Grand Hotel Khartoum.

SUDAN

A PERFECT WINTER RESORT.

KHARTOUM, a modern town, at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

A Street in Omdurman

Express Steamer and Dining and Sleeping Car Services between Cairo and Khartoum.

NEAR AND MIDDLE EAST.

Tangled Politics in Yugoslavia.

M. Ouzounovitch's heroic efforts to form a Government, in order to avoid a fresh General Election during the winter, are not meeting with much success. After several weeks of negotiation during which every possible grouping of parties in the Yugoslav Parliament was attempted with a view to providing some Government with a working and more or less stable majority, M. Ouzounovitch found himself obliged to accept the help of the Croat Peasant Party again, and once more a Radical-Raditchist Cabinet took office. The new Ministry, however, differed from its predecessor in two important particulars; the offer to the Slovene Clericals to participate remained open, and two portfolios were left unallotted for that party, under Dr. Koroshetz, to fill. At the same time an attempt was made to meet the country's more urgent needs of the moment, by introducing a business or "expert" element into the Cabinet. A bank director was appointed Minister of Finance and a military officer who had been Director of Transport on the General Staff became Minister of Railways. Unfortunately, neither the nation nor the Radicals have yet taken fully to heart the truth of the adage that union is strength. From inside his own party the Prime Minister has been assailed for continuing the alliance with M. Raditch, regardless of the fact that no other combination presented itself to give him the necessary majority in the Skupshtina; from outside, and indeed on all sides, he has been taken to task for appointing as Ministers four men who are not members of Parliament, and in the case of the Minister of Railways a soldier still on the active list. It is conceivable that M. Ouzounovitch would be able to deal with criticisms from one quarter at a time, but the combined attack threatens to cut short an interesting ex-

periment which it would have done the country no harm to make.

Party or Country?

The trouble in the Radical Party arises from the problem of filling the vacancy left by M. Pashitch. In spite of the fact that M. Ouzounovitch was his own nominee for the Presidency of the Ministerial Council, the veteran leader allowed it to be inferred, before he died, that he did not see eye to eye with his lieutenant on all political questions. There has, accordingly, arisen in the Radical Party a "Pashitch group" which is inclined to give M. Ouzounovitch very lukewarm support, when it is not actually at pains to thwart him. Such a state of affairs is very heartening to the other parties and makes them the less inclined, in the fluid condition of Yugoslav politics, to commit themselves to co-operation with the Radicals. Outside partisan circles the appointment of General Milosavljevitch as Minister of Railways is regarded as a stroke of genius; for in the welter of conflicting interests, with their reaction on the political world, there was a danger not only of necessary railway construction being held up, but also of the requirements of existing lines being subordinated to expenditure of a higher political value. The new Minister of Railways, it was thought, would give the railways a chance of coming into their own, to the material advantage of the country as a whole. Against this view of the appointment has had to be set the fear lest, in the hopeless tangle in which political parties appear to have become involved, the presence of a military officer in the Government might encourage the Army to emulate the Greek example of trying to purge party politics by unconstitutional means. The dilemma remains. Two of M. Ouzounovitch's Radical Ministers have resigned; the Radical President of the Skupshtina has registered his vote against the Cabinet as constituted; but from no political quarter does the harassed Prime Minister seem to receive any constructive advice. It is, perhaps, symptomatic of the confusion of thought into which the Yugoslav political world has been

thrown that prominent politicians are found to coquet with the idea that in a *rapprochement* towards Russia Yugoslavia may find a suitable offset to the Italo-Albanian Treaty. M. Stepan Raditch was first in the field with the suggestion, but it was hardly to be expected that any other leader of a party would seriously support his suggestion.

The Greek Army and Politics.

There would seem to be a large number of Greek Military officers who have learned nothing from the disaster to Greek arms in Asia Minor in 1922. The basic cause of the Greek defeat was the demoralising effect of the interference of politics with military affairs. It is immaterial which way that interference worked, whether the greater degree of incompetence rested with Venizelist or anti-Venizelist officers; whichever party happened to be in power could call only upon its section of the nation, with the result that Greece both in conducting the administration of the country and in waging war had to rely exclusively upon half the intelligence and knowledge that would otherwise have been available. General Pangalos may have acted unwisely in many ways, but at least he took the first steps in breaking down the watertight doors that had hitherto kept the two sections of the Greek people apart, and thanks to his high-handed methods Greek politicians have seen the viciousness of their former attitude and have now come together in a Coalition Government under a non-party Prime Minister. One of the first concerns of this Government is, very rightly, to eliminate the leaven of politics which has made the Greek Army a by-word among European armies and little short of a scandal to a gallant, but easy-going, people. The method proposed for accomplishing this is a perfectly reasonable one; it is to reinstate in the Army the officers who were removed on purely political grounds, and then to overhaul the whole Officers' Corps, without any political bias, solely from the point of view of military efficiency. So strongly, however, is the curse of politics established in a section of the Officers' Corps that this body of men has seen fit to form a new military league, known as the Republican Sentinel, pledged to prevent the Government from carrying through its intentions. The position is naturally embarrassing for the new Coalition Government; but in the light of past experience it is clear that, if drastic measures are not taken at once with the Republican Sentinel, the moral and

material rehabilitation of Greece will still be a long way off.

Communism in Bulgaria.

It would be interesting to know why Communism has proved a plant of harder growth in Bulgaria than anywhere else in South-Eastern Europe. At first sight Roumania, with its record of peasant risings and its Jewish problem, might seem to offer a more favourable field; both Yugoslavia and Greece have more populated industrial centres. For one reason or another, however, Soviet propaganda has fastened on Bulgaria, where eighty per cent. of the population consisted at one time of peasant proprietors, who, it might be imagined, would be the last people to adopt Communist theories. Possibly the influx of destitute refugees and the personal bitterness that has been engendered in the country since the later portion of the Stambolisky régime are responsible for the spread of a movement that is generally given the label of Communism. The latest manifestation of Communist activity is described as a secret organisation with headquarters at Philippopolis, under the direction of a central committee in Sofia. The police appear to have learned of what was going on before any definite plot could be hatched, and the sensational Press in Europe was left to fill in the more picturesque details from its own imagination or its recollection of the general lines of the last conspiracy. From the fact that bombs, revolvers and rifles are said to have been seized, it may be inferred that the organisers of the conspiracy were hopeful of being able to find a few desperate Bulgarians ready to do the work from which they themselves would shrink. The position of the Bulgarian authorities is difficult; but it is to be hoped that they will not lose sight of the fact that the best defence against Communism is a contented people. The economic crisis through which Bulgaria is passing makes the lavish expenditure of Bolshevik money a terrible temptation, and from this situation escape must necessarily be slow. On the other hand the existence of the temptation provides a reason for avoiding extreme measures of repression, as it is safe to infer that the movement will die out as soon as the foreign stimulus has been withdrawn.

New Year Honours.

Among the New Year Honours the Near and Middle East, which so often suffers from being, as it were, nobody's child, has this time not been altogether overlooked. To what extent that particular sphere can claim for its own Sir Charles Greenway, who now receives a well-merited barony, against the world-wide interests that have made the Anglo-Persian Oil Company under his Chairmanship an Imperial institution may be left an open question. The Honorary G.C.M.G. conferred upon King Faisal is a reminder that, although Iraq stands "on its own" in treaty alliance with Great Britain, a personal relationship has been established between the latter and Iraq's ruler, which finds fitting expression in His Majesty's inclusion among those whom the King, with the nation's approval, delighteth to honour. It is right that the British representative at the Persian Court should bear the status of knighthood. As Assistant Under-Secretary of State Sir Charles Montgomery has a wider sphere to cover in the Foreign Office; but his earlier steps in official promotion were associated with the Near East. Unofficial approval will be registered none the less readily for the official selection that has picked out for inclusion in the Honour List Colonel Charles Cox, Chief British Representative in Transjordan, Mr. Arthur Huddleston, one of the ablest of the officials in the excellent Sudan Civil Service, and Mr. W. S. Edmonds, Consul-General in Constantinople. One day, we may hope, recognition will be accorded to representatives of the British business world in the Near and Middle East—men who by upholding the traditions of honourable dealing, clean living and business success among other peoples perform well their share of promoting British interests in a part of the world of some importance to the Empire.

THURSDAY, JANUARY 6, 1927.

EGYPT IN 1926.

For Egypt at the present stage of its history every day, however devoid of incident, is eventful; still more so a whole year, even though the waters of development flow on with nothing more serious than surface rufflings. It may be, indeed, that the past year will prove the more conspicuous landmark, because it has not been characterised by "alarms and excursions" without or within; for the steeds that are yoked to chariots of independence are of necessity fiery, and it is a greater achievement that they are being held in than that they should be given free rein. During the greater part of 1925 the nationalism of Zaghloul Pasha remained within the shadow of the murder of Sir Lee Stack; towards the end of the year a new Electoral Law provided it with an opportunity to reassert itself. Opposition to this Law came to a head before the new year was many weeks old, and by the middle of February Ziwar Pasha, the Prime Minister, found it necessary to bow before the storm by withdrawing the offending measure. The elections of May 22, which were held under the Law of 1924, providing for direct voting and universal manhood suffrage, resulted in an overwhelming victory for the Nationalists, and Zaghloul Pasha became once more the central figure on the stage. From this point all interest in the Egyptian drama hinged on his actions. The first indication of the possibility of stormy times ahead came within three days of the Elections, when the Court that had been trying seven men charged with complicity in the series of murders of British officials in 1922 delivered its verdict, acquitting all but the one prisoner who had confessed to his crime. The verdict was a majority one, that of two Egyptian judges against the British President of the Court, Judge Kershaw, who resigned his post on the ground that the weight of evidence against four of the prisoners acquitted was so great that the verdict constituted a grave miscarriage of justice. The immediate effect of the acquittal had been a marked accession of self-confidence among the Zaghloulists, already considerably elated by their successes at the elections. Among the accused had been a Minister in Zaghloul Pasha's Cabinet, and an Under-Secretary of State; three other ex-Ministers had been Counsel for their defence. Zaghloul Pasha, who until then had been credited with the resolve not to take office, changed his mind under pressure of his more extreme followers and announced his intention to form a Government. Expectation at this point ran high in all circles and sections throughout Egypt; anything, it was confidently believed, might now happen.

Egypt's good fortune, however, did not desert the country; it was the unexpected that took place. On May 30 Zaghloul Pasha called at the British Residency and had a long conversation with Lord Lloyd. No official

account of what took place at the meeting was published; but it was generally believed that Zaghloul Pasha had taken advantage of the opportunity to make himself acquainted with all the difficulties that would attend his personal assumption of the Premiership in the light of his pledges to his party. When, therefore, two days later the election caused by the acquittal of the political prisoners had been checked by the resignation of Judge Kershaw, his staunchest supporters were among those who urged Zaghloul Pasha not to take office. Yielding to these counsels of moderation, he abandoned the idea of leading a Cabinet and promised his support to Adly Pasha, who on June 5 formed a new Ministry, in which Sarwat Pasha, also a Liberal, took the portfolio of Foreign Affairs. When the Chamber of Deputies met Zaghloul Pasha was elected President. Throughout a session which was prolonged well into the middle of the summer, the Nationalist leader handled the Chamber with all the tact and shrewdness of which he shows himself at times a past master. It was inevitable that, with the result of the Elections what it had been there should be much pent-up steam to be worked off in Parliament. To Zaghloul Pasha belongs the credit that it was diverted along safety openings. The spectacle of a victorious party embarking upon a personal vendetta against a political opponent who had served his country well and honourably at a critical time was not a happy one in British eyes; but the veteran leader, doubtless, knew his followers, and Ziwar Pasha is probably philosophical enough to realise that gratitude is not an ingredient of party politics. Zaghloul Pasha's hold upon his party and consequently upon the country proved as striking in the winter as in the summer session. The fear that the holding-in of the extremists would not last until the end of the year has been entirely belied by the event. When Parliament re-assembled a noticeable feature of the Speech from the Throne was the friendly spirit of the reference to Anglo-Egyptian relations and of its acceptance by the Chamber.

A year that has witnessed such a test of Egyptian self-control and statesmanship cannot be dismissed as unimportant in the country's annals. Problems of grave delicacy still await solution, but the Egyptians have no reason to be ashamed of their first essays in statecraft. In the circumstances it was inevitable that domestic politics should monopolise the stage throughout the year. Two notable achievements, however, in other directions may be recorded. The temptation to undo all the work of the Ziwar Cabinet was resisted in the case of the agreement with Italy over the Jarabub oasis. Although the Italians had occupied Jarabub in February under the convention of the previous December, the agreement had not been ratified, and serious differences of opinion had arisen in the mixed Commission appointed to settle questions of detail. In October, however, a further agreement was signed which brought the two countries within sight of a settlement satisfactory to both. Of equally good augury was the submission in May of the Report of the Nile Waters Commission signed in complete agreement by the Egyptians and the British members of the Commission after the death of the neutral Chairman. Egyptian anxiety in regard to the Sudan has a genuine background in the Nile Water question, and the report of the Commission represents a useful advance towards a fuller understanding of the subject on the part of the Egyptians. The Caliphate Conference held in Cairo in May was overshadowed by the more important Congress due to take place two months later in Mecca, and the tendency to regard it as a mild challenge to Sultan Ibn Saoud's leadership of the Moslem world found some support in the disturbance that subsequently occurred between the Egyptian pilgrims and the Wahhabis. Here again good will on both sides was not lacking, and the visit to Egypt in August of the Amir Saoud served to restore good relations between the two countries.

The Near and Middle East*

From Our Own Correspondents.

Cairo, December 25.

Port Fuad.

The inauguration of Port Fuad at the beginning of the week was an unqualified success. Everything went according to programme, and, what is equally important, all the guests—and there were many hundreds of them—behaved themselves. Very often, and particularly in this country, the best of organised shows are spoilt by the manner in which those bidden to attend disregard instructions and create incidents by their impatience and their lack of consideration. But on this occasion there was none of these features. A hearty vote of thanks is due to the Navigation Congress Committee and the Suez Canal Company, who shared the responsibilities of organisation. To the Company we are indebted for the open-handed hospitality which we received at Port Said, Port Fuad and Ismailia.

Whoever conceived the idea of holding the inauguration of Port Fuad at the present juncture was thrice happily inspired. In the first place it constituted an incomparable *clou* to the International Navigation Congress. The delegates and the members, already enchanted by their reception and the excellent arrangements made for them, regarded their participation in this Royal ceremony as one of the most interesting of their many interesting experiences in Egypt. Secondly, by taking advantage of the presence in Egypt of this Congress the organisers of the inauguration made sure of the attendance at that ceremony of an international assembly such as they could not otherwise have secured. Thirdly, the nature of the ceremony was consequently completely in accordance with the traditions associated with this historic waterway, and thus the attention of the world has been drawn in an exceptional manner to an event which may in time prove to have been the starting point of an important development in inter-continental communications.

Everyone was most charmed with the aspect of this new city. It reminded many forcibly of the beginning of

Heliopolis. The villas in the best quarter have a delightful appearance, and are surrounded already with most promising gardens. The *jardin public* is, indeed, most attractive. In the less well-to-do quarters the houses are all well designed and look most comfortable, and in the so-called native quarters all the needs of the workers have been provided for, while sacrificing nothing of the æsthetic character of the whole scheme. It is a most laudable enterprise and deserves all the success which promises to attend its accomplishment. Port Fuad is to serve as an overflow residential quarter for Port Said, and it may quite conceivably come to constitute a welcome alternative summer resort to Cairo. Its ultimate success must, however, to a great extent depend on whether the terminus of the Palestine railway is transferred thither from Kantara.

Draft Laws.

Two interesting draft laws are about to go before Parliament. The first provides for a change in the financial year. At present it begins on April 1. The Constitution lays down that the annual budget must be submitted to Parliament three months before the new financial year starts, and the Government finds it exceedingly difficult to obtain in time all the estimates from the various Departments. The explanation is that the annual leave season, which extends to the end of October, provides insufficient time for heads of Departments to submit their proposals to the Ministry of Finance and for the latter to discuss them before January 1. In order to provide the extra time required it is now proposed that the financial year start on June 1, which will mean that the budget need not be presented to Parliament before March 1.

The second law concerns a proposal put forward by Parliament for the creation of an independent audit of the State Accounts. The law establishes this Department with an official at its head having the rank of Minister. He will be entirely independent of the Government, will have access to all information he may require, and will be responsible, and report directly, to Parliament, by whom he will be appointed for periods of five years.

Yugoslavia and the Italo-Albanian Treaty.

On December 1, Italy published the Treaty which was signed on November 27 at Tirana by her Diplomatic Representative and the Albanian Minister for Foreign Affairs. This Italo-Albanian Treaty greatly disturbed public opinion in Belgrade, and, indeed, throughout Yugoslavia. This is not surprising, as the Treaty contains stipulations calculated to cause Yugoslavia justifiable anxiety. Italy and Albania bind themselves to safeguard the political rights and territorial *status quo* of Albania. Furthermore, the two States pledge them-

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

selves mutually not to conclude any political or strategic treaties prejudicial to the other contracting party. Hereby Albania has conceded Italy an immense advantage as regards political influence over her, and the Treaty, which is for five years, is regarded in Yugoslavia as tantamount to establishing an Italian protectorate over Albania. But this is not all. Along with her obligation to preserve Albania's integrity, Italy secured the right to intervene in case of internal dissensions and to safeguard the régime of Ahmed Beg. Situations calling for intervention are, however, open to divers interpretations; they can even be engineered to occur at suitable moments, and the consequences of the exercise of the right to intervene would be incalculable. Yugoslavia regards the Italo-Albanian Treaty as a practical advance of the Italian frontier to the line of the Drina.

Taken all round, this new Treaty would appear to be opposed to the interests of Yugoslavia. Her principle is: The Balkans for the Balkan peoples. Let the latter manage their own affairs and neither be the tools of other European Powers, nor serve these Powers in their attempts mutually to get the better of one another. Thus Belgrade cannot by any means be satisfied that Albania—in any case a very sensitive spot in the Balkans—should pass under the protectorate of Italy. For this reason, the Italo-Albanian Treaty is regarded in Yugoslavia as the beginning of Italian imperialistic expansion in the Balkans; and of this Yugoslavia, as the central Balkan State, can in no wise approve.

If Yugoslav public opinion has been disturbed by the Tirana Treaty, there was good reason for this even from the purely formal point of view. A treaty of friendship had just been concluded between Italy and Yugoslavia, whereby both States bound themselves to act in loyal and friendly fashion in all matters that might arise between them. This pact of friendship has special reference to Albania, whose territorial integrity is guaranteed by both States. During the last rebellion in northern Albania, the Governments at Rome and Belgrade issued joint *communiqués*, in which they definitely assumed the standpoint of joint and friendly obligations and co-operation in the progress of Albania. At the last Little Entente Conference (at Bled, in June, 1926) Dr. Nintchitch, then Yugoslav Minister for Foreign Affairs, made a public statement to the effect that the Little Entente, and Yugoslavia in particular, would undertake nothing without previously advising Italy. In face of the oppression suffered by the Yugoslav minority in Italy under the Fascist policy, Dr. Nintchitch found it hard to carry out a policy on these lines towards Italy; but he did carry it out, and in this respect no Italian critic can reproach him with the slightest lapse. Dr. Nintchitch justly earned for himself the reputation of being the most peace-loving diplomat in South-Eastern Europe.

Dr. Nintchitch's Resignation.

The Italo-Albanian Treaty, however, gave a shock to Italo-Yugoslav friendship, as unexpected as it was sharp. Italy had prepared this pact with Albania without advising the Yugoslav Government of the fact, as she was really bound to do, in view of the *communiqués* already referred to. Furthermore, Italy undertook, by the Treaty, to guarantee Albania politically, her territory and her rights, although she already shared this obligation with Yugoslavia. The pact which she has now concluded is—according to opinion here—aimed at Yugoslavia, the very State which she professed to regard as friendly. For of the fact that the Tirana Treaty is aimed at Yugoslavia, there are no two opinions in the Kingdom.

The opponents of Dr. Nintchitch had now a powerful argument for their contention that Italy did not take her friendship with Yugoslavia seriously—that she was not loyal to Yugoslavia, but worked covertly against her, just as she gives a free hand to Fascist fanatics around Trieste and Gorizia. What Dr. Nintchitch calls loyalty to the neighbour State was blamed by his countrymen as unjustifiable pliancy, which Italy fails to repay in kind. Dr. Nintchitch obstinately rebutted these charges and

remained faithful to his conception of a loyal attitude towards Italy.

But the Italo-Albanian Treaty tripped him up. All unexpectedly it was clear that his conception of friendship between his country and Italy was mistaken, and there was not enough loyalty on both sides. The whole system of his pacifist policy crumbled, and he had no option but to resign. On December 7, a week after the publication of the Treaty, the report of the resignation came from Belgrade. That Dr. Nintchitch's resignation should entail that of all the rest of the Cabinet, is immaterial here. He himself gave as reason for his resignation the fact that he had been mistaken in his belief in the loyalty of the other contracting party.

The further development of Italo-Yugoslav relations it is impossible to predict. But whoever he may be, Dr. Nintchitch's successor will find it difficult to resume the course of the ex-Minister for Foreign Affairs, who failed through no fault of his own. Yugoslav public opinion demands a fresh orientation in her foreign policy. She desires a strengthening of her relations with France and the establishment of yet other ties which are dependent upon a change of venue. Truly, Dr. Ninko Peritch, the new Minister for Foreign Affairs, has plenty of difficult work before him.

December 30.

Pashitch and After.

Dr. Nintchitch's resignation was followed by that of the entire Government of the Kingdom of Serbs, Croats, and Slovenes, a Government still consisting of a coalition of the two strongest of the parliamentary parties, i.e., the Radicals and the Raditchists. The resignation of the Cabinet was not a consequence of disturbed public opinion on account of the failure of Dr. Nintchitch's policy, but only technically in connexion with it. The Prime Minister, M. Nikola Ouzounovitch, simply took advantage of his colleague's resignation to hand in his own in order to make use of the opportunity to reconstruct the Government. The "R.R." Coalition, although an alliance of the two most powerful parties in the State, has proved quite unworkable. There are too much distrust between the partners and too much dissension and disharmony within the ranks of each of them. So M. Ouzounovitch, as head of the Government, thought to improve matters by extending the coalition so as to include the Democrat Party under M. Liuba Davidovitch, with whose help he hoped to get the whip-hand of the unruly elements in the Raditch Party. But M. Ouzounovitch planned this alliance without the knowledge of the aged Nikola Pashitch, who had returned to the capital and was prepared once more to take an active part in the field of politics whence he had been ousted against his will. In this he was completely successful. Once more his influence was paramount in the Radical Club, and the latter issued a special pronouncement to the effect that as regards future conjunctions it would agree only to such of M. Ouzounovitch's decisions as had the approval of M. Pashitch. Hereby Nikola Pashitch at one stroke regained his former predominant and absolutely decisive position in the party and in the State. But he was not fated to give outward effect to his restoration. On the morning of December 10, 1926, suddenly and unexpectedly, the greatest Yugoslav statesman passed away.

The death of Nikola Pashitch overshadowed all other events—Dr. Nintchitch's resignation and its cause, M. Ouzounovitch's resignation and the possible new con-

School of Oriental Studies, London Institution

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

junctions—all this became news of secondary importance. All thoughts were riveted on the personality of Pashitch, who had now for ever quitted the world of politics in which he had laboured for over fifty years, and for the most part as leader.

Impartial critics of Nikola Pashitch's political career agree in pronouncing him the most remarkable Serbian—and hence also Yugoslav—statesman of our day. He was first elected to the Serbian National Skupstina in 1878; and became chief of the Serbian Radical Party, the constitution of which is largely his work. It is due to him and to several notable adherents and colleagues of his that Serbia became a constitutional monarchy. The first period of his political activity shows him an extremist who with his radical slogans won over the greater part of the populace. He did not fear to appeal to revolutionary methods against the autocratic regime of King Milan Obrenovitch. When the Radical Party scored a majority at the polls, and the King nevertheless refused to entrust it with the Government, he sought to coerce the King into giving way. In 1883 the Timok rebellion broke out in eastern Serbia. But the rebellion was put down: many Radicals were sentenced to death, Pashitch being one of them, and he only just managed to escape to Bulgaria in time. Eventually pardoned, he returned to his native country, where he followed a more or less opportunist policy until the exit of the Obrenovitches.

With the turn of events in 1903 which brought the Karageorge dynasty to the throne and the Radical Party to the helm, began the period of Pashitch's historic successes. Serbia's policy was, in the main, in his hands throughout the trying years of the tariff war with Austria, throughout the Annexation Crisis, the Balkan wars, and, finally, through the Great World War with its disasters and ultimate triumph. He continued chief of the Government in the greatly enlarged post-War State—the Kingdom of Yugoslavia. The halo of success endowed the ageing statesman with prestige, not only at home, but abroad, nay, throughout the world.

Nikola Pashitch never theorised about politics, not even in his last and most successful period. He wrote practically no articles nor books. He was exceptionally silent and not remarkable as a public speaker. He was a man of action. He was, moreover, an admirable tactician, who could adapt himself to any situation and make the best of it for his own ends, those of his party and of his country. As an old hand at the game, he was a shrewd observer, always well-informed as regards the position at home and abroad—in a word, he was a first-class politician in the true sense of the word.

By his death Yugoslavia's political life has entered upon a difficult legacy. Within his party he left no heir capable of taking up the leadership after him. So the urgent question has arisen, whether there is a personality strong enough to keep together the National Radical Party in whose ranks so many rifts have appeared of late. Just now there is no one great authoritative personality in Yugoslavia who might, as a statesman, take the place of the deceased veteran. But this statement must not be misunderstood. New times bring new needs. To-day it is necessary for the younger men to come to the fore in Yugoslavia, with present-day principles and demands, to take the helm in party and State. Authority will come with the need for it.

Of course, not at once. M. Ouzounovitch has constructed another Government (which, by the way, has the approval of M. Stepan Raditch), but unquestionably on the old lines, and with old hands, although the country is insisting more and more upon a working Government and the *de-politisation* of the State executive. These are the lines on which Yugoslav political life must develop after the passing of Pashitch, and this is also the wish of the supreme representative of the State.

Five pictures, the work of Roumania's most famous artist, Grigoresco, have disappeared mysteriously from the National Museum at Bucharest. The Grigoresco collection was the property of the nation.

CONFLICT IN ZIONIST POLICY.

Under the heading "The Present Conflict in Zionist Policy," the *Menorah Journal* of October-November publishes two vigorous articles on "The Case for Revisionism," by Johnson J. Smertanko, and "Revisionism: A Rejoinder," by Emanuel Neumann. To all students of Palestinian affairs these essays, the one in defiance of Dr. Weizmann's policy, and the other in defence of it, have a peculiar value. The Revisionist lays it definitely down that if the Jewish Homeland is to have any meaning at all, the Jews must be not a dependent minority but a dominant majority, and, because signs at present do not point to this consummation, he heartily blames not only the British Government but also the Zionist leaders. The "Moderate" asserts that for the time being there is little more to be accomplished in the political sphere, and that the responsibility for success now rests with the Jewish people.

AN IMPERIAL JOURNAL.

With the advent of the New Year we have to welcome a new journal in London, called the *London Weekly*. This publication, which is edited by Dr. L. Haden Guest, M.P., is to be devoted to Imperial affairs, and in co-ordinating interests that have hitherto been either unrealised or separate, it should do a very considerable service. It is notable that it has a really practical aim: the development of Imperial resources. Moreover, the Editor writes: "Our object in assisting to popularise knowledge of Empire affairs is thus not a theoretical interest in political or economic speculation, but a practical interest in helping our people to a happier individual and social condition."

MISSIONARY REVIEWS.

The January issue of the *International Review of Missions*, which is under the able editorship of Dr. J. H. Oldham, contains articles of particular interest to readers of THE NEAR EAST AND INDIA. Among these may be mentioned "Some Present-Day Trends in the Life of the Orient," by J. R. Mott; "The Indigenous Church," by William Paton; and "Can I Give My Life to Christian Missions?" by R. C. Hutchison. And, as usual, there is excellent reading to be found in the reviews of books.

The last number (December) of *World Dominion*, an international review of Christian progress, has much that is likely to interest students of Islam and of the East generally. For the most part the articles are short and rather suggestive than informative, but some idea of the ground covered can be obtained from a list of some of their titles: "The New Diocese of the Upper Nile," "An Intimate View of Abyssinia," "Present Conditions in Palestine," "Islam in Africa To-day," "London Hears the Muezzin," and so on.

The latest addition to the stamp-issuing countries of the world, says *The Times*, is the Arab Imamate of the Yaman, whence emanate two postage labels of crude design and local workmanship, the outstanding feature of which is two curved daggers, crossed. The inscriptions in Arabic read:—"Sanaa, Government of Yaman, by the will of Allah, Postage (values) and Yahya Protected by Allah," the last portion being the name of the ruling Imam of Sanaa. Their values and colours are 5 bucksha black on orange, 10b. black on white. A Bucksha is one-eightieth part of the Maria Theresa dollar, which is the common currency of the Yaman.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

PALESTINE, RUSSIA, AND THE JEWS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I be allowed to say a word or two on the article which appears in your issue of December 23 under the heading "Palestine, Russia, and the Jews"?

It seems to me, if I may respectfully say so, that you have not, perhaps, fully appreciated the *New Judea's* point. The *New Judea* was commenting on the leading article which appeared in your issue of December 2. In this article you remarked, with perfect justice, that Palestine is passing through a period of temporary depression, and you proceeded to observe that

"It is from such a background of doubt, if not of fear, that Zionists are turning their attention to another—and we cannot help thinking a rival—scheme for the colonisation of the Jews: we mean the scheme of the Moscow Government for the settlement of Jews in Southern Russia."

The *New Judea* not unnaturally denied with some emphasis that Zionists were doing anything of the kind. The burden of the article to which you refer is that Zionists, whatever their opinions about Jewish colonisation in Russia or elsewhere as a measure of economic relief, know nothing of any "alternative Zionism." In your issue of December 9 you explain that when you wrote "Zionists," you really meant "Jews." But the *New Judea* is hardly to be blamed for assuming that you meant what you said, which was—in effect—that there was a tendency among supporters of the Zionist movement to lose interest in Palestine in favour of the Crimea. It goes without saying that no such tendency exists, and your own disclaimer in your issue of December 9 is in itself sufficient to show that the *New Judea's* comments were not as unreasonable as you now suggest.

The main contention of your article of December 23 is one which the *New Judea* has never challenged. You argue that the Crimean proposals are a "Soviet plan for competing with Palestine." Of course they are; that is precisely why Zionists—and for that matter a good many Jews who are not Zionists—have been inclined to fight shy of them. The *New Judea* itself refers to M. Kalinin's recent utterances and comments appropriately on his childish gibe about "bourgeois Palestine" and his equally childish suggestion that Palestine has nothing but exploitation to offer the Jewish masses. M. Kalinin's proposals and their motives are one thing; the Jewish response is quite another, and the extracts which you print from his speeches throw no light on the question how far the Jews have, in fact, been persuaded to accept the Crimea as an alternative to Palestine.

On this point you draw attention to an article in an Anglo-Jewish paper in which it is stated that English money has been sent to Russia for the furtherance of the colonisation scheme, but you omit to mention (what was subsequently pointed out by the *New Judea*) that the

allusion is to a sum of some twenty odd pounds collected at a meeting in the East End of London, as compared with the £27,000 recently contributed by the Jews of Great Britain in a single month to the Palestine Foundation Fund. I am far from suggesting that this is the measure of the financial support which the Russian colonisation scheme is receiving in various parts of the Jewish world. Substantial sums of money have been and are being contributed for this purpose, more especially in the United States. But it does not follow that they have been contributed because the Crimea is regarded as a substitute for Palestine as the Jewish National Home. As you rightly point out, one of the leaders of the Russian colonisation movement in the United States is the distinguished President of the American Jewish Committee, Mr. Louis Marshall. You have, however, apparently omitted to observe that Mr. Marshall is also an active supporter of Jewish colonisation in Palestine, that he and his associates are in close and friendly contact with the Zionist Organisation, and that they have been at pains to make it clear that if they view with favour the settlement of Jews on the land in Russia, they are at the same time fully determined to take their share in the regeneration of Palestine.

The two movements are, in fact, incommensurable. The Jewish public realises that those who sup with the Bolsheviks must have a long spoon. Precisely because of their underlying motives, to which you rightly draw attention, many Jews regard the Russian proposals with a considerable measure of distrust. There is, however, no Zionist, however enthusiastic, who does not realise that Palestine has at present only a limited capacity of absorption, and that if means can be found of relieving the indescribable misery of the Jewish urban masses in Russia by transferring even a fraction of them to the land, it is not for the Zionist Organisation to stand in the way. Individual Zionists may have their own views as to the merits or demerits of the Russian scheme, but the standpoint of the Zionist Organisation, as such, is perfectly clear. It does not and cannot oppose Jewish agricultural colonisation in Russia, but it adheres firmly to the view that such colonisation cannot be a solution of the Jewish problem as Zionism conceives of it—a problem which can only be solved by the establishment of the Jewish National Home in Palestine. There may possibly be Jews who, not as Zionists but as anti-Zionists, are inclined to favour the Russian scheme as a means of diverting the Jewish imagination from Palestine to the Crimea, but so far as the great mass of Jews are concerned, all the evidence goes to show that such hopes are illusory, and that if they are cherished, as they may be, by the Soviet Government, it has—and not for the first time—miscalculated the forces with which it has to deal.

I must apologise for troubling you at such length, but THE NEAR EAST AND INDIA has so high a reputation for accuracy and fairness that I feel sure you would not desire to do the *New Judea* an injustice.—I am, etc.,

LEONARD STEIN.

The Zionist Organisation, 77, Great Russell Street, W.C.1, December 24.

[We will pursue this discussion no further. It would perhaps be a redundant "explanation of an explanation" if

The Indo-European Telegraph Co., Ltd.,

we still expressed adherence to our implied statement that there are Zionists whose confidence in the success of the Palestine scheme is not so full as that of the officials of the Organisation. We will, therefore, content ourselves with remarking the apparent contrast in the description of the Soviet colonisation scheme contained in the Zionist Organisation's first letter to us—wherein that plan was said to be "intended solely for the amelioration of the economic conditions of the Jews in Russia," and that contained in this second letter from the Organisation, the third paragraph of which seems to include a quite different interpretation of the Soviet scheme.—Ed.]

ALBANIA, YUGOSLAVIA, AND ITALY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to your Notes of the Week in your issue dated December 16, may I point out that it is quite untrue, as you state, that I take it for granted in my letter, which appears in the same issue, that the genesis of the recent insurrection in Albania must be sought in Yugoslavia? I neither said nor hinted anything of the kind. I said that the genesis of the rumours to the effect that the rising had been aided and abetted in Italy must be sought in Yugoslavia. This is an entirely different matter.

The point of my letter was to repudiate emphatically any such insinuation. In your Notes of the Week to which my letter took exception, such an insinuation was given currency. It was also therein implied that Monsignor Fan Noli was at the bottom of the trouble and that Monsignor Fan Noli was resident in Italy. My letter pointed out the additional fact that Monsignor Fan Noli is not and has not been resident in Italy since his exile.

I gave no opinion as to the cause of the rising. I do not believe, as a matter of fact, that Monsignor Fan Noli had anything to do with it. I am, moreover, quite convinced that the other, predominant group of the Albanian Opposition, those who have indeed taken refuge in Italy, have likewise had nothing to do with the rising. Whether Yugoslavia, officially or unofficially, prompted the rising, I have no means of judging.

The correctness of Italy's position in the matter is demonstrated by Signor Mussolini's recent declaration that nothing would give him greater pleasure than if Yugoslavia entered into a similar treaty with Albania.

One word more: I really think it is going a bit too far to suggest that Italy might have negotiated the Albanian Treaty with the Yugoslav Government "in the know." Yet this is the tenour of your comment in your issue dated December 9. To anyone who knows the Balkans, let alone fallen human nature generally, such an idea can only be described as a joke.—I am, etc.,

Trieste, December 23.

J. S. BARNES.

[We regret that in our comments upon our Correspondent's former letter we read more into it than the words actually conveyed. It was not our intention to suggest that Italy should carry out the negotiations with Albania in the presence, so to speak, of Yugoslavia; but that, in view of the Italo-Yugoslav Pact of friendly intentions regarding Albania, Italy might have notified the Yugoslav Government of the conclusion of the Treaty before the news could reach Belgrade from any other source.—Ed.]

THE PROBLEM IN SYRIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to "The Problem in Syria" appearing in your issue of December 2, the cause of the Druse revolt was the repudiation by the Mandatory Power in April, 1925, of the special agreement made between France and the Druses, and signed on her behalf by M. de Caix in March, 1921.

Now that two journalists have lectured to two learned British societies on Syrian affairs, would not another learned Society invite one of the Syrian Nationalist leaders to address them, so that they might hear the Nationalist side of the question?

Among the most prominent members of the Syrian Nationalist Party are Dr. Shahbander, Amir Shakib Arslan, Ihsan el Jabri, and Riad Solh.—I am, etc.,

Beyrout, December 19.

J. J.

[We have vivid recollections of a lecture which was given (and reported in our columns) a year or two ago by Dr. Shahbander to the Near and Middle East Association.—Ed.]

NEWS IN BRIEF.

Mr. E. J. Talbot, Curator of the British War Cemetery on Mount Scopus, was found suffocated in bed on December 23 in Jerusalem, owing to his use of a charcoal stove in a closed room.

Professor Garstang on December 24 received a striking international tribute of esteem at a gathering promoted by all the Schools of Archaeology and learned institutions in Palestine on his retirement from the post of Director of the Department of Antiquities.

Afghan newspapers have published the text of the Russo-Afghan treaty of neutrality and mutual non-aggression, signed at King Amanullah's summer palace at Paghman on August 31, and the treaty of friendship of September 14, 1926.

Mr. Edward Henry Day, of Iddersleigh, Watts Avenue, Rochester, and of Assiut, Egypt, who died on October 3, left estate of the gross value of £57,320, with net personalty £57,063. Among other bequests he left £500 Egyptian Unified Stock to the Egyptian Sudan Diocesan Fund; £300 stock to the Cairo Brotherhood Waifs and Strays Society; and £200 such stock to the Alexandria Merchant Seamen's Homes..

M. Panta Gavrilovitch, the Yugoslav Minister who played so large a part in the recent negotiations about the Yugoslav Free Zone in Salonika, died in Athens on December 22 of meningitis following influenza. Admiral Kounduriotis, the President of the Republic, conferred the Grand Cross of the Order of the Redeemer as a posthumous recognition of his services.

According to the Rome Correspondent of the *Morning Post*, Ahmed Bey Zogu, the President of the Albanian Republic, accompanied by his Minister for Foreign Affairs, will pay a visit to Italy, probably in January. They will be the guests of the King. It is stated that the visit has no determined scope other than "the desire always expressed by Zogu to know Italy at close quarters and to express to the Capo dello Stato and the Government of Italy Albania's most cordial sentiments."

THE NEW YEAR HONOURS

Among the recipients of awards in the New Year Honours List which are of especial interest to THE NEAR EAST AND INDIA are the following :—

BARON.

Sir Charles Greenway, Bt.—Sir Charles Greenway is President of the Anglo-Persian Oil Company and Chairman of numerous other associated undertakings. He is also a senior partner in the firms of Shaw, Wallace, and Co., in India, and R. G. Shaw and Co., London. Between 1895 and 1908 he spent most of this time in India, and has taken a prominent part in the commercial and industrial development of that country. Since his return he has been actively engaged in banking and commerce here, and has taken an especial interest in all affairs relating to Persia.

PRIVY COUNCILLOR.

The Hon. William George Arthur Ormesby-Gore, J.P., D.L., M.P.—Mr. Ormesby-Gore during the Great War was Intelligence Officer at the Arab Bureau, and began his Parliamentary career as Private Secretary to Viscount Milner. He was Under-Secretary for the Colonies in the Conservative Government of 1922, and resumed the office when Mr. Baldwin again became Prime Minister in 1924. He sat for Denbigh during the War Parliament, and has since represented Stafford. He is the first Under-Secretary to make official tours of the Colonies, and has visited in this way the West Indies and the West and East Coasts of Africa.

KNIGHT.

Walter James Franklin Williamson, C.M.G.—Late Financial Adviser to Siamese Government. Mr. Williamson entered the Indian Financial Department in 1890, and from 1891 to 1900 was Assistant Accountant-General, United Provinces, Bengal, and Madras.

KNIGHTS (INDIA).

Richard Burn, C.S.I., Indian Civil Service.—Lately temporary Member of the Executive Council of the Governor of the United Provinces.

John William Anderson Bell.—President, Bengal Chamber of Commerce.

David Thomas Chadwick, C.S.I., C.I.E.—Indian Civil Service, lately Secretary to the Government of India in the Commerce Department.

Norman McIver Murray.—Managing Governor of the Imperial Bank of India.

Joseph Aspden Kay.—Member of the Bombay Legislative Council, Managing Director, Messrs. W. H. Brady and Company, Limited, Bombay.

Joseph Augustus Maung Gyi.—Member of the Executive Council of the Governor of Burma.

Sardar Bomanji Ardeshir Dalal.—Member of the Legislative Assembly, First Class Sardar, Bombay.

Mr. Justice Cheruvuri Krishnan, Diwan Bahadur, Puisne Judge of the High Court of Judicature, Madras.

Rao Bahadur Ramanbhai Mahipatram Nilkanth, Bombay.

ORDER OF THE BATH.

G.C.B. (Military).

General Sir George Francis Milne, G.C.M.G., K.C.B., D.S.O., A.D.C. General to the King. Colonel Commandant, Royal Artillery, Chief of the Imperial General Staff, the War Office. Sir George Milne, who left the Eastern Command to succeed the Earl of Cavan as Chief of the Imperial General Staff, commanded the British Salonika Force and Army of the Black Sea in the Great War. His earlier service included the Sudan Campaign (1898), including Khartoum, and South Africa (1899-1902.)

K.C.B. (Military).

Lieut.-Gen. Alexander Richard Hamilton Hutchinson, C.B., C.M.G., D.S.O., Royal Marines.—Lieutenant-

General A. R. H. Hutchison, Adjutant-General to the Royal Marines since 1924, served with distinction during the South African and European Wars, being at Gallipoli with R.N.D., 1915-16, and in France from 1916 to 1918. He is A.D.C. to the King.

Maj.-Gen. Harry Christopher Tytler, C.B., C.M.G., C.I.E., D.S.O., Indian Army, General Officer Commanding, Burma Independent District.

C.B. (Military).

Ordnance Officer 1st Class and Col. Robert Henry McVittie, C.M.G., C.B.E., Royal Army Ordnance Services, the British Troops in Egypt.

Col. Walter Edward Wilson-Johnston, C.I.E., C.B.E., D.S.O., Indian Army.—General Staff Officer 1st Grade, India Office.

Col. (temporary Colonel Commandant) Cyril Rodney Harbord, C.M.G., D.S.O., Indian Army.—Brigade Commander, 2nd Indian Cavalry Brigade, Sialkot, India.

Col. Corrie Hudson, C.I.E., D.S.O., F.R.C.S. Edin., Indian Medical Service.—Assistant Director of Medical Services, Aden Brigade, Aden.

ROYAL VICTORIAN ORDER.

G.C.V.O.

Right Hon. Rowland Thomas, Earl of Cromer, G.C.I.E., C.V.O.—The Earl of Cromer entered the Diplomatic Service in 1900, and served in Cairo, Teheran, and Petrograd. Transferring to the Foreign Office in 1907, he became Private Secretary to the permanent Under-Secretary for Foreign Affairs. After resigning his appointment at the Foreign Office he became a director of Baring Brothers, Ltd. In 1915-1916 he was A.D.C. to the Viceroy of India; he was also Chief of Staff to the Duke of Connaught on his Indian Mission, 1920-21, and to the Prince of Wales's visit to India and the Crown Colonies, 1921-22. He has been Lord Chamberlain of His Majesty's Household since 1922.

FOREIGN OFFICE LIST.

K.C.M.G.

Aretas, Viscount Chilston, C.M.G.—His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Vienna. Viscount Chilston, who succeeded to the Peerage last year, entered the Diplomatic Service in 1898, and has served at Constantinople, Athens, Sofia, and elsewhere. He was Diplomatic Secretary to the Secretary for Foreign Affairs for two years before going to Vienna. Educated at Eton, he was formerly a Captain in the 3rd Royal Scots.

Robert Henry Clive, C.M.G.—His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Teheran. Mr. Clive, who was born in 1877, became an Attaché in the Diplomatic Service in 1902, and Counsellor of Embassy in 1920. He has served, among other places, at Cairo and Morocco.

Charles Hubert Montgomery, C.B., C.V.O.—Assistant Under-Secretary of State, Foreign Office. Mr. Montgomery, who was born in 1876, entered the Foreign Office in 1900, and became Secretary of the Earl Marshal's Office for the Coronation of King George, 1911: Marshal of the Ceremonies, 1913-20; and Vice-Marshal of the Diplomatic Corps, 1920. He was attached to the staff of the Earl of Reading, Special Ambassador to the United States in 1918, and in 1922 was appointed an Assistant Under-Secretary of State.

C.M.G.

George Nevile Maltby Bland.—Private Secretary to the Permanent Under-Secretary of State, Foreign Office.

William Stanley Edmonds, O.B.E.—Consul-General attached, with the local rank of First Secretary, to His Majesty's Embassy in Turkey.

Arthur James Croft Huddleston, O.B.E.—Governor of the Blue Nile Province, Sudan.

COLONIAL OFFICE LIST. HONORARY G.C.M.G.

His Majesty King Faisal of Iraq.

C.M.G.

Lieut.-General Charles Henry Fortnom Cox, R.A.,
D.S.O.—Chief British Representative in Transjordan.

ORDER OF THE STAR OF INDIA.

K.C.S.I.

His Highness Maharaja Gulab Singh Bahadur, Maharaja of Rewa, Central India.

C.S.I.

Archibald Young Gipps Campbell, C.I.E., C.B.E.,
V.D., Indian Civil Service, Chief Secretary to Government, Madras.

Lieut.-Col. Stewart Blakely Agnew Patterson, C.I.E.,
Indian Army, Political Department, Agent to the Governor-General in Rajputana.

John Thomas Marten, Indian Civil Service, Member
of the Executive Council of the Governor of the Central Provinces.

Blanchford Foley, Indian Civil Service, Member of the
Board of Revenue, Bihar and Orissa.

Alexander Langley, C.I.E., Indian Civil Service, Commissioner, Lahore, Punjab.

ORDER OF THE INDIAN EMPIRE.

K.C.I.E.

William Pell Barton, C.S.I., C.I.E.—Indian Civil
Service, Political Department, Resident at Hyderabad.

C.I.E.

Howard Denning.—Indian Civil Service, Controller of
the Currency, Calcutta, Bengal.

William Browne Brander, C.B.E.—Indian Civil Service,
Chief Secretary to Government, Burma.

George Washington Hatch.—Indian Civil Service,
Commissioner, Central Division, Bombay.

Cecil Upton Wills.—Indian Civil Service, Commissioner,
Nagpur Division, Central Provinces.

Herbert Allardyce Lane.—Indian Civil Service,
Revenue and Judicial Secretary to Government, United Provinces.

Kaikhosru Sorabji Framji.—Acting Chief Engineer
and Joint Secretary to Government, Public Works Department, Bombay.

Colonel William Harry Evans, D.S.O.—Deputy Chief
Engineer, Northern Command.

George Ernest Fawcus, O.B.E. V.D.—Director of
Public Instruction, Bihar and Orissa.

Frank Armitage, Inspector-General of Police, Madras.

Trevor Claude Simpson.—Inspector-General of Police,
Bengal.

Lieut.-Col. Alexander Charles Tancock.—Indian Army,
Inspecting Officer, Frontier Corps, North-West Frontier Province.

Brevet Lieut.-Col. Henry Lawrence Haughton, 11th
Sikhs.—Commandant, Prince of Wales Royal Indian
Military College, Dehra Dun.

Lieut.-Col. Hannath Douglas Marshall, O.B.E., V.D.
—Aide-de-Camp, Commandant, Surma Valley Light
Horse, Silchar, Assam.

Henry Duncan Graves Law.—Indian Civil Service, His
Majesty's Consul at Kerman, Persian Gulf.

Rupert Willoughby Hanson.—Postmaster-General,
Madras Circle.

Hector Russell Wilkinson.—Indian Civil Service,
Private Secretary to His Excellency the Governor of
Bengal.

Lieut.-Col. John Wolfran Cornwall, M.D.—Indian
Medical Service, lately Director, Southern India Pasteur
Institute, Coonoor, India.

Rudolph David Anstead.—Director of Agriculture,
Madras.

David Miine.—Director of Agriculture, Punjab.

William Roche.—Executive Engineer, Public Works
Department, United Provinces.

Rai Biswambhar Rai Bahadur, M.B.E.—Government
Pleader, Krishnagar, Nadia District, Bengal.

Rai Tara Prasanna Mukharji Bahadur.—Pleader, Vice-
Chairman of the Burdwan District Board, Bengal.

Gopal Krishna Devadhar.—Vice-President of the
Servants of India Society, Bombay.

Chaudhri Chhaju Ram.—Of Alakhpura, Hissar District,
Punjab.

Shaikh Abdur Rahman, brother of Shaikh Said, who
was executed for his share in the Kurdish insurrection of
1925, has been captured by the Turks, who accuse him
of conspiring to start a new insurrection in the Eastern
vilayats.

Major-General Sir W. Hastings Anderson, late G.O.C.,
Baluchistan District, the Quartermaster-General-designate,
has left India for Ceylon, and is expected to arrive
in England early in February. He had just completed an
extensive tour of the North-West Frontier from Malakand
to Dera Ismail Khan, by way of Peshawar, Kohat, Bannu,
Razmak, and Jandola.

Speaking in the Bulgarian Sobranie recently, M.
Liaptcheff, Prime Minister, assured the Opposition that
the Government had no intention of negotiating for a
coalition or a concentration of parties before the General
Election. All that the Opposition could demand was the
freedom of the elections, and this he promised them.

It is officially announced in Geneva that the British
and Sudan Governments have not only approved the
decision of the Council of the League to prolong for six
months the mandate of the Commission on Sleeping Sick-
ness in Equatorial Africa which has its headquarters
at the moment at Entebbe, Uganda, but that they have
also agreed to continue their financial assistance in con-
nexion with the work of this Commission.

A memorial signed by Lord Dawson of Penn, Lord
Lee of Fareham, Viscount Grey, Lord Burnham, Sir
Oliver Lodge, Sir Alfred Mond, Sir Michael Sadler, Sir
Charles Sherrington, Sir Arthur Shipley, Mr. J. A.
Spender, and many others has been submitted to the
Viceroy expressing appreciation of the work achieved at
Sir J. C. Bose's Research Institute at Calcutta and urg-
ing the Government of India to continue to give help to

PERSONAL AND GENERAL

TO-DAY

January 6, 1927 (New Style).
 December 24, 1926 (Old Style).
 Rajab 2, 1345 A.H., of the Muslim Calendar.
 Shebat 3, 5687, of the Jewish Calendar.

The Roumanian Minister has returned to London from Paris.

Sir Milne and Lady Cheetham left Claridge's Hotel last week for Copenhagen.

Mrs. Arthur Walter left London on December 31 for Ceylon and India, and will be away till Whitsuntide.

Sir Malcolm McIlwraith arrived last week at the First Avenue Hotel, Hove, from 36, Stanhope Gardens, S.W.

The Turkish Ambassador will return to London about the middle of this month, from Turkey.

Earl and Countess Winterton are expected to arrive in England about the middle of February on their return from India.

Viscount and Viscountess Goschen last week left Mandalay, where they had been spending Christmas, on their return to Madras.

The High Commissioner for India and Lady Chatterjee will return to 131, Ashley Gardens at the end of this month, from Italy.

The Master of Elibank and the Hon. Mrs. Gideon Murray have returned to St. James's Court from the country.

Sir Herbert and Lady Samuel have taken a lease of No. 35 Porchester Terrace, W.2., which will now be their permanent address.

Sir Archibald Boyd-Carpenter left London on December 30 by the P. and O. special train to join the Razmak at Marseilles for Port Said.

Mr. F. Hedges Butler left England on December 31 by the P. and O. liner Chitral for the Sudan *en route* for Khartoum and the Blue Nile.

The christening took place on December 29, at the Parish Church, Hurst Green, of the infant daughter of Sir Edward and Lady Boyle, of 63, Queen's Gate, S.W., and Dekham, Hurst Green.

The India Society has invited Mlle. Suzanne Karpelès to lecture at 21, Cromwell Road to-day (Thursday) at 9.30 p.m., on "The Influences of Indian Civilisation in Further India." Sir Francis Younghusband will preside.

The Hon. David Lloyd, son of Lord and Lady Lloyd, arrived at Cairo last week to spend the Christmas holidays with his parents. Mrs. Malcolm Pilkington, Lord Lloyd's sister, and her two sons are also staying at the Residency.

Field-Marshal Viscount Allenby having resigned the Captaincy of Deal Castle, the Marquess of Reading has been appointed his successor by the Lord Warden of the Cinque Ports (Earl Beauchamp).

The Countess of Sefton, Lady Glanusk, and Viscount Elveden, M.P., and Viscountess Elveden left London on December 30 for Marseilles, where they embarked on the Razmak for Bombay.

M. Dimitri Stancioff, former Bulgarian Minister to the Court of St. James's, and Mme. and Mlle. Fedora Stancioff have arrived in London from Bulgaria for the winter, and are staying at 62, Courtfield Gardens, S.W. They spent Christmas with Sir Kay and Lady Muir in Northamptonshire.

Sir Arthur Churchman, M.P., and Miss Churchman left England last week for Cairo and expect to be away until the latter part of January.

NEWS IN BRIEF.

The first battalion Dorsetshire Regiment arrived last week at Bombay from Malta.

The League of Nations Information Section has published a summary of the work of the League during the year 1926.

The King has signified his approval of the Indian Capital now being built at Raisina, outside Delhi, being named New Delhi.

A Beyrout message states that the Customs agreement between Syria and Turkey, concerning which negotiations have been proceeding for several months, has been signed.

Mr. Davar, the Bombay Parsi who is endeavouring to cycle round the world, arrived recently at Lagos on his way to the Gold Coast, after crossing the Sahara desert from Algeria and having traversed Nigeria.

The Royal Free Hospital Centenary Appeal Fund has been started by a New Year's gift of £1,000 from Mr. H. M. Phipson, in memory of his late wife, Dr. Edith Pechey Phipson, one of the pioneers of the Indian Medical Service for Women.

The death occurred while tent-pegging at Arrah, India, of Captain Henry Rivett Cecil Guise, of the Indian Police, aged 43. During the War he served with the Indian Contingent on the European front, and was awarded the Military Cross and the O.B.E.. He was the son of the late Mr. Rivett Francis Guise, of the Bengal Police.

The King has approved of the award of the Royal Red Cross, First Class, to Miss Mary Wilson Campbell, late Matron, Princess Mary's Royal Air Force Nursing Service, in recognition of the exceptional devotion and competency displayed by her in the nursing and care of the sick in Air Force Hospitals at home and in Iraq.

Field-Marshal Sir Arthur Arnold Barrett, G.C.B., G.C.S.I., K.C.V.O., of Sharnbrook, Beds., formerly Commander of the Northern Army of India, who saw much active service on the North-West Frontier, and who died on October 20, 1926, aged 69, left estate of the gross value of £35,403, with net personalty £30,592. He gave his General's sword to the United Services Club, London.

A Parliamentary delegation handed the Bulgarian Sobranje's Address in reply to the Speech from the Throne to the King of Bulgaria on December 30. The King discussed the situation of the country with the political leaders, and later received at the Palace all the members of the Sobranje.

The Air Ministry regrets to announce that Flying Officer (Hon. Flight-Lieutenant) Alastair Neil MacNeal the pilot of the aircraft, and No. 362,102 L.A.C. Cyril Arthur Overy died of injuries on December 29, as the result of an accident at Ambala, India, to a Bristol Fighter of No. 28 Squadron, R.A.F., Ambala, on that day.

THE WEEK AT HOME.

London, Tuesday Morning.

The New Year.

There never has been a year, one supposes, of which the start did not promise well. We are always going to do better than we have done in the past; gone are the old enmities and rivalries which kept us back in former days; turned are our faces to the new light. And yet, and yet, the Millennium does not arrive. . . . But who, at the beginning of a new year, cares to take the long view?

Certainly for those who think in terms of mere decades the New Year of 1927 opened very auspiciously. Talk is widespread of booming trade, good will in our national industries, the inevitable prosperity which comes from non-interference with economics, and so on. All this may be quite true, and in fact, to the limited extent of the impossibility of a repetition of last year's great trade disputes, it is manifestly true. Therefore, let those who can at once take heart and cash be cheerful: the which, to do them justice, they certainly are doing.

Of the spheres of the national life which are not covered wholly by the blessed word prosperity, it is not more easy to speak than it was a year ago. The religious life, which is still, presumably, one of the land's most important assets (a presumption that will of course be vigorously disputed) is still a problem of the most baffling nature. It remained unsolved for two years though the *Daily Express* (I think it was) endeavoured to discover for its readers the ultimate truth; nor does it seem likely to be solved now that the *Morning Post* has taken in hand this amazing task. England seems to have lost her key to this particular door.

Politically, the new year seems safe enough for the Conservative Party. By-elections may, and probably will, go against it, but its majority is sufficient to stand the loss of a considerable number of seats. It was inevitable that its policy of non-intervention in the Coal Lock-out should cost it many votes, but, curiously enough, the personal popularity of its head stands; if anything, higher than it did before the great test came. Apart from Mr. Baldwin's personal influence, I should not say that anyone in the Conservative Party has had great effect on domestic politics.

The Liberals are still in the most obscure of quandaries, and many moons are likely to pass before they again see the star in the East. Nor is the Labour Party very rigidly

prepared to take over from the present Government. The amount of internal dissension in the Party has been skillfully covered up, but its existence cannot be denied. Mr. A. J. Cook, for instance, whose freedom to speak is, one thinks, yet one of the most powerful assets of the Conservative Party at the present time, has no words bad enough for the more "moderate" leaders, and they, although they know by this time how to cloak their feelings in parliamentary language, have not minced matters in their description of the sort of people who talk about revolution in England by any means, from the bomb to the ballot-box. In other words, the political situation in 1927 promises to be at least as interesting as it was in 1926.

Easton Lodge.

One of the minor effects of the failure of the Trade Unions to force their terms on the nation in the recent dispute is to be seen in the rejection by the Labour Party of the offer, made by Lady Warwick, of Easton Lodge as a centre of university teaching for working men. It is true that there are in the Labour Party many people opposed to such a scheme as this, which would, it is thought by them, make for snobbery and others things which are supposed to be the monopoly of another class. But it was, I am told, really the depletion of the Union funds which made it impossible for the Party to levy even a penny a member for the realisation of the scheme. Lady Warwick has now withdrawn her offer.

It is improbable, however, that she is the last aristocrat who will have made an offer like this to the Labour Party for the education of working men. The time will almost certainly come again when the Labour Party, in a rather better financial condition than it now enjoys, will accept such an offer. For education is a bait that very few people seem to know how to refuse. Only those people, apparently, who can lay some claim to it, or, alternatively, have to confess to its possession, are aware of how, for the purely practical purposes of the modern world, its value is grossly exaggerated. It is hardly open to debate now that, as the direction of the modern world is, those without education, at least without university education, are by no means handicapped for what is curiously but with uncommon pertinence called life's race. If, on the other hand, it be eventually realised that the real purpose of education is not practical, then the necessity to build an exclusively working men's university would seem to disappear. But this is a problem for the increasing number of aristocrats or plutocrats who are joining the Labour Party.

What is Good for Others.

There is, as I have said, considerable confusion in the minds of those who advocate education as the infallible cure for our ills. It is quite open to question whether the judgment of what is called an educated person is always to be preferred to that of the uneducated. Now it happens that a series of discussions has just been taking place at University College, London, in which this point indirectly arose.

The question at issue was "The choice of what is good for others." Authority, it was pointed out, is now everywhere challenged, and the problem was whether it was best to let people have unlimited opportunities for finding out for themselves, or whether the authorities ought to restrict and to compel. The path of freedom led to such results as could be seen to-day in the cinema; and as for educated people, there were literally thousands who prefer, say, Chaminade to Chopin. Does the best choice really depend upon education?

The Honours List.

No one often gets excited, or writes longer leading articles than they are obliged, about the modern Honours Lists: probably because so few people really care for such things nowadays. But at least it is possible to praise the New Year Honours in a negative fashion, for the list

contains the names of men and women whose main claim to recognition is not merely the performing of routine duties in the Conservative interest. Much of the work that has been recognised here is, in fact, non-political; and if all lists were like this one, there would be far less of the dark hints of corruption or its modern equivalent in which men now indulge—at least, in their conversation.

Books.

It is a remarkable fact that, despite the coal dispute, only 403 fewer books were published than in the previous year. One will surely remember this fact when one hears again the eternal plaint of the publisher that he is losing money; and the publisher is likely now to be classed with the theatrical manager, the farmer, and the other perennial sufferers. It is interesting—perhaps more interesting than instructive—to see the greatest number of books published classified respectively as Fiction, the Fine Arts, History, Science, and Technology. There was a falling off in "Juvenile," Religion, Sociology, and Biography.

But even now one is not quite sure what the public does really read. It is said by the statisticians that the public likes best Fiction, Juvenile, and Religion. But that statement would, I imagine, take considerable proving.

"Sultan after Sultan."

Another of London's snows of yester-year is soon to be melted: for the demolition fiends are at work on the Empire Theatre, which, if you please (or even if you do not), is shortly to be turned into a super-cinema, capable of holding 3,500 people. These are assuredly the signs of our modern time: once more I ask you, "Do you like them?"

An echo reaches me over the thousands of miles traversed by THE NEAR EAST AND INDIA: "Ah! For the good old Prom!"

The Sea's Encroachment.

It was, I think, in O'Neill's play "Anna Christie" that the memorable phrase occurred: "that old devil, sea"; and one is reminded of it in reading of the Bill which the Board of Trade has at last prepared for the protection of the coasts of England. The fact of coastal erosion is, of course, well known in this country, but few people seem to realise what inroads this enemy to our land has really made. In Yorkshire, from Scarborough to Spurn Head the North Sea is taking from us an average of nine feet a year; and the filching of land on such coasts as those of Norfolk and Suffolk and Sussex is very considerable.

For long it has been urged that the burden of defending the country from marine attack should be borne, not by individuals or localities, but by the country in general, for the growth of long stretches of low-lying and profitless beach—the aftermath of the sea's victory—is a matter of more than local interest and importance. There are places, of course, particularly in Suffolk, the defence of which is probably impracticable; but quite certainly much could be done to save ground from the greedy and insatiable sea.

Social Services.

It is commonly said—but with uncommon inaccuracy—that the Conservative Party is opposed to Reform. The truth is that in the spending of public moneys there is not very much to choose between Tory and Radical. It happens that the Parliamentary returns giving the totals of expenditure on public services for various years were published recently; and it is a remarkable record. In 1891 the cost of social services was 20 millions; in 1901 it was 31 millions; in 1911 it was 55 millions; and in 1925 it was 338 millions.

Now it seems to be generally agreed that, quite apart from War requirements, the cost of social services is on the up grade. That implies either the existence of a greater sense of responsibility on the part of the State to the individual, or a definite trend towards Socialism. Whether either (or both) of these things is bad I leave to

readers to determine, but it seems fairly obvious that in History the influence of Mr. Lloyd George upon social legislation will be picked out as one of the most notable features of our time. The puzzle is: Why should the Conservatives have so largely continued or adopted his point of view?

ALTER EGO.

R.A.F. APPOINTMENTS.

The following appointments in the Royal Air Force are notified:—

GENERAL DUTIES BRANCH.

Squadron-Leaders.—A. N. Gallehawk, A.F.C., to No. 14 Squadron, Palestine (December 2, 1926); J. Everidge M.C., to No. 2 Armoured Car Company and Repair Section, Palestine (December 2, 1926).

Flying Officers.—(Hon. Flight-Lt.) L. P. Winters to Headquarters, Iraq (December, 7, 1926).

STORES BRANCH.

Flight-Lieutenant.—W. Thorne to Aircraft Depot, Iraq (December 4, 1926).

MEDICAL BRANCH.

Flight-Lieutenant.—B. F. Haythornwaite, M.B., B.A., to Basrah Combined Hospital, Iraq (December 4, 1926).

CHAPLAINS BRANCH.

The Rev. W. P. Hughes to R.A.F. Depot, Egypt (November 23, 1926).

The death is announced from Patna of Mr. H. F. E. B. Foster, Additional Judge, High Court, Patna, of heart failure.

Miss Gertrude Margaret Lowthian Bell, C.B.E., F.R.G.S., Rounton Grange, Northallerton, formerly Liaison Officer of the Arab Bureau in Iraq, afterwards Assistant Political Officer at Baghdad, and latterly Oriental Secretary to the High Commissioner for Iraq, left unsettled property in her own disposition of the gross value of £25,604, with net personality £19,535. Miss Bell gave £6,000 to the British School of Archaeology in Iraq, upon trust for investment, and to apply the income in archaeological work in Iraq; but if this school should not have been founded at her death, the bequest is to revert to the British Museum upon trust for similar purposes. She left a selection of her books to the said school.

Book Reviews

OSMAN DIGNA.

"OSMAN DIGNA." By H. C. Jackson With a Preface by General Sir Reginald Wingate. (London: Methuen and Co. 12s. 6d. net.)

This is an extraordinarily timely publication, the coincidence of its issue with the death of its subject being notable. Unhappily, however, Mr. Jackson's work suffers from having been written at intervals, over a long period, and it is too diffuse and disconnected, and in places discrepant. It is indeed unfortunate that the author, having taken so long to compile the book, did not find time to revise it, shorten it, and omit from it some of the excrescences which bear little relation to the story he is telling, and which serve only to irritate the reader.

At the same time there is much in the book that is good. The author has been at great pains to consult his authorities and has included much information that is new, particularly that obtained from Mohammed Bey Ahmed, formerly Commandant of the Suakin Police, and other native sources.

Mr. Jackson has drawn a convincing picture of the corruption, cowardice, and futility of the Turco-Egyptian Government, and the mistaken and hesitating policy of the British Government to which the success of the Mahdi and Osman Digna, his chief lieutenant in the Eastern Sudan, was so largely due. He also brings out clearly the difficulties with which Osman Digna had to contend in keeping together his following among the scattered unenthusiastic and independence-loving Beja tribes of the Red Sea littoral.

Altogether the book is a valuable addition to our knowledge of the period of Osman Digna's prominence from 1883 to 1898.

NON-OFFICIAL LEGISLATORS.

"EUROPEAN NON-OFFICIALS IN THE INDIAN LEGISLATURE." By Edwin Howard. (Pioneer Press. Allahabad.)

It is explained, in the Introduction, that this little book is a "chronicle of the efforts contributed by British members of the Legislative Assembly towards establishing a responsible Government for India": efforts of which it is certainly very desirable that an account should be put on record. For, as Sir Hubert Carr, the writer of the Introduction, goes on to say, "politics have no attraction for the average British civil population in India where, until the advent of the Reforms, they could leave their political interests to be safeguarded by Government; but members of the British community have awakened to the fact that India will be increasingly governed by Indians and, on the double score of self-interest and friendship, they are not going to be left out of the new order, but are ready to assist." One cannot help thinking that the very real and important assistance, that has been given by British non-official members of the Legislatures, might have been more adequately presented if the writer of the brochure had cast it in narrative form, bringing out the points that he considered specially worthy of emphasis, rather than in the form of a scissors-and-paste collection of verbatim extracts from speeches—which, as he remarks, if not remarkable for their eloquence, were at least packed with commonsense, good feeling and frankness. One may also be excused for thinking that, on another score, the British non-official members have not been too fortunate in their author, whose English is not infrequently slipshod; as, for instance, when he speaks of "abundantly disproving the fallacy of the view that the Reforms were unreal and unsubstantial"; or when, in apologising for being unable to find enough matter for his scissors in the debates of the Council of State—the Upper House of the Central Legislature of India—he says that "a recital of the doings of the Europeans in the Council of State cannot be interwoven with their col-

leagues' performances in the Legislative Assembly." But it may be hoped that those who read the book in its present form will "see the truth between," and will find it of sufficient interest to justify the appearance of a second edition, cast in a more attractive form; for it is undeniable that the British non-official members have done most valuable work, with little public recognition, and have given a fine example to those who will follow them. As the author puts it, "their community has reason to be grateful to the little band of men who thus manfully sailed an uncharted sea and kept the ship steady on her course."

THE PROBLEM OF AUSTRIA.

"THE SOCIAL REVOLUTION IN AUSTRIA." By C. A. Macartney (Cambridge University Press. 8s. 6d. net.)

This is quite the most important work on present-day Austria which has been given to the world, and we think it hardly probable that Mr. Macartney's achievement will be surpassed. In fewer than 300 pages he gives us an outline of the steps leading from the general position of centre of affairs under the Habsburg Empire to that of a small group of mountain lands, evenly balanced against a huge world-city. Few desired the birth of this little new State and few either hoped for or anticipated its survival as an independent unit. Its infancy has been attended by maladies of every kind, but it has so far survived, is convalescent, and Mr. Macartney cheers us with the hope that it has a useful and healthy life in prospect.

Although THE NEAR EAST AND INDIA does not profess to follow the intricacies of Austrian republican politics, its readers are well aware how closely Austrian affairs impinge on those of the Near East. It is, therefore, of the first importance that students of Near Eastern countries should make themselves thoroughly acquainted with the circumstances and the currents of thought (political and otherwise) prevailing in Austria. This book is their opportunity. Ably planned and impartial, the fruit of years of personal study on the spot, well and entertainingly written (with more than a touch of Viennese quietly ironical wit), it presents a picture of Republican Austria which is of the greatest interest. It will also be of permanent value.

C. S-W.

THE PERFECT HERO.

"AT GOVERNMENT HOUSE." By Arden Beaman. (London: Mill and Boon. 7s. 6d. net.)

"Being some incidents in the career of Captain and Brevet-Major the Hon. Rollo Dennistoun, V.C., M.C., during his office as Military Secretary to His Excellency the Governor of Mahdipur." There are fourteen of Rollie Dennistoun's exploits in all, and in each of them he shows a genius for spotting a villain and unravelling a plot, and in each he behaves with the most perfect coolness and courage. They are told by his friend Jumbo Carstairs, who commands the Mahdipur Bodyguard. He is as brave as Rollie and occasionally resourceful, but generally he acts as Watson to his friend's Holmes.

It is an achievement to have made Rollie human and extremely likeable and at the same time to make us believe such statements as "there is a sort of glamour about Rollie, a strange splendour in his presence, an overmastering power in his eye which other men have not." Major Beaman's plots are thrilling and the background, though purposely highly coloured, is fairly convincing. The reader will go on from one episode to the next, eager to see what fresh ingenuity the author has devised and with a lively expectation of enjoying Rollie's nonchalance and gallantry.

J. B. Ainslie.

EUROPEANS AND THE REFORMS.

The European Association held its fourth annual conference at Cawnpore on December 4, when two political resolutions of special importance were discussed and passed. The first of these was: "This Conference is of opinion that the time has come when the Council of the European Association should investigate the possibility of formulating a definite policy for the future political development of India on lines of co-operation with the leaders of Indian opinion who have a real stake in the country and who are anxious to see India progress as an integral part of the British Empire, with a stable Government suited to the traditions of the people of India." The second: "This Conference favours the exclusion, from the Statutory Commission to be appointed under the Government of India Act, of past or present members of official or non-official communities in India; but it is strongly of opinion that the Council of the European Association should press for the inclusion of a member of the non-official British community, should any communal representative be appointed on the Commission."

The mover of the first of these two resolutions made it clear that the British non-official community recognises that there can be no return to the old system of a paternal autocracy; that India has been started on the path of democracy and that the only practical question is, the method on which she shall proceed on that path. He held that, while the parliamentary system of government must be developed, its development must begin in the Provinces, and by the evolution there of "a stable and intelligent electorate." As for the Imperial Indian Parliament of the present, he considered that this ought properly to be confined to "an enlarged Council of State, composed of representatives from every Indian Province and State"—the existing popular body, the Legislative Assembly, being abolished altogether. In favour of this radical alteration he stated the plain fact that the traditional form of Indian government is autocratic, and that it is only proper that the Central Government should remain so in appearance as well as in fact. At present, the "popular" Legislative Assembly is only apparently a parliamentary body; for, though elected on a popular basis, its duties are, in fact, only advisory—the Government of India is in no way bound by its decisions, though naturally desirous of treating them with respect, whenever it is possible for it to do so. The result of the superficial resemblance of the Legislative Assembly to a House of Commons is that the Council of State has, in public opinion, become something less important than any Upper House ought to be; and it is probably true that it can be rehabilitated only by the abolition of its rival. This is a very drastic proposal, but one for which there is a great deal to be said: as the mover of the resolution pointed out, such a Central "House of Parliament" would really speak with authority, and its opinion would carry the greatest possible weight with the Executive Government. As for the Provinces, where the real attempt to introduce parliamentary government ought to be made,

it is admitted by all dispassionate observers that the existing electorate has failed completely, on three successive occasions, to justify its possession of the vote; but it is reasonable to think that one cause of this is that the electors are expected to vote on matters that are too high for them, and it is not unlikely that, if it were possible, by some recasting of method, to allow a wide franchise for local "electoral colleges," much better practical results might be obtained without any restriction of the total number of persons entitled to the suffrage. Indeed, if some such scheme were introduced the number of primary voters might even be considerably increased. The discussion on the resolution is very inadequately reported by the leading Anglo-Indian newspapers; all that they say is, that several members of the Conference "sympathised with its underlying idea." But it does seem that the British non-officials have seriously decided to make their opinions heard, in regard to the future political form of India's government: and this is a great step in advance. It has been quite truly pointed out that the British non-official community is specially well adapted to take a comprehensive and impartial view, as it is at once free from communal prejudices and from pre-conceived ideas; and that it should now have openly recognised this fact itself is an important step towards impressing it upon others—one that should be followed by the best results.

The second resolution suggests that the British non-official community has been impressed with the probable correctness of the forecast, referred to in last week's issue of *THE NEAR EAST AND INDIA*, that the personnel of the Statutory Commission will be decided in the course of the next few months, preparatory to a commencement of work in the autumn. It is, one fears, a counsel of perfection to urge a demand for a completely "impartial" Commission, though it is quite correctly pointed out that the idea in the Government of India Act is that the Statutory Commission shall be exclusively a Parliamentary body, and that its duty shall be to report its own conclusions, as such, to Parliament. The *Englishman* argues that, as India's goal is Dominion status, the "proconsular talent" to be found in both Houses of Parliament should be drawn upon for the Commission; but, if this suggestion were followed, it would mean that the House of Lords would be unduly represented, even if all those of its members who had had Indian gubernatorial experience were rigidly excluded: the paper suggests Lord Jellicoe, Byng and Buxton as a suitable nucleus. Among the members of the House of Commons, there are a number who can claim Indian experience, thought not, perhaps, "proconsular" experience; but one would certainly be pleased to see all of them set on one side, and an attempt made to confine the personnel of the Commission to men of outside authority. The inclusion of Indians, however distinguished, would certainly mean—as a correspondent of the *Englishman* points out—the condemnation of some as "creatures of Government" and the irresistible temptation to others to write minority reports. The inclusion of British-Indian officials or ex-officials would, with equal certainty, achieve

the first of these results, though doubtless not the second. The European Association's resolution is, therefore, a self-denying one, on conditions: the Association hopes that the Commission will consist solely of persons of outside authority, altogether unconnected with India. If this is not possible, it hopes that the members will be entirely British and will not include any who are or have been officials of the Government of India. Only if this too is impossible, and it is considered necessary to include "past or present members of official or non-official communities in India," whether Indian or British, does the Association demand that it also shall be represented. One can think of a number of members of the British non-official community whom one would like to see on the Commission, where one believes that their work would be most valuable; but one can heartily echo the Association's hope that the need for the enlistment of their services will not arise.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 16.

The Viceroy's Visit.

His Excellency Lord Irwin, Viceroy and Governor-General of India, duly arrived in Calcutta on Friday last, and the novel arrangement for him to drive through the Indian portion of the city in journeying from the station to Government House turned out to be a complete success. The writer went out an hour before the arrival and walked a mile along the portions of the route through the area of the communal riots and thence through the most densely populated section of the city, finally to see the procession itself at what has become to be regarded as the centre of the danger points in the city. Although the route was effectively guarded and there were plenty of what *Forward* calls "bright bayonets gleaming on the sun," the fact remains that the crowd ran into tens of thousands and at times it was almost impossible to pass. The middle-class Hindu element was sparsely represented, but they were not missed. The usual silence, the greatest sign of respect in an Indian crowd, was broken by bursts of hand-clapping at a number of points—a strange mixture of East and West—and the writer was particularly struck with the fact that in a number of temples conch shells were being blown and prayers being offered for His Excellency as he drove by. The procession itself was perfectly done and it was a brilliant show. Reviewing the whole in a word, it was encouraging.

The Attitude of the Corporation.

The Government declared a holiday for the day, which, of course, would have enabled the Indian staffs of European firms to watch the procession, if they felt so inclined; if they were there, however, they were not conspicuous. The Corporation, with the distorted outlook on events which prevented it from exercising the customary courtesy of presenting an address of welcome, declined to close its offices, and in addition some one had thought fit to placard the route with posters seeking to explain the Corporation's action. With the triple crown on the head of the Mayor, the Corporation itself must accept the responsibility of this childish waste of money. Neither these posters, nor those showing Mr. S. C. Bose behind some black lines supposed to represent prison bars, attracted the slightest notice so far as the writer could see. The effect of the S. C. Bose poster, however, on the recent elections was remarkable, and had there been no general desire to watch the procession, it might easily have done much to interfere with the attitude of the public. A level-headed and honest moderate Indian remarked during the elections that the poster had so appealed to his heart that he must vote for the innocent behind the bars of steel, even though he fully realised that this meant the non-representation of North Calcutta on the Councils. This is the kind of the thing that sways the Indian electors.

The Political Fog.

The present political situation does not become any clearer with the approach of the Congress which is being held at the beginning of the new year. Mrs. C. R. Das has declined to accept the Presidency of the Bengal Provincial Council and Mr. J. M. Sen-Gupta has reiterated his refusal to take office for another year. All parties hesitate to commit themselves as to what is going to happen in the new Councils, and the most active canvassing is taking place between the various groups who will be sitting in them. Up to the present the only clear result has been the consolidation of the largest section of the Moslem Party, but an attempt to combine all Moslems as such in the Council has failed. It is once again the old story of personal jealousy. Extremist ideas in regard to the 1929 Commission have been rudely shaken by the suggestion of the President of the European Association that its earlier appointment would be welcomed, as the members would immediately appreciate in good time the complete failure of the Reforms Scheme. In both extremist and moderate organs there are guarded references to the possibility that a trial might be given to self-government on indigenous principles, that is through the village councils and working up from there through district boards to the central legislative bodies. Strenuous efforts would be made in such a case to capture the machinery, but the task of a lawyer politician would be a very difficult one in such circumstances. It will be interesting to see how far this idea will be developed in the next few weeks.

Europeans at Dinner.

The Annual Dinner at the European Association has come to be looked upon very much as a kind of Lord Mayor's Banquet, and the company which assembled at the Saturday Club on Tuesday was a brilliant one. Mr. John Langford James, the President for the year, proposed the Viceroy's health in a speech which reflected his own views very frankly, and although it may appeal to many, it has given ample material for pungent comments in all sections of the Indian Press. The Viceroy in reply touched on little more than one sentence in the speech, when he invited the European Association not to join the ranks of the communal disputants. His Excellency's speech was as plain spoken as the proposer's, but he struck an entirely different note; he said that the Reforms experiment had been made, because no nation with the history and traditions of the British could do anything else than make it, and he called upon every European to remember this fact. Lord Irwin's first appearance in Calcutta has fully borne out the reports that we are to be governed for the next five years by an English gentleman of high character and liberal traditions.

Men and Things.

The rupee agitation still continues, and Sir Basil Blackett's last speech attributes the present weakening of exchange to this fact. He says that traders are, in fact, speculating on the result of the agitation, and consequently the natural levels have been disturbed; the sooner the matter is settled the better it will be for both sides.

Major-General Ward, our G.O.C., has been addressing the Rotary Club and regretting the disappointing results to date of the Reserve of Officers scheme. It would rather look as if the nominal leaders of local European opinion have misled the military authorities; very definite doubts exist in many minds as to the soundness of a scheme which relies upon an immediate withdrawal of a substantial proportion of the civil population from their normal work before mobilization can take place. Civil staffs in India do not as a rule carry any spares, and possibly some of the representatives of the larger and more wealthy corporations are apt to overlook the point of view of the small firms to whom money does not flow in quite so easily.

Full reports have been cabled out of Lord Inchcape's speech at the annual meeting of the P. and O. Company.

His remarks in regard to the probable increase of fares are about as welcome here as his suggestions, that the passengers steal the Company's linen at the end of the voyage.

Toc H's lamp for India was duly lighted at St. Paul's Cathedral last night at a most impressive service perfectly conducted by Padre Cyril Pearson; he has just returned from Home, and Calcutta is fortunate in being able to attract such a man from the preferment which would undoubtedly be his at Home for the asking.

Lady Tegart, the wife of our popular Police Commissioner, had a bad fall at the first paperchase last week. It is good to learn that she is progressing favourably and that no permanent damage is likely to result.

The New Woman is said to have arrived in Bengal and is the subject of many self-revealing letters in the Press; obviously many Indian husbands are scared by the fact that the Indian woman is beginning to think.

The Trivial Round.

The December Meeting was continued last Saturday, when there was a complete change from the previous week, as in most races the favourites won. The weather was rather unseasonably warm, but this did not interfere with the display of dresses which are obviously going to be as brilliant this year as they are brief.

The M.C.C. are now working their way across India, having finished up in Bombay by giving the Presidency an innings beating. The local games at the week-end produced exciting finishes, the European Schools beating the Anglo-Indian Schools at Ballygunge close on time, while at the Eden Gardens, where the Bengal Gymkhana sportingly declared at 8 wickets for 190, Calcutta knocked up the runs in two hours, a four off the last ball giving a victory by one run. This is cricket.

The Mannequin Parade duly came off at Mrs. Arthur Page's, when the house was uncomfortably crowded and many saw but little of the dresses. There should be much money from the gate, but one hears the sales were few, and in comparatively small societies such as ours this is not to be wondered at.

The paperchasing season has begun, and Captain W. Leatham won the opening meeting in good time; the thrusters are keener than ever this year.

The Army Polo team has started practice in Calcutta, and it looks as if the principal difficulty will be to find teams strong enough to extend them. They will be a tough crowd when their ponies have settled down.

The South Calcutta Tennis Tournament has produced first-class play, and, as usual, the Japanese are showing up strongly, as the finals approach.

The Quaints have finished a most successful season at the Empire, and we now have the Stravinsky Dancers, a Russian Company which is putting up a mixture of classical and modern ballets; their show is excellent.

The first singing festival of the European Schools took place on Saturday last, when 350 children gave a fascinating afternoon to those fortunate enough to hear them. Mr. de Bois Shrosbree, the conductor of the Symphony Orchestra, was doing the same for them, and the happiness on the stage infected the audience to such an extent that in the carols at the end the whole house became a single choir; it was a delightful experience.

The Symphony Orchestra held its second concert on Sunday, and concluded with the César Franck Symphony in D. Minor; the house was crowded and the reception of the work at the end was, considering that it was new to most of the audience, astonishing. The Calcutta Symphony Orchestra has passed far beyond the experimental stage, and M. Sandre and the School of Music must be delighted with the result of many years of persistence and hard work.

Markets.

Jute has remained very steady during the week under review, and any small drop in price has at once attracted buyers and brought prices back to previous levels. Inquiry for gunnies has strengthened considerably, with rates exceeding those of a week ago, and having

every appearance of going higher. Speculation in this market is on the increase, especially for the forward positions for which business has been done as far ahead as for the end of 1927. The better tendency in the piece-goods market apparent last week has not been maintained, and the volume of business transacted has fallen considerably short of that anticipated; there have been a few small failures in the local market.

Tea prices at the sale here showed an easier tendency all round in sympathy with the London market on the previous day; the second sale, however, displayed a better tone, and the opinion here is that, so far as Calcutta sales are concerned, prices are unlikely to fall. With regard to outturn, November produced an excess of about six million pounds over that of the same month last year, bringing the total increase up to about 32 million pounds. In December last, however, the crop amounted to 7½ million pounds, as against nil for this month on account of plucking having ceased from the 20th of last month; the position in regard to the whole year is that the crop is between 24 and 25 million pounds in excess of that of last year.

On the Stock Exchange, very few deals have been transacted in Government Securities, and prices have remained quothably unchanged, with the exception of 3½ per cent Paper and the New Loan which both show increases on heavy buying orders from Bombay; jutes have gone further ahead, and a number of the most popular scrip are difficult to pick up at the moment. Coals, rubbers and tins have shown a downward tendency, especially the first-named which are now almost back to previous levels. Rubber shares are lower all round, mostly on excessive speculation on the part of the operators, who expected a reaction as soon as the reduction of 80 per cent. of standard came into force.

The Exchange market has been neglected, and rates have remained stationary. Money has been in slightly better demand and Call money may be quoted at 1 per cent.

THE GOVERNORSHIP OF BURMA.

The Rangoon correspondent of the *Statesman* says that it is generally believed that the present Governor, Sir Harcourt Butler, is likely to be appointed to the India Council early next year; and adds that his probable successor will be Sir Frederick Whyte, the late President of the Legislative Assembly. Burma, says the correspondent, is individual in her interests, is racially homogeneous, her national patriotism is intact, and her potential wealth is far greater than that of any other Province of the Indian Empire. The Burmese people profess a different religion, speak a different language, acknowledge a separate history and have descended from an anthropological division distinct from that of India; so it is not surprising that her needs should be different. What is

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and introduce them (if disengaged) to families about to travel to the East.

surprising is that, after the enumeration of this catalogue, the correspondent should press the claims of Sir Frederick Whyte "not only because of his deep knowledge of Indian affairs as President of the Legislative Assembly, but also because of his dignified and impartial outlook on the racial and political kaleidoscope of India." Perhaps recognising some flaw in this argument, the correspondent is careful to add that in Sir Frederick Whyte the Burmese recognise a man of calm and impartial judgment, unlikely to be predisposed by any impressions he may have formed in India as to the peculiar claims of Burma. Commenting on this letter, the *Englishman* expresses the opinion that "to put it bluntly, the appointment of Sir Frederick Whyte would be a scandalous piece of jobbery, such as we hesitate to believe the Secretary of State would commit."

This opinion is not expressed in any spirit of personal antagonism to Sir Frederick Whyte, but in the interests of the Indian Civil Service, to whom the appointment of any outsider would, the paper considers, be a slap in the face. The baton that the Indian Civilian has always carried in his knapsack has been the Governorship of a Province; and, though his legitimate ambitions have been reduced by the transfer of Bengal from a "civilian" to a "political" Governorship, it is but fair to remember that they have been increased by the erection, into Governorships, of the Chief Commissionerships of the Central Provinces and Assam, so that the I.C.S. are still one up on the deal. When discussing the outlook regarding Indian Governorships consequent on the almost simultaneous termination of a number of terms during 1927, one expressed the opinion, a few months ago, that the United Provinces would probably become a "political" Governorship when the present incumbent left. A valued and very highly qualified friend wrote to say that he thought this forecast was wrong: and that, if any of the Provinces of India should receive an "outside" Governor, it would almost certainly be Burma. The reasons for this belief, though not stated by one's correspondent, are pretty obvious: that the future of Burma is quite manifestly destined to be separate from that of India, and that, for a good many years past, no Burma Civilian has been thought worthy to be head of his own Province; which, by thus becoming accustomed to the appointment of outside Civilians, may be expected complacently to receive an outside politician. The only valid argument against such a change lies in the fact that the salary of the Governor of the United Provinces is that of a "political" Governor—Rs.120,000: while that of Burma remains at the "civilian" figure of Rs.100,000: and, if it is intended to make Burma a political Governorship, it will become practically necessary to raise the emoluments accordingly, while the Civilian Governor of the United Provinces retains an indefensible advantage over his Civilian brother of the Punjab.

If, then, one agrees with the *Englishman* in championing the claims of the Indian Civil Service to the Governorship of Burma, one would be inclined to go a step further, and champion those of the Burma Civilians to the Governorship of their own Province: and, if one agrees that a political appointment is desirable, one would suggest that Burma is likely to be better served by one who has no Indian bias—not even such a "deep knowledge of Indian affairs" as may be attributed, by a log-rolling campaign that failed a few months ago but has now bobbed up again, to a temporary official who has gained it through his association with politically-minded Indians in the Legislative Assembly at Simla and Delhi.

INDIAN MAIL.

The General Election.

When the last mail left India, the general election was not yet complete, though nearly so; but, except in the cases of Bengal and Madras, it has not been easy to discover what the political prospects are in the various

Provinces. The result appears to have been, in general, to leave things very much as they were before; with the Swarajists still the only disciplined party, their rivals mostly suffering from the familiar complaint of having too many generals and too few privates. The search for exact figures is hampered by two considerations: the first being that it is not at all unusual for an Indian legislator, elected under one ticket, to take his seat under a different one: the second, that the leading Anglo-Indian newspapers which produce a weekly mail edition seem to discriminate, in their presentment of news, in favour of those English readers who take but a superficial interest in matters Indian. Last mail week, for instance, saw two very important conferences at Cawnpore, in the United Provinces—those of the European Association and of the Associated Chambers of Commerce of India and Ceylon. Yet the leading English newspaper of the Province devoted considerably more space to a report of the Viceroy's speech to the latter than to the whole of their own very important discussions; and its account of the proceedings of the former is contained in $2\frac{1}{2}$ columns of print, while that of the speech, with which the Finance Member favoured the conference, occupies $6\frac{1}{2}$ columns. Those observers in England who realise the great and growing importance of the British non-official community in India would welcome a full statement of the opinions of its members on occasions such as these; but would be content with a brief résumé of official pronouncements: and it is hard to resist a feeling of exasperation when one finds that the contrary is the case. In the matter of the elections, the position is somewhat similar: one finds plenty of pronouncements by leading Indian politicians, which are of the smallest possible interest to the earnest student in England; but a conspicuous dearth of facts on which he might be able to base an opinion of his own.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

The New Year Honours.

As usual under the present Administration the New Year Honours List is somewhat brief. It includes, however, a number of noteworthy awards, among them several of special interest to the world of commerce. The barony conferred on Sir Charles Greenway, Bart., Chairman of the Anglo-Persian Oil Company, who recently announced his prospective retirement from that position and who is to take the newly-created office of President of the Company, is the outstanding feature in the list. Sir Charles Greenway has been privileged to control the destinies of the Anglo-Persian Oil Company through a long and important period, and the proud position reached by the Company under his Chairmanship makes this a thoroughly well deserved honour. Among the other honours mention may be made of the knight-hoods conferred upon Mr. D. T. Chadwick, C.S.I., C.I.E., lately Secretary to the Government of India in the Commerce Department, Mr. N. M. Murray, Managing Governor of the Imperial Bank of India, and Mr. A. J. Law.

British Finance.

In view of the position as revealed in the latest figures it is impossible for anyone to look forward with any confidence to the closing of the financial year. It may be taken for granted that there will be a deficit, and the only point of interest lies in the extent to which the final figures will fail to come up to the estimates. If the gap is large, increased taxation in the coming Budget is assured; probably it is in any case, for it must be remembered that the real incidence of the industrial strife of 1926 will only be reflected in the company returns in the coming twelve months, and the Chancellor will have to budget for a marked decline in the yield of the income tax on the present basis. Admittedly the position is not happy, and from Mr. Churchill's point of view it is rendered more difficult by the fact that all the ordinary resources of taxation have been exploited to the fullest extent. It is clearly impossible to increase the income tax, and the alternative is to find new sources of taxation, and that is easier said than done. The tragedy of the situation is that it is imperative that commerce and industry should receive a remission of taxation to further the revival of trade. That, of course, is out of the question, though it is just barely possible that the Chancellor, relying on the improvement of conditions, might decide to adhere to the *status quo*. That, while it would be a great relief, is such an improbable contingency that it may be almost dismissed out of the reckoning.

The New 4 Per Cent. Loan.

The terms of the new Government Loan will no doubt be the subject of detailed comment elsewhere in these columns, and I shall only refer briefly to it here. During

the War Great Britain found it possible to raise money at 5 per cent., but now, roughly eight years after the Armistice, the rate necessary to attract new loans is 4 per cent. for a loan issued at 82, which means in plain English that the rate for money is now a shade over £4 14s. per cent. That does not reveal any startling advance since the War, but of course the truth of the matter is that conditions here have been such that the country has literally not had a chance to recover. If there had been a total freedom from industrial disturbances it is unthinkable that the position now would be such as to necessitate the offer of such terms for a new loan. Briefly the terms are the repercussion of the events of the past. There is no getting away from the fact that we are now paying for the follies of our industrial situation. The other point to which I wish to refer is the usual provision with regard to a sinking fund. At the time of writing it is impossible even remotely to estimate the amount of new money that will be forthcoming, but it would seem *prima facie* that the allocation of a sinking fund of £10,000,000 a year for the first ten years is distinctly on the side of generosity. There is a further point that is not clear. Is the sinking fund to be an additional sinking fund, and, if so, where is the money to come from?

The Trade Outlook.

It is quite refreshing to turn from the somewhat depressing scene of State finance to the gradual revival of British industry and commerce. I am not sure, indeed, if gradual is quite the right word; if it is so now it will not be for long, for in practically every industry throughout the land there are now signs of activity which herald something approaching a trade boom. In the last week or two our readers will have noticed references to the increasing number of contracts coming to our firms for the Near and Middle East and India, and in the current issue quite a large number of contracts are recorded. These orders are only symptomatic of the development of trade which was bound to follow the conclusion of the disastrous coal dispute. Given a year or so of industrial peace, the position of this country will be radically

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

altered. In a very few weeks now we shall have the opening of the British Industries Fair at the White City and at Birmingham, and the demand for space at these sections and the encouraging reports with regard to the probable attendance of buyers from overseas are alike indications of a belief in a pending improvement in the world trade outlook. It is eminently satisfactory to know that the Near East is taking a special interest in the Fair, and that Greece, to name only one country, will be well represented among the buyers. It is not unnatural to attach special importance to the attendance of representatives from the Balkans, as that is an outlet to which we must look for trade and where the competition is certain to be particularly severe. The Fair, it may be hoped, will herald the commencement of a period of greater enterprise on the part of our traders in the Near East and other markets where in the past we have occupied a back place.

The Near East Market.

A supplement to *Lloyd's List* contains a comprehensive review of world trade last year by Sir Max Muspratt, Bart., President of the Federation of British Industries and Chairman of the United Alkali Company. With his general remarks I am not concerned, but he devotes a good deal of attention to the Near Eastern market, and what he has to say calls for a little comment. It is rather surprising to find this outlet referred to as "an appanage of the British exporter" before the War. The position varied, of course, in the different countries, but except for

cotton goods the incidence of foreign competition was very much felt by our traders in most of the outlets. Of the past year Sir Max Muspratt has little that is encouraging to say. As he points out, trade with the Near East has been quiet, while in the Balkans commerce "has been in a very depressed state throughout the year, owing to the straitened finances of the peasants, due largely to the high cost of living and to the difficulty of finding remunerative export outlets for their products." The export question is, of course, the great problem which the Balkan countries have to solve, and the surest way to arrive at that end is to establish a reputation among the world trading circles.

Diala Cotton Plantations.

Full details with regard to the proposed changes in respect of this company have already appeared in these columns, and the meeting (a report of which will be found in another column), at which the proposals were unanimously approved, does not therefore call for extended comment. Sir Edward Manville, the Chairman, dealing in detail with the proposals, mentioned that the members of the small committee of shareholders nominated at the extraordinary general meeting of March 31 last to assist the Board in deciding the course to be adopted, found themselves unable to spare the time to act. Colonel Stanley, a director of Eastern Irrigations, Ltd., was subsequently approached by the Board, and he held protracted negotiations in Baghdad with the representatives of the Government of Iraq. Three or four alternative proposals

were examined, and it was ultimately decided that the Latifiyah project gave greater prospect of restoring the fortunes of the company. The estate is on the Euphrates, and there is no question about an adequate supply of water. Further, it was pointed out, the estate is of a character which would permit crops of many descriptions to be grown.

The Rubber Market in 1927.

It would be surprising if those who are interested in rubber were not looking forward with considerable satisfaction to the approaching months. Two months ago the rubber quota was reduced by 20 per cent., and on February 1 there will be a further reduction to 70 per cent. if the price of the commodity for the quarter has not averaged 1s. 9d. per lb. How likely this is to happen can be judged from the fact that the average for November and December was only fractionally over 1s. 7d. We have therefore the position that for this the last month of the quarter the price must be in the neighbourhood of 2s. per lb. It is not impossible that this should be so if America at last decides to enter the market extensively as a buyer, but I think we may take it for granted that 70 per cent. will be the figure on February 1. If that happens it will mean that from that time onwards we shall see rapid inroads being made in the large London stocks of rubber, and it will not be long before we are again at a period of rapidly rising prices with its consequent effect on the share market. It is small wonder that a lively interest is being taken in the situation.

COMMENTATOR.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lombury, London, E.C.2

NEWS FROM ALL SOURCES.

Mohammed Fehmy Aly, who was found guilty of the murder of the Sirdar, Sir Lee Stack, was hanged in Cairo on December 30.

The will of Major Harold Alexander Ravenshaw (late Bengal Staff Corps) (69), of Broomrigg, Parkstone, Dorset (net personalty £48,189) has been proved at £50,771.

The King has approved the appointment of Mr. W. A. C. Goodchild, an Assistant Secretary in the Scottish Office, as British Secretary and Assistant Delegate to the Reparations Commission, in place of Sir Basil Kamball-Cook, K.C.M.G., C.B., who has resigned.

The death is announced of Major-General Sir Reginald Thomas Thynne, K.C.B., at the age of 84. Born in 1843, Sir Reginald served during the Zulu War (1879), in Egypt and the Sudan, for which he received the medal, the order of the Osmanieh, and the Khedive's Star.

The contract with the British Naval Mission has been initialled in Athens. The contract begins on March 15, and lasts for two years unless either party desires an earlier termination. British officers may not assist Greece in case of war. The Mission consists of Captain Turle and four other officers.

It is estimated that the area under tobacco in Palestine in the current year amounted to 8,971 dunums as compared with 11,676 dunums in 1925; 7,301 dunums were planted with Turkish tobacco, 1,184 dunums with Bafadi tobacco, and the remainder with tobacc and Heisheh tobacco. The yield of the 1926 crop is estimated at 555 tons.

The cereal crop in Bulgaria this year gave a total yield of 25.42 millions of centals, against 29.06 million centals last year. The decline is partly to be attributed to the smaller area under cultivation, but it mainly due to the wet weather during the summer. The yield of wheat was only 11.11 million centals, against 13.51 centals a years ago; while that of maize was 7.37 million centals, against 7.15 million centals.

The seaplane Pelican, which was to have opened the Khartoum-Kisumu air service last week, met with an accident while undergoing an engine test on the Blue Nile at Khartoum. Examination showed that the bow port float was stove in and ripped open. It is presumed that the seaplane struck some submerged object. The damage done necessitates new parts being obtained from England.

We much regret to announce the death, in his fifty-fourth year, of Mr. S. M. Edwardes. He was an eminent Orientalist and criminologist. Particularly upon Western India was he an authority. Ill-health necessitated his retirement from service in India in 1916, but his interest in India and in crime never flagged. He was first Secretary of the Indo-British Association, and last summer was selected to succeed Miss Ella Sykes as Secretary of the Royal Asiatic Society.

Major and Bt. Lt.-Col. H. W. McCall, C.M.G., D.S.O., has been promoted to command the 1st Battalion of the Green Howards, in the place of Lt.-Col. M. D. Carey, whose tenure of command expired on December 31. Brevet Lt.-Col. Hugh W. McCall was associated with the 60th Division when it formed part of the central force for home defence and he remained on its staff when that formation went to France and Salonika. In Egypt he was on the staff at Alexandria and also with the 3rd Division of the Egyptian Expeditionary Force, and received the Order of the Nile and the Legion of Honour. He is the senior major of the Green Howards and thus the batalion command remains within the regiment.

Yugoslav Supplement

(Continued from page 765)

YUGOSLAVIA'S FOREIGN TRADE.

I.—Trade Balance.

Yugoslav imports during the third quarter of 1926 amounted to 329,938 tons, valued at 172,220,460 dinars (gold). The total foreign trade during the first nine months of 1926 amounted to 1,026,626,730 dinars (gold), as compared with 1,067,183,405 dinars (gold) in 1925, imports accounting for 517,374,498 dinars as compared with 585,748,303 dinars in 1925, and exports 509,252,232 dinars, as compared with 581,435,102 dinars in 1925.

II.—Chief Articles of Import and Export.

During the first nine months of this year the chief imports of Yugoslavia were as follows:—

Article	Million gold dinars	Percentage
Cotton fabrics	74.3	14.36
Woollen fabrics	37.2	7.20
Machinery and apparatus	25.4	4.91
Cotton yarn	22.1	4.28
Various iron goods	21.9	4.23
Raw coffee	15.3	2.95
Raw hides (domestic)	14.5	2.81
Coal	13.6	2.63
Vehicles	11.6	2.23
Raw cotton	10.8	2.09
Cooking salt	10.7	2.08
Electro technical machines, etc.	8.5	1.64
Wool	7.9	1.52
Shelled rice	7.1	1.38
Unwrought and half-wrought iron	6.1	1.18
Rails, rly. material	5.7	1.10
Sheet iron	5.5	1.06
Petroleum	5.5	1.06
Vegetable oils	5.5	1.06

Sacks	4.5	0.86
Leather footwear (not sandals or top boots)	4.1	0.79
Woollen yarn	3.9	0.76
Other goods	181.2	35.02
	517.4	100 p.c.

The chief articles of export during the first nine months were:—

Article	Million gold dinars	Percentage
Maize	101.7	19.97
Wood: building	58.4	11.47
fuel	4.7	0.92
Corn: wheat	54.2	10.65
other	4.5	0.89
Eggs	46.9	9.21
Live cattle	21.5	4.22
Meat a. fresh	19.6	3.85
b. meat products	2.2	0.44
Raw copper	18.1	3.54
Pigs	17.6	3.46
Wheat flour	9.8	1.93
Cement	9.2	1.80
Horses	7.9	1.56
Sheet lead	6.8	1.33
Hemp	6.6	1.29
Prunes	6.1	1.20
Hops	5.9	1.15
Calcium cyanide	4.5	0.89
Lamb and kid skins	4.1	0.79
Tanning extracts	3.7	0.72
Oak railway sleepers	3.6	0.70
Opium	3.5	0.69
All other	88.1	17.33
	509.2	100 p.c.

III.—Chief Trading Countries.

The chief countries which traded with Yugoslavia during the first nine months of 1926 were:—

IMPORTS—

Country of origin	Million gold dinars	Percentage.
Austria	102.7	19.85
Czechoslovakia	97.8	18.90
Italy	74.2	14.34
Germany	63.1	12.21
Great Britain	30.6	5.92
France	25.0	4.77
Hungary	23.7	4.59
Roumania	21.7	4.20
U.S.A.	20.6	3.99
Brazil	11.8	2.28
Greece	10.1	1.96
Poland	6.5	1.25
Switzerland	5.5	1.06
Belgium	4.8	0.94
India (British)	4.3	0.84
Holland	4.1	0.80
Argentina	1.8	0.36
Tunis	1.3	0.25
Turkey	1.1	0.22
Canada	1.0	0.18
Other Countries	5.7	1.09
	517.4	100 p.c.

EXPORTS—

Country of destination	Millions gold dinars	Percentage.
Italy	142.4	27.97
Austria	94.5	18.56
Roumania & via Braila	62.2	12.22
Czechoslovakia	52.6	10.33
Germany	40.9	8.04
Greece	31.2	6.12
Hungary	22.5	4.43
Switzerland	22.2	4.36
France	15.2	2.99
Great Britain	5.1	0.99
Egypt	4.1	0.80
U.S.A.	3.4	0.67
Holland	1.9	0.36
Turkey	1.7	0.34
Belgium	1.4	0.29
Poland	1.3	0.25
Spain	1.2	0.23
Argentina	1.2	0.23
India	1.1	0.21
Albania	0.5	0.10
Other countries	2.6	0.51
	509.2	100 p.c.

The above countries appear regularly as the chief countries of Yugoslavia's import and export trade, and always in almost the same order.

IV.—Exports.

Exports from the S.H.S. Kingdom during the first 10 months of this and last year amounted to:—

	Tons	Million Gold Dinars
1st 10 months 1925	3,666,907	658.8
1st 10 months 1926	4,085,151	584.1

an increase in 1926 of 418,244 tons (11.40 per cent.) in weight, and a decrease of 74.7 million dinars (11.34 per cent.) in value over the corresponding figures for 1925. The decrease in value is due to two causes: first, the fall in prices since last autumn of agricultural products on the world markets, which affected Yugoslavia adversely, her exports being mainly agricultural; and secondly, the improved value of the dinar this year. The improvement during 10 months of this year amounted to 4.70 per cent. as compared with the value of the dinar during the first 10 months of last year.

THE MONOPOLY ADMINISTRATION.

For the six months ending September 30, 1926, the Yugoslav Monopoly Administration shows receipts amounting to 1,283,877,441 dinars, as compared with 1,239,687,384 dinars for the corresponding period in 1925, and an estimated revenue of 1,212,250,000 dinars. To the total the Tobacco Monopoly contributed 904,852,145 dinars; salt, 164,483,842 dinars; kerosene, 67,123,226 dinars; matches, 70,501,338 dinars; and cigarette papers, 74,091,649 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the first six months of the financial year was as follows:—

REVENUE.		EXPENDITURE.	
	Dinars.		Dinars.
Monopolies (Sep.)	221,021,755	5% Loan (1913)	35,406,548
(April—Aug.)	1,059,855,686	Blair Loan (1922)	34,629,222
Customs (September)	161,968,220	Administration Expenses	376,371,935
(April—Aug.)	685,377,800	Current a/c. (Min. of Finance)	2,207,833,428
Stamps & Duties (Sep.)	85,020,958	Sundry a/cs. & Cash in Hand	27,854,631
" (April—Aug.)	465,851,345		
	2,682,095,764		2,682,095,764

Under the heading "Cash" a gold dinar is reckoned as a dinar an English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as one dinar, etc.

Discount rate: 6 per cent. Loans on securities: 8 per cent.

OTTOMAN LOANS SECURED ON THE EGYPTIAN TRIBUTE.

Messrs. N. M. Rothschild and Sons have to announce that in the application made to the Chancery Division of the High Court of Justice in London regarding the disposal of the sums awarded by the Mixed Court of Appeal in Egypt representing interest on overdue instalments for the service of the Ottoman Four per Cent. 1891 and Three and a Half per Cent. 1894 Loans, the Court declared that the amount received should be applied in payment of

the costs, charges, expenses, and liabilities paid and incurred in connexion with the actions in the Egyptian Courts and the proceedings in this country.

The costs, charges, expenses, and liabilities so incurred have now been duly allowed and certified by the Court. The certified amount is in excess of the sums received; there is consequently no balance remaining to be dealt with.

NEWS FROM ALL SOURCES.

The latest forecast of the Indian cotton crop gives an estimated yield of 5,000,000 bales.

An order has been placed by the Burmah Oil Company with a Sunderland firm for an oil tanker.

The Chartered Bank of India, Australia and China announce that an agency will shortly be opened at Kuala Kangsar (Perak).

A Reuter message states that blocks of ice have begun to form on the Danube. Navigation is being continued, with precautions, as far as Braila.

It is estimated that the maize crop in Roumania this year will yield 5,165,715 tons, which would represent an increase of 1,006,570 tons on the 1925 crop.

Mr. J. Y. Munro has retired after 41 years' service with the National Bank of India, and Mr. W. J. K. Hegarty has been appointed London Manager in his place.

The Egyptian State Railways have placed an order with Gwilym Owen and Co. for the supply of 50,000 tons of Welsh locomotive coal for delivery during February, March and April.

Messrs. Hick, Hargreaves and Co., Ltd., of Bolton, have received a contract for five plants, each capable of dealing with 56,000 lb. of water per hour for the Anglo-Persian Oil Company, for power stations in Persia.

Miniature cord tyres to fit two-inch and three-inch wheels are now being made at Fort Dunlop as part of the equipment of Meccano motor-cars for boys. They cost fourpence and sixpence each.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 10, amounted to £E10,288 making the total from April 1 £E232,049. The figures for the corresponding periods of 1925 were: £E13,559 and £E240,738.

Orders have been received by the Sentinel Waggon Works, Shrewsbury, for their "Sentinel" locomotives for the Orki Division P.W.D., India, and for the Upper Chenat Canal irrigation works, India, and for three double-articulated coaches for the Great Indian Peninsula Railway.

A recently issued Roumanian Customs Circular revokes previous Circulars regarding the tariff classification of waterproof cloth on importation into Roumania. Textile stuffs, threads, bands and ribbons of all kinds of textile materials, except silk, covered on one surface with a thick layer of rubber so that neither the design nor the fabric on which it is applied can be seen, or such articles made of two materials with an intermediate layer of rubber, are to be assessed for duty under Tariff No. 460 (a). Materials, bands and ribbons of silk, or containing silk, covered with a thick layer of rubber so that neither the design nor the fabric on which it is applied can be seen, and such articles made of two materials with an intermediate layer of rubber, are to be dutiable under No. 460 (b). If the material of whatever kind is covered with a thin layer of rubber so that the design and the material can be seen on the surface the articles are dutiable at the rate applicable to the textile material of which they are composed.

Shipping Intelligence.

THE TREND OF DESIGN IN MARINE MOTORS.

(Contributed.)

During the last ten years there has been remarkable progress in the evolution of the internal combustion engine, not only in motor car work but also in marine work. That such evolution progressed relatively slowly at first is all to the good and there are few scientific productions of industrial value which have so rapidly secured the confidence of the commercial world.

The trend of design in marine motor engines for 1927 will be on the same sound lines: the indications offer nothing revolutionary, but rather steady progression towards the ideals of simplicity, efficiency and above all light weight-to-power ratio. The weight-to-power ratio is of foremost importance to users, inasmuch as it strikes at the root of the two great problems of the boat owner—to obtain the maximum speed and at the same time to make as much as possible of the limited space available in his craft.

Much good work on these lines is gradually becoming apparent and 1927 will see the product of advanced design which makes possible motors capable of heavy duty performance and yet of very reasonable weight and small dimensions. In detail it will be found that such engines will obtain the maximum stiffness of construction by the use of block castings which comprise both the crankcase and the cylinders. There will also be increases in the scantlings of the crankshaft to meet the higher working stresses, while in all but the smallest engines not less than three crankshaft bearings will be used.

Such engines will probably run at considerably higher revolutions than have hitherto been associated with heavy duty motors, the conflicting desiderata of high revolutions for the engine and low revolutions for the propeller being cared for by the use of reduction gears.

The increase in the use of these reduction gears during 1926 has confirmed in a very definite manner the tendencies foreshadowed for that year, the designs of the leading makers, such as Messrs. Thornycroft and Co., Ltd., and the Ailsa Craig Motor Co., Ltd., having proved their efficiency in all classes of heavy commercial, fishing, and trawling work.

There has again been a steady increase in popular favour of overhead valve motors, a preference to be expected, following the demand for higher efficiency. To

the motor car must be ascribed the distinct tendency towards six cylinder engines for marine work; there is no doubt that in the larger sizes the six cylinder is rapidly replacing the four cylinder where the utmost luxury and smooth running are desired. For the same reason two cylinder motors are losing favour and even in small sizes they are being ousted by four cylinder models.

Improved designs of paraffin vaporisers will be found leading to greater flexibility and a more economical use of fuel: the best of such vaporisers will enable engines to run for long periods on half throttle or even slower without any adverse effects. As to general appearance, it will be found that greater attention will be paid to pleasing and graceful lines and that exterior gadgets are being eliminated, thus making the engine not only more compact but also more easy to keep clean.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, January 8).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, January 12).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, January 15); s.s. Dumana for Bombay and Karachi (London, January 22).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool January 22, Swansea January 25); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Glasgow, Swansea, and Liverpool, January 29).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 12); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 5).

P. and O. Line.—S.s. Rajputana for Bombay (London, January 14; s.s. Nagoya for Colombo, Madras, and Calcutta (London, January 22).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 11); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 25).

Ellerman and Papayanni Lines.—S.s. Grodno for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catani, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool January 8, Swansea January 11); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 12); s.s. Dido for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 10); s.s. Bavarian for Algiers, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 22, Swansea January 22); s.s. Gerano for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, February 12). * Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

On instructions from Cairo, the Egyptian Legation in London has refused to visa the passport of Mr. Shapurji Saklatvala, M.P., after he had obtained the British endorsement to visit Egypt. He wrote protesting, and the Legation have replied that their action is in accordance with regulations. Mr. Saklatvala sailed last week by the P. and O. steamer Rajmak for India via Marseilles. His idea is to spend a few weeks in Egypt on his way back from India next March. He has circularised members of Parliament asking them to raise the question of this refusal of passport in the House of Commons.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CASTALIA ...	Jan. 14	*ASSYRIA ...	Feb. 15

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 4.

Though few will bemoan the passing of 1926, brokers and jobbers, and investors too, have much to be thankful for. Business turnover, except in special sections, has been restricted throughout a great part of the year, but the comparative firmness of prices has been remarkable in view of the troubles of a harassing period. Now we pass the threshold of a new year into the atmosphere of renewed optimism which customarily characterises this season, and experts are inclined to expect a period of brighter markets. There is, however, a disposition to call attention to two or three sobering factors. One is that industrial shares in many cases are higher than before the coal dispute began, and that when the bad results of 1926 come to be published any renewed optimism may be nipped in the bud. Another is that before many weeks are over the fear of increased taxation in the Budget will begin to exert a restraining influence.

Of recent events the issue of the prospectus of a British Government 4 per cent. loan at 85 is of course the outstanding point. On the whole its reception has been favourable, and, as soon as the terms were known, existing British Government stocks improved in quotation. The ingenious, and rather novel sinking fund arrangements in connexion with the new loan, which is, of course, purely for conversion purposes, are regarded as sufficiently attractive to ensure a good response. A further point in favour of the immediate market outlook is the rather confident expectation that Bank Rate, which has stood at 5 per cent. for over a year, will shortly be reduced.

Home Railway Dividend Prospects.

The weekly traffic returns of the four great British railway companies afford all the information we shall get as to the operations of the companies during the past year until the annual reports are published towards the end of February. These traffic returns show a decline in the gross receipts of the four companies of £27½ mil-

lions, or 15 per cent., as compared with 1925, and although a partial offset to this has been secured by the reductions in staff which followed the general strike, there can be no doubt that net revenue will show a very heavy decline. The rates of dividend which will be declared next month on the ordinary stocks will therefore depend on the extent to which the directors are prepared to make further withdrawals from reserves. In the last balance sheets the general reserves amounted to £22½ millions and the railway depreciation funds to £57 millions. The four companies withdrew £6½ millions a year ago in order to pay dividends, but unless a much larger amount is taken this time the rates of dividend cannot be maintained. The rates paid for 1925 were: London, Midland and Scottish ordinary, 6 per cent.; Great Western ordinary, 7 per cent.; London and North Eastern Deferred, 1 per cent.; Southern Deferred, 3½ per cent. At midsummer the interim dividends on London Midland and Scottish and Great Western ordinary stocks were reduced from 5 and 5½ per cent. respectively to 3 per cent. per annum. The Southern paid the full rate on its preferred ordinary stock, but the North Eastern paid nothing on the preferred, consideration of the matter being deferred until the full year's results had been ascertained. In 1925 the latter company failed to earn its preference and guaranteed stock dividends by £1½ millions, and as gross receipts have fallen by nearly £10 millions, the chances of any distribution on the deferred stock for 1926 are not promising. The Southern, on the other hand, shows a comparatively small decline in receipts—less than £2 millions—and as only £200,000 was withdrawn from reserves a year ago to pay 3½ per cent. on the deferred stock the cut in the dividend, if any, is not likely to be large.

While the immediate outlook for the junior stocks is rather gloomy, more distant prospects are more promising, in view of the coming into force of the rates provisions of the Railways Acts, which should enable the companies to secure something approaching the standard revenues fixed by the Railway Rates Tribunal, partly by judicious manipulation of rates and partly by economies resulting from a permanent reduction in staffs and from the improvement in organisation arising from the amalgamations, which is only now beginning to show its full effect.

A Shipping Investment.

There are some who are decidedly optimistic regarding the shipping outlook for the New Year, so that investors may be tempted to take an interest in shipping shares. On several occasions, it will be recalled, we have sounded a note of caution in this connexion and we must repeat that the prospect is still by no means re-assuring. Nevertheless, if the investor desires a good shipping share which, though at present giving a comparatively modest return, has reasonable prospects of early benefits from an improvement in the shipping industry, he should consider the ordinary shares of Furness, Withy and Co.

The company occupies a position of exceptional strength. It has an excellent profit and dividend record, even during the recent years of very severe depression. Thus profits have been as follows: 1920-21, £782,944; 1921-22, £655,207; 1922-23, £552,511; 1923-24, £572,443; 1924-25, £528,742; and 1925-26, £523,044. For 1920-21 to 1921-22, the total distribution to the ordinary shareholders was at the rate of 10 per cent. per annum tax free, and since then the rate has been 7½ per cent. tax free. The balance sheet discloses a very sound position. Of assets totalling £11,460,679, no less than £3,706,616 is accounted for by investments in British and Colonial Government securities, etc. The revenue from these investments alone is practically sufficient to maintain the 7½ per cent. tax free distribution. Moreover, steamships, investments, etc., are very conservatively valued at £4,781,465. At present the ordinary shares give a return of approximately £4 8s. per cent. tax free, while the 5 per cent. cumulative preference shares, in denominations of £10 each, and yielding £5 12s. per cent., are not without attractions.

THE DRIED FRUIT MARKET IN 1926.

Messrs. J. C. Houghton and Co., of Liverpool, have issued a comprehensive review of the dried fruit trade in 1926, from which we take the following:—

The period under review embraced, unfortunately, two outstanding events, the consequences arising therefrom having influenced enormously the course of business and crippled the purchasing power of the public. We refer in the first place to the general strike, of extreme severity but of comparatively short duration, thanks in a great measure to the commonsense of the vast majority of the general public who wholeheartedly supported the Government in its endeavour to grapple with the situation in a very efficient manner. Certainly while it lasted the general strike caused the utmost interference with trade. The second event, the coal strike, although less serious in itself, was in the long run of greater importance on account of its long drawn out character and disastrous and cumulative far-reaching consequences.

Currants.

S.s. Esneh, with about 600 tons, inaugurated the new season on September 17, followed by Lesbian on the 29th, and considering the adverse economic conditions under which we were working, a fair demand was experienced, buyers recognising that the usual activity associated with the opening of the Christmas trade would not be possible this year. Quality, colour, and condition were good, Pyrgos opening 32s. 6d., Amalias 33s. 6d., Patras 35s. to 36s., Gulf 37s. Prices eased slightly as the month progressed, showing about 1s. per cwt. decline. During October we were well catered for, Phrygia, Cypria, Andalusian, Roumelian and Karnak bringing a good selection. The firmness of the Greek market had a stimulating effect on holders, and helped to counteract the paralysing effect of the coal strike and its influence on trade generally. Values remained stationary, although progress was difficult in the medium grades. A few parcels of Vostizza showing outstanding merit realised 60s., and some particularly attractive parcels of Gulf sold at 50s.

The improved position in Greece developed strength during November, the main influence contributing to the rise being the confirmation of the estimates of a considerable shrinkage in the harvest, in comparison with the 1925 crop.

In December the outstanding feature has been the continued strength of the Greek market, rising daily. Latest cables quote for shipment at prices equivalent to 38s. for Pyrgos, and the year closes with very little offering under that figure. Closing values:—Pyrgos and Amalias 36s. 6d. to 37s. 6d.; Patras 37s. 6d. to 38s.; Zante 37s. 6d.; Gulf and Panariti 40s. to 50s.; Vostizza 40s. to 60s.

Sultanas.

The early satisfactory reports of the growing Smyrna crop estimated the yield as high as 45,000 tons, good average quality being offered at 43s. c.i.f. for shipment, and holders exhibited a general desire to realize the small remaining stock on spot, so that 60s. to 66s. was accepted for good qualities. Upon arrival of Gerano and Esneh with the first of the 1926 crop prices of Smyrna and Cretan were, for a short period, inclined to ease, but advices from Smyrna restored confidence, and with the knowledge spreading that the harvest was proving considerably below early estimates (latest figures giving the crop as not exceeding 33,000 tons) prices quickly bounded forward, and as there was a strong and active demand supplies were quickly absorbed, realizing 60s. to 63s. for ordinary qualities, 64s. to 70s. for fair to good, and up to 82s. for fine.

October witnessed active trading, and prices forged ahead. Compared with October, there was a big falling off in the amount of business done during November, but the steadiness of the Smyrna market, and the reports that the remaining stock in Smyrna had dwindled to below 10,000 tons owing to Continental purchases, kept prices firm. The year closes with an exceptionally firm

tone in sympathy with strong advices from Smyrna, to the effect that the crop is practically finished, very little fruit now remaining for export.

Greek.—First shipments per Phrygia and Cypria came to hand early in October, and were well competed for at 69s. to 75s., up to 85s. being made for coloury lots. As the season advanced and supplies became more plentiful, easier prices had to be accepted for the lower grades, sales ranging from 64s. to 88s.

Figs.

Business in new crop Naturals, Bags 25s. c.i.f., Genuine 27s. 6d. to 30s. c.i.f., September shipment, took place as early as June, and late in July further sales were done at 26s. 6d. and 27s. c.i.f., for September shipment. Genuines were persistently offered for sales during August as low as 23s. c.i.f. September. The opening of the season by the arrival of Esneh and Gerano was on the whole disappointing, quantity being altogether in excess of demand. Large boxes were most in request at 60s. to 75s., small boxes being difficult of sale at 70s. to 80s. Locoums sold at 100s. to 105s., Pulled 42s. 6d. to 47s. 6d. Trade in Bag Figs was anything but brisk as fair quantities had been sold to arrive, which filled buyers' requirements for the time being. Sales of Primas were made at 28s., and of Genuine at 35s.

October saw more activity, large boxes being particularly active at 58s. to 75s., small boxes selling more slowly at 70s. to 80s.; Locoums 90s. to 102s. 6d., Pulled 42s. 6d. to 47s. 6d. Bags had a dragging sale, good averages 28s. to 31s., Genuine 33s. to 35s., while towards the end of the season skeleton cases were in active request large boxes selling at 66s. to 80s., small boxes 75s. to 85s. Packets 72s. 6d. to 75s., Pulled 40s. to 47s. 6d. Naturals continued slow, genuine 33s. to 34s., good average 30s. to 31s. Stocks of cases are practically exhausted, with the exception of small consignments ex Destro and Karnak, which arrived on the eve of Christmas.

A contract has been obtained by Messrs. Ransomes and Rapier, Ltd., Ipswich, for petrol electric mobile cranes for the R.A.F. depot, Aboukir, Egypt.

Among the subjects to be discussed at the International Cotton Congress in Cairo next month are the proposed reduction of the area under cotton in Egypt, excessive damp in Egyptian cotton, and the presence in it of foreign matter.

The traffic receipts of the South Indian Railway Company for the week ended December 4 amounted to Rs.9,66,462, making the total from April 1 Rs.3,52,60,697. For the corresponding periods of the previous year the figures were Rs.9,52,838 and Rs.3,57,59,422.

A contract has been obtained by Messrs. Braithwaite and Co., Ltd., of West Bromwich and Newport (Mon.), for the supply of a new bridge of six 165 ft. through spans and four 40 ft. approach spans to replace the recently destroyed bridge carrying the Bombay-Calcutta section of the Great Indian Peninsula Railway over the Nerbudda River at Jubbulpore. Orders have also been received by this firm for pressed steel flooring for the Bombay Port Trust, and for jetties and dolphins at Abadan for the Anglo-Persian Oil Company.

Company Meeting.

DIALA COTTON PLANTATIONS.

Agreement with the Iraq Government.

The ordinary general meeting of the Diala Cotton Plantations, Ltd., was held on December 30 at Winchester House, E.C., Sir Edward Manville (the Chairman) presiding.

The Chairman dealt at length with the proposals outlined in the Board's circular of December 22 for the settlement of all matters outstanding between the Government of Iraq and the company. He recalled that at the extra-ordinary general meeting of March 31 last he had had to disclose a most unsatisfactory state of affairs and to inform the shareholders that it was extremely doubtful whether they could rely on an adequate supply of water for the cultivation of their cotton, notwithstanding the guarantee contained in the concession. The result of that meeting was that, at the request of the Board, a small committee of shareholders was nominated to assist in deciding upon the course to be adopted. Unfortunately, the members of that committee found themselves unable to spare the time to act, and ultimately the Board approached Colonel Stanley, a director of Eastern Irrigations, Ltd., who had great experience concerning land and a knowledge of Iraq, and he volunteered to proceed to Iraq and get in touch with the Government there. In Baghdad he had protracted negotiations with the Government's representatives. Colonel Stanley had to remember that the position was very complicated. Abandoning the concession and putting the company into liquidation would not only mean the irretrievable loss of a great part of the shareholders' money, but claims might be made by the original concessionaires for compensation; on the other hand, if the company continued to hold the concession it involved a heavy outlay on development work.

The Latifiyah Estate.

Colonel Stanley found the Iraq and British officials most anxious to arrive at an amicable solution of the difficulties, and after examination of three or four alternative proposals it was eventually decided that the Latifiyah project, comprising approximately 60,000 acres of the Latifiyah estate gave greater promise of restoring the fortunes of the company. The Latifiyah estate was on the River Euphrates, and close to Baghdad, and the railway between Baghdad and Basra ran through the property. Perhaps the most important aspect was that there was no question about an adequate supply of water. The estate was of a character which permitted crops of many descriptions to be grown; it was suitable for sale to various classes of cultivators, and, the Board believed, eminently marketable. The transfer from the Government to the company involved the payment by the company of about 5s. per acre, but such land could under existing law be transferred free of cost, although the directors were assured that the price in no way represented its value, which as cultivation proceeded would be greatly enhanced. The directors were the more inclined to recommend the scheme because the capital required was within the capacity of the present financial resources of the company, which would enable them to take steps to wipe out the existing liability of 10s. per share.

Agreement with Eastern Irrigations.

It had been necessary to obtain the concurrence of Eastern Irrigations, Ltd., because the arrangement involved the complete cancellation of the concession under which Eastern Irrigations, Ltd., held their rights; also in order that no claim should be made upon Eastern Irrigations, Ltd., by the original concessionaires, an agreement was necessary between that company and the original concessionaires for compensation to the latter. Further, their own company had a liability for £37,500 to Eastern Irrigations in respect of its holding of 50,000 shares in that company, and if the concession were not cancelled Eastern Irrigations might find it necessary to enforce payment. A provisional agreement had been entered into whereby Eastern Irrigations, Ltd., agreed to the cancellation of the concession and the release of this company from all liability in respect of the 50,000 shares which were to be regarded as cancelled, and by way of compensation Eastern Irrigations would receive 60,000 shares of 10s. each, fully paid, in the reduced capital of the company, of which they would hand over 30,000 to the original concessionaires. If the proposals met with the approval of the share-

holders it was proposed to change the name of the company to Latifiyah (Iraq) Estates, Ltd. In the opinion of the Board the proposals submitted offered the best solution to the present difficulties.

The report and accounts were unanimously adopted, and resolutions were also passed unanimously approving of the agreements proposed to be entered into (a) between the Government of Iraq and Eastern Irrigations, Ltd., and the company, and (b) between Eastern Irrigations, Ltd., and the company.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Galvanised Iron Bolts, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 291,800 bolts galvanised wrought iron (not steel) with nuts and two washers. January 22.

Ropes.—The General Management, Egyptian, State Railways Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 5,000 kilos white hemp rope. January 22.

Scientific and Electrical Apparatus, Etc.—The Principal of the Royal School of Engineering, Giza, invites tenders for the supply of scientific and electrical apparatus and machines for testing of materials. February 5.

Semi-Diesel Engines.—The Controller of Technical Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of tools required for Luxor and Nag Hamadi Trades Schools. February 12.

Uniform Clothing, Etc.—The Egyptian Customs Administration invites tenders for the supply and delivery of uniform clothing and equipment required for the year 1927-28. January 31. (D.O.T.)

Clothing, Etc.—The Department of Health, Cairo, invites tenders for the supply of clothing, equipment, tents and accessories, hardware, glassware, oils and paints, brushes and brooms, furniture and wooden articles, enamelled goods, copperware, etc., for the year 1927-28. January 20. (D.O.T.)

Dynamo, Etc.—The Director-General, Mechanical Department, P.W.M. Cairo, invites tenders for the supply and erection of a dynamo and one internal combustion engine at the Survey Department, Giza. January 10.

Asphalt.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 3,700 tons of solid asphalt required for the year 1927-1928. March 1.

Machine Tools.—The Principal of the Royal School of Engineering, Giza, invites tenders for new high-grade machine tools and small tools. February 5.

Equipment.—The Director of Stores, Public Health Department, Cairo, invites tenders for the supply of equipment, clothing, tents, etc., for the period of one year commencing on April 1, 1927. January 20.

Paper and Stationery.—The Ministry of Finance invites tenders for the supply of paper and stationery and office requisites for the financial year 1927-1928. February 24. (D.O.T.)

Paper and Stationery.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery required for the Ministry for 1927-1928. February 24.

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of one year commencing April 1, 1927. January 15.

King Fuad, with his suite, is on a short visit at the Winter Palace Hotel, Luxor.

Eight Indian cadets are to join the Royal Military College on February 1. Three of them have qualified through the Prince of Wales's Royal Military College at Dehra Dun in competition for the scholarships given from the Sir Pertab Singh Memorial Fund. These three cadets are the sons of native officers who served in the 3rd Battalion 10th Baluch. Regiment, the 11th Rajputs, and the 11th Battalion 12th Frontier Force Regiment. The other five are sons respectively of an officer of the Salt Department, a landowner, a Gwalior State Forces official, a Fergusson College professor, and a police superintendent.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 29:—

Egyptian Futures.—Sakel Contract.—Owing to the holidays intervening, our market has only been open for four sessions since our last report. During these, although trading has been of a rather light description, a steady tone has been in evidence and prices show moderate gains on the week. No special feature of outstanding importance has developed, except perhaps that there has been a hint of a rather better trade demand, and we believe that in some quarters fair lines of yarns have been sold or are in process of negotiation. Normal markets have been experienced in Alexandria during the past few days, fluctuations approximating closely with the movements at this side, and perhaps to a more marked degree in sympathy with the New York Market. With stocks accumulating rapidly, it will take a very decided revival in the Sakel demand, both from this country and the Continent, to counterbalance the present heavy weight of stocks and the continual augmentation of same that is taking place from week to week. The differences between the current positions and later deliveries have again narrowed slightly, but very little deliveries in our premium over the American contract has taken place.

At the moment, we have no very decided view of the outlook, but, as stated last week, we consider that those who are inclined to long commitments would be well advised to hold off until there are more definite signs of active trade support developing, as, should this latter not come into operation during the next two or three weeks, we think that prices will have to revert to the level witnessed in the earlier days of the present month.

Upper Contract.—This option, without attracting much business, continues to show a hardening tendency, prices since our last report showing gains of 7 to 15 points. The demand for Upper cotton, both in this country and abroad, continues on a steady scale and as, basically, values compare favourably with other varieties, we are rather inclined to the opinion that takings will be well maintained, if not increased, as the season progresses. We still consider that prices will appreciate further and would advise purchases on any recessions.

Egyptian Spot.—During the four days under review business has been distinctly quiet and features of interest have been entirely lacking. Here and there a bright spot has appeared, and a better undertone has become apparent, but it is somewhat difficult to find any reason for it other than the perennial New Year's optimism; nevertheless, prices have shown a hardening tendency. To-day, a good general inquiry has been in evidence, but we doubt if the resulting business will exceed two hundred bales for the whole market.

Sakel, 50 on to 50 off; Uppers, 9½d. to 9½d., and Pilon, 11.00d. to 11½d. have been the quotations chiefly in request. Sudan cotton has been rather neglected. C.i.f. business has been done on a small scale only. Estimated sales 600 bales Egyptian and 500 Sudan. Quotations for both Sakel and Upper show an advance of 20 points since our last report. F.G.F. Sakel to-day 13.95d. F.G.F. Upper to-day 9.70d.

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester. (Established 1887).

Commercial Bookshelf

"ROUND THE WORLD BY P. AND O."

"THE P. AND O. POCKET BOOK." (London: A. and C. Black. 5s.)

Like the Government or the London policeman, the P. and O. is a British institution. Neither the Company nor the public can get away from the fact, and in keeping with those other two institutions it goes on its way strongly and confidently, human enough to be pleased with all the praise that comes to it, and prepared to sift the straw from the chaff of any blame received. Times have changed since the day when in a British community abroad the local uncrowned king or Bombastes Furioso of the comic stage could "bring down the house" by the claim to be "the only man who had ever had a civil answer from the P. and O." Efficiency remains as the Company's watchword, but it is less unbending and far less silent than it used to be. Witness "Blue Peter" and the Pocket Book. The latter, now in its fourth issue, not only tells the story of the P. and O., but is an admirable *vade-mecum* for the traveller as he passes on his circuit round the world. In a series of chapters by well-known authorities the story of different countries touched by the Company's liners is told—Egypt, India, Ceylon, China, Japan, East Africa, Australia, and New Zealand, as well as the Suez and Panama Canals. This is not the conventional guide-book, by any means; there is the happy personal touch which will enable the reader to forget that he is a tourist and for the time being make him feel at home in each country. Here is Shanghai: "Shanghai is a very notable city and has great belief in itself. . . . Shanghai is ruled by a model municipality of which it is very proud. The Shanghai Club at noon is a bewildering combination of commercial transactions and mixed drinks. . . . Shanghai shooting parties welcome strangers, and Shanghai game pie is famous." But the things that count, the things to be seen also find mention in this little book, all well told, attractively enough to make the Pocket Book worth reading at home in an armchair, usefully enough to make the Pocket Book indispensable on an actual tour.

At the end of the Book is an excellent Descriptive Gazetteer; there are 16 page illustrations in colour, 36 maps and plans, and four plates of flags. The whole costs five shillings, and is well worth buying, reading and keeping.

INDIAN PROVINCIAL FINANCE.

"THE EVOLUTION OF PROVINCIAL FINANCE IN BRITISH INDIA." By B. R. Ambedkar. (London: P. S. King and Co. 15s.)

The Indian author of this book traces (with occasional excursions, more or less relevant, into politics) the growth of Indian Provincial finance from its earliest beginnings to its modern importance. He claims that he is the first to produce an authoritative study of his subject, no comprehensive survey of which has hitherto existed—to quote his own explanation of the difficulties that beset a seeker in such a case, "Often there is the apprehension of some error having crept in and, when there is hardly anyone to save the student from it, there is nothing but to smart under a sense of irritating affliction."

After the Mutiny of 1857, the question was debated whether Indian finance should be imperial or federal; and this was—wrongly, as the author holds—decided in favour of the former. The position has altered, by successive stages, until that decision was finally reversed on the introduction of the Reforms. Originally, the Central Government collected the revenues and furnished the Provinces with fixed assignments of money; next, it caused the Provinces to collect their own revenue, but to remit the money to the Central Government, which gave them back what it could spare; next, certain revenues were shared between the Central and Provincial Governments; and finally certain revenues were assigned to the Pro-

vinces, who paid a fixed contribution, out of their receipts from them, to the Central Government. The advantages and disadvantages of the various methods are very fairly stated: it is, however, not easy to agree with the author's political ideas put forward in the course of his financial arguments. He says, for instance, that much larger amounts ought to be obtained from land revenue and customs: explaining that the Indian demand, in opposition to the former, for the extension of the Permanent Settlement at present obtaining in Bengal (in the existence of which he finds the cause of the financial difficulties of that Province) "was derived from the motive of putting a limit on the financial resources of an alien and irresponsible bureaucracy"; while, in regard to customs, he writes, "Everybody knows that the customs revenue is not raised in India because it is feared that under it Indian industries would be protected against English industries. That the whole policy of India has been dictated by the interests of English manufacturers is beyond dispute."

The visit of the British Fleet to Phaleron, which is announced for January 13, has caused very great satisfaction in Athens, says the *Morning Post*, alike in Greek and British circles. It is two years and a half since, at the end of June, 1924, the British Fleet last visited Phaleron. Great preparations are being made already for the reception of the Fleet and for the entertainment of the officers and men.

Colonel Henry Arthur Peyton Lindsay died on December 30, at Western Underwood, Olney, Bucks, at the age of 58. He entered the West India Regiment in 1887, and later transferred to the Indian Army. His first war experience was in the protracted North-West Frontier operations of 1897-8. In the Great War he was with the Indian contingent in France and Belgium, and at the close of 1915 was transferred to Iraq as A.D.S. of the 7th Meerut Division, and later Deputy Director of Supplies and Transport to the 1st Indian Army Corps. He also went through the Afghanistan and Frontier campaign of 1919, and was in the subsequent Waziristan operations, being again mentioned in dispatches and made C.S.I. He retired in 1924.

The death occurred at Tel Aviv on January 2 of Mr. Asher Ginzberg ("Achad Ha'am"). He was one of the most creative intelligences in the modern Zionist movement, says *The Times*. This in its earlier form was exclusively a political device for raising the status of Jews throughout the world, but Mr. Ginzberg gradually transferred its centre of interest towards the conception of a Jewish nucleus in Palestine, where, undistracted by Gentile rivalries and beguilements, the Jews might create a purely Hebrew centre and civilisation based on the Hebrew language and Hebrew literature, art, and science. Such a centre would serve as an inspiration for Jews elsewhere by forming a cultural rallying-point as a preservative against the disintegrating consequences of assimilation. Mr. Ginzberg was born in 1856, near Kieff, and lived in England from 1906 till 1921. He was with Dr. Chaim Weizmann primarily responsible for the activities which culminated in the issue of the Balfour Declaration in 1917. Mr. Ginzberg had resided in Palestine since 1921. He had a deserved reputation as a Hebrew writer and thinker and exerted a profound influence on his generation. A few of his writing have been translated into English by Mr. Leon Simon.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Negotiations with Sultan Ibn Saoud.

The interruption in the negotiations between the British representative in the Hijaz and Sultan Ibn Saoud which have been held on the route to Madina would seem to have given rise in the Hijaz itself to the belief that there had been a set-back in the friendly relationship that has long existed between the Sultan and Great Britain and was confirmed a year ago by the treaties of Bahra and Hadda. This is an entirely mistaken view and one that could only arise from a failure to appreciate the object of Mr. Jordan's visit to Sultan Ibn Saoud. Over a period now exceeding a dozen years more or less close touch has been maintained between the British Government and the Sultan of Najd—a treaty was signed in 1915—and in the opinion of the latter some of the arrangements reached in the past are now out of date and may be found on investigation to call for revision or cancellation. At the time of Sir Gilbert Clayton's visit to him Sultan Ibn Saoud expressed the hope that, after the conclusion of those negotiations, an opportunity would occur for examining the former agreements, and other points of common interest to the Hijaz and Great Britain. Accordingly, as our Jidda Correspondent announced in a letter published in our issue of December 16, Mr. Jordan, British Consul at Jidda, left by car on November 22 for Abyar Ibn Hasani, a group of wells half-way between Rabigh and Madina, in order to meet the King of the Hijaz. There would be nothing improbable in the supposition that in the course of negotiations fresh subjects, outside the questions originally set down for discussion, had been raised by Sultan Ibn Saoud. In these circumstances it would be natural for the British representative to ask for further instructions from his Government, and Mr. Jordan has returned to London to report on the negotiations. Ex-

pectations in the Hijaz, it may be inferred, had been pitched too high, if any pessimistic deductions have been drawn from the interruption of the negotiations. Sultan Ibn Saoud himself appears to have been under no misapprehension on the subject, to judge from the course of events; but in these matters he is, no doubt, in advance of his Hijazis. If, as our Correspondent is informed, he finds the ground that he wishes to cover so varied that it is better to submit his views in writing, he will not have been surprised that the British Government should require time to consider them.

Asir and Yaman.

Outside Arabia there would not be much chance for the success of a military expedition announced so confidently beforehand as that which our Jidda Correspondent states is being prepared by the Idrisi of Asir against the Yaman. The encroachments of the Imam Yahya both to the north and to the south have long been a factor in the politics of South-West Arabia, and it will not be a matter for surprise, if the Idrisi should aspire to recapture some of the territory taken from him. Hitherto he has not felt equal to the task, as the Yamani are formidable opponents in their own sphere. The change in the Idrisi's fortunes is attributed to the potentialities of oil in the Farsan Islands, which lie off the Asir coast opposite Jizan. Whether the story is quite so romantic as that which has reached Jidda is another matter. As in many other parts of the world likely sources of petroleum are being eagerly sought out. Even the richest are not easily come by, and, as is well known, a very considerable fortune had been spent in Persia and failure recorded before the Anglo-Persian oil-fields were established. Oil is found on the Egyptian coast of the Red Sea, and it is natural that other parts of the Red Sea littoral should also be explored for oil. Attention has been paid to the Farsan Islands, which by a treaty of 1917 between Asir and Great Britain were recognised as belonging to the former, and the first of the oil-prospectors in the field was a syndicate which secured a concession over the islands from the Idrisi. As is usual

in such cases the concession carried with it the obligation of payments; when the syndicate failed to make the second instalment on the specified date, the Idrisi held that the concession had lapsed and proceeded to hand it over to the representatives of the Anglo-Saxon Petroleum Company. The new concessionaires have not only been punctual in their payments, but have also lost no time in proceeding to test the oil-bearing potentialities of the Farsan Islands. Things do not seem to have moved quite so rapidly as is reported in Jidda, but boring operations have begun. In the meantime the Idrisi is credited with having spent his windfall in the purchasing of munitions and with contemplating an offensive against the Yamani. This development is, naturally, his own affair, and, if it should add to the romance of oil, it can hardly be charged to the curse which is supposed in some quarters to attend that commodity.

The Situation in Yugoslavia.

The incidence of the Christmas Holidays—under the rites of the Orthodox Church—has given M. Ouzounovitch, Prime Minister of Yugoslavia, breathing space in his arduous task of Cabinet-building, or rather of the creation of a Government majority in the Skupshtina. Almost immediately the names of the new Ministers were announced, two of them—members of the Radical Party—resigned, in accordance, no doubt, with the wish or dictation of the section in the party that is challenging M. Ouzounovitch's inheritance—whether carefully sought or unwillingly accepted is not clear—of M. Pashitch's mantle. King Alexander refused to accept the resignations, and the holiday season intervened to allow the harassed Prime Minister to carry on his work with less publicity. One development is likely to attract more attention within Yugoslavia than outside. The *Obzana*, or special regulation issued in December 1924 under the Defence of the Realm Act proscribing the Croat Peasant Party, decreeing its dissolution, prohibiting its meetings and confiscating its archives, publications and correspondence, has been formally repealed. It will be news to many people abroad that this Order in Council should still have remained nominally in force, even after the Raditch Party was represented in the Cabinet; and the Croat Ministers cannot be regarded as guilty of political blackmail if at last they insisted on the removal from the Statute Book of an Order, which at the time of its promulgation carried little conviction in regard to the proofs of the Party's guilt carefully set forth in attempted justification of the measure. In all the circumstances the best that M. Ouzounovitch can hope to attain is to carry

on by hook or by crook with the present Skupshtina until the spring, when in all probability a fresh attempt will have to be made to find a majority in Parliament for a party or parties with a clearly defined policy bearing some relation to the more pressing needs of the country.

The Balkans for the Balkan Peoples.

The *Matin* has published a highly sensational statement regarding the part alleged to have been played by the British Government in the events that led up to the signature of the Italo-Albanian Treaty. In order that the statement should attain its full effect, it is necessary to read an *arrière pensée* into the Tirana Agreement. If that document should prove to be merely a mild echo of Locarno, in spite of Italy's anxiety to go bail for the present Albanian régime for the next five years, any encouragement given to Signor Mussolini to spread around friendly relations does not appear to be a very serious crime. The *Matin* statement bears on the face of it a laboured attempt to say what France thinks of Italy and to give an air of verisimilitude to the reports that have undoubtedly found credence in Albania, that the treaty with Italy carried Great Britain's blessing. On this point Albania can easily be reassured. She made the treaty with her eyes open—at least with Ahmed Beg Zogu's eyes open—and if it promotes Albania's internal peace and material development and the domestic harmony of the Balkans, it carries with it Britain's warmest approval; if, on the other hand, it is going to lead to unrest in Albania, Italian interference, and strained relations or worse between Italy and Yugoslavia, then the Treaty will be strongly and rightly condemned in this and many other countries. As a straightforward document intended to mean what it says, the Treaty is harmless; but if it should be found to carry with it any other interpretation, it is likely to prove dangerous and pernicious. In this latter case the chief sufferer will be Albania, or Ahmed Beg Zogu. Until then there is little need for France, Yugoslavia or any other country to shed tears over spilt milk. The fears at first entertained in Yugoslavia have, it is clear, been in some measure removed by the obviously truthful assurance of the Bulgarian Foreign Minister that "no Great Power had called upon the Bulgarian Government to enter into special engagements outside the obligations entailed by the Peace Treaty." It was feared in Belgrade that the Italo-Albanian Treaty followed upon a similar understanding between Italy and Bulgaria, and to that extent completed that side of the "iron ring" which it was sought to forge round Yugoslavia. The scheme of the Balkans for the Balkan peoples can still be realised, if the countries most concerned will look to their own domestic affairs and bury the bitterness that is kept alive for the most part by the Press.

By Air to India.

The flight to India undertaken by Sir Samuel Hoare, Secretary of State for Air, and Lady Maud Hoare, to inaugurate the future Cairo to Karachi air route, has been successfully accomplished. A more felicitous inauguration there could hardly have been; one and the same machine carried the passengers the whole way from London—6,300 miles in 63 flying hours; there was no breakdown; the Hercules arrived at no station more than forty minutes behind her time-table and was frequently ahead of it; weather conditions were not exceptional, for after leaving Jask a sandstorm was encountered, through which flying was impossible, and the machine had to return to Jask to spend there the day that it had been intended to wait at Karachi. The arrival at Delhi took place on January 8, thirteen days after the departure from London. The difference between the total length of the journey and the number of flying hours is explained by the fact that no attempt was made at record-breaking. For the Secretary of State it was an official business trip and opportunity was taken for inspecting Air Force stations *en route*, and, as he testified

ANGLO-TURKISH RELATIONS.

The felicitous meetings at Angora last week between Sir George Clerk, British Ambassador to Turkey, and various representatives of the Angora Administration, notably the Foreign Minister, Tewfik Rushdi Bey, and the Turkish Representative to the Court of St. James's, Ferid Bey, were, perhaps, what might have been expected in view of the recent change of attitude that has come over Turkey in regard to Great Britain, but there are at least some grounds for believing that the official good-will displayed was on this occasion not quite the hollow thing that it sometimes is. As a matter of fact, both general and particular causes have combined to make the present an admirable time for cementing Anglo-Turkish relations. Sir George Clerk is by way of being *persona grata* in Turkey, and the personal factor is one that—as is well known but too frequently ignored—is of enormous importance in Near Eastern countries, more particularly in one whose inhabitants resent more than most any assumption by foreigners of superiority or indifference. It would appear, indeed, that the visit of the British Ambassador to Angora was most nicely timed, not only from the purely British point of view, but also in the larger aspect of Turkish relations with the West. We do not know the precise nature of the business which prompted the Angora Administration to summon to the capital the Turkish representatives in places like London, Paris, Rome, Athens, and Geneva; but it is hardly just to suppose that these men were recalled to discuss merely the question of female attire in Turkey or the desirability of gambling casinos. One of the topics that were discussed must surely have been the problem of whether Turkey should or should not apply for membership of the League of Nations. The recent failure at Odessa on the part of Tchitcherin and Tewfik Rushdi Bey to accomplish much more than verbal agreement about the lastingness of Russo-Turkish friendship, was not unnaturally followed by a conference upon the desirability of Turkey's pursuing Russian advice about remaining aloof from the West. Now manifestly the Kemalists are not strong enough to disappoint the Soviet authorities other than negatively; but within what partial independence they can enjoy from Bolshevik supervision they intend, apparently, to work out whole-heartedly their conception of what a Westernised Turkey should be. Their present relations with Western Powers, or, rather with Western representatives, is strikingly correct. Thus it was that Sir Henry Dobbs, High Commissioner for Iraq, could report with the utmost satisfaction upon Turco-Iraqi relations, confidence in which he was able to confirm as a result of his visit to Angora last November; and thus, one imagines, Sir George Clerk will be able to report. Great Britain is enjoying a sort of psychological boom in Nationalist Turkey just now, and the inspired Kemalist Press has of late been indulging in articles couched quite in the old vein upon the relations that ought to exist, now that all "outstanding" problems be-

tween Turkey and Britain have been solved, between the two countries. Quite certainly there will be from the British side no lack of eagerness to have the position progressively regulated.

No doubt Nationalist Turkey has at times been vexatious, even perverse, in the view of British officials. Certain Nationalist subordinates have appeared occasionally to go out of their way to make rough the path of Anglo-Turkish collaboration; but the worst in this sense is, we may hope, now safely over, and the time is assuredly ripe for a revision, or rather, a revitalisation of the attitude which each country should adopt towards the other. It is no part of Great Britain to probe into the domestic affairs of Turkey, and in fact it is gratuitous and probably bad manners to hint at an offer of advice on internal matters. Turkey and the Turks are no concern of Britain; Turkey and the world are very properly one of the more urgent problems of British foreign policy. The duration of the Kemalist Government is a matter that first and foremost concerns the Turks who lost the War against the Allies but won the war against the Greeks. Born of military necessity, this Government has had in large measure to inform its policy or policies on military considerations. The extent to which Turkey still thinks in terms of physical force is, indeed, vividly reflected in the national Budget, over half of which is devoted to military expenditure. Now, however, she is at peace, fortified by treaties, with all her neighbours; and it would not be unreasonable to suppose that we may see a progressive decline in such expenditure, unless, indeed, there be intimate reasons for its otherwise superfluous continuance. But that again is the Turks' own affair. Moreover, this military preoccupation of the Nationalists is susceptible of misinterpretation. For instance, Turkey has never been given the credit which we think is her due for refusing to meddle in Syrian affairs, wherein an official step on the part of Angora might have had serious results. In the same way, we think, credit should be given to her for so far loyally abiding by the decision arrived at over the northern frontier of Iraq. If the first meeting of the Turko-Iraqi Commission, which took place a few weeks ago at Zakho, be any criterion, the peace between the Turk and Arab States should develop into cordial co-operation. As far as Turkey's foreign relations go, there is, therefore, no invincible reason why Anglo-Turkish relations should not be put on a belated but satisfactory basis.

Not that Anglo-Turkish relations can ever be what they were, say, at various times in the nineteenth century. To suppose that were possible would be to live in a mirage. For the present, at any rate, it is quite impossible for the Nationalists to detach themselves from a Bolshevik Russia, which, at all events in form, has renounced the traditional Tsarist policy towards Turkey. Soviet Russia must, it would seem, be at least outwardly Turkey's chief counsellor, for geographical reasons alone. Kemalist Turkey, however, is now having at last an opportunity of taking a long view of the situation, for apart from certain troubles in the eastern vilayets, she has nothing to worry about except internal reforms. In these circumstances, therefore, it may well be that she will have time, not only to study history, but also to look at Russian activities outside her own borders, and to form her own judgment upon whether Soviet policy towards weaker peoples differs in essence from the hated Tsarist policy. If she discovers an important difference, the helping hand of the West may continue to be held out to Turkey in vain; but if she, too, unfolds a fundamental similarity, then she may begin to fear that not all the Odessa meetings in the world would compensate, say, for the loss of such places as Kars or Ardahan. That Russia is aiming at a new hold on Islam, moreover, can scarcely be doubted; nor is it so easy to believe now that Turkey has renounced her former interest in Islam. These two tendencies may ultimately clash, and then, it may be supposed, will result the traditional leaning of Turkey upon the greatest Islamic Power in the world; we mean that Power whose stability and sincerity Sir George Clerk at Angora has so happily been exemplifying.

The Near and Middle East*

From Our Own Correspondents.

Cairo, January 2.

New Year Celebrations.

Cairo celebrated the New Year in usual fashion, with much noise, music and champagne. But although some of the most popular resorts, such as the grill-room at Sheppard's Hotel, were as suffocatingly packed as ever, it was noticeable that there was considerably less public merrymaking this year than on previous occasions. More than one observer has remarked that not only at the hotels, but also at the Royal Opera House and the theatres, the Cairo public this winter seems to be smaller, duller, and conspicuously less smart than in the past. The cause, no doubt, is to be sought in the state of the cotton market and its influence on business of every kind. Not only have many people less money to spend on their wives' clothes this winter, but also many others are reducing to a minimum their expenditure on luxuries and amusements. It is rather the absence of this section from Cairo social gatherings than any lessened smartness of those who do attend, which gives the impression that this season Cairo is less sparkling than in the past. But the season proper is only now beginning, so our scintillations may be coming later.

The "Absent Guest" Dinner.

Three years ago the Cairo Y.M.C.A. initiated the "Absent Guest" dinner scheme by which members and friends of the Y.M.C.A. in Cairo pay five shillings each for a dinner of lentil soup and bread and cheese, the cost of which is threepence halfpenny, the difference between cost and charge being devoted to providing a dinner for unemployed men in London. The "Absent Guest" idea caught Cairo's imagination, and the annual dinner has grown larger in numbers each year and is now one of the notable events of the winter. The "Absent Guest" dinner and the Caledonian Society's St. Andrew's Day Dinner are almost the only gatherings of the British Community at which after-dinner oratory forms a principal part of the proceedings. At both functions excellent speeches are usually delivered, and particularly at the Y.M.C.A. gathering, since the choice of speakers is not limited by national considerations, as at the St. Andrew's Day gathering. This year Lord Lloyd presided at the "Absent Guest" dinner, the company, numbering 160, being of record size and providing funds for the entertainment of 350 unemployed at Marylebone Baths Hall. Lord Lloyd, the Hon. Cecil Campbell and Mr. Harry Farnall all spoke well, while messages were read from Lord Plumer, the Lord Mayor of London, Chairman of the London County Council, Mr. J. B. Hobbs and many others.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Dr. Llewellyn Phillips.

The death yesterday morning of Dr. Llewellyn Phillips at his house at Kasr el Doubara takes away one of the best known members of the British Community in Egypt and a very able medical practitioner. He had been practising in this country for nearly thirty years, and at the time of his death was senior surgeon at Kasr el Aini Hospital, besides having a very large number of private patients. Dr. Phillips' two Sunbeam cars, which he had had in use for many years and which were always painted a bright yellow and kept in the most spotlessly shining condition, have for long been one of the most familiar sights in Cairo streets. Dr. Phillips leaves a wife and three daughters.

Aly Bey Fahmy Kamel.

Another sudden death occurred on Friday afternoon, when Aly Bey Fahmy Kamel, brother of the late Mustapha Kamel Pasha, founder of the Nationalist Party, dropped dead immediately after delivering a hour-long speech at a gathering held to commemorate the anniversary of the death of Mohammed Fareed Bey, another of the early leaders of the Hisb el Watani. Aly Bey Fahmy Kamel inherited some of the tremendous prestige which was associated with the name of his brother, and for a time was the leader of the Nationalist Party. But he was not endowed with either the personal magnetism or the political astuteness of Mustapha Pasha, and in recent years a considerable section of the party has been in open revolt against the leadership of Aly Bey, and has held its own meetings and run its own newspaper irrespective of his views and sometimes in clear opposition to them. Nevertheless, the enormous popular veneration for the name of Kamel has not yet quite died out, and Aly Bey enjoyed during the whole of his life a position of considerable prominence. In politics he was certainly not a power, but still something of a personality.

Aerial Events.

Aerial news has filled the columns of local newspapers during the past week. The arrival of Sir Samuel Hoare at Aboukir has been the principal aviation event, but there have also been other happenings of interest. The departure from Cairo of Captain Gladstone, to initiate the Khartoum-Kisumu mail service and the bad luck which involved his machine in accident at its first trial trip, have caught the local imagination. The progress of the Swiss aviator, Mittelholzer, who has passed through Egypt, going south, and of two French airmen who have arrived from Madagascar, together with numerous other air happenings of greater or less import have served to add variety to the events of a week which, from the viewpoint of Egypt's future as a centre of air travel, has been a notable one.

Municipal Lotteries.

Municipal lotteries in this country are not likely to be very popular in the future, as a result of what has happened in connexion with the Alexandria Municipal lottery to provide funds for that city's new stadium. In the first place the lottery should have been drawn last May, but, as only a comparatively small number of tickets had been sold then, the drawing was postponed, amidst much protest, to December 31. Even then only a minority of the tickets had found buyers, so the Municipality put all the ticket numbers, sold or unsold, into the drawing, with the result that the two principal prizes, of £E5,000 and £E2,000, were drawn by unsold tickets, so that these sums revert to the Municipality. There have been many very forcible comments on this new way of conducting a lottery drawing, and when next the Alexandria Municipality needs money it will be well advised to choose some method other than a lottery for raising the wind.

Constantinople, January 5.

The Eastern Vilayets.

In accordance with the reforming policy adopted by the Government after the Kurdish rising, a draft law has been drawn up by the Ministry of Interior, for submission to the Grand National Assembly, envisaging the transplantation of over 15,000 people who at present inhabit the regions under state of siege. In view of the above people's contact with the insurgent elements it is considered that it would be judicious to distribute them in the sparsely populated central provinces where they will have attributed to them compensating land for that which they will be forced to leave. This measure further testifies to the thoroughness with which the Government is purging the country of elements detrimental to the Republic on account of their religious and tribal fanaticism.

Anti-Fire Appliances.

Much trouble is being taken with the investigations into the cause of the fire some fifteen days ago which destroyed the Customs Warehouses at Emine Enu, in Stamboul—when over £2,000,000 damage was done. It has been found that the watchmen are guilty of negligence in their duties, but nothing to which the cause for the outbreak can be attributed has yet been seized upon. Reports say that a further commission will now investigate and attempt to establish whether or not the disaster was caused by a short circuit of electricity. All this, however, brings things very little forward. What would appear to be a subject for serious consideration is that of deciding on the best preventive measures possible for the future. As there are no adequate fire-fighting appliances in any of the Customs Houses in the Constantinople zone, it would be wise if the authorities relieved the night-watchmen of some of their responsibilities by installing in all warehouses the automatic sprinkler systems used so extensively in other countries.

A Turkish Census.

If everything goes according to programme it may soon be possible to know the exact number of inhabitants in Turkey. For very many years no census has been taken and no correct statistics exist. Figures given at the beginning of 1926 by the Turkish Ministry of Interior stated that there were over 12,000,000 inhabitants in this country, but as it is generally believed that the total population is not more than 7,000,000, a new census

would undoubtedly seem to be indicated. A certain M. Emile Jacquart has been engaged to superintend the work, which will be a task of exceptional difficulty, as owing to the non-existence of any reliable figures the census authorities will have to start their activities by a house-to-house investigation throughout the country.

Educating the Women.

The Ministry of Public Instruction is now devoting considerable attention to the feminine element in Turkey. It has just decided to begin domestic courses for women and girls throughout the country. Particular attention will be devoted to the instruction of mothers on the upbringing of children, and as the greater part of the female population of the interior vilayets are unable to read, a great amount of good should be derived from this movement. Further, women's clubs are to be opened in various parts of Turkey, having as their objects social development and the complete reform of the Turkish woman's dress.

Purging Constantinople.

The Constantinople vilayet authorities have started a campaign for the improvement of the morals of the city's youth. All public dancing saloons are now the object of a strict surveillance and new regulations prohibit minors attending these places unless furnished with their parents' written permission. No alcohol can be served on these premises and places are to be provided for chaperons who will pay no admittance unless they dance. This measure has been instituted as a result of recent regrettable incidents and certainly demonstrates the admirable intentions of the authorities to render the place more proper. It is even reported that restrictions will go to the extreme of prohibiting mixed dancing classes. At this rate all that will soon remain will be to dismiss the police force.

HIJAZ.

Jidda, December 19.

The Negotiations with the Sultan.

The favourable symptoms which characterised the early days of the recent conference between Sultan Ibn Saoud and a representative of Great Britain have not been maintained, and the negotiations have been broken off *sine die*. Ibn Saoud only a year ago, while still in the throes of the war with the Hashimite dynasty, found His Majesty's Government so anxious for a friendly understanding that Sir Gilbert Clayton was sent out to negotiate with plenipotentiary powers. The result was the eminently satisfactory Treaties of Bahra and Hadda. Since then the Wahabi King has sent his son and his Secretary of State for Foreign Affairs to England, where one might suppose that high matters of policy were discussed with a view to arriving at a basis for more regular negotiations—such a supposition is, however, scarcely justified by the facts. In return the British Consul at Jidda, accompanied by the official of the Palestine Government, who had also assisted Sir Gilbert Clayton, has spent the best part of a month in discussing matters over again with the King only to reveal in the end that he had no authority to agree to anything outside the narrow letter of his instructions.

And now he is returning to England at once to discuss the matter with the Foreign Office with a written statement of Ibn Saoud's standpoint on various questions.

The Conquering Motor.

Meanwhile Ibn Saoud is preparing for a visit to his ancestral domains, and there is much activity in the desert between Madina and Hanakiya in preparation for the passage of the large convoy of motor cars which will accompany him. The first year of his reign over what is practically a united Arabia has not only established security, but has also definitely set this ancient country in motion on the path of modern progress.

Asir and Yaman.

In the King's absence Jidda pursues the even tenor of its ways, and it is only from the south that rumours come of alarms and excursions. And a very extraordinary tale it seems to be. An Italian mission under an ardent disciple of Fascismo, Commendatore Uccelli, arrived in the Yaman a month or so ago and is apparently engaged in the task of paving the way for the future establishment of an Italian colony. The Imam Yahya is said to be suffering from a fit of depression and melancholy, scarcely knowing which is the greater danger to the future of his kingdom—his Italian friends or the small cloud in the north, whose focus is at Jizan and whose motive power seems to be the latent oil of the Farsan Islands.

At Jizan there are a great coming and going of the tribes and open talk of the approaching offensive against Maidi (held by 3,000 Imamic troops) and Hudaida. The tribes have to be armed and paid, and the erstwhile needy Idrisi—with whom is the ex-Grand Sanusi and an ex-artillery commander of Ibn Saoud's army, Jamal Pasha al Ghazzi, as commander-in-chief—has become suddenly rich. The story of this transformation scene will go down to history as one of the romances of oil, and it will make better reading, if I give the story as it reaches me. In the early part of last summer a representative of a British syndicate visited the Idrisi and secured a concession in connexion with the Farsan Islands, which are supposed to be oil-bearing. A failure in the remittance of the second instalment of money due under the terms of the concession coincided with the appearance of a rival in the lists. A representative of the Anglo-Saxon Oil Company is said to have visited Saiyid Mustafa, a cousin of the ruling Idrisi, at Cairo, and the latter wired to Jizan saying that a good offer was immediately available. Jamal Pasha immediately visited Aden to inform the Resident that the concession was cancelled for a breach of conditions. He telegraphed to Saiyid Mustafa that the coast was clear, and it appears that a private vessel of the Anglo-Saxon Company, fully equipped to begin work at once, arrived at Jizan. A present to the Idrisi of four Fiat cars and an initial payment of £10,000—in the circumstances the figures given should not necessarily be regarded as exact—secured the concession, and a first instalment of £3,000 was paid under the conditions thereof. These payments, so the story runs, were followed by the granting of a loan of £50,000, on part account of which a large consignment of machine-guns, rifles and ammunition—apparently ready packed on board the same vessel presumably for self-defence against the Red Sea pirate—was landed at Jizan. The vessel then weighed anchor for Farsan and boring operations were at once started in consequence of which by the end of November oil had been found! The representative of the Anglo-Saxon Oil Company has returned

to Suez to arrange for the continuation of the work, while his Idrisi friends are dancing war-dances preparatory to their great offensive against the Yaman Tihama. I have given the story as I heard it, from a source by no means negligible. Some of its details may prove to be inexact.

The political status of the Asir is still doubtful. It certainly comes within the sphere of Ibn Saoud's protection; but it appears to enjoy complete economic and political autonomy. It is but one more of the riddles of Arabia.

Sofia, January 4.

The Government, the Opposition, and the King.

In accordance with the Sobranie's tradition, the discussion on Parliament's response to the Speech from the Throne gives place to a long debate on the general policy of the Government, in which each Party, through the medium of its recognised leaders, brings to bear not only its criticisms, but also its ideas upon the domestic and foreign position of the country.

The debate this year yielded much good sense and information. All the speakers at the tribune developed their themes with a seriousness which signified the gravity of the problems discussed. Their theses were not identical, and on certain points in fact were contradictory; but in their dignified treatment of these problems the speakers were the same. Members from the ranks of the Opposition insisted upon the necessity of "normalising" the domestic situation and of creating the possibility of national union, of throwing a veil over the past, but also of providing that, if the extremists were to attempt to disturb public order, they would find themselves faced by the whole nation. This task of "normalisation" becomes imperative in view of the approaching legislative elections, which will certainly mark a turning point in the internal development of Bulgaria. Speakers were united on this point. The most notable of them, M. Malinoff, head of the Democratic Party, and, so to speak, leader of the Opposition in the Sobranie, put the situation like this: there were two ways open before the country—the path of internecine struggle and the path of general conciliation. It was for the Government to make its choice.

But if peace and solidarity are necessary in domestic politics, they are no less so for Bulgaria abroad, and in this regard no difference was recorded between the various orators. All, without reserve, supported the sincerely pacific character of the foreign policy pursued by Bulgaria, and in this pacific policy all emphasised in the first place the desirability of *rapprochement* with Bulgaria's neighbours. The Opposition, refusing here to participate in the Government's optimism, considers the external situation of Bulgaria still very precarious, in spite of the incontestable success which she obtained by the conclusion of the Refugee Loan. The Opposition, without minimising the importance of the League of Nations, believes that the country must yet depend upon its own efforts. They therefore recommend a more active foreign policy, which would assure to Bulgaria, with the protection of the Powers, the valuable help of her neighbours and the realisation of Balkan solidarity by the application of recognised rights for the Bulgarian minorities in Roumania, Greece, and especially in Yugoslavia. Such a policy would, according to the Opposition, procure at least some alleviation of the heavy charges of the Reparations, which she can no longer support.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

The Government replied to the Opposition through the Minister for Foreign Affairs and the President of the Council.

The Foreign Minister explained the fundamental aims of Bulgarian foreign policy arising out of the Peace Treaties. This was an essentially pacific policy, aiming at harmony with all the Great Powers—at present equally well disposed towards Bulgaria, as was to be seen from the Refugees Loan—and at frank and loyal relations with her neighbours, an inter-Balkan Entente being a necessary condition for the establishment of a lasting peace in the Balkans. To remove all misunderstanding, he continued, the Bulgarian Government implies a *rapprochement* reached by direct and separate negotiations with each neighbour, and not general negotiations, which could end in no practical result in the present state of affairs in the Peninsula. It means to gain, by absolute loyalty and very conscientious execution of its obligations, the sympathy and confidence of the League of Nations, of which M. Bourroff was an unreserved admirer.

M. Liaptcheff ended the debate. In a long speech he explained what his Cabinet had done in different aspects of public life, the efforts which he had made for the appeasement of the country, the results which he had obtained in this way, and, in answer to the speakers of the Opposition who had discussed what had been called the Government of To-morrow, he insisted that this could only be his Government, at least until the day of the legislative elections, because he saw no reason either for a coalition with a section of the Opposition (meaning the Democrats) or for a Concentration Government, which was justified only in moments of national danger, adding however, with a condescension that did not pass unnoticed, that he did not consider the elements and parties of order as his enemies—signifying by this that he would take them into account at the elections, which would be held in perfect freedom.

These statements of the President of the Council, which disillusioned many people, gave rise to varied comment. The dominant impression was, and remains, that they mark a concealed rupture between the Government and the Opposition, although some friends of M. Liaptcheff affirm that the speech should not be construed in this way. On the following day the King, starting what will prove to be an excellent practice, invited all the deputies to a reception at the Palace; but in his reply to the Sobranye's Address, King Boris, appreciating the delicacy of the situation maintained a prudent reserve, and contented himself with stating the progress of the work of appeasement and of vaunting the solid qualities of the people. In conversation with deputies he did not cease to emphasise words of appeasement and conciliation, avoiding the controversy between the Government and the Opposition. This is explained in some quarters by the fact that several months separate us from the legislative elections, and, consequently, the King has not yet to declare his attitude. That, however, allows the uncertainty to remain, which, possibly of purpose, the President of the Council created.

This uncertainty will soon be dissipated, the pourparlers between the different parties for the formation of a united Opposition being due to start at once.

ROUMANIA.

Bucharest, January 6.

The Little Entente.

In view of insinuations made by some sections of the foreign Press, that the recent pact of Italy with Albania would be likely to trouble the friendly relations of the members of the Little Entente, the Roumanian Press loses no opportunity of bringing forward proofs that no such effect has been produced, and reproduces with satisfaction the recent suave and friendly speech of M. Markovitch in the Belgrade Parliament, in which he states that all the recent international Treaties affecting the Little Entente have been made with the full cognisance of all its members, and that they are all on the best of terms.

Roumania's Internal Position.

As regards the internal situation of Roumania, her position at present appears to be favourable in many respects; her trade balance is in her favour, and her budget has been balanced for several years; the present Government is reducing the export taxes by degrees with the object of encouraging home production, and the import taxes are being increased on all articles produced in this country; in the quantities and qualities required by the home industries. But the two great hindrances to the economic development of Roumania remain, as before, the instability of the currency and the inadequacy of the transport system. Up to the present all the efforts of the Roumanian Government to obtain a foreign loan have failed. The Ministry continues its efforts to gain the confidence more particularly of England and of America, but the attitude of the Liberal Party towards foreign capital has created an atmosphere of insecurity, which it is difficult to dispel, especially as it is felt that the Liberals are in reality the greatest power in this country as they command the greatest wealth.

Even British business firms appear to be holding aloof from this market, and are rapidly being replaced by German, Austrian and Czecho-Slovakian competitors. This seems a great pity, as the ordinary business conditions have greatly improved of late and there is good business to be done in many commodities, and raw materials of all kinds; and when the free zones in the Danube ports and in Constanza have been installed (of which mention was made in the last of these letters), the facilities will be even greater.

Petroleum Indemnities.

The labours of the Committee appointed to inquire into the compensation due to the various petroleum enterprises in Roumania on account of the destruction of stocks and plant before the German occupation of this country during the War appear to have been ended, and the table now published in the Roumanian Press of the sums apportioned to each enterprise shows what a gigantic task was theirs. All the companies, except the Astra Romana appear to be satisfied with the portion allotted them. As regards the Astra Romana, this might be described as a Protestant company floated in a sea of Orthodoxy—or non-Orthodoxy—and it is part of its mission to protest. When was a Protestant ever satisfied? The total indemnities allotted by the British and French Commission amount to £9,978,890, 17s. 2d. (according to the *Argus* of January 1) and this is divided among 134 companies, in portions varying between £200 and two million odd pounds.

The Health of the King.

Although the King has resumed many of his ordinary duties, and received in person, along with the Queen and other members of the Royal Family the New Year greetings of the Ministers of the Cabinet and other State officials, his health still gives some cause for uneasiness, and it is reported that Professor Gerota has gone to Paris in order to hold a consultation with French experts.

The Royal Family are at present in residence in Bucharest and Princess Ileana is giving a small "coming out" dance on January 8 (on the expiry of the term of Court mourning for the late Emperor of Japan) to celebrate her eighteenth birthday.

Miscellaneous News.

Shipping on the Danube has almost ceased, and it is expected that the river will be completely closed very shortly.

A heavy wind and snow storm broke over Bucharest last night, which will no doubt have done some damage to roofs and telegraph wires, though it is too early for reports to be received to this effect. It is the first heavy snow of the season in this part of the country, as the autumn has been an exceptionally long and mild one. So mild has been the weather that the wild strawberries were in full bloom in Sinaia in the month of November.

Book Reviews

A POETESS ON PERSIA.

"PASSENGERS TO TEHERAN." By V. Sackville-West. (London: The Hogarth Press. 12s. 6d. net.)

This is an enchanting book. Miss Sackville-West, as she still is called in literary circles, has done one of the things that was most needed in our time: she has gone to the post-War Middle East with an open (but very far from an empty) mind. She is full of knowledge; yet before the ageless problems of the East her "nice" (as they used to say at Oxford) theories avail nothing. She does not tell us why such and such a thing happened; nor does she point out the "sights" familiar to the reader of the guide-book: but she describes men and places as she, a poetess and prose writer of considerable distinction, sees them. The timelessness, the immensity, the incommunicability of the East—these are for her the capital factors. And we are uncommonly grateful and refreshed.

It was perhaps inevitable that her literary preoccupations should protrude themselves into the book, at once so personal and impersonal. Karnak, for instance, reminded her of Piranesi's Prisons, Aden of Rimbaud, the Persian Gulf of Proust, Reza Shah Pahlavi of Marlowe, Isfahan and Kum and the Shah's Coronation of Donne and Flecker (slightly monstrous, this last comparison). But they are beautiful and generally pertinent protrusions, more illustrative of the authoress's power of description and a better illumination than are even the abundant photographs which heighten the radiance of her pages.

Miss Sackville-West went to Persia via Egypt, the Red Sea, the Persian Gulf, and Iraq; and returned via Russia, Poland, and Germany. Karnak by moonlight, the leprous salt-fields by Aden, the feverish monotony of the Gulf, the dusty jumble of Baghdad (perhaps she would like the city better if she spelled it correctly!), and then—Khaniquin to Teheran: these are the stages of her outward journey. But the best of the book lies not in the description of these, excellent though they are: for that she reserves for Persia itself—not, of course, Teheran, but Persian Kurdistan, Demavend, Doshan Tapeh, Dillijan, Isfahan, and Kum.

Quite unreservedly we welcome and recommend this stimulating travel book, for it is one in a thousand such that have emanated from facile and jejune travellers who know the post-War Middle East. No Syrian oasis, no Persian garden, deserves to be better cherished than these notes of an English poetess upon the still undiscoverable East.

THE POLITICAL FUTURE OF INDIA.

"ON FIRMNESS." By a Sojourner in India. (Oxford: Basil Blackwell 2s. net.)

In this rather oddly named and unpretentious little book, the anonymous author reviews the results of British domination in India and gives his ideas on its governance in the future. Many more pretentious volumes, written over well known names, are much less worthy of study; there can be few people really interested in Indian politics who, having read it through once, will not immediately

turn back and read it through again: and it is certain that every reader, whether familiar with India or not, and whether or not he agrees with its arguments and conclusions, will be the better for having done so.

The case that the author puts before his readers, and the views that he discusses, are those of the Indian intelligentsia—the class that, for convenience, may be called that of the Indian professional politician; which are, in fact, widely different from those of "the man in the mud hut": and he proceeds on the theory that the politically-minded Indian does, on the whole, faithfully represent the views of the inarticulate masses for whom he professes to speak, even if those views are at present but dimly held. This being understood, one may proceed to examine his arguments, and his conclusion, in his own words. We are faced in India with a growing opposition to the continuance of British control: one which, in a hitherto submissive people, we find it difficult to recognise. It is as if we, in this generation have somehow failed to maintain what our fathers had established, so that its recognition is uncongenial as well as difficult. We are in the position of a once accepted authority whose wisdom and eloquence have lost their magic, so that he has ceased to be an oracle and has become a bore, or even an obsession: Indians, in fact, have had too much of us. We have been moulding the Indian character for a century and have succeeded in arousing a reaction that defeats our efforts. We have attempted to introduce our own standard into India and to impress upon Indians the belief that our way of progress is not only the best, but the only possible way, on the assumption that the heaven that we have infused will continue to work even after we have surrendered the tenure of power. The limit of service of precept is easily overstepped, and we have probably already overstepped it. As an agency of education we have done as much work as we could hope to accomplish; the best we can do now, in order that the work may be of any use, is to endeavour to get rid of the reaction that stands in the way of its utilisation. Indians maintain that our system is a training in obedience rather than in responsibility; they have reached the stage at which it is useless to attempt to force more education on people to whom it is unwelcome, and wisdom is to be found in accepting the situation. If we do so, we are no longer under an obligation to train Indians for a specific type of government, instead of undertaking to dictate and to direct their political destiny, we can set them to work it out for themselves, as other peoples have had to do: we can relieve our control of its educational embarrassment and base it on indispensable requirements: and we can free Indians, and ourselves as well, from the friction that stimulates the reaction animating the national movement and standing in the way of their uniting with us for a common purpose.

What, then, are the indispensable requirements? Control that will protect India from external invasion and internal aggression, until Indians are able to assume it themselves: together with the widest possible extension of the principle of local self-government. We have a moral obligation to see that the authority which we hand over is not abused: the control must be such as will ensure freedom from oppression and a reasonable standard of good government within each unit of the administration: and, as these units must be placed on a stable basis before they can be united in a stable combination, it is necessary for us to retain the administration of imperial functions until the combination, whatever form it may take, can relieve us of them. Finally, it rests with us to safeguard the legitimate interests of our own people in India. The local governments, whose constitution would vary according to local conditions, would be free to administer their domestic concerns without interference, so long as they did not fall below a certain standard; while, in the Imperial Government, in its function of asserting this standard and in the management of Imperial concerns, the

SERBO-CROATIAN SELF-TAUGHT

responsibility would be undivided. The final authority would rest with the British Government: the British personnel in India would be concentrated and its functions adjusted to the requirements of the central administration and control, but the local governments could have British assistance if they wished.

It is unnecessary to follow the author into his suggestions for the inclusion of the Indian States in the body politic of India, or into the details of his plan for the summoning of a representative convention which, if it could not be expected to reach a definite conclusion, would yet clarify the issues and prepare the ground for a future settlement: and one cannot agree with his belittlement of the importance of Hindu-Muslim differences; though one can whole-heartedly agree with his dictum that, when authority is resolute, when Hindus and Mussalmans, or any others with a quarrel to foment, know that provocation or aggression will be punished, they are not willing as a rule to bring trouble upon themselves. To the reviewer, the most interesting point in an unusually interesting book is that the general conclusions of the author arrive, by a process of reasoning entirely his own, at the same solution as that several times advocated in *THE NEAR EAST AND INDIA*—the scrapping of Diarchy in favour of a system that includes a Central Government entirely British and a wide extension of the principle of local government preponderatingly, and where possible entirely, Indian.

THE ST. BARNABAS PILGRIMAGE.

The St. Barnabas Hostels and Pilgrimage Fund has collected into an album all the articles which were written for the Press upon the pilgrimage made last autumn to Gallipoli and Salonika. To all those who took part in the pilgrimage, and to many who were unable to do so, this Album should be a pleasing souvenir. It has been well prepared and is abundantly illustrated. A few copies are still on sale at the offices of the Fund: 7, Hobart Place, S.W.1.

NEAR AND MIDDLE EAST ASSOCIATION.

Lady Muir (*née* Nadejda Stancioff) will lecture to the Near and Middle East Association, on January 21, at 8.45 p.m., upon "The Ancient History and Religion of Bulgaria." The Hon. Mrs. Aubrey Herbert will preside, and the meeting will take place, by kind permission of Mrs. L. Cobham, at 14, Hans Crescent, S.W.1.

NOTES OF THE WEEK.

(Continued from page 32.)

on arrival in India, the absence of strain had been a notable feature of the voyage. We may hope that his pilot, Mr. Woolley Dod, experienced the same absence of strain. In this connexion it is noticeable what marked improvements are being made in ground organisation and in reliability of machines. When the Cairo-Baghdad air service was first started, a little over five years ago, it was considered necessary to mark a track right across the Syrian Desert, from Qasr al Azraq to Ramadi, in order that machines experiencing a forced landing should be able to locate themselves and to be located. The liability to engine trouble is being eliminated with improved engines, and in the case of the India air service by the use of three-engined aeroplanes; this means that the strain on the pilot is being considerably reduced.

The death is reported from Constantinople of Suleyman Nazif Pasha, one of the best-known Turkish poets and for some time Ottoman Vali of Baghdad.

The death has occurred of Nicholas Kalogeropoulos, who was Prime Minister of Greece for a short time in 1916. Since 1923 he had remained outside the Assembly.

NEWS IN BRIEF.

The death has occurred of Mr. Leslie H. Saunders, C.S.I., late Indian Civil Service. From 1914 to 1922 he was stationed at Mandalay as Judicial Commissioner for Upper Burma.

The death is announced of Mr. R. O. Douglas, who began his service in the I.C.S. in 1920, in the United Provinces. His last appointment was to the Collectorship of Ghazipur.

After the Court-martial in Damascus had sentenced a number of insurgents, including Sultan Pasha al Atrash, the execution of the sentence against him was suspended, but M. Painlevé, Minister for War, has just withdrawn the suspension.

At the People's Party meeting held on January 4 in Angora the Turkish Premier, Ismet Pasha, said that the census to be taken this year would be the first census of Turkey on modern statistical lines. There are still superstitious prejudices against counting the population. Many people fear it is intended thereby to fix a broader basis for new taxation. The Government have established a statistic bureau which will collaborate with the Ministry of the Interior in drawing up the census.

The North Sea Aerial and General Transport, Limited, which organised the Khartoum-Kisumu air route, have accepted an offer from the Air Ministry of the loan of a seaplane with which to begin the Khartoum-Kisumu air mail service until repairs to their own machine, a De Havilland 50 seaplane, the Pelican, which sustained an accident while on her trials, are completed. Captain T. A. Gladstone hopes to make the first flight to Kisumu early in February.

The Government of Bombay, says *The Times*, has accepted the offer of the Chief of Aundh to erect a statue of the Prince of Wales in a prominent situation in Poona to commemorate the Prince's visit in 1921. The statue will be carved in white Carrara marble by two Hindu sculptors in the Chief's own workshops, and it is proposed that the Governor should unveil it 18 months hence. The Chief is also anxious to present a bust of the present Governor, Sir Leslie Wilson, to the College of Agriculture in Poona to commemorate his Excellency's assistance to agriculture by holding the recent great agricultural show in Poona.

The first of the regular scheduled flights of the new Empire Airway between the Persian Gulf and Egypt was begun on January 7, when the first West-bound air liner left Basrah *en route* for Baghdad and Cairo. The machine, one of the five D.H. 66 Bristol Jupiter Empire types, built for this new Imperial Airway service, was piloted by Captain Warner, who carried one passenger and about one thousand urgent letters and parcels, the bulk of which were addressed to Britain from India, and which will arrive in London several days earlier than by previous routes. The Imperial Airways liner is due to leave in future every alternate Friday at 1 p.m. local time. Baghdad is reached at 4 p.m., local time, and on Saturday morning the flight is resumed along the desert route to Cairo. The air liner is scheduled to arrive in Cairo in time to connect with the P. and O. mail steamer for London.

THE WEEK AT HOME.

London, Tuesday Morning.

Labour and Co-operation.

As is widely recognised, Labour seeks supporters where it can, and for the moment it is not much concerned to analyse the exact nature of such support. A Party in Opposition can with advantage take any assistance that is offered, for the effect of cumulative help may be to frighten the Party in power. During the last few days the Conservative Party appears to have been somewhat scared by the news of the proposal that, for the purposes of political action, the Labour and Co-operative Parties shall be allied. A draft agreement in this sense has actually been drawn up, and will in all probability be confirmed within the present year.

At this prospect naturally Socialists are rejoicing. They are, however, rather inclined to overlook the number of non-Socialists contained in the Co-operative movement, although differences between the two parties have more than once manifested themselves in the past. As a matter of fact, there is no real reason to suppose that the Socialist element will dominate the other elements any more than the Socialist element dominated the Trade Union movement when it got hold of it. It is not likely to be forgotten, if this fusion is actually secured, that the Co-operative represents, first and foremost, the interests of the consumer.

Liberal Leaders.

It is one of the most curious phenomena of this decade that two of the shrewdest politicians of the time, Lord Reading and Sir Herbert Samuel, should be linking up their fortunes with the one political party which is commonly supposed to have no future: the Liberal Party. As I recorded a few weeks ago, Lord Reading has interested himself in the *Daily Chronicle* group of papers, and has stated therein that the Liberal policy which has characterised them in the past will be continued. And now Sir Herbert Samuel, fresh from Palestine and the Royal Coal Commission, has just signified his return to the fighting ranks of Liberalism.

These moves are, I say, curious, for the whole tendency of the alerter politicians has been, while Lord Reading and Sir Herbert Samuel have been serving overseas, to forsake the Liberal Party, as if it were a sinking ship. What does it all mean? Is the Party to be composed of leaders, with no followers? Or is it that these two men

are really shrewder than any of their stay-at-home fellows, and are in fact backing the winning horse?

The Nation's Deficit.

From this time onwards until the end of March will be a most anxious one, not only for the Chancellor of the Exchequer, but also for us poor mortals whom he "hither and thither moves," for the call of the Income Tax is looming more and more ominously. The General Strike and the Coal Lock-out have, of course, placed Mr. Churchill in a most unenviable position, and he is credited with the intention of obtaining the last legitimate farthing from us before the end of March; but at least it is good news to hear that he does not contemplate raising the Income Tax: a move which is thought to be too mechanical for his imaginative temperament.

Whether he will be forced to create new taxes or whether the apparent effect of his new Betting Tax—the driving of Conservative punters into the Labour Party—will have the result of frightening him off such things, it is yet too soon to state. But anything would be better than a further burden on the general income of the community.

London and New York.

For those who measure progress in terms of scientific discovery there must have been great thrills last week, when a public telephone service was established between London and New York. Not even the discovery of the Cape route, nor the opening of the Suez Canal can be said to have been so fraught with possibilities for the English-speaking races. The shrinkage of the world's surface, so much talked of by our sociologists, is indeed going on apace. Space will soon be but an historical conception, and one of Life's Illimitables will, as some people may tend to think, have become almost definite.

There still remains one thing, however, which the mechanical wizards of our age surely cannot touch: Time. The attack upon that is probably reserved for the next omniscient generation.

Capitalism Up to Date.

No one can survey the present marked tendency to form trusts in capitalist England without suspecting that this formation is the answer of shrewd capitalists to those who assert that the present economic and social system has had its day. In more conservative quarters—one uses the word, of course, in its non-political sense—the old capitalists' idea that competition was at the root of every good thing is maintained intact, though not unbattered; but in the newer thought, whether it is Conservative or Liberal or even—to judge from certain recent utterances of Labour Party leaders—Socialist, the trustification of England seems no unpopular conception. It is perhaps not unnatural that the Conservatives should have swallowed with comparative *insouciance* this new slogan of "mergers"; but one is rather aghast at the ease with which the young intellectuals of the Liberal Party are cottoning on to this travesty of what their forefathers considered the be-all and end-all of business. Mr. J. M. Keynes is the protagonist of the new trustifying methods, and is securing in his Party considerable support. Why the Socialist Party should bless the movement towards trusts it is more difficult to see, for inevitably such formations will become the strongholds of a newer and, from their point of view, more formidable capitalist system. Can it be that the Socialists are preparing to work wholeheartedly for the prolongation and the improvement of the capitalist system? Certainly recent speeches of Messrs. MacDonald, Henderson, and Snowden appear to be pointing in that direction.

But other heads are at last popping up in opposition to all these mergers, which are to eliminate competition, waste, and so on. It is now more boldly being hinted that what in truth is being aimed at in the formation of these fusions is monopoly, with all this talk of the interests of the consumer as a mere blind. That is to say, this tendency should be looked upon with the English-

man's old and natural suspicion, for whereas in some industries it is probably an inevitable and wholly desirable thing, in others—according to this argument—it is a mere device of the "captains of industry" still further to control the workings of the system. And possibly at the back to the conservative Englishman's objections may be the idea that our borrowing from America has already reached an indecent stage.

The Feeling in the Railways.

Everyone knows that the aftermath of the General Strike has been felt with particular severity in the Railways, on behalf of whom Mr. J. H. Thomas is repeatedly making gestures of good-will. It is comforting to realise that these requests for clemency, or "the big thing," as this rather pathetic Labour orator is so fond of calling it, are not going unheeded, at all events in so far as the Great Western Railway is concerned. Probably feeling on that Railway never reached the intensity which was discernible on other lines, but in any case, Sir Felix Pole, the General Manager, has shown what may prove to be a memorable magnanimity. Two little things that concerned the deferment of salary or wage increments to salaried and conciliation grades of the employees of the G.W.R., and a question about the meal times and the length of the working day of carters in Manchester and Liverpool, both of which, had the respective sides stood on their dignity and on their legal rights, might have provoked bitter discussion, were settled in a mood of peace and good-will. This is very encouraging.

Of course these two points were minor points, but it is precisely the little points that so often spoil the relations between employers and employed. If only the other Railways were as sensible as the G.W.R.!

The Flemish and Belgian Exhibition.

The exhibition of Flemish and Belgian Art 1300-1900, which is now being held at the Royal Academy, Burlington House, is something more than a revelation: it is an experience. It is an experience because one is enabled through it to project the mind and the senses back to the time when Christendom was in large measure one in the religious and artistic meaning, and to see the artistic consequences—some good, some bad—of the break-up of that entity. The works that were performed before the Reformation, all of them of course sacred, are saturated, as only art can be saturated, with the Catholic spirit of piety, intensity, and colour.

The arrangement of these seven or eight hundred exhibits in chronological order is very sensible, for one can trace the change—a better word, I think, than development or progress—which has come over Flemish and Belgian art during the last six centuries. One gazes, almost spell-bound, at the miraculous technique of the two Van Eycks, the inventors of oil painting (it has been said that oil painting began and ended with these two men): one revels in the splendour of the great gallery containing those magnificent portraits by Rubens and Van Dyck; one chortles at the newly-found licence in which men like Brouwer and Teniers rejoiced.

Not are the oil paintings all. For owing to the co-operation of five Governments and of numerous private collectors, there are in this exhibition admirable—some almost priceless—specimens of drawing, sculpture, and, most notably, tapestry. Quite certainly it will be one of the shows of the year. To many people it may present Flanders and Belgium in a new light.

Commercialising Cricket.

An outcry has been raised in the Press, and quite rightly raised, over the proposal that Mr. Ponsford, the young Australian cricketer, should be engaged by a north of England cricket club. It is not suggested that Mr. Ponsford should play for Lancashire, but for one of the very strong League sides there. Now if this sort of thing is to be prevented, the present is the time to stop it. Of late there has been a deplorable tendency on the part of certain Northern sides to get the services of what they

consider match-winning players, irrespective of their origin or of their past. This, if allowed to develop, would inevitably bring about the commercialisation of cricket; and a law ought to be passed to inhibit it.

Professionalism in the game is another matter, because for the most part professionals play for the county or club to which they have been attached for some time: that is one of the capital differences between professional cricket and professional soccer. The theory still holds good that, as old Craig used to say, "all the Gentlemen are Players, and all the Players are Gentlemen." As soon as talent is imported this theory will go to the winds. If payment is to swamp all local or national boundaries, there is an end to playing the game for its own sake. For myself, however, I do not think that the South of England, at any rate, will ever stoop to this sort of thing, although it is an obvious danger that certain impecunious counties are without competent professionals.

ALTER EGO.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE DEVELOPMENT OF CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The letter of your Correspondent, Mr. Hourmouzios, has given rise to a somewhat discursive correspondence. The point of his original letter is that there is an opening in the Island for jam factories: thousands of pounds of money go every year to America for jam.

Then the Colonial Commissioner takes up the running and states that Cyprus fruits are of excellent quality on the admission of all visitors to the Island. The visitors probably have little or no knowledge of the commercial value of the fruit. The Commissioner also states that the grapes are delicious eating and that it would be worth while trying them on the London market.

I must not be discursive, and can only say that I adhere to what was said in my first letter.—I am, etc.,

Kyrenia, December 29, 1926.

G. L. H.

A message from Jerusalem last week stated that the drought in Southern Palestine was becoming so severe that at Hebron water-tickets were being issued to the inhabitants and the local hospital might have to close.

The arrival in Karachi of Dr. Bhabo Nath Banerji, the meteorologist, on January 8 marks, says *The Times*, the establishment of the Karachi office of the Meteorological Department of the Government of India, which is designed to supply civil aviation and the Royal Air Force with trustworthy weather reports. Plans have been prepared for spacious buildings at the Karachi air port (Brigh Road). The department intends to open 20 meteorological observation stations between Karachi, Basra and Aden during the current year in order to assist the London to India air service.

The arrangements made for raising and maintaining a Reserve of Officers in India have been at work now for some months, says *The Times*, with the support of business firms and commercial bodies. The number coming forward for enrolment is not very large, and the building of the Reserve will take some time. A number of commercial men prefer service in the ranks of the Auxiliary Force, which has less responsibility and does not make so much demand on their time. A change, however, is likely to take place this year, as the heads of businesses are to encourage their principal employees to take up a proper status in Indian affairs. The arrangements for training time are also being dealt with in a liberal spirit.

PERSONAL AND GENERAL

TO-DAY

January 16, 1927 (New Style).

December 31, 1926 (New Style).

Rajab 9, 1345 A.H., of the Muslim Calendar.

Shebat 10, 5087, of the Jewish Calendar.

Mr. and Mrs. Soames have left Sheffield Park, Sussex, for Egypt.

Sir Ian Malcolm returned to 57, Onslow Square on January 7 from Egypt.

General Rascano has been appointed High Commissioner for Bessarabia and Bukovina.

The Hon. Arthur and Mrs. Asquith, who are staying in Egypt, will remain abroad until the middle of February.

Sir Alexander Carlyon and Miss Violet Carlyon left Tilbury on January 8 for Port Said, and will be absent about six weeks.

Mr. George Millett, a survivor of the Indian Mutiny, has died at Victoria B.C., aged 86. He was in the siege of Lucknow.

M. Georges Todorovitch, Counsellor to the Yugoslav Legation in London, has been transferred to New York as Consul-General. He left London on January 3.

Sir Vincent and Lady Rauen left London on January 7 for Gibraltar, and Lady McCracken left for Port Said in the P. and O. liner *Rajputana*.

Sir Herbert Samuel, who will be the guest of the Eighty Club on February 28, has accepted an invitation to become president of the Paddington Liberal Association.

Mr. D. A. St. Valentine Jayewardene, K.C. (District Judge, Colombo), has been appointed a Puisne Judge of the Supreme Court, Ceylon.

Mrs. Marian Shakoor, of Rodah Cottage, Liphook, Hants, widow of Milhem Sakoor Bey, of Syria (property in this country) (net personalty £3,408), left £5,940.

The Rev. T. Herbert Jacques, who has been Chaplain at Baghdad, has been nominated by the Archbishop of Canterbury to the Vicarage of Leeds-with-Broomfield, Kent.

The Antiquities Department of the Egyptian Government has decided to readmit visitors to the tomb of Tutankhamen three days a week, as during last year, on production of the usual monument tickets.

Among the recent visitors to Sir Flinders Petrie, who is carrying on his excavation work at Tel Jemme, near Gaza, has been Lt.-Com. V. L. Trumper, M.R.A.S., Honorary Secretary in Egypt of the Palestine Exploration Fund.

In the absence of the King of Roumania, Prince Nicholas and Princess Ileana represented the Royal Family at the usual Epiphany ceremonial blessing of the waters at Bucharest on January 6.

The will of Major Charles Louis Williams, L.D., late Indian Medical Service, of Dehra Doon, Lyme Regis Road, Bannstead, Surrey (net personalty £12,789) has been proved at £12,850.

Mr. Alfred Ezra, who is a vice-president of the Zoological Society, intends to present another full-grown Indian elephant to take the place of Indiarani, and he has already cabled to Calcutta for a suitable one to be chosen. The new elephant will arrive at the Gardens about next May, and it will be perfectly trained to carry children before it leaves India.

An enthusiastic reception was given to the Viceroy and Lady Irwin, when they arrived in Benares on January 4. They were received by the Maharaja of Benares and his staff, and they drove in State through the streets.

Sir George Clerk, British Ambassador to Turkey, entertained Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, and Ahmed Ferid Bey, Turkish Ambassador to the Court of St. James's, to dinner in Angora on January 6.

Mr. Harold Arrowsmith Brown, Indian Civil Service, has been appointed a Judge of the High Court of Judicature at Rangoon vice Mr. Edward Dyce Duckworth, Indian Civil Service, retired. Mr. Brown was called to the Bar (Inner Temple) in 1920.

Mr. Winston Churchill arrived in Malta on January 8 on board H.M.S. *Witch*, as the guest of Vice-Admiral Sir Roger Keyes, Commander-in-Chief in the Mediterranean. A dinner and dance was given at Admiralty House the same evening. Mr. Churchill left for Egypt on January 10.

Mr. Leonard Wilfred James Costello, Barrister-at-Law, has been appointed one of the Judges of the High Court of Judicature at Calcutta in the vacancy caused by the appointment of Sir George Claus Rankin to be Chief Justice of that Court.

NEWS IN BRIEF.

Four Arab fishermen from Tiberias were caught in a squall on the Sea of Galilee on January 8 and were drowned.

During November 521 immigrants entered Palestine, including 481 Jews. Nine hundred and twenty-three people left Palestine permanently, including 822 Jews.

Sir Wyndham Deedes, formerly Chief Secretary to the Palestine Administration, is now in Poland in connexion with Jewish immigration into Palestine.

A force of insurgents under Sultan Pasha al Atrash, the Druse leader, was defeated by the French on January 4 in the Jabal Druse. The insurgents lost 20 killed and several prisoners.

The Italian shipbuilding firm of Ansaldo, in Genoa, has paid £70,000 to the Turkish Government in settlement of a long-disputed claim in connexion with the cruiser *Drama*, which was laid down for the Turkish Government but, owing to the outbreak of the Tripolitan War, was never delivered, being incorporated on completion in 1912 in the Italian Navy as the *Libia*.

Mr. C. J. Irwin, Commissioner for the Jubbulpore Division of the Central Provinces, in his report on the work of the municipality of Jubbulpore, pays a notable tribute to the progress made in the collection of arrears of taxes, in increasing the revenue, in road repair, and in the destruction of rats. The Commissioner praises especially Mr. O. C. Bose, President, and Mr. Goverdhan, Health Officer, both of whom are Indians, for the satisfactory state of affairs.

LANDLORDISM IN NORTHERN INDIA.

BY JANUS.

To meet possible criticism, I will begin by admitting that in Northern India there are practically no landlords in the strict sense, because the men who live on their rents, and who are known officially as landholders, occupy a very different legal position from that which the word landlord denotes in England. All the same there is plenty of landlordism in the popular, and slightly abusive, sense which the word has acquired: and, since the people immediately concerned have often asked to be called landlords, they may, for anything I care, have the word in that sense, so long as the thing survives. Whether it will survive for long is by no means certain: I think myself that the landlords' action in the recent session of the United Provinces Council has sealed the doom of the institution, as it now exists, most probably in Northern India, and possibly also in Bengal and elsewhere: and, if I am right about the thing, the name matters very little.

The papers say so little about what goes on in the United Provinces that it may be well to recall what happened. The eclipse of the Liberals in the elections of 1923 left the landlords in a position to exercise very great influence in the Council; for, while they had not an absolute majority, they were the strongest group and, with a little help from outside, could do very much as they liked. It was an awkward position for the Government, which stood pledged to remodel the tenancy system, because the landlords had to be "squared" in order to pass the necessary legislation, and the result was that, while the Tenancy Bill contained a good many sops, another Bill was introduced to reduce the burden of the land revenue, the whole offer being described by some critics as extraordinarily generous, and by others as an outrageous bribe. Far-sighted men, knowing that the old submissiveness of the tenantry is rapidly passing away, would have seized the opportunity, so generously afforded, of stabilising the position for the years to come; but the landlords thought they could do better: and, allying themselves with the Swarajist irreconcilables, they carried against the Government a series of amendments which would have left them virtually masters of their tenants' fate: and they then proceeded to amend the Revenue Bill so as to increase the price to be paid for what they had refused to give. The Governor seems to have acted with discretion in a difficult position. He first used his "exceptional powers" to force through the Tenancy Bill in a reasonable form, and then, to the consternation of the conspirators, he dropped the Revenue Bill altogether, thus getting substantially what was wanted for a much lower price than he was prepared to pay.

At the moment then, it was a neat little comedy with a happy ending: but to understand its real significance one must look back. The existence of landlordism in British India came about as the result of two very different forces, political expediency and economic idealism: which, in the circumstances of the time, happened to operate in the

same direction. The paralysis of the Mogul Empire had been followed by an extraordinary outburst of energy among its subjects: and every man of force or talent had taken the road to kingship, carving out for himself a dependency, as it was called, and ruling his subjects entirely in his own personal interest. Expediency demanded the recognition of these gentry: under British rule they could not all be Kings, but as landlords they could be expected to rally to the new Sovereign, and keep the country in some sort of order, the one thing of which the country stood in immediate need. But next to order came wealth, for the poverty and misery of the people were too obvious to be overlooked; and the first Englishmen dreamed greatly of such landlords as they knew at home, dreamed of Cokes and Townshends springing up in every district, loyal subjects of the Company, to which they would be bound by ties of self-interest, devoting their energies to reorganising agriculture, making two blades of grass grow instead of one, and, speaking generally, establishing a millennium at the shortest notice.

It was a typical bit of English idealism, but it did not come off. For a long time now it has been recognised that the landlords in the mass are of no economic value, and probably, on the whole, do much more economic harm than good; so that defenders of the institution have been driven to rely on the political argument alone. Recent changes have given this argument a new and attractive shape, for constitutional reformers have looked confidently to the landlords to furnish the nucleus of the Right, the much-needed party of stability, a nucleus round which all the sober elements of India might be expected to group themselves, and so provide the ballast for the Ship of State. This, I take it, is the real explanation of a fact which has puzzled so many outside observers, that successive Governments of the United Provinces have appeared to think so much more of a few hundred landlords than of the many millions of peasants who ought to be their primary care. And now, at the first real opportunity, the landlords as a party have combined with political irreconcilables to bite that Government's caressing hand: the Government has very properly replied with a touch of the whip: at the moment the animal is whining in the corner, and the question for the future is, Will any Government ever be able to trust it again? The answer is, I think, obvious: Nobody can rely on the landlords now, until an entire change of heart has been manifested abundantly in good works, and of such a change there is, I fear, but little prospect; because if it was to come at all it would have come before now. Meanwhile, the Government is free to exercise its proper function as the head of a great peasant province, and thus take its place in the movement which is now in progress. Lord Irwin has already made it clear that he is a peasant's Viceroy, the first since Curzon, and it is quite possible that, before he leaves India, the peasants will have begun to exercise the political power which they already possess. The beginning is the real difficulty: once it is overcome, the change may be rapid, until the landlords find that they must forget all about domination and learn to lead,

or else follow their French and Irish prototypes to the limbo that awaits the failures of landlordism in a peasant country.

Will it matter if they are eliminated? I believe myself that the country can spare landlordism as it now exists; but there are some individual landlords who would be worth saving. I have so far written of them in the mass, and it is only just to acknowledge that there are exceptions, sagacious and laborious men who probably earn their keep and something over. I cannot, however, say that the exceptions are numerous, though the proportion may be higher than would have sufficed to save the doomed city in the familiar biblical story: and in any case such institutions stand or fall by the mass rather than the exceptions. There is likely then to be some loss; but, all things considered, it will not be more than the country can afford; and, at the risk of shocking the landlords and their defenders, I may offer the forecast that, when they have gone, if in fact they have to go, they will be very little missed.

COMMUNAL EUROPEANS.

At the dinner given by the European Association at Calcutta, in honour of the Viceroy, on December 14, Lord Irwin urged Europeans in India to avoid anything communal in their outlook on Indian politics. How necessary the warning is may be inferred from the fact that the *Bombay Times of India* seizes the opportunity to make a violent attack on the speech of the President of the Calcutta Association, delivered on this occasion: and that, in doing so, it is apparently actuated by the old standing jealousy subsisting between Calcutta and Bombay, each of which claims to be "the second city of the Empire"—more properly speaking, Calcutta owns the claim and Bombay aspires to dispossess her. The *Times of India*, in the course of its comments on Mr. Langford James' speech, refers to his "noisy exhibition of what the Viceroy slyly described as the non-official European in full action": declares that, beyond this "sly" remark, Lord Irwin made no reference to the speech in his reply: and condemns the President for "making of himself an exhibition like a bull in a china shop." The paper complains that Mr. Langford James asserted that "various political organisations in this country show a growing tendency to challenge the right of the unofficial European to be in India at all, or to suggest that we are here merely on sufferance": and declares that "windy accusations" of this kind are mischievous—harmful to the position of British people in India and damaging to that good feeling between Great Britain and India to cultivate which is the duty of every loyal citizen, whether British or Indian. The accusation, it adds, may be true of Bengal, but is untrue "as a generalisation about political leaders and parties in Western India." It disputes Mr. James's right to speak for any Europeans in India other than himself, declaring that "as a gauge of his capacity it is worth remark that, in speaking of democracy as a system of government, he likened to a lunatic asylum": and ends with what, it would seem, is the conclusion to which the whole tirade was intended to lead up: "What we should like to emphasise is how strongly this demonstration by the Calcutta European Association President supports the view that, in paying so much attention to Calcutta as they do by their long cold-weather visits, the Government of India are year by year recommitting themselves to the very difficulties and false outlook from which the transfer of their Capital from Calcutta was intended to deliver them."

It is worth while to look at the reports of the speeches delivered at the Calcutta dinner, to see what the President and the Viceroy actually did say: and thus to arrive at the grounds for this trenchant criticism. Mr. James's assertion about various political organisations in India challenging the right of non-official Europeans to be there, except on sufferance, is correctly quoted: he continued—"The simple answer to this challenge would

appear to be that we are here, that we have a right to be here, and that we intend to remain here until we are turned out. Apart from these truisms, I think we have a right to be in India on moral, but equally strong, grounds. British people have very largely made India. Their continuance in the country is, in my opinion, necessary to the future welfare of the country, and I venture to think that most thrinking Indians realise that truth. Our forefathers, when they came to India, brought with them a particular stock-in-trade, which may perhaps be summarised in three words—stamina, honesty and initiative; and I believe that these are still qualities which are needed and valued in India. But, if these are qualities on which we pride ourselves, we must be careful to put them into practice in dealing with the problems that confront us; they must be placed at the disposal of the body politic to the fullest extent. In the past, when the indigenous population have got into a tight corner, the first thing they have cried for is the Sahib. The need is still there, and we must continue to respond to it. Perhaps most important of all, we must make up our minds to say quite honestly and sincerely what we think to be the truth. There is no need to be offensive, but there is every need to be frank. It is always a distressing sight to see two people yielding to the temptation of winning easy applause by saying comfortable things which neither believes. This is particularly true in India." Later on in his speech, Mr. James spoke of two fundamental fallacies which he discerned as underlying the Reforms Scheme: first, that it promulgated a system of government for which an electorate was essential and then went out to look for the electorate. "That is a political *hysteron proteron* which it is difficult to justify, and no one can say that the political results are encouraging. If I may be permitted a metaphor, no business-like man, I imagine, would build a first-class lunatic asylum and then proceed to scour the country for lunatics to fill it and doctors to certify them." Mr. James' second "fundamental fallacy" was the method by which it was proposed to engender a sense of responsibility in the legislative bodies. "It seems to me that, if you wish to engender political responsibility in the Councils, it is necessary materially to extend their responsibilities. At the same time, you must realise the vital importance of ensuring that men of the right stamp are elected or nominated to those Councils. . . . I confess that instances which present themselves to us of efforts of Indians to manage their own affairs do not impress one with an immense amount of confidence. In Calcutta we always have in front of our eyes the Corporation, which claims to be a national body. . . . I think they have fairly imbued everybody with a sense of their inefficiency. . . . Much the same tale is told from all parts of the country." Lord Irwin, in his reply, said that Mr. Langford James had touched upon many subjects and, if he did not follow him in all, it would not be because he failed to appreciate their importance. "This great city affords to anyone an opportunity of seeing the non-official European in full action, and of realising the problems and difficulties with which he has to deal and the spirit in which he sets about it. . . . I appeal to you never to conceive of Indian politics only as matters directly affecting, at particular points, European interests, but as a great business affecting the whole of India's future, to which you can bring qualities such as India can find nowhere else . . . because this Association has done so much already to assist Indian growth, because they have brought to the land of their adoption those gifts of determination, honesty and initiative to which Mr. Langford James referred, and because in the years to come their opportunity of service may well be greater than it has been up to now." The Viceroy then dealt at some length with Mr. James's two "fundamental" questions of responsibility and the electorate: observing that the lack of the former was one of the chief reasons for the presentation to the latter of the British Government in India as "the common opponent of all patriotic citizens."

The unprejudiced observer will probably conclude from this that the statement that the Viceroy made no reference

to Mr. James' speech, and the imputation of "slyness" in his reference to Calcutta's non-official Europeans, are equally without foundation. Also that, whatever one may think of the appositeness of Mr. James's metaphor, it is hardly fair to say that the likened democracy to a lunatic asylum. It may very likely be true that his accusation against "various political organisations" is ill-founded "as a generalisation" against Indian politicians in Western India; but it was not made as such; and a good answer is to be found in the comments of the *Bombay Chronicle*, the leading extremist newspaper in Western India, on Mr. James' speech. That paper condemns its "downright impudence and insufferable arrogance," and characterises it as a specimen of "the attitude of hauteur and contempt with which Anglo-Indians of a certain type regard anything Indian": and proceeds, "In tight corners the indigenous population cried out for the 'Sab.' What a land this India of ours must have been before 'Sabs' prostrated themselves at the court of Mogul Emperors and begged for the privilege of opening factories. There was no stamina, no honesty, no initiative among us. That stock-in-trade was brought over by the forefathers of Mr. Langford James and his kind. History, as they understand it, is that in which these qualities are the exclusive peculiarities of a race of shop-keepers who profited in India by setting by the ears factions and parties amongst Indians. 'We have a right to be here and we intend to remain here until we are turned out' was the burden of Mr. Langford James's insolent speech. He gave public expression of that attitude of insolent contempt for Indians which a type of priggish, ignorant and self-opinionated Britisher in India adopts towards the children of the soil. Indians know that the absurd charge that they have no stamina, no honesty, no initiative in them until a contingent of British 'factors' arrived in this country with these estimable qualities as their 'stock-in-trade' carries with it its own condemnation. . . . Vain and foolish threats that Europeans mean to live here, and that they have a right to live here, have no meaning for Indians, much less will such threats deter them from their pursuit of self-government. They know very well that Europeans like Mr. Langford James will not live in India the moment it becomes economically unprofitable for them to do so." To find this sort of writing in the *Bombay Chronicle* will surprise no one; but it certainly is surprising to find an echo, in substance if not in form, in the *Times of India*. At the present moment, unity among non-official Europeans in India is pre-eminently necessary. Bombay's jealousy of Calcutta, when exhibited in its "parochial" aspect, is, like Calcutta's jealousy of Delhi, merely amusing; but, if it should lead to developments of this nature, it may quite easily become disastrous.

CURRENT TOPICS.

A Church for New Delhi.

The influentially signed appeal for funds to build a Church in the Capital of India is one that should come home to all Englishmen, even those without direct interests in India, at the present juncture. When the original plans for the Imperial Capital were drawn they included a scheme for the erection of an Anglican Cathedral; but, owing to shortage of money, this proposal had to be dropped, though the site—a central and imposing one—is still there. Sir Edwin Lutyens' ideas, in his designs for New Delhi, included the creation of a special style of architecture which, while containing Indian attributes, should yet be basically British, in order to perpetuate, for all time, the character of the government under which it was to be built. It is very greatly to be desired that an English Church, which entered not only into the original design, but also into its basic idea, should not be omitted. If it had been possible to adhere to the original proposal, and to make a Cathedral one of the components of the design, it would have been far better than any such

arrangement as that now proposed; but, as the best is not possible, every effort ought to be made to make the next best as great a success as may be. It ought also to be remembered that there is a movement on foot, which seems likely to come to fruition in the near future, to make the Indian Church of England independent—one that is looked upon with considerable disfavour by many Europeans in India, but which, nevertheless, is perhaps a natural corollary of the determination to lead India along the path of political self-government. In the fashioning of the latter, a British foundation cannot be avoided: and is, indeed, the only foundation possible. The same must be said of the former, with even more certainty: and where can it be more fitting to erect a visible monument of the fact, than in the Imperial City of Delhi? All British well-wishers of India will hope that the political Capital will long stand as a memento of Indo-British rule: and it is only right that, in its midst, should stand a worthy reminder of the great influence that Christianity, as presented by the British, has exercised on the best thought of India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 23.

Christmas Week.

We are now at the peak of the cold weather season in Calcutta, and it is safe to say that there can be few places in the world in which there is more doing *per caput* than in Calcutta at the present time. The M.C.C. team have arrived; the Viceroy and the Crown Prince of Sweden and their suites are here; the Army Polo team is here, together with all the entrants for the championship; the Regiments are arriving for the Tattoo; native princes and Rajas and the wealthy racehorse owners have come with their horses and their wonderful motor cars; more officials arrive daily from Delhi; golfers from everywhere are down for the Indian championship. With the added attraction of the M.C.C. visit this year, there has never been a greater influx of all the bright and beautiful from the out-stations, the tea gardens, and the coalfields. Life is full of dinners, dances, garden parties, golfing, tennis and what not, and the only difficulty is to find time to sleep; it is a mercy that the offices are closing down for the greater part of next week.

In High Places.

The personality of the Viceroy, coupled with his public and private utterances, is winning for him a very deep respect from the European community, and even the Extremist Press is showing signs of moderating the venomous tone that has become almost the daily spice served up with the defiance of authority. Opinion is firm that the Viceroy is not only a strong and capable man, who does not fuss, but that his example may help to induce in Indian public life a return to the traditional courtesy which has almost entirely disappeared at the present time. It is pleasing to note also an improvement in the tone of the Indian Press in regard to the Governor, and it would seem as if his frank admission at St. Andrew's Dinner that he had been completely disillusioned as a supporter of the Reforms has given many Extremists furiously to think. In the past it has been the tradition that the Governor and Government alike must stand up for their Province, and the bitterness of disappointment must have gone deep for Lord Lytton to have acknowledged publicly that his Province has failed. We shall see whether these things produce any effect upon the Congress which is meeting next week at Gauhati.

A Scandal.

Obviously inspired articles have been appearing in the European Press this week in regard to the flagrant abuses of the Building Laws that are daily taking place in the City, and particularly referring to the scandalous number of such cases which occurred when the European City Architect was on leave last year and an Indian was acting in his place. The harvest is now being reaped, and during the last three months no fewer than 64 buildings in the city collapsed, three persons having been killed and fifteen injured in consequence thereof. This is but the beginning and there is no doubt whatever in the minds of those qualified to judge that within the next few years there will be far higher casualties to record. The Regulations themselves provide many loopholes for "concessions," and so long as there was a European non-elected Chairman at the head of the Municipality there was always someone who was independent of the electors to see that the Regulations were observed in spirit and that evasions were kept as few as possible. The situation now is that any landowner can appeal against the technical decision of the executive to a Committee which is composed entirely of elected members, and the result is that, in the words of the article, the Committee has become an organisation for the protection of landowners' interests, or what are considered to be their interests. Even in the event of decisive action being taken against an owner, it is possible so to delay the remedial processes as to have an illegal building erected and occupied for over a year before it is judicially condemned. This is one of the actual fruits of popular government in India, and it is typical of many others that are now ripening.

Men and Things.

A summary of Sir James Connolly's comment upon Lord Inchcape's speech at the P. and O. annual meeting has been cabled out, and we note that someone has pointed out at your end the paradox of claiming credit for successful working whilst you are warning possible competitors that the field is not a profitable one.

Rabindranath Tagore, Bengal's own poet-laureate, arrived back from his European tour this week and was met by a host of admirers. The Extremist Press has seized the opportunity to make political capital out of him and his doings, and it is evident that this is to become a standard practice.

The Bengal Provincial Conference met this week as a preliminary to the Congress gathering at Gauhati in the first week of January. They are without a President; Mrs. C. R. Das refused to accept the honour thrust upon her, and Mr. J. M. Sen-Gupta was not willing to withdraw his refusal. The contending parties were unable to agree and in the usual way they have resolved to avoid bringing their differences to a head by doing nothing; so the matter is to stand over until it is seen which way the Congress cat jumps.

The *Statesman* has won its case in the libel action brought against it by Mr. S. C. Bose, the interned Chief Executive Officer of the Corporation. He sought to take advantage of the fact that he has been interned under a Regulation without ordinary trial, and he claimed that the suggestion that he was connected with terrorist activities was a libel. The judgement is that the comment was a fair one, which appears to be common sense.

The Institution of Engineers has been holding its annual dinner and the Chief Engineer of the Port Trust took the opportunity of pointing out that engineers must be practical men; he referred to the many Indians, who, whilst brilliant at their books, fail in the job, and he also referred to others who have achieved marked success on the Port Trust staff; nevertheless *Forward* comments on the speech in a leading article headed "A White Conspiracy." Everyone seems to be conspiring against the wretched readers of *Forward*.

The N.S.P.C.A. held its annual animal show this week and even if many of the exhibitors wonder why the Society's inspectors are entitled to force them to lose a day's work for some mad scheme of the Sahibs, a free feed for the animals and small money prizes to drivers

are beginning to make an impression upon their very primitive minds.

The Trivial Round.

Saturday was a memorable day at the races, for not only was it the first of the Classic Meetings, but the racing was also most exciting, and both human and equine aristocrats were there in plenty. The dresses were brilliant; all the stands were crowded and the bookmakers seemed to be having a busy time. The Agha Khan with "Quincy" beat Orange William by a head in the King Emperor's Cup, and it begins to look as if the latter has seen his best days. Although few favourites got home, most of the winners were well backed, and on the whole it was accounted a good day.

The second paper chase took place on Friday morning last and a very keen batch contested the long course, with Mitchell Innes winning it by a neck; riding is certainly keen this year.

The M.C.C. have arrived and they made no mistake in their first match against a combined Indian and Anglo-Indian team, giving them a sound hiding with eight wickets in hand in a one-day match. Gilligan is said to have warned his team against the notorious Calcutta hospitality, but reports to hand indicate that the dangers are being investigated. The writer saw the match yesterday, and there is no question about the seriousness of this cricket; they are out to beat Calcutta.

Local cricket at the week-end saw the Lords Schools surprisingly beat the rest comfortably at the Eden Gardens on an batsman's wicket. Playing for Dalhousie, Tarrant practically beat Ballygunge "on his own."

The South Club tennis tournament has come to a successful conclusion and this is now certain to be an annual event. Miss Jennie Sandison beat Mrs. McKenna in the Ladies' Finals, while J. Robson won the men's event from Kitagawa.

It has been a dancing week at the theatre, the Russian Ballet having continued their season, and on Monday and Tuesday evenings pupils of Miss Aenid Ballin gave a new and fascinating children's show. The amateur pantomime rehearsals are in full swing and there will be a great deal to see next week; frankness at the moment is not confined to politics.

The Social Conscience.

The annual meeting of the Calcutta Vigilance Association was recently held, the Bishop of Calcutta presiding. Considerable disappointment has been felt at the feeble response to the appeal for Rs. 1 lakh for the cost of establishing a Home for minor girls, the efforts of the Association during the last two years having resulted in the collection of less than one-fifth of the amount required. In spite of this, suitable premises have been taken, and the Home will shortly be opened. The Association has ascertained that from 1,600 to 2,000 girls of from 9 to 13 years of age are detained in Calcutta brothels for immoral purposes, and, although the police have power to remove them, they cannot do so, until there is accommodation for them elsewhere. The subject is nauseating, but it must be confessed that Indian opinion appears on the whole to be indifferent to it.

Markets.

Both the jute and gunny markets have improved during the past week, and a particularly good demand has been evident in gunnies, especially for forward business which has been transacted up to the end of last year; prices are better all round. The piece-goods market shows little alteration, except that the position is relieved a little by satisfactory clearances of overdue goods, which have been arranged without resorting to compulsory measures as has been necessary the last few weeks. This has had an effect of clearing the air to some extent; but on the other hand there are reports of further failures in the local market. In the tea market the sale here has displayed a rather weaker tendency except for the best and tippy teas. The next sale here will be on January 11 next.

On the Stock Exchange, Government Securities have

shown weakness, $3\frac{1}{2}$ per cent Paper being no better than Rs.78/10/- and all the shorter dated securities have been on offer; the turnover has been on the small scale generally, but this is no doubt due to the near approach of the Christmas Holidays. Business in investment stocks has again been limited only by the scarcities of sellers, and in the miscellaneous market there has been a number of features including Indian Iron and Steel and Indian Standard Wagon, the latter of which is rumoured to be under negotiations for purchase by Government. Jute shares have gone further ahead, and all the stocks have been marked up substantially during the week. Dealings in teas and rubbers have been few and far between, and in the tin share market there continues to be a preponderance of sellers; but prices show no signs of reacting further.

The Exchange market was listlessly steady at the end of last week, but with tightening money and more bills showing a firmer tone developed. Later, bills continued to show and with little or no demand for remittance, business has appreciated considerably. Ready T.T. closes at 1.5 15-16 to 1.5 31-32. Money is in distinctly better demand and may be quoted—Call and Short Notice 2 per cent.

CORRESPONDENCE.

WOLF CHILDREN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to the article on "Wolf Children" appearing in your issue of December 23; when on tour in the Kheri district of the present United Provinces in India in 1900, I was on an elephant sent by a Zamindar to help me along. We were going along a path through heavy forest alongside a large marsh. The *characut*, whose work was to cut fodder for the animal and generally assist the mahout, was shuffling along the path ahead of us and his way of talking, laughing, and walking induced me to ask the mahout if the lad had had a drink of *daroo* (fermented liquor). "No," said the mahout, "he has been like that ever since we caught him; he is a wolf boy." He then gave me the following story. "About eight years ago several mahouts noticed that when they came for chara to the far end of this marsh and disturbed a family of wolves, as they ran off, a queer-looking black animal ran with them. So one day eight of us went out together on our elephants and surrounded the spot where the wolves had their lair, and when they ran some of us jumped down, chased and caught the black animal, and in spite of his barking, snarling, biting, kicking, and scratching, tied him up and found he was a boy about ten years of age. We took him to our quarters and tied him up in a strong bamboo enclosure. After a day's starving we offered him some cooked meat and chappatis and water. He took a drink like a dog, but ate nothing; he just sat snarling and sulking. Next day we threw him raw meat, which, after smelling, he ate greedily, growling all the time. After a few days he ate half-cooked meat and in a fortnight we let him loose and watched him. He looked about for a time then sat and sulked, but made no attempt to get away. Gradually he became tame and learnt to sit with us round the fire in the evening. He learnt a few words and made signs with his hands. After about six months, when he had become quite friendly, we made him a Mussulman and tried to teach him the Kulma (creed). As he grew bigger we made him a *characut*. He is a very willing lad, always laughing and talking, as he is doing now. He has one peculiar habit: when told to do anything, he will go on doing it till someone stops him. When told to cut chara, he would go on cutting till night, if we did not stop him. When cooking elephant cakes we have to watch him or he would use up the whole sack. If told to go ahead along a road and wait for us, he would walk on as far as the road went or till night if not called off."

He was evidently about 18 or 20 years of age when I saw him; was just beginning to raise a beard and

moustache. I never saw him again. That a wolf boy lived for some time in the R. C. Orphanage, Agra, was well known in India half a century ago.—I am, etc.,

G. B. SCOTT.

INDIAN MAIL.

The Statutory Commission.

The possibility of an acceleration of the appointment of the Statutory Commission has lately attained some prominence in the English Press of India: some important organs of opinion expecting it to occur in 1927, others in 1928, and others not until 1929, after the completion of the full ten years originally contemplated. The upholders of the latter continue to talk about the prospects of co-operation in the Legislatures, as if this was what really matters: one of them goes so far as to say that an essential pre-requisite of the hastening of the Statutory Inquiry is the demonstration of co-operative spirit by the leaders of Indian political opinion—"the co-operation required must be unanimous and overwhelmingly general." It is admitted that there is at present no sign of such an attitude; and its absence is advanced as a good reason for deferring the inquiry until the last moment, in the hope that, in the interval, the attitude will change for the better. But, if one considers that there is not the slightest indication of such a hope being realised, one may justifiably argue that the absence of a spirit of co-operation is the best possible reason for the acceleration of the inquiry. *The Times of India* asks, "of what possible use would be the opening of an inquiry if leaders of Indian political thought non-cooperated with it—refused to give evidence before it and promised in advance to reject its findings?" The answer is, that the British Parliament has taken upon itself the duty of inquiring into the political position in India and of deciding as to how Parliament shall deal with it—in the words of the Government of India Act, the Commission shall "report as to whether it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing." The absence of a spirit of co-operation in "the degree of responsible government now existing" is one of the facts on which the Commission will base its report: and no amount of evidence, by politically minded Indians, could alter it in any degree. Its acceptance may reasonably be expected to lead the Commission to realise that Parliament has been barking up a wrong tree; and, if so, it follows that, the sooner it climbs down and barks up a different one, the better for all concerned. It is incontestable that politically minded Indians dislike the present constitution; and the masses are indifferent to any system of reform. Delay in the appointment of the Commission will make no difference to these facts: all that is necessary is for it to take note of them and to proceed accordingly, in the endeavour to reconcile the legitimate aspirations of the politically minded with the best interests of the masses: that is to say, not in the direction of extension or restriction of the existing reforms, but in that of their modification.

Acceleration or Delay?

Discussion about the date of the appointment of the Statutory Commission has been carried a stage further in consequence of a speech delivered by the President of the European Association on the occasion of the dinner given by the Association in honour of the Viceroy's visit to Calcutta, on December 14. The President said, "If you have a state of affairs where the most important Indian political party whole-heartedly condemns the system, the British community from the start, though entirely willing to work it, has condemned it, the other political parties have been lukewarm, and the people, who really matter, are either ignorant or indifferent, I cannot see the argument for delay." Those who do put forward arguments for delay take a different standpoint when doing so. Briefly, they argue that, since

seven years have been wasted in the follies of non-cooperation and senseless obstruction, an early appointment of the Commission would not be of advantage to Indian Nationalist aspirations: and that there is still time, during the next two years, for Indian politicians to create a more favourable atmosphere. Further that if, as appears to be the case, the present system is generally unpopular, time is necessary to allow the people most nearly interested to think out a more acceptable system and to get it ready for presentation to the Commission: which, as the *Englishman* observes, will not only expect to hear evidence as to how the present Constitution has worked in the past, but will also demand practical recommendations as to the manner in which it is to be amended, if considered capable of amendment, or as to what form of government should be put in its place, should it be decided to scrap it altogether.

It is, however, worth remembering that the advocates of acceleration have never gone further than to suggest that the personnel of the Commission should be decided on next spring, in order that it may be in a position to begin work in the autumn: which would give an interval of nine months in which to prepare alternative schemes. From the Central Government down to the smallest local body, "authority" in India has always been incurably opportunist, always desirous of putting off action until the last possible moment: and, if it is desired to spur the people in India to think out and seriously to prepare constructive suggestions, the best possible way of doing so would be to make them really understand that the time is short. As for the probability of the next two years showing any improvement in method over the last seven, it would need something more than an optimist to expect that; especially if it is true, as it certainly seems to be, that all communities in India are unanimous in condemning Diarchy. In such a case, even those who are quite willing to co-operate may naturally be reluctant to do anything likely to persuade the Commission to report favourably on a constitution the continuance of which they do not desire.

Responsibility and the Electorate.

One feels some diffidence in referring yet again to the Calcutta European Association's dinner to Lord Irwin; but both the occasion, and the speeches delivered on it, seem to the writer to have been of quite exceptional importance. The President expressed the opinion that two "fundamental fallacies" underlay the Reforms—the assumptions that they would train Indians to accept responsibility, and that the creation of an electorate would lead to an intelligent exercise of the vote. Lord Irwin's remarks on these two points are worthy of close attention. "Speaking of central politics, so long as there is in the hands of the Governor-General or Government of India some reserve power by which, in the last resort, they can secure what they conceive to be essential, it is evidently possible for popular representatives to escape the sense of responsibility that ought to accompany the power, even though only partial, which they exercise. Again, so long as the Government of India is not fully responsible in the strict sense of the word, it is impossible for parties or politicians to feel the salutary check of being perhaps compelled to replace, in the task of government, those who have been the targets of their criticism and attack. It, therefore, follows, as has recently been seen, that one of the principal distinctions between the different parties is apt to be the degree of vehemence with which they assail the policy of Government. . . . I suspect Parliament will realise that, at the root of the whole question, lies the problem of what I may call the average political sense of a wide electorate. An educated electorate, as Mr. Langford James has said, is the only sure basis of democracy. Without it, politics are the possession of a small class of intelligentsia, and the leaders of political thought, who must be the pioneers of political development, would be the first to recognise that, in the conditions, the political system, instead of resting broad-

based on intelligent popular judgment, is insecurely poised on an inverted apex."

Commenting on the speeches made at the dinner, the *Statesman* observes that Mr. Langford James used language which must be of serious import to all those who share Parliament's desire to see India not only endowed with, but able to profit by, representative institutions, in which lies the hope of the future. "Great Britain must realise that representative institutions can and do exist apart from democracy, and that the East neither desires nor understands the British democratic constitution. There are indigenous democratic institutions in the East, and it is possible, on the basis of the Indian village, to build up a system of government of a far more congenial and comprehensible kind than any which is to be hoped for from the present system of direct election to the highest legislative bodies. The village knows its best men and can select them for the panchayat: the panchayats will know whom to choose for district boards, and the boards will know whom to choose for Councils. In this way experience in one sphere will lead to promotion in another, and men of standing in their own localities will have a chance of proving their worth. Lord Irwin's saying, that an educated electorate is a sure basis for democracy, is only true of countries to which democracy makes a national appeal. India's next constitution must be a more Indian growth."

In describing these two questions as fundamental, the present writer believes that Mr. Langford James put his finger on the spot: and that the future constitution of India, widely different from the present one, ought to be built up on an attempt to ask of the electorate—probably by means of a panel system—only such questions as they are competent to answer, and to inculcate the idea of responsibility by beginning near the bottom, instead of—as at present—near and at the top.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

The British Industries Fair.

As showing the efforts which are being made to make this year's British Industries Fair the success that is hoped for, it may be mentioned that the overseas advance edition of the catalogue of the Fair with classified lists of exhibits in nine languages was sent out last week to leading buyers in Europe, Asia, North Africa, etc. The early publication of the catalogue has been rendered possible by the eagerness of the British manufacturer to participate in the Fair, resulting in the early booking of the available space. This is significant not only of the belief in the Fair but also of the optimism among the trading community regarding the outlook in the coming months.

Chemicals at the Fair.

Imperial Chemical Industries—the great chemical merger formed by the amalgamation of Brunner Mond and Company Ltd., Nobel Industries Ltd., the United Alkali Company Ltd., and the British Dyestuffs Corporation Ltd., under the Chairmanship of Sir Alfred Mond, Bart., M.P.—is to make its first appearance to the public at the British Industries Fair. During the past few weeks the staffs of the respective companies have been collaborating in the organisation of the largest individual exhibit which will be placed in the Chemical Section of the Fair. The main object of the exhibit is to make an expression of Imperial Chemical Industries' individuality as one group, at the same time showing the inter-connexion of the different companies comprising the merger, and pointing out to overseas buyers, the chemical trade in general, and the public at large the advantages derived by the amalgamation of the various interests. The exhibit will be Imperial in its significance as showing the wide influence of the company in British commercial affairs. It will be practical in the sense that the man in the street will be able to visualise its numerous activities, and it will be scientific in the sense that the buyer of chemical goods will at once see the intimate relationship which exists between the products made in the factories belonging to the respective components of this great organisation.

Egypt's Trade Position.

The figures for Egypt's trade for the first ten months of 1926 show very plainly the effect on the country's prosperity of the rapid decline in the price of cotton. The value of the imports was £E41,915,818, at which they are £E3,937,374 below the figures for the corresponding period of 1925, while that of the exports was £E32,440,622, a decline of no less than £E11,676,347. Of the countries from which Egypt draws her imports Great Britain was first with £E9,749,348, France being second with £E4,588,303, Italy third with £E3,771,706, Germany fourth with £E3,190,623, while British India's contribution was £E1,899,353 and Australia's £E1,767,163. The value of the exports taken by the United Kingdom was £E14,708,882, the United States being second with £E4,399,745. It will be noted from the figures I have given that competition in the Egyptian market tends to

become increasingly severe, and it can scarcely be maintained that Great Britain's position in this market at the present time is such as to give cause for overwhelming satisfaction. It may be hoped that our traders will make a special effort in this direction, so that when the inevitable revival of trade comes with the recovery in the price of cotton this country will obtain a share of the import trade more proportionate to her share of the exports.

Bank Results.

We are now approaching the period of the bank meetings, which this year will be of greater interest than ever on account of the desire to hear the views of the Chairmen on the effects on the country's position of the developments during the past year. It will be interesting also to learn to what extent the bankers share the optimism that is now beginning to pervade the business community regarding the immediate trade outlook. As regards the results of the banks, there have been no surprises this time in the dividend announcements, but, of course, no increases were to be looked for in view of the past year. The directors of Lloyds Bank propose to maintain the dividend on the "A" shares at 16½ per cent., while the "B" shares are to receive the maximum of 5 per cent. for the year. The final dividends proposed by Westminster Bank will make the distributions 20 per cent. on the £20 shares and 12½ per cent. on the £1 shares as before. The profits of the banks, it may be added, have been singularly well maintained during a particularly difficult period.

Cotton Growing and Prices.

On several occasions I have pointed out that the fall in the prices of cotton is bound to affect the progress of cotton cultivation in the Empire, and it is not surprising to learn that growers in various regions are now faced with a very difficult position. I am not referring here, of course, to Sakellaridis which stands on a plane by itself, but to American, the development of the cultivation of which in the Empire is imperative in order to reduce the extent of our purchases from the United States and thus to lessen the strain on the exchange. It seems likely that America will cope with the situation arising from her record crops by a reduction of production, and that will give growers within the Empire a special opportunity. It is imperative therefore that everything possible should be done in regions such as the Southern Sudan to make American still an attractive crop pending a new rise in prices.

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Khartoum-Kisumu Air Service.

The inaugural flight to Bombay by the Secretary of State for the Air, Sir Samuel Hoare, to open the Egypt-India air service has rather tended to obscure developments with regard to another important air service, that from Khartoum to Kisumu, which is being organised by the North Sea Aerial and General Transport Ltd. The first flight on this route, which will link up Kenya, and the Southern Sudan with Khartoum, was to have taken place last week, but an accident, on its trial, to the seaplane Pelican, which was to have inaugurated the service, necessitated a postponement, and it is understood that the first departure from Khartoum to Kisumu will not now take place until February. The importance of this air mail service in linking up the regions in question scarcely needs emphasis; it is hardly less obvious that Khartoum is not likely long to remain the northern terminus of this service. It is the ultimate object of the company to run a service as far as Cairo, which will enable it to connect up with Imperial Airways, and will enormously reduce the time taken between London and Khartoum. It will also, when the service is developed as one imagines it will be eventually, greatly decrease the time taken over what is now one of the longest journeys in the world—that from Cape Town to India.

Imperial Bank of India.

The net profits of the Imperial Bank of India for the six months ended December 31 last amounted to Rs.35,49,400 as compared with Rs.38,25,100 for the corresponding period of 1925, a decrease of Rs.2,75,700 which reflects the adverse trade conditions in India. With the amount brought forward the available total is Rs.64,99,700 as compared with Rs.60,23,000. The dividend is maintained at 16 per cent. per annum tax free, and the allocations are Rs.7,50,000 to the reserve fund as against Rs. 5,00,000, and Rs.3,00,000 to the pension fund, leaving to be carried forward Rs.9,49,700 as against Rs.10,23,000.

Roumanian Oil Progress.

The provisional figures for oil production in Roumania during 1926 show very plainly the rapid strides that this industry is now making. If only progress had not been handicapped ever since the War by the inadequacy of the transport facilities the effect of the development of the oil industry on the situation of the country generally could not have failed to be very pronounced. Happily for many months now the position with regard to transport has been improving, and in the current year the country should be able to benefit to a far greater extent from her vast petroleum resources. The figures for the individual companies abundantly indicate the advance that is now taking place in the industry. Those of the Steaua Romana may serve as an example. The production for 1926 amounted to 406,447 tons, an increase of 86,711 tons on the figures for the previous year.

COMMENTATOR.

NEW COMPANY.

The Red Sea Petroleum Company has been registered as a private company with a nominal capital of £25,000 in £10 shares, to carry on the business of producers, refiners, transporters and distributors of petroleum and other oils, etc.

NEAR EAST MARKETS.

The Monthly Review of Barclays Bank for January contains the following reports:—

Khartoum, December 28.—The general trading situation in the Sudan is still bad, but a slight improvement is recorded over last month. Import prices, including cotton goods and tea, are steady and although business is on a small scale, there is a certain amount of movement. The export market also shows improvement. Gum is quoted at 66 pts per kantar El Obeid.

Jerusalem, December 28.—General trade has shown some activity on account of the seasonal festivities. In the import markets, there has been a slight fall in prices, but a corresponding increase in sales is to be noted only in rice. Recent severe storms have caused damage to the orange crop to the extent of about 200,000 cases. Up to the present 27,000 cases have been shipped, the latest prices realised being 11s. to 18s. per case.

NEWS FROM ALL SOURCES.

M. Burileanu has been appointed Governor of the National Bank of Roumania.

M. Capitanovici's term as Vice-Governor of the National Bank of Roumania has been extended for a year.

The production of the Indo-Burma Oilfields for November was 2,186 barrels, being 1,020 barrels from Yenangma field, and 1,166 barrels from Padaukpin field.

A 50 cwt. lorry fitted three years ago with British tyres on all wheels is still running on them after having completed 180,000 miles.

Net new life business completed by the Royal Exchange Assurance during 1926 amounted to £1,998,700, being an increase of £26,507 over that completed during the preceding year.

The gross production of crude oil of the Phoenix group of companies for December was 33,330 tons. For the twelve months ended December 31 last the production of crude amounted to 360,231 tons, as compared with 267,380 tons for the previous year.

Steaua Romana (British) Limited are advised that the production of the Steaua Romana Company, Bucharest, for December was 34,420 tons, making a total production for the year of 406,447 tons, compared with 319,736 tons for 1925; an increase of 86,711 tons. This is the highest production obtained by the company from its own fields since 1912.

By a recent Decree the duty leviable on certain articles on exportation from Roumania are as follows:—American vine grafts, from 22 per cent. *ad valorem* to 1 lei per 100 kilograms. Hemp tow, from 11 to 2 lei per kilogram. Unshelled walnuts, from 40,000 to 20,000 lei per wagon. Shelled walnuts, from 80,000 to 40,000 lei per wagon. White wool waste or rags, and rags of sheepskins, from 60,000 to 10,000 lei per wagon. Wool remade-up from fraying out or rags, from 50,000 to 8,000 lei per wagon. Rags of all kinds (except of white wool and sheepskins), from 10,000 to 3,000 lei per wagon.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 11.

Although the opening of 1927 on the Stock Exchange has not been marked by an ebullition of optimistic activity such as sometimes characterises the first week of a new year, business has been on a fairly satisfactory scale. British Government stocks were inclined to droop in the early part of the week, but recovered on the news that the lists of the new 4 per cent. Consols had been closed. Some days must elapse before the actual result is known. But, clearly, the Treasury has received as much new money as it wished to receive and the operation is from that point of view a success. Meanwhile, the opportunity offered to holders of 5 per cent. Treasury Bonds maturing next month, and of 5 per cent. and 4 per cent. (tax free) bonds maturing in October to convert into the new loan remains open until January 14th. A heavy volume of conversion is practically certain and on the whole the Treasury will be found to have emerged with credit from an operation which was freely criticised in some quarters.

Among the market features of the week were a rise in the shares of Hudson's Bay, which is again issuing shares to shareholders on attractive terms, and the issue of an annual report by that much discussed company, British Controlled Oilfields. The latter does not remove altogether the deplorable impression created by the very pessimistic statement of the directors last September, nor does it suggest that there is any way of avoiding drastic reorganisation; but it reveals better production and earning figures than had been expected, and suggests improved hopes regarding a portion of the company's properties.

As regards markets generally there are no signs of active public participation. Among other influences, realisation of the losses caused by the coal stoppage and the fear of increased taxation in the next budget, are operating in restraint of business. The position as regards the latter question merits careful consideration.

The National Accounts.

The figures of revenue and expenditure for the first three quarters of the financial year, from whatever angle they may be examined, are decidedly disquieting. Revenue for the nine months amounts to £479 millions, representing a decrease of £21 millions in comparison with the corresponding period of 1925-26. Expenditure at £625½ millions, shows an increase of £2 millions. The deficit at £146½ millions is thus nearly £23 millions higher than at this time last year. The fact that there is a deficit does not, of itself, give ground for anxiety, for it is not abnormal at this time of the year, seeing that a large proportion of the revenue is collected during the final quarter of the year, while expenditure goes out fairly evenly. In the final quarter of 1925-26, the deficit was reduced from £124 millions to £14 millions. But even if a reduction of £120 millions is secured during the current three months, Mr. Churchill will be faced with a deficit of over £30 millions. Moreover, we find from the expenditure figures that sinking fund payments are £15 millions which Mr. Churchill added in the Budget, and that interest on the National Debt, on which an estimated saving of £4 millions was expected in the full year, already shows an increase of £6½ millions. Again the decline in revenue would have been considerably larger but for the fact that interest and miscellaneous receipts have come in faster than expected, showing an increase of over £8 millions over last year, whereas for the full year an increase of only £3½ millions was expected. The decline in revenue, indeed, is due to the fall in income tax and super tax receipts, which have dropped by £21½ and 7½ millions respectively. This may be partly due to leni-

ency in collection from businesses temporarily harassed by the coal stoppage and the current quarter may see some recovery in this respect. But even allowing for this and for the well-known resourcefulness of the Treasury Officials when difficulties in the matter of budget-balancing have to be faced, it is difficult to see how the Chancellor is to avoid a substantial deficit at March 31 next. Moreover, his problems next year will be complicated by the fact that income-tax will be assessed on the profits of a single year only, instead of the three years' average as hitherto, and the year in question will be 1926, when profits were diminished by industrial troubles. It is difficult to see therefore, how an addition to taxation is to be avoided.

Profits from Influenza.

At present colds, influenza, etc. are very prevalent. But it is an ill wind that blows no one any good, for though they are not pleasant to their victims, they are a source of profits to certain undertakings. Among those who thus benefit are the manufacturers of patent foods and so forth. Thanks to an effective advertising campaign, one of the first of such concerns that comes to mind is Bovril Ltd.; and it is one of the most prosperous undertakings of its kind. Thus net profits have been as follows: 1923, £312,226; 1924, £352,565; and 1925, £362,379, while the dividends on the deferred capital were 11½ per cent. for 1923, 12½ per cent. for 1924 and 11 per cent. for 1925. The reduction in last year's dividend is more apparent than real owing to the increase in the capital. The return on the deferred shares to some extent discounts a rise in profits in the immediate future, for the figure is £5 6s. per cent. The 6 per cent. cumulative preference shares, however are not unattractive, since they yield approximately £5 13s. per cent.

Liebig's Extract of Meat has also recently returned increasing profits, the figures having been as follows: 1923, £228,819; 1924, £259,356; and 1925, £340,043. Ordinary dividends have been 15 per cent. for 1923 and 16 per cent. for 1924 and 1925, all free of income tax, while the ordinary proprietors in addition received a capital bonus in 1924. The report is expected shortly and here also an immediate improvement is somewhat discounted, since the return on the ordinary shares is £5 11s. per cent. Though these companies apparently occupy a strong position at the moment, the speculative element should not be overlooked.

The traffic receipts of the South Indian Railway Company for the week ended December 11 amounted to Rs. 9,82,602, making the total from April 1 last Rs. 3,62,43,299.

The Ford Motor Company has submitted a proposal to the Greek Government for the erection of a large automobile factory at the Piræus.

CAPITAL SUPPLIED

for new or established projects of merit through the sale, in the United States, of shares, debentures or other forms of securities. Give full particulars of requirements in first letter so as to save time. American representation on board not required. Particularly favour issues of from £20,000 up. All communications confidential. Stanley, Jefferson and Co., 63 Wall Street, New York, N.Y., U.S.A.

COMPANY NOTES AND REPORTS.

WESTMINSTER BANK LIMITED.

The directors of Westminster Bank Limited have declared a final dividend of 10 per cent. in respect of the £20 shares, making 20 per cent. for the year; and a final dividend of 6½ per cent. on the £1 shares, making the maximum of 12½ per cent. for the year. The dividends will be payable (less income tax) on February 1.

SOUTH BEHAR RAILWAY.

The report of the South Behar Railway Company for the year ended December 31, 1926, shows that after paying a dividend at the rate of 5 per cent. per annum for the half-year ended December 31, 1925, the balance remained of £3,977, which, with the amount received from the Secretary of State for India for the half-year to June 30, 1926, and other receipts, less interest on Debenture Stock and sundry other outgoings, left £13,530. An interim dividend at the rate of 5 per cent. per annum was paid on July 15 last, leaving £4,041 to carry forward. Adding £15,000 received from the Secretary of State for India, for the half-year to December 31, 1926, and other receipts, less interest on Debenture stock and sundry outgoings, there remains £13,663 to be dealt with. The directors recommend a dividend at the rate of 5 per cent. per annum for the half-year, leaving £4,173 to be carried forward.

ROHILKUND AND KUMAON RAILWAY.

The net earnings of the Rohilkund and Kumaon Railway Company for the year ended September 30, 1926, were Rs.32,88,636, against Rs.29,98,106, and the company's share is Rs.14,16,921, against Rs.13,63,865. The actual rates of exchange during the period to which the accounts relate were above the book rate—1s. 4d.—and after adding the gain in remittance—£12,351—and other miscellaneous receipts, the net receipts for the year are £115,456, against £108,522. After bringing forward from last year £36,551, providing for income tax, interest on Debenture and Preference stocks, interim dividend and bonus contribution to provident fund, and making other adjustments, including £8,200 on account of the Secretary of State's share of surplus profits, the amount to be dealt with is £64,476. The directors recommend a final dividend of 5 per cent., together with a bonus of 3 per cent., on the Ordinary stock, subject to tax at 2s. 3d. in the £, making 14 per cent. per annum, and that the balance of £36,076 be carried forward.

The Greek Government is inviting tenders for salvage work in the Ægean or Ionian Seas.

Egypt imported 466,134 pairs of boots and shoes in 1925 of the value of £E210,356.

THE PROMOTION OF TRADE.

A club that can hold its 206th Annual Banquet is old enough to date back to the time when a "tradesman" had a wider sphere than is usually associated with the word to-day. Consequently the City of London Tradesmen's Club, established in 1720, is an association of merchants and others engaged in or interested in trade in its widest sense, who meet once a month to discuss public matters affecting City, Municipal, Imperial and Trade interests. Under the auspices of Mr. J. H. Walesby, this year's President, the attention of the club has been directed to an increasing extent to overseas trade, and reference to addresses given on this subject to the club have appeared from time to time in our columns.

This year's Annual Banquet was held at the Hotel Cecil on January 4, and was attended by the Lord Mayor and Lady Mayoress, Sir Rowland Blades, M.P., and Lady Blades, and the Sheriffs, Mr. Percy Vincent and Mr. H. P. Shepherd, Mr. J. R. Clynes, M.P., and Mr. F. C. Goodenough, Chairman of Barclays Bank. There were many representatives of City Clubs and Guilds among the four hundred guests. The toast of the Lord Mayor, Aldermen, and Sheriffs of the City of London was proposed by Mr. Patrick Howling—the toast of Trade, proposed by Mr. Clynes, was responded to by Mr. Goodenough, who spoke optimistically of the present outlook. In replying to the toast of the City of London Tradesmen's Club, Mr. J. H. Walesby claimed for the Club that in common with similar Clubs in the City it performed a most important work and constituted a real source of help to the Corporation and the Government in its treatment of affairs of public interest. Such Clubs indeed were, as had been pointed out by one of his predecessors in the President's chair, post-Graduate Colleges for public work.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, January 26). (For passenger sailings and dates see advertisement.)

Anchor Broeklebank Line.—S.s. Mahrona for Port Said, Colombo, and Calcutta (Birkenhead, January 22).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, January 26.)

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, January 15); s.s. Dumana for Bombay and Karachi (London, January 22).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also Corfu and Ancona if inducement (Liverpool January 22, Swansea January 25); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Swansea January 25, Glasgow January 27, and Liverpool January 29).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 5).

P. and O. Line.—S.s. Rajputana for Bombay (London, January 14); s.s. Nagoya for Colombo, Madras, and Calcutta (London, January 22).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 25); s.s. Highland Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, January 26).

Ellerman and Papayanni Lines.—S.s. Dido for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 16); s.s. Bavarian for Algiers, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 22, Swansea January 22); s.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool February 5, Swansea February 8); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 12); s.s. Algerian for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, February 12). * Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port, Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CASTALIA ...	Jan. 14	*ASSYRIA ...	Feb. 15
*ELYSIA ...	Feb. 4	*CIRCASSIA ...	Mar. 4

*First class passengers only. Specially low fares.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Company Meeting.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1926, submitted to the shareholders at the twenty-first ordinary general meeting held at Alexandria on December 29:—

We have pleasure in placing before the shareholders for their approval our 21st annual report, together with the audited accounts to August 31, 1926.

The quantity of cotton ginned in our factories during the year 1925-26 was 828,835.74 kantars, against 711,475.89 kantars in 1924-25.

During the season ending August 31, 1926, we did not steam press. The following are the results to August 31, 1926:

Factories profit	£E	43,402
Less: Sundry repairs and renewals in the factories ...		1,792
	£E	41,610
Add: Interest earned		320
Reserve for eventualities		670

		39,653
Of which your board propose to distribute as dividend to the shareholders one shilling three pence per share, making		21,937
And to carry forward		17,716

This ginning season is the first under the new agreements with our founder firms which were approved by you at the extraordinary general meetings of May 2, 1924, and May 20, 1924, by which agreements the said founder firms paid the same ginning rates as those charged to the other clients of the company.

Your board of directors have decided to rent the Benha ginning factory from Lloyds Bank Ltd., for three years at a rental of £E4,000 per annum, and thus also obtain the ginning of the bank's other cotton in the centres where the company possesses factories.

We have been appointed General Agents of the "General Accident, Fire and Life Assurance Corporation Ltd."

We have made an installation of self-feeders to the gins of our ex Carver Factory at Mehalla Kebabir.

We have also carried out a system of underground drains to the yard of our ex Choremi Factory at Kafr Zayat.

By order of the Ministry of Public Works we have made new sanitary installations at our factories: ex Choremi, Kafr Zayat and ex Demetriadis-Mehalla Kebabir.

We also carried out other minor additions which your board considered necessary for certain of our buildings.

Mr. Alexandre Th. Kitroeff retires from office by rotation and is eligible for re-election. You are now asked to approve and adopt the report and balance-sheet for the year ending August 31, 1926, as presented. You have also to appoint auditors for the ensuing year and to fix their remuneration. Messrs. Russell and Co. offer themselves for re-election.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 20, amounted to £E9,417, making the total from April 1 last £E241,466. The totals for the corresponding periods of the previous twelve months were £E12,264 and £E253,002.

The production of petroleum in Roumania in 1926 is estimated at 3,241,195 tons as compared with 2,316,504 tons in 1925, an increase of 924,691 tons. During the first ten months of 1926, 1,200,209 tons of mineral oil and by products were exported, against 652,000 tons for the corresponding period of 1925.

Negotiations recently concluded between the Anglo-Persian Oil Company and the Taranaki Oilfields are expected to have an interesting bearing on the oil potentialities of New Zealand (says a Reuter message from Wellington, N.Z.) Two of the former company's leading geologists, to be joined by a third at an early date, have arrived in the Dominion from England, and are proceeding forthwith to examine certain territories over which the Anglo-Persian Company has an option.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 30 state:—

Since our last report the futures market has been quiet and fluctuations have been small. The week's summary of price movements is as follows:—Sakellaridis: January, 25.22 dollars, 0.27 dollars up; March, 25.16 dollars, 0.31 dollars up; May, 25.13 dollars, 0.38 dollars up; July, 25.13 dollars, 0.38 dollars up; November, 25.68 dollars, 0.58 dollars up. Ashmouni: February, 17.03 dollars, 0.43 dollars up; April, 17.33 dollars, 0.45 dollars up; June, 17.53 dollars, 0.53 dollars up; October, 17.85 dollars, 0.50 dollars up.

Sakel.—As we pointed out in one of our recent reports, the Government intervention has very considerably restricted market operations. The daily turnover recently has been of very small proportions and has consisted mainly of operations between the jobbers. The commercial houses have done very little in the market, their operations being mostly sales at the close against the fixing of cotton purchased, and so narrow is the market that very often lately the contrepartie to the operation has been the actual seller of the spot cotton. The demand from abroad has continued to be only very moderate, and the fairly firm tone of the market must be put down to the steadiness of New York and to the purchase of a few contracts by Liverpool interests. Practically all the old crop deliveries are quoted at parity, but we should not be surprised to see January re-establish a premium over the distant months. Much of the Sakel at present offered for sale is not at all of a desirable character, neither in class nor staple. If American prices are maintained at about present levels, we do not look for any weakness here: on the other hand, should American decline, prices here will probably also fall away, but the fall would be limited as the Government have declared that they will buy all cotton offered at 23.50 dollars F.G.F.

Uppers.—The past week has been a series of colourless markets, with very little business. The demand from abroad has been poor and prices have been maintained only by the steadiness of America.

The week's receipts amount to 276,275 kantars, against exports 220,636 kantars; the stock in Alexandria is 3,003,735 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to December 23, 1926, are as follows:—Arrivals: Lower Egypt, 2,511,000 kantars; Upper Egypt, 1,752,000 kantars; total, 4,263,000 kantars. Exports: Sakel, 1,043,944 kantars; Ashmouni, 1,314,389 kantars; Various, 148,236 kantars; total, 2,506,569 kantars.

Spot: The week under review has been a short one owing to the Christmas holidays. A very moderate demand has been dealt with and sales for the four days amount to about 12,400 bales, of which we estimate 4,500 bales Sakellaridis, 7,500 bales Ashmouni and Zagora, 250 bales Pilion, 150 bales White, and a few odd bales of Brown. Arrivals having accumulated somewhat over the holidays, there has been rather more cotton offered for sale during the week.

Sakellaridis: A moderate business has been done cover-

ing all grades. With the exception of Fully Fair and below, which have eased a little, spot differences show no change from last week.

Ashmouni and Zagora: Have been in fair request for all qualities. Spot differences are generally without much change.

Pilion: A fair business has been done at about last week's differences.

Brown: Only a few bales have changed hands. Spot differences are without quotable change.

White: A moderate business has taken place. Spot differences have eased a little.

Up-Country: Government loans to cultivators under the scheme promulgated a couple of months back amounted on the 27th inst. to £E1,410,856, against 432,597 kantars.

In Upper Egypt, the preparation of land for the new crop has already commenced.

As regards the law for the restriction of the acreage, opinions as to its operation are very contradictory, but in general it is not thought that the law will seriously be respected.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 5:—

Egyptian Futures.—Sakel Contract.—On the whole, this market has shown a steady undertone throughout the past week, and even during the period that the American markets showed a reactionary tendency there was little disposition in evidence on the part of local operators to force a decline; on the contrary, the opportunity was taken to cover short commitments, so that any set-backs were of short duration. At the present juncture, Alexandria is inclined to show rather tardy recognition of the recent stability in evidence at this side and on this account our premium has been inclined to widen somewhat: this coupled with the fact that spot differences have latterly shown signs of easing, has caused near positions to encounter more pressure with some consequent easing. For some time past, the local November option has been running at a considerable discount with the equivalent overseas option; during the past few days this has attracted a fair straddle interest, with the result that the difference has rapidly closed in, at the time of writing our market being roughly 10 points below Alexandria. Whilst this operation may ultimately show some small profit, it must be borne in mind that practically all new crop sales of actual effected during the next few months will have to be covered by purchases of futures in Alexandria, as, owing to our contract carrying Sudans, the majority of exporters would probably not consider it as adequate protection, however attractive the then existing difference might appear to be. Generally speaking, trade reports show a more optimistic tone, but judging from the off-take there is as yet no marked degree of increased or sustained activity in this quarter; margins in the counts produced from cotton covered by this contract continue to be unremunerative. Probably the best thing that could happen from a consumer's point of view at the moment, would be for the raw material to begin to show a hardening tendency, as this would cause many hesitating buyers to take the plunge. Taking all the adverse factors which have cropped up since the beginning of the statistical period, August 1, spinners' takings have kept up remarkably well, as, at the time of writing, this season's total is within 5,000 of the 1925-26 figure. We cannot say that we consider the trade position both here and on the Continent warrants as yet any decided "bullish" views, at the same time, we must admit that the market shows a very steady undertone; probably the safest policy to follow at the moment is to watch the position closely, with the idea of making purchases, should any weakness develop or the trade demand show increasing activity.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool.

C.i.f. business has been depressingly quiet, but last week's forwardings were returned at the respectable figure of 8,797 bales Egyptian and 864 bales Sudan. Quotations of Sakel show a decline of from 5 to 15 points, whilst those of Upper have been advanced 20 points all round. F.G.F. Sakel to-day 13.90d. F.G.F. Upper to-day 9.95d.

Under the provisions of the Banderolle Ordinance, 1926, imported matches and playing cards may not be removed from the Custom House or, if manufactured in Palestine, from the factory of production, unless the containers have in each case been surrounded by a banderolle printed in the form prescribed, which is to be issued on payment of the corresponding Customs or Excise duty. No matches imported into Palestine or manufactured therein are to be enclosed in packets containing more than twelve boxes.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Palestine Supplement.

With this issue, which also sees THE NEAR EAST AND INDIA in a new cover, we publish a Special Palestine Supplement. It contains, among various articles on Palestinian affairs a full account of what is generally known as the Rutenberg Scheme. The advantage of cheap and abundant power to any country needs no emphasis, but in the case of Palestine it is likely to turn the scale as between progress and stagnation. Some time has lapsed since the formulation of this project and its incorporation in a concession granted by the Palestine Government attracted attention in Great Britain and were used to revive the flagging energy of the opponents of the Mandate. It was difficult, however, to find fault with a proposal so obviously designed to benefit Palestine at no expense to the Mandatary, and the attempt to make an issue of the fact that the concession had been granted to a Jew failed in the absence of a proposal of a similar nature from any other quarter. Although Mr. Rutenberg had been able to draw up a satisfactory scheme and to secure the concession, the problem of obtaining financial support had yet to be solved. Foiled in his first attempts in England, he turned to America; but he was dissatisfied with the conditions with which his would-be supporters were inclined to hedge his project, and he returned to England to see the scheme through with British capital. In the end his confidence and his enthusiasm were rewarded; a few months ago the Palestine Electric Corporation, which had already been responsible for the introduction of electric energy on a local basis—at Jaffa and Haifa—by way of testing the soundness of the bigger scheme, was reformed or re-equipped, under the chairmanship of Lord Reading, on a scale commensurate with the large-

ness of the undertaking. From the outline given of the project it will be seen that it is intended to benefit the whole of Palestine, not merely the Jewish centres of population. For this reason it is to be hoped that it will play its part in convincing the Arabs that, however much they may have resented at first the proclamation of the Jewish National Home, its actual application has brought nothing so far but material advantage to the country.

Stock-Taking in Bulgaria.

The Speech from the Throne before the Bulgarian Parliament affords, as our Sofia Correspondent pointed out last week, an opportunity for a general review of the position in domestic and foreign affairs by both the Opposition and the Government speakers. This year there was something almost pathetic in the insistence of all parties upon the necessity for peace at home and peace abroad. It would be unfair to the Opposition speakers to imagine that they were seeking only to score a debating point in pleading for a policy that would close more effectually the rift in the Bulgarian population; yet it is not clear that any practical suggestions to this end were put forward. The Government can point to the amnesty as an earnest of its good will; but at the same time it has to emphasize the discovery of another plot, which, if it had been allowed to mature, might have ended in as terrible an outrage as that which took place in the Cathedral of St. Nedéla in April, 1925. The Prime Minister is probably right in saying that the country has no longer to deal with Communism as a political belief, but with motives of a different kind working among blinded fanatics. Even so, it is unfortunate that any large section of the people should be allowed to consider that they are still regarded as pariahs by their fellow-countrymen. Whether this is really the case in Bulgaria to-day is not clear. Many, if not all, of the harsher disabilities imposed on the Agrarians have been removed, with the result that the moderates among them are gradually taking the lead:

but it must be supposed that in official eyes the party is still tarred with the Communist brush, and that a longer period must elapse before it can be completely rehabilitated in the opinion of its political opponents. M. Liapcheff admitted that he was prepared to regard as potential collaborators all those who stood for order in the country, but he held out no hope of admitting them to participation in the government of the country before the next elections.

Bulgaria and her Neighbours.

In M. Buroff's review of foreign affairs there was a significant passage in which he stated that an inter-Balkan entente was a necessary condition for the establishment of a lasting peace in the Balkans, but immediately added "to remove all misunderstanding" that the Bulgarian Government has in view a *rapprochement* "reached by direct and separate negotiations with each neighbour." General negotiations, the Bulgarian Foreign Minister pointed out, could end in no practical result in the present state of affairs in the Peninsula. The only possible meaning of this declaration is that Bulgaria still counts on settling outstanding points of difference with each neighbour in turn before she consents to become a party to a Balkan federation. In other words, she refuses to crystallise the present situation, and counts on a satisfactory settlement of such questions as her outlet on the Aegean, and her minorities in the Dobruja and in Yugoslavia before she meets in round-table conference to draw up a Balkan Pact. Bulgaria fears that at a general conference she would find herself, on raising such questions, in a minority of one. There is, however, another aspect of the question. At present none of her neighbours sees any reason to yield to Bulgarian wishes on any given point. It is conceivable that the desire for a Balkan federation might prove strong enough, and the idea might be made attractive enough to prompt the other States to incur sacrifices in common to bring about the desired end. It is for this reason that the suggestion has been put forward in these pages that there should be a preliminary conference of leading men of the four or five countries—not members of any Government, but as far as possible men of standing outside party politics—who should explore the ground without committing in any way their countries to any definite plan. They would at least be able to inform their Governments that, on such and such terms, they could so forge the Balkan peoples into a single political entity that henceforth these will speak individually and severally with all the authority of a Great

Power in the council chamber of Europe. With that evidence before it each Government would be better able to decide whether the sacrifices entailed were adequately compensated by the advantages to be gained.

Visions and Pictures in Greece.

Unless the British Chancellor of the Exchequer was anxious to encourage the Greeks to hope for better terms in the settlement of their War indebtedness, he would have done well to choose any other portion of the Mediterranean littoral for his sketching expedition than the immediate neighbourhood of the Bay of Phaleron. Churchill was able to paint two pictures on the Acropolis, and there is no disguising the fact that the Greek people expect each picture to cost the British taxpayer two-and-a-half million sterling. There are many Britons who have been anxious that Greece in the settlement of her War debt should receive the most favourable terms compatible with justice and her capacity to pay; but it should have been possible to arrive at those terms a year ago in a more scientific manner and on a more reliable basis than Mr. Churchill will have been able to evolve in the course of his brief visit to Athens. If it can now be established that the Greek contention throughout the protracted negotiations has been right and that Great Britain is in duty bound to grant Greece easier terms, then blame attaches to the responsible officials who have misrepresented the situation; for considerable bitterness has been engendered among Greeks by what has been termed the implacability of the British Treasury. On the other hand, it is possible that the purpose of Mr. Churchill's visit was to persuade the Greek Government of the reasonableness of the British claim and of the advantages of an early conclusion of the debt-funding negotiations. In these circumstances it might be a graceful act on the part of the Chancellor of the Exchequer to present the two pictures painted on the Acropolis to the Greek nation.

The Sounder Way.

It is more likely, however, that, after the first expectations raised in Greece by Mr. Churchill's visit have had time to adjust themselves to a normal level, the negotiations for a settlement of the Greek War Debt will run a smoother course. Although Greece is passing through a difficult time, there can be little doubt that she has come out of her troubles of recent years in a potentially stronger position than she was ever before. Her refugees are proving a valuable asset, but their influence on the material progress of the country cannot make itself fully felt for a few years to come. The belief is gaining ground abroad that the economic position of Greece would be much better if a serious attempt could be made to eliminate the curse of politics. It cannot be a matter for surprise to the Greeks that other countries should be unwilling to pander to their tragic obsession that national interests can be permanently subordinated to personal ambitions. No country in Greece's position can hope to evolve a satisfactory financial policy when it changes its Minister of Finance every few months, and in effect Great Britain is asked to continue to pay interest on Greece's War Debt, because the Greeks are too busy with their political squabbles to attend to the dull subject of finance. When the plea is urged that heavy military expenditure has been necessitated as a result of the War it can be pointed out that at no stage since 1922 has the Army been anything but a source of trouble to the Greeks. Much of General Pangalos's military expenditure was in the nature of a *douceur* to what he regarded as his following in the Army, and, if it be true that Republican and Royalist societies are still being formed in the Army, it is evident that as a fighting machine that army would be of little use and cannot, so long as that condition of things lasts, justify the money spent upon it. If Mr. Churchill's visit has had the effect of strengthening the Government's will to set its house in order by deeds and not merely by talking about the subject, the value of the visit to Greece will be as great as any probable reduction in her War Debt.

The Near and Middle East*

From Our Own Correspondents.

Cairo, January 9.

Marking Time.

Not for many years has Egypt known a quieter period than the present winter, has been up to the present. Politically, there is complete tranquillity; cotton is in the doldrums and general business, reacting in sympathy, is stagnant; the influx of tourists is, to date, only fairly good; under the new Government system of treating archæological researches as though they were a branch of forbidden magic, to be zealously hidden from the general public, we hear nothing of interesting discoveries, even if they are made. Egypt's legislators are suffering from the general inertia. The Chamber of Deputies meets only once or twice a week, and at each gathering the initial business is to hear a little sermon from the President on the regrettable lack of attention to their duties shown by the considerable number of deputies who refrain from attending, and by the committees of the Chamber which display insufficient energy in dealing with the proposals and draft laws passed to them for consideration. Everything, in fact, is "dead." It is in just such circumstances that the unexpected bolt from the blue is wont to arrive; meanwhile we nurse the influenza colds from which half Egypt seems to be suffering at the present time, and wait for something to turn up.

Young Abyssinia.

Victoria College, Alexandria, began its new term during the past week, with a satisfactory number of new boys, including, it is interesting to note, eight Abyssinians. When Ras Tafari was in this country two years ago, he

was much interested and apparently impressed by his visit to Victoria College and then expressed the opinion that it would be greatly to the advantage of his country if a leavening of the youths of the upper classes would come to Egypt to receive the type of education given at Victoria College. There were then two Abyssinians in the school, one of whom has just left, to go up to Trinity College, Cambridge, where, if his school record is to be taken as an indication of his prospects, he should do very well. His younger brother is still at Victoria College and during the coming summer will be captain of the school cricket eleven.

King Fuad's Tour.

His Majesty King Fuad on Monday concluded his strenuous tour of the Red Sea area and Upper Egypt and was welcomed back to his Capital by a large gathering at Cairo Station. In spite of the fact that he was not in the best of health, when the tour began with the inauguration of Port Fuad, and that he has continuously suffered throughout the remainder of the period with a feverish cold and a slight temperature, His Majesty carried out in full a tiring itinerary. One of the most fatiguing portions was the motor journey from Kosseir, where the Royal Yacht was left, across the more than a hundred and fifty miles of desert to Luxor. The track is rough and the going bad, seven hours of continuous bumping and jolting, and the Frontiers Administration, in order to provide the necessary number of vehicles for the Royal party and accompanying officials, had to impress the services of a large number of Cairo taxicabs and their drivers, many of whom had had no previous experience of driving on anything else than comparatively well-surfaced city streets. To have brought this heterogeneous collection of cars and chauffeurs safely across what is a trying route at the best of times, even to drivers experienced in desert conditions, is something of an achievement for the Frontiers Administration.

Time and a Tender.

Dessuk's new railway bridge is now completed and open to traffic, thanks to the admirable organisation and remarkable resources of the contractors, Messrs. Dorman, Long and Co. There is a very interesting story connected with this bridge. When the Ministry of Communications decided to pull down the old inadequate bridge and erect a new one, the work was put out to tender. Among the many offers received, that of Messrs. Dorman, Long and Co., submitted through their local representatives, the Associated British Manufacturers (Egypt), was by no means the lowest priced. But the British firm engaged themselves to complete the task by a date much earlier than that of any of their competitors. In this instance time very literally means money, for every day beyond the minimum spent upon the work meant holding up rolling stock and also maintaining a costly ferry service across the river. When Messrs. Dorman, Long and Co. received the contract there was considerable criticism in a section of the vernacular Press, which declared that a British concern had been deliberately favoured at the expense of firms of other nationalities which were prepared to execute the work at lower cost. When the general strike and then the coal strike occurred in England it looked as though the Arabic Press critics might be afforded some justification for their complaints, for the contractors' supply services in England were naturally seriously affected by the strikes. Another piece of ill-fortune occurred when a barge collided with a pier which had just been erected, inflicting damage which necessitated several days' extra work. Notwithstanding these difficulties the contractors determined to carry out the terms of their undertaking,

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

and this they have now succeeded in doing, handing over the bridge as a going concern to the State Railways at a date so much earlier than that offered by the lowest tenderers that it is estimated that the difference between the tenders is covered several times over by the saving effected by the Railway administration through being able to put the bridge into operation at the earlier date.

Pass and Impasse.

The local Diplomatic world has been very much on its dignity this winter. The incident at Cairo Station, when the King returned from his Summer Palace at Alexandria, has been reported in the British Press. Recently the Diplomatic Corps has been complaining that it does not receive sufficient consideration from the Police and has sought to have a more definite enumeration of the privileges conferred on the holders of the special traffic permits with which the representatives of foreign Powers are supplied. Actually, these special passes, in Egypt as in England, are intended to secure for the holders special consideration when, for any reason, the police find it necessary to impose particular traffic regulations, on such occasions as the opening of Parliament, the inauguration of congresses, gala nights at the Royal Opera House, and so on. To define exactly what the holders of these permits are allowed to do is almost impossible. Another consideration which makes the task of the police particularly difficult in this country is that these special passes, instead of being limited to a very small number, issued only to members of the Royal Family, Cabinet Ministers and foreign envoys, are scattered almost broadcast. Every deputy and every senator, besides Under-Secretaries of State and other senior officials, is provided with one of these passes. Over five hundred have been issued in Cairo alone. As a result, what should have been the exception has become the rule and on every important occasion the police find themselves surrounded by hundreds of occupants of motor-cars all claiming special privileges which could only possibly, for reasons of space, be accorded a dozen cars or more. Some holders of these passes regard them as permits to break every traffic regulation and even to crash through lines of troops stationed in the streets on notable occasions. One irascible gentleman even thought himself justified in beating with his stick a policeman who, in obedience to orders received, did not regard the possession of the special pass as a licence to defy every rule and regulation. The policeman's lot in Cairo is sometimes very far indeed from being a happy one.

CYPRUS.

Nicosia.

The Legislative Council.

Matters remain in suspense since the elected members took the ill-advised step of rejecting the estimates. Sir Ronald Storrs, in addressing members summoned by him to meet on December 21, said that he had hoped to inaugurate the session of 1927 by laying before them a programme of progressive legislation. Instead of this he had the unpleasant duty of explaining the situation in which he finds himself placed, and he has done so with entire frankness, so that there should be "no loophole for misinterpretation." He pointed out that the mistaken method by which they had aimed at furthering an undoubted grievance could only embarrass all, both in Cyprus and England, who sympathise with their object. The Governor stated that he had ascertained while in London that the desire to reopen the question of the "Tribute" might, in circumstances other than those they had adopted, now receive more sympathetic consideration. As things stood, however, they must be under no illusion. It would be his duty "to inform the Secretary of State by telegraph on December 30 of the urgency of the financial situation, when there will be no alternative but to advise His Majesty to bring the Appropriation and Customs Bills into force by an Order in Council." He

reminded them, in conclusion, that co-operation with his Executive and Legislative Councillors, which he desired, postulated "a wholehearted reciprocity of spirit, and must be based upon an absolute elimination of past misconception and future misunderstanding."

A somewhat similar state of things existed in, and prior to, 1904, when the Greek members caused much trouble by a policy of obstruction; wasting time over captious criticism, and futile and immature proposals. The line adopted bore no little resemblance to that of the elected members of the Malta Constitution, in which, after due warning, it was found necessary to revert to the Constitution as it existed prior to 1887. Cypriots were warned that the only remedy for a policy of systematic and organised obstruction would be to remodel the Cyprus Council so that a preponderance of the official element would possess the power to continue the elaboration of reforms. The Crown cannot, as Sir Ronald Storrs said, continue to govern by Orders in Council.

Miscellaneous News.

The Governor has been actively engaged in making himself acquainted with the island, having visited the different administrative districts, inspected Government offices, Municipalities, Hospitals, and many other institutions, and conferred with their heads and with leading representatives. Unfortunately he has been confined to Government House for some time owing to the results of a chill.

On December 22 a dramatic performance arranged by Lady Nettleton, wife of the Chief Justice, was given at the Theatre in Nicosia, in honour of the Governor, a comedy and part of Shakespeare's Twelfth Night being presented. Amongst those who acted were Lady Nettleton and Mrs. Dickenson. Fuad Bey, a Judge of the District Court, took the part of Malvolio.

Sir Sydney Nettleton has postponed his departure till February 15.

The Governor is keenly interested in the Cyprus Museum, at Nicosia, and has attended meetings of its Committee. He has presented the Museum with illustrated catalogues of the Cairo Museum, and a variety of works on Greek and Roman coins. He advocates an active development of the Museum Library.

The Committee appointed to inquire into forest administration and policy is carrying out its duties.

Ljubljana, January 13.

Departmental Elections.

On January 23 the first Departmental Diet elections will take place throughout Yugoslavia. These Departments (*Oblasti*) are new provinces, the largest administrative unit in the State as provided for under Art. 95 of the Constitution passed on June 28, 1921 (hence the name, *Vidovdan* Constitution), and specified in detail by the law of April 26, 1922, whereby the State was divided into 33 *Oblasti*. Under the Constitution no Department may have a population in excess of 800,000. There are seven "large" departments—i.e., with populations ranging from 500,000 to 800,000—in the north-western part of the Kingdom, in Slovenia, Croatia, Voivodina. "Small" Departments, i.e., of 100,000 to 300,000 inhabitants, are to be found in the main in Central Serbia, some in Bosnia and South Dalmatia; "middle-sized" ones, of 300,000

to 500,000 inhabitants, are situated in South Serbia and Bosnia.

The Law of Departmental self-government provides for the election of popular representatives, so that each Department shall have its own elective Skupshtina, i.e., Diet. Suffrage for elections to this body is universal, equal, secret, and indirect, with proportional representation, the principle and procedure being the same as for the State Skupshtina. As regards the number of seats for each individual Department, the law provides one deputy to each 5,000 inhabitants.

The main concern of the *Oblastna Skupshtina* is local self-government in the widest sense of the word. So far this type of administration is unknown in any part of the Kingdom, and the forthcoming elections are the first of their kind. January 23 will, therefore, see an important chapter of the Vidovdan Constitution put in practice, and the newly-elected deputies in the Departmental Skupshtinas will be faced by a difficult and delicate task. They will have to reorganise local administration from top to bottom, and not until this is taken in hand will it be possible to judge whether the new administrative division of the State under the Vidovdan Constitution is really for the good of the country or the reverse.

In the meantime there is yet another reason why the political public in Yugoslavia should look forward with the keenest interest to these Departmental elections. Their result is expected to be the decisive factor in the whole inner-political situation. They will show what is the attitude of the electorate in regard to the parliamentary and political problems of the day. In its present composition, the State Parliament has proved very disappointing to a large proportion of the public, and the Departmental elections will show whether a new general election would be likely to result in any essential change in its political structure.

The present national Skupshtina was elected at a time when the P.P. Coalition dominated the situation, i.e., the coalition between the Radical Party under the late Nikola Pashitch and the Independent Democrats under the leadership of Svetozar Pribitchevitch. Certainly this coalition scored 162 mandates out of a total of 315 at the elections; in other words, an absolute majority, but it was only a bare majority. So the Radical Party dissolved its partnership with the Independent Democrats and came to an agreement with Stepan Raditch's party instead. In coalition

with this party it formed the Government known as the Government of National Agreement, inasmuch as it stood for the alliance of the most powerful of the Serbian parties with the strongest Croatian party, which had up to that time been in opposition or had abstained altogether from attending Parliament.

After all the great hopes set upon it, the joint reign of Radicals and Raditchists turned out one of the least fruitful of Governmental periods in Yugoslavia's post-war history. There was no true harmony between the partners, as was most clearly apparent in the never-ending succession of Government crises. Nevertheless, so long as the present proportion of power between the parties obtains, it will be difficult to group them differently, and so there is a widespread feeling in favour of dissolving the present Skupshtina and calling a general election, on the chance that it would reveal a change in the attitude of the public towards the existing political parties. If January 23 should prove that this feeling is justified, that the proportion of power between the parties has undergone a change, and that the present grouping in the Skupshtina is no longer a faithful reflection of the popular will—then we may expect a general election to follow reasonably soon after the Departmental elections.

If, however, the Departmental elections show no essential changes in the attitude of the electorate, then a basis for constructive work will have to be found in Parliament as it stands. Failing this, parliamentary government itself in Yugoslavia will be faced by a crisis.

Lord Inchcape has made a personal contribution of a lakh of rupees (approximately £7,000) towards the construction of a church at New Delhi, in response to the Viceroy's appeal.

Among the countries represented at the third Congress of the International Entente of the Democratic Parties of Europe which was opened on January 15 in the hall of the Landtag at Karlsruhe, Baden, were Greece and Turkey.

Further police raids in Calcutta last week, following the discovery of bombs there and the arrest of three Bengali youths, resulted in the finding of chemicals and revolutionary literature. Two more arrests were made.

The Zaidi Imam Yahia of Sana', in the Yaman, has decided to establish diplomatic relations with Turkey, and his representative, Ahmed, formerly an official in the Ottoman service, arrived in Constantinople on his way to Angora last week.

The President of the Greek Republic, on January 14, gave a luncheon in honour of Admiral Keyes. The President proposed the health of King George V and the British Minister replied. Admiral Keyes subsequently left for Lake Copais on a shooting party.

The Fédération Aéronautique Internationale has officially registered the flight of Lieutenant Costes and Captain Rignot from Paris to Jask, Persian Gulf, as the longest non-stop flight in a straight line yet made by an aeroplane. The official distance is given as 5,396 kilometres (3,345 miles). The flight was accomplished on a Breguet XIX. biplane (500 h.p. Hispano Suiza engine) on October 28-29, 1926.

A Haifa message states that M. Ponsot is shortly proceeding to Palestine to interview Lord Plumer, it is rumoured, for the discussion of Syrian and Palestine affairs and the French peace move. Syrians suggest a general amnesty without exception and a treaty, in lieu of the mandate, with a definite Syrian Government. United Syria, it is suggested, should enter the League of Nations under French supervision.

PERSONAL AND GENERAL

TO-DAY

January 20, 1927 (New Style).

January 7, 1927 (Old Style).

Rajab 16, 1345 A.H., of the Muslim Calendar.

Shebat 17, 5687, of the Jewish Calendar.

A Turco-German commercial treaty was signed in Angora on January 12.

Sir Francis Oppenheimer left Tilbury on January 14 in the Mongolia for Aden.

The Egyptian Ministers have voluntarily decided each to forgo £300 of their salaries annually.

Prince Nader Mizra Arasteh, Counsellor of the Persian Legation, left London last week for Teheran.

The Turkish Ambassador, Ferid Bey, who recently paid a short visit to Angora, has returned to London.

M. Constantin M. Laptew, Counsellor of the Roumanian Legation, arrived in London last week from Bucharest.

Mr. William Forbes, M.R.C.S. (temp. Major, R.A.M.C.), Winton Road, Bexhill-on-Sea, a member of the Quarantine Board of Egypt, left £4,893.

Viscount and Viscountess Portman left London on January 14 for Port Said, and expect to spend a few weeks in Upper Egypt.

Sir John and Lady Marshall, Sir Evan Maconochie, Lady Blackett, and Lady Ramsay were among the passengers joining the steamship Rajputana on January 15, at Marseilles for India.

The death is announced on January 12, of Dr. Otokar Rybar, of the Yugoslav Diplomatic Service and a member of the Yugoslav Delegation to the Paris Peace Conference in 1921.

Sir Percival Marling, V.C., and Lady Marling left Stanley Park last week for Egypt, embarking in the P. and O. Narkunda from Tilbury on January 14. They will be away for two months.

The Marchioness of Linlithgow left London on January 13 by the P. and O. Bombay express *en route* to join the s.s. Rajputana at Marseilles for India. Lady Mary Hope is a passenger in the same vessel.

Sir Daniel Stevenson left on January 13 for Paris to attend a conference at the Embassy regarding the proposed British Institute, intending to proceed thence to Italy, Egypt, and Palestine.

The will of Mr. George Houston Charman, late of the Egyptian Civil Service, of Church Walk, Worthing, has been proved at £8,501 (net personalty £8444).

Major-General Thomas Ross Church, C.I.E. late Madras Staff Corps, of the Goffs, Eastbourne, who died on October 29, aged 96, left property of the value of £16,769, with net personalty £14,142.

Professor Yovan Cvijitch, President of the Yugoslav Academy of Science, died in Belgrade on January 16, at the age of 61, after a long illness. His works on geographical, ethnological and geological subjects are well known; he was the author of *La Peninsule Balcanique*.

According to a Central News message from Constantinople, a Jockey Club has been formed at Angora, with the Premier, Ismet Pasha, as president. Races for valuable prizes will be arranged shortly at Angora, and the stables at Smyrna, Adana, Constantinople, Broussa, and other centres will be asked to co-operate in making the meetings a success.

It is reported from Luxor that amongst the latest finds in the tomb of Tutankhamen is a well-preserved Royal ostrich feather fan. The fan has alternating black and white plumes of great length and a semi-circular gold centrepiece and a long gold handle.

Lieutenant G. E. Goodbody, Royal Tank Corps, is reported by the *Pioneer* to have lost his life near Quetta. He was out duck-shooting at Kushdilkhan, when the ice on a lake broke and he fell in. The other members of the party unsuccessfully tried to rescue him, but he suddenly disappeared. The body was recovered later.

The Government of India has gazetted three Bills embodying the recommendations of the Hilton Young Commission. The first Bill proposes the stabilisation of the rupee at rs. 6d. The second Bill is intended to establish a gold standard currency and constitute a Reserve Bank, which will have the sole right of note issue for twenty-five years, subject to renewal.

We regret to have to record the death at 39, Wilton Crescent, London, S.W., of Lady Allen, widow of the late Sir George Allen, K.C.I.E., founder of the *Pioneer* of India. Lady Allen, who was the youngest daughter of the late Rev. John Fisher Turner, of Winkleigh, N. Devon, is survived by a son, Mr. Charles T. Allen, C.I.E., of Retreat, Cawnpore, and Freechase, Warminglid, Sussex, and two married daughters.

We regret to announce the death which took place in London on January 17 of the Viscount Bearsted, at the age of 73. Lady Bearsted died on the previous Sunday, so that he only survived her by a few hours. Lord Bearsted, who is better known as Sir Marcus Samuel, was the founder and for many years the Chairman of the Shell Transport and Trading Company, Ltd. Among the many offices he held was that of Lord Mayor of London in 1902-1903. He is succeeded by his elder son, Captain Walter Horace Samuel, M.C., who was educated at Eton and New College and succeeded his father as Chairman of the Shell Company.

CURRENT TOPICS.

Delhi.

The ceremonial opening by the Viceroy this week of the Council House at Delhi marks the completion of a further stage in the construction of India's new capital. In this building are to be found the Chambers of the two Houses of the Indian Legislatures and the Council of Princes, and under the central dome is the space reserved for future All-India Durbars. It is too early to gauge the significance of the great undertaking that is India's capital city. Sufficient for the moment is the fact that it is grandiose and thoughtful in conception, noble and artistic in design, worthy alike of the Power that has made India what it is to-day and of the India of history. Called into being at this time, new Delhi, we can but hope, will also prove a lasting monument of the wise prevision that has sought to promote Indian national unity within the sphere of the British Empire.

Bombay Back Bay Inquiry.

The report of the Bombay Reclamation Committee has now been issued. It appears to have been unanimous, and to include a fairly catholic condemnation of most of the officials connected with the enterprise; though, with a few exceptions, it confines its censure to the matter of the dredgers. Their specification demanded the ability to deal with soft clay, whereas the Bombay clay was hard; but it is worth while to remember that a considerable number of the expert witnesses, called before the Committee, declared that the dredgers were fully equal to the work required of them, and that their comparative failure was due to defective working rather than to faulty design. The Committee's condemnation of what is past is, however, of less interest than its recommendations for the future. These are, that four of the eight blocks, into which the complete scheme was divided, should be completed, and that the reclamation of the remainder should be only partial. The former part of this recommendation was already known, and it is the latter part that is of importance now. It may be hoped that this includes the completion of the sea wall, of which about seven-eighths have already been built; so that if, in the words of the Committee, a demand for the completion of the reclamation should arise in future, this could be satisfied with the least possible difficulty. There are some who confidently believe that such a demand will arise, and in a future not too distant; and that, when this has been fulfilled, the advantage to Bombay will be so great, and so fully recognised, that the names of those responsible for the inception of the scheme will be remembered with gratitude, long after the strictures of the Committee on their errors of judgment are forgotten.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 30.

Political.

Congress has been meeting at Gauhati and the Liberal Conference at Akola; in neither instance can the results be said to be in the least encouraging to those who believe in the Reforms—a rapidly diminishing body, in India at least. The Liberal Conference is of less importance, and after its President had opened with a thoughtful speech, it proceeded to pass a resolution, demanding the immediate release of the Bengal *détenus* or their trial in the ordinary courts. This has become a rallying point for all parties, and the passage of this resolution shows that the Liberals recognise the necessity of coming into line; but it also makes it clear that the most rational section of Indian politicians is not prepared to face the responsibilities involved in responsible government. The Congress, on the other hand, has had the courage to go back upon its recent tendencies towards reasonableness, and following a reactionary speech on the part of the President, who this year is a Madrassi, it has decided not to accept office anywhere and also to oppose the appointment of Ministers in every province. It might have gone even further, had not Mr. Gandhi made the pronouncement that *Swaraj* does not mean severance from the British Raj, but the closest association with the British people on terms of absolute equality. In the end the Congress broke up on a pious resolution that the wearing of khaddar was an essential for membership. To summarise, both the delegates and their leaders were faced by practical problems for which they could see no solution, and they have, therefore, gone back to the era of the spinning wheel and blind opposition.

Communal.

Considerable excitement was caused at the beginning of the week by the report from Delhi that the Hindu leader, Swami Shradhanand had been shot dead by a Mohammedan fanatic. The Swami was lying ill in bed when he gave an audience to an unknown Mohammedan who produced a revolver and riddled him with bullets. The crime was a close copy of many of those of the terrorists which have ceased to exist since the internments under Regulation III; but the parallel appears to have escaped the notice of the Indian Press. There was naturally considerable feeling in Delhi, and a certain amount of rioting; but thanks to the prompt action taken by the authorities in picketing the town, matters were kept well in hand. North Calcutta observed a *hartal*—a shutting of all places of business—for a day as a protest

(Continued on page 65.)

CALCUTTA LETTER.

(Continued from page 64.)

against the shooting, but there was no further disturbance of the normal in Calcutta. Leaders on both sides have deplored the outrage, and it is generally admitted that it is purely the work of an irresponsible, who will be dealt with by the ordinary process of the law.

Social.

The promise of the brilliant Christmas season has been a little clouded by one or two untoward events, and one of them was responsible for blotting out the brilliance of what is usually the most dazzling display of the year, the racecourse on Boxing Day, when the race for the Viceroy's Cup is run. For the first time within memory, the weather decided to fail us, and as a matter of fact, there was quite an active danger of a cyclone throughout the whole of Monday last. There was a most violent storm in the Bay, which was steadily making its way towards Calcutta; for two or three days previously the skies had been overclouding and the weather becoming unseasonably warm, and the culmination came when rain began to fall in the early hours of the morning. It continued steadily throughout the day with the result that the State Procession was abandoned and most of the dresses for the parade of the year were put away against a better day. In spite of this the crowds were as large as ever, but, with mackintoshes and subdued colours prevailing, it was a very different scene from the usual one. State mourning for the late Emperor of Japan has caused the cancellation of the official functions and the sound hiding administered by the M.C.C. to the British in the East has caused a good deal of thinking. Fortunately, however, the sun has come out again and there is no lack of optimists who are prepared to gloat with Sinbad at the theatre, "Now that the hot weather's over and the cold weather has begun."

Men and Things.

Considerable interest is being taken in the departure of the giant machines which are to inaugurate the Air Service to India and the telegrams from the various stopping places are eagerly followed. The two Moth machines are, of course, on a different footing, and it is good to see that they have succeeded in getting as far as Baghdad without mishap.

The annual Art Exhibitions of the two Societies which have their headquarters in Calcutta are open this week, and amongst much that is pleasing there is some remarkable work by Deviprasad Roychoudhuri, a young Bengali living in Calcutta. If his present promise is maintained, his work will soon be finding its way West.

A special note is due to Mr. W. C. Houston, who has won the Golf Championship this year, beating Mr. George Downie in the final of 36 holes by two and one. Houston only started to learn golf three years ago, and a year back his handicap was 10; this is his first appearance in a championship, and he won without any mistake. If he can go on in this way we shall yet see the Home amateur championship won from India.

There is quite a military gathering in Calcutta at the

moment, as two regiments have gone into camp for training in the neighbourhood, and the opportunity is being taken to run a Tattoo in Fort William next week. The programme is being carefully worked out upon the lines of Wembley, scaled down, of course, to suit local accommodation, and rehearsals for this event and for the Proclamation Parade to-morrow are making a fine display for the morning riders on the Maidan.

The memorial signed by a group of English intellectuals to the Government of India urging the continuation and extension of Government grants to the Bose Institute at Calcutta has been published in the press. Sir Jagadish Bose must contrast this with the scepticism with which his remarkable work was first greeted, a scepticism which is now being extended to his theory that consciousness extends to the mineral world.

The Trivial Round.

There has been an orgy of racing this week, but the mid-week meeting yesterday did not attract so large a crowd as usual. Rain probably robbed the Aga Khan's Quincey of the Viceroy's Cup; he started an odds-on favourite, but he was beaten by the winner, Cap-a-pie, as well as by Orange William. It would seem that the latter's great days are over, for although he challenged the winner in quite his old style on entering the straight, he was unable to maintain it and was beaten by two lengths. Yesterday was remarkable for close finishes, there being only one race in which more than a length covered the placed horses.

Rain has also interfered with the polo programme, but good progress has been made with all the events; Calcutta is out of both championships. The Army in India team has won its matches up to the present, but the general feeling is that their display is not yet convincing enough.

Mr. G. S. Johnstone won the paperchase this week on "Bright Future," Captain Leetham being second. There was quite a number of casualties on a very twisty course and unless one has a pretty good mount it is rather a matter of luck to get round without kissing a tree.

The M.C.C. seem to have paralysed the local cricketers. The British in Bengal team raised our hopes on Friday last by a draw on pretty even terms; the M.C.C. accepted the invitation to knock off 152 in an hour and a half, the local team having declared at 7 wickets, but after four wickets had fallen for five runs Sandham and Wyatt were sent in to steady things and they carried the score to 102 for 5 when stumps were drawn. In the three days' match against the British in the East, the local team had none of the luck and they were beaten by an innings and 55. Unfortunately Tarrant has split his finger and will not be able to play any more this season, and the odds are on the visitors for the All-India game.

The C.A.T.S. have produced their Sinbad pantomime at the Empire, and in spite of a thin book and none too strong principals, they have put up a brilliant and lively show, which is drawing record houses. The Tosh sisters and the chorus carry off the honours, and congratulations are due to Mrs. J. Barke and "Andy" Gemmel who are responsible for practically everything in the production.

Markets.

Little or no business has been done in the jute, gunny, and piece-goods markets owing to the Christmas holiday; the tea market has been closed, as also has the Stock Exchange. Exchange Market closed very steady before the holidays and opened firm this week with banks very reluctant buyers. The rate for Ready T.T. closes at 1. 6 1-32d. after business at 1-32nd higher. Money has been in good demand and rates may be quoted 3 per cent. for Call and Short notice. The Imperial Bank of India rate is being raised to 5 per cent. on January 1, 1927.

THE INDIAN MAIL.

Security.

Lord Irwin was the guest of the Bengal Chamber of Commerce on December 17 when the President—Mr. J. W. A. Bell, whose New Year knighthood was then only a fortnight away—spoke of the connexion between trade and politics. Before the passing of the Government of India Act, said Mr. Bell, the Chamber excluded politics from the scope of its activities; but they now had a number of representatives in the Legislatures, who, though from their training they were not as a rule well adapted to political life, yet endeavoured to the best of their ability to fill the place assigned to them under the Reforms in the political life of the country. Lord Irwin, in reply, expressed the complementary doubt whether politicians were well adapted to business; but assured his hearers of the sympathy of the Government in their efforts to improve the conditions of trade, while reminding them that "industry must not, and never would be, at the beck and call of the Government. It was as impossible for the Government to make industry run in economic channels as to make water climb a hill. What industry wanted from the Government was security, and this it was the function of Government to provide."

It is the non-official Englishman in India who has most to fear from the development of the Reforms, if haste is allowed to outrun discretion. So long as a strong Central Government remains, which he can implicitly trust to fulfil its function of providing security for India, he will always be willing to give the fullest possible assistance to Indians in attaining the aim of their legitimate aspirations. If he has sometimes seemed, to his Indian critics, to have accepted the Reforms unenthusiastically, even grudgingly, they should remember that, in the last resort, Hindus and Mohammedans both feel the same need of a strong Central Government: one not only whose function, but also whose determination, it is to provide security for all its subjects irrespective of race, religion, and caste.

Wilful Misunderstanding.

It is curious to see how completely some of the leaders of Indian political thought have allowed themselves to misunderstand Mr. Langford James' speech at the Calcutta European Association's dinner to the Viceroy. It is possible to dissent from the form of some of his remarks, though there are occasions when plain speaking is not only useful but necessary; but the sense of them was perfectly clear—that the non-official European is an important component of modern India, who brings qualities that must be used, in the interests of Indians as well as of himself, in the evolution of a self-governing India on sane and sensible lines: a future to which he desires to contribute, and to which he looks forward with confidence so long as he is allowed to do so. Two "leaders" who did not hear the speech and who, if they have read it in full, have evidently not done so with either care or understanding, have unburdened themselves on the subject in Press interviews. One of these is Mr. Rangachariar, an "Independent" of moderate views who was Deputy President of the Central Legislative Assembly; who said that nobody denied that the European community had a large stake in

India, but that, if their interests were to be used to deter early realisation of the goal of responsible government, they would only have themselves to thank "if the indigenous population took a definitely hostile attitude."

Mr. Sen Gupta, Mayor of Calcutta and leader of the Swaraj Party in Bengal, put the matter even more plainly: and his words, fatuous as they are, deserve to be quoted if only as a proof of the correctness of Mr. James's argument. "The elementary fact which should not be overlooked by the Europeans in India is that they total at the outside 250,000 or 300,000. Half a million men, sufficiently desperate, would be more than enough to give them such trouble as to make them realise their singularly precarious position in this country. The Congress is pledged to non-violence and its members are sincerely anxious that the struggle for Swaraj should be carried on on non-violent lines. It pains me to think that our efforts should be frustrated by gentlemen of the ilk of Mr. Langford James. I warn him and his friends against such outbursts. The mills of Providence grind slowly, but they grind exceeding small. The events in China ought to be an eye-opener to the more sanguinary section of the European community."

After this, one turns with something like relief to vernacular Press criticism of Lord Irwin's speech on the same occasion: and is gratified to find that the worst that is said against it is that it "sought to produce a happy result of political generosity by clothing a difficult and stagnating position in the florid garb of rhetorical and figurative concepts." After all, the gravamen of the charge is very much the same in both cases: that Mr. James claimed that Europeans should be consulted as to the form of India's progress, and that the Viceroy did not repudiate the claim.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

Palestine To-Day.

The Palestine Supplement, which we publish this week, gives a succinct survey of some of the outstanding aspects of the country as it is to-day. As we know, 1926 has been anything but a good year for Palestine owing to causes which are too well known to need recapitulation here, but there is no reason for thinking that the set-back that the progress of the country has sustained is other than temporary. The present year, which will see the flotation of the long-awaited Palestine Loan which will provide the funds which are urgently needed for the country, will see a series of developments in train which will have a vital effect on the progress of the country. The projects in view include the electrification scheme, the Haifa harbour project, and the development of the land in the vicinity of Haifa Bay, all of which are the subject of detailed description in articles in the Supplement. When these and other projects are completed the country should be in a position to make headway. Palestine, it cannot be too strongly emphasised, is fortunate in the possession of one unique asset in her favour, the overwhelming enthusiasm of the Jewish race, and their faith in the future of the country (manifested as it is in the most practical way) should mean for it an assured future.

Palestine's Economic Position.

At the present time Palestine is in the main dependent on two or three industries, of which the production of the famous Jaffa orange is the chief. Prosperity is dependent on the broadening of the country's economic basis, and this beyond question is in process of accomplishment. The wine and tobacco industries, to give two examples, both of which are dealt with in detail in the Supplement—the former having its origin in pre-War days while the latter can in reality be said to date only from 1921—are two contributors of promise to the country's well being. It was relatively easy to establish the wine industry, but the other has required careful nurturing and owes a very great deal to the regulations made by the Government for its encouragement. Another industry that has made a very striking beginning in meeting Palestine's needs and should ultimately occupy a good position in her export trade is that of cement. Others there are that hold out marked promise of helping on the country's economic welfare. In short, the wherewithal exists in Palestine for the development not immediately but over a long period of years of a prosperous and self-sufficient community. It is, however, futile to look for miracles and to expect barren land to blossom in a twinkling of an eye. It is essentially a case for patience which, if exercised, will be justified in the outcome.

Phoenix Oil Dividend.

A second interim dividend of 6d. per share on the £1 shares has been declared by the directors of the Phoenix Oil and Transport Company in respect of the year ended December last, while a corresponding distribution is declared on the 1s. shares. The previous interim dividend was the same, so that so far the distribution for the year is 5 per cent. As the production figures have shown, the company has been making excellent progress, and a substantial final dividend may therefore be anticipated. The company, it may be pointed out, now has its own marketing organisation, and henceforward there should be con-

sistent improvement in results. In view of the outlook for the company it is rather surprising that the shares do not stand at a somewhat higher level, for even if the distribution for the past year is relatively moderate it is only a foretaste of things to come.

Sudan Trade Position.

The figures for the Sudan for the first ten months of last year show a slight set-back as compared with the figures for the first three quarters of 1926. For the latter period there was an increase in the total volume of trade as against 1925 of £E1,495,046, but for the ten months this balance has decreased to £E1,340,598. Apart from the regions which have come under the spell of cotton the year has unfortunately not been a very good one for the Sudan, and the failure of the public imports to expand is simply a reflection of the conditions which have prevailed. It is, of course, merely a temporary phase, and given an improvement in the price of cotton and the consequent expansion of the area in the South under the American type it will not be long before the commerce statistics show a remarkable trade advance. Not that they can be regarded as really unsatisfactory this time. A total of £E9,450,162 for the ten months as compared with £E8,109,564 is distinctly promising, and it is obvious that the full total for the year will be over £E10,000,000. Turning to the actual figures the imports totalled £E4,442,254 as compared with £E4,224,878, Government imports contributing £E1,447,401 as against £E1,230,143, and public imports £E2,994,853 as against £E2,994,735. On the other side the value of the exports was £E4,626,440 as against £E3,488,183, so that for the ten months the Sudan had a fair favourable trade balance.

Bengal and North Western.

A very satisfactory report is forthcoming from the Bengal and North Western Railway for the year ended September last. The net earnings amounted to Rs.2,20,34,163 as compared with Rs.1,86,97,748. Of this the company's share is Rs.1,24,29,735 as against Rs.1,05,91,019, and with a gain in exchange of £87,047 as against £82,210, the net profits in sterling amounted to £913,300 as against £788,300. The usual allocations are made and it is proposed to raise the distribution on the ordinary stock by way of dividend and bonus to 16 per cent. as against 14 per cent., leaving £178,671 to be carried forward as against £150,079.

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

NOTES FROM ALBANIA.

(From Our Own Correspondent.)

Tirana, January 7.

Prospecting for Petroleum.

At Penkova, in the concession of the Italian Mining Co., "Sélénitza," east of Valona (see Sector No. 6 in the map published in THE NEAR EAST AND INDIA of September 9, 1926, p. 267), the sounding line has given positive results, that is to say, petroleum was found to rise from 50 to 100 metres in a tube which was sunk to 540 metres; the density of the liquid is 0.912, showing that its quality is not very rich in carburetted hydrogen. It is anticipated that the yield will be about 10 tons per day (24 hours). The company has not yet decided whether it should proceed with the exploitation of this section, making other soundings close by, or whether it will be necessary to dig a deeper bed.

Meanwhile the other concessionaires are progressing with their borings. The Anglo-Persian Oil Co. (Sector No. 1) has abandoned its sounding No. 1 at Patos, in order to sink two others, one of which, No. 2, reached a depth of 582 m. below the surface, and the other, No. 3, 15 m. only, but neither the one nor the other gave any results. This company made another boring at Ardenitza half-way up the hill on which stands the convent with this name, a tube which was inserted already having reached a depth of 1,112 metres, from which petroleum gas was emitted. This fact makes them hopeful of positive results. This same company is at the moment about to begin a fifth boring at Bouzmadh, to the north-east of Valona.

The Italian State Railways (Concession No. 2) has four borings, one to a depth of 581 m. at Kocul, the second to 290 m. at Sélénitza, the third to 10 m. at Peshtan and the last at Mifol. The latter has reached 534 m. and is already emitting quantities of petroleum gas.

The Albano-Italian Pact.

Italy is making friendly overtures to Albania with a view to making her forget the pressure brought to bear on this little State for the conclusion of the Pact. Thus the President, Ahmed Bey Zogu, has received the insignia of the Order of Sts. Maurice and Lazare. On the other hand, Albanian colonists abroad, in Egypt, Turkey, Roumania, and America and the political refugees have sent protests against the Italo-Albanian pact, which is described as a disguised seizure of Albania by Italy.

Earthquakes.

Since December 17 earthquake disturbances have been repeatedly occurring in the region of Durazzo, but the shocks are not so severe as those of the first day. On that day indeed the earthquake was felt at Tirana, Scutari,

Elbasan, Bérat and Valona. The first tremors were horizontal, subsequently becoming vertical. There were only three victims; a young girl died at Durazzo and a man was injured, while another man was killed at Bérat; on the other hand, every house suffered at Durazzo and at Kavaja, where the minarets of the mosques fell down. In the villages of Ndrogi and Rogozhina the shocks were so severe that 130 houses were demolished in the first and 50 in the second of these localities, giving the impression that the centre of the earthquake must have been between Durazzo and Kavaja and at a very little depth below the earth's surface.

The Italian Red Cross sent help to Durazzo for 500 people, furnishing nurses, doctors, tents, etc.

During the earthquake at Durazzo, where the terror-stricken inhabitants took refuge in the barracks, the Extraordinary Tribunal for Political Offences was carrying out its task at Scutari, trying the culprits in the Dukajjin insurrection. Four of the men who were condemned to death were executed last week and several others were sentenced to terms of imprisonment. A hundred dossiers still remain to be studied by the tribunal and the examining magistrate.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, January 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahronda for Port Said, Colombo, and Calcutta (Birkenhead, January 22).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, January 26.)

British India Line.—S.s. Dumana for Bombay and Karachi (London, January 22); s.s. Merkara for Colombo, Madras, and Calcutta (London, January 29).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also Corfu and Ancona if inducement (Liverpool January 22, Swansea January 25); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Swansea January 25, Glasgow January 27, and Liverpool January 29).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 5); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina (Liverpool, February 12), also Galatz and Braila, closing February 17.

P. and O. Line.—S.s. Nagoya for Colombo, Madras, and Calcutta (London, January 22); s.s. Ranpura for Bombay (London, February 4).

Prince Line.—S.s. Highland Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, January 26); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 4).

Ellerman and Papayanni Lines.—S.s. Bavarian for Algiers, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 22, Swansea January 22); s.s. Flaminian for Malta, Alexandria, Jaffa*, and Haifa (Liverpool, February 2); s.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool February 5, Swansea February 8); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 12); s.s. Algerian for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, February 12). * Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 18.

The first Stock Exchange account of the new year, though causing a little interference with business, was a light one and passed uneventfully. Markets generally are more active, a feature being the steady demand for high class investment stocks on cheaper money prospects, and in some sections of the industrial market quite a large amount of business has been done. Gilt-edged prices are very steady with a firm tendency, and home rails have improved on the announcement that the higher rates are to come into force on February 1. There has been some activity, though mostly professional, in the oil market, and rubber shares hardened a little in sympathy with a rise in the price of raw material. In the industrial section Courtaulds and Snia Viscosa have been an active market on reports of an acquisition of control of the Italian company by the former. The prospectus of the new White Star Line issue appeared on Friday. Two and a half millions in 6½ per cent. cumulative preference shares are being issued, and are guaranteed, both as to principal and interest, by the Royal Mail Steam Packet Co., which has acquired the fleet from the International Mercantile Marine. An immediate response to the issue resulted. Dealings in the new 4 per cent. Consols will begin next Thursday.

Shares Without a Prospectus.

A matter which has been attracting increasing and anxious attention in financial circles is the rapidly growing practice of marketing new securities in the Stock Exchange by a method which does not require a prospectus to be issued. A big corporation or finance house buys a large line of shares and wishes to place them with investors; it applies to the Stock Exchange Committee for a quotation, which the Committee grants on condition that certain alternative particulars are advertised in a statement "for public information only." By this means a new security, about which the public knows little—far less than if a prospectus were issued—but about which it frequently hears or reads enticing rumours, becomes purchasable in the open market.

This method of "introduction" is less costly than the prospectus and public issue method, and other arguments

may be adduced in its favour. But it is open to abuse, and has its serious dangers. Of course if an investor will go and gamble in a share of which he knows next to nothing, he has no one but himself to blame if he burns his fingers. Nevertheless, it is arguable that the Stock Exchange Committee should do something to guard him against his own folly; and this it could do by insisting on the publication of a far greater mass of information than it at present requires. As things stand at present it is a very sound rule for the ordinary investor, not intimately acquainted with the devious ways of the financial markets, not to purchase any new share unless it has been publicly issued by means of a full and informative prospectus.

Industrial Company Profits.

The net profits of 414 joint stock companies, whose reports were published in the final quarter of 1926, show an increase of £1½ millions, or 3.8 per cent., over the profits disclosed by the same companies in their preceding financial year, according to a statistical analysis made by the *Economist*. This increase is partly due to the inclusion of groups of rubber and oil companies whose profits show increases of £1,601,900 and £984,400 respectively, and partly to the fact that the accounts of the concerns in question do not, in a large number of cases, cover the whole period of the coal strike. The iron, coal and steel group of 29 companies, it should be mentioned, shows a decrease of £1,110,300, and the six textile companies a decline of £1,591,300. Of the aggregate net profits 61.5 per cent. was paid to ordinary shareholders, and 14.8 per cent. to preference shareholders, while the balance of 23.7 per cent. was either placed to specific reserve and other funds, or added to balances carried forward. The average rate of return on total ordinary and preference capital works out at 11.8 per cent., as compared with 10.2 per cent. for the preceding quarter and 12.3 per cent. in the final quarter of 1925. The average rate of ordinary dividend for the quarter works out at 10.8 per cent., as against 11 per cent. a year ago, rubber companies showing an increase from 14.2 to 27.6 per cent., oil companies from 12.9 to 14.9 per cent., and trust companies from 10.1 to 13.7 per cent. The iron, coal and steel section shows a decline in the average rate of ordinary dividend from 1.3 to 0.8 per cent. and the nitrate group from 10.3 to 3.1 per cent.

Attractive Investments in Discount Companies.

On several occasions we have drawn attention to the comparatively modest yield given by British bank shares. A more generous return, however, can be obtained on the shares of the discount companies. These institutions conduct a highly specialised business and are an integral part of the London Money Market. Having survived the storms and stress of the War period, it is not possible to foresee any event that might seriously endanger their earnings in the coming years. Indeed, it is widely recognised that the discount companies are managed with conspicuous efficiency. It is true that the majority of the shares are not fully paid, but there does not seem much ground for apprehension on this account.

The reports of the two largest companies, just issued, show that profits for 1926 were practically maintained at the satisfactory levels reached in 1925. The Union Discount Company earned a net profit of £220,240, which was within £1,000 of the previous total, while the National Discount Company's net revenue of £153,081 exceeded that of the previous year by £5,500. In both cases dividends were maintained at the same level as in 1925. Thus the Union Company's £5 shares, with £2½ paid up, return £5 17s. per cent. The National Company's "A" shares, which are in denominations of £2½ fully paid, yield £5 9s. per cent., and the "B" shares, which are in denominations of £7½, with £2½ paid up, return £6 13s. per cent. The net profit of Alexanders Discount Co. was also virtually equal to the previous year's level, the figure being £106,045 against £106,113; the dividend was likewise maintained. The £10 shares, with £5 paid up, yield £6 7s. per cent.

Cotton and Cotton Goods.

EMPIRE COTTON GROWING CORPORATION.

A meeting of the Administrative Council of the Corporation was held in London on January 13. In the absence abroad of Lord Derby, the President, the Chair was taken by Mr. R. H. Jackson.

The Chairman referred to the loss which the Council had sustained through the death since their last meeting of two of their Vice-Presidents, Lord Emmott and Sir Frank Forbes-Adam, and of Mr. Rae, the representative of the Bombay Chamber of Commerce.

In moving the adoption of the quarterly report of the executive committee, the Chairman laid stress on the hope, which he believed was shared by all members of Council, that during the present period of low prices growers throughout the Empire would not be discouraged, but would persevere with cotton growing in all countries where it was found to be a suitable crop. By such a course they would place themselves in a more commanding position from which to fill, at all events partially, the gap in production which might follow either a restriction of acreage in America or a short American crop at some future date. It would then be found that the action they had taken would not only be remunerative to themselves, but would render this country less dependent than formerly on America for her supplies of raw material.

Progress in the Sudan.

The following extract is taken from the report:—

The Sudan Government have been making markedly successful efforts to extend cotton growing as a rain-grown crop in the South, and they have simultaneously been giving careful consideration as to the mechanism that will be necessary for ginning and marketing the crop. They feel that at all events for the present this cannot be left to private enterprise; the scattered nature of the population coupled with considerable transport difficulties render it unlikely that any but very petty traders would be prepared to handle the crop, and the rate of profit that they would require would prevent the cultivator from receiving a fair price. As the crop develops and transport facilities improve, it will become possible to leave this side of the industry to private enterprise. But meanwhile, in order that the necessary ginning and marketing facilities may not be lacking, the Government approached the Corporation and the British Cotton Growing Association with a view to the formation of a company in which these three will be the only shareholders. Negotiations to this end are proceeding and it is confidently expected that they will soon reach a conclusion satisfactory to the three parties concerned.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 12:—

Egyptian Futures.—Sakel Contract.—Taking all things into account, this market has shown a very steady undertone throughout the past week. It is true that declines of 8 points to 12 points for near positions and 11 points to 12 points for distant positions have taken place, but when due consideration is given to the fact that there has been heavy and consistent selling in progress throughout most

sessions, it must be acknowledged that the cotton so offered has been taken remarkably well and at a comparatively equitable basis. The most prominent portion of the buying power would appear to have emanated from Continental sources and local short covering; in addition to this the firming up of American values has done much to maintain the tone. The recent action of the raw material markets is now starting to have a beneficial effect on trade; spinners are beginning to find increasing yarn orders at more remunerative margins, and provided values remain at the present level or, better still, show a gradual hardening tendency, many would-be buyers, who have been "sitting on the fence" for so long, would probably definitely commit themselves. Throughout the course of the week, the Alexandria market has relatively shown more strength than our contract, with the result that our premium has again been somewhat reduced; at the time of writing, the local March position stands at only about 12 points premium, exclusive of any shipping charges. Latterly, the American/Egyptian straddle difference has tended to show a gradual shrinkage; in fact, at the moment, the margin in favour of our cotton for the early spring position has declined to about 557 points.

Egyptian Spot.—A healthier tone has been apparent in our market during the past week. The inquiry has again broadened slightly, and reports from consuming centres have been of a distinctly promising character. The feature of the week has been the large business which has been done in Sudan Sakellaridis. The basis of this cotton has recently been reduced some seventy-five points all round, and spinners have found it very attractive when compared with what is offering in Sakellaridis at similar prices. Naturally, the genuine Sakel cotton has been somewhat neglected as a result, and prices for this commodity have weakened substantially. On the other hand, Uppers have continued in steady request at hardening rates, the recent strength of the American markets having reacted to the

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Anglo-Italian Conversations.

The British and Italian Governments have set about in the right way to remove all possibility of misunderstanding which might have been provoked by the wide activities of Italian diplomacy at the present time. It was well known that while Sir Gilbert Clayton was carrying out negotiations with the Imam Yahia of the Yaman the Italian representatives were, so to speak, sitting on the Yaman doorstep, and as soon as the negotiations came to naught, the Italians were admitted, and had no difficulty in concluding a treaty of amity and commerce with the Imam. There was no particular reason why they should not. The British negotiations broke down because there is a point at issue between the Yaman and Great Britain over a part of the hinterland of the Aden Protectorate occupied by the Imam's troops, and the British Government was not prepared to leave the matter out of any general settlement with the Imam. Italy, having no point of actual touch with the Yaman, was merely concerned to clear the ground for her trade. By following on the heels of the British representative at Sanaa, however, she encouraged the Imam to suppose that he had made a shrewd move in adopting an unaccommodating attitude towards the British, inasmuch as there were other European Powers anxious to cultivate his friendship. Much the same effect, it might be imagined, would be created if Great Britain selected an ostentatious method of concluding a treaty of amity and commerce with the Senussi or any intransigent chieftain in the hinterland of Libya with whom Italy happened to have differences of opinion. There was nothing in the Italy-Yaman treaty that affected British interests; but there is much to be

said for what we understand in Great Britain by "playing the game" by one another among Great Powers in their dealings with the East. The Italian Government, which is new to this aspect of the case, would need only to have its attention directed to it to appreciate its value in the relations of Great Powers.

Italy and Arabia.

It was, accordingly, a sound move that Sir Gilbert Clayton, who has represented the British Government in negotiations with both King Ibn Saoud and the Imam Yahia, should discuss the situation created in Arabia by the recent manifestations of Italian interest in this part of the world. The Italian representative was the Comendatore Gasperini, Governor of Eritrea, who negotiated the successful treaty with the Yaman. The two delegates will have met as experts in regard to the sphere over which the discussion may be supposed to have ranged. The position in Arabia is delicate, owing to the inability of the three principal rulers, King Ibn Saoud, Imam Yahia of the Yaman, and the Idrisi of Asir, to hit it off among themselves. Italy's interests in the peninsula are of an economic order, and she may not feel called upon to concern herself with Arabian politics. Great Britain, on the other hand, with her long-standing ties with Arabia, cannot indulge in the same ignorance or affect a similar indifference. She appreciates the necessity of treading carefully in Arabian affairs, for the sake of the peace of the peninsula, and a good cause will have been promoted if the Italian Government has been induced to see the matter in this light also. Quite recently it was reported that Italian representatives had tried to stake out an economic claim on the Farsan Islands belonging to the Asir, under the mistaken idea, no doubt, that the agreement with the Imam covered any part of the Red Sea littoral to which Italians might take a fancy. Unenlightened activities of this nature can easily lead to trouble in the East, and it should be possible for the

British and Italian Governments to come to an arrangement, such as their agreement in regard to Western Abyssinia, which will prevent complications in Arabia from excess of zeal on the part of Italian agents.

France and Roumania.

The publication of the text of the Franco-Roumanian Treaty signed on June 10, 1926, adds little to what was already known about the document from the summary issued last year. France detaches Roumania from any possible combination against her; but whereas she would not look for Roumanian help for herself if she were at war with Germany, the Roumanians would certainly have liked to be able to count on French help, if they were at any time embroiled with Russia. This satisfaction, however, the treaty does not give them. France binds herself to examine, in conjunction with Roumania, any question that might threaten the latter's external security, or in the event of an unprovoked attack on Roumania to consult without delay on their respective action to be exercised within the framework of the Covenant of the League. From Roumania's point of view this assurance would seem to be hardly worth an elaborate treaty, which, however innocuous or superfluous, encourages other countries to seek safeguards outside the League of Nations against possible hostile combinations, and so brings about the establishment of rival camps that it was the object of the League of Nations to prevent. To a certain extent, indeed, the treaty may be found by Roumania to undo the service that the Bessarabian Pact had rendered her. By that document, in which the principal Allied Powers recognised the sovereignty of Roumania over Bessarabia, France incurred at least a moral responsibility to see that the decision thus formally recorded was not upset. By her treaty with Roumania, however, she escapes from any personal responsibility in the matter by sheltering herself behind the League of Nations, which might not have the same interest to-day in binding Bessarabia to Roumania. Both the treaty with France and the later one with Italy are the work of General Averescu's Government. Internal dissatisfaction with the Italian agreement is the greater because it failed to provide for the ratification by Italy of the Bessarabian Pact, which she signed in October, 1920, in company with the other Powers, but has refused to ratify. The two documents, however, provide General Averescu with proof that under his Government any stigma attaching to Roumania regarding the estrangement of foreign opinion has been successfully removed.

The Greek Army.

Further light on the condition of the unfortunate Greek Army has been thrown by the publication of reports submitted by an officer of the Intelligence Service to the General Commanding the First Army Corps. These documents, which are dated December 29 and 30, reveal the fact that the Army considers it among its duties to maintain a system of political espionage, and was at the time actually engaged in "shadowing" the Royalist members of the Coalition Government. According to the reports the three Royalist Ministers had been observed talking to Royalist officers, and they were accused of meditating a Royalist *coup d'état*. The Government has charged the Minister for War to deal drastically with the offending officer. It is pointed out that the Intelligence Service had been "dissolved," and the Press generally is said to deprecate the circulation of ridiculous reports. The revelations, it is to be feared, disclose a state of affairs in the Army that can hardly be remedied merely by the disciplinary punishment of the writer of the reports. General Pangalos is credited with responsibility for establishing the "Hamidian Secret Service," but the fact that the system continued to flourish six months after he had been deposed suggests that it was planted in very favourable soil. Even the Dictator, it will be supposed, did not use the Service to watch his colleagues in the Ministry; but the Army had so far improved upon his creation that the Service is now known to have constituted itself as a spy on members of the Government, and the system was sufficiently organised to call for reports from subordinates to their seniors and so up to the Officer Commanding, who presumably regarded the whole affair as part of his military duties. Unless far more drastic measures are taken with the Army than seem at present contemplated, it will be inferred that the country does not realise how serious is the state to which it has been brought by the demoralisation of the Army and its degradation to political purposes.

"The Future of Egypt."

Under the above heading Mr. Josiah Wedgwood, one of the bright stars in the Labour firmament, contributes an article to last Sunday's *Observer* in which with much pleasant badinage he ventilates the idea of an Egypt confided to Italy's protection. Mr. Wedgwood would appear to have been recently in Egypt and to have realised that, in no way deterred by the fact that Great Britain's Egyptian shoes pinch her, Italy has a keen desire to step into them. Such a development would hardly be in accordance with the gospel of the Labour Party; but then Mr. Wedgwood, seeing perhaps farther than some of his political associates, cannot stultify his intelligence by pretending to believe that, if Great Britain divested herself of all responsibility for and interest in Egypt, the country would necessarily be left to the Egyptians. He points out very shrewdly that Italy would carry out her task in a very different way from that in which Great Britain has tried "to guide the people to freedom, economic stability and prosperity." "A prosperous Egypt, disciplined and efficient under some Fascist guidance, might provide a better market for our trade. Our trade has no benefit from our occupation of Egypt. . . . If it be said that we should remain in Cairo for the protection of foreign capital, let us admit frankly that that capital (not most of it British) would be quite as secure if that protection were afforded by those so efficient Fascists who have done such wonders in Italy. We were too neutral." So neutral, indeed, as he points out in another place, "that now everybody in Egypt talks French or Italian." Labour, when next in power, may well be looking for old worlds to evacuate, and it might bring unction to many souls to make a gesture of noble surrender in the knowledge that it "might provide a better market for our trade." It would remain to be seen, however, whether Egypt, for all her dislike of the British frying-pan, prefers an Italian fire.

THURSDAY, JANUARY 27, 1927.

THE UNITED STATES AND TURKEY.

It is not necessary to take seriously, still less to take tragically, the refusal of the American Senate to ratify the treaty of amity and commerce between the United States and Turkey, signed at Lausanne on August 6, 1923. This treaty provided for the resumption of diplomatic relations between the two countries after their severance on April 20, 1917, and in effect constituted by its provisions America's acceptance of the salient points of the Treaty of Lausanne, to which she had refused to be a party on the ground that she had not been at war with Turkey. From the outset a considerable body of public opinion in the United States displayed a determined hostility to this treaty, and no attempt was made at the time to submit it to the Senate for ratification. That this step should now be taken without success is a testimony to the strength of American convictions, even if it leaves the Turks wondering at the logic of American institutions. To all intents and purposes the treaty has been in force during these three years, although the relations between the two countries have formally depended on a provisional agreement, prolonged as required, by which most-favoured-nation treatment was secured to each party pending the ratification of the Treaty. This arrangement can, presumably, be continued indefinitely without embarrassment to either country, until such times as the United States change their mind on the subject of spilt milk, unless indeed Turkey is to renounce all that the Republic stands for. The explanation given for the rejection of the Treaty by the Washington Senate is that it fails to give effect to President Wilson's views, or award, regarding Armenia, that it does not contain guarantees of protection for Christians and non-Moslems in Turkey, and that it does not provide for the recognition by Turkey of the American nationality of former subjects of Turkey who had to be nationalised in the United States. In other words, the Senate would fain traverse once more the whole of the ground covered by the long-drawn negotiations between the Allied Powers and Turkey at Lausanne. For the treaty was as much the outcome of those negotiations as was the Treaty of Lausanne itself. In the statement issued by the State Department at Washington at the time this was made clear in the following passage: "The prospective conclusion of peace between the principal Allied Power and Turkey made it appear advisable, in order appropriately to protect American interests, that the relations between the United States and Turkey be regularized at an early date. This appeared all the more necessary in view of the fact that in the course of the Allied negotiations with Turkey the abrogation of the capitulations had been agreed to." The American signatory of the treaty, Mr. Grew, had followed the Lausanne negotiations from the beginning as one of the American "observers," and the conversations which led up to the treaty were spread over three months, being brought to an end a fortnight after signature of the Treaty of Lausanne.

Whether the Senators who are opposed to the treaty imagine that Turkey can now be persuaded to concede what she refused in 1923 is not disclosed. It is more probable that their action is intended merely as a gesture to show that the motives which actuated America in enter-

ing the Great War still appeal to large numbers of her citizens. The same, we imagine, can be said of Great Britain; and if our attitude towards Turkey is different to-day, it is because, through being closer in touch with realities, we realize that the world will not stand still while we proclaim the everlastingness of even the most cherished opinions. No one can pretend that the abandonment of the Armenians was not a grave blot on the Allies' escutcheon. Yet when the Lausanne negotiations began the Armenians, to all intents and purposes, were not. If it had been possible to eliminate the Turks and to install the Armenians in the regions that were at one time claimed for them, Western conceptions of justice would, no doubt, have been well served. Such a course, however, was not practicable, and those people who were obliged to face facts, however disagreeable—including Mr. Grew and the American Government of the day—decided that they must again resort to the only possible alternative, in making the best of the Turkish will to become modernized. On the Turks' failure to respond in every particular to the hope thus placed in them there is no need to dwell. The fact remains that the Turkey of to-day has in it the makings of a better country than the Ottoman Empire ever was. The Turkish Government can be, from the foreigner's point of view, as exasperating as before; but the most prejudiced observer would be obliged to admit that there is a something stirring in the new Turkey which did not exist in the old. That it will suffice to carry the Turks through until they make entirely good by modern standards cannot yet be predicated. There can, however, be no doubt that Turkey has gone forward, and not backward, since the Treaty of Lausanne. With that measure of progress the Allies have to be content, while American Senators hug to themselves counsels of perfection which will make the world not one whit the better, because they are, and have been from the first, incapable of being carried into effect.

Curious contrasts are presented by America in her handling of Turkey. Writing in 1919, an American authority in the Near East stated: "Where others have invested for material profit we have invested twenty million dollars in founding colleges, forty million in feeding the hungry and fifty million in preaching, instruction and free medicine." The Near East Relief claims to have distributed seventy million dollars. All these sums, it is true, were not spent on Turks alone. Robert College was founded in 1863, but in 1914 there was only one Turkish student there. The United States refrained from declaring war against the Turks, and full advantage of this attitude was taken in the post-Armistice years to further American economic interests in Turkey. The Chester Concession, granted on April 9, 1923, a few days before the resumption of negotiations with the Allied Powers, represented, according to a Turkish newspaper, Turkey's *quid pro quo* for American help at Lausanne. The conclusion of the treaty between Turkey and the United States immediately after the Treaty of Lausanne suggested that the understanding between the two countries was complete. At an earlier date Mr. Hughes, the American Secretary of State, had declared that the United States in regard to Turkey would stand on seven points of policy, which included the maintenance of the capitulations, the protection of American philanthropic institutions and the protection of Christian minorities. Yet under the title of a treaty of "amity and commerce" all these points were specifically or by implication abandoned, for the simple reason that the United States Government learned, as the Allied Governments had discovered before it, that the demands could be enforced only at the point of the bayonet. America, however, for all her specific promises to the Armenians, refused to implement them by accepting an Armenian mandate mainly, if not entirely because the Harbord Mission had reported that American troops would be required in the early stages. To kick against the pricks at this point cannot further the cause that the United States have at heart, and it is to be hoped that, before the Turks feel encouraged to make some equally foolish reprisal, the American Senate will realize its responsibility in the matter.

The Near and Middle East*

From Our Own Correspondents.

Cairo, January 16.

Mr. Churchill's "Visit."

The movements of Mr. Winston Churchill have been a subject of excited interest to the local Press during the past week. From the time when the Genoa correspondents of the News Agencies, apparently jumping to conclusions from the fact that Mr. Churchill embarked at that port in the s.s. *Esperia*, announced that he was to visit Egypt, the vernacular papers have not ceased to speculate on the purpose of his supposed coming. Not unnaturally, there have been recalled the "elastic circle of Empire" phrase and the fact that when last Mr. Churchill visited this country we were in the period of political effervescence and demonstrations. A very large sized specimen of the latter form of manifesting political sentiments had been prepared for Mr. Churchill on his arrival at Cairo Station. Only the explanation that his train had stopped at a small halt a few miles out of the Capital, to which he was taken by motor-car, enabled the disappointed would-be demonstrators slowly to grasp the fact that the man for whom they were waiting had eluded them. They sadly dispersed, with their enthusiasm baulked of the opportunity they had hoped for.

Not even the denial which was not long in coming could convince Egyptian journalism that Mr. Churchill was really not on his way to this country. The fact that he was not on board the *Esperia* when she docked at Alexandria last Monday morning could not be disputed, so another theory—that he had disembarked at Brindisi and gone aboard a waiting British warship which would land him unnoticed on Egypt's shores—became prevalent. The circumstances that no British warship entered Egyptian waters last week, excepting the *Barham*, on Friday, did not prevent a number of journals from announcing that Mr. Churchill had positively arrived on Tuesday or Wednesday, and was staying at Mena House Hotel, incognito. One paper expressed its opinion that the member of the British Cabinet had come to settle the boundary line between Egypt and Palestine, a most unlikely theory, to say the least of it. But now the Churchill myth has at last been laid and the Arabic Press, which has lately been rather short of local political news of really exciting quality, has had to admit that it has been misled.

Captain Gordon Canning.

Another visitor whose presence here has aroused some interest is Captain Gordon Canning, who is staying at Shephard's Hotel. Although there seems to be no reason why the former would be intermediary between the French Government and Abdel Krim should not spend a part of the winter in Egypt, just like anyone else who dislikes fogs and cold, it has immediately been assumed that Captain Canning must be here with some secret design. As a result he has been interviewed by a number of local newspapers. Either Captain Canning has been rather obscure in his statements or else the journalists detailed to see him have been remarkably stupid, for in each instance where an interview with him has been published parts of it have subsequently been rectified by Captain Canning sending to

the editor a disclaimer of sentiments attributed to him. In any case, he has been as great a disappointment to the Arabic Press as has been Mr. Churchill's non-arrival, for Captain Canning's interviews have been discreet to dullness.

Village Fires.

The season of village fires is with us once again, and already there have been several disastrous blazes, of which the most serious occurred last week at Kafr Shubra, between Quesna and Shebin el Kom. The greater part of the village was burnt out and 179 families were rendered homeless. With characteristic generosity and promptness, the Khedive Mother immediately instructed the officials of her teftish of Mit Khallaf, which adjoins the village of Kafr Shubra, to distribute £E1,000 amongst the sufferers from the fire. The distribution was carried out yesterday by the Mudir of Menoufieh, Shaheen Pasha.

The regular recurrence during the first three months of the year of these disastrous village fires is a problem which has been exercising the Government for some time past, but of which no solution has yet been found. Two causes are chiefly responsible for the fact that the fires occur annually during the first quarter of the year. It is at that time that the cotton and sugar cane stalks and other similar products which are used by the fellaheen for fuel have become thoroughly dried and have been stacked on the housetops, to be drawn upon as required throughout the summer. January, February and March are also the months of violent winds which render almost impossible the task of restricting the area of a fire, once it has obtained a good start. Another circumstance makes it particularly difficult to cope with these conflagrations at this season, and especially during the present month, when the majority of the irrigation canals are practically dry, with the result that even if fire engines reach the scene of the blaze in good time they are often unable to do any useful work.

The real cause of these fires is no secret to anyone. It consists in the persistence of the fellaheen in storing their fuel, than which nothing can be more inflammable, on the roofs. The obvious solution is to forbid the use of housetops for this purpose. But that is much more easily said than done. The Delta villages are such closely-packed conglomerations of hovels that there is nowhere else where the stalks could possibly be put. It has been suggested that an effective solution would be to have a common storing ground, just outside the village and on the opposite side to that from which the prevailing winds blow. But the general opinion of provincial officials is that this proposal is impracticable because not only would it impose considerable hardship on the housewives, many of them old and infirm, who would have to walk a considerable distance each time they needed a little fuel for cooking purposes, but also because communal storing grounds of any kind have always been found in Egypt to be a fruitful source of disputes and factions, which too often have fatal consequences. The provision of adequate fire-fighting appliances is almost impossible, on account of the initial cost and would be of doubtful value, because few villages have amongst their inhabitants men with sufficient mechanical knowledge to keep fire engines in good working order. Moreover, as already explained, the water supply is usually inadequate or entirely lacking during the period when these fires occur.

The problem is a very serious one indeed; last year over fifty villages were wholly or partly destroyed by fire. And

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

an Egyptian village may hold anything up to ten or twelve thousand inhabitants. Anyone who can devise some practical and not too expensive means of dealing with village fires will be rendering a real service to the most likeable, the hardest-working and the least considered section of Egypt's inhabitants.

GREECE.

Athens, January 9.

Intrigue and Counter-Intrigue.

Two interesting documents have appeared in the Press during the last few days. One gives the details of an organisation styled "The Republican Sentinel," a league of Republican officers on the active list, of which the aims are admittedly not connected with the military profession, but political. They are as follows: (a) to defend the Republican régime; (b) to ensure that admission to and loss of officers' rank shall conform with the laws in force; (c) to hinder the return to the active list of officers retired or dismissed. Then follow details of the composition of the League and regulations for membership, subscriptions and the rest.

The other document, published in the *Eleftheros Typos*, exposes the aims and organisation of a body called "The Invisible," which, according to the paper, has numerous ramifications. The names of its president, secretary, and influential members are given, as well as of its headquarters and favourite meeting-place. Its aims are subversive of the present Government, and it professes to be at the disposal of the Royalist leaders, if and when required. To it are attributed the numerous reports in the Press of seditious movements in the Army, against which it hopes to poison the public mind. This organisation is said to have increased enormously lately, and to have one hundred and forty branches. The members are armed. MM. Tsaldaris and Metaxas deny all knowledge of it.

It is well known that political changes in Greece have for long been accompanied by corresponding changes in the personnel of officers, and political complexion rather than military efficiency has been the determining factor in these changes. The Smyrna disaster was precipitated, if not caused, by this system (if so it can be called), and the legacy of bitterness which that episode created is reflected in the existence of these two societies. That these societies *do* exist is, in spite of official denials, probable. It would be more remarkable, in view of all that has happened in Greece since 1920, if they did not. Those who suppose that the deep cleavage which runs through Greek life is going to be filled in in a moment are out of touch with reality. Rightly or wrongly the Republican element in the Army believes that it saved Greece after the Smyrna disaster and is determined not to lose the predominating influence which it then acquired. It argues that military interference in politics has not been so disastrous as the interference of politicians with the Army. The Government is, therefore, faced with the problem of reforming the Army without exasperating the Republican element in it. This should not prove impossible, but the danger is that the extremists, more especially the anti-Republicans, may embarrass their leaders by agitation and intrigue. Signs that they are so doing are not wanting.

In the proposed reform, two separate classes of officers are involved, those who have been removed from the Army as a result of political movements since September, 1920, and those who are on the active list but superfluous or inefficient. The first class are to be dealt with by a special Council, of which the list of members is now complete. The second class will be dealt with by the Supreme Council of War; the usual regimental, etc., reports being the basis for dismissal or retention. In this direction, it is hoped, some of the economies which are required for balancing the Budget will be made; but it is clear that great discontent will follow among the "axed." An officer's pay in the Greek Army is small in any case, and many will find themselves without employment. But the elimination is

absolutely necessary, as the Army is over-officered, and it is to be hoped that the decisions of the Council of War will be rigorously enforced.

The Old and the New Calendar.

A movement is going on, fostered, it is believed, by anti-Republicans, to restore the Old Calendar. Churches in Athens and in the surrounding villages have been seized and the office proper to the day according to the Old Calendar recited in defiance of the ecclesiastical authorities and the law of the land. Disedifying scenes have occurred, and, if one believes the anti-Republican papers, the movement is spreading. It has all the appearance of an agitation designed to make the Government unpopular, and it is quite in keeping with Monarchist tradition to make use of popular religious sentiment to injure their political opponents.

Miscellaneous.

The letter from the League of Nations to the President of the Refugee Commission, Mr. Eddy, came as a surprise, but its effect can only be good. It should rally public opinion to the side of the Government in its attempts to reduce public expenditure.

The first caravan of tourists—perhaps one should say rather, pilgrims—arrived a few days ago, the first drops of what, we are told, is to be a record shower. Every year these invasions increase in volume and intensity. The moral of the Greek nation has suffered more or less at the hands of all its successive invaders. It remains to be seen whether these, its latest invaders, will not be the most demoralising of all. No country has ever yet been known to be improved (though individuals have been enriched) by becoming opened up to tourism: and many well-intentioned but cloudy-minded people, who delight in advertising this country, will be horrified, if they are alive fifty years hence, to see the results to which they will have unwittingly contributed.

Sofia, January 17.

The Political Situation.

The Government is taking advantage of the holidays to draw up the Budget for 1927-28. The elaboration of the Budget, always a delicate matter these days, has become a subject of political importance in Bulgaria under the existing conditions, and it is not surprising to find that M. Moloff, Minister for Finance, has called upon his colleagues to revise their estimates with a view to eliminating all increase of credits that they had previously included, and to keep the Budget within seven or eight per cent. below last year's figures. He considers that the new Budget must not exceed the figure of 6,500,000,000 leva by a single stotinka. The Budget for the current

For particulars apply to THE SECRETARY.

year amounts to 7,000,000,000 leva, with an additional 700,000,000 leva, representing supplementary credits. Consequently the reduction envisaged by M. Moloff amounts to more than a milliard, and if this goal should be reached it would be the more meritorious inasmuch as Bulgaria's payments abroad—reparations, military occupation, consolidated pre-War debts and first payment of 18,000,000 leva for the Refugee Loan service—show appreciable increases.

The vote on the Budget is likely to be the last work of importance that the Sobranye will undertake. The fate of the Chamber has, indeed, been the subject of an interesting, though possibly academic, discussion. Under the Constitution Parliament exists for four years, during which four ordinary sessions are supposed to be held. As the present Parliament was elected on November 18, 1923, its Mandate should run, strictly speaking, to November, 1927. On the other hand it is essential that Parliament should meet on October 28 of each year, and it would be contrary to tradition that a fifth session should be started. The Government, accordingly, has decided that Parliament should end with the ordinary session on March 28, thus leaving for itself the wide margin of seven months before the regular opening of a new Sobranye, which will be elected in the meantime. Its intentions are not yet known, but there is a consensus of opinion that the elections will be held in April or May, and in the former rather than in the latter month.

It is in connexion with these coming elections that the President of the Council is being approached with a view to alterations in the Cabinet and the formation of a Coalition Ministry to hold the elections. A certain number of Government deputies, for the most part those who obtained election in 1923 as a result of the special conditions of that time, are putting forward this request with a view, it is supposed, to secure their re-election. M. Liaptcheff rightly holds that it is not for him to say who should be deputies and who not, and has referred his followers to their constituencies, giving them to understand without ambiguity that he sees no reason for changing the constitution of his Cabinet, which he proposes should hold the elections in its present form. Whether this decision can be regarded as final remains to be seen, but it may be supposed that the malcontents will have nothing to gain by a rupture with M. Liaptcheff. The latter has equally rejected the request of the Opposition for a Coalition Government, put forward on the grounds that it is desirable to avoid extreme antagonism between the different parties. The Government, however, which suffers from a plethora of electoral candidates, finds it more just to leave it to the electorate to express its will and then, as soon as the new Sobranye has been elected, to make such coalitions as may be necessary between the different parliamentary groups of the Democratic Entente does not obtain a sufficient majority to continue to govern alone. This line of reasoning has much to commend it, provided always that the elections are carried out without any administrative constraint, in spite of the fact that the bitterness of the electoral struggle is apt to render coalition more difficult after than before elections.

Another important effect of the approach of the elections is the outbreak of a crisis long threatening in the ranks of the Agrarian Party, which has shown itself in the beginning of a cleavage. After a vain effort to obtain control of the Agrarian Club those who are dissatisfied with the present leadership of the Party have proclaimed the constitution of a new central committee under the direction of the former Ministers, Alexander Boteff and Constantine Mouravieff. As a matter of fact,

the crisis can only be superficial, for the initiative of the movement of rebellion against the central committee, dominated by the former Ministers, Tourlakoff and Thomoff, comes from the emigrants established in Yugoslavia, while the great mass of the Agrarian population, whose real orientation is the great enigma of to-morrow, are observing an attitude of comparative indifference to the bitter struggles regarding the leadership of the Party. Moreover the possibility of a complete rupture has tended to alarm those concerned and has given rise to an attempt at conciliation in the hope of discovering a moderate nucleus which will be able to eliminate certain extreme elements with communist leanings. The Agrarian crisis will presumably be settled at the next Party Congress, which the Government has finally authorised to take place on April 6 and 7, the first Agrarian Congress since the *coup d'état* of 1923.

The Communist Plot.

Two months ago the police were warned of efforts being made by the Communists of Philippopolis to organise themselves. They kept watch on certain suspects and when the work of reorganisation was sufficiently advanced they proceeded to make numerous arrests. The Communist Party and its political and economic organisations have been formally interdicted by law and every attempt at re-constitution must on this account be considered as an act of conspiracy against the established régime. For this reason it seemed to be an instance of conspiracy rather than organisation, inasmuch as the organisation was trying to extend itself gradually throughout the whole country under the direction of a central committee operating from Sofia. One hundred arrests were made at first, but it was soon found that only 27 people could reasonably be detained, and the whole matter was handed over to judicial authorities. This was all that happened in connexion with what was represented in the European Press as a vast Communist conspiracy aiming at the assassination of Ministers and the abdication of the King.

THE HIJAZ.

Jidda, January 6.

The New Pilgrimage Regime.

The Wahhabi King is due to leave Madina to-day with a fleet of motor cars on a rapid tour of his desert dominion. The first stage of the tour is to Hail, whence he will proceed to the Qasim and eventually to Riyadh, and it scarcely seems likely that he will be back at Mecca in time for the Ramadan fast, as was his original intention. He will, however, certainly be back here before the Pilgrimage, which bids fair to be a good one. Up to date eight ships have arrived from Java and Singapore with a total of 3,714 pilgrims, and the new arrangements for their reception appear to be working smoothly and expeditiously. On the arrival of a pilgrim ship the official reception committee, consisting of six citizens of Jidda, proceed to the wharf and there remain on duty until the last pilgrim has been cleared through the ordinary formalities. Their presence, of course, secures the pilgrims from any irregular attentions on the part of boat-men, stevedores, porters, *et hoc genus omne* and in almost all cases the pilgrims have passed through the Mecca gate *en route* for the holy city within forty-eight hours of arrival. The camel still competes with the motor-car on favourable terms as a vehicle for the transport of pilgrims.

Comings and Goings.

Life at Jidda has been quiet and uneventful during the past week or two, and those who have been looking forward to an outburst of festivities in celebration of the first anniversary of the King's accession to the throne (December 28 or January 8 according as one regards the matter with lunar or solar eyes) have been disappointed by the King himself, who has ruled that none but religious occasions are to receive any special recognition in this country. Qadhi Ahmad, formerly a deputy in the Turkish

Parliament, passed through here by sea on January 3 *en route* for Angora, where he is to be the representative (whether minister or ambassador is not yet known) of His Yamanite Majesty, the Imam Yahya. Such an appointment, though long since foreshadowed, affords ample scope for speculation as to its motives. Another interesting visitor to Jidda is Mr. Charles R. Crane, formerly President of the American plebiscite commission of 1919 in Syria. He arrived here on Christmas Day and, having found it impossible to get into personal contact with Ibn Saoud—incidentally the Amir Faisal came down from Mecca to greet him here—he leaves to-day with the intention of making a tour in the Yaman from Hudaïda to Sanaa and thence to Aden. He then proposes to visit the Hasa and particularly Hufuf, whose dates (the famous Khalas) have proved as successful as any in a Californian oasis, which occupies a warm corner in his heart. Mention of this tour reminds me of the recent death there of Muhammad Effendi, Ibn Saoud's chief revenue official for the Hasa since the expulsion of the Turks, whom he had previously served in a like capacity. His great personal charm will be missed by future European visitors to the Hasa and his ability by Ibn Saoud, who will find it difficult to replace him. Incidentally he was the father-in-law of Dr. Abdullah Damluji, the Hijaz Foreign Secretary, and it is rumoured that the latter will shortly proceed to the Hasa to see his family through this crisis.

News from the south is scanty but no further developments have taken place in the military dispositions of the Yaman and the Asir. The birth of the Yamanite kingdom has been celebrated by the publication of the first issue of a monthly newspaper at Sanaa. The paper is called *Al Imam*—the Trust, and naturally gives prominence in its first number to the Italo-Yamanite Treaty and the aspirations engendered by it.

IRAQ.

Baghdad, January 5.

Imperial Airways.

The importance of Iraq as a calling station on the air highways of the Empire has been emphasized this week by the arrival in Baghdad of the first liner of Imperial Airways, on its initial flight from London to Delhi. The great aeroplane reached Baghdad at 9.30 a.m. on December 29, and circled slowly round the city before landing on the carefully prepared aerodrome of the company at Baghdad West. Thousands of Arab and British spectators watched the descent of this herald of a new age into the city of Haroun ar Rashid. Sir Sefton Brancker, Director of Civil Aviation, and the two pilots were heartily congratulated on their successful flight. No hitch of any kind had occurred since the aeroplane left London. Sir Sefton remained in Baghdad as the guest of the High Commissioner to await the arrival of the second aeroplane; the first, with its two passengers, and carrying also a doctor whose passage from Baghdad to Basrah had been booked by Messrs. Thos. Cook and Sons, immediately on its arrival, left after only three hours in Baghdad.

The second aeroplane, which is officially inaugurating

the Imperial Airways service, reached Baghdad on the morning of January 2, bring Sir Samuel Hoare, Secretary of State for Air, Lady Maude Hoare, and Sir Geoffrey Salmond, who is flying to India to take up his post as Air Officer Commanding. The party, who were the guests of the High Commissioner, spent only one night here, leaving the next morning at 8 a.m. for Basrah *en route* for Bushire. Sir Sefton Brancker left with them.

Another aspect of the conquest of the air has been illustrated by the arrival of two airmen who are engaged in the adventurous enterprise of flying to India in small 2 h.p. "Moth" aeroplanes. They are Mr. Stack and Mr. Leete both late of the Royal Air Force; the former is chief instructor to the Lancashire Aero Club. Each airman is his own navigator and mechanic as well as pilot, and the light weight and small horse-power of the machines make their achievement in covering such a distance a remarkable one. The two airmen left on Christmas Eve for Basrah.

Proposed New Ministry.

A certain amount of discussion is taking place in political circles as to the desirability of forming a new Department of State. Some favour a Ministry of Economics and Commerce: others, pointing out that Iraq's prosperity depends on the development of her large agricultural resources, would prefer a Ministry of Lands, which would unite Agriculture, Irrigation, and State Lands under one control, instead of under that of the Ministries of Interior, Communications and Works, and Finance respectively. There is much to be said for each of these and other suggested combinations, though the present moment may be an unsuitable one for introducing them, since the expense involved in the creation of a new Ministry seems at first sight inconsistent with the Coalition Cabinet's declared policy of retrenchment. In point of fact, however, the Coalition was only achieved by the promise to create a new portfolio and the new Cabinet, economy or no, may have to fill its obligations.

An experimental census taken at Angora gives the population of the Turkish capital as 58,849. Of the inhabitants 35,674 are males and 23,175 females.

The death is announced from Calcutta of Sir Kailas Chandra Bose. He served as Vice-President of the Indian Medical Congress and President of the Calcutta Medical Club.

Mr. Martin H. Donohoe, whose death occurred in London on January 19 in his 58th year, was a special correspondent of the *Daily Chronicle*. Mr. Donohoe, in the course of his varied career as a war correspondent, was in Constantinople during the Turkish revolution in 1909, and witnessed the capture of the city by the Young Turks. In the Great War he was an officer with the British Intelligence Corps, and served in Greece, Roumania, and Russia. He was special service officer in the North Persia Expedition in 1918-19.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Allow me to add a few lines to the information that appeared in your issue of December 23 last, as well as some rectifications.

1. It was stated in that issue that "the Turkish quarters were decorated with English and Turkish flags." All the people of Nicosia town know well that not one Turkish flag was hoisted on that occasion, but only British flags were waving over all Turkish clubs and shops, etc.

2. As to the information given for Greek quarters it was accurate, as the Greeks hoisted both English and Greek flags.

3. When their Excellencies the Governor and Lady Storrs landed at Famagusta, the Turkish community as well as the school boys, went out to meet and wish welcome to their Excellencies, and on their way to Nicosia, while the train was passing through the Turkish villages, all the population as well as the school boys and girls went to the station to offer to their Excellencies a welcome with shouts and bouquets of flowers.

4. On the arrival at Nicosia while the band of Turkish schools was playing the National Anthem of England, the Greek Mayor of Nicosia was busy handing over to His Excellency an address demanding the union of Cyprus with Greece!

5. While their Excellencies were driving from the station to the palace all the Turkish quarters were decorated with English flags and some arches were erected, and Turkish ladies and children were offering and throwing flowers to their welcome and esteemed Governor.

Such was the fact of the reception and you will render a justice to the Turkish community if you will be so kind as to insert these additions to your paper.—I am, etc.,

Nicosia, January 5. A READER OF YOUR PAPER.

CYPRUS FRUIT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With regard to the Cyprus fruit controversy Mr. "G. L. H.," is quite at liberty, if he so choose, to "adhere to what was said in his first letter," although what was said is proved in the light of official testimony to have been not a statement but a gross mis-statement of facts. The Governor's Colonial Report on Cyprus and the statement by Mr. W. Bevan, a man who was for several years Director of Agriculture in Cyprus and who had ample opportunities to study and compare the Island's products, are simply confirming the opinion of everybody—except, of course, my disputant—who happened to taste the delicious Cyprus fruit and to compare it with others.—I am, etc.,

C. S. HOURMOUSIOS.

34, Northumberland Place, W.2., Jan. 22.

THE HEALTH OF EGYPT.

Foreign newspapers have recently published statements in Europe to the effect that influenza is prevailing in Egypt. Considering that these statements are in contradiction to the facts, the Egyptian Department of Public Health have already published a denial, explaining that the general state of health in Egypt is normal, and that the average number of cases of influenza is smaller, this year, than it was the previous one. Moreover, the cases reported are of a more benign nature.

NEWS IN BRIEF.

The United States Senate has declined to ratify the Treaty of Lausanne with Turkey.

For the seven months ended October 31, 1926, the revenue of Palestine amounted to £E.1,315,160 and the expenditure to £E.1,121,112.

The Greek Orthodox Cathedral of the Holy Trinity in 72nd Street, Manhattan, U.S.A., was destroyed by fire on January 18.

Heavy rain was last week reported from Beersheba, Gaza and Hebron, and the severe drought which has so long afflicted Southern Palestine has thus been broken.

The Adana branch of Orosdi-Back, an old-established general store well known throughout Turkey and the Near East, was recently totally destroyed by fire. The damage is estimated at £75,000.

According to the *Echo de Turquie*, General Refet Pasha, a former Nationalist Prime Minister, who recently resigned his seat as one of the Deputies for Constantinople in the Grand National Assembly in Angora, has now been put on the retired list of the Turkish Army.

General Sir Neville Howse, Australian Commonwealth Minister for Defence and one of the delegates at the Imperial Conference, arrived at Port Said on January 19, suffering from pneumonia, and is now in the British hospital there.

The British Mediterranean Fleet, which was visited by the Archbishop of Athens on January 19, left Athens the following day, some ships proceeding to Salonika and others to Volo, Navarino, the Akarnanian Coast, and the Ochia Islands (off the Akarnanian coast at the mouth of the Gulf of Patras).

Sir Ronald Storrs, the new Governor of Cyprus, formally opened the session of the Legislative Council in Cyprus on January 17 with a Speech from the Throne, indicating the lines on which he hoped to secure the economic, commercial and agricultural development of the island. There was an unusually large attendance at the ceremony.

The Palestine Government has issued the order for the expropriation of the land required at Jisr el Mejamie for the construction of the dam, power-house, and other buildings connected with the Rutenberg scheme for damming the Jordan just south of its exit from the Sea of Galilee for the purpose of providing electric power for the whole of Palestine.

A pilgrimage to the war graves and battlefields in Palestine and Egypt is being organised by the St. Barnabas Gallipoli Pilgrimage Fund, of 7, Hobart Place, London, S.W.1. The Pilgrimage will leave Victoria Station on April 27 and return on May 20. A limited number of assisted pilgrims can be taken on the pilgrimage. Full particulars can be had from the Secretary.

Mr. Robert Williamson, of Penwold, Bridge of Weir, Renfrewshire, and of Harley House, Marylebone Road, London, N.W., lately deputy chairman of the National Bank of India, Limited, and a director of the Chubwa Tea Company, Limited, of the London and Lancashire Insurance Company, Limited, and of the Marine Insurance Company, Limited, who died on November 29, left unsettled personal estate in Great Britain valued for probate at £345,452, including holdings in the National Bank of India, Limited, valued at £102,125, in War Loans, etc., at £49,124, in the Attock Oil Company, Limited, at £46,018, and in the Mercantile Bank of India, Limited, at £33,380.

PERSONAL AND GENERAL

TO-DAY

January 27, 1927 (New Style).

January 14, 1927 (Old Style).

Rajab 23, 1345 A.H., of the Muslim Calendar.

Shebat 24, 5687, of the Jewish Calendar.

The Earl and Countess of Airlie will return to London next week from the Sudan.

Sir Banister and Lady Fletcher have returned to 10, Woburn Square from Egypt.

Sir Trehawke and Lady Kekewich will leave on February 26 for a cruise in the Mediterranean.

Mr. and Mrs. Victor Thomson left London last week for Egypt, and will be away till the end of February.

Viscountess Rhondda sailed from Tilbury on January 21 in the P. and O. s.s. Rawalpindi for Bombay.

Mr. and Mrs. Rudyard Kipling will leave Southampton to-morrow (January 28) in the Andes for Rio de Janeiro.

Lord and Lady Montagu of Beaulieu joined the Narkunda at Marseilles last week on their way to Persia.

Lord and Lady Forster have cancelled their proposed visit to Egypt, and are remaining in England for the present.

Sir Louis Newton, Bt., and Lady Newton left London at the end of last week for the Riviera on their way to Palestine and Egypt.

Field-Marshal Sir Claud Jacob and Lady Jacob have left London for Rome and the South of France. They will remain abroad for several weeks.

Major E. W. Polson Newman has left London for Italy, Tripoli, Tunis, Algeria and Morocco, and will return to England about the middle of March.

The King has approved the appointment of Mr. James Addison, I.C.S., and Mr. Bakshi Tek Chand to be Puisne Judges of the High Court of Judicature at Lahore.

Lady Maffey and Sir Edward and Lady Stern were among the passengers who left London on January 20 for Marseilles to embark in the Narkunda for Port Said.

The newly appointed First Secretary to the Persian Legation, Mirza Ahmed Khan Ardeshir, has arrived in London and taken up his duties at the Legation.

M. George Mélas, hitherto First Secretary of the Greek Legation in London, accompanied by Madame Mélas, left on January 19 for Athens, on vacating his appointment.

The King has approved the appointment of Mr. Sitaram Sunderrao Patkar to be a Puisne Judge of the High Court of Judicature at Bombay in the vacancy created by the death of Sir Lallubhai Shah.

Mr. W. P. D. MacMahon, Ph.B., for two years Headmaster of the English High School at Constantinople and formerly Assistant Master at Rugby, has become Vice-Master of Claysmore School, Winchester.

The Rev. J. H. Jennings, who has for many years been stationed in India and has latterly been S.P. G. missionary at Adra, in the diocese of Chota Nagpur, has been appointed to the vicarage of Hooton Pagnell, Doncaster.

Sir Charles Greenway, Chairman of the Anglo-Persian Oil Company, who was included in the New Year List of Honours as the recipient of a barony, has chosen the title of Lord Greenway of Stanbridge Earls on his elevation to the Peerage. The barony has been gazetted.

Viscount Loftus sailed on January 21 in the s.s. Arcadian for the Mediterranean, Palestine, and Egypt.

M. Slavko Grouitch, former Yugoslav Chargé d'Affaires in England and Minister at Berne and Washington, left London last week for Belgrade after a fortnight's stay in England. Mme. Grouitch is staying on for some time at 58, Jermyn Street, S.W.

Mr. L. Harrington, of Messrs. Waring and Gillow, Ltd., will be visiting Egypt early next month. He is expected to arrive in Alexandria on February 17, where he will remain a few days prior to an extended stay at Shepherd's Hotel, Cairo.

Lieutenant-General Sir Alfred Robert Martin, K.C.B., of St. Peters, Farringdon, Alton, Hants, formerly of the 5th Gurkha Rifles, who saw service in the Afghan War (1878-80) and in numerous other expeditions on the North-West Frontier, formerly Adjutant-General for India, who died on October 27, aged 73, left unsettled property of the gross value of £8,395, with net personalty £5,609.

The funeral service for Lady Allen, widow of the late Sir George Allen, K.C.I.E., was held on January 19 at St. Paul's Church, Knightsbridge. Prebendary F. Leith Boyd, assisted by the Rev. A. T. Keane, officiated. The chief mourners were: Mr. and Mrs. Charles Sturdy, Lieut.-Colonel and Mrs. Mervyn Williams, Sir Montagu and Lady Turner, Mr. and Mrs. Alwyne Turner, Miss Cynthia Allen, Major and Mrs. Fordham, Mrs. Ward and Colonel A. M. Turner. Others present at the Church were: Viscountess Gough, Edith Lady Bradford, Lady Lambert, Miss Lambert, Sir Henry and Lady McMahon, Lady Seton-Karr, Miss Seton-Karr, Sir Richard Taylor, Lady Mason, Lady Norton-Griffiths, Mr. George Berney, Mr. A. J. Brown, Mr. C. B. Calley, Mrs. Denton Carlisle, Dr. E. M. Coxon, Mrs. Edward Darrell, Mr. Kevill Davies, Misses Deacon, Mr. Favarger, Mrs. G. H. Gibbes, Mrs. and Miss Haggerty, Mr. O. G. Herford, Mrs. Streeter Lambert, Mrs. Levita, Miss Kinnell, Mrs. Langton May, Mrs. Jack Michell, Mr. Montague Bell, Mrs. Frank Newman, Mr. Robert Page, Mr. and Mrs. Montague Parker, Mr. and Mrs. Kinsey Peile, Mrs. Pickering, Mrs. Field Richards, Mr. A. Richards, Miss Humphrey Roberts, Mrs. H. Alan Scott, Mr. Edward Sturdy, Mrs. Symes Thompson, Mrs. Threlfall, Mrs. Turnbull, and Mrs. Francis Wood. The burial took place at Shirley, near Croydon.

Book Reviews

THE SHADOW OF THE TURK 1435-1439.

"*PERO TAFUR. TRAVELS AND ADVENTURES 1435-1439.*" Translated and Edited by Malcolm Letts. (London: George Routledge and Sons. 16s. net.)

It certainly looks as if Messrs. George Routledge and Sons are going to do a great service to those of us who love to follow the footsteps of those who first attempted to see the world and its marvels. Apart from the valuable information to be obtained from the best of these travellers, we have the sensation of being transported into an unknown world with an atmosphere of its own. At the same time the shrewd observations of a man of the world or of learning mix delightfully with the tall tales heard by him which he was often apt to take at something over face value. If this book may be taken as a fair sample of the fare to be set before us, a great and goodly feast is in store. Its general-editorship makes it certain that the kitchen is in charge of two very competent chefs.

Pero Tafur was a Spanish nobleman who went out to see the world at the age of about 25 and was absent on his journey for about three years and a half. These years fell between 1435 and 1439 when the shadow of the Turk was over Eastern Europe, when most of the Powers of Christendom were engaged in strife, when printing had not yet been invented, the renaissance of classical learning had barely begun, and when the last attempt was being made to heal the great schism between the Western and Eastern churches. He travelled with ample credits on the merchants of the chief towns visited, and to judge from his reception by such potentates as the Eastern Emperor, his colleague of the West, the King of Cyprus, the Duke of Burgundy and others, he must have been well furnished with credentials. It is clear that he wrote the book some time after his return, which accounts for some inaccuracies in his itinerary (in those days there was no "Times Atlas" to check himself by), and for some evident confusion in description. But, on the whole, we have a vivid sketch of the many interesting things which he saw and heard, though in places we can but lament that he did not foresee how interesting to later ages would have been some notes on matters deemed, no doubt, by him to be of little moment. He is, in the main, very cautious in accepting as true what is told him. "I gathered much information concerning Damascus, but since I did not see the place I pass it over and leave it to those who have been there." "But no one can remember this, and it seems to me that too much credit must not be attached to the story." "But I would place more faith in anything found in the Evangelists." These extracts are typical of his general mental attitude, though he did fall badly to the yarns of the Venetian Nicolo de' Conti whom he met in extraordinary circumstances in the Sinai Peninsula when the latter was on his way back from his adventures in the Far East.

His tour took him to Italy, Germany, Burgundy, Flanders and other countries in Europe. But what will interest readers of THE NEAR EAST AND INDIA more especially is his account of what he saw in Egypt, Cyprus, Rhodes, Constantinople, Trebizond and Palestine. Cyprus was nearly at its last gasp. Constantinople, was in the position of the mouse on which the cat has her eyes. There was much pomp, but little less sordid misery behind it. The visit paid to the Grand Turk disclosed a very different state of affairs. Trebizond was wholly decadent

and pilgrims to Palestine had to put up with much fleecing at the hands of the Turk. In Rhodes he saw, and describes, the election of a Grand Master. Egypt was strong and prosperous. As was usual with him, he was well received and entertained there. He gives a thrilling account of a game of polo which he witnessed. What a game it was too! Here is his account:—

"That day the Sultan dined in the field, and afterwards they played a game which is customary there, in this manner; they place a ball in the centre of the field, and some thousand horsemen, more or less, take up their position on one side, and they draw lines on either side in front of them, and each one has a mallet in the hand, the handle of which is fixed into a staff, and they all attack the ball at the same time, with intent, on the one side, to drive it across the line, while the others seek to do the same on their part, and those who succeed in driving the ball across the line are the victors. That day one of the players tried to hinder the Sultan's son, and he took out his sword and tried to kill his opponent, and there was a great commotion until the Sultan came up and parted them."

From Egypt he actually did the difficult and trying journey to Mount Sinai, but, indeed, no difficulty was ever allowed to stand in his way and his adventures by sea and land were numerous. All are narrated in the most matter-of-fact way. It is not often that he allows himself to depart from this, but the following little gem from his observations at Constance deserves to be quoted: "I saw there the most beautiful woman it has ever been my lot to see. So great was her beauty that I doubted if she could really be human. If she was as good as she was beautiful, they should make much of her in Paradise."

The few extracts which we have been able to give will show how well Mr. Letts has done his work of translation. His introduction and notes are excellent, while the book is supplied with appropriate and interesting illustrations and is produced in a manner worthy of its matter. The price is, as things go now, wonderfully low, and we look forward to seeing Pero Tafur's successors in the procession of "Broadway Travellers." C. S.-W.

ENGLISH BEGINNINGS IN BENGAL.

"*STUDIES IN THE LAND REVENUE HISTORY OF BENGAL, 1769-1787.*" By R. B. Ramsbotham. (Oxford University Press. 10s. 6d. net.)

This book will be welcomed by students of the history of British India, because it throws new and valuable light on the troubled period when Englishmen were trying to bring into running order the derelict Mogul administrative machine which had come into their hands. A large part of it consists of the text of two import records, the Amini Report of 1778, and the Kanungo Report of 1787, which are now published in full for the first time, and may justly be described as indispensable to a precise study of the subject. Unfortunately the reproduction is apparently not flawless, for p. 105 does not run on from p. 104, and in the same way p. 118 does not run on from p. 117. Conceivably the fault is in the original, but if so it should have been explained in the footnotes, and it looks as if the Indian printers had for once let even Mr. Milford down. With careful reading, however, the text of these documents can be used by those who have not access to the Record Office in Calcutta. Mr. Ramsbotham gives us also by way of introduction a summary drawn from the minutes of the proceedings of various Committees from 1772 to 1786, and this too will be welcomed by students. Its most interesting feature is certainly its vindication of the young Englishmen who were working in the Bengal districts, and there is undoubtedly truth in the author's contention that Warren Hastings fell into the snare of over-centralisation which is set for the feet of every strong administrator. The young men were in touch with facts, and some of them were not backward in bringing important matters before their superiors at headquarters, to

FRENCH SELF-TAUGHT GRAMMAR WITH KEY

By J. LAFITTE, BèsL., Principal French Master, City of London School.

For learning the Language by the Natural Method. It contains Classified Vocabularies, Travelling by Rail, Road and Sea. Cycling, Motoring, Post, Telegraph, etc. Commercial, Naval and Military Terms, etc. Conversations so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION Tables of Money with illustrations of Coinage, etc.

A course of simple and practical lessons in the Grammar and construction of the French language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

Crown 8vo, 315 pp. Green Cloth, 6s. net. Postage 6d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25. London: E. MARLBOROUGH & CO., LTD., 51 OLD BAILEY, E.C.4

be snubbed at first, and possibly appreciated later on, as sometimes happens nowadays. Hastings would probably have done better if he had given the young men more scope, and Mr. Ramsbotham has done good work in bringing this fact out, but in our judgment he shows insufficient appreciation of the case of centralisation resting on the earlier history of Bengal, when young men alone in the districts did a great deal of harm; and this brings us to the weakest part of the book, the failure to put British beginnings in their true relationship to what had gone before. The author has apparently not mastered the Mogul system of administration, and a good many instances could be found in his notes where he either misleads or fails to help his readers on points which could easily have been cleared up. To give one only, he boggles at the personage called "Buttickchee," and suggests (p. 163) that the word may be a corruption, but every student of the Mogul system knows that "Bitikchi" was one of Akbar's many experiments in nomenclature, and is the Turkish name which he bestowed on the "karkun" or revenue-clerk. This ignorance of the earlier period appears also in more important matters, as when we read (p. 30) that the British introduced the system of farming the revenue by auction. In point of fact the auction-farm had been a recurring blight over most of India for at any rate four centuries: the *differentia* between British and indigenous methods was not the auction, but the fact (which appears on pp. 60 and 64) that the British authorities did not allow for the indigenous practice under which impossibly high bids could be modified later by corruption and intrigue. To take one other instance, the author seems to accept at its face value the legend that Tadar Mal made a detailed assessment of Bengal: that legend is now out of date, but even in the eighteenth century Sir John Shore had recognised its practical impossibility. We should then have had a better book if Mr. Ramsbotham had based his work on the Mogul system as it really operated in the North, and had traced its gradual corruption in the peculiar atmosphere of Bengal, but, subject to this criticism, the book can be recommended confidently to the student.

SYRIA AND THE SYRIANS.

"CEDARS, SAINTS AND SINNERS IN SYRIA," By E. S. Stevens. (London: Hurst and Blackett, Ltd., 21s. net)

The erstwhile Turkish province now styled "L'état du Grand Libanon" is a mountainous tract lying to the north of Palestine, and extending from the Mediterranean coast to the Syrian desert. Miss E. S. Stevens, who recently visited this romantic region under the guidance of Monsieur Léon Brassell of the French Archæological Service, has given us a fascinating account of the land and its people. The climate of the Great Lebanon is sub-tropical on the coast line and sub-Alpine at higher altitudes. Fairly good roads render every point of interest accessible: motor cars and even taxis are ubiquitous. Western tourists would indeed find northern Syria an ideal winter and summer resort, but for the fact that its mediocre hotels are generally packed with garrulous Levantine families. Its world-famous cedar forests have been nevertheless privileged for three milleniums; and the isolated groves which survive give but a faint idea of the glorious garb of its upland valleys in the days when Hiram reigned over Tyre and King Solomon was building the Temple of Jerusalem. This lovely land has ever been rent by theological hatred. Its Maronite inhabitants belong to a Christian sect dating back to the seventh century of our era; they are sturdy mountaineers, and have never bowed the neck to the Islamic yoke. The Druses, on the other hand, are a kind of fanatical Muslim; and massacres were the rule until their French overlords called a truce between these implacable foes. Of the heterogeneous population of the Lebanon, Miss Stevens writes:—

Syria is a Mediterranean country, washed by the bluest and laziest of seas, a lotus-land of forgetfulness, where *tout passe, tout lasse*. It has seen race succeed race, domination succeed domination;

Phœnician, Greek, Roman, Saracen and Ottoman have in turn swayed its destinies. Now it lies, if uneasily, beneath the protection of France. Versatile, imitative and supple, the Syrian is quick to mould himself on the foreigner. He has little national pride. To-day the Syrian would rather be taken for a Frenchman than for himself, and depreciates national habits while he uses them. But in the souls of these dark-haired, opaque-eyed women, these too softly-living, too fleshy men, with their perfumes, their French soaps and their excellent imitation of European accents and European culture, the East is the East still. They have always imitated the West; they are never of it. Suave, clever, adaptive, fluent in other tongues, supple to perceive an advantage, the Syrian is ever an Asiatic.

Our authoress devotes many pages to a description of the churches and monasteries mostly founded during the epoch when Syria was a congeries of Latin principalities; but the most interesting chapters in her book deal with Anglo-French relations in the Lebanon. Our neighbours' affection for Syria dates back to the Second Crusade, when St. Louis established a evanescent kingdom there. The French claims to a protectorate of Christian communities in this part of the Near East bulked largely among the causes of the Crimean War; and now threatens the endurance of the Entente with ourselves. The history of Syria since the Great War does not redound to the credit of either country; and the friction thus generated has left a leaven of jealousy on the French side which makes more difficult cordial relations with Great Britain. Miss Stevens's peroration will be echoed by all who desire to see civilisation advancing in the Near East:—

The almost childish suspicions that have troubled past relations may surely be put aside with childish things and relegated to the dustbin. Syria under the French Mandate, once the country has recovered from the present check, may have a time of prosperity and quiet before her which she sorely needs.

F. H. S.

A PRIMITIVE PEASANTRY.

"ECONOMIC LIFE IN A MALABAR VILLAGE," By S. Subbarama Aiyar. (The Bangalore Printing and Publishing Co. 1 rupee.)

The author of this little work has chosen an individual village in Malabar as typical of the District, and has produced an interesting survey of the life of the peasants of a curious and rather isolated community. The natural advantages of the country are considerable, as it receives both the South-West and North-East monsoons and is blessed with an abundant rainfall: and, protected by mountains, forest and the sea, it has escaped the invasions from the North that played so large a part in the history of India. But it has some serious disadvantages, chief among which are the system of Matriarchy and an intense demarcation of caste—the latter a curious fact in view of the general belief that the caste system was introduced into India by the Aryan irruption from the North. The young Nair woman, after going through a ceremony of marriage with some casual stranger who is paid a trifling sum for his services, is free to bestow her favours on any number of men not of a lower caste than her own, provided that she takes them one at a time. All her children, whatever paternity, are entitled to maintenance from the family property, and her daughters transmit the same right to their children. This system tends to a high rate of natural increase, and to any excessive number of men untrained to any form of labour. The lowest caste is not allowed to enter a caste village at all, and its members must not approach, within a radius of 72 feet, any member of any of the higher castes except the next lowest, where the distance is 48 feet: the latter themselves, though allowed to enter a caste village, being obliged to stand at a distance of 24 feet from any of its inhabitants. The lowest caste exists in a state of semi-serfdom, some of its members being attached to their masters' soil and changing hands with the land in case of its sale. Communications and transport facilities are very defective, railways and roads being few, and most of the internal transport is carried on the backs of cattle or human beings.

In these circumstances, it is not surprising that the

peasants are a shiftless folk. Their lack of capital is excused by the author on the ground that "saving in itself is no virtue and perhaps is not to be recommended in the case of a people earning only just sufficient wealth to satisfy their bare necessities of life, for it is absurd to sacrifice the present if that involves jeopardy to the future." The author gives statistics of the income and necessary expenditure of his typical village of 620 inhabitants: and makes the former about 150 rupees a year less than the latter, exclusive of interest on debts, which he puts at 1250 rupees. Of the 107 families represented, he finds 30 to have a balance on the right side, 30 to be just solvent, and the remainder to be "trying hard to make both ends meet." In regard to debt, he reports a characteristic reply to an inquiry on the subject: "Who is to lend me money?" he said, with a sigh and evident despair. "If I can get, I am quite willing to borrow; but my earnings hardly suffice to keep me through from day to day." Measured by the British standard, the author reckons that the Malabar agriculturist does, on the average, during his five to eight months' field work in the year, about the equivalent of one month's effective work. As for cottage industries, during the agricultural slack season, he says that, though the fly shuttle loom is from 50 to 100 per cent. more effective than the hand loom, the worker objects to turning out in the day more than he has been accustomed to, and it is an almost hopeless task to persuade them to the contrary.

The author's suggestions for the future improvement of the Malabar peasant's lot are ineffectual: he sets up three proposals, only to knock them all down again—intensified cultivation, encouragement of cottage industries, and emigration. As to the first, apart from the small effective value of the peasant's labour, he describes it as seldom possible and sometimes not to the interest of the cultivator; for "so long as there is full and free competition for the use of land there is a dense and hungry population to be fed, the landlords will screw up the rent to the utmost, whatever be the intensification of cultivation"; though, as a remedy, he recommends that "capricious eviction of tenants or arbitrary enhancement of rents should immediately cease." As to the second, with the previously quoted attitude of the cloth weavers before him, he opines that "the sustained efforts of industrial leaders of a new type, as well as organised education of the masses" may, in time, lead to "the rehabilitation of village industries on modern lines with all the advantages of a central agency, an organisation for the purchase of raw materials and the disposal of finished products, and the use of efficient tools and materials." As to the third, though a number of labourers do find seasonal work in the rice-fields outside Malabar, "as a remedy it is quite defective, for it exposes the local agricultural industry to most serious danger at the most critical seasons of the year." In short one finds, in this interesting and, in its way, valuable little book, the characteristics of the Indian intelligentsia of the present-day: patience and skill in the collection of knowledge, and an almost complete absence of the power of turning it to practical account.

A MUSLIM VIEW.

"**INDIAN POLITICS**," By *Hakim Barham*. (The Bharat Prakash Press, Gorakhpur.)

This little brochure contains the report of the speech of a Muhammadan landholder before the United Provinces Zamindars' Association, with a foreword by the author. The speech was mainly devoted to a plea for special representation for landholders in the Indian Legislature; the foreword contains the views of a Muhammadan publicist on the Reforms. These, though written with a strong communal bias, are not without interest. The author declares that the continued presence of the British Government in India is indispensable: that "the disintegrating effects of the War unhinged the minds of British statesman and, in a moment of confusion and depression, they yielded to the clamours of Indian agitators." This is not to say they made no inquiry before the passing

of the Government of India Act of 1919; but that this inquiry ought to have preceded the announcement of policy made in August 1917, instead of following it as a method of giving effect to a decision already announced. The author declares that the establishment of self-government in India means the establishment of a Hindu Raj: and that this is unfair to Muhammadans, who have always been friendly to the British and from whom the latter, as the successors of the Moguls, received the Empire of India. The British Government is disconcerted to find that its efforts to meet Indian aspirations have not been appreciated; but "the moment it changes its attitude and begins to favour the Muslim position, it will see that the trend of Indian politics takes a new turn." It is untrue to say that self-government is the birth-right of any people; "there can be no self-government without power and capacity, and these things are badly wanting in India": at any rate (one must suppose the author to mean) among the Hindu majority.

Sir Sefton Brancker left Karachi on January 22 in a Royal Air Force aeroplane for Jodhpore, proceeding to Delhi the following day.

M. Auguste Ponsot, French High Commissioner in Syria, is reported to have been visiting Palestine, staying in Jerusalem for two days as the guest of Lord Plumer.

The Indian Government has chartered the Takliwa and Sirdhana as transports for service in China, to which country the Jhansi Brigade is unofficially reported to be sailing from Calcutta this week.

It is officially estimated that the population of Palestine on September 1 was 887,000, of whom 641,000 were Moslems, 158,000 Jews, 78,000 Christians, and 10,000 Druses and persons of other religions.

The pilot of a Greek military aeroplane, who landed in error on Bulgarian territory in the neighbourhood of Petritch on January 21, was detained by the Bulgarian authorities, who are opening an inquiry.

On the advice of the General Staff of the Greek Navy, only one battleship, two ocean-going destroyers, and two smaller destroyers will remain in commission. The rest of the ships will be put in reserve.

Rear-Admiral Bristol, United States diplomatic representative in Turkey, left Constantinople for Angora on January 21. On February 20 the provisional commercial treaty between Turkey and the United States expires.

Lieutenant R. C. Freeman, Royal Tank Corps, son of Mr. Oliver Freeman, Principal of Portsmouth Municipal College, died at the Abbassia Military Hospital, Cairo, on January 16, as a result of a motor accident on December 19. He was 25 years of age. A memorial service was held in Portsmouth on January 22.

The death has occurred of Vice-Admiral Sir Maurice FitzMaurice, who had 43 years of distinguished service in the Navy. In the Great War he served in the Far East, the Dardanelles and Salonika, and the Eastern Mediterranean, being Commodore on the coast of Palestine at the time of the Armistice. In 1925 he was appointed to be Commander-in-Chief of the African Command.

The *Times* Belgrade correspondent states that regular diplomatic relations are being instituted by Yugoslavia with the Baltic States. M. Liuba Neshitch, Yugoslav Minister in Warsaw, will be also accredited to Helsingfors, Riga and Reval, while the Minister in Berlin will represent Yugoslavia in Kovno. Hitherto Yugoslavia, out of special regard for pre-revolutionary Russia, had no diplomatic representatives in States which were once parts of Russia, though it had Consuls.

NEAR AND MIDDLE EAST ASSOCIATION.

Lady Muir lectured to the Near and Middle East Association on January 21 on the subject of "The Ancient History and Religion of Bulgaria." The meeting, which was presided over by Mrs. Aubrey Herbert, took place at 14, Hans Crescent, S.W.1.

Lady Muir began her lecture by stating that Bulgaria of to-day represented only a very small part of the Bulgarian Empires of the 10th and 13th centuries, and included within its present frontiers only a fraction of the Bulgarian people. The early origin of the Bulgarians might be traced to a Tatar tribe, whose home was far to the east on the banks of the Volga. The Bulgarians or "Vulgari" as they were called by the historians of that period, were driven southward from their Volga settlements by the Avars. During the early centuries of the Christian Era Bulgarians invaded the Roman Empire every year.

The Bulgarians made several incursions south of the Danube, but no definite settlement took place until the 7th century. When in 679 A.D. they settled in the present Bulgarian territory they mingled with the Slavonic tribes already settled there, first as conquerors, then gradually becoming absorbed into the Slavonic race. Thus the dominant characteristics of the Bulgarian people of to-day were essentially Slavonic, but these characteristics differed from those of the equally Slavonic inhabitants of Russia. The first incursion of the Bulgarians across the Danube was followed by a definite migration, and they soon spread southwards over the territory that is now Bulgaria along the valleys of the rivers Maritza, Mesta, Struma, Vardar, down to the Ægean Sea. From the earliest times the Bulgarians were a vigorous, brave and essentially agricultural people.

From the 7th century the history of the Bulgarians until the destruction of their independence in the 14th century, was a chronicle of war with the Byzantine Empire. The country was governed by a succession of Czars; chiefs of the nobles called Boyars, formed the Czars' Council; and there was no intermediary class between the Boyars and the peasants. Lady Muir then gave a brief sketch of the reigns of the Czars Boris, Simeon, Samuel, Assen, and others.

Christianity was introduced under Czar Boris (852-888) and the civilisation of Bulgaria dated from the introduction of Christianity. Their Church was an independent branch of the so-called Greek Church.

During the rule of the Turks the Bulgarians preserved their language, religion and traditions through the monasteries. The Turks never opposed the Bulgarian religion and the Turks gave more freedom to the Bulgarian Church than some Christian nations in the Balkans had given since the last War to Bulgarian populations of territories which had been annexed.

In regard to the present situation Lady Muir said that as the Bulgarian nation had once been the pioneer of Christianity in the Balkan Peninsula to-day Bulgaria was the bulwark against Bolshevism. Bulgaria had always been a buffer State and had therefore suffered more than other nations. History proved that Macedonia, the cradle of the early Christian religion in the Balkans was an integral part of the Bulgarian race.

The present geographical position of Bulgaria was a dangerous one, but the Bulgarian nation had survived centuries of oppression and wars and had maintained its language, religion and traditions intact. The qualities of the Bulgarian peasant remained unchanged, their steadiness of purpose unimpaired. Lady Muir pointed out that the history of Bulgaria showed that to-day the Bulgarians could not be suppressed or made a mock of in future and that the legitimate interests of Bulgaria could not be neglected. Bulgaria to-day was a valuable asset to the Western Powers in the maintenance of stable conditions in the Balkans and in the preservation of the Balkan Peninsula from the inflow of Bolshevism. Although Bulgaria had lost her "historical territories"—Macedonia and the Dobruja—Bulgaria accepted the

decisions of the Treaty of Neuilly and would abide by this Treaty.

Lady Muir concluded by saying that it was at a meeting of the Near and Middle East Association in the same room that a loan to Bulgaria for the refugees in her territories, was first publicly advocated.

The following were among those present:—The Hungarian Minister, accompanied by M. E. Nelky, the Albanian Chargé d' Affaires, the Egyptian Chargé d' Affaires and Mlle. Sidarouss, the Counsellor of the Bulgarian Legation (in the absence abroad of the Bulgarian Minister), M. Dimitri Naumoff, M. Papazoff, the Counsellor of the Polish Legation, M. and Mme. Biega, Orhan Halid Bey, M. and Mme. Stancioff, Prince and Princess Soumbatoff, Viscountess Dunedin, Viscountess Dupplin, Gen. Sir Ian and Lady Hamilton, Constance Lady Boyle, Edith Lady Bradford, Lady Hewitt, Lady Penson, Sir William Clark, Sir Harry Lamb, Sir John Foster Fraser, Hon. Mrs. E. C. Feilden, Hon. Mrs. Yorke-Bevan, Captain Hon. H. Fitzalan Howard, The Baroness de Knoop, The Rev. Chancellor Gordon Ponsonby, Mrs. and Miss Eckstein, Mr. Ronald Michell, Mrs. Charles Hancock, Miss Edith Durham, and Miss Stavridi.

Abdul Rahman Fikry Bey, hitherto Second Secretary at the Royal Egyptian Legation in London, has been appointed First Secretary. We understand that the Legation is moving into its new quarters in Bute House this week.

The Bishop of Bombay leaves India at the end of January for England to assist the progress of the Measure, and the Metropolitan in India (the Bishop of Calcutta) follows him in March.

Mr. James Alfred White, grandson of John White, a veteran of Lord Lake's army of Nepal, and son of Alexander White, of the H.E.I.C.'s Bengal Infantry, a veteran of the Mutiny, died at Cawnpore on January 17.

Professor E. Hultzsch, who was Epigraphist to the Indian Government from 1886 to 1903, has died at Halle, where he had been Professor of Sanskrit till a few years ago. An important work of his on the Edicts of Asoka was recently published by the India Office.

THE PERSIAN GULF.

Sir Arnold Wilson lectured before the Royal Geographical Society on January 10, on the subject of "A Periplus of the Persian Gulf." Sir Arnold began by referring to the absorbing interest which the Gulf held for Great Britain: there was not an island, not a port, not a tract of water therein that did not recall some gallant or tragic incident in British annals.

The geological history of the Gulf began in late Secondary times, when the Zagros range on one side and, on the other, the great plateau of Arabia rose out of the Cretaceous Sea. When man appeared, the Hamitic peoples entered from Africa, the Dravidians pushed along the Baluchistan coast, and from the north, at a much later date, came Aryan races, while Semitic tribes occupied the western and northern shores.

The earliest records concerning this region related to commerce. Dhufar, an outlying province of Oman, was the oldest and perhaps the most productive of the frankincense districts of Arabia, and its people were of the Qahtan tribe, the sons of Joktan mentioned in Genesis. A hundred miles further along the coast lay Masira Island, the Sarapis of the unknown author of the Periplus, famous even in those days for its tortoises.

Coming to Ras al Hadd, Sir Arnold said that five million tons of shipping—95 per cent. British—made the cape every year. Just round the corner lay the port of Sur, the first sheltered port on the Oman coast touched by dhows from India or Africa. Sur was long the centre of the shore trade from Africa, and in view of its geographical position was still a serious rival to Muscat and Matra.

Another hundred miles up the coast lay Muscat, one of the most picturesque harbours in the world. The stronghold of the Portuguese upon the place was not relinquished until 1650.

The lecturer then described Musandam, within which were the wondrous fiords of Elphinstone and Malcolm Inlets, probably the hottest places on earth. Here once was established a submarine cable station, but it was destroyed, and relay stations were arranged at Jask and Hanjam. From Jask the land telegraph lines ran along the Makran coast to Karachi. A cable ran eastwards as far as Charbar and westwards to Hanjam, where there was a wireless station.

To the north of the "Quoins" (as the old British tars called two rocky islets standing athwart the Strait of Hormuz) lay Larak and Hormuz. This stretch of water here was the key of the Gulf, for in that sheet the whole British Fleet could ride safely at anchor. Hormuz, once an emporium comparable with modern Bombay, was now almost uninhabited; its sole commerce being red-oxide for export and rock salt for local use. On the destruction of Hormuz (owing to joint Perso-British action against the Portuguese), Shah Abbas planned that a great sea-port on the mainland should bear his name: Bandar Abbas rose from the ashes of Hormuz.

The lecturer then proceeded to Qishm Island, and, south of it, to the Great and Little Tanb Islands. He sketched the history of British relations with the Jawasmi pirates, and of how the "Pirate Coast" became the "Trucial Oman"—the change being signalled by a treaty which was not concluded until after the enemies of law and liberty had been thoroughly defeated. Retired pirates had now become pearl divers. He retraced his steps from Tanb to look at Lingeh, on the Persian coast, now a shadow of its former self, and also to Qais Island, where lay anchored a lightship. Qais succeeded Siraf (the modern Tahiri) as chief emporium of the Gulf in the eleventh century. It was Siraf, Qais, and Hormuz, in conjunction with Basra, that epitomised the commercial history of the Gulf during the Muhammadan era. They flourished, successively, at a time when the Persian Gulf still formed part of the principal route of communication and trade between East and West—before the "sea-way" round the Cape was found.

Sir Arnold then went to Bahrain, the centre of the pearling industry. The value of the pearls exported from

the Gulf at the present time was probably £3,000,000 a year. The richer merchants were mostly Arabs. It was also the centre of American missionary enterprise in the Persian Gulf—other points being Kuwait, Basrah, and Muscat. Upon the work of missions in the Persian Gulf, Arabia, and Mesopotamia, Sir Arnold said:—"I should not like to speak about the Persian Gulf without bearing testimony to the wonderful work they are doing. I do not suppose they have made converts in appreciable numbers, but they have, by their labours, assisted by the high standard of rectitude displayed by British officials and British merchants, profoundly modified the Arab outlook in ethical matters. The Arab is a Muhammadan first, and an Arab after, like all Islamic races: he regards Europeans likewise as Christians first and foremost. He knows, perhaps better than we do, that our standard of conduct has its basis in the religion of our country: he respects our standard of conduct, and without adopting our religious views he tends, unconsciously, to recognise our standard of conduct as higher than his. He does not despise, but greatly respects, those who devote their lives to spreading, by example and by teaching, the Christian religion. There is no greater influence for good in the Persian Gulf than the Christian missions: no Europeans are so universally respected as are the missionaries, such as Zwemer, Van Ess, Harrison, and Mylrea, and those who decry foreign missions do less than justice to themselves, and harm to our good name."

A hundred knots north of Bahrain was Bushire, the headquarters of British political influence in the Gulf, and the terminus of the most frequented and shortest road from the coast of the Gulf to Shiraz and the interior of Persia. Again going towards the head of the Gulf, the lecturer described Kharag and the smaller island of Khargu. Kharag in 1753 became the headquarters of Dutch commercial activities in the Gulf. During the War it was much drawn upon by the Expeditionary Force in Mesopotamia for road metal, and recently the quarries were reopened by the Anglo-Persian Oil Company.

Twelve hours' steaming from Bushire brought one to Kuwait Bay. The jurisdiction of the Shaikh of Kuwait extended nominally for some 200 miles down the western side of the Gulf, when it met the Hasa territory of Ibn Saud. The rule of the Shaikh of Kuwait was absolute.

The lecturer ended his description with an examination of the Shatt al Arab, of Bawarda, of Abadan, and of Muhammarah.

Sir Arnold concluded with a word on the people of the Persian Gulf; they were, he said, not unworthy of admiration. Islam in the waters of the Gulf was rooted in the older faiths: many of its shrines on the Persian side were places of pilgrimage before the teaching of Muhammad had replaced that of Zoroaster: the names of the epic-heroes of pre-Islam days—of Rustam, Zuhrah and Zal, of Solomon, Bahram and Qubad—were still on the lips of men. Among the peoples of such a land it was the Briton's privilege to exercise influence without dominion, to obtain trade without acquiring territory: successive generations of British officials and merchants had set their mark upon the Gulf without impairing the vigour of the local Governments, whose precarious existence Great Britain had often assisted to maintain and had never destroyed.

The Angora Judicial Commission of the National Assembly has approved the law forbidding people under 18 years of age from frequenting cinemas and theatres.

Major-General Sir C. J. Deverell has been appointed Quarter-Master-General in India, in succession to Lt.-General the Hon. Sir A. R. Montagu-Stuart-Wortley (February, 1927). Major-General Deverell was in command of the United Provinces District in India from 1921 to 1925. During the War he commanded the 4th East Yorkshire Regiment, 1915, the 20th Infantry Brigade, 7th Division, 1915-1916, and the 3rd Division, 1916-1919. He was made a C.B. and an Officer of the Legion of Honour, and was mentioned in dispatches nine times.

THE BACK BAY INQUIRY.

The opportunity of examining the report of the Bombay Reclamation Committee, in greater detail than was possible on the appearance in the Press of the original summary of its findings, makes no appreciable difference in the impression conveyed by it. The report is not likely to commend itself to extremist opinion in India, which has been loudly demanding a scapegoat—for choice, one who could be “impeached”: not because of the absence of any such provision, but because it has provided too many. The comprehensive indictment of every person, and of every body, connected with the scheme will doubtless be popular: less so, the emphatic repudiation of the charges of “graft”—the Committee holds that there has never been the slightest foundation for the suggestion that anyone connected with the scheme “has been guilty of any dishonesty of any kind whatever.” It has always been the fashion, in extremist circles, to characterise official reports, of this nature, as “white-washing”; but it will be difficult for the most violent partisan to apply this particular epithet to the present report; though it is not at all unlikely that extremist perverseness may make such a suggestion regarding the Committee’s findings in the matter of “dishonesty”—a reckless charge in which it is certain that no one ever believed; not even the man who made it without being able to put forward the faintest grounds for its acceptance. So far as recollection serves, one of his complaints was that consignments of spare parts for the dredger “Sir George Lloyd” were so marked, and might, therefore, have been delivered to the individual, not to the vessel, of that name, and treated by him as his private property!

The Committee’s main strictures are directed against what has now proved to be the under-estimate of cost, and the failure to realise the difference between hard and soft clay. The latter point—which, on the face of it, seems reasonable enough—is really a matter for the expert: and it is worth notice that, in his letter to *The Times* of January 21, Sir George Buchanan complains that no practising civil engineer served on the Committee or was associated with it. To the ordinary observer, it certainly does seem that this point has been over-emphasised. Both Sir George Buchanan and the firm who built the dredger emphatically declared that it was fully equal to the work for which it was required and would have performed it satisfactorily if its operators had been competent. Recent reports from Bombay, quoted by Sir George Buchanan in his letter, certainly seem to substantiate this view: they say that “the dredger has been doing excellent work this season, the results and output having been far more encouraging than those achieved previously.” Indeed, it would seem that the failure to work the dredger successfully is much more largely responsible for the falsification of the estimates than any other factor. It is certainly true, as the Committee has pointed out, that this was partly due to the initial failure to obtain the previous agreement of “the statutory

owners of the sea bed, the Bombay Port Trust, and also of the Royal Indian Marine,” both of whom refused permission to dredge over a large part of the area contemplated in the original scheme. This failure certainly does seem inexplicable—so much so, indeed, that it is difficult to avoid the conclusion that permission was looked upon as a matter of course, and that the failure was the sole cause of the refusal, which was merely obstructive. The Committee’s phrase, that these authorities, in refusing permission, “acted within their rights,” seems to suggest that it takes the same view. It is certainly difficult for a layman to imagine any harbour authority objecting to getting its harbour deepened free of cost for any other reason than wounded *amour propre*. Whatever the reason for the refusal, it admittedly deprived the dredger of most of its best material and also compelled it to use a much longer pipe line than that originally contemplated. Another important point, which the Committee does not appear to have noticed, was the omission to “waterproof” the sea wall: so that a ruinously large percentage of the filling, actually pumped inside it, escaped through it back again into the sea. There would, therefore, seem to be some reason for thinking that the Committee has not been altogether fortunate in its apportionment of blame: a considerable amount of which might have been shifted, from the designers and the tools provided for the work, to local obstructionists and incompetent workmen.

The last of the Committee’s main strictures is directed against the “disastrous” decision to begin the sea-wall at both ends: which, they say, “meant a great capital outlay without giving any early financial return”: and they add that “more than three-fourths of the wall so far built is at present serving no useful purpose whatever.” Here it would seem, to the layman, that they are arguing backwards: for it is not to be supposed that it would be held, in the case, for instance, of a tunnel which it was thought advisable to abandon before it had been pierced, that the engineers ought to have kept this possibility in view and had, therefore, wasted money by beginning it at both ends. What the engineers of the Bombay reclamation had in view was not “any early financial return,” to guard themselves against criticism which they had no reason to expect, but to bring a great scheme to completion in the shortest possible time. It has been decided, in accordance with the recommendation of the Committee, to complete the four outside blocks—the two at either end of the existing sea wall. It is quite true that the four middle blocks—only one of which is not already enclosed by the wall—are to be left for better times; but, if the small portion of the wall, still unbuilt, is completed now, those times will come soon. If it is not completed, they may never come at all. If, before they began it, the designers had contemplated the partial abandonment of the work, they would, no doubt, have begun the sea wall from only one end: with the result that less of it would have been completed, and less reclamation achieved, than has been the case now; but it is hardly reasonable to condemn them on this account. Two or three weeks ago, the

dredger broke down altogether—an accident that was hailed with delight by the Bombay extremists, who saw in it the final abandonment of the scheme: and they will not be pleased to see that the completion of the four outside blocks is still to proceed, with dry filling, in accordance with the Committee's recommendation that this should be done "unless the work of the dredgers is as economical and satisfactory." Bearing in mind their criticism in the matter of the sea wall, it really seems as if the Committee ought to reassemble, in order to add a minute of censure on themselves for not having foreseen the breakdown of the dredger.

CURRENT TOPICS.

The Delhi Council House.

The cable reports of the opening of the Council House in New Delhi by the Viceroy seem to show that the function was an unqualified success: not only from the spectacular but from the political point of view as well. The chief note in Lord Irwin's speech was an appeal to his hearers "to let their thoughts pass through the building to that of which it is the visible and external sign—the reality of the intention of His Majesty's Government in their declaration of August, 1917, and the set purpose and sincere desire of the British people as then expressed towards India." To this, as *The Times* report remarks, there has been an immediate response "in the quarter where belief has hitherto been hardest to produce"—a remark by a prominent member of the Swaraj Party that, if they had been sitting in that building last year, there would have been no walk-out; "for this great building means reality and permanence, and this cannot be denied." Another of the reports published gives interesting details as to the cost of the new Capital: which is estimated at about £10½ millions, of which £9¼ millions have already been spent. It is stated that the average cost of the Council House, the Secretariat and Viceregal Lodge works out to eleven annas, or about a shilling, per cubic foot: and that the corresponding cost in England now would be about nine shillings.

The Currency Bills.

Several interesting points emerge from the announcement, made at Delhi on January 16, of the terms of the Bills that the Government of India proposes to introduce in order to give effect to the recommendations of the Indian Currency Commission. One is that, in the Bill for the stabilisation of the rupee at rs. 6d., the demonetization of sovereigns and half-sovereigns as legal tender is included: the omission of any such provision from the Bill originally brought in last autumn, but subsequently dropped, was a subject of criticism at the time. Another is the decision that, during the transition period until the proposed Reserve Bank takes over the issue of currency notes, the Government of India "will not exercise the option to sell gold," as it will be engaged in building up a gold reserve. It will probably be remembered that the method, which the Commission recommended for the establishment of a gold bullion standard, was the free sale by Government of gold in quantities of not less than a bar of 400 ounces: and it was on this visible link between gold and the existing Indian currency that reliance was placed in order to achieve two main objects—a diminution in India's absorption of gold, and the strengthening of confidence in the "token" currency of India. A Bill for the establishment of a Reserve Bank, and one for the amendment of the existing Imperial Bank Act, are being brought forward concurrently with that for the stabilisation of the rupee; but it is at least probable that their translation into fact will entail considerable delay: during which, though the rupee will be technically linked with gold, the visible link will be wanting. Lastly, it is proposed that the Reserve Bank shall have its headquarters in Bombay—an "injustice to Calcutta" which will doubtless give rise to a good deal of heart-burning in the latter city.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 6.

The Congress.

Mr. Srinivasa Iyengar, President of the Congress has been passing through Calcutta and has granted an interview to the Press in regard to the recent proceedings of the Congress, when he also expressed his views upon the political situation generally. He had little to say in regard to the practical results achieved by the Congress, and this is hardly surprising in view of the fact that the principal work done was to carry a series of resolutions reverting to the policy of blind obstruction. He was, however, eloquent in one respect; he sees in recent utterances of the European leaders that amongst the possible results of the coming of the 1929 Commission there are likely to be three changes; the first is that the electorate will be varied; next that a Second Chamber will be introduced into the Provinces; and last, certain subjects will be re-transferred from the Provinces to the Central Government. All these things are considered by Mr. Iyengar to show the intention of the bureaucracy to defeat the desire of India for self-government. He seems to live in a muddle-headed world in which, given the opportunity to indulge in self-government, his party declines to have anything to do with it; even in governing its own affairs it cannot agree upon any major lines of policy, such matters being either permanently deferred or side-tracked by resolutions for blind opposition. When any attempt is made to suggest alternative forms of government based upon indigenous organisations, the Congressite begins to howl at the inevitable outcome of his own attitude of permanent obstruction, forgetting that someone must carry on government, and, if he is not prepared to take advantage of his opportunities, there are other directions in which experiments can be made.

The Delhi Murder.

Comments in the Indian Press on the murder of the Hindu leader at Delhi are equally ingenuous and eloquent. The Congress Extremist papers beg Indian Moslems to believe that the Hindus have no thought whatever for themselves as Hindus in seeking to control the government of the country by Congress. With charming innocence *Forward* asks the Moslem community to drop its demands for a proportion of patronage, of Government posts, of scholarships, of Colleges and so on and to be satisfied with what can be obtained in competition with brother Hindus; the fact that the Hindu in such circumstances obtains nearly the whole of what is going is too well-known to the Mussalman to make it in any degree possible that he will listen to the voice of the charmer. Meanwhile *Forward* sees in the establishment of the Islamia College in Calcutta, and in fact in all official acts which reserve any benefits to the Mohammedan minority, only further proofs of the fiendish plan of the bureaucracy to encourage communal hatred for its own ends. The President of the Congress is not intimidated, however, for in replying to an address from the Corporation, he stated that he will achieve communal unity, or break in the attempt; brave words.

Communal Hatred and Swaraj.

Forward this week admits that the attainment of Swaraj by legitimate means is unrealisable so long as "Hindus and Moslems go on in the way they have been doing for some time past;" it states that Moslem-Hindu unity is the foundation of the whole of the structure and, if the foundation goes, all must crumble in ruins. Its leader may be quoted; the problem which "has repeatedly defined all our attempts at solution in the past requires very delicate handling by men who are above all sectarian prejudices in an atmosphere of justice and toleration. In spite of all pacts and agreements made in the past the atmosphere to-day is surcharged with mutual suspicion and intolerance, and fanatics are not wanting on both sides to whom no solution will be acceptable but the extermination of their rivals." This is a very frank

admission and it is probably the most eloquent comment upon the demand which is continuously made by the Congress Party, of which *Forward* is the official organ, for the grant of immediate self-government. Probably the most tolerant view to take is that both the claims and the admissions are a product of a mixture of inexperience and innocence.

Cricket.

The M.C.C. have come, conquered, and gone, on their way to Rangoon; their visit was a tremendous success in spite of the fact that the public stands were only completely filled upon one day of the visit. At this time of the year there is so much doing in Calcutta that something has to be missed out, and cricket was bound to suffer when it clashed with the cold weather race-meetings. Unfortunately Gilligan was down with fever for the greater part of his stay and this accounts for his non-success at the wickets; we hope that the sea-voyage on the way to Rangoon will put him straight. The team has won golden opinions and its members have been most popular everywhere. They attended the pantomime on Saturday night and took an abundant ragging in excellent part, Gilligan's solo being especially popular! The last match was very exciting and at one time it looked as if the visitors would have all their work cut out to get 183 in two and three-quarter hours on a badly cut-up wicket; thanks principally to a perfect 97 of Wyatt's they won by four wickets and were warmly congratulated on a fine all-round exhibition. In particular the visitors' fielding has been model, and it should do a good deal to tone up this department of the game, which tends to be rather lax in the tropics. J. L. Guise and Major Brooke made up for their bad luck in the "Bengal" match, putting up a record first-wicket stand in the second of All-India; "gratters" to Guise on a fine 91 for his last innings as a bachelor, his wedding to Miss Joan Thomas having taken place yesterday.

Men and Things.

The annual Proclamation Parade took place on the first day of the new year, and in the opinion of competent judges the crowd this year was larger than it has been for eight or nine years past at least. All Calcutta seemed to have turned out, and the Maidan was a wonderful sight. It has always been held that the size of the crowd on this occasion is a barometer of public opinion in regard to the popularity of Government, and, if this is so, things are better.

The New Year's Honours list was particularly short so far as Calcutta was concerned, the only knighthood being that for Mr. J. W. A. Bell, head of Mackinnon Mackenzie's and President of the Bengal Chamber. There were a few other items, mostly of bureaucratic interest, and rumour has it that there is more than one bad disappointment.

Sir Dinshaw Petit of Bombay has been addressing the so-called Indian Industrial and Commercial Congress which has been sitting in Calcutta this week. To judge by the number of political Extremists present, this function is merely another branch of the Congress, and in any event it would not do to take too seriously the speaker's suggestions as to the exploitation of India for the benefit of foreign traders; Sir Dinshaw himself is one of them!

Sir Ronald Ross has arrived in Calcutta and is giving an official lecture at the Empire Theatre on Monday next. A Gateway of Honour has been constructed adjacent to the laboratory of the Presidency General Hospital where his epoch-making discovery was made, and even the Corporation is giving him an address.

In reply to a question in the Corporation this week, it was stated that over 160 buildings had collapsed in Calcutta within the last three years, many of them actually falling down whilst they were being erected; 1929 Commission, please note.

The Trivial Round.

Saturday was Grand National Day at headquarters and this event was won this year by Mr. J. Mein Austen's More Sanity ridden by Captain Leetham. The Cooch

Behar Cup was also run the same day and, the weather having cleared up, the show on the stands made up for Viceroy's Cup Day. All the new dresses seemed to be out, and the Viceroy and the Governor arrived in state, which is one of the finest shows it is possibly to see anywhere.

The Annual Horse Show at Tollygunge produced a good display of animals, and the general opinion was that the average quality is improving again. Captain J. A. Herbert's "Viceregal" was awarded the Cup for the best horse in the show, having previously won the Heavy-weights and the Ladies' Hacks Classes.

The paperchase this week produced one of the best finishes ever seen. Captain Leetham beat J. S. Johnston by about a short nose, a number of others being close up; the thrusters are all out this year.

The Polo Championship has been won by the Army in India team, who defeated a make-up side by 2-0 in the Final. The other events are still running.

Golfing interests this week are centred upon the Ladies' Open Championship, in which the Finals take place to-morrow. Mrs. Alan Macbeth, the English player, is favourite at the moment.

"Sinbad," the C.A.T.S.'s pantomime, has settled at the Empire into the best and brightest show given by them since the War and it is drawing record houses. The *ensemble* and dancing are really first-class and the greater part of the show could be put on in London without any change. It is a fine achievement.

Markets.

In the jute market the firm tone ruling before the holidays has been fully maintained on the re-opening and gunnies have remained steady with a majority of the business transacted for near deliveries. The piece-goods market closes slack and prospects of business in the near future do not appear to be good. Prices continue to be easy, and with everybody in the local bazaar keen sellers it is possible to pick up lots at very cheap rates. There has been no tea sale here this week, and the majority of the interest in this market is centred round the question of restriction for next season; no decision, however, has yet been made.

The Stock Exchange opened again this week; but apart from a good demand for jute shares there is little to report. Government securities show an easing off all round, and the extent of the fall is somewhat unexpected, in spite of the conditions prevailing in the money market where Call money is quoted 4 per cent. There has been a slightly better demand for coal shares, but teas and rubbers remain almost neglected. In the miscellaneous market Indian Iron and Steel shares have continued to change hands in large quantities at increasing prices, and there is evidence of good inquiry for sugar shares.

The Exchange Market has been very steady with Ready T.T. closing at 1s 6 1/32. Money is in good demand and may be quoted Call, Short Notice and One month 4 per cent.; two and three months 4 1/4 per cent.

THE INDIAN MAIL.

Trade Returns for November.

The returns of India's sea-borne trade for November show a decline, both in imports and exports, from the figures of the preceding month; their value having fallen from 1997 to 1830, and from 2313 to 2120 lakhs respectively. India's net import of treasure amounted to 335 lakhs, against 301 for October; and the visible balance of trade in favour of India was 22 lakhs, compared with 98 in October.

The three major heads of imports all show a decline in value from that of the previous month: food, drink, and tobacco having fallen from 339 to 298, manufactured articles from 1428 to 1329, and raw materials from 198 to 161 lakhs. Compared with October, the total imports of piece-goods fell from 143 to 129 million yards in quantity, and from 456 to 391 lakhs in value: grey goods

declining from 54 to 48 million yards and from 141 to 123 lakhs, and coloured goods from 45 to 37 million yards and from 174 to 137 lakhs; while the quantity of white goods remained unaltered at 4 million yards, but the value fell from 141 to 131 lakhs.

Under the major heads of exports, food, drink, and tobacco, and raw materials and produce, both show an increase in value over October's figures, from 617 to 626 and from 805 to 874 lakhs respectively; but manufactured goods fell heavily, from 866 to 593 lakhs. Japan again entered the market seriously as a buyer of India's raw cotton, she and Italy each taking 4000 tons out of the total export of 11,000, the greater part of the balance being taken by China and Belgium, with 1600 and 1000 tons respectively. India's export of raw jute rose slightly from that of the preceding month, amounting to 89,000 tons valued at 310 lakhs, against 84,000 tons valued at 306 lakhs in October; but her exports of manufactured jute fell heavily, the figures for gunny cloth being only 89 million yards and 167 lakhs, against 157 million yards and 300 lakhs, and of gunny bags 42 millions and 210 lakhs, against 50 millions and 275 lakhs in October.

The United Kingdom's share in India's trade shows a satisfactory rise, from 47 per cent. in imports and 25 per cent. in exports, to 49 and 30 respectively; while the shares of Japan and the United States both increased slightly, at the expense of Germany; the figures for the three countries, in that order, being 7, 9, and 6 under imports, and 4, 13, and 5 under exports, against October's figures of 6, 9, and 7, and 3, 11, and 7 respectively.

Polite Habituals.

The following address of welcome, presented by the inmates of an Indian jail to a party of five Inspectors-General of Prisons who were making a tour of inspection, deserves to be rescued from oblivion.

"Most respected Sirs,—We welcome you gentlemen to our special habitual Central Jail. We invite you to see our jail specially built for habitual prisoners of all castes and creeds, to see how well the habitual criminals are trained in duty and in discipline by the selected officers, to right the wrong, to leap from Satan's foot to Peter's knee. May it please you to appreciate our work carried on in this habitual jail. We thank you, gentlemen, and express our heartfelt gratitude for the keen interest taken by you to pay a special visit to this habitual jail, in the advancement of our welfare. Your most obedient prisoners, inmates of the Central Jail, Salem."

The M.C.C. in Bombay.

Some weeks ago a paragraph in these notes mentioned the offer, by the Indian proprietor of a Physical Training establishment in Bombay, of a free course of physical training for the local cricketers selected to play against the M.C.C. History does not relate whether the offer was accepted or not; if, by any chance, it was, the results of the three matches played in Bombay should provide a good advertisement for the enterprising owner of the "Health Home." It is true that the only finished match was won quite easily by the tourists; but the Bombay cricketers had none the worse of the first, and all the better of the second, of the two drawn games. When, in the former, the Bombay team only failed to equal the M.C.C. first innings score by a few runs, the feat was hailed, by the Bombay Anglo-vernacular Press, as only another proof that Indians could, if given a fair chance, beat Englishmen in any form of undertaking, even one that is peculiarly British; and when, in the latter, the Indian eleven headed the M.C.C.'s first innings score—the first, and so far the only, occasion on which this feat has been performed—the dictionary was dredged for superlatives. Bombay cricketers have, indeed, the right to be proud of themselves; and the scene of enthusiasm that ensued, when the Englishmen's score was passed, must have seemed strange to the M.C.C. men. Excited members of the crowd rushed out on to the pitch and garlanded the two batsmen, while some ultra enthusiasts prostrated themselves at their feet; and some little time elapsed before it became possible to proceed with the game.

"A Regrettable Incident."

A curious incident occurred when the "All-India Indians" team passed the M.C.C. first innings score in the last of the latter's matches at Bombay. Two boys from the crowd ran out on to the pitch and placed their caps at the feet of one of the batsmen. The umpire at the bowler's end, who happened to be an Englishman, kicked one of the caps aside—an action that the *Bombay Chronicle* characterises "with due deference to Mr. Higgins' integrity, as highly reprehensible." The report proceeds: "The action of the boys represented sincere unbiased admiration in its simplest form, and certainly did not deserve such treatment. All fair-minded persons in the arena were shocked at the official's arrogant behaviour . . . Mr. Higgins' action bears only one interpretation. It does not entail undue mental strain for a man to decide whether he is to insult another who has performed an act which should rather appeal to the better nature of a man. Mr. Higgins' desire to avoid interruptions is certainly commendable, but his methods are redolent rather of spleen than zeal."

There is a moral to this story—how quick the average Indian is to take dire offence at the most innocent action, and how hard it is for the Englishman in India to live up to the ideal of perfect good manners, which have been defined as the possession of him who is never unintentionally offensive. The instructed Briton is continually on the watch, though seldom with complete success, to avoid giving offence; while the uninstructed is for ever treading on the toes of his Indian friends, often hardest when he imagines himself to be behaving with special politeness. It is quite true, of course, that many Indians—especially those who write to the vernacular Press about the "insolent" Englishman—are deliberately looking for offence where none is intended; but, if we are to expect them to be less thin-skinned, it behoves us to try, so far as in us lies, to do what we can to help them to become so.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2.

Tuesday Morning.

The British Industries Fair.

In a very few weeks now the British Industries Fair will be in progress, and if the present indications are any guide the business done on this occasion should far surpass previous figures. Abroad, with the exception of China, the situation is clear; orders are coming in rapidly for our manufacturers; we are now holding our own in competition with our rivals for important tenders; and generally the way seems clear for a steady trade revival. The Fair is looked to to give a stimulus to our commercial activities, and I do not think that this time there will be disappointment on this account.

The Outlook in Palestine.

In another column will be found a detailed report on conditions in Palestine in the closing quarter of 1926. It will be seen that a distinctly hopeful view is taken of the outlook. As I pointed out last week, the year has been anything but a good one for Palestine, but the works of development in view are such that it would be surprising if they failed to go far in redressing the economic balance. It will be noted that the value of the imports for the year is estimated at an increase of one million pounds on those of the previous year, and of the total unfortunately Great Britain has only a very small share. There is really no valid reason why this should be the case, for the conditions in Palestine may be said, broadly speaking, to be in our favour, and it can scarcely be maintained that we are not equal to showing the same enterprise and to giving our traders the same support as other countries. One or two hopeful features in the trade from our point of view are indicated in the report. Thus there has been a steady increase in the sale of British motor cycles, a feature which Palestine shares in common with so many other outlets in the Near East. What is difficult to understand is if it is possible to foster a trade in motor cycles why the same thing cannot be done in regard to motor cars. If the hire-purchase system is to be introduced for motor cycles it is difficult to see why it cannot be utilised also for cars. British gramophones are also in good demand in Palestine it appears, which is most encouraging as record sales of gramophones were reported last year. Our success in these two commodities ought to be repeated, however, in many other directions. It may be hoped that the present year will show a great improvement in this respect.

India and World Trade Tendencies.

Mr. H. A. F. Lindsay, the Indian Trade Commissioner, had some interesting things to say regarding the way in which world tendencies are reflected in Indian trade in a paper he read before the Indian Section of the Royal Society of Arts on January 21. Lack of confidence, he pointed out, is admitted on all sides to be the first most obvious and most deep-seated cause of the economic ills from which we are suffering to-day, there being a general uncertainty on all sides which hampers trade. Price fluctuations constitute, of course, one of the principal handicaps to the development of trade, and as Mr. Lindsay showed there have been since the War abnormal fluctuations in the markets handling India's staple commodities. One need scarcely cite cotton in this connexion, since its fluctuations have been specially pronounced. This season's record American crop has resulted in a sympathetic decline in the price of Indian cotton to sixpence which compares with eighteen pence which was the

maximum for 1924. An important phase of post-War conditions to which Mr. Lindsay drew attention is the wide gap which has developed between the prices for raw materials and those obtained for manufactured goods in the world's markets, though this, of course, does not apply to all classes of commodities. Food grains and oilseeds, for instance, never reached the level—by comparison with the pre-War period—at which manufactured goods were sold. The effect of this in the case of a country like India, Mr. Lindsay pointed out, was that while the producer of, say, food grains was obtaining for his produce prices only 40 per cent. over pre-War levels, he had to pay for the manufactured goods he required, whether they were made locally or abroad, prices 80 or even 100 or 180 per cent. over pre-War prices.

Sudan Cotton Progress.

The latest report on cotton in the Sudan to reach me shows an estimated crop of 575,506 kantars which would be equal roughly to 143,870 bales. That will mean an appreciable advance on the past season's production, but it only represents a small part of the output of which the Sudan is capable. If things go well the present figures should seem small a decade hence. Of the present season's production the Gezira accounts for 400,000 kantars, Tokar for 27,000 kantars, and Kassala for 50,000 kantars, the total for the Sakellaridis variety being approximately 486,114 kantars. This only leaves 57,756 kantars or 14,440 bales for the American type which is the one disappointing feature of the position. Sakellaridis cotton we must have, but American cotton is equally indispensable to us, and in the case of the latter type we have the exchange question as a further factor which makes it imperative that we should be able to buy as much of this cotton from sources other than America the less the strain on the sterling exchange in New York, but apart from that the American production is a fluctuating quantity. Last season it was a record, but another season it may be millions of bales below the total then reached with the result that if there are not alternative sources of supply there may not be sufficient cotton to go round. For these reasons the cultivation of the American type in the Empire is an urgent matter, and in the Southern Sudan we have a region particularly suitable for the cultivation of this type. The position, however, has been complicated by the price factor. What is an attractive crop when American stands over

is. is quite a different thing when it is in the neighbourhood of sixpence, and the problem that has to be solved in the Sudan is to devise means of making it a profitable crop even if the price is low. Transport is essential for the expansion of cotton cultivation in the Southern Sudan—indeed the vital factor—and it is interesting to learn that important developments are now contemplated by the use of railless trains. Progress in this direction will be followed with interest, for cheap transport will solve the cotton problem.

COMMENTATOR.

IMPROVING CONDITIONS IN PALESTINE.

British Trade Handicaps.

Messrs. T. S. Boutagy and Sons, of Haifa, in their report on trade conditions in Palestine for the three months ended December 31 last, give a most encouraging survey of the outlook for the country. The report states:—

There is reason to believe that the last quarter marked the beginning of a most prosperous era in the history of Palestine. The passing of the Bill in the British Parliament authorising a large loan to equip a harbour at Haifa has been received with marked enthusiasm by all sections of the population who are now anxiously awaiting the commencement of operations. It is universally acknowledged that the imminent commencement of the harbour works will add considerable impetus to the present rate of progress. The engagement of several thousand workers and engineers is no small matter for the country.

The cultivation of oranges which has progressed in the northern area, notably in Zichron Jacob and Hedera, as well as the Tiberias sub-district, continues steadily, and has so far produced satisfactory results. Several thousand cases have been exported to Egypt and abroad. It is estimated that about two and a half million cases will be exported from Palestine this season. Prices in England have continued to improve and cases fetch from 15s. to 20s. The improvement in price is chiefly due to the poor crop in Spain consequent upon blizzards and cold weather. The success of the present season has given a welcome stimulant to the cultivation of oranges, and the planting of new orange groves continues.

The first tourist ship of the season arrived in December with a crowd of tourists who spent an average of about one week in the country. The prospects of the present season are very good, to judge from the bookings that have been made so far by the leading hotels and at the railway administration who announce that a "record" tourist season is anticipated. These encouraging prospects lead to the belief that Palestine has a special attraction to travellers.

Tourist agencies complain that hotel accommodation provided for tourists in Palestine is not adequate. Hotel proprietors are handicapped by the lack of funds and credit facilities to enable them to effect suitable improvements and enlarge their present accommodation.

A good deal of satisfaction has been caused throughout the country by the news that the Palestine Electric Corporation has succeeded in securing the capital necessary for the execution of the River Jordan hydro-electric scheme. It is reported that the preliminary work on the scheme will be commenced early in the spring, and it is estimated that the number of labourers to be engaged will be between 1,000 and 1,500. It is confidently hoped that

the commencement of the work will contribute to a visible improvement in the present rate of the country's progress and development.

The cigarette industry continues to grow steadily. The Karaman Dicke Salty Factory on the outskirts of Haifa is nearing completion. The Matossian Society of Cairo have decided to start a branch factory in Haifa, and the contract for its construction has recently been placed with the Solel Boneh.

Trade in general manifested signs of steady improvement during the last quarter. Distributors and retailers report record sales for the winter season. The demand for all classes of goods was satisfactory, and normal prices have been maintained throughout.

It is estimated that the total imports of Palestine during 1926 will exceed eight million pounds, an increase of one million over those of the previous year. Out of this large total Great Britain's share is very small. Importers identified with the sale of British goods in Palestine complain of the absence of special machinery or organisation to encourage and foster British trade in this country. Importers engaged in the distribution and sale of British goods continue to make consistent endeavours in the face of the greatest difficulties. It has been explained that Palestine is capable of considerable development the result of which will open up markets for British industries. Industrialists and visitors to this country such as Sir Alfred Mond have pronounced Palestine to be a good "business proposition": the soil is fertile, the climate favourable and the agricultural industry good.

The imports of American cars continue to increase. It is estimated that the total value of motor car imports during 1926 exceeds £100,000, chiefly American and Continental makes. The American industry is devoting much attention to the Palestine market, and arrangements have lately been introduced whereby they finance their local agent by accepting their clients' bills in connexion with the sale of cars in lieu of cash. Importers of British cars complain bitterly of the lack of support received from both manufacturers and bankers, and it is predicted that it will be difficult for the British made car to secure a footing in the Palestine market in spite of the existence of a unique opportunity for the sale of British cars to the extensive community of British officials the majority of whom for sentimental reasons prefer to buy an English car.

The sale of British motor cycles continues to show steady improvement. Local agents hope to be able to sell an average of five motor cycles per month throughout the country. A local distributor has recently expanded his business by creating an outlet in Jerusalem for the sale of his goods. It is hoped that a volume of trade of £5,000 per annum may be possible in this line provided agents secure the necessary facilities from their bankers to enable them to supply officials and private and responsible individuals on the hire purchase system which has hitherto proved to be a very practical arrangement affording an opportunity to purchase out of income.

The gramophone business continues to expand. Local distributors report record sales for 1926. The demand for English gramophones is steady. Excellent sales have been reported from all over the country.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 25.

Interest in the Stock Markets during the past week has largely centred in the gilt-edged market, partly by reason of expectations of an early reduction in Bank Rate and partly because of the commencement of dealings in the new 4 per cent. Consols. The result of this new loan was fully up to the best expectations, cash applications amounting to over £81 millions (which means that the Treasury will receive £69 millions in cash, the loan being issued at 85) and conversion applications to £128 millions. Although these two amounts do not cover the nominal total of debt maturing during the current year, the financing of the debt should cause no difficulty, since those holders of maturing bonds who have not converted into the new Consols have still the right to convert into 5 per cent. War Loan on the basis of £95 of bonds for £100 of stock, and many, no doubt, will exercise this option before the date of maturity. Dealings in the new 4 per cent. Consols opened on Thursday and small premiums were quickly established on both the A and B classes—the former being the loan issued for cash, on which the first dividend will be 25s. per cent., and the latter that issued in exchange for maturing bonds, on which the first dividend will be 2 per cent. After July 2 next both classes will rank equally.

The sharp rise which has occurred throughout the gilt-edged list in the past week or two has been due to anticipations of a lower Bank Rate, but those who expected a change last Thursday were disappointed, for at the present time the directors of the Bank of England are acting with the utmost caution. This week the Bank failed to secure the bulk of the gold which came to the market, and in addition the New York exchange is not in quite so favourable a position as it should be at this time of the year. Moreover, money rates in New York show no signs, at the moment, of weakening and London is hardly yet in a strong enough position to take the lead in the matter of lowering rates.

Some observers, in the meantime, are inclined to think that the rise in quotations in the market for British Government securities has been overdone, seeing that 3½ per cent. Conversion Loan now yields 4½ per cent., Funding Loan a little over 4½ per cent., and 2½ per cent. Consols a little less. The new issue has had the effect of drawing attention to investment securities throughout all sections of the Stock Exchange, and business generally is on a good scale, though Chinese developments continue to put the brake on enterprise. The Home Railway market has reacted after last week's little spurt, the approach of the dividend season giving rise to some nervousness. In industrials a feature was the relapse in Imperial Tobaccos owing to disappointment at the dividend which is at the same rate as for the previous year, namely, 24 per cent. free of income tax, and the absence of a share bonus.

Banking Results.

Most of the joint stock banks have now issued their full reports and accounts for 1926. As anticipated, dividends were in all cases maintained at the 1925 levels, and there were no striking changes in net profits, those of the "big five" being in the aggregate £10,000 higher than for the preceding year. Barclays showed an outstanding increase of £137,000 in net profits, while those of the Midland were £13,000 higher, but the other three banks recorded decreases of between £40,000 and £50,000. Thus these great institutions have weathered with complete success the most disturbed and unsatisfactory industrial year which Great Britain has experienced for several decades.

A feature of the balance-sheets is the increase both in loans and advances and in deposits. The former is no doubt partly due to the fact that the banks have been called upon to carry a large number of undertakings,

especially those concerned with the export trade, through a disastrous period, and for this reason may not only have to make larger allowances for bad debts but may find for a time that much of their resources is tied up in "frozen credits" which may only be thawed as trade revives. As regards the increase in deposits, it was stated at the annual meeting on Thursday by the Chairman of Barclays Bank to be in part due to the bank's overseas developments and to a large number of new customers. The banks have been severely tested during the past year, but they emerge successfully, thanks to their staunch adherence to fundamentally sound policy.

A List of Preference Shares.

During recent weeks quite a number of new capital issues have taken the form of preference shares. If it may, therefore, be assumed that there is a public demand for preference shares, it may be useful to give a short list of the preference shares of established undertakings, since it is generally advisable to take up the shares of established concerns against those that have still to win their spurs. On the other hand, the investor should not miss an opportunity to subscribe to a good new issue, for it is often cheaper thus to acquire shares than to buy existing securities; but he should first make certain—so far as this is possible—that the issue is a good one.

The Dunlop Rubber Co.'s 6½ per cent. "A" cumulative preference shares give a return of approximately £5 15s. per cent., while a yield of some 2s. less is given by the 6 per cent. cumulative preference shares of Bovril, Ltd. The 7 per cent. cumulative preference shares issued by both J. Lyons and Co. and the Mond Nickel Company yield approximately £5 12s. per cent. Somewhat lower returns are given by the 6½ per cent. cumulative preference shares of Callender's Cable and Construction Co. and by the 6 per cent. cumulative preference of John Barker and Co., the figures being £5 9s. per cent. and £5 6s. per cent. respectively. A fair amount of ordinary stock ranks for dividend after these preference shares and all the companies are paying good dividends on their ordinary capital.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, January 17.

THE BULLION MARKET IN 1926.

The fall in the price of silver and other developments during the past year impart a special importance to the annual bullion review of Messrs. Samuel Montagu and Co. which has just been issued. We give the following extracts:—

The year 1926 was one of disappointment and anxiety. Though further advances have been made in international amity, exchange difficulties and the new or more stringent tariff barriers created by the new national entities and other countries have still continued to hamper world trade—so vital for the recuperation of labour and capital. Besides these external drawbacks, industrial strife has occupied the domestic arena, and part of the community practically declared war upon the nation as a whole.

Unfortunately the dispute in the coal mining industry lasted for six months. The after effects of this prolonged struggle upon the prosperity of the nation are serious. The actual cost to the nation and how it is to be met await publication. Nor can it yet be estimated how many coal miners will remain to swell the total of unemployed, or how soon, if ever, the industries handicapped by the strike will regain lost ground.

The pressure from keen industrial competition of countries possessing a lower standard of living, or exchanges favouring their exports, was aggravated by the coal dispute, yet the currency system met every strain with a surprising amount of ease.

The gold holding of the Bank of England, which stood at £142,763,880 on December 30, 1925, rose by December 29, 1926, to £149,856,430, a gain of £7,092,550 during the year (though a net loss of £4,049,885 since April 29, 1925, the day after the gold standard became again effective). Thus the British pound, despite many adverse circumstances, well maintained its value in the markets of the world.

It is of general interest to point out that the total held by the Bank of England against notes on December 29, 1926, is £1,274,115 more than would have been expected from the daily announcements of receipts and withdrawals. Some of this variation is accounted for by the fact that the amounts figuring in the daily bulletin are in round sums (and that small movements under five thousand pounds are not necessarily included), and possibly by transfers of gold from the Banking to the Issue Departments of the Bank.

Basis of National Strength.

Visible returns of trade do not account for the strength of sterling exchange during the dangerous crisis. The fact was that the world relied upon the sober commonsense of the British people, and was well aware that national finances had been conducted, during and after the exhausting world catastrophe, on sound business principles, and that there were ample reserves upon which to draw. Moreover, it was perceived that the resources of this country, drawn from international banking, insurance and shipping, and other outside sources, made no small contribution to the nation's financial strength. The country's ability to maintain its position as an international clearing house has thus been closely tested, and the early return to an effective gold standard has been justified by the result.

All restrictions placed upon the export of gold were automatically removed by the expiry of the Gold and Silver (Export Control) Act of 1920, on the first day of the year under review. Great Britain actually crossed the Rubicon on April 28, 1925 (when the Bank of England received a general licence for the export of gold), and her courage was rewarded by an access of internal confidence. The step she then took has been, and will be, followed by other States.

A large number of European countries have now succeeded in reducing their currency affairs to order. A gold standard obtains in many countries, including Great Britain, Holland, Germany, Belgium, Switzerland, Austria, Hungary, Czecho-Slovakia, Sweden, Finland, Latvia, Esthonia, and Lithuania. But the buying and

selling prices of gold in many of the countries, even if officially quoted, become effective only when the authorities are content to make them so, and gold transactions, when desired, become a matter for negotiation. It is understood that Denmark will return to the gold standard as from January 1, 1927. The serious attempts being made by France to deal with her currency problems are being watched with sympathetic interest.

Indian Gold Imports.

During the calendar year 1926, the net import of gold into India was very much less than that of 1925, which constituted a record. It will probably be found to be about £17,100,000, as compared with about £45,600,000 in the previous year. The export of gold from this country to India included £1,942,549 in bars and £630,069 in sovereigns, and from South Africa £7,144,826 in bars and £2,689,000 in sovereigns. Owing to the drastic currency changes in prospect, it is more than usually difficult to forecast the future gold absorption by India.

Canadian Production.

The gold mining industry of Canada is of considerable interest, not only because of its substantial contribution to the gold output of the world, but also because of its importance to Canada herself. The gold production of Canada in 1925 was 15.8 per cent. of her total mineral output in value, and was only exceeded by that of her coal production.

The Province of Ontario in 1925 produced 84.2 per cent. of the Canadian gold total, and the immediate prospects of increasing figures are very promising. The improvement in the province has been phenomenal—from 9,096 ounces in 1903, to 1,461,039 ounces in 1925. The production of British Columbia dates back some 70 years, but development has been slow, though distances in that province are so great that improvement may be looked for with some confidence.

The Yukon, which promised so well in 1900 with a yield of over 1,000,000 ounces, has reduced its contributions year by year to 47,817 ounces in 1925. This output, derived mostly from alluvial deposits, is naturally more uncertain than extraction from mining operations where gold is found in conjunction with other metals. Some other provinces add to the Canadian total, but their rock formations are less favourable to the occurrence of gold.

Silver.

The tendency of the silver market in 1926 was unmistakably downward. The helpful factors that made for steadiness began to weaken and even to disappear, so that it became apparent, almost before half the year had run its course, that silver was distinctly losing the buoyancy shown in the last few years. The reason was not far to seek. China and India, the great silver absorbing countries, had now to bear almost the whole weight of supplies, to which, in recent years, production alone has contributed some two hundred and forty million ounces. During part of the preceding decade the two countries had difficulty in supplying their demands, so that when supplies were more plentiful they absorbed with such freedom that their markets became satiated, and, as a consequence, prices failed to possess resilience.

The pronounced decline in the last half of the year was mainly owing to the recommendations of the Commission on the Indian Currency, whose report was made public on August 4. It was rumoured in the Indian bazaars that the finding would not be favourable to silver, and the price fell about a penny before its publication.

The Commission advised that the paper currency should cease to be legally convertible into silver coin, and that the silver holding in the Reserve, which on April 30, 1926, stood at 85 crores, should be reduced to 25 crores (on the basis of the then circulation) during a transitional period of 10 years. (The proportion of silver to the note circulation was then 46 per cent.—at the close of the year, December 31, it had risen to 57 per cent.) The recom-

mentations suggested the possible sale of rupees as bullion, if not absorbed into circulation, and postponed indefinitely future coinage. The adoption of these suggestions by the greatest silver using country in the world would obviously constitute a new adverse factor which could not be ignored.

Falling prices further augmented visible supplies in China—the only important country where silver forms the basis of currency—so much so, that a consignment of about 6,000,000 ounces in bars was sent to this market for disposal in July. It is many years since Shanghai shipped silver to London—on the last occasion it was in the form of sycee—though frequently silver has been transferred from China to India when the latter market was the more favourable. This unusual movement was a danger signal too plain for any to disregard. Bears commenced active operations, often closed but again reopened, with the result that each month recorded a lower average price. Some sales of French demonetised coin, in October and November, coincided with the decline, and the lowest quotations of the year were reached in the former month.

Reason for Heavy Decline.

The fact that the value of silver, after fluctuating for three years either side of 31d., should have fallen so suddenly and heavily needs some explanation. Sentiment alone is often the most potent factor in the silver market. The amount of silver which comes into the market from production or other sources represents but a fraction of the silver bought and sold daily in the London Market. The bulk consists of silver which figures upon previous or fresh contracts for forward delivery. China exchange operations also are tantamount to buying or selling silver, and daily dealings in Shanghai, etc., are often many times larger than London silver contracts. Hence, on a given day, London silver contracts and China exchange contracts may easily total twenty-five times the value of that day's silver output throughout the world. Hence the sentiment which dictates these orders—in other words the attitude of bulls and bears—may actually have much more to do with the world value of silver than transactions based on the mining output of the day.

Speculation in the China exchanges, and in silver for forward delivery on account of the Indian bazaars and China, when large enough, can, by a preponderating pressure from bulls or bears, raise or lower the quotations effectively for long periods; for, given the necessary courage and persistence, a possible future factor can always be discounted by operators in advance. The Report of the Indian Currency Commission, foreshadowing possible sales of silver in the future, discouraged the bulls and encouraged the bears, thus creating an unhealthy atmosphere, although the balance of actual supplies and absorption had not yet been disturbed. Failing important coinage orders, which might have stemmed the collapse, the market failed to be more courageous at 25d. than it had been at 30d.

The highest prices during the year were recorded on January 4, namely, 31 13/16d. for cash and 31 3/4d. for two months' delivery; similar figures were fixed for cash on January 7, 8, and 9, and for two months on January 2. The lowest prices were recorded on October 20, namely, 24 1/2d. for cash and 23 7/8d. for two months' delivery. The former was the lowest since November 1, 1915—at that time no quotation was fixed for forward delivery. We append a comparison of the annual extreme fluctuations during the years 1920 to 1926.

	Cash Delivery	Two Months' Delivery
1926	... 7 11/16d.	... 7 3/4d.
1925	... 2 8d.	... 2 8d.
1924	... 4 9/16d.	... 4 7/16d.
1923	... 3 3/16d.	... 2 3/4d.
1922	... 7d.	... 7 7/16d.
1921	... 12 3/4d.	... 13d.
1920	... 50 3/4d.	... 48 3/4d.

It will be observed that no such wide movement has taken place since 1921, when the price was returning to a more

normal level after the record high year of 1919, with its peak at 89 1/2d. for cash and 87 3/4d. for two months' delivery.

Silver and Gold Ratio.

Large as these variations appear, they are but slight compared with the change, in the value of silver as measured in gold, during the lapse of fifty centuries. Within a tomb discovered during the year on the slope of a low hill close to the village of Dendra in Greece, and reputed as more ancient than 3,000 B.C., lay the bodies of a king and a queen.

As the last procession wound its way in regal state, the most precious possessions of the pair were borne to be interred within their tomb. There—after long ages—have they been brought to light. On the breast of the king lay a magnificent golden cup, cunningly chased with what we might almost call a submarine seascape. On the lower part of the king's body lay two silver vases, a gold cup sheeted with silver on the outside, and a bronze vessel. At the other end of the pit lay the queen, and on her breast another splendid gold cup, its outside covered with silver, on which are five bulls' heads inlaid with gold, bronze, and black silver.

The composition of these vessels confirms the statement of Agatharcides (181-145 B.C.) that some thirty centuries before his day ten ounces of gold were worth one ounce of silver, for these gold articles were adorned with silver. During these five thousand years, the ratio—alas! for bimetalism—has been astoundingly reversed. To-day ten ounces of gold equal 376 ounces of silver, and we naturally do not embellish gold with silver, but silver with gold.

Chinese Politics.

The internal affairs of China—a great silver using country—continue in a state of apparently hopeless entanglement. Military leaders have come into prominence and retired into obscurity. Chinese campaigns have been lost and won, being often decided by subtlety, not force. Despite the use of modern weapons—aero planes and suchlike—a strange air of unreality pervades military operations in China. A telegram was published in *The Times* of August 28 that "Kiangnan arsenal here is working overtime producing ammunition and considerable quantities of straw sandals and umbrellas for the troops."

The disturbances caused by contending war lords, however, are mainly local, and the great life of China pursues the even tenor of its way. Trade is sometimes hindered for a while, as during the Cantonese boycott, but trade returns, as a whole, are little affected by the internecine strife. Indeed, the tendency is towards higher figures than ever, so materially prosperous are the masses of the people. Unrest in the neighbourhood of the disturbances is still preventing the free flow up-country of specie, which is retained at the treaty ports for safe custody in increasing quantities.

Chinese military operations are financed on lines not dissimilar from those practised in the West during the Great War, though more drastic. For instance, the paper currency or "fengpiao," forced into circulation around Mukden, gradually fell to a heavy discount as against silver. When it touched 5.80 to the Mexican dollar in July last, Marshal Chang Tso-lin took the matter in hand and gave orders that his dollar must improve 50 points a week. The exchange market not responding as quickly as he wished, the Marshal is reported to have arrested several exchange brokers and merchants, who, after arraignment before the Marshal himself, were condemned to death, and shot or strangled offhand. The methods of the Marshal met with such speedy success as must rouse the envy of some Finance Ministers in Europe, for his dollar promptly doubled in value.

Net imports into China during 1925 were estimated at 68,000,000 standard ounces, as compared with 28,300,000 in 1924. In 1926 the amount will probably be found to be also substantial. It is possible that the capacity of China to import silver may increase as its gold value depreciates, but actual absorption will possibly be a slow process.

Indian Prosperity.

The *ability* of India to absorb during coming years an increased proportion of the world's silver output for industry depends upon a continuance of her present favourable conditions. The fact that the rainfall of 1926 may be regarded as a 16-anna monsoon is an encouraging feature. The *willingness* of India to do so, however, is another question, which we shall discuss later. Details from the latest official returns show the remarkable wave of prosperity upon which Indian fortunes are now being borne.

Considering the large figures involved, the increase in India's foreign trade is striking, and a very sound index of her satisfactory participation in the profits derived from international intercourse.

The success of the co-operative movement in India is very marked, and indicates a very healthy advance in social conditions. During the nine years 1915-16 to 1923-24 the total of societies, members, share capital and loans have increased roughly 300 per cent., and the reserves of the societies appreciably more.

The healthy state of Indian internal trade is shown by the railway returns. Notwithstanding that the mileage has only increased 4 per cent. in the decade ending 1924-25, the net earnings have improved by 46 per cent. The average passenger rate per mile in 1924-25 was 3.47 pies, say $\frac{1}{4}$ d., for 3rd class, and for goods 6 pies, or $\frac{1}{2}$ d. per ton, charges so reasonable that residents in this country may well take note!

Indian Bullion Movements.

The importation of silver into India during 1926 may be found to exceed that of 1925, which constituted a record. India's power of absorbing silver depends upon the price of the metal. A point of saturation must always exist, and the very heavy net imports of 1925 and 1926 suggest that, unless demand be stimulated by further falls in price, importation may begin to slacken, for, be it remembered, the demand is not for currency, but for trade, and the use of jewellery cannot be indefinitely expanded, even though prices become still more tempting.

Further, in considering the prospect of India future consumption of silver, the possible inducement to the peasant—when once the currency is placed upon a gold bullion basis—to hold his scanty reserves in the form of a gold saving certificate, a security bearing interest and convertible at will into a readily exchangeable commodity of stable value, must be taken into account. It is reasonable to suppose that in course of time the ancient silver customs will be affected by changing circumstances, and that the people of India will make such use of new State facilities for saving as to diminish the practice of hoarding in silver, though their strong liking for the use of silver for jewellery and other ornamental purposes will continue.

Price and Output.

Movements to the present price level are not likely to affect materially the output of the world. When the bulk of supplies was derived from purely silver mines a close connexion existed, but such mines are now few in number. Nowadays smelting and refining are conducted upon such scientific lines that the silver traces—of more or less extent—found in lead, copper, and zinc ores furnish by far the most important quota to the world's output. The base metals after various processes are turned out in an almost pure state, and the expense of extracting the silver, an inherent part of a mechanical process, does not enter into the calculation. Science has been constantly discovering new methods of dealing with refractory ores, and in recent years contributions have been made to silver supplies hitherto untapped.

Some important mines, anticipating a lower level of silver prices—have been contemplating a less specialised treatment of low grade ores, and leaving some small quantity of silver in the base metal sent to market; this may result in reducing production by a small percentage. Keen efforts, however, will undoubtedly be made by mines, whose main support is silver production, to go on working as long as possible, even under adverse circumstances, by cutting down costs wherever possible and by more economical and scientific working.

United States producers do not look for any great contraction of output from the above causes, but the returns from Burma mines may show some falling off. The Canadian output, which shows an increase, notwithstanding the falling prices of 1926, may be maintained even in more adverse circumstances. Mexico is trying to avoid shrinkage, for it is proposed to ease the silver mining industry by lowering taxation if a lower level of quotations is reached. On the whole we do not anticipate any large reduction of world output in 1927, even if the price should be driven to a decidedly lower level than that which has ruled during the last three years.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, January 31). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Port Said, Colombo, and Calcutta (Birkenhead, February 5).

Bibby Line.—S.s. Shropshire for Port Said, Colombo, and Rangoon (Birkenhead, February 9).

British India Line.—S.s. Mandala for Bombay and Karachi (London, February 5); s.s. Manela for Colombo, Madras, and Calcutta (London, February 12).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Swansea January 27, Liverpool January 29); s.s. Cyprus for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume, also at Ancona if inducement (Liverpool February 19, Swansea February 22).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 5); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina (Liverpool, February 12), also Galatz and Braila, closing February 17.

P. and O. Line.—S.s. Ranpura for Bombay (London, February 4); s.s. Novara for Colombo, Madras, and Calcutta (London, February 5).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 4).

Ellerman and Papayanni Lines.—S.s. Kioto for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 2); s.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool February 5, Swansea February 8); s.s. City of Lancaster for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 9); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 12); s.s. Andalusian for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, February 12); s.s. Flaminian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna and Constantza (Liverpool, February 26). * Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE EMPIRE AND THE OIL AGE.

Address by Sir John Cadman.

Sir John Cadman, K.C.M.G., chairman-designate of the Anglo-Persian Oil Company, was the chief guest at a luncheon given by the Royal Colonial Institute on January 18 at the Cannon Street Hotel. Sir Hamar Greenwood, Bart., M.P., presided.

Sir John Cadman, in the course of an address on "Oil from the Empire Point of View," said that it was reasonably safe to predict that the "to-morrow" of petroleum, using the word "petroleum" in its most comprehensive sense, would far outshine even the brilliance that to-day attended its achievements. Aviation, and particularly the adaptation of the airship and the all-metal aeroplane and flying-boat, would shortly herald the arrival of an important new stage in transport. Remarkable as might have been the marine use of oil during the last fifteen years, there were indications that by the development of new processes and of more economical methods they would shortly enter upon a much more scientific phase in the use of oil.

What would be the ultimate fate of petroleum in relation, say, to the destiny of coal as a producer of power? More than once he had recorded his conviction that, except within narrow limits, what had been called "the profound antagonism" of coal and oil was really a profound illusion. Even at present the two were very largely complementary, and he expressed disagreement with the view that the revival of coal in this country would sound the death-knell of the other new industry. He thought they would find, as time went on, that except where coal possessed advantages in its natural state, it would tend to embrace and adapt the technical processes already far advanced so far as petroleum was concerned. Again, processes still in the experimental stage might win through to proved success. Thus they would come to welcome the dawn of a new era in which comparable oil products might well be obtained from coal as from natural oil. Under those circumstances it would be possible for coal of the required characteristics—and by that he meant the great bulk of their potential coal production—to enter the refining plant in its solid form; by far the greater part of its calorific value and

potential power would then be extracted and carried off in universally convenient liquid or gaseous form, leaving as a solid a residue of no heating value.

The catalogue of mineral resources within the Empire made but scant reference to petroleum. India, Trinidad, and Sarawak were the only countries that produced it in considerable quantities, and the aggregate of their entire output was relatively small; in fact, it did not exceed 2 per cent. of the world output. At the other end of the scale was the United States, producing from its own oilfields in 1926 something like 70 per cent. of that total. Exploration throughout the Empire would press forward unceasingly, but in the light of the knowledge they possessed to-day, they were not entitled to look for results comparable to those of the United States. The great world work of the Shell group in peace and War was, he thought, well comprehended by observers in this country. He was sure the members of the club would join with him in expressing deep sympathy, on Lord Bearsted's death, with the members of his family, and with the Shell organisation. He was a great figure in the world of oil and a great citizen of London.

Sir John Cadman went on to refer to Lord Fisher's enthusiasm for oil and to the great contribution made by Mr. Winston Churchill to the evolution of the present oil era. But for the timely participation of the British Government, he declared, it was probable, almost certain, either that the Anglo-Persian Oil Company would have been compelled to pursue its development in a restricted, a hasty, and therefore a wasteful manner; or, alternatively, there must have loomed the peril of its control passing to hands definitely alien from Britain. True, there would have remained the Burmah Oil Company—a pillar of real strength. When all was said, there would appear to be ample materials to justify a conclusion that in future public opinion would applaud the candour, the foresight and the true statesmanship which, finding British supplies of oil dangerously exiguous, did not hesitate to take a hand in the development of that great centre of supply.

It might be of interest to inquire whether there were not circumstances in which their interests could be advanced as actively in foreign countries as within the limits of their own Dominions. Who, for instance, would attempt to assess the value of proving to Persia the benevolent effect of British activity? In that country British energy and British capital had been successfully mobilised to stimulate and to crown the efforts of the inhabitants themselves. The engineers of the Anglo-Persian Company first arrived in South-West Persia to find a rocky wilderness equipped with none of the apparatus of modern civilisation, and so inaccessible that normal methods of transportation were ruled out. To-day, that region had become a flourishing area of industrial activity, with comfortable bungalows and other dwellings, many miles of first-class roads, electricity for lighting, gas for cooking and heating, and abundant supplies of pure water. About 25,000 people were employed in the oil industry there, the very great bulk of whom, but for 1,000 Europeans, were of Persian nationality; and if those dependent on wage earners be included, a total of some 150,000 Persians was involved. Obviously, all that represented a great stabilising influence in the country. Further, a well-sustained effort was being made to give technical training to Persian youths and also to assist in providing educational facilities, not only in the areas of the company's operations, but also at the capital of Persia and elsewhere in the country.

With the best will in the world, relations with a foreign Power could never be free from occasional ambiguities and misunderstandings. It might well be that, even to this day, many Persians did not yet entertain a sufficiently clear idea of the favourable significance of those activities. Fortunately, however, there were also very many who did. He need hardly add that it was a prime factor in the Anglo-Persian Company's policy to do all it could to maintain the friendliest understanding with the Persian Government and people, and he felt confident that the longer its association with them and the more they saw of the effects of its

operations in their country, the more pride they would feel in the great industry that had sprung up in their midst.

A concluding word must concern this country where, after all, the Anglo-Persian Oil Company occupied a place, although not a dominant place, in the counsels of those who controlled oil distribution here. The central feature of the Anglo-Persian Oil Company, for weal or for woe, was, of course, its altogether British character in ownership, in control, and in the spirit of its every operation, but it was not an instrument of government to be employed in attaining political objectives. It was a purely commercial industry, conducted for strictly commercial ends on severely commercial lines.

The Near East Markets.

AN ANNUAL JAFFA ORANGE SHOW.

Encouraged by the success of the show held last year, the Committee have decided to place the Jaffa Orange Show on a permanent basis and to organise an annual show.

This season's show, which H.E. the High Commissioner has consented to open, will be held on February 17, 18, 19, and 20. Owing to the large number of exhibits received last year and the general interest taken by the

early sowings germinated unusually well and an increased area of cereals is anticipated. On the other hand, the remainder of the second flush of cotton sustained damage directly from the rain, and unopened bolls were also subjected to fungoid attack favoured by damp conditions. Grazing is unusually plentiful and stock generally are in good condition.

Little progress was made with cotton picking owing to rains. The deliveries of seed cotton to the ginnery of the British Cotton Growing Association, up to the end of November, totalled 3,720,038 lb., equal to approximately 2,325 bales of 400 lb. lint., as compared with 1,883 bales for the same period in 1925 and 2,000 in 1924.

Over 200 tons of seed wheat of four varieties selected by the Department of Agriculture have been disposed of to cultivators; this having been made possible by the generous co-operation of the British Cotton Growing Association, who have financed the transactions. These wheats, which, with hundreds of other varieties, have undergone rigorous comparative tests for 6 years at the Government Experimental Farm, Rustam, are acknowledged by growers to be much superior to types commonly grown in the Iraq, and their steady propagation should add to the prosperity of the country.

At the Government Experimental Farm, Rustam, sowing of cereals, linseed and flax was much interrupted by rains but satisfactory progress was made. Practically all cotton pickings were suspended, and the yield from the

trade, the Committee have decided to engage the Exhibition Hall of the Palestine and Near East Fair at Tel-Aviv. A large number of valuable prizes will be offered, and it is expected that, not only for the growers and those otherwise interested in the cultivation of citrous fruits in Palestine, but also for the public generally, the show will be the great event of the year.

Both the twin cities of Jaffa and Tel-Aviv now enjoy excellent hotel accommodation, and there are already indications to show that many visitors to Egypt will avail themselves of the opportunity offered by this season's show to spend a few days in the Holy Land.

Visitors who desire to be present at the official opening, are requested to apply to the Hon. Secretary, Jaffa Orange Show, District Offices, Jaffa, who will be pleased to send them the necessary entrance tickets.

AGRICULTURE IN IRAQ.

The official report on agricultural conditions in Iraq for the month ended December 15 states :—

The last three weeks of November were characterised by a most unusual rainfall; at Hinaidi no less than 6.24 inches were recorded, falling on 14 days, whereas the average for November during forty years is 0.84 inches. It is interesting to note, however, that at Mosul the rainfall during the month was only 3.43 inches.

There was great activity in cereal sowings throughout the country whenever land became dry enough to plough,

second flush will be very light owing to rain damage.

Preparations for an intensive campaign against locusts in the areas invaded this year are in active progress. The main line of attack will be by the scattering of poisoned bait over swarms of hoppers; materials are now being delivered to locust areas and arrangements made for further distribution.

The July to November exports of wheat from Basrah were 860 tons and of barley 27,959 tons; total 28,819 tons as compared with 840 tons for the same period last year. The August-November exports of dates from Basrah were 67,950 tons valued at Rs.1,47,15,600 as compared with 129,888 tons valued at Rs.1,69,90,160 for the same part of last year's season. The July-November exports of wool from Basrah were 2,713 tons in 1926, and 6,589 tons in 1925.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., report as follows under date January 12 :—

The arrivals of sultanas up to December 31 are estimated at 29,222 tons and the sales to date are put at 28,207 tons.

Owing to the holidays it has not been possible to obtain before this date the complete figures of shipments and stocks as at December 31, given above. Total stocks now remaining in this country are estimated at between 2,000 and 2,200 tons. Low grades are practically unobtainable. Type 13 is scarce, and the bulk of fruit now

on the market consists mainly of 14 and 15 grade qualities. The demand showed a gradual improvement throughout December and prices advanced, showing a gain of about 7s. (fl.7) since early December. Closing prices c.i.f. U.K. to-day are:—Type 13, 63s.; type 14, 65s.; type 15, 67s.; type 16 96s.; type 17, 73s.; nominal. We give the price of 17 as nominal as this grade is now practically exhausted.

The arrivals of figs up to December 31 are estimated at 28,742 tons, and the sales to date are put at 28,316 tons.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 19:—

Egyptian Futures.—Sakel Contract.—Since we last wrote, values in this market have shown a steady appreciation, and judging from the undertone at present in evidence the movement appears likely to continue. The chief influence in operation at present is the more active measure of trade support accorded, and in addition to this we have had the backing of advancing American markets, which certainly exercise a sentimental effect, although, strictly speaking, bearing little relation to the to the cotton covered by this contract. In contrast to the last two or three weeks, during which the market was called upon to digest some heavy selling orders, there has latterly been little pressure, as, apart from the customary profit-taking operations on a rising market, contracts have been at times rather difficult to purchase in quantity without causing a distinct stiffening in values. With Alexandria generally showing a somewhat poor response to the course of values at this side, we have commenced to regain in part some of the premium at which we are entitled to stand above the overseas market. Reports indicate that a good deal of undesirable and poor quality cotton is now in stock in Alexandria, and the fact that their contract may have to bear this cotton would seem apparent judging from the discount to which the near positions have now worked down.

Local trade reports continue to be encouraging, and spinners are operating more freely in the raw material than has been their custom for a considerable period. We understand that Lancashire is now receiving, apart from the flow of orders from customary sources, a steady demand from the Continent, where, owing to the cost of production and adverse rates of exchange, they can undercut local producers.

To sum up, we maintain our view of the outlook. The continued improvement in the trade offtake justifies a further rise in values, if not in the immediate future, at least during the later spring months. This being the case, we think that purchases at round the present level, or preferably on any reaction, should the opportunity occur, are to be advised.

Upper Contract.—We have again to report a further advance in values in this market; at the same time, it must be confessed that the appreciation witnessed has not been commensurate with the firming up witnessed in other markets. Probably, this is due to the fact that our difference over competitive cottons has now widened to the extent to check, at any rate for the time being, any further decided upward tendency. Trade reports rather bear this out, as we are informed that margins on to-day's basis have lost a great part of the attractiveness they offered a few weeks ago. This does not debar us from the view that ultimately further price advances will be witnessed.

Egyptian Spot.—A steady, if somewhat slow, improvement has again occurred and, on the whole, conditions have ruled very similar to those of the previous week.

A series of remarkably steady American markets has again attracted more buying by the trade, and reports from Manchester and district have been sufficiently good to indicate that a considerable volume of business is now

being transacted up-country. So far, these reports have dealt chiefly with the American side of the trade, and, at the moment, there is undoubtedly some difficulty in bringing together buyers and sellers of Egyptian yarns. Nevertheless, it is not disputed that there is big business about in Egyptian counts for those who can arrange terms. Spinners are apparently showing a firmer front.

The sales of ordinary Egyptian show but a slight increase on those of the previous week (an average of approximately 200 bales per day), but it must be borne in mind that Sudan cotton is now being used very largely in lieu of Sakellaridis and, if the Sudan sales are included (as they should be), the daily average of spot sales for the past two weeks is brought up to 1,100 bales, a figure which can only indicate that a much improved trade is taking place and that spinners regard the current level of prices as being a reasonable one.

The local inquiry for Sakel cotton has continued on moderate lines only, but here and there a welcome increase in interest has been noted. The low qualities particularly are still much in favour in certain quarters. The best qualities have been comparatively neglected. Prices have hardened. A very steady trade has continued in Uppers, chiefly for the Strictly Good Fair to Fully Good Fair qualities, at from 9½d. to 10½d. A considerable inquiry exists for Low Uppers at from 7½d. to 8½d., but there is little offering here at these prices. Pilon has been entirely neglected, but a small inquiry for White Egyptian has recently been noticeable. As we have mentioned above, the bulk of the business has been done in Sudan cotton, both Sakel Seed and American Seed showing a good turnover on the week.

C.i.f. business has remained quiet. Forwardings to spinners for the week ending 14th inst. were returned as 9,803 bales Egyptian and 2,500 bales Sudan. Estimated sales 1,100 Egyptian and 5,450 bales Sudan. Quotations of Sakel have been advanced from 40 to 65 points and those of Uppers 35 points. F.G.F. Sakel 13.95d. F.G.F. Upper 10.55d.

NEW COMPANY.

Yugoslavian Developments has been registered as a private company with a nominal capital of £4,000 (3,500 ordinary of £1 each and 10,000 preferred of 1s. each). The objects are to adopt an agreement with E. Y. M. Schwarz and to carry out all kinds of financial operations in Yugoslavia and other countries other than ordinary banking business. E. Y. M. Schwarz is permanent director so long as he holds 500 ordinary shares. The registered office is at 66, Victoria Street, S.W.1.

Company Meeting.

BARCLAYS BANK (DOMINION COLONIAL AND OVERSEAS).

Development of Activities.

Mr. F. C. Goodenough's Speech.

The adjourned ordinary general meeting of Barclays Bank (Dominion Colonial and Overseas) was held on January 21 at the Cannon Street Hotel, E.C.

Mr. Frederick Craufurd Goodenough (the Chairman), in his speech in moving the adoption of the report and accounts, said:—This is the first balance-sheet of the combined institution, and is one which we present with considerable satisfaction. Our deposits exceed £50,000,000, while our assets show a satisfactory degree of liquidity. Cash in hand and at bankers and gold bullion exceed 16 per cent. of the deposits, bills discounted exceed £14,000,000, or 27 per cent. of deposits while investments at over £6,000,000 represent another 12 per cent. Advances to customers are under 44 per cent. of the deposits.

Profit and Loss Account.

The profit and loss account to September 30, 1926, includes the profits of the Colonial Bank and the Anglo-Egyptian Bank, Ltd., as from July 1, 1925, and those of the National Bank of South Africa, Ltd., as from April 1, 1925. I should like to emphasise that this covers from 15 to 18 months' profits of the bank. The net profit, after making full provision for rebate, bad and doubtful debts, and staff bonus, amounts to £637,020. To this must be added the Colonial Bank's carry-forward at June 30, 1925—namely, £27,330, making a total of £664,350.

We have written off the non-recurring expenses of the amalgamation, and have made appropriate provision for income-tax. The reserve fund has been increased by £100,000, to £1,100,000, a step which I am confident will meet with general approval. A final dividend on the Eight per Cent. Preference shares is proposed, covering the period April 1, 1926, to September 30, 1926, and the Board recommends a dividend of 3 per cent. on the "A" and "B" shares, less income-tax, leaving a balance of £114,294 to be carried forward.

The consolidation of this institution with its widespread branches and the co-ordination of the various organisations have been no easy task, and the Board desire to acknowledge the valuable assistance and cordial co-operation of the various local Boards of the different sections of the bank, and to pay tribute to the general manager, Mr. Caulcutt, the assistant general managers and the managers of the various sections, and to the staff for the rapid and efficient manner in which the various component parts of the institution have been brought together.

I have much pleasure in stating that Mr. A. M. Mostert has accepted an appointment to the local Board in South Africa, which Board has the advantage of being presided over by Mr. Leisk, whose co-operation in South Africa is of inestimable value to the bank.

It is our intention to establish a local Board to watch over our interests in Egypt.

Mr. W. O. Stevenson, foreign general manager of Barclays Bank, Ltd., has been appointed a member of the London Committee.

It was felt that the arduous work of the staffs should receive some tangible acknowledgment, and the Board therefore granted a bonus to the staffs of the National Bank of South Africa and the Anglo-Egyptian sections, the staff of the Colonial Bank having already received their bonus in October, 1925.

I desire to take this opportunity of informing our shareholders and clientele that this bank is now equipped to act as executor and trustee, and offers its services in these capacities to its customers.

Union of South Africa.

The transfer of the business of the National Bank of South Africa, Ltd., has been carried through in a satisfactory manner, and has been well received by the customers of the bank. The business of the bank in South Africa is expanding, and there are already indications that the amalgamation, with its provision of larger resources and wider organisation, will prove to be for the mutual benefit of the Dominion and of the bank.

The production of gold continues to increase. In 1925, £40,800,000 worth was produced, or just one-half of the world's production. The output for 1926 was £42,300,000, which exceeded the output for the

previous year by £1,500,000, and constituted a record in volume in the history of this industry in South Africa.

The production of diamonds continues to increase, particularly of alluvial diamonds, now aggregating nearly £500,000 per month. The increase is largely due to the discoveries in the Lichtenburg district, Trafsvaal. These alluvial discoveries attract large populations, principally drawn from agricultural areas.

The total exports of South Africa for the first nine months of the year 1926 amounted to £57,000,000, a decrease of £3,000,000 compared with the corresponding period of 1925, which is more than accounted for by the diminished crop and the fall in wool prices.

The imports during the same period totalled £54,000,000 (an increase of £4,750,000), of which textiles and metal goods (machinery, etc.) provide the greater portion; 65 per cent. of the imports came from the United Kingdom and British Possessions.

The commercial and agricultural prospects of the Union are encouraging. Good rains have fallen over most parts. The manufacturing industries are, however, disturbed by the awards announced by the Wages Board, which are alleged to threaten the existence of the industries in question, but the Government has postponed confirmation of the awards until the position has been re-examined.

Northern and Southern Rhodesia.

In spite of the gradual decline in the gold production of Southern Rhodesia, reports from the territory are encouraging, owing to the good crops of tobacco and maize which have been harvested during the past twelve months. A good export trade in these products is being established, as well as in the export of beef through Union ports.

Copper developments proceed in a most promising manner, and production on a large scale is taking place in Northern Rhodesia.

Your Board is giving careful attention to the question of providing extended banking facilities in East Africa. Certain points in Kenya and Uganda have already been decided upon for the establishment of branches.

There has been a rapid increase in the production of such commodities as cotton, coffee, oilseeds, etc. For instance, Uganda, which in 1909 produced 5,000 bales of cotton, exported in 1925 196,000 bales, and as more than two-thirds of that country's native population of 3,000,000 are engaged in agriculture the prospects of still larger production are favourable when the railway taps the cotton areas in the south-east.

The principal West African colonies, Nigeria and Gold Coast, continue to show expanding trade returns. The total imports and exports of Nigeria for 1925 showed an increase of £5,000,000, or 19 per cent. over the figures for 1924, and Customs duties collected during that year were the highest on record, not forgetting the inflation period six years ago.

In the Gold Coast, as well as in Nigeria, high prices are being paid for cocoa, which should help in turn to give the import trade a much-needed stimulus. The export of cocoa from the Gold Coast for the year 1926 has reached 226,000 tons, which is a record.

I cannot turn from British West Africa without congratulating Mr. Ormsby-Gore, Under-Secretary for the Colonies, upon his report on his visit to these colonies, which contains a wealth of valuable information upon the present position of that part of our Empire.

Egypt, Etc.

The fall in the price of cotton has had its inevitable effect upon the commerce and conditions of Egypt. Although the 1925-26 crop was 700,000 kantars (a kantar is, say, 100 lb.) larger than the 1924-25 crop, yet its value showed an enormous decrease.

In order to alleviate the position of the cultivators, the Government have set aside from their general reserve a sum of £E4,000,000 to be advanced to them against their cotton, through the medium of the principal banks in Egypt, at 4 per cent. per annum. Further, a law has been passed limiting the cotton area during the three years 1927-29 to one-third of every holding, and cultivators have been warned that this limit will be rigorously enforced.

In the Sudan there has been depression, largely due to the lack of sufficient rain in the Blue Nile Province, and the consequent failure of the durra crop, which is the main food supply of the natives. Importation of this food has been necessary and consequently prices have risen. On the other hand, in spite of the fall in price, cotton exports show a considerable increase in total value.

The main influence upon the business prospects of Palestine is immigration. The attendant influx of capital has not been directed solely into productive channels, and at the moment there is acute depression.

A Currency Board is being established, of which this bank has been appointed agents.

West Indies, Etc.

In the Island of Trinidad the sugar crop of the past season exceeded 73,000 tons, being the largest figures recorded for 29 years.

Oil exports for the first ten months of 1926 were 113,000,000 gallons, an increase of 15,000,000 gallons by comparison with the corresponding period of 1925.

During 1926 a West Indian Conference met in London under the Presidency of Sir Edward Davison, a director of our Colonial Bank Local Board, whom we congratulate upon the baronetcy recently

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

conferred upon him in recognition of his considerable services to the Empire.

The above report will have given you some information in regard to the conditions prevailing in certain of the territories where we have branches. You will have noted that these territories are widely spread, which, from a purely banking point of view, has considerable advantages, and this is especially the case since the various localities are subject to considerable fluctuations in prosperity, both on account of climatic forces and also as the result of wide movements in the price of the various commodities which they may produce. For these reasons a strong bank must prove to be of great benefit to them, besides which our own institution serves to bring the exporter and importer into closer touch, since the bulk of the import and export trade passes between those places and Great Britain. In conclusion, therefore, the directors are fully satisfied as to the result of the past year, and that the bank is giving and will continue to give valuable and increasing services to our overseas trade generally, and, in particular, to our trade within the Empire.

The Chairman moved the adoption of the Report and Accounts, which was seconded by Sir Herbert Hambling, Bart., and was unanimously passed.

A vote of thanks to the staff was moved by Mr. C. F. Wood, seconded by Mr. James Tuke and unanimously accorded. It was replied to by Mr. John Caulcutt (General Manager).

The proceedings terminated with a cordial vote of thanks to the Chairman and the Board for their services, on the motion of Col. G. R. C. Westropp, C.B., seconded by Mr. A. Hepworth.

BENGAL AND NORTH WESTERN RAILWAY.

The ordinary general meeting of the Bengal and North Western Railway was held on January 25 at the offices of the company, Gresham House, Old Broad Street, E.C., Sir Henry P. Burt, K.C.I.E., C.B.E. (the Chairman), presiding.

The Managing Director (Lt.-Col. W. R. Izat) having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, in moving the adoption of the report and accounts, said:—For the fifth year in succession we are able to record a further and very satisfactory advance on previous records as regards the gross earnings of the joint undertaking. Compared with the previous year the increase amounted to 10 per cent. Under general merchandise the traffic in sugar contributed the largest increase; and, although, owing to dull markets and absence of demand, there was a falling-off in the traffic in rice and wheat, there were increased earnings from most of the other principal commodities.

It is again very satisfactory to note that our third-class passenger traffic continues to expand, both as regards numbers carried and the earnings therefrom, and I should like to emphasise how very large is the contribution which this particular traffic alone makes to our total gross earnings, amounting as it does for the year under review, to as much as 47 per cent. Our working expenses show a small decrease in spite of the improved earnings, with the result that our working percentage has fallen from 43.39 to 39.36, a figure which is lower than that on any other railway in India, and is not approached, I believe, by any railway of importance in any other part of the world. The net earnings of the company realised £825,426, calculated at 1s. 4d. per rupee, and adding the gain in exchange, £87,847, which is slightly larger than last year, the total net earnings amounted to £913,273 against £788,278 in 1925. Making the necessary adjustments on account of income tax, the payment of interim and preference dividends, and carrying £75,000 to reserve, and providing £35,000 for the sinking fund, the amount to be dealt with to-day is £421,546. Out of this amount we recommend a dividend of 6 per cent., together with a bonus of 3 per cent., making a total dividend and bonus for the year of 16 per cent., or 2 per cent. higher than has ever been paid in the past. I am sure that you will regard this as eminently satisfactory, and with these results before us let us remember how much we owe to that great pioneer of this company's system, the late Mr. Alexander Izat, and to the late Colonel Gracey, who was associated with him in more recent years, for the wisdom and foresight with which they laid the foundations on which the company's present prosperity rests.

From the first the Board have steadily pursued a consistent policy in husbanding our resources, even when our earnings were low, and although the increase in our traffic during the last few years has, of course, helped us considerably, we have been able, in pursuance of the policy to which I have referred, not only to raise our dividends during the last eight years from 10 per cent. to 16 per cent., but have also built up a reserve fund of over one million pounds, and established a sinking fund which has made it possible to redeem our debenture and preference stock to the nominal value of £896,939, at a cost of £664,062 3s. 5d. And as regards the present, our thanks are, of course, due to our staff of all ranks in India, for the zeal and efficiency they have displayed in the discharge of their duties.

At our last two meetings I referred to the serious damage which was caused to the Bagaha Bridge by the floods of 1924, and I informed you that an expert committee, which had been convened at the request of the Board to report on the situation, considered that the bridge could be retained at its present site if the training works were effectively restored. An extensive scheme of repairs, designed to hold the river to its course through the bridge, was carried out during the last working season. I regret to say, however, that our endeavours to secure that end have failed, as a serious flood, which occurred last September, breached the railway embankment to the west of the bridge, and led to the river being diverted into an entirely new channel, and to the consequent isolation of the bridge. It has now been decided, with the approval of the Railway Board, to abandon for the present all further restoration work, and to wait until the position has become more defined, before taking any definite decision as to the necessity or otherwise of replacing the existing bridge by one at another site. There is still a possibility, although I am afraid a faint one, that it may be practicable to train the river back into its channel through the bridge.

In the past and when the time was sufficient to enable traffic to develop before our property could be acquired, we have never hesitated to extend our system by the construction of new branches, even when it was known that the earnings would be poor at the outset. The result has been that, speaking generally, there are few parts of India which are at present better provided with railway transport facilities than the area opened out by this company. The only extensions which can now be regarded as in any way urgent for the further development of the country we serve are the Muzafferpur-Darbhanga, the Mashrak-Thawe and Chakia-Sahibganj. At the instance of the Railway Board, these projects are being resurveyed and the traffic prospects further investigated. It is not likely that the estimated earnings on first opening will be sufficiently attractive to justify the company providing the necessary capital. In that case it seems probable that, should their construction be decided upon, the needed capital for these extensions will be found by the Railway Board, the work being carried out on behalf of the Railway Board by this company.

Before I leave the subject of new extensions, I should like to inform you that the Pharendra-Nautanwa Branch, which was opened for traffic in December, 1925, has already fulfilled our expectations as regards earnings, the reports for the first 10 months after opening showing that the return on the capital expenditure is fully 5 per cent.

The latest telegraphic advice from India indicates that the prospects for the current half-year are satisfactory.

The report and accounts were unanimously adopted.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

Islam and the "Haj."

The question of the *haj*, or pilgrimage to Mecca, is one that concerns not only all devote Mussulmans, but also the Western world. Once again the desirability of making the *haj* while the Wahhabis rule in the Hijaz is being keenly discussed by Muslims, and it may be that very much more will be heard of the matter before the actual season is upon us. Of the non-Muslim Powers chiefly interested in this question the most important are Great Britain, who is said to be responsible for 106,000,000 of the Faithful; Holland, who has 39,000,000 Muslim subjects; and France, who has in surveillance 32,000,000 Mussulmans. Now the main anxiety has to be borne by the British Empire, for it is in India that the campaign is being most furiously waged against the present keeper of the Holy Places. The Shiah, of course, are anti-Wahhabi, but they can at least console themselves with pilgrimages to other shrines than Mecca and Medina; yet even among the Sunnis in India there is being shown great animosity against Ibn Saoud and his "Najdians." Even after the Wahhabi leader had denied the alleged sacrilege done to Muslim holy places in the Hijaz the campaign against the Wahhabis went on. And it continues yet. Towards the end of last year, for example, the Maharaja of Mahmudabad sent messages to the King Emperor and to various Muslim rulers soliciting intervention to check the defacing hand of the Wahhabi. And at a large meeting in Bombay the suspension of this year's *haj* was openly advocated. Behind this anti-Wahhabi campaign it is not difficult to discern the hand of the Ali brothers, and of the Indian Muslims who last year attempted to foist upon Ibn Saoud the conception of a Republican Hijaz. It is strange indeed that the very Indians who a year or two ago denounced the British Government for warning intending pilgrims of the dangers from civil war in the Hijaz, and praised the Wahhabis as against the reputed British protégé, the Hashimite representative, should now have turned completely round, and be denouncing Ibn Saoud, the conqueror of the Sharifian dynasty in the Hijaz, as the tool of the British!

It is naturally no part of the British Government to claim any one man as particularly worthy of Islamic support, especially when that man represents the most puritanical sect in Islam, for British statesmen well know that puritanism in religion is at least as likely to be a product of geographical conditions as of anything else. For our own part, however, we lean emphatically towards the view—which we believe is endorsed by the major section of Sunni Islam—that under the present Wahhabi régime *hajjis* will secure not only greater comfort and security than they have enjoyed for years, but also an adequate degree of toleration. It is at least significant that a goodly number of pilgrims from the Far East have already arrived in the Holy Land, for it is the opinion of some observers that the Javanese constitute one of the finest parts of Islam. Nor does it seem probable that the number of pilgrims from Egypt, who last year were more numerous than usual, will not be maintained; for the existing bond between Egypt and the Wahhabis is one of the most remarkable, and hopeful, features of the Islamic world. If Muslims in the British mandated territories do not, for dynastic reasons, largely favour this year's pilgrimage, if Syria is still too shaken by recent events, and if Persia still maintains her opposition—even then the 1927 *haj* may still be a resounding success. The whole season really depends upon the Indians, of whom it may yet be hoped that they will not decide against journeying to Holy Places merely because they are controlled by a man who considers the highest interest of Islam not incompatible with friendship for Great Britain. Whether the reforms which the Wahhabis are said to have made in the interests of the pilgrims are all that is claimed for them we have no means of knowing, but to suggest, as was suggested at the Bombay meeting on December 31 already referred to that the step that was taken during the Barmecide régime of suspending the *haj* as a protest against the maladministration of the Hijaz should now be repeated would seem to indicate a fanaticism at least as great as that of which certain politically-minded Indians are now accusing the King of the Hijaz.

WAR ALARUMS IN ARABIA.

For some time past there have been the rumblings of another war in Arabia, that home of perennial unrest. As usual in affairs concerning this Peninsula, a certain obscurity overhangs the actual position, but it appears to be a fact that, as the Jidda Correspondent of THE NEAR EAST AND INDIA was, we believe, the first to point out, the armies of the Idrisi of Asir and of the Imam Yahia of the Yaman stand arrayed against each other, although the distance between Jizan and Maidi yet separates them. It would appear, further, that the Idrisi, lately encouraged by the granting of a concession to the Anglo-Saxon Petroleum Company for work in the Farsan Islands, opposite Jizan, is spoiling for a fight against the Imam's troops, who in the last year or two have quietly been taking to themselves a considerable section of the Tihama which after the Armistice and the disappearance of Turkish control from the Peninsula was governed, or misgoverned, by the Idrisi. Most notably, they have recaptured the ports of Hudaida, which is, indeed, the key to Sanaa, the capital of the Yaman, and Luhaiya. Now it seems that the present Idrisi recognises the Imam's claims no more than his predecessors, Saiyid Muhammad and the Amir Ali, recognised them, and he has but been awaiting his opportunity to assert his rights, at least his right to the southward of his State. Again as usual in affairs concerning the Peninsula, "opportunity" implied the possession of money. While the Idrisi was penniless he had perforce helplessly to watch the Imam's troops slowly creep up the Tihama, but now, fortified both by the Farsan Islands concession, to which sufficient reference has already been made in previous issues of THE NEAR EAST AND INDIA, and also by the open backing of Ibn Saoud, King of the Hijaz and Sultan of Najd, he grows warlike and threatening. A conflict, however, has not yet broken out, and it is not unreasonable to suppose that European interests, namely, British and Italian, have exerted a certain influence in the preservation of peace. Whether war will eventually be waged, in spite of the general interests of the British in the Peninsula and of the particular interests of the Italians in the Yaman, it is difficult to say: the issue depends in considerable measure upon the patience or impatience of the Imam and upon the restraining or urging hand of the leader of the Wahhabis, whose control of Asir, as manifested in the Treaty of Mecca of October 21, 1926, a translation of which the *Daily Telegraph* published last week, is fairly absolute. One would hazard the guess that Ibn Saoud's immediate preoccupation is with the *haj* and with the second Mecca Conference, and that he would not, therefore, willingly undertake another war at the present moment.

In the actual circumstances there are one or two documents which are of peculiar pertinence and importance. First, there are the two treaties which Great Britain made with the Idrisi, that is, with Saiyid Muhammad, Amir of Asir, in April, 1915, and in January, 1917. This second treaty is commonly called the Farsan Treaty. The Idrisi

took the Farsan Islands from the Turks in January, 1915, and still holds them. Next, there is the treaty which the Yaman last autumn. And finally, there are the treaties which Ibn Saoud has made with the Idrisi, that is, the 1920 treaty with Saiyid Muhammad (who died in March, 1923), and the 1926 treaty with Saiyid Hassan ibn Ali. Upon the first treaties, the war treaties between Asir and Great Britain, it is only necessary to remark that they do not imply the permanent protection of the Idrisi's domains against any enemy; as a matter of fact, the enemy implied in their clauses was the Turk, not a fellow Arab. There would appear to be no justification, for instance, for supposing that Great Britain is under any obligation to restore to the Idrisi Hudaida, which, being surrendered to the British Navy on the Armistice, was given to the Idrisi upon its evacuation by the British in February, 1921. Hudaida languished under the Saiyid Muhammad; nor were its fortunes restored by his son, Ali, so that it was no surprise when the late Idrisi's cousin, Saiyid Mustapha (who, incidentally, was instrumental in getting passed the Farsan Islands concession) combined with Saiyid Abdal Qadir and Mahmud Nahim Bey, in April, 1924, to take Hudaida. This capture did not endure long, but it may be said to have heralded the Imam's repossession of it. In other words, the Idrisi was not capable of running the place. Mention of the second of Saiyid Mustapha's assistants brings one to the Italian Treaty with the Yaman, which, although it seems to have taken many observers by surprise, was quite definitely foreshadowed before it was actually signed. In March, 1925, for instance, it was reported from Massowa, whence Italian negotiations originated, that the same Mahmud Nadim Bey, the last Turkish Vali in the Yaman (and now Pasha and Counsellor to the Turkish Legation in the Hijaz) had concluded an agreement on behalf of the Imam Yahia with the Italian authorities. The climax of these negotiations, which Commendatore Gasparini lately achieved, was inevitable as soon as the views of the British Government upon the presence in the Aden Protectorate of tribes subject to Imam was made known to the Sanaa authorities by Sir Gilbert Clayton early last year. But there is no reason to suppose that the Italians are desirous of war between the Imam and his northern neighbour, whose ancestor, indeed, helped them to some extent in the Turkish-Italian War of 1911: Fascist interests are pre-eminently in the peaceful and commercial development of the Yaman. It is over the exact interpretation of the Wahhabi-Idrisi treaties that doubt enters the situation.

Now how is Great Britain affected by the present uncertain position of the potentates in Arabia? Her precise relations with Ibn Saoud will be clarified when Mr. Jordan, British Consul at Jidda, has returned to the Hijaz and concluded a fresh agreement with the Wahhabi leader. It is quite safe to say in the meantime that Great Britain is as friendly to Ibn Saoud as he is to Great Britain, and that she will go far to make any readjustment of the general situation which he may request. That fact—the cordiality between Britain and the Wahhabis—is perhaps the main point in Arabian affairs to-day. Nor is there any ground for supposing that the present Idrisi, although it may be true that he is not the man that Saiyid Muhammad was, should not be on friendly terms with Britain. And even of the Imam's friendship there is no reason to despair, although the Italians' successful treaty with the Yaman might, at first blush, seem to indicate that the Fascist Government, or, perhaps, the Governor of Eritrea, had ruffled the waters of what superficial observers would have liked to be a British lake, on the analogy of the Persian Gulf. For our part, we cannot see why there is not room for both British and Italians in the Red Sea; and that, to judge by the recent conference in Rome, is the view of Sir Gilbert Clayton and of Commendatore Gasparini. If these two great influences work for harmony, the prospects of peace in Arabia, at least along the sea-board (and it is virtually along the sea-board alone that the Idrisi's influence extends), are by no means so black as it is the fashion to paint them.

Notes of the Week.

Political Difficulties in Yugoslavia.

After a little more than a month in office with his fifth Cabinet M. Ouzounovitch, Prime Minister of Yugoslavia, has found himself obliged to hand in his resignation again. The irrepressible leader of the Croat Peasant Party is once more the stumbling-block. Local government elections have recently been held throughout the Kingdom, and their results did not prove as favourable to M. Raditch as he gave the country to expect. They showed, indeed, very little change in public opinion since the last parliamentary election. Out of the thirty-three County Councils the Radicals obtained an absolute majority in nineteen, the Raditchists in nine, the Democrats in three and the Slovene Clericals in two. The Radicals retained their hold on Serbia, although in a minority in the Belgrade Council, and on the Voivodina. Bosnia was divided among the parties, the Radicals claiming the capital, Sarajevo. The Raditchists gained successes in Dalmatia, outside their Croat stronghold; the Slovene Clerical successes were restricted to Ljubliana and Maribor, and the Democrats have the consolation of knowing that Montenegro is with them. Taking umbrage at these results which entirely belied his confident predictions, M. Raditch has indulged in fresh attacks on the Radicals on the ground of their conduct of the elections and maltreatment of his followers, and last week instructed his party in the Skupshtina to vote against and so to defeat the Government on the first issue that presented itself. As the subject in question was of minor importance, it was a foregone conclusion that King Alexander would not accept the Government's resignation, or would entrust M. Ouzounovitch with the formation of a new Ministry. Possibly M. Raditch did not intend to be taken quite so literally. He had, perhaps, overlooked the fact that M. Ouzounovitch thrives as much on resignations as he himself does on permanent hostility to his political allies.

Barren Controversy.

For a whole year the political history of Yugoslavia has been the story of internecine disputes in the Radical-Raditchist combination, with constant resignations and reshuffling of portfolios. Whether in such circumstances any useful legislation can be enacted and the country as a whole can avoid serious prejudice is a matter which would seem to concern the Yugoslav people very vitally. The *impasse* becomes the more acute as the time approaches for the new Budget to be passed. M. Ouzounovitch has continued the unworkable alliance with the Raditchists only because he could bring about no other combination in the Skupshtina that offered him a majority. This fresh defection on the part of the Raditchists should convince him finally that the present coalition is hopeless. In connexion with the Budget, it would be thought, all the parties could be induced to make common cause with the Government against the purely destructive tactics of M. Raditch. In spite of the fact that the County Council elections hold out no hope of the parliamentary tangle being cleared up by a general election, it is obvious that fresh elections will have to be held in a few months' time. For this short period it should be possible to make M. Raditch politically harmless by a coalition of the other parties for the business of the Budget, without any one party being called upon to sacrifice its cherished convictions. M. Ouzounovitch has made repeated overtures to the Slovene Clericals for help against the vagaries of the Croat leader, and Dr. Koroshetz's "terms" have been published. His more important stipulations deal with the question of Slovenia's position of the Triune Kingdom; he wants all the State revenue raised in Slovenia to be spent on that country, and the system of taxation in force there to be revised. In theory there may be something to be said for the first contention, especially if the Slovenes have been led to suppose that they make an unequal contribution to the State

Exchequer and then that damage done by floods in Slovenia cannot be repaired because there is not enough money to go round. In practice, however, the problem must be settled by the greatest good of the country as a whole. It would be suicidal for Yugoslavia to starve one section of the Kingdom, while another was accumulating unused balances. On the other hand, the Belgrade Government must desire that there should be no ground for the Slovenes to imagine that Serbia is dipping her hand freely into Slovenia's pocket without allowing the latter to have an adequate voice in the expenditure of the money. The question, however, cuts into the Vidovdan Constitution and calls for a round-table conference. No attempt should be made to compel M. Ouzounovitch to come to a decision on the subject before the parties combine to protect Yugoslav interests against the Croat leader.

The Little Entente.

Few things seem able to happen in Central or Near Eastern Europe without a declaration from one or other of the members of the Little Entente to the effect that the Entente has not been in any way prejudiced and that it is in the healthiest of conditions. The reason for these protests is not apparent, as the Little Entente for all practical purposes affects the outside world only in regard to its reaction on Hungary and, possibly, Austria. If exception can be taken to what tripartite agreement by anyone apart from these two countries, to whom it must necessarily remain a studied offence, in addition to being a hindrance to a united Europe, it will be by the friends of Yugoslavia and Roumania who are anxious to see these two States attain their full political and economic development in the shortest time by means of a Balkan Federation, which has geography, self-interest and common sense to recommend it. If Czecho-Slovakia, Yugoslavia and Roumania are still frightened of Hungary, the Little Entente is there to give them a sense of security; but it is not so apparent that it adds to the standing of any one of them in the councils of Europe in the way in which close co-operation between the four or five States of South-Eastern Europe would, enabling them to speak as a single Power with over forty million inhabitants. There would be no occasion for a Balkan Federation to apologise for the conclusion of re-insurance treaties by any of its members, for the reason that they would not feel in need of safeguarding themselves in this way against one another. This time it is Dr. Benesh who has to insist upon the unimpaired vigour of the Little Entente, whatever arrangements may be made by Italy with Hungary; but he was forced to admit that a certain international nervousness existed, that there was a certain crisis that had to be carefully watched, as big events regularly sprang from small causes. This *caveat*, not unnaturally, has been taken to refer to Italy's activities; yet it is strange that, as each of the three States has an understanding with Italy, the pacific nature of which is always emphasised, they should challenge the conclusion of a similar treaty between Italy and Hungary. For geographical reasons Czecho-Slovakia must always remain in a state of nervous watchfulness; but she will have rendered no service to Yugoslavia and Roumania by infecting them with her anxiety. A pact against Hungary might possibly have been justified for a few months after the Armistice, until the League of Nations found its feet; but the attempt to found upon such a pact a permanent factor in European politics can never be convincing, and is likely to lead to the repetition of pathetic assurances regarding the Little Entente's health.

Napoleons in Albania.

The quarterly announcement of a revolt in Albania had come to be regarded almost as a harmless indulgence on the part of the Belgrade Press, so long as no attempt was made to supply further details than that the Government

had the situation well in hand. When the last revolt did break out, after two years of false alarms, the Belgrade Press was behindhand with the news. This fact may have suggested to an Italian newspaper the idea of stealing a march on its Belgrade contemporaries by discovering an *interim* revolt in Albania. The *Giornale d'Italia*, however, it is to be feared, introduces some malice into the game. Its particular revolt, it announces, is a much graver affair than any of those which presumably originated in a dearth of news in the Belgrade Press. Yugoslavia, indeed, is to furnish the money, munitions and the men, and, in order not to do the thing by halves, two Cabinet Ministers—Generals both—are said to be looking after the Albanian revolt, with yet a third General as Commander-in-Chief. Evidently money is to play the chief part, as the first step has been to give the insurgents—to-be three napoleons each. Wiser heads, it would be thought, would have insisted on payment by results. The gift of a rifle is comprehensible, as in the hands of an Albanian tribesman a rifle is apt to go off, and there is always a good chance of its going off in the direction of the Tirana Government; but three napoleons conjure up visions of a village fair, and the revolt may be left to look after itself. Unfortunately, there are always people who take these allegations seriously, and further bad blood is engendered between two nations who have little love for one another at the present moment. The Belgrade Press cannot complain when others copy its favourite pastime of inventing news; but many will have hoped for better things from Italian newspapers.

Greece and her Army.

It is not a matter for surprise that the Royalist members of the Greek Coalition Cabinet, who have been the victims of espionage and false denunciation on the part of Republican army officers, should have refused to gloss over the incident as readily as their colleagues were anxious that they should. The personal affront was not as serious as the condition of affairs in the Army that it revealed; that a system of political espionage should be maintained and should be countenanced by every grade of officer up to the Commander of the First Army Corps. It has now been decided that all the officers involved, including General Manettas, should be placed temporarily on the retired list—a moderate penalty in all the circumstances—and the incident may for the moment be regarded as closed. The situation in the country, however, has caused the Government to send General Pangalos hurriedly to Crete, where he will be confined to Izzeddin Prison. It had had knowledge for some time of a movement on foot in favour of the

ex-Dictator; but, until the recent trouble in connexion with the Army arose, it had felt strong enough to cope with any disturbances made by the Pangalists. The removal of General Manettas is likely to be widely resented in the Army, and, in the present state of discipline of that force, the Government has rightly decided that it will try to avoid having to face two troubles at once. Whether the existence of some sympathy with General Pangalos, who has now been under arrest for over five months, will stand him in good stead at his trial when it is held, or will still further prejudice him, remains to be seen. In the meantime it is unfortunate that the Press of the country should continue to lend itself to the embitterment of political passions. The Coalition Government was formed because the people clearly demanded one; and the leaders have come together in an honest attempt to make a success of the coalition. The newspapers alone seem to plough a furrow of hate and bitterness.

Cyprus.

There is a homely directness of speech, as well as a ring of practical sympathy, in the speech of the new Governor of Cyprus to the Legislative Council (a summary of which appears elsewhere in this issue) that augurs well for the new régime on the island. Sir Ronald Storrs has gone straight to the root of Cyprus's problems, for there will be much less hankering after the unattainable, if economic conditions in the island are satisfactory. He is anxious to get into touch with the "realities" of rural life, in regard to which available information is so conflicting, and although committees to this end have been appointed before, we may expect that the Central Committee and the Local Committees that will now set to work on the subject will delve deeper than their predecessors. The difficulties that beset the agricultural population are admitted. Sir Ronald Storrs put his finger on one in the trenchant phrase that "the forest and the goat cannot live together," and one of the problems will be to find room for both. It cannot be done in the way that the flock-owners suggest, by according them extended rights to graze their flocks in State forests. Cyprus cannot afford to forgo the potential revenue of £2,500,000 that the forests under careful exploitation and development represent; but it should be possible to find sustenance for a sufficient number of goats, which are regarded at present as the irreplaceable means of subsistence for the very poor, without threatening the existence of the forests. The speech is not likely to have disappointed those who heard it. The hopes based upon his governorship have run so high that they had materialised into "promises" attributed to the new Governor before he had even reached the island. The fact that Sir Ronald Storrs made no such promises does not detract from the promise of all his earliest acts, not to mention the prospect that the island has of obtaining at long last relief from the unfair Tribute.

The Jews and Palestine.

It is manifest that at the moment the Zionists are making special efforts in conducting propaganda in foreign countries so that the depression which marked Zionist enterprises in Palestine last year may be to some extent set off. The results, indeed, of the campaign of such men as Dr. Weizmann in America and of Mr. Sokolow in Germany, are already visible in the amounts subscribed in support of the Zionist cause. Money is flowing into the Keren Hayesod in a way that is by no means disappointing the Zionist officials. And yet, in spite of the fact that the number of Jews in Palestine has been officially declared at 158,000—a higher figure than that commonly imagined—and the number of Muslims and of Christians combined as 719,000—a lower figure than that hitherto accepted—there is a certain reluctance on the part of both of certain Jewish and non-Jewish observers to pronounce the Palestine policy a success. There still seems to be a considerable section of Jews—exemplified by the recent declarations of "Liberal" Jews in Germany—who believe that the

Constantinople, January 26.

America and Turkey.

The most prominent question at the present moment is that arising out of the rejection by the American Senate of the Lausanne Treaty with Turkey. As was to be expected, this fact has rudely shaken official circles, but little indication of annoyance has been allowed to be manifested. The refusal to ratify is considered as resulting entirely from the anti-Turkish propaganda of Senator King and the former American ambassador to Turkey, Mr. Morgenthau, but it is undoubtedly far from Turkey's intention to do anything which might be construed by these Turcophobes as justifying their campaign against Turkey. Contrary to what at first seemed inevitable, it now appears quite possible that a further provisional commercial agreement may be negotiated. According to reports from Angora—where Admiral Bristol, the American High Commissioner, has gone to communicate the Senate's decision—everything tending to strengthen American confidence in Turkey's present Government is likely to be done. As it is considered that anti-Turkish elements in America would expect Turkey to have immediate recourse to reprisals on the decision becoming known, the apparent intention of the Government is to take everything very calmly and to deprive all enemies in the United States of any "I told you so" satisfaction by extending every possible facility to commercial, religious and educational institutions. It is, however, too soon to form any correct estimate of what will actually take place, but Press publications have the air of having been warned against resorting to any bitter comment which is likely to have undesirable effects. American circles here naturally manifest considerable perturbation at the non-ratification of the Treaty, as in the event of non-renewal of the provisional commercial comment which is likely to have undesirable effects. Another petition for the re-submission of the Treaty to the Senate is being sent to Washington by the American community in Turkey, and this is receiving the whole-hearted support of Admiral Bristol. As a precautionary measure all goods of American origin which were in the Customs warehouses here on the reception of the news concerning the non-ratification were immediately cleared, so that if the commercial accord really expires on February 20, the coefficient of eight or twelve will only affect future consignments.

The Aviation League.

The Aviation League of Turkey is undoubtedly the most enterprising organisation in the country. Apart from the numerous lotteries which have been organised for its benefit, it now appears probable that certain monopolies will be constituted which will be a continuous source of revenue. Considerable funds have already been amassed by this means, but to-day papers publish the information that the League intends to acquire a monopoly for the supply of hats. The sale of old fezes brought in a good figure and the sale of new hats to the wearers of the former is certainly a paying business. No stone is being left unturned in the quest for funds for the Aviation

League, and in this manner Turkey will doubtless possess—about a year hence—an air service of really first-class proportions. The above League has already about 15,000,000 liras at its disposal for the purchase of aircraft, but in spite of this fact aircraft constructors in England are apparently making no exceptional efforts to sell their machines to Turkey. Perhaps when they realise that Turkey has acquired a considerable fleet they will make attempts to secure orders already obtained by foreign competitors.

Papa Eftim.

Papa Eftim who, since his excommunication, has become a figure of public interest, and, as a result of his ridiculous activities, the object of innumerable cartoons, has once again had his hopes of immense riches dashed to the ground. He has lost his 100,000 liras claim against the Patriarchate for defamation of character. Despite the fact that he enjoys little sympathy or respect his church is invariably full. The congregation comprises few worshippers, however, as the majority goes for amusement as it would to a theatre. He apparently still cherishes certain hopes of future affluence, as there are yet over 50 cases filed by him against various individuals to be heard in the Turkish courts.

Census of Angora.

The census of Angora which has now been taken gives some idea of what the result of the complete census for Turkey is likely to be. Angora's population amounts to no more than 53,000 natives and 6,000 foreigners as compared with previous statistics which give the number of inhabitants as 100,000. Instead of a population of 12,000,000 in Turkey the ultimate figures will undoubtedly prove 6,000,000 to be nearer the mark.

Cairo, January 23.

An Alexandria By-Election.

The first defeat sustained by the Wafd in a by-election during the life of the present Parliament occurred last Wednesday in the Minet-el-Bassel constituency of Alexandria, where Mahgoub Sabet Bey, an Independent candidate, defeated the Wafd nominee by seven votes in a total poll of nineteen hundred. The defeat is not a very complete one, for Mahgoub Bey all through maintained that he was quite as good a Zaghloulite as his opponent, but had not been sufficiently fortunate to secure the endorsement of his candidature by the party's central executive. And as soon as the result was known the victor telegraphed to Zaghloul Pasha assuring the latter of adherence to the principles for which he stands—whatever they may be. Nevertheless, there are one or two significant features of the election. It is the first held in Alexandria since the original Parliamentary elections of 1924, since both in

1925 and 1926 all the Zaghloulst candidates were returned unopposed, in Alexandria constituencies. Again Mahgoub Bey made labour questions the main plank in his political platform, and is described by some of the newspapers as a Labour deputy. If the description is accurate, he is the second in the Chamber which, after succeeding elections, will almost certainly hold a steadily increasing number of legislators whose avowed first concern will be the welfare of the labouring classes. Lastly, not much more than a quarter of the electorate went to the poll to decide what was considered as being a hotly contested political fight.

Officials' Salaries.

Egyptian Cabinet Ministers have decided, says *Al Siassa*, to reduce their own salaries by £E300 annually, without waiting for the approval of Parliament when next year's Budget comes up for discussion. *Al Ahram* says that salaries of Under-Secretaries of State will be reduced, by the same voluntary method, from £E2,000 to £E1,800 annually, and those of Assistant Under-Secretaries of State by £E150 per annum to £E1,500. It is also intended, according to the same authority, to reduce the salaries of officials of rank equivalent to that of Ministers, viz., the Presidents of the Chamber of Deputies and the Senate, the Director of the King's Cabinet, and others, in the same proportion as those of Cabinet Ministers. These are to be the first fruits of the policy of economising all round which the Government has promised Parliament to adopt.

American Undergraduates' Tour.

Six hundred and fifty American undergraduates, including one hundred girls, drawn from universities all over the United States, arrived on Wednesday at Suez in the s.s. *Ryndam*, a Holland-Amerika Line 22,000 ton ship temporarily converted into a floating university. The *Ryndam* left New York last October and, proceeding via the Panama Canal and San Francisco, has visited the Philippines, Japan, China, Siam, Malaya, India, and now Egypt. To-day the *Ryndam* leaves for Haifa, thence going on to Constantinople, Athens and many other European ports, for the itinerary of the cruise, which will conclude in New York Harbour on May 2, embraces most of Western Europe.

Egyptian students have spared no pains to give their American visitors a good impression of this country. Two of the American undergraduates confessed to me yesterday that Egypt was the first country of the tour that had been visited in any spirit other than that of sightseers out for a rather boisterously good time. Here, thanks to the arrangements made by the various Egyptian welcoming committees, there had been a definite attempt to establish contact with university life here and to get to know something of the country's social and political life, as well as to see its monuments. The visit seems to have been a very successful one, from all points of view. The *Ryndam*'s passengers proved themselves very easy to get on with, and many Egyptian students have spent the last three days acting as guides and interpreters to appreciative little parties of Americans. Heliopolis Palace Hotel, where the party has been staying, has been a home of the Charleston these last few days, and last night, at a fancy dress ball held there, a series of exhibition dances was given by American undergraduates, of whom one was a girl, which delighted the hundreds of Cairenes present.

Turkey and Capitulations.

The local Press has been agitated during the past week by a report that the Turkish Minister in Egypt had presented a request that Turkey should be regarded as a Capitulatory Power and that Turkish subjects here should enjoy the same extra-territorial privileges as subjects of any of the Capitulatory Powers. The Arabic newspapers have been very astonished by this news, and have referred sarcastically to the inconsistency of Turkish policy in demanding and securing the termination of Capitulatory rights in Turkey and yet wishing to secure in Egypt the same treatment which the Turkish Government would not concede in its own territory to foreign Powers. The Turkish Minister has not altogether calmed the agitation by declaring that the truth of the matter is not that Turkey has asked for Capitulatory privileges, but only that her subjects should be treated in the same way as those of Powers actually holding Capitulatory rights. This seems to be a distinction without much difference, and has not done much to calm the feelings of Egyptian politicians, shocked by Turkey's having joined the side of Western European nations where the Capitulations, now the subject of continual discussion, are concerned.

Archæological Discoveries.

Although there are rumours that interesting archæological discoveries have been made in the Fayoum and at Sakkara, the Department of Antiquities, following its settled policy of surrounding everything connected with excavations in this country with an impenetrable veil of mystery, refuses to give the least information or to confirm or deny reports. The only archæological news of any interest at the present time concerns the famous bust of Nefertiti, now in the Berlin Museum, where it suddenly appeared soon after the War. The Department of Antiquities declares that this bust was taken from Egypt, without permission, when, at the commencement of hostilities in 1914, the German archæological missions, together with their chief in Egypt, Professor Burchardt, Director of the German Archæological Institute in Cairo, were packed out of the country. Professor Burchardt is now back in this country and has applied for a permit to resume excavations. According to *Al Siassa* this has been refused until the bust of Nefertiti is returned from Berlin. According to the same newspaper there was never any suggestion that the Germans had stolen the bust, but it was alleged that, in 1914, Professor Burchardt took advantage of the ignorance and incompetence of an official of the Antiquities Department who was appointed to carry out with the Professor the "division of the spoil" of the previous season's working by the German Institute. It is alleged that the official was advised to take a comparatively uninteresting statue of Tutankhamen's father-in-law and leave to the excavators the Nefertiti bust. Whether this version is true I have not been able to discover.

IRAQ.*Baghdad, January 18.***Progress in Iraq.**

In the political world perfect calm prevails. The Prime Minister has recently contributed to the local Press a series of articles on "Five Years' Progress in Iraq," written on an encouraging note of some complacency and considerable optimism. "Perhaps," he says, "I seem to have been talking rather of promise than of progress actually achieved. If that is so, it is because Iraq has such enormous potentialities, and one is conscious that if much has been done, very much more remains to be achieved." He deals briefly with agriculture and irrigation, pointing out that during the past five years the already existing irrigation works have been put in a sound condition, the old canals improved, and the bunds made secure against floods. Large schemes have yet to be realised, but everything is ready for further development when the time comes. After a brief summary of the history of oil in Iraq, "the birthplace of the oil industry," Jaafar Pasha refers to the A.P.O.C.'s new refinery at Khaniqin, and to the concession granted in 1925 to the Turkish Petroleum Company. A pipe line to the Persian Gulf or the Mediterranean will sooner or later be laid, but which route will be chosen it is as yet impossible to say.

Turning to the military problem, of which as a soldier and past Minister of Defence he speaks with special knowledge, the Prime Minister thinks that the country now realises that "an Army, and an efficient Army, is essential to the future peace of Iraq." The ideal aimed at is the formation of a small peace army, which could be increased in emergency to a size sufficient for the defence of the country by mobilising the reserves. Great progress has already been made with the aid of British officers, and "when a moderate form of military service by ballot has been introduced, Iraq will be in a fair way to realising this ideal." The Army at present, says Jaafar Pasha, is representative of every grade of Iraq's population; it has already done well in the Kurdish fighting, and an excellent esprit de corps prevails among the officers, whose relations with their British colleagues are most cordial.

The New Factory.

A new industrial enterprise for Iraq was inaugurated with ceremony on January 9, when King Faisal formally opened a wool-spinning factory at Khadhimiya, just outside Baghdad. A large quantity of modern machinery has been imported (unfortunately not from England) by Fattah Pasha and his sons, the owners of the factory, and Arab workmen have been trained to run the plant, which was in full working order for the King's inspection. The High Commissioner attended the opening, with the Prime Minister of Iraq, members of the Cabinet, and about 400 guests. Each process in the conversion of raw wool from the desert into fleecy blankets was explained by Nuri Beg Fattah to the King and the High Commissioner. It is

to be hoped that this undertaking will continue to run smoothly when it is entirely in Arab hands.

General News.

A regular mail service of Imperial Airways from Cairo to Karachi has begun to pass through Baghdad. The first air liner to carry mails was delayed at Gaza by heavy rain which made the aerodrome water-logged; the same conditions are liable to occur at Baghdad, interrupting the regularity of the service, until mud-proof aerodromes can be constructed.

The first attack on trans-desert motor traffic since the resumption of the Damascus route occurred on January 14, when a local company's convoy was attacked and held up about 100 miles from Damascus. The driver and one passenger were captured, but were later released and subsequently made their way to Rutbah. The French authorities are reported to be making every effort to prevent the recurrence of such raids on desert traffic.

A lakh of rupees has been sanctioned by the Parliament of Iraq for expenditure on the Technical School, which is to be made suitable for the temporary residence of the King until a new Royal Palace can be built.

General Hammond has completed his investigation into the working and prospects of the Iraq Railways, and leaves the country from Basrah next week.

A familiar feature in Baghdad has disappeared with the imminent disbanding of the Iraq Levies, who among their other duties have for some years past provided guards for the British Residency and Air Headquarters. The smart and efficient appearance of these men at their sentry posts has been a daily reminder of what can be done by discipline to transform savages into soldiers; for the Levies were recruited during the Occupation from among the wildest tribal districts of Iraq. Their guard duties are now taken over by Indian troops.

Important results of this season's work are announced by the archaeologists who are excavating at Ur of the Chaldees. Some interesting discoveries have thrown light on daily life at Ur some four thousand years ago, showing that the architectural plan of the normal dwelling house very much resembled that still employed in Baghdad to-day: the two-storied hollow square of rooms round a central courtyard open to the sky. Many of the graves and buildings have been plundered, probably during a sack of the town, but the archaeologists have secured a number of tablets of great interest and importance.

ROUMANIA.*Bucharest, January 25.***Roumanian Railways.**

Now that the Budget estimates have been passed by Parliament, the main pre-occupation of the Roumanian Government appears to be the condition of the railways. For years efforts have been made periodically to raise a loan abroad with a view to undertaking the necessary

The Indo-European Telegraph Co., Ltd.,

repairs and additions to the Railway system in order to bring it up to the standard required to meet the exigencies of the ever-growing trade and industry of the country. Hitherto all efforts to raise an adequate loan have failed. Meanwhile the condition of the railways has not improved. Traffic has increased with the rising of the industries, and the permanent way is being subjected daily to an abnormal strain, so that the conversion to double track of many of the single lines, especially on international routes, is becoming a crying necessity. Moreover, in view of the new trade currents created by the Union of the Provinces several small lines are required to link up the systems in the new Provinces with each other and with the Old Kingdom.

The urgency of finding some means of placing the transport system on a more satisfactory basis appears to be officially recognised, but apparently no sufficiently tempting terms have yet been offered to attract foreign capital to this enterprise. For their first financial year as a semi-independent institution the Railways have showed no deficit in their Budget. Their revenues have been greatly assisted by the very considerable increase of tariffs, both for passenger and goods traffic, introduced during the year just passed, and which have brought the cost of travelling in Roumania approximately up to the gold level. A second-class ticket from Bucharest to Ploeshti now costs about 4s. 6d. by an ordinary fast train and over 6s. by an express. The distance is about 60 kilometres. A certain improvement has been noticeable in the last two years in the condition of the passenger carriages used, and in the general comfort of travelling, though it is still not uncommon to have to pass a night in darkness because the lighting installation will not work. This, however, is not so much due to lack of funds as to lack of organisation or of efficient staff.

The proposal to create an Under-Secretary for Railways, into whose hands a great deal of the power would come which is now vested in the Secretary General, is still meeting with strong opposition both from the Liberal and other Opposition benches. The Press too expressed a firm disapproval of the re-introduction of a strong political element into the Railway administration—which element the last Government was at such pains to remove, being assured that a greater stability would be lent to the organisation by rendering the higher posts permanent and independent of political changes. This step on the part of the Averescu Government has gone far to add to the estrangement between itself and the Liberals which was first caused by the Italian loan, so that the Government can no longer reckon on the Liberals as a friendly opposition. It is perhaps partly for this reason that an attempt appears recently to have been made to attract M. Maniu's (Nationalist) Party to the side of the Government. Should such a combination be effected the Government would undoubtedly be greatly fortified and rendered independent of Liberal support; indeed they might even be able to defy the Liberals. Negotiations for the union of the Government and National Parties do not seem to make very rapid progress, however, and it is more than probable that they may once more come to naught.

The National Bank.

Those interested in Roumanian finance may remember that the post of Governor of the National Bank has been filled for the last four years with much dignity and wisdom by M. Oromolu, who though a political adherent of M. Iorga, has put aside all political considerations during his term of office, and enjoyed alike the confidence of all political parties, including that of the Liberals, under whose régime he took office. The legal term of M. Oromolu's office having come to an end at the beginning of this year, a new governor has been appointed in the person of M. Demitre Burilleanu, whose appointment likewise has received the approval of the public and the Press of all parties. His qualifications for the post are

said to lie less in any outstanding financial capacity than in the universal respect he enjoys as a man of moderation and of integrity and political impartiality.

Bessarabia and Bukovina.

Another important appointment which has just been made is that of General Rascanu (formerly Minister of War) to the post of High Commissioner for Bessarabia and Bukovina. It is a matter of common knowledge that a large proportion of the population of these two provinces, annexed to Roumania since the War, represent elements alien to the Roumanian nationality and, alas, only too often, to the spirit of the Roumanian rule. In order to attract those alien elements—represented by Russians in Bessarabia, and Austrians and Poles in Bukovina, there is need of a wise, moderate and impartial régime in these provinces, and it is confidently hoped that the appointment of General Rascanu will be an important step towards the realisation of more desirable conditions in these provinces.

"THE PALESTINE WEEKLY."

The *Palestine Weekly* has published its fourth annual tourist number, entitled: "Palestine 1927." In an editorial forward a somewhat gloomy view of the situation of Palestine is provided. "Commerce, industry and agriculture groan under a load of disappointments and debts which are not likely to pass away so quickly." "Palestine has lived beyond its means for the past nine years." "The rate at which improvements have been introduced has been too rapid for such a small country as Palestine." Such are the sentiments of the Editor, who endeavours to show, however, "what Palestine has been doing during 1926, in spite of adverse conditions." The issue contains articles upon Immigration and Travel in 1926, Posts, Telegraphs, and Telephones, Achad Haam, Electric Power in Palestine, and a Commercial section. Abundant illustrations have been provided.

CYPRUS LEGISLATIVE COUNCIL.

The Governor's Inaugural Speech.

The following is the text of a speech delivered by Sir Ronald Storrs, Governor of Cyprus, at the opening of the Legislative Council on January 17:—

"At my first formal opening of the Legislative Council I desire to express to Honourable Members my deep sense of the privilege that has been accorded me of being for a while associated with the destinies of Cyprus, together with my earnest hope that, with your advice and assistance, the Government may be enabled to raise the Island from the economic depression with which, like larger countries better able to bear it, she is afflicted.

"The year 1926 produced bad wheat and olive crops: barley, vetches, cotton, carob and grape were, however, good. The new factories established during the year for the manufacture of wine at Perapedhi, sumac at Limassol, and silk at Yeroshipu all gave an impetus to the production of these commodities. The importation of chemical manure continued on a large scale and there was a considerable exportation of live-stock. There seems to be no reason why, with due encouragement from the Government, and enterprise on the part of landowners, tobacco should not be grown as in the neighbouring islands, with the notable advantage of a twenty-five per cent. preference in British markets.

Trade in 1926.

"The imports for 1926, amounting to £1,570,166, show a decrease of £30,270, chiefly on account of decrease in mining machinery of which there were large importations in 1925. A more serious decrease is that of the exports for 1926 of the value of £1,103,651 (excluding invisible exports in the shape of emigrant remittances and Mining Companies' wages, amounting to at least £250,000), representing a decrease of £94,924 over those of 1925. The details and reasons for these are as follows:—Carobs £77,000 owing to greatly reduced prices and adverse customs tariff erected by Spain. Silk cocoons £17,500. The cocoons were bought up locally and used by the Cyprus Filature Company. The spun silk will be exported later. Cotton £15,000 owing to lower world prices, although quantities exported were normal. Pyrites £53,400 due to reduced prices and, owing to the coal strike, lack of ships to remove material. Mules £12,000 owing to fewer exportations. I am glad, however, to be able to report that exports showed a marked increase during the last quarter of the year and continue to be good. It is anticipated that carobs and pyrites, the two largest of the above items, will show large increases during 1927. Four hundred and ninety-eight steamers with a total tonnage of 753,724 visited the Island in 1926, as against four hundred and nine with a tonnage of 630,561 in 1925. In view of this increase special attention will be given during the current year to the question of increased harbour facilities, upon which reports were made in 1926 by a firm of Consulting Engineers. Such necessarily costly projects have to be considered with other major items clearly indicating the ultimate issue of a public loan.

"General comment on the Revenue and Expenditure is precluded as the final figures for 1926 are not yet available for the purpose of practical comparison. With the disappearance of the tithes, and the consequent exhaustion of the balance now in the Locust Destruction Fund, provision will have to be made annually out of current revenue for meeting the cost of the usual campaign and the contribution on account of the harbour and railway loans.

"You will observe that your recommendations with reference to certain items of additional taxation have been accepted, and the increased customs dues upon machinery and manure not imposed. Furthermore, demands for increase of staff in the Departments will not be entertained

until proved necessary after the increase of official hours of work from 30, which I consider inadequate, to 35 hours per week, which takes effect forthwith.

"In order to encourage production, the crafts and local enterprise in general, and to diminish the adverse balance of imports over exports, stringent instructions have been issued that, whenever practicable, Cyprus materials and Cyprus workmanship are to be employed for the purposes of the Government.

"Honourable Members are aware that a Commission has recently been appointed to examine the present system of taxation in Cyprus and to make recommendations with special reference to the needs of Agriculture and Commerce.

"The health of the Island has been on the whole good, and although cases of plague and typhus fever have occurred in all the surrounding countries, Cyprus still remains free of these diseases. The Sanatorium at Athalassa was opened in March, and 56 cases have been treated, with 36 deaths. It is to be regretted that patients arrive for treatment when illness is too far advanced for cure. Heavy rain in July brought about an increase in the number of Malaria cases, and I am exploring the possibilities of an extensive campaign in this direction. As an immediate and general measure, the system of village compounders is being completed so soon as the necessary staff can be procured.

Public Works.

"The general situation of the roads cannot be regarded as favourable. The type of construction which sufficed up to a few years ago will not stand up to the increasing traffic rising now on main roads as high as 900 tons daily concentrated on a single track, and the total loss by wear has for some time probably exceeded the repairs possible. Good means of communication are essential to prosperity, and to meet future requirements extensive reconstruction and widening will be required. For the time being, however, the funds available provide only for the minimum of maintenance.

"On the advice of a well-known firm of Consulting Engineers, a survey of possible "Second-water" bearing areas was started in 1926 by means of trial borings, and is being continued in the current year. Of eleven borings completed up to date five have produced a good supply of water. Provision has been made in the current Estimates for carrying on this work under the supervision of a specialist. Water being one of the chief needs of Cyprus, I trust that a successful outcome of these experiments will result in the increased production and prosperity of the Island.

"The sanitary water supply of the Capital is insufficient in quantity and liable to contamination in many ways. A report on the matter was made by Consulting Engineers last year and provision has been made in the 1927 Estimates for carrying out preliminary investigations for a new supply as recommended by them.

"The appointment of an experienced Mining Engineer as Inspector of Mines has resulted in a marked improvement in the amount of work done on prospecting areas owing to the supervision that has since been possible. The services of this Inspector are being placed at the disposal of prospecting permit holders, many of whom have little or no knowledge of mining, in return for a

fee. Generally there appears a good prospect of an increase in mining activities during the current year and in particular it is anticipated that a large Athenian Company will start a new mine in the near future and eventually provide employment for upwards of 1,000 workmen.

The Forest and the Goat.

"In Cyprus, as generally elsewhere, the prosperity of the peasant is the prosperity of the Island. Upon this vital matter so many conflicting and unsupported generalisations are current, and so little exact information is available, that I have appointed Central and Local Committees to examine and report upon the realities of rural life with the view of providing the Government with an authoritative exposition of the situation, which will enable it to understand, and so better execute its responsibilities towards the admitted difficulties of the agricultural population. One of the most immediate of these is the development and extension of agricultural credit, a problem which is engaging the attention of a second Commission which will be able to avail itself, if necessary, of the data in process of collection by the first. No less imperative is the need of technical, and especially of decentralised agricultural education. The benefits everywhere, and especially in a country like Cyprus, of afforestation on a large scale are incontrovertible: yet there is not a more controversial topic in the Island than the extent to which forests should be allowed to grow. Forestry in Cyprus conserves rainfall, clothes ground unfit for agriculture, moderates extremes of climate, improves by stream-shifted deposits agricultural lands, provides in timber one of the staples of civilisation, creates regular employment and small holdings for foresters, adds health to the air and beauty to the landscape and represents at a modest estimate a cash value of £2,500,000. But the forest and the goat cannot live together, and the goat is said to be for Cyprus what the pig is for Ireland or the camel for Arabia: the irreplaceable means of subsistence for the very poor. For the better study, therefore, of these mutual advantages and grievances an official investigation is being conducted into the methods and operation of the Forest Department. Effect is also being given to the recommendations of the Social Hygiene Committee, with whom I conferred both in London and in Egypt, before and after their visit to Cyprus, and I am arranging for an expert to report, in the course of the year, upon the progress achieved thereon.

"I am re-examining the questions of external mails,

transport and communications. For the study of these and of other commercial questions, (such for instance as the revision of the Law relating to Partnerships, Bills of Exchange, the extension of the Hire Purchase System, Bankruptcy), for the formation of a body of considered and representative opinion of producers, exporters, and importers, I am convinced that the Island cannot fail to benefit by the establishment of a Chamber of Commerce: and for such a project, though essentially non-governmental in character, I am ready, if approached, to give advice and assistance.

Le Doux Pays de Chypre.

"Not least among the resources of this ancient land are those relics of the past whose discovery is a romance, whose conservation a pious duty and whose explanation and display to voyagers of all nations should be the pride and the privilege of its inhabitants. Much has been done in this direction, but much more remains to be done, and Honourable Members will, I am sure, learn with pleasure that two learned and distinguished Societies have requested permission to conduct excavations in the Island, and that their requests are occupying the favourable attention of the Government. The suitable preservation of these and other spots is a responsibility as well as an honour, and I am shortly recommending to your notice a Bill for the control of advertisements, drafted on the lines which have been found necessary, useful, and in the end profitable in other historic countries. You will be pleased to learn that one well-known Company has already set the example, soon doubtless to be followed by others, by removing unsightly hoardings from the public road side. It order that Cyprus should derive her due benefit from the visitors who will not fail to profit by the above and other amenities, it is essential that adequate accommodation for foreign Automobile Associations, should be provided and connexions established. I therefore arranged whilst in London that the representative of a well-known travelling agency should visit Cyprus, and advise upon the steps to be taken for the encouragement and reception of visitors. This gentleman left the Island last week, and I am awaiting his report.

"Finally, it has been brought to my notice that Cyprus is still without a public library, and that the want of some such institution is increasingly felt. I therefore propose appointing a Commission to make recommendations, which, I would assure them in advance, will receive the sympathetic and practical consideration of the Government."

The Governor, in conclusion, enumerated the measures which the Council would be invited to consider.

The new regulations come into force this year, and the Governments interested have requested that they should be revised.

Book Reviews

SAILING ACROSS EUROPE.

"*SAILING ACROSS EUROPE.*" By Negley Farson. (London: Hutchinson and Co. 21s. net.)

Mr. (Skipper) and Mrs. (Crew) Negley Farson, two young Americans, full of good spirits, good health and enterprise, are the heroes of this book. They wanted to sail across Europe, and achieved it, in a little six ton, 26 foot clinker-built yawl with auxiliary engine, which they bought at Southampton in eminently unseaworthy condition. Starting from Rotterdam on June 15, 1925, they arrived at Sulina on the Black Sea the following December 10. Their route was by the Rhine and the Main, then through the old and little-used Ludwigs Kanal to the Danube. From Budapest they made excursions to the great Hungarian plains, from Belgrade they motored through Bosnia and Herzegovina to Ragusa, Cattaro and Cettigne, from Rustchuk they visited Bucharest and Sofia, and from Galatz they did an illicit trip to the Bessarabian coast.

They had their adventures, as might be expected, but the skipper and his crew took them all in the day's work, and the former touches but lightly on them in his book. They kept their eyes and ears open (the fact that they could speak German and Russian was of great assistance to them), and the result is a very jolly book. They saw things from a very different angle from that to which the ordinary tourist accustoms us. They were also delightfully free from national prejudice and had a natural propensity to see the good in those they met, resisting the temptation to be humorous in the somewhat "superior" attitude which we all know too well. Not that they had not their preferences. In the Near East they clearly greatly preferred the Hungarians and Bulgarians to the Roumanians.

It is not to be expected from a book of this nature that it should be a mine of statistical information. To this it makes no pretension. But its easy, cheery narrative does give a life-like idea of how things were a year ago in the queer parts of the Near East where the Great War has brought about such extraordinary political changes. We should have liked to quote something typical of this excellent book, but to do the author justice, we should have had to occupy more space than can be allotted.

Mr. Farson has added greatly to the interest of his account of his travels by using his camera freely and wisely, giving us in many cases photographs quite outside the usual illustrations of travel books in the countries concerned.

C. S-W.

THE DECLINE AND FALL OF THE MAHRATTA EMPIRE.

"*HISTORY OF THE MARATHA PEOPLE,*" Volume III, By C. A. Kincaid and D. B. Parasnis (Oxford University Press, 10s. 6d. net.)

In this, the final volume of the history, the story is somewhat compressed, for the reason given by Mr. Kincaid in his preface: that, as the book is primarily intended for Indian readers, the glorious period of the Mahratta kingdom will prove, to them, more interesting than its decline and fall. The first few chapters deal with the period when, under the Peshwa Balaji--no unworthy successor of the great Bajirao I--the Mahratta Empire reached its zenith; when its armies were on the point of overwhelming the last fragments of Mogul rule in the Deccan, which must inevitably have been followed by the conquest of Mysore. One does not forget that it was the Mahratta victories in the Deccan that gave Clive a free hand in Bengal and that, in the author's words, "did the English the best turn ever done them by a foreigner," thus consolidating the power that was eventually to subjugate them. After the death of Balaji, the only great Mahratta figure remaining on the stage was the Minister Nana Phadnavis; with whom, at his death in 1800, "departed all the wisdom and moderation of the Mahratta Government," the final fall of which came 18 years later, when the last of the Peshwas surrendered to the British.

Among the other great men of the time, the reader meets the Frenchmen de Bussy and de Boigne, and learns something of the astonishing career of the latter—an officer in the French, Russian and British services, a favourite of the Empress Catherine, sold as a slave in Turkey and captured by Arabs in Egypt, and finally—with an interval as a business man in Lucknow—in the service of the Maharaja of Gwalior. Also that remarkable man, Hyder Ali, who established himself as ruler of Mysore with the assistance of the Brahman Khanderao and then turned against the latter, who fled for protection to a neighbouring Raja, only to be surrendered by the latter on Hyder Ali's promise to "care for him as he would a pet parrot"—a promise that he fulfilled by confining him in a cage and feeding him on rice and water till his death.

THE "MOSLEM WORLD."

The January issue of the *Moslem World* is a Persia number. In it are articles upon "Universality of Early Islam," by E. E. Elder, "The Sect of the Ahl-i-Haqq," by Saed Khan, "The Approach to Shiah Islam," by U. S. Eardly, H. C. Schuler, and W. McE. Miller, and an editorial article upon "The Keystone of the Arch," in which it is suggested that the Dar-ul-Islam, of which Persia is the centre, is crumbling in the arch of its temple. The issue contains other interesting matter, both in the form of essays, of comment on current events, and of book reviews.

"FOREIGN AFFAIRS."

The January issue of that admirable American publication, *Foreign Affairs*, contains two articles in particular that will interest readers of THE NEAR EAST AND INDIA: "Three Days in Belgrade: July, 1914," by Hamilton Fish Armstrong, and "Downing Street and Arab Potentates." The first is a vivid description of the immediate events which led to the declaration by Austria-Hungary of war upon Serbia: it is a most readable essay. The second article explains the relations between Britain and the various Arab chieftains, and concludes that "the recent treaties between England and Ibn Saoud are an inevitable sequence of events in Arabia."

THE BOLSHEVIST MENACE TO INDIA'S EASTERN FRONTIER.

By LT.-GENERAL SIR GEORGE MACMUNN, K.C.B.,
K.C.S.I., D.S.O.

The Commander-in-Chief in India, Field-Marshal Sir William Birdwood, has just returned from travelling into the districts far up the valleys of the Chindwin and Irrawaddi rivers, into country that is in many ways the Ultima Thule of our administration. But what would normally be but an interesting tour in a military district of little importance is now of some Imperial moment. The River Irrawaddi is a mighty waterway, and in its course to the sea runs through three transverse ranges of hills after it has left the gorges of the vast mountains from which it derives. The two lower defiles are navigable at all times, but the Third or Upper Defile is impassable for six months of the year when the snow waters rise and the rains succeed to the melting snows. In those months only country boats hauled painfully by hand through the rapids can get up. In the earlier days of our occupation this upper district was practically cut off from the rest of Burma by the flood season. For the last twenty years, however, a railway has come up from below, and brought access on the west of the river to the isolated districts of Mogaung and Myitkhyina. Above the Third Defile the people on both banks are largely Kachin, a strange Mongoloid people, who after some years of resistance to British influence have now settled down to be some of the best of our Burman fellow subjects, and during the War sent forth soldiers that showed some of the best qualities of the Gurkhas. Above the Third Defile, the Burmo-Chinese frontier runs some forty miles or so to the east of the river. Across it various trade routes from the province of Yunnan, from Tali and Yunnan-fu come down into Myitkhyina and across to the Jade mines at Mogaung, or just below the defile into the town of Bhamo on the river. It was to protect these trade routes that we first penetrated the forests and jungles of the mountains which edge the river, and which landed us in some years of mountain warfare before the Pax Britannica reigned with the border.

Now these trade routes lead either to the valley of the Yangtzekiang or to that of the West River in the province of Yunnan. The Yangtze is navigable for many hundred miles above Hankow, and the route is a much used and extremely populous one right up to the mountains in which the upper courses of the Mekong, Salween and

Irrawaddi, run in deep parallel gorges in close proximity. The routes from Burma first rise and fall over these successive ranges, and then come into the open road of the Yangtze valley. Now if the Chinese are to continue their anti-British philo-Bolshevist cause, and are going to follow up the line indicated by aiding the frenzied policy of Moscow, the road to Burma lies singularly open.

For the last forty years British and Chinese military posts have looked at each other across the border, but the Chinese attitude, once certain misunderstandings had been cleared up, has always been friendly and correct, and any military danger from that side has long seemed faint, so that the Burma garrison has been reduced to a second-class military district with only enough troops to back up the military police in the event of trouble with the mountain tribes. During these years of peace the trade routes have been improved, and the way not only for propaganda and for agents but also for a few thousand troops is easy enough. The prospect might easily become serious and difficult to handle, and call for considerable effort in a terrain where effort is not easy.

Another interesting point exists. Some fifty miles above Myitkhyina, the Irrawaddi breaks into two rivers, the Nmai-Kha on the east and the Nmali-Kha on the west, the two branches still running parallel from north to south. The country beyond the Confluence, as the junction is termed, very mountainous and thickly wooded, is occupied by tribes of Kachins who have never been brought under any form of administration. They have hardly been visited even since Colonel Yule's column crossed the "Mai-Kha" in 1892, or since Prince Henry of Orleans' adventurous route took him across the gorges some miles further north in the next year. Sir Harcourt Butler, Governor of Burma, was, it will be remembered, exceedingly successful a year or so ago in persuading the slave-owning, head-hunting tribes further west in the Chin hills to abandon their slave habits and ruthless ways, and it has long been thought that the time was ripe to introduce some form of control and progress among the Kachin tribes north of the Confluence, especially since the remainder of the Kachins have taken so kindly to British influence. Sir William Birdwood will see for himself what the country is like should any military assistance be necessary, and will also realise what steps Bolshevist action might render necessary. It is certainly vexatious that the Government of India, while anxiously studying the Bolshevist attempts to penetrate Afghanistan and to get at India by way of Kabul, should now be compelled to keep an eye on so opposite a direction as the upper waters of the Irrawaddi.

MAYFAIR 1556

Calcutta, Delhi, Simla, Lahore, Rawa.
Pindi and Murree.

A general and foreign wireless service was established in Teheran in January 28 for the first time.

M. Ponsot, High Commissioner in Syria, arrived in Jerusalem on January 25 from Beyrout as the guest for two days of Lord Plumer, British High Commissioner in Palestine. He proceeded thence to Cairo and lunched with Lord Lloyd on January 28. M. Ponsot sailed from Alexandria for France on January 29.

Dr. Muthulakshmi Ammal, the first woman member of any Indian Legislature, who was recently elected deputy-president of the Madras Legislative Council, presided on January 27 during a part of the session. Mrs. Ammal said that Madras had set an example to the whole world in placing a woman in the high position she held, and appealed for the sympathy and help of the members in her task.

An Indian Army instruction notifies that the Secretary of State for India has decided to continue for a further period of six months with effect from January 1, 1927, the provisional increase of 25 per cent. to all pensioners under the Indian Military Service Family Pension regulations, and to pensioners of the Indian Military Widows and Orphans Fund who were on the pension list up to December, 1926.

NOTES OF THE WEEK.

(Continued from page 106.)

"territorialisation" of Zionism is inimical to the best Jewish interests; and there still exists a body of opinion—exemplified by some articles published in *Le Temps* in December—which insists that the alleged reluctance of Jews to leave their countries in order to form a new community in Palestine implies that Zionism is not what the majority of Jews desire. According to this argument, the fact that but a small section of the Jewish community can ever reside in Palestine should impel Jews in general rather to seek fusion with the peoples among whom they live than to "nationalise Judaism." However this may be, it is quite certain that the next year or two will be vital for the Zionists, who could not easily support again so unhappy an experience as befel them last year. But the signs point to a change in the situation in Palestine in 1927, during which, not only will the greatest industrial schemes of the Zionists be launched, but also the Municipal Franchise Ordinance, upon which such hopes of the eventual formation of a Palestinian nation are being set, will be put into operation. More and more Palestine is to be seen as the theatre in which a world-interesting drama is being played, a drama the *dénouement* of which is still upon the knees of the gods.

Government and Tel-Aviv.

In the meantime it is difficult to resist the conclusion that some at least of the anxieties of the Zionists in Palestine are of their own making. It has just been announced that Government has had to intervene in the local affairs of the purely Jewish town of Tel-Aviv, which have for some time been dominated by what it is the fashion to call "Labour" politicians. This municipality's finances appear to have been managed on most extravagant lines, and the Jerusalem Government, which is resolved to harbour no Poplars in Palestine, has had rigidly to control the Budget of Tel-Aviv. It is said that the Government has ordered, among other things, that the Tel-Aviv Council must sign no contracts for any sum higher than £E100 without the approval of the District Commissioner, that the Budget must include a sum of not less than £E20,000 to meet the sinking fund charges of the municipal debt (which now amounts to £E260,000); and that the Government's approval to accept a loan of £E15,000 from the Palestine Zionist Executive to help unemployment (it will be remembered that the Government came to the rescue of Tel-Aviv in this matter but a few weeks ago) is subject to the previous repayment of the existing loan made by the Government for the same purpose. All this no doubt is galling to the inhabitants of Tel-Aviv, but the Government is unquestionably right in attempting to get Tel-Aviv to adopt similar financial methods to those which have been officially pursued in Jerusalem with such gratifying results.

Arabia and Turkey.

Slowly and quietly but surely Turkey appears to be gaining that prestige in the world of Islam which she appeared deliberately to have forgone when she abolished the Ottoman Caliphate. Particularly is this noticeable in the relations now being formed between the Angora Government and the various sections of the old Ottoman Empire. The Turks have a Minister Plenipotentiary, for instance, in the Hijaz; and the Imam Yahia has at last decided to send a former deputy in the Turkish Parliament, Qadhi Ahmad, to represent him at Angora. Matters between the Nationalists of Anatolia and the various Arab potentates who have gained their independence either by the defeat or the defection of the Turks are, happily, becoming normal. It was a sign of the times, for instance, that the Turks and the Yamanites did last year send representatives to the Islamic Conference at Mecca, and equally so that the Turks should now be ranking the highest, in the diplomatic sense, at Jidda. Whatever may be said of certain individuals of the Turkish Government, the Turkish nation as a whole remains fundamentally Muslim; and as such it must always preserve close ties with the Jazirat ul

Arab. Nor should any well-wisher to Islam wish it otherwise. For if Turkey is borrowing largely from Europe (at least in the non-financial sense), so also is Arabia at last endeavouring to avail herself of whatever advantages the West may be thought by her to possess. It seems probable in fact that this generation will witness remarkable material development in the Peninsula which has for so long resisted the "earthy" hands of the Nasrani.

THE TREATY OF MECCA.

The *Daily Telegraph* of January 28 published an English translation (taken from the *Umm al Qura*, the Mecca weekly journal) of the text of a Treaty signed at Mecca on October 21 by his Majesty the King of the Hijaz and Sultan of Najd and its dependencies, of the one part, and Saiyid Hassan ibn Ali Idrisi of the Asir, of the other part, the latter's signature being attested in ratification of the treaty by Ahmad al Sharif as Sanusi. Here is the text:—

Between the King of Hijaz and Sultan of Najd and its dependencies and the Imam Saiyid al Hassan ibn Ali al Idrisi,

Whereas it is desirable to preserve harmony, to safeguard the existence of the Arab countries, and to strengthen the bonds between the Princes of Arabia, his Majesty the King of the Hijaz and Sultan of Najd and its dependencies, Abdul Aziz ibn Abdul Rahman al Faisal al Saoud, and his Honour the Imam of Asir Saiyid Hassan ibn Ali al Idrisi have agreed to conclude the following convention:

1. His Honour the Imam Saiyid Hassan ibn Ali al Idrisi recognises that the territory within the old frontiers defined in the Treaty of 10th Safar, 1339 [October, 1920], made between the Sultan of Najd and the Imam Saiyid Muhammad ibn Ali al Idrisi, which territory was under Idrisi rule at that date, is under the suzerainty of his Majesty the King of the Hijaz and Sultan of Najd and its dependencies in conformity with this convention.

2. The Imam of Asir shall not enter into political relations with any Government and similarly he shall not grant any economic concession except with the previous approval thereof of his Majesty the King of Hijaz and Sultan of Najd and its dependencies.

3. The Imam of Asir shall not declare war on or conclude peace with anyone except with the approval of his Majesty.

5. The King of the Hijaz and Sultan of Najd and its dependencies recognises the rule of the present Imam of Asir over the territories defined in the first article for the period of his life and thereafter the rule thereover of such person as may be agreed upon by the Idrisi family and persons of competency subject to the Imamate.

6. The King of the Hijaz and Sultan of Najd and its dependencies recognises that the internal administration of the territories of Asir and the supervision of the affairs of the tribes thereof, including the power of appointment and dismissal and other functions of internal administration, are the prerogatives of the Imam of Asir, provided that judgments shall be in accordance with the Sharia Law and justice as in the two-Governments.

7. The King of the Hijaz and Sultan of Najd and its dependencies undertakes to prevent any internal or external aggression on the territories of Asir defined in the first article, subject to mutual agreement based on the requirements of any situation and on the dictates of expediency.

8. The two parties undertake to abide by this Treaty and to act in accordance therewith.

9. This Treaty shall become effective after ratification thereof by both High Contracting Parties.

10. This Convention has been drawn up in Arabic in duplicate, and each of the Governments making the Treaty shall preserve one copy thereof.

11. This Treaty shall be known as the "Treaty of Mecca the Blessed."

NEWS IN BRIEF.

While crocodile shooting last week on the Ganges near Cawnpore, Mr. F. Godowin, an engineer, was accidentally shot dead.

The death is announced of Sir Charles Roe, formerly Chief Judge of the Chief Court of the Punjab and Vice-Chancellor of the Punjab University.

It is announced at Belgrade that a congress on Byzantine questions will be held there on April 26, which 110 historians of various nationalities propose to attend.

January 26 was the 42nd anniversary of the death of General Gordon at Khartoum. A wreath was placed on his statue in Trafalgar Square on behalf of the Council of the Shaftesbury Society and Ragged School Union.

The Greek military pilot who landed on Bulgarian territory owing to fog and was detained by the Bulgarian authorities has been released, owing to the explanations offered, and left for Salonika on January 27.

General Bramwell Booth announces that a Salvation Army leper settlement is to be established on the banks of the Ganges, near Benares. The suggestion that the Salvation Army should establish leper colonies in India was made by King George.

The Greek Government on January 26 removed General Pangalos from Averoff Prison, Athens, back to Fort Izzeddin, Crete, as a result of rumours of an attempt to release the ex-Dictator. He was accompanied by a military guard. A decision was taken that the Chamber should try General Pangalos as the Senate is not yet constituted.

The work of the Anglo-Bulgarian Mixed Arbitral Tribunal has been finished, its final meeting taking place on January 28, when the president reviewed the work of the Tribunal.

In the Burma High Court, Rangoon, on January 26, Miss Ma Pwa Hmee, the first Burmese woman barrister, was enrolled a member of the Burmese Bar by the Chief Justice, Sir Guy Rutledge. Mr. Gaunt, the senior Government advocate, introduced Miss Hmee, and the Chief Justice gave her a cordial welcome.

The Royal Commission on Agriculture in India is proceeding to England early in April to take evidence and obtain further material, with a view to preparing its report. The Commission will return to India in the autumn of 1927 in order to complete its itinerary and to write a report.

M. Manoilescu, Roumanian Under-Secretary of State for Finance, arrived in Rome on January 24 at the head of a delegation with the object of negotiating a trade agreement between his country and Italy. The first meeting of the Italian and Roumanian delegations was held the following day.

Relief crews for the Crocus and Cyclamen, stationed in the Persian Gulf, are to proceed to Bombay by freight, and similar arrangements will be made for the return to England of the relieved ratings. The present crews of these sloops joined them at Bombay on March 8, 1925. The Crocus, Commander W. C. Tancred, is manned from Portsmouth, and the Cyclamen, Commander C. R. E. W. Perryman, D.S.C., from Chatham. The commanders having joined since the commission started, it is not expected that they will be relieved yet.

The EPOCH MAKING
DUNLOP
 WELL-BASE RIM
 has been adopted for
95%
 of
 BRITISH CAR OUTPUT
 and also by the
FORD
MOTOR COMPANY
 DETROIT, U.S.A.

Dunlop possess one of the largest and best equipped rim and wheel works in Europe.

DUNLOP RUBBER CO. LTD.,
 BIRMINGHAM, ENGLAND.
 Branches throughout the World.

- Illustration shows
DUNLOP
 CORD TYRE
 mounted on
 WELL-BASE RIM
- A. The WELL embodied in Base of Rim, which makes tyre changing effortless.
 - B. Larger air capacity owing to "WELL."
 - C. Inextensible wire edges to tyre, giving absolute safety.
 - D. Easy access to valve for Inflation and Pressure Testing.
 - E. Triple Stud Tread, giving maximum resistance to side-slip and wheel spin, and increased safety in brake application.

MADE IN ENGLAND.

PERSONAL AND GENERAL

TO-DAY

February 3, 1927 (New Style).

January 21, 1927 (Old Style).

Rajab 30, 1345, A.H., of the Muslim Calendar.

Adar I, 1 5687, of the Jewish Calendar.

King Boris of Bulgaria, who was born on January 30, 1894, celebrated his 33rd birthday last Sunday.

Sir William Keith Murray sailed in the Cathay on January 28 for Port Said.

The Hon. Mrs. Rupert Gwynne sailed from Tilbury on January 28 for Port Said in the Macedonia.

The Hon. Sir William and Lady Erskine left London last week on their return to the British Legation, Sofia.

The Prince of Wales received the Bulgarian Minister (M. Pantcho Haji Mischeff) at St. James's Palace on January 26.

Lord and Lady Montagu of Beaulieu, who are on their way to Persia, arrived at Port Said in the Narkunda on January 26.

The Hon. Mrs. Lascelles left London for Port Sudan on January 28, embarking in the P. and O. Cathay at Tilbury.

The Hon. Mrs. Harold Nicolson left England on January 28 for the British Legation, Teheran, and will be abroad until May.

Viscount Wimborne will arrive at Marseilles on February 11 on his return from India, and will travel overland to London.

Sir Robert and Lady Hudson left on January 28 by the P. and O. s.s. Cathay for Egypt, and are not expected to return to Hill Hall until the end of March.

M. Diomedes, Governor of the National Bank of Greece, left Athens on January 27 for London and will meet M. Venizelos to discuss Greece's War Debt payments.

Mr. L. Harrington, of Messrs. Waring and Gillow, Ltd., is expected to arrive in Egypt on February 7 and not on the 17th as stated in our issue of last week.

Lord and Lady Greenway left London on January 27, to join the s.s. Rawalpindi at Marseilles *en route* for the East. They expect to be away for about two months.

An exhibition of the original pictures and woodcuts illustrating Colonel T. E. Lawrence's book, "Seven Pillars of Wisdom," is being opened on February 7, at the Leicester Galleries, Leicester Square.

Miss A. J. Dickinson, who supervises a cabinet-making school for boys in Bosnia, is, in the Ridley Art Club Exhibition which is being held at Spring Garden Galleries, Trafalgar Square, February 5-19, exhibiting some of the work done.

Mr. Francis Henry Harding, J.P., I.C.S. (retd.), Dorking, Surrey, formerly District and Sessions Judge for the Districts of Minnapur, Chittagong, and Eshahabad, and for thirteen years Secretary of the Dorking Cottage Hospital, left £16,525.

The will of Deputy-Inspector-General Henry Nanton Murray Sedgewick, R.N. (retd.), Southsea, Hants, who was in medical charge of the Naval Brigade during the Abyssinian War in 1868, and assisted Lord Napier at the capture of Magdala, and was fleet surgeon on H.M.S. Inflexible at the bombardment of Alexandria, has been proved at £7,078.

The appointment of Mr. Gregory C. Moses as Consul of Portugal at Calcutta, has been approved by the King.

Among the passengers leaving Liverpool on January 28 by the Bibby Line s.s. Warwickshire for Port Said, were Lieut.-Colonel Sir Emmanuel Hoyle, Bt., J.P., O.B.E., and Lady Hoyle, who, after visiting Egypt, intend to make a tour in the Near East, including Turkey.

Sir Abdur Rahim, the Bengal Muslim leader, finding no Hindu willing to serve with him, has resigned his Ministerial position. His resignation has been accepted by Lord Lytton, and Mr. A. K. Ghuznavi and Mr. Chakravarty have been appointed.

Among the passengers who left London on January 27 to join the P. and O. s.s. Rawalpindi at Marseilles were the Hon. Donald and Mrs. Erskine, and Major-General Sir Reginald and Lady Ford, for Bombay; and Sir William Cross, Lady Dowson, and Sir Harry and Lady McGowan, for Port Said, the Thakore Sahib of Rajpot, the Kumar Sahib of Rajpot, and the Raja and Rani of Kashipur for Bombay. Sir T. and Lady Comyn-Platt embarked at Marseilles for Bombay.

The King has given the following gentlemen authority to wear decorations conferred on them by the King of Bulgaria in recognition of valuable services:—

Insignia of Officer of the Order of St. Alexander.—Mr. Lewis Bernard Golden.

Insignia of Officer of the Order of Civil Merit.—Mr. Lawrence Webster.

Insignia of Chevalier of the Order of Civil Merit (with Crown).—Mr. Andrew Theakston.

Lord and Lady Greenway were entertained at dinner at Claridge's Hotel on January 25, before their departure for Australia, by the Board of the Anglo-Persian Oil Company. Among those present were:—Sir John and Lady Cadman, Admiral Sir Edmond and Lady Slade, Sir Hugh and Lady Barnes, Lord and Lady Bradbury, Sir John and Lady Cargill, Mr. Lloyd, Mr. and Mrs. Lund, Sir Edward and the Hon. Lady Packe, Captain the Hon. Charles and the Hon. Mrs. Greenway, Lieutenant-Colonel and the Hon. Mrs. Hunter, Sir Basil and Lady Kemball-Cook, Sir Arnold Wilson, Major and the Hon. Mrs. Currey, Sir George and the Hon. Lady Barstow, Viscount Inchcape, Sir Percy and Lady Cox, General and Mrs. Home, Mr. Oliphant, Sir Adam and Lady Ritchie, Major and Mrs. Wallace, and the Hon. Elsie Mackay.

THE GAUHATI CONGRESS.

The proceedings of the Indian National Congress are of small interest nowadays, and all the more so since it has become, in everything but name, merely a family meeting of the Swaraj Party. The selection of so out-of-the-way a place as Gauhati, in Assam, was only in keeping with the futility of the proceedings: and one of the speakers quite correctly described the situation when he said that people had, of late, been thinking more and more about the Councils and the Assembly and less and less about the Congress, which ought to be "elevated by the destruction of this rivalry." This statement was made by a supporter of a resolution (which was defeated) binding "the Congress Party" to walk out of the Councils immediately after having taken the oath. The chief opponent of this resolution explained that the Swaraj Party would not hesitate to leave the Councils when its work in them was finished, but that to-day "half their work was undone." In Bengal it might yet be possible, in conjunction with other parties, to "thwart those people who were conspiring to form Ministries"; but if, after three months, they found themselves unable to improve their position, or to prevent the formation of Ministries, they would certainly leave the Councils. The resolution finally adopted included the provisions that Congressmen in the Legislatures should refuse to accept Ministerships or other offices in the gift of Government: should oppose the formation of Ministries by both parties: should refuse supplies and throw out budgets: and should defeat all proposals for legislative enactments "by which the Bureaucracy proposed to consolidate its forces." It was explained that the wording of this resolution represented the anxiety of Congress not to lay down a programme that they could not carry out: Pandit Motilal Nehru, the Swarajist leader, said that it was obvious that, unless they were in a majority, they could not follow a policy of uniform and continuous obstruction, and that was why, when they found themselves in a minority, they modified their programme in order, if possible, to form a coalition with other parties to carry into effect as much of it as was possible. It was generally admitted that, to carry out even the modified programme, not only a coalition of parties would be necessary, but also unity among communities. The simplest way of tackling communal differences was found to be the denial of their existence; though Pandit Motilal Nehru expressed the characteristic opinion that it would not be surprising if, when the Statutory Commission came to India, there were a recrudescence of communal tension and a riot should take place in the very spot where the Commission was sitting, since this would prove the strongest possible reason for the Commission to report that India was not fit for any further advance. In the course of his opening address, the President (Mr. Srinavasa Iyengar, of Madras) said that, if communal conflicts really existed, they would necessarily involve an arbiter who, if the whole of India were divided into two warring communities, must be a foreigner; but that, as a matter

of fact, such differences as did exist were temperamental and individual and not at all communal; while the forces of nationalism were steadily and visibly triumphing over those of communalism. "Should we," he asked, "have dissident parties in the Congress or in the country? The answer comes again and again from the depths of our being, from the holy of holies, from our tortured soul, that the righteous should link hands against unrighteousness. We must see if it is not possible to reconcile the longing for unity with the longing for Swaraj without affecting either, and in such a way and by such methods as shall amaze and baffle and discomfit the Governments in India and in England at this critical hour."

Comparing the above "purple passage" with the expressed determination of the Congress not to attempt to bite off more than they can chew, it is of interest to see what their programme is: and this may perhaps best be done by quotations from the President's opening address. Any scheme of self-government, he said, will be nothing but an empty form if control over the Army and Navy, and over the political relations with the Indian States, is not given to the Swaraj Government: for, otherwise, self-governing India will be menaced by an Army under foreign control and the Indian States will, if nothing worse, be a perpetual thorn in its side. The rulers of Indian States ought, in their own interest and in that of their subjects, to content themselves with the position of hereditary Governors or administrators of their territories under a system of representative institutions and responsible government. The people of each State should have such representation in the Assembly as may be necessary to safeguard their interests till each obtains a system of responsible government. Next to Swaraj, the greatest of India's needs is the relief of poverty. The average yearly income of an Indian is scarcely 68 rupees. We are face to face with unspeakable squalor and misery and starvation: the first duty of a Government is to take adequate measures for their removal but, under the present system of government, the problem is wholly ignored. The time has perhaps come for us seriously to think of a federation of Asiatic peoples for their common welfare. So long as our neighbours were ruled by irresponsible autocrats, such an idea was clearly out of the question; but, now that Angora, Persia, China and Siberia are governed by democracies, a federation of democracies comes within the range of practical politics.

It is pertinent to inquire by what means the Congress proposes to carry out this programme, and incidentally to "amaze and baffle and discomfit" the British and Indian Governments. The Swarajists profess to believe that they have already "established a funk" both at Home and in India: and point to the visits of Lord Reading to England and of Lord Winterton to India, and to the internment of the Bengal déteenus—which Motilal Nehru described as due to the desire to suppress the activities of the Swaraj Party and therefore as proof of its strength—as evidence. So it is perhaps not surprising to learn that they intend to rely on what Bepin Chandra Pal, in his weekly letter 12

the *Calcutta Englishman*, calls "the old futility" of obstruction, assisted by the intensification of the "constructive" campaigns in favour of hand-spinning, prohibition, and the removal of untouchability. The Swarajists have always been fond of applying to the Government of India the old saying about the Bourbons: its application to themselves is now, at least, more than overdue.

CURRENT TOPICS.

The Bengal Ministry.

The decision arrived at by the Swaraj Party, not to form Ministries themselves and to do everything in their power to prevent others from doing so, has had remarkably little effect hitherto: and the successful formation of a Ministry in Bengal must have been a sad blow to them. Their overwhelming defeat in the Legislative Council on the motion to provide salaries for two Ministers, which was carried against them by 94 votes to 38, made things easy for the Governor; who, after a preliminary attempt to play into the Swarajists' hands by appointing a Muhammedan Minister with whom no Hindu would serve, has now, by the resignation of the latter, obtained a satisfactory Ministry. Pandit Motilal Nehru, the All-India leader of the Swaraj Party, expressed, at the Congress meeting at Gauhati, his conviction that "no Province would dream of accepting office while the Bengal detenus were still detained without trial, for Bengal's honour was the honour of India." The formation of a Ministry in Bengal, the home of the detenus "whose harrowing story," to quote another of the Gauhati speakers, "shows that Indians are asked always to move in a vicious circle with shame and humiliation as their badge, not with Swaraj as their birth-right," marks the complete defeat of the Swarajists' programme. It has been strangled at birth: and it will be no easy task for its parents to produce a fresh offspring to take its place. *Forward*, the Calcutta Swarajist organ, demands "other methods and other weapons"; but, with the Bengal "detenués" (always so spelt in the Anglo-vernacular Press—apparently "males of the feminine gender") still interned, it is not apparent where these are to be found. At Gauhati, Motilal Nehru declared that he had no doubt that, if the Swarajists "only said the word that they would work the Reforms," the internees now "rotting in jail" would at once be released. If they really desire to obtain their release, the change of policy hinted at by *Forward* is certainly not the best way to set about it.

Assembly Parties.

In the Central Legislatures, of course, there are no Ministries and no Ministers: and, to judge by the cabled reports of the first meeting of the new Legislative Assembly at Delhi, this is just as well. It would certainly be no easy task to select responsible Ministers from among the host of claimants to "leadership." Indian political parties have always suffered from a plethora of leaders and a shortage of rank and file: and this seems, just at present, to be more marked than usual. The Independent Party of last session has altogether disappeared, with the exception of its leader: who, being a Muhammedan, will, doubtless, compete with the other Muslim leaders for the command of a homogeneous Muhammedan Party; unless internal jealousies should cause it to split into two or more sections, as is always possible—there are, for instance, three Muslim "parties" in the Bengal Legislative Council. In the Central Assembly, there are quite a number of Hindu parties, three of which are relatively important—the Swarajists, the Responsivists, and the Orthodox, or Hindu Mahasabha Party. The leadership of each of these is in dispute: in the case of the first and third, between two individuals and, in the case of the second, between three: with, no doubt, plenty of other candidates in the background of each. Many years ago one remembers that, in English theatrical circles, "ladies of the ballet, front rank" held definite social precedence over their sisters farther back: and this is now the case on the Indian

political stage. In every Indian Legislature there are enough leaders, front rank, to make a chorus of respectable size: and many more, of the second and third ranks, eagerly claiming promotion. Those who are definitely resigned to a position as supers are but few, and seem to become fewer every time that a new company is formed.

The Silent Provinces.

After a few days passed in the limelight incidental to a vice-regal progress, the United Provinces have quickly slipped back into the usual obscurity, and for an indefinite period the rest of the country is apparently doomed to hear little or nothing of the region which claims to be the premier province of India, and which is certainly the heart and brain of the North. Judged by the ordinary test of population, the claim to precedence must be allowed. Bengal alone can count something like the same number of heads, and were Bombay to join the Punjab in a challenge, they would have to borrow one or two smaller provinces as well to make a reasonable show of equality; yet, wherever men talk of India, they know what those regions are saying, but they have to guess what the United Provinces are thinking or feeling. And it is the domain of thought and feeling that counts for most. If you want to know the truth about the Muslims, you must look for it in Lucknow, and Agra, and Aligarh. If your object is to plumb the depths of Hindu sentiment, you must turn first of all to Allahabad and Benares, to Ajudhia and Hardwar, the centres from which inspiration radiates throughout the country. But in this quest the Press still renders little aid. Opinion is generated and propagated by the old methods, devised and perfected in the period when thoughts had to be concealed, and it is largely due to this fact that so many of our Indian contemporaries seem to be out of touch with the main currents of national, or rather communal, life, and are taken by surprise when the effects of these hidden forces suddenly become manifest. That is one of the outstanding weaknesses of India regarded as a political country, and it is one which the constitution-mongers would do well to take into account.

The Need for a Capital.

It would, however, be unfair to put all the blame on the local Press for the obscurity of which we write. There are other causes operating in the same direction, and one of them is certainly the absence of a capital city, entitled and ambitious to speak for the province as a whole. Calcutta, for instance, is the centre of industry and commerce, of law and learning, of politics and culture, for the whole of Bengal, and nearly the same may be said for Bombay and Madras, but in the United Provinces these interests are localised in different cities, not one of which can claim to be completely representative. Commerce and industry have their capital in Cawnpore, where it is a well understood thing that politics must never interfere with business, where learning, except for the nascent schools of technology, is decidedly at a discount, and where culture is not yet a live topic. As an intellectual centre, Allahabad yields to no city in India, but there business is at a discount, and the local conditions seem to be driving politics away, to find a more congenial refuge in the social capital, Lucknow, unlettered and unbusinesslike as it is. We are not arguing that the centralised capital is an ideally perfect institution. There is a real danger that these huge "wens," to use Cobbett's expressive phrase, may draw more than their fair share of nourishment, and so impoverish the body politic on which they feed; and looking at such portents as Washington, Ottawa, or Canberra, it might be contended that instinct or accident has put the United Provinces on the better road. That is a question which the future will answer, and our point is merely that, as things now stand, there is no single city which can speak for the whole. The inquirer who hopes to hear one decided voice is met by a medley of unharmonised noises, and in these days of hustle it is not a matter of surprise that he turns to other centres, which can at least claim to know their own minds: and so India suffers by ignorance of things which concern her so nearly.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 13.

The New Bengal Council.

The most important event in political life this week has been the opening of the new Council by the Governor. Lord Lytton's speech was obviously deliberate, containing as it did a careful review of the history of the working of the Reforms scheme in Bengal and pointing out the last opportunities that were now becoming available for showing political capacity and public responsibility before the coming of the 1929 Commission. The speech was listened to with marked attention and it made a very definite impression upon all who heard it in the Chamber. It is obvious, however, that the Extremist is beyond hope in this matter; all that he can see in it is a futile effort to reforge broken fetters and to delude the only patriots. *Forward's* preliminary leader begins "Lord Lytton seems determined to retrieve his prestige by a crowning act of lawlessness and breach of Constitution before he leaves the Governor's *gudee*. He seems to have staked his reputation on the revival of dyarchy in Bengal, and for this he allowed himself in the past to stoop to any and every means possible. He went so far as to forget his position and acted the part of a whip. He used his rule-making powers most outrageously. He tested the fate of dyarchy in the abstract. And at the fag-end of his career as Governor of Bengal, he has once again put his hand in the pie." And so on for a column. If this is not childish irresponsibility, mental surgery is the only hope for the planting of political responsibility in the Extremist.

President of the Council.

Possibly Lord Lytton's speech induced a sane atmosphere when it came to the election of the President of the Council, the "Speaker" of the new House. To begin with, some ten candidates were in the field, say, one for each thirteen members, a fair indication of the way personal considerations count in this country. The actual election was between two, the Rajah of Santosh and a Swarajist, and the former was elected by a combination of all non-Swarajist votes. It was actually the first of the Extremists' defeats, although they concealed the fact by not making their man an official candidate. The Rajah is a landholder and a Liberal, and he has taken part in public life for some years past; it is probably as good a choice as could have been made in present circumstances. The Council next proceeded to pass a vote for the salaries of two Ministers until the end of the financial year; thus by the way following the lead of the Central Provinces Council; the appointments themselves are yet to be made and the air is thick with rumours; the probability seems to be one Hindu and one Muhammadan.

More Communal Trouble.

Wild rumours were flying around on Sunday evening, probably owing to the movements of police and the precautionary orders which followed, and the sinister news from China had assisted some inventive minds to jump to unwarranted conclusions. It turned out that the extent of the trouble was a small amount of rioting that had taken place in the usual area; this followed the stabbing of half-a-dozen Hindus returning from watching the annual Sikh procession to their principal temple, which is rather unfortunately situated in the zone where communal feeling runs highest. The procession was a large one, reports placing the numbers at 5,000, and it was well guarded by police. Although there seems to have been some jeering by Moslems at a few points, there was no trouble at the actual passing; the sufferers were some unfortunate spectators. All sections of the Press deplore the occurrence, which is significant of the fact that the underlying fires are still burning, although they may be damped down for the moment.

Europeans in Bombay.

A full report appears in the Calcutta Press of the annual dinner of the European Association in Bombay at which the Governor of Bombay was a guest. The Chairman took some trouble to emphasise that nothing the Association was doing or proposed to do was in any way dictated by racial considerations, and he proceeded to defend Mr. John Langford James' recent speech in Calcutta, the criticisms of which he considered both unfair and undeserved. He read an extract from a letter that he had received from Mr. Langford James which ran "The political watchword of the Association should, in my opinion, be sane advance from sound foundations. This can only be furthered, if the community gives unreservedly of its best to the good of the body politic and works sincerely and cordially with those of our Indian fellow citizens who aim at the same object." His Excellency's reply, as to which he said he felt some trepidation, endorsed the necessity of Europeans and Indians working in harmony in commerce and in politics, and he claimed that probably in Bombay this had been achieved to a greater extent than anywhere in India. Certainly Calcutta relationships on the personal side have hitherto been quite satisfactory, and it is to be hoped that this is still the case, in spite of the recent outbursts. The best thing is to ask that these should be forgotten by both sides.

Men and Things.

Mrs. C. R. Das has finally refused the Presidency of the Bengal Congress and the local Extremists will have to look elsewhere for a stop-gap to screen their differences for the time being.

A small bomb manufactory has been discovered in Calcutta with the usual accompaniment of illicit revolvers and the unhappy youths concerned are to stand their trial. *Forward* anticipates the judicial decision by half-concealed suggestions that the whole thing is a "plant" by the Police.

Sir Samuel and Lady Hoare and their party have safely arrived at Delhi and have our congratulations as the pioneer passengers on the new Cairo-Karachi Air Service. Nothing but praise is reported for both the machine and the pilots, and the Viceroy is amongst those who have taken the opportunity of their arrival for sampling the work for both.

The Countess of Lytton opened the new Y.W.C.A. Hostel in Calcutta last week, in which 70 working girls, mostly of the domiciled community, will live at the lowest possible cost. Such institutions are very necessary in this city, and Mrs. R. B. Gall has evidenced considerable public spirit in contributing one lakh of rupees towards the cost.

The cold weather has been the most disappointing we-

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

LADY SUPERINTENDENT, 4, King Edward Road,
London, E.9.; or to

F. W. CANNON, Secretary, Foreigners' Branch,
Mission House, 3, Bridewell Place, London, England.

∴ Latest Report "In their Own Tongue," Free on Request.

have had for years so far as temperature is concerned, and during the week the thermometer rose to 10 degrees above normal. Fortunately the storms are now arriving, and we hope for a little respite before stoking up again.

The Trivial Round.

Last Saturday's racing provided a day of surprises, only three of the winners being at all well backed. Congratulations to Mr. Galstaun on the turn in his luck which won him the Ronaldshay Cup with "Golden Crest." It was more like a hot weather afternoon than a day in the January meeting.

The Christmas Polo tournaments have finished, the Governor's side beating the Calcutta "Reds" in the Final for the Carmichael Cup, the junior event.

The course laid for the paperchase this week was a particularly tricky one and falls were numerous; there is such a thing as overdoing this side of the game. G. S. Johnstone won again on "Bright Future" after a great finish, and Captain Leetham had to be content with a third place, the second number being carried on "Patsy" Warren's cloth.

The M.C.C. held the advantage in their first match in Burma against Rangoon, which was drawn; they are now playing All Burma whom they have dismissed cheaply in the first innings. H. G. Nicholson, erstwhile of Calcutta, made a good showing in the first match, but is out for a duck in the present game.

Local cricket proceeded at the week-end, the Light Horse beating the Scottish in their annual match. These games are keenly fought out and the Light Horse deserved their victory after a sporting declaration, the match being finished in their favour with the last ball of the last over.

There is a record entry for the Open Tennis Championship this year and there should be some good games; interest at the moment is centred upon the chances of the local men holding their own against the visitors, who come from all over India.

Mrs. Allan Macbeth has won the Ladies' Golf Championship, beating Miss Campbell of Shillong by 5 and 4 in the Final. The winner as Miss Muriel Dodd has carried off both the English and Canadian Championships, and Miss Campbell, whose first appearance it was in a big event, has every reason to congratulate herself on her display.

The Pantomime finished triumphantly on Friday last with a record house at the Empire Theatre, and this week a Company of Russian Dancers is on. The Symphony Orchestra gave its third concert of the series on Sunday night, concluding a fine programme with a remarkable performance of Beethoven's 5th Symphony. The house was full, which is not only a tribute to the standard of the performances, but it also indicates the growth of the public to which the Orchestra appeals.

Markets.

With the Mills showing very little interest, the jute market during the past week has ruled somewhat dull, but there is little or no alteration in quotations; hessians, on the other hand, opened with an improvement on an inquiry from foreign centres. Dealers have been willing to pay the increased rates, and a good amount of business was done for all deliveries up to December; later there was a slight easing off and although the market closes steady, the tone is rather uncertain and business very limited. In spite of a recurrence of communal rioting last Sunday, the piecegoods market has passed through a rather better period during the last few days, and there are signs of dealers regaining confidence. The raw material has remained considerably more steady lately than for some time past; with up-country stocks on the low side a number of up-country buyers have appeared in the local market and inquiry is increasing. The tea market here has followed very closely the London market, where prices have been easier except for good qualities;

in addition, at the sale here there was an especially good demand for Autumnal flavours, which command exceptionally good prices.

On the Stock Exchange, Government Securities have been barely steady mainly as a result of the tightening of money accompanied by a rise in Exchange. Jutes eased during the week-end on the liquidation of a large account, but the shares were readily absorbed and prices have again continued on the upward grade. Mills are said to be making very substantial profits at the present price of the manufactured article, and general opinion is that still higher prices will be seen in the near future. Coals and cottons have reacted further, and tea shares have been scarcely mentioned. Rubbers on the other hand are firmer on the improvement in the price of the raw material, and several shares show a balance in favour of holders on the week. There is now a scarcity of sellers in this market, and it is probable that prices will tend to rise, provided there is no reaction in the price of the commodity. In the miscellaneous market there has been a considerable turn-over with sugars and flours, particularly in demand. The feature in this section has been the sharp reaction in the price of Indian Standard Wagons on rumours that the negotiations for purchase by Government have taken an unfavourable turn; news has come to hand that Government have offered 30 lakhs of rupees for the Company's undertaking.

In the Exchange Market, tighter money combined with a fair number of bills has imparted a firmer tone to the market with the result that Ready T.T. opened to-day at 1s. 6 1/2d., but as a result of a large demand for remittances reacted to 1s. 6d. Money has been in good demand and may be quoted 4 1/4 per cent. for Short Notice and One Month. The Bank rate was raised to-day to 6 per cent.

THE INDIAN MAIL.

Dislike of Diarchy.

In spite of the expressed determination of the Responsivists to work the existing Constitution "for all that it is worth," nobody in India seems to have a good word for it. The messages describing the opening of the Bengal Legislative Council all agree that every speaker "whether from the Government, the Responsivist, or the Swarajist benches," decried the system of Diarchy. One must suppose that the speakers from the Government benches must have been non-officials; for officials, whether or not they like the Constitution under which they are serving, must at least pretend to do so. With this exception, condemnation is certainly unanimous: the opposition parties make no secret of the fact that, if they consent to work the Reforms, it is only because the sole alternative is the barren and futile policy of non-co-operation and indiscriminate obstruction. In his weekly letter to the *Englishman*, Bipin Chandra Pal thus summarises the attitude of the Swarajists towards Diarchy: "if the Reforms work well, they will strengthen the bureaucracy and must therefore be destroyed. If the Reforms work ill, they will hurt the people and must therefore be destroyed. In whatever case, therefore, destroy the Reforms." The attitude of the Responsivists does not really, in the end, differ very greatly from this. They feel that, if they refuse to work the Reforms, the Royal Commission may well report that they have not yet received a fair trial, and must therefore be given an extended one; so that the hated thing will remain. If they consent to work the Reforms, the Royal Commission may report that the trial has been successful and that Diarchy, the excellence of which has thus been proved, should continue. Their creed, then, is that the greater danger lies in refusal: and that, by co-operation, they take the best chance of getting something better, in place of the system that they dislike. That is to say, both co-operators and non-co-operators attack the same enemy—Diarchy—with practically the

same motives, but using different tactics. The Responsivists feel that non-co-operation, even if successful, could only result in retrogression; and that the sole chance of improvement lies in co-operation, which they therefore give unwillingly enough, but of necessity. One may certainly hope that, having chosen the better part, they will, in the result, be rewarded for having done so. If their efforts should only lead to what they fear, instead of to what they hope, the Swarajists will be able to say "I told you so"; and their ranks will certainly receive a great accession. The contrary event should lead to the final and conclusive destruction of the Swaraj Party and the Swarajist policy: and the sooner this can be achieved, the better for all concerned.

Swaraj Constitution.

What is the Congress alternative to Diarchy? In February 1924 the Swaraj Party formulated a "national demand" for a revision of the constitution. The resolution in which this was embodied called upon Government to take steps to have the Government of India Act revised with a view to the establishment of full responsible government in India: and, for that purpose, to summon a representative Round Table Conference to recommend the scheme of a Constitution for India: then to dissolve the Central Legislature and to place the scheme, so recommended, before a newly elected Assembly for approval: and finally to submit the scheme, in the shape in which it should have been approved by the Assembly, to the British Parliament, to be embodied in a statute. The President of the Congress session at Gauhati referred at some length to this "gesture of honourable co-operation," which the Government of India "arrogantly brushed aside" while "truculently rejecting" the demand.

This does not carry one much further towards a definite answer to the question; but the Gauhati Congress did something to supply the deficiency. Mr. Sen Gupta, of Bengal, declared that "there must be a change of the Constitution from which India would be able to get Swaraj automatically, without any further reference to the British Parliament": and the President explained that "our Swaraj Government" must have complete control over the Army, the Navy and its relations with the Indian States. Later on in his speech, he said, "Do we feel that we are unfit to undertake the government of the country? Is it not actually run by Indian officials under English overseers? The machinery of the Government is already there: only the directing brain and voice are needed, and those can be supplied by us. We must get rid of the creeping paralysis of brain and will, of this hypnotism which the foreigner exercises over the Indian official and non-official. The conditions of India are so favourable to the immediate attainment of Swaraj that it were an easy achievement if we could but set our hands to it. We have been trying to build leadership from above, which is a destructive process. We must build leadership from the base, and on the spot itself."

This apparently means that the Swarajists are willing to take over the government of India in its present form, Diarchy and all, building leadership from the base by the simple process of abolishing the foreign overseers altogether: after which, they will proceed to recast the system according to their own ideas, without any further reference to the British Parliament. People who live in a dreamland of this kind are presumably unaffected by facts and they quite possibly look upon the Statutory Commission not as a fact, but as part of the national conception of *Maya*—illusion. But, if not, it will be interesting to see the form in which they submit their proposals to the Commission: unless, indeed, they decide to remain in dreamland and ignore it altogether.

The Calcutta Corporation.

The following trenchant description of the first serious attempt of the Swarajists at self-government—the Calcutta Corporation—gives a vivid idea of the position as it appears to one on the spot: in this case, one specially well qualified to judge.

"The Swarajists on the Corporation are very little worse in administration than their predecessors; but the fact remains that the tone of the administration has been lowered, and efficiency is less—I should think, by forty or fifty per cent. To take a typical case, the New Market is now almost impossible, with beggars and shopkeepers completely undisciplined. Refuse is cleared much later in the day and, in some of the approach streets where provision merchants abound, decaying street refuse is left for days together, covered in flies. It is easy to imagine what this means. Further, there is the case of the burial of the alleged saint in among the meat stalls; the official attitude that made this possible is reflected in the whole of the New Market organisation. Then the Chief Officers of the Corporation are snowed under with arrears, and they cannot get out on inspection duty to anything like the extent necessary. The Mayor, with his ridiculous "triple crown" and the necessity of earning his living at the bar, does not put in one tenth of the time that is essential if his job is to be done properly. It is small wonder that the ratepayers in the recently added areas are desperate. Their taxes have been quadrupled, largely because they have been properly assessed for the first time; but, with the administrative centre miles away, and the officers concerned smothered in work always in arrear, their municipal services have become lax or non-existent, and the promised road and sewage schemes are as far off as ever. The whole system is quite alien to the sort of joint-family methods that Indians love: and, so far as one can see, there is no possibility of any improvement so long as the Corporation is run by Indians."

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2.

Tuesday Morning.

The Cairo Cotton Congress.

From some points of view it is peculiarly fitting that Cairo should this time be the scene of the Cotton Congress, for Egypt has been particularly affected by the fall in the price of cotton and it is probably not going too far to say that the future of cotton growing in the country is now in the melting pot. The industry is vital to the country at present, and to safeguard it the Government is pursuing a policy which could only be justified if it had the practical control of the market, as, for instance, Great Britain has in the case of rubber. The restriction of acreage is a double-edged weapon which may have results quite other than those intended, for the cultivation of cotton, as we know, is being pushed on elsewhere, and the developing demand that is to be anticipated will simply give other regions their opportunity. Prices are now very low, but it seems to be assumed that they have touched their lowest point and that a gradual recovery may now be anticipated. It is because it should go far to clear up the cotton outlook from Egypt's point of view that the holding of the Congress in Cairo is to be welcomed, and it may well be that the views expressed will lead to a change of policy on the part of the Egyptian authorities. The most important address at the meeting will be that given to-morrow by Mr. Holroyd, president of the International Federation of Master Cotton Spinners and Manufacturers' Association. Among the matters which, it is understood, will be dealt with by him is the depreciation of Sakellarides cotton through mixing, and he will further, it is believed, emphasise the inadvisability of restriction on the ground that 15 kantars at 20 dollars are better than 10 kantars at 25 dollars as cheaper prices lead to an increased demand. Another and most interesting feature of his address will be a reference to another type of Egyptian cotton which in his opinion is better than Sakellarides.

Shipping at Constantinople.

The figures for the shipping at Constantinople for the twelve months ended September 30 last show a very marked decline on the 1913 figures both as regards the number of ships and the tonnage, which is, of course, only to be expected in view of the stagnation of trade since the War not only at Constantinople but at many of the Black Sea ports. For the period in question the number of ships was 6,651 as compared with 7,901 for 1913, the tonnage being 10,853,325 as against 13,958,973. When one comes to examine the statistics it will be seen, however, that they are peculiarly unfortunate from the British point of view. Comparing our totals for 1913 and the twelve months in question it is very evident that the falling off is in respect of our shipping, and that our rivals in the trade are now far better off compared to us than they were in 1913. It is worth while illustrating the position with a few statistics. For 1913 our figures were 3,136 vessels of a tonnage of 7,615,588, while for the twelve months ended September 30 last the figures were 1,102 vessels of a tonnage of 2,531,088. Greece's figures for the two periods were 651 ships and 901,047 tons and 1,396 ships and 1,906,696 tons, while Italy's were 796 ships and 1,250,351 tons and 1,070 ships and 2,203,220 tons. In plain words, therefore, while the number of our ships which called at Constantinople during the twelve months ended September 30 last was not much more than one third of the total for 1913 while the tonnage was less than one-third of the 1913 total, Greece has more than

doubled her ships and her tonnage while Italy shows an increase of nearly 300 ships and has almost doubled her tonnage. That state of things must give one "furiously to think."

Grapes from Palestine.

In view of the fact that the vine is largely cultivated in Palestine it was only to be expected that sooner or later an attempt would be made to develop an export trade in grapes, and it is now reported that grapes from Hebron are to be introduced to the London market this year. The development of an outlet for commodities of this kind is dependent on two factors—the delivery of the fruit in good condition and the period of their arrival. There should not be much difficulty about the former, while as regards the latter, Palestine grapes are best in July and August at a time when there is a shortage of this fruit on the London market so that a ready demand may be anticipated for the grapes.

Vines to be Greatly Extended.

While I understand that plans are in train for a great extension of vine growing in Palestine the grapes we are promised this year come from a place where grapes have been grown from the earliest period—Eshcol in Hebron. A reference to the grapes of Eshcol is to be found in the Book of Numbers, and it was this fruit among other produce which made Moses acquainted through his spies with the promise of Palestine. The district of Hebron, it may be added, produces many thousands of tons of grapes yearly, and a considerable export trade is done with Egypt, but it is obviously one thing to send fruit to a neighbouring country by land and another to ship it to a distant region. Over a period of six years Egypt has taken from Palestine an average of 814 tons of grapes per year. The best year was 1922, when the total was 1,386 tons, but for 1925 the total was no more than 435 tons. Palestine has many competitors in this particular market, which, of course, is an additional incentive to looking further afield. A very important consideration is further the desire to add to the export trade another commodity of the importance of the orange, for a country so dependent on one thing is naturally at a pronounced disadvantage even when the commodity is an article in such demand as the Jaffa orange. Besides the indications are that in future years the Jaffa will have to face increasing competition from other regions, while the extension of the cultivation of the orange in Palestine itself will further help to keep prices down and so make the Jaffa not quite so profitable as it has been.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 16, GRACECHURCH STREET
LONDON, E.C.3.

Branch - 11 CALEA VICTORIEI, BUCAREST.

Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Indian Tea Production in 1926.

There was a sharp increase in the production of tea in India in the past season. The output of Northern India was 345½ million lb. which compares with 317¾ million lb. for 1925 and 327¾ million lb. for 1924. This increase coincided with a marked rise in the production of Ceylon and Java, the total increase for the three areas being 58½ million lb. However this large output has had surprisingly little effect on stocks, so that one is left to the conclusion that consumption at the present time is almost keeping pace with production. Great Britain is not contributing to the increased market, there being actually a reduction in the amount of tea consumed here, and in default of definite data one is left to wonder whether the growing consumption is due to the recent efforts to encourage tea drinking in America, or whether the Bolsheviks have found the "cup that cheers" a stimulant for agitation and are therefore re-entering the market on a large scale.

Mr. Leaf on the Position.

One of the most interesting speeches at the bank meetings was that of Mr. Walter Leaf at the annual general meeting of the Westminster Bank, a report of which will be found on another page in this issue. As was to be expected he referred to the industrial crisis which this country has had to go through in the past year, and what he had to say with regard to its effects can only be regarded as distinctly encouraging. On the whole, he declared, the commerce of the country might be said to have stood the strain with an extraordinary display of strength. He went on to point out that the statistics of commercial failures showed a considerable diminution that large issues of capital for internal use were taken up without difficulty, and that the market had been able to digest large loans for overseas purposes without overtaxing the foreign exchanges. In his view it is remarkable that our gold reserves have been maintained without an increase in the Bank Rate in view of the strain thrown upon them by the disparity between the imports and the exports, and he drew the conclusion that our economic resources of strength are far greater than has been supposed, in other words that the amount of the savings at home and of the "invisible exports" must be greatly in excess of any estimates that have been put forward. Mr. Leaf went on to discuss the lines on which industry is developing. There is a rapid broadening in the area of capital, he pointed out, and there is further a marked tendency to the amalgamation of businesses on the largest possible scale, and finally there is a growing recognition of the fact that this amalgamation must not proceed to a pitch at which it would menace the public interest. "The future organisation of industry," he added, "will be ruled by the two main principles—that production must be upon the largest possible scale, but that it must be vitalised by rivalry and competition; and to this end the State will intervene to see there is no danger of monopoly or operation in the interest of one particular class."

Banking Amalgamations.

Mr. Leaf proceeded to illustrate this from banking, pointing out that when banking amalgamations were proceeding so rapidly that it seemed likely that the whole banking business of the country would be collected into a few hands the State intervened and vetoed any more

amalgamations by the big banks. He explained how the control of the State is exercised in other ways, and that the banks recognised that it is their duty to support the Government and the Bank of England. Despite the supervision to which the banks are subject, he emphasised, they are not handicapped by bureaucracy and red tape and are stimulated by the keenest of competition among themselves. He further maintained that the banks are practically democratic, instancing the fact that the average holdings of the capital are under £220, and that the executive control is entirely in the hands of the staff. In short the tenor of Mr. Leaf's remarks was that in practice the country had the advantage of nationalised banks without any of the disadvantages which would accrue from nationalisation. As regards the trade outlook Mr. Leaf expressed the opinion that the material conditions for a recovery of trade are present "and have been only held back from full fruition by the deliberate attempt to sabotage British commerce which has been so persistently undertaken in Great Britain and is still virulent in China." He regards the cotton trade as the most anxious point in the outlook, as the decline in exports in this industry is due to causes other than the coal strike, extending over some years and showing a constant growth. He pointed out that in the class of goods in which the cost of labour is an important factor the competition of countries such as Japan and India is growing more and more formidable. It was to be hoped, he added, that leaders of the industry would succeed in drawing up a scheme to meet the situation, and he was able to assure the trade that if there was general adhesion to such a scheme the banks might be relied on for sympathetic co-operation.

The Suez Canal in 1926.

The figures for the Suez Canal traffic in 1926 do not make such a good showing as in the previous year, as was only to be expected in view of the stagnation of trade and the effect for many months of the coal strike. The number of passages through the Canal was 4,890, the net tonnage being 26,060,377 which compares with a total of 26,761,935 for the previous year, there being thus a decrease of 701,558 tons which is scarcely as much as might have been expected in view of the various adverse conditions. The traffic receipts amounted to 186,590,000 francs as against 192,070,000 francs for 1925 and 185,160,000 francs for 1924. The most interesting feature of the figures is the rapid recovery which set in in October and was continued to the close of the year. For October the tonnage showed an increase of 180,288 on the figures for the corresponding month of 1925, for November one of 113,972 and for December one of 167,949. It is possible to draw the most hopeful conclusions in regard to trade revival from this development which points very strongly to the general improvement of commerce that is expected, it might be said, on all sides.

Development Work in Turkey.

It is significant of the new era in Turkey, and of the desire of the Angora authorities to do everything possible to further the development of the country, that plans are now in train for a most extensive programme of works of construction, covering, in addition to railways and port development, schemes for the utilisation of the country's water power. The money for the various schemes to the extent of over £250,000,000 has been authorised by the Grand National Assembly and the largest part of it is apparently to be provided by bonds secured on various revenues. The railway projects in view include lines between Trebizond and Erzeroum and between Angora and Samsoun. The hydraulic schemes are the most interesting feature of the projects in view for the lack of adequate fuel supplies has been a serious handicap to Turkey, and if it is possible to enlist white coal to any considerable extent in the country's service the effect on industrial progress may be pronounced.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

Further Rubber Restriction.

As had been evident for a long time would be the case, January 31 came with rubber a long way below the average required to sustain the present restriction, and so we have a further reduction of 10 per cent. in the output, bringing it down to 70 per cent. Actually the average for the period was roughly 1s. 7.2d. It now remains to be seen what is going to happen during the present quarter. If the price is still below 1s. 9d., then on May 1 there will be a further restriction to 60 per cent., and that would mean, beyond a peradventure, something approaching famine prices before the end of the year. It is difficult to believe that the American buyers will allow this to happen, but if they are to avoid it they will have to enter the market in a much more energetic way than they have been doing lately. Assuming that the price is 1s. 9d. for the quarter, it is reasonably certain that high prices will be seen by the end of the year. An interesting forecast of the outlook was given to me yesterday to the effect that this autumn will witness a small boom which will soon end, but that at the end of 1928 or the beginning of 1929 there will be a real shortage of the commodity as opposed to an artificial shortage brought about by restriction. It will be interesting to see how far this prophesy is borne out. *En passant* it is necessary to emphasise the debt the industry owes to Government assistance, for without the restriction scheme its position would now be deplorable. One imagines that cotton growers wish that some similar scheme could be devised to meet the low prices that occur from time to time.

COMMENTATOR.

Roumania's timber exports for the first 10 months of 1926 were as follows, in metric feet: Fir boards, 582,000; other softwood, 80,000; hardwood, 27,900; and fir logs, 12,000.

Mr. W. E. Rootes, joint managing director of Messrs. Rootes, Ltd., the largest retail distributors of cars in this country, has left on a tour of Egypt, India, Australia, and other countries to promote British trade. Mr. Rootes will examine the requirements for cars in the various countries he will visit.

The death occurred at Mohammerah (Southern Persia) on January 25 of Mr. Herbert Edward Nichols, a director of the Anglo-Persian Oil Company. Mr. Nichols was on a tour of inspection of the Persian properties of the company. Besides being a director of the Anglo-Persian Oil Company and head of the company's production department, he was a director of the Turkish Petroleum Company, the Anglo-Persian Oil Company of Australia, the British Petroleum Company, the British Tanker Company, Britannic Estates, Limited, the First Exploitation Company, the Homelight Oil Company, the National Oil Refineries, North Persian Oils, Limited, and other companies.

THE WEEK'S FINANCE.*(By Our Financial Expert.)*

London, February 1.

A change in tone has come over markets during the past week and the recent undercurrent of optimism has been very much less conspicuous. For this developments in China are the most obvious explanation, but a change in the monetary situation is also partly responsible. How closely these two factors are connected it is difficult to say. It is, of course, quite possible that, but for the serious nature of the Chinese situation, Bank Rate might have been reduced to 4½ per cent. But other developments affecting the monetary situation have not been favourable. The American exchange, which at this time of year generally moves in our favour, has weakened, the Bank of England has not secured much of the gold which has come into the market, and market rates of discount, after their recent downward movement, have shown a tendency to harden. While all these factors naturally suggest caution, the possibility of a reduction in the Official Minimum in the not distant future cannot be ruled out of account. We observe that Mr. J. M. Keynes, at the annual meeting this week of the National Mutual Life Assurance Society, of which he is chairman, said that, "for the first time in more than three years past I incline to agree with prevailing opinion that, so far as the near future is concerned, the signs seem to be set in favour of a somewhat lower rate of interest."

The Markets.

Expectations of a reduction in Bank Rate on Thursday were less lively and consequently the announcement of "no change" produced no effect upon prices in the gilt-edged market. The latter, however, have fallen materially, and the premium established on the new 4 per cent. Consols has very largely disappeared. This can be explained by selling on the part of "stags" who, encouraged to apply for large amounts by the smallness of the initial payment required—namely £2 per cent.—are now securing what profit they can before the next call becomes due. In other markets conditions have been irregular. Home rails show the effects of nervousness at the approaching dividend season, the Metropolitan dividend—3 per cent. against 5 per cent. a year ago—being regarded as disappointing. Courtaulds and Snia Viscosa shares were practically unchanged on the publication of the long expected announcement of an international working agreement, the effects of which had been discounted in advance.

The arrangement of the fortnightly settlement has occupied the attention of brokers, a fact which partly accounts for the quietude of business. Until, however, the situation in China assumes a less menacing aspect a general revival in Stock Market business cannot be looked for.

LLOYDS BANK LIMITED.HEAD OFFICE:
LONDON, E.C. 3.

Capital Subscribed	-	£73,302,076
Capital Paid up	-	£15,810,252

Reserve Fund	-	£10,000,000

LLOYDS BANK now has the following Offices in INDIA, BURMAH and EGYPT, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

EGYPT.—ALEXANDRIA, CAIRO (4 Offices), BENHA, BENI SUEF, FAYOUM, GAMALIEH, MANSOURAH, MEHALLA KEBIR, MINIEH, TANTA, WASTA, ZAGAZIG.

The Trade Balance and Overseas Lending.

The Board of Trade has published its estimate of Britain's real trade balance for 1926, which it finds to have been a trifling matter of £12 millions on the wrong side. This means that the country in this respect was £66 millions worse off than in 1925—a change attributable entirely to the coal stoppage. It is perhaps both remarkable and satisfactory that in so unfavourable a year as 1926 we should practically have paid our way in the world and that our "invisible exports" should total the enormous estimated net figure of £465 millions. Clearly we have paid our way, for sterling has remained steady, and we have added to our gold stocks without moving bank rate. But the figures none the less reveal the fact that the coal stoppage has postponed the day when London can resume on an unrestricted scale that campaign of foreign lending, which provided a constant and effective support to our export trade. The following figures relating to the real trade balance and public overseas issues in the London market for the past four years give food for thought:—

	1923 £.Millions	1924 £.Millions	1925 £.Mill.	1926 £.Mill.
Trade Balance ...	+150 to 200	+86	+54	—12
Overseas Issues in London	137	125	77	101

Neither in trade nor in investment can transactions be divided off into watertight compartments representing separate calendar years, for the flow of both is continuous. But the figures show that for the past three years at any rate our purchases of new overseas securities have been high in relation to our apparent resources from which to make such loans. Granted a prolonged period of industrial peace there is every sign that the trade balance will swing steadily in our favour; for 1926 was wholly abnormal. But it does appear that a cautious policy in the matter of floating loans for overseas borrowers will have to be pursued for the time being; and it should not be forgotten that this in its turn delays the building up of our stock of overseas investments, from which the country receives so large an annual income, and which is so powerful a help in times of trouble, as we found out during the Great War.

Norwegian Securities.

Norway's overseas trade for 1926 shows a more satisfactory balance than for some time past. Thus imports were valued at 1,093,000,000 kroner against 1,378,000,000 in 1925; exports totalled 811,000,000 kroner, as compared with 1,047,000,000. Hence the adverse visible balance is 282,000,000 kroner, against 331,000,000 for 1925, the figure for last year being the lowest since 1915. Despite considerable troubles, Norway seems to be making progress in the right direction. It is felt that the worst has passed and that when internal prices have been adjusted to the recent rapid rise in the external value of the krone, an improvement may set in.

Norway has been a substantial borrower in the London Money Market and a number of loans are quoted on the London Stock Exchange. The loan having the largest amount outstanding is the 6 per cent. of 1921, nearly £4,000,000 being available; the final redemption date is 1964 and the return is £5 16s. per cent. The next largest is the 3 per cent. loan of 1888—the amount outstanding being £2,691,700—and the final redemption date is 1965; the yield is £5 4s. per cent. A considerable amount of the 4 per cent. loan of 1911 is available and is finally redeemable by 1971; the return is £5 9s. per cent. In the main, the lowest prices of 1926 are very near the lowest of 1923, when Norway's economic crisis was at its height. This steadiness of prices indicates the confidence felt by the investor in Norway's stability and recuperative powers.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Port Said, Colombo, and Calcutta (Birkenhead, February 5).

Bibby Line.—S.s. Shropshire for Port Said, Colombo, and Rangoon (Birkenhead, February 9).

British India Line.—S.s. Mandala for Bombay and Karachi (London, February 5); s.s. Manela for Colombo, Madras, and Calcutta (London, February 12).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume, also at Ancona if inducement (Liverpool February 19, Swansea February 22); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, March 5).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (first steamer of the season for the Danube) (Liverpool, February 5); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina (Liverpool, February 12), also Galatz and Braila, closing February 17.

P. and O. Line.—S.s. Ranpura for Bombay (London, February 4); s.s. Novara for Colombo, Madras, and Calcutta (London, February 5).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 4).

Ellerman and Papayanni Lines.—S.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool February 5, Swansea February 8); s.s. City of Lancaster for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 6); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 12); s.s. Andalusian for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, February 12); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 23); s.s. Flaminian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool February 26, Swansea February 26). * Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Paints and Oils.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of paints and oils required for the financial year 1927-1928. March 15.

Bunting, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of bunting, ropes, canvas, hose, etc., required for the financial year 1927-1928. March 15.

General Stores.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of general stores required for the financial year 1927-1928. March 15.

Diesel Engines.—The Ministry of Public Works, Egyptian Government, invites tenders for the supply and erection at the site of the Egyptian Army Flour Milling Plant at Tura, near Cairo, of two internal combustion engines and accessories. March 3. (D.O.T.)

Near East Markets

NEAR EAST MARKETS FOR MOTOR BOATS.

The various market for motor boats are the subject of a series of reports in the latest issue of the American "Commerce Reports." The following surveys are given of Near Eastern markets:—

The Greek market for motor boats has always been very limited. The small number of these boats in use consists mainly of pleasure craft owned by the richer element of the country, and have been imported mostly from England. The number of gasoline outboard motors is small. Inboard crude-oil marine engines, up to 15 horse-power, are practically the only types for which there is a market in Greece. Outboard motors are mainly used on pleasure craft and fishing boats. The crude-oil engines are used as auxiliary motors on small sailing schooners.

Motor boats are in use in Roumania only on the Danube River and at the Black Sea port of Constantza. While the sale of motors is as yet very limited, there exists a steady demand for motors of 4 to 5 horse-power. A few small outboard motors are being sold, but their use is restricted by the swiftness of the current in the Danube. Motors up to 15 horse-power are also in demand to a limited extent for use in locally built boats. Competition in the sale of motors comes mainly from German and Austrian manufacturers, who make shipments on consignment or grant liberal credits to local dealers.

Turkey is an extremely poor market for the sale of foreign motor boats. Such boats, as well as marine engines, are imported only occasionally and in very small numbers.

The Indian market for motors is thus described:—There is practically no market in India for imported motor boats. The few foreign ones in use have been purchased, as a rule, by wealthy Indians on their European visits and may be regarded as exceptional. Occasional sales of outboard motors and gasoline motors of 5 to 30 horse-power are made throughout India. The demand comes from European managers of tea gardens in India, from landholders along the Ganges Valley, and from the jute-growing districts in and about Chittagong. There is a limited but increasing demand for small marine engines for ferry service on the Indian rivers; these range between

20 and 50 horse-power, are of heavy build, and have easily accessible parts. Price is of paramount importance in India.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ending December 31:—

Both old and new arrivals in Kordofan and Tendelti taken together were double those of December, 1925. Old crop arrivals showed a rapid decline and were only one-fifth of the total. Taking El Obeid as the standard, old crop prices fluctuated within the limits of about 1s. and closed about 1s. less than the price at which the month opened. New crop prices were inclined to firmness up to the 11th and thereafter weakened, the total decline amounting to 1s. New crop prices fetched about 1s. more than old crop.

It is to be noted that shipments were 280 tons less this December than last year. Demand was generally reported as extremely dull, particularly in the United Kingdom, United States and France, but if we exclude the United States our sales would indicate demand as being, say, 20 per cent. less than December last year. Demand from United States was only 25 per cent. of what it was in December, 1925.

There are perhaps 1,500 tons old crop stocks but it is difficult to arrive at a definite figure. This does not seem excessive especially when one considers that during 1926 the largest exports were recorded, the nearest approach being 22,425 tons in 1923.

Crop, 1927.—A large crop is expected, but our estimate is made difficult by the extremely low level at which prices have opened and which might restrict production.

The January-December exports of gum arabic amounted to 22,742 tons. The export figures are made up of the following qualities:—

	Hashab	Bleached	Talha	Total
1926—Tons	20599	313	1830	22742
1925— "	16519	235	2196	18950

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated January 31, state:—

Currants.—The more cheerful tone noticeable at the close of the Old Year has continued to prevail, and this state of affairs is not without justification, when it is realised that the shadow of the coal strike is no longer overhanging the country. The market generally has developed stability, the daily rise in strength of the Greek market contributing in the main towards this improvement. In addition, there are gratifying reports of prospects favourable to a revival of trade, owing to the more settled conditions in the labour world.

We have experienced a thoroughly cheerful month. Some disappointment may be felt that the volume of business has not been larger, but with values in Greece ranging many shillings above the parity here, sellers have been forced to exercise caution in offering, and this has naturally restricted trading. Latest sales show an appreciation of 3s. to 5s. per cwt. on quotations ruling last month. Closing Pyrgos 38s. 6d., Amalias and Patras 39s. 6d. to 42s., Zante 41s. to 42s., Gulf and Panariti 42s. to 48s., Vostizza 48s. to 56s., a few of exceptional merit making 62s.

Sultanas.—During the past month the improvement has been well maintained, though it cannot be said that any briskness has prevailed in actual operations, owing to the news of steadily increasing quotations from Smyrna, and reports to the effect that there remains very little stock on the other side suitable for export, added to active buying on the part of the Continent.

Company Meeting.

WESTMINSTER BANK.

Future of British Industry.

Mr. Walter Leaf's Address.

The annual general meeting of the shareholders of the Westminster Bank Ltd. was held on January 27 at the head office, Lothbury, E.C. Mr. Walter Leaf (the Chairman) presided.

The Chairman said that since they met a year ago the country had been passing through a time of severe trial, a trial which had brought to test the foundations of the whole economic structure of our constitution. They had attained, at least for the moment, a respite, where the country could take stock of its position and look forward to its policy in the future. The share taken by the banks in the struggle of the last eight months had been indirect. They had had nothing to do with the industrial and political issues, except as they had been affected by the general depression of trade. They had had to give help to some of the large industries concerned, and to make considerable provision for the risks which they took in so doing, but, on the whole, it might be said that the commerce of the country had stood the strain with an extraordinary display of strength. One obvious result of the great strike had been to show that the country's economic reserves of strength were far greater than any of them supposed. There had been no recourse to foreign loans to help the situation here, and the only conclusion to be drawn was that the amount both of their own savings at home and of their "invisible exports" must be greatly in excess of any estimates that had been put forward. So far as the strike was intended as sabotage directed against the industrial and commercial stability of the kingdom it had proved a complete failure.

Industry: Lines of Development.

After observing that it was not easy to feel the same satisfaction if they regarded the terms on which the truce in the coal industry had been brought about, and the prospect of an enduring peace to follow, the Chairman sketched what were the lines, in his opinion, on which industry was destined to develop in the future. First there was in progress a rapid broadening of the area of capital; the joint stock system was rapidly breaking up the ownership of capital and passing it on in small parcels to the little shareholder. As a consequence the owners of capital delegated the control of their business to professional managers who were paid chiefly by salaries. Next there was a marked tendency to amalgamation of business on the largest possible scale, and finally there was a growing recognition that this amalgamation must not proceed to the point where it became a monopoly or a menace either to the State or the worker, this consideration bringing with it the definite reservation by the State of such a controlling interest as would provide that the public interests of all were duly observed, and that there should be nothing in the nature of exploitation in any private interest. The future organisation of industry would be ruled by the two main principles that production must be upon the largest possible scale, but that it must be vitalised by rivalry and competition. To this end the State would intervene to see whether there was no danger of monopoly or operation in the interest of one particular class.

The State Veto.

Illustrating this by the case of their own industry, banking, the Chairman recalled that not long since bank amalgamations were proceeding at a rapidly accelerating pace until it seemed that the whole banking business of the country might be collected into a few hands. The State thereupon intervened and laid a veto upon any more amalgamations by the Big Banks, and that veto was still in force. But the control of the State went even further than that. The banks had been deprived by the State of the control of currency and the power of creating credit involved in it. That, which was once considered to be the very essence of banking, now belonged to the

Treasury. And the control of the rate of interest by which all deflation or inflation was managed, had equally been confided to the Bank of England, and in this the joint stock banks had no voice whatever. Beyond this, the Bank of England acting with, if not directly on behalf of, the Government, exercised a very real control over the policy of the joint stock banks, as was made clear enough very recently in the enforcement of the embargo on the issue of foreign loans. Generally, the banks recognised it as their duty to support the policy of the Bank of England. They were thus for all practical purposes as much under control as if they were nationalised, while at the same time, instead of being governed by a bureaucracy and red tape, they were stimulated by the keenest of competition among themselves, and by a professional pride in the standard of efficiency thus set up and maintained. Moreover, their management was practically democratic. The holdings of shares in the Big Five Banks were so numerous that each holding represented a very small capital. There were in effect about 275,000 shareholders among the five, owning an aggregate capital of over £60 millions, giving an average holding of under £220; the sub-division of capital could hardly go much further. Moreover, the executive control was entirely in the hands of the staff. The directors, to whom the duty of supervision was entrusted, were themselves the paid servants of the shareholders.

The Common Weal.

Another rapidly growing and important industry which was now in course of reorganisation on very similar lines was that of electric supply. So far as London was concerned the lines were laid down some 40 years ago with the idea of establishing active competition. London was divided up into a number of small areas, some of which were handed over to municipalities, others to private companies; in the latter case provision was always made for two competing companies in each area. The system worked fairly well at first, but as the supply developed, the limitations of the small companies became intolerable; amalgamation was forbidden, and the supply of London was seriously threatened. Legislative provision had now been made by which the London area was divided between large groups of companies and local authorities associated in a manner which will enable electric energy to be produced on the largest scale, while the charges of the companies were strictly limited, and the harmonious working of the whole was entrusted to a Joint Electricity Authority working under the ultimate control of the Electricity Commissioners, a public body. The new Electricity Act which had just been passed was, in intention at least, an extension of the same general principle to the whole country. In the case of the railways the same policy of amalgamation in large groups under the control of a body of commissioners had been carried through by legislation.

A Public Trust.

This appeared to him to be the constructive tendency which was shaping the future of industry. It involved a recognition of the fundamental fact that, in order to induce men to put forth their full energy in production, it was necessary to foster the spirit of rivalry, which was only stifled by official monopoly. And at the same time it recognised a sentiment which had imposed itself upon the public conscience, a sentiment which was too powerful to be ignored. This was the conviction that those who were in control of great businesses must operate with due regard for the common weal, and not only for their private profit; that the management of great aggregations of industrial power was not merely a private, but a public trust. It was this sentiment which was the strength of the movement which called itself Socialism. As an economic foundation for industry, Socialism was worthless; it had been proved and found wanting. It was a relic of the Victorian age. Russia, so far as one could see anything clear in Russia, was at this moment engaged in a bitter controversy between the leaders as to the best camouflage for a return to property as a reward for industry, and was appealing to the capitalists of Europe to come and help them, while loudly boasting that capitalism was to be annihilated. But the sentiment of the responsibility of property to the commonwealth for just administration

was more potent than ever it was, and it had been largely strengthened by the aggregation of businesses. In the United States it found expression in Anti-Trust legislation, a rather crude device, as it seemed. It was wiser to aim at direction than at suppression of economic forces. It was for this reason that the policy we had begun to adopt here appeared to him the wiser; and it was because he saw no permanent peace except along this road that he lamented its failure in the case of the coal strike.

Of course, it was impossible to lay down the rules by which such developments were to be carried out; nor would it be desirable that any compulsion should be applied if it could be avoided. We should doubtless go on the good old principle of taking each case by itself and evolving the solution which seemed best to suit the industry concerned. The establishment of the Coal Commission was thus, he felt confident, a step in the right direction; and it was because this method was not accepted that the result of the whole controversy seemed to him a step backwards rather than forwards, portending troubles yet to come.

Current Prospects.

As to the outlook, he alluded to the conditions in the iron and steel trade. Here there was the prospect of an active and prosperous year if employers and employed would work together for it. The cotton trade was probably the most anxious point in the outlook. He then went on to show that in the interesting experiments in comparative methods of stopping inflation among certain Continental currencies the policy of "a managed currency" had been unsuccessful, remarking that in the case of Belgium—the Westminster Bank had been able to contribute its share in the assistance to the Belgian Government—the gold standard had been attained by the stabilisation of the Belgian franc at a devaluated rate. Alluding to the bankers' manifesto, out of 142 signatories for Great Britain more than half were leaders in their great industries, thus revealing that it was in no way a "money lenders' circular." To describe it as such was a wholly baseless myth.

Bank's Appropriations.

Referring to the bank's balance-sheet, he said there had been an increase in the deposits, from £271 millions to £285 millions, which was evidence of the accumulations of savings in spite of all adverse conditions, and a good omen for growth of trade. On the other hand, there was a considerable fall in the bank's acceptances, amounting to £2,019,000, due in large measure to depression in the cotton industry and the fall in the price of raw materials. As to the appropriation of profits, the £200,000 put to the officers' pension fund must be regarded as a standing charge necessary to help the fund on to a sound actuarial basis. As to their re-building scheme, this was now proceeding rapidly, and they had put aside another £250,000 out of profits to replace the drafts already put upon it, but the directors hoped this amount would go a long way towards completing the whole scheme.

The Chairman then referred to the Board's loss by the death of Col. Batten, and to the appointment of Mr. John Rae, the Chief General Manager, as a Director.

The report was unanimously adopted and other formal business was transacted.

COMPANY NOTES AND REPORTS.

LLOYDS BANK.

The report of Lloyds Bank Ltd. for the year ended December 31 last states that after payment of salaries, pensions, staff bonuses and allowances, other charges and expenses, and the annual contributions to the provident and insurance fund and the widows and orphans fund, and making full provision for rebate, income tax, bad debts and contingencies, the profit brought in for the year is £2,523,582 14s. 7d., to which has to be added £534,295 1s. 4d. brought forward from the previous year, making a total of £3,057,877 15s. 11d., out of which the following appropriations have been made:—Interim dividend on the "A" shares for the half-year ended June 30 last of 1s. 8d. per share, being at the rate of 16½ per cent. per annum, less income tax, paid July 31, 1926, £958,197 1s. 4d.; interim dividend on the "B" shares for the half-year ended June 30 last of 6d. per share, being at the rate of 5 per cent. per annum, less income tax, paid July 31, 1926, £28,745 18s. 5d.; bank premises account, £250,000; staff superannuation fund, £300,000. This leaves a balance of £1,520,934 16s. 2d., which the directors recommend be appropriated as follows:—Dividend on the "A" shares for the half-year ended December 31 last of 1s. 8d. per share, being at the rate of 16½ per cent. per annum, less income tax, payable February 5, 1927, £958,197 1s. 4d.; dividend on the "B" shares for the half-year ended December 31 last of 6d. per share,

being at the rate of 5 per cent. per annum, less income tax, payable February 5, 1927, £28,745 18s. 5d.; to be carried forward to the profit and loss account of the current year, £533,991 16s. 5d.—£3,057,877 15s. 11d. In accordance with resolutions passed at an extraordinary meeting held in February last, the Bank's authorised capital has been increased from £72,500,000 to £74,000,000 by the creation of 1,500,000 "B" shares of £1 each, of which 1,437,296 have been issued fully paid.

IVORY IN GOOD DEMAND.

Messrs. Hale and Son's report on the quarterly ivory sales held on January 25 and 26, states that they comprised 38½ tons (against 53½ tons at the same time last year), viz.: 15 tons Zanzibar, Bombay, Mozambique, East African and Siam, ¼ ton Abyssinian, 10 tons Egyptian (Alexandrian description), 7½ tons West Coast African, ½ ton Lisbon, and 5 tons land carriage; also ¾ ton sea horse tusks and boars tusks, and 1½ cwt. rhinoceros horns. Total, about 39½ tons.

The following was the assortment of the East Indian description: 9½ tons soft tusks, ¼ ton hard and Siam, 1 ton billiard ball pieces and a few ball scrivellos, ¼ ton bagatelle points and bagatelle scrivellos, ½ ton cut points for balls, ½ ton cut points off large tusks, ¼ ton undersize and defective points, etc., 1½ tons cut hollows, ¾ ton scrivellos, ¼ ton cores and mixed defective pieces. Of the above quantities 11½ tons consisted of lots previous offered or indirect import, viz.: ¾ ton East Indian, ¼ ton Abyssinian, 4½ tons Egyptian, 1 ton West Coast African, 5 tons land carriage, and ½ ton sea horse teeth.

During the progress of the sales 5½ tons were bought in or withdrawn, viz.: ½ ton East Indian and Abyssinian, 1½ tons Egyptian, 1 ton Congo, and 2 tons land carriage. A generally good tone was manifested, and an active demand prevailed. America, the Continent and the Home Trade competed freely. There was a good assortment of large and medium tasks, both of the soft and hard descriptions, prices for which were firm to an advance of £2 to £3 per cwt. Ball ivory was in small supply, and consequently, meeting with keen competition, prices for ball pieces advanced £10 to £20 per cwt.

Egyptian consisted entirely of the Alexandrian description. Soft, large, and medium tusks were steady to £2 per cwt. higher, and hard was firm to £2 to £3 per cwt. dearer. Billiard ball scrivellos were steady on the average. Soft scrivellos were firm; hard rather dearer.

M. Diomedes, the Governor of the National Bank of Greece, is to visit Paris and London on business on behalf of the bank and the Government.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 26 :—

Egyptian Futures.—Sakel Contract.—This market has encountered rather more pressure during the past week, profit-taking transactions and a certain amount of short selling combining to create an easier undertone. In addition, it is now becoming apparent that Sakel cotton has not participated to the extent expected through the recent trade improvement. This in our opinion is due to the following causes :—First, the disappointing quality of the present crop, and, secondly, the very healthy demand recently experienced for Sudan Sakels, which at the present basis are relatively cheaper and also give spinners more satisfactory working results than the Egyptian variety. This situation is having a decidedly disturbing effect on holders at the other side, who are becoming increasingly perturbed at the steady augmentation of stocks, as, apart from the moderate offtake from this country, we believe that business from Continental and other sources is not at all satisfactory. A criterion of the situation is offered by the export figures which show, out of receipts totalling 2,865,000 kantars, shipments only amounting to 1,195,544 kantars. The following extract from a report just received from the Alexandria Commercial Co. (SA) is extremely interesting :—

"There is still a lot of cotton in the villages unsold, and the season looks like being a long one. Growers are, naturally, dissatisfied with the prices at which the present crop is selling, but this does not mean that the acreage to be put under cotton during the next few months will show any serious reduction on last year. Growers who rent land will do their utmost to obtain a reduction of rents, but all growers, great and small, anticipate an improvement in prices, sooner or later, depending on the Government to take such measures as shall appear necessary to bring about the realisation of this anticipation. The unsatisfactory statistical position, the relatively poor outlook in the textile centres, the increasing competition of outside growths, are factors which the Egyptian native is prone to ignore, and these factors will accordingly not have any great influence on the new acreage."

Manchester reports continue to show a more satisfactory business and inquiry. There may have been a slight slackening off during the past two days, but we believe that this is mainly due to the fact that the majority of spinners have now fair order books, and consequently are able to show a more independent and firmer attitude.

Near positions have latterly shown a decided tendency to ease in comparison with the more distant options, this being a reflex of our earlier remarks regarding the accumulating stocks. However, as our market continues to run at a comparatively small premium over Alexandria, we do not think that the movement, for the time being at any rate, will go much farther, as we are still a long way from being able to get cotton over to this side on anything like an important basis.

We do not think that much alteration from the existing level will be witnessed in the near future, but should the present reactionary tendency continue in evidence without any definite change in the trade outlook developing, we would not be averse to recommending conservative purchases.

Upper Contract.—Only a very limited amount of business has been transacted in this option during the past week, and with the American markets showing a somewhat hesitating tendency, prices have been inclined to

ease. Spot and forward business has been fairly well maintained and trade reports continue to indicate a good inquiry. We still consider that prices will ultimately harden further, and on this account would advise purchases on any further reaction.

Egyptian Spot.—On the whole, business has been somewhat quieter this week. During the earlier period there was a general tendency on the part of the trade to await the issue of the U.S.A. ginning figures, which were published last Monday, and although, when published, these figures proved to be much as had been expected, an easier tendency has since been noticeable in the futures markets of the world, and business in the raw material has been slowed down in consequence. The tone of the official Manchester reports has continued to be very healthy, and, provided that there is no unlooked-for collapse in futures, we see no reason why the improved trade which has lately been so manifest should not be maintained. It should be borne in mind, however, that spinners generally have been buying fairly well since the beginning of the New Year and a period of "digestion" is only to be expected sooner or later.

C.i.f. business has been of a patchy description, but here and there some improvement has been noted. The spot sales of actual Egyptian have shown improvement, but business in Sudan cotton, after the recent heavy buying, has been quieter. Spinners, however, still maintain close touch with the market for this latter cotton. The general Egyptian inquiry has shown little change from that of previous weeks. The greater part of it has been for Uppers at from 9½d. to 10½d. In Sakel, it has been the medium qualities which have been chiefly in demand, with perhaps just a hint of more business in the "Good" grade. Rather more business has been done this week in Pilon cotton, all qualities being in request from time to time. Forwardings to spinners for the week ending 21st inst. were returned as 5,108 bales Egyptian and 1,432 bales Sudan. Estimated sales, 1,600 bales Egyptian and 1,800 Sudans. Quotations of Sakel show a net decline of 25 points on the week; Upper are 15 points easier. F.G.F. Sakel to-day, 13.70d. F.G.F. Upper to-day, 10.40d.

A company with a capital of £40,000 has been formed for the construction of the electric tramway from Haifa to the Carmel, and it is understood that the work of construction will be started in April. Half of the shares in the company have been taken by two Jewish land companies, while the other half has been taken by the Palestine Electric Corporation.

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester. Established 1887).

NEWS FROM ALL SOURCES.

The area under maize in Roumania in 1926 was about 10,188,000 acres, and the yield is estimated at 5,165,713 tons, as compared with 4,159,147 tons in 1925.

The Greek Minister of Finance has not approved the draft of the new naval Budget, demanding further considerable economies.

The Anglo-Bulgarian Mixed Tribunal has finished its work. It is the first of the various tribunals of the kind in Europe to do so.

The death is announced of Colonel C. H. T. Marshall, who saw much service with the Indian Army, and was greatly interested in Indian ornithology. His eldest daughter is Mrs. Maude Diver, the novelist.

The Calcutta Corporation, which recently refused to vote an address of welcome to the Viceroy on the occasion of his first visit to the city, last week decided to give a civic welcome and address to Mr. Saklatvala, the Communist M.P., on his arrival in February 1. The decision was reached after protests by the European and non-Swarajist councillors.

It is reported that a new railway line is projected by the Soviet authorities, to connect Semipalatinsk with Pishpek.

Tenders are to be invited for the exploitation of wireless telephony in Greece.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 10 amounted to £E10,139, making the total from April 1 £E263,851. The figures for the corresponding periods of the previous twelve months were £E11,336 and £E278,533.

Dr. Walter Seton, the historian and antiquary, and secretary of University College, London, died on January 26 at the age of 44 in a London nursing home from pneumonia. In 1918 Dr. Seton was appointed Political Secretary to the Ministry of Information with charge of propaganda in the Balkans.

The Persian Cabinet resigned a few days ago in consequence of the Independent Party having joined the Opposition in giving notice of an interpellation in connexion with recent correspondence between the Government and the Anglo-Persian Oil Company, and also regarding the Government's failure to settle a trade treaty with Russia.

The Jewish Agency.

To all observers of Jewry it has been evident that for some time there has been in process a struggle between those Jews, personified by Dr. Weizmann, who saw in the development of Palestine the most urgent necessity for their race, and those Jews, personified by Mr. Louis Marshall, who thought more important the local alleviation of the misfortunes of suffering Jews in Eastern Europe. In a certain sense, these two endeavours, both backed by the energy and generosity of which Jews are so capable, seemed rival endeavours: Zionist and non-Zionist looked upon each other's campaigns with mutual anxiety. At last, however, a compromise has been reached, a compromise that may very considerably affect the future of the Holy Land.

It is a tribute both to the strength and to the weakness of the Zionist movement that it now seems to have gained the support of the vast body of non-Zionist American Jewry. At the opening, on January 17, of the New York City campaign for two and a half million dollars, as we read in the *New York Times*, Dr. Weizmann, whose sense of statesmanship no non-Jew has ever held in doubt, announced that the Jewish agency—the institution recognised in the British Mandate for Palestine as a co-operator, in the economic and social spheres, in the building up of a Jewish National Home—is to be formed on a non-partisan basis. Whether the hard experiences during the last year of Jewish colonists in Palestine have hastened this consummation or not, it is a fact that so long ago as February, 1924, plans for the formation of such an agency were formulated by Mr. Louis Marshall, representing the non-Zionist element in American Jewry. It is true that there still is in America hostility to the idea of "nationalising" the Jews: last month in the States, for example, there was a great conference in which the desirability of the establishing of an "American Judaism" was strongly urged. But in general it may be said that there is more active interest in the future of Palestine being taken by Jews than at any previous period. A non-partisan Commission is to go out to the Holy Land next

Easter to study the whole situation. It will present its report in the autumn, and then an extended Jewish Agency, which will include non-Zionists, will be formed. This Agency, as we have said, will co-operate with the Jerusalem Government in the promotion of Jewish interests. The preliminary investigation is to be done very thoroughly, for it is stated that the survey of Palestine will include an expert study of the resources in the agricultural, industrial, commercial and other economic possibilities of Palestine and neighbouring territory. These last three words are worth noting, for the allusion is clearly to fertile land in Transjordan and in Syria. There is, for instance, land in the Hauran and in the Lake Huleh region, for which Zionists have often suggested a better use than is at present being made. The very mention of this fact demonstrates how carefully the recommendations of this Commission will have to be laid down, for the foreign relations of Palestine are, of course, entirely in the discretion of the British Government.

We have said that the promise of the formation of this extended Jewish Agency indicates at once the strength and the weakness of the official Zionist movement. Dr. Weizmann is declared, indeed, to have said that nothing, short of the swallowing up of Palestine by the Mediterranean, would stop the construction of a Jewish National Home. That did great credit to his heart. But what does equal credit to his head is the statement, which occurs in the formal agreement between what is called his group and the Marshall group, that only by pursuing the method indicated in the setting up of the non-partisan Commission for the survey of conditions in Palestine can the Jewish Agency be made "an effective instrument of the building of the Jewish National Home in Palestine."

This agreement to form a widened Jewish Agency is probably the most important thing for Zionists since the promulgation of the Balfour Declaration. Certainly the report of the non-partisan Commission next autumn will be a most eagerly expected document.

THURSDAY, FEBRUARY 10, 1927.

TURKEY AND SOVIET RUSSIA.

For some time past it has been evident that there has been something in the nature of a *détente* in Russo-Turkish relations. Several obvious attempts to parade the solidarity of the two countries before the world have been made, but, whatever may have been the effect in Russia and Turkey, they have failed signally to carry conviction elsewhere. The Turkish-Soviet Treaty signed in Paris on December 17, 1925, was purely an emergency affair. On the face of it the agreement could be regarded as Turkey's reply to the Mosul award of the League of Nations, and as the retort of the Moscow Government to the Locarno agreements. The Soviet Acting Foreign Minister chose to connect it with "rumours appearing frequently in the Anglo-American press of a secret agreement concluded between Russia and Italy and directed against Turkey," and added that "on the other hand the Soviet Government was aware of the attempt of certain countries to draw Turkey into political combinations against it." Whatever the impelling motive, however, which, in any case, influenced Russia alone, the Treaty made no attempt to live up to its preamble as "tending to the strengthening of stable and normal relations between the two countries and the friendship uniting them"; for it provided merely for the neutrality of each contracting party in case of aggression against the other by one or more Powers, and bound each country not to participate in any attack or agreement of a political, financial or economic character directed against the other. Only as an afterthought, in a third Protocol, was an effort made to substantiate the enthusiasm of the preamble, by a joint understanding to enter into negotiations for the establishment of a method of settlement of differences which might arise and which could not be regulated by ordinary diplomatic means. Again, last autumn, the Turkish Foreign Minister paid a visit to Odessa, where he met M. Chicherin, the Soviet Foreign Commissary, but the official *communiqué* on the meeting made it clear to the people of both countries that there had been no tangible results.

Owing to the strict discipline under which the Turkish Press carries out its task considerable interest attached to an article, appearing simultaneously in the third week of January in two Governmental organs, which called upon all citizens and the Press to refrain from rendering the task of the Government in foreign policy difficult. The special reference it was explained, was to the campaign against Russia, her political dogma and her institutions which "some persons or some groups are carrying on." The Turks, the article continued, have not the right to mix in the politics of other States, and "it is useless to publish articles which create the impression that Turkey has designs on the Caucasus or on regions inhabited by

our racial brothers. Russia may be annoyed by this campaign, even although she believes that we do not covet any territory outside our frontiers and believes that our policy towards her is a loyal one." As nothing had been remarked in the Turkish Press that seemed to call for these strictures the reason for this particular gambit was not apparent until later. Within a fortnight both the two organs which had published the strange warning had entirely changed their tone. Russia apparently had failed to act upon the subtle hint. One newspaper drew attention to the fact that negotiations for a commercial treaty with Russia had been in progress for the better part of two years and still showed no sign of ending. Difficulties had arisen, but they were not the fault of the Turkish Government. Turkey, throughout the negotiations, had adapted the most conciliatory attitude, and had applied to Russian imports the same tariffs as were enjoyed by countries trading with her under provisional commercial treaties. The Soviet Government must understand, the newspaper added, that Turkey's conciliatory attitude cannot last indefinitely, and that Russia should display a similar spirit of conciliation. The other Governmental organ went further. It pointed out that the political friendship uniting Soviet Russia and Turkey should be sealed by economic friendship, but added that, if agreement cannot be reached, it will be better to allow each country complete liberty of action. If a commercial treaty be desired, it should be made at once; otherwise the negotiations should be broken off. Such plain speaking marks an entirely new development in Russo-Turkish relations.

This development, however, was inevitable, as Turkey passed into a more settled condition. A State needs to be in the melting pot to derive any benefit from Soviet friendship, and there must be many Turks to-day tempted to compare the position in China with their own experience when Soviet influence was more prominent at Angora. Such a comparison cannot fail to evoke satisfaction in Turkey; for it will show that not even at the gloomiest point in the country's recent history did the Government lose its grip on Turkish affairs and surrender itself to Bolshevik methods, as the Cantonese Nationalists have done. At a time when it seemed to the Turks of Anatolia that the whole world was against them, they accepted gladly the proffered help of Moscow without much consideration for any advantages that the Soviet Government might hold out, apart from munitions and money. Soviet phraseology to the extent of calling Ministers Commissars was adopted for a period; but it is doubtful whether Moscow has made any more lasting impression among the Turks in any other direction. Turkey remains anxious to continue friendly relations with her northern neighbour; but the more insistent that Moscow is to impose itself on Angora, the less responsive will it find the Turkish Government. Unless the signs of the times have been misread, the frequent comings and goings of the last year have represented a refusal on the part of Soviet Russia to accept the facts of the situation. A close alliance between Russia and Turkey and a Pan-Asiatic combination against the world in general have alike been rejected in Angora, and Russia is reduced to having recourse to such economic strength as she has to bring pressure upon an independent Turkey. The result does not promise well. Now that the Turkish Government has clearly shown that it does not intend to lend itself to the Soviet scheme of things, there is likely to be little that is altruistic in Moscow's interest in Turkey. The Soviets will try to secure by commercial agency the end that they failed to bring about by political means, and it is satisfactory to find that Turkey is as wide awake to this form of danger as she was to the other.

Notes of the Week.

Cabinet Building in Yugoslavia.

The competition in the Balkans for the establishment of parliamentary "records" continues. Greece, with six Prime Ministers in 1924, might have considered her position unassailable for some time to come; but within a little over two years Yugoslavia sends her a serious challenge. She cannot claim the same multiplicity of Prime Ministers, but she has one who has formed six different Cabinets in nine months. M. Ouzounovitch's sixth Ministry took the oath of office on February 2, and immediately two of its members resigned their portfolios. As one Ministerial Department out of the seventeen in which Yugoslavia indulges had not been filled, the Prime Minister's task of building his sixth Cabinet is not yet complete. The new Ministry is interesting because it marks the first occasion on which the Slovenes, the third component element of the Triune Kingdom, have had a share in the Government. Dr. Koroshetz, their leader, was reported to have laid down certain conditions for his acceptance of office—including a more generous expenditure of the State revenue on Slovenia—and it will be of interest to learn whether the co-operation of the Slovenes entails any modification of the previous policy of over-centralisation, or whether it is merely a temporary coalition *de convenance* to save the country from the worst results of Raditchism, which, if not met in this way, would prevent the Budget from being passed this session.

A Precarious Majority.

The new Yugoslav Government comprises Radicals and Slovenes only; but among the Radicals all three groups are represented—the Dissident Radicals led by Liuba Yovanovitch, and the Pashitchists, who are of recent formation as an organised group in the party, in addition to the Prime Minister's followers. The co-operation of these three groups is of hopeful augury for the future consolidation of the Radicals before centrifugal tendencies have prompted one or other to adopt a different name. With his Cabinet thus constituted, M. Ouzounovitch controls in the Skupshtina only 161 votes out of 314. Even if five German deputies give him their support, his majority remains dangerously small, and would not hold out much chance for the passing of the Budget, unless the Dissident Croats come to the Government's assistance. Up to the last moment they were expected to form part of the Coalition Government, but are supposed to have held back from a desire not to drive too wide a wedge into the Croat ranks. The Prime Minister has reminded the

Skupshtina that its fate is in its own hands, and that any further dislocation of parliamentary business, which may be said to have represented the normal state of affairs in Yugoslavia for the last two years, will be a menace to parliamentary institutions.

The Skupshtina's Test.

M. Ouzounovitch's statement does not necessarily mean that Yugoslavia is to have a Dictator; but there is every indication that the existing strength of parties represents the present state of feeling in the country, and if Serbs, Croats and Slovenes cannot, in these circumstances, come to a working arrangement in Parliament, the Government will have to carry on the administration without the Skupshtina's help. M. Ouzounovitch does not share the belief in some quarters that new elections will produce a very different distribution of strength among the various parties, and, as a Serb, he is naturally anxious that there should be no appeal to the electorate until the Serbian part of it, the majority being agriculturists, has finished with the harvest. With internal difficulties of such an acute character to face, it is not a matter for surprise that M. Ouzounovitch should not be favourably disposed to the idea of a parliamentary committee for foreign affairs, to which the Government might have to give explanations on foreign policy at awkward moments. The suggestion probably reflects the exchange of visits that has taken place between Czecho-Slovak and Yugoslav deputies; for the Foreign Committees in the Czecho-Slovak Chamber and Senate take themselves seriously, but it is not clear whether they are responsible for the Foreign Minister's restless activities or whether they are now trying to withdraw him a little from the limelight of the European stage, in the hope that the nation may concentrate more attention on domestic politics.

The Roumanian Succession.

It is as well that the question of the succession to the Throne should have been threshed out afresh in public in Roumania. Until it had been, the subject could not fail to give rise to misunderstandings and, probably, quite well-meant intrigue. The renunciation of his rights to the Throne by the Crown Prince was inevitably as grave a blow to the nation as it was to the Royal Family. Both were wounded in their pride as well as in their affection; but a stage had been reached when it was no longer possible for either to shut their eyes to the facts of the case, and Prince Carol's act of renunciation was accepted formally by both the Royal Family and the Roumanian nation. No one, it may well be imagined, was pleased with the course of events. The King felt compelled to act in accordance with the interests of the nation; the Roumanian people had to be guided by the King's judgement. If only the past could have been undone by the Crown Prince himself everyone would have welcomed his resumption of his former position in the country. In such circumstances it was natural that some people would not abandon all hope at once. There was the additional difficulty that, if someone did not make a move, the right opportunity might be missed; and so Queen Marie's meeting with Prince Carol has in due course been followed by an interpellation in the Roumanian Assembly of Deputies on behalf of the National Peasant Party with a view to giving effect to a motion passed by that Party's Executive Committee in favour of the revision of the Act of Parliament which had settled the succession to the Throne in January, 1926. The Prime Minister, General Averescu, took a firm stand in his reply. He pointed out that the National Peasant Party was going back on its attitude of a year ago, and declared that Prince Carol's renunciation had closed the question of the succession. He also added for the benefit of those who might wish to embark upon adventure that, as Head of the Government, he was determined to keep order and would apply

the law with severity in case of need. The latter rebuke we should like to think superfluous. The interpellation will probably have cleared the air, and will enable the Roumanian people to realize that, after all, there's a divinity that shapes our ends, rough-hew them how we will.

Religion, Britain and Turkey.

The intense interest raised by the recent case which Captain Peter Wright brought, and lost, against Lord Gladstone reminds one of how much the national attitude towards Turkey has changed since the controversial days of the 'seventies. It is not our business to re-examine the rather fantastic charge brought by the plaintiff that the great anti-Turk policy laid down for the Liberal Party by William Gladstone was built up on a personal foundation, for it is obvious, and, indeed, universally accepted that the religious criterion was the criterion used by our Victorian Liberals, just as it is in great part the criterion still used by those Americans who have just refused ratification of the Lausanne Treaty with Turkey. The march of events has at least proved that satisfactory foreign relations cannot be established on sentiment alone; it was largely neglect of this fact that brought about the downfall of Mr. Lloyd George. Nowadays no-one in their senses would dream, say, of supporting Abyssinia merely because she is called a Christian country or of opposing Afghanistan because she is Islamic. In emphasising this, we are not, of course, asserting that Gladstone's attempt to gain the friendship of Russia was wrong; but what ought to be repeated is that he was wrong in attempting to gain that friendship at the expense of a non-Christian people. The consummation of British policy in the East is surely cordial relations with both Russia and Turkey, formed on the basis of common interest and intention, and it ought never to be religion alone which should separate those interests.

Appeasement in Syria.

In announcing, a month or two ago, his intention to return to Paris for consultative purposes, at the beginning of the New Year, M. Henri Ponsot, High Commissioner for Syria, would appear to have nicely timed his visit. For just as he reached Paris came the news from Beyrout that Hasan al Atrash, Amir Designate for the Jabal Druse, had handed in his submission. In some quarters this important surrender is thought to herald that of Sultan Pasha al Atrash himself, but events have taught one to be chary of hoping for immediate effects such as this. If the optimists are right, so much the better. However that may be, it is indisputable that M. Ponsot's acts in connexion with his neighbours have been absolutely correct, and we are glad to note that, in an unostentatious way, he has pursued M. de Jouvenel's reversal of General Sarrail's policy towards the British in the East. On his way to Paris, M. Ponsot met both Lord Plumer and Lord Lloyd, and it is permissible to hope that at last Anglo-French co-operation in the problems of Western Asia has been set on a firm footing. France's troubles in Syria have been considerably reduced by the unswervingly correct attitude adopted by the Jerusalem and the Amman Government. It remains to be seen whether the French policy in Syria will, as we hope, model itself upon that so successfully followed in Iraq, or whether the endeavour to conserve States within a State will be persisted in. Upon that question, and upon the equally important question of Syria's currency, we shall know more when M. Ponsot has returned to his charge from Paris.

Palestine's Chief Justice.

As has been known for some time, Sir Thomas Haycraft, Chief Justice of the Supreme Court in Palestine, is retiring; he is due actually to leave the Holy Land next April. The appointment of his successor,

Mr. M. F. J. McDonnell, who has seen considerable service in West Africa, was officially announced last week. Now although Sir Thomas has still a few weeks in the country which he has served so well for six years, it is not an unfitting time to appraise his long work. Last month, indeed, a farewell reception was given to him at Government House, when the High Commissioner indicated the sterling value of the work Sir Thomas had done in administering the complex laws of Palestine. After Lord Plumer's remarks upon that occasion, there is little left to say; but we should like to pay tribute to the manner in which the retiring Chief Justice has held the scales even between Arab and Jew, and, at times, between Government and governed. Nothing has contributed more to the prestige of the British in the eyes of the inhabitants of the Holy Land than the absolute equity which has been unceasingly preserved under the direction of Sir Thomas Haycraft. In conclusion, we congratulate Mr. McDonnell on being chosen to carry on the high traditions already laid down.

The Persian Crisis.

The Persian Cabinet under the presidency of Mustofi ul Mamalik never had, as we pointed out about the time of its formation, the appearance of stability; it was surprising, indeed, that it endured until the end of last month. The factors that seem to have led immediately to its downfall were the relations of the Government with the Anglo-Persian Oil Company in connexion with the Naft Khan oilfield in Western Persia, and the failure of the Teheran Administration to bring about a satisfactory agreement with the Russians. But it was not until the "Independent" Party joined with the Opposition that the Government handed in its resignation. As things are at the moment of writing, Mustofi ul Mamalik, or, as he now is called, Mirza Hassan Khan Mustofi, has been entrusted by the Shah with the formation of another Cabinet. This crisis should not, perhaps, be taken too seriously. They have a saying in Persia: "It's the same old donkey, though another saddle." It is, perhaps, the capital mistake of the Russians to imagine that an unsaddling of the mount necessarily alters its direction.

The Stamboul Treasury.

Towards the end of last month the ex-Imperial Treasury at Topkapou Palace, Stamboul, which is in process of being converted into a museum, was opened to the public. Thus for the first time the Kemalists are able to gaze upon the magnificent relics of their ancestors, and of their ancestors' friends and foes. It would indeed be interesting to hear the comments of the luxury-scorning Nationalist as he surveys, say, the throne of the Shah Ismail, captured by Sultan Selim, or the throne of Murad IV., upon which he sat when he was formally recognised as conqueror of Baghdad. He will, perhaps, look with some contempt upon the slowness with which Turkish dress progressed towards the correct, for one room is said to contain a set of the Sultan's gala costumes and turbans from Mohammed the Conqueror to Mahmoud II., who was responsible for the introduction of European dress. The throwing open of these treasures to the public view may well be, as the *Manchester Guardian* suggests, a sign that the new Turkey feels herself at last secure from the danger of war. These relics were taken to Konia in 1912 and to Angora in 1916. In time they may be removed to the capital of Turkey. On the other hand, the capital may conceivably return to Stamboul.

CYPRUS: A CORRECTION.

In our "Notes of the Week" in our last issue the forestry of Cyprus by a slip was described as representing a potential revenue of £2,500,000. This sum is, of course, the estimated cash value of the Island's forestry.

The Near and Middle East*

From Our Own Correspondents.

Teheran, January 11.

Political Tranquillity.

News of any political interest has been very scarce during the past two or three weeks, and everything has been very quiet, except the celebrations in connexion with Christmas and the New Year, which were observed by the European colony with the wonted jollity. All contrived to make the festive season as merry as possible in spite of the distance separating us from Home.

The Conscription Bill.

The enforcement of the Compulsory Service Bill drags on and apparently the result is not very satisfactory, only some 300 recruits having been enrolled in Teheran in place of the 1,000 which the authorities anticipated. It is naturally very unpopular with those liable to be called up, who are doing all they can to get out of serving. This opposition is much deprecated by the local Press, which exhorts the youth of the country in the name of patriotism to join up willingly. It is hard, however, to be really patriotic on 2s. 6d. a month, which is apparently the allowance the conscripts are given, for even in this country where tobacco is cheap, you cannot buy many cigarettes for rd. a day.

The Russo-Persian Agreement.

Teymoor Tash, Minister of the Court, who was sent by the Shah last summer to Moscow with a view to the settlement of the many outstanding questions between the Persian and Soviet Governments, returned here a week or two ago. The proposed agreement between the two countries which has been the subject of much discussion and debate by the Cabinet and the Parliament for the past few months, seemed on a fair way to being ready for signature when the news came through, about a month ago, that most of the Persian merchants in Baku had been arrested and imprisoned by the Soviet authorities on the charge, presumably, of dealing in Chervonetz (the new Russian currency) which is apparently prohibited. This caused great consternation here, and an outcry was immediately raised against this fresh oppression of Persia by her northern neighbour; it created a very bad impression. A year ago, it will be remembered, the Soviet Government suddenly prohibited the import into Russia of all Persian goods, which caused very great losses to Persian merchants in the north, and this embargo, coming, as it did, just when the Majliss were discussing the important Caspian Sea Fisheries Concession, which the Russians are so anxious to obtain, was naturally taken here as an obvious endeavour on the part of the Soviet to bring pressure to bear on the Persian Government to pass the Bill, which, however, the last Majliss refused to do before its dissolution, and this question therefore forms part of the proposed agreement. In consequence of strong representations from the Persian Government to the Russian Embassy, some of the arrested merchants have been released, but on the other

hand latest advices report that several others have been arrested.

Railways.

Mr. Poland, the American specialist engaged in connexion with the construction of railways, arrived here a short time ago, and has been busy since his arrival. He has divided the American and German engineers in the service of his administration into six groups, who will examine different parts of the country and prepare plans and draw up reports on the various sections. Mr. Poland himself is proceeding to Mazanderan.

The Persian Club.

A very interesting event took place the other night when the Club Iran, to which most of the *élite* of Persian society belong, held a masked fancy dress ball, which was attended by some 200 people, mostly Persians, with a good sprinkling of Europeans. The ball was quite an innovation, for it is not so many years ago that the average Persian would have thought twice before appearing in fancy dress at a public dance, but the ball was such a success that the Club intend to repeat it in a month or two's time.

Imperial Airways.

Sir Sefton Brancker, Director of Civil Aviation, who arrived in Baghdad in the first of the three air-liners conveying Sir Samuel Hoare and his party on the inaugural flight to India, broke his journey in Baghdad and arrived here last Thursday, presumably with the object of discussing with the Persian Government the question of landing grounds in Persian territory on the Persian Gulf which are on the Imperial Airways route to India, such as Lingah, Bunder Abbas, Bushire, and so forth.

General News.

Everyone here was pleased to learn that our new Minister, now Sir Robert Clive, has received the honour of knighthood in the New Year Honours, having been raised to a K.C.M.G.

M. de Facendis, the new Italian Minister, who arrived here a week or two ago, presented his credentials to the Shah last Saturday, when the usual cordial speeches were exchanged.

There has been a great deal of agitation among the Progressivists the last year or two against the horse-drawn trams, which laboriously thread their way through the principal streets of the town, just as they did twenty years ago, and we now hear that the Belgian company which runs this service has been approached by the Ministry of Public Works. It has at last been prevailed upon to adopt more modern methods and has consequently ordered out 35 motor-trams, to be sent out through Russia.

The proposals of a Danish Company to introduce motor buses in the town and up to Shemran and back have been before the Majliss for some time, but now seem to have been shelved for the time being. There seems to be a great deal of opposition on the part of a number of the Deputies to such modernising influences, and one of the reasons urged against the introduction of motor buses was that it would throw out of work the hundreds of drivers of the ramshackle cabs which ply for hire in the streets, and the hundreds of half-starved horses, which would be far happier in their graves than between the shafts!

THE PERSIA SOCIETY.

*Sofia, February 1.***The Census.**

On December 31 last the authorities undertook a general census of the population of the country. The results of this census are not yet known exactly, but it is possible to say, from the bulletins officially published, that the total population, which was 4,800,000 in 1920, is now not less than 5,200,000—an increase of 400,000.

The increase of the population in the urban districts is particularly noticeable in the capital, which had 20,856 inhabitants in 1880, in the first period of the establishment of the Bulgarian State, but now has 224,370 inhabitants. Likewise in the great provincial towns, such as Philippopolis, Stara-Zagora, Bourgas, Varna, Rustchuk. But on the other hand the small towns with a few thousand inhabitants—those which formerly played an important part in the national renaissance—are falling into complete decay. Manifestly they are yielding to the peasant conglomerations, of which a large part has already acquired proportions exceeding those of the small towns. This movement, with the appearance of a peasant bourgeoisie, which is becoming more and more accentuated, emphasises the importance of the country, with the concentration referred to of an urban bourgeoisie in the great industrial and commercial towns.

The census, coming on the eve of the legislative elections, will imply a proportionate increase in the number of deputies to be elected. These, at the moment 243, will probably be about 260 in the future Sobranye, the electorate being determined in Bulgaria on the basis of 20,000 inhabitants. Even Sofia, which since 1920 has elected eight deputies, will henceforth have eleven—a fact which will rejoice the very abundant candidates at the next election.

*Cairo, January 30.***The Cotton Congress.**

Cotton is always a topical subject in Egypt, and during the past week it has been an obsession. On Tuesday at noon King Fuad inaugurated the Congress of the International Federation of Master Cotton Spinners' and Manufacturers' Associations, at the Royal Opera House, Cairo, thus opening the sluice-gates, so to speak, to a flood of speeches, debates and discussions regarding cotton, its past, present, and future, which has since filled the Press and monopolised public attention. Egypt has had several international congresses during the past few years, but in most of them the general public has taken no more than an academic interest. Now, when cotton is the subject under discussion, the whole country feels that, directly or indirectly, it is concerned in the

deliberations which have been going on in Cairo during the past five days and, from next Tuesday, will be continued in Alexandria.

An admirable impression was made by the Congress from its earliest moments. The speech by Mr. Frederick Holroyd, President of the International Federation of Master Cotton Spinners' and Manufacturers' Associations, in reply to the address of welcome by the Minister of Agriculture, Fathallah Barakat Pasha, not only excellently impressed the audience which heard it, but has also been very favourably commented upon by the whole of the vernacular Press, which heartily endorses Mr. Holroyd's declaration that the interests of producers and consumers are mutual, that the spinners are, eventually, the selling agents for Egyptian growers and that, therefore, it is in the interests of both sides to put all their cards on the table and talk over, in perfect frankness, the manner in which each may best serve the other, and in so doing also best serve himself.

This is an admirable idea, and at every possible subsequent occasion speakers, Egyptian or foreign, have lost no opportunity of making declarations in the same sense. And it is to be hoped, it may even be confidently expected, that something will be achieved towards creating a better understanding between the growers and the spinners. But it would be foolish to suppose that the mere utterance of admirable sentiments and declarations of anxiety to co-operate will in itself achieve much. For there is a big accumulation of suspicion and mistrust to be cleared away before the constructive side of the Congress's task can be begun. Egyptian growers—and Egyptian Governments, too—have been wont to regard Lancashire as the home of enemies of Egyptian cotton growers, ever on the alert to discover some new means of sending down the price of Egyptian cotton and anxious at the first opportunity to abandon the fine product of the Nile Valley for other grades produced, preferably in some part of the British Empire.

The spinners, on their side, have of late years been increasingly mistrustful of the Egyptian Government's policy in regard to cotton. Attempts to control the market by Government buying and cotton area limitation enactments are alike viewed suspiciously. Some of the delegates, too, in private conversation, have not disguised the fact that they have been more than disappointed on many recent occasions by the Egyptian cotton which has reached them—by its excessive moisture content and the large amount of foreign matter contained in the bales.

On both sides, therefore, there is no reluctance to put forward grievances, and it is to be hoped that the unrestrained ventilating of them will do much to remove some at least of the causes of those grievances. Nevertheless, it is very difficult at such a Congress which, unlike previous similar gatherings held under the auspices of the International Federation, is open to the general Press, and is being fully reported, for delegates to say all they would like to say. One Lancashire delegate remarked to me yesterday that he was afraid both sides were keeping something back. This remark happened to follow the reading of a paper on the commercial history of Egyptian cotton, in which the author of the paper, Amin Yehia Pasha, stated that the variety called Hindi, formerly such a pest and found in large quantities in fields of Sakellarides, had almost disappeared, a view which was supported by several other authorities, including Prince Omar Tousoun, Mr. Victor Mosseri and the head of the agronomic section of the State Domains Administration, but which was contested by experts of the Cotton Research Board.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to **THE SECRETARY.**

Another point on which, to the minds of local cotton experts, the official delegates of the Egyptian Government are inclined to insist too strongly, is the improvement to be expected from the recent enactment of laws controlling the area to be planted with cotton and providing for the uprooting of cotton crops in excess of the authorised acreage. In practice, as most people know, it is almost impossible to carry out these laws since the machinery required for ascertaining that there has been an infringement of restrictions and for securing punishment of the offender is necessarily so complicated and slow that the crop concerned has been harvested before the order for uprooting can become operative.

It is not suggested that the Egyptian Government is insincere in its declaration of cotton policy, but it does seem to many observers that the practical difficulties in the way of enforcing any laws or restrictions in this country—not merely regulations concerning cotton—are being a little glozed over. But it is in any case only natural that this should be done, for it is hardly to be expected that the Egyptian Government will publicly proclaim its impotence to enforce its laws.

The organisation of the Congress has throughout been admirable. Not only has everything that could possibly be done to make the delegates enjoy their stay here been done, but also the manner of the doing has been so gracious and courteous that everyone has been impressed in the highest degree. As an example of the care and forethought of the organising committee it may be mentioned that a score of officials, nearly all from the Ministry of Agriculture, and all of them drawn from Egyptians who have been educated, in part or entirely, in European countries, have been released from their duties during the period of the Congress and attached as a sort of corps of super-dragomans to the delegates. Each of the officials concerned speaks one or more European languages fluently, and their duties are to accompany the delegates on all their excursions and to endeavour to be helpful and informative in every possible way. Thus the visitors have always at their elbows cicerones who can explain to them, in the visitors' own languages, anything they may want to know about Egyptian history, conditions or customs. This is but one example of the thorough manner in which the organising committee has "spread itself" to give its guests every possible facility for enjoying and utilising their stay here.

Bushra Bey's Enterprise.

Amongst the many social functions which have figured in the week's programme, none has been more remarkable

than the visit, yesterday, to the estate of Fashn, Upper Egypt, of Bushra Hanna Bey. Bushra Bey is not only one of the wealthiest of Egyptian farmers, but also has the reputation of being, perhaps, the most scientific and practical private cultivator in the country. His 4,000 acre estate at Fashn is a model of what a cotton farm should be. So highly are his methods thought of by the Cotton Research Board that Bushra Bey is entrusted with trying out all the new grades which the Board produces of "Upper" cottons and the produce of his sowings in such circumstances is bought by the Board at rates considerably higher than contract levels. Yesterday's visit to his farms was in several ways a remarkable one. The whole estate had been organised with one purpose—to show the delegates the various processes which constitute cotton cultivation. The bullock plough which dates from immemorial antiquity was seen at work alongside a motor tractor and, a little farther on, a Fowler steam-ploughing plant. Irrigation methods, sowing, ridging, cultivating, everything, indeed, which at this season could be displayed, was in progress and was described and explained by Bushra Bey, his sons and headmen. There followed a remarkable luncheon consisting exclusively of Oriental foods, each table having its *pièce de résistance* a stuffed lamb, roasted whole. Afterwards came displays of Bedouin horsemanship, including a remarkable feat by a horseman who rode his mount up two flights of stairs and on its back and discharged both barrels of his gun, which rested between the animal's ears, without its moving a muscle. It was, indeed, a memorable day, and the delegates returned to Cairo, tired but happy, confessing themselves of the same mind as the Queen of Sheba after witnessing the glories of King Solomon's Court.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ISLAM AND THE "HAJ."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your admirable leading article, published in your last issue, upon "Islam and the Haj," you suggest that under the Wahhabi régime pilgrims may enjoy both security and toleration. This very possibly will be the case. But it seems to me highly unwise that Great Britain should take sides in what is a purely Muslim affair, for if anything were to go wrong with the 1927 haj, Great Britain would surely receive the most blame. Our duty lies in preserving absolute neutrality in this matter, and our responsibility for the welfare of the pilgrims ceases entirely upon their embarking upon the soil of the Hijaz. To interfere in Arabian affairs in any other way than as they affect the British Mandated States appears to me to be repeating the same mistake which we made with ex-King Husain.

In the meantime, may I be allowed to congratulate you upon the greatly improved appearance of your paper? Long may it flourish!—I am, etc.,
J. P.

The negotiations for a Greco-Bulgarian commercial treaty are nearly ended, and it is expected that the Bulgarian Government will then negotiate a commercial treaty with Great Britain providing for "the most-favoured-nation" treatment.

The disclosure made in the Assembly by Sir Alexander Muddiman Home Member, that revolutionaries have plotted against the life of Lord Lytton, has not surprised Calcutta, says the Calcutta correspondent of the *Morning Post*, where it has long been known that several prominent persons were in danger.

A Turkish Mission, under the Minister of Education, Nejati Bey, is making an extended tour in Western Europe to study schools and educational systems in different countries. Other members of the Mission are Namuk Ismail Bey, of the Ministry of Education, and Dr. Emin Bey, Professor of Philosophy in the Constantinople University. The first country visited by the Mission is Czechoslovakia.

LAWRENCE OF THE HIJAZ.

The story of the Arab revolt against the Turks has been told by its chief instigator, Colonel T. E. Lawrence, in the recently published "Seven Pillars of Wisdom"; but before the publication of the cheaper and abridged edition (30s.) by Jonathan Cape—due on March 10—comes an exhibition, at the Leicester Galleries, Leicester Square, of the illustrations to Lawrence's book. One may call him Lawrence, because now he is neither "Colonel" nor "Mr.", being with the Air Force in India.

At once it may be said that Lawrence has gathered to his book artists after his own heart, extravagant, irresponsible, penetrating, visionary, successful. Eric Kennington, William Roberts, Augustus John, Sargent, Colin Gill, Paul Nash, Cosmo Clark, R. M. Young, William Rothenstein, Frank Dobson, Henry Lamb, Blair Hughes-Stanton, Gertrude Hermes—any man who can have produced prose worthy of the work of these artists may be said to have genius.

But to hold away for a minute from these decorations. For the purposes of this exhibition, Mr. George Bernard Shaw has written an Introduction to the catalogue, in which he splashes and flashes in that Shavian manner of which some have wearied, and in which others still delight. I think some of them worth quoting, even if it be only to anger or to please students of Arabian affairs.

"Lawrence, knowing already only too well the sort of people we are, saw that if he came to our rescue by making the Arabs revolt during the War he would have more trouble with us than with them; for British public opinion and official routine disapproves (*sic*) intensely of geniuses, even when they have been hall-marked at Oxford. . . .

"The limelight of history soon concentrated its whitest radiance on Colonel Lawrence, *alias* Luruns Bey, *alias* Prince of Damascus, the mystery man, the wonder man, the man who might have, if provoked, put on Arabia Felix and Arabia Deserta as a shepherd putteth on his garment, and who did, when all the lies and all the legends are subtracted, authentically and unquestionably in his own way and largely with his own hands explode and smash the Turkish dominion in Arabia and join up with Arabia in Damascus at the head of Arabia Liberata, Arabia Redenta, Arabia allied to Britannia just when Britannia wanted her." (One wonders, concerning this, how Lawrence would have fared had he encountered the Imam of the Yaman, already bound by treaty to the Turks!) For the rest, Mr. Shaw suggests that the British Government ought to have given a munificent pension to Lawrence, tells how, like Carlyle with his "French Revolution," Lawrence had to rewrite the book that had been lost, joys in his description of how Lawrence threw to the winds consideration of expense in the production of his book (which, being sold at thirty pounds, actually cost ninety), and finally prophesies that, with the presence of Lawrence in India, Heaven only knows what will happen next in that Dominion.

It is most convenient to take the illustrations in the order in which they are catalogued. One notices at once a very fine pencil sketch of the head of Sir Henry McMahon by William Roberts, a prelude to the magnificent types of British administrator which are elsewhere in this book. But the spirit of the "Revolt in the Desert" is most conveyed in Eric Kennington's wood-cut "The Eternal Itch," a fantasy of the underlying passion of man to get at one another, so that there shall always be cruel deaths, ghoulish skulls, and desolate places on the earth. Next to this is hung a magnificent work in pastel by Eric Kennington, "Said al Sikaini: Najd," also a prelude to the types of the true Arab which abundantly and splendidly colour Lawrence's pages. Proceeding, one's attention fixes itself on John's chalk drawing of "T. E. Lawrence," and on Kennington's pastel of the same subject, on the delightfully satirical "Wind" of Kennington, which

depicts brass-hats striding by in tempestuous neglect of some subalterns' soul-shattering salutes, the while Lawrence's meekly gazes, out of Arab costume, at what he considers the monumental folly of it all. Then come Kennington's pastel portraits of General Allenby (who, after all, had something to do with the "triumph" that ended at Damascus) and of the present Governor of Cyprus, and R. M. Young's chalk drawing of Major Hubert Young, now Colonial Secretary at Gibraltar, but formerly "Makik" in the Hijaz. One cannot miss the striking pastel portrait of Nouri esh Shaalan, that fierce Arab who has been in almost all the fights which occurred during and since the War in Arabia, nor the Blake-ish "Nightmare" and "Dysentery" of Kennington.

On the next wall hang Sargent's charcoal drawing of Sir Ronald Storrs, Frank Dobson's pencil sketch of Colonel Joyce, and portraits by various artists of Colonel Allan Dawnay, D. G. Hogarth, General Guy Dawnay, and General Sir Reginald Wingate. These are nearly all admirable. For John's portrait in oils of King Faisal of Iraq, some observers use a more laudatory word even than admirable, because they are convinced that he was interested in his subject. I am not so convinced.

Of the things that remain, Kennington's portrait of the Amir Abdullah is perfectly satisfactory, and that of his brother Ali is good. But there is deeper penetration in the representations of "Alayan: a Spy," and in "Mahmas: Soldier of the Camel Corps," who show that royal personages in Arabia are by no means monopolists in the art of making trouble. Most of the other decorations are more or less symbolical woodcuts, beautifully in keeping with the far visions of Lawrence. But they all lead back to the so-called hero of the show, T. E. Lawrence, of whom a portrait bust in gilded brass, by Kennington, is aptly placed in the middle of the room.

In conclusion, it should be said that it is time that the "mystery" of Lawrence were forgotten, and especially that the controversy over the policy that he advocated both during and after the War should not influence the indisputable fact that his book is the record of a very real romance, and that the art which has gone to its making is not unworthy of it.

Those who attended the private view of these pictures included: Viscount Lascelles, Earl of Scarborough, Lord Ashton of Hyde, Viscountess Rhondda, Lord and Lady Swaythling, Hon. Stuart Montague, Gen. Sir John Maxwell, Lord Allenby, Lord Kenyon, Earl of Crawford, Earl of Sandwich, Sir Reginald Wingate, Hon. Sir Gervase Beckett, Lady Sybil Grant, Sir George and Lady Lewis, Lady Winifred Elwes, Julia, Marchioness of Tweeddale, Sir Barry Jackson, General Dawnay, Lady Jane Gaythorne Hardy, Lady Morant, Lady Jackson, Sir Herbert Baker, Viscountess Gough, Major and Mrs. Hubert Young, Hon. John and Mrs. Collier, Hon. Mrs. Walter Levy, Mrs. Bernard Shaw, Mr. Edward Garnett, Mrs. W. K. Clifford, Mr. Lawrence Binyon, Mrs. Alec-Tweedie and Mr. Sacheverell Sitwell.

Book Reviews

BELIEFS AND RITUAL OF THE INDIAN PEASANTRY.

"RELIGION AND FOLKLORE OF NORTHERN INDIA." By Dr. William Crooke. (Oxford University Press, Humphrey Milford. 21s. net.)

This work, described as a New Edition, entirely rewritten, seems in fact to be the third edition of a book which was first produced on a much less ambitious scale. It is a veritable mine of information on the subjects with which it deals, with a profusion almost bewildering to the uninstructed reader. To such a one, indeed, it gives the impression of the contents of a number of well-filled notebooks put into print very much in their original form: an impression which is heightened by a certain amount of repetition, generally caused by the appearance of the same facts, in practically the same words, in different chapters dealing with various aspects of the subject. Sometimes, however, the repetition occurs without this excuse: as, for instance, when we are told of the veneration of the tomb of "the great Brahman saint Dnyanesvar, at Alandi in the Poona District": and, on the same page, eleven lines later, that "Dnyandeva, the gifted Maratha Brahman poet, has been deified under the title of Dnyanesvar, and a tomb and temple have been raised in his honour at Alandi in Poona District." One finds also, here and there, statements that read rather strangely, in a form that apparently escaped the notice of the author when rewriting his original work, and of the compiler whose name is given as having prepared this edition for the press. In one place, for instance, we are told the names of seven godlings of the Deccan who control various diseases: and the list of "diseases," that follows, includes not only smallpox and cholera, but gold and buffaloes. As another instance, the compiler might have improved the wording of the passage in which we are told that "Kandhs conceived the Earth Mother in elephant form, a human victim was fastened to the proboscis of a wooden elephant, and as he was whirled round the crowd used to cut pieces of flesh from his body as long as life remained; the only surviving example is now in the Madras Museum."

The uninstructed reader will find a certain number of statements apparently, though not really, contradictory: the apparent contradiction being due to the diversity of peoples that inhabit the geographical expression India. He may, for instance, be puzzled to find a statement on one page that ladies of a certain profession are married to a tree if Hindus, to a sword if Muhammadans: and that the belief obtains that, if the tree dies or the sword is lost, the lady becomes a widow; while, on another page, he is told that such a woman is considered lucky "because she can never become a widow." The explanation is, that the first passage refers to Bengal and the second to the Deccan. Also the book deals, in general, only with the mystical side of things, ignoring the matter of fact side. For instance, we are told (several times) that "the dread of punishment by decapitation" is explained by the fact that many of the most pernicious Indian ghosts are headless; but, at any rate among Muhammadans, there is also the dread of getting the wrong head in the future life. The present reviewer was once stationed in the Kurram Valley, when a trans-border ruffian dug up the corpse of a local holy man, recently buried, and carried off the head, which he held to ransom. The inhabitants were much less exercised at the sacrilege than at the fact that, as they put it, "our holy man is now standing before God without a head: and, when God says 'Who are you?' and he answers that he is such a one, God will reply, 'But how can I tell?': for, lacking his head, it is impossible for God to recognise him." We are told, also, that a Shiah Muhammadan will not touch the flesh of the hare "because the blood, a forbidden food, cannot, they think, be separated from its flesh." The present reviewer was once told, by an elderly Shiah Pathan, that one of the

reasons why Shiahs would not eat the flesh of the hare was because they believe it to be one of the animals (the camel, he said, was another) which has "the sinew which shrank" in the hollow of its thigh—vide the Biblical story of Jacob wrestling with the Angel.

The book contains a great deal of very interesting information probably unknown to the ordinary Englishman in India. It quotes the known fact that, in Vedic times, beef was permissible food, and that it remained so up to the later period of the great Hindu epics; so that the Hindu reverence for the cow is a development of comparatively recent date. It also explains that the ass is "an ignoble animal," because it is the steed of the Goddess of smallpox and is associated with low-caste persons following mean crafts. Englishmen in India quite often give their small children a donkey to ride; but this is not a wise thing to do, for the ignobility of the steed communicates itself, in the mind of the Indian, to the rider. An amusing touch is to be found here and there, in such pieces of out-of-the-way information as that which explains why certain low-caste Hindus in Bengal, though they will kill and eat cows and other animals, regard the dog as tabu. An elder of the community said that, as they thought it right to select some animal that should be as sacred to them as a cow is to a Brahman, they pitched upon the dog, "because it is a useful animal when alive and not very nice to eat when dead." And a phrase, which may be said to present the view of the average Indian to his European governors, is to be found in that in which the author remarks that the widespread belief in the efficacy of charms, and in the unavoidable effects produced by the process of nature, invests the Indian peasant with "the assurance that his actions are regulated by some force outside himself, which often stimulates his energies and leads him to success."

POLITICAL EVOLUTION.

"FROM TRIBE TO EMPIRE." By A. Moret and G. Davy. (London: Kegan Paul, Trench, Trubner and Co. 16s.)

We have only one serious fault to find with this very learned, able and interesting book. And that is that it fails to carry out the programme which it has set for itself. The fact is that we have not yet sufficient knowledge to work out the various stages which led from the simple society of primitive man to the highly-developed Egyptian Empire with its international complexities. So we have really two books by two authors, both of which are well worth reading, but which fail to make the vital connexion which it is necessary to supply.

The main part of the volume is taken up by a very brilliant sketch of the growth of Egypt from a collection of communities to a rich and powerful Empire, together with its decline. No living man probably could have done this work better than Professor Davy of Dijon. Knowing his subject thoroughly, he is able to work out his thesis by sticking to essentials, and the illustrations supplied do much to illuminate the text. Specially well done is the treatment of the international relations which the development of the Empire produced.

Professor Moret of Paris supplies the earlier part and

RUSSIAN GRAMMAR SELF-TAUGHT with KEY

(In Russian and Roman Characters.)

By JOHN MARSHALL, M.A. Trin. Coll., Camb.

"It contains much that cannot readily be got at in English text-books, and the Author's writing is always clear." — *The Gamolier Edinburgh University.*

Sold by all BOOKSELLERS. Write for Catalogue No. 25.

London: E. MARLBOROUGH & CO., LTD., 51, OLD BAILEY, E.C.4.

deals with the growth of society from the Totem clan to the beginnings of individualised power. His essay is an able setting forth of the familiar theories of Durkheim which carry far less weight with English scholars now than they apparently still do across the Channel. Still it is well that we should have them so clearly expressed. With less insistence on polemics with Sir James Frazer and others we should have escaped the feeling that Professor Moret finds himself cramped for want of space. The subject is, of course, extremely polemical, but we feel that the author ought to have chosen between proving the Durkheim case and stating it. As it is, he has rather fallen between two stools.

As we said above, it is the *trait d'union* between the two essays that is missing. It is a long step from the totems of Australia and the American Indians to the standards of the *Nomoi* of ancient Egypt. While these may conceivably represent clan totems, it is at least equally possible that they do not. Indeed, this is frankly acknowledged by Professor Davy. C. S.-W.

WAR MEMORIAL AT JERUSALEM.

The Imperial War Graves Commission announce that the construction of the war cemetery at Jerusalem, on the Mount of Olives, is nearing completion, and that the memorial will be unveiled by Field-Marshal Viscount Allenby on Saturday, May 7. The cost of this memorial, which takes the form of a chapel, has been mainly borne by a fund subscribed by members of the Egyptian Expeditionary Force during the War under Lord Allenby's command. The names of those of the Force who fell during the campaign, but who have no known graves, are being engraved on panels affixed to two wings extending on either side of the chapel.

The New Zealand Government, in memory of the New Zealand Expeditionary Force in Palestine, have furnished the funds necessary for the decoration of the interior of the chapel with mosaic. This forms a special feature of the memorial.

The chapel, memorial, and cemetery have been designed by Sir John Burnet, R.A. The mosaic work is the design of Dr. R. Anning Bell, R.A., and the sculpture work of Mr. Gilbert Bayes, R.S.B.S.

GIFT FOR THE ASHMOLEAN.

Sir Arthur Evans' offer to present to the Ashmolean Museum at Oxford the unique collection made by his father and himself, covering the Palaeolithic and Neolithic ages and the Bronze and Early Iron ages not only in Great Britain, but in many parts of Central, Southern, and Northern Europe, has been accepted. This collection includes in particular a series of ancient British gold ornaments, many objects from the cemetery of Halstatt, some rare Egyptian objects, and a large collection of Romano-British and other provincial Roman coins. In a letter to the Vice-Chancellor, Sir Arthur described the collection as standing alone among private collections, and as being "in some measure an historical collection since it contains pieces that supplied some of the first convincing evidences of the antiquity of man."

According to the preliminary census returns in Bulgaria the population of the port of Varna has increased to 60,725 from 50,810, as it was in 1920.

The death occurred last week of Colonel G. W. Borradaile, who had 38 years of active service. He served for long in India, and was with the Egyptian Expedition of 1882.

NEWS IN BRIEF.

The Greek Chamber has adopted by 133 votes to 92 the article of the Constitution creating a Senate. Greece has been uni-cameral since 1862.

Krsta Londref, who murdered M. Spasoye Hajipopovitch, the editor of the Serb Nationalist newspaper, *Southern Star*, at Bitolye (Monastir) in July last, was recently killed in attempting to escape from prison.

Colonel B. U. Nicolay, C.B., is going on leave this month from India preparatory to vacating his appointment as Deputy Military Secretary on Sir William Birdwood's Staff on March 31. He has been in the Military Secretary's Branch since 1922.

The students of the University of Al Azhar, Cairo, made a demonstration on February 1 against the Government's decision to restore the control of the Egyptian Ministry of Education over the religious schools which were put under that of the Ministry of Wakfs (Pious Foundations) a few years ago. They were dispersed by the police.

Mr. Tom Shaw, the ex-Labour Minister, and his daughter are in an Indian nursing home with enteric fever. Mr. Shaw is in charge of the International Textile Commission from Europe inquiring into Labour conditions in India and Japan.

The Standing Finance Committee of the Indian Legislative Assembly has granted over a quarter of a crore of rupees (£187,500) for expenditure on civil aviation. The grant is subject to the Assembly's approval of the Government's aviation policy.

The Egyptian Minister at Paris, Fakhry Pasha, and members of his family were robbed of jewels estimated to be worth a million francs, on February 5. The robbery took place at the Minister's house in the Kleber Avenue, and the missing jewels, which were contained in a casket, include an enormous sapphire.

Field-Marshal Lord Plumer, the High Commissioner for Palestine, and Lady Plumer arrived at the end of last week at the Residency, Cairo, as guests of the British High Commissioner for Egypt and Lady Lloyd.

Sir Mohammed Habibullah Khan and the other members of the deputation which has been to South Africa to discuss the position of Indians in the Union were welcomed by the Viceroy of India on returning to Delhi.

The High Commissioner for Egypt and Lady Lloyd gave a reception on January 28 at the Residency in honour of the principal British delegates to the International Cotton Spinners' Congress. M. Ponsot, French High Commissioner in Syria, took luncheon with Lord and Lady Lloyd the same day.

The death occurred on February 2 of Major-General George Stewart, who served during the Indian Mutiny, and saw service in Afghanistan, being present at the storming of Ali Musjid and the operations round Kabul.

AUTONOMY FOR THE CHURCH IN INDIA.

The full text of the Indian Church Measure—which seeks to apply to the Church of India the principle upon which the Church of England rests—was circulated on February 2 to members of the Church Assembly.

The five main purposes of the measure are:—

To repeal certain clauses of the Government of India Act, and cancel the Letters Patent of those Bishops to whom they were issued; to give the Church power to frame her own constitution; to abolish the King's right of patronage; to provide machinery for dealing with Church trusts, and to dissolve the existing corporations, and arrange for trustees to hold Church property.

YOVAN CVIYITCH.

Within the short space of a fortnight, Yugoslavia has lost two of her best sons. Hard upon the death of Dr. Otakar Rybar followed that of Dr. Yovan Cviyitch, his colleague at the Paris Peace Conference and fellow-worker in the great task of consolidating the young State.

Dr. Yovan Cviyitch, Professor of Geography at Belgrade University, Yugoslavia's leading man of science, a scholar whose numerous works on geographical subjects had earned for him recognition and an honourable place among his fellow-savants all the world over, died at Belgrade on January 16.

Yovan Cviyitch was born at Loznitza in Western Serbia on December 12, 1865. In 1888 he passed out of Belgrade University; he went to Vienna where he continued his studies (1889-1892), and soon distinguished himself among his fellow-students. He was then appointed Professor of Geography at the University of Belgrade and soon afterwards began his investigation of the geographical problems of the Balkans, which are all the more valuable as this part of Europe was until then comparatively but little known, so that Cviyitch with his research work practically laid the foundation for scientific exploration of the Balkan Peninsula.

He began his scientific labours with the exploration of his native country. He furnished a thorough study of the Karst and Karst formations—a work in which he exposed the true nature of Karst phenomena. This work brought him instant recognition abroad. It was altogether independent and original, providing a new and deeply-considered explanation of Nature's mysteries in the strange and fascinating world of the Karst.

No sooner had he been appointed Professor at the University of Belgrade than he organised the study of Serbian villages. He compiled instructions for explorers, took the lead in collecting material, and conducted the work, in which he was soon surrounded by a number of enthusiastic young students, who were delighted to work under him. This research, planned on a large scale, was eminently successful. The Serbian Academy of Science issued a number of volumes—twenty up to date—containing material about the hamlets and villages of Serbia, their situation, buildings, population, the mental and physical peculiarities of their inhabitants, their origin, customs, manners, and economic interests. These bulky volumes on Serbian settlements, every one of which is edited by Yovan Cviyitch himself, are a mine of information on their subject. They provided Cviyitch with material for his profoundly important studies of the internal migration of the Serbs, popular types in the Balkans, and their mental attributes. The summary of this many-sided work he gave in his book on the anthropogeography of the Balkans, which formed the subject of his lectures at the Sorbonne in Paris during the Great War and was published afterwards in French.

Cviyitch did not limit his researches to the area of the small, pre-War Kingdom of Serbia, but extended them beyond its frontiers so as to embrace all the territory inhabited by Serbs, and eventually all the rest of the Balkan States, which he visited himself for purposes of study. National instinct led him above all in the chief direction of Serbian aspirations, to Old Serbia and Macedonia. To both he devoted, for several years in succession, many weeks of travel and intensive scientific study. The fruit of these labours was his great book on the Foundations of Geography and Geology in Old Serbia and Macedonia, which, apart from many other important results, brought the light of unbiased criticism to bear on the complicated dispute over the nationality of the Macedonian Slavs, and—for the first time—gave a clear picture of the national problem in Macedonia—a problem which had so far been known in Europe only from the point of view of Bulgarian nationalist propaganda. From that time the word of Yovan Cviyitch, who enjoyed the reputation of an impartial man of science, carried considerable weight in

this question, and thereby rendered invaluable services to the Serbian national cause.

Yovan Cviyitch furthermore carried out research work of fundamental importance into the nature of the Balkan mountain ranges and their relation to each other. In this field he discovered things altogether new and quite unknown until then. Whoever would speak to-day about the internal structure of the Balkan Ranges, cannot do so without quoting Cviyitch and taking his views into account. Similarly, and in even greater measure, Cviyitch was the first to discover traces of the ice age in the Balkan Peninsula and to give a clear account of glacial phenomena in the highest ranges of the Balkans.

Equally important is his pioneer work in exploration of the surface of north Serbia, where raised beaches indicate traces of the great Pannonian Sea. Latterly he turned his interest to the structure of the Adriatic littoral.

Cviyitch's last work was his great book on geomorphology. The first part, in itself a large book, was published in 1924; the second is on the point of appearing, whereas the third exists as yet only in manuscript. It is a vast work, beautifully got up, which would do credit to any nation or scientific institution in the world.

Besides books, Cviyitch wrote a large number of treatises and articles both long and short on geographical, political or national political subjects. In these deeply-considered and—invariably—scientifically sound articles Cviyitch would comment upon Serbia's political aspirations, whether it was her access to the sea via Bosnia-Herzegovina, via Albania, or down the Vardar Valley towards Salonika that was under discussion. The policy of a nation, its vital aspirations, are bound to develop in accordance with natural laws, which the scientific geographer does not establish subsequently, but discovers beforehand, thereby teaching the nation the way it ought to take rightfully and by rights. Cviyitch was a scholar of that type, and with the force of his weighty arguments and scholarly logic he rendered great services not only to pre-War Serbia, but to the New Kingdom of Serbs, Croats and Slovenes.

His important task in regard to the world of foreign opinion Cviyitch could fulfil all the more successfully as the reputation of his work was such that he ranks to-day among the greatest scientific authorities in Europe. In Yugoslavia he was honoured and esteemed. During the latest political crisis of last year there was a popular desire for a non-party Cabinet of experts, and the name of Cviyitch was mentioned repeatedly as that of a likely candidate for the leadership of such a government. Of course, Professor Cviyitch declined the task, publishing a special statement to that effect. He dealt with politics only in so far as his unbiased scientific work entrenched upon them.

After the Union, Dr. Cviyitch extended his research work to all parts of Yugoslavia. He was anxious to train a new generation of students, since his former hearers had almost all of them perished in the wars between 1912 and 1918. But towards the end of his life an incurable disease placed increased limitations on his working powers, until it finally put an end to them altogether.

The death of Yovan Cviyitch leaves a gap in the ranks of Yugoslav scientific men which the new generation will find it very hard to fill.

A. MELIK.

Herr Walther Uppenkamp, who was appointed last November to a Judgeship of the Mixed Court of First Instance in Cairo—the first German to be appointed since the outbreak of the War—took his seat on February 2.

On the invitation of the Turkish Government, M. Omer Buysse, Director of Technical Education and Fine Arts of the City of Brussels, will leave for Turkey at the end of February for the purpose of reorganising professional education there.

M. Tourlakoff, a former Bulgarian Minister of Finance, has been sentenced by the Court of Cassation at Sofia to three years' imprisonment, ten years' deprivation of political rights, and a fine of one million levas (£1,500) to be paid to the Treasury, on a charge of embezzlement.

FERMENTS IN THE WORLD OF ISLAM.

A meeting of the Central Asian Society was held on January 19, at the Royal United Service Institution, when a discussion on the subject of "Ferments in the World of Islam," was opened by Sirdar Ikbal Ali Shah. Sir Michael O'Dwyer, who presided, observed that the Sirdar was sufficiently well known in Orientalist circles to require no recommendation or introduction, and his remarkable articles to the Press on Muslim Asia added further to his scholarly reputation. The subject was particularly interesting because Great Britain was the greatest Muslim Power, and political rumblings from India, specially in the form of protest meetings in Bombay against the Wahhabi King and the telegram of the Maharaja of Mahmudabad to H.M. the King regarding alleged Wahhabi excesses, were no ordinary signs. The importance of these matters lay in the fact that the Muslim masses in India had small means of sifting the right from wrong, and often got confused over facts and names of Islamic personalities. In this regard he added that Abdul Karim, son of Amir Yakub Khan, who was alleged to have caused the Khost rebellion in Afghanistan, was often mixed up with Abdul Karim, Chief of the Riffs.

The Sirdar opened the subject by stating that there was now a definite challenge of Islam to the materialistic, scientific civilisation of the West which had been breaking all the traditional barriers of old Asia for some time. Young Islam was on trek, and trekking to its real source of inspiration because it had now discovered that the civilization of the West did not graft well on to its Oriental soil of philosophy and rendered life very difficult for it. He traced the origin of Pan-Islamism at considerable length, and added that the modern "revivalism" was the child of Pan-Islam, although the latter had totally different ideals to defend, and a different scheme had, therefore, been evolved. The present-day Muslim thinker, the Sirdar contended, was in a definite cultural revolt against the West, and he added: "The surging tide of scientific civilization of the West carried everything before it as it broke wave after wave upon us in Islamic Asia. And the matter of great concern was that it did not make us better men, because the movement, being essentially foreign to our mentality and outlook on life, struck us as spectacular, overpoweringly fresh, full of economic allurements, and we drank of the stream much more than was good for us. We yelled for Nationalism where no nationhood existed; we craved after a representative form of government in a land where generations had lived and died under benign autocracy; we began to speak of religion but lightly."

In this process of regeneration of Islam, the Sirdar saw the distinct value of the advent of the Wahhabi power in Arabia. Sultan Ibn Saoud, he thought, was essentially a Pan-Arabist, but it was just those strict laws of the great Wahhabi which would purge ultra-liberalism out of Islam. "What the Sultan does strive for," said the Sirdar, "is that there should not be any breakaway from the true spirit of Islam. At the outset many had feared that he, as the guardian of the Holy shrines of Islam, might perpetuate an orgy of iconoclasm, but recent events in the Hijaz had shown that Ibn Saoud was fully aware that, by assuming the reins of the Hijaz Government, he was committing himself to a gigantic enterprise, in which a disregard of the religious susceptibilities of respective Islamic sects would detract from his influence and he marvellously stayed the hands of many a zealot prone to go to excesses."

In the subsequent discussion Sir Arnold Wilson said that, while sympathising with the lecturer's suspicion of "scientific materialistic civilisation," he was not prepared, without many saving clauses, to agree that there was a conflict between "materialistic civilisation" and Islam. Islam had, he thought, gained much more than it had lost by adopting certain material and scientific aids to comfort and economic prosperity, without which progress was

impossible. The adoption of railways, motor-cars, telegraphs, wireless and aeroplanes by Afghanistan, by Iraq, and by Syria, for example, had in no way weakened the spirit of Islam, to which such things were not opposed. Persians and Arabs differed from other Orientals in welcoming an increase to their material welfare; but they did not thereby become "materialists." Arab shaikhs who owned 10,000 or 15,000 camels had now invested in motor-cars in which they careered across their ancestral deserts. Moreover, the West had contributed to the East something more than "materialism," especially in late years. Just as ten or eleven centuries ago the West looked to the East for light, so to-day whatever seeds of progress were coming to fruition in Eastern countries had their origin in the West. The truth was that there had been for the last two or three thousand years a constant interchange of spiritual and intellectual gifts from one to the other. The great religion had come from the East, great advances in mathematics, in chemistry, in medicine, and improvements in agriculture and stockbreeding had their origin in the East. After a time the West gave back these things developed and applied to fresh ideas. Agriculture, navigation, and astronomy, for example, were highly developed by Sumerian and Semitic races. The West had handed back many great gifts to the East, such as medical science, the use of steam and electricity, and above all an ethical outlook which has on the whole made life sweeter for the poor, and has mitigated human cruelty and curbed human ambition. But it was still true that Islam had a stability of culture which enabled its adherents to face famine, misery, revolt, revolution and death with dignity, and still retain their finest characteristics. That, however, may have been due to inherited characteristics far older than Islam. Sir Arnold did not believe in Pan-Islamism either as a possibility in the future or as a real movement in the present. He believed Islam was essentially a de-centralized religion, and that it was good that it should remain so. The flowers that were sown all over the desert could not be wiped out by years of drought, but once a tree was destroyed it could not be replanted without difficulty. The flowers would come up again when the fruitful rain fell. Islam, like the flowers, had scattered its seeds widely from innumerable centres. And though Pan-Islamism was not a reality, Islam of to-day was a very great force. It was changing its objectives and its outward manifestations were being altered, but it was rather stronger than before. Finally, the difference between East and West was essentially one rather of longitude than of latitude. The West had a common object with the East: the spiritual progress of the human race.

The Rev. A. R. Dard, of the Southfields Mosque, and Lord Headley also spoke.

M. Bohdan Pavlů, Czecho-Slovak Minister to Bulgaria since July, 1922, arrived last week in Copenhagen on his appointment as Minister to Denmark.

His Highness Mirza Hassan Khan Mostofi, the former Mostofi ul Mamalik, who resigned office as Prime Minister on January 30, has been entrusted by the Shah of Persia with the formation of a new Cabinet.

During December 513 Jews entered Palestine and 642 left, including 595 who had previously come in as immigrants. Non-Jewish emigrants totalled 100.

The death is announced in Belgrade on February 4 of General Yanko Voukotitch, Chief of the General Staff of the Montenegrin Army and Commander of the Montenegrin troops against the Bulgarians in the Great War. General Voukotitch, who was born in 1866, was three times Minister of War, and once Prime Minister, of Montenegro.

The Executive Committee of the Roumanian National Peasants' Party has passed a resolution urging that the question of the succession to the throne should be submitted to a new Crown Council. All the other parties maintain the position taken up on January 4, 1926, when an Act of Parliament was passed excluding Prince Carol from the right of succession.

PERSONAL AND GENERAL

TO-DAY

February 10, 1927 (New Style).
January 28, 1927 (Old Style).
Shaabau 7, 1345, A.H., of the Muslim Calendar.
Adar I, 8, 5687, of the Jewish Calendar.

The Roumanian Minister returned to London last week from Bournemouth.

Viscount Wimborne will arrive in London at the end of this week from India.

Viscount Inchcape left London on February 4 for Paris, accompanied by the Hon. Elsie Mackay.

The High Commissioner for India and Lady Chatterjee returned to London on February 1 from Geneva.

The Secretary to the Greek Legation and Mme J. Romanos have returned to London from Greece.

The Master of Elibank and the Hon. Mrs. Gideon Murray have returned to 187, St. James's Court.

Sir Victor Warrender, Bt., M.P., and Lady Warrender will return about February 20 to 18, Upper Grosvenor Street from India.

Sir Grey Skipwith left Tilbury on February 5 in the Oronsay for Cairo. He will return about the middle of April.

Earl Winterton, M.P., and Countess Winterton left India on February 5 for Egypt and North Borneo. He will be away for about five months.

Among the passengers who left London on February 3 by the P. and O. special train to join the s.s. Macedonia at Marseilles were Lady Malcolm and Lady Cobbold for Port Said.

Sir John Bucknill, Puisne Judge of the Patna High Court since 1920, of Patna, Bihar, and Orissa, India, left unsettled property in this country of the gross value of £3,809, with net personalty £3,644.

Mr. Frederick Eckstein, Chairman of the Sudan Plantations, has presented a portrait of the late Earl Kitchener to his Majesty's Government. The portrait, which is by the Hon. John Collier, will be hung in the Residency, Cairo. H.M. Government have gladly accepted the gift.

Colonel Robert Charles Græme, who, with the Yorkshire Light Infantry, took part in the Umbeyla Expedition in the North-West Frontier of India Campaign of 1863, the Jowaki Expedition of 1877, and the Afghan War of 1878-79, including the assault of Ali Musjid, died last week at Camberley at the age of 83.

It is officially announced that Mr. Michael Francis Joseph McDonnell of the Inner Temple, Barrister-at-Law, has been appointed Chief Justice of the Supreme Court of Palestine. Mr. McDonnell was appointed an Assistant District Commissioner in the Gold Coast in 1911, Police Magistrate and Inspector of Schools in the Gambia in 1913, Legal Adviser in that Colony in 1918, Solicitor-General in Sierra Leone in the same year, and Attorney-General in Sierra Leone in 1920.

The Political Committee of the Ladies' Carlton Club are giving a farewell dinner to Lieutenant-Colonel the Right Hon. F. S. Jackson and the Hon. Mrs. Stanley Jackson, at 8, Chesterfield Gardens, on Friday, February 25, at eight o'clock. Colonel Jackson was at one time Chairman of the Board of Directors of the Club, and Mrs. Jackson has for some years been a member of the Political Committee. Lady Worthington-Evans will preside.

Mr. B. K. Featherstone will lecture, on February 16, at 5 p.m., to the Central Asian Society, upon "The Karakoram Himalayas." The lecture, which will be illustrated with lantern slides, will be presided over by Sir Michael O'Dwyer and will be given at the Royal United Service Institution Whitehall.

Malike Sultan and Kobra Begomi, the son and daughter respectively of the King of Afghanistan, arrived at Brindisi on February 2, from Bombay in the s.s. Pilsna (Lloyd-Trestino) accompanied by the King's father-in-law, the Amir Tarzi Muhammad and his wife. They arrived in Rome the following day before proceeding to Paris, where the King's son will study.

THE ARAB HORSE SOCIETY.

A Council Meeting of the Arab Horse Society was held on January 26 at the Grosvenor Hotel, London, Brig.-Gen. F. F. Lance (President) being in the Chair. There were also present Mr. T. C. Armitage, Lt.-Col. T. R. Badger, Messrs. H. V. M. Clark, C. W. Hough, C. W. Laird, G. H. Ruxton, Major G. B. Ollivant, Messrs. W. F. Saynt, R. S. Summerhays, and the Secretary, the Rev. D. B. Montefiore.

Entries were received for the Stud Book and Register, and final arrangements were made in connexion with the Arab Classes for the London Show.

The following new members were elected:—William Allison, Rodwell, near Lewes, Sussex; Miss Evelyn M. Coats, Corsebar, Paisley, Renfrewshire, Scotland; Miss Irene Coats, Corsebar, Paisley, Renfrewshire, Scotland; Capt. the Hon. C. K. Greenway, 13, Wilton Crescent, London, S.W.; Fawcett Hignett, the Nook, Bankfield Road, West Derby, Liverpool; Miss Brenda Tassell, St. Dunstan's Lodge, Canterbury, and the Duke of Veragua, 7, San Mates, Madrid, Spain.

Volume III of the Arab Horse Stud Book has been issued and sent to all the members.

Lieutenant-Colonel R. H. Chenevix-Trench, C.I.E., O.B.E., has joined the Nizam of Hyderabad's Council in the Police Department. He has been serving in Baluchistan as Political Officer, and was formerly in the 126th Baluchistan Infantry, now the 2nd Battalion of the 10th Baluch Regiment, serving with it at Peking in 1900 under General Gaselee.

INDIA AND HANKOW.

The extremist Indian newspapers have been quick to draw a moral from the disturbances on the Yangtze: and the particular moral that they draw is naturally one in keeping with their political ideas regarding India. One of the leading Anglo-vernacular papers, for instance, under the heading "The Beginning of the End?" says that the inevitable has happened—the thundercloud that has for so long been gathering in the Yangtze Valley has burst; and whom should it hurt first except the Britishers who have made themselves odious to the Chinese people by carrying on their ruthless policy of oppression and exploitation? When the feelings of the Chinese mobs were excited to a dangerous pitch by their sanguinary encounter with British marines, no alternative was left but to withdraw them and to leave the British population under the protection of the National Army. "Of course, some people at 'Home' have been kind enough to appreciate in very generous terms the patience and forbearance of the British marines who were not provoked into quick action by the fury of the Chinese attack. But we hope they will soon realise—if they have not realised already—that the marines and the volunteers chose quietly to pocket a terrible humiliation and defeat merely because they saw that they and their people would run far graver risks by showing even the slightest signs of defiance." The way out of the whole difficulty is perfectly clear. The British Government must first radically change its ideas about the new China and the Government of Canton, which seeks to embody its very highest principles. Britishers must wisely realise that the days of their privileged concessions and monopolies are gone. The millions of the Yellow Land are now united in that common determination to oust the aggressive foreigners and, unless they quietly submit to the same laws and taxes that govern the people of the land, and live with them in a spirit of harmony and equality, their days are numbered indeed. The evacuation of Hankow will indeed prove the beginning of the end of all the unjust privileges of foreigners in China, unless they quickly remove all cruisers and battleships from the waters of the Yangtze and come to terms with the real sovereign power that is enthroned in the hearts of the millions of the land.

The same paper condemns "the hateful recommendations" of the Extra-territoriality Commission, under which foreigners would continue to enjoy their immunities from the jurisdiction of Chinese law, and "all the paraphernalia of the Concessions" would be perpetuated: a state of affairs that naturally resulted in "driving the Nationalists to the last point of desperation." It also exhorts the British Government to recognise the Cantonese as the sovereign power in China, which has now "only to stretch out its hand to plant its banner on the celestial city" of Peking. It refers slightly to the suggestion, in the British memorandum, that all

Provincial Governments shall be empowered to levy the additional customs duty; because the Cantonese Foreign Minister "has notified to the world how this in effect helps his northern enemies by filling their coffers." It will be interesting to see how Sir Francis Aglen's refusal to do this very thing is described, when the time comes for the Indian extremist papers to comment on it: one may be quite sure that, by some process of reasoning peculiar to them, it will be twisted into a high-handed defiance of the Nationalist Government of China—perhaps because, if the Cantonese have only to stretch out their hands to capture Peking, they have practically already done so: and, as Ko-Ko said in the *Mikado*, why not say so? As for the proceedings of the Chinese mobs, we are asked to remember that it was only because all efforts, to persuade the foreign Governments to be reasonable, had proved in vain, that "a Government as strong and disciplined as that of the Cantonese could not restrain the rude demonstrations of its people," in the face of which "sensible Britishers naturally took discretion to be the better part of valour" and decided to remove all women and children (to whom, by the way, the paper says that its "heart goes out") from all towns on the Yangtze to "the final resort of Shanghai." Finally, reference is made to the "decree of outlawry" sought to be passed on all Britons by the representatives of the labourers, farmers, merchants, students and soldiers—"who may well remind us of the peasants' and soldiers' Councils of Russia."

The implication of this presentation of the Cantonese Government's case is plain, and the parallel to be drawn is obvious enough, even if not directly expressed. To the detached observer with some knowledge of China, it seems certain that the programme of the Chinese Nationalists is to do everything possible to avoid putting the lives of foreigners in actual danger, but so to organise boycotts and strikes as to squeeze the foreigner out of China by "non-violent non-co-operation." It also seems fairly clear that the Bolshevik advisers of the Cantonese would like to see the latter committed beyond recall, and would welcome the murder of foreigners for that purpose. At present, these two forces have made a drawn battle of it, though in favour of the Nationalists—mob violence they have been unable, almost certainly indeed unwilling to prevent, but they have so far succeeded in avoiding murder. As time goes, they will certainly find it increasingly difficult to do so: and, if they fail, they will doubtless lay the blame on the "provocative" measures for the defence of Shanghai. The non-co-operation campaign in India failed to prevent not only mob violence, but murder as well. The Congress programme still professes to include the final step of mass civil disobedience, which embodies the same idea as the Chinese system of pressure by boycott and strike: and the policy of non-violence has been defined as prohibiting "offensive violence" but permitting "defensive violence." Thus the followers of that policy hope to achieve their

object of expelling their British rulers by a combination of strike, boycott and "defensive" mob violence; and they see, in the troubles on the Yangtze, an example of such a combination, carried out with considerable success. When, therefore, they ask whether those troubles are not the beginning of the end, they do not mean only as regards the position of British people in China, but in India and throughout the whole of Asia as well.

CURRENT TOPICS.

The Bengal *Détenus*.

The Legislative Assembly's vote in favour of the immediate release or trial of the Bengal *détenus* was only what was to be expected; but the "important prepared statement" made, in the course of the debate, on behalf of the European non-official members of the Assembly, introduces an unexpected element into the discussion. As cabled, this statement is decidedly cryptic. The speaker said that he felt that the Government of India were prepared to review their existing policy; and added "I trust that the continued reconsideration of that policy will, in the end, lead us out of the *impasse* into which we are fast drifting." It must be supposed that this means something, but it is certainly difficult to say what it does mean, or what is the *impasse* whose early arrival the speaker foresaw. The Bengal *détenus* have been interned on what the police call "information received": very full and very definite information, but incapable of legal proof in a Court of Law, solely because the persons who gave the information flatly refuse to translate it into evidence: being well persuaded that, if they were to do so, their lives would be but short. That Lord Reading, an ex-Lord Chief Justice, than whom it is difficult to imagine any man more averse from "illegal" procedure, should have arrived at the certainty that the internments were justified, is the strongest possible argument in their favour; and it is certain that Lord Irwin is equally strongly opposed to the use of "*lettres de cachet*" except under the stress of imperative necessity.

A perfectly honourable path to release has been laid before the Bengal *détenus*—an undertaking to have nothing to do with revolutionary methods, this not to be taken to imply confession of previous complicity in such methods. It seems that this is not enough: what is demanded is "unconditional" release, without any condition "derogatory to the honour of perfectly innocent men." It is true, of course, that the *détenus* cannot be interned indefinitely; and that, if they persist in refusing any sort of terms short of unconditional release, it will in time be necessary to grant them that. This may conceivably be "the *impasse* to which we are drifting"; but there does not seem to be any evidence that the drift is fast. Previous experience does not lead to much confidence in a bare declaration, unaccompanied by substantial guarantees, of abstention from revolutionary methods in future, which is all that is now demanded from the *détenus*: if, in the end, they decide to offer it, the *impasse* will be over, though only perhaps temporarily. One may hazard a guess that, in such a case, it will not be long before it recurs.

The United States and Oriental Seamen.

The Bill "to provide for the deportation of certain alien seamen" which has passed the Senate and is expected to pass the House of Representatives, is primarily intended to deal with an admitted evil; but its provisions, taken at their face value, go far beyond this. It is a perfectly well known fact that, during the last few years, a number of persons posing as seamen, though in reality nothing of the sort, have succeeded in evading the passport barriers that almost every country now maintains against undesirable immigrants. A seaman employed on a vessel needs no passport and is at liberty

to land without one, though legally bound not to leave the port, where he lands, except in order to re-embark. The undesirable immigrant has to surmount two difficulties—the first, to get on shore, and the second, to stay there. In the case of the serving seaman, whether or not he is a *bona fide* one, the defeat of the first obstacle is simple: so that he starts with a very great advantage in his attempt to negotiate the second.

On the face of it, the Bill means that any "excluded alien" seaman arriving in an American port will be taken off his vessel and put on board another outward-bound ship as a passenger; but it is perhaps doubtful if it really means this. If it did, voyages from quite a number of countries to America would have to cease altogether—from Japan, for instance. If it really means that no "excluded alien" seaman may land, this is a rule that might be enforced: necessarily with hardship, but not perhaps with intolerable hardship. Shore leave would have to be refused to all such members of his crew by the master of every vessel, who would have to submit to close scrutiny of his entire complement, both on arrival and before departure: as also to severe penalties for any evasion, for which he would doubtless be held personally responsible. The United States are already unpopular with politically minded Indians, owing to their refusal to class caste Hindus as "white persons," a privilege that they claimed, at first successfully in some cases, on the ground of Aryan descent. Later legal decisions reversed those originally given in favour of eligibility for naturalisation as American citizens, though attempts are still being made to get the latter restored; but the present Bill will probably be represented, in India, as specially aimed at Indian lascars. There does not seem to be any real justification for saying so, though its provisions, if strictly enforced, even on the less drastic lines just suggested, will certainly hit British shipping hard. On the whole, however, one is inclined to believe that the Bill, if it should become law, will prove less uncompromising in practice than it appears on paper, and will, in fact, make much less difference to lines employing Oriental seamen than it purports to do.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 20.

New Ministers.

The statement in last week's letter that the Council had passed the vote for the salaries of Ministers up to the end of the financial year was not correct, the decision being that the matter should be allowed to be brought up at the meeting this week. It has now been duly passed and, all parties voting at their full strength, the vote was carried by a majority of 56, 94 being in favour and 38 opposing it. Practically everyone in the House outside the Swaraj Camp voted in favour of the motion, and the voting strength of the Extremists is now shown to be under 40. It need hardly be said that the result has been a bitter pill for the Extremist Press, and, whilst the saner *Amrita Bazaar Patrika* admits that it is a victory for constitutionalism and says that the fact had better be faced, *Forward* is having a bad attack of hysterics and attributes the result to a combination of the machinations of the Governor and the cupidity of possible office holders. The former may be dismissed as the nonsense it is, but there may be a touch of truth in the latter; the principal reason, however, is probably the growing realisation of the nearness of the 1929 Commission and what it will see when it comes. Intelligent anticipation says that the new Ministers will be Mr. B. Chakravarty, the Moderate Leader, and Mr. A. W. Ghuznavi, who has a strong personal following in the Muslim Camp. The appointments are expected to be made before the end of the present week.

The European in Politics.

The third provincial dinner of the European Association has taken place in Madras, where Lord Goschen, the Governor, made a speech appealing for wider vision on the part of Europeans in India in regard to politics and political service. Pertinent comment in the Press points out that there is little inducement for Europeans to devote any substantial proportion of their time in this country to political work, as the possibilities of attaining office or distinction are almost exclusively confined to Indians. Further, there are obvious reasons why Firms generally are unwilling to allow anyone but the heads to take part in politics, and it is natural that Home Boards feel that political and business interests do not always run together. Speaking in general terms, the European in this country is distinctly harder worked than his brother at Home, and those who are willing to undertake public service find that the demands upon their time, and their pockets, are enormously greater than is the case with a man who works in England. The amount of unpaid service that is given to public and social activities by the British community in Calcutta is remarkable, and most of it is done without any hope of acknowledgment or honour; and it generally has to be its own reward. Such services have a real and obvious value, and it is not to be wondered at that the majority prefer them to the somewhat barren task of endeavouring by example to educate unwilling and ungracious Indian political groups.

The New Delhi Council Chamber.

The new Council Chamber of the Legislative Assembly at Delhi, the first of a group of three which are combined in one mighty building, has been opened this week by the Viceroy, and the scene is reported to have been a brilliant one. For the first time the gardens were planted out and the fountains were playing and it was possible to see something of what New Delhi will ultimately look like, although, of course, it will be a generation before there are many trees to relieve its vast spaces, not to say wastes. After he had read a message of good will from the King-Emperor, the Viceroy made another of his inspiring speeches, expressing the hope that the building would be a symbol of the future unity of all States and classes in working for the good of the country. It need hardly be said that the attitude of the Extremist Press is that of the deaf adder. Incidentally, figures are now published that indicate that the ultimate cost of New Delhi will be about 14 crores of rupees or, say, 10½ millions sterling.

The Late English Mail.

Lateness in the delivery of the English mail has been going from bad to worse ever since the War, and it is difficult for any ordinary person to understand why this should be the case. So far from making any attempt to remedy the present unsatisfactory state of affairs, the Postal Authorities have recently decided to stop sorting the mail on the train on its way from Bombay, with the result that a further half day is now to be lost. Appeals to Government to run a special mail train on the Bengal-Nagpur Railway instead of the E.I. Railway, where the collapse of a railway bridge in a recent flood will mean a three hours' loss until a new bridge can be built—a matter of three to four years—are met by blank refusals.

Prohibition.

Social workers as well as advocates of prohibition will be interested to learn that the latest report of the Excise Department of the Punjab Government states that, in spite of a more efficient and active staff, the increase of excise duty on intoxicants and drugs has only resulted in offences against the regulations increasing to such an extent that they are now several times more numerous than they were ten or fifteen years ago; further, that only a small proportion of them are detected. The reasons for this are both connected with the present high cost of liquor, which not only makes wholesale evasions more profitable but also encourages people who cannot afford to pay "official"

prices to brew and distil for themselves. The Excise Department suggests as one remedial step the opening of a few more drinking places; the *Statesman* truly says that such a scheme, to promote temperance by increasing drinking facilities, is one that would have appealed to the late Sir W. S. Gilbert; it is another paradox in this land of paradoxes.

Men and Things.

Following upon the recent arrests of suspected terrorists when firearms and materials for bombs were discovered in a hut in the north of the city, there have been further police raids with finds of chemicals and inflammatory literature. The comments of the Extremist Press upon this are that it is extraordinary how these things always occur when a resolution is to be moved in the Councils for the repeal of repressive legislation; mischievous insinuations could hardly go further.

Three Bills to give effect to the recommendations of the Currency Commission are tabled for the meeting of the Legislative Assembly at Delhi, and in the meantime controversy appears to be dying down in the Presidency towns. One and six still stands as the ratio, Government lending its support by purchases in the open market. Some talk is reported for a compromise at one and five; we shall see the result of this in the forthcoming debates.

The report of the Committee upon the operations of the Bombay Development Trust has been read with considerable interest in Calcutta; it is satisfactory to note that it was a unanimous one, and no one will accuse the Commissioners of being afraid to state their conclusions. Obviously the Development Trust has been badly hit by the falling land prices, consequent upon the slump in trade, a thing which has also tied the hands of our Improvement Trust more than a little; fortunately, however, their operations at that time were on a much less extensive scale, and recovery is likely to be far more rapid on this side.

The Swarajist at times must pray to be saved from his friends; Mahatma Gandhi has been at Gaya and, in response to an address from the local District Board, he said that it was the most insanitary town he had ever seen. Competition in this respect is pretty high, and it is unfortunately the fact that, as local administration falls more into Indian hands, deterioration becomes more and more marked.

One way traffic is to be introduced in Calcutta; former ditchers will be interested to know that in future only south-going traffic will be allowed to use Clive Row and north-going vehicles will use the narrower portion of Clive Street from the Eastern Bank onwards.

Representatives of the new Indian Wireless Corporation have been in Calcutta this week making arrangements for their headquarters. Incidentally, one of the first things to be relayed throughout India will be the concerts of the Calcutta Symphony Orchestra, a fitting acknowledgment of the fine performances they are giving each cold weather.

The extent of the field which is open to research, and incidentally to a modern live organisation, is indicated by the evidence given before the Agricultural Commission that the annual damage to crops in India by insect pests exceeds in value 200 crores of rupees or, say, 150 millions sterling. Will this field be left to Germany to exploit?

The Trivial Round.

There have been two days' racing this week, a mid-week fixture having taken place yesterday in addition to the ordinary Saturday event, when both the Governor's Cup and the Metropolitan Stakes were run; backers have had a bad time in nearly every race and not even the brilliant weather—we are having a cold spell at last—has succeeded in banishing the somewhat depressing atmosphere.

The paperchase had to be postponed from Friday last owing to an unseasonal fall of rain having flooded the Salt Lake country; it was run this week and Ian Maitland-Heriot had his first win of the season, beating Captain Leatham and G. S. Johnston in that order in a very tight finish.

The M.C.C. duly beat All-Burma by 10 wickets in their last match in Rangoon, and they are now visiting Madras; Wyatt has been showing up well again, and he will have a remarkably fine record for the tour.

The cricketers are already beginning to see the end of their season; last week-end Calcutta drew with the Scottish and all the other pitches were fully occupied.

The Tennis Championships started yesterday and the first round produced no surprise, all the expected wins duly coming off.

Calcutta is getting ready for the All-India Olympic Trials which are to take place early in February with a view to selecting a team to compete in the Far-Eastern games. As these are fixed for Shanghai, there appears to be some doubt whether they will eventuate, but this will not detract from the interest felt in the visit of competitors from all over India.

The Pantomime has had another short revival at the Empire and the stage is now held by a new revue company brought out by the genial Charles Chamier from Home; it is a very cheery show even if some of the performers must rather feel the present cold spell!

Markets.

Business in both jute and gunny markets has been on a small scale during the week under review; the up-country jute market, however, has remained very firm, with the result that sellers show no disposition to reduce rates. The expected improvement in the hessian market from foreign markets has not yet appeared, and it seems that buyers from North America and the Plate are purchasing only immediate requirements; this state of affairs may be expected to continue for some time. The piece-goods market opened with considerable activity; but the demand was quickly satisfied and a distinct falling off in inquiry has resulted. Local dealers are of opinion that there will be a revival in the demand in the course of the next fortnight. In spite of the stronger tea market in London at the beginning of the week the sale here was disappointing, and all but fine qualities were easier. The subsequent sale in London of the balance of Indian teas is reported as firm and advancing for all qualities, and this may be expected to be reflected in the sale here next week.

On the Stock Exchange, Government Securities, after settling down for a few days at the lower levels, have displayed a rather firmer tendency, mainly as a result of Bombay dealers coming into the market as buyers. A considerable number of transactions have taken place in jutes, but the tendency is slightly easier at the close as a result of profit-taking after the recent rapid rise. Coal, cotton and tea shares continue to be almost neglected; but a distinctly improved demand for rubber shares has set in, and a number of advances in prices are reported. The miscellaneous market has been a source of considerable dealings, in which Burn and Co. have registered a jump of about Rs.40 to Rs.243. Sugar shares are again in request, but, with a scarcity of sellers, little business has resulted.

The Exchange Market opened firm, but on the announcement that Government were buyers at 1s. 6 1-32d. a quieter tone developed. The quietness was short-lived, however, and a fair amount sold to Government at 1s. 6 1-32d., who raised their rate to 1s. 6 1-16d.; the market closes dull but steady. As a result of the Bank rate being raised to 6 per cent., money has been in good demand, and rates may be quoted at 4½ per cent. for short notice, 4¾ per cent. for one month, and 5 per cent. for two and three months deposits.

THE LATE S. M. EDWARDES.

(From a Bombay Correspondent.)

The death of S. M. Edwardes, recalls the fact that his life and work were more wholly devoted to Bombay than that of any other Englishman of his generation. Edwardes, after a very few years in the positions held by a young civilian in the Mofassil, was very early posted to Bombay

for special duties, and there he remained till the end of his service, as a Commissioner under the Land Acquisition Act, Census Commissioner, Police Commissioner and Municipal Commissioner. As a non-official I may perhaps be pardoned if I have not got the titles of his early appointments quite correct; and it is a little difficult to be quite certain whether Edwardes was himself perfectly sure about them. His own conception of his duties seemed to be that, whatever he might be called officially, it was his business to assimilate information of every possible kind about the city and its inhabitants, and before many years had passed, it seemed that Edwardes not only knew all that was to be known of the history of the city and of the customs of every community and caste in it, but also had a personal acquaintance with every inhabitant who had the slightest claim to distinction.

His appointment, by Lord Sydenham, as Commissioner of Police, in succession to Mr. Gell, was a singularly happy choice; and Edwardes was in that capacity, able to make the fullest use of the extensive and peculiar knowledge of the city and its inhabitants, that he had gained in his days of less responsibility. After very few interviews with his friends, the leaders of the Muhammadan and Hindu communities, he was able to arrive at an amicable settlement which has ever since been effective in regularising the popular enthusiasm at the Mohurram and Holi festivals; enthusiasm, which, to put it mildly, had occasionally been rather too obvious in its methods on previous occasions. Throughout his career as Police Commissioner he worked on the lines of compromise, helped by his wonderful understanding of all classes with whom he dealt; and he left to his successors a task which had been a great deal straightened out by his exertions. His mantle fell on the worthy shoulders of a succession of brilliant members of the Police, and it is unlikely, and not wholly desirable, that this office should ever be held by a member of the Indian Civil Service again. But nobody has ever been found more ideally suited for his work than Edwardes was for the Police Commissionership.

Though the Municipal Commissionership to which he passed, seemed to require the same qualifications, it is very doubtful whether Edwardes was ever so happy in that post, as he was when riding about Bombay with his two police sowars behind him, and before long he had to retire on grounds of health, having held all the positions open to him in the City of Bombay. Whether it is desirable to make the appointments of the Civil Service more elastic is another question; a wise absolute monarch would have created a post of the highest honour and the richest emoluments in order to keep Edwardes in the place for which he was so well fitted. But under the rules of the Service there seemed to be no higher appointment available for him, and this no doubt affected his decision to retire.

Edwardes' career is of great and special interest in these days, because he was an unusually perfect example of the Englishman who forwards the cause of England in India by his understanding of the people and by his readiness to give and take. He was unusually perfect, because he had extraordinary opportunities for studying Indian character and an extraordinary gift for making full use of his knowledge; but he was so far from being an unusual type, that his methods are in fact those of ninety-nine out of every hundred Englishmen in responsible positions in India, however far short they may fall of his accomplishment.

It is only in books that the Englishman in India is held up to admiration as a ruthless and brutal Empire builder; but those books have in the past twenty years at least gained a very great ascendancy in the mind of the average Englishman at home. What impression is created depends very largely on the columns of his morning newspaper: he is either invited to regard the Englishmen in India as domineering savages who ought at once to vacate the country, or he is told that the Indian is so rapidly being forced into a superior position by a Radical Gov-

ernment that no self-respecting Englishman can ever take service in the East again.

The position is in fact, if not quite what it was twenty years ago, certainly what it was a hundred years ago, when our position in India was not quite so settled as it was in the later years of Queen Victoria. We have won our ascendancy in India, we hold it, and we intend to go on holding it, not by force of arms or by brutality of method, but by our success in understanding the mentality of the Indian, and by our willingness to work with him and to give him as much as we take from him. It is in partnership, and equal partnership, with Indians that English business has been built up in India from the earliest times; and where men of business have succeeded, it is not much to ask that the administrator of the future will follow in the footsteps of his predecessors of the past. For there is a very great career still to be made in India by young men who go out with no wild ideas gathered from the halfpenny press, but prepared to work in the spirit of S. M. Edwardes.

THE INDIAN MAIL.

"Communal Europeans."

It is pleasant to see that the Chairman of the Bombay European Association, at the dinner given on January 17, made the *amende honorable* to Mr. Langford James: whose Calcutta speech had, he said, led to much adverse criticism which, he ventured to think, was both unfair and undeserved. He mentioned that Mr. James had been invited to attend the Bombay dinner: a proof of the solidarity of the European Association throughout India, though Mr. James was unfortunately unable to accept, and said so in a letter that was read by the Chairman, and characterised by the Governor, who was the guest of the evening, as completely dispelling any idea, that may have existed, that his remarks had "partaken of too candid or partisan a character." The *Times of India* associates itself with this verdict, though perhaps somewhat grudgingly: it says that the letter was particularly gratifying, though "its terms are cryptic and might mean anything. But that matters not." The main point in the letter was its insistence on the article in the Constitution of the European Association that urges its members to "foster a relationship of cordiality and co-operation with Indians working constructively for the good of India." The speakers at the Bombay dinner claimed, and certainly with full justice, that there Europeans and Indians in commerce, in public life and in politics work together better and in greater harmony than in any other part of India. Evidence of this to be found in the fact that all the Indian members of the Bombay Government attended the dinner as guests. It is possible that the very noticeable camaraderie that does exist in Bombay is partly due to the presence there of the Parsee community: who, though technically Indians, are, in fact, almost as much foreigners as are the Europeans themselves. Whatever the reason, the fact is undoubted: it is one that strikes with pleasure and surprise the visitor from less favoured parts of India. In the prosecution of her claim to oust Calcutta from the position of the Second City of the Empire, Bombay has sometimes shown the "communal" spirit in its narrower sense. But, beyond all question, she gives a lead to every possible rival, not excepting Calcutta, in her avoidance of it in the wider sense.

The Anglo-Indian Community.

The pressing, and yet almost hopeless, nature of the problem of the Anglo-Indian community is well exemplified in the extracts from a letter from a valued correspondent in India, given below. It is not only the individuals of mixed blood that are affected, but the "domiciled community," of persons of European blood but of Indian up-bringing, as well.

"Is it possible to do anything in the matter of the

Anglo-Indian community? At the moment, there seems to be no official policy in regard to them: and one of the most definite results of Indian domicile appears to have been to deprive such people of the power of organising themselves, or of settling a policy and sticking to it. Their attitude towards Indians is as antipathetic as that of Indians to them: and I feel that, when it comes to reorganisation, something will have to be done to consider their special circumstances. At the same time, I confess that I have no ideas as to what this should be."

A Plucky Child.

The following account of a road-side adventure is taken from a Madras newspaper:

Very interesting news reaches of a narrow escape of a traveller from the jaws of a tiger three days ago. It is said that, when the bullock cart containing a cultivator and his eight year old son was passing through a jungle way at about five in the evening, the bulls were suddenly startled by the mad rush of a tiger of middle size that appeared from amidst some bushes. The cultivator, who was driving the cart, lost his nerve and jumped down to the ground shouting. The beast, instead of getting frightened, sprang upon the man, and both were rolling on the ground when the boy in the cart, who it appears had not lost his presence of mind, seized upon a big tin vessel which was in the cart fortunately, and thumped upon it with great noise. This seems to have made the wild animal halt, and during this breathing time the boy threw the vessel with great noise upon the animal. Hearing this sudden noise and feeling the vessel, the tiger got frightened and released its hold upon the fallen man who took hold of the vessel and thumped in turn. The animal cleared away, and the continual thumping noise brought some villagers on the spot. The man and his son arrived home after a very narrow escape.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

A New Sudan Company.

The appearance yesterday of the prospectus of the Gedaref Railway and Development Company (Sudan) Limited offering Five per Cent. Debenture stock at the price of 100½, guaranteed as to principal and interest by the British Government under the terms of the Trade Facilities Act, marks a further stage in the gradual development of the Sudan as a cotton growing region. The loan capital of the company consist of £2,160,000 in Debenture stock, redeemable over the years 1932 to 1962 by a cumulative sinking fund operating by annual drawings at par or purchase. The terms of the loan, it will doubtless be remarked, do not err on the side of generosity, and it must remain to be seen to what extent the Debentures will appeal to the investing community at a time when conditions have made yield a more important factor than absolute safety. The Gedaref Railway Company was incorporated in November last to undertake the construction and operation in the Sudan of a single line of railway about 135 miles in length from the present railhead at Kassala to Gedaref. The construction, equipment, and operation of the railway will be in the hands of the Sudan Government Railways. Under a sale agreement the Sudan Government will purchase the undertaking while under construction and when complete at a price (payable in half-yearly instalments) which is more than sufficient to cover the interest and sinking fund of the stock. As usual in the case of loans under the Trade Facilities Act it is stipulated that the plant, machinery and materials required, provided out of the proceeds of the issue, shall be manufactured in Great Britain.

Greece's Financial Position.

By a decree of December 10, 1926, a committee of financial experts was appointed in Greece for the purpose of indicating suitable measures for improving the State's finance and for bringing about, in general, a better financial condition. In the report that this Committee has now presented to the Greek Government attention is called to the fact that in the fifteen years since 1912, during which Greece was engaged in four wars, the country has incurred an expenditure of £163,409,490 on the military and naval services and in connexion with post-War settlement problems, such as refugees, exchange of populations and assistance to the families of reservists. Towards this outlay Greece has obtained in loans from abroad only £26,000,000. Of the two ways of regulating the monetary question the Committee rejects the idea of bringing the drachma back to par as being "chimerical" and proposes the establishment of the drachma at a level more consistent with present conditions. Accordingly, to enable the latter suggestion to be carried out, it recommends a foreign loan on the lines adopted by Austria, Hungary, Belgium and Germany, the balancing of the Budget, the regulation of existing Treasury deficits by a foreign loan and the definitive settlement of Greece's foreign debts. "It is evident," the Committee adds, "that without this Debt settlement we shall find all doors closed to any kind of help from abroad, under any form whatsoever." This report is additional evidence of the resolve of the Greek people to set its house in order. Already the new Budget has been drastically curtailed, and yet further cuts are contemplated. Greece to-day is in the position of having nothing

to fear from outside aggression; she can, therefore, carry out retrenchment and improve her political position at home at one and the same time by cutting down her military and naval establishments to a minimum.

Egyptian Cotton Forecasts.

The question of crop forecasts was bound to arise at the Cotton Congress in Egypt, and some striking comments on this matter were forthcoming from Mr. F. A. Tomlinson, ex-President of the Manchester Cotton Association. As a matter of fact the crop forecasts of very many regions—and I am not now referring to cotton but to all branches of agriculture—give rise to criticism from time to time. No estimate in the nature of things can be more than approximate except by a prodigious fluke; the ideal to be achieved is to maintain a standard of approximate correctness. How estimates may vary in the case of cotton can be seen in regard to the last American crop when at a very late stage the crop was very considerably underestimated. Mr. Tomlinson touched on the American system and said that he felt that Egypt's task was an easier one with a crop that was so much smaller than that of the United States. He stated that the Egyptian Government's attempts to forecast the crop until last year were received with scepticism, and though they were somewhat better last year they remained unnoticed by the trade owing to the lack of confidence in them. As my readers who follow these things will be aware the official estimates of the Egyptian crop have varied very appreciably from the private estimates which have proved to be very near the mark, and while there is such a thing as official caution to be taken into consideration it behoves the authorities to consider that that can be overdone, and that it is their duty to build up a reputation for careful and reliable estimates which will enable cotton consumers to know where they stand.

Recommendations of Cotton Congress.

The Congress, which, according to all reports, has been most successful, concluded its work at Alexandria on February 5. The various resolutions adopted by the joint committee of the Congress indicate the lines on which the discussion has proceeded. One resolution deals with the question referred to in my previous note, and expresses the hope that crop forecasts will be published punctually at the dates fixed previously and at the same time every year, and that the most modern methods of obtaining the statistics will be employed. Another resolution expresses

appreciation of the work undertaken by the Egyptian Government and the Royal Agricultural Society with the object of increasing the yield per feddan, and also of the legislation whereby the mixing of cotton seeds becomes a criminal offence. Appreciation is also expressed in regard to the value of the measures taken for the selection of seed, the combating of pests, and the improvement of the quality of cotton. If therefore there has been criticism on one or two points such as crop forecasts it will be seen that the authorities in Egypt have much in the proceedings of the Congress over which to be pleased, for the painstaking work that has been, and is being, undertaken in so many directions has very evidently been the subject of well deserved and unstinted recognition. The final resolution recommends the formation of a Joint Permanent Committee representing Egypt and the International Cotton Spinners Federation, each having seven members, to consider the problems regarding Egyptian cotton. The carrying out of this proposal should mean much for Egypt's staple industry for its difficulties are partly of its own making, and have been largely due to a failure to appreciate the facts of the cotton position generally.

The Functions of a Bank.

One of the most interesting portions of the speech of Mr. J. Beaumont Pease at the annual meeting of Lloyds Bank last week was that in which he discussed the obligations of a bank. A week ago, Mr. Walter Leaf made the point in his speech at the annual meeting of the Westminster Bank that the country has the advantage of nationalised banks without any of the disadvantages which would accrue from nationalisation, and what Mr. Beaumont Pease said merely served further to emphasise the wide and comprehensive view that the banks take of their functions in their relation to the community. Banks, he declared, were not primarily concerned in earning profits in order that there might be distributed increasing dividends to their shareholders, but rather in seeing that, while a fair return to them is maintained, the strength of the banks should be continually increased, for the security of the depositors, the benefit of trade, and the preservation of the country's prestige. Nothing could be more illuminating as to the work accomplished by the banks in assisting the country than the detailed analysis of the advances made by Lloyds Bank which Mr. Beaumont Pease quoted. It has not infrequently been urged against the banks that they have not done sufficient in the way of providing credit facilities. These figures which, it may no doubt be assumed, are simply in accord with the general banking experience, supply a very complete answer to any criticism on that score.

The Power of Banks.

Mr. Beaumont Pease went on to discuss another and a much debated matter—the power of banks—and expressed the opinion, in reference to the suggestion that the banks ought to influence the monetary position more strongly, in order to further trade, that the truth was that the power of banks had been largely exaggerated. He accepted with reservations the truth of the statement that every advance makes a deposit, but he pointed out that it would not be possible to act on it as a practical principle since it would be impossible to be sure which bank would

receive the deposit. Obviously a bank's capacity to make advances is dependent upon its cash holding. As regards the outlook generally it is satisfactory to note that Mr. Beaumont Pease said nothing to dim the optimism which is gradually beginning to permeate through the commercial community. He said that in the past depressing year there was much to justify a sane optimism as to the future, and in his opinion the world was slowly but surely advancing to more normal times. His view is that politically Europe is settling down while financially distinct progress is to be recorded. In regard to this country he referred to the way in which the order books of the steel, iron, and engineering works are beginning to fill up again and to the increasing number of blast furnaces which are being blown in, and pointed out that there were many other encouraging features. Let us hope that a year hence he will be able to refer to 1927 in terms of unmixed eulogy as the year which heralded the first real trade revival since the War.

A Good Tourist Season.

If one of Egypt's two assets has temporarily fallen short of what is expected the other, the tourist season, is once again, and one might almost add as usual, proving a considerable success. New resorts spring up and come into fashion and favour, but the attraction of the Valley of the Nile remains unchanged, rising serenely above such mundane considerations as the tide of fashion, and it would seem probable that as long as the spirit to make holiday lasts it will never lack its full quota of tourists. They have just been holding the International Congress of Tourism in Egypt, and that induces these reflections, for after all what more suitable place could there be for such a gathering than in the most famous temple of the tourist in the world. It is only one of quite a number of congresses that have been held in Egypt of late which is another proof of the increasing appeal that the country is making. One of the most interesting functions of the Congress was a banquet at the Semiramis, when Mr. Charles Baehler, the leading figure in the hotel industry in Egypt, gave the guests the story of the establishment of Shepherd's Hotel, of which it has been said, and probably with every truth, that in a season there one would be sure to see nearly everyone who matters. When the impoverishment consequent on the War is borne in mind it may seem passing strange that Egypt still has prosperous tourist seasons, but it is different from pre-War days in that while visitors before 1914 spent perhaps months in the country now there are many more tourists, so many more indeed that thought the average length of their stay is brief Egypt gains on the balance. When in future decades—always provided the absence of further struggles—the economic balance is more or less redressed, and tourists are able to take their time again, one can see the need for many more hotels in Egypt. But that vista lies in the lap of the future.

Egypt's Trade Position.

The figures for Egypt's trade for December are not yet available, but those for the eleven months of the year indicate that the country will have a rather large adverse balance of trade. The value of the imports for the period

LLOYD'S AGENTS

was £E48,271,604, while that of the exports was £E37,257,859, and on the supposition that the trade in December ran on much the same lines as in the previous month then the unfavourable balance would be in the neighbourhood of £E11,300,000, a serious matter for a country if there were any great likelihood of a similar state of things obtaining over a prolonged period. It is scarcely necessary to explain that the decline in exports is due to the fall in the price of cotton, but it is a telling example of the effect that world fluctuations in prices can have on the future of an individual country.

The Egyptian Budget.

The Egyptian Budget estimates for 1927-28 allow for an expenditure of £E38,677,000, and provision is made for a draft on the reserve of £E2,454,000 to balance the Budget. The principal decreases of revenue are estimated in respect of Customs £E906,000 and Railways £E700,000. The Railways Budget, of course, reflects the cotton crisis, and simply serves to show how this one industry dominates the activities of the country. The financial situation as now disclosed emphasises two points—the need for economy, and the imperative necessity for broadening the basis of Egypt's industries.

COMMENTATOR.

NEW COMPANY.

Boots The Chemists (India), Ltd., has been registered as a private company with a nominal capital of £1,000 in £1 shares, to carry on the business of wholesale, retail, pharmaceutical and dispensing chemists and druggists, etc. Subscribers: J. C. Boot and H. R. Gillespie, both directors of Boots Pure Drug Company. Registered office: 37, Station Street, Nottingham.

The Southern Punjab Railway Company recommends a final dividend on the ordinary stock of £6 per cent., together with a bonus of £2 per cent. (less English tax at 2s. 6d. in the £), making a total distribution of £14 per cent. for the year ended September 30, 1926.

It is reported that the Yugoslav Ministry of Foreign Affairs has requested the Belgrade Chamber of Commerce to prepare a report upon the present position of pre-War debts owed by Serbian Nationals to British firms. It is presumed that this indicates a pending settlement of these debts, it being necessary as a preliminary that the Yugoslav authorities should be in possession of full particulars of the money still owing to each creditor.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1, 1926, to January 29, 1927, are: Purchases of sterling in India, £1,195,000; transfers from the Paper Currency Reserve in England to the Treasury Account of the Secretary of State for India in Council, £23,425,000; total, £24,620,000. The total includes £1,425,000 on account of telegraphic transfers on London sold by the Government of India.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, February 1.

The Gabrovo Industrial Exhibition.

The industrial town of Gabrovo, which has been called the Manchester of Bulgaria, has had the happy idea of organising a comprehensive exhibition of samples of all the industries which have had their foundation there and contribute to the honour and welfare of the country.

The exhibition, which has had an outstanding success, is of particular interest because the organisers have given it an obvious retrospective character by the inclusion, in addition to the samples of present day products, of models of the successive stages of development of the existing industries illustrating the gradual improvement of the products and the multiplication of the manufactures. The diversity acquired by the town of Gabrovo is such that there now exist no less than 124 industrial enterprises, including notably textiles, tanneries, woollen mills, cutlery, foundries, and furniture.

This display of the industries of Gabrovo gives rise to the most hopeful reflections as to the outcome of the great economic crisis from which the country has been suffering for some years. It appears that this crisis has already passed its highest point, and that the country is now going forward to a period of intense production and material prosperity.

The Bacon Monopoly.

It will be recalled that last spring the Bulgarian Government concluded an agreement with the Bulgarian Development Company of London by which it conceded to this concern the concession for the manufacture and export of bacon in Bulgaria for a period of twenty years. It hoped thus to give a fresh and decisive impetus to the rearing of pigs in the country and to form new and very important links between Bulgaria and the great British market.

The exploitation of this concession, the realisation of which would necessitate a large capital, was to be carried out by a company to be formed after the ratification of the agreement by the Sobranje, and which was to provide the necessary capital for the enterprise—£500,000. The Bulgarian Government was to participate in the enterprise to the extent of £140,000—£40,000 being in cash and £100,000 in kind by the supply over a period of five years of 100,000 tons of fuel from the Pernik mine for utilisation on the refrigerating vessels. That participation gave the right to the Bulgarian State to Preference shares bearing 8 per cent. interest which it could exchange after five years for Ordinary shares. However, as the

LLOYDS BANK now has the following Offices in INDIA, BURMAH and EGYPT, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

EGYPT.—ALEXANDRIA, CAIRO (4 Offices), BENHA, BENI SUEF, FAYOUM, GAMALIEH, MANSOURAH, MEHALLA KEBIR, MINIEH, TANTA, WASTA, ZAGAZIG.

first five years, in view of the difficult and complicated character of the undertaking, would be precisely the period when there might be an inevitable loss on the concession, all the profits of which could not be realised until after the construction of vast buildings and installations and after the introduction into the country of a modern system of pig raising, the concessionaries asked for a modification of the contract by the limitation of the privilege given to the Bulgarian State, pointing out that it ought to safeguard its Preference shares by renouncing the right of ultimately replacing them by Ordinary shares which would eventually bear higher dividends or to be willing to content itself now with Ordinary shares—the same as its associates of the concessionaire company—and thus to run the same risks of initial losses.

This request has been formally rejected by the Council of Ministers which has held strictly to the stipulations of the agreement signed and already ratified by Parliament. Consequently the Minister of Commerce and Industry has informed the interested parties that any modification of contractual obligations was impossible and that they ought, if they did not wish the concession which they had been granted to lapse, to make haste to present, within the time prescribed, the guarantee of execution the amount of which was fixed at three million leva.

The period for depositing the guarantee was to expire on January 28, and on that day the Government was officially informed that the concessionaire company had advised the Bulgarian Legation in London of the deposit of three million leva at Schroder's Bank, which was transmitting the sum to Sofia. That news caused the greatest satisfaction among the public and especially among the peasants, impressed by the extent of the undertaking which foreshadowed the industrialisation of pig raising and a great development of agriculture in Bulgaria. Very soon the construction will be commenced of large slaughter houses and cold storage installations at Gorna Orehovitza and of warehouses at Varna.

Mr. Jacob Freudenthal, London manager and a director of the General Mining and Finance Corporation, has joined the Board of the Phoenix Oil and Transport Company.

A Reuter message from New Delhi dated February 5 states that the Indian National Congress Executive this evening decided by five votes to one to direct party members of the Legislative Assembly to support a 16d. rupee ratio. The minority of one consisted of the Pandit Motilal Nehru, the party leader, who favoured leaving Assembly members freedom to vote as they liked. The chances of amending the Government Bill are accordingly favourable, but the Government is determined, so it is understood, to enact the 18d. ratio even by resort to the Governor-General's emergency power to certify the Bill as essential for the interests of the country, whereby it would come into operation forthwith.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Photographic Materials.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. March 16.

Stationery Articles.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of stationery articles for 1927-1928. Approximate cost between £E6,000-7,000. March 22.

Paper.—The Controller-General, Administration and General Stores, Ministry of Finance, invites tenders for the supply of paper, binding materials, and metals required by the Government Press for 1927-1928. March 17.

Lathes, Etc.—The Egyptian Ministry of Education invites tenders for the supply and delivery of machine tools and textile machinery for Damanhour Trades School 1926-1927. February 28. (D.O.T.)

Asphalt.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 3,700 tons of solid asphalt required for the year 1927-1928. March 1.

Paints and Oils.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of paints and oils required for the financial year 1927-1928. March 15.

Bunting, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of bunting, ropes, canvas, hose, etc., required for the financial year 1927-1928. March 15.

General Stores.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of general stores required for the financial year 1927-1928. March 15.

Diesel Engines.—The Ministry of Public Works, Egyptian Government, invites tenders for the supply and erection at the site of the Egyptian Army Flour Milling Plant at Tura, near Cairo, of two internal combustion engines and accessories. March 3. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, February 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakand for Port Said, Colombo, and Calcutta (Birkenhead, February 19).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, February 23).

British India Line.—S.s. Margha for Bombay and Karachi (London, February 26); s.s. Matiana for Colombo, Madras, and Calcutta (London, February 26).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also Corfu and Ancona if inducement (Liverpool, February 19, Swansea February 22); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow and Swansea, March 5).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina (closing February 12), also Galatz and Braila (Liverpool, February 17); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 12).

P. and O. Line.—S.s. Ranpura for Bombay (London, February 11); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.s. Stuart Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Mersina, Alexandretta, Tripoli, Famagusta, Larnaca, and Limassol (London, February 16); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 18).

Ellerman and Papayanni Lines.—S.s. Kioto for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 9); ss. Andalusian for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, February 12); s.s. Lesbian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool February 19, Swansea February 19); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 23); s.s. Algerian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool March 5, Swansea March 8). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The output of the Anglo-Egyptian Oilfields for the week ended January 28 was 3,126 tons. For the previous week it was 3,132 tons.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 8.

There was no change in Bank Rate on Thursday. Indeed, a reduction had not been seriously anticipated, in view of the continued uncertainty of the Chinese situation and of the present position of the foreign exchanges and the outward movement of gold. A considerable amount of gold has been withdrawn from the Bank of England during the past week and a substantial quantity has been purchased in the open market on American account. Such movements impel caution in the matter of Bank rate. There are several favourable factors in the situation, however, the most important of which perhaps is increasing activity in some of the leading industries. Moreover, the position of the Bank of England is very much stronger than it was twelve months ago. That no change was anticipated in Bank rate is indicated by the fact that on Thursday British Government securities displayed a slight tendency to harden. Business as a whole in the stock markets, however, has been on a small scale, the Chinese position still acting as a restraining influence in the absence of counteracting factors. The Home railway market, which has lately been described as the Cinderella of the Stock Exchange, has been further depressed by a batch of rather disappointing weekly traffic returns, and has failed to benefit from the fact that the new freight rates are now in operation. In many branches of the industrial market the tone has been heavy and more falls than rises have been recorded. Iron and steel shares exceptionally have remained fairly steady.

The reduction from 80 to 70 per cent. of standard in the exportable quota of rubber for the current quarter under the Stevenson Restriction scheme entirely failed to stimulate the rubber share market, nor yet the price of the raw material. Stocks of rubber in London continue to expand and are now over 55,000 tons. Those in a position to judge, however, are not pessimistic as to the outlook. Mr. Eric Miller, Chairman of Harrisons and Crosfield, for example, pointed out in a recent speech that the wintering season is now approaching in the producing areas and that exports will automatically decline. Consumption, on the other hand, should expand as the year

progresses. Market talk, however, suggests that any substantial revival in the share market is not anticipated until the second half of the year.

The Artificial Silk Agreement.

During the past few weeks the prices of artificial silk shares both in this country and on the Continent have been under the influence of the rumours of an international agreement among the leading producers. Thus at one time in January Courtaulds touched £5³/₄, having risen from £4¹/₂ at the end of December; this compares with last year's highest price of £8³/₄ and the lowest of £4³/₄. Snia Viscosa, again, rose appreciably, the highest price of January being £2¹/₄ and the lowest £1¹/₄. There was little movement in share values upon the publication of the official announcement, the previous rise having fully discounted the agreement. The extreme optimists, however, were somewhat disappointed, for there was no reference to a consolidation of financial interests. The arrangement had been concluded, it was stated, "for the purpose of bringing about commercial and technical collaboration between the three companies"—namely, Courtaulds, Snia Viscosa and Vereinigte Glanzstoff-Fabriken A.G.

At the same time, the agreement is of very considerable importance. It has been suggested that it covers—or will cover—export prices and the lines upon which each company will develop its export trade. At any rate, it establishes a close working arrangement, so that appreciable economies should result from the exchange of technical information, marketing, the elimination of wasteful competition and so forth. In particular, the companies should be better able to concentrate upon the main problems of the industry. Thus, given wise administration the agreement may be of great advantage to both producers and consumers. So far as the recent rise in share prices is concerned, that of the British company's shares would seem to have the most justification.

Gas Companies and the Coal Stoppage.

The holder of gas stocks has been concerned as to the effect of the coal stoppage upon the financial position of the gas companies. It is known that the price of coal stood for some time at a very high level, apart from the difficulties of obtaining supplies. On the other hand, the companies raised the price of gas to consumers. What, the shareholder has been asking, is the net result? The accounts of the Gas, Light & Coke Company are useful as indicating the resultant of the opposing factors in one instance; but whether or not this company is representative is an open question.

Since the results are favourable, however, the figures may be indicated in the hope that other companies have had equally good fortune. Gross revenue for the year ended December 31st, 1926, was £12,548,619, as compared with £9,569,292 for the previous year, while expenses were £11,210,773, against £8,307,233. Thus net revenue was £1,337,846, in contrast with £1,262,059; but the percentage of expenses to revenue was slightly higher than a year ago. In the circumstances, therefore, this is a very satisfactory result and apart from its usefulness as an indication of the possible position of other gas companies, it reflects considerable credit upon the Gas, Light & Coke Company. It is one of the largest and most progressive of the gas companies. Its ordinary stock gives a return of approximately £5 15s. od. per cent. and the 3¹/₂ per cent. maximum stock, which is receiving the maximum dividend, yields £5 17s. od. per cent. There are large amounts of both classes of stock outstanding.

Orders have been received by Huntington, Heberlein, and Co., of London, for two sulphuric acid oleum plants, one for the Assam Oil Company and one for the Burmah Oil Company.

Near East Markets

BULGARIA'S IMPROVING TRADE POSITION.

Interesting details regarding the economic situation in Bulgaria are contained in the latest monthly report of the Bulgarska Banka from which we take the following:—

Bulgaria's trade balance for the year 1926 is of unusual interest. During the first four months of the year (January—April) the value of the exports exceeded that of the imports by about 170 million leva. But during the next four months (May—August) the results were less favourable, so that for the first eight months (January—August, 1926), the imports exceeded exports by about 426 million leva, the total value of the former being 3 milliard 916 million leva, while the exports amounted to 3 milliard 490 million leva.

This circumstance need not occasion disquiet, as already it is evident that for the whole of 1926 the total value of exports will certainly exceed that of the imports.

During September and October last the value of exports showed a considerable increase, exceeding imports by several hundreds of millions of leva.

The statistics giving Bulgaria's trade balance for the month of November last have just been published. During that month the exports reached 44,859,027 kgs. (valued at more than 600 million leva). The imports for the same month were only 31,843,120 kgs. (valued at under 520 million leva). It will thus be seen that in November Bulgaria's trade balance did not show a deficit, but on the contrary a considerable balance in her favour. It can be said that the results for December will be similar.

The following were the principal items of export during November last (in tons):—Wheat, 2,393; tobacco, 2,365; eggs, 693; wheat-flour, 5,232; maize, 8,780; haricot beans, 2,684; charcoal, 7,239.

The export of tobacco, flour, maize and charcoal showed a marked increase. In addition 67,952 kgs. of silkworm cocoons and 175,328 kgs. of sheep skins were exported.

Railway Traffic Receipts.

In July, 1926, the railways receipts from the transport of passengers and goods amounted to 83½ million leva, in August to 97 million leva and in September to about 109 million leva. In July 783,554 passengers travelled on the railways; in August 964,272, and in September 879,513. During October there were 39,566 wagon-loads of goods, of which 4,690 were used for the transport of beet-sugar to the sugar factories.

There is only one match factory in Bulgaria, situated at Kostenetz Bania. During 1925, 10,839 cases of

matches were produced, as against 9,811 cases in 1924. The value of Bulgaria's match production in 1925 was 97,551,000 leva, including a sum of 82,918,350 leva, paid by way of tax to the State. During that year 77,355 kgs. of different chemical products were employed in the manufacture, as well as 3,268 cubic metres of wood, 76,796 kgs. of other materials and 75,473,136 labels.

Bulgaria's total rice crop for 1926 was estimated at about 10 million kgs., as against 7 million kgs. for 1925. The rice crop for 1924 represented about a third of that for 1926.

The Pernik coal mine dispatches each day by rail about 6,500 tons of coal for use on the railways and for Bulgaria's industries. This considerable figure has enabled the mine to despatch to consumers its surplus coal and to increase its daily output.

During the autumn 10,502 wagon-loads of beet sugar were transported to the Bulgarian sugar factories. The largest supply, viz., 4,747 wagon-loads, was sent to the factory at Gorna-Orehovitz, followed by 3,667 to Rustchuk and 1,689 to Kaialy, while Philippopolis received 999 wagon-loads. But these figures represent only about one-half of the quantity of beet sugar which will this year be manufactured into sugar in Bulgaria.

EGYPT AS A MARKET FOR INDUSTRIAL MACHINERY.

Rather unique problems are present by the Egyptian market for industrial machinery says an American Consular report. Located at the crossroads of trade between the East and West, Egypt is a common ground of intense competition in which price plays a very large part. Probably nowhere in the world is there such a variety of industrial machinery—British, German, French, and Swiss—installed side by side. The matter of freight rates is also an important consideration, for the United States is 3,000 miles farther removed than any of its competitors in this field. Quotations, to be of interest, must be made c.i.f. Alexandria, as Egyptian merchants are not generally familiar with the charges for transporting goods from American ports, and prospective agents will not, as a rule, take the pains to compute the delivered price of goods quoted f.o.b. port of origin.

Egypt's foreign resident population and its prejudices also constitute an important factor in its commercial and industrial life. Other things being equal, the British engineer at Cairo prefers British tools; the Swiss cotton manufacturer at Alexandria, Swiss spindles or looms; the Italian brewer in either city, Italian bottling machinery, etc.

The most important class of industrial machinery figuring in the Egyptian import returns is internal combustion engines, which in 1925 accounted for £E652,951. Of this amount the United Kingdom supplied considerably more than half, or £E374,145, as against £E122,589 from Germany and £E135,257 from Switzerland. Nearly all of these engines were of the stationary type, imports of portable internal-combustion engines amounting to only £E3,276. Practically no stationary steam engines are imported, and portable steam engines entering the country were valued at only £E9,394 in 1924 and £E10,177 in 1925.

Although farmers and peasants have been slow to adopt modern methods in connexion with their labours, the use of power pumps is steadily gaining headway throughout the country. Imports of such equipment amounted to £E111,136 in 1925, as compared with £E59,495 in 1924 and £E34,937 in 1923.

Imports of machine tools in 1925 were valued at £E35,761, as compared with only £E3,191 in 1919 when they were first classified separately in the Egyptian customs returns.

THE CLOSING OF A FAMOUS OIL WELL.

The F7 of the Anglo-Persian.

The F7—the famous well of the Anglo-Persian Oil Company—may have been closed, but it will never be forgotten for it has assuredly gained for itself an abiding niche in the history of the industry. It was at the general meeting of the company on November 10, 1925, that it was announced by the Chairman that the directors had decided that F7 must be shut in. This was not because of any failing in productivity, but because the head fittings had become so worn in their long service as to be no longer safe. It had been in operation for fifteen years, and at that date its production had totalled $6\frac{1}{2}$ million tons. In a recent issue of the *Naft*, the magazine of the company, an account is given of the actual operation of the “mudding” off of this well. We give the following extracts from the article:—

Oil was first struck in this well in November, 1911, at a time when there were few other producers in Maidan-i-Naftun and none of very great volume. There was even, on the part of the operating staff at that time, some anxiety as to their ability to meet the requirements of the new refinery at Abadan and the crude shipments. F7 came in with an initial production of about 30,000 gallons a day. This, of course, was nothing compared to its subsequent production, but it is characteristic of the fortunate and equable character of the well's history that it should have begun so quietly. The field staff at that period had had little experience of the high pressures and enormous productions later obtained, and had F7 come in with the full force of its later output it might easily have run wild and done irretrievable damage.

The well-head valves and fittings of F7 were only of cast-iron and comparatively light. At the time they were installed they seemed quite sufficient for the work they had to do, though subsequent experience in the Persian field demonstrated the need for the heaviest and most powerful fittings obtainable. But in November, 1911, there was no indication of the terrific strain to which the fittings of F7 were to be subjected over a long period of years. And, after all, they did stand the strain, though they were the occasion of many hours of anxious thought to the technical management, especially in the later stages of the well's active life.

From the time oil was struck in F7, the well was never closed in. This was due to the fact that the pressures developed were considered to exceed the safe working limit of the cast-iron flowhead. There was also a belief at the time that the channel conveying the oil to the bottom of the well might possibly be somewhat choked up. F7 was, therefore, permitted to flow freely into the tanks situated some two hundred yards distant, which it did

at a steady rate of approximately 30,000 gallons a day until March, 1914, when suddenly and without warning it drilled itself into the lower and richer area of the lime-stone and began to produce at the tremendous rate of 450,000 gallons a day with a flowhead pressure of about 300 pounds to the square inch. And even this, as stated before, was a restricted production, for there is little doubt that if F7 had been fully opened out the production would have amounted to 750,000 gallons a day.

During all these years the condition of the well-head fittings of F7 were a source of constant anxiety to the management. There was always the danger that they would give way under the heavy and unceasing pressure, and that the suddenly-released gas and oil would catch fire. Such a result would have been nothing less than a disaster.

Finally the decision to close F7 was arrived at, and the work of “mudding” off was commenced on March 23, 1926, and was successfully concluded the following morning:—That the whole operation of restraining the enormous subterranean forces for which F7 was the outlet should have gone through without a hitch and in strict accordance with plan, is an engineering triumph which reflects the greatest credit on the Fields management and staff, whose skill and care made it possible. The problem, briefly, was to force mud down a hole over 1,350 feet long, up which oil was rushing at tremendous speed and with a pressure of hundreds of pounds to the square inch behind it.

The first part of the task was to erect a derrick over F7, for the drilling rig had naturally been taken away years before when the well came into active production. Before the derrick was put up, however, a stone wall about eight feet high was built around the flowhead and covered with steel girders to protect the well from any damage from material that might be dropped during the construction of the derrick. Then, by the side of the well and about five feet away from it, three containers sixty feet long and made of ten-inch casing were erected and braced to the side of the derrick. These containers, each controlled by a ten-inch gate valve, were coupled at the bottom to a common manifold, the manifold being again coupled by a flexible connection to one of the two three-inch production valves on the well. From the other production valve a further connection was made by a two-inch pipe to the top of the containers, with the object of allowing the pressure of oil in the well to be passed to the top of the containers, thus equalizing the pressure above the columns of mud they contained. In this way it was designed that the mud by its own weight, should slip freely down the well through the oil, and gas.

All the apparatus having been thoroughly tested, the actual operation of “mudding-off” was begun. On the morning of March 23, for the first time in its history, F7 was closed in. It was kept closed for thirty minutes,

HOBBS, HART & CO., LTD., LONDON, E.C.2

in order to allow separation of oil and gas to take place in the well. In this way a considerable initial quantity of mud could be run into the well very quickly, the mud falling rapidly through the gas, its progress down through the oil being naturally much slower. The first container-full of mud fluid was then emptied into the well, being followed in due course by the other two. As the mud was injected the pressure in the well gradually dropped. No less than 58 container-fulls of mud—a quantity equal to six times the capacity of the well—were run in before the operation was complete and the fluid level could be maintained at the well-head.

Will F7 ever be brought back to production? The task would offer no special difficulty from an engineering point of view, all that would be necessary being to fit modern high-pressure valves and flowhead to the top of the casing and clear out the mud. The casing, however, was never cemented, the well coming in so quickly that there was no time to do so, and undoubtedly considerable corrosion has taken place below ground. It is not likely, therefore, that F7 will ever flow again.

NEWS FROM ALL SOURCES.

The production of the Phoenix Oil and Transport Company for January was 31,956 tons.

Bulgaria's tobacco exports for 1926 amounted to 27,700,314 kilos (27,291 tons).

During the third quarter of 1926 about 126 motor cars were purchased for Greece for use as taxicabs.

As from January 25 Roumanian export taxes on all cereals have been reduced to £5 sterling per wagon.

The International Sample Fair at Liubliana is to be held from July 2 to 11.

An Agricultural and Hygienic Exhibition is to be held at Liubliana from September 10 to 19.

Mr. E. R. Lingeman, H.M. Consul at Teheran, Persia, is visiting Bradford on February 16 for the purpose of interviewing representatives of firms interested in trade with Persia.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for January was 35,910 tons.

A Reuter message from Bucharest states that a decree is published ratifying the agreement between the Roumanian State and the railway company in regard to the repurchase of the Arad-Cenad, Matra-Crisana and Bihor lines.

The area under tobacco in Palestine last year amounted to 8,971 dunams as against 11,676 dunams the previous year. Turkish tobacco (which only formed 3.5 per cent. of the 1922 crop) represented 90 per cent. of the yield as against 83.5 per cent. in 1925.

The Greek hat industry, it is estimated, produced 700,000 straw hats with a value of 52,700,000 drachmæ and 105,000 felt hats worth 15,750,000 drachmæ during 1925 as compared with 750,000 straw and 105,000 felt hats in 1924 and 550,000 straw and 80,000 felt hats during 1923. The industry, however, is unable to meet the entire domestic requirements (says an American Consular report), and imports of hats into Greece during the first eight months of 1925 were valued at 13,405,000 drachmæ, of which straw hats accounted for 5,000,000 drachmæ, felt hats for 8,040,000, and miscellaneous headgear for 365,000.

A tyre which has been specially made to run at the record speed of two hundred miles an hour has been tested at Fort Dunlop in the presence of Major Segrave, who will use a set of similar tyres on the sands of Daytona Beach, Florida, in his attempt to set up a world record during February. The Fort Dunlop experiment was carried out on an electrical revolving testing machine, where the tyre undergoes the same strains as on the road or racing track. First a tyre of the old type was tried on the machine. It reached a speed of one hundred and twenty miles per hour, and, when the load which it would have to bear under actual running conditions had been applied, the tread was stripped off with a report like that of an explosion and flung red-hot through the door of the great shed specially erected for the experiment. Other tyres were then tested, including one similar to those which Major Segrave will use in Florida. This was the plain rubber without any tread, and at the end of the test it was comparatively cool.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 2:—

Egyptian Futures.—Sakel Contract.—Values in this department throughout the past week have been maintained at a very steady level, only fluctuations of a few points either way taking place during the majority of the sessions, and we close to-night with the list showing gains of 10 points to 14 points. No special features of particular interest have cropped up, but, in view of the fact that Sakel cotton is not really attracting the degree of support necessary to neutralise the heavy supply figures, it must be confessed that our market is showing a decided resistance to any easing in values. We are rather of the opinion that during recent weeks a fairly large "long" account has been quietly accumulating; however, provided American prices maintain their recent firmness, we do not consider that holders will show much anxiety, but should the other market commence to show weakness, rather an unlikely contingency in our opinion, this contract might experience liquidation on a scale to cause a sharp set-back. Trade reports continue to show a healthy business, but we would hesitate to say that spinners have been operating in actual on the substantial lines witnessed during the major portion of last month; certainly the demand for fine spinning qualities, if we except Sudan Sakel, has been considerably reduced since we last wrote. In spite of this, throughout the week values in the Alexandria market have been maintained at a very even basis; however, the tendency there seems pretty much the same as on this side, as in both cases holders of near positions show an obvious disinclination to face actual cotton, and the bulk of the speculative business which is coming to hand is for new crop options. In a report just received from the other side, the following information regarding the coming crop is illuminating:—

"As mentioned previously, it is expected that the Government will be very strict this year in the publication of the law restricting acreage. Up to the present, when similar laws have been in force, the Northern regions of the Delta have always been excepted, but this year the reduction of acreage will also be applied to these regions, and its application to the Northern area of 800,000 feddans will mean that the reduction will be proportionately greater than in previous years of enforced restriction."

At the present moment we cannot see any cause likely to affect values in a marked degree one way or the other. In the ordinary course of events, at the present juncture our market might reasonably be expected to show a weakness, but against this the prevailing idea that the existing level is not unreasonable and also as mentioned previously, the firmness of the American market, both combine to influence a resistance that otherwise would be lacking. On this account, we can only repeat our previous opinion, that is, to watch the position with the idea of making purchases on reactions provided that no further slackening in trade demand becomes apparent in the meantime.

Upper Contract.—Some slight easing in values in this contract have been witnessed since we last wrote, moderate hedging operations against imports finding the market rather bare of support. The Upper varieties continue to maintain their interest with the trade, and there is no doubt that the unsatisfactory lines upon which this contract is framed are responsible to a great extent for the lack of interest and narrow trading that have been in evidence since its inception.

Egyptian Spot.—No special features have been apparent during the past week and conditions generally have ruled rather quiet. Owing to the slightly easier tendency amongst the American markets, and to the somewhat restricted trade demand locally, prices all round have shown a disposition to sag, but the net results have been comparatively unimportant. The forwardings to Egyptian

spinners last week reached an unusually large figure, so it is not remarkable that the spot business should have fallen off a little. Manchester reports have not been quite so good, the inference being that manufacturers have also filled up for the time being, or else that the recent political news from the Far East has acted temporarily as a deterrent to further business.

The local inquiry has shown no change. Sakel has been in request for practically all grades, but the amount of actual business resulting is not by any means commensurate with the extent of the inquiry, and spinners continue to find the greatest difficulty in selecting the staple they require from this year's cotton. Uppers at from 8½d. to 10½d. have maintained their popularity fairly well, but it is a rare occurrence to receive an order for cotton above the later figure. Business in Pilon has been quieter. Sudan cotton has been in fair request, both the Sakel and American seed varieties coming in for attention, the former at from 13½d. to 15.75d., and the latter at from 150 to 200 on American contracts. It would appear that some improvement has again been noted here and there in c.i.f. business, but this class of trade is still very patchy.

Forwardings to spinners for the week ending 28th ult. were returned as 9,027 bales Egyptian and 4,918 bales Sudan. Estimated sales, 1,300 Egyptian and 2,400 Sudan. Quotations of Sakel have been reduced 15 points, and those of Upper 30 points on the week. F.G.F. Sakel to-day, 13.65d. F.G.F. Upper to-day, 10.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended January 27 state:—

Since our last report the market has shown some weakness and prices all along the line are down from those of last Thursday. The week's summary of price movements is as follows:—Sakellaridis: March, 25.17 dollars, 0.38 dollars down; May, 25.47 dollars, 0.25 dollars down; July, 25.57 dollars, 0.45 dollars down; November, 26.24 dollars, 0.24 dollars down. Ashmouni: February, 17.10 dollars, 0.70 dollars down; April, 17.58 dollars, 0.52 dollars down; June, 17.78 dollars, 0.62 dollars down; August, 17.88 dollars, 0.62 dollars down; October, 18.50 dollars, 0.35 dollars down.

Sakel.—The market during the whole week has been rather dull, both commerce and speculation showing very little interest. January went out, on 22nd inst., at a considerable discount, due to fairly heavy selling against cotton bought on call. The demand from abroad has continued to be very poor, in spite of the rather more optimistic reports from Lancashire. Whilst reports on English trade have improved, those received from Continental centres are less satisfactory and indicate a considerable falling off in the demand for yarns and finished goods.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations.
Alexandria.....	Piastre to £	97½	97½
Athens	Drachmæ to £ ...	25.22½	375
Belgrade	Dinars to £	25.22½	276
Berlin	Marks to £	20.43	20.46½
Berne	Francs to £	25.22½	25.22
Bombay	Sterling to Rupee	24d.	17-31/32—18
Brussels	Belga to £	35	34.87½
Bucharest	Lei to £	25.22½	855
Budapest	Pen to £	27.82	27.74
Calcutta	Sterling to Rupee	24d.	17-31/32—18
Constantinople	Piastres to £	110	940—955
New York	Dollars to £	4.96 2-3	4.84 15/16
Paris	Francs to £	25.22½	123.35—40
Prague	Kronen to £	24.02	163½

Vienna	Sch to £	34.58½	34.38—34.43
Warsaw	Zloty to £	25.22½	42—45

Our agents in the Sudan report ideal climatic conditions during the past few weeks, and the production of Sakel in that country this season may, as a result, reach 600,000 kantars. Within a month or two, this cotton will be offering on the Liverpool market and must inevitably affect spinners' takings of Egyptian Sakel.

At the January tender, 1,750 kantars were issued. The total for the month is 4,750 kantars.

Uppers.—The publication on the 24th inst. of the American Ginners Report showing 16,610,000 bales ginned to January 15 against 15,542,000 bales ginned to December 12 out of a crop estimated by the Government in its last report of 18,618,000 bales, had no influence on the market, the figure being round about that anticipated. New York has shown some weakness during the last two or three days and this weakness, reflected in our market, has induced some local liquidation. The demand from abroad has been fairly good, but not sufficient to maintain prices in the face of the decline of American; the stock of Uppers is more than sufficient for present requirements and holders are fairly free sellers.

The week's receipts amount to 222,116 kantars against exports 170,487 kantars; the stock in Alexandria stands at 3,302,690 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to January 20, 1927, are as follows:—Arrivals: Lower Egypt, 3,088,000 kantars; Upper Egypt, 2,057,000 kantars; total, 5,145,000 kantars. Exports: Sakel, 1,333,025 kantars; Ashmouni, 1,611,995 kantars; various, 178,000 kantars; total, 3,123,620 kantars.

Spot: During the past week we have had a fairly good demand and a good business has been done at Minel el Bassal. Sales amount to about 25,800 bales, of which we estimate 9,500 bales Sakellaridis, 14,000 bales Ashmouni and Zagora, 2,100 bales Pilon, and about 200 bales White. The selection of Sakel continues poor and Ashmouni has not been so freely offered as last week.

Sakellaridis: A fairly good business has been done and all grades have changed hands except the very best. Spot differences are very steady with a tendency to harden except for the low grades, which are easier.

Ashmouni and Zagora: A good business has been done covering all grades. Spot differences are unchanged.

Pilon: Has been in excellent request and a greatly increased business has been done at about last week's spot differences.

Brown: Is neglected and no business has been reported. Spot differences are quotably unchanged.

White: A small business has been done. Spot differences are steady with a tendency to harden.

Up-Country: Business in the interior is very quiet. A fair amount of cotton remains in the villages unsold, but it is mostly held by the big growers who, for the time being, are not sellers. Some of the ginning factories are now only working intermittently owing to the accumulation of stocks in Alexandria and the consequent dearth of storage space.

The Shipping, Engineering, and Machinery Exhibition will be held from September 8 to 24 at Olympia.

The Zagreb Motor Show, which was to have opened on February 8, has been postponed until the beginning of May.

The following articles have been added to the list of goods which are admitted into Syria duty-free under the conditions prescribed by Decree 69 of January 25, 1926:—Mills and moulds for grinding coffee, cotton huskers, beaters and pressers for grapes, churns and separators, and oil presses.

Company Meeting.

CREDIT FONCIER EGYPTIEN.

Egypt and the Cotton Industry.

The following is a translation of the report of the Credit Foncier Egyptien, which was presented to the shareholders at the annual general meeting, held at Cairo on January 14:—

The Fall in Cotton.

The favourable conditions in which the economic activity of Egypt has developed during the past ten years have been affected of late by the fall in the price of cotton which has been produced chiefly by the size of the last American crop. The Egyptian season of 1925, satisfactory from the point of view of quantity, which amounted to almost eight million kantars, benefited at first from high prices. Then the price rapidly weakened, going from 50 to 28 talaris for Sakellarides and from 32 to 20 talaris for Ashmouni. The yield of cotton and seed finally exceeded fifty million pounds. But the 1926 season, of which the quantitative yield has remained high, has been markedly affected by the fall in prices, which from September to December declined from 35 talaris to 24 for Sakellarides and from 25 to 15 for Ashmouni.

Pressed to intervene to stop the fall, the Egyptian Government purchased during the first half of 1926 at a mean rate of about 33 talagis 480,000 kantars, which it still holds. The accentuation of the fall in November, 1926, led it to take a series of new measures. A credit of £E4,000,000 at 4 per cent. interest has first of all been placed at the disposal of cultivators desirous of obtaining an advance on their crop. In the next place a project for a law has been presented to Parliament restricting for three years to one-third of the cultivated land the area reserved to cotton. Finally, the Parliament has decided, after lively discussions, that it is expedient to intervene again, this time in the contract market, to stop the fall in rates. It would be absurd not to recognise that the present prices decrease to a very large extent the profits of cultivation and endanger the payment of rents, in some cases excessive. Actually the country is accustomed to high prices, which provide compensation without effort for the decline which set in years ago in the mean yield. The present situation teaches us many lessons. It recalls the fact that a leading raw material cannot be indefinitely immune from the incidence of the large fluctuations in prices which ought to be regarded with equanimity. It also shows the need for the Government to substitute for its precipitate and haphazard interventions methodical and sustained action, inspired by the desire to assure to the cotton remunerative outlets, on the one hand taking advantage of the remarkable properties of the Egyptian soil for the development of the exceptional quality of fine varieties so universally appreciated and on the other hand seeking in higher yields compensation for the inevitable fall in prices.

To appreciate as is desirable the bearing of present difficulties, it must be recalled that in the course of recent years Egypt has realised considerable profits which have been mainly invested in shares acquired abroad and in real estate, after having considerably reduced her mortgage debt; this has notably improved and strengthened the country's position.

The Balance-sheet.

Our mortgage business has made appreciable progress this year. While the year 1925 showed a falling off of £E598,184 on the account of mortgage loans, the year 1926 has shown a slight advance of £E4,900. The realisations have risen to £E1,919,357 against £E1,321,805. The redemptions arising from repayments anticipated have fallen from £E356,443 to £E273,325, and the redemptions by expropriations from £E90,026 to £E48,604, which is evidence of a normal economic situation. The balance of the account for annual and half-yearly payments and interest due was at October 31, 1925, £E1,108,499. Adding the maturities of the year £E1,968,029, we obtain a total sum of £E3,106,438. At October 31, 1926, we had collected £E1,835,552. The amount of our arrears was thus reduced to £E1,270,886, an increase of £E162,477 on the corresponding total of the previous year. The account third party purchasers of real estate has been reduced from £E113,685 to £E79,508. The account of real estate acquired following expropriations has disappeared from the balance-sheet. Our mortgage position is then in all respects satisfactory.

Investments.

The composition of our portfolio has undergone various modifications during the year, arising from the re-employment which we have had to make of the yield of 19,212,500 francs of French Treasury Bonds which we encashed on December 8, 1925, from the amount of the last million of Egyptian pounds which the French Treasury repaid us on the loan of £E4,000,000 on April 1, 1926, as well as from our other disposable funds. The particulars of the portfolio are given in the report. You will note that our investments include only English and Egyptian Government securities, with a preference for redeemable loans, and bonds of the Suez Canal Company. In the list of various securities appear no longer the bonds of our company repurchased by us and of which the total stands in the present balance-sheet at 310,521, the purchases of the year having amounted to 50,749 shares. We have, as a matter of fact, modified the mode of reckoning of these repurchased bonds which reasons of accountancy prevent us from cancelling.

Finally, to enable you to follow the course of these shares henceforward, we have separated them in the assets and liabilities, not only for their initial value, but also for their net cost in the provision allocated annually for the amortisation of the bonds, and we have allocated the contingency account for the reduction of the premium on the bonds this addition to their value. That same account has benefited by the contribution of the balance of the loan account for premiums: 1911 issue. It is thus that in the balance-sheet which is submitted to you the contingency account for the reduction of the premium on bonds is raised to £E1,114,064.

The disappearance of our French securities converted into funds in December, 1925, has involved the suppression of the accountancy operation which reckoned off at par the revenue of our paper francs. As a result the French taxes which were made in the opposite sense the object of the same process have no longer been carried to the expenditure for their exchange value at par, but only for their actual amount in pounds, which has reduced that charge in the accounts from £E152,402 to £E21,516. The fluctuations of the exchanges has further contributed to this result, enabling us to effect our remittances at advantageous rates.

We would point out that the year 1926 saw the ending of the duty on transmission of 0.84 per cent., which only affected the second half of the previous year, and that the stamp duty has been increased from 0.12 to 0.20 per cent.

Notes of the Week.

The Skupshтина at Work.

The Prime Minister of Yugoslavia, in contradistinction to his chief opponent and late ally, the leader of the Croat Peasant Party, is a man of few words; but he has contrived to retain his hold on the political situation for the greater part of a year in spite of the coolness of M. Pashitch during the latter months of his life, and of the fulminations of M. Raditch. M. Ouzounovitch's last Cabinet took the oath of office on February 1 and the same day two of his Ministers handed in their resignations. Their places, however, have not been filled, and it would seem as if the Prime Minister considered that the best way to meet the abnormal position in which he is placed is to give the resigning Ministers, who belong to his own party, but were dissatisfied with the portfolios given them, time for reflexion. The Skupshтина is again in session; but a kind of informal truce is being observed while a party of delegates—twelve of the Government's followers and ten of the Opposition—has gone to Czechoslovakia to return last year's visit to Yugoslavia of parliamentary delegates from Prague. This state of affairs gives M. Ouzounovitch an opportunity to carry on his negotiations for increasing the Government's majority in Parliament. The fact that he is anxious to avoid all contentious legislation as far as possible and to concentrate on the passing of the Budget and such measures as the industrial crisis seems to call for may yet bring him the support of the Democrats.

Electoral Amenities.

M. Raditch's denunciation of the conduct of the recent local Government elections in Yugoslavia has taken formal shape in an indictment of the Minister of the Interior for breach of the Constitution, abuse of office and violation of the Electoral Law, to which is appended a list of acts that constituted the electoral "terrorism" for

which the Government or the Minister is held responsible. The indictment is signed by fifty-one deputies; but apart from his own followers M. Raditch was able to obtain support only from two small groups, four members of the Farmers' Union and three Montenegrin Federalists. Neither the Democrats nor the Dissident Croats cared to risk their chances of coming to terms with the Government by endorsing M. Raditch's grievances. In these circumstances it is difficult to decide whether the Croat leader is endeavouring to effect a reform in a direction where it is needed, or whether he is merely indulging in his favourite pastime of baiting the Ministry in power, whether he happens to be a member of it or not.

The Coalition in Greece.

In spite of the existence of a Coalition Government Greece is passing through days of considerable political tension. The revision by the Chamber of the Constitution promulgated by General Pangalos's Government is not without its difficulties, and progress, though steady, is slow. The creation of a Senate, vetoed under the Dictatorship, was reinstated by the Constitutional Commission, but the clause was passed in the Chamber by means of a strict party vote, although the heads of the so-called Anti-Venizelist parties left their followers free in the matter, the majority of 133 being Republicans, and the minority of 92 their Royalist opponents. Thus in a House of 286 deputies the motion in favour of a second Chamber received less than half the total number of votes; but there have been scanty attendances of late, and the Republicans express themselves well satisfied with their majority. In the circumstances it is unfortunate that the new Constitution cannot be the subject of wider agreement among the Greek people. The trouble, as far as can be gathered, lies mainly with the Press; for even if there is still bitterness in the two camps, it is the

obvious duty of the newspapers to avoid giving expression to any sentiments likely to widen the breach. Yet the organ of the Royalist Popular Party would seem to imagine that it is promoting Greek interests by describing the Constitution as "Republican rags, since torn to shreds, which it is not worth while attempting to mend," and is at once answered by Republican organs with the inevitable references to the monarchy, the Asia Minor disaster and so forth, in the most approved *tu quoque* style. Little wonder that General Pangalos can still find among his fellow-countrymen some apologists, who recall that, whatever mistakes he may have made in other directions, he did make some of the Greek newspapers observe the more ordinary decencies of political discussion.

Air Routes and a Gap.

The Secretary of State for Air is back again in Cairo on his return journey from India, and the fine achievement that he went out to inaugurate is to be robbed of some of its glamour by the bathos of his having to cover the distance between Cairo and Paris by rail and steamer instead of by aeroplane. The City of Delhi flew from England to India and back as far as Cairo, which becomes the western terminus of this Indian air service. No arrangements, as far as is known, have yet been made for a service between England and Egypt; yet this is surely the most important link in any scheme of Imperial air routes. It is particularly desirable that the first section of the journey to India and beyond should be in British hands, and for this reason it is to be hoped that steps will be taken to fill the gap before any Continental air system extends its services across the Mediterranean to Egypt. The City of Delhi flew from Croydon via Malta, and this would presumably be the route of a regular service, although a diversion from the direct flight might be made between Malta and Egypt to take in Greece, if it were held to be justified as a commercial proposition.

A Dutch Arabist.

It is a strange commentary upon the industry of what is the greatest Muslim Empire in the world that no works by the eminent Dutch Arabist, Dr. Snouck Hurgronje, should yet have been translated into English. His endeavours to explain the real nature of Islam, not only for the benefit of his own country, Holland, but also for the whole world which is interested in Muslim affairs, were, however, happily recognised last week, when he was presented, in the Leyden University, with the funds, which had been contributed by his own people, by native

princes of the Dutch East Indies, and by scientists from all parts of the globe, for a Snouck Hurgronje Foundation. Dr. Hurgronje, with Caetani, Lammens, and others, has consistently stood for the highest standard of scholarship; moreover, he has tested his theories with the actual facts as they prevail in Arabia. To the European knowledge of ordinary life in Mecca, he and Burckhardt have probably contributed more than anyone. Nor have his writings subsequent to his sojourn in the Holy City of Islam been of less importance to students of Islam. To mention but one thing, he has constantly tried to stem the popular error of supposing that the Caliphate is an institution even remotely resembling the Papacy. It is a British scholar, Sir Thomas Arnold, who has endeavoured to emphasise the truth of Dr. Hurgronje's remarks in this direction, but popular prejudices towards peoples of another religion do not, we are afraid, die easily. We hope that we may be allowed to congratulate this great Dutchman, on this the occasion of his seventieth birthday and the year of his enforced resignation from his professorship at Leyden, upon the universal recognition of his services to one of the most necessary tasks before the world to-day: the real understanding of the peoples whose continual thoughts are being turned towards Mecca.

The Turkish Harem.

But if Dr. Hurgronje and others have found it difficult to dispel the ideas of a Caliph possessed of "spiritual powers," how much more difficult is it to drive out the time-honoured notion of the Oriental harem! Nothing is more ingrained in the popular European imagination than the idea of the Turkish Pasha, surrounded by innumerable and mysterious women, horrible dwarfs, and, perhaps, an odd eunuch or two. To those who know the economic facts of modern Turkey the persistence of this figment is amazing; it really would seem that men like Pierre Loti have as completely formed public opinion on this subject as, say, Miss Dell and Miss Hull have formed the public opinion upon what a shaikh of the desert is. Against these female romanticists the ordinary Arab is powerless, but the Turks, at any rate, are determined to expose what they call "the harem myth." Nationalist propagandists are now at work to show that the European idea of even the old Imperial harem is baseless, and, of course, with the establishment of the Republic, the public life of Turkey is stated by these writers to have changed entirely. Women are now no longer in subjection; in fact, "as for our life to-day, it is a model of civilised society, absolutely free and independent." This effort to prove the practical identity of Turkish and European moral codes is worth noting. But we warn the Nationalists that they must not expect a swift relinquishing by Europeans of the romantic conceptions in regard to the harem.

Angora and the Veil.

It is all very well for the Kemalists to pretend that they are precisely like other men, that the Turks differ from other modern nations only in that they are more misunderstood, but it is not quite certain that Turkey herself will yet assent to this claim. Take, for example, the recent inhibition of the wearing of the veil by Turkish women. The President of the Turkish Republic has explained in the clearest possible terms that this article of raiment is but a relic of the undesirable past; and he added, with a dark significance, that the veil is a disguise favoured by the criminal in Turkey. In some parts of Anatolia the women have leaped at the chance of showing their countenances to the world, as they do in Europe and, indeed, in certain parts of the Muslim world; but elsewhere this command is going unheeded. In one vilayet, in fact, the Kemalists argument is considered to be of nothing worth compared with the immemorial traditions of the race. It is said that Mustapha Kemal told an interviewer that the wearing of the veil was a crime punishable by death, but one can hardly believe that the Turkish woman who persists in wearing the veil will be brought into the same category

as the Turkish man who persisted in wearing the fez. Perhaps the President will wait until the census in Turkey has been taken, and then resolve anew whether or not he is to exercise the full penalty of the law upon the conservatively minded women of his land.

Snow in Jerusalem.

Snow has fallen in Jerusalem. Not since 1921 has the City that is holy to Christians, Muslims and Jews suffered from this unusual visiting. Then, if one remembers aright, it provided a lesson, or a guide to the mental attitude of the inhabitants of the City. It was, of course, the British soldiers who cleared away the snow; the while the fatalistic Muslims watched and waited. What the Jews did is not quite clear. Now that there are no troops to do the work of scavenging, one wonders what will happen to the snow, especially if it be, as it was in 1921, so deep as to block communications and to threaten loss of life. Perhaps it will be a temporary boon to the unemployed Zionists in Jerusalem, who, as one reads, have of late been increasing in numbers, thus following in the wake of Tel Aviv. It would be a great pity if the snow were to spoil the forthcoming Municipal Elections, for which such great preparations are being made and upon which such considerable hopes are being built. But nothing more damping to the spirits of electors can well be imagined than the presence of snow in a more or less primitive city. It is just such comparatively little things as this that show that life in an Oriental town is not, however "civilised" its inhabitants may claim to be, quite the ceaseless thing that it is further West. In the countryside the snow levels things out. Is it possible that such could be the result as between Arabs and Jews in this present fall?

Palestine and War.

The forthcoming visit of Lord Allenby to Palestine, in order to unveil the War Memorial on the Mount of Olives, seems to give added point to the illuminating lecture which he delivered in London last week upon Palestine. The Field-Marshal remarked then that all armies in Palestine had used the same lines along the coastal plain, the same roads, and the same passes. But how few with the same success as his! It is only now becoming possible to understand the immense effort that was made by the Egyptian Expeditionary Force and its influence upon both the Great War and the peace that was to follow. If, for instance, Allenby had failed as, say, Richard the First and Napoleon failed in Palestine, the whole history of the world would have been utterly different. The Turks would still be in charge of the land that is dear to at least three religions; the Jews would, probably, be without ultimate hope of returning to the home which they have never forgotten; Great Britain's position in the Middle East would be most problematical. It has been said that no really decisive battles have ever taken place in Palestine, but it is patent that the British victory therein will have most decisive results for Arabia. Allenby's victory is, indeed, vitally affecting the adherents alike of Christianity, Islam, and Jewry. Where his triumph possibly differs from other Generals—Alexander, Titus, Julius Severus, Mohammed Ali, and so on—is that use of it has been made to ensure, as far as is humanly possible, that the country shall be the scene of no more wars but of a prosperous peace.

The Armenian Problem.

Religious or racial fanaticism has always been a most difficult thing to keep within bounds, and one had only to mention the word "Armenia" to conjure up in the popular mind tales either of "Muslim massacre" or of "Christian treachery." Fortunately, however, the time seems to be passing when the future of Armenia cannot be discussed without reference to the "blood-thirsty Turk" or to the "low and avaricious Armenian." It is, for instance, a fact which no ecclesiastic can exaggerate so as to put it beyond belief, that the Armenian refugees in Syria are suffering extreme hardships—for the moment we say

nothing of the State which centres upon Erivan, for the future of that lies almost wholly with the Russian Government. And, in consideration of what has already been promised to the Armenian refugees, we see no exception to be taken to the resolution that was passed at the session of the Church Assembly last week: "That the urgent needs of the Armenians in the Near East and the rapidly passing opportunity of helping them should ensure renewed and greatly increased efforts of rescue by English Christians," unless, indeed, it be supposed that sympathy with the Armenians may not be felt also by non-professing Christians. In Syria, there are 100,000 Armenian refugees; their settlement upon the mandated territory would, it is estimated, cost £120,000, towards which France has contributed £25,000, with a promise of a further £25,000. Here, the Lord Mayor's Fund, together with other British Armenian Societies, is finding £5,000. A mixed Committee, with British representation, instituted by the International Labour Office at the desire of the Geneva Assembly, has begun operations in Syria. The work of Miss Jeppe, the League of Nations representative for Syrian Armenians, is well known. It does seem, therefore, that the time has come to fulfil what part we can of the promises held out—as, for instance, they were held out, to the luckless Assyrians—to a people with a tragic history. Naturally, there might be political complications to this plan of settling Armenians in Syria—so often the Armenian problem has been overshadowed by greater problems in the East—but since the Mandatory Power therein has given its support to the colonising scheme, it is hardly possible for any sympathiser not to hope that the appeal for financial support that is shortly to be made to the British Government (the head of which is known to sympathise with the Armenians in their troubles) will be at last successful.

NEW PERSIAN CABINET.

The Shah of Persia on February 8 approved of the new Cabinet, which is as follows:—

Prime Minister.—*His Highness Mirza Hassan Khan Mostofi, the Mostofi ul Mamalik.

Foreign Affairs.—*Ali Kuli Khan Ansari, the Mushaver ul Mamalik.

War.—*His Highness Mirza Mohamed Ali Khan Farughi, the Zoka ul Mulk.

Justice.—Mirza Mohamed Ali Khan Daver.

Public Works.—*Nahdighirli Khan Hadayat, the Mokhber-es Sultaneh.

Interior.—The Seyyid Mehdy Fatemi, the Emad es Sultaneh.

Finance.—Firuz Mirza Firuz, the Nusret ed Dowleh.

The Ministry of Posts and Telegraphs is vacant.

*Members of the late Cabinet.

The influenza bulletin of the Health Section of the League of Nations reports a serious spread of the epidemic in Bulgaria. During the first week of February there were more than 100,000 cases in Bulgaria, of which 405 were fatal.

The *Jewish Chronicle* states that Mr. P. Rutenberg has signed an agreement with the Transjordan Government according to which the Palestine Electric Corporation is acquiring 6,000 dunams of land in the Jordan-Yarmouk area for the development of further electricity plans.

The death is announced, at the age of 69, of Sister Marie-Flavie, one of the first French women missionaries to go to India. She was appointed Provincial Superior of Bangalore, and was head of a European school of 1,000 children, together with a native secondary school.

Lieutenant-Colonel Walter Calverley Beavor, C.B., C.M.G., late of the R.A.M.C., died suddenly on February 6, aged 68. He served in the Sudan campaign of 1885, in the Ashanti operations ten years later, and also in the North-West Frontier of India operations in 1897-8. When the Duke of Connaught went out to the Durbar for the proclamation of King Edward at Delhi in 1902, Colonel Beavor served on his staff, and thereafter was on the personal staff of the late Lord Northcote during his short tenure of the Governorship of Bombay.

GREECE AND A CONCESSION.

The Greek Chamber—there cannot be the least doubt about the matter—has done the right thing in according the Government an emphatic vote of confidence for the honouring of the concession granted by a previous Government to the Power and Traction Finance Company. Public feeling has run high, particularly in the capital, on the subject of this concession, which confers a monopoly for a period of sixty years in respect of electric light and power and of tramway and omnibus services in Athens and within a radius of twelve miles. The comprehensive character of the monopoly could hardly escape challenge, particularly in regard to the omnibus services, which hitherto have been supplied by private enterprise. By the terms of the agreement omnibuses already licensed would continue to run, but no authority, whether by licence or otherwise, is to be given to any person other than the Transport Company for new omnibuses or the replacement of existing omnibuses in the area defined by the concession. In the case of electric light and power it is at least arguable that Athens could not hope to have a supply service of the required standard without the establishment of a monopoly. The concession covers the linking up of the Athens-Piræus Electric Railway with the Athens-Kephissia Railway by the construction of a tunnel connecting the two termini, and the electrification of the Kephissia line. The effect of the concession will be to add considerably to the amenities of life in Athens and the immediate neighbourhood, and should prove a stimulus to industrial enterprise by the supply of cheap power. Although the British Company is generally regarded as the concessionaire, the concession has actually been given to an Anglo-Hellenic group formed by the Power and Traction Finance Company and the Syndicat d'Etudes et d'Entreprises, in which the National Bank of Greece and consequently the Greek Government have an interest. The group carries out its concession through the medium of various Greek companies—a parent company, known as the Société Générale Hellénique, which will in turn create as subsidiary companies the Hellenic Production Company, the Hellenic Distribution Company, the Hellenic Transport Company and the Hellenic Electric Railways Company.

With a view to preventing the ratification of the concession by the Chamber a strike of existing transport services took place, and attempts have been made to inflame public opinion both on the ground that the beneficiary company was foreign and because the concession had been granted under the dictatorship of

General Pangalos. Now, several wise measures were adopted by General Pangalos's Government, and the future will show whether the granting of this monopoly was one of them; but it is evident that the details of the agreement were in some respects open to challenge, and the Anglo-Hellenic Group has already shown its willingness to forgo some of the privileges conceded to it. In the light of what has happened in connexion with the ratification of the concession it will, no doubt, be equally ready to examine other points on which criticism has fastened. The good will of the Athenian public will always be a valuable asset for the various companies, and may well be worth securing at the price of a few initial sacrifices. It is a matter of common knowledge that General Pangalos was often possessed of sound ideas and good intentions; where he failed was in the lack of capacity to carry out his ideas and to prevent his good intentions from being thwarted by his entourage. It was not to be expected that a purely foreign syndicate would obtain such an important and comprehensive monopoly; but when Greek participation was assured, it may have been inevitable that the terms of the concession should err on the generous side.

The question before the Greek Chamber was whether Greece with any consideration for her honour could repudiate a contract signed by a Greek Government, even if that Government was subsequently overthrown. M. Zaimis's Cabinet was clearly in a delicate position, as the acts of the late Dictatorship included not only contracts for big public works, but also conventions with Yugoslavia regarding Salonika and Greco-Yugoslav relations. It was laid down that the Government could not recognize conventions concluded under the Pangalos dictatorship which had not received the sanction of the dissolved National Assembly, unless the present Chamber were to ratify them; but at the same time the Government let it be understood that certain of those conventions—the one made with the Power and Traction Finance Company amongst them—would have to be ratified. There may be some difficulty in drawing distinctions between conventions; but the Greek Government's instinct was right when it implied a difference between a business contract formally concluded and a political agreement, which in its very nature depends on formal ratification by Parliament. The debate in the Chamber showed that for the fate of the concession it was lucky that Greece should have at the present time a Coalition Government of all the parties. In any other circumstances it is conceivable that a Cabinet would have been unwilling to give its opponents a handle by trying to force through Parliament an unpopular measure for which it was not responsible and in which it had no special interest. The firm stand taken by M. Zaimis's Ministry will not only have created an excellent impression abroad, but should also have strengthened the position of the Coalition Government. The event offers the best possible augury for a resolute attempt to set Greece's financial house in order. Individual measures must prove unpalatable; but if the Government can give a reasoned explanation for the course taken and show that Greece's honour is bound up with its acceptance, it will be supported by the sound instinct of the nation as a whole. Hitherto the obstacle has been that the politicians have shrunk from doing the right thing for fear it might give an opponent an opportunity of riding to power on their own unpopularity.

The Near and Middle East*

From Our Own Correspondents.

Teheran, January 28.

The Cabinet.

Mostofi ul Mamalik's Ministry appears to be on its last legs. The Deputies seem to be dissatisfied with its inability to look after the country's interests. An interpellation has been demanded by the majority in the Parliament and is fixed for next Sunday, when the Cabinet will have to appear before the Majlis, and if a vote of confidence is not passed—as seems highly probable, for the Prime Minister does not possess a majority in the House—he will have no option but to resign. Several reasons have led to the interpellation. For one thing the agreement with Russia, which has been discussed now for several months, and which is so vital to the economic welfare of the country still hangs fire and seems no nearer signature. Another thing to which the Deputies have taken objection is the letter from the Ministry of Public Works, approved by the Cabinet, to the Anglo-Persian Oil Company three months ago, with regard to the terms and conditions of the Company's operations in western Persia (round Khaniqin and Qasr-i-Shirin) which they are entitled to carry out, with the approval and consent of the Government, in accordance with the original D'Arcy Concession. The Deputies maintain that the terms and privileges mentioned in the letter exceed those provided for in the Concession, and that it should, therefore, have been submitted to the House before it was sent. The Government have naturally been averse from cancelling the letter, as this would mean repudiating their signature, but in view of the Deputies' opposition they have apparently given way on this point, as the papers to-day announce that the letter has now been cancelled.

The Luxury Tax.

Another question which has aroused a great deal of interest lately is the measure submitted to the House by the Cabinet proposing greatly increased Customs duties on certain *articles de luxe* and prohibiting the importation of others, which has now been before the Majlis for the past few weeks, and has already passed the first reading. Suddenly about ten days ago the shopkeepers and dealers in anything that might come within the category of luxuries (although the list of articles which would be affected by the Bill has not yet been disclosed) took it into their heads to speculate on the Bill's becoming law and put up prices all round. These consequently rose by leaps and bounds. Wines and spirits of course suffered (it will be remembered Seyed Zia ed Din, after the *coup d'état* of 1921, tried to introduce Prohibition, which came to nothing), and of course scents and perfumes, silk stockings and other articles of ladies' wear particularly, all advanced in price, in fact nearly every conceivable thing imported from abroad, including such things as boots and shoes and even lamp-glasses, which we would prefer to class as necessities rather than luxuries. This purely speculative and wholly unjustifiable raising of prices naturally occasioned an outcry from all

classes, and the Shah himself ordered the Municipality to issue a notice that prices must immediately revert to the former level, which has more or less had the desired effect, though it is naturally difficult here, as in other countries, to enforce the charging of such fixed prices. For, as we have experienced in the past, the merchants simply hide their stocks and refuse to deal in them. The only way would be by resorting to drastic measures.

I remember, a good many years ago, in a provincial town seeing a crowd in the main street, and on approaching I saw a poor wretched baker, who had been accused of selling underweight bread, attached to a tree at the side of the road by a nail driven through his ear) and a very rusty nail it was too!). It seems problematical if the Bill will be passed, as there appears to be considerable opposition to it. Opinion is divided among the Deputies on whether the importation of the articles listed as luxuries should be totally prohibited or the duty on them increased by 100 per cent., as suggested. Many contend that people who have been in the habit of buying such things will not lightly be able to give up doing so and do without them, and if, therefore, the duty on them is increased by as much again, as proposed, the cost of living will increase accordingly, and it is hard to see how this will eventually benefit an already impoverished country.

Boycott of Russian Goods.

While the Russo-Persian Agreement on the several outstanding questions between the two countries is still the subject of much discussion here, it is interesting to note that the Soviet Government (which last year placed an embargo on all Persian goods) has now stated that the import of Persian merchandise, such as wool, cotton, rice, fruits, and so forth, will be allowed, for the Baku Fair, which opened recently, up to a very considerable amount—which would have been of great benefit to merchants in Resht and Pahlavi, had it not been that these same merchants decided last week to boycott all Russian goods and to have no dealings with Russians, in retaliation for the economic pressure which the latter are bringing to bear on Persia in their endeavour to force this country to submit to Soviet dictates.

The Crops.

The weather is still delightfully sunny and bright, that is as far as we personally are concerned, but this continued dry, frosty weather is very harmful to the crops, for which moisture is absolutely necessary now, as the two or three slight falls of snow, which is all we have had so far this winter, have been quite insufficient. In fact, grave anxiety is beginning to be felt, for no one, naturally, wants a repetition of the state of affairs last winter, when famine was only staved off by measures taken by the Alimentation Service. These measures cost the Government the best part of half a million sterling. Two heavy falls of snow were reported last week from Resht, which lies below sea-level, and it seems strange that Teheran and other places at a much higher altitude have not had any snow to speak of. It is sincerely to be hoped that we shall have some soon.

Government Pawnbroking Institution.

The Government pawnbroking institution was opened the other day, and should be well patronised. The question of the establishment of a National Bank is still being discussed by the Majlis.

The Cotton Congress.

The Cotton Congress has ended and the delegates have left for Upper Egypt, where they are spending the best part of a week before embarking, some on Friday next, some on Saturday, and some on the following Monday, for the return journey to Europe. With the exception of last Monday, the whole of the past week's proceedings have taken place at Kafr el Zayat, the principal ginning centre of the Delta, and at Alexandria. The programme of the Congress fell naturally into two parts. Everything concerning the growing of cotton was discussed during the meetings in Cairo. All that related to the baling and shipment of cotton, and the relations between shippers and spinners, was debated in Alexandria. As an intermediate stage between the two phases, the delegates spent a day at Kafr Zayat and there inspected the processes which the cotton undergoes during its progress from the farms to the loading quays.

Now that the Congress is over everyone is asking what practical results it has achieved. So far as it is possible to form an opinion at this stage, the most important consequence of the meetings has been the decision to set up a joint committee, having representatives of both growers and shippers, on the Egyptian side, and spinners, appointed by organisations controlling the industry in Lancashire. The objects of the committee will be to continue the work on which the Congress itself has principally concentrated, namely, reconciling the interests of growers and users. Throughout the past fortnight the Egyptian delegates have been insisting that the cotton growing industry cannot continue to flourish unless better prices than have recently prevailed can be obtained. The spinners, for their part, have stressed the view that unless Egypt makes more whole-hearted efforts than have been made in the recent past to produce fine cotton, prices will go still lower, for manufacturers will gradually discontinue the use of Egyptian cottons in favour of the more evenly running product of the Sudan, East Africa and other countries whose contribution to the cotton needs of the world is just beginning to be appreciable. All the points which have provided material for the animated debates between the two sides, such as the quantity of water added to cotton before shipment, the presence of impurities and the failure to secure shipments of even quality throughout, have been incidental to the main problem. Towards the solution of this the Congress has admittedly done little more than to create an atmosphere in which both sides can work amicably in their common interest. It will now be for the joint committee to evolve solutions of the difficulties which have been so frequently emphasised during the past fortnight, but towards the elimination of which there has not been much practical contribution.

Strike at Al Azhar.

Students and ulema of Al Azhar University have been on strike all this week because of the Government's decision, following a debate in the Chamber of Deputies, to transfer the School of Cadis, the Dar el Oloum Training College and various other higher religious schools from the control of the Department of Religious Instruction to that of the Ministry of Education. This decision has surprised nobody outside Al Azhar, and it is remarkable if the inmates of that institution, after last year's debate in the Chamber on the budget of the Ministry of

Wakfs, did not realize that the change just made was inevitable. In point of fact it is neither revolutionary nor new. The schools and training colleges affected are essentially technical institutions and always were under the control of the Ministry of Education until two years ago, when the transfer to the Department of Religious Instruction was effected, during the suspension of Parliamentary government, by royal decree. Zaghloul Pasha and his followers did not hide their intention of cancelling that decree as soon as the possession of a parliamentary majority should give them power to do so, and they have now fulfilled their promise. In consequence, Al Azhar is in revolt, and since the police, after one tumultuous morning of demonstrations in the streets, have now established a cordon around the University and refuse to allow the striking shaikhs and embryo shaikhs to emerge, a constant series of protest meetings proceeds within, where Parliament and all its works are anathematized.

It is interesting to see how little popular support the unruly Azharists are getting. The Press, with one or two insignificant exceptions, is solidly against them, as was the Chamber of Deputies, and articles are appearing daily arguing that, while the rest of the country is endeavouring to progress and to adopt modern methods, Al Azhar remains a centre of reaction and mediaevalism. There are hints that unless the famous centre of Muslim learning can reform itself and behave, drastic measures may be taken by the secular authority to reform the University, whether it wishes the change or no. The incident is interesting in its affording one more proof of the fact, daily growing more patent, that the local religious leaders, once almost omnipotent, have now lost nearly all their power and influence and, by the younger generation at least, are being more and more regarded as an encumbrance to a nation wishing to deserve the adjectives "modern" and "civilized."

Postal Advertising.

Having learned nothing, apparently, from the recent similar experiment in England, the Postmaster-General here is endeavouring to institute a system of advertising by affixing stamps, or labels, to all correspondence passing through the post. Business houses have been asked to submit designs of advertising stamps, for approval by the Post Office, which will then arrange to have these stamps affixed by the postal officials to all correspondence passing through any post office or offices chosen by the advertiser concerned, who will be charged so much per thousand stamps affixed. As might have been expected, this plan has had a very bad reception by the Press. Most of the arguments used against the advertising by postmark scheme in England have been repeated here, and several journals have announced their intention, if the Post Office proceeds with the scheme, of taking legal action to test whether private property, in the form of correspondence, can be used in this way, without the permission of the owners. The newspapers, naturally, are not entirely altruistic in this matter, fearing

that some of the publicity now placed in their columns may be diverted, but there seems to be little doubt that they represent the opinion of the general public, which is solidly opposed to the stamp-advertisements proposal.

CYPRUS.

Nicosia, January 31.

The Legislative Council.

On January 21 and the following days the draft of a reply, in twelve clauses, to the address of the Governor, Sir Ronald Storrs, at the opening of the Council, came under discussion. It expresses pleasure at Sir Ronald's assumption of the government.

The clauses were passed, with slight additions, excepting the third. In this a hope was expressed that H.E. as "a faithful interpreter of national sentiments" would warmly recommend the Central Government to advise His Majesty the King so to alter the island Constitution that the chosen representatives of the people may be enabled to take part, responsibly and effectually, in the administration. The Turkish members, Eyoub Bey and Mahmoud Bey, voted with the official members against the clause, which was thus rejected.

In other clauses the conviction is expressed that the Governor will devote his care to the various needs of the island, and the co-operation of his Council is promised.

Forest policy is criticised as destructive of the breeding of animals. It is submitted that the deplorable condition of the island can be remedied by the following measures:—

(1) The establishment of an Agricultural Bank, with capital sufficient for the immediate and future needs of the agricultural classes, providing loans with interest not exceeding 6 per cent.

(2) The carrying out of irrigation work, under a well-studied policy, by the careful selection of a trained *personnel*, with a view to the discovery of "second water" supplies; thus solving the problem of increased productivity in the island.

(3) A thorough reorganisation of the Agricultural Department.

(4) Active help on the part of the Government in establishing new trade connexions, to provide new markets for Cyprus products. Other clauses refer to the need of further protection for workmen employed in mining operations in the island. The health of the island is stated to require attention. An improvement in external communications is very desirable, and it is hoped that the existing mail contract (which has still three years to run) may be made to meet the commercial needs of the island. The question of the nationality of the many Cypriots living abroad is commended to H.E.'s consideration, with the earnest hope that a satisfactory solution of the problem may be found. The proposal to favour the carrying out of excavations is warmly approved. The flow of visitors to the island would be encouraged.

A noteworthy point is that the Greek effort to introduce a claim to which an emphatic reply has been so frequently given was defeated by the Ottoman vote. The Turkish members of council have practically always had a deciding voice in the Assembly. When they voted recently with the Greeks against the Estimates for 1927, it was because they agreed with them in considering that the portion of

the Ottoman Debt annually payable by Cyprus (now £42,000) might now be devoted to island needs, Cyprus being no longer a part of the Sultan's dominions, and that this view could now be loyally taken. To Greeks who may ask "Why, since you voted against the Estimates, do you not also advocate larger powers for the Council, since even our joint vote is over-ridden by an Order in Council?" the reply is "We have no desire to alter the Constitution of the island."

Liubliana, February 10.

The Political Situation.

The political situation in Yugoslavia has undergone a considerable change during the course of the last month.

On January 23 there were the Departmental Diet Elections, i.e., for the popular representative bodies in all the thirty-three largest administrative units into which the Kingdom is divided under the present Constitution. As these elections were conducted, in essentials, on the same principles as those for the State Parliament, the result of them was awaited with very great interest. Because, in view of the unsatisfactory relations between the ruling parties in the Skupshtina, there had been repeated demands from many sides for a dissolution of the present Skupshtina; with a General Election to follow, in the hope that results would justify expectations and yield a legislature more capable of work than the present. The Departmental Diet elections would enable the public to gauge what changes, if any, were likely to be brought about.

The twenty-third of January, however, showed that the Yugoslav Parliament is not to be dissolved just yet. It revealed no surprising changes. Just as the Radical Party commands a relative majority in the Belgrade Skupshtina, so the Radicals have obtained, in the aggregate, the largest relative majority of mandates in the Departmental Diets; and the largest party but one in Parliament, the Croatian Peasant Party, scored the biggest number of votes after the Radicals. The other parties follow in pretty much the same order as in the State Parliament.

All the same, these results must be taken with some reserve. Election was on the principle of universal, direct and equal suffrage with proportional representation, the same as for the State Parliament. But the mandates were distributed on a different principle, for very small constituencies, and in such a way that the election order greatly favours the majority parties, while giving no representatives to weaker parties disposing only of a small number of votes in individual constituencies. For this reason, the bigger parties have scored, proportionately, a larger number of mandates than their votes represent, and the smaller parties more votes than would appear from the number of their representatives.

Besides this, it must be taken into account that the voting was very slack, not only in the rural constituencies, but also in the urban districts. In some places, as many as from forty to fifty per cent. of the electors stayed at home. This abstinence from voting was due in part to dissatisfaction with the inefficiency of the present Skupshtina, and in part to dissatisfaction with the mistakes and errors of modern parliamentarism in general. Another, perhaps the most important reason, was the fact

that these were the first elections of their kind in the country, Departmental Diets being a new, and, so far, untried institution. The public was not particularly interested, because as yet it knows nothing of their work; hence a good deal of the apathy shown at the elections.

But on the whole these elections have shown that a fresh General Election would not bring about any material change in the representative strength of the individual parties in the Skupshtina. Herewith the main reason for a dissolution falls to the ground, and government will have to be carried on with the parties that come into consideration now. For a year and a half, the RR (Radical-Raditch) Coalition has been at the helm; but this alliance has proved very disappointing, and both parties to it have been thoroughly dissatisfied as well. Latterly, the Radichists have been specially indignant, because at the departmental elections the Radicals did not support, but actually worked against, them. So M. Stepan Raditch launched a series of attacks in his press, directed chiefly against M. Maksimovitch, Minister for the Interior, and made use of the first opportunity in Parliament to vote with the Opposition and against the Government, which was thereby left in a minority. M. Ouzounovitch handed in his resignation, which was accepted. And so ended the exceptionally barren era of the Government of National Agreement.

The King again entrusted M. Ouzounovitch with the task of forming a Cabinet. After relatively brief negotiations, M. Ouzounovitch came to an arrangement with the Yugoslav Club, which consists of the Slovene People's Party under Dr. Koroshetz, and so constituted a new Government which includes three members of the Koroshetz Party. This Government disposes of a very narrow majority of seventeen votes in the Skupshtina, and even this slender margin it owes to the support of the Raditchist Dissenters under the ex-Minister, Dr. Nikitch, and to that of the Germans. This new Government is referred to in Slovene papers as the KUN (Koroshetz-Ouzounovitch-Nikitch) Government, and its opponents augur but a short life for it. But time will show. For the moment, the chief task of the new Government will be to pass the State Budget for 1927-1928. This is a very urgent matter, because the financial year begins on April 1, and by that date the new Budget will have to be passed.

AN INDIAN IN YUGOSLAVIA.

(From a Belgrade Correspondent.)

Mr. Shoran Satya Singha, well-known as a Christian social worker, has just spent a few days in Belgrade. The Y.M.C.A. were responsible for his visit, which the Rector of the University described as "an unheard-of success." Certainly no speaker has caught the imagination of the students so thoroughly as this far-seeing Indian. On three occasions he spoke to large audiences, chiefly composed of students and professors, in the Great Hall of the New University, and it is estimated that the

total number of attendances at his lectures numbered upwards of eight thousand. When they were given in the new premises of the Y.M.C.A. so many people came that not all of them could gain admittance. Mr. Singha also spoke at the Anglo-American Luncheon Club, where there was a record attendance, and at the Anglo-Yugoslav Club, where he was entertained to tea.

Another event of importance was a luncheon for Cabinet Ministers and members of the Diplomatic Corps, arranged by Mr. P. H. Sitters, National Director of the Y.M.C.A. in Yugoslavia. For this were assembled: Dr. Nintchitch, M.P., Ex-Minister of Foreign Affairs, Dr. V. Janitch, M.P., Ex-Minister of Religion, Messrs J. Markovitch (Assistant-Minister of Foreign Affairs), D. Bogdanovitch (Alderman of Belgrade), Hon. N. Kennard (British Minister), Prince (American Minister), Dr. F. Olshausen (German Minister), Sheba (Czech Minister), Hoffinger (Austrian Minister), Polychronidis (Greek Minister) various other representatives of Foreign Ministries, and other guests.

Mr. Shoran Singha laid before the company a new problem—that of the future relationships between the white and coloured races, and handled his subject in such a way as to excite the admiration of all who were present. It was instructive to notice, in this as in his other addresses, his loyalty and unstinted recognition of the debt which India owes to the British Empire.

CORRESPONDENCE

NEW RAILWAYS IN EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to the Cairo letter, which appeared in your issue of December 23, I have received a communication from Mr. Macaldin from which I make the following extract:—

"The position I hold in the Railways is Assistant Chief Engineer New Works, and as such am directly responsible to the Chief Engineer for all New Works between Cairo and Shellal, including the work just completed on the Luxor-Assuan Line. Lieut.-Col. Mathieson as Resident Engineer in charge of the executive part of the work on the spot is my assistant."

Mr. Macaldin refers particularly to the paragraph "Luxor-Assuan," in which, in giving credit to those responsible for the good work, I mentioned that he was Lieut.-Col. Douglas Mathieson's assistant, a mistake for which I present my apologies to Mr. Macaldin.

As a matter of fact Col. Mathieson had no English assistant in the execution of the work on which about 3,000 "Saidis" were engaged. *Verb. sap.*—I am, etc.,

WHERE THE TOURIST DOES NOT TREAD.

BY DAVID E. GOITEIN.

He had only one eye, His long coat must have been an heirloom. . . .

"His lordship will look?" He held in his grubby hand a few wisps of reddish hair—probably goat's hair.

"This from head the Judas 'Scariot'."

"Why should I want a whisp of Judas Iscariot's hair—eh?"

"Very antiqa."

"How do you know it came from the head of that traitor?"

"My grandfather he there. When they cut from head the Judas 'Scariot—his lordship understan'?"

"But Judas lived more than eighteen hundred years ago."

"Not so long."

Finding that the hair did not interest me, he produced a glass bead, tied up in a dirty bit of rag.

"I suppose this comes from the turban of Muhammad?"

"Not, not. This de Queen Sheba."

"What do you mean?"

"Very antiqa."

"What has the Queen of Sheba to do with it?"

My friend Jacob Hadassi arrived at this moment, so I did not wait for a reply. Hadassi had promised to take me to a quaint *bet hamidrash* which, he assured me, was a kind of Jewish university—absolutely mediaeval.

"You will find no reference to it in your Baedeker," he said with a smile. "And, Allah be praised, tourists have not discovered it."

That was no wonder. We went up by-lanes, along narrow cobbled alleys where the odour, not perhaps of sanctity, made itself very perceptible, down closed-in arcades, through a precipitous turning without a ray of light until we came to a series of houses thrown one on top of the other either by a drunken architect or a frolicsome jinn.

"I am not surprised tourists have never discovered this place."

Jacob chuckled. These were obviously not Arab but Jewish houses. The *mezuzoth* on the doors made this clear. Jacob Hadassi took me to the most antiquated of the houses and there suddenly appeared a whole host of dirty little children. Some stared, with their thumbs in their mouths, some peeped and ran away, one bright-eyed fellow with a most alluring lisp asked for "bak-theeth," the rest got under my feet—and screamed.

"*Hizaher*, it is very dark."

There was a series of very crazy steps which seemed to go round and round. Some had been worn down, others had fallen askew and some were missing. It was quite impossible to see anything. I merely had to feel my way and follow the continually disappearing coat-tails of Hadassi.

When we had arrived safely at the top, Jacob opened a small door, I bent my head and went in to—Wait. It was a sight that I shall never forget. The sun threw a diffused light through the dust-laden windows on to a mass of swaying bodies. There must have been some fifty people in the room and each one was chanting as he swayed backwards and forwards, backwards and forwards over massive volumes with tiny print. What was really surprising about this "school" was the type of pupil. There were children who could scarcely have been more than seven or eight, there were old men quite seventy and eighty. In between these extremes there were men of every age and condition. There was something fascinating about the weird chant. I stood stock still at the door—and listened.

I felt I had been pulled up by the hair and carried back five centuries or more. Only in a Gilbertian opera can you see dresses half so strange as graced these Jerusalem-ites in their *bet hamidrash*. They all kept their hats on. ("It is wicked to study bare-headed.") It must have been the Mad Hatter himself who had fitted them, allowing his strange fancy to run-riot. He had fitted one old man with

a bishop's hat, another with a pancake-shape trimmed with fur, yet a third with a cross between a bowler and a fez.

I could not, at first, make out who was the "professor" at this 'varsity. After a time I began to realise that there were nine or ten groups each entirely independent of the other. I went up to one which consisted of a grey-beard, a boy of about eleven with side-curls saucily appearing from under his cap, swinging as he swayed, a middle-aged man with glasses balancing dangerously on the tip of his nose and two nondescripts. He of the glasses was apparently the leader. He had a book to himself. The other four had two books between them. He sang out in Hebrew, "At what time do we read the *shema* prayer for vespers? At the time when the Priests enter to eat their portion of the sacrifice . . ." At the same time the other four chanted the words *sotto voce*. The boy in a childish treble, the rest somewhat huskily. Then the leader translated the words into Yiddish, while the rest hummed. No one took any notice of our arrival, they went on swaying and chanting as if their life depended upon it. . . . The translation over, the leader sang out the word "Rashi," and all the others echoed "Rashi." They left the main text of their Talmuds and turned to some microscopic writing in the margin.

"What does 'Rashi' mean?" I whispered to Hadassi.

"Have you never heard of him?"

"Is it a man?"

"Yes, of course. The text is written in a crabbed Aramaic. Rashi who lived before Saladin explains it in Hebrew."

"Hasn't the teacher just explained it?"

Jacob Hadassi laughed. "They all know what it means," he said, "but, you see, it is a religious duty to study the Talmud and you cannot study the Talmud without Rashi. . . . Come along to this group."

We moved away.

Above the gentle chant came an Arabic cry, "Water, liquorice water, buy water, liquorice water." Carrying a large brass apparatus on his back—it resembled a geyser—came a young Arab. He poured some dark-coloured liquid into a glass waited for a millieme (less than a farthing) then handed the drink to the students. They drank off the glass with one gulp and returned to their work without stopping for a moment.

"Will you sell me a glass?"

He looked doubtful. I handed him a piastre. He poured out a glassful and I tried to drink it. Imagine the flavour of cold tea, cod-liver oil and soap, and you will have some idea of the delicious taste of liquorice water.

My friend Hadassi informed me that this group was studying "Gitten" or the laws of divorce.

"Surely that little fellow—how old is he, thirteen?—is not learning about divorce?"

"Why not? It is all in the Talmud. Therefore it must all be known. You have an occidental mind," he laughed.

Luckily the boy I had referred to got up to go. Outside I said to him in Hebrew:

"Don't you go to school?"

"It is forbidden to speak Hebrew," quoth he in Yiddish.

"What do you mean?"

"It is a holy language. Only atheists and Zionists speak Hebrew."

I cannot speak Yiddish, and the rest of the conversation was carried on through Hadassi.

"Is this the only school you go to?"

"Of course."

"But you cannot learn anything else but Talmud here?"

"Is it true you have just been learning the laws of divorce?"

"Gittin, perek hanosen. Yes."

"Do you find it interesting?"

He laughed in my face. "Interessant? What a question! The Talmud is holy, sir, every word is from God—what a question!"

"Will you become a Rabbi when you grow up?"

"How do I know? God is good."

"You hope to be?"

Again he laughed. This time he was sure I was mad. We talked a deal more, and realising that in the East people do not usually give information away for nothing, I took out a few coins from my pocket. He blushed deeply.

"I am not a schnorrer (a beggar)," he said proudly.

"No, no. Merely a little present."

But he was angry, very angry, and walked away with his head in the air.

"Serves you right," said Hadassi. "You English and Americans think you can treat us all as beggars. Ha! Ha! Ha!"

"There is something to be said for an education that can turn out a boy like that," I said.

NEWS IN BRIEF.

The death occurred at Madras on February 9 of Sir Cheruvuri Krishnan, Judge of the Madras High Court, who received the honour of knighthood at the New Year, at the age of 58.

The Sardar Ala Mahmud Tarzi Khan, Foreign Minister of Afghanistan, and formerly Afghan Minister in Paris, arrived there on February 7.

The first weekly local North Persia air mail service was opened on February 7, when a Junkers monoplane left Teheran for Enzeli en route for Russia.

Two Englishmen and three Muhammadans were last week arrested at Karachi in connexion with the discovery of machinery alleged to be for manufacturing coins, and said to have been imported from England. The discovery was made by Karachi Customs house officials, who opened a large package to assess the value of the goods owing to the invoice having been lost.

Captain T. A. Gladstone, who left Khartoum on February 8 in a Fairey seaplane, on the opening flight of the Khartoum-Kisumu air line, left Kisumu on February 14 with the mail on the return journey.

Snow fell in Jerusalem on February 10, this being the first time since 1921.

Three shops were gutted and two partly destroyed by fire in the European shopping centre of Karachi on February 10. A detachment of the Sherwood Foresters kept large crowds at bay and prevented looting.

Sir James Wilson, K.C.S.I., of Annieslea, Crieff, Perthshire, and late of the Indian Civil Service, who died on December 22, aged 73, left personal estate valued for probate at £8,875.

The King and Queen of Roumania, the Princess of Roumania, and Princess Ileana met the Prince of Hohenzollern, the King's elder brother, at the railway station in Bucharest on February 11. The Prince's visit will last a month.

Book Reviews

A TEXT BOOK OF INDIAN HISTORY.

"THE MAKING OF INDIA." By A. Yusuf Ali. (London: A. C. Black 10s. 6d. net.)

This book is one of a series whose collective title is "The Making of the British Empire." It aims at presenting in a simple and readable form the tangled history of India from the earliest to the most recent times: and, of all the histories of India that the present reviewer has come across, this is the one that most nearly approaches his idea of what such a history should be. It presents the salient features of the story of India in a way that is easy to understand and in a sequence that it is easy to follow, and the author has resolutely refused to be drawn up any of the almost innumerable side-tracks through which the reader of more ambitious histories commonly finds himself trying to grope his way. Mr. Yusuf Ali is an apostle of the imperial unity of India, an idea which he traces from the Mauryan Empire of Chandragupta and Asoka, in the third century before Christ, through the Gupta and Harsha Empires of the fourth and seventh centuries A.D. to its temporary collapse after the fall of the latter: when three hundred and fifty years of complete anarchy supervened, till the Muslim invasions of the North and the Chola Empire of the South laid the foundations of the Mogul Empire founded by Baber in 1526 to which, after its collapse on the death of Aurungzebe in 1707, the British were so soon to fall heirs. He compares the Grand Alliance of 1815, by which the four strong Powers endeavoured to maintain the peace of Europe after Napoleon's downfall, thus indulging in "a dream for the confederation of Europe, the Great Powers imposing on themselves the task of keeping the small Powers in order," with the much more successful "treaty structure erected in India in 1819, by which one overwhelmingly strong Power undertook to regulate the constitution and external position of a number of small Powers which could not possibly compete with it."

The author, himself a Muslim, observes a quite unusual impartiality in communal matters; though here and there occur passages from which one could guess his creed if one did not know it. He records, for instance, how the Arab invaders of Sind carried out their instructions to show kindness to their enemies and to comfort them, by their "free reception as brothers of all Hindus who accepted Islam." He does not say how the less amenable Hindus were received; but one may guess that it was—to use a well-known India phrase—as brothers-in-law. So far as one has been able to check them, the author has been very careful to verify his facts; though he sometimes slips, as when he says that India's export of opium to China "would have been" extinguished in ten years from 1907 had not China herself re-started indigenous production. Nor can one always agree with his conclusions: as, for instance, when he declares that, during Lord Curzon's Viceroyalty, "the passion for efficiency became the ruling motive, and universal discontent the prevailing feature of the Indian atmosphere," and that, when Lord Curzon left India, he left it "a seething mass of discontent." The correctness or otherwise of wide generalities of this kind depends so much on the exact meaning that the words "India" and "Indian" are intended to convey; but, if they are taken in their ordinary meaning, the statement is certainly very wide of the mark. One may also take leave to doubt the accuracy of the author's statement that the advent of the British official selected by open competition, in place of the servants of the Company "who, with all their faults, at least adapted themselves to the people and the country" gave a type of man who, though much superior in education, had a much less Indian outlook, and was responsible for producing "a wide gulf between the rulers and the ruled, between British and Indian, in the thirty years following the Mutiny." Still less can one accept the argument that the "free movement of British non-officials, without the training and responsibility which

made for tact and smooth inter-racial relations" gave rise to a claim that "gave the more offence as, without being rulers, they claimed the status of a ruling race." The two statements strike one as mutually destructive: and, even if one were prepared to concede some basis of fact in the first, one can find none at all in the second. While the power and prestige of the British official are visibly declining, those of the British non-official are increasing: nowadays it is the latter who adopts himself to the people and the country, and the successful merchant cares nothing for ruling castes. The best hope for the future lies in the recognition, by himself as well as by others, both British and Indian, of the growing importance of the part to be played by the British non-official in India.

THE JEWISH RACE.

"ARE THE JEWS A RACE?" By Karl Kautsky. (London: Jonathan Cape. 9s.)

The views of the German Socialist, Kautsky, upon the problem of the Jewish race, are well known, for the first German edition of this work appeared in 1914, and a second edition, with additional matter, was published in 1921. Kautsky does not believe in the existence of the Jews as a "race," and he bends all other views to his conviction that the solution of the Jewish problem is by assimilation with other peoples.

What makes this English edition particularly interesting, however, is the inclusion of comment upon recent development in Palestine.

Kautsky does not, of course, approve of Zionism, which he defines as "not a progressive but a reactionary movement. Zionism aims not at following the line of necessary evolution, but of putting a spoke in the wheel of progress. Zionism denies the right of self-determination of nations, instead of which it proclaims the doctrine of historical rights, which is breaking down everywhere to-day, even where it is supported by the greatest powers." He believes that "whatever Zionism does not accomplish in the immediate future, it will never accomplish." Again, he says on this subject: "At best it might bring about the following partial accomplishment: the number of Jews in Palestine may increase more rapidly than the number of non-Jews in the country (the Arabs) and the new Jewish State, although it will never embrace the great mass of the world's Jewish population, may nevertheless be predominantly Jewish in tone. But even this prospect is not likely to be fulfilled."

But it is rather for what it can do than for what it cannot do that Kautsky is opposed to Zionism. On sociological grounds he thinks it a wrong-headed movement. "Zionism means a wasting of the fortunes and resources of the Jews in a wrong direction, at a moment when their true destinies are being decided on an entirely different arena. . . . It is not in Palestine, but in Eastern Europe, that the destinies of the suffering and oppressed portion of Jewry are being fought out."

Kautsky believes, in his conviction of the ultimate triumph of the proletariat, that the Jews have become a revolutionary factor, while Judaism has become a reactionary factor. What he most ardently desires is the disappearance of Jews *qua* Jews, to whom the vanishing

The Moslem World

A Quarterly Review of Current Events, Literature and Thought Among Mohammedans and the Progress of Christian Missions in Moslem Lands.

Edited by Samuel M. Zwemer, Cairo.

"Indispensable for all friends of foreign missions who wish to remain in touch with the rapid and kaleidoscopic changes among Moslems. No living person commands such world-wide and intimate knowledge of the problems connected with the Moslem world as the editor-in-chief of this Quarterly."—Dr. Julius Richter, University of Berlin.

THE MOSLEM WORLD, 156 Fifth Avenue, New York City, U.S.A.
or Missionary Equipment and Literary Supply, The Church House, Great Smith Street, Westminster, London, S.W.1

50 cents a copy.

\$2.00 a year.

of Judaism will mean, not decline, but a rising to greater things. When assimilation is fully realised, "Ahasuerus, the Wandering Jew, will at last have found a haven of rest."

It is an interesting book, one well worthy of study, although the main preoccupation of Kautsky's mind must never be forgotten. Disagreement with the author on many points is practically inevitable, but it is certainly a contribution to the examination of one of the oldest problems in the Christian world.

CEYLON, THE LAND OF ETERNAL CHARM.

"CEYLON, THE LAND OF ETERNAL CHARM." By Ali Foad Toulba. London: Hutchinson and Co., Ltd. Price 21s.

On the principle that all the world loves a lover, this attractive volume can command a warm welcome. Ali Foad Toulba Bey is in love with Ceylon, and out of the fulness of his heart he takes his readers with him on a visit to the island, to enumerate and enlarge upon its manifold attractions and to share with them all his numerous experiences. Among these, as is fitting, by far the most are sheer pleasures homely and personal indeed, but such as enable those who accompany him through the book to gain an excellent idea of Ceylon, if they have not already been there, or to revive happy memories of a land which deserves all the affection that Ali Bey showers upon it. The author is an Egyptian, now risen to a position in King Fuad's Household ("English Redactor to H.M.'s Cabinet"), who spent his boyhood in Ceylon, by reason of the fact that his father, Toulba Pasha Ismet, accompanied Arabi Pasha on his exile there. He was educated at Kingswood School, Kandy, and from the insight that he gains of the author's character the reader will be inclined to endorse all that is said about that school and about its founder and headmaster, Mr. L. E. Blazé, as a fine mould of men. This old school was the Kaaba of Ali Bey's Ceylon Haj, and no one, even should he not have heard of Kingswood before, will grudge the two dozen pages devoted to "Kingswood Week." Before he reaches them he will have covered much ground in the enthusiastic company of the author—Colombo, Mt. Lavinia, Kandy, Nuwara Eliya (by no means, by the way, "practically unknown" in the 'seventies of the last century), with a motor trip across the Island. Ceylon, without doubt, is one of Nature's beauty spots. The admirable photographs with which the book is so well

illustrated bring home this fact. A chapter is devoted to Ceylon fruits, and the author rightly gives the palm to the mangosteen, which, with the development of air transport, may yet make its way to England.

A final word is due to the praiseworthy restraint with which Ali Bey touches upon political subjects. He is an Egyptian Nationalist, but his devotion to his own country does not blind him to the good work that Great Britain has accomplished in various parts of the world. At Kandy he met Seyyid Talib Pasha, exiled for a period from Iraq; but he does not allow his sympathy with and admiration for this victim of "the dangerous game of politics" to disguise the fact that there are always two sides to a question and he contents himself with quoting a "tendencious" report of Seyyid Talib's deportation from Baghdad.

"CIVIS BRITANNICUS IN PARTIBUS."

"EUROPE IN THE LOOKING GLASS." By Robert Byron. (London George Routledge. 8s. 6d.)

Mr. Byron and his publisher appear to hold different opinions about this book. While the youthful author, hoping not to be taken too seriously, says that "this book makes no pretensions to literary merit," the publisher terrifies us by the information that if the "accepted beauties" "pass his test," he "stamps them on the retina with a white-hot wire." As a matter of fact there is nothing to be alarmed about. These occasional purple passages resolve themselves into imitations (we had almost said parodies) of his beloved Sitwells, and that is all there is to them. Few "accepted beauties," however, do "pass his test," whether it be that they have had the misfortune to have been admired by old fogies such as Ruskin, or that the car passed them so quickly that he did not see them. He and his friends seem to have spent their nights till dawn in any night-club or cabaret that came handy, so perhaps it is not altogether to be wondered at that they had small appetite for natural or artistic "beauties" in the daytime. Their days were chiefly spent in rushing over roads from Hamburg, via Berlin and Florence, to Brindisi and through towns, to the great discomfort and danger of the rightful inhabitants, to whom, excepting, possibly, their companions of the cabarets, they must have been eminently distasteful. They did have some little leisure in Athens, where our author finds time to write two pieces of Greek propaganda, one on Smyrna and one on the Dodecanesus. He also finds time to make some exceedingly offensive remarks about American tourist ladies.

After 229 pages of this, we sat up and rubbed our eyes on reading his last sentence, which runs:—"I experienced a new pride of race; the pride of being, as well as English, European." Well, no one would ever have thought it, and we might add, no one is likely to care. C. S.-W.

A Senior Officers' School for officers in Indian State forces has now been established at Gwalior.

"Young Palestine," a film to further the idea of Zionism among the Jews, is to be shown in London on Sunday afternoons.

The Inter-Collegiate Indian Students' Committee will shortly proceed to the appointment of a secretary, who is by preference to be a resident Master of Arts. Applications should be sent to the Vice-Chancellor on or before February 21.

Mr. Saklatvala, the Communist member for Battersea, N., arrived in Karachi on February 10 and was taken in procession through the streets accompanied by politicians and members of the Karachi District of the National Congress Committee.

The Director of Surveys and Land Records in India has been on a tour of inspection in Bengal, and his work has included the preliminary arrangement for an aerial photographic survey of the reserve forces in the province, which are reputed to extend over an area of 1,000 square miles and have not been accessible for ordinary survey work. Colonel C. H. D. Ryder, late Surveyor-General of India, is to conduct the work with the aid of the air survey company which recently carried out an aerial survey in Burma.

THE BENGAL MINISTRY.

In his address to the newly-elected Legislative Council of Bengal, the Governor expressed the hope that it would pass the demand for salaries for two Ministers: and said that, if it did so, he would thereupon do his best to select such persons as appear to have the confidence of those who recorded such a decision. He went on to say that he had no wish, and no power even if he had the wish, to appoint Ministers unacceptable to the Council: and added "it will, I hope, be equally obvious that the personal likes or dislikes of individual members can also be a deciding factor, and my task would be greatly facilitated if, before any appointment is made, the groups who have a common political policy would elect their own leader to carry it on." It certainly seems odd that, after giving expression to these sentiments, Lord Lytton should have selected, as his first Minister, a Moslem who was not only unable to find a Hindu colleague to work with him, but did not even command the confidence of the members of his own community in the Council. When the Council met, there were three distinct Muhammadan parties in it: and Sir Abdur Rahim, the Minister originally selected, was not even the leader of the most numerous party, but of that which came second in numbers. At the same time, it is only fair to recognise the difficulty of the Governor's position, faced as he was by the personal jealousies that play so large a part in Indian politics. Even if not the most popular, Sir Abdur Rahim is undoubtedly the foremost among the Moslem leaders in Bengal: and it was perhaps better that he should be left to find out his unpopularity himself, rather than that the Governor should have pointed it out to him by refraining from offering him a Ministership. It is, of course, only natural that the foremost Muhammadan partisan should be specially obnoxious to all Hindus; but one would have supposed that he would have been specially popular among his co-religionists. If he is not, the explanation is doubtless to be sought in the abundance of "leaders" to be found in every Indian party. It is, for instance, instructive to learn that seven (according to some accounts, eight) Moslem candidates were nominated for the office of President of the Bengal Legislative Council; but all of them withdrew, leaving the election to be contested by two Hindu candidates, because the Muhammadans could not be induced to select, and vote for, any one Moslem candidate—no single one of them would consent to withdraw, unless all the others did the same. It is quite likely, therefore, that the Muhammadan parties in the Bengal Council already number considerably more than the original three: and that Sir Abdur Rahim's party, if not numerically the strongest, is the most homogeneous of them all.

According to the cabled reports, Sir Abdur Rahim is so nettled at his failure, not only to form a Ministry but also to be allowed to form one according to his own wishes, that he is credited with the intention of opposing the Ministry that was formed after he had given up the task. The previous Bengal Ministry consisted of three

Ministers, two of whom were Muhammadans and one a Hindu. Sir Abdur Rahim thought that this arrangement ought, to be revived. The Hindu, on the contrary thought that it ought to be reversed, in the interest of communal equality. The Governor left the number to be decided by the Council, but declared his intention of preserving the strictest possible communal impartiality. If the Council decided for two, or four, Ministers, he would appoint one, or two, from each community: if for three, the third would be a European. The triangular idea, though it looks reasonable enough on paper, is one that could not possibly be expected to work in practice: and it is admitted, on all hands, that Bengal cannot afford four Ministers: for whom, in addition, there would not be enough work. There are already four Executive Councillors—two Europeans and two Indians: a number generally held to be a generous one. The ideal that commends itself to most people is three Councillors and three Ministers; but this would, in practice, involve the translation of one of the Indian Councillors into a Minister: and, though this could be done so as to preserve communal equality on the Bengal Government, it could not do so on the "popular" side. It seems, therefore, that the present arrangement, though admittedly rather unsatisfactory, must continue: but it seems doubtful whether it will continue for very long. The voting on the question of salaries for Ministers shows how hopelessly the Swarajists are outnumbered in the Council; but personal jealousies, such as those obviously existing among the Muhammadan members, may play into the hands of the Swarajists, and help to carry out, in Bengal, their declared programme of refusing to form a Ministry themselves and of preventing any other party from doing so.

It looks, indeed, as if they would find plenty of opportunities. The Governor explained, at considerable length, the methods by which the confidence of the Council in its Ministries could be tested. In order that it might be in a position to express its opinion on each Minister individually, it had been arranged that the salary of each Minister would be shown separately in the Estimates: and the passing of a resolution moving a token reduction in the salary of any particular Minister would, while not involving the discontinuance of the Ministry, involve the resignation of the Minister. The passing of a similar resolution on a demand asked for by the Minister in charge of any Department would also involve his resignation. If such a resolution should be carried, the Governor would select a fresh Minister, and the Council would then have the same opportunity of expressing its opinion about him. If the internal jealousies that appear to be so rife, especially among the Muhammadans in the Council, are not speedily composed, it seems probable that it will have frequent opportunities of expressing its opinion on Ministers. The only bright spot in the outlook for the Governor would appear to be that, in the multiplicity of "leaders," he will have an almost unlimited field for selection of Ministers: and will be able to go on selecting fresh ones until, by a process of exhaustion, he has arrived at those who do command confidence—or, more probably at the conclusion that no one does so.

CALCUTTA LETTER.

Calcutta, January 27.

The New Ministers.

No one appears to be pleased at the method adopted for the appointment of the new Ministers, but possibly the difficulties were greater than is generally known. The period during which the running of the Transferred Departments had been in the hands of the Governor expired at the end of last week, and it was necessary for some arrangement to be concluded, if Ministers were to be appointed at all. The probabilities appear to be that appointments were offered to Sir Abdur Rahim and Mr. Byomkesh Chakravarty, and whether the latter had at one time expressed his willingness to accept or not, the fact remains that he refused at the last moment to act, if the other appointment were given to Sir Abdur Rahim, on the grounds of the latter's communal activities. This was very near to being an attempt to dictate to the Moslem community whom they should choose as their leader, and Lord Lytton attempted to get out of the difficulty by appointing Sir Abdur Rahim, provided that he could find a Hindu willing to act with him; this reversed the situation and apparently pleased no one; least of all the Hindu politicians, and no one was surprised that, after vainly trying to induce anyone to sit with him, Sir Abdur Rahim threw in his hand. It is announced this morning that the new Ministers will be Mr. A. K. Ghuznavi and Mr. Byomkesh Chakravarty. European opinion is by no means enthusiastic at the way that the situation has been handled and the whole Indian press, in a greater or less degree, has taken full advantage of the opportunity to criticise the Governor. The Extremists are venting their annoyance at the failure of their policy of obstruction by an indiscriminate attack on the Ministers, Hindu as well as Moslem, and throughout it all there is an unpleasant undertone of communal feeling which bodes good to no one.

The Assembly and Terrorists.

The Legislative Assembly at Delhi by 64 to 46 votes, passed the motion moved by Pundit Motilal Nehru for an adjournment of the House in view of Government's action in not permitting Mr. S. C. Mitra, a political *détenu*, to join meetings of the Assembly and exercise his rights as a member of that body. This was not a good beginning, but it is indicative of the attitude, largely a sentimental one, of Indians generally in regard to the steps that have been taken to keep the terrorist organisation under. There is hardly a single Moderate Indian left who would dare publicly to state that he approves of Government's action in this matter, and the Extremist has to go outside ordinary language to express a glimmering of what he feels. The situation is an unfortunate one; but it is difficult to see any other remedy than the retention of these men who refuse to give any undertaking that they will not engage in the organisation of terrorist activities in future. The Viceroy did well, in opening the Assembly, to point out that the maintenance of public safety is a matter outside questions of political progress; it is the first duty of any Government to see that its subjects are not terrorised by revolver, bomb and dagger. The Extremist press will have none of it, however, and it only sees in Lord Irwin's studiously moderate expressions a proof of official hypocrisy; it is a bad sign that the Moderate press is now joining in the chorus on very much the same lines.

Indian Extremists and China.

No attempt is made by the Extremist press to conceal its satisfaction at the turn of events in China, and this morning's leader on the matter in *Forward* is headed "Asia for the Asiatics." It is too late to hope for good manners or common decency on the part of Extremist

writers when they are dealing with matters that concern Great Britain or the Empire, and the action of the Viceroy in disallowing the motion tabled in the Assembly to protest against the dispatch of Indian troops to China without consulting that body has resulted in a stretching of licence to its furthest extreme. If they are to be judged by their public utterances, the Extremist will welcome the Bolsheviks and their communistic activities to India with open arms.

The Corporations and the Communist.

If further proof of this were required, it could be found immediately in the action of the Corporations of Bombay and Calcutta in regard to the presentation of addresses of welcome to the notorious Parsee, Mr. Saklatvala. Both of these popularly elected bodies are controlled by Swarajists, and both of them have refused at various times to present addresses of welcome to the Viceroy or to have anything to do with his reception. Bombay, however, presented an address of welcome to the Parsee M.P. on his arrival there, and the local Calcutta Corporation has this week resolved by 29 to 12 votes to give an address of welcome to the member for North Battersea. Everything for which Mr. Saklatvala stands is opposed to the social organisation of India, and in such circumstances too much importance should not be attached to the matter; the mere fact that he represents a party of one in the Imperial Parliament is sufficient to give him a peculiar appeal to the Indian Extremist, who in all the Council operations represents an almost similar proportion of the people; apart from this the principal plank in his platform is to be "ag'in the Government" whenever possible, another parallel to the policy of the Extremist. In fact, he only does it to annoy, because he knows it teases.

Men and Things.

There was a certain amount of surprise at the absence from the last Honours' List of the name of Mr. J. E. Armstrong, who was Acting Commissioner of Police during the recent communal riots in Calcutta; his appointment is now announced as Commissioner of Police for the State of Hyderabad (Deccan) and this is probably a recognition of his work at a particularly trying time. A number of new appointments have been made in Hyderabad State, and these are probably the explanation of the reports which were published a few months ago in Bombay that the Government of India were "advising" the Maharajah to adopt certain measures of reform.

The Bengal Congress has at last succeeded in finding a President, and its choice has fallen upon a College Professor who has been one of the more vocal Extremists from the beginning; the appointment increases the prestige of neither the Congress nor its leaders.

Attention is being called to the increase in the number of beggars, particularly those suffering from more obvious diseases, in the streets of Calcutta. There is an inherent objection in Indian minds to taking any administrative action restraining the beggars, whose lot, equally with that of his more fortunate brethren, has been cast by the gods, and at the moment large numbers of lepers are to be seen in the streets of the city, particularly in the neighbourhood of the fresh food bazaar; public concern is always aroused at this season of the year when small-pox begins to appear again, but the Corporation members are too busy thinking of elections to worry about beggars who have no votes.

The youths discovered in possession of bombs and revolvers recently have been sentenced to transportation for seven years; the Extremist Press makes its usual comments in regard to the complicity of the Police in these conspiracies against the subject!

The mail was late again this week, delivery not taking place nominally until Sunday evening and practically in many cases not until Monday morning; Press comment

is ceasing to be in any way reserved, and, if matters do not mend, there will be some plain speaking shortly.

Mr. J. Sime, Chairman of the Jute Mills Association, has made some very pertinent remarks upon the housing conditions of the jute mill operatives; there is a curious resemblance between what the capitalist says and the remarks of his labour namesake from Dundee, who came out and saw what he wished to see last year, but Mr. Sime correctly remarks that there is no sign that the operatives themselves are in any way unhappy in their surroundings. He makes the suggestion that the working day on the four days a week basis is far too long and that the mills should run shorter hours on more days.

The Trivial Round.

Racing continued at headquarters on Saturday last in ideal weather. Once again the books had all the best of the exchanges, as the favourites failed to materialise throughout the afternoon, and long faces followed the long-priced winners.

The paperchase this week was over a five-mile course with rather a tricky finish; the thrusters were lying handy against the usual run in only to discover that the finish was round a short corner after an innocent jump. Hugh Colvin was first past the post, well ahead of G. S. Johnstone and Captain Leetham, who were following in that order.

The M.C.C. scored a comfortable draw with Madras, and are now on their way to Colombo. In local cricket the principal match was the return between the Bengalis and the Anglo-Indians, in which the latter were well beaten.

The flood of sports meetings continues in full spate, the principal event on Saturday last being that on the Mohan Bagan ground when all the principal local athletes were out getting ready for the Olympics.

The tennis tournament continues successfully, but most of the local candidates have been eliminated. Mrs. "Commander" Graham looks good for the finals of the Ladies' Open; she is playing better than ever this year and will require a lot of beating. The meeting concludes on Saturday.

The Chamier Revue Company continues to hold the boards at the Empire. The fourth concert of the Calcutta Symphony Orchestra took place on Sunday night and after a vivid opening with the "Figaro" overture and a 'cello solo by Sgr. Verga, we had a very fine performance of Elgar's "Enigma" Variations. The house was fuller than ever, and it is obvious that the popularity of this class of music is growing.

Markets.

The jute market during the past week has been conspicuously dull, although prices show very little change from those ruling previously. The hessian market has been equally apathetic apart from the temporary activity on the news of the Steamer Karroo being on fire in New York. This quickly died down, and the tendency at the close is considerably easier. The piece-goods market on the other hand shows signs of improvement day by day, and there has been a good demand both for ready goods and for near shipment, at better prices. In the tea market, there has been a better feeling both here and in London for all descriptions, and the local sale showed a slight increase in rates for all kinds except the poorest qualities. The total crop figures are to hand to-day, and these are reported to amount to 345½ million pounds, against 317 million pounds for last year, thus showing an increase of 28½ million pounds; this is slightly in excess of anticipations.

On the Stock Exchange, Government Securities are easier all round, and business has been on a much reduced scale, with the 4 per cent. 1960-70 Loan most in request. Debentures and other investment stocks have been less easy to place with the exception of jute preferences, for

which there has been more inquiry. Interest in jute shares has been conspicuous by its absence, but in spite of this, prices have for the most part shown little change. With the hessian market closing easier, it appears that there may be a slight reaction in jute shares; but the general opinion is that so long as the mills continue to make their present handsome margin of profit there can be little reaction from present quotations. Coals and cottons continue to be neglected, and in the tea section there has been but one transaction reported, which speaks for itself. Business in rubber shares has been restricted only by scarcity of sellers at market prices, and it seems that more activity is likely to be seen in this section in the near future, especially when the allowance is further reduced to 70 per cent. from next month.

The Exchange Market has been very dull during the week, and closes quiet in the absence of bills with Ready T.T. quoted at 1.6d. Short money has been in slightly less demand, but there have been good takers of Fixed Deposits. Rates are quoted at 4½ per cent. for Short and One Month and 5 per cent. for Two and Three Months.

BOMBAY NOTES.

The Rupee.

It seems a great pity that financial matters should be regarded in India as a subject for politics and for politics only. Whether the rupee should be 1s. 6d. or 1s. 4d. or some wholly different figure, and whether the existing Imperial Bank is fitted to fulfil the functions of a Central Bank, appears to the man of ordinary intelligence to be technical questions of great delicacy to be discussed by financial experts. It does not appeal to the ordinary man how these matters affect one political party more than another: many Englishmen at any rate would, as far as their own business is concerned, prefer the lowest rate of exchange, and there does not appear to be the least reason for making a racial feud out of it. But that is the spirit in which this highly technical matter is likely to be thrashed out in the Assembly: and a division, which could only be of any interest, if all whips were taken off, is likely to follow the strictest Party lines.

The Back Bay Scheme.

The enthusiasm of the Indian legislator for interference with matters of no consequence of which he has no knowledge, is likely to cripple very seriously even those legislatures which are most earnestly attempting to face the problems of Government. How far it would have been possible to dismiss the Back Bay Scheme soon after its inception is doubtful; the most ardent opponents of Government were inclined to favour it more wholeheartedly than many of those on Government benches. But the opportunities of discussion were thrown away by the inveterate passion of the Indian for irrelevancy. It was the practice of Government to put the demands for the Development grants at the tail end of the Budget, for the discussion of which twelve days were allowed. The Budget consists of a series of many hundred demands for grants of all kinds, great or small: and it appears to be the practice of Indian members to compete for the maximum number of objections.

For several years in succession the debate had to be closed before the Development estimates had been reached, while honourable members vied with each other in arguing such points as whether a telephone ought to be installed at the policeman's bungalow in some up-country station: and, if so, whether the installation could be done for less than the estimate of Rs.275 or not. This shows zeal, no doubt, but a certain lack of a sense of proportion, which will have to be remedied before the Indian legislators take their proper place in the constitution.

Whether any good would have been done is more than doubtful. It is probable that words of warning would

have been unpopular on both sides of the House. For a point which the Report of the Commission ignores, is that the Back Bay Scheme was almost universally popular at the time it was instituted. It was very far indeed from being thrust on the people of Bombay by Lord Lloyd and the Government: on the contrary it was looked upon as a Government investment of vast profit-earning capacity: and it is safe to say that, had it been a public flotation, almost every member of the Opposition in the Legislative Council would have fought for shares. Sir Chimonlal Setalvad's estimate of fantastic profits, quoted in the Report, was received by a crowded house without the slightest question: and any dissent would have met with the same sort of reception that would await a turbulent stockholder at a general court of the Bank of England.

The Report of the Commission is an admirable one, but it does not seem to me that it quite recognises how completely the scheme was accepted by the whole of the Indian population of Bombay, and how universal was the belief in its success. On one occasion, a responsible Minister, in a speech in the Legislative Council at Poona, spoke of the ridiculous suggestion that a certain plot of land in Bombay was worth only Rs.500 per square yard—the equivalent of about £100,000 per acre: and in this estimate of the future value of land he was supported by several leading members of the Opposition who poured scorn on the unfortunate head of the non-official Englishman who had ventured to dream of the possibilities of lower prices.

Lord Lloyd was himself no pessimist; but he certainly did nothing to stimulate, and probably did a good deal to modify, the unreasoning optimism of the general public of Bombay—and though the responsibility of the scheme is no doubt his, he was never in the position of forcing it on a reluctant public.

The scheme, as run by Government, has been an expensive failure: but if it had not been run by Government, it would certainly have been taken up by a company, the failure of which would have been even more disastrous to the financial stability of Bombay than the public loss has been. And, as the Back Bay Company of 1864, left to future generations, when all was done and said, the fine expanse of maidan seaward of Queen's Road, I believe that our successors, when to-day's troubles are over, will find the amenities of Bombay enormously increased by the operations of the Development Board.

“COMRADE SAK.”

It is curious that all three of the “Indians” who have sat in the British Parliament should have been Parsees—members of what is numerically by far the smallest of the communities of India and, strictly speaking, not an Indian community at all; since the Parsees are, and always have been since they sought asylum in India, foreigners not only in race and religion, but in outlook also. If it be true that a prophet is without honour in his own country, this fact perhaps explains the triumph of Mr. Saklatvala's progress in the Bombay Presidency, where he has been affectionately dubbed “Comrade Sak” and hailed as “the greatest Communist of the world”—presumably since the death of Lenin, of whom his Indian admirers class him as an even more fervent (though not, perhaps, more humble) follower than Mr. Cook himself. It is reported that, in Bombay, he addressed several “tremendously huge concourses of humanity”: and took the opportunity “to drill his fresh and dynamic views into the hearts of his audience with his magnificent oratory to which, indeed, there is no parallel in India to-day. Wherever he goes, he enlivens the atmosphere and electrifies his hearers with the message which he is carrying home every day to thousands of hearts with the shafts of his inimitable eloquence. If Mr. Saklatvala, one of the most eminent sons of modern India, continues to

preach throughout the country as he has done in Bombay, he will fire many an imagination and convert many a mind in the course of his whirlwind tour.” At one of his meetings the Chairman, in introducing him, said that, if the pictures of communism drawn by the capitalist press were correct, Comrade Saklatvala would be returning to India “with his hands bleeding with blood. But nothing of the kind had happened. The heart of the Comrade was full of the milk of human kindness.” At another, Mr. Saklatvala was presented with a red rose, “in humble token of affection”: and, on this occasion, the Chairman of the meeting, “when pinning the rose on the Comrade's buttonhole, said that, in days to come, that flower was going to be the symbol of India's Communism.” At a third, he was presented with a *khaddar* purse containing money collected from among those attending the meeting: which (the purse, presumably not the money) he said he would cherish all his life as a token of the love of the donors towards himself.

Among the gems of speech which fell from his lips when, “amid sky-rending shouts of joy from the huge audience,” he rose to speak on the first of these occasions, were condemnations of thrift and of usury. “Thrift,” he declared, “is a vice: it is a sacrifice of the present generation. Usury was condemned by public opinion even in the days of its inception. The money-lender, in those days, used to be put down and condemned by the enlightened section of society. In capitalism the simple form of benevolent money-lending had been converted into a powerful pump with which capitalists started pumping blood out of poor human beings.” Among resolutions passed at the various meetings was one of thanks to the people of North Battersea for their firm stand by Comrade Saklatvala: a resolution which, it was decided, should be “communicated to the Mayor of that county.” Another, passed by a meeting of Muhammadans, under the auspices of the Central Khilafat Committee with the inevitable Shaukat Ali in the chair—where the “august” Parsee guest was greeted with deafening shouts of the Moslem war cry “Allaho Akbar”—called upon the King of Egypt to “permit Mr. Saklatvala, a brave and courageous friend of Islam, to land in Egypt on his way back to Europe, and thus remove the blot of ungratefulness from the good name of Islam.”

It is true that Mr. Saklatvala's expositions of his creed have not altogether escaped criticism. One of his most enthusiastic supporters in the press goes so far, indeed, as to suggest that some of his views “are based on an imperfect understanding of the real conditions in India.” Another otherwise friendly critic says that Comrade Sak is “importing not the stodgy beer of England but the heady wines of the Continent or rather the too-exhilarating vodka of Russia, and the danger is that the tee-totalling people of India may be too much intoxicated by these treats. . . . He condemns the cinema as stupid, idiotic and foolish, but allows it a place in the modern mechanism on the ground that we cannot fight against the inevitable. We would not allow it any place, nor would we consider that we have to be dragged willy nilly in the general herd which follows industrialism as the rats followed the Piper of Hamelin.” But these are, after all, very small spots on the sun. It must be a new and pleasing experience to Mr. Saklatvala to be reported at full length in place of his usual fate in the English “capitalist” newspapers' reports of Parliament—the discussion was continued by” Mr. Saklatvala and others. Up to the present, he has never been so contemptuously summarised as in the famous report that said, of a debate in the House of Lords, “after some fatuous remarks by the Bishop of ———” (a Prelate whose best-known oratorical efforts were often quoted a generation ago—“I feel a feeling that I feel you all feel”: and “And these, I think, are the things we all think we ought to think about”); but, on the record of his recent speeches in India, there is no need for him to lose hope.

chartered by Government for the conveyance of troops to India, his only practicable alternative, to the Overland route, was by "the fine and fast-sailing ships of Messrs. Green or Wigram, which generally perform the voyage in three or four months." The only advantage of the all-sea route was cheapness; for, while the Overland journey to Bombay averaged 34 days only, it cost £140 first class, and the sea voyage by steamer cost £90 (plus £2 as "steward's fee") and by sailing ship £70 to £100 "according to accommodation offered." But the young Civilian is warned that, as he gets no pay, nor does his service commence, until he has reported in person to his local Government, "if he travel by a sailing vessel he loses every chance of promotion that may have arisen during a period of four or five months: and, as deaths are frequent in India, it is but fair to presume that many vacancies would take place during so long a period."

Climate

The traveller is advised, if possible, to avoid leaving England later than February; for, if he should "make his first visit to India in the hot (May) or rainy (June) season, he is almost certain to have successive attacks of all those diseases which are most peculiar to the climate." by way of emphasising this piece of advice, it is added that "the old Indian," when homeward bound, generally leaves in April at the latest, and then frequently "sojourns some time in Italy or France before returning to England, or he will find the change of climate too severe for his shattered constitution."

Outfit.

The list of indispensable articles of outfit is a long and comprehensive one, including, among many other items, 3 long-cloth shirts, with linen fronts, 6 dress shirts "if worn," 18 Indian gauze waistcoats, 54 pairs of socks, 24 pairs of gloves and 30 towels: besides a "Maud shawl, which can be used as a dressing-gown in the morning, wrapper by day and coverlet by night," two veils, one green or blue and the other brown, a sun umbrella, a brandy flask, and a bottle of smelling salts. (A list of outfit for a lady is also included, among the items in which may be mentioned 24 pairs cambric trousers (plain) and 12 ditto (trimmed), 12 common and 6 spring muslin nightcaps, 6 pairs mosquito sleeping trousers, and 24 Indian gauze waistcoats). The male outfit also comprises a travelling book case, with a list of recommendations for filling it with "a Library which will contribute much to beguile the traveller's weary hours and will enlighten him as to the manners, customs, peculiarities and origin of the various castes with whom he will hold constant intercourse." Then follows a formidable list of about 200 books—mostly, to judge by the titles, of a strictly educative nature: witness "Indian Commissioner's Reports to the House of Commons," "Wilson's Select Specimens of the Theatre of the Hindus," "The Oriental Treasury of Indian Knowledge," "Meteorological observations of the Bombay, Simla and other Indian observatories," "Chemistry of Creation," and Hayden's Dictionary of Dates, as examples. Finally, the lady traveller is urged to take out with her "her own patterns of every article, even from a chemise to a dress, cut out in calico, with the dimensions accurately marked on each piece," so that she can get her garments made for her, under her own eye, by an Indian tailor; for "the charges of milliners in India are most exorbitant and frightful in the extreme, it being usual for a European to charge from £2 to £3 for making up a dress!"

Recommended Firms.

The "India gauze waistcoats" which, it is to be noted, appear in both the male and female outfits list (though the lady needed more of them than the gentleman), are described as a speciality of Messrs. Thresher and Glenny, next door to Somerset House, Strand. One wonders whether that famous firm, still in the same location, makes "Indian gauze waistcoats" now: and, if so, whether there is still a market for them. Many other names of

firms still well known appear in the "recommended" list: e.g., Stanford for maps, Waterlow for stationery, Heal for bedsteads, Thurston for billiard tables, Thacker for newspapers, Chubb for safes and locks, Keating for cough lozenges, Crosse and Blackwell and Mortons for groceries, Finnigan for trunks, Whitelock for shirts, Eaton and Dellar for fishing tackle, Samuel Bagster for books, Hickie Borman and Co. for passages, Grindlay and Co. as agents. If the traveller is liable to sea-sickness, "three drops of creosote taken in a small quantity of water half an hour prior to embarkation, and the same dose on a piece of sugar, repeated every half hour, is an excellent antidote": and the advertisements in the volume include one of "Joseph Brown's patent anti-sea-sickness sofa beds"—though these, perhaps by an oversight, find no place in the recommended outfit—announced as "acknowledged by all the Captains of the Port of London to be a complete preventive against sea-sickness and all the disagreeable sensations attendant on the motion of the ship."

The Red Sea.

The Indian part of the Overland traveller's voyage may be said to have begun at Suez—referred to, in the book as "that miserable hole" and "that most wretched hovel of a place." As to the Red Sea, "this portion of the Overland route is by far the most dangerous and trying to climatise as well as unclimatise constitutions, and many old Indians on their return, and Europeans on their passage out, have found watery graves in this sea." The heat in the day time is almost unbearable—rarely is there a breath of wind, the body becomes heated and the traveller, to assuage his burning thirst, has recourse to drinking what, in those days, was the rational beverage (during his passage through Egypt, he is constantly warned to avoid drinking water, and to stick to it) Pale Ale. Aden is reached after eight days. The book says there is hardly anything to be seen that is worthy of note except boatmen—"arrant knaves, wild Arabs, with red hair." The water tanks, now the stock "sight" of Aden, are not mentioned; presumably they had not then been excavated.

Bombay.

Eight days' voyage from Aden brings the traveller to Bombay; where, if he is bound further, he must put up at a hotel—with a company "of a most heterogeneous description." If, however, he has been posted to Bombay, he must rent, and furnish, a house, and supply himself with a staff of servants. When arranging to rent a house, he must be careful to obtain the signatures of at least two witnesses to the agreement, "because deaths take place suddenly in India, and then great difficulty exists in proving the signatures, if one party only attests a document." A special difficulty that is likely to confront the new tenant is a "squatter" in his "compound"—often occupying a small hut which the book correctly describes as a "nuisance." The best method of abating this reads somewhat surprisingly. Complaint, or an attempt to buy out the squatter, is certain to be useless: "the most effectual, safest, easiest and most economical plan will be to purchase a small pig, price five rupees, have a hole made in the hut, and send the unclean animal into the premises, at the appearance or sound of which the whole of the inmates will abandon *instantly*, as it is against their creed to remain in any place which a pig has crossed or inhabited."

Finance.

The furnishing and equipment of the new arrival's establishment is reckoned to cost from 3150 to 4700 rupees: and, as the initial pay of the young civilian was 300 rupees a month, it is easy to agree with the opinion that "it is quite out of the question for any civilian, on his debut in India, to form an establishment without incurring debt, unless his parents or guardians place sufficient funds at his disposal to purchase such for cash, which they are *most earnestly* solicited to do." The alternative is debt: and the book contains a very lengthy

and impassioned warning against "purchasing rupees"—borrowing from a native moneylender: "who, like the venomous cobra Capella, twines himself tightly round his victims, and has scarcely ever been known to leave them during the lengthened period of their sojourn in India": and who uses his hold upon the official to pervert the course of justice in his own interests, or to obtain favours for himself and his relatives; so that "the Civilian who has so far degraded himself as to "purchase rupees" loses his own independence and becomes the mere puppet of the designing and unprincipled native." One wonders whether Rudyard Kipling ever read this book, and whether he worked its views into the couplet in his "Maxims of Hafiz," that accurately summarises them:

"Yea, though a Kafir die, to him is remitted Jehannum
If he borrowed in life from a native at sixty per cent. per annum."

Servants.

The compilers then proceed to enumerate the staff of servants necessary for an Englishman who desires to keep up a proper position in India. These number no less than 32, whose united monthly wages total to 259 rupees; so that anyone, who feels the need of keeping up such an establishment, must obviously be in receipt of a private income in addition to his pay. For one not so fortunately situated, and who is prepared to exercise "the most rigid economy," it is possible to make shift with 13 servants; but this is the absolute minimum. Indian servants, with one exception, are declared to be "with the slightest over-colouring, the most adroit and consummate rogues that are to be met with in the whole universe. True it is, that they will not allow any of the other menials to cheat their master, unless previously consulted; but yet they themselves will rob, plunder and deceive their employers in the most shameful, impudent, cunning, barefaced, heartless and unconscionable manner imaginable." The one exception is the "Sepoy, or belted messenger": whose fidelity in the discharge of his duties "is patent to the Indian world. He may be safely trusted with any sum of money to take to the bank or pay to tradesmen without the least fear of his betraying his trust."

Housekeeping.

The young Civilian is recommended to buy, so far as possible, his stores direct from England: in particular, "as the nature of the climate renders the consumption of Pale Ale considerable, the resident European may effect a great saving in that article by importing the quantity he may require direct in hogsheads, preferably on a standing order every quarter; which, on arrival, his butler will bottle off under his own immediate surveillance." As regards perishable stores, which must necessarily be bought locally, the dealers will cheat the official openly—"the native buttermilk who supplies the establishment of a Civilian who has the entrée at Government House will only give him twelve cups of butter for a rupee; while a European engineer, or any individual in a similar position, will obtain sixteen cups at the same price." According to a specimen household account, made out for a practitioner of "the most rigid economy" with the minimum of thirteen servants, the youngster is left with a monthly credit balance, over and above his board and lodging and the wages of his servants, of 54 rupees: from which to defray "incidental expenses—viz., wine, brandy, soda water, clothing, repairing, carriage and saddlery, veterinary surgeon, newspaper subscriptions, medical attendance, subscription to Civil Service fund, postage, etc.": and the conclusion drawn from this calculation is nothing more nor less than what is termed in India—*subsistence allowance*."

Conclusion.

Finally, the youngster is urged to shun the insidious siesta and to "battle with that dead langour and heavy torpid lassitude which creeps over every European when resident in India. It is then that he should rouse himself, mount his horse and take a hard gallop, which will have the effect of restoring him to his accustomed energy."

One does not know what the Honourable East India Company thought of this presentment of the position of the young Indian Civilian; nor what effect it had on "the competition of candidates for the Indian Civil Service." perhaps they were too busy with the Mutiny to notice it. But it does at least show that the I.C.S. had its grievances in 1857, and that the disabilities that led to the appointment of the Lee Commission, had a parallel seventy years ago. One cannot imagine similar propaganda receiving the "patronage" of a modern Secretary of State for India: and one may be excused for supposing that such an attempt to smooth the way of the young Indian Civilian would nowadays be the reverse of popular with the powers that be; even if those that were, in 1857, looked upon it not only with calmness, but even, as it would seem, with approval.

CURRENT TOPICS.

Civil Aviation.

In a reference to the subject of civil aviation in India in these columns some time ago, the opinion was expressed that what was needed was that the Government of India should be spurred into activity by someone sent from Home for the purpose. Sir Samuel Hoare's visit has evidently produced the desired result; for it is now announced that the Government—which had "found it impossible" to ask for the money in advance—is demanding a supplementary credit of approximately ten lakhs of rupees, in order to pay for the work either undertaken or decided on in anticipation of financial sanction. This, we are told, includes the provision of a mooring mast at Bombay and arrangements for another at Calcutta: also, apparently, the acquiring of the existing landing ground for aeroplanes at Karachi—at present, it appears the property of the Royal Air Force—with a view to charging Imperial Airways rent for the use of the sheds. As for the near future, "expert consideration is being given" to the modernizing of the Karachi wireless station and to the extension of the Karachi meteorological service. As to internal aviation, it is announced that India "may soon consider" the conversion of the fortnightly Cairo-Karachi service into a weekly one with a view to its extension to Delhi: that "it is proposed to lay down" a chain of landing grounds from Karachi to Victoria Point (in the extreme south of Burma) and to establish this as an invariable route across India: and that it "hopes in the near future" to invite tenders for an aeroplane service from Calcutta to Rangoon, for which a subsidy should be offered, the contract to contain a condition that any Company formed to operate the service must be registered in India with rupee capital, and shall be required to afford training and opportunities to Indians in all branches of its work. For the "establishment of the trans-Indian air route" and the salary of the new Director of Civil Aviation, a credit of 1½ lakhs of rupees is to be asked for. These are rather modest beginnings; but it is something that, at least, a beginning has been made, and it seems certain that it is Sir Samuel Hoare's visit that is responsible for it. It may be hoped that his departure will not prove the occasion for a relapse.

INDIAN MAIL.

"Whitewash."

In its issue of January 27, THE NEAR EAST AND INDIA wrote, of the Bombay Reclamation Committee's report, "It has always been the fashion, in extremist circles, to characterise official reports of this nature as 'whitewashing'; but it will be difficult for the most violent partisan to apply this particular epithet to the present report; although it is not at all unlikely that extremist perverseness may make such a suggestion regarding the

Committee's findings in the matter of 'dishonesty'—a reckless charge in which it is certain that no one ever believed."

Some of the extremist papers have risen surprisingly to the occasion. The *Bombay Chronicle* publishes "the main conclusions of the Committee" under displayed head-lines which are headed (in letters nearly an inch long) by "The Expected Whitewash": and proceeds, in its leading article, to impugn the honesty of the Committee. "Once more public funds have been wasted by what was made to appear, when it was appointed, a well-balanced and conclusive Committee, but which, in the result, has turned out to be a mere whitewashing effort on the part of Government to save their own face and the skin of their muddling henchmen. . . . Signs are not wanting of the restraint imposed on this Committee by their age, experience, or expectations of further official preferment. . . . The incompetence and inefficiency of everyone associated at the top with this enterprise . . . deserves a greater condemnation . . . and would have secured a different set of recommendations from the Mears Committee had they not been over-anxious, as is evident from many places in their report, to minimise the guilt of the officials. . . . Nothing is more conclusive of this attitude on their part than the judgment of Solomon which they have delivered in regard to the allegation of dishonesty on the part of officials. Corruption is not seldom the twin sister of incompetence: and, where inefficiency was rampant to the degree to which it is revealed even in the cautious document now made public, it is not conclusively proved that a closer examination of papers would not have brought to light serious over-payments, discrepancies, etc. . . . There is no evidence in the report to convince the public that their inquiries have gone far enough and that they have not made those invitations to the public (to put forward proofs) with their tongue in their cheek, since it is not possible in human nature to expect that those who profit by corruption would come forward with accusation or evidence. . . . If ever there was a fiasco of public inquiry, it is the Mears Committee."

Indianisation.

The remarkable progress that has been made during the last few years in the Indianisation of the government in India is hardly realised in this country. In a recent speech the Governor of the Central Provinces stated that, of the 33 members of the Indian Civil Service who had not completed ten years' service in the Province, seventeen are Indians; while, in the Forest Service, there were eight Indians out of seventeen of the same standing. In this connexion, it is worth noting that 112 candidates entered for the competitive examination for the Indian Civil Service that began at Allahabad on January 3. Incidentally, it is interesting to see that the Public Services Commission was making what would seem to be its first public appearance, at this examination; where its members, assisted by a local official—one is inclined to wonder why, in the case of an All-India service, this should be thought necessary—were to conduct the vivâ voce examination. The men recruited at the last examination in London numbered 29 Europeans and eleven Indians; so the number of vacancies to be filled at Allahabad is presumably eighteen. According to present experience, it is unfortunately almost certain that a number of these will have to be filled by nomination; an expedient that is rendered necessary by the fact that the candidates appearing at such examinations are nearly all Hindus, most of whom are Bengalis or Madrasis. No doubt it will be

some time before this state of affairs can be altered; but in the meantime, the number of candidates shows that the service is decidedly popular, and that the rapid advance that is taking place in its Indianisation is fully appreciated by those whom it most concerns.

Sub-Provincial Autonomy.

The writer of these notes has received, from personal correspondents in India, a number of interesting comments on the idea of Indianisation of the government from below, by the creation of comparatively small administrative units with a semi-autonomous system of government. A friend writing from Calcutta suggests that the City with the whole of its adjacent industrial areas would need a separate "sub-provincial" government of its own: perhaps something on the lines of the County Council government of Greater London. "Few people at home," he writes, "have any idea of the size of these industrial areas, which run some forty-five miles north and south, closely hugging the river; while their population, including the mill hands, must be four or five millions. These areas would simply not exist were it not for the British trading interests, and it is in them that the most persistent political agitation is found."

A correspondent from Bengal suggests two other candidates for separate representation—the tea areas in Assam, the Dooars and Northern Bengal, and the coal-mining districts in Bengal and Bihar: neither of which, he thinks could be handed over to Indian administration without the result of introducing "a flood of pleader agitators" among the labourers. The "sub-provincial" idea does not, in fact, contemplate exclusive, but only progressively preponderating Indian administration: which may, of course, in time and under proper safeguards, become exclusive; but, at any rate at first, there would certainly be a number of areas whose peculiar conditions would need special treatment.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, Strand, London, W.C.2.

Tuesday Morning.

Prospects in Palestine.

We give this week lengthy extracts from a comprehensive report on conditions in Palestine as at October last which has just been issued by the Department of Overseas Trade. The report, which is by Mr. K. W. Stead, Director of Customs, Excise, and Trade in Palestine, is one which deserves careful perusal by all who are interested in the progress of this important Mandated territory. One point that Mr. Stead makes that is of special interest is that the country is under-populated, but, of course, one of the causes of the trouble from which the country suffered last year was an undue influx of emigrants into a land not yet ready to receive settlers in such volume. Palestine, it may be emphasised, requires town dwellers no more than Australia and Canada do, and it may be assumed that it was because to some extent the wrong type of settler was being attracted that last year witnessed the development of a significant movement to leave Palestine. It is needless to say it is agriculturists (using the term in its most comprehensive sense) that are wanted, and the Jewish race can only justify the hopes based upon them if they prove (as they have demonstrated on a small scale at the various colonies) that they are as a people just as fitted to a life on the land as they are to the exchange of commodities in a large town. So far as can be seen the immediate economic development of Palestine rests mainly on the expansion of agriculture and of industrial undertakings appertaining to the land. The provision of power in the form of electricity will go far to open new economic outlets, but it has to be borne in mind that it cannot provide the country with raw materials which it lacks. At present Palestine has a large adverse balance of trade, but this, Mr. Stead points out is accounted for by invisible items, such as the tourist traffic, expenditure of Zionist funds, immigrants' capital, and investments and remittances from abroad. In the tourist traffic the country has an asset which no doubt will be of constantly increasing value in the future.

British Trade with Palestine.

The trade figures give Great Britain little cause for satisfaction for there is no getting away from the fact that we have not been able to hold our own with our rivals in this market. A particularly glaring instance of the way in which we have been outpaced is provided in the case of motor cars. As was to be expected motor transport has developed considerably in Palestine in recent years, and the figures of the registrations of vehicles given by Mr. Stead indicate plainly the prospects in this direction. In 1925 805 motor cars were imported into Palestine, and of this number the United Kingdom provided four as against 738 from America, 24 from France, and 23 from Italy. It is unbelievable that this is the best our manufacturers are capable of in competition in this market against America, and one can only assume that

it is due to the outlet having been overlooked; it is to be hoped that the publication of these figures will suffice to bring about a different result.

Sudan Trade Progress.

The figures for the trade of the Sudan for the first eleven months of last year make an excellent showing compared with the same period of 1925 even if the expansion shown has not quite come up to expectations. The value of the imports was £E4,827,654, while that of the exports was £E4,751,012, the total trade amounting to £E9,981,545 as compared with £E8,598,059. It will be seen that the Sudan has now a slight adverse trade balance as against a favourable one in previous months, though if re-exports be included the converse is the case. Two factors in 1926 may be said to have prevented a really marked development of the commercial figures as compared with the previous year. On the one hand the failure of the durra crop had a generally depressing effect while the expansion of cotton growing had only a limited effect on the population. On the other, while exports of cotton amounted to 498,833 kantars as against 171,225 kantars the fall in the price of cotton was such that the effect on the export figures was quite disproportionate. It is satisfactory to learn that the outlook for the Sudan generally is now improving. A second failure of the durra crop is unlikely, and the reports regarding other staple crops are fair so that it may be assumed that the period of depression will give place to commercial activity which will be marked by an increase in imports. The outlook for cotton is reported to be particularly good, and it seems probable that the official estimate of the yield (which was given in these columns recently) will be considerably surpassed. If the crop is disposed of at good prices—and the indication is that the cotton market is now on the up grade—then the Sudan should be in for a good year, which, it may be added, will go a long way to popularising cotton as a crop in the southern districts of the country where American is grown, the increase in the cultivation of which variety is so necessary to this country to decrease the strain on the sterling exchange in New York.

Italy and the Near East.

A further indication of Italy's growing interest in the Near East markets is provided by the news of the dispatch of an Italian floating samples exhibition to the ports of

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

the Mediterranean and the Red Sea. Since the first few years after the War, as a matter of fact, Italy has been making rapid commercial progress in the Near Eastern outlets. The Turkish trade figures are illuminating in this connexion. In 1925 Italy was at the head of the list both as regards imports and exports, and the only one of her rivals to make really rapid and consistent progress in the last few years has been Germany. In Turkey's import trade Italy's figures for the years 1923 to 1925 in millions of Turkish liras were 28, 40.9 and 43.4, the last figure representing 18 per cent. of the total trade. In those years Germany rose rapidly from 9 to 27.4 million Turkish liras which represents 11 per cent. of the trade and gives Germany third place in the import list. In the exports for 1925 Italy's percentage is 26 while Germany's is 14, but in the case of the latter country it may be noted that between 1923 and 1925 her exports from Turkey have almost quadrupled. One would like to be able to say that Great Britain was making equal progress in this important market, but the figures unfortunately do not permit of this deduction, but one may hope that this year with the lower prices now ruling it will be possible to compete more advantageously with these two great rivals in the Near East.

The British Industries Fair.

The fact that buyers from thirty-four countries will attend the British Industries Fair, which opens on Monday in London and Birmingham, indicates very plainly the reputation this annual event has acquired in the course of its very brief existence and the assured basis on which it rests. When it was inaugurated during the War there was bound to be considerable doubt whether, in view of the competition to be anticipated from similar institutions abroad, it would be able to hold its own in the future, but doubts on this head have long ago been dispelled, and year by year the Fair fulfils an increasingly useful function in demonstrating to foreign buyers the new developments in British industries. Its rôle hitherto would have been much more effective if the conditions had been favourable. It was held last year, for instance, under the shadow of an approaching industrial crisis. This time the sky is relatively clearer than it has been at any time since the Armistice, and it is reasonable to anticipate a great volume of orders at the Fair. A particularly satisfactory feature of the Fair this time will be the presence of a number of buyers from the Near East, and it may be hoped that the time will not be far distant when every country included in this region will be represented at this event.

COMMENTATOR.

Joseph Cattani Pasha, a former Minister of Finance and of Communications in the Egyptian Government, has been appointed a Senator. Cattani Pasha is President of the Cairo Jewish community.

British Trade Reports

I.—PALESTINE.

The economic and financial situation of Palestine is the subject of a detailed report by Mr. K. W. Stead, Director of Customs, Excise, and Trade of Palestine, from which we give the following extracts:—

Palestine, as administered by the Palestine Government, has an area of roughly 9,000 square miles in extent, and includes only that part of historic Palestine which lies to the West of the Jordan. The population, according to the census on October 23, 1922, was 757,182, of which number one-third is located in 22 towns and large villages. It is estimated that the population as at April 30, 1926, was 752,268, plus over 100,000 nomadic Bedouins. Of these it is calculated that 528,229, plus over 100,000, are Moslems, 139,645 Jews, and 75,936 Christians. The others are mostly Druses. These figures do not include His Majesty's forces in Palestine. Jewish immigration and the measures taken to protect the public health have been important factors in the increase of population.

The country is under-populated and under-cultivated, and lacks capital, but the wants of the rural districts, other than those which they can satisfy by their own production, are few, and there is little poverty. Modern business methods are making headway amongst the urban population, and there is every reason to hope for further development and progress.

Finance.

The following expenditure has been incurred from surplus revenue balances and from advances by the Crown Agents, London, in anticipation of the issue of the projected Palestine loan of £4,500,000:—

	£E.
Railways	1,405,241
Buildings	57,087
Roads and Bridges	123,091
Telegraphs and Telephones	129,315
Other works of development—	
1. Harbours and Wharves	4,468
2. Cadastral Survey	127,672
3. Land Settlement Courts... ..	15,525
4. Stud Farm, Acre	308
5. Afforestation	3,003
Total	1,955,717

The sum of £1,000,000 is due to His Majesty's Government in respect of railways, roads, telegraphs and other capital assets acquired by the Palestine Government. Provision for the payment of this amount is included in the schedule of the projected Palestine loan referred to above.

LLOYDS BANK LIMITED.

HEAD OFFICE:
LONDON, E.C.3

Capital Subscribed	£73,302,076	Reserve Fund	£10,000,000
Capital Paid up	£15,810,252	Deposits, &c. (30th June, 1926)	£336,631,359

EASTERN DEPARTMENT:

14, KING WILLIAM STREET, LONDON, E.C.4

LLOYDS BANK now has the following Offices in INDIA and BURMAH, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MUREE, SRINAGAR (Kashmir), GULMARG.

Agricultural Loans.

In accordance with the terms of an agreement between the Chief Administrator of the Occupied Enemy Territory Administration and the Anglo-Egyptian Bank, Ltd. (now Barclay's Bank (Dominion, Colonial, and Overseas)), the bank has advanced the total sum of £E561,911, for loans to cultivators, of which £E404,980 have been repaid, leaving an outstanding balance of £E156,931 at March 31, 1925. The loans to cultivators bear interest at the rate of 6½ per cent. per annum.

The cost of maintenance of the military units in Palestine is defrayed from Imperial funds; and grants-in-aid have been made to the Palestine Administration, as under, to meet the cost of the British section of the Palestine Gendarmerie, which constituted a part of the Civil Forces up to March 31, 1926:—1922-23, £E287,625; 1923-24, £E234,606; 1924-25, £E187,200.

Palestine possesses no stock or produce exchanges or organised money markets, although some merchants indulge in speculation in shares and currencies.

Trade Conditions.

The commercial situation of the country, which became more stable during 1924, received a considerable stimulus during 1925 owing to the large numbers of new immigrants possessing capital. Immigrants entering the country during the year numbered 34,641, a large percentage of whom were possessed of considerable means, which were deposited in the banks, thereby facilitating the granting of credits. During the first part of the year the rate of interest on loans reached the lowest figure since the British occupation. Some 6,000 building permits were issued by municipalities, and a sum exceeding £E2,000,000 was invested in buildings during 1925 in order to provide housing accommodation for the new settlers. The principal centre for this activity was Tel-Aviv, where over 70 per cent. of the total amount spent in building operations was invested.

The requirements of the country, particularly in foodstuffs, clothing, and machinery, increased considerably, especially as the cereal season of 1925 was a poor one owing to drought. As a result of the increased demand traders indulged in speculative purchases abroad, particularly in the building and allied trades. The immobilisation of capital in extensive building operations and land purchases, coupled with speculative purchases abroad, caused a shortage of capital towards the end of the year which led to a restriction of credit. This synchronised with a decline in the building activity and resulted in a depression in trade which still continues (October, 1926). A number of bankruptcies occurred, but the total liabilities were relatively small. These failures were due principally to keen competition and the unsound basis on which certain traders were working. The urban population of the country, particularly that of Tel-Aviv, is suffering most from the present depression.

With a cautious policy on the part of the banks, the cessation of land speculation, and the restriction of orders by traders, it is anticipated that the trade depression will be only temporary.

The adverse balance of trade is accounted for by the following invisible items:—Tourist traffic, expenditure of Zionist funds, religious and relief missions, immigrants' capital, re-exports to Trans-Jordan and Syria, and investments and remittances from abroad. Though the balance of trade is not satisfactory, it is not alarming.

Modern methods of business are progressing rapidly, and though 35 to 45 per cent. of the trade is still in the hands of commission agents or small merchants, direct connexions with foreign firms are increasing. A relatively large number of partnerships engaged in all branches of trade were registered in 1925. Twelve foreign and 27 Palestinian companies were registered during the year, as compared with 13 and 29 companies respectively registered during 1924. The Palestinian companies represent a capital of £E255,675.

A number of chambers of commerce are functioning in the principal cities. The Jerusalem Chamber is composed of members from all nationalities, whereas those at Jaffa and Haifa are divided into Jewish and Arab chambers. There are also a number of traders' associations at the smaller towns of Hebron, Gaza, Acre, Nazareth, etc. The principal chambers are in constant touch with the Government on questions connected with the promotion of trade in general.

The increase in the imports during 1925 as compared with 1924, amounting to the sum of £E2,078,576, was chiefly in cereals, foodstuffs, wood and timber, cement, cotton, and woollen tissues, motor cars, benzine and kerosene. The principal decreases were in sugar, tombac, iron bars, girders, plates and sheets. The countries which contributed chiefly to the increase in imports in 1925 were, in order of importance, Germany, France, Austria, United States of America, Italy, Roumania, Syria, the United Kingdom, India, Australia, and Egypt. The percentage of goods imported from the principal foreign countries during 1925 was as follows:—United Kingdom, 14.50 per cent.; Syria, 14.50 per cent.; Germany, 12.50 per cent.; U.S.A., 9.50 per cent.; France, 7.50 per cent.; Egypt, 5.50 per cent.; Italy, 5 per cent.; Roumania, 4.50 per cent.

Although the increase in the value of imports from the United Kingdom in 1925 is not substantial in comparison with other countries, the United Kingdom trade still holds the first place in the list of countries exporting to Palestine. The principal articles imported from the United Kingdom are cotton piece-goods, yarns of all kinds, woollen tissues, and under garments. The total imports from other parts of the British Empire increased from £E351,940 in 1924 to £E583,550 in 1925, and was due to increased imports from India and Australia, consisting of wheat flour, wheat and rice.

Foreign Competition.

Syria ranks second in the list of countries exporting goods to Palestine. Goods purchased in Syria are not all of Syrian origin, and many foreign goods which have undergone a slight process of manufacture in that country are classified as Syrian goods. Animals, foodstuffs, furniture, brass and copper manufactures, olive oil, apparel, bullion and specie are imported from Syria.

Germany holds the third place. The principal articles imported from Germany are machinery, iron and steel goods of all kinds, cement, paper and cardboard. Imports from that country increased in 1925 by £E370,757.

The United States of America is fourth in the list. Imports thence increased by £E280,458. The chief articles imported in 1925 were wheat, flour, motor cars, kerosene, benzine, mineral lubricating oils, tyres and glucose.

France, which comes fifth in the list of the countries of supply, has increased her trade by £E244,099. The principal articles imported from that country are silk cloths and mixed silk textiles, wheat flour, potatoes, drugs and hosiery.

Small merchants frequently visit the Egyptian market and obtain their requirements of foreign goods from wholesale dealers in that country. The trade transactions between Palestine and Egypt are far more important than the statistics show, as only goods of Egyptian origin are included in the figure given for the total imports from this country. The rest of the goods bought in Egypt being

classified under their respective country of origin. The principal articles of Egyptian origin imported into Palestine are rice, sole leather, vegetables, sugar, cigarettes and wearing apparel.

From the figures given below it will be observed that the textiles imported into Palestine are chiefly of British origin. Competition, particularly from Italy, has increased considerably, but not to such an extent as to challenge the United Kingdom in the supply of these goods. The following figures show the value of the various textiles imported and the principal sources of supply:—Cotton piece-goods — United Kingdom £E265,281, Italy £E135,508, France £E48,277, other countries, £E223,437; total, £E672,503. Woollen tissues wholly of wool or mixed:—United Kingdom £E47,490; France £E44,937; Italy, £E10,920; other countries, £E26,876; total, £E130,223.

With regard to machinery (excluding electrical machinery), Germany holds the premier position, the United Kingdom takes the second place, and the United States of America the third, as shown below:—Germany, £E108,119; United Kingdom, £E38,980; United States of America £E30,940; other countries £E53,583; total, £E231,622.

Exports from Palestine of local produce increased during 1925 by £E96,747 over the previous year. The principal articles responsible for this increase were oranges, water melons, laundry soap, leaf tobacco, durrh and almonds. The principal decreases in the exports of the year were in cereals, wine, grapes, hides and skins. The principal countries purchasing Palestinian produce are Egypt, the United Kingdom and Syria.

Agriculture.

Palestine is essentially an agricultural country, and it is only since the British occupation that industries have begun to develop. Before the War the manufacture of wine was the only industry existing on a large scale, and a few factories in Nablus and elsewhere made soap from olive oil by simple processes.

A considerable number of small industries manufacturing a large variety of goods, as well as a few factories on a large scale engaged in the manufacture of cement, soap, silk, leather, flour, silicate bricks and textiles have been founded by immigrants entering Palestine since the British occupation, and a total sum of over £E2,500,000 has been invested in these enterprises. Agriculture, however, continues to be the leading industry of the country.

During 1925 the country was largely dependent on imported food supplies, particularly foreign wheat, wheat flour, barley and slaughter stock. Though exports of these commodities during the previous years had been very important, imports during 1925 reached the total of £E312,682 for wheat flour, £E167,167 for wheat, £E69,712 for barley and £E128,065 for slaughter stock. This was due principally to unfavourable weather conditions and certain areas formerly planted with cereals being reserved for the cultivation of forage crops. In addition, the considerable number of immigrants entering the country during last year were responsible for a substantial increase in the imports of these commodities.

The orange trade, which forms the principal export of the country, is progressing favourably, and large areas approximating to 6,000 dunums, were planted during the year. The crop suffered from frost and drought and was slightly lower than in 1924, but the prices realised in the English markets were high owing to the failure of the Spanish crop. Cases of oranges to the number of 1,868,291, valued at £E551,463, were exported during 1925, of which 1,319,291 cases, value £E417,940, went to the United Kingdom, as against 1,880,783 cases, value £E460,350, in 1924.

The export of water melons and melons, chiefly to Egypt and Syria, has also increased, though prices realized were lower than in 1924. The value of melons exported in 1925 was £E128,447, as compared with £E106,375 for the previous year. Almonds had a better sale, exports amounting to £E32,070, as compared with £E27,098 in the previous year.

The value of wine exported was lower than that in 1924 by £E7,850. The industry is suffering from lack of sufficient markets and the strong competition of countries with a depreciated currency. Vine-growers are converting vineyards into orange groves, others are paying more attention to the production of table grapes. The production of wine and liquors as assessed in 1925 and 1924 were as follows:—

		1925. Kilos.	1925. Kilos.
Dry wine	...	1,035,523	830,838
Sweet wine	...	1,123,343	634,115
Arak	...	138,858	69,948
Cognac	...	34,356	40,905
Other liqueurs	...	13,183	6,974

The remarkable enthusiasm displayed for tobacco planting during 1924 resulted in the production of a crop largely in excess of local requirements. A large surplus caused an inevitable reaction, and the area planted with tobacco decreased from 27,137 dunums in 1924 to 11,676 dunums in 1925. This, however, may prove a blessing in disguise by ensuring the production of higher-grade tobacco leaf. The production of tobacco decreased from 1,845 tons in 1924 to 678 tons in 1925.

The introduction of new staples promising higher acreage results is being organized by the Department of Agriculture, selection being made of crops the production and preparation of which call for no considerable outlay on machinery and no special expenditure except for labour. Oil seeds, such as ground-nuts, linseed, sunflower and soya beans, and fibres such as cotton, flax and hemp, which find a ready market locally in oil and textile mills, soap factories, etc., are being encouraged. The past season was not favourable from a weather point of view, but good results were obtained at forest nurseries with ground-nuts, flax, and sunflowers, where a deficient rainfall was supplemented by irrigation. Banana cultivation is increasing. Subsidiary industries for the production of perfumes, medicinal barks, etc., have been established. Liquorice roots from the Jordan Valley are in good demand.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 9:—

Egyptian Future.—Sakel Contract.—The action of this market since we last wrote has rather justified the anticipations expressed by us in recent reports, as, despite every encouragement from the American markets, the tone has inclined decidedly to the heavy side, and prices, in spite of spasmodic upward movements, show little change from the level ruling at the time of our last circular. The factors responsible for the present tendency are the heavy stocks overhanging the market, the poor spinning quality of this year's crop, and the comparatively moderate participation by fine counts in the recent trade revival. In addition to the above, the Alexandria market has latterly given little support; rather to the contrary recent reports have revealed a decided weakness, and the fact that we are now approximately half-way through the season with so much cotton unsold is evidently discouraging holders, even in face of hardening values in other cottons. Near positions, both here and at the other side, are still under pressure, and we now find that in the local market the next active trade position, March, is the cheapest month on the board. Manchester reports continue to reveal an improving tendency, but, as mentioned previously, fine yarns do not seem to be moving off nearly as freely as other counts. Where sales have been effected the recent tendency to cover them by purchases of Sudan Sakels is still in evidence. With regard to the future course of the market, we do not anticipate much change; provided that American values register a further strong advance our market might show a reluctant following, but if this support is withheld values will probably show little change, or alternately commence to develop a reactionary tendency.

Upper Contract.—This option continues to suffer from lack of interest, but under the influence of appreciating American values and a satisfactory trade offtake prices have had a hardening tendency throughout the greater portion of the week. As there is no reason to anticipate any falling off in the trade demand, we still consider that the probabilities are for a further stiffening as the season advances, and on this account consider conservative purchases on any set-backs to be recommended.

Egyptian Spot.—A distinct broadening in the inquiry has been in evidence during the past week, but on the whole the resultant business has been rather disappointing as the turnover has only amounted to 1,200 bales. The main portion of the business transacted continues to be in the medium Upper qualities; scattered sales of Pilon have also taken place, but the Sakel offtake con-

tinues on a moderate scale, the exception being a demand from a certain quarter for export for really good staple cotton grading in the neighbourhood of Fine. Sudan Sakel continues to be in steady request, and the number of users of this variety is being consistently enlarged. Throughout the week, Manchester reports have shown a very satisfactory tone and c.i.f. business has been on an improved scale. Forwardings to spinners for the week ending February 4 show 6,714 bales Egyptian and 1,443 bales Sudan. Estimated sales 1,200 bales Egyptian and 1,600 bales Sudan. Quotations of all grades of Sakel are unchanged on the week, whilst all qualities of Uppers and Brown are advanced 20 points. Fully Good Fair Sakel to-day, 13.65d. Fully Good Fair Upper to-day, 10.30d.

Negotiations for a commercial treaty between Czecho-Slovakia and Greece will open in the course of the current month.

The production of wheat in Yugoslavia last year was about 1,950,000 tons, while the maize crop yielded 3,750,000 tons.

The production of crude by the British Burmah Petroleum Company and Rangoon Oil Company for January was 46,895 barrels.

The production of the Indo-Burma Oilfields for December was 2,280 barrels, being 1,097 barrels from Yenanna field and 1,183 barrels from Padaukpin field.

The Customs duty on raw silk imported into Syria coming from countries belonging to the League of Nations, the United States of America, and Turkey, has been reduced from 25 per cent. to 11 per cent. *ad valorem*.

A contract has been received by Messrs. Wm. Simons and Co., Ltd., for a powerful cutter and drag suction hopper dredger for the port of Chittagong. The dredger will be constructed under the direction of Messrs. Rendel, Palmer and Tritton, the consulting engineers for the Chittagong Port Trust.

NEWS FROM ALL SOURCES.

Yugoslavia produced about 38,000 tons of dried prunes in 1926.

The production of the Anglo-Egyptian Oilfields for the week ended February 4 was 3,167 tons.

During the third quarter of 1926 it is reported that approximately 120 passenger cars were purchased for Greece for use as taxicabs.

Messrs. Ransomes and Rapier, Ltd., Ipswich, have obtained a contract for a 5 ton steam travelling crane for the Bombay, Baroda and Central India Railway.

Mr. H. W. B. Schroeder (of Messrs. J. Henry Schroeder and Co.) has been appointed a director of the North British and Mercantile Insurance Company.

A party of 20 members of the Skupshtina arrived on February 13 in Prague to return the visit to Belgrade of Czech Parliamentarians last autumn.

Sir John Cadman, Chairman of the Anglo-Persian Oil Company, has been appointed a member of the board of the Suez Canal Company, in succession to the late Mr. Oswald Sanderson.

The authorities of the vilayet of Nigde, part of what used to be Cappadocia in Asia Minor, have declined to support the movement for prohibiting the wearing of the veil by Muslim women in Turkey.

The new bridge across the Nile at Dessuk, which has been constructed by Messrs. Dorman Long and Co., was officially opened on February 12.

The Rt. Hon. Josiah C. Wedgwood, P.C., M.P., is addressing the Anglo-Palestinian Club at Jews' College, Guildford Street, W.C.1, this evening (Thursday), at 8.30 p.m., on "Criticism of Zionism."

The contract for electro-pneumatic inter-locking at the Victoria Terminus, Bombay, of the Great Indian Peninsula Railway, has been obtained by Messrs. Saxby and Farmer (India), Ltd., who are associated with the Westinghouse Brake and Saxby Signal Co.

It is reported that a company is being formed under the title of the Yugoslavia Steamship Company to inaugurate a service from Yugoslav ports to South America. It is understood that tonnage is being purchased from the Hamburg-Amerika Line and that that concern will be actively interested in the company.

The directors of the Manchester Ship Canal Company have decided to recommend at the meeting to be held on February 23 a dividend of 3½ per cent. on the Manchester Ship Canal Corporation Preference stock, 5 per cent. on the Preference shares and 5 per cent. on the Ordinary shares. After placing £80,000 to reserve for contingencies and repairs a balance of £31,346 will be carried forward.

Sir Edward Manville, Chairman of the Phoenix Oil and Transport Company, replying at the second annual dinner of the Oil Industries Club at the Trocadero Restaurant last week to the toast, "The Oil Industry," said he thought the people of this country owed a debt of gratitude to the pioneers and sportsmen who, 25 years or more ago, realised what the position of this country might be if we did not have powerful influence in the production of oil. He did not think it was going too far to say that Great Britain would be in the forefront of the oil industry, for while she was not producing in the various parts of the world to the extent of others, she was at least reserving oil lands which would almost certainly in the future put her in the forefront of oil production.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Chemical Manure, Bags, Sacks, Etc.—The Egyptian Ministry of Agriculture are inviting tenders for the supply of the following goods required during 1927-28:—(a) Nitrate of soda; (b) nitrate of lime; (c) sulphate of ammonia; (d) superphosphate of lime; (e) new bags for bagging the nitrate of soda; (f) new sacks for sacking cotton seed (Tagawi); (g) twine (coloured blue); (h) pieces of tin for sealing. March 21. (D.O.T.) In the case of certain quantities of nitrate of soda required the latest date for the receipt of tenders is June 7.

Paints, Etc.—The Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of the following goods required during the year 1927-28:—(a) Paints, oils, soap, tallow, tar, etc.; (b) bunting, ropes, canvas, hose, etc.; (c) general stores (including firebricks, fireclay, caustic and crystal soda, brushes and brooms, insulators, electric wire, files, hacksaw blades, emery cloth, glue, brass polishing paste, etc.). March 15. (D.O.T.)

ROUMANIA.

Hemp Postal Sacks.—The General Post Office invites tenders for the supply and delivery of the following quantities of hemp postal sacks:—4,000 sacks, size 0.75 met. x 1.30 m.; 3,000 sacks, size 0.65 met. x 1.10 m.; 3,000 sacks, size 0.45 met. x 0.80 m. March 18. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, February 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakand for Port Said, Colombo, and Calcutta (Birkenhead, February 19).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, February 23).

British India Line.—S.s. Margha for Bombay and Karachi (London, February 26); s.s. Matiana for Colombo, Madras, and Calcutta (London, February 26).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also Corfu and Ancona if inducement (Liverpool, February 19, Swansea February 22); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow and Swansea, March 5).

Johnston Line.—S.s. Jessmore for Galatz and Braila (Liverpool, February 17); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 12).

P. and O. Line.—S.s. Ranchi for Bombay (London, March 4); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 18); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, March 9).

Ellerman and Papayanni Lines.—S.s. Andalusian for Algiers, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool February 19, Swansea February 19); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 23); s.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 2); s.s. Manchurian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool March 5, Swansea March 8); s.s. Algerian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 16); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 21). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(Continued from page 195.)

12½ per cent. for 1923-24, and 10 per cent. for 1924-25 and 1925-26. There are evidently expectations of a not distant return to more generous dividends, for the ordinary shares yield only £5 6s. per cent. John Hetherington paid 7 per cent. for 1923-24, and 5 per cent. for 1924-25, and the ordinary shares return £5 14s. per cent. Platt Bros. and Howard and Bullough are likely to be first to recover a larger measure of prosperity, for they occupy a stronger financial position.

ANCHOR LINE

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 15.

The negotiation of the fortnightly settlement did not prevent the Stock Exchange from exhibiting marked strength in one or two sections all the week and in general on one or two days. The opening of Parliament, the King's Speech, and the debates on China have produced little visible effect, and on the whole China as a factor in market calculations is not so prominent as it was. The principal interest has centred on the Railway dividend cuts, which are discussed below; the further postponement of a reduction of Bank rate caused little disappointment because it was expected by a majority; and apart from these points, the most notable event has been the strong and sustained upward movement in oil shares.

The discussion of monetary policy, aroused by Mr. McKenna's speech at the Midland Bank meeting, has by no means died down. Although his attack upon the Bank of England is far from commanding universal approval, both opponents and supporters of the attack agree that, the subject being of such vital importance to the nation, the Government would do well to adopt his suggestion that a Committee should be appointed to review, in the light of recent events, the whole problem of monetary policy. This, however, is not to be done at present.

Home Railway Dividends.

Three of the four great British railway companies have made their dividend declarations this week. Very much more than the normal interest attached to these announcements, as the market had made no attempt to forecast the rates, since none of the companies was likely to have earned anything upon the junior stocks. It may be recalled that the gross traffic receipts of the four companies for 1926 showed the following declines in comparison with 1925: London, Midland and Scottish, £11.4 millions; London and North Eastern, £9.8 millions; Great Western, £4.7 millions; Southern, £1.8 millions. Obviously the rates of dividend had to depend on the extent to which reserves would be drawn upon. The directors of the London, Midland and Scottish have declared a final dividend of $1\frac{1}{2}$ per cent. on the ordinary stock, making 3 per cent. for the year, a sum of £7,188,000 being withdrawn from reserve to pay the dividend, while, in order to clear

up the position resulting from the coal strike, a further sum of £1,700,000 has been transferred from general reserve against the losses to be met this year in respect of foreign coal commitments entered into last year. The dividend for 1925 was 6 per cent., the withdrawal from reserve being £1,626,000. The Great Western dividend for 1926 is 3 per cent. on the ordinary stock after withdrawing £2,100,000 from reserves; for 1925 the dividend was 7 per cent. and £800,000 was withdrawn from reserve. The dividend on Southern deferred ordinary stock is at the rate of $1\frac{1}{4}$ per cent., after withdrawing £704,000 from reserve, and bringing in £128,000 from Suspense Account. For 1925 the rate was $3\frac{1}{2}$ per cent. and only £200,000 was withdrawn from reserve. The London and North Eastern announcement is not due until next Friday. The usual interim distribution at the rate of 5 per cent. per annum on the preferred ordinary stock was not made last midsummer and as only one per cent. was paid on the deferred ordinary for 1925, after withdrawing £4 millions from reserves, there is no likelihood of any payment on the deferred for 1926. Nor is the preferred ordinary likely to receive its full 5 per cent.

A Brighter Outlook.

Disappointing as are the results disclosed by the announcements so far made, they had but small effect upon prices in the home railway market. The payment of 3 per cent. by the L.M.S. and Great Western companies on their ordinary stocks enables the prior stocks of these two companies to retain their "trustee" status. Reductions in the rate of dividend had been partly discounted in advance, but not to the full extent, for at the present quotations the yields obtainable are absurdly small. This is, of course, explained by the fact that earnings in 1927, barring some unforeseen catastrophe, should at least equal those of 1925 and enable the companies to pay substantially higher rates than those now declared. Traffic receipts for the first five weeks of the year are mostly slightly below those of the corresponding period of 1926, though better than in the same period of 1925, and it is encouraging to find that goods receipts are, in three cases out of four, higher than in the first five weeks of 1926. There is no cause for alarm on the part of the holder of home railway stocks. The outlook, indeed, at present is fairly encouraging, for with industrial peace and reviving trade, and the recent small increase in freight charges, traffics should expand, while the economies for which the companies have been striving for the past four years will no doubt become more effective.

Improving Outlook for Textile Machinists.

Since the beginning of the New Year there has been a distinct improvement in the cotton trade. Buying has been on an appreciably larger scale and there is a much more hopeful feeling regarding the future than for a long time past. In particular, there is a more definite inquiry for textile machinery. After five and a half years of industrial depression, machinery—by no means new when the slump began—badly needs replacing. Moreover, if foreign competition in textiles is a source of anxiety to the Lancashire manufacturer and merchant, it is not entirely unwelcome to the Lancashire textile machinist, who often receives large orders for textile machinery for foreign mills.

The leading firms of textile machinists have, of course, felt the effects of the depression ruling in late years. But so far as Platt Bros., Howard and Bullough, Ltd., and John Hetherington and Sons are concerned, the ordinary shareholders have received a distribution during the past few years. What effect the coal stoppage has had, however, remains to be seen. Platt Bros. is the largest of the group. The ordinary dividends have been 15 per cent. for 1923-24 and 10 per cent. for 1924-25 and 1925-26, and the ordinary shares give a return of £6 10s. per cent. Howard and Bullough have paid 20 per cent. for 1922-23,

Near East Markets

GOOD WINTER SOWINGS IN IRAQ.

The Agricultural Bulletin of Iraq for the month ended January 15, states:—

The sowing of winter cereals continued at a great pace with the continued rainfall and it is believed that more than average areas have been sown throughout the country. Particularly is this so in the case of daim or rain-fed wheat, and daim sowings have been made in more southerly districts where the practice is not general. Towards the end of December, the weather became suddenly dryer and colder, and during the first half of January sowings were largely stopped. The colder temperatures had an adverse effect on the early sown cereals which had made too rank a growth, but it is not considered that the permanent effect of this will be serious.

Irrigation water was reported as plentiful in all regions, but it was not until the end of the period under report that any irrigations were required. Owing to early rains the desert grazing is plentiful, and live-stock is reported to be in better than average condition. Lambing has been general during the period under report, and is believed to have been more than usually good, mortality being low.

The last picking of cotton were taken in December. Heavy losses to cultivators of this crop were caused by the unusual autumn rains, and the quality of later picking is naturally poor. The amount of new season cotton delivered to the ginnery during the calendar year amounted to 2,863 bales of lint, as compared with 2,169 bales for the same period last year, and 2,540 bales for the total 1925 season crop. Some cotton remains to be delivered and it is expected that the total crop for 1926 will be at least 3,000 bales.

Preparations for the anti-locust campaign are being pushed forward. Temporary inspectors have been appointed throughout the infested areas, and material is being dumped in suitable sites. Much anxiety has been felt on account of the non-delivery of poisons from England (due to manufacturers' difficulties consequent on the coal strike), but it is now hoped that the bulk of the material will arrive in time. Locusts which were reported to be feeding into the late autumn and to be damaging maize crops have been identified as *Locusta Migratoria*. This is the true migratory locust, but so far as observations go it does not seem to have arrived to serious pest conditions, and indeed seems to have modified its habits to non-migratory type.

Orders of silk eggs are beginning to be received by the Department. The rearing of silk continues to show steady progress. The value of the 1926 crop was estimated at Rs. 35,000 as against Rs. 11,500 in 1925; in

view of the fact that a continued increase at this rate would eventually glut the local market, the Department has this year, at the suggestion and with the assistance of the Silk Committee of the Imperial Institute, forwarded a consignment of cocoons to the Cyprus silk Filature. It is hoped to estimate in this way the feasibility of an export trade in cocoons, pending the growth of the industry to dimensions where a local filature would be economically possible.

Agricultural exports figures for December were as follows:—Wheat 38 tons, barley 1,331 tons, total 1,369 tons as compared with a total of 33 tons during the same period last year. Dates amounted to 4,123 tons valued at Rs. 7,51,524 as compared with 8,990 tons valued at Rs. 11,66,913 for December, 1925. Exports of wool for the month were 676 tons against 751 tons last year.

The exports for 1925-1926 amount in all to the following:—Wheat, 188 tons; barley, 1,339 tons; wool, 9,844 tons; dates, 151,020 tons. The new season's crop of dates amounted to an export of 72,245 tons at the close of December.

CONDITIONS IN EGYPT, THE SUDAN, AND PALESTINE,

The current issue of the Monthly Review of Barclays Bank contains a series of quarterly reports on Near Eastern countries, from which we give the following extracts:—

Egypt,

Alexandria.—January 15. Cotton.—The salient features in the situation during the period under review have been steadily increasing crop estimates, with their depressing influence on prices and two measures of Government intervention. It was ordered officially that the acreage upon which cotton might be grown was to be limited, for three years, to one-third of the total under cultivation and the Government announced that they were prepared to purchase all January (Sakellarides) contracts at 23.50 dollars and all February (Ashmouni) contracts at 15.50 dollars, delivery to be insisted upon. The Government also stated that they were prepared to advance upon cotton held in the interior at the rate of 22.50 dollars per kantar for Sakellarides and 15.00 dollars for Uppers. This latter measure had the immediate result of easing the position for the fellahen and, indirectly, for the merchants dependent on the money circulated by them.

The effect of both these ordinances upon the general cotton market, however, does not appear to have been entirely beneficial. It is reported that although the price of Sakellarides contracts is 1.50 dollars above the Government minimum, the twin factors of a piling up of stocks and a falling off in demand render that price liable to a further drop at any moment. Should such a fall occur, it must add to the already large Government stocks at Minet-el-Bassal and in the interior. This precarious position would appear to be felt more by dealers in Sakellarides cotton than in Ashmouni, since the latter is closely allied with the American position, which has recently been firm. A good deal of Zagora and Pilon cotton are tenderable against the Ashmouni contract, but these descriptions are not in great favour and may eventually depress prices. It is suggested, on the facts now available, that the lack of demand for Egyptian Sakellarides is due to a fall from favour of this type and it is stated that Sudan Sakellarides, Peruvian Tanguis, and Brazilians are replacing it. In some quarters, the artificial price support afforded by Government intervention and by the limitation of acreage is held to be responsible for buyers going elsewhere. Taking a view of the situation generally, the spot market is heavy for all varieties except Ashmouni, and with the stocks increasing, a steady demand will be required from now onwards to relieve the pressure.

Cotton Goods.—The keen competition of Italian and Japanese goods and the large number of small holders pressing sales at very low prices, have been the two principal factors depressing this market during the period under review. At the time of writing, the general situation remains unchanged, and there seems to be no visible prospect of an improvement. Prices continue weak and the actual stock at the bonded stores shows practically no reduction, as compared with the stock in October last. Consuming districts are buying only for immediate requirements and are evidently expecting lower prices.

The Sudan,

Khartoum.—January 13.—The situation has shown gradual improvement during the last three months. Stocks of dura have been found to be greater than was estimated and it is confidently expected that they will suffice for the country's needs without further imports. The 18,000 tons imported from India cost about £180,000, while the absence of the usual exportable surplus, which may be reckoned

for an average year at 30,000 tons, represents a loss of about £E150,000. Against this, however, must be reckoned the increased cotton cultivation in the Gezira. Imports compare favourably with 1925, but reports from the interior show a slack demand and general absence of money and, in many parts, the natives are in an impoverished condition. If rains are good this year, it is thought that considerable improvement may be expected generally.

The sesame crop is normal and there are steady exports to Egypt, but groundnuts are only about 40 per cent. of last year's crop. Rain-grown cotton in the Blue Nile Province and the Northern rainbelt has been almost a total failure and the price is so low that, from the Southern provinces, it can scarcely repay the cost of ginning and transport. The Gezira scheme now covers an area of 100,000 feddans of cotton planted, the estimated yield being 400,000 kantars. The total crop from the Sudan is estimated at 120,000 bales of Sakel and 22,000 bales of American, all bales being of 400 lb. each.

The financial position generally is not good and considerable stringency prevails, but although, on the whole, the situation is depressed without any prospect of a material improvement in the near future, it is felt in most quarters that the worst is over and that there is certainly no cause for alarm.

Palestine.

Jerusalem, January 19.—The general financial and economic conditions during the last quarter have shown restrictive tendencies.

Picking and packing of oranges are at present in full operation, and it is hoped that a good orange season will ease the general situation to a certain extent. The yield is estimated at two-and-a-half million cases, valued at approximately £E750,000, the crop being from 30 per cent. to 40 per cent. heavier than last year. Heavy storms and violent winds, however, during the middle of December,

caused considerable damage, and the loss is estimated at about 10 per cent. of the whole crop. The market for Jaffa oranges in England has greatly improved lately, owing, it is understood, to the frost having damaged a large portion of the Spanish crops.

This season's tobacco crop is still on the strings. The market is inactive, there being few purchasers, and growers are considering the advisability of destroying unsold stocks carried forward from last year. It is estimated that this season's yield will amount to 555 tons, of which 500 tons will be Turkish and 50 local "Baladi." Important quantities of Palestine grown tobacco were exported to various European countries during November.

Imports of motor cars continue to increase. American manufacturers are devoting considerable attention to the Palestine market, and arrangements have lately been introduced whereby local agents are now allowed to cover their sales by bills instead of ready cash. It is thought that at the present time, there is a very good opening for the sale of British cars to British officials and others who prefer that make of car, provided sufficient attention is given to the requirements of the market. The sale of British motor cycles continues to show steady improvement.

Messrs. Edgar Allen and Sons, Ltd., Sheffield, have obtained a contract for the supply of crushing and grinding machinery to the order of the Crown Agents for the Colonies.

The monthly meeting of the Council of the British Cotton Growing Association was held at the offices, 333/350, Royal Exchange, Manchester, on February 1. In the absence of the President (the Rt. Hon. the Earl of Derby, K.G.), Mr. J. M. Thomas occupied the chair.

Notes of the Week.

Peace Pacts in the Balkans.

If any uneasiness still lingers among Albania's neighbours in regard to the innocuousness of her treaty with Italy, it should be largely removed by the step now taken by the Tirana Government in Belgrade and Athens. Both to Yugoslavia and to Greece, it is reported, Albania offers to conclude a territorial guarantee pact similar to the Italo-Albanian Treaty. It is unlikely that the offer will be refused in either case; and, although the value of such agreements, which do little more than register the absence of hostile intentions, is for the most part negative, in the present instances they may go far towards reassuring the Balkan States in regard to Italy. At the time of the Tirana Treaty the Italian Government sought to disarm criticism by stating that it had no objection to Albania's concluding similar agreements with her Balkan neighbours. Italy's foreign policy at the present has, admittedly, to keep in mind both economic and territorial considerations. In the Balkans, however, her interests should be exclusively economic, as she stands to gain little on the balance if, for the sake of potential territorial expansion in Albania, she were to close all other Balkan markets to her traders. In the meantime Yugoslavia and Greece may hope to benefit in the economic sphere by the maintenance of good relations with Albania.

Earthquakes in Yugoslavia.

With extensive floods last year and now with a serious earthquake Yugoslavia may well complain that her already hard task of reconstruction is being unfairly hampered by these disastrous visitations. The centre of the earthquake which caused considerable damage in the early morning of February 14, and has been followed by repeated tremblings of the earth, was in lower Dalmatia and Herzegovina, in the region between Mostar and the sea. The loss of life has fortunately not proved as serious as

was at first supposed; the damage to property would also have been greater, if the area visited by the earthquake had not been largely in the Karst district, where there is less to destroy and where the peasants' dwellings are often rock caves. As it was, the towns in the region affected suffered badly—Liubinye, Stolatz, Metkovitch and Bukovici—and it is stated that approximately a thousand houses have been entirely or partially destroyed, and many other buildings left in an unsafe condition. As often happens in an extensive earthquake, water channels have been subjected to curious experiences; some have dried up altogether, others have been reduced in volume, and one stream that flowed some twelve miles from Stolatz disappeared entirely, to re-appear the following day at a distance of three kilometres from its original channel. A railway bridge over the Narenta at Metkovitch has been destroyed, and the railway station at the same town was also wrecked. Immediate relief is being sent to the damaged areas, and, as happened in the case of the floods last year, there will be ready co-operation throughout the Kingdom in repairing the effects of the disaster. Dalmatia forms Yugoslavia's chief holiday centre, especially for visitors from Central Europe, and it was a wise precaution on the Prime Minister's part to urge the Skupshtina to avoid panic legislation, and to await full details before voting money intended to repair actual damage as distinct from affording immediate relief to the sufferers.

Yugoslavia and Czecho-Slovakia.

The exchange of visits between parliamentary delegates of Czecho-Slovakia and Yugoslavia has naturally led to the emphasising of the cultural kinship of these two branches of the Southern Slavs and many schemes have been evolved for bringing the two peoples closer together.

by extending this interchange of visits to as many classes of the population in each country as possible. The more immediate problem for the two States, however, is to adjust their economic and political relations. Czecho-Slovakia is largely an industrial country exporting manufactured goods and importing raw material; Yugoslavia, on the other hand, is an agricultural State which stands in growing need of markets for her increasing agricultural production. Post-War conditions have caused the Yugoslavs to place a heavy tariff on imported goods, while Czecho-Slovakia, in order to encourage her own agriculture, has recently increased the import duties on agricultural products. In these circumstances there is clearly room for the two countries to come together for an adjustment of a mutually prejudicial state of affairs. In many other details the relations between the two States can be simplified, as, for instance, in regard to railway tariffs, traffic on the Danube, passports and postal and telegraphic communications. Yugoslavia, moreover, would like to secure Czecho-Slovakia as a regular purchaser of her tobacco on a definite footing, with a view to regulating her production of tobacco by the amount that she is able to sell. Amid the social amenities that are being lavished in Prague on the Yugoslav delegates the ground for an agreement on outstanding questions is being prepared, and a Czecho-Slovak delegation is expected in Belgrade before the end of the month to begin negotiations for a new commercial treaty between the two countries.

Mandates and the League.

An interesting point was raised last week in the House of Commons in connexion with the status of mandated territories. The Governor of Tanganyika had stated in a speech that Tanganyika was part of the British Empire and would remain so. Questioned on the subject the Secretary of State for the Colonies (and Mandated Territories) replied that the phrase was a colloquial summary of the exact position as defined in the preceding part of the Governor's statement, where "he rightly laid down that Tanganyika was mandated territory under British control, and there was no possibility of its passing from that control." Asked whether he was aware that Mandates were allotted by the League of Nations, which could also take them away, Mr. L. S. Amery replied: "That is precisely not the case. The Territories were allotted by the Allied and Associated Powers, and the Mandates are obligations which we have undertaken towards the League of Nations. They are in no sense a form of tenure which

is held by us from the League of Nations, and the League of Nations is not in a position to transfer them or take them away." As it was obvious from the question that elicited this answer, the position in regard to the Mandated Territories is not generally understood, and it is well that it should have been so clearly explained by the spokesman of the British Government.

The Sinai Peninsula.

The unhappy experience last week of Captain Malins and Mr. Oliver, the British motor-cyclists who are on a tour round the world, is being held up in the Sinai Peninsula for five days, gives point to the discussions that one hears from time to time upon the future of this barren land. The way from Palestine to Suez runs from Beersheba along the old Turkish railway (since destroyed) which had been built almost as far as Al Kossaima, in preparation for the attack on the Suez Canal during the Great War. The route goes through Asluj, Al Auja (where the old Turkish barracks are said to be still standing) and Al Kossaima itself, where the frontier authorities are. This much of the way between Beersheba and Suez is, from the point of view of desert travel, more or less ordinary. But from Bir al Hassana the drift sand is stated to be almost impossible for anything but a powerful motor car. At Nakhl, which is a little nearer Egypt, and which was well known to British soldiers during the War, there is an army rest house; and it is after leaving this place that the motorist encounters the mixture of sandy plain with the flint from volcanoes which constitutes so considerable a part of barren Sinai. It is not surprising that the two adventurers on motor-bicycles should have met with ill-fortune. But it seems hardly probable that there are any commercial possibilities in the route which these two British cyclists have chosen as the beginning of their world tour. Nor does there appear to be any need, on strategical grounds, for any anxiety upon Sinai's future ownership.

Imperial Service.

In the Earl Grey Memorial Lecture which the Bishop of Durham delivered last week in Armstrong College, Newcastle-on-Tyne, upon "The Ethics of Empire," the remark was made that "the English in India have erred less from mistaken policy than from lack of imagination. In their anxiety to propitiate native sentiment they had sometimes failed to understand the idiosyncrasy of the East." Dr. Henson went on to quote Sir Michael O'Dwyer as having said that "religion is the one thing which the people of the East take seriously," and he stated that "the British Government had silently exchanged religious toleration for religious neutrality." This dictum undoubtedly has force: there is a tendency on the part of the British Government occasionally to be neutral in the East. Sir Arnold Wilson recently reminded the Royal Geographical Society that Christian culture in the East has been of incalculable value, not only in the world sense, but, he implied, in the Imperial sense also. The importance of the right direction of affairs in the undeveloped East, through the medium of one personality, is, indeed, tremendous, and it is an axiom that this direction is best achieved when it is in the hands of a man who represents the finest not only of the English race, but also of the English religion. One may mention Syria as a striking example of a country in which the head of affairs, in the person of General Sarrail, neglected the advantage which his predecessors had given him in this regard. This High Commissioner, while flouting the Catholics of the Lebanon and Syria, by no means succeeded in gaining the respect of the Catholics' religious enemies in the country. The old maxim of "service" can no doubt be abused, but in its highest sense it must forever be the watchword of British policy, especially among those people whose destiny has been undertaken as a "sacred trust" of civilisation.

THE PREOCCUPATION OF EGYPT.

Whether the political map of the world has been changed to a greater extent and more lastingly by design or by chance is a question for historians to determine; but it is certain that there will always be those who scheme to redraw it. Apart from minor essays in a necessarily limited space in Arabia, contemporary opinion would have been inclined, until a few weeks ago, to attribute rightly or wrongly intentions in this direction to Signor Mussolini alone. Now, however, a new competitor has appeared in the ranks of the British Labour Party in the person of Colonel Josiah Wedgwood, who would seem to have decided that in the case of Egypt a redrawing of the map of the world is necessary, without having quite made up his mind in what colour that country had better be painted. It is true that the leader of the Labour Party has hastened to deny that Colonel Wedgwood's views have the Party's official sanction; but it is not likely that this disavowal will detract from the attention that is being given to the views by Egyptians themselves. A brief visit to Egypt four months ago has made the Labour ex-Minister gravely dissatisfied with conditions in that country. He starts from the premise that "British statesmen are tired of the problem of Egypt . . . it has not been one of our successes. . . . The Egyptian statesmen and patriots look on England as the oppressor . . . our trade benefits in no sort of way from our protection of Egypt," and on these grounds he advocates a change. His policy, however, is not one of incontinent scuttle; the Labour Party—at least officially while Mr. Ramsay MacDonald leads it—has no Little England traditions to live up to at all costs, and Colonel Wedgwood is out to promote the interests of the British Empire. He holds, as far as any clear policy emerges from his writings, that those interests would be best promoted by Great Britain's withdrawing from a thankless and, in his opinion, unsuccessfully performed, task; Italy, he realises, would at once step into British shoes in Egypt, and it would probably be better for Egypt, and for British trade, if she did. Great Britain should safeguard herself in relation to the Suez Canal by arranging for the transfer of Sinai Peninsula to Palestine, in order that British troops, withdrawn from Cairo, might be stationed at Port Fuad for the protection of the Canal, and she would at the same time regularize her single hold on the Sudan by friendly arrangement with Egypt. Colonel Wedgwood recognizes that there is "only one objection" to his scheme; Egyptian statesmen told him that they prefer British to Italian protection. He is tempted to attribute the remark to the natural politeness of the Orient; but he is prepared to pay to it the deference entailed in propounding an alternative proposal:—If Egypt wants British protection, she must pay for it; and his ideas hover between a purely business transaction for cash and an Egyptian "Dominion" within the British Empire. In the latter case the *quid pro quo* from Egypt would follow the policy adopted by Australia and the other Dominions, of trade preference, contributions to the Navy and similar forms of assistance.

It is true that the last Imperial Conference laid the

foundation of profound changes in the constitution of the British Empire; but, while these changes may be very real to Britons and may even have impressed General Herzog, it is doubtful whether their significance is capable of being fully appreciated by peoples outside the Empire. Earlier in his article in the *Contemporary Review* Colonel Wedgwood recognised that "Egypt does not want to come into the British Empire," and it may be doubted whether the attraction of a more tangible form of protection, which might give the British Empire advantages in Egyptian eyes over the League of Nations, would outweigh the risk of having to be content with what outwardly appears to be a reduced measure of independence. If this should prove to be the case, the result of the change proposed would be to convert Great Britain into a mercenary world-policeman, who would be expected not only to justify the payments received by the concrete services rendered, but also to adjust the bargain from time to time by what might be considered or alleged to be the market rate for the measure of protection provided.

In the circumstances, the first point to be considered would seem to be whether the game is worth the candle. It may be true that British statesmen at one time or another have been "tired" of the problem of Egypt; but it is by no means an axiom that they ought, on that account, to use their tiredness as an excuse for bad or useless bargains. Colonel Wedgwood was in Egypt at a moment when a new stage in Anglo-Egyptian relations was being reached. The manifest attractions of an independence that in the first flush of novel sensations seemed to raise Egypt to the level of the great nations have given place to a shrewd weighing of the chances that Egypt, situated in one of the key positions of the earth, might have of retaining that independence unaided against a thrustful and covetous people. The situation clearly calls for the careful consideration that the Egyptian people are now giving it. Enter at this precise moment Colonel Wedgwood, whom a cursory glance convinces that Egypt is the Sick Man of Africa and that it will never do for Great Britain to be in attendance up to the moment of death. The condition of the fellaheen, it is true, is serious as a result of the slump in cotton and the general economic condition of the world; since 1922 some valuable years have been lost in barren strife; the genius of the people has been directed towards the baiting of Great Britain instead of to the advancement of Egypt's interests; Nile regulation works have been delayed, because it was hoped first to browbeat the British out of the Sudan, where the barrages must be built, regardless of the fact that the complete irrigation programme entails further training-works at the Lakes, which can never be in Egyptian hands. Yet there is no reason for extreme pessimism in regard to Egypt or to Anglo-Egyptian relations. The hostility displayed by the Wafd has abated, in its cruder form, and Egypt appears to be approaching an attitude towards Great Britain which it has been the aim of the latter for the last four or five years to cultivate. Time must be given for the new relationship to bear fruit. At this particular moment there can be no need for the drastic measures proposed: that Great Britain should "cut her losses," or that Egypt should subscribe to the revival of the Roman Empire. In theory it is a sound principle that a nation should have a definite policy; but a definite policy does not necessarily imply a cut-and-dried programme for all time. British policy in regard to Egypt has been laid down in the desire to assist her in making a success of her independence. Up to the present circumstances for which Great Britain is not responsible have prevented that independence from being properly rounded off, and the stage of assistance has not been reached. Now that the Egyptians have realised that the indefinite prolongation of the present make-shift arrangement is a mistake, there is a chance of the two countries coming together at last with a view to terminating it.

Cairo, February 13.

The Dessouk Bridge.

The new railway bridge at Dessouk, whose recent completion by Messrs. Dorman Long and Co., within the contract time of twelve months, despite the difficulties caused by last year's strikes in Great Britain, has been one of the best advertisements that British industry has had in Egypt for many a long day, was officially opened yesterday. Mohammed Mahmoud Pasha, Minister of Communications, who performed the ceremony, made an excellent little speech which was very much approved by his hearers, especially the British element amongst them. The old bridge, he said, took four years to build, from 1894 to 1898. When the old structure became inadequate for the increasing weight of engines and rolling stock used by the Egyptian State Railways, tenders for a new bridge were invited. Messrs. Dorman, Long and Co., undertook to do the work in twelve months; the next best offer, in point of time, specified two years. The British tender was accepted and, in spite of the difficulties encountered by the British steel industry last year, the contract had been kept. It was a feat on which he heartily congratulated Messrs. Dorman, Long and Co. Their achievement, too, meant a saving of at least £30,000 to the Egyptian State Railways, which could now dispense with the ferry which had been in operation whilst there was no bridge, and which cost £10,000 annually, while the balance of £20,000 would be easily economized during the twelve months by the economies in haulage made possible by utilizing the Dessouk route from Alexandria to Mansura and the Central Delta. Another advantage, difficult to estimate in cash values, was the greater convenience and quicker travel afforded to passengers.

Messrs. Dorman, Long and Co. are the more to be congratulated on having kept to their undertaking because, when the tender was accepted, there was considerable criticism in the vernacular Press, which asserted that the British firm could not possibly do the work in the time specified and had named twelve months as the necessary period merely as a bluff, well knowing that they could not keep to it and that they would have to pay back to the E.S.R. in penalties the difference between the amount of their tender and that of the rival concern which had offered to build the bridge in two years, at a considerably lower figure.

The completion of the bridge in the contract time, despite the strike difficulties at Home, made a splendid opportunity for impressing upon the Egyptian Government and the Egyptian people the merits of British methods and workmanship, and it is very pleasing to be able to record that Messrs. Dorman, Long and Co., made the most of it. Yesterday they invited some hundreds of local notabilities to attend the inauguration ceremony, provided a special train to take them to Cairo and back, and entertained them on the journey in princely fashion. The day's excursion must have cost Messrs. Dorman,

Long and Co. some hundreds of pounds, but there is no possible doubt that the result justifies the expenditure. For British industry generally and for their own firm in particular they obtained an advertisement of enormous value which, it is to be hoped, will contribute towards making their connexion with the Egyptian Government, so pleasantly and satisfactorily begun, one which will grow steadily in the future, with benefit to both parties.

The Motor Show.

British industry is not so well represented at the First International Motor Show, which King Fuad will open in the grounds of the Royal Agricultural Society of Egypt on Wednesday morning. The British firms represented will be Rolls-Royce, Bean, Clyno, Hillman, Rudge-Whitworth and one or two accessory makers. In large measure the fact that there will be any British representation at all is due to the initiative of Messrs. Rootes, Ltd., the important firm of car distributors of Devonshire House, London. Mr. Rootes is now in Egypt, in the course of a world tour, and will attend the Cairo show as part of the investigation he is making of this market, with a view to deciding whether it will be worth while for his firm to make efforts to secure some of the Egyptian motor business.

The meagre representation of British cars is not so serious as it might otherwise be because of the fact that the show itself is rather a half-hearted affair, in which no country is displaying more than a rather meagre selection of its leading makes of automobiles. America is represented better than any other car-producing country, but this fact is mainly due to the enterprise of General Motors, Ltd., who, with their comprehensive range of six different makes, have during recent months been making energetic and successful efforts to capture a considerable portion of local trade. Italy comes next in importance, where Wednesday's show is concerned, but here again there is a predominance of one or two very big firms, like Fiat, and a complete absence of many others whose products are typical of the best Italian automobile engineering. Renault, Citroen and Peugeot are the leading French makes represented.

The fact that the Show cannot be more than a partial success is chiefly due, it is to be feared, to defective organisation. The Royal Automobile Club of Egypt has given its patronage to the exhibition, but has been able to exercise little effective control over the details. Instead of the organization being carried out by the local motor agents, or by a committee representative of them, it has been in the hands of an organizer who, in the first instance at least, appeared to believe that the purpose of the exhibition was to make a profit, rather than to afford the public an opportunity for a comprehensive view of the cars and motor-cycles which are sold in this market, thus enabling agents to establish contact with thousands of potential customers who, normally, might never enter the agents' showrooms. As a result of being asked what they considered prohibitive prices for stands, many firms, conspicuously local representatives of British makers, fought shy of the exhibition and even when stand rentals were lowered, declined to come in. This is regrettable, but as the agents of cars of all countries are more or less

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

in the same boat, the British motor industry may not lose very much by being so poorly represented at this initial Egyptian exhibition. On the other hand, this first show will almost certainly be succeeded by others and, with the experience gained on this occasion, it is probable that future exhibitions will be far more representative and more successful. If all the organizations at present represented in the Egyptian market would get together and run their own exhibition it would probably be a very successful and useful display. If between now and next year something of this kind develops, it is to be hoped that the British motor industry will then be represented by many more makers than are participating in the present exhibition.

Al Azhar.

The Azhar ulema and students who have been defying the Government for the past fortnight appear now to have been cowed by the threat of severe action and the instructions given by the Ministry of Justice to the Cairo Parquet to open an inquiry, with a view to bringing to trial the ringleaders of the insurrectionary movement. Al Azhar seems, on this occasion, to have gravely misjudged popular sentiment towards religious institutions. A few years ago a strike by Al Azhar on the grounds which have been the cause of the present unrest would have been a serious matter, for the ulema and their pupils would certainly have carried a considerable portion of the country with them. But popular sentiment, at least of the educated section of the Egyptian nation, is now almost solidly against the Azhar extremists, and the Arabic Press has of late been full of articles declaring that, unless Azhar reforms itself and realizes that it cannot continue to exist as a State within a State, reformation must come from outside and that it will be drastic. The present tendency is towards confining the authority of Al Azhar and similar institutions, to purely religious matters, severing religious teaching from general education and towards lopping off from the Ministry of Wakfs the innumerable schools, hospitals and institutions of various kinds which, in the course of centuries have become attached to that Ministry but which now, it seems are to become dependent upon the Ministry of Education, the Department of Public Health, and other purely secular branches of the administration. The decline of the influence of the religious element is, indeed, one of the most striking features of recent years in Egypt.

ROUMANIA.

Bucharest, February 17.

The Railway Bill.

Contrary to the advice of the Tutelary Liberal Opposition Press the first Bill brought before Parliament, and passed in the face of strong opposition, was the Bill for the Reorganisation of the Railway Administration, probably the most unpopular on the whole of the Government's

programme for this Session. The main reasons for the unpopularity of this measure were dealt with in my last letter (published on February 3), the chief of these being that the railway appointments should be made on the basis of technical efficiency and not for political party interests. So strong was this conviction in the mind of M. Pretorian, who has held with distinction the post of Secretary-General of the Railways for several years, that he has retired on the overthrow of his organisation by the passing of the new law, which involves the appointment of an Under-Secretary of State for Railways, in whom many of the powers of the former Secretary-General are vested.

Railway Materials from Germany.

The latest development in connexion with the needs of the Railways is the inclination to turn towards Germany both for rolling stock and for the loan required to execute the necessary repairs to the permanent way and to provide means for the upkeep of the existing rolling stock, by supplying the workshops with materials and funds for wages for a more numerous and efficient staff. Germany appears to be the only country willing to step into the breach. Already orders for rails and other materials have been placed with a German group (Krupp, Otto Wolff, and Vereinigte Stahlwerke) to be the value of 30 million gold marks, on account of reparations and the Dawes scheme. Moreover, negotiations are apparently on foot between the two Governments with a view to laying aside the old bone of contention (viz., the compensation demanded by Roumania and refused by Germany (outside the Dawes plan) for the issue of banknotes by the Banca Generale during the German occupation) and coming to an agreement for a railway loan. The Opposition Press is making use of this circumstance to try to excite the anti-German section of public opinion against the Government by issuing long articles with such headings as "Economic Offensive of German Trusts." In justice to the Government, however, it may be asked where else it can turn for the loan which is absolutely necessary even to maintain the railways in their present state of efficiency. France, America, and Great Britain have all repeatedly refused a loan and have thus left the field open for Germany to pursue her favourite wise and far-seeing policy of peacefully expanding her economic influence by a process of slow infiltration. Germany fully realises the amazing natural wealth of this country, with its cereals on the Danube and timber in her Carpathians and their foothills (to say nothing of the extensive and rich fisheries in the lakes and marshes in the Delta), and she is now making overtures to Roumania for an exchange of products and an intensification of trade relations generally. It is obvious even to a casual observer that Germany has begun to regain all the ground lost during the War, as far as the Roumanian market is concerned.

Change of Capital.

Considerable interest has been aroused by the proposal of Her Majesty the Queen to transfer the capital from Bucharest to Brashov. Her Majesty confidently states that American capital could be obtained to carry out this project. It has often been argued that Bucharest is an unsuitable centre, and it certainly has a much less pleasant climate than Brashov, the former lying in the sun-baked plains, with no pleasant surroundings, while Brashov stands higher, in the Carpathian foothills, and is surrounded by mountains and beautiful wood country. Brashov is, too, an historic old township, having been the centre of trade between East and West during the Middle Ages. It is also provided with modern drainage. It would certainly make a much pleasanter and more convenient Capital city, but whether the advantages would justify the enormous expense involved is a question which involves much consideration and calculation.

Cost of Living.

In spite of the rise in the value of the leu (which has reached 860 to the £, on an upward swing from the figure

SECURITY - - £11,839,056.

of 7,600 reached during last summer) the cost of living continues to increase, the index number of prices in Bucharest last month being 54.7 times those of 1916.

Free Zones in Roumanian Ports.

In anticipation of the Free Zones Bill which is to come before Parliament this session, a concession has been granted by the Government to the Société Americo-Danubienne for the establishment of Dépôts for stocks of Brazilian goods intended for the Roumanian and also for Eastern markets, in the ports of Braila, Galatz, and Constantza.

Sofia, February 15.

Bulgaro-Yugoslav Relations.

The approaching departure of M. Rakitch, transferred to Rome, which is at the moment the most delicate and difficult post for a Yugoslav diplomat, has been the occasion, on the part of the Press of Belgrade and of Sofia, of comments upon Bulgaro-Yugoslav relations—what they are and what they might be.

M. Rakitch is leaving amid unanimous regrets—regrets for him personally and for the policy which he followed. This was a policy of *rapprochement* between Bulgaria and Yugoslavia. This *rapprochement*, which logically should end in an entente and in the cause of which M. Rakitch has worked ceaselessly during his six years' stay in Sofia as Minister for Yugoslavia, was at first ardently desired by Bulgaria and but coldly received by Yugoslavia, which gave the idea little welcome until Dr. Tsankoff, ex-President of the Council, visited Belgrade in December, 1924. The change in temper which was the result of his visit was, however, soon overtaken by the explosion of anger which the attempt in the Cathedral at Sofia provoked. This was the work of the agents of Moscow, and of the Agraro-Communists who had sought refuge in Yugoslavia. But the conversations were resumed in the autumn of 1925, and, at the time of the fall of the Tsankoff Cabinet, at the beginning of January 1926, the question was seriously considered of the conclusion of a Customs union between Bulgaria and Yugoslavia.

The arrival of the Liaptcheff Cabinet seemed to open out the best possibilities for a Bulgaro-Yugoslav entente, in view of its political composition. The old National-Progressive Party (the Gueshoff-Daneff group) had without doubt a Slavophil and Serbophil orientation. Moreover, the new Foreign Minister, M. Bouroff, who had

never disguised his French and Yugoslav sympathies, thought that he could realise the definite reconciliation of the Bulgarians and the Yugoslavs. The first personal contact of M. Bouroff with Dr. Nintchitch, then Minister of Foreign Affairs in Yugoslavia, filled the numerous supporters of a Bulgaro-Yugoslav *rapprochement* with hope. This alarmed the Yugoslavs, who believed the moment had arrived when matters might be precipitated by a grand *coup*. They proposed to Sofia the conclusion of a Pact of Arbitration the preamble of which contained a declaration that Bulgaria completely disinterested herself in the future of Macedonia and the Macedonians, and an undertaking to pursue into Bulgarian territory all revolutionary activity and all political propaganda against the Yugoslav domination of this province. No Bulgarian Government could possibly sign such a declaration; and no one was surprised in Bulgaria on hearing of the categorical refusal of MM. Liaptcheff and Bouroff. But in Belgrade the refusal to discuss the matter on the proposed basis was interpreted as a lack of loyalty and as proof that Bulgaria cherished treacherous thoughts towards her neighbour. And so, the nascent reconciliation giving place to resentment and hatred, Belgrade covered Sofia with most serious charges. A little while after it was learned that Yugoslavia had secretly sounded Roumania on the subject of a military occupation of Bulgaria for the purpose of destroying the revolutionary centres therein, the activities of which threatened equally the frontiers of Macedonia and of the Dobruja. This secret agreement, made sufficiently manifest at the Conference of Bled, was expressly remarked in the famous letter which the aged Generalissimo Savoff wrote at this time to Sofia, a letter which it has been attempted to disprove but the authenticity of which cannot really be questioned. The author of this document, which was distorted in the Yugoslav Press and consequently in the European Press, showed alarm at the intentions of Belgrade and advocated instantly the policy of *rapprochement* with Great Britain, which is the sole Power able to secure security and peace in the Balkans. The Collective Note which the three neighbouring States of Bulgaria presented last August 11 at Sofia and to which Greece adhered only under pressure from Yugoslavia and Roumania, was but the corollary of this anti-Bulgarian policy.

It is well known how Bulgaria faced the threats contained in this Note, which was virtually an ultimatum. Courageously recognising her errors, she took all the measures wished for against the revolutionary organisations, to repress their activities upon her territory. But at the same time, she no less courageously showed that the responsibility for the troubles of which her neighbours complained lay with them themselves, and asked to be assisted, in her heavy task of putting down all revolutionary activity, by political measures in Macedonia and in the Dobruja. This was a reference to the question of the Bulgarian minorities in these two provinces. This firm and even audacious attitude astonished Belgrade.

The Loan, guaranteed by the League of Nations, had not yet been concluded—and consequently the bitterness which it provoked in Bulgaro-Yugoslav relations was still fresh—when the Italo-Albanian Pact was published. This was the most considerable event for the Balkans

since the termination of the Greco-Turkish war. Immediately, and, so to speak, instinctively, a current of mutual sympathy started flowing in Belgrade and in Sofia. The idea of *rapprochement* became the "order of the day." The Bulgarian Government gave it to be understood that it was ready to enter into conversation, if so desired. Negotiations were unnecessary; what was wanted was a simple explanation. The relations between Bulgaria and Yugoslavia cannot, and ought not to, rest—in the interest of the peace and independence of the whole Balkan Peninsula—in their present state of indifference.

But an explanation did not come, Yugoslavia, wounded by the Italian offensive, deciding not to enter upon conversations of which Bulgaria could not take the initiative.

In face of this reserved attitude on the part of the authorities, a discussion was waged in the Press, which ended in misleading conclusions. One of the most serious Bulgarian journals having written, that after all the platonic declarations of recent times, a Bulgaro-Yugoslav entente was most desirable, but that the question must be got out of the domain of generalities (it mentioned several concessions that Yugoslavia would have to make if the entente were to become a reality), the Yugoslav Press, with the *Politika* at the head, replied that if it were necessary to make concessions of this sort and especially if it were necessary to allow the Bulgarians of Macedonia to continue to call and to feel themselves Bulgarians, it was not worth the trouble of bringing about an entente with Bulgaria. . . .

And at the moment when M. Rakitch goes to take up his new post in Rome, there is, between Sofia and Belgrade, only a heavy and enigmatical silence. Perhaps it is because of this uncertainty that the new Minister for Yugoslavia, M. Liuba Neshitch, who is one of the best Yugoslav diplomats, has been taken from Warsaw, whither he went but last spring.

SCHOOL OF ORIENTAL STUDIES.

This week the School of Oriental Studies celebrates the tenth anniversary of its opening by King George. A luncheon is to be held in honour of the event, at which the principal guest will be Lord Birkenhead. Owing to the fact that this issue of THE NEAR EAST AND INDIA goes to Press on Tuesday, our account of the gathering has to be held over until next week.

NOTES OF THE WEEK.

(Continued from page 200.)

India and Arabia.

Events in China have naturally eclipsed, and are likely for some time to eclipse, all other happenings in Asia. It is, therefore, even more difficult than usual to estimate how this year's *haj* is to loom in Muslim eyes. A considerable number of pilgrims have, of course, already arrived in the Hijaz, or are on their way thither—notably the Javanese and Mussulmans from Chinese Turkestan. But the main question of this year's *haj*—the participation of the Indian Muslims—is still unsolved. There is little means of judging how far the campaign instigated by the Ali brothers against the Wahhabi régime is having effect. Both pro-Wahhabi and anti-Wahhabi meetings are reported from India. We notice that the Foreign Minister of the Hijaz, Dr. Abdullah Damluji, when in Bombay recently on his way to Hasa, definitely denied the report that special rates had been provided for by the Hijaz Government for Indian pilgrims, and he is also stated to have defended the Wahhabi attitude towards the undesirability of tombs as being in strict accordance with the *Shariat*. The actual pilgrimage season is in June this year, so that there is yet time for the Indian Muslims to reconsider the matter of supporting Ibn Saoud or of suspending the *haj*. It has been suggested that a rival assembly of Muslims should be held this year in Teheran, instead of Mecca, and if this should indeed come about, it would be profoundly interesting to watch the developments of such a schism in Islam—for it would, of course, be a schism not merely of Sunnis and Shiahhs. Presumably there would be a considerable number of Sunnis supporting the Shiahhs.

The Rev. E. G. Parry, recently curate of Almondbury, Yorks, has gone to Cairo to take up work under the C.M.S. with Canon Gairdner.

Under the auspices of the Union of Democratic Control Mr. H. W. Nevinston spoke on "Syria and Palestine To-day" on February 23 at Denison House, 296, Vauxhall Bridge Road.

The German School at Athens last week resumed excavations near the site of the Dipylon Gate, at the beginning of the Sacred Way, discovered in the Mycenaean cemetery below the foundations of the Pompeion—the building where the Pan-Athenian processions were marshalled. Many funereal urns, pottery, and metal ornaments have been discovered.

Major-General Cyril N. Macmullen, C.B., C.M.G., C.I.E., D.S.O., who is Deputy Quartermaster-General in India, is to succeed Major-General Sir Louis Vaughan in command of the Rawalpindi District. He is an officer of the 15th Sikhs who has been 30 years in India and was one of Sir Percy Lake's general staff officers. He had a long succession of appointments with the Indian, Mediterranean, and British Expeditionary Forces, and was chief of staff to the 2nd Mounted Division, 15th and 19th Army Corps, as well as being on Lord Haig's staff. He commanded a brigade at Bareilly and served in the Afghan War of 1919.

The appointment of General Staff Officer First Grade in the Military Department at the India Office has been filled by the selection of Colonel John Cavendish Freeland, who is now an assistant adjutant-general for organisation at Army Headquarters, Delhi. Colonel Freeland will join the staff of Field-Marshal Sir Claud Jacob in Whitehall during April. The vacancy occurs owing to the return of Colonel W. E. Wilson-Johnson to Indian service in command of the 7th Indian Infantry Brigade, as already announced. Colonel Freeland has had 30 years' service since joining the unattached list for the Indian Staff Corps, and he was Adjutant of the 35th Sikhs, now the 10th Battalion of the 11th Sikh Regiment. He is a Staff College graduate of Quetta, where he qualified under Lieutenant-General Sir Walter Braithwaite. He came to France with the Dehra Dun Brigade, and was afterwards with Lord Haig's 1st Army Staff. He was for a time with the 8th Division and was also at General Headquarters in Mesopotamia.

The Index to Volume XXX of "THE NEAR EAST AND INDIA" (July 8—December 30, 1926) is now ready and copies will be sent to subscribers gratis on application to the Manager, "THE NEAR EAST AND INDIA," 170 Strand, W.C.2.

THE TEMPORARY MARRIAGE.

By MORRIS HUGHES.

The Probate, Admiralty and Divorce Division has recently had a real thrill—if the condition be first laid down that the essence of a thrill lies in the unexpected. There the unravelling of knots injudiciously tied becomes wearisome in its monotonous familiarity.

The impossibility of existence with one particular man or woman is the lesson that the Courts have learned from over repetition. Judge then of the consternation, the almost paralysing shock when counsel suddenly stood up, addressed the learned judge, Lord Merivale, and calmly asked him to declare that two women—both present—were the lawful wives of one man. The case was naturally adjourned—once and yet again—and justice was saved by its being settled between the parties out of Court—and very proper, too.

It arose through a Shiah Muslim who had been living in this country and had married two English women. He had since died, and now his wives each claimed an equal share in the estate. The first disputed the claim of the second on the ground that her marriage was merely a *muta'*—a temporary marriage. The second declared that whereas her marriage was originally a *muta'* it was subsequently made permanent.

Just as the Doctrine of the Imamate separates the Shiah from the Sunni in matters of theology, so the existence of *muta'* forms an insuperable barrier between the sects in questions of social life. It is a curious custom, and so far as the writer is aware, exists in this particular form among no other people of the world.

Muta' is simply a temporary marriage. A document is drawn up and the terms of the marriage are clearly stated thereon. The man and woman agree to live together as man and wife for a certain period—a month, a year, or longer or shorter as the parties decide. A small sum, varying in amount in accordance with the length of the period and the attractiveness of the bride—the *muta'*—is handed to her as a dowry, promises are given before witnesses, and the bride repairs to her husband's house and is accepted by the neighbours as his true and lawful wife.

In this form of marriage no divorce is possible and for that reason the period named is usually fairly short. The man is, of course, temporarily responsible for the support of his "wife," but *permanently* responsible for the upbringing of any offspring accruing to the "marriage." At the end of the agreed period the woman returns to her house, and no obligation—save the question of children already noted—exists on either side. Should the parties decide to prolong the period, a new agreement must be made out and a further sum of money be paid to the woman.

A temporary marriage cannot automatically, by lapse of time or by any other circumstance, resolve itself into a permanency. The two are completely distinct phenomena, involving different obligations and requiring different ceremonial.

It will probably be recalled that Haji Baba of Ispahan was taken to a house where dwelt the *muta'i*, with the idea of choosing from among them one to his liking. It has become, therefore, a definite profession, and whereas no shame attaches to it, yet the women who choose it do not naturally shine as social stars.

The origin of *muta'* is obscure. That concubinage has existed in Islam almost from its inception is fairly well determined, and it is possible that *muta'* came into force with the idea of affording some sort of legal protection and social position to the concubine. Unfortunately the custom of concubinage still exists side by side with that of *muta'*, but whereas the former is naturally the monopoly of the rich, the latter is the refuge of the poor.

Islam has laid it down that it is a man's duty to marry and to produce a family. Barrenness is a sufficient ground of divorce. Islam has laid it down equally clearly that a

man must support his wife adequately, and he who neglects her is regarded as a social outcast.

A man may marry one, two, three, or four wives but only if he can support them all equally and without showing preference to one above the other. The regulations regarding the marriage law of Islam had originally two objects in view—to satisfy adequately the natural passions of a fierce martial race and to ensure the raising of families in such numbers as would fill the ranks of the armies depleted by years and years of constant warfare.

There are, then, four contributory causes to which we must probably look in order to account with the gradual development of *muta'* among the Shiah.

(a) The affording of some kind of legal status to the concubine.

(b) The obligation to marry and produce children.

(c) The rigid necessity of adequately supporting the wife.

(d) A large amount of very real poverty.

The existence of the later would make it almost impossible to fulfil the necessary obligations. *Muta'* provides a means of escape which not only assuages the conscience of the individual, but also affords him the opportunity of satisfying that overwhelming desire which is found throughout the Eastern peoples—that of raising up a man-child to his name, while it effectually eliminates, on the one hand, the onus of immorality, and, on the other, the stigma of illegitimacy.

NEWS IN BRIEF.

Sir W. Sefton Brancker, Director of Civil Aviation, made a return journey over the new Khartoum-Kisumu air route. He was scheduled to leave Khartoum on February 20 and to arrive at Kisumu on the 22nd inst.

The agreement for the compensation of expropriated British subjects, the draft of which was initialled on February 14, was formally completed in Athens on February 17 in the form of an exchange of Notes.

Five hundred and seventy United States professors and students from 42 different States, who are making a world tour, visited Naples on February 18. They have already visited Japan, China, India, Egypt, Palestine, Turkey, Greece, the Adriatic, and Malta.

The first sitting of the new Czecho-Slovak-Yugoslav Parliamentary Committees was held on February 14 at Prague. One committee will deal with educational methods of common interest, while the other will endeavour to devise a means for closer commercial relations between the two countries.

Colonel Vickers Dunfee, C.B.E., whose death occurred on February 17 in his 66th year, during the War commanded the 2/4th Battalion, The London Regiment, and served in Egypt, Gallipoli, the Senussi campaign, and France, and was twice mentioned in dispatches, being also made C.B.E. (Military Division).

Mr. Frederick Eden Pargiter, an Orientalist of distinction and a former Judge of the Calcutta High Court, died at his residence at Oxford on February 18, in his 75th year. He devoted much of his spare time to the work of the Bengal Asiatic Society, of which he was for some time Secretary and afterwards President. At home he became identified with the Royal Asiatic Society, serving as a member of the Council, and afterwards as Vice-President.

The Greek Government has come to an arrangement with the British Minister in Athens regarding British subjects' properties expropriated under the Rural Law of last October. The Government undertakes to pay compensation in cash during the next three years or restore the property. In the former case the prices are to be fixed by direct negotiation, but in the case of disagreement between the two parties, experts will be nominated by each party, with ultimate appeal to a judge. Four per cent. interest is payable since the expropriation.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

TOURISTS FOR GREECE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Being heartily in favour of "opening up Greece to tourist travel" and therefore one of the "cloudy-minded" individuals so courteously referred to in your number of January 27, I trust I may be permitted to ask your Athens Correspondent to turn the attention of his scintillating brain to the following:—

(1) The newspapers report that England is expecting 300,000 American tourists during the summer of 1927 and is preparing to separate them from the estimated sum of one hundred million American dollars. There seems to be no visible evidence that any Englishman is exactly what you might call "horrified" at this prospect.

(2) Mr. J. H. Cahill, of the British Embassy in Paris, in an address recently delivered before the Manchester Statistical Society, describes the tourist industry of France as "one of the most remunerative, if not the most remunerative, of all the national industries." Mr. Cahill avers that the National Touring Office created by law in 1919, has helped to make it an outstanding example of the increased capacity of France for wealth production, adding that it was probably not far wrong to estimate the "invisible exports" which it had created in the last year at 70 to 80 million pounds sterling, while some put the figure at 100 millions.

Greece having an unfavourable trade balance needs tourist money to help offset that unfavourable balance. Greece also needs the friendship and understanding usually engendered in the hearts of those who visit her shores. And the tourists themselves are entitled to the thrill they receive when gazing for the first time upon the remains of the Classic Age of Greece, to see the "violet light upon the hills," and to learn the charm and wonder of this land, which is so old and yet so young.

"Cloudy-minded" we may be, but croakers we are not, and we shall go ahead and do our best to advertise Greece, looking forward without fear, in spite of the dire disaster which is predicted by your lugubrious Correspondent.—I am, etc.,

BRAINERD P. SALMON.

Hotel Angleterre, Athens, February 14.

JEWISH LABOUR IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your article in your issue of February 17 upon "Snow in Jerusalem" you seem to suggest that the work of scavenging should be done by the Jews. May I be allowed to point out that this is not the kind of work for

which Zionists have gone to Palestine? It is not the intention of the Jews in Palestine to sink to the level of the Arab workers, and for the purpose of such work as you mention I do not think that the Jews should compete. In Palestine outside the towns the Arab fellah works for 9 piastres a day, and I can tell you that the Jew will never be content with that miserable wage. The Jew's average wage, as compared with the fellah's, is, in fact, 15 piastres a day (3s. 1d.). And the difference in the two amounts is a just one.

Such an attitude as you imply towards Jewish workers is all too common among officials in the Palestine Administration.—I am, etc.,

A. PETROWSKY.

[We confess that it never occurred to us that any Jews should resent its being suggested that they should do what British soldiers did in the country which our troops conquered from the Turks in the interests of the inhabitants and of the Jews to come. We believe, as a matter of fact, that the Jewish National Home will be really and solidly established, not on the attitude which our correspondent takes up, but precisely upon the work of the humble Jewish labourer, the man who is himself content to do the lowly jobs, not merely to employ the native inhabitants of the country to do them. The difference between the rates of payment for Arab and Jewish labour is, of course, one of the main preoccupations of the Jerusalem Administration, as any attempt to introduce into a backward Eastern country the more advanced notions of the West must necessarily be.—ED.]

NEAR AND MIDDLE EAST ASSOCIATION.

Sir Henry Penson, K.B.E., will lecture on March 4 to the Near and Middle East Association on "The Economic Background of World Politics." The meeting, which is to begin at 8.30 p.m., will take place by kind permission of Mrs. Geoffrey Mander at 53, Seymour Street, W.1. The Viscountess Dunedin will preside.

The agreement prolonging the existing provisional relations between America and Turkey for a period of one year was signed on February 18.

The wedding of Mlle. Didi Vlasto, the eminent lawn tennis player, and M. Jean Serpieri, a young Italian, took place on February 17 at the latter's country house, near Athens.

Mr. Sydney Arthur Thomas Ware, M.B., B.S., of Harley House, Manor Road, Wallington, Surrey, of the Sudan Medical Service, intestate (net personality £1,152), left £1,222.

Major-General Sir Cyril J. Deverell, K.B.E., C.B., takes up the appointment of Quartermaster-General in India this month in succession to Lieutenant-General the Hon. Sir A. Richard Montagu-Stuart-Wortley, K.C.B., K.C.M.G., D.S.O.

It is officially announced that the Hungarian Government has concluded a temporary commercial agreement with the Government of Egypt for the application of the most-favoured-nation clause on all exports, with the sole exception of tobacco.

Captain Malins and Mr. Charles Oliver, who are making a tour of the world on two motor-cycle combinations and who had not been heard of since they left Suez for Jerusalem, were reported on February 16 to have left Nakhil, in the Sinai Desert, for Beersheba. One machine was giving trouble.

Mr. G. B. Pradham, the member for Thana in the Bombay Legislative Council, will succeed Dr. Paranjpye (who has been appointed to the Council of India) as Minister of Excise. Mr. Pradham withdrew his candidature for the Presidency of the Bombay Legislative Council, and Mr. A. M. K. Dehlavi, a Muhammadan, and a former Minister of Excise, has been elected President. Another Muhammadan, Sir Ibrahim Rahimtulla, previously filled the post.

The Ministry of War in Athens has issued a summary of the progress made by Greek aviation during the last three years. The hours of flight were 2,369 in 1924, 5,475 in 1925, and 6,936 in 1926; the distances covered 177,656 miles in 1924, 409,275 miles in 1925, and 520,200 miles in 1926. The accidents consisted of one aviator killed and one slightly wounded in 1924, two killed and six wounded in 1926; there were no casualties in 1925.

CRITICISM OF ZIONISM.

Under the auspices of the Anglo-Palestinian Club at Jews' College, Guilford Street, W.C., Colonel Josiah Wedgwood delivered an address, on February 17, on "Criticism of Zionism." Mr. Joseph Cowen, who took the Chair, referred to the services of distinguished Englishmen in the Zionist cause, which enjoyed, he said, the support of all the best Englishmen. His one criticism of the British Government in Palestine was that they might do a little more to bring about the establishment of the Jewish National Home as provided in the Mandate: the pace should be quickened. He referred to the recent utterance in the House of Commons of Mr. Amery, who, speaking on the question of African mandates, had said that Great Britain did not derive her authority for mandated territories from the League of Nations, which had no power to take them away from the Mandatary. For his part, he welcomed this announcement, for he wanted the Zionists permanently to have the protection of the British Empire.

Colonel Wedgwood confessed at the outset that he found it very difficult to criticise Zionism. But he would deal with the critics of Zionism. First, there were the critics among the Jews themselves. Of these the chief were the "Assimilationists," people who wished to be taken for anything, so long as it was not what they were—Jews. These could be won over by proving that the Gentiles no longer respected a man who did not take pride in his race, that, in fact, the Assimilationists would be more highly regarded if they became Zionists. Next, came the rich Jews, who did not like it to be thought that they were of the same race as the poor Jews. Their objection to Zionism was the result of pure snobbery. For instance, the German Jews who had emigrated to the United States after the "48" and had since become rich, were unwilling to throw their lot in wholeheartedly with the poor Russian Jew. Then there were the Jews who had devoted their whole lives to the welfare of their unfortunate fellows. These tended to look upon Zionism as a rival method of dispensing Jewish moneys. It was necessary to teach them that there was an even wider thing, in Palestine, than local relief. Of the objections raised by Englishmen to Zionism, the lecturer said that little was heard now of the statement that the Jew was essentially a middle-man, not a producer, one who had not the stamina to build up a modern State. The work of the "Haluzim" had effectually squashed this objection. Nor was there point in the objection that the Jew would not defend his land, for the Haluzim were now armed. As a matter of fact, the national hero of the Palestine Jews was, not Sir Herbert Samuel, but Trumpeldor. Colonel Wedgwood proceeded to chide the Jews for sitting down too easily under injustice. He instanced the work of the Keren Hayesod in providing funds for such things as education—things, which, he maintained, ought to be provided by the Jerusalem Government. He threw out the suggestion that American Jewesses might be taken to Palestine to teach Hebrew, of course at the expense of the Palestine State, and not of the Zionist funds. Continuing, he stated that the British Government had made a profound mistake in Palestine in the Municipal Franchise Ordinance, which provided for communal representation. This, as in India, was nothing but a plan to perpetuate the existing divisions of the peoples of Palestine into Muslim, Christian, and Jew. What ought to be done was to divide the people horizontally, along lines of economic interest. In conclusion, Colonel Wedgwood referred to the state of Palestine in thirty years' time, when "the Jews would be in a majority." Then it would have a parliament of its own, and could decide its own future. It might enter the League of Nations; on the other hand, it might opt for incorporation within the British Empire.

In the subsequent discussion, various points were emphasised by speakers. For instance, one Russian Jew stated plainly that Jews in Palestine should work for the benefit of no one but the Jews. In his view, the Balfour Declaration was a divine act, and it was now for the Jews to assert their rights without fear and without favour. Another Zionist stated his belief in the necessity of co-operating with the Arabs. But the boast of the Arabs that they were in a majority in Palestine was not true: the majority of the inhabitants of Palestine were malarial microbes, which the new colonists had done so much to destroy. A Jew recently in Palestine also asserted his belief in Arab-Jewish collaboration. He gave instances of official lack of enthusiasm for the Zionists on the part of members of the Administration. Another Jew asserted his conviction (which, as he had seen in one of his letters, was shared by Nordau) that the Jewish National Home must be built up on the foundation of the Torah. As for the lecturer's suggestion that teachers of Hebrew might be imported from America, that was not the sort of thing that the Zionist stood for: they wanted no pidgin Hebrew. Another comment on the lecturer's address was that, if voting in Palestine were not communal, quantity would dominate quality. There was a necessity for a bi-communal State in Palestine.

In reply to these comments Colonel Wedgwood said that in criticising the Keren Hayesod he was really criticising the British Government. Keren Hayesod wanted all the money it could find for objects other than those which ought to be taken in hand by the Palestine State. He stood by his suggestion of placing the education of Jews in the hands of the State: it would, he said, at least give Zionists the chance of learning English, the language of the world. Of the ultimate future of Palestine he hoped that it would vote for incorporation within the British League of Nations (like French Canada, Burma, Dutch South Africa, Ceylon, India).

Colonel Solomon, in moving a vote of thanks, explained that he knew little of Zionism until he went as a soldier to Palestine. Then he underwent such an experience as prompted him to tell the story of a Persian Ambassador who came to England about 150 years ago. An English lady came up to him and said: "Is it true, Your Excellency, that in your country men worship the Sun?" "It is true," he replied, "and, Madam, if you ever saw the sun in your country, you would worship it too." He had seen the sun when he saw what the colonists were doing in Palestine, and he had worshipped it ever since. It was inconceivable to him that any English Jew could fail to support the establishment of the Jewish National Home. But it was foolish to hope that the Home could be built in a day. It was the work of generations. Some Jews, in their haste for the completion of the Home in Palestine, reminded him of the story of the girl riding pillion on a motor bike. "This," she said to her companion on the saddle, "is a nice village, wasn't it?"

In seconding the vote of thanks, the speaker remarked that more men of the type of Colonel Wedgwood were wanted in Palestine. A man who could—as the lecturer had done—visit the Jewish Labour Party in Palestine and criticise them, was entitled to respect. At present there were too many Zionist farmers who could raise—nothing but their hats when a particularly generous contributor to the Zionist funds passed by!

The Moslem World

A Quarterly Review of Current Events, Literature, and Thought Among Mohammedans and the Progress of Christian Missions in Moslem Lands.

Edited by Samuel M. Zwemer, Cairo.

"Indispensable for all friends of foreign missions who wish to remain in touch with the rapid and kaleidoscopic changes among Moslems. No living person commands such world-wide and intimate knowledge of the problems connected with the Moslem world as the editor-in-chief of this Quarterly."—Dr. Julius Richter, University of Berlin.

PERSONAL AND GENERAL

TO-DAY

February 24, 1927 (New Style).
February 11, 1927 (Old Style).
Shaaban 21, 1345, A.H., of the Muslim Calendar.
Adar I, 22, 5687, of the Jewish Calendar.

Lady (Geoffrey) Salmond left London on February 18 for Bombay.

Mrs. Wilfred Brownlow and Miss Frances Shirley left England on February 16 for Asia Minor.

A good Service Pension has been awarded to Lieutenant-General Sir Thomas E. Scott, Indian Army, retired.

Lord and Lady Airedale sailed from Marseilles on February 19 for Colombo by the Bibby M.V. Shropshire.

Major-General A. B. E. Carter has been appointed General Officer Commanding the Sing-Rajputana District, India.

Sir Edwin Lutyens has returned to 13, Mansfield Street from India. Lady Emily Lutyens will return from America about April.

The appointment of Prince Antoine Bibesco as Roumanian Minister to Spain was officially confirmed in Bucharest on February 18.

His Majesty invested the Lady Maud Hoare with the Insignia of a Dame Commander of the Most Excellent Order of the British Empire (Civil Division).

Sir John and Lady Shuckburgh were among the passengers travelling to Port Said for Palestine in the Bibby Line M.V. Shropshire, embarking at Marseilles on February 19.

The Secretary of State for Foreign Affairs was represented by Mr. J. B. Monck at Victoria Station on February 21, on the departure of Nejati Bey, Turkish Minister for Education.

By command of the King, Brigadier-General the Earl of Lucan, Lord in Waiting, received the Right Hon. Sir Samuel Hoare, Bart., M.P., Secretary of State for Air, upon his return to London from India on February 17.

Sir Robert Waley Cohen has left England in the Orient liner Osterley for Palestine. With him is Mr. Walter S. Cohen, Hon. Secretary of the Economic Board for Palestine.

The Right Hon. Sir Samuel Hoare, Bt., M.P. (Secretary of State for Air), and the Lady Maud Hoare had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on February 19.

The English Zionist Federation (Central Keren Hayesod Committee) is holding a reception in honour of Mr. Nahum Sokolow to-night, Thursday, at 8.30 p.m., in the Suffolk Galleries, Suffolk Street, Haymarket. The Right Hon. Sir Herbert Samuel, G.B.E., will be in the Chair.

Lieutenant-General Sir Robert Whigham had the honour of being received by his Majesty at Buckingham Palace on February 18, upon relinquishing his appointment as Adjutant-General to the Forces, and upon his appointment as General Officer Commanding-in-Chief, Eastern Command.

His Excellency Abdol Ali Khan Sadri was received in audience by the King at Buckingham Palace on February 15, and presented his Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Shah of Persia. Sir William Tyrrell (Permanent Under-Secretary of State for Foreign Affairs) was present, and the Gentlemen of the Household in Waiting were in attendance.

M. and Mme. Ivan Stancioff, with Mr. James Mitchell, left London for Brazil on February 18 on the Arlanza. They intend to go to New York from Rio de Janeiro and to return to London next May.

Sir Frederick Nicholson, formerly a member of the Viceroy's Council, left for India by the Bibby M.V. Shropshire on February 19, accompanied by Lady Nicholson. Their address is Coonoor, South India.

Earl Winterton, Parliamentary Under-Secretary for India, and Countess Winterton reached London on February 19 on returning from their six weeks' private tour in India. Sir Victor and Lady Warrender, who accompanied them to India, will arrive in about a week's time.

Colonel George Grant Gordon, C.I.E., V.D., J.P., retired tea planter, of The Elms, Queen's Road, Richmond, Surrey, late a member of the Legislative Council of Bengal, who died on November 12, aged 63, left estate of the gross value of £17,500, with net personalty £16,781.

Major Denys Walter Reynolds, D.S.O., the York and Lancaster Regt., and Sudan Defence Force, has been appointed a Commander of the Military Division of the Order of the British Empire, in recognition of valuable and distinguished services rendered whilst in command of the force employed on the military operations in the Nuba Mountains Province of the Sudan between January 27 and March 7, 1926.

In Convocation at Oxford on February 15 a decree was passed accepting the endowment of a scholarship for the encouragement of the study of Armenian history and literature given by His Excellency Borghos Nubar Pasha, in memory of his late father, Nubar Pasha, three times Prime Minister and sometime Regent of Egypt, and expressing the gratitude of the University for his munificence.

The King has approved of the award of the Air Force Cross to Flight Lieutenant Richard Llewellyn Crofton, M.B.E., in recognition of valuable flying services rendered in the Sudan and in connexion with the operations in the Nuba Mountains Province of the Sudan, 1926.

Book Review

ROE'S EMBASSY.

"THE EMBASSY OF SIR THOMAS ROE TO INDIA, 1615-1619."
 Edited by Sir William Foster. (Oxford University Press: H. Milford.
 18s. net, or on Indian paper 21s. net.)

All students of the Mogul Empire and of British beginnings in India will be grateful for this new and revised edition of what must be regarded as, on the whole, the most important single document available for the period in the English language. Roe's reputation as an observer has been established ever since his contemporary De Laet described him as *facile princeps* among the writers on Mogul India, but the first satisfactory edition of his journal was that which Mr. Foster, as he then was, prepared for the Hakluyt Society in 1899. That edition, limited as it was, met the needs of the small number of readers who were then interested in the subject, but of late years interest has increased rapidly, the Hakluyt volume has been sold at fabulous prices, and librarians have been hard put to it to keep their copies from being torn to pieces. Now students can get the book for themselves, and a better book too, better by the fruits of another quarter of a century's study of the period. The chief improvement consists of the inclusion of extracts from many additional letters, but the detailed revision of the notes and introduction gives results of almost equal importance in the aggregate, and the book may be regarded as definite, unless—what can scarcely be hoped for—the missing portion of Roe's journal should happily come to light. Of the story told by Roe it is unnecessary to say much. An Englishman, and a big Englishman, found himself plunged with no previous experience into the sea of intrigue and faction which constituted the Mogul Court, made inevitable mistakes, and eventually obtained a measure of success by dint of hard brain-work, and still more by the influence of his strong and fine character; and he recorded his experiences day by day, not for publication but for the information of the Company, in the terse and vigorous language of the early seventeenth century. He tells us all too little of the life of the ordinary people, but of the Court, and the huge administrative machine of which the Court was the centre, his description is full and convincing. We get a life-like picture of Jahangir, the Emperor, a man of many failings, but in essentials a gentleman, of the Prince, who was to succeed to the throne as Shahjahan, a much stronger man, but not a gentleman like his father, of Asaf Khan the Prime Minister, a prototype of the Eastern statesman-diplomatist, and, in the background pulling all the strings, the tireless, forceful, and ambitious Empress, in whose hands the Emperor was wax. It is not a very pleasant picture, but it is quite convincing, and a thorough study of it is indispensable for anyone who wishes to understand how India lived in the days when it had not come under the influence of Europe.

The negotiations between Admiral Bristol, the United States High Commissioner, and the Turkish Government have resulted in an agreement prolonging the existing provisional commercial relations for a period of one year. Diplomatic relations between Turkey and the United States will be resumed forthwith in virtue of a decision of President Coolidge to exercise his constitutional prerogative in favour of such a course. It is hoped that during the ensuing twelve months it will be possible to conclude conventions dealing with commerce, rights of residence, and consular relations.

WAR GRAVES IN EGYPT AND PALESTINE.

A Pilgrimage Arranged.

A pilgrimage to the war graves and battlefields of Egypt and Palestine has been organised by the Rev. M. Mullineux, owing to the success of a similar pilgrimage last September to Gallipoli and Salonika. In deciding the date for the pilgrimage a suitable season for climate has been chosen, and it also coincides with the unveiling of the War Memorial in Jerusalem on May 7 by Field-Marshal Lord Allenby.

The party will leave London on April 27 for Marseilles, where they will embark on the *Stella d'Italia*. Two days will be spent at Alexandria, when visits to all cemeteries and battlefields near the port will be arranged. This will also give an opportunity for sight-seeing in Cairo and at the Pyramids. From Alexandria the course is east to Haifa, where four days will be spent ashore. At Haifa motor transport has been arranged to convey the pilgrims to Jerusalem, where three nights can be spent. Visits will also be arranged to the many scattered cemeteries in the battlefield areas. The stay in Jerusalem will allow time for pilgrims to view all places of Biblical interest in the neighbourhood. The pilgrimage will then proceed to Cyprus, where a stop of several hours will be made. Rhodes, Crete, Malta, and Naples will also be touched at, and time allowed for landing and sight-seeing. Marseilles will be reached on May 19. The Honorary Secretary, St. Barnabas, 7, Hobart Place, London, S.W., will give all information regarding the pilgrimage, and illustrated leaflets will be sent on request.

TURKISH MINISTERS' VISIT TO LONDON.

Nejati Bey, Turkish Minister for Public Instruction, Mehmed Emin Bey, President of the Board of Education, and Namuk Ismail Bey, Director-General of Fine Arts, arrived in London on February 16 and were greeted by Mr. J. B. Monck, who represented the Secretary of State for Foreign Affairs.

They have come here to study educational methods in Britain. They were entertained at luncheon the following day at the Turkish Embassy. Later the Government entertained them at their hotel, when Lord Eustace Percy presided.

The Government of India has issued orders prohibiting the further cultivation of the opium poppy in the province of Ajmer-Merwara.

Mr. H. I. Bell, O.B.E., addressed the Egypt Exploration Society on February 23 at the Royal Society rooms, Burlington House, on "Alexandria."

The Græco-Turkish Agreement for the regulation of abandoned properties in both countries passed its first reading in the Greek Chamber on February 16.

The Seismological Institute in Belgrade on February 16 issued an official warning predicting the recurrence during the next few months of earthquakes in Yugoslavia.

Under special authority from the Majlis, Mirza Mohamed Ali Khan Daver, Persian Minister of Justice, is dissolving all the jurisdictional departments, owing to their unsatisfactory organisation.

An epidemic of scarlet fever is said to have broken out at Samarkand, in Turkestan, and parents of children who have died of the disease have attacked the doctors.

The employees of the *Allahabad Pioneer*, who recently went on strike, returned to work unconditionally on February 17. Although its whole Press staff was locked out, the *Pioneer* appeared daily in an issue of 16 pages, except on one day, when it was reduced to eight pages. The newspaper was produced by the supervising staff with the help of volunteers.

Captain T. A. Gladstone, carrying the first air mail from Kisumu to Khartoum, left Kisumu at 2 p.m. on February 15 in a Fairey seaplane. In reply to congratulations from the acting Governor, Captain Gladstone said that Air Vice-Marshal Sir Sefton Branker, Director of Civil Aviation, would be a passenger on the next trip from Khartoum on February 20. He would reach Kisumu on February 22.

The Grand Zupan of Mostar has received official information from the provincial administrations of Herzegovina that the damage done by the earthquakes in the Ljubinye district amounts to 3,500,000 dinars (£12,700), that in the Stolatz district to 2,500,000 dinars, and in the Trebinye district to 1,000,000 dinars, and the Grand Zupan of Dubrovnik (Ragusa) reports damage in that district to the amount of 3,000,000 dinars, which forms a total amount of 10,000,000 dinars (£36,300), without counting the damage done to the railway bridge and railway station at Metkovich and that in Montenegro. The Yugoslav Government has granted 200,000 dinars (£720) for immediate relief.

LORD IRWIN ON THE REFORMS.

When the Viceroy addressed India's third Legislative Assembly on January 24, he devoted the major part of his speech to the future of the reformed constitution: reminding his hearers that, whatever the date finally determined for the appointment of the Statutory Commission, it would necessarily be one within the life-time of the present Assembly. At the risk of indulging in remarks that, as the *Pioneer* says, "may appear to some to be a mere reiteration of platitudes," Lord Irwin re-stated the British case with conspicuous moderation but unmistakable firmness. He said that he could understand the opinion, and could acknowledge the sincerity of some of those (a significant limitation) who hold it, which rejects the right of Parliament to be arbiter of the fashion or the time of India's political development. But, he added, he could suggest no means of reconciling such a position with facts. There was, he said, another section which, while admitting the right of the British Parliament to voice the decision, contended that the actual decision must not be its own, but that of India: that is to say, that of politically-minded Indians. Between these two schools of thought Lord Irwin was able to find little difference: as he said, it is scarcely possible to impugn Parliament's right to deliver a free verdict without challenging its title to sit in judgment. The fact is, of course, that Parliament is quite convinced that it not only has the right, but the duty, of making the decision itself: and as, beyond any possibility of contradiction, it also has the power, it is but beating the air to argue the matter. If politically-minded India desires that the verdict should be favourable to itself, it has, as Lord Irwin said, two methods of bringing this about: it must either coerce Parliament or convince it. He could not emphasise too strongly his belief that an attempt at coercion was not only unlikely to succeed, but would be resented, under whatever shape the attempt were made. Here, one may think, politically-minded India is wiser than its Press, which affects to make light of the Viceroy's words. A leading extremist newspaper, after mentioning the "precedents" of the United States, South Africa (when "the disastrous South African War made the graceful concession inevitable"), Ireland and Egypt, says "We shall put aside the alternative of coercion, for, when India decides to coerce, she will know how to carry out her decision."

As the best method of convincing Parliament, Lord Irwin recommended co-operation in the working of the existing constitution: and insisted that Parliament, in inviting such co-operation, had specifically declared that this did not include the demand that any Indian party should lay aside, for the time being, its claim to Swaraj. The British people had definitely pledged itself to fulfil the declaration made in August 1917, an undertaking from which "no British Party can or will withdraw: and, although the British race may lack many excellent qualities, they can afford to remain unmoved by charges of bad faith which their whole history denies." But what the British Parliament wanted to find out, and what they specially desired Indian politicians to show them,

was whether or not the ultimate structure, which Parliament was seeking to erect, was one suitable to Indian conditions and Indian needs. If it saw any large section of Indian opinion, however vocal in its desire to further the cause of Indian self-government, steadily adhering to the determination to do nothing but obstruct the machinery with which India had been entrusted, Parliament would be more likely to see, in this, evidence that the application of Western constitutional practice to India might be mistaken, than proof of the wisdom of immediate surrender to India of all its own responsibility. In no case would it surrender its charge before it was satisfied that it could safely be entrusted to other hands: and conviction on this point was not likely to be attained by "a refusal to play the game because the players do not like the rules." Indian politicians had to make their choice between the search for points of agreement in a policy on the fundamentals of which all were agreed, or following the way of conflict. Finally, Lord Irwin expressed the hope that his statement of what he believed to be the truth would be accepted, even if it were unpalatable. "It were better to be blamed for saying unpleasant things in time, if they are true, than to be condemned for saying them too late."

All this has been said before, though never more convincingly or with more obvious friendliness and good faith: and Lord Irwin's words certainly made a considerable impression, at any rate for the moment. Political courtesy is not to be expected from the extremist Press, and it has not disappointed expectation. The *Calcutta Forward* characterises the Viceroy's attitude as one of "impudent callousness"; while the *Bombay Chronicle* says that Lord Irwin "has accepted the humiliating position of head of a subordinate branch of the British Government, that is, a mere tool," and describes various passages in his speech as fatuous, intellectually dishonest, nauseating, and hypocritical cant. Pandit Motilal Nehru, the Swarajist leader, gave a much truer appreciation by saying that the speech, though it only repeated "the same old story," was delivered by "a thorough gentleman in a gentlemanly manner." For there is no question but that it is the same old story: and the Swarajists, wrong-headed though they may be, have reasonable arguments on their side, though these are obscured by the excesses of extremist speech and writing. The insistent denial of the right of Parliament to legislate for India, and the insistent assertion of Britain's bad faith, do no good to their cause: as Lord Irwin said, the former exists, in spite of words, and we can afford to disregard the latter. But the Swarajists argue, with some force, that they are called upon to play a game under rules in the making of which they had no hand: and that their methods are deliberately intended to show Parliament what it desires to learn—that the ultimate structure that it is seeking to erect is not one suitable to Indian conditions and Indian needs. It is their misfortune that they are not able to go a step further, and show one that is suitable; beyond the patently absurd suggestion that India should at once be granted full self-government and left to work out her own salvation by making what she can of the gift. The

bane of the Swaraj Party is their refusal to face facts, and to try to find a solution in consonance with them; and they cannot complain if, in the circumstances, Parliament is driven to find one for them itself. It may well be—one hopes it will be—a solution radically different from the first tentative and experimental one; but, whether or no, if it proves equally distasteful, Indian politicians will have no one but themselves to thank.

CURRENT TOPICS.

The Statutory Commission.

Information appears to have reached India that Lord Birkenhead, in fulfilment of a long-expressed desire, "is understood" to be contemplating a visit to India next cold weather—that is, some time from nine to twelve months hence. This statement has been taken in India to mean that the Statutory Commission will not, in any case, be appointed until after the visit is over, and will, therefore, not get to work before the autumn of 1928 at earliest. It is safe to prophesy that the announcement—or rather, the inference drawn from it—will be received with enthusiasm by politically-minded India, which was beginning to feel uneasy at what appeared to be a reasonable prospect of an early appointment of the Commission. The appointment may, in any case, be expected to be made about six months before actual arrival in India; but six months is none too long a time in which to decide whether to state a case before the Commission and, if so, what the case is to be and how it shall be presented. The lawyers who form so large a percentage of the politically-minded Indians will certainly welcome a long adjournment; though it is true that the interval will not be expended in preparing their case, but only in congratulating themselves that they need not begin on its consideration yet awhile. The number of leading lawyers in India who decline to read their briefs is considerable, and by no means confined to Indians; these are mostly men who have made their names as defending counsel and who rely on their ability to pick up their case as they go along. In the prevalence of this method may, perhaps, be found one of the reasons why Indian politicians, so many of whom are lawyers, are quite good at destructive criticism, but fail hopelessly when construction is wanted. It is, in any case, fairly certain that, when the Statutory Commission does materialise, they will not have mastered their brief; but, doubtless, they believe that they intend to do so, and will welcome the longest possible delay before they actually have to come into Court.

Perhaps, if politically-minded Indians accept the truth of Lord Birkenhead's rumoured visit, they may decide to find another explanation of it. There have been rather persistent stories of his intention to give up politics in the comparatively near future: and it might be suggested that he intends to do this by degrees—resign the Secretaryship of State for a seat on the Statutory Commission, as a member of which he might carry out his "long-expressed desire" to visit India. And, if so, as the rumour definitely refers to "next cold weather," such an interpretation should lead to serious searchings of heart.

Indian Troops for Shanghai.

The dispatch of Indian troops to Shanghai has led to a great expenditure of ink and hot air by the politicians of India. A resolution, put forward in the Legislative Assembly, questioning the right of the Government to send troops without previously consulting the Assembly, was disallowed by the Viceroy: and this has, of course, been hotly resented. Mr. Jinnah, who was, in the last Assembly, leader of the Independent Party but is, in this one, in the not singular position of a leader without a party, stated his opinion that "the control of military government as well as civil administration should be transferred to the Assembly"; but expressed approval of the arrangement that, when Indian troops are sent out by Indians for

Imperial purposes, the British exchequer bears the cost. The later fact, however, proves, somewhat to one's surprise, to be only a fresh grievance: as a leading extremist paper puts it, "it only increases the ignominy of India's position: it brings out in sharper relief the fact, so insulting to India, that the British Empire wants mercenaries and that its Dependency must supply them." At a "crowded meeting" held in Bombay to protest against the dispatch of troops, it was decided to ask the President of the Indian National Congress to send a message of sympathy from the Indian people to the people of China—their Chinese brethren with whom they would join hands if given the chance of exercising their own will. One speaker said that, in helping England against China, Indians would be selling the honour of their country for a few pieces of silver: another, that he was "at a loss to know why Indians should not prefer Bolshevism to the rule of the Britishers, and the red-handed yet clean-hearted Bolshevik to the white-handed but dark-hearted Englishman." A fact peculiarly exasperating to the extremists is that a number of Indian Princes have offered assistance if required—an "immoral and inhuman" action that is coupled with that of Indian merchants who accepted contracts to fit out the transports conveying the troops to China.

All this is, of course, quite irresponsible—but none the less pernicious—nonsense. It is nowhere necessary for a "popular" speaker to have any acquaintance with his subject; this is, indeed, rather a disqualification than the reverse. The familiar brand of demagogue whose own country is always in the wrong finds plenty of imitators in India; all the more so because the latter are in a position to vilify not only those of their countrymen whose views differ from their own, but an "alien Government" as well. Western democracy, if it has not made much impression on politically-minded India, can at least claim the credit of this.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 3.

Political Jealousies.

The appointment of Mr. A. K. Ghuznavi and Mr. Byomkesh Chakravarti as Ministers was quickly followed by the issue of statements to the Press by the three so-called Moslem leaders, one of whom is the new Minister. Since then, in addition to the usual crop of articles and leaders in the Press explaining everybody's point of view, we have had a series of demonstrations and student processions calling upon Mr. Ghuznavi to resign as a protest against the "insult to Muslims." It is clearer every day that we are no nearer to real unity amongst indigenous politicians, although they have for the moment patched up their differences sufficiently to enable a Ministry to be formed. Personal jealousies and rivalries have always been major obstacles to political progress in India, and matters go from bad to worse. The quarrels and discussions over the Ministerial appointments show the condition of affairs in regard to the Moderates and the Moslems, but the Extremist camp is no better, and the *Bengalee*, in commenting upon the subject, says that the sole function of the Congress now appears to be to furnish an arena for the display of spite and jealousy. So far from helping in political education, the effect of the Reforms has been to enlarge the field for intrigue and personal animosities.

Late Mails.

The Press continues to give prominence to the subject of the lateness of the mail. There were good grounds for the prevailing impression that the P. and O. were not doing all that was possible in the matter for, following upon Lord Inchcape's Press statement, the mail steamer arrived in Bombay last week in good time, and it is stated

that this will now be the standard practice. The fault appears to lie mostly with the G.I.P., now a State railway, and its Blue Train, which started a few weeks ago with such a flourish of trumpets is now being subjected to a blast of criticism. Three hours are lost in each run owing to the breakdown of a bridge, but this still makes the train substantially slower than its drab predecessor of pre-War days. Inspired statements show that the B.N. Railway, which is company-worked, is prepared to introduce a mail special doing the journey in 37 hours as against 44 hours of the Blue Train over the State line. The only difficulty appears to be the extra expense which is put down at Rs.2,000 per week or say, a lakh of rupees yearly. It will be ridiculous, if the Government which is responsible for New Delhi hesitates to spend such a negligible sum for the convenience of the whole of the commercial interests on this side of India.

Steel in the Assembly.

Sir Charles Innes, in introducing to the Assembly the Bill for giving effect to the recommendations of the Tariff Commission, was very complacent upon the effect of the protective policy of the last few years. He claimed that the assistance of tariffs and bounties had placed the Tata Company on its feet again and had enabled it to reduce the cost of production very substantially. It is clear that Tata's, and any other exploiters of the Indian field, will get their protection for another seven years, but Home manufacturing interests would do well to note carefully the attitude of certain members of the Assembly in regard to the differential duties between British and Continental steel. Remarkable and widespread hostility was shown to anything which might be construed to be a preference for British steel, and it must be recognised that the growth of Extremist influences in India is accompanied by bitter antipathy to British commerce.

The Chinese Situation.

Several regiments have embarked in Calcutta this week for China; but little is seen of them by the man in the street, as, with the development of the Port, troop trains now run straight through to the jetties. The tone of the comments in the Extremist Press shows no alteration for the better, and *Forward* exhausts the dictionary to find sufficiently scathing adjectives to describe the insincerity of Great Britain. It is by far the most influential Indian newspaper here, and it is at the moment in Court on a prosecution for sedition following its comments on the Pabna riots last year; this does not temper its present outbursts, which are obviously calculated to inflame the public mind with equal irresponsibility and mischief. One would have thought that the military record of the Bengali would have made the Extremist Leaders more cautious in commenting upon matters which are so far outside their understanding, but it is hopeless to expect the glimmerings of a sane outlook from such quarters; as an antidote the action of a number of the Indian Ruling Princes in offering the services of their State troops, if they are required, may be noted as a factor of equal importance in the Indian political outlook.

Men and Things.

The Corporation has made partial amendment for some of its recent futilities in regard to addresses of welcome by presenting one to Sir Ronald Ross, who is visiting the city in which he made his great discovery in regard to the transmission of malaria. It was somewhat brave of the Corporation to do this after it had abolished its Anti-Malaria Brigade and left matters entirely to the god of chance.

Sir Samuel Hoare and his party have left Delhi for Home, and, although their start was delayed some three hours by mist, Karachi was reached in good time the same evening. The news at present is that the new Air Service is receiving very little patronage, largely owing to the difficulty of obtaining steamer connexions at Port Said.

Calcutta had a jewel robbery sensation this week—£70,000 worth of jewels, the property of a ruling prince,

having suddenly disappeared with the agent who had brought them here for disposal. They were recovered almost as quickly as they were lost; an Anglo-Indian youth saw a newspaper account and realised that a bag containing "business papers" had been left with him two or three days previously when he had put it under his bed for safety. He took the bag to the police and the whole of the spoils were found intact.

On February 1, 1827, the first meeting of the Bengal Club was held, followed by a dinner; on Tuesday of this week 150 members sat down to dine and celebrate the centenary. Mr. Oswald Martin, President, was in the Chair and, as was the case a hundred years ago, his health was proposed by the Chief Justice of Bengal. This interesting and dignified occasion was followed yesterday by a feminine invasion of the Club precincts, and it is said that it will take some of the older members another hundred years to recover from the shock.

Considerable interest is being taken in the amalgamation of the firms of Martin and Co., and Burn and Co., the shareholders of the latter having been bought out by the great organisation of which Sir Rajendra Nath Mukherjee is the head; speculation is rife as to what is behind this, as the combination means the amalgamation of the principal Indian iron interest outside of Tata's.

The Trivial Round.

Saturday was the first day of the Spring Meeting and the weather was certainly unseasonably hot, an all too frequent experience this year. The racing was interesting on the whole, although once again favourites failed to materialise; the appearance of the rings seemed to indicate that money is getting shorter.

The paperchase this week attracted one of the biggest attendances of the season, and G. S. Johnstone once again led the field home, followed by Ian Maitland-Heriot, owing to Captain Leetham having run out just before the finish.

The Tennis Tournament concluded before some of the largest crowds ever seen upon the Calcutta ground. The Men's Doubles were won by Ueda and Kitagawa; E. V. Bobb, the All-India Champion, won the Men's Opens, while the Mixed Doubles were carried off by Meyer and Mrs. Graham, the latter having already won the Ladies' Championship. The majority of the competitors are now at Allahabad playing in the All-India Meeting.

Although the M.C.C. did not succeed in winning their matches in Colombo, they held a considerable advantage in each of the draws against the Europeans and the Ceylonese. In the latter match Wyatt proved his quality by scoring a century and doing the hat-trick. In local cricket the annual match between McLeod's and Turner Morrison's took place on Sunday last, the former winning with not a great deal to spare.

The Olympic Teams have arrived from all over India and are hard at work on the Eden Gardens track. The meeting should see some fast timings.

The Saturday Club has regained its position in the dancing world, the introduction of the dinner dance having created a new form of entertainment, which has quite ousted the old type of Friday evening event. Nowadays you cannot get a look in, unless you take a partner or a party.

Monday saw the annual Kalimpong Dance at the Club, the success of which was heightened by a particularly amusing cabaret, which included a wonderful boxing match, as well as the violent but futile efforts of a well-known broker to sing the Prologue from Pagliacci; the Tosh sisters repeated their Pantomime successes with a delightful and original dance, and rounded off a particularly cheery evening which should show very good returns.

Markets.

The tone both in the jute and gunny markets has been quieter and prices have tended easier in both cases; a certain amount of speculation in Hessians for forward deliveries has been done, but export business has been

negligible. As a result of a more general demand, the piece-goods market has again shown an improvement this week; prices are firmer all round, and inquiry from up-country centres has been greater than for some time. The tea sale here reflected the tone of the London market and displayed an easier tendency for all but the best qualities. Later reports from London indicate a weaker and irregular market for the balance of the sale there, but this is, no doubt, due to the troubles in China.

On the Stock Exchange, Government Securities, especially the longer dated ones, have been made in demand than for some weeks; this is attributable chiefly to a good inquiry from Bombay. Debentures have been steady, and amongst Preferences a number of Jutes have changed hands, although on the whole the shares were not as readily absorbed as would have been the case a few months ago. In spite of a number of transactions jute shares are rather easier on balance, mainly as a result of the decline in the commodity market. On the other hand, two more satisfactory dividends were paid by the Kamarhatty and Kankinara Companies, and so long as holders obtain such excellent returns there is little possibility of any material reaction in share prices. Coals have been dull but steady, and business in teas once again has been on a small scale. Rubber shares have been the source of a fair turnover, but the tendency at the close is slightly quieter. In the miscellaneous market, sugar and flour shares continued to be sought after, and there have again been a large number of dealings in this market.

In the Exchange Market, as a result of a scarcity of bills and a demand for remittance, the rate for Ready T.T. has weakened to 1s. 5 15-16d. Money has been in less demand and at the close rates are $4\frac{1}{2}$ per cent. and $4\frac{3}{4}$ per cent. for Call and Short Notice and 5 per cent. for One to Three months deposits.

THE ARABIC HISTORY OF GUJARAT.*

The Story of a Lost Manuscript.

By SIR E. DENISON ROSS, C.I.E., Ph.D.

I.—Author and Manuscript.

Habent sua fata libelli, and few books can have had a fate stranger than that of the Arabic History of Gujarat, which forms the subject of my lecture. The story, in brief, is as follows:—A young Moslem of Indo-Persian descent named 'Abdullah ibn Muhammad ibn 'Umar, having been brought up in Mecca, arrives in India with his father in the last year of Humayun's reign. Like his father before him, he takes service under the Nobles of Gujarat and during the whole period of Akbar's reign, that is from 1556-1605, he is employed in various official capacities and is in close touch with the chief protagonists of the drama which culminated in the absorption of Gujarat into the Mogul Empire. During part of this time he found leisure to compile a history of Muhammadan rule in India. Although he records no events later than 1605, in which year Akbar died, he was certainly engaged in revising and adding to his History as late as 1611, as we know from the sources he quotes, and at that date he himself was in active service in the Deccan: what happened to him after that we shall probably never know. He may quite possibly have returned to Mecca and died there. However this may be, his History in the form of a rough draft somehow found its way to Northern India, and presumably at the end of the 18th century came into the Library of the Calcutta Madrasa, an institution founded by Warren Hastings in 1781.

As far as we know, no fair copy was ever made of this draft, nor were its contents ever examined by any other historian. During the 19th century there were among the

Principals of the Calcutta Madrasa two very eminent scholars, whose names are familiar to all Orientalists to-day, namely, Sprenger, best known for his *Life of the Prophet*, and Blochman, who made so many valuable contributions to the History of Moslem India. It seems quite certain that the Arabic History of Gujarat must have fallen under the eye of both these scholars, for it is inconceivable that they should have left unexamined the MSS. temporarily under their charge. The fact, however, remains that neither of them ever made any allusion in print to this work, and how it escaped notice must always be a mystery. By great good fortune I happened to light upon this MS. during my first inspection of the Library, the day after I had arrived in Calcutta in 1901; and the work was thus rescued from oblivion 300 years after its completion.

In order to dispose at once of my share in bringing this lost History to the notice of scholars, I may mention that after a brief examination of its contents I at once drew the attention of the Government of India to its importance; and suggested that the text should be printed at the expense of the Government. Thanks in a large measure to the encouragement of the then Viceroy, Lord Curzon, that great patron of Indian history and archæology, it was decided that the text should be printed, and that it should form part of the recently established *Indian Record Series*. In 1910 the first volume appeared; in 1921, the second, and in the present year (1927) I hope the third and concluding volume will be issued.

II.—The Title and Contents of the History.

The title of the whole work, to which the author refers on two occasions, is "*Zafar ul-Wāliḥ bi Muzaḥḥar wa Aliḥ*," a title by no means easy to translate, but the late Monsiuer René Basset suggested, "*La Défaite du Craintif par un Victorieux et sa Famille*." (The subjection of the timorous by a conqueror and his family.) The word for "victorious" is a play on the name of Muzaffar, the founder of the Gujarat dynasty.

This History is divided into two parts or *Daftars*. *Daftar I*, which occupies nearly three-quarters of the whole work, is intended to give a detailed history of the Moslem Kings of Gujarat, who ruled from 1396-1572. Incidentally, it deals with a number of other topics, including the history of Southern Arabia, Jaunpore, the Deccan and Mandu, and includes several long biographies. Unfortunately, the reigns of the first two Kings of Gujarat, namely, Muzaffar and Ahmad, are missing. This is the more to be regretted in that other historians of Gujarat have dealt less fully with these two reigns than with the later ones.

Daftar II deals with the history of Muhammadan rule in other parts of India, and is naturally not so valuable as an original source as *Daftar I*, but even here we may find many additional facts, and quotations from works of which no trace exists to-day. Moreover, it constitutes the best short account of Moslem India down to the reign of Akbar to be found in an Oriental language. The time at my disposal will not permit me to discuss its various merits, but I would like to remark in passing (1) that the author has drawn at first hand upon a history called the *Ta'rikh-i Bahādurshahi*, which, though quoted as a source by many Indian historians, has never been identified until now and never quoted at such length: (2) that there are several indications that the author had before him a recession of the *Akbar-Nāma*, differing from, and presumably earlier than any known to us to-day.

III.—Other Sources of Information.

The best known source for the history of the Muhammadan Kings of Gujarat is the well-known *Mir'āt-i Sikandari*, which was probably completed in A.D. 1611. This work has not only been lithographed *in extenso*, but has been twice translated. Bailey's translation, published in 1886, is incomplete, but there is a complete translation by Fazullah Lutfullah Faridi, published in Bombay without a date at the end of the 19th century. Down to the

* The Sir George Birdwood Memorial Lecture read before the Royal Society of Arts (Indian Section) on February 11; Sir William Foster, C.I.E., in the Chair.

reign of the Sultan Bahádúr the same sources were, no doubt, used by Sikandar and by the author of our History, but whereas Sikandar's narrative constantly shows a bias towards the Sayyids of Bokhara who played a very important part in the country for upwards of a century-and-a-half, and in whose service he and his father were, the author of this work writes an unbiased narrative and displays a critical spirit rare among the Moslem historians, and even goes so far as to call into question the accuracy of the famous *Akbar-náma*. It is hardly conceivable that Hajji Dabír (the name by which our author was commonly known), and the author of the *Mir'át-i Sikandari* should not often have met, seeing that they held similar positions in the same country and at times in the same town over a period of many years, and yet Hajji Dabír never alludes to such an acquaintance in the course of his frequent allusions to the *Mir'át-i Sikandari*.

The second source I would refer to is a little book written by Abú Turab, who took an active part in the negotiations between Delhi and Gujarat under both the Emperors Humayun and Akbar. This work I found in a unique manuscript in the British Museum about twenty years ago, and in 1909 I published the text in the *Bibliotheca Indica*. Part I deals with the hostilities between Humayun and Bahádúr; and Part II with the first entry of Akbar into Gujarat and the subsequent settlements of the country and the disputes between the nobles. It is rather a journal than a history, but being a personal narrative it is full of interesting details.

The Bodleian Library possesses a history of the Sultans of Gujarat*, which, as far as I am aware, has never been examined by any student of Indian history, beyond being briefly described by Ethé in his *Catalogue of the Persian Manuscripts*. Although the narrative does not extend beyond the year A.D. 1553, this little work was obviously written after the entry of the Emperor Akbar into Ahmadabad in A.D. 1572, since this event is referred to. It is presumably older in composition than the *Akbar-náma*, the *Mir'át-i Sikandari* and the History of Gujarat by Abú Turáb Vallí, and may, therefore, be regarded as an original source for the history of the Sultans of Gujarat. The most valuable features are (1) the account of Bahádúr's death, which differs from other known versions, and (2) the close agreement with Abú Turáb's History in connexion with the defeat of Bahadur by Humayun at Mandesur in A.D. 1535.

Finally, I must mention the *Mir'át-i Ahmadi*, which was begun in A.D. 1748 towards the close of the reign of Muhammad Shah by a certain Ali Muhammad Khan, who had been appointed Diwan of Gujarat. He originally intended to compile an extensive return of the revenues of that province. Subsequently, however, he decided to expand the historical matter and finally completed his work in the reign of Alamgir II. This work contains much interesting matter regarding the early history of Gujarat and the history of the province under the Mughal Emperors, but for the account of the Kings of Ahmadabad is mainly an abridgement of the *Mir'át-i Sikandari*. An incomplete translation of this work was published by Dr. Bird in 1835.

IV.—Moslem History in Gujarat.

The province of Gujarat comprises roughly the western part of India, which is bounded on the north by Sind and Rajputana, on the south-east by the Deccan, on the west and south by the Arabian Sea.

The principal towns are:—Ahmadabad, Baroda, Broach, Surat and Diu.

Up till the end of the 13th century this country was governed by various Hindu dynasties, to which I do not propose to refer. In 1295 the province was first conquered by a Muhammadan ruler in the person of Ala-uddin-Khilji, Emperor of Delhi, and it remained a

Muhammadan province until 1758, when the Marathas took possession of the country. Thus Muhammadan ascendancy lasted a little more than four-and-a-half centuries. This period may be divided into three:—

(1) The 13th century; rule of the early Delhi Kings.

(2) From the beginning of the 14th century to nearly the end of the 16th century; about a century and three-quarters under the local dynasty of Ahmadabad Kings.

(3) Nearly two hundred years under the Viceroy appointed by the Mughal Emperors.

The period to which I wish to refer specially is of the last twenty years of the second period, culminating in the entry of the Emperor Akbar into Ahmadabad in 1573.

In 1297, Ala-uddin-Khilji sent his general Ulugh Khan into Gujarat, the result of which expedition was the appointment of a local governor. Ulugh Khan made several further expeditions into Gujarat, by which the domination of the Delhi kings was consolidated, and for upwards of twenty years he was practically Governor-General of Gujarat. At the end of this period he was recalled, and succeeded to a certain Ain Ulmulk, who was in turn succeeded by the father-in-law of the Delhi Sultan, namely, Qutb-uddin-Mubarakshah, with the title of Zafar Khan, and it was this Zafar Khan who, appointed in 1391 as Viceroy of Gujarat, eventually founded the local dynasty of the Muhammadan independent rulers of Ahmadabad which endured for a century and three quarters. It is not known precisely when Zafar Khan openly threw off his allegiance to the Delhi Sultans, but this probably occurred about A.D. 1396.

Zafar Khan was the son of a Rajput convert to Islam. He found himself surrounded by enemies, and in possession of a territory confined on one side by the hills and on the other by the sea, but including a long strip of the coast extending at least as far as Surat.

In 1411 Zafar Khan died and was succeeded by his grandson Ahmad, who was the real founder of the Gujarat dynasty. It was he who built the famous Ahmadabad, which became the capital of the dynasty, a beautiful town, the delight of all travellers and famous for its monkeys. There were fourteen kings of this dynasty in all: I do not propose here to enter into details of the various reigns, but the names that stand out most prominently are those of Mahmud Shah Begarha, who reigned from 1458-1511 and added the important strongholds of Junagarh and Champanir to his dominions and built a large fleet; and Bahadur Shah, who conquered Malwa and ceded the factory at Diu to the Portuguese, at whose hands he met his death in 1536. The three rulers who succeeded Bahadur Shah were mere puppets in the hands of the local nobles, and it was under the last of this dynasty, Muzaffar Shah III., who came to the throne in 1561, that Akbar invaded Gujarat in 1573 and made himself master of the whole country.

During these 20 years of Gujarat history prior to the advent of Akbar, the nominal Sultan was carried about as if he were nothing more than the royal crown or seal and was constantly changing hands as one or the other feudal chiefs got the upper hand and commanded the largest following.

We have seen that the first Sultan was himself a Rajput by descent. As for the leading nobles who served or made use of this convert dynasty, they represented the most various origins. In fact, the only thing they had in common was their adherence to Islam, for it seems that most of the permanent officials and commanders were Muhammadan in name, though, no doubt, in a country whose inhabitants had practised the Hindu religion and, except for an occasional Muhammadan invasion had, up to the end of the 14th century, had very little to do with followers of the Prophet, it may be supposed that a large mass of the population remained faithful to their Indian religion. The chiefs were in the main Hindu converts, but

* The M.S. is numbered Caps. or C.10: See Ethé's *Catalogue*, p. 271.

they also included a very large number of Abyssinians. A contemporary author tells us that in 1511, on the death of Mahmud Bégarha, the Sultan's army in the field reached 100,000, but that when in 1572 Akbar arrived in Gujarat, there were no more than 12,000 armed horsemen. There were 700 Habshis or Abyssinians, 300 Turks, 400 Bahlims, 600 Ghuris, 500 Mughals, 500 Bokhara Sayyids, 4,000 Afghans and 5,000 others. From this it is evident that Gujarat attracted adventurers from every quarter and that the armies were composed entirely of mercenaries, with little or no attachment to the soil, but merely devoted to their leaders who were usually of the same race as themselves. The most powerful noble was the one who commanded the largest number of mercenary leaders.

(To be concluded.)

INDIAN MAIL.

Mr. Saklatvala.

The triumphal progress of "Comrade Sak" continues. It is announced that, in Bombay, a deputation of "young Chinese residing in this city" pressed him to visit China as soon as possible: in the "evident"—but perhaps somewhat sanguine—expectation that such a visit "will give a great impetus to the nationalist movement in that country." The Calcutta Corporation, which refused to present an address to Lord Irwin, has decided, by a majority of 29 to 12, to present one to Mr. Saklatvala. There is, of course, no real political significance in this: it is merely that the Swarajist majority on the Corporation have chosen the most striking—indeed, preposterous—contrast in order to rub in the studied discourtesy of their previous refusal: an action worthy of an undisciplined gang of naughty school children.

It is stated that "the main anxiety of the Comrade's heart" is to see and talk with the man whom he has now canonised as "Comrade Gandhi"—he has, incidentally, also conferred, in a letter to the Press, the same title of honour on a number of other Indian "leaders"—Comrades Nehru, Sarojine Naidu, Mahomed Ali, Shaikat Ali and others. In the letter mentioned, he expounds his scheme for the regeneration of India: one which, he says, in a moment of inspired insight, cannot be carried out "by thumping oratory of a travelling agitator." When Comrade Gandhi called out the students from Government schools and colleges, what they should have done then is what they must do now—"enter villages, factories, mines, dockyards, railway yards, not as external and superior preachers, welfare workers or advisers, but taking their places with our oppressed classes as one of them on terms of equality, doing the same hard and unpleasant work, eking out the same precarious existence, and suffering the same indignities and degradations of human life and human rights." India, he says, has 600,000 villages and 20,000 centres of industrial organisation: and a band of 70,000 young educated men and 30,000 women could, at Comrade Gandhi's inspiring call, be mobilised to work under the guidance of a central All-India organisation, and to "lead the ignorant peasants and workers on a path of self-assertion, of defence against the might of the privileged classes, and then of demands for the ultimate rights of their own class." He explained that he hoped himself to put into working shape this "gigantic programme of an Indian revival," which should produce great results within twelve months. He refused to give lip-service to the creed of non-violence, declaring that even Comrade Gandhi's *khaddar* campaign could not be called non-violent, since, if it succeeded, it would "inflict distress, starvation and misery upon thousands of innocent children of the workers of Lancashire." The emblems of equality and service should be "little red flags to be worn as buttonholes," bearing differences to suit the various groups in his army of workers—the Spin-

ning Wheel, the Hindu trident, the Moslem crescent, even the Crown for Liberals and Moderates: and, wearing these, all ranks would join "in a march with the world that is seeking for justice, equality, liberty and national and international unity, or, all put in one word, Bolshevism."

The Bengal Ministry.

Sir Abdur Rahim, the Moslem leader who was unable to find a Hindu colleague in the Bengal Ministry, and, therefore, had to resign, has issued a statement in which he claims that there was a general Hindu conspiracy against him, and that he was unduly rushed into resignation. He expresses the opinion that the "Responsivist-cum-Liberal" group is of little significance in the Council, and that the Governor had not grasped this fact. "If Lord Lytton had not been so misled, and had given me reasonably sufficient time, I say with confidence that I would have secured a stable Ministry for him and, at the end of his career, he would have been compensated for the failure of his previous attempts in the same direction." This seems to suggest that Sir Abdur Rahim does not expect the present Ministry, constituted after his resignation, to prove a stable one; though it seems probable that its stability will largely depend on his own attitude towards it. It is not so long ago that Hindu publicists were writing about a "conspiracy" to set up a Muhammadan Ministry, under Sir Abdur Rahim, in Bengal. Assuming the accuracy of the word, this, at any rate, was still-born, and their own counter-conspiracy has been more successful; and Lord Lytton is now so near the end of his career that perhaps, after all, he will be allowed to finish it in peace, in spite of the implied threat that seems to underlie Sir Abdur Rahim's words.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Fair.

The general arrangement of the White City section of the British Industries Fair strikes me as being much superior to that of previous years. Gradually we seem to be learning the art of making industrial exhibitions attractive. Speaking generally, moreover, the improvement has extended to the stands. There are many which stand out pre-eminently, and on the whole the level reached seemed to me most praiseworthy. Much can be done with even a small stand no matter what the type of exhibit. As an example of what can be achieved in this direction I recall in a previous year a stand devoted to a well-known commodity. It depicted a vineyard with masses of purple and green grapes, and as a simple but extremely effective advertisement of the product in question, I consider that it merits a very high place. A good deal can be accomplished on similar lines. For instance, a bower of roses may well serve as the surroundings for exhibits of perfumes. A visit on the opening day affords no guide to the extent to which foreign buyers are visiting the Fair, and I shall hope to have something to say on this subject next week.

Developments in Palestine.

While economic depression has had Palestine in its grip in the past year there has been no standing still as regards planning projects for the future development of the country, and it suggests very plainly that there is no failure to realise the facts as they are that the plans in train concern the proved resources of the country. The continually increasing demand for the Jaffa orange has naturally led to the gradual extension of the area devoted to this fruit, but it is now proposed to form a company for the purpose of purchasing land and planting it with orange trees and selling it in small lots to would-be settlers. This scheme has been adopted with, I believe, considerable success in South Africa, and as inquiries are often made with regard to the purchase of orange plantations in that country it seems very probable that it might prove extremely valuable in promoting the rapid extension of orange production in Palestine. The one thing that the country has to guard against, of course, is a surplus production of the fruit, but the market is extending year by year (though competition is also on the increase), and given adequate and continuous publicity this danger should be avoided. The orange it must be remembered is the staple product of Palestine's export trade—without it indeed in past years the country would have been in a poor way—and while it is essential for the country to exploit every possible new avenue of economic development it is only natural that the fullest possible utilisation should be made of a product which has proved itself so fully as the Jaffa orange. Another interesting development in project is the organisation of an export society for the development of a market abroad for Palestine products. That is the natural corollary to the widespread extension of enterprises in the country in recent years.

Palestine itself cannot provide the necessary outlet for the various manufactures, and it must be found abroad if the undertakings are to be established on a firm foundation. How far the country will be able to compete abroad is a large question and one which only the future can answer.

Progress in Iraq.

In comparison with Palestine it would probably be true to say that Iraq has suffered to some extent from the lack of publicity so that the excellent work which has been accomplished there in the past few years has perhaps failed to meet with adequate appreciation. Actually the past five years have seen excellent and steady progress in every direction. What has been accomplished in that period is the subject of a most able and lucid exposition in a paper by the Prime Minister, Jaafar Pasha, published in the *Journal of the Central Asian Society*—a paper which he was to have read before that body but was prevented from so doing owing to being called home to form his Ministry. Some of the points he makes may be briefly summarised. Before the War Iraq had only one railway—a section of the Berlin-Baghdad line—of 76 miles, whereas to-day the approximate mileage open to traffic is 816, and half a million passengers and 400,000 tons of merchandise are carried every year. But, of course, the extensive construction of railways is a very expensive undertaking, and it is fortunate for Iraq as it is for all similar countries that the motor car exists. By the construction of numerous bridges Jaafar Pasha pointed out that practically the whole country has been opened up to motor traffic, and there are now some 2,627 miles of earth roads and 124 miles of metalled roads which can be traversed by motor cars. The Government has built about 300 bridges of more than six feet span, seventeen of these being floating bridges, while there are ten flying ferries on steel cables. Further, the conditions of life generally have been greatly improved. In addition to Baghdad and Basrah, eight towns are now served with electric light, while eight of the provincial towns have a

water installation. "In all these things," Jaafar Pasha justly stated, "there is reason for solid satisfaction. Admittedly our railways and roads will undergo great extension. We are at the beginning of their development, not the end.

Iraq's Agricultural Possibilities.

What Jaafar Pasha had to say on the subject of agriculture in Iraq was of the greatest interest. He rightly regards agriculture as the bedrock on which Iraq's future depends, and he believes the country to be one of the richest portions of the earth's surface awaiting scientific cultivation. At present Iraq is in much the same position as Palestine, as a fruit crop is one of its most valuable assets, and it is interesting to note in this connexion that Jaafar Pasha looks for a considerable extension of date palm cultivation. Iraq's prospects as a grain growing country would seem undoubted, but it is pointed out that improved seed and improved methods of cultivation are necessary. The fullest attention is being paid to this matter, and it may be instanced that in 1925 twenty-two new strains of wheats were tested, while the uses of agricultural machinery are being demonstrated to the cultivators. Jaafar Pasha naturally devoted considerable attention to the question of cotton, and on this subject he is very optimistic, pointing out that the soil and climate are suitable and that there is plenty of water, and that when the irrigation system has been developed the country can be one day one of the great cotton growing areas. He admits that slow progress must be expected, and that so far the advance that has been made has not been as great as they would have wished, but, of course, apart from the irrigation difficulties it is never an easy matter to introduce a new crop in a country where the people are conservative in their habits. Cotton growing is emphatically a case for the application of the proverb that nothing succeeds like success. When the landowners realise that in cotton they will have a really profitable crop progress will be rapid, but here again that depends on the price of the commodity in the world markets.

India's Cotton Problems.

We have heard much in recent years of Egypt's cotton difficulties and of the American crop varieties and other cognate matters, but very little of India as a cotton producer though the country is second to the United States as a producer of cotton—a poor second admittedly in the case of an American crop of the dimensions of last year's. It is very welcome, therefore, to have the address on India's cotton problems which the Indian Trade Commissioner, Mr. H. A. F. Lindsay, delivered last week at a meeting of the East India Association at which Sir Frank Nelson, M.P., presided. After pointing out that cotton is the biggest single item in the long list of commodities in which India is interested both as a producer and a

consumer, Mr. Lindsay went on to deal with the effect of the changes and vicissitudes of production and price during and since the War on the Indian crop. He pointed out that one of the great difficulties in India has arisen from the fact that the American crop has always so dominated the world's markets that the Indian crop even in India has been affected. India was using a considerable amount of American cotton, and the problem was the improvement of the Indian varieties of cotton and particularly to secure local supplies of long staple. In 1921 came the appointment of the Indian Central Cotton Committee, and in succeeding years various regulations were passed having the effect of putting a premium on the cultivator who undertakes to grow long staple and to market it in good condition. As to the future Mr. Lindsay declared that it is certain that the Indian mills will wish to advance still further in the production of the finer counts of yarn and the finer grades of cloth, absorbing increasing quantities of the long staple cotton. That means, of course, ever increasing competition for Lancashire, whose trade is mainly in the higher grade fabrics.

The Late Mr. A. S. Bull.

His many friends will learn with deep regret of the death in London of Mr. Arthur Seymour Bull at the age of sixty years. Mr. Bull, who was hon. secretary of the Royal Colonial Institute, was associated for many years with the Publicity Department of the Sudan Government. The excellent work he accomplished in both offices is so well known as to need only a passing reference here. He was a man of infinite tact and charm, and brought to his work a painstaking efficiency and an enthusiasm that was bound to conduce to success. His death leaves a gap that it will be hard to fill.

The Manchester Ship Canal.

Despite the extremely adverse conditions obtaining during the past year the report of the Manchester Ship Canal Company shows a further and marked advance on the results obtained in 1925. The cessation of coal exports for a period was a factor which might have been expected to have a vital effect on the year, but imports of coal were forthcoming which offset the loss in this direction to a considerable extent. The total traffic amounted to 6,830,879 tons as compared with 5,881,691 tons for 1925 and 5,435,508 tons for 1924, and the astonishing way in which the traffic has developed may be gathered from the fact that for 1921 the figures were only 3,293,670 tons. The gross receipts for 1926 amounted to £2,215,000 as against £2,103,000, while the expenditure at £1,237,000 was little above the level of the previous year, the net receipts being £962,000 as compared with £889,000. It is proposed to maintain the Ordinary dividend at 5 per cent. as before, to place £80,000 to reserve as against £51,000 last year and £10,000 for 1924, leaving to be carried forward £31,436.

LLOYD'S AGENTS MASSOWAH & JEDDAH

It is the ambition of Manchester to become a great port, and the figures of the Ship Canal over the last few years show that this hope is well on the way to being realised. The vast cotton industries of the regions, to say nothing of the other activities in the neighbourhood give grounds for viewing the future of the Canal with the greatest confidence. Of course, its growing prosperity means an increasing loss of trade for the railways, but that cannot be helped, and it is obvious that commerce must tend to flow in the cheapest channel.

Roumania To-day.

It will doubtless not have escaped notice that in recent weeks there has been a significant appreciation in the Roumanian exchange which may be taken to reflect the improvement in the economic position of the country generally and, in particular, the progress made by the oil industry. There has been a tendency to underestimate the difficulties which have stood in the way of Roumania's progress since the War, and because her recovery has not been so obvious as that of some of her neighbours the steady work that has been going on has not been fully appreciated. Unfortunately as we know countries dependent on agriculture experience fluctuations from time to time, and Roumania suffered from bad harvests in 1921 and 1924 which has prevented the progress made from being so marked as it would otherwise have been. Thus in 1924 the production of grain fell to 7,296,404 metric tons as compared with 9,104,029 for the previous year, and the exports of cereals for 1925 were correspondingly affected, totalling only 815,152 metric tons as against 1,374,215 metric tons. The harvest of 1925, however, like those of 1922 and 1923 was very good with the result that last year's exports again made a good showing, and as the harvest of 1926 was again good, presaging a further expansion of exports it is not difficult to understand the strength of the exchange. There has been no real set back in the production of oil, and the rapid ex-

pansion of this great national industry is a most hopeful feature for Roumania's future. Roumania had a substantial trade balance in her favour last year, and for four years out of five this has been the case, and the general improvement in the situation suggests that the time is now not far distant when it will be possible for her to follow the example of other countries and place the currency on a permanent basis.

The Rubber Position.

With February almost at an end it cannot be maintained that the Rubber situation has lost anything of the interest which attached to it when January ended with the average price well under rs. 9d. per lb., thus bringing about a reduction in the exportable percentage to 70 per cent. Another cut of 10 per cent. would have such pronounced consequences that it is not surprising that the course of the quotations of the raw commodity should be watched with extreme interest. Until the last few days, rubber has stayed at or just below rs. 7d. per lb., but now what appears to be a buying movement of some significance has set in, and the quotation has risen considerably. The position now is that the price must average roughly rs. 10d. per lb. for the remainder of the quarter if a further reduction is to be avoided. If it is to do so American manufacturers must make purchases on a much more extensive scale than in recent months, and it can scarcely be thought that they will not, for the alternative would be very high prices by the autumn. Still there may not be much in it one way or the other on May 1, and a mere fraction will probably decide this important issue.

COMMENTATOR.

The traffic receipts of the South Indian Railway Company for the week ended January 22 amounted to Rs.4,70,396, making the total from April 1 Rs.4,22,03,658. For the corresponding periods of the previous year the totals were Rs.9,19,146 and Rs.4,23,52,985.

M. MOLLOFF ON BULGARIA'S POSITION.

*(From Our Own Correspondent.)**Sofia, February 15.*

The Sobranie commenced the discussion on the Budget of 1927-28 last week. As usual it was preceded by a detailed explanation by the Minister of Finance of the financial and economic situation of the country. The statement consisted of an analysis of the Budget, the total of which has been slightly increased compared to that of last year—the total being 6,993,000,000 leva—in particular because of the increase of Bulgaria's engagements abroad resulting from the rising payments for the service of Reparations and the consolidated loans, including the loan recently raised for the establishment of the refugees. The Government, which has already effected great economies in the course of the year of the present Budget, will continue in future its policy of economy and it is certain that the expenditure will be really balanced by the anticipated receipts. It will continue also to take every requisite measure for the encouragement of the foreign trade of Bulgaria, in the first rank of these measures being a new reduction of the export taxes and a probable alteration of the import taxes, so as to attain a complete equilibrium and to bring about a favourable balance of trade which remained adverse in 1926, though less so than in 1925.

The financial policy of the Government, as M. Molloff elaborated it, is essentially characterised by the tendency to free systematically the Banque Nationale, to which the Treasury owes more than four and a half milliards of leva, by the progressive repayment of this floating debt. For this purpose it allocated in the Budget of 1926-27 a sum of 150 millions, which it has maintained in the Budget of 1927-28. The Banque Nationale has played a rôle of the first importance in the economic life of the country. After its reorganisation, following the conclusion of the Refugees Loan, that rôle will be shared by other banking establishments, such as the Banque Internationale, already existing, which will be enlarged to take over the functions of commercial credits, and the Banque Hypothécaire, which will be constituted very shortly to take over the operations of land credits. The Government's policy, especially after the conclusion of the Refugees Loan which procured for the Bulgarian State the foreign exchange which it needed, has had the result of assuring stabilisation—the first step towards the legal stabilisation of the national currency. Here M. Molloff referred to the transition to the gold standard, adding that he could not indicate when or how the change would be introduced, contenting himself with emphasising the need for seeking long term credits, in other words, loans which Europe ought to grant to Bulgaria as she has done to Austria, Hungary, and Belgium. He urged that Bulgaria deserved this not only because Budget equilibrium had been reached, not only

because she had re-established a state of tranquillity and was concentrating on work, had consolidated her democratic institutions and assured her economic and political recovery, but also and particularly because she followed a wise and firm policy which deserved the confidence of the world, for it was not the policy of a Government or of a party but of the entire nation, so that no one could any longer suspect the country's pacific sentiments and her loyalty in the execution of her international obligations.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Photographic Material.—The Egyptian Ministry of the Interior invites tenders for the supply of photographic material, including apparatus and accessories, chemicals, plates and papers, and identification films required during the year ended March 31, 1928. March 16. (D.O.T.)

Tents, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of tents and shamsias for same. April 9; aluminium and zinc lithographic printing plates, April 27; and document and map printing paper. May 3.

Paper, Printing, and Bookbinding Material.—The Egyptian Government Press invites tenders for paper, boards, printing ink, cloth, etc. March 17. (D.O.T.)

ROUMANIA.

Naval Stores.—Tenders are invited for the supply of various goods required by the Naval Dockyard at Turnu-Severin, Roumania. (D.O.T.)

Yellow and Red Ochre and Iron Minium.—The Braila Docks Service invite tenders for the supply of yellow and red ochre and iron minium. March 1. (D.O.T.)

Ropes, Etc.—Tenders are invited by the Roumanian River Navigation Service, Galatz, for the supply and delivery of the following goods:—Thin ropes for lashing, thick tarred rope, thin canvas (sail-cloth) for awnings, thick sail-cloth, woollen bunting, etc. March 2. (D.O.T.)

Paraffin Wax.—The Roumanian State Monopoly Regie invites tenders for the supply of 200,000 kg. of refined white opaque paraffin wax. March 12. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, March 10). (For passenger sailing and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Anchoria for Port Said, Colombo, and Calcutta (Birkenhead, March 5).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, March 8).

British India Line.—S.s. Margha for Bombay and Karachi (London, February 26); s.s. Matiana for Colombo, Madras, and Calcutta (London, February 26).

Cunard Line.—S.s. Cypria for Gibraltar, Malta, Patras, Calamata, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, March 5); s.s. Tyria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also at Corfu and Ancona if inducement (Liverpool March 10, Swansea March 22).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 12).

P. and O. Line.—S.s. Ranchi for Bombay (London, March 4); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 4); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, March 30).

Ellerman and Papayanni Lines.—S.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 2); s.s. Manchurian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool March 5, Swansea March 8); s.s. Algerian for Gibraltar, Malta, Patras, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 19); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 21); s.s. Roumelian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 2). * Subject to sufficient inducement.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 22.

The Stock Exchange has had a rather disappointing week. The bullish spirit which was so much in evidence earlier in the month has been damped by a variety of influences, among which fresh anxiety over the crisis in China is the most serious. But even if the China trouble were out of the way, other malign influences would remain. Company reports now appearing are showing the public day by day how much the coal dispute cost the country, and how much leeway has to be made up. This influence is likely to become intensified, because we are only at the beginning of the period during which company reports for 1926 appear. Then, again, every week brings us nearer to the date of a new Budget, which is awaited with considerable uneasiness. On the whole, therefore, although the public are showing a good appetite for new issues of an attractive type and some degree of spasmodic speculative activity, general conditions are not very favourable to a renewal of heavy Stock Exchange buying. This week, moreover, the monetary position has not developed in a way favourable to investors, and there is some disappointment over the postponement of a reduction in Bank rate, which prophets had expected to take place before now. Still, neither the volume of business nor the course of quotations in general gives either investor or broker any cause for serious complaint at the moment.

The Activity in Oil Shares.

The past week has seen a slight reaction from the boom conditions recently prevailing in the oil share market. But prices are still high enough to justify a warning against incautious speculation. The rise in prices has been very substantial. Its main causes were the publication of excellent earnings and dividends by certain leading companies, and it found further justification in the fact that in 1926 for the first time for eight years America avoided over-production, and American oil stocks declined. So far so good. But experts are not satisfied that consumption in 1927 will exceed production, and a fall in the price of the commodity is in some expert quarters regarded as more likely than a rise. It would, therefore, be rash to count upon a further substantial increase in oil companies' profits

or dividends in the current year. Yet the present quotations in many cases seem to be based on the expectation of unchecked increase of prosperity. All these considerations combine to suggest that considerable discrimination should be used by investors who are contemplating taking a hand in the oil market at this juncture.

London's Traffic.

The results disclosed by the accounts of the Underground group of railways of London come as a pleasing contrast to the unfortunate position shown by the main lines. The group includes the London General Omnibus Company. In spite of the dislocation of the General Strike, total traffic receipts fell by only £46,000, and as expenditure was reduced by £81,400 and miscellaneous net receipts brought in £93,000 more, net income was £128,400 higher at £3,117,900, that of the four underground railways being £91,600 higher and that of the omnibus company £36,800 higher. Reserve appropriations and dividends were all maintained at the previous year's level, the dividend of the London General Omnibus Company being 6 per cent. paid free of income tax. The amounts paid in dividends by the four railways and the omnibus company represent an average of 4.09 per cent. The parent concern, the Underground Electric Railways Company of London, whose report has not yet been issued, pays the full 6 per cent. on its income bonds, free of tax, and a maiden dividend of 1½ per cent. on its new ordinary shares. The income bonds now stand at 104, at which the yield is not unattractive, though the cover is not yet very substantial.

Some interesting points are brought to light in the statistics published with the reports. The number of railway passengers carried was 310 millions, or 9 millions less than in 1925, while the bus company carried no less than 1,249 millions, or 13 millions more than in 1925, an average of nearly 3¼ millions a day. The fleet of buses numbers 4,700.

Chilean Securities.

Conditions in Chile are by no means satisfactory. The immediate causes of the depression are the crisis in the nitrate industry, increased taxation, delay in agreement on the National Budget, and uncertain political conditions. As for the national finances, for 1925 there was a deficit of approximately £1,727,000. In some quarters it is urged that Chile, having regard to its size, ought to devote rather less money to military expenditure. The public debt, however, is not regarded as excessive, for the figure works out at about £15 per capita.

Despite the unfavourable factors in Chile's outlook, it has to be remembered that few foreign countries have given the external bondholder less ground for concern. However unsettled internal conditions may have been, the service of the debt has been maintained. In these circumstances, those investors who are seeking a generous return on foreign investments and are prepared to take some degree of risk might find a short list of Chilean securities useful. The 5 per cent. loan of 1911—redeemable 1948—gives a return of £7 6s. per cent., and the 5 per cent. loan of 1911—redeemable 1947—gives an equal yield. A return of £7 8s. per cent. is obtainable on the 5 per cent. bonds of 1909, which are redeemable 1957. The 5 per cent. or 1896—redeemable 1944—gives a yield of £6 14s. per cent.

The Mysore Gold Mining Company recommends a balance dividend for the year 1926 of 1s. 9d. per share.

Messrs. Vickers, Ltd., announce that they have received an order from the Admiralty for a Fleet Repair Ship.

A new terminal station for the Bombay, Baroda, and Central India Railway is to be built in the Byculla district of Bombay.

It is reported that the Bulgarian Government is to enlarge the port at Vassiliko on the Black Sea at a cost of 30,000,000 leva in connexion with the forest concession that has recently been granted.

Near East Markets

BULGARIAN TOBACCO STOCKS.

An Important Deal.

(From Our Own Correspondent.)

Sofia, February 15.

According to the official reports the area planted with tobacco in 1926 amounted to 30,337 hectares as compared with 52,670 hectares in 1925. The crop of 1926, which totalled 26 million kilos (that of 1925 being estimated at more than 30 millions) is better than that of 1925 and a great improvement on the 1924 yield. The tendency is now not to plant tobacco except on lands specially suitable for its cultivation. The weather conditions of last summer, and notably the long period of dryness which preceded the harvest, developed in the leaf to the desired extent the qualities of aroma and colour which lovers of Eastern tobacco seek. Of this crop 3,500,000 kilos have been sold already at about 20 per cent. higher prices than ruled for the 1925 tobacco. Thus the superior quality of the last crop is demonstrated.

The stocks of old crops that now exist in Bulgaria total about thirty million kilos. On account of the poor crop of this year in Turkey and Greece, it is hoped that purchasers will be found for the Bulgarian stocks. In 1925 Turkey produced 52 million kilos and Greece 55 millions. Their crops of 1926 were respectively 37 and 40 million kilos. Thus the Turkish, Greek, and Bulgarian crops of 1926 totalled about 103 million kilos. The total consumption of these three countries is estimated at about 27 millions (Bulgaria 6, Turkey 14, Greece 7), so that the exportable surplus amounts to a maximum of 76 million kilos (a weight which drying and manipulation will decrease by about 10 per cent.). The world consumption of Eastern tobaccos is estimated at about 110 million kilos a year, so it follows that there is a shortage on the 1926 season of about 35 million kilos. As it does not appear that Turkey and Greece have large stocks of old crops, it is anticipated that the deficit will be met by the Bulgarian reserves.

Since the purchase by the Hungarian Régie of two million kilos in October no other foreign Régie has concluded business in Bulgaria. The conclusion is looked for shortly of contracts with the Polish, Czecho-Slovakian, and Italian Régies. German traders have bought since October from 1,500,000 to 1,700,000 kilos. It is becoming evident that the German market will offer this year a larger outlet than last owing to the reduction of the tax on raw material; in 1925 this tax affected imported tobaccos to such an extent that German cigarette manufacturers were compelled to exist on their stocks. Since May, 1926,

the tax on raw material has been greatly reduced, and the German houses are replenishing their stocks.

An important transaction has been concluded between the peasant co-operative producers of tobacco and a company of Lugano "Tioutioun"; the co-operatives are negotiating through the medium of the Banque Agricole de Bulgaria, the Tioutioun Company having the guarantee of the Banque Commerciale Italienne of Milan. The company will agree to an advance to the co-operatives of an amount of six million florins on the security of the tobacco of 1926 and the following harvests; it undertakes to place these tobaccos abroad. The agreement is for three years, and can be extended by mutual agreement for two further years. It is anticipated that advances of an amount of three million florins will be granted by the company on the same conditions on the harvest of 1925 and earlier which the company will also undertake to place.

EXTENSION OF ROSE GROWING IN BULGARIA.

(By Our Sofia Correspondent.)

According to information gathered by some distillers the production of attar of roses amounted for 1926 to 1,600 kilos. Of that quantity a little more than 1,000 kilos has been produced by the works; the balance represents peasant production. The yield of the year 1925 was a little better than that of 1926. Despite the continual rise in the net price due to the increased price of the flower nearly all the production has been sold, and it is estimated that there are hardly any disposable stocks. It would seem therefore that a crisis arising from over-production need not be feared, and this impression finds support in the fact that plans are in train for the creation of new rose gardens. The area planted with roses, which was unceasingly increased before the War, amounted in 1917 to nearly 9,000 hectares, and since it has not ceased to diminish, and it is estimated to have been in recent years about 3,500 hectares. The new plantations will commence to flower at the 1928 harvest. From this extension a marked fall in the price of the flower is to be looked for and consequently in the net price of attar of roses, and it is hoped that Bulgarian producers will be able more advantageously to meet the competition on the French market of the distillers of Grasse.

Before the war the Bulgarian production of attar of roses varied between 3,000 and 4,000 kilos. They are making at present in the Valley of Roses experiments to acclimatise jasmine.

COMPANY NOTES AND REPORTS.

SOUTHERN PUNJAB RAILWAY.

The report of the Southern Punjab Railway for the year to September 30 last shows a net revenue of £262,006, after deducting £177,483 due to the Government, and after allowing for administrative expenses, taxation and debenture interest. With £77,788 brought forward the available total is £339,794. The directors recommend a final dividend on the ordinary stock of 6 per cent. actual, together with a bonus of 2 per cent., making, with the interim of 6 per cent. already paid, a total distribution of 14 per cent. for the year, less English income-tax at 2s. 0½d. in the £. From the balance of £107,794 remaining, £50,000 is transferred to contingencies account and £57,794 is carried forward.

The India Office, after a trial in India of the new Wolseley 16-45 h.p. Light Six, have placed an order with Mr. W. R. Morris for 28 of these cars.

Orders have been placed by the Metropolitan-Vickers Electrical Company, Manchester, with the Westinghouse Brake and Saxby Signal Company, London, for 82 electrically-driven air compressors for brake equipments on locomotives for the Great Indian Peninsula Railway.

British Trade Reports

I.—PALESTINE.

(Continued.)

New Industries.

Early in 1925 industrial conditions were favourable and a number of important factories were established. A silk-weaving factory, cotton-spinning and a steam tannery commenced operations at Tel-Aviv.

The most important stimulant to local industry has been the establishment of electrical power stations at Tel-Aviv, Haifa and Tiberias (the latter two in 1925) by the Palestine Electrical Company, Ltd. So great has been the demand for electricity at Tel-Aviv and Jaffa that the two engines, each of 500 h.p., which were first installed in the power station there had to be supplemented by a third one of 250 h.p., and later by a fourth of 1,000 h.p. Electricity is now also supplied from the Tel-Aviv station to Petah Tikvah, the largest Jewish colony in the neighbourhood. It is expected shortly to start work on the establishment of hydro-electric power from the Jordan. The first hydro-electric station will produce 24,000 h.p. for 24 hours a day; others can be added as conditions may demand, up to a total output of 300,000 h.p.

The soap-making industry, the most important of the pre-war industries with the exception of wine manufacture, is progressing, and new methods and machinery are being introduced by manufacturers. The production is increasing, and during 1925 5,855 tons of laundry soap, valued at £E.247,725, were exported, showing an increase over the previous year of 1,046 tons, valued at £E.43,834. Toilet soap of an improved quality is now manufactured. The "Shemen" Oil Company at Haifa, a modern factory established with a capital of approximately £E.250,000, commenced manufacturing laundry and toilet soap on a limited scale. A number of small soap factories have been established during the year in Tel-Aviv and Jaffa.

The Portland Cement Company "Nesher" of Haifa commenced operations in October. The cement produced by this factory compares favourably with foreign brands. The capital invested is approximately £E.300,000, and the factory can produce 60,000 tons a year.

Flour milling is progressing. The Grands Moulins de Palestine erected an additional factory for the manufacture of Matzot (Passover bread). Prospects for this new enterprise are good.

Seven tobacco and cigarette factories and seven tobac factories were working regularly in 1925. Over 300 tons of cigarettes were manufactured. The industry is progressing steadily, but a certain amount of tobacco is still smuggled into the country, with a resulting loss to manufacturers and to the revenue.

The sale of salt is a Government monopoly. A company is producing salt at Athlit by the evaporation of sea water in artificial basins. The output of this company was 5,500 tons of salt in 1925, as compared with 2,600 tons in 1924. Sales of salt by the Government amounted to 4,794 tons in 1925, as compared with 3,457 tons in 1924.

Three factories are producing alcohol in the country; these have formed a syndicate in order to reduce the cost of production and eliminate competition. The production

was 52,456 kilos. of alcohol in 1924 and 261,894 kilos. in 1925.

The Bethlehem mother-of-pearl industry progressed during the year owing to the success it obtained at the British Empire Exhibition, where important sales of curios and articles of piety were effected. There are two match factories in Palestine, one at Acre and the other at Tel-Aviv. The industry is hampered by the high cost of production.

Over 700 small industrial concerns are at work manufacturing all sorts of goods. There are brass and iron foundries, printing presses, and factories manufacturing confectionery, pottery, and furniture, and many persons are employed in other trades. Industry in Palestine is still in an embryonic stage and is handicapped by the lack of raw materials, the relatively high cost of production, and transport. Long-term industrial credits are lacking. The more important industries were not seriously affected by the financial depression of the latter part of the year, and prospects for the future are promising for those industries which can obtain their raw materials in the country.

Most of the new industries find their development retarded by the high cost of living, with its corollary of a high cost of production, and many of them ask for measures of protection. The Government policy in these matters has been to grant customs exception in respect of raw materials, and to assist the development of the export trade. Olive oil for industrial purposes, caustic soda, various seeds for the extraction of oils, hides and skins, dyes, cotton, woollen and silk yarns, mother-of-pearl shells, sulphur, printers' types, tools and implements, bottles, etc., were exempted from customs import duty during the year in order to encourage local industries. The export duty on all articles, with the exception of antiquities, was abolished early in 1926. With a view to encouraging agriculture, the land tax on tobacco and cotton has been abolished for a certain period, and the agricultural tithe has been reduced from 12½ to 10 per cent.

Palestine Railways.

Steady development and progress were recorded in all branches; the tonnage handled, passengers carried, kilometrage of line operated, and work performed were substantially in excess of the figures for 1924. The traffic consequent on increased immigration and building activities was handled without incident. The gross earnings of all sections were £E604,569, and working expenses £E438,504.

The railway administration operates the following sections (the figures representing kilometres):—Palestine railways: open line 374.223, sidings 98.491, 472.714; Sinai military railway: open line 201.885, sidings 41.235, 243.120; Hejaz railway (Palestine): open line 212.040, sidings 30.546, 242.586; Hejaz railway (Trans-Jordan): open line 436.343, sidings 10.945, 447.288; total, 1,405,708. Of these, 715.834 kilometres are standard gauge and 689.874 kilometres are 105-cm. gauge track.

The main line standard gauge is in good condition throughout, and the 105-cm. gauge also, except from Amman to Ma'an, where damage was caused by floods. From Ma'an to Qal'at el Mudawwara, bridges have still to be repaired over several wadis. The Jaffa-Jerusalem line is being widened to a maximum of 1½ ins. over normal to lessen the tractive effort of trains on the 150-metre radius curves and 2 per cent. grades. The standard gauge was extended from Haifa for 7 kilometres eastwards over the 105-cm. gauge of the Hejaz Railway to connect up the "Nesher" cement factory, to which a private siding was laid. Some 21,000 cubic metres of ballast were placed during the year, and the main line from Zichron Jacob to Athlit was relaid with B.S.S. rails on wooden sleepers, replacing Krupp rails. There no longer remains other than B.S.S. permanent-way material on the standard gauge.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

The derelict line which ran from Asluj (30 kilometres south of Beersheba) to the Palestine-Egypt frontier at Kossaima was salvaged, and all the railway material is now in depots. Staff instruments were installed on the Raf-Beersheba branch and working appliances fitted at various sections and sidings. The Western Electric Telephone control has been centralized at Haifa, and six emergency telephone outfits have been provided. Standard crossing signs, whistle boards, speed restriction boards, etc., are in use.

The line from Haifa to Kantara was recharged and zero transferred from Kantara to Haifa. Hectometre stones have been set up throughout the line. Special installations were constructed at Lydda, Sarafand, Artuf and Jerusalem to supply Jerusalem with water during the drought, and from 75,000 to 120,000 gallons were transported daily by as many as six trains between Lydda and Jerusalem.

Motor Transport.

Motor transport, which was unknown in Palestine before the war, has developed considerably since the British occupation. There are 1,169 touring cars, 295 motor 'buses, 111 lorries and ton trucks, and 146 motorcycles now registered with the Department of Police and Prisons. Motor-car services link up the whole of Palestine, services between the less important towns being of an irregular nature. Motor 'buses are operating in the main towns of Jerusalem, Tel-Aviv, Jaffa and Haifa. There were 805 motor cars imported during 1925, as compared with 205 imported during 1924; of these, 738 came from the United States of America, 24 from France, 23 from Italy, 11 from Canada, 4 from the United Kingdom, 4 from Germany, and 1 from Austria.

The length of metalled roads in the country is approximately 600 kilometres, and, in addition, many hundreds of kilometres of tracks are passable for wheeled traffic of all kinds during dry weather. Resurfacing and repair to many roads was in progress and new roads were constructed.

Minerals.

The minerals of Palestine and Trans-Jordan may be divided into the following classes:—(a) Minerals in solution; (b) earthy or non-metallic minerals; (c) metallic minerals; (d) petroleum and natural gas. Up to the present time the country has only been partially surveyed; the increasing knowledge of the geological formations indicate greater possibilities than have hitherto been suspected. The following résumé gives an indication of the mining possibilities.

(a) Minerals in solution.—The Dead Sea contains 1.0 to 1.5 per cent. potassium chloride, according to the depth at which the sample is taken; 0.5 to 0.7 per cent.

magnesium bromide; 11 to 17 per cent. magnesium chloride, and 7 to 9 per cent. sodium chloride.

(b) Earthy minerals at present known are rock phosphate rock salt, gypsum, sulphur, bituminous limestone and bitumen. With development of the country and cheap transport it is probable that much of the phosphate beds will be worked.

Bituminous limestone.—These are also very widespread in the formation named, sometimes occurring in very thick beds associated with the chalk or overlying the phosphate deposits at Nebo Musa. The low price of fuel oil in Palestine and the presence of a high percentage of sulphur in the crude oil is somewhat against their present development, but applications to work them have been received, and it is possible that the light oils might be marketed locally.

Bitumen occurs rather widely distributed, but it is not usually in a form that can be readily used without purification. Thin seams of coal are found associated with Nubian sandstone around the Dead Sea, but do not appear to exist in beds of any commercial value. Rock salt occurs in domes, such as that of Jabel Usdom, where it intrudes into the gypseous marls and sands of Miopliocene age; much of the salt is extremely pure. Sulphur and gypsum are widely distributed in the deluvial deposits of the old Jordan lake area, but only in a few places have they been profitably extracted.

Iron ores, mostly of a poor quality or very limited extent are found associated with the Jurassic rocks and the upper Senonian series in many parts of Palestine and Trans-Jordan. No detailed survey or examination exists, and it remains for the future to determine whether they possess any commercial value. The area of crystalline rocks of Archean and Paleozoic age of Trans-Jordan are known to carry metallic minerals such as the copper ore at Fenan, and in their extension into Arabia gold was worked by the ancients. There appear, therefore, possibilities in this region of the discovery of metallic minerals—whether of commercial value will probably be determined by a survey that is shortly to be undertaken.

The main indications of petroleum are where the Cretaceous or Eocene rocks are covered with beds of later, probably Miopliocene, age. The area around the Dead Sea, particularly the southern end, has been known as long as history carries us back as a region of bitumen and oil. The main indications are oily bitumen in rocks which may be of Nubian, Turonian or Senonian age. The Miopliocene also contain indications of oil. It is expected that in the near future the area will be tested by the drill and settle the long-debated question of oil in commercial quantities in Southern Palestine.

Messrs. Beyer, Peacock and Co., Ltd., of the Gorton Foundry, Manchester, have received a contract for nine 4-6-0 superheated locomotives for the broad-gauge lines of the Ceylon Government Railways.

THE BRITISH INDUSTRIES FAIR.

Great White City Display.

(From Our Own Correspondent.)

The British Industries Fair—in two sections as usual, light goods being displayed at the White City and heavy goods at Birmingham—commenced on Monday in a more hopeful trade atmosphere than on any occasion since the event was instituted. China apart, the commercial horizon is remarkably clear, fluctuations of currencies are no longer the obstacle to trade that they were, many markets are bare of stocks owing to the long period when purchases were curtailed, and orders are now beginning to come to this country from almost all over the world. Small wonder then that there should be a feeling of hope about the Fair, and that it is generally expected that the improvement in world conditions will mean a flood of orders which will keep our manufacturers busy for many months.

The White City section is something more than a business Fair this time. It has all the elements to make it a very considerable public attraction, and it will be surprising if the public as a whole do not take full advantage of the opportunity afforded them of seeing the exhibits at certain hours. The vision which meets the eye on passing Wood Lane entrance is abundant evidence of the care the authorities have taken to make the Fair not only picturesque but imposing as befits an undertaking of this national character. There facing the visitor in the old Court of Honour is an impressive statue of St. George in bronze by Sir George Frampton, who, incidentally, was putting the finishing touches to the work as I passed. In the galleries on either side of the statue are the Empire stands, and a very attractive show they make. Here it is possible to take a bird's eye view of many of the products of the Empire. India, of course, is represented, but there are a number of absentees who it may be hoped will be represented on a subsequent occasion—the Sudan, for instance, and Cyprus, to say nothing of Palestine. The last two countries are engaged at the present time in finding outlets for their products, and the Fair would have given them an opportunity of introducing their wares to new markets in a way that the British Empire Exhibition could hardly do, for the Fair is for trade buyers only.

The exhibits in all the multifarious branches of industry shown at the White City are, needless to say, all that can be desired. A walk round the serried rows of stands is, indeed, an absolute revelation as to the industrial potentialities of this country. *Semper aliquid novi* might well be the motto of the Fair, for go where one will one can always find fresh evidence of the initiative and ingenuity of the British manufacturer. There are many—very many—lines of goods at the Fair in regard to which it was formerly held that it was impossible for this country to compete with its foreign rivals, but our manufacturers have shown that it can be done, and so effectively too that it is even said that some goods are purchased for abroad and are re-exported to this country. If that be possible it is a very consoling thought, and, be it added, a complete answer to the pessimists who would have it that this country has entered a stage of industrial decline. It is not only the novelties which are of interest, but the undoubted stamp of quality that is in evidence at every stand in the Fair, making it abundantly clear that the British hall mark is as true to-day as ever it was. Colour, of course, there is at the Fair and in full measure. Indeed many of the rows of stands are a perfect feast for the artistic eye with their delicate tints tastefully blending one with the other. Those who say there is no romance in business should go to the White City, and if they have the slightest artistic appreciation they cannot but be charmed. Of the wealth of delightful stands one in particular stands out, as I have no doubt all who see it will agree, and that is Courtaulds, where artificial silk products are displayed in the form of flowing draperies in luscious green and lilacs and other delightful colours. It

is a stand at which it is possible to remain a long time.

As usual, the pottery and glassware section makes a wonderful display; indeed, I always think it one of the most attractive features of the Fair. It has to be remembered, however, that it is easier to stage a fascinating show when the articles to be dealt with are such works of art as cut glass ware and wonderful pottery in glorious colouring than it is when humdrum commodities are in question. Messrs. W. Moorcroft have an especially interesting stand where are to be seen a wide range of pleasing examples of their famous pottery. The range of colour at this and so many other stands in this section is a sheer delight. The section devoted to musical instruments is of a most comprehensive character, and reveals very clearly the importance of this industry to the country. Particularly extensive are the exhibits of pianofortes and player-pianos, the exhibits of the former numbering 35 while those of the latter number 25. Gramophones are also well to the fore, as indeed, they should be for this is one of the branches of the musical industry in which there is particular scope for the development of the export trade, particularly in the Near East markets.

Rainbow tints from black tar, sweet perfumes from evil-smelling pitch, fertilisers from the air, explosives, leather, enamel and laquers from cotton waste, are but a few of the contributions of modern science to the welfare of mankind, and all this modern magic is strikingly illustrated in the chemical section. The central and predominating stand of the section is that of Imperial Chemical Industries Ltd. This occasion is, as it were, the combine's first appearance in public, and its novel exhibit, bold and attractive in design, not only catches the eye but fittingly symbolises the world-wide scope and enormous interests of the new merger.

The products of each of the four companies in the merger, Brunner Mond, Nobel Industries, United Alkali, and British Dyestuffs Corporation, are allotted separate sections on the stand, while perhaps the most striking and informative of all is the section which demonstrates the co-relationship and inter-linking of the various products and processes of all four constituent firms. This is done by an ingenious arrangement of models and raw materials, with lines of coloured wire directing the eye through a range of processes and intermediate products down to the last and final product of all. By this clever device even the layman can glean an idea of how the various manufactures of the combine are linked up and of how the explosives and dyestuffs draw their materials from the heavy chemicals section, which in turn takes us back to the raw materials found in nature. On the top shelf of the stand are five raw materials, air, pyrites or sulphur, coal, brine and limestone. From these, the coloured wires run down through different intermediate products to the manufactured explosive or the finished dyestuff on the bottom shelf. To even the casual observer this gives a simple picture of the highly complicated processes involved, and gives also a fairly adequate idea of how closely the work of the modern chemist enters into the daily needs and doings of each individual.

Another section of the stand contains the exhibits of the British Dyestuffs Corporation, Ltd. Here the on-looker may actually watch the dyestuffs being made, and may also follow the process of dyeing fabric. In the first instance he will see before him two vessels containing pure, colourless liquids. These two liquids are run together in a larger vessel, and the result is the formation of a brilliant dye of red or yellow or any other colour, according to the constituents of the liquids. This dye is then subjected to treatment with brine, and is then perfectly ready for use. The actual process of dyeing is illustrated by a miniature working model of a proper dyeing machine. This machine consists of a trough containing the previously prepared dyestuff, and several rollers over which the fabric passes on entering the solution and after immersion in it. The fabric is passed through the dye continuously by electricity, and emerges at the other end of the trough dyed to the required shade, when it is gathered up on a spool. There may also be seen various fabrics and yarns which have been dyed all

manner of colours and shades, and which will delight the eye of all lady visitors to the Fair.

In the explosives section—represented by Nobel Industries—there are not only explosives but a wide variety of miscellaneous products displayed, such as artificial leather vanity bags, enamelled door-plates and vases, motor enamels and incandescent mantles. Farmer visitors may not at once grasp the kinship of chemicals and the plough, but associated with Imperial Chemical Industries is Nitram Limited, the newly-formed company who are acting as sole agents not only for the British Sulphate of Ammonia Federation, but also, it is understood, for other fertilisers, etc. for I.C.I. The Nitram section of the stand also shows how chemicals enter into daily life.

The interior of the stand is not only arranged with the greatest taste, but also has a definite object of its own, only I.C.I. products having been used in its furnishing and decoration. The pegamoid-covered luxurious arm-chairs, the aluminium-like wall-paint, the lino on the floor and the various fittings are all either I.C.I. products, or have called on I.C.I. products in the process of their manufacture. In one corner is a miniature coal seam illustrating the use of Nobel's blasting explosives, and in another corner is a miniature farm showing the use of fertilisers for grass land.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 16:—

Egyptian Futures.—Sakel contract.—Only minor fluctuations have taken place in this contract during the past week, but on the whole we should say that the tone shows some slight improvement as fairly heavy selling, especially of near positions, has revealed more underlying resistance than generally anticipated. We attribute this latter to the firmer tendency recently noticeable in the Alexandria market, and also to the continued strength which has recently been a feature of the American departments. Trade reports have passed what might be termed the improving stage, as, from all accounts, a good and consistent offtake is being experienced in Manchester for yarns. We are afraid, however, that Sakel counts as hitherto are not participating to their full extent in the present movement, and this coupled with the fact that stocks are accumulating and another large crop of Sudan Sakel is just about to be marketed, is likely to exercise a restraining influence on values for the time being.

The chief interest locally has been concentrated on the March position. Earlier in the week, some rather aggressive selling of this month forced it to a discount of 12 points under May and 17 points under July. In view of the fact that it is quite impossible to purchase any tenderable cotton in Alexandria and bring it over, here

without showing a substantial loss, the weakness appeared exaggerated, and during the past two days moderate trade purchases against "on call" cotton and some short covering have revealed a decided scarcity of contracts, with the result that the month in question has regained its previous premium over the spring and summer options.

We cannot say that we yet perceive any pronounced factors likely to cause a material alteration in the existing level. On the one hand, there appears little justification in the situation to warrant pronounced activities on the "short" side owing to the local trade revival and also to the stabilising influence of the Egyptian Government's declaration to purchase at 23½ dollars. On the other hand, the fact that takings of Sakel have so far this season not been on a sufficient scale to counterbalance the plentiful supplies will curb any decided upward movement for the time being. We, therefore, think that the best policy at the moment is to watch events, but should any material set-back from the present range be witnessed, we would certainly advise purchases.

Upper Contract.—Values in this contract have appreciated sharply during the past week, this being due to the strength of the Alexandria market and also in a lesser degree to the continued firmness of American values. It rather appears that the movement has been too rapid for the trade, as support from this quarter has been generally withheld during the past few days, and whereas up to a short time ago our cotton appeared basically reasonable in comparison to other varieties, we now consider that it has switched round to the dear side. Whilst in the long run we still remain "bullish" in this variety, we consider that those with good profits might be advised to liquidate as opportunities to repurchase at a lower level may easily be experienced.

Egyptian Spot.—Whilst a fairly good inquiry has persisted from day to day, the amount of actual spot business put through has again proved disappointing. Interest has been centred chiefly on Uppers, from barely Fair to Strictly Fully Good Fair, and prices for this cotton have hardened considerably, in spite of the fact that the competition of outsiders is being increasingly felt. The better grades continue to hang fire. Sakellaridis cotton has been very difficult to move, and the opinion continues to gain ground that the price of this commodity is much too high as compared with other growths. A range of 10.00d. to 13.50d. would probably cover the bulk of the small business which has been reported. Pilon has been in moderate request only at from about 10.00d. to 11.00d. Low cotton has not formed such a prominent feature of the inquiry as was the case during the previous two or three weeks. Sudan cotton (Sakel) has been comparatively quiet, but a fairly good demand for the White variety at from 75 to 175 points on has been in evidence.

C.i.f. business, according to most accounts, has ruled very quiet, but forwardings to spinners for the week ending 11th inst. reached the large total of 12,000 bales Egyptian and 1,066 bales Sudan. The official reports from Manchester have been couched in the most encouraging terms, but it is understood that it is the American

section of the trade (which includes "outsiders," of course) which has been benefiting rather than the Egyptian. Estimated sales 1,400 Egyptians and 300 bales Sudan. Quotations of Sakel have been advanced 15 points (Fine exceptionally 25 points) and those of Upper and Brown 50 points on the week. Fully Good Fair Sakel to-day 13.80d. Fully Good Fair Upper to-day 10.80d.

NEW COMPANY.

The Anglo-Egean Bank of Commerce has been registered as a public company with a nominal capital of £20,000 in £1 shares. The objects are to acquire the business of bankers carried on in Salonika and elsewhere by the Banque de Commerce et de Depots.

The production of the Anglo-Egyptian Oilfields for the week ending February 11 amounted to 2,975 tons.

Messrs. Ransomes and Rapier, Ltd., have received orders to proceed with the manufacture of 165 canal head regulator gates with the necessary built-in parts and regulating machinery, for the 55 openings of the seven main irrigation canals which will take off from the River Indus immediately above the Lloyd Barrage at Sukkur.

NEWS FROM ALL SOURCES.

Major Cyril Wilson, whose death was recently announced, served in Egypt on special Intelligence Service and became Chief Military Censor at Alexandria.

The new air station at Gaza, built recently by the Jewish Labour Co-operative Solel Boneh, has been formally taken over from them by the Palestine Government.

With a view to planting a garden to the memory of Alexander Marmorek in the Workers' City in Palestine bearing his name, the Society of Friends of Max Nordan and Alex. Marmorek in Paris has started a fund for this purpose.

The Bishop of Egypt and the Sudan has appointed the Rev. J. E. Cheese to Addis Ababa, in Abyssinia, where he will minister to the British community. Mr. Cheese has worked in Palestine, and is at present in Aden, but will temporarily resign his work there. The appointment has been made possible by the assistance of the S.P.G.

The Secretary of State for India has offered a seat on the Council of India to Dr. Raghunath Purushottam Paranjpye, D.Sc.—who is at present a Minister in the Bombay Government—in succession to the late Mr. Narayan Radhar Samarth. Dr. Paranjpye is expected to join the Council in April next.

At an "at home" given by Mr. and Mrs. Harold Kisch at 15, Wimpole Street to the Medical Section of the Friends of the Hebrew University on February 12, speeches were delivered by Mr. H. W. Nevinston, who has recently returned from Palestine, and Mr. Leon Simons.

The Solution of Syria.

The pacification and the solution of Syria have been publicly announced so many times that the expectant observer has come almost to suspect the ability of the Mandatory Power so to balance its domestic and foreign policies as to hit, and to keep hitting, the right nail. At last, however, the French appear to be contemplating a stroke which has the genuine ring about it. A report was recently published in Beyrout to the effect that M. Ponsot, the High Commissioner, who is now consulting his Government in Paris, is recommending for Syria the proclamation of Syrian unity on the basis of a general federation (to include the Lebanon as an autonomous province) and the subsequent establishment of a constitutional monarchy for United Syria.

If this report be true, we heartily congratulate the French High Commissioner upon his timely wisdom. Syria must be administered as a unity; it was the erection of independent and artificial States within the State of Syria which was always the main political objection to its development. If the Mandatory now contemplates the establishment of a monarchy in Syria, on the model, presumably of Iraq, doubtless it will find many men in the East to support its move. After all, Turkey, which is virtually a dictatorship, is the only country in the Middle East which is not ruled over by a King or by some direct form of government. It is said that certain Egyptian Princes have been named as candidates for the Syrian Throne, but from that matter comment may profitably be withheld until the particular names are given. The bond between Egypt and Syria is, of course, a very close one; we should have thought, however, that some man could have been found in Asia to fill the post.

Actual news from Syria is scanty, but what there is certainly points in the direction of a sincere and fresh effort on the part of the French in what has been, and would have been for any conceivable Mandatory, a most difficult task. Their military problems being almost, though not quite, over, they are already working through

the increased security to secure political ends. For instance, an order has just been published providing for the amalgamation of the two gendarmerie services in Syria and the Lebanon: this was due to take place on March 1. It has been hailed as a new step towards the attainment of political unity; and if Syria can follow Palestine in one particular, there seems to be little reason why she should not follow Iraq in another.

Whether the French Government will show sufficient elasticity to approve the recommendations that the High Commissioner for Syria is said to have made to it, we have no means of knowing. It may not be easy for so essential a republican nation to recommend the establishment of a monarchy in a country under its charge; certainly it would not be easy, even if Beyrout were preserved as the capital of an autonomous Lebanon, to transfer the capital from a place so much under French influence to Damascus, which still keeps memories of a two years' independence under an Arab chief. It may even be that France will choose to take the Lebanon under her wing (as Great Britain might, had weaker counsels prevailed, conceivably have taken merely the Basrah district under hers) and let the rest of Syria go. But that easy path we hope she will steadfastly avoid. France has her duty to the whole of the area placed under her mandatory charge, and we refuse to believe that she will shirk it. Her experience has been bitter, her cup of disappointment full. But she has loyally stuck to her task, and if, by a stroke of belated but very welcome political sanity, she sets about destroying the foolish jealousies and economic difficulties that have been allowed to grow among the peoples of Syria, none will applaud her action so heartily as her mandatory neighbours to the South and East. If the first great political step of securing a United Syria be taken, then the equally important economic step of reforming the currency will assuredly follow. And in pocketing her pride, France may well fill herself with other and more delectable things.

THURSDAY, MARCH 3, 1927.

THE RUSSIAN THRUST TO THE SOUTH.

Imperialist or Bolshevik, Russia seems unable to throw off that restlessness which has always made her an uncomfortable factor in the world's history. With the substitution of the Soviet for the Tsarist system, the country promised for a period to go back upon its destiny. The imperialist ambitions of the old régime were formally denounced, anything savouring of "capitalistic oppression" was repudiated; Soviet Russia walked out of Persia, and Turkey was overwhelmed with protestations of friendliness and bidden to fear no longer the territorial designs which had been her nightmare in the past. The immediate neighbours of the Russian Giant hastened to avail themselves of the advantages of this new spirit. Turkey had reason to be grateful for Russian assistance in the days that led up to the formation of the Republic; Afghanistan concluded a treaty of amity and mutual recognition with the Moscow Government. Persia, unfortunately, for her own peace of mind, could not, in the circumstances of the case, be left long in ignorance of the fact that she is economically dependent on Russia in the present state of Persian communications; and in her disputes with Moscow over the fisheries and navigation of the Caspian Sea, as well as in the various forms of pressure exercised by Soviet representatives in Teheran, she has found a change only in degree in respect of the interference with Persian affairs practised by pre-War and post-War Russia. Her experience in one way or another is likely to be shared by all Asiatic peoples. Imperialism in its sinister meaning implies nothing more than the negation of the spirit of "Live and Let Live," interference, that is to say, with the affairs of other peoples. From the point of view of the victims it may be immaterial how that interference is exercised, whether by the imposition of order from above or by the inculcation of disorder from below; the interference is there, in either case, and occasion for resentment remains. In regard to the Soviet authorities it is charitable to conclude either that this aspect of their activities has been overlooked by them, or that, as with Imperialist Russia, they find themselves in the grip of destiny, or whatever name be given to a movement from which Russians under any political system have, so far, been unable to escape. On their own showing they are so convinced that Russian communism spells salvation for the world that they refuse to be deterred, whether by formal undertaking or out of respect for international comity, from trying to enforce their views in any country, whatever degree of interference with that country's affairs the process may entail.

The predicament of any Government which tries to cope with this state of affairs is obvious. In Imperialist Russia an appeal could be made with some effect to the letter of actual agreements, however often Imperialist motives tended to override their spirit. Soviet Russia, on the other hand, recognizes no limitations on its liberty of action. In regard to Great Britain it has undertaken "not to support, with funds or in any other form, persons or bodies or agencies or institutions whose aim is to spread discontent or to foment rebellion in any part of

the British Empire . . . and to impress upon its officers and officials, the full and continuous observance of these conditions." When the attention of the Soviet Government is called to manifest violations of the letter and the spirit of this agreement, its reply is to the effect that it would be ridiculous to expect it to stifle the active demonstrations of individual citizens of their sympathies for their own class abroad; and in accordance with this theory it encourages the active interference of its agents in the affairs of all countries where an opportunity offers of prejudicing British interests. In the face of continued provocation the British Government has been obliged to address a further Note of protest to the Soviet authorities, warning them that the continuation of such acts as those set out in the Note must sooner or later render inevitable the abrogation of the Trade Agreement between the two countries and the severance of ordinary diplomatic relations. It is not very likely that the Note or even the execution of the threat will cause the Soviets to mend their ways, if only for the reason that, while their manners and their methods are their own—the product of their upbringing, character and environment—the motive force is the natural instinct of the Russian until a change of heart has taken place. Great Britain is not called upon to change the Russian nature. Her carefully documented protest, however, prevents the rulers of present-day Russia from supposing that British toleration is based on ignorance of Soviet actions or designs and clears British prestige in regard to what might otherwise be regarded as weak acquiescence in "the unprecedented relationship between the two countries."

For the countries of the Near and Middle East the point to bear in mind would seem to be the obvious inability of Soviet Russia to refrain from the aggressiveness that was once regarded as essentially the product of an Imperialist régime. For the time being Bolshevism is concentrating its attention on the British Empire, and seeks to disarm suspicion among its immediate neighbours by protestations of friendliness and ostentatious offers of help. Is it to be supposed that the impelling force of communism, which drives Russia to devote her strength and treasure to an attempt to undermine the British Empire, will allow, if it can be helped, any other social system to flourish indefinitely across the Russian frontier? Turkey and Afghanistan are supposed to have been sufficiently inoculated for the present with anti-British serum, and the treatment is in process of being vigorously applied to China. If Persia alone is apt to be treated harshly, it is because she has not reacted favourably enough to the inoculation. As part of her treatment the Soviet Government has been reduced to attributing to THE NEAR EAST AND INDIA some vague threat that trouble would be fomented by Great Britain in the country, if Persia did not show herself amenable to British desires. The British Note is on safe ground in protesting against "the malevolent bias which makes pure inventions the basis or support of its (the Soviet Government's) policy." All these countries are presumably marked down for infiltration of Bolshevik doctrines as soon as Russia has disposed of the British Empire or has to be content with smaller victims for the extension of the "world revolution" that she professes her determination to promote. The Turkish Government must be well aware that it has earned Moscow's resentment for displaying unexpected strength of character in resisting Bolshevik penetration in Asia Minor, after accepting Soviet help against the Greeks; Afghanistan too caught sight of the old-fashioned knout, before it was hastily concealed behind the Treaty of Pagan. It is natural and right that no country in Asia should wish to incur the active hostility of Soviet Russia; but it behoves all to beware of the danger of facilitating the spread of Bolshevik doctrines when their turn comes for a deadlier form of inoculation. As far as the hapless Russians are concerned, the Bolshevik edifice has been built up and maintained on the assertion that the whole world is turning communist. When this monster deception has been finally refuted, there will be some chance of Russia's reverting to a saner conception of international relationships.

Notes of the Week.

M. Chicherin and a Threat.

In the abbreviated form in which the speech made by M. Chicherin, Soviet Foreign Commissar, in Berlin on December 6, 1926, reached this country he was reported to have alleged that a British periodical had threatened Persia with trouble, if she did not carry out the behests of England. The reference seemed to be intended to apply to *THE NEAR EAST AND INDIA*, but, as it was quite impossible that M. Chicherin should have found such a statement in these pages, the vague allusion did not appear to call for refutation on our part. In the Note presented last week to the Soviet Chargé d'Affaires in London the Secretary of State for Foreign Affairs discloses the fact that M. Chicherin referred to this paper by name, and rightly states that an examination of *THE NEAR EAST AND INDIA* would have shown that no such threat had appeared in it. Almost simultaneously we find in the *European Economic and Political Survey*, published by the American Library in Paris, a full report of M. Chicherin's speech, in the course of which he said:

It is extraordinary with what brutal sincerity the British Review *Near East*, which is in close contact with the Colonial Secretary, has recently exposed, in its leading article, the relations of the British Empire with awakening Persia. This article states plainly: Should the Persian Government not obey England, it might be possible to arouse wild tribes and similar forces against Persia. I must add here that, if such an insurrection takes place, the entire English Press, together with English agents, will endeavour to cover us with calumnies and to persuade the Persian Government that the Soviet Union was the instigator of the revolts.

In a footnote the *Economic and Political Survey* states that "the article in question appears in *THE NEAR EAST AND INDIA* for November 4, 1926," and quotes the last seventeen lines of the leading article of the issue of that date. Neither in that passage nor in any other part of the article is there any sentence that by the wildest flight of imagination can be made to support M. Chicherin's allegation. On the contrary it was suggested that Persia's salvation rested with her young men, who are free to make their choice, in regard to outside help, between Russia and Great Britain. The article concluded: "If she (Persia) favours a Russian orientation, she cannot expect British help; if she shows a predilection for British methods, she must cut herself adrift from all coquetting with Soviet doctrines. The sooner her young men make up their minds on the point the better."

The Bear and the Mouse-trap.

In the course of the same speech M. Chicherin described the League of Nations as a mouse-trap, into which Russia did not intend to be lured, and he declared that friendly political relations and ever-growing economic connexions are the road on which the country is advancing. Soviet Russia speaks with many voices, and the constant dissensions among its leaders suggest that it finds itself confronted with the necessity of adjusting its policy or politics to the course of events. Without doubt, considerable stress is now being laid on economic penetration, as if it had been realised in some quarters that political propaganda, in spite of some conspicuous successes, is not achieving all that was expected of it. To this end a Central Asiatic Economic Council was established in the latter part of 1926 for the purpose of furthering economic relations between various Central Asian republics and their connexions with the Union of Soviet Socialist Republics in general. Since 1921 there has been in existence an All-Union Scientific Association, attached to the Central Executive Committee of the U.S.S.R. in connexion with the People's Commissariat for Nation-

alities, of which an economic section deals exclusively with questions affecting the East and aims at creating a staff of specialists on Eastern questions. The Association publishes a magazine known as *Novyi Vostok* ("Near East"). Again, the Russian-Eastern Chamber of Commerce at Tashkent pays attention both to economic and political matters. Further East the same policy is being adopted in regard to China; railways are being built and air routes opened, with the result that, in the words of the *Economic Survey*, already quoted, "Mongolia, politically speaking, is now about as nearly a republic in the Soviet Union as it is a part of China."

Roumanian Political Parties.

The fusion of the National Party of Transylvania under M. Julius Maniu with the Peasants' Party (Tsaranists), whose leaders were Dr. Lupu and M. Mihalashe, that brought into being the National Peasant Party last autumn, has soon been followed by the breaking up of the coalition into its component parts. Dr. Lupu, who was understood at the time to be only a lukewarm supporter of the fusion, has now withdrawn some of his followers on the ground of his dissatisfaction with the step taken, against his advice, by the party executive in adopting a motion in favour of the revision of Prince Carol's renunciation of his right to the Throne. Even if this action is not followed by accessions to the People's Party, which forms the Government under General Averescu, it will entail a further weakening of the Opposition. The failure of the Transylvanians, of whom such great things were expected after the creation of Greater Roumania, to make their mark in Roumanian politics has been one of the disappointments of post-War Roumania. They seem destined to remain at cross purposes with the Crown; for their first mistake was to absent themselves from King Ferdinand's Coronation as a political protest, not realising apparently that their action must be a grave affront to the Sovereign. Now they have attempted to interfere in the question of the succession to the Throne, after they had, as a party, accepted the King's decision to make Prince Carol's son Heir Apparent.

Contracts in Greece.

A statement issued by the Greek Legation in London points out that the convention with the Anglo-Hellenic Group for power, light and traction services in Athens and the immediate neighbourhood, although concluded under the dictatorship of General Pangalos, has been ratified as being in agreement with a law regularly passed in 1925, authorizing the Government to conclude a convention for the electric lighting of Athens. "Transactions or agreements," the statement continues, "of the dictatorial régime which were either concluded in contravention of pre-existent laws or are devoid of legal basis, cannot be recognized by the Greek Government. A Bill has been introduced to that effect, reserving to the different Departments the right to abolish completely or to revise such conventions on a legal basis." Such a declaration is, no doubt, necessitated by the desire to liquidate formally the Pangalist régime. As it is liable, however, to create misgivings in regard to the Greek attitude in general towards the sanctity of contracts, if on second thoughts they are held to be inconvenient, it is to be hoped that none of the Pangalist conventions will be found to be "illegal." The effect of any wholesale repudiation of these conventions would be to throw upon foreign capital the onus of deciding whether any given Cabinet in Greece was wholly constitutional or otherwise—a risk that few interests would care to undertake. In their dealings with any civilised country foreigners are entitled to conclude that the Government responsible for the administration over a period of time long enough to conclude contracts speaks on behalf of the nation and binds it by its pledges. Foreign interests were not responsible for General Pangalos, or for the attitude of

the Greek people that allowed him to assume without civil war or the firing of a single shot, the dictatorship, and if anyone is to suffer for acts, *ultra vires* or otherwise, under his régime, it should be the Greek nation and not foreign interests. So far the crude repudiation of official contracts on the ground that the régime which made them is no longer recognised has been left to Soviet Russia.

Yugoslav-Bulgarian Relations.

The letter from Sofia in last week's issue was devoted to a consideration, from the Bulgarian point of view, of the relations between Yugoslavia and Bulgaria. Although it ended on a doubtful note—"a heavy and enigmatical silence"—as a result of the transfer from Sofia of the Yugoslav Minister, M. Rakitch, who had worked hard for six years in the cause of a Yugoslav-Bulgarian *rapprochement*, there are many indications that the cause of a Balkan understanding makes steady progress, in spite of an occasional spectacular setback. Quite recently a report from Athens attributed to Yugoslavia a desire to revise the idea of a Balkan Pact. On this point the wish may be father to the thought; for it is certain that there must be a considerable amount of preliminary adjustment. There is no reason, however, why an exchange of views should not be begun between any two or more of the Balkan States. We should be more hopeful of early success if the Press of the different countries would refrain from setting forth what it regards as the irreducible minimum of the national demands, as soon as there is any talk of a friendly discussion between the Governments. As our Sofia Correspondent has pointed out, the present "silence" between Sofia and Belgrade follows upon the attempt of a Bulgarian newspaper to specify the "concessions" that Yugoslavia would be expected to make, and the inevitable retort of a Yugoslav journal. Until the Press of each country can develop greater discretion and a higher sense of responsibility the friends of the Balkans may well despair of any early inauguration of even preliminary discussions.

The Jew as Universalist.

It is the claim of the Jew that he is a universalist. We will not probe the claim, but content ourselves with remarking that where that claim is patently justified there will a Jewish success be generally palatable. In Palestine, particularly, is the tendency visible both to neglect that claim and to realise it. We need only recall the tendency on the part of some Jews to be, in Colonel Wedgwood's

recent words, "a community instead of a people." But on the other side it is pleasing to notice, for instance, the attitude of Mr. Nathan Straus, the American Jewish philanthropist, who arrived in Palestine last month. At Haifa, Mr. Straus declared that he was going to establish in Jerusalem a health and welfare centre "to help people regardless of race or creed." That is the spirit in which the rebuilding of Palestine ought to be undertaken, as it is, for example, the spirit which impels Christian medical missions all over the globe. It is, moreover, the spirit in which the British Government in Palestine is, despite the criticism often levelled against it, striving to administer the country. If all Jews were possessed of the same sentiments as Mr. Straus the regeneration of Palestine would eternally redound to the credit of the people who seek therein not only to build up a National Home, or spiritual centre for themselves, but also to realise their world mission as universalists. If the development of Palestine be broad based upon such equity as is here suggested, it may well rank as one of the finest achievements of modern civilisation. But the Jews alone can ensure an increase in the number of men like Mr. Nathan Straus.

Palestine's Currency.

Although the reform was not nearly so urgent for Palestine as it is for Syria, it is the southern half of the ancient Holy Land which is to enjoy a change in the currency which it has employed since the end of the War. In the House of Commons on February 21, Mr. Amery stated that a new currency would be ready for Palestine probably by the autumn. As everyone knows, Egyptian money has been the only legal tender in Palestine since the British occupation. This fact, though it has implied security in the currency of Palestine, has involved a high cost of living. And, too, the change from Turkish to Egyptian currency caused inconvenience to a certain number of people in Palestine. For instance, the small trader who before the Great War thought in terms of the *metallik* (halfpenny) and the *beshtik* (fivepence) has since been thinking in terms of piastres and shillings. This class of inhabitant at least should welcome the new coinage, which is to be the mil (one-thousandth of a Palestine pound) and multiples of the mil. In any case, the whole problem has been thrashed out by a Committee of Experts, and the step just announced for honouring Palestine with a new currency appears to be a satisfactory emblem of her slow but steady march to self-supportingness and self-government. It is to be hoped that her northern neighbour will not hesitate much longer in remedying the defects of her present system of currency.

Persian Railways.

If verbal support were all that was needed to construct railways in Persia, that country would long ago have removed the reproach that the few miles of railroad which do run through the land were constructed by Russians. In these latter days, however, and particularly since the Americans assumed a certain control over Persian finances, the project for railway construction has never been allowed to lapse. It has just been reported from Teheran that the Majliss has approved the Bill authorising the Government to proceed with the construction of a line from Muhammarah, on the Gulf, to Bandar Gaz, on the Caspian. This trans-Persian line would presumably run through Hamadan and Khurramabad, but for a large section it would pass through an area thinly populated. Whether it could ever be made to pay is a question on which experts differ; it is to be presumed that the American advisers have sufficiently considered this aspect of the matter and have duly balanced it with other factors in the problem. It would be the height of optimism on the part of Persian and other observers, however, to suppose that the merchants of Iraq need immediately fear the construction of a rail-road from North Persia to the South.

From Our Own Correspondents.

Jerusalem, January 29.

The Municipal Elections.

For more than a month past (and it will probably be so for another two or three months to come) all good Palestinians have had hardly a single thought beyond Municipal Elections. A keenness and alertness and rivalry are being shown far in excess of the interest ever called up in the past by, say, the abortive elections to the Legislative Council, or even the meeting of an "Arab Congress." Jews and Arabs are alike bitten. Naturally the interest in the contest is greater in Jerusalem. There is the old Husseini-Nashashibi rivalry within the Arab camp; while on the Jewish side there are grave searchings of heart whether or not to boycott the elections; since there is a danger that the Jews may poll only a minority of the votes in spite of being by far the majority of the population in Jerusalem. As cross currents of interest, the two Arab parties are (so it is widely reported in both Jewish and Arab circles) bidding for the support of the Jews—the Husseini party even going to the length of promising, as an extreme concession, that should their candidate be made Mayor as a result of Jewish help, he would do nothing in his municipal capacity without consulting his colleagues on the Town Council! The Jews protest against the undemocratic nature of the municipal franchise—the vote being virtually confined to property-owners who are also Palestinian citizens. This hits the Jews hard; since, on the one hand, they still show a marked reluctance to take the plunge and part with their particular variety of East European nationality; and, on the other hand, as compared with the Arabs there are relatively few individual Jews who own property.

Arab Feelings.

Owing, probably, to this obsession with municipal politics, the visit of M. Ponsot, French High Commissioner for Syria, has been allowed to pass without any excitement, in spite of certain elements in the Arab Press which called for a "general strike," and appeared with black borders on their front pages the day of M. Ponsot's arrival, in order to mark the solidity of Syrian and Palestinian Arab feelings against French Syrian policy. The utter indifference on the part of the general public to this and like matters of higher politics, is the standard theme for denunciations from the deserted political leaders of the past. They even accuse the Government of a sort of super-subtlety (of which it is certainly quite incapable) in producing one bauble after another "to distract a down-trodden and oppressed race, to divert their tortured minds from dwelling on the high-handed deprivation of their rights of self-determination"—and so forth.

The Tithe.

Far more important than either municipal election

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

tactics or high Arab politics, from the point of view of the future well-being of the country, is the report just issued of the Commission appointed to consider the question of "Tithe." The manner of collecting the annual tithe of crops is one of the evil things inherited from the Turkish régime. It is clumsy, expensive, oppressive and arbitrary. According to the system as now conducted, no farmer may sell his crop till a Government assessor has estimated its quantity and its market value and collected the prescribed dues. This process must be repeated in every detail every year with every kind of crop. It involves a large staff of inspectors; any delay in assessment means that the crop may be spoiling and the owner losing the best of the market; the owner is always uncertain what the actual assessment will amount to; and he is at the mercy of officials who may or may not be infallible in their estimates of quantities and values. It has long been clear that the *Ushr* must be abolished. The trouble is, however, that any form of "land-tax" which might replace it cannot be applied immediately owing to the existing confusion and uncertainty on the precise ownership of any plot of land as a result of the complicated land laws, the various forms of land tenure, further complicated by the Muhammadan laws of inheritance. It is understood that there is some ten years' work in front of Sir Ernest Dowson as "Lands Commissioner," before the tangle can be straightened out.

The Tithe Commission was instructed to recommend measures by which present hardships in the incidence of the tax could be mitigated during the intervening ten years. The Commission has not been able to devise any startling reform, and confines itself to the fairly obvious and safe recommendations that the Tithe be fixed both in quantity and value—the quantity to be based on the average of the preceding six years' estimate, and the value or "redemption price" to be fixed according to the average estimate of the past four years.

Constantinople, February 23.

Germany and Turkey.

Further proof of the far-seeing commercial policy of Germany in regard to Turkey is instanced by the recent proposition by a group of German manufacturers that a certain number of Turkish boys be sent to their factories and workshops to learn skilled trades. In addition to this facility for the boys to serve their apprenticeship in useful trades the Germans guarantee that these apprentices shall

be made self-supporting. The proposition, therefore, is open not only to the sons of rich families but also to those who are forced to depend for their living on remunerative employment. Naturally the Turkish Government has accepted this offer, which will have an important effect on future orders. It stands to reason that the factories proffering these facilities will receive favourable consideration in any subsequent calls for tenders from Turkey. On the other hand, the desire expressed by the Director of the Commercial Department at the Ministry of Commerce that some arrangement be made whereby lectures in English could be given to students in the Commercial School has had no other effect than to produce the expression in certain British circles here that "this desire to learn English should be encouraged." Furthermore, the Turkish Chamber of Commerce has asked for prospectuses and particulars of technical courses in the industrial and commercial centres of the United Kingdom where students could follow the various industries, as it is intended to send a number of youths abroad for commercial and industrial studies.

As other countries are seizing every opportunity by which they—either immediately or at some future date—are likely to profit, it appears extremely regrettable that British enterprises should be so remiss as to disregard the same opportunities out of which their foreign competitors gain so much.

The English High School.

In his address at the annual meeting of the British Chamber of Commerce here on Thursday last Sir George Clerk referred to the English High School for Boys. The precarious situation (owing to the British Government's refusal of financial assistance) of this school, whose high educational standard is amply demonstrated by the excellent successes annually obtained by its scholars in examinations in England, is a question of never-ending anxiety to the British community here. The Ambassador, while appreciating "the wise generosity of other countries in this respect" and admitting the necessity for the British Government to help in the maintenance and enlarging of the facilities for learning English made it clear, however, that once a full education for British children in Turkey is safeguarded, money—obtained either from H.M. Treasury or from the pockets of Englishmen here—would be well spent in facilitating the teaching to Turkish citizens of English and English commercial methods on the same lines as those employed in the pre-War German *Real Schule* in Constantinople.

British Lack of Enterprise.

Speaking on the trade situation now obtaining in Turkey, Sir George Clerk confirmed the oft-expressed views that as far as business with Great Britain is concerned some criticism appears justified at the lack of enterprise and adaptability displayed by British manufacturers at the present time. Various orders have recently been placed with German firms solely as a result of their having successfully persuaded certain official departments of the absolute necessity of their wares for the perfect running of their administrations, and in a country as new as is Turkey there must be articles of British manufacture which could likewise be introduced if their makers would take the trouble of demonstrating their indispensability.

Metropolitan of Kadikuey.

Monseigneur Nicholas, ex-Metropolitan of Kaiseria, was yesterday elected by the Holy Synod to the post of Metropolitan of Kadikuey left vacant by the death of Monseigneur Joachim.

Cairo, February 19.

National Defence.

One of the most interesting debates during recent weeks in the Chamber of Deputies took place on Wednesday evening, when the Nationalist Deputy, Fikry Abaza Effendi, asked the Minister of War for information regarding the Government's policy in regard to national defence. Abaza Effendi took the opportunity to restate the well-known point of view of the Nationalist Party on the subject. As on the last occasion when this matter was debated, during the discussions last summer of the Budget of the Ministry of War, Abaza Effendi and the other Nationalist deputies urged the necessity of Egypt's putting herself in a position to defend herself, unaided, against all-comers. Three years' compulsory military service for all adult males, with no exemptions whatever, was the burden of the Nationalist demand, together with a powerful Egyptian Navy. There was nothing very novel about this kind of nonsense, for we have grown accustomed to it in recent years. What was more significant was the reply from the Zaghloulite benches. Ibrahim Helbawi Bey, one of the Chamber's veterans, declared that the Nationalist proposals were preposterous, for they could not be realized even if the whole of the State's present revenue were devoted to military and naval expenditure. Abdel Rahman Azzam Effendi who, in point of age, is at the opposite end of the political ladder from Helbawi Bey, but who is one of the most level-headed of the younger deputies and almost certainly destined for a notable political career, also scouted Abaza Bey's proposals, though for a different reason. There was no occasion, said Azzam Effendi, for Egypt to burden herself with expenditure on a larger army and on creating a navy, because there was already in the country an army (the British) which amply protected Egypt. Nothing that Egypt could achieve in the way of armaments could possibly provide protection so secure as that afforded by the British navy and army. It would, therefore, be absurd for Egypt to endeavour, at great expense, to create forces which could not give so effective a guarantee of security as the present arrangement, which cost Egypt nothing.

A Murder.

Cairo last Sunday was horrified to hear of an abominable murder, in the principal shopping street of the city, Sharef Fuad el Awal, at the busiest hour of the day, just after noon. An Egyptian entered a jeweller's shop, shot the proprietor and his son and made off with some £E5,000 worth of jewellery and £E120 in cash. He might have got clear away had not a secret policeman who happened to be in the neighbourhood tackled the murderer and engaged him in a pistol fight in which the policeman came off worse, but not before he had succeeded in disabling the bandit sufficiently for him to be secured. This brutal crime has not unnaturally alarmed the jewellers of the capital, who have petitioned the Commandant of Police for additional protection, which has been arranged. Cairo jewellers' shops at this time of year contain very large quantities of valuable jewellery and as most of these establishments are situated in one quarter, and many in one street, it is fortunately not impossible to arrange for extra police patrols.

British Chamber of Commerce.

The decline in Britain's share in Egyptian imports during 1926, as compared with 1925, was the principal subject of discussion at the British Chamber of Commerce dinner to Lord Lloyd on Monday evening. The Chairman of the Chamber, Mr. H. E. Barker, was frankly pessimistic, but Lord Lloyd declined to take a gloomy view of prospects and pointed out that, although there had certainly been a falling-off on total trade, this had been inevitable, in view of the long continued coal strike, while in certain sections there had been notable increases. Hard work and keener trading were the cure put forward for the present unsatisfactory state of affairs, but while there is no doubt that hard work and keenness are indispensable to success in any form of business, there are not a few people here who believe that a radical change of system is needed in many branches of British business in this country. Recent years have seen a multiplication of small agencies in many different branches, and although many of these agents have worked very hard and some of them have achieved a certain measure of success, it does appear that better results could often be achieved if there were a pooling of resources. The Associated British Manufacturers, a sales organisation representing a number of British makers of machinery, has been in operation for some years here and has shown what can be achieved when a sufficient number of interests combine to make it possible to occupy extensive premises and showrooms and to incur the expenditure necessary to secure business and to drive home advantages, when secured. An extension of this method of handling British goods here seems to be indicated as necessary if British manufacturers are to continue to enjoy their fair share of Egyptian business.

Banking and the Fellaheen.

An interesting paper on "Banking and the Fellaheen," by Mr. G. H. Malcolm, was read to the British Union on Tuesday evening. Mr. Malcolm, who is a brother of Sir Ian Malcolm and an authority on rural banking, was most interesting in his discussion of the famous five-

feddan law. In his opinion this law, the passing of which is often quoted as one of the outstanding achievements of the late Lord Kitchener, had been disastrous for the fellah. Making illegal the seizure for debt of properties of less than five feddans in extent, the law, said Mr. Malcolm, had cut off the fellah small farmer from the possibility of obtaining credit from the only disinterested source available to him, namely the Agricultural Bank of Egypt, without in the least diminishing his need for credit. At the same time, it was credibly reported that the law was being constantly evaded by unscrupulous money-lenders, with the result that the fellah now obtained necessary advances at extortionate rates of interest, instead of, as formerly, at legitimate rates. The only reason Mr. Malcolm could assign for the fact that the law had not, at the time it was being considered, aroused more opposition, was that the Agricultural Bank had found lending money to small cultivators to be an expensive and unsatisfactory form of business and therefore was not strongly opposed to the ordinance which would make such loans practically impossible.

"Turandot."

"Turandot," Puccini's posthumous opera, has been produced in Cairo with the scenery of the original production at the Scala in Milan. The performance of "Turandot" has been long advertised as the outstanding event of the season, and it must be admitted that the Royal Opera House management put on a very spectacular and brilliant display. But "Turandot" hardly comes up to expectations musically, while it certainly imposes a very severe strain on any normally sized orchestra. Some of the climaxes are terrific and can be adequately rendered only by a band of a hundred musicians or so. In their absence, and with the normal orchestra of sixty, or thereabouts, the local production seemed, at times, rather thin.

GREECE.

Athens, February 16.

Proposed Economies.

The Committee of Experts which has been studying the question of economies to be effected in the various services has published its report. The proposed reductions in drachmæ are: Ministry of War, 788,280,000; Marine, 129,003,000; Communications, 96,000,000; Agriculture, 10,000,000; Finance, 4,256,000; Education, 4,930,000; Foreign Affairs, 18,300,000; Interior, 80,000,000; Welfare, 149,000,000; Special Services, 19,000,000; total, 1,298,769,000. Thus the total reductions in the estimated expenditure for 1926-1927 amount at the present rate of exchange to nearly four million pounds. The Budget for 1926-27 balanced at 8,821,619,843 drs., showing a surplus of revenue over expenditure of 350 million drachmæ. Thus expenditure was originally estimated at 8,471,619,843 dr.

Traction Company, which has absorbed public interest, to the exclusion of everything else, during the last three weeks, eclipsing the affair of the dossiers, and almost provoking another crisis, has brought out in a most striking way the haphazard manner in which contracts were signed under the dictatorship. The commercial acumen which characterises the Greeks seems to have deserted their representatives at that time, and it has remained for their successors to bear the brunt of the unpopularity. The agitation, which expressed itself in a strike of the bus-owners and a threat of shopkeepers to close their shops, should not be regarded as an outbreak of Bolshevism or a desire to upset the Government. The small proprietors of buses (one bus is often owned by ten persons), and the small mechanics, who make their living by doing repairs, saw their business being taken from them by a foreign company, by right of a contract made at a time when public opinion and criticism were stifled—and without any provision for compensation. In the circumstances they can hardly be blamed. The larger question, whether Athens is to become a capital on European lines or remain on the level of a small provincial town, could not be expected to appeal to them. The attitude of the Government in general, and of the Minister of Communications in particular, has been irreproachable, while the incident has served to show the solidarity of the Government and the control over their followers which the various party leaders can exercise, the Popular Party alone showing restiveness. The more objectionable clauses of the contract will be modified in agreement with the Company.

Slights on Greece.

The crisis may, therefore, be said to be over; but it has been noted in the Press with some bitterness, and not unjustly, that, in honouring her obligations, Greece is setting an example which might well be followed by her neighbours, whose failure to honour their obligations does not involve unpleasant consequences for them, and that she is entitled to expect generous treatment in the settlement of her War debts. It is certainly remarkable how the occasion for a graceful gesture, even in purely sentimental matters, is neglected in regard to Greece, and even unnecessary slights inflicted on a nation peculiarly sensitive and peculiarly anxious to show her recognition of the services rendered to her in the past by foreigners. A case in point is the dinner given in Paris on February 6 by the Association of the Army of the Orient. Among the distinguished guests were the Ministers of Yugoslavia and of Roumania, but the representative of Greece, the country on whose territory most of the fighting took place, and which took a very important, if not decisive, share in the campaign, was not invited, nor in the post-prandial speeches was any reference made to her. And yet a few weeks before Greece had been rendering graceful homage to the memory of a distinguished Frenchman, Colonel Fabvier. The impression created by such incident is not effaced by belated apologies or explanations.

Ineptitude on Railways.

A further illustration of the want of care with which contracts were signed under the late régime is provided by the report on the Railways by M. Matsas. Among other anomalies, it reveals the fact that, by the convention signed with a Belgian group, thirty-five locomotives of 18 tons are to be supplied, although the bridges on the State Railways are inadequate for those actually in use at present. To make them adequate for the existing locomotives £100,000 will have to be spent; to make them support the new locomotives, £400,000. Moreover, there are ten heavy locomotives, bought at the time of the Armistice, which have for the same reason never been used. Again it seems that while the Railway authorities applied for ten locomotives at 18,830 dollars each, the State ordered forty more of the same locomotives at 19,865 dollars each. The same with rolling-stock. The Railway authorities asked for 1,000 wagons, etc.; the

State ordered 2,850, or 210 million drachmæ of unusable material—to say nothing of sheds, hangars, etc., which will have to be constructed to house them.

The report also recommends that the construction of the proposed line, Larissa-Kozani-Sorovitz, should be postponed—a line which would connect Thessaly with Monastir direct, and, should Monastir be connected some day with Skoplye, would bring Greece into more direct communication with Europe, the *détour* by Salonika being avoided. Strategically, the line would be important, but the moment is not propitious for spending large sums on military objects. Commercially, Western Macedonia is fairly well supplied with roads, better than the south, and in view of the many parts of Greece where no communications of any kind (except mule-tracks) exist, the report is evidently right in recommending postponement. The proposed extension of the light railway, Sarakli-Stavroz to Angista, is more practical, but the necessity for increasing the gauge is not apparent for military reasons. Greece is eminently suited for light railways, and the most urgent need is a through communication between the East and West of the country, especially in the North, where at present none exists.

General Pangalos.

General Pangalos remains in prison, in Crete, where he was transferred a few weeks ago. What court is to try him, and on what charges, remains unsettled.

HIJAZ.

Jidda, February 9.

The King at Riyadh.

Apart from telegraphic intimation, received *via* Bahrain, of the King's safe arrival at Riyadh, no details of the journey thither by motor-caravan have yet come to hand, though a messenger is expected daily at Mecca. The trip from Madina to the Central Arabian capital would, however, seem to have taken about five days, including, doubtless, a brief halt in the Qasim.

The Pilgrims.

Meanwhile peace and quiet reign throughout the Hijaz, where the Amir Faisal rules on his father's behalf at Mecca, while a cousin, Mishari ibn Jiluwi, holds the reins of government at Madina. Pilgrims continue to arrive in force, their number up to date being about 2,600—for the most part from the Dutch East Indies—and the increased vitality of the Jidda bazaar gives an indication of returning prosperity. The arrangements for the reception of pilgrims here and for forwarding them to Mecca, whence large caravans take them for the customary flying visit to Madina and back, have proved to be very satisfactory and efficient.

Visitors to Jidda.

The Amir Faisal paid a short visit to Jidda on January 28 and 29 to welcome the Duke of Sutherland and his party, whose yacht made a stay of a few days in the harbour. A banquet on shore and a luncheon party on the yacht provided an opportunity for the exchange of speeches expressive of the goodwill subsisting between the British and Arab nations. A week later the cable-

ship, Mirror, of the Eastern Telegraph Company, arrived here to repair the long-derelict cable between the Sudan and Arabian coasts in accordance with the terms of the agreement recently concluded between Ibn Saoud and the other parties interested. It is expected that the cable will be in operation within a few days—a great boon to local traders and pilgrims, as the wireless station, having a limited number of hours per day for communication with the station at Port Sudan, has been unable to accept all the traffic available.

Yaman, Asir, and Hijaz.

Mr. C. R. Crane, who was recently at Jidda, appears from all accounts to have successfully carried out his intention of visiting Sana, the capital of the Yaman, which is said to have been visited about the same time by a German diplomatic officer from Abyssinia and by a French envoy. The publication of the treaty between Ibn Saoud and the Idrisi appears to have stabilised the situation on the Asir-Yaman border, whence come no more rumours of war and unrest. The lull may be only temporary, but it looks as if Ibn Saoud has set himself firmly to discourage activities to create disturbances in Arabia.

Professor Snouck Hurgronje.

The seventieth birthday of Professor Snouck Hurgronje, doyen of living explorers of Arabia and perhaps the greatest living authority on the Hijaz and the pilgrimage, was duly remembered here, and a telegram of congratulations sent by a few of his admirers to Leyden.

THE SCHOOL OF ORIENTAL STUDIES.

Tenth Anniversary.

On February 23, 1917, the School of Oriental Studies, established by Act of Parliament and admitted as a School of the University of London, was formally opened by His Majesty the King. In the ten years that have elapsed since that date some three thousand students have made use of the Institution; but demands are continually being made upon the School for new teaching which it is unable to provide owing to lack of funds. With a view to enlarging the School's activities it was decided to take advantage of the tenth anniversary of its foundation to make a wide appeal for endowments. Of the total annual income, which is about £24,000, more than half, £13,250, is provided by the British Government; £2,250 represents the contribution of the Government of India, £1,333 comes from the London County Council, £1,225 from the funds raised on the first appeal, and £4,200 is derived from fees. Budgeting equilibrium is maintained only by the exercise of rigid economy, which finds conspicuous expression in the case of the salaries of the Staff. The six Professorships and the four readerships in Oriental subjects, established by the London University and tenable at the School, cannot be considered permanent until they have been endowed with funds adequate for their maintenance.

Alone of all the great Universities London has not a single endowed chair of Oriental learning; yet the number of its students of Oriental languages far exceeds that of any other university of Europe or America. Other specific objects for which permanent endowments are urgently required are the purchase of books for the Library, the publication of texts, grammars and dictionaries (the production of which, as far as Oriental subjects are concerned, is impossible on a commercial basis), and the foundation of scholarships.

France instituted the *Ecole des Langues Orientales Vivantes* in 1795; Germany founded a similar institution in 1887. Great Britain with far closer and more extensive relations with the East was the last of the three Powers to enter the field, but the School of Oriental Studies cannot yet be regarded as existing on a settled, satisfactory basis. An endowment fund of £150,000 is

needed, and the time has now come when an appeal for this amount is not only necessary, but is also a matter of urgency.

For the purpose of launching such an appeal a luncheon was given at the School in Finsbury Circus on February 23. Sir Harry L. Stephen, Chairman of the Governing Body, presided and the Guest of Honour was Lord Birkenhead, Secretary of State for India. Among others who had accepted invitations were:—

The Marquess of Reading, the Earl Buxton, the Earl Winterton, Lord Meston, Lord Southborough, Sir Charles Addis, Sir Thomas Arnold, Sir William Beveridge, Sir Henry Birchenough, Sir Edgar Bonham-Carter, Sir John Cadman, Sir Atul Chatterjee, Sir John Cumming, Sir Gregory Foster, Sir William Foster, Sir Gilbert Grindle, Sir Frank Heath, Sir Arthur Hirtzel, Sir George Hopwood Hume, Sir Stanley Leathes, Sir James Stewart Lockhart, Sir Charles Lucas, Sir Archibald Maclagan, Sir Charles McLeod, Sir Michael O'Dwyer, Sir Archibald Ross, Sir Denison Ross (Director of the School), Sir Lancelot Sanderson, Sir Sidney Sitwell, Sir Seymour Tritten, Sir Montagu Turner, Sir William Tyrrell, Sir Arnold Wilson, Dr. E. Barker, Dr. A. E. Cowley, Messrs. S. A. Courtald, G. Eumorfopoulos, E. M. Fraser, Emile Mond, F. Anderson, Ernest Andrews, Hubert Ashton, J. T. Beatty-Pownall, Frederick Palmer, T. E. Grigsley, John Lea, J. S. Wardlaw-Milne, M.P., N. C. Sen, W. Sutton Page, G. F. Hotback, H. Eric Miller, James Steel, W. Mansford, Montague Bell, M. de Z. Wickremasinghe, James Mackenzie, T. McMorran, and W. E. Preston, Mr. Sheriff Percy Vincent, Mr. Sheriff Percy Shepherd, Dr. E. Graham Little, M.P., Prof. H. H. Dodwell, Dr. C. O. Blagden, Dr. Edwin Deller, Prof. J. P. Bruce, Prof. R. L. Turner, M.C., Dr. T. Grahame Bailey, Prof. E. J. Rapson, Prof. A. A. Macdonnell, Dr. Peter Giles, and Lt.-Colonel C. G. Maude, D.S.O., M.C.

The Lord Mayor of London, Sir Rowland Blades, was to have been present, but was prevented by a death in his family. Professor Paul Boyer, head of the *Ecole des Langues Orientales Vivantes*, had come over from Paris in order to attend the Luncheon, but was confined to his hotel by illness.

A feature of the Menu-card at the Luncheon was the printing in Sanskrit, Chinese, and Arabic of three proverbs:—

धनेन किं यो न ददाति 好事

Dhanena kim yo na dadati. (What is the use of money to him who gives not?)

Chinese.—In the matter of a good work, let not the other man do it.

خير البر عاجله

The best part of benevolence is to hasten it.

Sir Harry Stephens, in welcoming the guests, pointed out that the School of Oriental Studies, with ten years of useful work behind it, could now regard itself as having come of age. It was, therefore, liable in its own person for torts, which it did not intend to commit, and was able to contract marriage; but it was already wedded to its studies. It paid assiduous, constant and necessarily expensive attention to a few principal languages, such as Arabic, Persian, Hindustani, and Chinese; in a somewhat less degree to African tongues such as Swahili, and taught 61 other forms of human speech. The School was in urgent need of an Endowment Fund; with increased funds it would be possible to increase the School's activities in many directions.

Lord Birkenhead said that, without the highly specialised knowledge which an idiomatic acquaintance with the 67 languages and dialects taught in the School would show, he could appreciate the immensely valuable services rendered by the School to our land and Empire. For more than 100 years a most distinguished school working on similar lines had existed in Paris. It was strange that we should be so far behind France as to have had such a school for only ten years, for we had incomparably greater

reason for establishing, maintaining, and endowing Oriental teaching in the capital of the Empire than any other country in the world. He need not dwell upon the vastness of the Indian population, nor upon the extraordinary number of dialects and sub-dialects which must be mastered by some of those who were in the immense machine of the Government of India. Even from the purely business point of view, such a school was indispensable to the vast mercantile connexions of London.

Our attention had lately been drawn, rather more vividly than we could desire, to China. Every one knew the complications of our commercial interests in China. To anyone going out to the East it was an enormous disadvantage to approach the difficulties of learning a language without any previous instruction from men who knew it and who were also of one's own speech and race. The existence of that School was of the first consequence not only to the administrator and the Oriental student, but also to the man of business affairs with connexions in the East. The Government had done much, both by placing at the disposal of the School those fine premises and, very properly, by a considerable annual grant. There was also the help given by the City of London and by the London County Council. There was a plain case for some independent contribution by the business community, having regard to the instruction given to the employees sent out to Eastern lands and to the deficiencies to be made up in the financial position of the School.

Was it not a serious reflection that in the University of London—the greatest numerically in these islands—there was not at present a single endowed professorship or lectureship in Oriental languages? The professor and lecturers were insufficiently paid. Owing to financial conditions the School was not even secure in its position in the University of London, in which, for the work it did and for the dignity, adequacy, and self-containedness of the University, it should have a high, honourable, and secure place. For these reasons he most earnestly commended the appeal about to be issued for a sum in no way excessive in relation to the purpose required. Possibly his words might reach the eye of some wealthy and enlightened potentate either in business or in some splendid sovereignty in India to whom the appeal might seem to have a special claim. Our obligations in the East required that the modest claim now made should be generously and completely satisfied.

Sir Thomas Arnold, on behalf of the Governing Body and Staff of the School, thanked Lord Birkenhead for his speech. He emphasised the need for those who were to be among Eastern people of an understanding and generous feeling towards them, and of knowledge of their history, religion and ideals. This was the instruction that the School could impart, in addition to knowledge of languages.

The Afternoon Programme.

In the afternoon the programme in connexion with the Tenth Anniversary celebrations started with Tea in the Library, followed by a concert of instrumental music in the Theatre, a performance of Indian Music in the Women's Common Room, and an illuminated Lecture in the Lecture Hall on the use of the Gramophone in the Study of Oriental and African languages. Throughout the afternoon books and MSS. were exhibited in some of the class-rooms.

General Gamelin, General Officer Commanding the French troops in Syria, having been recalled to Paris, left in the steamer Lamartine on February 23.

The Bulgarian Minister of Finance, M. Molloff, attended the meeting in Geneva of the Financial Committee of the League of Nations on March 2 to discuss the establishment of Bulgarian Refugees, in virtue of the recent loan. M. Molloff was accompanied by M. Saraoff, who is in charge of the Refugee settlement operations. M. Charron, the Commissioner of the League in Bulgaria, has also proceeded to Geneva to report to the Financial Committee on the work accomplished up to the present.

NEWS IN BRIEF.

Navigation was interrupted last week between Galatz and Tulcea owing to the Danube being frozen between those ports.

During the week ended February 5, of 130,239 cases of influenza declared in Bulgaria, 1,154 proved fatal.

The Hon. Srinivasa Sastri was sworn in as a nominated member of the Indian Legislative Assembly on February 21.

President Masaryk will leave Prague on March 10 for the South of France, where he will make a stay of about 12 days, proceeding thence to Egypt.

To-day (Thursday) King Fuad is to give the name of "City of Cairo" to the new De Havilland "Hercules" employed on the Cairo-Basra air line.

Brigadier-General Roger Henry Massie, C.B., C.M.G., died on February 23 at Wick Vale, Finchampstead, Berkshire, in his fifty-eighth year. He served in the Sudan, on the North-West Frontier, and in Egypt.

The National Bank of Roumania, in agreement with the Government, is reported to have decided to have a small quantity of gold coins bearing the effigy of King Ferdinand struck, probably in Great Britain.

A Congress on Macedonian emigration held in Sofia has concluded its discussions by passing a number of resolutions drawing attention to the unstable situation in the Balkans, and suggesting that the remedy can be found in the grant of self-government to Macedonia. It declared that the League of Nations should apply to Macedonia the convention for the protection of minorities.

The Persian Majliss has passed a Bill authorising the Government to survey and construct a railway line, Khur Mussa-Mohammerah-Hamadan-Teheran-Bandar-i-Gaz, linking the Persian Gulf to the Caspian Sea. The construction will be offered to companies by public tender.

On February 25 it approved the surveying for other trunk lines and the call for tenders from foreign contractors for the supply of railway materials. It likewise voted a sum of 4,500,000 tomans for the establishment of an iron factory.

M. Boteff, a member of the Agrarian Party in Bulgaria, and at one time President of the Sobranie, who has been convicted of embezzlement, has been sentenced by the Court of Appeal to three years' imprisonment and ten years' loss of civil rights.

An Order in Council, issued on February 7, has been published in *The London Gazette* providing for the introduction, at a date to be fixed by Proclamation by the British High Commissioner for Palestine, of the new currency for Palestine based upon sterling to take the place of the Egyptian money now current, and authorising the Royal Mint to strike the new coins.

The Chrysanthemum, Commanded H. V. Hudson, target-towing sloop in the Mediterranean, left Malta on February 28 for a three weeks' cruise eastward. She will be at Famagusta from March 4 to 9, and at Alexandria from March 10 to 20, returning to Malta on the 21st.

The departing Yugoslav Minister to Sofia, M. Rakitch, was last week received in farewell audience by the King of Bulgaria, who conferred upon him the first class of the Order of Civil Merit and gave him a signed photograph as a souvenir of his long stay in Bulgaria.

In honour of the 250th anniversary of the death of Spinoza special public lectures were given at the Hebrew University at Jerusalem by Dr. Joseph Klausner, Professor of Modern Hebrew Literature, and Dr. Hugo Bergmann, Librarian of the Jewish National Library. A collection of first editions of Spinoza's works and related literature was shown in the library.

The Metropolitan Museum of Arts, New York, has acquired the late Lord Carnarvon's private Egyptian collection, which has been presented to one of the trustees of the museum. The collection comprises over 1,400 articles in gold, brassware, and pottery, and is valued at more than £50,000.

Sir Leslie Wilson, Governor of Bombay, last week unveiled, in a central position in the city, a bronze statue by Mr. Talim of Mr. Dadabhai Naoroji (1825-1917), generally known as "The Grand Old Man of India," and the first Indian member of the British Parliament. He sat in the House of Commons from 1892 to 1895.

Dr. Sluys, of the Brussels Radium Institute, who went to Bucharest recently to give radium treatment to the King of Roumania, has returned to Brussels, and expresses his satisfaction with the results obtained. He considers that King Ferdinand will be able within a month to undertake the journey to the South of France for his convalescence.

PERSONAL AND GENERAL

TO-DAY

March 3, 1927 (New Style).
February 18, 1927 (Old Style).
Shaaban 28, 1345, A.H., of the Muslim Calendar.
Adar 1, 29, 5687, of the Jewish Calendar.

Lord and Lady Belper are on a visit to Cairo.

The Punjab Reunion will take place on June 8 at the Hyde Park Hotel.

The Earl and Countess of Airlie are returning shortly from the Sudan.

The Roumanian Minister and Madame Titulescu left London on February 27 for Geneva.

The High Commissioner for India is giving a luncheon to-morrow (March 4) at Claridge's Hotel.

Mr. Scott Callingham left last week for Egypt in the Osterley, and will be away about one month.

The Marchioness of Reading returned to 32, Curzon Street from Brighton on February 27.

The Persian Minister in London will hold a reception on March 22 to celebrate the Persian New Year.

Alexandra Lady Worsley will return to England early in May from India.

Dr. D. A. Alexander, C.M.G., will sail in the Bibby s.s. Herefordshire on March 5, from Marseilles, to Port Said.

Major A. S. Orpen and the Hon. Mrs. Orpen are embarking on the Bibby Line s.s. Herefordshire at Marseilles, on March 5, for Port Said.

Mr. and Mrs. Denton Carlisle left Drovers, Singleton, Sussex, last week, for Cairo, where they will be staying with Colonel Turner.

Lady Salmond and her children sailed on February 18 in the Kaiser-i-Hind to join Air Vice-Marshal Sir Geoffrey Salmond in India.

Sir Stewart and Lady Stewart-Clark, who had been staying at Cannes, arrived at Mena House, Cairo, on February 26. Later they will make a trip up the Nile.

Sir Stanley and the Hon. Lady Birkin who left England recently for Egypt, will take up their residence on their return at 41, Upper Brook Street, W.1., which they have taken for six months.

Lord Cornwallis, Deputy Grand Master of the United Grand Lodge of England, will in the course of a few months leave England on a Masonic mission to India, Burma, and Ceylon.

The Afghan Minister in London will hold an evening reception at the Legation, 31, Prince's Gate, S.W., on Tuesday, March 15, from 9 to 12 o'clock, on the occasion of the anniversary of the Independence of Afghanistan.

The King has approved the appointment of Sir George Rainy, K.C.I.E., C.S.I., I.C.S., to be a member of the Executive Council of the Governor-General of India, in succession to Sir Charles Alexander Innes, K.C.S.I., C.I.E., I.C.S., whose term of office expires on March 31, 1927.

Lieutenant-Colonel the Right Hon. Stanley Jackson was received in audience by his Majesty at Buckingham Palace on February 22, and kissed hands upon his appointment as Governor of Bengal, when the King conferred upon him the honour of Knighthood, and invested him with the Insignia of a Knight Grand Commander of the Most Eminent Order of the Indian Empire.

We regret to learn, as we go to press, of the death of General Sir Walter Congreve, V.C., Governor of Malta.

Sir France Du Pre Oldfield, LL.M., Puisne Judge, High Court, Madras (retired), has been appointed Professor of Jurisprudence, Victoria University, Manchester, in Hindu and Mohammedan Law.

Sir Alexander Kay Muir, Lady Muir, and Miss Fedora Stancioff sailed on March 2 in the Berengaria for New York. They will afterwards visit South America, and will remain abroad till the end of May. Letters will not be forwarded.

A marriage has been arranged, and will shortly take place in Baghdad, between Mr. Francis Brough Sadler, of Baghdad, and Miss Mary Wightman, daughter of Mrs. Lubbock and step-daughter of Mr. M. G. Lubbock, D.S.O., M.C., of Quarakhan, Iraq.

A complimentary dinner to Sir Samuel and Lady Maud Hoare on their return from the Indian flight was given at the Savoy Hotel on March 2 by the Royal Aeronautical Society, the Royal Aero Club, the Air League of the British Empire, and the Society of British Aircraft Constructors.

Coles Pasha (Charles Edward Coles), Villa Sans Atout, Biarritz, for 18 years Director-General of Egyptian Prisons, later Inspector-General of Police in Egypt, left estate in England of the gross value of £1,088, with net personalty £874.

Mme. Titulescu, wife of the Roumanian Minister in London, held a reception at Claridge's Hotel on February 25, on the occasion of the opening of the exhibition of paintings by the Roumanian artist Mlle. Elena Popea. The guests included the Italian Ambassador and the Marchesa della Torretta, Mrs. Stanley Baldwin, Lady Tyrrell and Miss Anne Tyrrell, Viscountess Dunedin, Lady Maud Hoare, the Minister for the Kingdom of the Serbs, Croats and Slovenes, the Minister for Czechoslovakia and Mme. Masaryk, Mr. and Mrs. Seton-Watson, Mrs. Norris, the Dowager Lady Boyle, Miss Millington-Drake, Mr. and Mrs. Locke, Mrs. Mond, Mrs. Philip Martineau, Mrs. Charles Hancock, Major-General and Mrs. F. G. Duncan, Sir George Lewis, M. C. Laptew, M. G. Constantinesco, M. D. Ciotori, Colonel Radesco, and M. S. Radulesco.

M. Refik, Turkish Consul in Vienna, has been appointed to the Consulate in Jerusalem.

Maitre Alfred Wilner Bey, Secretary-General to the Alexandria Municipality, is retiring on pension from Government service at the end of May next.

Mr. Nathan Straus, who recently arrived in Palestine from America, will to-day (Thursday) lay the foundation stone of the building of the Health Centre which he is erecting in Jerusalem.

The Central Consistory of Bulgarian Jews has been officially recognised by the Bulgarian Government and the statutes of the Consistory, whereby Bulgarian Jewry is recognised as a national minority, have been approved.

M. Danailoff, a former Minister and Professor of Political Economy at Sofia University, and M. Cyrille Popoff, Director of Statistics, are representing Bulgaria at the Economic Conference which has been convoked by the League of Nations.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ROBERT COLLEGE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I noticed in your issue of January 27, page 75, in the editorial on the United States and Turkey, this statement: "Robert College was founded in 1863, but in 1914 there was only one Turkish student there."

If you will consult the catalogue for the years 1914-16, you will find that there were 51 Turks in the college at that time. Probably you will wish to correct the statement referred to—I am, etc.,

C. F. GATES,
President.

February 12, Robert College, Constantinople.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your number for January 27, 1927, you have an excellent leader on "The United States and Turkey." You have stated the case excellently.

Permit me to call your attention to one error. In the last paragraph you state, "Robert College was founded in 1863, but in 1914 there was only one Turkish student there."

You are aware of the attitude toward foreign schools taken by Sultan Abdul Hamid and the governments under his control. Turkish students were forbidden to frequent such schools. Robert College was especially opposed by Hamidian reactionaries on account of its liberal tendencies. Not until the establishment of the new régime in the summer of 1908, followed by the overthrow of Abdul Hamid in the spring of 1909, were Turkish students permitted to attend Robert College freely. The figures for Turkish students (Moslems) registered each year indicate well this state of affairs. They are as follows:—

1870-71,	1	1895-96,	4	1913-14,	92
1875-76,	5	1900-01,	14	1915-16,	61
1880-81,	10	1905-06,	16	1919-20,	103
1885-86,	0	1909-10,	61	1921-22,	73
1890-91,	2	1910-11,	63	1924-25,	215
				1926-27,	365

It is certainly true that Turkish students were in the vast minority in Robert College until the coming of the new régime. Our first Turkish graduate took his B.A. diploma in 1903. No other Turk completed the whole

course until 1911, and then no other until 1915, when there were two Turkish graduates. Since that year there have been 24, of whom seven took their degrees in June, 1926. Our first Turkish graduate of 1903 is now the honoured head of our department of Turkish language and literature, a man well known among leading Turks and highly respected by them all. He was associated with Ismet Pasha in the negotiations at Mudania, and was his right-hand man during the negotiations at Lausanne.

I have no desire to claim anything but the truth for Robert College. Owing to the social and political conditions of the Near East our great work during the first fifty years of the College was done for Bulgarians and Armenians at first, and later for Greeks as well. Nevertheless in 1914 there were 92 Turkish students in Robert College, and not "only one" as your editorial stated. Of course, this merely means that the coming of a large group of Turkish students to Robert College was some years earlier than your leader indicated, and followed immediately upon the enlargement of freedom given by the establishment of the new régime and the overthrow of Abdul Hamid. The fact that we have registered 365 Turkish students this year out of a total of about 750 speaks for itself.

I am not asking that you publish this correction. The matter is not so important as that. I am merely interested to have the facts brought to your attention. I find THE NEAR EAST AND INDIA a most useful weekly, in fact, quite indispensable, and I am sure the editorial staff is as eager to have all its statements exact and reliable as are its readers to find them so.—I am, etc.

GEORGE H. HUNTINGTON.

February 16. Vice-President of Robert College.

[We much regret the error to which the President and Vice-President of Robert College so courteously call our attention and are glad of the opportunity of correcting it. The reference to the number of Turkish students in 1914 was made on the strength of a published statement, the accuracy of which there seemed no reason to doubt. The statement appears in an American publication entitled: "The Great Betrayal," by Edward Hale Bierstadt. On page 332 in an analysis of the Turko-American treaty of amity and commerce "taken from a statement appearing over the signature of Mr. James W. Gerard" (former United States Ambassador to Turkey) appears the following sentence: "In 1914 there was only 1 Turk in Robert College, and up to 1910 there were none for several years."

To judge from the statements of the ex-Ambassador (1), the President (51), and the Vice-President (92), the Turkish students in that unsettled year were as hard to count as the Irishman's pig; but it is surely not the least hopeful sign of the new order in Turkey that Robert College can now claim a Turkish student for every day in the year, and all danger of any further error in enumeration is eliminated.—Ed.]

JEWISH LABOUR IN PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I suggest that the Jewish worker in Palestine receives 15 piastres a day as against the Arab's 9, not because he is, as Mr. Petrowsky would have us believe, worth the difference, but because the Zionist Organization pays him an unremunerative wage. Whereas the Arab employer, not being subsidized with funds supplied from abroad, can afford to pay only an economical wage.

The employment of Arab labourers in the Jewish settlements, when there are so many unemployed Zionists in the country, shows that many of the Zionist emigrants are totally unfitted for hard manual labour. They seem to have been attracted to Palestine by some sort of idea that they were to be the over-lords while the Arab population worked as serfs, tilling the soil, hewing wood and drawing water.—I am, etc.,

C. F. DIXON-JOHNSON.

Croft-on-Tees, Darlington.

MACEDONIAN PICTURES.

Contained in a very stimulating exhibition which Mr. Stanley Spencer is holding at the Goupil Gallery, Regent Street, are some pictures inspired by his experiences in Macedonia. First, there is a large drawing called "Resurrection of Soldiers in Macedonia," which is an extraordinary fantasy, depicting the ascent of cross-bearing men to the heavens; the same formal imagination marks his *chef d'œuvre*, "The Resurrection." A slight oil painting entitled "Source of the Buna, Mostar," has a striking unity of design, and is pleasingly coloured. This work has, of course, a rather melancholy topical interest. Another slight work in oil is a representation of Lake Scutari, which, when the artist painted it, was in Montenegro. Mr. Spencer's exhibition is an excellent index of what the younger school of British artists are aiming at: a kind of revision to the "Primitive" technique with a strict but unconventional imagination.

THE NEW BRITISH NAVAL MISSION TO GREECE.

Details of the contract for the new British Naval Mission to Greece, of which Captain Charles E. Turle, D.S.O., is the head, show that the appointments of the officers will date from March 15, 1927, and will terminate on March 14, 1929. This period includes the journeys to and from Greece and any leave due for service with the Mission. Captain Turle will be assisted by one commander (or below) as director of studies at the Naval War School; one wing commander (or below) for the general training of air forces and in command of the Naval Flying School; one lieutenant-commander (or below) as staff officer to the head of the Mission; and one squadron leader (or below) as technical officer at the Naval Flying School. Some or all of the following extra officers may join for the remainder of the period of the contract when considered necessary and as agreed by the Minister of Marine and Head of the Mission, but preferably within six months after the Mission begins work:—Two commanders (or below) for the general training of destroyer and submarine flotillas; two lieutenant-commanders (or below) as directors of studies at the Gunnery and Torpedo Schools; and a lieutenant or flight lieutenant as squadron leader at the air base.

THE NEW PERSIAN CABINET.

We have received from the Persian Legation in London a revised and corrected list of the Ministers of the new Persian Cabinet, which was formed last month:

Premier, Mirza Hassan Khan Mostofi; Interior, Mirza Mehdi Khan Fatemy; War, Mirza Mohamad Ali Khan Foroughi; Finance, Prince Firouz Mirza Firouz; Public Works, Mehdi Gholi Khan Hedayat; Public Instruction, Said Mohamad Tadayone; Justice, Mirza Ali Akbar Khan Davar; Foreign Affairs, Ali Gholi Khan Ansari.

According to the final figures for the new census of Bulgaria the population is now 5,484,143, an increase of 637,172 since December 31, 1920. The division of the sexes is males 2,747,983 (an increase of 327,199), females 2,736,160 (an increase of 309,973).

The Viceroy of India paid a surprise visit to the heart of Delhi on February 25. He walked through the narrow streets behind the Chandni Chaul and spent a considerable time inspecting the shops and dwelling-places, asking questions about the sanitary arrangements and the general condition of the inhabitants.

The new permanent issue of postage stamps for Palestine will appear shortly. The new issue, which is to supersede the existing E.E.F. stamps, overprinted in English, Arabic, and Hebrew, will have representations of the Tower of David and of the Dome of the Rock in Jerusalem, of Rachel's Tomb, and of the Sea of Galilee.

Colonel Frank Joseph Agabeg, of Peers Court, Aspley Guise, Beds, died on February 24 after a long illness. He was formerly a member of the Burdwan District Board and vice-chairman of the Local Board, Asansol Sub-Division, Bengal. In 1914 he became president of the Mining and Geological Institute of India. Colonel Agabeg, who was appointed an hon. A.D.C. to the Viceroy in 1912, was a member of the Bengal Provincial Recruiting Board during the Great War.

THE ANGLO-PALESTINIAN CLUB.

The Anglo-Palestinian Club has transformed itself into a talking newspaper, with Mr. E. David Goitein as "Editor." This "living journal" of East and West Views held the first meeting under its new style on February 27 at 102, Gt. Russell Street, W.C.1, when the Editor opened the proceedings with a short paper on "It Pays to Advertise." He gave many amusing illustrations of the crude advertising adopted both by the Arab and Jewish inhabitants of Palestine, and pointed out that the methods of publicity as in vogue among the Jews were not much more advanced than those of their Arab neighbours. Mr. M. A. Solomons followed the Editor with a contribution entitled "Palestine on the Dole." He made a strong appeal to all Jews outside Palestine to create and maintain a demand for Palestine products and manufactures. He emphasised the fact that women should insist on Palestinian silks and other goods and by creating a fashion for these articles the demand would grow and have the effect of providing industry and labour for the Palestinian, as the only remedy for the economic crisis in Palestine was employment. The dole was the alternative. He said the Jewish slogan should be "Buy Palestine Products and Keep the National Home Busy."

Mr. Marcus Lipton contributed a paper on "Zionising the Zionists," which in his absence was read by Mr. Kraut. He was in favour of Zionist workers being systematically trained for the task of enlisting the sympathies of those who had not yet been won over to the Zionist fold or who were appealing for funds, in the same way as the political parties in this country gave their propagandists a thorough schooling in everything they should know in regard to their particular party.

Mrs. S. Wassey gave an interesting account of her very young schooldays in Palestine, before the time when Tel Aviv was as important as it is to-day—when, in fact, it was marked by sand dunes. The children in those days were never young. Their leisure was spent in debates and in efforts to create a Hebrew argot. From their earliest childhood it was impressed upon them that both girls and boys must equally take their share in the task of the uplifting of Palestine.

Mr. Leonard V. Snowman read a paper on "This Side and T'Other Side," referring to the two Kantara stations, Kantara Station East in Egypt, which was typically characteristic of the West, where all was bustle and noise, and Kantara Station West in Palestine, where the exact opposite prevailed and all was quiet.

The Secretary of the Club, Mr. S. Sagalovitch, took for his subject "C.C.C." This title was symbolic of the Anglo-Palestinian Club, which was in reality a Constructive Criticism Club in all affairs regarding Palestine. He welcomed the co-operation of all interested in the welfare of Palestine, whether Jew or non-Jew.

The Jewish National Fund propose to plant an "Achad Ha'am" Wood in Palestine on the same lines as the Herzl Forest.

The Rt. Hon. Sir Matthew Nathan, formerly Governor of Queensland, has succeeded Sir Philip Hartog as President of the Friends of the Jerusalem Hebrew University.

Sir Victor Sassoon has been appointed Chairman of the Indian Currency League for the stabilisation of the rupee exchange. The Bombay Mill-Owners' Association has nominated Sir Victor as their representative in the Legislative Assembly.

Mr. Israel Cohen, Secretary of the Zionist Organisation, returned to London on February 20, after touring the Continent. He addressed meetings in Bulgaria, Roumania, Bessarabia, Austria, Hungary, and Czecho-Slovakia.

At a conference of delegates of the Friends of the Hebrew University (Jerusalem) held at Jews' College on February 22, presided over by Dr. M. Eder, Mr. Arthur M. Blok gave an address on the Haifa Technical Institute, of which he was formerly Director.

The Franco-Palestinian Association in Paris gave a banquet in honour of Mr. Nahum Sokolow on February 3. During the function it was announced that a Chair of Modern Hebrew would be inaugurated next year at the Paris School of Modern Oriental Languages.

The Executive of the Zionist Organisation entertained Colonel Sir Wyndham Deedes, D.S.O., at the Hotel Cecil on February 15 on the occasion of his return to England from Poland and prior to his departure for the United States. Mr. Nahum Sokolow presided over the function.

Colonel Robert Patch, C.B., late Bengal Staff Corps, died on February 23. He served with the Bhutan Expedition in 1865, the Afghan War of 1879-80, the Hazara Expedition, 1888, the Miranzai Expedition, 1891, and the Chitral Relief Expedition, 1895, being frequently mentioned in dispatches. He had transferred to the Bengal Staff Corps in 1875. From 1887 to 1895 he was in the Punjab service.

THE FLIGHT TO INDIA.

On February 25 the Overseas League entertained Sir Samuel Hoare, Secretary of State for Air, and Lady Maud Hoare to luncheon at the Criterion Restaurant. Sir Charles Wakefield, who presided, referred to the fact that air travel was now safe, luxurious, and reliable, and that the problem of Imperial aviation lay chiefly in rousing public interest.

Lady Maud Hoare gave an illuminating account of her journey to India and back. In a reference to the interest everywhere displayed by well-wishers in the flight, she described her recent award of the D.B.E. not so much as a personal honour as a symbol of recognition of all those who through good times and bad had been working for the good of aviation. On the actual flight itself, everyone, both official and "lay," had been most helpful. As examples of this assistance, she mentioned the French officials at the military aerodrome at Dijon; the Italian Governor-General in Tripoli, who motored them to see Magnis Lapta; and the British Resident and his wife at Bushire on the Persian Gulf. Lady Maud described in some detail the country over which they flew round about the Persian Gulf. It seemed, she said, like the bare bones of the world. Great tablelands of unadorned rock stretched beneath them which seemed, until they realised how far above "ground-level" those tablelands were, ideal landing grounds. And yet cows managed to exist in these parts. In answer to her inquiry how the cows fed, she was told that they derived sustenance from the waste paper of the telegraph companies! And now she wondered how it was that on each pound of butter she bought some name like "Reuters" was not imprinted! Commenting on the supposed hardships of the journey, Lady Maud said that they were really negligible. Her own sufferings had been greatly exaggerated. They had had, it was true, a very bumpy passage from Delhi to Karachi, and from Baghdad to Cairo, but on the latter flight she at least survived, whereas the Director of Imperial Airways did not! She hoped, in conclusion, that long-distance flying would become a quite normal affair, for which you packed yourself ready just as if you were a parcel.

Sir Samuel Hoare spoke of the complete success with which the objects of the flight to India had been attained. He, as Minister for Air, wanted not only to visit a number of overseas Air Commands, to see their problems at close quarters, but also to investigate the possibilities of each part of the Empire paying for the particular part of the Imperial air route which, so to speak, lay within its

jurisdiction. There must, if Imperial flying were to be a real success, be co-operation in the widest possible sense. The great principles of these long-distance flights must be safety and punctuality: on his recent flight not so much as a single spare part had had to be used, and every point was reached within a minute or two of the scheduled time. In conclusion, he stated that the British Empire depended more and more upon its communications. For a long time to come the sea must be the principal channel of such communications, but by means of air routes the Empire would be knit much more closely together. He suggested that if air communication had been known in the latter half of the eighteenth century, George Washington might have been brought into personal contact with George III. and the American War of Independence would have been averted. Also, if Sir Stanford Raffles, that great man who was only now coming into his own, could, by a quick journey home by air, have impressed on the authorities his views of the Far East, we should be in a very different position in regard to the strategic centres of that part of the world from what we are to-day.

The chief guests included:—Mr. Evelyn Wrench, C.M.G., Mr. Bernard Darwin, Miss Wrench, Admiral the Hon. Sir E. R. Fremantle, G.C.B., G.C.V.O., Mr. Victor Gordon, High Commissioner for Newfoundland, Mr. William C. Noxon, Agent General for Ontario, Mrs. William C. Noxon, Mr. John Howard, Agent General for Nova Scotia, Mrs. Howard, the Hon. John Huxham, Agent General for Queensland, Sir Walter Hearn, K.B.E., Mr. Hilton Philipson, Sir Henry Cowan, M.P., and Miss Jean Cowan, Mr. Alec Rea, and Mr. R. H. Philipson, O.B.E.

THE NEW GOVERNOR OF BENGAL.

Lt.-Colonel the Hon. Sir Stanley Jackson, Governor-Designate of Bengal, and Lady Jackson were the guests of the British Indian Union at the Hotel Cecil, London, on February 25. The Marquis of Reading was in the Chair, and among those present were:—

Lord Inchcape, Lord and Lady Hawke, the Countess of Hardwicke, the Dowager Lady Minto, Lord and Lady Erleigh, the High Commissioner for India and Lady Chatterjee, Sir Godfrey and Lady Fell, Mr. and Mrs. N. S. Mallik, Lady Bennett, Sir H. and Lady Burt, the Dowager Lady Boyle, Sir Selwyn and Lady Fremantle, Lady Chamier, Lady Clarke, Lady Demetriadi, Lady Leggatt, the Hon. Mrs. Parker, Lady Pinhey, and Lt.-Col. Warliker.

In proposing the health of Sir Stanley and Lady Jackson, Lord Reading pointed out that the British Indian Union existed to promote a better understanding between Indians and Britons, to enable both peoples to get to know each other better. It was, therefore, fitting that they should meet to wish the Governor-Designate of Bengal all success in his new enterprise. Sir Stanley Jackson was well equipped for his responsible duties by long experience in public affairs. He had been twelve years in the House of Commons, membership of which always extended a man's range of vision and widened his mind; he had also been head of a great party organisation, and, equally important with his public record, inasmuch as British rule and wisdom of administration depended on the character of those who filled responsible posts, was his prowess at cricket, which meant that he was endowed with the British spirit and tenacity of purpose, and a determination to do the best that was in him. Bengal was by no means the least difficult of the great Presidencies to administer, but they were confident that Sir Stanley Jackson would acquit himself nobly.

Passing to the need for promoting a better understanding with the peoples of India, Lord Reading referred to the settlement recently arrived at on the position of Indians in South Africa. The Indian was sensitive, much more sensitive than our own people, and it was very desirable that we should always recognize this quality and should strive to be sympathetic in regard to it. There was nothing upon which the Indian was more sensitive, and naturally and rightly so, than anything which appeared to place him in a position of inferiority with

regard to other races. The disabilities of Indians in South Africa had great reactions on India and led to very considerable agitation. During the last two years of his Viceroyalty he was engaged very often in efforts to secure an amicable settlement. He rejoiced that after much further negotiation an amicable understanding had been reached. Although the conclusions arrived at in Africa had not completely settled the problem, they had at least removed it to a different sphere, where it would be easier to arrive at satisfactory results. The South African Government had handled a very difficult question in a statesmanlike way. He could well understand the Indian's point of view in the past in wondering what were the benefits of membership of the British Empire if his fellow-countrymen were to be differently treated in South Africa on grounds of race. Therefore, it was a great gain from an Imperial point of view that General Hertzog and his Government had taken so wise, so wide, and so salutary a view of the position.

Sir Stanley Jackson, in returning thanks for the British Union's hospitality, paid tribute to the work of Lord Reading in India during five years of almost unexampled difficulty. This country, he added, had been no less fortunate in his successor, Lord Irwin. The success Lord Irwin had already achieved was due in no small measure to his sincere desire that the relations between Britons and Indians should be those of mutual respect, good will, and friendliness. The British Indian Union existed for the promotion of such aims, and it seemed to him that the vital need for the welfare of India was the willing co-operation of these two races. By the development of social intercourse, there could be brought about a plain, unassuming understanding of one another, especially in respect of those who were the most educated and most influential of Indians. It would be his aim to try to bring about a feeling of confidence in the good faith of the British people and that the Government would carry out its avowed intentions and obligations. What he asked for was the confidence of the people of India in the sincerity of his purpose to work the best he could in their interests.

MR. NAHUM SOKOLOW.

A reception in honour of Mr. Nahum Sokolow was given on February 24 by the English Zionist Federation at the Suffolk Galleries, Suffolk Street. Sir Herbert Samuel presided, and supporting him on the platform were Field Marshal Lord Allenby, Commander S. M. Kenworthy, Dr. Eder, Dr. Goldbloom, and others. The Chairman referred to Mr. Sokolow as a traveller in ideas: in various parts of the world this distinguished Zionist had shown both to Jews and to non-Jews precisely what lay behind the Zionist movement. In calling upon Lord Allenby, Sir Herbert referred to him as the man who more than any other had made possible the Jewish National Home.

Lord Allenby, who received a particularly cordial welcome, remarked that he had little part in the upbuilding of Palestine. The regeneration of that country was due to the Zionist. For the peace and security that were now reigning in Palestine they had largely to thank the first Civil High Commissioner, Sir Herbert Samuel, who not only saw that there was peace in his time, but also ensured that there should be peace after him. The Zionist movement in Palestine was to be an agency of peace throughout the Near East.

Commander Kenworthy, fresh from contact with Zionists in Palestine and America, explained that it was now fashionable to be a Zionist, but twenty years ago Mr. Sokolow, who had lived to see his dream in the way of assured realisation, was fighting a lone hand.

Mr. Sokolow gave a long and eloquent address upon his work in the Zionist cause. He contrasted the state of affairs now with that obtaining twenty years ago. He was proud of the Zionists' achievements: he was proud

of Tel Aviv: he was proud even of the crisis in Tel Aviv. To Lord Allenby and Sir Herbert Samuel he paid a striking tribute, suggesting that, in the future Bible of the Jews these two men might find an abiding place. The latter part of his speech was devoted to his experiences in explaining to France what Zionism meant.

Dr. Goldbloom addressed the audience in Hebrew; and after appeals had been made that English Jews should contribute more generously to the Keren Hayesod, the Chairman suggested that, in thus doing honour to one great Zionist leader, Mr. Sokolow, they might at the same time send greetings to another leader, Dr. Weizmann, who was explaining the Zionist cause in America.

IRAQ IN ART.

Those lovers of Iraq who are now in London should certainly pay a visit to the Greatorex Galleries, Grafton Street, Bond Street, W.1., where, in an exhibition by various artists of original etchings and dry-points, are being shown four of the works of Mr. Charles W. Cain. The technical progress of this young artist, whose work has been noted more than once in THE NEAR EAST AND INDIA, is astonishing, for good as were his representations, done a few years ago, of scenes in Iraq, the four works here shown, which have been done from sketches made during or just after the War, are amazingly distinguished. They are called, respectively, "Kifl," "Hassan's House, Baghdad," "Indian Silversmith," and "Water Carrier, Baghdad." The first is a particularly well composed Euphrates scene; the second sufficiently explains itself; the third is a beautiful interior, in which the silversmith's head is perhaps the finest thing; and the fourth is a typical representation of water being brought up in sheepskins to be laid on the carrier-donkey. For our part, we go straight to "Hassan's House" as the masterpiece. It is something akin to genius, this facility of Mr. Cain in constructing solid walls out of nothing. But apart from its technical excellence, there are in this house, with its high overhanging window, and the draped silent figures shuffling to its portal, the mystery, the romance, the very spirit of the largely unchangeable soul of the City of the Caliphs.

Residents in Iraq will not have forgotten the pictures that Mr. Cain did for the Imperial War Museum; but even they, we think, will be surprised at the astonishing progress made by an artist, who, at any rate in this particular medium, seems destined to reach unusual heights.

INDIANS IN SOUTH AFRICA.

The cabled reports from India seem to show that the agreement with the South African Government on the Indian question has met with the general approval of Indian politicians; though it is, perhaps, significant that, while this was expressed in the Council of State, it went by default in the "popular" Assembly. In the latter, we are told that the "benches of the Left" were thinly occupied and that their occupants did not join in the otherwise general cheering that greeted the official statement. The report goes on to say that, though the Government promised to set apart a day for the discussion of the agreement, if this should be desired, it is considered unlikely that the "Congress" members of the Assembly, after examining it, will find it possible to raise "a hostile debate" on it, so that they will probably decide to leave it alone. In the Council of State, where a resolution was adopted congratulating the Deputation on the results that it had achieved, it was recognised that, although the agreement is not perfect, and there is still a good deal in regard to the condition of Indians in South Africa that remains to be remedied, it is at least "an honourable compromise representing mutual understanding and good will and promising to the South African Indians the development of a happy future." One of the "Congress" members—whose representation in the Council of State is but small—joined in the general approval, though raising the technical objection that the agreement should not have been ratified before it had been presented to the Legislature; which suggests two conclusions—the first, that he was a lawyer (as is, indeed, almost inevitable), and the second that, though he recognised that there was no chance that the Upper House would disapprove of the agreement, he thought it not unlikely that the Lower House might do so. We are told that a pleasant feature of the debate in the Council of State was the recognition of the fact that the agreement was made possible because of a change of heart in the Union Government largely due to the Imperial sentiment, "an aspect of Imperialism new to India": and that a Hindu member (presumably not one belonging to the Congress Party) said that the agreement made him feel that "the British Empire, like the Hindu family, was reunited." This is, at any rate, the cabled version of his remarks, though doubtless not what he actually said. In the general sense of the term, "the Hindu family" in India is anything but united, a fact of which evidence may be seen any day, in the non-Brahman movement and the question of the depressed classes; no doubt what the speaker actually said was that he felt that the British Empire had now again reached a unity comparable with the proverbial one of the individual Hindu family.

Such condemnation of the agreement as has been made by the "Congress" Party was made in advance of the facts, on an intelligent forecast of its contents telegraphed from Durban to an Anglo-vernacular newspaper in Madras. This telegram appears to have been sent by someone possessing considerable inside knowledge, as it correctly

enumerates most of its items since made public in the Government statement. It speaks of the interval during which Indians would be expected to learn to "befit themselves to white standard" as a "period of tutelage" during which the Indian settlers should "agree to voluntary separation from the rest of the population." It also suggests that, as a *quid pro quo* for the appointment by India of a Commissioner to protect the rights of Indians in the Union, a commercial agreement is to be concluded under which South African coal and liquor will be admitted free into India. Some of the leading extremist newspapers have, not unnaturally, seized this opportunity to talk about "disgraceful and immoral bargains" which will give India full cause to complain that she has been "bitterly deceived and insulted." A telegram to the Viceroy from the Natal Indian Association is also published in the Indian Press, in which an appeal is made against the ratification of the agreement on the ground that its underlying principle is that of the "voluntary repatriation of the ex-indentured Indians' descendants who form the backbone of the Indian community": and this appeal is endorsed by the "Congress" Press, which expects the voluntary part of the repatriation terms to be "of the kind with which overseas Indians are already familiar."

If, therefore, there is to be any general opposition to the agreement, it may be expected to centre round the "voluntary repatriation" clause. The position is a complicated and rather curious one. The Union of South Africa does not want Indians and is quite determined that, if some there must be, there shall be as few as possible. A generation or two ago, Natal did want Indians, gave them inducements to come, and acquiesced in their remaining: thus incurring a debt of honour that has now to be discharged not by herself but by the Union as a whole. The matter at issue is one of first-class importance to South Africa and to politically-minded Indians; but whereas, in the case of the former, its importance is material, in that of the latter it is wholly sentimental. The talk about the Union's "change of heart" and about the "new aspect of Imperialism" is evidence of this: and it cannot too often be insisted that even the most politically-minded Indian has no practical interest whatever in the position of his emigrant compatriots overseas. His attitude in the matter is almost exactly the same as that which he professes to hold towards the refusal by the United States to accept Hindus of alleged Aryan extraction as "free white citizens." It is not even so much the Indian claim to full British citizenship that is at issue: it is the claim of "the Indian nation" to the status of full equality with all other nations, though particularly with those that go to make up the rest of the British Empire. The attitude of the Union of South Africa is that, having been saddled by one of its component parts with an embarrassing debt, it has decided to liquidate it on terms that, though reasonably generous, are still those of its own choosing: the Indian "political" attitude is that it is due to India's dignity that the Union should appear to have been forced to do so by the pressure of Indian opinion, and that this

should be continually exerted towards increasing the generosity of the terms. Any failure in this respect must necessarily be due to the fault of the British Empire in general, and to the cramping influence of the British Government of India in particular: and will doubtless be closely scrutinised for the possibility of exploitation in a "hostile debate" by the Legislative Assembly.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 10.

"Comrade Saklatvala."

Mr. Saklatvala, the Communist M.P. for North Battersea, has been continuing his tour of India with the ostensible purpose of enlightening the Indian political world as to the true meaning of Communism. His latest effort has been to address a meeting of the non-European portion of the Legislative Assembly at Delhi, but he does not appear to have cut much ice with any of the parties except in so far as his abuse of Government corresponds with that of the Extremists. None of the Indian papers has any use for his more responsible statements, but *Forward* finds satisfaction in quoting his remarks that "no responsible politician in England means seriously that India should have Dominion status or enjoy equal rights." The *Bengalee*, which has been helped in a return to its former influential position by the appointment of the late editor as a Minister, frankly says that Mr. Saklatvala's presentation of communalism was an insult to the distinguished audience he addressed, and it comments pungently on his complete silence in regard to the Communistic doctrines of the abolition of inheritance, and of private property, and the nationalisation of everything. It is quite probable that by the time he has finished his self-revealing pilgrimage he will have done more good than harm.

The Political Detenus Again.

The annual resolution for the release of the *détenus* under the Bengal Ordinance has been duly passed by the Assembly, and a similar resolution will be placed before the Bengal Council, and no doubt passed, as soon as it meets. The methods of the importunate widow have always been popular in the East, and even an unjust judge could hardly fail to be affected by the unanimity with which all parties are now insisting that these men should be either released or brought to trial. We see that Mr. Pethick Lawrence has been speaking on similar lines in the House of Commons, but Mr. Pilcher replied to him setting out the point of view of most level-headed men who are not completely swayed by sentiment. The cynic would be inclined to accept these resolutions and to let the terrorists loose upon the public once again; Europeans would suffer hardly at all apart from the fact that the hands of the police would be again tied and the life of every efficient officer in danger, a thing which, to their credit be it said, has no apparent effect upon their attitude towards the matter. The flow of eloquence is growing, and growing more irresponsible, and to-day even Babu Bepin Chandra Pal, who should by this time be more cautious, describes the hundred *détenus* as a body of "hundreds and thousands." This is typical.

A Stolen Programme.

A leading member of the Swaraj party has given notice of a resolution in the Council that sets out for the first time a programme of constitutional reforms; which, it is stated, would receive the support of his party. This pro-

gramme happens to be almost precisely the same as that put forward by the Liberal Party some year or two back, and the fact that it is now adopted by the Swaraj Party is an indication of the extent of the swing of that particular pendulum. The fact that all is not happy within the Swaraj camp is becoming increasingly obvious, and a press statement has just been made that a large number of members of the Bengal Congress Committee have signed a requisition for the removal of the present Secretary, who is one of the most influential members of the party. The differences of opinion appear to have come to a head over the question of the allotment of offices in the new Corporation, the elections for which are about to take place.

A New Indian Daily.

Another interesting pointer of the trend of events amongst the politically-minded classes is the establishment of what is practically a new English newspaper run by Indians. The *Basumati* is one of the oldest of Indian newspapers, and it has hitherto been printed in Bengali; it has established for itself a position of considerable influence amongst those who are more advanced than the Moderates but have no desire to join the out-and-out Extremists. It has now been issued in English, as well as in the vernacular, and its get-up is better than that of any of its rivals in Calcutta. So far as can be seen from its first few numbers, it is going to continue along its old lines and this means that it will stand for progressive nationalism without rancour. The new venture would not have been started, unless there were clear signs of a demand for it, and it can be regarded as an encouraging sign of the growth of a saner outlook.

A Sentence and an Appeal.

The attitude of the Extremist Press in regard to communal disturbances has been frequently mentioned in these columns, and for some time past the editor of *Forward* has been on trial under a prosecution arising from its comments at the time of the last riots. The article upon which proceedings were taken stated that the Governor of Bengal and the Executive were acting under the orders of the British Government to allow communal tension to increase to such an extent that disturbances were inevitable, and so to show that Hindus and Moslems could not be trusted to live together. The Chief Presidency Magistrate yesterday sentenced the editor to three months' imprisonment and a fine of Rs.300, but the High Court the same day released him on bail pending an appeal.

Men and Things.

The official report of the progress of education in Bengal, which has been issued this week, shows that there is an increasing demand for secondary schools in which the instruction is carried out in English, but a decrease both in the number of the schools and the scholars in the higher vernacular schools. The total number of educational institutions has been increased by 805 and the number of pupils by 71,070 during the year, and the competition for the openings for the products of these institutions will become correspondingly more acute.

This is Baby Week, when the usual exhibition is being held to show all sorts of mothers how they can improve the health of their babies; at the same time entertainments are being held to raise the funds to enable the Baby Clinics to carry on for another year. On the other hand Indianisation proceeds steadily, and the solution of the Anglo-Indian problem becomes still more remote.

The Budget of the Calcutta Corporation has been presented, and on the whole it is encouraging; the fact that the Swarajists have been in power does not seem to have weakened the financial status of the Corporation, and it must be admitted that they have done something to assist the executive in making a beginning towards bringing assessments for Municipal taxes in line with real values. There is an enormous hidden reserve in the systematic under-valuation which has been the past practice throughout the city.

A Moslem member brought before the Corporation this week a proposal to rescind the Resolution ordering the removal of the body of the so-called saint who was buried under the meat stalls some two years; the motion was defeated by a large majority, but no one believes for a moment that any action is likely to be taken in the present state of communal feeling.

Government appears to assume that the Bengal Legislative Council will have sufficient faith in itself to vote an extra 30 per cent. on the cost of the proposed new Council Chamber in order that it may be faced with stone; a resolution providing for this is being put forward in the near future, and it is understood that the works may be put in hand before the end of the present year.

Monday was a day of Hindu religious processions and, thanks to the efficient police precautions, there were no disturbances. One student procession thought fit to try to break through the police cordon in Harrison Road, and it finally had to be dispersed by a charge. A typical Indian sequel is an application in the Courts for authority to prosecute the Police for assault, as no written order was produced authorising them to divert the procession from the danger area!

An Indian member of the Afghan Air Force who has been interviewed in Delhi states that he is the only non-Russian officer of the Afghan Aviation Service; he also added that instruction in the Military Schools was being given by German and Turkish officers.

The Trivial Round.

Once again backers repeated their recent melancholy experiences at racing headquarters on Saturday last, and an increasing heat wave did not add to the gaiety.

The M.C.C. finished their tour in Ceylon by giving the combined team an innings beating; Club games continue in Calcutta and the hardening up of the wickets was responsible for a crop of centuries.

The All-India Tennis Championships have concluded at Allahabad, E. V. Bobb repeating his Calcutta success in the Men's Singles and Miss Jenny Sandison, the young Calcutta player, winning the Women's Open. Both of these players are comparatively inexperienced, and with a wider field they should go far.

New life and new blood are flowing into the old Calcutta Rowing Club on the removal of its course and headquarters from the unsavoury Boat Canal to the new Improvement Trust lake to the south of the city; it is proposed to open a boating and sailing section and these are certain to become extremely popular.

The A.D.C. is producing "Outward Bound" at the week-end, and this promises to increase the already high reputation of Mrs. "Pat" Deane, the producer.

Music has been well to the fore this week with two Russian-Americans giving matinees at the theatre and the Symphony Concert on Sunday last; the latter was even better than a crowded house expected, and there was considerable enthusiasm both at the close and on the conclusion of Beethoven No II, which had already been played once before during the year and was repeated by request.

Changes in Club life are indicated by the fact that the kitchens of the new Saturday Club building, which was designed only 18 months ago, will have to be increased to cope with the demand for dinner dances. Tollygunge Club, too, has moved with the times and opened a fine Swimming Bath, and, although old Quai Hais may shake their heads, it is attracting all the best and brightest; it will be a great boon in the hot weather.

Markets.

Another quiet week has passed in the jute market; sellers have been more ready to do business at lower rates, but, with buyers holding off, transactions have been on a small scale. Hessians have been lifeless on account of the lack of interest from North America and the Plate and the small amount of speculation in the local market. The improved position in the piece-goods market, which has become apparent during the past few weeks has

been maintained, and buying for up-country markets is increasing daily. Prices in all cases have been steady, and in some instances there have been advances over the previous week's rates. The position in the tea market is almost identical to that obtaining last week; both here and in London, common and medium qualities have tended easier, and good descriptions especially those with autumnal flavours have continued to realise good prices. A section of the tea experts here are of opinion that prices are now nearing bottom and that there will be steadier tendency in the near future.

On the Stock Exchange Government Securities have been quiet with $3\frac{1}{2}$ per cent. Paper and the 1960-70 and 1945-55 Loans a shade easier on Bombay liquidation, due to the uncertainty concerning the position in China. In the Investment Market, buyers are still not easy to find and apart from a good turnover in Jute Mill Preferences, business in this section has been small. The tone in the jute shares has been dull on the easier tendency of the fabric market, and prices have given way slightly; the opinion, however, is that there is no possibility of any serious set-back in share prices. Cottons and coals continued to be more or less neglected, and buyers in the tea section have been at a premium. As in the past few weeks, the miscellaneous market has been the subject of most attention; sugar shares have continued steady, and India Iron and Steel have recovered from the recent profit taking. Flour shares are in request, and the tendency here, as in several other shares in this section, has been in favour of holders.

As a result of the cessation of inquiries for remittance on bullion account, the Exchange market steadied and rates firmed up to 1-16th with Ready T.T. quoted at rs. 5 31-32d. Money has been in good demand and Banks have borrowed at $5\frac{1}{4}$ and $5\frac{1}{2}$ for Short money. The Bank Rate has been raised to-day to 7 per cent.

BOMBAY NOTES.

The Rupee and Cotton.

Whether for good or evil, and whether permanently or temporarily, the rupee is for the present as firmly established at rs. 6d. as it ever was at rs. 4d. It was not raised from rs. 1d. to rs. 4d. and held there without difficulty—without manipulations of the currency, if you choose to use the expression; and it is now being held within the gold point limits on either side of rs. 6d. in the same way—that is to say, the effects of the balance of trade are adjusted by the supply of currency.

A few weeks ago the export trade of India increased, and the rupee rose from the lower gold point to well above rs. 6d. in a very short time. Trade has now gone the other way. There have been considerable imports of wheat and there has been a very active demand all over India for Manchester goods. The balance of trade is for the moment against India, and the rupee has fallen to below rs. 6d. again; and with a considerable balance of Government remittance still to be covered, there is some encouragement for those who look for a further fall.

But, as far as cotton is concerned, there is nothing abnormal in the present situation: in fact, I think I pointed out in these letters some months ago, that the effect of a large and cheap American cotton crop was sure to be felt in Lancashire before it reached India. Lancashire mills have been able to get their raw material cheap before the cotton market in India has reacted to the fall; and with the Indian ryot, or at any rate the Marwarri middleman, able to hold back the Indian crop during the two months when American futures were round about 6d. it seems doubtful whether Indian mills will ever be able to get their cotton this year on a parity with American. The temporary advantage is, therefore, all on the side of Lancashire; and from every point of view it is satisfactory that Lancashire has been able to take advantage of cheap American cotton and to pass that advantage

on to Indian markets, which have been waiting for some years for this opportunity.

But the situation is certain to adjust itself very soon. In one direction or another, the parity between India and America will become more normal before the beginning of the rains: and the Government of India, which is under no necessity of taking short views, will be helped by the restoration of the usual favourable balance of trade.

When the trade balance is normal, it is so much in favour of India that it is, in practice, within the power of Government to stabilise the rupee at any figure between one and two shillings: but I certainly do not intend to use this letter to re-open the arguments in favour of any specified figure.

Sectional Riots.

Such trouble as there is in India at the moment seems, on the surface at any rate, to be entirely confined to faction fights between small and inconsiderate parties of the rival communities; and, again on the surface, there seems to be remarkably little attempt to combine against the European.

We in India know remarkably little about the state of affairs in China, but if there is any analogy at all with India, we are inclined to doubt whether the genuine anti-foreign feeling is as strong as is sometimes represented. If there was nobody to control the passions of Sikhs, Muhammadans, Brahmins and Hindus in India it is not impossible to conceive a state of affairs in the interior very similar to that of China in the past few years; and if one of the combatant forces was promised the support of foreign troops on condition of carrying on an anti-British campaign, the effect would, no doubt, be much the same as it looks like being in China.

Up to the present, we hope and believe, Bolshevism in India is negligible. There is one very important difference between the two countries. To an enormous number of Chinese the Englishman is a myth: comparatively few of those millions have ever seen an Englishman: an infinitesimal percentage have ever been in close touch with one; and to the ordinary Chinese the Englishman must be an unknown creature of whom he is prepared to believe what he is told—in much the same way as I am prepared to accept, for instance, any reasonable account of the mentality of Attila's Huns or Pizarro's Spaniards.

In India, on the other hand, every Indian knows the Englishman. There are villages, no doubt, where the Sahib seldom comes, and where, when he does come, it is on routine duty which gives him no opportunity of close contact. But the vast majority of Indians have at one time or another met the Englishman on a more human footing, whether through the Army shikar or trade: and the Indian, being a first-class, hard-working, sport-loving individual, is not in the least likely to prefer the average Bolshevik to the type of Englishman that he sees in India.

The position of England in India is based on the relation between the individual Englishman and the individual Indian: and untold good, and untold harm, can be done by every single Englishman in the country. It is not only the judge, the collector, the colonel or the senior merchant who influence the future of England. The casual globe trotter and even the most junior assistant in office, mill or tea estate can create an impression, for good or evil, on thousands of Indians upon whose goodwill we depend.

There is another problem: the small body of highly educated lawyers and politicians, whose discontent is loudly voiced throughout the land: but the consideration of their grievances and the adjustment of political power lie in other hands than those of the average Englishman in India. It is his duty to go about among the people, the most attractive in many ways in the world, to mix with them for his own purposes of business administration or sport, and to see to it that the name and reputation of his country stands high among his Indian friends, colleagues and servants.

THE ARABIC HISTORY OF GUJARAT.—II.*

The Story of a Lost Manuscript.

By SIR E. DENISON ROSS, C.I.E., Ph.D.

V.—The Value of this History.

The history of Gujarat during the last half of the 16th century is neither very important nor very edifying, but when told in such minute detail, as in the case in this history, by a man who had daily intercourse with one or more of the contending nobles, we obtain a vivid picture of the manners, customs, intrigues, and character of a group of men who were after all very typical of the age and country they lived in. And whereas, in most histories of the period, we are told a great deal more than is necessary about the Kings, we have here a faithful diary written without fear or prejudice by a man who seemed to have no ulterior motive beyond his own diversion.

Of the author's fidelity as a translator from Persian into Arabic and of his scholarliness as a careful sifter of the best available sources there can be no doubt, but, unfortunately, he did not possess the gift of telling a plain narrative, and no sooner does he attempt to describe at first hand scenes he has witnessed or stories he had heard than he becomes involved in a morass of parentheses and inconsistencies and repetitions, with the result that the most authoritative portions of his history require the greatest care and patience to unravel.

Before passing to the life of Hajji Dabir, as we may piece it together from his own disjointed allusions to himself, I cannot refrain from confessing to a very real affection for this old man with whom I have spent so many intimate hours during the last twenty-five years. I feel as if Fate had made me his residuary legatee, and I can only regret that this pious undertaking should not have fallen to some one better equipped and more leisured than myself. When I look at the two volumes which have already appeared, I am reminded of the village doctor in the Persian story, who was wont to cover his face with shame whenever he passed the local cemetery.

VI.—The Author's Life. Autobiographical Incidents.

Although Hajji Dabir tells us many incidents of his life in the course of his narrative, these are scattered about the work in a purely arbitrary manner and are by no means easy to piece together. It is quite probable that in the missing introductory folios to Daftar I he had set out something in the nature of an autobiography. His full name was 'Abdullah Muhammad ibn Siraj ud-Din 'Omar an-Nahrawali ibn Kamal ud-Din Muhammad ibn Farid ud-Din Muhammad ibn Hasan ibn Qasim Ulugh Khani. He was born in Mecca about A.D. 1540 and there he remained and received his education until 1556. His father was born in Pattan at the beginning of the 16th century of our era and was descended from Persian ancestors, who at the time of the Mongol invasion in the 13th century fled from their home either by land or by sea to Multan in Sind. When, at the end of the 14th century, Tamerlane entered Delhi, his great-great-grandfather, whose name was Qasim, fled from Gujarat with his family, who settled in and around Pattan. This happened during the Governorship of Zafar Khan, the real founder of the Ahmadabad Kingdom, of whom I have already spoken. In the reign of Sultan Muzzaffar II, a certain nobleman arrived in Pattan with his son, and it was with this son, who afterwards rose to great fame as Asaf Khan, that Hajji Dabir's father, Siraj ud-Din, formed a life-long friendship. In 1535, when the relations between Humayun

*The Sir George Birdwood Memorial Lecture read before the Royal Society of Arts (Indian Section) on February 11; Sir William Foster, C.I.E., in the chair.

and Bahadur, which had hitherto been friendly, became strained, and it seemed likely that war would break out between the two rulers, Bahadur took the precaution of sending his harem and his treasures away to Mecca, in charge of Asaf Khan, who took along with him all his own household and his major-domo, Siraj ud-Din. The party arrived safely in Mecca and as long as Bahadur was alive seemed to have there found a secure asylum. But when a year later news arrived of the death of Bahadur (who was accidentally or intentionally drowned while visiting the Portuguese Captain at Diu), Khusraw Pasha—the ruler of Egypt, the Hijaz and Yaman on behalf of the Ottoman Sultan—gave orders for the confiscation of the harem and treasure. This order was to be carried out by the Governor of Jidda. Now it happened that Asaf Khan was at that moment in Cairo, and hearing of the Pasha's order, sent a message by the same envoy who bore the Pasha's letter to Siraj ud-Din, saying: "Following on this—that is, the order of confiscation—will arrive a further order cancelling it." The author continues the story as he heard it in his father's words, and so illuminating and vivid is this narrative that I cannot refrain from reproducing it here.

"When the news of the Pasha's design, and of the arrival of the Amin in Mecca reached us, we were all greatly alarmed. For though we were sufficiently strong to resist the Governors of Mecca, we could do nothing against the Amin of Jidda. And when we had made up our minds that the seizure would take place on the morrow, we commended ourselves to God's care: and the women, preferring death to capture, washed, clothed and perfumed themselves, and gave what they were able in charity: while the chief of the harem, Melik Firuz, sharpened their blades for them. The whole of Bahadur's household spent the night in fear and trembling, not knowing what the morning might have in store for them.

"Now on that same night all the grantees of Mecca happened to be assembled in the house of Abu Baqa as-Sukkari, who was giving a party in his son's honour. This house was next to the Khan's house, and we were also invited to the party: but we excused ourselves on account of the state of anxiety we were in. We spent the night, however, in the court-yard, which was at the gate of the Khan's house.

"Now the Egyptian messengers used to arrive in the early morning, and the road they took passed in front of this verandah: and when dawn broke I was sitting at the end of this courtyard, and whenever a rider passed I called out to him by the name the Khan had mentioned in his letter. And each passed on until at last one rider answered 'na'm'—'yes'—and then asked me, 'Are you so-and-so?' to which I replied, 'I am,' whereupon he drew rein and handed me a sealed packet, and then rode on again. I fell on my knees in thankfulness to God, and then withdrew to pursue the Khan's letter. As the letter was in Turkish I sent for one of the Khan's confidential attendants, who was a Turk; to translate it for me, and it turned out to be the cancellation of the orders issued by the Amin. The Turk was an excellent fellow, and though he was probably capable of keeping a secret, I thought it better to be on the safe side, and so gave him something to occupy him in my house, while I myself went to the women's quarters and told the good news to Melik Firuz and asked him to communicate it to the ladies. I next sent for the head butler (*sherabdar*) and ordered him to bring out a hundred trays of Indian sweets and preserved fruits. I then returned to the courtyard, where I found several of our people.

"When the trays were brought out, I sent forty of them to the guests at the party next door, and a like number to Melik Firuz and the leading men of Bahadur's suite, who had spent the night hovering between life and death: while I sat down with my friends to enjoy the remaining trays. Two of them, however, I sent to that virtual prisoner, the Turk.

"The guests at the party were amazed at the arrival of

the trays of sweets: and one of them said: 'Thus does despair of enjoying a thing lower its price—even though it be precious.' By this he implied that everything we possessed would be seized by the Amin in the morning.

(To be continued.)

CORRESPONDENCE

ARABIC HISTORY OF GUJARAT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The work referred to by Sir Denison Ross in his lecture on the above subject, and reported in your last issue, as "*Zafar ul-walih bi-Muzaffar wa-alih*," simply means the work of *Zafar* on Muzaffar I. of Gujarat and his dynasty, of whom that author seems to have been very fond.

No other translation is possible and certainly not one making bi-Muzaffar the subject of the sentence! You also print *walih* with a capital w, in error, perhaps.—I am, etc., A. SEFI.

Buckingham Gate, February 26, 1927.

"INDIA GAUZE WAISTCOATS."

With reference to the article, in our issue of January 17, on the journey to India seventy years ago, in which the question was raised whether "India gauze waistcoats," which played a prominent part in the outfit recommended in those days for visitors to India, were still made, Messrs. Thresher and Glenney, of 152-3, Strand, write:—It may interest you to know that we still make the "India Gauze Waistcoats" mentioned, but the garments are now described by the more modern terms of *undervests* and *singlets*.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Indian Budget.

The new Indian Budget, which has just been presented to the Indian Legislative Assembly, is Sir Basil Blackett's fifth Budget. The first four all yielded surpluses, that of the past year amounting to over three crores of rupees as compared with an estimate of five lakhs. This result must be regarded as particularly satisfactory in view of the unfavourable trade situation during the year. Thus for the first ten months of the year the balance of trade in India's favour amounted to 27.16 crores as against 85.76 crores for the corresponding period of the previous year. The fall in the price of staple commodities was the main factor in this decline. For the present year the estimate is for a surplus of about 3½ crores. The changes in taxation proposed are small, it being pointed out by Sir Basil Blackett that in view of the unliquidated provincial contributions it is impossible to utilise any substantial part of the surplus in reduction of taxation. The export duty on hides, which was condemned by the Fiscal Commission, is abolished, entailing a loss of nine lakhs. Further, the export duty on tea is abolished, involving a loss of fifty lakhs, but compensation for the bulk of this will be forthcoming by an alteration in the basis of assessment on tea companies from 25 to 50 per cent. of their profits. It is estimated that this will yield forty-five lakhs this year, rising to fifty in 1928-29. It is to be expected that this change will be strongly criticised by the planters. A particularly welcome feature is the reduction of the import duty on motor cars from 50 to 20 per cent. *ad valorem* and on tyres from 30 to 15 per cent. This should give a most useful stimulus to trade in these commodities, and should be a great encouragement to our manufacturers to redouble their efforts in the Indian market. The net effect of these and other measures will be no more than six lakhs leaving the estimated surplus at 364 lakhs. The Finance Member takes the view that this can be considered a recurrent surplus, and proposes to utilise the present surplus, together with a large part of that of the past year, for the abolition of provincial contributions for 1927-28, provision being made for specially favourable treatment of Bombay. In future years if the actual surplus of the year is insufficient for the purpose, as in the present case, the means will presumably be provided by new taxation. A separate statement was circulated with the Budget setting forth the effects of exchange revision to rs. 4d., and it may here merely be pointed out that it would have entailed a deficit on the Budget of over 1½ crores.

British Trade with Egypt.

At the dinner given by the British Chamber of Commerce in Egypt at Cairo recently to Lord Lloyd, British High Commissioner, the Chairman of the Chamber, Mr. H. E. Barker, dealt in some detail with the position of British trade in Egypt. In view of the unfortunate labour developments last year in Great Britain, British commercial enterprise has naturally been severely handicapped in Egypt, and it is not surprising if there has been a large falling off in a number of lines as compared with 1925. The unfortunate thing is, as Mr. Barker pointed out, that while British trade has been declining other countries have been able to improve their position in the Egyptian market to some extent. The ground lost has to be regained in conditions rendered adverse by the fall in the price of cotton, which, of course, means reduced purchasing power in Egypt and an intensified struggle

for the trade that is going. The great asset of the British manufacturer is that British goods remain the best that can be obtained, but it remains to bring their virtues to the notice of potential buyers in Egypt. British commerce has received an excellent advertisement during the past year from the way in which the British contractor has shown how much better he can carry out his contracts than his rivals, and it remains to take advantage of the prestige thus accruing to things British by greater enterprise on the part of our traders which has hitherto been so sadly lacking in Near Eastern outlets.

Manchester Ship Canal.

I referred last week to the favourable results obtained by the Manchester Ship Canal last year, the traffic showing an increase of 911,375 tons on the previous year's figures which were the best on record. At the general meeting (a report of which will be found elsewhere in these columns) the Chairman, Mr. Bacon, pointed out that for the first half of the year there was a decrease in merchandise of 56,163 tons and of £31,291, but in the second half there was a substantial increase both in gross tonnage and revenue. The company benefited by the importation of over 1,200,000 tons of coal to Manchester, but on the other hand, there was a loss in the export of this commodity of about half a million tons. It will be noted that Mr. Bacon points out that the improved results of the year are not wholly to be attributed to the imports of coal, and that other traffics have been well maintained. Reference was again made by Mr. Bacon to the efforts to establish the direct importation of tea to Manchester, and he pointed out that the arguments in favour of the importation direct of this commodity applied equally to other foodstuffs and produce. As regards the outlook for the present year, Mr. Bacon is distinctly hopeful, and the fact that for January the figures of the company for traffic and revenue showed a marked improvement on those for the corresponding month of the previous year is a most promising indication of the extent to which the company is likely to benefit from a trade revival.

Budget Prospects.

Attention is now increasingly concentrated on the prospects of Mr. Churchill's next Budget. That there will be a substantial deficit on the current year as a result of the coal strike is obvious, but the whole effects of last year's disturbances have not yet been felt, for the balance sheets

of the current year will reflect its incidence and those which have already appeared are on the whole—there have been a number of pronounced exceptions—not encouraging. The question at issue, therefore, is whether the Chancellor will be able to avoid new imposts, and while in some quarters it seems to be anticipated that he will, it is difficult to see any good grounds on which to go. The field of expenditure in which economies can be made is rather restricted, and unless the Chancellor is prepared to depend on the effects of the trade revival on the country's revenue it is difficult to see how he can avoid new departures in taxation.

The Fair.

This week sees the close of this year's British Industries Fair, and so far as I can judge it is going to prove a most pronounced success. There has been no lack of buyers from abroad while home buyers have been present in their thousands, and the orders placed have not been for trifling quantities, but for large consignments. The feature of the present Fair which gives me great satisfaction is the presence of exhibits from various parts of the Empire such as Palestine and India. It points to the possible development of the Fair in the future.

COMMENTATOR.

COTTON EXPERIMENTS IN THE SUDAN.*

The Empire Cotton Growing Corporation have just issued the reports received from experiments stations in 1925-26. The reports cover the work carried out at experiment stations on cotton, and its principal rotation crops, in Australia, the Union of South Africa, the Sudan,

* Reports received from experimental stations, 1925-26. (Empire Cotton Growing Corporation. 2s. 6d.)

Uganda, and other regions. The report on the Sudan, by Mr. M. A. Bailey, Plant Breeder to the Sudan Government, describes the general lines on which the work at Shambat has been reorganised. It is divided into two sections. The plant breeding section undertakes all work in connexion with the selection, purification, and propagation of cotton and other field crops, and the introduction and testing of new strains and varieties. Further, so far as time and opportunity permit, attention will be paid to the introduction and trial of new kinds of fruit and other trees and of useful and ornamental plants. Then the section of plant pathology and physiology under Mr. Massey, the Government Botanist, will undertake research into the underlying principles influencing the growth and yielding power of the crop and their resistance or susceptibility to disease. The division of the area of the experimental farm under different crops during the winter 1925-26 was (in feddans):—cotton 25½, wheat 18, berseem 7½, lubia and cowpea 2, other crops 2½, fallow and trees 34½.

It is pointed out in the report that the complaints that have been heard regarding the deterioration of Egyptian Sakel emphasise the extremely favourable position of the Sudan. Complete control by the Government of ginneries and of seed production throughout the country is, it is emphasised, the only effective remedy for deterioration, and this is practically in existence in the Sudan. This control, it is urged, must be retained to the full or even further extended as the Sudan's future as a cotton growing region may come to depend upon its reputation for the quality of the cotton produced.

The Agricultural Bank of Egypt recommends a dividend of 10s. per share on the ordinary and £55 per share on the deferred shares.

THE CAIRO MOTOR SHOW.

(From Our Own Correspondent.)

Cairo, February 17.

Egypt's first international motor exhibition is a disappointment. Not only is the number of standholders very small, but also the arrangement of the exhibits and the apportionment of space leave much to be desired. Cars are huddled up together on stands not large enough to display effectively the number of cars placed on them, with the result that the visitor, if desirous of inspecting any particular model, finds difficulty in doing so comfortably, while his impression of the show as a whole is apt to be a mass of wheels, radiators, and coachwork, with few distinguishing features.

For this state of things the organizers are chiefly to blame. When, two years ago, the then newly-formed Royal Automobile Club of Egypt decided to organize an exhibition, it did not assume the task itself, nor did it seek the direct co-operation of the motor agents of this country. Instead, it entrusted the work to a concessionaire.

Forty-six firms have stands, twenty-nine being taken up by motor cars, the remainder by tyres and accessories. The cars being shown are:—Amilcar, Austin, Bean, Buick, Chrysler, Citroen, Clyno, De Dion Bouton, Delaunay-Belleville, Erskine, Fiat, Hillman, Hupmobile, Itala, Latil, Marmon, Minerva, Moon, Nash, Oakland, Oldsmobile, Peugeot, Pontiac, Renault, Rolls-Royce, and Studebaker, together with Rudge motor-cycles, a Peugeot motor-boat and an extraordinary three-wheeled Krupp production which does not look at all like either a motor-car or a tractor, but is, presumably, the latter.

It will be seen that American exhibits are much the most numerous, eleven different makes of cars being shown, as compared with five British, six French, two Italian, one Belgian and one Italian. Nor is the American lead fully indicated by the numbers alone, for the stands occupied by the Trans-Atlantic manufacturers are, for the most part, the best situated, most spacious, and among the best arranged. General Motors Corporation, with their range of six cars, Cadillac, Buick, Oakland, Oldsmobile, Pontiac and Chevrolet, have a little show of their own, while Chrysler and Studebaker are also well represented.

The British contribution to the show would have been a very slight one indeed, but for the initiative of Messrs. Rootes, Ltd., of Devonshire House, Piccadilly, who, although not hitherto directly concerned in the Egyptian motor market, have taken a stand, on which they exhibit

Rolls-Royce, Hillman, and Clyno cars. The 40/50 h.p. Rolls-Royce chassis, carrying a Thrupp and Maberly closed limousine, is, at £3,300, by far the most expensive exhibit in the show. Indeed, except for its smaller brother, the 20 h.p. Rolls-Royce, carrying a Hooper cabriolet body, there is no other car at even one-third the price, the next most expensive being a 20 h.p. Minerva 6/7 seat landaulet, at £1,050, while another comparatively highly-priced car is the 20/25 h.p. Lancia limousine, at £850, a price which is also asked for the most expensive models of Fiat and Chrysler, while the Cadillac saloon is at £1,040.

These exceptional models apart, the majority of exhibits in the show are of the medium-priced class, between £250 and £400. This is the type of car for which Egypt offers a better market than for either larger or smaller cars. Motoring conditions in this country differ markedly from those in Great Britain. Motoring for the average Briton means the open road, the wind singing past his ears, the contented hum of a sweet-running engine as it settled down to a swinging gait, the glow of satisfaction as the long up grade is surmounted on top gear, the picturesque country inns, with their hearty welcome and generous fare, all these are a part of the pleasures of motoring.

Egypt knows few of these things. Long stretches of metalled road do not exist outside the big towns. Of hills there are none to test an engine's stamina and the country roads are as innocent of inns as they are thronged by camels, donkeys and fellaheen foot-passengers. The car exists in Cairo and the few modern towns to take its master in the morning from his home in the suburbs to his office in the city, and thence to the Bourse, or for a series of business calls, and in the cool of the late afternoon to give its mistress a breath of fresh air after the heat of the day. The automobile in Egypt seldom journeys more than twenty miles from its home.

As may be imagined from the foregoing description of motoring conditions, the small-engined, highly-refined, super-efficient type of car, so popular in Europe, is not the most in favour in Egypt. Cars are frequently in use to give the family an airing, and as Egyptian families are inclined to be large, the car, too, must be roomy and well-sprung. And since a large part of the driving is in city traffic, or on much used country roads, it is an advantage to have a comparatively slow-running, flexible engine, which will throttle down to a crawl and get away again smoothly without the necessity for changing gear. In these conditions the popularity of the American light six-cylinder car, which fulfils Egyptian conditions so admirably, is easily understood.

Nevertheless, there is a fairly large and an increasing market for the British light car. During the last three years Morris Motors have been making a bid for Egyptian business and, if the results may be judged by the number of Oxfords and Cowleys seen on the streets of Cairo and Alexandria, their effort has been fairly successful. At the same time there is a market, though a limited one,

for British cars of the very highest class, such as the Daimler, Rolls-Royce and Lanchester, and the two former makes have for years been very well-known and very highly favoured here. The Armstrong-Siddeley (which is not represented in the present show) is also becoming well-known here.

From the British manufacturers' point of view the Egyptian market is a difficult one. Although motor imports have increased steadily in each year since the War and will undoubtedly go on increasing, the potential sales are hardly large enough to justify any one maker from launching out on any very large scale here. Yet attractive showrooms and a liberal system of payment by instalments are essential if British firms are to withstand the competition of American, French and Italian makers who have recognised the value of these assets. It almost seems that there are too many makes of British light cars, all of high quality, but all very much alike so far as specification, price and performance are concerned. The effective way to meet foreign competition in the Egyptian market would seem to be for a group of British firms, representing a comprehensive range of cars, to combine forces and to establish a really adequate agency here, with attractive showrooms and sufficiently capitalized to offer attractive purchase terms. That is, essentially, the plan of the General Motors Corporation, whose success in selling cars here has been one of the outstanding features of the last few years. If British manufacturers would adopt similar methods they might hope for a fair share of the Egyptian trade. But if twenty or thirty British makers attempt to share between them the comparatively limited market for British cars here it is unlikely that any of them will find the experiment a very profitable one.

PALESTINE CROP PROSPECTS.

The Director of Agriculture and Forests in Palestine, in his report on crop prospects in January, says:—

Climatic conditions have been extremely unfavourable in Southern Palestine during the last month. The situation in the Beersheba area is exceptionally grave and was unaffected by a light shower amounting to 1.5 millimetres on January 13. A complete failure of the barley crop in this district is probable, while the almost total lack of pasturage has already resulted in the loss of some 40 per cent. of the sheep and goats.

Exceptionally strong gales and sandstorms also caused great damage to fruit trees, vegetables, and cereals in the Jaffa District. On the other hand, the general position has improved during the last few days by showers varying from 30 to 37 millimetres over the central portion of the southern zone from Hebron to Gaza.

In the northern sector the weather has been much more propitious. In a few places beans are above ground; farmers are taking advantage of the fine weather to complete sowing of beans, lentils, and kersenneh, and it is expected that owing to the lateness of the season and the prospect of favourable late rains, seeding operations will be continued up to the middle of February.

Oranges.

The Jericho groves were unaffected by the stormy weather which occurred elsewhere and prices are good. In Gaza severe damage

was caused by gales and the yield reduced by from 10 to 12 per cent. In the neighbourhood of Jaffa the damage was more extensive, the loss amounting in some cases to 20 per cent. Much of the unpicked fruit was bruised and rendered unfit for export to the United Kingdom.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Centrifugal Pump, Etc.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of high lift centrifugal pump, fire hydrants, chemical fire extinguishers and air-moistening machine required for the spinning machine workshop at Delta Barrage Prison, April 12.

Tents, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of tents and shamsias for same, April 29; document and map printing paper, May 3; calico and Shash, May 9.

Police Clothing and Stores.—The Egyptian Ministry of the Interior invites tenders for the supply of clothing and necessities required for the Police and Ghafir services during the financial year 1927-1928. March 10. (D.O.T.)

Photographic Materials.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. March 16.

Stationery Articles.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of stationery articles for 1927-1928. Approximate cost between £E6,000-7,000. March 22.

Paper.—The Controller-General, Administration and General Stores, Ministry of Finance, invites tenders for the supply of paper, binding materials, and metals required by the Government Press for 1927-1928. March 17.

TURKEY.

Motor Cycles.—The British Commercial Secretary at Constantinople reports that according to the local Press one of the Government Departments in Constantinople has decided to purchase 28 motor cycles. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, March 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Anchoria for Port Said, Colombo, and Calcutta (Birkenhead, March 5).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, March 9).

British India Line.—S.s. Querimba for Bombay and Karachi (London, March 12); s.s. Movada for Colombo, Madras, and Calcutta (London, March 12).

Cunard Line.—S.s. Cypria for Gibraltar, Malta, Patras, Calamata, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, March 5); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice, Trieste, and Fiume, also at Corfu and Ancona if inducement (Liverpool March 10, Swansea March 22).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 12).

P. and O. Line.—S.s. Ranchi for Bombay (London, March 4); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, Famagusta, Larnaca, and Limassol (London, March 9); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, March 10).

Ellerman and Papayanni Lines.—S.s. Manchurian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona, Venice, Trieste, and Fiume (Liverpool March 5, Swansea March 8); s.s. Egyptian for Malta, Alexandria, Jaffa, and Haifa (Newport March 7, Liverpool March 16); s.s. Algerian for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 10, Swansea March 10); A steamer for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Glasgow, March 21); s.s. Assyrian for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Liverpool March 23); s.s. Mardinian for Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 2).

* Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 1.

Business has been quiet this week in the Stock Markets, and the phrase "China and the approach of the Budget restrict activity," must be used, and will, one fears, have to be used every week for some considerable time to come. But the general tone has on the whole been fairly firm, and Home Rails, curiously enough, have improved on the issue of unsatisfactory reports. The excitement in the oil share section, recently by far the most active in the house, has died away; but at the same time rubber share quotations have improved on a renewal of the attention which has been so conspicuously lacking in that market of late. Brokers are beginning here and there to suggest that we are about to see an old story re-told, namely a rubber share boomlet, following on the collapse of speculation in oil shares. But in this connexion one may say that the conditions in the rubber world are far too uncertain at present to justify indiscriminate speculation, although the well-managed companies continue, without doubt, to earn good profits.

Home Railway Accounts.

The reports of the four great British railways, for 1926, all of which have now appeared do nothing to temper the disappointment aroused by the dividend announcements, which showed that very heavy amounts had been withdrawn from reserves to pay greatly reduced dividends. By this policy the companies have preserved the "trustee" status of their senior stocks, but the size of the encroachments upon reserve funds, following withdrawals upon a smaller scale at the end of each of the three preceding years have been viewed with some misgiving. However, the market quotations of the junior stocks, which have now received only small dividends have not suffered, and in fact stand a little higher than they did before the announcements were made. At these prices the yields obtainable on the basis of the dividends for 1926 are, of course, very small indeed, but the outlook for the current year is regarded more hopefully and present prices discount the recovery in revenue which is expected to occur.

The year's accounts show that certain savings in expenditure were made possible under the heading of

wages by the reduction in staffs, which followed the General Strike. These economies, however, were partially offset by the increased cost of coal which had to be purchased abroad. The total saving in expenditure varied considerably, namely from 9 per cent. in the case of the Great Western to 2.4 per cent. in the case of the Southern. The decreases in net income were as follows: London Midland and Scottish, from £18 millions in 1925 to £9.4 millions; London and North Eastern from £10.1 millions to £4.6 millions; Southern, from £6.4 millions to £5.2 millions; and Great Western from £7.1 millions to £2.7 millions. The year's earnings in the case of the L.M.S. provided less than half the amount required for payment of dividends on guaranteed and preference stocks, while in the case of the L.N.E.R., fixed charges were barely covered. This company, it will be recalled pays only $\frac{1}{2}$ per cent. on its preferred ordinary stock, which has hitherto received 5 per cent. A year ago one per cent. was paid on the deferred ordinary stock. The Great Western earned less than one-third of the amount required for preference and guaranteed dividends, but the Southern earned more than half the amount paid in ordinary dividends.

The Prudential Millions.

The report of the Prudential Assurance Co., for the year 1926 is again a very satisfactory one, fresh new records having been broken, in spite of the effects of the labour troubles of the year upon saving power of the working classes. In the "Industrial" branch the premiums collected increased by £199,400 to over £16 millions and in the Ordinary branch the new business was nearly £15 millions, producing new annual premiums of £955,200. Total income for the year was over £38½ millions, representing an increase of £1,744,400 over 1925 and £4,161,000 over 1924. The surplus arising from life business was £7,810,400 against £7,087,800 a year ago, and from this £1 million was again carried to the investment reserve and £250,000 to the common contingency fund. In the Ordinary branch a bonus of 44s. per cent. has been declared, while the scale of bonus in the Industrial branch has been improved in respect of old policies. The expense ratio in the Industrial branch has been further reduced to 25.9 per cent. of the premium income. The amount allocated for dividend on the "A" shares of the Company is £875,000 representing 87½ per cent. against 85 per cent. The "B" shares still go without a dividend. They depend for dividend on 75 per cent. of the profit of the General Fund. The General branch accounts last year resulted in a slight debit balance owing to the transfer of £100,000 to the Marine Fund. That the Prudential stands in a class by itself will be realised from the magnitude of its assets, which stand in the latest balance sheet at no less than £199 millions, representing an increase of £13½ millions over 1925 and of £28 millions over 1924.

British Investors and Canadian Mining.

In the course of his address at the recent meeting in Toronto of the Empire Club, Dr. Mackintosh Bell, the managing director of two well-known British-Canadian mining enterprises, referred to the comparatively small part played by home capital in the development of Canada's mineral resources. He urged the London Press to deal with the Hollingers and the Lake Shores (marked successes) rather than to continue to dwell upon those that have been unsuccessful. Unfortunately there is a flaw in the argument. It consists in the fact that the British capital never had the opportunity of participating in the successful enterprises on anything like ground floor terms, whereas it was invited to subscribe for shares in the companies which turned out so badly. An example coming under the former heading is the Keeley Silver. When these dollar shares were introduced on to the London market, they were rushed up to 9s.—a figure which has never since been seen. True the purchasers have in the meantime received fair dividends: but they could not sell without incurring a substantial loss.

THE BRITISH INDUSTRIES FAIR.

Great Volume of Orders.

(From Our Own Correspondent.)

It is, of course, too early to attempt to sum up the results of the Fair, but the results of the first week, both at the White City and Birmingham, have been fully in accordance with expectations. Something like 50,000 visitors have been to the White City, while the visitors at Birmingham have been about the same number, and at both centres orders have been placed on a large scale. It is estimated that the business done at Birmingham represents approximately £1,500,000, while at the White City the story of excellent orders placed comes from stand after stand. In short the Fair is beginning to justify itself to the full as a medium for the promotion of trade, and it is assuredly a fixture for the future, and as the world settles down more and more after the War it should become to an ever increasing extent a really valuable instrument of British trade endeavour. Everyone is familiar with what Leipsic did for German commercial development before 1914, and there are infinitely greater possibilities for the British Industries Fair than there were for Leipsic.

I was only able last week to touch on a few of the many attractions presented by the stands at the White City. One of the most comprehensive sections is that devoted to sports goods and clothing; indeed, I think this section has expanded more than any other. It has always been a mystery to me why Great Britain, the mother of all games, has not played a greater part in the overseas outlets for sporting equipment, particularly in regions like the Near East, and I am constrained to hope that the goodly array of stands in this section is an indication of a growing determination on the part of our manufacturers to extend their export trade. It would be superfluous to enumerate the firms in this section, for most of the well-known manufacturers of sporting equipment are represented. Badminton racquets, billiard tables, croquet sets, fives balls, golf clubs, hockey sticks, and tennis racquets are but a few of the objects which meet the eye in profusion. It is a display calculated to make the athlete envious.

Another section which is much more comprehensive this time is that devoted to textiles and clothing. In view of the opportunities for trade in tropical wear it is surprising that this section has not been more extensive on previous occasions. Here a notable stand is that of the Argus Clothing Company, who show tropical and sports wear and also rainproofs and waterproofs. Another stand of interest is that of the Bihar and Orissa Cottage Industries where are to be seen such things as silk rugs, scarves and shawls, and cotton hangings and quilts.

In the pottery and glassware section, as I pointed out last week, there are a wealth of attractive stands. I would instance that of Messrs. A. G. Harley Jones, who show a most pleasing selection of vases, bowls, etc., in Wilton powder blue, also some charming dinner ware. Another specially notable stand is that of Messrs John

Walsh Walsh, Ltd., showing a wonderful range of table and decorative crystal glass-ware. A glance at this stand is an object lesson in the ornamental value of glassware. Finally, at the stand of the Palestine Arts and Crafts is to be seen a choice range of Palestine pottery, glassware, jewellery, etc.

The remainder of the sections are fully up to the high standard of those I have already described. I do not propose to go through them in detail, but to content myself with a few examples to illustrate the extensive range of the Fair to-day. In the fancy goods section mother-of-pearl articles are to be seen at the stand of Joseph Alonzo, and also at that of the Palestine Arts and Crafts to which I have already referred. Messrs Veerasawmy and Co., have a stand in the section devoted to foodstuffs and beverages showing their well-known products such as chutneys, Indian pickles, etc. Another notable exhibitor in the section is the Dublin Distillers Co., Ltd., whose exhibit is a reminder that "Scotch" has a very active rival for popularity in "Irish."

COMPANY NOTES AND REPORTS.

IMPERIAL BANK OF INDIA.

The report for the half-year ended December 31 states that the period has been characterised by abnormally dull trade conditions, low prices of staple produce and a protracted jute season, all of which combined to bring about a glut of money in the market and rendered it extremely difficult for the bank to find remunerative employment for its resources. The Bank rate remained unchanged at 4 per cent. throughout the half-year as against 4.701 for the corresponding period of 1925. The net profits of the bank for the half-year amounted to Rs.35,49,327-13-4, which, with Rs.29,50,273-7-4 brought forward from the half-year ended June 30, 1926, made a total of Rs.64,99,601-4-8. This sum the governors of the bank disposed of as follows:—(1) In payment of a dividend to the shareholders at the rate of 16 per cent. per annum free of income tax, Rs.45,00,000; (2) transferred to reserve funds, Rs.7,75,000; (3) transferred to pension funds, Rs.3,00,000; (4) carried forward to the profit and loss account of the current half-year, Rs.9,49,601-4-8; total, Rs.64,99,601-4-8.

SERBIAN PRE-WAR DEBTS.

Repeated attempts have been made to obtain a settlement of commercial pre-war debts owing to British creditors by Serbian (now Yugoslavian) debtors, but the Moratorium Law passed by the S.H.S. Government in 1920, which provided for the payment of these debts on terms quite unacceptable to creditors, has stood in the way. It is believed, however, that Serbian debtors are anxious to reopen negotiations, and the London, Manchester, and other Chambers of Commerce are collecting particulars from creditors with this object in view. Creditors in London should communicate with the London Chamber of Commerce.

The traffic receipts of the South Indian Railway Company for the week ended January 29 amounted to Rs.9,56,685, making the total from April 1 Rs.4,31,60,343.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended January 31 amounted to £E9,902, making the total from April 1 £E282,844. For the corresponding periods of the previous twelve months the totals were £E12,833 and £E302,073.

Company Meeting.

MANCHESTER SHIP CANAL COMPANY.

Great Increase in Traffic.

Mr. Bacon's Speech.

The sixty-ninth ordinary general meeting of shareholders of the Manchester Ship Canal Company was held on February 23 in the Houldsworth Hall, Manchester.

The chairman (Mr. W. C. Bacon), in addressing the shareholders, said:—All chairmen in dealing with the accounts of their respective companies for the past year have been under the painful necessity of referring to the general strike in May last and the coal strike and the effect which they have had on the fortunes of their companies.

Undoubtedly the general strike and the first two months of the coal strike had their effect on the company's revenue with the result that there was a decrease in merchandise tons of 56,163, and of £31,291 in revenue up to June 30 last.

In the second half of the year I am glad to say, as you will have seen from the accounts, that this decrease was not only wiped out but we had a substantial increase both in gross tonnage and revenue and in net revenue for the year as a whole.

As you are aware, the coal strike led to large importations of coal to this country and over 1,200,000 tons of coal were imported at the Port of Manchester; in fact, it is not too much to say that your Port, as in the War, once more demonstrated its usefulness in times of national emergency. I know as a fact that we were of the utmost benefit to the gas, electricity, and commercial undertakings of this district.

Against this import of coal, however, there was a loss in export of coal of about half a million tons, but the remarkable fact is that, in spite of the coal strike, other traffic—taking the year as a whole—was wonderfully well maintained and whilst there were decreases in some commodities there were counterbalancing increases in others, and ignoring coal imports and exports there was an actual increase of tons passing over the waterway as compared with the previous year. Some of the increases may have been indirectly attributable to the coal strike, but, as I have said, our regular traffic kept up surprisingly well.

Record Tonnage.

As stated in the report, the total weight of seaborne traffic on which Ship Canal tolls were paid amounted to 6,533,780 tons, which is the largest tonnage using the Port of Manchester in any year since it has been open for traffic.

This is an increase of 911,375 tons as compared with the previous year, which up to then was the highest on record.

The receipts from Ship Canal tolls, ship dues, and miscellaneous receipts were also the highest on record for any year since the Port has been open, and amounted to £1,592,219—an increase of £98,675 over the previous year.

Expenditure in the working of the Ship Canal showed an increase of £18,514, as compared with the previous year, which was chiefly incurred in the dredging of the Ship Canal, repairs to machinery and works, and cost of working tugs, the last named being a charge under traffic expenses.

The increased cost of coal during the latter half of the year is for the most part the explanation of the increases in expenditure.

I may mention that taking all departments, including the Ship Canal, working of dock labour, working of the company's railways, and of the Bridgwater undertaking, the extra cost of coal amounted to upwards of £40,000, so that whilst the Port undoubtedly benefited by the imports of coal it would be a mistake to attribute the improved result for the year wholly to this source. The satisfactory feature

is, as I have already stated, that other traffics have been well maintained.

Take cotton, for instance: although we do not get anything like the quantity which we ought to do having regard to the facilities we provide, the amount was practically the same as the preceding year. Grain, too, was as nearly as possible the same as last year, there being only a slight decrease.

The Bridgwater canals were much more seriously affected by the strikes than the Ship Canal.

Increase in Net Income.

The final result for the year was a net income from the whole undertaking of £962,841, as compared with £889,273 for the previous year.

Adding £33,017, the amount brought forward from the previous year, to the net income of £962,841 for 1926—

there is a total of £995,858

From which must be deducted:—

Interest, rentals, and other fixed charges £459,720

Leaving a balance of £536,138
(after payment of fixed charges)

Out of this sum there has been appropriated to reserve for contingencies and repairs £80,000

Leaving a balance available for dividends of £456,138

The dividends recommended for payment are:—

3½ per cent. on the Manchester Ship Canal Corporation

Preference stock

5 per cent. on the Preference shares

5 per cent. on the Ordinary shares of the company

amounting in total to £424,702

Leaving a balance of £31,436

to be carried forward to next year's account.

The reserve for contingencies and repairs at December 31, 1925, amounted to £104,678

Against this has been charged £24,904

for the cost of repairs to the Northwich Road swing bridge and repairs of lock sluices at Barton and Irlam

Leaving a balance of £79,774

to which must be added the £80,000 appropriated out of the year's accounts

making a total at December 31 last of £159,774

The £80,000 is the largest amount yet put to reserve out of any one year.

Capital Expenditure.

During the year capital expenditure amounted to £528,578

The details are fully shown in Account No. 5, the two principal items being construction of wharf, transit sheds and ancillary works at Ellesmere Port £116,245

Construction of reinforced concrete sheds north of Dock No. 9 £138,337

I am glad to say that one of the transit sheds at No. 9 dock is now complete and is in use. The other one will be completed within a few months.

These sheds will be extremely useful, and it is rather disappointing that there has been considerable delay owing to strikes and other causes in the completion of this work.

The new offices at the docks are practically complete and are already partially occupied.

The new head offices are nearly complete and we hope to enter into

LLOYDS BANK LIMITED.

HEAD OFFICE:
LONDON, E.C. 3.

Capital Subscribed - £73,302,076
Capital Paid up - £15,810,252

Reserve Fund - £10,000,000
Deposits, &c. (31st Dec., 1926) £347,653,458

EASTERN DEPARTMENT:

14, KING WILLIAM STREET, LONDON, E.C. 4.

LLOYDS BANK now has the following Offices in INDIA and BURMAH, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

occupation in the course of the next three or four months.

At this point may I again draw your attention to the Manchester Ship Canal bonds at present being issued by the company? They carry interest at 5 per cent.

The bonds are issued at par from £50 and upwards for five, seven, or ten years to suit the convenience of lenders.

These bonds are very well secured and I can confidently recommend them to any shareholders who have money available.

Parliamentary.

As stated in the report, both the company's Bills of last year received the Royal assent.

You will remember that the General Powers Bill, in addition to giving power to the company to acquire certain lands, provided for the sub-division of the original preference and ordinary shares, amounting in total to 800,000 £10 shares, into 8,000,000 of £1 each.

In connexion with Parliamentary matters I may say that we have just found it necessary to present petitions against the Bills in Parliament promoted by the Liverpool Corporation, Birkenhead Corporation, and the Wallasey Corporation.

All these three corporations seek to extend their boundaries. The particular point on which we are specially interested is that at present all the sewage and solid matter from these districts goes into the Mersey without any treatment and it seriously hampers the work of the Mersey Docks and Harbour Board, who have charge of the conservancy of the river, and also of this company, who have to maintain the entrance channel at Eastham and other entrances to the Ship Canal. The company is vitally interested in the maintenance of a good access to the port through the Mersey estuary.

Traffic Developments.

The regular lines of steamers running between Manchester and various ports have been maintained during the past year, although in most cases with the utmost difficulty during the coal strike, owing to the scarcity of bunker coals.

The Canadian weekly service has been regularly maintained by our friends the Manchester Liners, who have run the service continuously for 29 years.

I am informed that they now run faster steamers available for this service, which will appreciably shorten the time for delivery of goods between the Ports of Montreal and Manchester.

A new development is the establishment by Messrs. Houlder Bros. and the Manchester Liners of a regular service homewards from the River Plate to Manchester direct. For many years there has been a demand for such a service and we hope that now the opportunity is given to our importers they will take advantage of this new service by ordering their produce bought in the Argentine to be shipped directly to Manchester.

I have referred in previous years to the efforts being made to establish direct importations of tea to Manchester. The tea imports last year were well up to the average of previous years, and it is interesting to note that one of the firms who are large importers of tea direct to Manchester are now engaged in an extensive advertising campaign, from which it would appear that they appreciate the benefit to northern consumers of tea by importing directly to Manchester.

In passing, I would venture to suggest that the arguments used in favour of direct import to Manchester of tea as compared with importing to London equally apply to other foodstuffs and produce. For instance, dead meat, the import of which is largely centred in London and afterwards finds its way to the vast consuming centre of which Manchester is the nearest port, the consumer eventually having to pay this extra cost of transit.

Prospects.

You will expect me to say something about the prospects for the coming year.

So far I am happy to say our traffic and revenue are keeping up. For January, compared with the same month last year, we had an increase in tonnage and about £10,000 in revenue, which I think you will agree is a satisfactory start for the current year.

There seems to be a general feeling of optimism that trade is improving, and therefore we have every reason to hope for maintaining, if not, indeed, improving, our position.

On every hand we hear of more inquiries for machinery, manufactured articles, and cotton goods, and in the shipbuilding trades many orders have been placed which will keep the yards busy for months, and this, of course, has its effect upon the steel, iron, and other industries.

The electrical industry is also very busy, and altogether the general outlook is brighter than it has been for some years.

As regards tons of merchandise, we shall not have the large import of coal which we had last year, but, on the other hand, against this there will be some off-set if, as we hope, the normal exports of coal are resumed.

Coal, of course, being low-class traffic, bears comparatively small toll, and therefore even if we were not able to maintain or improve on the record tonnage of last year we may still reasonably expect that improved traffic in other directions carrying higher rates of toll will more than maintain the company's revenue.

We shall, as I have already said, have the two new sheds at the docks in full use before the end of the year.

As regards the works at Ellesmere Port, however, although it is anticipated that they will be completed before the close of this year, they will not be ready in time to have any appreciable effect on this year's revenue.

It is to be hoped that industrial peace will prevail in the whole country—indeed in the whole world—for disturbance in any industrial centre has its effect over every industrial country and affects the cost of living very considerably and brings consequent unrest.

I should wish to put on record our thanks to the shipowner friends who have supported us so loyally year after year, and also our importing and exporting friends who have made such good use of the port and facilities provided.

Efforts are constantly being made to augment the flow of traffic through the port of Manchester.

It would not be wise for me to explain any of the detailed efforts which are constantly being made by all concerned, because to do so would not be in the best interests of the objects which we have in view.

Our success in the past may have been in some measure contributed to by the fact that instead of advertising in advance what we hope to do we get on with the business, and I am able to report to you annually what the results of our efforts have been.

The report and accounts were adopted.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 23:—

Egyptian Futures.—Sakel Contract.—The improved undertone to which we drew attention last week has been well maintained during the recent session, and under the influence of some fairly substantial short covering operations, and in a minor degree a certain amount of fresh speculative purchases, mainly for Continental account, values have had a hardening tendency, to-night's close showing an appreciation of 23 to 30 points for near positions and 31 to 34 points for the later summer and new crop options.

Whilst no doubt the sustained activity witnessed in the offtake of all varieties of cotton has had, and is having, a sympathetic influence affecting sentiment in this market, we are now beginning to feel the backing of a more substantial factor; we refer to the developing trade interest in finer counts, and would say that during the past week more business has been done in Sakel cotton than for some time past. Whilst this movement is in the right direction, it must be confessed that we have a considerable leeway to make up as a result of the comparative neglect experienced since the marketing of the present crop. This is manifest by the action of the Alexandria market, where supplies are weighing heaviest: in the ordinary course of events, the modest advance that has taken place during the past few days would have been construed into a very "bullish" point on the other side; however, there is so much cotton still unsold at this comparatively late period of the season that holders are apparently only too anxious to take every opportunity of working off some of the surplus. The result of the above is that the two markets have widened out somewhat, and we should not be surprised to see the movement there as the local Sakel stock is running well below normal and also because at the present levels the contract will probably be unaffected by the Sudan arrivals.

The bulk of the short covering which has come into

TEXTILES.

If you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester. (Established 1887).

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester, and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

the market has been mainly concentrated on the March position, and although at one time this month dropped back again to a discount with the later options, the subsequent support from the above-mentioned source quickly re-established previous differences.

Trade reports have again been more than satisfactory and spinners continue to be working into a better position; however, although an improvement is noticeable, we still rather doubt if the Egyptian section are getting their full quota of the business transacted.

To conclude, we consider that the outlook all round is beginning to justify more decided "bullish" views, and on this account we would certainly recommend purchases should prices ease from the ruling level.

Upper Contract.—Although only a few isolated transactions have taken place in this option during the past week values have shown a gradual appreciation, the chief factors contributing to this being the continued firmness of the American markets and also the consistently satisfactory trade offtake experienced. The Alexandria market for the Upper varieties is remarkably firm and business can only be negotiated at a full basis. It will be noticed that trading in the new contract for deliveries from October onwards has now commenced. The scope in this option has been enlarged by the lowering of the Liverpool standards, which heretofore have been practically a full

grade higher than the corresponding Alexandria grades. For the new contract, the Liverpool boxes have been, roughly speaking, lowered by about half a grade, perhaps the difference being more pronounced in Good Fair. This, of course, means that far more cotton comes within the tradeable range, and, as a result, freer trading and increased attractiveness to both spinner and importer should ensue. In addition to this, the fact that Pilon standards have now been made up and will be officially quoted from October 1 onwards, will also help to this end. We still consider that the probability is for values to harden as the season advances and on this account would recommend conservative purchases.

Egyptian Spot.—A healthy inquiry has been in evidence and some slight improvement in the (Egyptian) spot sales has been noted. Uppers at from 8½d. to 11.00d. have formed a very large proportion of the demand, with most of the actual business taking place between 10.00d. and 10½d. This week Sakellaridis cotton has attracted rather more attention, but it still continues to move off very slowly as compared with other growths. Fully Good Fair cotton at from 13½d. to 14.00d. has been the most popular range. Prices on the whole have remained very steady. Pilon has continued in quiet request, with business passing up to 12½d. Prices for Pilon have hardened recently.

Notes of the Week.

The Stirring of Slav Waters.

A semi-official organ in, Belgrade has recently been making some rather startling excursions into the domain of foreign affairs, from which it is evident that uneasiness still prevails in Yugoslavia on the subject of international relations. How sensitive is public opinion in the country was shown by the excitement caused by the Tirana Treaty. That particular trouble passed almost as quickly as it arose, for a few days' reflexion and the assurances that were forthcoming from every quarter seemed to convince the Yugoslavs that the treaty between Italy and Albania constituted no really new development in the Balkan situation. It may have served to crystallize what was before a more or less fluid position; but it offered no definite challenge that could be taken up and countered. Subsequent events, however, suggest that, although reassured on this point, the Yugoslavs have decided that, as far as their country is concerned, the general trend of foreign affairs is unsatisfactory, and an attempt is seemingly being made to distract public attention from the situation at home to the necessity of watching Yugoslav interests abroad. In these circumstances it was natural that Yugoslav relations with Soviet Russia should come up for consideration. The traditional ties between the two countries were necessarily broken by the accession to power of Bolshevism; but as the years pass and it is beginning to be recognised that there still exists a Russia distinct from the Bolshevik system forcibly imposed upon it, the desirability of trying to maintain some form of touch with fellow Slavs becomes more insistent. In certain quarters, no doubt, it is not overlooked that any *rapprochement* with Russia may have the effect of inculcating a greater measure of politeness on the part of countries which are credited with not being too friendly disposed towards Yugoslavia. Thus the motives that have contributed to a revival of the question of Russo-Yugoslav relations are frankly sentimental and political.

Yugoslavia has not the commercial incentive which prompts Czechoslovakia to seek Russian markets, but she does not feel inclined to lag behind in any attempt that may be made to recreate Slav solidarity.

Yugoslavia's Foreign Relations.

Natural as is the desire for the Southern Slavs to maintain touch with Russian Slavdom, it would hardly seem necessary for Yugoslavia to make hostility to Great Britain the essential stepping-stone to the new orientation. This, however, is the effect of a rather crude discussion of international relations in the semi-official *Politika* of Belgrade. The Yugoslav organ bases its arguments on two false premises and on a forged or bowdlerised document. It assumes—quite wrongly—that British policy is hostile to Russia, and it misreads entirely British policy in the Balkans. There is, of course, no hostility on Great Britain's part towards Russia; but there is a very deep resentment against the Soviet rulers of Russia, who have announced their resolve to try to undermine the British Empire. In its second mistake the *Politika* is helped by a curious document alleged to be a telegram despatched by the Greek Minister in London to his Government. The Greek Government has repudiated the authenticity of this telegram; but, as its denial may not carry conviction in Belgrade, it may be as well to examine the statements in the communication which have manifestly made a great impression on the Yugoslav newspaper. It is alleged that the Greek Government consulted the British Government in regard to the policy which Greece should follow on certain Balkan questions, and received the following advice:—to endeavour to come to an agreement with Bulgaria, to secure friendly relations with Turkey, not to make a treaty with Yugoslavia but to submit pending questions to the League of Nations, to avoid differences with Italy and not to worry over the Italo-Albanian Treaty. Now,

with the exception of the third piece of advice, concerning Yugoslavia, no fault can possibly be found with the alleged recommendations, which are wholly in keeping with Great Britain's policy of urging peace and co-operation on the Balkan States. The wording of the recommendation in regard to Yugoslavia is so impossible for any diplomatic communication that it is a matter for surprise that the semi-official *Politika* had not the intelligence to realize that it was the victim of a hoax. Even if it had been suggested that, failing a direct agreement with Yugoslavia, there was always the possibility for Greece of an appeal to the League of Nations, no hostile intent against Yugoslavia would have been implied, nor could it have been read into the alleged message by any fair-minded person.

British Policy in the Balkans.

It is evident from the *Politika's* outburst, unless it is repudiated by the Yugoslav Government, that the studied aloofness of British policy in the Balkans is causing misconceptions among the Balkan States. At the same time Anglo-Italian friendship—which is nothing more than the application of the British desire to live peaceably and in friendly relations with all countries—is being interpreted as active support on Great Britain's part of every phase of Italian policy. This inference is entirely without justification, although for the prejudiced and short-sighted it may not be unnatural. The British Government is obliged to accept Italian assurances on the non-aggressiveness of Italy's Balkan policy, and, until the contrary can be definitely proved, it is within its rights in advising the Balkan States to accept those assurances also; but, with a view to rendering them superfluous, it urges the States to come together to carry out the purpose of "the Balkans for the Balkan peoples." We could wish, indeed, that Great Britain could find the happy mean between the aloofness of her present policy and the excessive zeal shown by other countries both before and after the War. In the present instance the *Politika* has failed to realize that the greatest compliment that can be paid by a Great Power to a small Power is to credit the latter with a sufficient supply of the spirit of independence and self-confidence to enable it to live its own life without having to keep awake all night to wonder what other countries are thinking of it. Every country in the Near East knows—as Greece is credited with knowing in the alleged telegram of the semi-official "disclosure" in Belgrade—that at any time it can turn to Great Britain for disinterested advice and help. It would be a fatal mistake, however, if the British Government were to allow the impression to gain ground that

it had one or more favourites among the Balkan States, instead of being—as it actually is—equally favourably disposed towards them all and anxious to assist everyone in the peaceful pursuit of continued prosperity for the whole Peninsula.

Great Britain and the Hijaz.

It is not often that happenings in Arabia enjoy the glamour of publicity, but an obscurity even denser than usual seems to have surrounded the negotiations which were begun towards the end of last year between Great Britain and the erstwhile Sultan of Najd, Abdul Aziz Ibn Saoud. As is known, the meeting last December at Abyar ibn Hassani between the British Consul at Jidda and the King of the Hijaz provoked certain problems that were referred back to the British Government. These problems affected various Departments of the British Government and patently could not be solved there and then; but they are now, it is understood, provided with at least a British solution. It is improbable, however, that the British representative, whoever he may be, who is to re-discuss these matters with the King of the Hijaz, will be leaving for Islam's Holy Land for another five weeks or so, since Ibn Saoud himself is now on a tour in Central Arabia and, therefore, is not accessible. But there is every reason to hope eventually for a satisfactory regulation of the problems raised by Ibn Saoud—a solution which is, indeed, highly desirable both from the British and Ibn Saoud's point of view. It may be that certain difficulties, such as that pertaining to the Hijaz Railway, agreement upon which was reached only recently between the French and British mandatory authorities, may have to be tackled independently of the forthcoming conference with Ibn Saoud. Another difficulty pertains to the Maan wilayat, the future of which Ibn Saoud may be persuaded to see in the light rather of those independent Muslim Powers who at the last Mecca Conference refrained from voting upon this question than of those Muslims who regard its unconditional surrender to the Hijaz as a *sine qua non* of negotiations with the British. It will be instructive to observe how Ibn Saoud, whose statesmanship and friendliness towards the British have hitherto been as unquestionable as they have been remarkable, will deal with the various matters that have become so urgent alike to his dignity and to his position.

Capitulations in Egypt.

With a notable increase in the good relationship between the Egyptians and the foreign authorities in Egypt is to be remarked a renewed disposition, on the part of Egyptians, to turn away from points of difference that have hitherto proved insuperable obstacles and to concentrate on one particular point upon which it is known that certain foreign authorities are favourable. We refer, of course, to the Capitulations. This matter has recently been the subject of many questions in the Parliament at Cairo, and in the Egyptian Press a move has been made for the transference of cases from the Consular to the Mixed Courts. It would appear that certain cases of illicit drug dealing, and a report recently submitted on this subject to the Ministry of Justice by M. Van de Bosch, have impelled the Press to re-commence a campaign against the Capitulatory régime. In any case the Egyptian people are very sensitive on this matter, as was shown in the outcry a few weeks ago at the report that Turkey, which, of course, has outlived the Capitulatory régime, was asking to be treated in Egypt in the same way as Powers holding Capitulatory rights. The time does seem convenient for a re-investigation of this problem, and if, as is stated, at least three countries, the United States, Spain, and Greece, are in favour of the abolition or at least the modification of the Capitulatory system, it should not be difficult to discover which, if any, of the other Powers in Egypt stands in the way of the necessary unanimity in securing certain changes.

PROGRESS IN TURKEY.

In its endeavour to impress the outside world that the Turkish Republic is resolutely bent on conforming with Western standards, the Angora Government has taken the significant step of dissolving the two Tribunals of Independence. Although it was unfair to these institutions to compare them with the notorious Cheka, they represented an irregular addition to the judicial system of the country, and so long as they existed they implied a lack of confidence on the part of the authorities in the measure of popular support given to the new régime. The Tribunals were travelling assize courts in perpetual session, each with a panel of three judges. They were first instituted during the War against the Greeks, in order to deal with desertion, treason, or espionage, and were subsequently re-established to deal with agitators against the Republic. Their jurisdiction, however, was not confined to open rebels and counter-revolutionaries, but was extended to major cases of violence and to any action likely to involve a disturbance of the peace. In the public eye, especially outside Turkey, they will be associated with the large number of death sentences imposed, and in particular with the spectacular trials that followed the plot, discovered last June, against the President's life. At the Smyrna trial of the actual conspirators sentence of death was passed on fifteen persons, and the thirteen in custody were hanged before dawn of the following day; at Angora the trial of members of the Committee of Union and Progress began a fortnight later, and on August 26 four were condemned to death in the afternoon and executed at midnight. Apart from these notorious cases, there is some evidence that the Tribunals exercised a salutary effect on the criminal classes of the population. Trials were held in public and the penalties imposed were in accordance with existing laws; jurisdiction was prompt, sentences were carried out immediately, and in the case of the Eastern Tribunal, with its headquarters at Mamuret-ul-Aziz, there was no appeal. It was, no doubt, this aspect of efficient judicial action that led to requests that the scope of the Tribunals should be extended to cases of common law.

As in other branches of the administration the Turkish Republic possesses, on paper, an admirable judicial system, but is handicapped by a shortage of personnel qualified to give full effect to it. By the Constitution judges are independent in the conduct of trials and in the rendering of their judgments; they are protected from any kind of interference and are subject only to the law. It is only recently that a Faculty of Law has been created at Angora, with a view to supplying the necessary quota of qualified judges and advocates to apply or interpret the new jurisdiction. New civil and penal codes, it will be recalled, came into force only last year, in October, the

Civil Code, modelled on that of Switzerland, the Penal Code, adopted in the main from that of Italy. Every individual who considers himself the victim of injustice or wrong doing has the right to appeal to the *procureur*, who institutes an inquiry and, if satisfied, prosecutes the guilty party. The country is divided into six Inspectorships-General, and each Inspector-General is assisted by five Inspectors, whose duty it is to forward to the Ministry of Justice the grievances of the people, and also to see that the circulars distributed to the Courts by the Ministry are duly applied. The physical difficulties in the way of making justice accessible to all in a country where communications are wholly inadequate are obvious, apart from the shortage of personnel. It is to be expected, therefore, that in spite of the fifteen thousands officials stated to be under the Ministry of Justice, and the six hundred Courts of Justices of the Peace, there are still many parts of the country where the application of justice leaves much to be desired. At first, no doubt, the Tribunals of Independence did not lose sight of the political purpose of their creation; but as soon as the Eastern Tribunal had disposed of the ramifications of the Kurdish rising, it will have been available for setting an example of informed even-handed justice in the least-advanced portion of Asia Minor. If in the eyes of the people among whom it carried out its functions any evil can be attributed to it that, we may hope, will die with the Tribunal, so that only the good that it did will live after it.

The impression that the abolition of the two Tribunals stood to create abroad would have been better, if General Ismet Pasha, the Prime Minister, in his speech advocating the measure before the Grand National Assembly had contented himself with emphasising the present state of peace and security in Turkey. He preferred, however, to dwell upon the political and social disorders of the past and thereby seemed to stress unduly the terrorist aspect of the Tribunals of Independence. His contention, we may suppose, was that the Tribunals were merely the executive organs of martial law, or, as it was called, the Law for the Maintenance of Order, and he would not admit that they had done more than give effect to the Law's provisions in a judicial and impartial manner. Be that as it may, it is all to the good that the Turkish Government now finds itself able to dispense with these exceptional bodies. The Law for the Maintenance of Order is regarded as "still necessary" and is to be prolonged for another two years. It remains, therefore, as a weapon available for the Government's use, but the machinery that existed for putting it into everyday effect is to be scrapped. Turkey, it is to be hoped, will be the gainer. Neither Mustapha Kemal Pasha nor his Government ought to expect that the régime identified with his name could be enforced without arousing opposition. He was entitled to hope that such opposition would be on strictly constitutional lines, for no country in the making—and Turkey had to make a start *de novo*—can afford the luxury of civil war; but in the East constitutionalism is generally as far above the head of the Opposition as it is above that of the Government. As things are, unconstitutional opposition has lost for the present any attraction it may have had, and it is a wise move on the President's part to dissolve the organisations that had been associated with the policy of rigorous suppression of political opponents. Turkey needs the help of all her most enlightened men, and it would be idle to pretend that an Assembly that has no other thought than to carry out the President's bidding represents all the wisdom and experience which the country ought to be able to command.

Cairo, February 27.

The Motor Show.

The first motor show held in Cairo will close on Thursday next, after a distinctly disappointing three weeks' life. The reasons which made it impossible, from the first, that this exhibition could be more than a half-success have already been stated in THE NEAR EAST AND INDIA. It would be an exaggeration to say that even semi-success has been achieved. Most agents report comparatively little business done, while the only exhibitors who seem to be satisfied with the results are the firms which are introducing makes of motor cars hitherto unknown in the local market. These standholders regard the show as being quite worth while simply as an introduction for their products to the Egyptian public, irrespective of whether or not much immediate business results. Of these newcomers to Egypt there is a considerable number. British cars which are now to be represented adequately in this country for the first time include Rolls-Royce and Hillman. It is true that the former make has been represented here in the past, but never very actively. Now Messrs. Rootes have undertaken the distribution of Rolls-Royce, Hillman, Daimler, and Clyno cars here, and all four makes will be backed, so far as sales are concerned, by adequate organisation and service.

Several American manufacturers are experimenting with the Egyptian market this season. Among others which are now arranging representation here for the first time may be mentioned Marmon, Moon, Nash and Auburn. In addition, the American firms which are already well established here are carrying on very active sales campaigns, amongst which the efforts of the General Motors Corporation, Studebaker, Hudson-Essex and Chrysler are conspicuous. It appears that agents in this country have undertaken to receive heavy shipments of cars this season and, with low cotton prices restricting purchasing power, selling competition is very keen. If, as is freely predicted, the Ford factories produce a new model this Autumn, and back it with a powerful advertising offensive here, there will probably be a scramble towards the end of the year by agents trying to cut their losses and sell their present season's consignments of cars before the arrival of new models makes the stock in hand out of date. It looks like being a rather difficult year for motor traders here, and it may be that, before another twelve months are passed, some of the manufacturers who are now preparing to experiment with the Egyptian market will decide that it is in present conditions hardly worth while.

"Foreign" Companies.

In the absence of political activities to fill the columns of Arabic newspapers, the latter have been giving more attention than usual to economic matters. As usually happens when the vernacular Press gets on to this subject, "foreign" Companies have been severely criticised. Many of these so-called "foreign" Com-

panies are Egyptian *sociétés anonymes*, the property of shareholders practically all of whom reside in Egypt, but this is not recognised by the newspaper critics. Incidentally, Egyptian opinion tends more and more to imitate Turkish example and to regard as a foreigner anyone who is not an Egyptian-born Muslim. It is curious that this sentiment should grow up at a time when there is less religious fanaticism than for a long while past, when, indeed, the younger generation of educated Egyptians may be considered to be at heart largely agnostic, but that the sentiment is growing up in Egypt, as it did in Turkey, simultaneously with a weakening of religious influences, is undeniable. And this tendency will probably manifest itself when, as is quite likely to happen in the near future, a proposal is made in the Egyptian Parliament to compel "foreign" Companies operating here to employ a certain percentage of Muslim Egyptians on their staffs.

That, however, is a development of the future. What the Arabic Press is now demanding is that the Egyptian Government shall adopt a far more inquisitive attitude towards the affairs of "foreign" Companies, and particularly Companies which are under contract to maintain public utility services. The new spirit manifests itself whenever there is a question of renewing a concession-holding Company's contract or whenever, as in the case of the recent litigation which resulted in the local courts' declaring themselves incompetent to decide the claim of shareholders in the Cairo and Alexandria Tramway Companies to have their dividends paid in gold francs, public attention is for any reason drawn to such Companies' affairs. Until now no Company has been particularly harassed, but it is certainly a fact to be taken into account that all foreign business interests in this country are going to have conditions made more difficult for them, simply because they are foreign, and one of the most popular modes of demonstrating a zeal for one's own country, whether it be Egypt or another, is to be rather unpleasant to members of other nations.

At the moment the work of insurance Companies in Egypt is receiving much attention in the local Press. The theme of most of the articles is that it is wrong to allow these Companies to operate here, without any Government control or inspection of their accounts, without any verification of the statements set out in their prospectuses and without their being obliged to make any deposit of securities, for the protection of policy-holders. Cases are quoted of Companies doing business here and either going bankrupt or failing to meet their obligations to individual policy-holders, who have then found, to their loss, that any action against such Companies would have to be taken in the courts of the countries in which are situated the Companies' headquarters.

It must be admitted that these criticisms are not entirely unjustified. Many of the leading British and Canadian insurance Companies have agencies in this country, and there is, of course, no question of the soundness of these concerns. On the other hand, at least one unsound British Company has operated here since the War, eventually failing, with resultant loss to policy-holders. And the number of non-British Companies which have worked here at various times, eventually going out of business for various reasons, but with results unsatisfactory to their customers, is considerable. Nor have Egyptians yet forgotten their experience during the War, when so many policy-holders in French, Belgian, German and Italian insurance Companies lost heavily. For these reasons the majority of British insurance Companies doing business here would welcome a law compelling them to hold in this country a sufficient sum in gilt-edged securities to protect local policy-holders. Such a measure, it is felt, would clean up the local insurance market by eliminating the unsound concerns, whilst it would also encourage business by increasing the confidence of the public in insurance generally.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Khartoum, February 20.

A Loan.

Considerable interest is taken in commercial circles in Khartoum regarding the new loan of two million which is being raised through the energy of Sir George Schuster, Financial Secretary, Sudan Government. Being issued under the guarantee of the British Government, the money will be secured on favourable terms: and the special grant of two-fifths of the interest payable for the first three years is a concession reflecting great credit on the negotiators of the loan. Primarily the money is intended to be expended on railway and transport development, and work is already in progress on the Kassala-Gedaref section, which it is expected will reach the Atbara river in the near future. And at Abu Deleig a bridge is in course of construction by Messrs. Dorman Long and Co., Ltd., who are responsible for the bridge approaching completion connecting Khartoum with Omdurman.

Transport facilities are perhaps the most pressing of all the many needs of the Sudan from the point of view of trade. It is confidently felt that trade will be vastly stimulated and local production encouraged when better, more expeditious and cheaper transport is provided: and the opening up of new districts should mean larger exports of Sudan produce including the much-discussed "rain-grown" cotton crops.

The extension of the Gezira scheme under the modified contract recently entered into by the Sudan Government with the Sudan Plantations Syndicate will also absorb part of the loan, and new materials and machinery imported for this purpose; new ginning factories are also provided in the Nuba Mountains Province and even further South. The native-grown cotton, an industry of very recent growth and now being carefully nursed by the Government, should receive a distinct impetus.

Among the other objects to be developed under the loan the extension of the Port Sudan harbour works will receive consideration. In commercial circles it is felt that Port Sudan has a great future before it: the last few years have seen an amazing growth of this, the Sudan's only seaport, and the number of ships calling there is increasing by leaps and bounds. Work on the new quays is proceeding rapidly, and as they are to be fitted with the most modern equipment in the way of electric cranes, coal transporters and the like, the port should soon be able to cope with the expected large increase in cotton and other exports. After the general stagnation which has been the prevailing element in Sudan trade during the past year or two, the loan, in view of its almost inevitable results in the country, if it is spent in the manner contemplated, is a very welcome herald of a probable general revival in trade conditions.

Khartoum-Kisumu Air Service.

The unfortunate accident to the De Havilland seaplane Pelican when undergoing trials in January has not been allowed to interfere seriously with the running of this service, and Captain T. A. Gladstone arrived back in Khartoum after the first of the intended regular trips, with mails, having accepted the loan of a seaplane from the R.A.F. for temporary service pending the repair of the Pelican.

On arrival in Khartoum the mails were taken over by the R.A.F. and carried by plane to Cairo, thus saving some fifteen days in the normal time taken for letters from Uganda.

Captain Gladstone reports that the round trip was entirely uneventful, and says the single journey each way can be very comfortably accomplished in three days of seven flying hours each day, and that the weather conditions were ideal. He says the service has nothing abnormal in it, and when it is once got going should run to scheduled time with the regularity and lack of incident of a railway train.

IRAQ.

Baghdad, February 10.

Education.

In spite of difficulty in balancing its Budget, the Iraq Government has not neglected education, as the following interesting statistics show. The past year has shown not only a considerable increase in the number of children receiving instruction in Government schools, but also a general rise in the standard of education. Seven primary schools have been opened, making a total of 228 scattered over the country; in several towns the buildings have been paid for out of municipal funds; in others the money known as the "General Maude Memorial Fund," collected by voluntary subscription, has been used. It is noteworthy that the Ministry of Education has had to undertake enlargements and additions to the class room accommodation of a number of schools.

Secondary schools, which are of course in their early stages, now number five—one each at Baghdad, Basrah, Mosul, Arbil and Kirkuk. The total number of pupils is 583. Since the establishment of these schools, 92 boys have graduated, last year's graduates numbering 38. The Government Training College is divided into two branches, one for the training of teachers in preliminary schools, and one for that of teachers in primary schools. The students last year numbered 303—an increase of 69 on the previous year—of whom 240 were resident. The graduates numbered 49. A new departure is the inauguration last year of the "High Training College," which is to turn out teachers of mathematics and natural science. Of the nine students who were admitted to this branch from the secondary schools, seven have been promoted to a higher class, in which they are to study higher mathematics and undergo a course of laboratory work.

The disappointingly slow progress of the technical schools—the one at Kirkuk had to be closed for lack of students—is attributed by the Ministry to the lack of efficient teachers and to the shortness of the time devoted to the teaching of a trade. It has been decided to remedy this by the recruitment of efficient teachers from Egypt, and by the establishment in Baghdad of a boarding school.

GLASGOW

HAMBURG

COLOGNE

for technical training, in which boys from the liwas can devote adequate time to the completion of the course.

The plan of sending advanced students to continue their studies at foreign universities is being persevered with, twenty-three having been sent abroad during the past year. Of these three went to America, ten to England, and eight to the University of Beyrout. Two doctors were also sent to England for specialised training.

An interesting section of the report deals with the education of girls, which is making slow but unmistakable progress in Iraq. Twenty-seven primary girls' schools are working, the total number of pupils being 4,053. Mistresses have been recruited from abroad, as well as from among the girl students of Baghdad, and the school life and teaching have been very greatly improved, notably in the Central Schools for Girls at Baghdad, which has become virtually a high school. In 1925 a kindergarten was established in a building which has since greatly improved; modern methods are in use, kindergarten material has been obtained from Europe, and the Arab mistress in charge is making a real success of the Ministry's experiment.

Irrigation.

Two new regulators are to be constructed this year in the Diwaniyah Liwa, at an estimated cost of Rs.650,000. This will be one of the largest irrigation works undertaken in Iraq since the British Occupation.

The work of revetting the banks of the Tigris immediately south of Baghdad is proceeding, the finished banks being considered safer now than they have ever been.

The area under cultivation throughout Iraq is reported to be exceptionally large this year, owing to the heavy and prolonged rainfall earlier in the winter. More rain is now badly needed, and if it is much longer delayed large areas that depend on rainfall for water will fail.

General News.

The Secretary of State for Air, accompanied by Lady Maud Hoare and Sir Sefton Brancker, reached Baghdad on February 5 on their return journey from India, and spent the week-end at the Residency as guests of the High Commissioner. They left for Cairo early on Monday morning.

Colonel J. H. Stanley is now in Baghdad to complete the negotiations between the Iraq Government and the Diala Plantations Company, Ltd.

ALBANIA.

Tirana, February 20.

The Cabinet.

For two months there has been talk of a change in the Cabinet. Several members of the Chamber of Deputies, whose relations with the President of the Republic are well known, had undertaken to attack Ministers in Parliament and to make interpellations. And it was said every day that the President was going to nominate other Ministers.

The change took place on February 11, under the apparent form of the resignation of the four Ministers who compose the Cabinet. This resignation has been accepted by Ahmed Zogu, and four other Ministers have been appointed. These are:—Ilias Vrioni, Minister for Foreign Affairs; Abdurrahman Dibra, Minister of the Interior; Musa Juka, Minister for Public Works; and Fejzi Alizoti, Minister for Finance. The portfolio for Justice has not yet been filled.

Musa Juka, who has up to the present held both the portfolios of the Interior and of Public Works, remains at the head of the last department, in spite of the attacks which he underwent in Parliament during the autumn.

Ilias Vrioni, ex-President of the Council and Minister of Foreign Affairs, is awaited from Paris, where, as well as at London, he has been representing Albania. For the moment the resigning Minister, Hussein Vrioni, is carrying on in his department of Foreign Affairs, as is Sif Kedhi at the Ministry of Justice.

Nothing is known of the reasons which have prompted Ahmed Zogu to replace his Ministers. In the letter dated February 10, which the four resigning Ministers wrote to the President of the Republic—and which was published in the journal *Shqysnija* of February 18—there was mention of a difference upon the Budget proposals; but it was a question of which no one had heard anything before.

Of the new Ministers it is said that the first two (Ilias and Abdurrahman) are of neutral colour; that Musa Juka passes as a convinced partisan of the Yugoslavs; and that Fejzi Alizoti has for long been known as wedded to the Italian policy.

It is to be remarked that, in the letter which Ahmed Zogu has addressed to Hussein Vrioni, the President expresses his thanks and satisfaction on the question of foreign affairs, and thanks him for his work, especially for the conclusion of treaties. Upon this matter, the question is being asked: Why is Hussein Vrioni so profusely thanked?

Works and Projects.

The execution of the condemned men of Dukagjini (revolt of Shala) continues at Scutari. Three other men have been hanged.

On the other hand, and to prepare for a movement coming eventually from the Yugoslav border, bajraktars and notables of the Grand Malsija (Hoti, Gruda, Puka) have been called to Tirana and reclothed in military uniform with the distinctive badges of rank—major, captain, lieutenant, and so on. In this way the loyalty of some of the Catholic chiefs is being assured.

As for the projects of which one has heard so much for so long, one pertains to the port of Durazzo, for which money will be drawn from the Italian Loan, and the work will be executed by the Italian Company, *Svea*.

Nevertheless, nothing is certain, Albania being a country, *par excellence*, of contradictory news. For instance, the famous railway from Durazzo to Tirana, about which there was such extensive rumours, has been forgotten for six months.

Scandals.

The *Banka Kambetare* (National Albanian Bank) had put into circulation some notes of one franc and some silver coins of two francs (gold), on which the two-headed eagle of Albania has been replaced by the eagle of the House of Savoy. These pieces have been in currency, without being remarked, for several months, and were withdrawn from circulation only last week, to the consternation of their possessors.

Another scandal has been caused by the same Bank by the striking of a gold coin of 20 francs, commemorative of the Italo-Albanian Pact, and bearing, on the one side, the effigy of the national Albanian hero, Scanderbeg, and, on the other, the winged lion of St. Mark. The Albanian Government, having heard of the proposed issue; interposed its veto, but the Bank proceeded to put the money into circulation. The Government now refuses to recognise these coins as legal tender, and declares them valueless, while the Bank claims the contrary.

Jerusalem, February 20.

The Municipal Elections.

Preparations for the Municipal Elections are going on busily, and remain the principal item of public interest. It is the voter's part to produce proofs of his right to vote, with the result that all the communities are instilling into their members a sense of civic duty. It is necessarily slow work compiling the lists and it seems improbable that the elections will be held much earlier than May. Statements are made from time to time of the numbers of voters so far registered in the larger towns; Muslim voters everywhere are in a heavy majority, even in those towns where the Jews are in the neighbourhood of half the population. The returns for Jerusalem are characteristic. The total population is something over 70,000, of which the Jews number approximately two-thirds. Yet the registered voters up to the present number 1,250 Muslims, 1,025 Jews, and 800 Christians, numbers which bear no manner of relationship to the divisions of the population. Fortunately this obviates any danger of an Arab-Jewish rivalry for absolute control in municipal affairs, while at the same time the local Muslim family rivalries make it desirable for the Muslims to cultivate and conciliate the Jewish vote. Various statements are abroad to the effect that the elected members of the various municipalities will organize themselves into a united body in order to confront the Government with a "democratically elected Parliament" representing native opinion; while on the other hand it is thought, probably rightly, that the Government will judge from the general conduct and results of these elections on the advisability and possibility of renewing its previously interrupted attempts at granting an elected Legislative Council.

Snowfall.

Even interest in municipal elections was forgotten for a time in the acute discomfort experienced over the last week-end by the storms all over the country and the heavy downfalls of snow in the high-lying districts from Safad to Hebron and in Transjordan. The results were not quite so disastrous as in the famous storm of 1920, but they were enough to cut off connexions with Transjordan and to block the Hebron road for nearly a week. A certain amount of suffering was reported among the poorer Jewish population, and most of the tourists who had been able to land—several boatloads could not—left by train as quickly as possible for Egypt. But, at least, Jerusalem has escaped all danger of a water famine during the coming summer.

The Jewish Agency.

The "Weizmann-Marshall Agreement" has been received here with mixed feelings by the local Zionist population; which is only natural. They fear that whatever advantages may accrue economically will be more than offset by the restraining influence of those who have not the Zionist cause at heart, and who will be tempted to regard Palestine as just one place of refuge for distressed Jews and one among other recipients of American charity instead of being the centre on which all Jewish cultural, political and financial interest the world over ought to be concentrated. But the present somewhat severe unemployment crisis and the excess, however small, of Jewish emigration over immigration are of considerable help in quietening criticism except from the "Revisionist" camp.

Non-Zionist Jews.

As a matter of general interest, it is worth bearing in mind that many of the old "non" or "anti-Zionist" elements are showing a willingness to take some part in the Palestine development work hitherto confined to completely-labelled "Zionists." Thus near Haifa is a colony manned by Hasidim (a type of ultra-orthodox Jews of most markedly religious habits), while even the "Agudath Yisrael" are organizing their own fund for the "upbuilding of the Land of Israel," and have begun a small agricultural colony north of Jerusalem. It never was true, of course, that all "religious" or "orthodox" Jews were as such opposed to Zionism, any more than the current notion that "Zionism" as such, is anti-religious. And now, under the wizardlike statesmanship of Dr. Weizmann, the Zionist endeavours in Palestine are gaining wider and wider support among previously lukewarm or hostile elements among the Jews.

ROUMANIA.

Bucharest, March 2.

The National Peasant Party.

An event of the past week throws a further light on the instability of the foundations of the National Peasant Party, an amalgamation which was recently discussed in these pages. This event is the resignation of Dr. Lupu, the well-known politician of Socialistic tendencies, from the united party. At the time of the union, which was effected with the object of forming a strong Opposition capable of holding its ground against the Liberal Party, a certain section both of the Nationalists and of the Tsaranists (Peasants) refused to join. M. Jorga is the leader of the Nationalist separatists and Dr. Lupu has now constituted himself leader of the separate Peasants' Party. M. Mihalache, Vice-President of the National Peasant Party, ascribes the secession of Dr. Lupu to a purely personal misunderstanding and declares that it in no way affects the principles of his party, but it is obvious that the resignation of so influential a politician as Dr. Lupu must deal a blow at the unity of the Party he leaves, and reduce its prestige by revealing disunion in its ranks. "Liberal intrigue again," says the Opposi-

tion Press. Indeed, the Liberals appear to be invested, in the minds of their opponents, with all the mysterious powers of his Satanic Majesty. It is to be hoped, for the sake of the many excellent principles it represents, that the National Peasant Party will survive this blow, and that its members will henceforth bend their efforts towards its consolidation, by means of compromise when necessary, and so preserve its dignity and strength. Such resignations tend to render it ridiculous and futile.

Roumanian Academy in Rome.

Great satisfaction has been generally expressed here at the generous offer of the Municipality of Rome of a free and permanent site in the "Eternal City" of 4,700 square metres in the Villa Borghese for the erection of a Roumanian Academy to provide Roumanian students of History, Archæology, Literature and Art with facilities for pursuing their studies amidst the most favourable surroundings. Funds for the construction of the building and for the maintenance of the Academy must, of course, be found in this country, and the National Bank has accepted the patriotic duty of providing all the funds required for the building, which, according to the terms of the offer, must be finished within five years. The site of the Roumanian Academy is beside that of the English Institute. When it is finished, this new institution should be of the greatest value to aspiring Roumanian students, and it may draw to Italy some who would otherwise have studied in other Art centres, in view of its situation among the majestic ruins and the inimitable productions of the great classical period, and, perhaps, it will help to nurture healthy and classical standards in the coming generation of artists and writers.

The King Ferdinand I. Institute.

In celebration of the King's sixtieth birthday Parliament has voted a fund for the foundation of an educational institute to be called "Fondation du Roi Ferdinand I." The King has drawn up the Statutes of this Institute, and has decided that he wishes it to be located at Jassy in Moldavia, where the first Union of the Roumanian Principalities was effected. The King has also requested that the name of the Queen should be associated with his as co-patron of this Institution in all its ramifications.

CYPRUS.

Nicosia, February 21.

The Governor and the Greek Archbishop.

On February 8 Sir Ronald Storrs, with Lady Storrs, paid a visit to the Greek Archbishop, and was received with great honours by His Beatitude, who was accompanied by the Bishops of Papho, Kition, and Kyrenia. The chair on which the Prelate sat was one sold in Paris nearly 100 years ago, as being that which had been used by Napoleon I. It was purchased by a Greek, who presented it to the Greek Archbishop of Cyprus, and has been used by successive prelates on their accession to the high office. During this visit the Governor was shown over the library and other parts of the palace. In conversation with the Archbishop he mentioned that he had served in Roumania and Bulgaria; that the Patriarch Damianos was a friend of his, and that the differences which separated the Orthodox Greek Church, which he greatly respected, from the Anglican were but slight. On February 10 the Archbishop paid a return visit to Government House, accompanied by the Bishops of Papho and Kition.

New Taxes.

The imposition of fresh taxes at present causes some grumbling and dissatisfaction. The tax called *verghi kimet* (4 per thousand on the capital value of immovable

property) is doubled, in the cause of education. This is in addition to the school fees assessed locally by Town Committees. The import duty on the long list of articles which have paid 10 per cent. *ad valorem* is increased to 15 per cent. It is, however, recognised that, since the abolition of tithe, and in face of what was rather a bad year, fresh taxation is necessary.

Various economies are being proposed. One is to strike out of the estimates £2,000 set down for the office of a Trade Commissioner in London. The experience of the British Empire Exhibition at Wembley seemed to warrant the appointment of this agent, and Sir Ronald Storrs has not failed to advocate the establishment of a Chamber of Commerce in the island. In view of the present crisis, however, these proposals do not seem to meet with favour. Members of Council also call for the abolition of certain officers, or the reduction of salaries.

Sir Ronald Storrs and the Press.

The Nicosia Greek paper, the *Voice of Cyprus* (*Phonés Kyprou*) states that, in a late interview, the Governor expressed his sympathy with the Press, stating that he had been himself in the ranks of journalism, as correspondent of *The Times*, for some time in Egypt, and that he desired at all times to furnish the Press with the means of supplying positive information regarding the work of Government. He also said that he would give instructions of the Commissioners of Districts and Heads of Departments to communicate details respecting questions relating to their departments when asked for.

General News.

There has been heavy snow in February, not only thickly covering the hills, but falling at Nicosia, and lower down towards the coast than has been the case for many years. This has coincided with deep snow in Palestine, Transjordan, and other regions, which has impeded road traffic.

It is said that a large hotel is to be built at Nicosia; this is certainly needed.

Greek Cypriots living abroad, especially in Egypt, who if not in Cyprus at the time of the annexation are not recognised as British subjects, are hoping to obtain active support from Sir Ronald Storrs in the matter of their nationality.

Agricultural prospects are for the present all that could be desired.

M. Cicurel, head of a large drapery establishment in Cairo, was found dead in bed on March 4. His Italian chauffeur has confessed to murdering him.

In the Annual Report of Bishop's College, Calcutta, which is connected with the S.P.G., it is stated that the Rev. T. Sither, the Indian member of the staff, has been appointed Vice-Principal, in place of the Rev. R. L. Pelly, who is proceeding to pastoral work in Calcutta.

The sarcophagus found at Gizeh by Dr. Reisner, of the Harvard-Boston Expedition, and believed to contain the body of the mother of Cheops, the builder of the Great Pyramid, which was opened on March 3 in the presence of the Egyptian Minister of Public Works, the United States Minister, and other diplomatic representatives, was found to be empty.

A statement of the Government of Bengal on the Barisal communal riot is as follows: A thousand Muslims, armed with spears and lathis, prepared violently to oppose Hindus passing a mosque with music at Kulkathi. The Muslims were dispersed by Frontier Rifles under orders of the magistrate. Thirty-three rounds were fired, twelve Muslims were killed, and seven wounded. There were no Hindu or police casualties.

THE PERSIA SOCIETY.

74, Grosvenor Street, W.1.

RESURRECTION IN GREECE.

BY THE RT. HON. JOSIAH C. WEDGWOOD, D.S.O., M.P.

[Publication of this article does not imply that THE NEAR EAST AND INDIA endorses all the statements made or the opinions expressed. It will be found, however, that the freshness of view with which Colonel Wedgwood approaches his subject stimulates thought even where it does not provoke agreement.—ED.]

Greece has been so kaleidoscopic always; and, especially during the last twenty years: insurrections, elections, rulers and pronunciamientos have followed each other so swiftly, that it would seem foolish to prophesy peace. Yet it is conceivable, and the case should be stated. I will show presently why the British should look attentively at the implications of this change.

In the first place the country is booming—exports and imports, capital expenditure, roads, population, and civilisation. Look at the figures (in millions of drachmae—approximately only in the case of 1925):—

Year.	Exports.	Imports.	Revenue.
1924 ...	3,470	6,035	3,959
1925 ...	4,325	9,914	5,489

Much of this growth is due to the disease of inflation, which has so infected the Continent; but for the last five months, since General Pangalos quitted the dictatorship, the drachma has safely held up its head, and yet unemployment has not invaded the export trades. In spite of what we have seen in Austria, Germany, and France, it seems possible that in Greece, so swiftly are things moving there, one might stabilise without a slump.

Capital expenditure during the last three years has been exceptional, and most of the capital has been British. This is strange, when one considers what poor banking facilities there are for British trade; for the one British concern, the Ionian Bank, is altogether overshadowed and outclassed by the great Italian, French and German credit institutions. And Greek shipping concerns have certainly an unhappy reputation in the British insurance world. So it happens that the two millions we advanced to the Athens Power and Traction Company were guaranteed by the British Government under the Trade Facilities Act; while the ten millions (out of twelve and a half) that we found for the Refugee Loan was floated under the auspices of the League of Nations.

But all this capital expenditure has kept people happy and busy, so busy that they cannot be bothered with politics. Population too has increased, from 5 million to 7 million, by more than all the refugees from Asia Minor and Gallipoli and Eastern Thrace. These are spread over the country, bringing a higher civilisation and demanding roads and schools and police. They have just got to the producing stage, changed from a liability to an asset. Most of the 1,400,000 refugees are a stabilising element. They are peasants, not of the military caste. They are peasants who have got land and only want titles to their bit of earth. They do not expect much from the Government, except the promised compensation on account of which advances are now being made. Peace is what they want. They hate all the dynasty of Constantine, the author, as they believe, of all their woes; but they are only Venizelists at election time, as it were by an effort of memory. They have no time for hero-worship any more.

And that is true of all Greece—tired of politics. They are sick of Constantine and Venizelos, and of the poor part Greece played in the War and in Asia Minor. They had 15 years of ceaseless war, ending with Smyrna! Politics was the business of the Army. The Army made an infernal mess of it, ending in Pangalos, the darling of the Gendarmerie! They are all more ashamed of General Pangalos than of anything else. For nine months Greece

put up with a dictator modelled on Italy, a dictator so little terrible that when they puffed at him with their lips he blew away. One cannot help being beaten in the field when certain odds are against you, but to have been made afraid of nothing is a memory all would willingly forget.

So they have just had a Free General Election, and the Republicans who do not want Venizelos back, number 146, and the Royalists, who do not want the Constantines back, number 141. Therefore, all the leaders from Right to Left, who have all at some time or another put each other into prison or exile—Tsaldaris, Metaxas, Michalakopoulos, Kaphandaris, Papanastasiou—have all united in one creed and in one Ministry. The creed is simply, "Let us purge the Army of politics." It is a question of self-preservation for all of them. In most countries the Army officer is Right, Fascist in time and style and gesture. In Greece alone they enjoy officers of both Right and Left, each anxious to apply that simply political argument of shooting at dawn. Therefore all these statesmen are calculating, before even they calculate the Budget, where they can find pensions or posts of dignity abroad for some dozen Generals or Colonels or Admirals, whom they would all gladly eliminate without pain. Once that is over (if it goes over) the whole country will breathe a sigh of relief, settle down to business, and try to forget this nightmare politics.

Let me put it in another way. Politics are always live matters when people want something badly. If the peasantry were oppressed by landlords, then some political party would have a creed. If bureaucratic officials were officious and all-pervading, Greeks, like other people, would wax indignant. If there was any religious minority, or any alien national minority, one knows how live politics would be. But there are only Greeks now in Greece and they are all orthodox with an orthodoxy which leaves one gasping. Such unanimity is almost unnatural; such geographical and racial identity is unexampled. No hope for politics there.

Nor do Governments and officials in Greece conceive it their duty and pleasure to mould the minds and morals of the race. The collection of taxes is quite enough for Government, sometimes too much. Greeks do as they please. This is often unpleasant, but a Greek Government does not look for trouble, and politics become for the man in the street a far-off matter only, a game for gentlemen in Athens. It is always related that M. Venizelos lost the famous elections of 1922 because he sought to regulate the traffic in Athens, interfering with the liberty of taxi-drivers to drive wherever there was—or seemed to be—a gap.

Then the land question is settled; there is no "politics" in that any more. For years the struggle of Thessalian landlord against tenant gave a reality to Greek politics. That is over now, and the landlords gone from Greece. Even the English landlords are gone from the Euboea, perhaps a loss to Greece. With little exception now, all over Greece, the peasants cultivate their own holdings, hard work which leaves little time and less need for politics.

For all which reasons Greeks seem likely now to have peace in politics—if only the Army officer will go quietly. I refer to peace at home. No one can live in Greece a week without becoming aware of the vaster nightmare which weighs upon the chest and grips the heart of the Greek statesman and all the people of Hellas. They are afraid of the Serbs, and they are more afraid of Signor Mussolini. He has given them a touch of the whip in Corfu; and there they know the League of Nations cannot save them. Pangalos fed out of the hand of the Duce, and the Duce liked him. Now they have ventured to imprison Pangalos, and the Duce may at any time be angry. One has to live in the Mediterranean, perhaps also to be one of a small people, before one can realise what Mussolini means and the terror of the Roman name. The Mediterranean must have felt like this about 100 B.C.

The Treaty of Tirana brings them nearer, and frontier incidents happen so easily in the mountains of Epirus and Albania.

The Serbs, too, are formidably oppressive, looking down the Vardar valley on to Salonika. It is true we have made Macedonia all Greek, but the Serbs have a right to an outlet for their trade at Salonika, a right to an actual area in the port and an untariffed run over the railway. The area has not been finally settled, and there are endless chances of dispute over the "hemming in" of the Serb concession; a deflected tramway line may be a cause of war. It would have been better if Salonika had been made a free port under the League of Nations.

So the Greeks are afraid; all know perfectly well that they could not stand up against either Italy or the triune Kingdom of Serbs, Croats and Slovenes. Italy outnumbered them eight to one; the Slavs by four to one, and better fighters. What Italy would do they see in the Dodecanese and in Rhodes. *Vae victis* is good Latin, even when the *victi* put up no fight at all, and were occupied in an unofficial manner. The Serbs in these matters are even cruder than the Italians, so that all Greeks have good reason to be afraid. That too makes for peace inside the country, and a truce among the Army politicians.

In these circumstances, more than anything else in the world the Greeks would like an alliance with England, the protection of the British fleet, safety to develop in peace. What they want is clear—a guarantee of territorial integrity, similar to that given to Belgium long ago, or to France and Germany at Locarno. They want to be able to call on the policeman—on the policeman they can trust.

Personally I voted against Locarno. A policeman's life is not a happy one, and if we are to take on the job it seems to me that we ought to be paid for it. We can take our pay in various ways. Genuine European disarmament might have been good enough pay for Locarno—our customers might then recover and our debts be paid. The Dominions pay for the protection of our Fleet by subsidies for the Fleet, or by a trade preference, or by the placing of Government orders, and by paying their debts. Greece might make an offer. I see no insurmountable difficulty in the way of calling one of H.M. ships *Salamis* and even spelling it in Greek, or of having Greek officers in the Mediterranean Fleet. H.M. *Malaya* makes a respectable precedent capable of expansion, like the British Empire.

Or, as we need an export trade more than warships in these days, could not simple arrangements be made to help our trade—orders, preference, guarantees for our benefit?

People with the old pre-War mind will say, of course, that this is ridiculous, that Greece would never ask for protection, that that would be a surrender of national independence. But all these nations, raw from war, will do much to secure protection nowadays. And, is National independence absent from the contract which now keeps the Union of South Africa within the Empire? The change is simply this: we no longer ask other people in; they ask to come in.

It must be the British Empire or the League of Nations. One or other must find the required protection for these smaller and unbalanced Powers. Before the War Greece, or Bulgaria, or Roumania, or Serbia, were within the ambit of Russia or Germany or Austria. With all these gone they feel uncomfortably alone, unsheltered, exposed. They want to settle down into some similar sheltered niche with a great Power to call them little brother; but is it to be France, or Italy, or England, or is the League good enough? They will even flirt shamefacedly, upon occasion, with that rude, wicked, ostracised elder brother of the U.S.S.R. The need for friends has grown since the peace, and there are more little nations needing friends, and so few of the possible big friends seem safe enough or quite reliable. So keen is "Nationalism" since the peace, that minorities are made to change their father's

surnames and their mother's tongue in the Tyrol and in the Dodecanese. The Big Brother is like a bear; his embraces are often dangerous. A Sovereign Kaiser merely demanded loyalty in any sort of language. A Sovereign Priest may demand conformity. But a Sovereign Nation seems to demand uniformity, and uses the police to get it.

Any small nation would take the League of Nations for protection, if they thought it good enough. But the League is not thought well of in Greece. Fascist Italy did pretty well what it liked in Corfu in spite of the League, and it was Greece that had to pay. But when the Fascist Dictator of Greece, considering Bulgaria weak enough, proceeded to pass on the Corfu kick over the Bulgar border, the League of Nations soon indicated that Greece was not a Great Power, and made her pay again. Emphatically Greece has no great opinion of the League as a sure and certain help in time of trouble. Great Britain is different.

Some Constantinian Royalists will tell you that Great Britain deserted the Greeks in Asia Minor, and was the cause of that awful fall which ended Royalism. The wicked Lloyd George led them on to go to Asia Minor, etc., etc. One may absolve even the wicked Lloyd George. M. Venizelos was his friend, our friend, and as long as M. Venizelos was in charge Greece was cautious and moderate, and all went well. When Greeks saw fit to replace M. Venizelos by King Constantine, and to plunge on towards Angora, they most certainly did so at their own risk. I do not think even M. Tsaldaris or General Metaxas now hold us in any way responsible for that shameful flight to Smyrna.

Otherwise England's name has been uniformly good in Greece. Even throughout the War, in Athens or in Salonika, our troops, so I am assured, shone by comparison, if not with positive brilliance. The Royalists killed in Athens more French soldiers than English, and the French resented it more than the English, and took most occasions of showing how they felt during the last two years of the War. So, now, the Greeks like English soldiers and sailors almost pathetically—they are not coloured.

But one could make an endless list of good Greek grounds for liking and trusting England. There was Byron and there was Navarino. If Lord Elgin did take the marbles, Mr. Gladstone handed back the Ionian Isles. All his life, from its classical foundation to its close, Mr. Gladstone was the ideal Big Brother that Greece dreams of. Without any right to meddle, without anything to gain, we even dared to resist Mussolini's annexation of Rhodes and the Dodecanese, so long as M. Venizelos was in power. Finally, the best work done in Greece since the peace has been done by two Englishmen—Sir John Campbell planting refugees, and Sir Frederick Halliday, the policeman.

Sir John Campbell, an old Indian Civil Servant, was appointed by the League of Nations Vice-President of the Commission which directed the expenditure of the ten

CENTENNIAL ENGLISH — ARABIC DICTIONARY

The newest and most complete work of its kind. 1050 pages, containing 35,000 words. Indispensable alike to the students of Arabic and to Arabic speaking students.

AMERICAN PRESS - BEIRUT, SYRIA

million pounds (most of them English pounds) raised under the auspices of the League for settling the Greek Refugees from Asia Minor in Greece. Though he was only Vice-President, yet the President, an American, changed so often and was so long absent that Sir John seems to have been the man who did it all—1,400,000 unemployed, starving refugees, settled. Naturally he bulks large in Greek thought as the man who took responsibilities and saw them through.

Sir Frederick Halliday, on a different scale, comes in for blessings as sincere. He took in hand the Athens police, and in three years has made of them a force that would be a credit to London. He has established a training school for Police (where, incidentally, they learn English); between 2,000 and 3,000 have already passed out through this school into this model force. The result is that corruption has wonderfully come to an end, and the untamed taxi-drivers of Athens halt at the red light and tremble at the upraised hand of a Mediterranean "bobby" who neither shouts nor shoots. They have ceased to bear arms. The citizens of Athens make a point of showing strangers not merely the Acropolis but their police! They will go up to them and ask the way just to show you how it is now done.

These police ought to be all over Greece, and would be, had it not been for Pangalos, the Dictator. Unfortunately, he depended for his throne on the Gendarmerie, and the Gendarmerie regard the Police as supplanters, virtuous and, therefore, mean. So the English police nearly went the way of the English Naval Mission; they would have gone, but the one and only non-political force could not be spared. Even Dictators require order.

So for many and good reasons the Greeks have a good opinion of the British, and are prepared for closer ties than friendship. If the Greeks like the British, the British reciprocate the feeling. It would of course be too much to expect the British to regard any foreigner as anything but a foreigner—the sort of people who require directors. But Greeks are already a semi-exception. We respect, for instance, the Greek colony in London. The Greeks know their classics almost as well as we do, though their pronunciation of the names of Greek gods is sometimes rather new-fangled and fanciful. It almost makes them "one of us" that they know where Homer was born, and appreciate the glories of the age of Pericles. The British have in truth long since appropriated to themselves both the patriarchs of Palestine and the heroes of Hellas, but they are quite generously inclined towards those who have a claim on the same ancestors.

The fact is that Anglo-Saxon culture is very largely founded on Greek. There is the same basic cult of freedom, and the spirit that carries individualism into anarchy. Every Greek citizen has the impression that the State rests on him alone, and the mistakes of the State will not let him sleep at night. This is very Anglo-Saxon. A very American Lawyer, President of the Commission, told me that he felt more at home with Greeks than with "these French and Italians." He was a business man with no classics and no fancy languages, but he liked their hustle and good biting journalism. He understood them; and, though we smile, we all do.

If, therefore, a request comes from New Greece, let us not look at it with the old blind eyes. M. Koroshetz from Belgrade turns to England for protection; M. Michalakopoulos from Athens may turn to England for protection. We have refused many people in time past, and regretted it afterwards at leisure. Britain's greatest interest is peace, her next is trade. In replying to any request we should consider whether these interests can best be advanced by relying upon the growth of the League of Nations, or upon the growth of ourselves, as we have now been new-shaped by the last Imperial Conference.

PERSIA'S AMERICAN ADVISERS.

The Sixteenth Quarterly Report (for the three months June 23—September 23, 1926), of the Administrator-General of the Finances of Persia, contains some illuminating comments upon Persia's present condition and upon her possible future. Dr. Millspaugh points out that while, during the period under review, Persia's general financial situation remained satisfactory, the general economic situation remained unsatisfactory. As main cause of this last fact he mentions the embargo placed by the Soviet Government on the importation of various Persian goods into Russia. Of the balance of trade he says that it is almost impossible to determine it. To judge by the two conditions of the transfer of gold or silver and the rate of exchange, Persia probably had an adverse balance of trade, but "if the policies and actions of the Government and of Persian merchants are wise, the adverse balance should be of a temporary nature." On the need of a favourable balance, Dr. Millspaugh writes that "the country requires large amounts of capital for its reconstruction and development. The people must be able to bear the burden of increased taxation which is necessary for the extension of public works, education, and sanitation. . . . Nomadic tribes must be settled on the land." He refers briefly to the proposed reforms, as they concern opium, roads, railways, and so on, and then states that "no such measures will be sufficient unless Persia possesses the fiscal freedom which is necessary for the fulfilment of her economic needs and economic programme." And he very definitely is in favour of tariff protection for Persia's infant or dying industries. Moreover, "Persia must possess complete tariff autonomy. . . . So long as the tariff of Persia is framed in negotiation with foreign Governments, it is inevitable that it will be framed for the encouragement of imports in the interest of foreign countries, rather than in the interest of Persia." No wonder the Soviet authorities do not greatly care for the American Financial Advisers!

Dr. Millspaugh believes in the advisability of the adoption of the gold standard for Persia, which change might be effected (as he thinks it could be effected in a change from opium growing) without loss to the Persian people.

To all observers who are optimists in regard to Persia, and who wish to know how the optimists in Persia are endeavouring to order affairs, this Sixteenth Report is especially to be commended. Nor to those who assert that the main stumbling block to the "reform" of Persia is the Persian people will perusal of these Reports do any harm.

NOTES OF THE WEEK.

(Continued from page 264.)

The Administration of Aden.

Whether or not the new régime to be adopted in regard to Aden is a consequence of the failure to come to terms with the Imam of the Yaman, there is little doubt that a change was overdue. For the last ten years Aden has been administered by the India Office, but political questions concerning it have been the care of the Colonial Office and military questions the care of the War Office. Actually, however, both civil and military authorities at Aden have been responsible to the Government of India. But now the Imperial authorities are taking over political and military control in Aden, the civil administration of the place alone being left to India. India is to contribute £250,000 for the first three years of the new régime at Aden, and thereafter £150,000. The comprehensive administration of the Protectorate will be vested in a single authority, either a Governor or Political Resident, appointed by the Imperial Government with the concurrence of the Government of India. It is not quite clear whether these changes will vitally affect the political status of Aden, but that such a change is desirable is surely obvious. Aden has suffered extremely in the past either from the clash of policies as between civil and military authorities or else from a policy of inertia. In the view of some experts, the British are lucky, indeed, to have been left in Aden. Competition for the lead in the lower half of the Red Sea is increasing, and it is to be hoped that the changes decided upon for Aden will enable the supreme British authorities more elastically to envisage the possibility of coming to terms with the chief power in South-West Arabia, the Imam Yahia. Arabia generally is not a country in which any European Power, however much it may be technically in the right, can impose its desires; the main thing, after the realisation of this principle, is to get a policy and to hold fast to it. There can be no time fitter than the present to determine the exact meaning and the exact relative importance to the British Empire of the political, commercial, and strategical aspects of Aden.

The R.A.F. in Iraq.

An extremely interesting Memorandum has been issued by the Secretary of State for Air with this year's Air Estimates. In view of the key position occupied by the Middle East in the British Empire's air communications the greater part of this document has a special interest for that part of the world, and it is a matter for regret that considerations of space prevent more than a brief reference to some of the more important points. As a consequence, it is stated, of the settlement of the Northern Boundary question and of the progress in the development of the Iraq Army the air garrison in Iraq is being reduced from eight squadrons to five and will cost £664,500 less, £2,259,000 in 1927 as compared with £2,921,500 in 1926. An additional expenditure, on the other hand of £110,000 is incurred in regard to Aden, which it has to be inferred was borne last year by India. In all eleven-and-a-third air squadrons are at present located in Middle Eastern theatres, six of them being in India. Reference is made to the policy of testing and developing the mobility of the air arm by means of long distance flights, which will continue to form part of the normal training exercises of the Royal Air Force. Airships also come in for mention, and these, as is known, are intended to play an important part in the ultimate development of air communications by way of India. There is a total reduction in the 1927 gross Estimates of £878,100 over those of 1926. As the bulk of this is provided by the saving in Iraq, the British public has the satisfaction of knowing that the progress of its ward in the Middle East is enabling the Air arm to be improved without adding to the taxpayer's burden.

NEWS IN BRIEF.

A band of anarchists robbed the Caisse Departementale in Sofia on March 6.

M. Tihomir Popovitch, Yugoslav Minister to Turkey, has been appointed Yugoslav Minister in Athens.

M. Albert Thomas, of the International Labour Office, arrived in Athens on March 2 in order to obtain the ratification by Greece of the various Labour Conventions recommended by the Office.

Major Robert Pringle, Bey, C.O.N. (late Indian Army) (77), of Newlands, Beechfield Road, Sandown, Isle of Wight, formerly of the Ministry of Finance, Cairo (net personalty £5,357), left £5,384.

Dame Lilian Adelaide Tyser, of Villa Garbarino, San Remo, Italy, who died on December 17, widow of Sir Charles Tyser, late Chief Justice of Cyprus, left estate of the gross value of £12,274, with net personalty £11,208.

The King has approved the appointment of Mr. John Fuller Graham to be a Puisne Judge of the High Court of Judicature at Calcutta in succession to Sir Babington Bennett Newbould, who will retire in March.

In the absence of most of the 315 members of the Yugoslav Skupstina, the Ouzounovitch Cabinet suffered a defeat in committee on March 2 by 13 votes to 12. The Minister in charge of the Bill under debate, M. Yovanovitch, declared that the Cabinet was not affected by the defeat.

It is stated from Constantinople that a private salvage company has undertaken to raise the wreck of the French submarine Mariote, which was sunk by Turkish gunfire 200 yards off Chanak Point in July, 1915, while trying to get through the Dardanelles.

So many Muslims from Malaya and the Dutch East Indies are waiting in Singapore to embark for the pilgrimage to Mecca that there are not enough ships available, and one line of steamers has put up the fares to 50 dollars (more than five guineas) in hopes of reducing the demand for passages.

The death is announced from Belgrade of M. Constantine Christitch, a former Serbian Minister of Justice and Serbian Minister in Bucharest, Rome, and Vienna, on March 6. He was the eldest of the six sons of the late M. Nikola Christitch, a former Prime Minister of Serbia.

Agraro-Communist emissaries in Sofia on March 5 assassinated M. Ikonomoff, section chief of the Bulgarian Surêté-Générale. M. Ikonomoff had succeeded, it is stated, in discovering the preparations made by the Agraro-Communists in Yugoslavia against the established régime in Bulgaria.

Major F. Gwatkin, of the 10th King George's Own Lancers, joins the new Commandant of the Staff College at Quetta, Major-General Godwin, as an instructor. Captain L. A. Stuart, of the 1st Battalion 6th Rajputana Rifles, succeeds Major A. F. Chater as Deputy Assistant Adjutant-General at Delhi.

The death occurred at Malta on March 2 of Mr. Edgar Bonavia. His death follows closely upon that of General Sir Walter Congreve, V.C., in whose absence from Malta he had frequently acted as Governor. Mr. Bonavia, who was educated at St. Ignatius College and Malta University, entered the Malta Civil Service in 1886.

Major-General Sir Gerald F. Boyd has taken up the appointment of Military Secretary to the Secretary for War on transfer from Indian service, where he has for the past four years been Commandant of the Staff College at Quetta. He is succeeded in that post by Major-General C. A. C. Godwin, C.B., C.M.G., D.S.O., who leaves the Commander-in-Chief's Staff at Delhi.

The Allahabad *Pioneer* reports the death at Indore of Mr. Frederick Clarence Scindia Baker, Inspector-General of Police, Central India Agency, from peritonitis. Mr. Baker was on the cadre of the United Provinces police and was an able officer. During the non-co-operation troubles in 1921-22 he showed great vigour, and was wounded by an unknown assailant while on duty at that time. He was about to leave Indore on promotion.

PERSONAL AND GENERAL

TO-DAY

March 10, 1927 (New Style).
February 25, 1927 (Old Style).
Ramadan 6, 1345, A.H., of the Muslim Calendar.
Adar II, 29, 5687, of the Jewish Calendar.

The Roumanian Minister and Mme. Titulescu left London on March 4 for Geneva.

Lord and Lady Kinnaid have left England for Palestine and expect to be away about six weeks.

Sir John Shuckbrugh is at present in Jerusalem and is the guest of the High Commissioner.

Sir Victor Warrender, Bt., M.P., and Lady Warrender will return on March 12 to 18, Upper Grosvenor Street, from India.

Hassan Nashaat Pasha, Egyptian Minister to Spain, left Claridge's Hotel last week for Madrid after a short stay in London.

Lord and Lady Montagu of Beaulieu are expected to arrive at Valescure on their way home from Persia tomorrow (Friday).

Captain and Mrs. Vincent Copland Griffiths sailed in the Orama on March 5 for Egypt. They will be away until the middle of April.

Mr. Stephen Meredyth Edwardes, C.V.O., C.S.I. (53), of Meraldine, Felden, Boxmoor, late of the Indian Civil Service, and formerly Commissioner of Police for Bombay (unsettled) (net personality £488) left £1,382.

Mr. Robert Greg (His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest) had an audience of The King at Buckingham Palace on March 5, and General Sir Walter Braithwaite had the honour of being received by His Majesty upon relinquishing his appointment as General Officer Commanding-in-Chief, Eastern Command, and upon his appointment as Adjutant-General to the Forces.

The Hon. Sir Stanley and Lady Jackson gave a dinner party on March 4 at Claridge's Hotel. Their guests included: the Earl and Countess of Birkenhead, Lady Eleanor Smith, General Sir Reginald and Lady Wingate, Sir Archibald and Lady Weigall, Viscount Younger, Mr. and Mrs. Craven, Miss Beddard, Mr. Stanley Jackson, Sir Arthur and Lady Hirtzel, Dr. Williams, and Mrs. Wilson.

The High Commissioner for India and Lady Chatterjee gave a luncheon party on March 4 at Claridge's, at which the guests included the Hon. Sir Stanley Jackson (Governor-Designate of Bengal) and the Hon. Lady Jackson, the Earl of Meath, Lady Swaythling, Sir Russell and Lady Scott, Sir Richard and Lady Redmayne, Sir Gregory and Lady Foster, Sir Howard d'Egville, Lady Seton, Mr. Drake, Miss Baden-Powell, Mr. and Mrs. Ghosh, Mr. Brown, Mr. and Mrs. Mallik, Mrs. Palit, Mrs. Cambier, Captain Banerji, and Mr. Iswar Saran.

The Hon. Sir Stanley Jackson, who leaves England to-day (Thursday) to take up his duties as Governor of Bengal, was entertained at lunch on March 4 by the Shipwrights' Company at Barbers' Hall. The Right Hon. Walter Runciman, M.P., Master of the Company, presided, and other present included Viscount Inchcape, Mrs. Runciman, Professor Sir John and Lady Biles, and Sir Alfred and Lady Yarrow. He was entertained at dinner on March 2 by the officers of the Great Northern Railway Co. at King's Cross Hotel. Sir Stanley was a director of the Great Northern Railway Co. before the amalgamation.

Mr. and Mrs. Surendra Nath Mallik gave a reception on March 4 at the rooms of the British-Indian Union in Grosvenor Gardens, to meet Sir Hugh Stephenson, Governor-Designate of Bihar and Orissa, and Lady Stephenson. The company included the High Commissioner for India and Lady Chatterjee, Sir George Hume, M.P., Lady Hirtzel, Sir Reginald and Lady Mant, Sir Albert Gait, Lady (Thomas) Holland, Mr. and Mrs. H. A. F. Lindsay, Sir Ewart Greaves, Mr. and Mrs. Frederick Palmer, Sir Thomas and Lady Richardson, Mr. Kunning, Mr. and Mrs. N. C. Sen and the Misses Sen, Sir Herbert and Lady Holmwood, and Mr. J. C. B. Drake.

GENERAL SIR WALTER CONGREVE.

General Sir Walter Congreve, whose death was announced in our last issue, was born in 1862. He served with great distinction in the South African War, in which he gained the Victoria Cross. In the Great War he served in France until the spring of 1918, when he was invalided home. In August 1919, he was appointed Commander of the British Forces in Syria and Palestine. A month or so afterwards he was appointed to the command of the troops in Egypt, with whom he remained until April 1923. A year later he was chosen to succeed Field-Marshal Lord Plumer as Governor and Commander-in-Chief in Malta. In that island, as everywhere else, his popularity was immense. By his own wishes he was buried at sea last week. A Memorial Service was held at St. Margaret's, Westminster, on March 7.

NEAR AND MIDDLE EAST ASSOCIATION.

A lecture was given to the Near and Middle East Association on March 4 by Sir Henry Penson, K.B.E., on "The Economic Background of World Politics," at 53, Seymour Street, W.1, by kind permission of Mrs. Geoffrey Mander. The Viscountess Dunedin was in the Chair.

Commander Williams also spoke.

The following among others accepted invitations: Viscountess Dunedin, Viscountess Dupplin, Lord Meston, Baron Rubido-Zichy, The Albanian Chargé d'Affaires, M. and Mme. de Uggla, M. and Mme. Biega, M. Naumoff, Baroness Beck Friis, Constance Lady Boyle, Sir Edward Boyle, Sir Harry Eyres, Sir Griffith Boynton, Lady Tighe, Lady Penson, Sir William Clark, Hon. Mrs. Chetwynd, Hon. Mrs. E. C. Feilden, Hon. Katherine Thring, Hon. Mrs. Yorke Bevan, Dr. Ernest Griffin, Mr. Roland Michell, Brig.-Gen. Campbell, Rev. Chancellor G. Ponsonby, Miss May Mond, Miss Joan Stavridi, Mr. and Mrs. Bruce Dick, Mrs. Margaret Hasluck, and Mrs. Beauchamp Tufnell.

EGYPT EXPLORATION SOCIETY.

A lantern lecture on Naucratis will be given by Dr. D. G. Hogarth on Wednesday, March 16, at 8.30 p.m., in the Meeting Room of the Royal Society, Burlington House (by kind permission of the Council).

The lecture is the fourth of a series arranged by the Egypt Exploration Society, and a few free tickets are available for non-members upon application to the Secretary, 13, Tavistock Square, W.C.1.

A recent Turkish statement puts the number of foreigners in Angora at 2,339, of whom 659 were Hungarians, 140 Bulgarians, 105 Germans, 83 Italians, 79 Austrians, 76 Albanians, 63 Czechoslovaks, 49 Russians, 52 French, 17 Yugoslavs, 13 Greek, and ten English. It will be recalled that the total population in the capital was recently returned at 58,849.

THE BUDGET.

The outstanding feature of the Indian Budget that was presented at Delhi on February 28 is the remission of the Provincial contributions to the Central Government. These, which originally totalled 983 lakhs of rupees, had by last year been reduced to 545 lakhs: and the final remission of this large sum is now contemplated. The realised surplus of the Central revenues, for the financial year that closes on March 31, will be 310 lakhs of rupees: and, out of this sum, 28 lakhs—half the amount of her existing contribution—is being handed back to Bombay, whose finances are in a bad way. As Sir Basil Blackett said, her deficit “on other than Development transactions” is expected to amount this year to 51 lakhs. The net surplus remaining, 282 lakhs, will be transferred to the Government of India’s reserve, instead of being used for the reduction or avoidance of debt: a diversion that the Finance Member defended on the ground that the “complete liquidation of the Central Government’s liabilities to the Provinces is a very big prize justifying a very special effort,” the gaining of which has been made possible by the fact that a succession of realised surpluses has enabled the fixed programme of the redemption of debt to be out-distanced during the last few years, and that it still remains unmodified for the future. If the Provincial contributions had continued, the estimated surplus for the financial year 1927-28 would have been 364 lakhs: a surplus that Sir Basil Blackett said could be considered as a recurrent one. He proposes, therefore, that, to that extent, the Provincial contributions shall be permanently abolished: and that, in the year 1927-28, the remaining amount shall also be remitted, by the transfer, from the Central reserve to the Central revenue, of 181 lakhs out of the 282 lakhs now to be placed in the former. The balance of 101 lakhs will be kept in the reserve “as a nest egg for use in connexion with the inauguration of the new gold bullion standard and the Reserve Bank.” The net result is, therefore, that, in the financial year 1927-28, the Provinces will pay no contributions to the Central Government at all: and that, in later years, the maximum contribution payable, by all of them together, will be 181 lakhs. The Finance Member obviously hopes that India is entering upon a period of largely expanding surpluses; for, whatever the arrangements made on paper for the resumption of payments of contribution after 1927-28, it is undeniable that the Provinces, having once been relieved of the obligation to pay any contribution at all, will never expect to be called upon to resume payments, however much reduced in amount. It is necessary to remember that Indian Budgets always have been, and must always remain, a “gamble on rain”: and any break in the long succession of favourable monsoons with which India has lately been blessed would be likely seriously to upset Sir Basil Blackett’s forecast; but the gigantic irrigation schemes now on the tapis, which will inevitably be followed by others, will, it may confidently be hoped, reduce this danger to a minimum.

Though overshadowed by the central fact of the re-

mission of the Provincial contributions, the Budget statement contains several other features of great importance. Among these are the abolition of the export duties on hides and on tea, and the reduction of the import duty on motor cars and tires, from the existing figure of 30 per cent. *ad valorem*, in each case, to 20 per cent. in the case of the former and 15 per cent. in that of the latter. The export duty on hides and skins has been repeatedly condemned, and it is certainly a great pity that it was not found possible to remove it long ago; for it is to be feared that the present removal has come too late. It was originally imposed under the mistaken idea that the trade was so nearly an Indian monopoly that the imposition of the duty, while valuable as a revenue-producing scheme, would not in any way affect the trade; but, in fact, for some years past, prices have ceased to be regulated by India, and her pride of place in the trade has passed from her, to all appearances definitely. The export duty on jute remains, for here India really has a monopoly: and it may confidently be expected that, if ever any indication of possibly successful competition arises, the melancholy experiences of the trade in hides and skins will ensure prompt measures being taken to combat it. As for the abolition of the export duty on tea, the Budget proposals put back on the growers, with one hand, the burden which they take off with the other; or, at any rate, they appear to do so. For the basis of assessment on tea companies will be altered from 25 to 50 per cent. of their profits: a change that is expected to produce, in a full year, 50 lakhs of rupees—the sum which will be lost to the revenue by the abolition of the export duty. In fact, however, its abolition should be of definite value to the tea-growers: since it will not only allow a larger margin of profit on the existing production, but should prove to be a considerable stimulus to an increase in sales. As for the reduction in the import duty on motor cars and tires, it is doubtful whether this will prove of much benefit to the owners of cars; for it is to be expected that it will provide an incentive to Provincial Governments to increase their scales of local taxation, at present kept in some sort of bounds by the heavy import duty. It is, however, to be welcomed as an official recognition of the fact that there is a great future for the motor car in India, and it should certainly stimulate sales; for, in India as elsewhere, the prospective motor owner is apt to consider only the cost of the article that he proposes to buy, and to overlook the recurring expense of keeping it on the road. The realisation of the latter comes to him later; but only after he has bought his car.

Finally, the Budget statement shows the extraordinary advance that the finances of India have made under Sir Basil Blackett’s guidance. His conversion arrangements have been so remarkably successful that the interest on India’s dead-weight debt has been reduced by 550 lakhs from what it was in 1923-24. The rate of interest at which the Government was able to borrow in 1926 was 4.69, subject to income tax, compared with 6 per cent. tax free in 1922: a fact that has, incidentally, led to a quite

appreciable increase in the revenue from income tax, mainly due to the substitution of tax-subject for tax-free Government securities. Altogether, the outlook is very bright, and a quite extraordinary contrast to what it was before the occurrence of what history will probably record as the two outstanding successes of Lord Reading's Vice-royalty—its synchronisation with five successive favourable monsoons, and the placing of the control of India's finances in the hands of Sir Basil Blackett.

CURRENT TOPICS.

The Steel Tariff.

The announcement, cabled on February 21, that the Steel Tariff Bill has been passed in the Legislative Assembly by 52 votes to 40, is a matter of some surprise. Strong opposition has developed against the Bill from at least three different standpoints. There were those who objected to the continued subsidisation of the Tata business, to which "the people of India have contributed in two years £1½ million in hard cash, besides the unestimated sum that they have paid on all steel, including Indian steel, in consequence of the rise in price brought about by the steel duties." To these the Government reply was, that the protective duties were now being lowered and that it was hoped that, after the seven years for which the new tariff was to be current, it would be possible to abolish it altogether—an expectation which, in view of similar experiments elsewhere, is hardly likely to have carried conviction. The two other quarters from which opposition developed both concentrated on the same point—the clause under which the basic rate of import duty is calculated on standard (British) steel, and a higher rate is imposed on non-standard (Continental) steel, whereby the imported price of both is approximately equalised. It was explained that this is not a measure of Imperial preference, but one purely economic: since, if the basic rate were applied to all steel alike, the protection to the Indian industry would be insufficient and, if it were calculated on the lowest price of imported foreign steel, it would be excessive. But this disclaimer is not accepted by the two classes of objectors mentioned: one of which, while admitting the justice of the proposed differentiation between standard and non-standard steel, fear that, if accepted, it may be used as a precedent for a similar differentiation in circumstances less justifiable, to the ultimate detriment of Indian industries. The other views the matter from a wholly political point of view: one speaker in the Assembly going so far as to say that he "would rather the Indian steel industry went down and under, than that any preference should be given to Britain." He and his friends are congratulated by the "Congress" Press for having "thoroughly foiled the insidious attempt to get the Assembly to sign a blank cheque for Imperial preference" and for their complete "exposure of the Britishers' surreptitious plans for the revival of their steel industry" at the expense of India. With protectionists, anti-protectionists and politicians all arrayed against it, the Bill seemed certain to meet with a rough passage, if not with shipwreck: and the explanation of how these expectations came to be falsified will be awaited with some interest.

Imperial Preference.

Rather more than two years ago Lord Lloyd, in an article in the Empire Number of *The Times*, expressed the opinion that arrangements for a modified form of Imperial Preference with India were a probability of the future that would not be distasteful to the Indian commercial community. Unfortunately, this community is largely non-vocal, as indeed are the saner elements among Indian politicians: and the violent opposition developed in the Legislative Assembly to an apparent—though not real—move in the direction of Imperial Preference, in the matter of the Steel Tariff Bill, provides evidence of the fate that any such proposal would be likely to meet at present. Yet,

though it is entirely one-sided, a very considerable grant of preference to India has already been made by Great Britain. For many years the self-governing Dominions had given preference to British goods without return: and it is only recently that Great Britain has responded. In doing so, she has favoured Indian goods as well as other Empire products: and figures recently published in several of the leading English newspapers of India show that, under the British tariff, the gain of India in the shape of preference was 226½ lakhs in the financial year 1924-5; 212½ lakhs in 1925-26, and 200 lakhs in the first eight months of 1926-27. This is chiefly due to tea and tobacco: and while, as an article in the *Times of India* points out, it may be argued that practically all the tea-gardens in India belong to British owners, no such argument can be put forward in the case of tobacco, which is nothing but an ordinary crop of the Indian agriculturist. During the first eight months of the current financial year, the preferential advantage gained by Indian tea amounted to 79 lakhs, and by Indian tobacco to 120½ lakhs. As the *Times of India* remarks, the development of their own manufactures was as important to the Dominions as it is to India, and to let British manufactures in under a lower tariff than foreign articles gave them no material benefit. But they saw that their freedom rested upon the strength of the Empire of which England is the nerve-centre, just as India's does. With such facts and such an example before them, how long, asks the paper, will reasonable people in India follow the lead of politicians who proudly worship what their accepted leader advertises as "not an intellectual but an emotional proposition." Not, it hopes, until in self-defence Great Britain is tempted to reconsider her position and, in the interests of her hard-pressed Exchequer, refuses any longer to sacrifice the 2½ crores of rupees that she now gives to India for the sake of Imperial sentiment, and so pays India back in her own coin.

An "intellectual" proposition, such as this, will not, of course, appeal to the "emotional" politicians of India; but, if India is to progress towards the nationhood and equal partnership that her politicians profess to desire, the saner elements must come into their own before long. In anticipation of the time when they will do so, it would be worth their while to take a note of the facts, and to ponder the advantages likely to accrue to India from a well-considered scheme of Imperial Preference.

Indo-Chinese Trade.

The opinion held in India on the effect that the troubles in China are likely to have on India's trade is that it will be negligible. The value of India's total trade with China was, in 1925-26, 18 crores of rupees: which, incidentally, was nearly half as much again as it had been in the previous year, the difference being practically entirely due to increased takings by China of Indian cotton and rice. Of these two commodities, China in 1925-26 imported 96,000 tons and 150,000 tons respectively, the value of the former being 1200 lakhs of rupees and that of the latter 220 lakhs. Though these figures sound impressive, China's share in the total overseas export trade of India only amounted, in the year mentioned, to 4 per cent.: and to less than 1½ per cent. in the import trade. The chief product that China supplies to India is silk, her share in India's imports of that commodity amounting to 37 per cent.; but, as a correspondent writing on this subject to the *Statesman* points out, silk is a luxury that India can, if she wants to, obtain without difficulty from other sources, notably from Japan, France and Italy. China's normal export of tea amounts to about one-eighth of the world's requirements: and any reduction in her ability to keep up her supplies would offer a good opportunity for India to increase her own. The only market that is likely to be seriously affected is the silver market.

The dispatch of Indian troops to China, though viewed with suspicion and dislike by the politicians—particularly by those among them who, as the *Statesman* puts it, "make a practice of having their suspicions aroused"—will result in a gain to India's exchequer, since the Home

Government will bear the whole expenses of their employment, including their pay during absence from India. It is also worth remembering that China has been in a state of chronic disorder for years past, of a kind that, in the case of any other country, would be considered hopeless: and yet her Customs receipts, so far from falling off, have actually increased. The virtual closing to trade of the great waterway of the Yangtze is, however, a new feature that may have unfortunate results on the trade of China with the world at large, though even here it would be unsafe to dogmatise; but, even if this does happen, it seems unlikely that the trade of India will suffer from it to any appreciable degree.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 7.

The Swarajist Split.

The eruption in the Bengal Congress Camp has produced a fissure which shows no signs of closing. Following a vote of "No Confidence," the executive, including the newly-elected President, who had only held office for about a couple of weeks, was stated to have resigned; this now appears to have been premature, and throughout the week there has been a stream of Press attacks and counter-attacks. The matter appears to be resolving itself into a struggle for power between the Calcutta Extremists and those from outside, especially Eastern Bengal, and the real bone of contention is the right of distributing patronage in the Calcutta Corporation. If moderate opinion were better organised, it might well be a case of the premature counting of chickens but, things being as they are, there appears to be little hope of anything else than another Swarajist Corporation after the election next month; meanwhile party personalities will presumably increase, but with the change that the Swarajists will be slanging each other.

"Mr. Speaker."

The Extremists have wasted no time in getting to work to show their indifference to British parliamentary traditions. *Forward* is making violent attacks upon the new President of the Council, whose position corresponds to that of the Speaker in the House of Commons, and accuses him of seeking to muzzle the Swarajists and to establish a complete autocracy in regard to the subjects which he will allow to be debated in the Council Chamber. This presumably is merely another line of attack upon the new constitutional system in revenge for the Swarajists not being able to elect their nominee as President. It is, however, not only another example of the general political irresponsibility of the Extremist: it illustrates the fate of practically every Indian public man who succeeds, and then for that reason alone immediately becomes the object of attack, not only of his unsuccessful rivals, but also of his former supporters.

"Forward" and China.

In spite of the fact that a sentence of imprisonment is hanging over the head of its Editor, the tone of *Forward* shows no improvement in its comments on the China situation, and it would seem to be emulating the spirit of that well-known body of amateur cavalry who were said "to learn nothing and to salute nobody." The depredations of Chinese bandits and unpaid soldiery along the borders where the Burmese frontier runs with that of the old Chinese Empire, have been the subject of considerable anxiety, and it has been known for months past that the garrison has been strengthened and certain action of a police nature initiated. *Forward* now chooses to see in this part of a deeply-laid plot of the Home Government to assist in working up a first-class crisis in conjunction with events at Hankow, and it heads its comment "Pilfering from Behind." The leading article which follows im-

partially abuses all the English political leaders and finishes off with a scarcely veiled impertinence to His Majesty the King-Emperor. It is difficult for the most moderate of men to see why this irresponsible mischief-making is not put down with a heavy hand.

The Bengal-Nagpur Railway Strike.

The greater part of the labour force at Khargpur, the headquarters of the B.N. Railway, is on strike and strenuous efforts are being made by the so-called Labour Union to organise a general strike throughout the whole of the system. It is difficult to form an independent judgment without independent information in regard to the point of view of the strikers, and at a distance it is almost impossible to obtain this. Certainly some of the demands made in their name, such as an increase of 150 per cent. in all wages, are absurd, and there is little doubt that it would be found that a large proportion of the strikers have no idea as to why they have stopped work. Notice was given of a question in the Assembly from Extremist quarters, but this has been dropped—which is rather significant. As a general comment upon strikes of this kind, it may be observed that as a rule the difficulty of large employers of labour in India is not to find work, but to find labourers, and unless pay, housing and social organisation are such as to be more attractive than the normal conditions that the agriculturist finds in his village, he will not leave his land to work in an industry. It is also found that a higher rate of pay does not by any means ensure greater prosperity for the worker; not only has he the habit of working shorter time, if he can earn as much money by doing so, but the shopkeeper, the moneylender and the land-owning lawyer all conspire to obtain anything he may have in the nature of a surplus, and it may be noted that the Labour Unions are also exclusively officered and run by members of these classes.

Steel Duties.

The recommendations of the Committee in regard to the proposed revision of steel duties are now under debate in the Assembly, and it is expected that a final decision will be made in the course of the present week. A preliminary tussle took place on a motion to refer the recommendations back for further consideration, the debate being principally upon the proposal to impose a lower tariff rate upon British standard sections as compared with Continental steel; it was suggested that this was actually a form of preference for British manufacturers. A division took place on this, and, thanks to the firm stand taken by Bombay industrial interests, Government was able to defeat the motion. It is generally anticipated that this indicates that the Tariff Board's recommendations will be carried in spite of the implacable hostility of the Extremist group to anything which may even remotely benefit British trade.

Men and Things.

The mails are still delayed in delivery and letters are being sent out at least half a day later than was the case before the War. Questions in the Assembly this week revealed the fact that the Council Member in charge of the matter, an Indian, had only considered the complaints a week before, although agitation has been going on for three months past; an illuminating comment upon the effect of the Delhi isolation upon the official mind.

The annual meeting of the District Charitable Society was held this week; Mr. T. Edelston, of Begg Dunlop's, the retiring President, stated that poverty and distress, particularly amongst the Anglo-Indian community, showed no signs of diminution; he also stated that no progress had been made towards co-ordinating charities, but regular conferences were now reducing the overlapping of distribution of casual relief to permanent beggars.

Another annual meeting in the week was that of the Kalimpong Homes, at which Dr. Graham stated that they were continuing their good work and appealed for more public support; an interesting point was that the children

who had been emigrated out of India were in every case making good. It would seem that the only solution of the Anglo-Indian problem lies in this direction.

In spite of official opposition, the Legislative Assembly this week decided to appoint a Committee to consider various points arising out of income tax administration. Sir John Bell made a very pointed speech to show that both officials and taxpayers were equally at sea in trying to settle their liabilities, and in face of this the official spokesman did not dare to persist in his objection to the Committee's appointment.

The report of the Special Committee appointed by the Corporation to inquire into the conduct of the Deputy Mayor was considered by a special meeting of that body this week, but the debate was adjourned; the meeting was held *in camera*, but a pointer in regard to its deliberations was given by the fact that the conduct of the Collector of the Corporation has also been included in the Committee's investigations.

The names of the new Committee of the Bengal Chamber of Commerce have been published and universal regret is felt that illness has made it necessary for Mr. R. B. Wilson, of Birkmyre's, again to go Home and so lose his well-deserved Presidentship; Mr. Basil Eddis, of Gillander's, is the new President and Mr. J. A. Tassie, of James Finlay's, the Vice-President.

The action of the Imperial Bank in raising the Bank rate to 7 per cent. was the subject of a volley of questions in the Assembly; Sir Basil Blackett's replies went near to admitting that Government had put up the borrowing rate against the Imperial Bank, in order to handicap the financing of exchange speculators in Bombay.

A Press announcement states that well-informed quarters anticipate the release of a number of *détenus* in the near future on medical grounds; the importunate widow has again succeeded!

The Trivial Round.

Racing at headquarters was carried out under much more pleasant conditions on Saturday last, thanks to a storm the day before, which materially lowered the temperature; financial considerations, however, stood in the way of complete enjoyment, and daily racing correspondents have been seeking to explain that the proportion of equine rogues is unduly high on the Calcutta tracks! Incidentally Calcutta owners have done well in the Lucknow meeting, and Mr. Mein Austin won both the Civil Service Cup and the Governor's Cup with T.A.B. Congratulations.

The paperchase had to be postponed owing to the rain-storm and it was run off yesterday morning; the course makers had worked out a short but tricky course and they had also increased the height of the jumps, presumably in order to take advantage of the soft ground. Ian Maitland Heriot just beat Captain Leetham for first place; G. S. Johnstone had bad luck at a water jump at which "Bright Future" picked up a strain which may spoil him for the Cup; hard luck for a really hard goer.

Cricket dies hard and there was a full programme of matches at the week-end; Calcutta and Ballygunge played returns, and there were exciting finishes on both grounds; in the first team game Ballygunge just managed to hold off defeat until time saved them, while their second string were beaten in the last over, Calcutta gathering 208 in two hours to do this.

In addition to the Tennis Leagues of the Mills, minor clubs are now holding their meetings. Hockey is just beginning with practice games and the rest of the Maidan seems to be taken up with the sports meetings, which are more numerous than ever.

The attraction this week at the Empire has been the A.D.C. cold weather production—"Outward Bound." Brilliant is a restrained word for this, one of the finest productions ever seen in India; the Society and the caste can congratulate themselves not only on their own ability, but also on the genius of their producer, Mrs. Milly Deane.

Markets.

There is little of interest to report in the jute and gunny markets during the past week; apart from a fair amount of buying of hessians for covering purposes, business has continued to be on a small scale, but rates have remained very steady. Conditions in the piece-goods market have brightened still further since the last review; demand from up-country centres is increasing, and with stocks steadily declining, dealers are asking higher prices. Business for forward delivery has also been done on a much more extensive scale in almost all lines. The increase in the price of the raw material has been a big factor in strengthening the market, and there is more confidence than there has been for some time; inquiry is expected to increase still further during the coming weeks. The tea sale here this week is probably the last but one of this season's crop, and the tendency was almost similar to that of last week when good qualities fetched satisfactory prices but common kinds displayed a further weakening. According to the reports from London, the market there is improving and this is in accordance with the opinion of those who should be in a position to know here.

As a result of the rise in the Bank rate to 7 per cent., Government Securities displayed a further easing off, and there are now more sellers than buyers in this section; investment stocks have been quieter in sympathy. Jutes, on the other hand, have advanced on the week; there does not appear to be any justification for this apart from the difficulty of finding other sources of investment offering equal security together with the prospect of capital appreciation. The speculative favourites, Clives and Howrahs, advanced a Re.1 on the week. Cotton shares, after opening quiet, firmed up slightly later, Dunbar being in keen request up to Rs.210; coals have given way further. Few shares changed hands in the tea section, and the business done was at a lower level of prices. Dealings in the rubber section dwindled at the beginning of the week, but on advices from the Straits of a stronger market there, more business has been put through and prices have tended upwards.

The Exchange market has been dully steady at Rs. 5 31-32d. for Ready T.T. throughout the week, but forward positions have been somewhat quieter, and the rate for the monsoon months is quoted at Rs. 5 25-32d. Money has been in good demand and rates may be quoted call and short notice 6 per cent., one month 5½ per cent., two months 5¼ per cent., and three months 5 per cent.

DELHI LETTER.

(From Our Own Correspondent.)

Delhi, February 17.

The Legislative Assembly.

Our new Legislative Assembly elected last November is now in session, and it is very difficult to see where it is an improvement on its predecessor. Before and during the elections we heard a good deal about Responsive Co-operation and the intention of certain groups of Indian politicians to work the existing Constitution and thus to compel Parliament to grant further reforms to India. But really now that the Responsive Co-operators, Independent Congressmen and so forth are in our midst there seems to be very little difference between them and the Swarajists. The Responsive Co-operators, Independent Congressmen, Hindu Mahasabha Party and others have united themselves into one "Nationalist" Party, numbering about seventeen, in the Legislative Assembly. Hitherto this party has voted solidly against the Government at every division and the speeches delivered by its members have been quite as pungent as those delivered by the Swarajists. It is said that the Nationalist Party will not join the Swarajists when the latter attempt to throw out the Budget next month, but it would not surprise me if some

of them, at any rate, attempted to join in this useless act of folly.

The New Building and Chamber.

The Legislative Assembly, of course, is now housed in the splendid new Legislative Building, which was opened by Lord Irwin on January 18, and which holds also the Council of State Chamber and the magnificent room in which the Chamber of Princes will meet henceforth. The Legislative Assembly Chamber is in the shape of a horse-shoe. On the left of the Presidential Chair sit the Swarajists between 35 and 40 strong. Next to them come the Nationalists, then the shrunken remnant of the old Independent Party led by Mr. Jinnah—a mere handful four or five strong. It is true that a number of Muhammadans, perhaps eight or ten, sit on the benches behind Mr. Jinnah, but they do not really belong to his party. They and the other Muhammadan members of the House have not yet formed themselves into a definite party, but act as a very loosely organised group with leanings towards the elected Europeans and the official benches. Continuing our journey round the horse-shoe we come next to the elected European benches, to the Muhammadan and nominated non-official members and, lastly, to the official benches on the right of the Presidential Chair, which complete the horse-shoe.

The Programme of the Session.

The session, which is now about three weeks old, has not been without excitement. There has been a lively debate on the subject of political prisoners, a brisk passage of arms on a motion for adjournment to censure the Government for not bringing in their Currency Bill before the Budget, and an attempt to move a motion of adjournment over the dispatch of Indian troops to China. Until this week Government lost all the divisions, but yesterday, after a very animated debate on a Bill to protect the Indian Steel Industry, the Independents and Muhammadans threw in their lot with Government and inflicted a respectable defeat on the Swarajists and Nationalists, who were opposing the further progress of the Bill. But the greatest battle of all is yet to come, namely, the battle over the rupee ratio. Tremendous propaganda has been going on in favour of the 1s. 4d. ratio—propaganda directed from Bombay and taken up by the Swarajists as a political move. Echoes of this to-do have reached England and most people are familiar with the main points at issue. As things are at present, it seems as though Government will win the fight which is staged for March 7 and succeeding days. Perhaps at the very moment when these words appear in print, the battle will be in progress on the floor of the Legislative Assembly Chamber and the keen blade of Sir Basil Blackett's dialectic will be performing that operation, so much more difficult than the carving asunder of steel casques and stout bucklers, namely, the scission of a fine spun web—the web of skilfully concocted misrepresentation and appeals to prejudice.

TAVOY.

The destruction of the town of Tavoy, recorded in the telegrams of the week, is not likely to affect in any way the mining industries of that district. The bazaar and old town, which lie on the bank of the river, are a singularly ramshackle collection of inflammable buildings, even for an Eastern town: but during the mining boom of the later years of the War the firms which were attracted to mine wolfram and tin built residences and offices on the comparatively high ground behind the town, and it is most unlikely that they have been touched by the fire.
