An alarming increase in crime is indicated by the latest statistics which show that during March crimes rose from 511 to 616 cases and during the first five months of the judicial year from 2,370 to 2,773, the lower figures being for the corresponding period of the preceding year. To a certain extent the economic situation may be responsible for the increase. But it is evident from the fact that murders and attempted murders increased by 13 per cent.—during March the number was as much as 7 a day—that there must be some other important reason for this rise in the curve, and this reason is to be found undoubtedly in the fact that, owing to the encroachment on, and persistent interference with, the executive by the political element, the authority of the provincial personnel, responsible for the preservation of public order, has been completely undermined. It is no secret that the Provincial Mudirs and their staff have the greatest difficulty in the world in carrying out their duties owing to the manner in which, as in 1924, the deputies and their friends interfere directly with them or pull strings through Cairo. This state of things is responsible for the loss of respect

for the Government which is reported from all over the country, and it is not surprising that the administration should be deteriorating at a rapid rate and that this should translate itself into a general increase in crime. It may be added that the official statistics merely give the number of crimes reported and that many others are committed but concealed, since there is this notorious interference with the execution of justice, it follows that the state of lawlessness is even more serious than the figures themselves reveal.

The Prince of Arab Poets.

A wonderful meeting was held yesterday at the Royal Opera House, where litterateurs from various parts of the Arabic-speaking world as well as leading Egyptians met to do honour to Ahmed Bey Shawky the celebrated poet. "The Prince of Arab Poets," as he is called, is renowned wherever that language is spoken for his poems and songs which peculiarly appeal to the oriental mind by their loftiness of thought and their beauty of expression. Many of them have in fact been translated into French. King Fuad extended his patronage to this meeting, which was in reality but the beginning of a series of ceremonies in honour of Shawky Bey, and was graciously pleased to delegate his first Chamberlain Ahmed Hasanein Bey to represent him. The meeting was attended, in addition to the leading Egyptians, by delegates from Palestine and Syria, by the Chief of the Cabinet of King Ibn Saoud, and by Sidi Kaddur Ben Kebrit, the Moroccan statesman, and numerous speeches were delivered and poems, specially written for the occasion, were read. Shawky Bey was accorded an enthusiastic ovation, and his new verses, which a friend recited for him, completely carried his audience off their feet. He has been the recipient of many presents, the most beautiful of these being a palm-tree made of pure gold with pearls in the place of dates the whole reposing on an amber base, the gift of admirers in Iraq, of which the palm tree is the symbol.

HIJAZ.

Jidda, April 19.

The King's Movements.

His Majesty the King has not yet arrived in the Hijaz and, as there is no definite news of his movements, it is scarcely probable that he will reach Mecca before the beginning of May. This will leave him only a month before the actual ceremonies of the pilgrimage. Meanwhile, as a counterblast to the attempts of interested parties in India to discourage the pilgrimage on the ground of imminence of hostilities between the Hijaz and the Yaman, the Amir Faisal has issued a categorical denial of the existence of any such danger. Common sense should be sufficient to show them that, even if the parties concerned were disposed to war, they would not select the heat of a Red Sea summer for active hostilities in the Tihama. But common sense is a quality which for some reason or another has been conspicuously lacking in the critics and enemies of King Ibn Saoud ever since the earliest days of his governing ascendancy over Arabia.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

To such critics and enemies the present peace and tranquillity of the Hijaz are the only and sufficient answer, and that answer seems to have satisfied Islam in general, to judge by the facts that some 70,000 pilgrims have already passed through Jidda from overseas and that the Egyptian Government has declared booking for the pilgrims open to its subjects. The contract for the conveyance of Egyptian pilgrims, who are expected to exceed 15,000 in number, and the "Holy Carpet" has this year been given to the Italian "Transatlantica" line, in preference to the Khedivial Mail Company, which had it last year.

Help to Pilgrims.

The solicitude of the Hijaz Government for the comfort of the pilgrims is evidenced by the progress made in the paving of the hitherto dusty way between Safa and Marwa, which pilgrims have to traverse to and fro seven times in commemoration of Hagar's frantic search for water for the infant Ishmael. The pavement, begun recently under the direct orders of the King, is now nearly complete, and the attention of the authorities is now being directed to a project for recovering over the court of the Great Mosque itself with a removable awning to protect the praying multitudes from the heat of the sun during the day time. Apart from these improvements, actual and projected, it is under contemplation to remove all booths and temporary wooden structures from the main thoroughfares of Mecca for the greater convenience of the pilgrims, while their medical needs are being amply catered for by the division of the city into medical wards with special clinics and doctors in attendance. The number of motor cars available for the transport of pilgrims is officially given as 87.

The Hijaz and Italy.

The following official notice is published in the *Umm al Qura*: "It has come to the notice of the Government that certain individuals claim to represent the Government of His Majesty the King at the court of His Majesty the King of Italy and arrogate to themselves an official status to which they have no right. The Government accordingly announces that it has no representative at Rome." It will be remembered that ex-King Husain and his successor were represented at Rome by the Amir Habib Lutfallah in the capacity of Ambassador, but the arrangements of the Hashimite Foreign Office ceased to be effective with the overthrow of the Hashimite Government in December, 1925.

Health Conditions.

The Health Department publishes the vital statistics for Mecca, Madina, Jidda and Taif for the week ending April 8. Deaths from infectious diseases during this period numbered 69, of which 17 were due to smallpox; there were in addition 368 deaths from ordinary causes (205 men, 93 women and 70 children). The weather conditions are still springlike, though during the last day or two there have been mild reminders that summer is not far off.

GREECE.

Athens, May 5.

Political Incidents.

The only noteworthy political incidents of the last few weeks have been:—(1) The threatened resignation of the President of the Republic, (2) the dispute over the appointment of the Chief of Gendarmerie, (3) the interception of correspondence between General Pangalos and his friends.

The first incident is now closed, and as the Chamber has resumed its sittings after the Easter vacation, there is a prospect that the interminable discussions will at last bear fruit and the President's justifiable irritation will have had a beneficial result. The limitation of discussion, now enforced by decree, is a step in the right direction.

The second incident, one of the periodical squalls that ruffle the calm of the Cabinet's deliberations, has also blown over—for a time.

The third incident shows that the late Dictator continues to be a thorn in the side of the Government. There is naturally no serious popular demand for his return to power, but as long as he remains in prison and untried, he is likely to receive a certain amount of sympathy, and, if he is allowed to communicate with disaffected elements outside, may be a real source of danger.

The cumulative effect of these incidents is bad for the Government, which is bound to lose prestige, as long as every really important question is shelved. The military problem, and the question what is to be done with General Pangalos, seem as far off settlement as ever.

According to a communication of the Ministry of the Interior, the British mission which is entrusted with the duty of re-organising the gendarmerie will arrive in Greece in two months' time.

General News.

Of non-political events, one may mention the enthronement of the new Catholic Archbishop—a Greek, Mgr. Philipouses—the meeting in the Stadium between Greek athletes and representatives of the Achilles Club, which was a great success—the purchase by the British Minister of a race-horse from the Copais Company's stables, which will shortly appear on the race-course at Phaleron.

The most interesting archaeological news comes from the Argive Heraeum, where the American School has discovered a very striking piece of bronze revetment, destined for a chair or a chest, which shows in *repoussé* work, scenes from ancient legends—perhaps from that of the House of Atreus.

The question of drains is not always a savoury one, but in a place like Athens it is of some interest and importance. Up to last year, the whole of the western part of Athens was served, apart from the cess-pool which almost everywhere possesses, by two open drains, which united and flowed into the Kephissos, by which, such of their waters as were not diverted to irrigate the market-

gardens of Athens, were conducted to the sea at Phaleron. In spite of this primitive system, or absence of it, the general health of Athens has been good, and epidemics almost unknown. An attempt is now being made to modernise the drainage, by constructing pipes which will conduct the sewage, after being passed through a cleaning machine, 200 metres out to sea, so that bathing at Phaleron will lose some of its terrors. It is good news also, to learn that the rain water that pours in cataracts off the sides of Lycabettus after a heavy storm, turning streets into raging torrents, and burying tram-lines under mountains of debris, will be partly controlled and conducted into the bed of the Ilissos. All these things show that the municipality of Athens is seriously grappling with the problem of how to adapt Athens to the new requirements and to its position as the leading Balkan capital.

ROUMANIA.

Bucharest, May 3.

The King's Illness.

Public interest during the month of April centred chiefly round two events, viz. :—during the first half of the month, the illness and almost miraculous recovery of King Ferdinand, and, during the second half, the new Customs Tariff on imports, which came into force on April 24.

The illness of the King caused great anxiety, not only because of the great popularity of His Majesty, but also on account of the special circumstances surrounding the succession to the Throne. It was feared that the country might not be unanimously willing to accept the Regency arrangement instituted over a year ago, and precautions were taken to deal with any disturbances which might take place. Fortunately, no such contingency arose, and to the great joy of all King Ferdinand has recovered so far as to be able to go about, and even attend to some of his many duties.

The Government and the Liberals.

In the field of politics the most interesting development of recent date is the friendly understanding which has apparently been come to between the Government and the Liberal Party. Having tried for many months without success, to come to a working agreement with the Nationalist Party of M. Maniu, the Government has once more turned towards the Liberals for support. It may therefore be expected that, on broad lines, the financial policy of the Liberals will continue to be pursued by the present Government, especially where they do not interfere too much with the reforms in the interests of agriculture, instituted by M. Garoflid, the present Minister of Agriculture and Domains, to which the Government is now committed.

EGYPTIAN MINISTRY OF EDUCATION. APPLICATIONS are invited for POSTS of ASSISTANT MASTERS to teach English in Egyptian Government Secondary Schools.

Candidates, who should be between 24 and 34 years of age, must have University Degree (preferably in Honours) and should have experience of teaching in Secondary Schools. Diploma in Education desirable. Initial salary £E.450 (about £461) with biennial increment of £E.45. Non-resident. Contract three years. Allowance for journey to Egypt. Full particulars and form of application may be obtained from the Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1.

EGYPTIAN MINISTRY OF EDUCATION. APPLICATIONS are invited for the following POSTS in Egyptian Government Girls' Schools:—

- (a) ASSISTANT MISTRESSES to teach English.

The Position on the Adriatic.

To all appearance, the difference between Italy and Yugoslavia has latterly become less acute, and public opinion in Europe is evidently under the impression that the situation has improved and that the tension between the two States has lessened.

As a matter of fact, one has to be very cautious in taking an optimistic view of the position, because nothing new has happened which might improve matters in essentials or eliminate the causes which lie at the root of the ill-will between the neighbours on the Adriatic. The most trifling incident would suffice, and relations would again be strained to breaking-point.

It would be an excellent thing if foreign journalists would more frequently visit Yugoslavia and so become convinced by first-hand evidence that the country is really all for peace; that no one dreams of embarking upon war-like adventure, be it against some weaker Balkan neighbour or against any other State. The judgment of Europe is greatly biased, and indeed at fault, if it persists in regarding the Balkans in the light of views that held good ten years ago and more, when the interests of the various Great Powers clashed in the Peninsula and the Balkan nations allowed themselves to be used as pawns in the

game. The Balkans have outgrown the period of their minority; they are hard at work to-day in their efforts to make up for what they have lost in time and opportunity during the long age of a barbarous Asiatic rule, and they are anxious to play their part in the constructive work of the world's civilisation and culture. The Balkan States have no desire to perpetuate their reputation as the storm-centre of Europe, whence a baneful breeze may at any time fan a European conflagration. It is true that there are certain differences between individual Balkan States—differences which have their origin in the comparatively recent past and are not more serious than those existing between other European Powers, and far less of a danger to peace. The Balkans have had a longer and more bitter experience of war than the rest of Europe, and for this reason alone the disinclination for further wars and an earnest desire for peace are at least as great in the Balkan States as in any of those which already enjoy a reputation for pacifism.

The Balkan States desire, therefore, as long a period of peace as possible, so that they may devote themselves to the work of internal consolidation and set about healing the countless wounds they sustained during the wars from 1912 to 1918. *Rapprochement* has begun between the various States, notably even between Yugoslavia and Bulgaria. On both sides it is regarded as a good thing that it should come to a definite understanding between these two essentially Balkan States. And everywhere public opinion is in favour of a peaceful solution of all still outstanding questions. The Balkans, in fact, are nearer to their Locarno than is generally supposed in Europe.

In view of this, there is no need in the Balkans for the interference of outside Powers. The Balkan States are determined to arrange their affairs without foreign tutelage, convinced that the Balkan Peninsula will be definitely pacified as soon as outside Powers withdraw their protectorate from it.

Yugoslavia and Italy.

This is to-day the view of the general situation that obtains in the Balkans, and especially in Yugoslavia. For this reason Yugoslavia has co-operated with Italy, although the Yugoslav minority in Italy—a minority numbering over half a million—fared so badly under the Fascist régime. The definite misunderstanding dates from the moment when the Treaty between Albania and Italy was concluded at Tirana. This Treaty invests Italy with the virtual protectorate over Albania and gives her the right to interfere for the protection of the existing régime in Albania. Signor Mussolini's defence is that the Treaty was concluded between two sovereign States and that it concerns no other parties. But this point of view is not so simple in practice, because no Balkan State can afford to be indifferent if the troops of a non-Balkan State may at any time be landed in the middle, as it were, of the Peninsula. And least of all can Yugoslavia remain indifferent. Over and above this, it is known to what extent Ahmed Beg Zogu is financially and economically the debtor of Rome; wherefore the claim as to the sovereign States offers quite a problem by itself.

If Signor Mussolini declares that the Tirana Pact cannot be the subject of negotiations between Belgrade and Rome, then here is a highly significant fact. It means that Italy intends to stick to her rôle of protectress of Albania, and that although Italy at one time made an agreement with Yugoslavia for joint procedure in matters regarding Albania. On this basis alone could direct negotiations prove fruitful. But so long as the Tirana Treaty in its present form and with its present contents remains taboo, the very foundation for any kind of real and sincere understanding is lacking. The Nettuno Conventions cannot be a serious obstacle to a fresh *rapprochement*, because it is more than likely that they will be ratified by the Skupshtina—in spite of the vigorous objection of all ranks of the Opposition.

In view of all this, public opinion in Yugoslavia is very sceptical of the achievement of an understanding by direct

negotiation between Rome and Belgrade, because Signor Mussolini's restriction in regard to the Treaty of Tirana means that these negotiations are debarred from dealing with the very problem from which arose the misunderstanding between the two States.

So the situation remains far from clear. But let us repeat once more and insist upon the point that Yugoslavia does not desire any warlike adventures, either on the Albanian, or on any other frontier. Public opinion in Europe may seek proof of this at any time. Indeed, Yugoslavia would welcome investigation to this effect. As far as the Kingdom of Serbs, Croats, and Slovenes is concerned, the peace of Europe is in no danger.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

AN ANGLO-WAHHABI ALLIANCE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—To-day, more than ever, consideration of Islamic affairs forms a significant part of the British Imperial concerns, not only because under the English flag dwell by far the greatest number of the Muslims, but also, because that this country is being increasingly drawn closer to the higher diplomacies that are now agitating the world of Islam. This contention is reinforced by the report that Sir Gilbert Clayton is re-opening Anglo-Arab negotiations with the Wahhabi King of the Hijaz. The desert Conference will not fail to leave a moral of great political force, inasmuch as a British alliance with a Puritan Islamic section would give practical denial to Britain's alleged anti-Islamic views.

In considerations of this nature the sentiments of Indian Muslims must obviously loom large, for in any attempt at handling the tangled skein of Indian politics the importance of the Muslim elements there can scarcely be exaggerated; and a Muslim—in China, India or Arabia—has, essentially, in virtue of his faith, an international perspective. Neither the greatest Himalayan heights nor the span of the Seven Seas can circumscribe his political vision or cultural affinity. All Muslims are brothers, all bow their heads towards the Sacred Mecca, all strive to visit at least once during their lifetime that wonderland of mystery—the Cradle of Islam—where Ibn Saoud sits enthroned in his mighty glory surrounded by his desert warriors waiting to shed their blood in a religious cause to reap the life eternal under the Celestial bowers of Allah's garden. With such an element England now seeks friendly dealings. This bodes well for the peace of the world. And the West may well gulp down its fears, for nothing is nearer to the heart of Ibn Saoud than peace—peace long and continued.

In the meantime, however, storm rages high in India at the hands of those who, to use the Arab saying—are as consistent in the political ideals as is an egg steady on a revolving tray. First they disliked King Husain because he basked under English friendship; and then circumstances placed Mr. Mohammed Ali on a pedestal to represent the power and arrogance of a class that does not grow old, and therefore wise, that will never emerge from the thrall and gloom of brazen agitation into the free air of rational outlook.

The great Wahhabi is subjected to abuse now because he holds what he has won and above all is drawing nearer to "England, the arch enemy of Islam." The Ali Brothers, although detesting the Western impact, yet advocate a republic for the Hijaz, and forget that the ideas of kingship are inseparable from the Asian mentality, for a monarchical rule is the last fortress of racial traditionalism of the hoary East. And with venom in their tongues they harangued the unsophisticated through the length and breadth of India till they actually

The NEAR EAST YEAR BOOK and WHO'S WHO 1927

Edited by

H. T. MONTAGUE BELL.

A comprehensive survey of the affairs, political, financial, commercial, industrial and social of YUGOSLAVIA, ROUMANIA, BULGARIA, GREECE and TURKEY. With the text of Near Eastern Treaties, Lists of factories, &c., Who's Who of prominent people and five maps.

980 pp. Demy 8vo. Price 25s. net.

SOME PRESS NOTICES:

The Spectator. "An important book which every student of international politics will want. Here, clarified and condensed . . . will be found information which is of the greatest value . . . Some of it is better reading than the average novel, and all of it is of great interest. Only an expert on the Near East could have attempted the task, and we are grateful to the author for having succeeded so well in supplying us with something that (now that it is available) merchants and journalists and politicians will discover they have been needing since 1919."

The Scotsman. "Makes a welcome addition to the works of reference at the disposal of publicists and students in general of contemporary affairs. . . A real want has been uncommonly well supplied."

The Daily News. "An extremely valuable work of reference."

The Times, in the course of a half-column notice (under "Books of the Day") says: "With best part of 1,000 pages at his disposal, Mr. Montague Bell is able to deal with them (the Balkan States) very thoroughly, and to find room for ample and detailed information about every form of political, financial, economic, commercial, and educational progress. . . Mr. Bell is not content to limit the information he imparts to the geographical details and statistics of all sorts usually to be found in books of reference. He deals very fully with finance, debts, banking, commerce, shipping, insurance, and industry, and provides useful historical summaries, complete with lists of past Prime Ministers and the present strength of parties in the various Legislatures. Indeed, even those who are well acquainted with Balkan and Near Eastern affairs will be surprised at how much there is to learn about those countries; and Mr. Bell himself seems to hope that if the Near Eastern nations can be persuaded to take a greater interest in the present, and its multitudinous and important interests and activities, they may begin to forget about that unpleasant past which has hitherto been such a drag upon their progress. He has certainly provided them and their friends with ample means for taking that interest."

The Morning Post. "A long-felt want is supplied . . . For purposes of reference his book is invaluable. . . Good maps and detailed information regarding every sphere of the activities of these countries are provided in a clear and accessible form."

The Financial Times. "Every branch of activity in these countries is exhaustively and authoritatively reviewed. From its pages a very clear idea can be obtained of the countries' great natural resources . . . while lists of manufacturers and factories make the book of practical utility to the individual merchant. For the student and politician the timely appearance of the work is enhanced by an appendix embodying the text of recent Near Eastern treaties and agreements. . . Mr. H. T. Montague Bell, who has edited the compendium, which is at once informative, comprehensive, and withal accurate, is heartily to be congratulated on an admirable production."

forced the steps of otherwise quite balanced men into perilous by-paths bestrewn with holders of Sectarianism, and an influential landlord of Oudh was persuaded to beat his way to the Delhi Durbar appealing to Lord Irwin against the ruler of Mecca.

The fact of Maharaja of Mahmudabad's leading an anti-Wahhabi delegation the other day to the Viceroy makes it appear that despite considerable opportunities of both official and unofficial leadership human frailties must beset the path of the best of us. This Maharaja seemed to possess that happy blending of Eastern and Western cultures which makes the bosom of an Oriental swell with pride. But just when in heroic adoration we prepared to fold our knees before what seemed to us a cynosure of Muslim India, the idol fell from its niche and crashed to a thousand fragments; for else how can the situation be explained that a Muslim delegation should appeal against Muslims, and in so doing manifest an ignorance of most rudimentary knowledge of international law? The Viceroy of India can no more interfere in the Hijaz affairs than the Spanish Government direct the fashioning of a Buddhist temple in China. The matter is all the more appalling when we consider that the Maharaja till quite recently has been an important member of his Government.

But despite the hysterical outcries of irresponsible persons urging the Arab King not to have dealings with Great Britain, he has very clear ideas regarding the benefits which may accrue from such a *rapprochement*.

The question of the Hijaz railway, to say nothing of the other matters, is of sufficient merit to command his urgent consideration. Ever since its completion in 1908, the railway has filled a pressing commercial need, as it linked the desert city of Madina with Damascus marts, and added greatly to the comfort of thousands of Syrian and Egyptian pilgrims on their way to Mecca. The War not only interrupted its running, but also divided the line between the French and the British mandated territories of the Near East. The situation was further complicated by a section of the railway crossing from Palestine into Syria and back again into Amir Abdullah's territory; while the whole stretch beyond Maan to Madina awaited ownership for years till the rival desert chieftains had fought it out between themselves. Now, of course, the issue lies between the Sultan Ibn Saoud and the British Empire, and the day is not far distant when Anglo-Arab treaty will definitely seal the peace of the world, for an English Alliance with Islam is a more potent factor towards this end than the enemies of both are inclined to own.—I am, etc.,

IKBAL ALI SHAH.

LIGHT ON "OBSCURITY."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—“Thus were the most modern discoveries of civilisation employed to save the lives of two *obscure* Orientals,” is the phrase which ended the message of March 31, 1927, of your Baghdad Correspondent in telling the story of the accident which took place half-way between Damascus and Baghdad, and of the help of the hospital aeroplane which came from Baghdad and took over the two injured persons.

This phrase certainly did not add anything to the whole story, and it would seem that so long as European correspondents and writers insist on honouring the Orientals with such phrases there is very little hope for a better understanding between the Occident and the Orient. It is sometimes these unnecessary phrases which cause serious troubles.—I am, etc.,

J. ESTARABADI.

American University, Beyrout, Syria.

April 28.

[We regret that the expression to which our correspondent takes exception should have caused him offence. The word “obscure” was not used in any derogatory sense, but to heighten the effect of the verbal contrast in the application of the discoveries of the West for the benefit of the East. Two lives were in danger, and at once the resources of the R.A.F. were brought into

requisition, as readily for two unnamed passengers as would have been the case if the victims had been among the great ones of the earth.—Ed.]

PALESTINE'S NEEDS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Palestine is in need of an administrator to be given free hand for ten years to organise it, and prepare it for a larger population of agriculturists. The present arrangement is too costly, and unsuitable, for that country.

The post of High Commissioner being one for five years, it should be reinforced by an administrator of ability, imagination and sympathy with the inhabitants, Muslim; Jews, and Christian, who would control all branches of the administration.

Much of the present machinery of government is out of place and out of season in the present state of the country. It is, in fact, ridiculous.

Reclamation of land, its sanitation, and preparation for settlers, are the *most urgent duty* of the Government and the Jewish societies who wish to help the colonists of their race. Industries are premature, and education, which is sectarian, is less than useless for spending money upon by the Government!

Roads and facilities of communication, town-planning and sanitation, a *safe harbour* for passengers and cargo steamers, are things that should be taken seriously in hand, while agriculture is preparing to provide freight, and offer occupation and profit to more settlers.

Nearly one million a year is now spent on ruling this small, poor country, simply to keep it stagnant and passive, because no one on the spot can feel responsible for the consequences. There is nothing to say against Jews or British officials, individually; but what is virtually wanted is a dictator with a vision!

From my knowledge of the country and people, I should say that an able administrator would find a quarter of a million ample for his administrative requirements.

While it may amply provide for economic administration, I must say that I consider £3,500 a year for salary of the High Commissioner, is a piece of high parsimony! Three times that amount might with advantage, I think, be spent by him merely on representation! But with all our knowledge, very few of us understand the East, although they think they do.

Meanwhile, neither Jews nor Arabs can be satisfied, nor our commerce benefited!—I am, etc.,

A. SEFI.

Buckingham Gate.

May 5.

CAPITULATIONS IN EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your readers may not be aware of the fact that foreigners in Egypt are not under the same laws and penal code as Egyptians and cannot, therefore, be punished for many grave offences. The Egyptians are at present trying to remedy this state of affairs and to hold foreigners equally responsible for their actions with Egyptians. For those who are opposing the Egyptians in their efforts to attain this object, I, as an Egyptian brought up in English Universities, will instance the following as an example of how these privileges are abused by some. *Al Ahram*, the leading Egyptian daily paper, reports a case in which a foreigner while riding a bicycle at night without a light near Opera Square, Cairo, knocked down and hurt an old man. When the point duty policeman tried to stop him, it is reported, he shouted “Don't raise your hand to me, and don't you dare to touch me; I am an Italian and privileged.” What would your English readers think if a German, say, knocked down at night an old man in Piccadilly Circus, while not carrying a light, and successfully evaded arrest on the ground that he was a foreigner: and how could we, learned Egyptians, who had lived abroad on terms of equality, bear to see such a drama when we return home?—I am, etc.,

I. HELMY AL SA'ED MATTER (B.Sc.).

The Aga Khan left the Ritz Hotel on May 3 on his return to Paris.

Prince Jean Ghyka left Claridge's Hotel last week after a fortnight's stay in London.

Viscount and Viscountess Elveden have returned to 11, St. James's Square from India.

The Hon. Harold and Mrs. Nicolson have arrived in England from the British Legation, Teheran.

Lieutenant-Colonel and Mrs. Stewart Patterson have arrived from India at 23, Alexander Square, S.W.3.

The Earl of Lytton was received in audience by the King, upon relinquishing his appointment as Governor of Bengal, on May 7.

The Earl and Countess of Lytton subsequently had the honour of being invited to luncheon with their Majesties at Buckingham Palace.

M. N. Stancioff, the former Bulgarian Minister in London, and Mme. Dimitri Stancioff have left London for their summer residence—"Villa des Trois Sources," Varna, Bulgaria.

Viscountess Inchcape, who has now recovered from her long illness, arrived in London on May 5 from Glenapp, and left two days later, with Lord Inchcape for Paris, where she will spend a few weeks.

Lieut.-General Sir Peter Strickland (upon his appointment as General Officer Commanding the British Troops in Egypt) had the honour of being received by the King at Buckingham Palace on May 7.

The King has given Mr. Oliver William Verner authority to wear the insignia of the Third Class of the Order of the Nile, which decoration has been conferred on him by the King of Egypt in recognition of valuable services.

LEBANON HOSPITAL FOR MENTAL DISEASES.

The twenty-eighth annual meeting of the Lebanon Hospital for Mental Diseases, Asfuriyeh, Beyrout, Syria, will take place at Friends' House in Euston Road on May 19 at 3 p.m. The meeting will be presided over by Dr. E. W. G. Masterman, Dr. H. Watson Smith, Director of the Hospital, will present his Report, and other speakers will include: Major S. W. Mackinnon, Archdeacon Beresford Potter, Pastor Hoffman de Visme, W. W. Haviland, F. H. Edwards, Lt.-Col. H. G. L. Wortabet, and Mrs. Alfred Moorhouse. It is hoped that all who are interested in the work of the Hospital will attend.

The Egyptian Parliamentary War Committee has recommended the suppression of the Sirdarate, as it considers that under the Constitutional régime the Minister for War fulfils the necessary duties.

According to the Constantinople Correspondent of *The Times*, Sir Maurice Amos, the former Judicial Adviser to the Egyptian Government, arrived in Constantinople on May 7. With him were Mr. Owen Wells, the British agent on the Anglo-Turkish Mixed Arbitral Tribunal; Mr. Fitzmaurice, his junior counsel; and Mr. Orme, Clerk of the Treasury. Sir Maurice is acting for the British Government in the case which has been brought against it by Abbas Hilmi Pasha, the last Khedive of Egypt, who is claiming nearly £3,000,000 for properties and possessions seized in Egypt at the time of his deposition in 1914.

NEWS IN BRIEF.

Ibn Saud, King of the Hijaz and of Najd, arrived at Mecca from Riyadh on May 6. Sir Gilbert Clayton landed at Jidda the previous day.

According to the Turkish Press, the negotiations for the purchase of the Anatolian Railways by the Turkish Government has been adjourned. The representatives of the shareholders are said to have asked for a sum of £T.73,000,000 (gold).

The Bulgarian Government has paid 1,900,000 gold francs (£76,000) to Yugoslavia, representing the last payment due under the Agreement of 1923 as to requisitions made by the Bulgarian troops during their occupation of Serbian territory during the War.

The Greek Government has submitted to the Chamber a motion providing that the Constitution be passed before the end of May, limiting speeches to fifteen minutes and adopting without discussion 25 out of the 215 articles.

Colonel Henry Travers Lugard, late R.A., who died in London on April 30, at the age of 78, served in the Afghan War, 1878-80, and was present at the Battle of Ahmed Khel. He also served in the Mahsud Waziri Expedition, 1881, and the Burma campaign, 1886-87.

Mr. J. B. Payne, Chairman of the American Red Cross, presided at the annual meeting in Paris of the Board of Governors of the League of Red Cross Societies on May 4. All the national societies affiliated to the League except the Austrian and Albanian societies were represented.

The Vice Chancellor of Cambridge University publishes a letter which he has received from the secretary of the Managing Committee of the British School at Athens, who offer a special studentship of £100 for the session 1927-28, or, if deemed advisable, the studentship might be divided into two of £50 each.

Colonel Herbert James Mills, C.B., late R.A.O.C., died at his residence in Maida Vale on Monday in his 91st year. He served with the Egyptian Expedition of 1882-4, being mentioned in dispatches and receiving the Order of the Medjidieh. In the Sudan in 1884 he was Senior Ordnance Officer.

In reply to a protest sent to the Archbishop of Canterbury by the Greek clergy, the British Minister in Athens, Sir Percy Loraine, has conveyed to Mgr. Chrysostomos, the Archbishop of Athens and Primate, the assurances of Lord Plumer, the British High Commissioner for Palestine, that there is no intention of interfering with the status of the Patriarch of Jerusalem.

Field-Marshal Viscount Allenby on May 6 laid the foundation stone of the St. Andrew's Chapel and Hostel in Jerusalem, erected by the Scottish Churches to commemorate the liberation of Jerusalem from the Turkish armies during the Great War, and also to commemorate Scottish soldiers who fought in the campaign, and their Imperial comrades.

The death occurred on May 1 at Kensington of Brigadier-General Hugh James Alexander Mackey, C.M.G., D.S.O., late R.F.A., from pneumonia at the age of 51. He left France for Mesopotamia in December, 1915, to take part in the operations for the relief of Kut. From May, 1916, to April, 1919, he was Colonel, R.A., 14th Division, Mesopotamia, and took part in the battles of Hai and Shumran Bend and in the crossing of the Tigris, being also present at operations at Baghdad and Shatt-el-Adhaim.

On May 15 the Simplon-Orient express, which runs daily from Calais and Paris to Trieste, Belgrade, Sofia, and Stamboul, will be extended from Constantinople with connexions to Angora, Yenije, and Aleppo (Syria), while at the same time it will be accelerated by about two hours between Calais and Constantinople. The extension, say *The Times*, is the first step into Asia in connexion with the through journey to Baghdad, which is intended to be the eventual destination of the service. The journey from London to Constantinople (leaving Victoria by the Southern Railway's 11 a.m. Continental express) at the present time takes 78 hours over the total distance of 2,178½ miles. This is 24 hours quicker than any other railway service, and comprises what is the longest "through" carriage run in Europe—namely, 2,075½ miles, from Calais to Constantinople.

WALKING IN GREECE.

(From Our Athens Correspondent.)

Greece is an ideal country for walkers. Roads are still scarce, and a large part of the country, and that the best, can be visited only by means of the mule tracks. As the roads that do exist run mostly from north to south on either side of the central mountain range and there are none that cross it from east to west, either in Northern or in Southern Greece, the best parts of the country still lie away from them. Now to tramp, carrying one's luggage on one's back, has many disadvantages. The paths are steep and rough, and have a way of disappearing; the distances between villages are great, and one has to accept chance hospitality for the night—an experience not to be faced lightly—especially in the summer. Food is heavy to carry and often extremely difficult to obtain locally. It is, therefore, only the very strenuous and hardy who can tramp, carrying their own luggage. It is better to hire a mule to carry your things: you can then take a supply of food for several days, while a valise and sleeping bag will make you independent of hospitality, as it is possible to sleep out of doors during six months of the year. It is true that you are dependent to some extent on the muleteers—an obstinate and difficult race, who will try to take you to some place you don't want to go to, who are often quite ignorant of the road more than a few miles beyond their own village, although they will have confidently assured you that they know every inch of the country. For this reason, they should always be engaged for one day only, and when you reach your destination at night, a fresh one should be engaged for the following day. This involves protracted bargaining in the village shop, with the whole population looking on—and an animated discussion about the route. Insuperable objections are raised, and the muleteer will try to persuade you that you must pass through some village or other, where he perhaps has business, or friends whom he wishes to see. However, with some knowledge of the language (quite indispensable) and a knowledge of the map, (this always creates a great impression), and a firm determination to get to your destination, and not be put off by imaginary difficulties, you can generally carry out your programme. Of the many admirable qualities of the Greek peasant love of truth is not one, and if you put yourself unreservedly in his hands, you may find yourself taken in a quite opposite direction to that in which you want to go. In fixing the price, the muleteer's return journey is taken into account, and they have an unpleasant habit of trying to hurry you up, so as to make you reach your destination early, and get back themselves the same day, thus economising a day at your expense. This is a nuisance, as, if you wish to halt a long time in the middle of the day (which in summer is necessary), they get restless, and it requires a struggle to enforce your wishes. The most tiresome are those that have been in America: and their company can be tolerable, only if you steadfastly refuse, even to the point of rudeness, to understand the curious jargon which passes for English, and which they will try to work off on you. It is sometimes a good plan to pretend to be a Frenchman or a German, but it seems that they too have a good deal to put up with in the same way, as a smattering of French is taught in secondary schools, and one often meets Greeks who have been prisoners of war in Germany.

Among minor nuisances must be reckoned mosquitoes, which infest nearly all low-lying parts. A mosquito-

net is, therefore, indispensable, and this, tucked round one's sleeping-bag, will also keep out the numerous ground insects, especially ants, that seem to haunt every square-inch of ground.

I have so far emphasised the dark side of this method of travel in Greece. Now for the other. When evening comes, instead of in some stuffy cottage, or indifferent hotel, you lie down under the stars, perhaps by the side of a stream, with a whispering plane-tree above your head, or on some sandy beach with only the sound of the sea in your ears, to rise before the short night is over, cook your own breakfast and take the road again in the twilight of dawn. You may walk all day through country that is always changing, and nearly always beautiful; through gorges overpoweringly grand, through cool oak woods where the bracken keeps the dew in the hottest days of summer, and to climb the steepest ridge will have its reward in one of those incomparable panoramas of sea and sky and mountain, which make Greece the most beautiful country in the world.

But, as occasions arise where one cannot sleep out of doors, a word about hotels. The ordinary hotel in a provincial town does not pretend to cater for tourists. It is just a place where commercial travellers pass the night. They expect no comforts—not even clean sheets. In some hotels one sheet is changed for fresh arrivals, but never both. There are usually several beds in each room, and, if you want to be alone, you must take them all. In the summer they abound with bugs, and with fleas all the year round. There are, of course, hotels, which are exceptions, but, generally speaking, these provincial hotels are only clean, when they are new. In places visited by tourists, such as Olympia, Delphi, Nauplia, there are quite good hotels. Strangely enough, at some of the places, most visited by tourists, the hotels are still very bad. Corinth has no good hotel, and visitors now stay at the watering-place of Loutráki, rather than Corinth. The hotels at Sparta are primitive and dirty, and the place has such a bad reputation that people will not stay there. Until lately, it was the same at Candia, the place from which Knossos is reached. Andritsena, where all travellers stay the night on their way to the famous temple of Bassae, had, until 1926, no hotel, and the accommodation which was offered to the stranger, unprovided with an introduction, was unspeakably filthy and verminous. The place could also show the dirtiest restaurant in Greece. In 1926 three small hotels were opened simultaneously, one of which (Ambariotis) at any rate, is clean and comfortable.

In remote parts, the monasteries take the place of hotels, and are usually clean. The monks are hospitable and receive the stranger with a charming courtesy. To the traveller toiling over blazing mountain-tracks, their very names sound like music. Aéloni on Parnon, Megaspélaion on Chelmós, Makarítissa on Helikon, Eikosi-phoinisses on Pangaeon, Varnákova or Vourkáo call up pictures of green trees and gardens and cool running water. And such, when he reaches them, they prove to be.

In travelling about Greece in this way, the foreigner will discover how much the people vary from place to place. But amid the widely-differing types that he encounters, Albanians, Maniotes, Epirotes, Vlachs, or whoever they may be, he will find that hospitality and kindness to strangers are unfailing characteristics. He will be the object of curiosity, but he will never be molested. As a stranger he is the care of the community, and, if anything happened to him, it would be a reproach to the whole district. Two ladies travelling in Thessaly a year or two ago, had stones thrown at them by school-children. On returning through the same village a few hours afterwards, they were met by the schoolmaster at the head of his pupils and a public apology was offered. For the same reason no one who wishes to travel in remote parts of Greece should be deterred by the fear of brigands. Greece is, for a foreigner, even in the wildest parts, as safe as any country in Europe.

Book Reviews

THE NEW PALESTINE.

"PALESTINE AWAKE: THE REBIRTH OF A NATION." By *Sophie Irene Loeb*. (London: Sampson Low. 7s. 6d.)

As an introduction to the study of post-War Palestine this book is to be commended, for it is enthusiastic and not so one-sided. The tang of the work may be gauged from the facts that Mr. Nathan Straus, the eminent philanthropist whose work for Palestine recently won editorial praise in *THE NEAR EAST AND INDIA*, has written a "foreword" to Miss Loeb's pages; and that he says therein "To-day the Holy Land bids fair to become again the 'land where milk and honey flows,' for the benefit of all its inhabitants—Arabs, Christians, and Jews alike."

Miss Loeb, who is engaged in welfare work and is, therefore, specially interested in the problems of the primitive or pioneering inhabitants of Palestine, writes of such things as the municipality of Jerusalem, of Tel Aviv, which she calls "the miracle city of the Eastern world," and "the Miami of Palestine" (she was writing before the crisis in that city, and also for American readers principally), of the zeal and the resources of the colonists, of orphan asylums, of the revival of Hebrew, of "England's Job," and so on. There is not very much connexion between her various essays, which, indeed, are rather little sketches than serious examinations of the problems of which she is writing. On that account, therefore, one need not be troubled overmuch by slight slips. It does seem a pity, however, that she should have left in her book such unconsidered statements as "statistical records show that every-year the population of settlers is doubling"; "Jerusalem with its hundred thousand inhabitants has every tongue and creed"; "We fly almost daily from here to Baghdad, Damascus, and other places. Palestine, with its great valleys and hills, lends itself beautifully to aeroplanes," (this somewhat misleading statement is actually put into the mouth of the Mayor of Jerusalem); and so on.

Details apart, however, this little work is a quite readable one. One ought to mention that it has been decked out with appendices relating to the work of the now defunct Pro-Jerusalem Society, and with numerous photographs.

"SANS PEUR ET SANS REPROCHE."

"THE LIFE OF LT.-GENERAL SIR PARTAB SINGH." By *A. B. van Wart*. (Oxford University Press. 12s. 6d.)

It is not given to our poor humanity to produce more than a very few individuals to whom the beautiful words quoted above can safely be applied. Maharaja Partab Singh Rathor, Prince of Jodhpur and Chief of Idar was one of them. He knew not what fear was and he never did a dirty or dishonest act in his life. On the contrary he played the game steadily whether circumstances favoured him or whether, as so often happened, they were dead against him. His loyalty to King, Country, State and friends was almost beyond belief. He was a true sportsman in every sense of the word and at the same time an unusually able administrator and judge of men. Unselfish to others, strictly Spartan in his treatment of himself, clean-minded, clean-living, and deeply religious he was, though not content to follow blindly in the way marked out for him by the priestly caste.

He was ever a picturesque personage, in *grand tenu* or in the weird and wonderful nondescript garments which his friends knew so well, or in holding forth in his own special and most curious brand of the English language which he used so aphoristically and efficiently. His virtues made him a figure outstanding among his contemporaries. So far, then, Mr. van Wart started with an advantage. And he brings out this side of his hero's character well. The book is full of good stories, well told. But it was less easy to make a reader interested in

things which, after all, were essentially revelations of the real man, specially in the hard and thankless tasks of administration which he seemed periodically fated to have to undertake, putting them through successfully in spite of countless difficulties and personal danger. That the author has succeeded in doing so means that his book is thoroughly satisfactory. The only fault that the present writer can find with it is that it keeps on calling his old friend "Partab" by a form of his name, which may be more linguistically correct but is entirely unfamiliar. The book is well illustrated and is a fitting memorial of a very great gentleman.

THE MARATHA DISASTER AT PANIPUT.

"THE LAST BATTLE OF PANIPUT," By *H. G. Rawlinson*. (Oxford University Press for the University of Bombay. 3s. 6d.)

Mr. Rawlinson has done good service in rescuing this very interesting contemporary account of the eighteenth century battle of Paniput from the obscurity of the 1799 volume of "Asiatic Researches" where it had become practically inaccessible. The great battle between the army of the Maratha Confederacy and that of Ahmad Shah Duranni was one of momentous importance to the former and was the last of the great series of armed contests which, through the history of India, had Paniput as their field. Not only is Cazi Raja Pundit's account a valuable contribution to the understanding of an important historical event, but it is also in itself a work of literary interest which well deserves reading for its own sake. We could have wished that Mr. Rawlinson had considerably extended his introduction by going into the series of events which led to the final contest much more fully and with dates. Nowhere in the book have we been able to find a record even of the date of the battle. But we are grateful for what is given us and congratulate the University of Bombay on publishing it. Incidentally we would congratulate the Wesleyan Missionary Press, Mysore, on its excellent workmanship.

NEAR EASTERN PRESS.

Turkey's Debt.

A period of reconstruction in the Balkans and Near East demands a period of peace. Yugoslavia is busy consolidating a new Government under the shadow of a watchful neighbour, and the warlike spirit abroad is confining itself to duelling in the Italian and Serbian Press. Turkey with the balancing of her Budget is continuing to turn her mind to internal improvement and external defence. There is much talk of future improvement in the efficiency of the Army and Navy, of better Civil Service conditions, of encouragement given to agriculture and industry. The discussion, therefore, in Paris of the settling of her debt has raised her fears, and she considers her hopes of prosperity as threatened. *La République* writes:—

The discussion is taking place, in Paris, at this moment, of the modality of payment of our external debt transferred from the old Public Debt, and at Angora of the re-purchase of our Anatolian railway. If, as we think, these discussions end this time in a positive result, both new schemes will entail an immense amount of Turkish money going out of the country. This state of affairs will obviously alter our economic balance in proportion to the amount of money going out, and it seems that instead of thinking exclusively as at present of the amount of our debt, we should consider the question of the value of our money. . . .

For if the amount which we shall have to pay were to effect a debasement of our currency, we should be unable to continue those payments. . . .

These payments would certainly influence considerably the economic situation of the country according to the modality which will be settled, and the first effect would be upon the currency of the country. It is, therefore, evident that the Government will consider very seriously in the course of discussion all the possible consequences, and we are sure that H.E. Ismet Pasha will show the same vigilance and skill in this new phase of the affairs which he exhibited before during the first discussion of the question of the Public Debt at Lausanne. . . .

Agricultural Shows in Turkey.

To stimulate the zeal of the population in the care and improvement of their horses, cattle, and general live-stock, the Turkish Government are about to instigate race meetings and agricultural shows. It is interesting to note that a special race to be run in the spring meeting at Angora will be reserved for horses of English thoroughbred stock and is worth £T.2,000. *La République* reports:—

Our Correspondent in Angora gave us yesterday the résumé of a telegram addressed to the Governors by Ismet Pasha, giving them instructions with regard to the races and shows which will be organised this year under the patronage of the President of the Republic. A Commission for racing and the improvement of live-stock has been instituted at Angora under the patronage of Ghazi Mustapha Kemal Pasha with Ismet Pasha as president.

The telegram intimates that Spring and Autumn race meetings will be held from this year onward, in seven of the principal towns: Angora, Constantinople, Smyrna, Erzeroum, Sivas, Adana, and

Konia; and shows of domestic animals will be organised at nine principal centres: Angora, Smyrna, Erzeroum, Constantinople, Adana, Broussa, Diarbekir, Sivas and Konia. The sum of the prizes allotted to each race meeting will be two thousand pounds and to each live-stock show five thousand pounds. . . .

La République then draws attention to the industrial value of wool and hair, of milk and its products, as well as to the agricultural transport value of animals. It urges that stock be increased not only in number but also in condition and quality, that in time of war the country may be self-supporting.

The prize of two thousand pounds awarded to the Ghazi Mustapha Kemal Pasha race, for horses of thoroughbred English stock, has a particularly clear significance; it shows us the height to which we must attain in the improvement of our breeding stock. Agricultural machinery which we have had on trial has shown us already how poor are the advantages which we can derive from it. We have ended, it would seem, by realising that ploughs drawn by tractors cannot give us entire satisfaction compared with those drawn by good animals. . . .

The Turkish Navy.

The visit of the French Fleet has fired Turkey with enthusiasm and desire for a "small but strong navy." It has inspired three articles in *La République*, one describing a visit to the Naval College on the island of Halki.

The article alluded to the perfect orderliness of the school, the discipline and the marvellous up-to-date curriculum, complete with games and physical training. Two other articles glow with surprised amazement at the efficiency of the crew of the Cruiser Hamidje, and the last one concludes:—

The result of my impressions of the visit to the Hamidje can be summed up as follows:—The need of Turkey for a powerful fleet is as great as the need for an army and air force to assure the defence of the country.

Turkey, although possessing but a limited number of naval units, sees with joy the immense progress made by our sailors day by day. . . .

We must at all costs endow our valiant sailors with modern equipment, and propose a law dealing with naval construction realisable within ten years. The Republic needs and certainly will possess a fleet capable of defending her shores.

The Yugoslav Cabinet.

One reads with amazement of the numerous appointments in the Yugoslav Cabinet. As can be expected, with so many Ministries, a split has occurred in the Radical Party chiefly owing to the inclusion of certain members of the Club and the exclusion of others. The *Morgenblatt* reports:—

A lively discussion took place yesterday and to-day in the Club of the Democratic Party, concerning the unity of the party in the new Government, in which were heard discontented voices condemning the manner in which the new Government had been formed, and the choice of Democratic representatives in the Cabinet. Among the dissatisfied members was Dr. Slavko Setzerov, who shares with the reporter the objection to the new Government and withholds his support. Dr. Setzerov states that the Democratic Party had taken good part in the Government together with Radicals, but that the mode of entry into the Government could not be sanctioned. Hitherto every advance of the party had been followed unanimously by the whole Club. This time, however, the Democratic Party, without consulting the Club, or their Leaders, had been included in the Cabinet, a thing which is quite unheard of. So the Leader of the Party, Liuba Davidovitch, does not uphold any of the members who accepted office in the Cabinet. M. Voukitchevitch demands that Drs. Kumanudi, Miyovitch, and Sumenkovitch be in the new Cabinet without conditions.

If one knew how Dr. Marinkovitch had come into the Government, it would be clear how little the Club has had to do with it. . . .

The resignation of the Ouzounovitch Cabinet was caused by the weakness of the political combination, which the President hoped to strengthen in the formation of a new Cabinet. Speaking of the resignation of M. Ouzounovitch the *Morgenblatt* says:—

His one wish is that, owing to the step he has taken, there might arise a better combination, of greater use to the people and the State. In his request to retire M. Ouzounovitch declares that after the acceptance of the Budget and the Finance Bill, together with the conclusion of the thirty million dollar Loan, his aim and object for the State, with a broader and more successful control of State business, must be a stronger, brighter and firmer foundation. To make possible the formation of such a Government he had the honour of handing in the resignation of the Cabinet.

INDIA AT GENEVA.

The reported eleventh-hour protest by the Indian Merchants' Chamber of Bombay and other Indian commercial bodies in that country against the personnel of the Indian delegation to the International Economic Conference, which opened at Geneva on May 4, has raised anew the question of India's place in world economics. During the course of 1925 the League of Nations issued a table designed to compare, on a gold basis, the total foreign trade of all the countries of the world in 1913 and 1924, respectively. According to the figures in that table India stood in 1913 eighth on the list of countries in the matter of total value of foreign trade. In 1924 she had risen to the fifth place and there is little doubt that, in spite of the fall in prices of her staple exports and the depression in the textile industry, she has maintained that position throughout the two succeeding years. As, however, we have been forcibly reminded by the experiences of the post-War period, the foreign trade of a country is difficult to maintain if the finances, currencies, and above all the fiscal policies, of other participating countries are unstable and subject to violent fluctuations or sudden changes, whether the variations tend continuously in one direction or not. Europe and India are closely linked together in international trade; the exports from India to the Continent in 1925-26 were more than 46 per cent. of the total exports and the imports into India originating in Europe formed, in the same period, about 68 per cent. of the total imports. After the War, therefore, the stabilisation of European currencies was a matter of the greatest importance to India's seaborne trade, but the process of reorganization, now virtually complete, has brought in its train a host of new problems in the solution of which India is as vitally concerned as in the more spectacular question of the domestic constitutional issue. Although she buys from the United Kingdom one-third as much again as she sells in this country, her position *vis-à-vis* other countries is exactly the reverse. Her purchases from Japan and the United States are between one-third and one-half of her sales to those countries and, in the case of the Continent, she sells just two and a half times the amount of her imports from the countries concerned. The fact that India's exports are either necessities of life, which her customers cannot produce in sufficient quantities themselves, or else raw materials of industry which they frequently do not produce at all, converts what would otherwise be a very weak position in to one of exceptional strength, but does not alter the fact that India's interest in the proceedings at Geneva is both direct and practical.

The idea of the Conference, it will be recalled, originated with the French delegation at the sixth assembly of the League of Nations held in September 1925. The intention underlying the proposal was that there should be a general international discussion of world economic conditions, but more especially those of post-War Europe, with two main objects in view—namely (a) to explore every possible means of reducing the opportunities

for economic friction between nations and (b) constructively, as another aspect of the problem, to consider the most effective means of restoring general economic prosperity in the interests of international trade. The preliminary arrangements for the Conference were drawn up by a representative committee, upon which India's interests were ably represented by Sir Atul Chatterjee, the High Commissioner in London, and in the host of preparatory memoranda written under its direction, representing the collaboration of merchants, bankers, economists and both official and private trade and industrial organizations throughout the world, the special needs and resources of the Indian Empire have been kept prominently in view. The time chosen for the full Conference, from India's standpoint, is particularly opportune, coinciding as it does with the final stabilization of the rupee on a gold basis and the return of the Royal Commission on Indian Agriculture to prepare the first part of its momentous report, a task in which it will, no doubt, be very greatly assisted by the work of the special Commission appointed by the Conference to review the agricultural position, to discuss the causes of its present difficulties and to examine the possibilities of international action, particularly as regards the development of the purchasing power of primary producers. The selection of Dr. L. K. Hyder, a member of the Royal Commission, as one of the three delegates from India to the Geneva Conference is especially appropriate, ensuring that India's peculiar needs receive adequate recognition at the hands of a body primarily concerned with the satisfaction of European requirements, and, at the same time, enabling the Commission, in the framing of its recommendations, to enjoy the advantage of first-hand knowledge of the practical obstacles which at present surround the distribution and sale of India's produce in the world's markets. Although objection is taken to the appointment of Sir Campbell Rhodes, the only European member of the delegation, on the grounds that it is contrary to the recommendation of the Preparatory Committee that "the delegates should be chosen for their personal qualifications and should not be spokesmen of official policy," presumably in view of the fact that he is a member of the India Council, commercial interests, both Indian and European, could scarcely find a better or more experienced advocate. The cotton textile industry, which will inevitably figure prominently in the discussions on the industrial situation, is no less adequately represented by Sir N. N. Wadia, who has an intimate knowledge of the conditions of the trade, both in India and Lancashire.

It is pertinent to recall at this juncture exactly what India's responsibilities are to the rest of the world and, secondly, how the great consuming markets of the West stand in relation to India. Briefly stated, India finds herself in the position that her manufacturing industries have been developed under War conditions and cannot now be allowed to die out under the pressure of dumped goods from abroad. She has, therefore, adopted a policy of discriminating protection which is, as a matter of fact, very moderate both in principle and in effect. It

must not be forgotten that other nations, meanwhile, have so adjusted their tariffs as to facilitate the imports of raw materials, while excluding manufactured goods. Thus many countries have raised barriers which keep out cotton and jute textiles while admitting raw cotton and raw jute from India. India has never shown any resentment of this treatment but, at the same time, she insists on the right to apply her own raw materials more and more towards the satisfaction of her own requirements by local manufacture. Primarily, however, India is an agricultural country and she suffers from the serious fluctuations of prices which are so marked a feature of post-War trade. No middleman dare hold stocks and, thus, when over-production occurs, surplus products are left on the hands of the cultivator. India is aiming, therefore, at the progressive improvement of her agricultural methods in order that she may be enabled to produce the quantities and qualities of agricultural goods which are required in both local and overseas markets. The chief difficulty, however, in India is the serious discrepancy which has developed between the prices of raw materials and those of manufactured goods. By attempting to develop her agricultural resources on the most efficient lines with the aid of the Royal Commission's recommendations, both the quality and volume of her produce is being steadily improved, and prices kept at a reasonable level. The manufacturing countries of the world must not forget that India is one of their best and biggest customers, but, if she is to buy their goods on the pre-War scale, they must see that their costs are reduced to a minimum. Otherwise India will be forced to convert more and more to her own requirements the raw materials which she possesses in such abundance; and thus to rely less and less on manufactured goods from abroad.

CURRENT TOPICS.

The Mississippi Floods.

It is an ill wind that brings good to nobody and, however sincerely we must regret the enormous losses of life and property caused by the vast floods near New Orleans, it seems likely that Indian cotton growers and dealers will receive considerable benefit from the conditions which must result therefrom. The price of cotton in India follows the price of American cotton in spite of differences in staple and in the uses to which the raw material is applied. Last year's bumper crop in the United States of nineteen million bales caused a very marked depression in the Indian prices. The latter have already materially improved in spite of some setback due to the unsettled conditions in China. The destruction wrought by the floods in America must entail a further rise in Indian values, which is likely to be maintained as it is not only a question of the loss of one year's crop over the areas that are swept by the water; the damage done may, it is understood, prove to be almost irreparable so far as the American fields are concerned. The reason apparently is that the deforestation which has been going on for several years past in the mountainous districts surrounding the cotton fields is likely to cause the soil, in which the cotton has hitherto been growing, to be swept away into the bed of the Mississippi, causing the silting of the river channel. In any case large areas of land will remain out of cultivation until the embankments that have been destroyed can be repaired. The Karachi market, already a serious rival to Bombay, is likely especially to benefit, in view of the high grade of cotton which is being, or will be, cultivated on the land under the Sutlej Valley and Sukkur Barrage projects.

Swadeshi Banking.

The failure of the Bengal National Bank is an event of comparatively little significance as, though it was the largest native bank in Bengal, all the native banks there are small and fill no definite role in the commercial life of the city. If an Indian commercial house fails, the

disturbance to conditions is much more serious. There is the case of Mr. Sangidas Jesiram, whose failure disturbed conditions in Bombay for months. The Bengal National Bank, which was started at the height of the Swadeshi movement, went through a crisis shortly after the War, and since then it had not showed signs of vigorous health. That it has been compelled to close its doors is, therefore, not surprising. It has been stated that the cause of the failure was very heavy withdrawals following upon the appointment of Mr. Chakravarti, the Chairman of the Board of Directors, as a Minister of the Bengal Government. That is interesting. It would appear, therefore, either that membership of the local Government is enough to destroy a man's credit (which, we hope, cannot be true), or, alternatively, and perhaps more probably, that Mr. Chakravarti's former friends have marked their disapproval of his responsive co-operation by withdrawing their deposits. The banking public in India puts its faith rather in the personnel of a Board of Directors than in the balance sheets, because it has no confidence that a joint stock company would ordinarily be conducted on business-like lines. Too many joint stock companies have failed through sheer mismanagement and the neglect of the most elementary rules of business.

The weakness of banks and industrial enterprises in India is that they have seldom more than one or two directors who really enjoy the confidence of the public. We can look forward to a change only when there is an increase in the number of public men who have established high business reputations. The outstanding success of the Central Bank of India is largely due to the confidence in Mr. Pochkhanawala, the Managing Director, but Mr. Pochkhanawala is probably India's best advertiser, and he has succeeded in giving the public faith in the facts of the balance sheets. There is another danger confronting indigenous banking in India; and that is the general inability of the directors to resist demands for credit from a single quarter, because of the comparatively limited field which is still open to Indian banks. As most Indian commercial houses indulge to a very large extent in pure speculation, there is always the danger of a run on a bank known to be financing a particular house, which has had losses on the Stock Exchange. The failure of the Bengal National Bank is regrettable, because it is certain to prove a discouragement to the expansion of Indian banks, but there is no hope of much progress being made unless it is recognised that an Indian bank must follow a very cautious policy and consequently cannot aspire to paying high dividends. Investors in India have lost so heavily in industrial enterprises during the past six years that there would be no difficulty in raising capital for Indian banks were the impression created in the public mind that, if banks afford only small dividends, stability at least is assured.

The Simla Conference.

His recent visit to Kashmir has given the Viceroy yet another opportunity of touching upon the "unique and profoundly absorbing problem" of the future relationship between the Indian States and British India. His Highness the Maharaja of Jaman and Kashmir might indeed almost have been accused, in his address of welcome, of trying to draw some statement of policy from the Viceroy, but beyond emphasising the need for devoting serious thought to that very delicate question Lord Irwin naturally refused to commit himself, or even to disclose whether he has any definite proposals in his own mind. It has, however, long been a matter of common knowledge that plans for what His Excellency describes as "clearing the ground before we can begin to build" have already been made, and the Conference of Indian Princes, which was held last week at Simla, is no doubt one of the first steps in the direction indicated. Although the cabled reports lay emphasis upon the informal nature of the conversations, or, as *The Times* Correspondent more discreetly puts it, they "are in no sense to be regarded as a conference between the Princes and the Governor-General in Council,"

it is significant that the Viceroy was accompanied by certain members of the Government of India. So little has been said of the position of the Indian States in relation to any possible grant of a further measure of self-government in the area directly under British administration that it is hard to believe that this aspect of the whole question of the reforms has received the attention that its importance merits. The working of the reformed constitution may not as yet have affected to any great degree the position of the rulers of the Indian States, but if the Maharaja of Kashmir was looking a long way ahead when he referred, indirectly, to the time when British India's political aspirations will be fulfilled in their entirety, the time is definitely approaching when the Statutory Commission will be required to examine the constitutional position in the light of our experience of the progress made to date. Whatever may be the outcome of the deliberations of that body, its decision will have to take into the fullest account the views of India's ruling princes that will, no doubt, be laid before them. If their case is to be properly presented no time should be lost in its preparation, and if the present discussions do no more than clear the air and help to clarify the real issue they will have served an eminently useful purpose.

Another Swarajist Victory.

Contrary to general expectation, the voting for the election of Councillors to the Municipal Committees of the Calcutta Corporation resulted in a decisive victory for the Swarajist candidates, all of whom were successful, by 44 votes to 27. The result, following upon the re-election of Mr. J. M. Sen Gupta, is yet another instance of the advantage which their superior organisation and strict party discipline give to the Congress followers in the municipalities and other local bodies. As the "Times" correspondent points out, the work done by the Committees in question is so important that the Swarajists may be said to have regained their former control of municipal administration, although the Coalition of other parties has a nominal majority in the Corporation itself. The immediate outcome of the aldermanic election, it will be recalled, was that the non-Swarajists—consisting of the Muslim, Independent Hindu, and European groups and the new Councillors nominated by the local Government—now number 48, as against the 42 adherents of the Congress creed. The combination is, however, a loose one and, as we explained in these notes a few weeks ago, the issue on the occasion of every real trial of strength depends upon the attitude of the 15 Muslim councillors who have received a definite mandate to make the interests of the community their first consideration. That the Swarajists again relied upon Muslim defections from the Coalition—at least eight members of the group have indicated their conditional acceptance of the Congress programme—is evident from the report that attempts made before the election to compromise on agreed lists of candidates proved fruitless. The writer recalls many occasions in the Bombay Corporation, where the opposition to the Swarajist, or Nationalist, party is similarly loosely organised under the style of the "Progress" party, on which a precisely similar situation has resulted, notwithstanding the often very considerable numerical advantage enjoyed by the opponents of the Swarajist policy.

In reply to a question by Lieut-Commander Kenworthy in the House of Commons on April 28, Mr. Locker Lampson stated that the difficulty which had arisen with regard to the Cairo-Karachi air route was due to a recent and sudden reversal of policy of the Persian Government, who decided not to allow an international airway along the southern coast of Persia. A written agreement, which had it entered into force would have secured the opening of this route to international traffic, had in fact been signed by the Persian Minister for Foreign Affairs and His Majesty's Minister at Teheran, on behalf of Imperial Airways, Limited, in September to October, 1925. Further negotiations with the Persian Government, the Under-Secretary of the Foreign Office stated, were in progress and he did not accept the suggestion that the difficulty had arisen owing to the British Government's refusal to allow Persian aeroplanes or machines belonging to a Persian company to fly to Baghdad.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 21.

Sir Stanley Jackson.

The French very wisely say that "*on ne peut pas contenter tout le monde et son père.*" True. No one can please the world and his father. The new Governor of Bengal will have experienced that before he is quite settled and *au courant* of Indian affairs. On his arrival he was expected to reply to a score or more addresses; what could be expected of a man who had just arrived, and was already overwhelmed with problems that years of previous study had not yet solved? The *Tribune* of Lahore unkindly says that "His Excellency appears to be an apt disciple of the Secretary of State, to whom doubtless he owes his appointment." On the important question of the Bengal *détenus*, he was "as vague and indefinite as his predecessor ever was": what else could he be? The same papers asks "if it is for the repetition of such platitudes that this great cricketer has been translated from the playground to Government House?" The *Indian Daily Mail* of Bombay thinks that "if Sir Stanley Jackson desires to inaugurate an era of mutual trust and confidence between himself and the people of Bengal, he must have the courage to revise the mistaken policy of his predecessor. No amount of verbal sympathy for the *détenus* will improve matters." *Forward* says that Sir Stanley Jackson, after hearing all the addresses, and weighing the grievances of the various loyalist bodies, could not fail to detect where lay the secret of the present degradation of the people, and how foreign domination was possible in India. In an editorial the same *Forward* gives Sir Stanley a lesson in statesmanship: "Real statesmanship consists in establishing the supremacy of eternal moral laws, which even an imperial nation cannot long violate with impunity." Barking dogs seldom bite.

Indian Princes and Reforms.

What Sir John Strachey wrote more than forty years ago about the Rulers of the principal Native States is true even to-day. The Indian Princes are indeed, in most cases, as foreigners to the people they govern, as are Englishmen. The Ruler of many a native state is as autocratic, as indifferent to the welfare and progress of his subjects as any foreign ruler could be. There are about seven hundred states, and millions of people live in them. They begin to feel the need of protection from the oppression and misrule of the Princes. The policy laid down by Lord Lytton in 1879 does not seem to have been followed by the succeeding Viceroys, except in Kashmir. The position of the Ruling Princes in relation to constitutional developments in British India was the subject of a speech by the Maharaja of Kashmir, at a State banquet in honour of the Viceroy last week. Sir Hari Singh said: "There are matters which concern us jointly with British India, in which at present we have no voice. We ask a voice in such matters." The Indian Press points out that the policy of non-intervention of the Government of India is intended as a shield against the legitimate demands of the subjects of the Native States for responsible government. The true fact is that the history of the Native States under British rule is one of intervention, at the will and pleasure of Government. The conditions enforced on the Maharaja of Mysore, for instance, were a valuable precedent, and what is desired is that the Government of India should, in future, deal sympathetically instead of occasionally with similar questions of reorganisation and reforms in the administration of the Native States.

The Bengal Detenus.

The *Rangoon Mail* understands on reliable authority that Mr. Subhas Bose has declined the offer of conditional release recently made to him by the Government of Bengal. He is said to be considering the offer as a humiliating and even cruel joke, inasmuch as it amounts to asking him

to choose between a slow death in prison or a voluntary banishment for an indefinite period. Mr. Bose's health is in an alarming condition. His transfer to another, and healthier, jail is contemplated, but no place has been as yet definitely selected. The *Statesman*, commenting on this piece of news, lightly states that the matter is now of small consequence. Mr. Bose is free to go. His friends ought to persuade him to go, now that they cannot make any political capital out of his illness: the way to recovery is open to him. The *Statesman* goes one further. It adds: "The man who insists on remaining in gaol when the gates are open, and when everybody in authority would be only to glad to see him depart, becomes a figure of mere perversity." At a crowded meeting, the formation, at Nagpur, of a Bengal Détené Release Committee was explained. The main object is to resort to peaceful, constitutional and legitimate individual civil disobedience of laws, such as the Arms Act and the Explosive Substances Act, as a protest against the detention of the Bengal *détenus*. The Committee will not countenance violence in any form, and will not authorise any member to make use of arms or explosives in any manner, so as to cause injury to any individual or to any property. Meetings will be organised, that is all.

Broadcasting in India.

Lately many wireless amateurs in India have picked up American and European stations and succeeded in re-transmitting the programme on a different wave-length for the benefit of those in their immediate vicinity. The Dutch Station which has been heard last week in Calcutta (P.C.J.J.) was fairly clear, and sometimes very loud. The programmes have been of such a quality as to indicate the possibilities of the near future. The Afghan Capital is alive with radio. The listeners-in were tuning their sets to Moscow, London and Paris last week, when the Consul-General for Afghanistan was at Kabul. He said that the messages from Moscow are easier to pick up than those from London or Paris. Many improvements have been introduced in Afghanistan lately. It is proposed to install a giant aerial on the mountain. The inauguration of that powerful wireless station will mark the opening of an era of closer relations with other centres of the civilised world. When His Majesty the Amir has recalled all the Afghan moneylenders, and given them some work in their native land, Afghanistan will become an ideal country.

Here and There.

During the National Week a procession was arranged, led by some prominent Bengalis, starting at 7 a.m., and reaching the place where the ashes of the great leader, Chittaranjan Das, have been placed more than four hours after. Many portraits and mottoes were carried by the processionists. One read "Who can save the country? We." Many took the solemn vow not to use anything manufactured in England, as long as the political prisoners were kept in jail, and as long as the national demands were not responded to.

According to an Indore message, Dr. Kitchlew was deported a few days ago. The order of deportation states that Dr. Kitchlew is a violent agitator, and that his activities have always resulted in some disturbance. He and some others are alleged to have carried on propaganda of a subversive kind. Dr. Kitchlew, who has been motored to Palia, a station fourteen miles away from Indore, has left a message to the Muhammadans, telling them not to lose heart, and to work courageously to defend the helpless men implicated in the riot case, some of whom he was engaged to defend in court.

The Maharaja of Mysore has placed a bungalow at Mr. Gandhi's disposal. The Nandi Hill Sanatorium is thirty-five miles from Bangalore. Mr. Gandhi will remain there for two months in complete rest.

The Bombay Corporation has arranged for a central clearing-house to receive the beggars. The religious fakirs, however, those who are not lepers or professional beggars, will be given a licence; but the difficulty is to

decide whether a beggar is really a religious man doing a penance or choosing a low living, or a professional, made up into a pitiful, underfed, or crippled fellow.

The Ranchi sailed the other day with a number of interesting passengers. Among them were several members of the Royal Commission on Agriculture, who were pleased with the way the Indian legislative bodies have tackled the problems of rural reconstruction. H.H. the Gaekwar of Baroda and the Maharaja of Cooch Behar, the Maharao of Cutch and the Tikha Raja of Kapurtala were in the same boat. Sir Victor Sassoon was there too, and Sir Henry and Lady Wheeler shared the comforts and dangers with Comrade Saklatvala. If Comrade "Sak" had been asked: "Are you not uncomfortable in such superior company?" he might have said, like Gilbert, "I feel like a lion in a den of Daniels!"

The Calcutta Aldermen have been elected. Only one is a Swarajist, the retiring Mayor, Mr. Sen Supta. The election of the new Mayor will be the test of strength between the two groups in the Corporation, the Swarajists (self-government party) and the non-Swarajists. The election of Mr. J. N. Basu is likely. He is among the men put forward by the non-Swaraj party. There is strong opposition to Mr. Sen Gupta's re-election.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, April 22.

Sweated Labour.

It would seem almost impossible that sweated labour should be found in as progressive an industrial city as Bombay, and yet that is the condition of the *bidi* makers here, however much we try to disguise the fact. The *bidi* is not only the vilest smoke imaginable, but is also the cheapest, and the latter probably accounts for its universal popularity. These are principally manufactured by women, who herd together in most unsanitary surroundings and labour away for an unlimited number of hours a day. Now a measure of reform has been suggested, which will make it obligatory for the capitalists who control this industry to allow breathing room for each worker before he can secure a licence. Needless to say, the proprietors of these establishments have protested very forcibly against the new ruling, but the Municipal Commissioner's insistence succeeded in getting it before the Corporation; only for it to be held up there by, what on the face of it appears to be, a wholly unnecessary reference to the Public Health Committee, to make the law less irksome in its application. Most laws are irksome to someone, but of general benefit, so that it is difficult to appreciate the Corporators' intention. The only bright feature of the problem is that the reform, even though late, will ultimately be introduced—and it cannot be too soon.

Sentiment and Sanitation.

Sentiment plays a part in Indian public life quite out of proportion with its value. An instance of this is afforded by Ahmedabad. Never was the need for improvement more evident in any city than it is in Ahmedabad at the present day; indeed, not long since it was proclaimed by a leading research scholar of Bengal to be the most insanitary city in the whole country. Yet, sheer sentiment is holding up all schemes for removing this blot on Ahmedabad's fair name. Time after time town-planning schemes have been drawn up, but up to the present they have never been put into operation. The hitch is the fact that the city wall, erected many centuries ago when the future prosperity of the city was never dreamed of, has so many historical associations, that the local Muhammadans simply refuse to allow it to be demolished. Fortunately the Municipality have at last decided to really get a move on with the demolition and:

expansion, and it is to be trusted that the authorities to whom the Muhammadans intend to submit their protest will take their cue from the Viceroy, who had no hesitation in suggesting that the historic wall of even famous Delhi should fall before the march of progress.

Better Cholera Outlook.

The immediate measures taken by the Public Health Officers to suppress the cholera epidemic that broke out in the Karnatak recently have met with a certain measure of success, and the latest reports indicate that a check has been made. Not only do the figures indicate a diminution of both cases and deaths in each district, as compared with the previous week, but 345 villages have been absolutely cleared, and hundreds of others show merely the slightest of traces of the dread disease. Despite this success, however, many lives have been lost already, and are still being lost. Near Madura a day or so ago, a similar outbreak occurred, and the fair which was its immediate cause, was immediately dispersed and the scourge brought under control before hardly a score of people had paid the penalty. This was the kind of action that was wanted in Bombay, and had it been adopted earlier we might now be in the comparatively happy position of Madura.

Railway Travel.

Complaint has recently been made to the B.B. and C.I. Railway against overcrowding in third-class compartments. We have most of us seen the heterogeneous collection of human beings to be found cooped up in the cage-like third-class carriages on the Indian Railways and it will therefore come as something of a surprise to learn that there actually is no overcrowding. The B.B. and C.I. Railway has carried out more than one census, and the figures returned indicate this remarkable fact. It is rather hard to believe, unless of course the census is based on an average, including both the busy and slack seasons. But it seems very necessary for some further travelling facilities being provided for the third-class passengers, including the provision of lying down accommodation for long journeys instead of their having to sleep almost standing.

Kathiawar Ports.

We seem to be doomed to disappointment in all our endeavours to secure our just rights. Thus, the agitation set on foot in the Assembly over a month ago regarding the free transshipment of merchandise at Bombay and Karachi for Kathiawar ports, which evoked from the Finance Minister a promise at first to order that the principle should cease from April 1 and later to amend this to an undertaking to instigate an immediate inquiry, has so far not borne fruit. India loses a considerable amount of customs in this fashion, and Bombay is particularly hard hit, so it is up to someone to raise the question once again so as to refresh the Central Government's mind, and to keep on raising it. A job for our Chamber of Commerce!

Market Conditions.

The money market has maintained a steady tone throughout the week with call funds in good demand at 6½ per cent., and the trade demand continues. In spite of money conditions Government securities are firm and fractionally higher, owing chiefly to rumours that a sterling loan and not a rupee loan is to be issued. Government's decision to purchase sterling in India by tender has produced no noticeable effect on exchange, but the move is generally considered as a step in the right direction. Gold and silver are steady and cotton prices have been remarkably firm in the face of selling by Japan in view of the financial crisis there, which otherwise has had little or no effect on local markets. Mill shares are dull and miscellaneous in demand.

THE LATE SIR JAMES WALKER.

Mr. Pat Lovett, the veteran Editor of "Capital," pays a characteristic tribute to the memory of the late Sir James Walker in "The Diary of a Ditcher," in the current issue of that well-known Calcutta journal. "There are few people left in Calcutta," he writes, "who were on terms of intimacy with Sir James Walker, this once well-known Punjab capitalist and captain of industry, who died in Switzerland last week at the great age of 82 years. By most of the present generation of Ditchers, he will be remembered as the Life Director of the Alliance Bank of Simla, the failure of which dealt him a blow from which he never recovered. The son of a Punjab policeman, he laid the foundation of his fortune by participation in the brewing industry which ensured the Tommies of the Army in India unlimited supplies of excellent beer. Thereafter Sir James became connected with some of the most important companies in northern India, among others the newspapers "The Pioneer" and "The Civil and Military Gazette" whose policy he controlled for many years." Referring to the great personal interest which Mr. Walker, as he then was, took in "The Pioneer" in particular, Mr. Lovett reminds us that "it was at Mr. Walker's suggestion that the late Mr. Shirley Tremeane started to write "Commerce and Companies" and continued for many years to make it the most lively and critically sound review of Calcutta commerce and industry published in any paper in India. When Mr. Tremeane founded "Capital" he took leave of "The Pioneer" but not of Sir James Walker who seldom failed to drop into "Capital" office on his frequent visits to Calcutta." Mr. Lovett concludes "Before Boulton Brothers fascinated him everything Sir James Walker touched turned to gold. When I met him more than thirty years ago the clarity of his intellect and the geniality of his disposition conquered my worship. *Requiescat in pace.*"

INDIAN MAIL.

Income-Tax Anomalies.

The latest report of the Central Board of Revenue at Delhi shows that India has far to travel before her receipts from income-tax, or her machinery for assessment and collection, in any way approximate to the standard prevailing in, say, this country. The gross income-tax demand in 1925-26, which reflects the conditions of the previous year, was better than in 1924-25, but there was a falling off in the super-tax assessment, accounted for, largely, by the depressed state of the cotton industry in Bombay. But for the improvements effected in the machinery of collection in recent years the revenue, says the report, would have been still smaller. Two main problems face the Income-Tax Commissioners with much of their old insistence. One is to discover new assesseees, who have hitherto escaped taxation, and the other is to "educate assesseees" to the need of making honest returns. Moderate progress only is to be recorded in each case, the one of which calls for considerable vigilance and honesty on the part of the staff, as the authorities in India do not pay rewards to informers, and the other for a change in human nature. Calcutta, the Punjab and Burma apparently enjoy an unenviable notoriety for concealing tax-payers who are liable to income-tax, no fewer than 1025 new assesseees being discovered in the former city alone during 1925-26, while the Punjab delinquents numbered 2,609. The progress made in educating assesseees to the necessity of rendering accurate returns varies in different provinces. In the City of Bombay, according to the Commissioner of Income-Tax (who has recently retired after long and conspicuously successful service in that office) 40 per cent. of the cloth dealers, although making much better profits than in previous years, filed no returns "trusting to the chance of income-tax officers' under-assessing them." In the province as a whole "only 21 per cent. of the returns could be described as correct"

and it is not therefore surprising to find that Mr. Hartley is of opinion that in the majority of assessment cases relating to business an examination of accounts is absolutely necessary." In the Punjab we are told that "at least one out of every three assessee concerned failed to submit a return, or to produce accounts, and of those who produce accounts only one in four could be accurately assessed. . . . Excluding salaried assessee, only 4,073 persons declared themselves liable. 17,951 had to be taxed who presumably wished it to be supposed that they were not assessable." The Board piously repeats the same advice as last year—namely, that honest assessee have everything to gain and nothing to lose by the submission of accurate returns and the production of true accounts. At the same time it must be admitted that whatever improvement is achieved in that direction is to some extent obscured by the gradual raising of the standard set by the income-tax officers.

The Taxation Inquiry Committee, which reported last year, dealt in the main with questions of machinery and not, unfortunately, with broad principles. The *Englishman* goes to the root of the matter when it points out that the real points in connexion with Indian income-tax, with which the Committee failed adequately to deal, are that it is a tax paid in the main by the small European community, while Indians are able to practise evasion on a wholesale scale. Furthermore incomes derived from agriculture are free from tax except apparently where tea companies are concerned. Although the Todhunter Committee admitted that the exemption of agricultural incomes could not be justified by any process of reasoning, the Committee, on which the Indian and the landed element were strongly represented, were able to discover strong political arguments against any change being made at the present juncture. The Government of India has apparently displayed equal timidity. Administrative reports rarely discuss fundamental principles, but the Calcutta paper argues with some reason, that "with Government evincing a distinct tendency to strain income-tax regulations unduly against European companies operating in India, it is time to emphasise that there is equal need for removing anomalies in Indian income-tax imposition as for improving the machinery of collection."

The 1926-27 Trade Returns.

A revival of the import trade, and the unusually small volume and value of exported merchandise, are the two outstanding features of the provisional sea-borne trade returns for the past fiscal year. Although the value of imported merchandise shows an increase of approximately 3 per cent. as compared with the 1925-26 return, exports fell away by nearly 20 per cent. over the same period, and the contrast with the record figure of the preceding year is even more pronounced. Last year, it will be recalled, the position was radically different, the slight decline in the value of the export trade being accompanied by a very much more marked contraction of imports. As, in the period under review, an increased demand for silver, stimulated by the lower prices, was more than offset by the smaller purchases of gold, imports of treasure were also upon a reduced scale and the transformation accordingly finds its most complete expression in the visible trade balance, which declined from 109 to 40 crores, or the lowest point touched since 1923, when the adverse balance of the two previous years was again converted into a modest surplus in India's favour. Cotton manufactures still account for more than a quarter of the total imports, and, while the improvement under the latter heading is, no doubt, mainly due to the remarkable expansion of the motor trade, the rise in sugar prices and, in a lesser degree, the increasing popularity of artificial silk goods, Lancashire's staple shipments to its largest market, appear to have been fully up to the level of the previous year, although admittedly that is not a very high standard of achievement. The marked falling off in the value of exported merchandise, including re-exports, is, of course, mainly, if not entirely, due to the fall in cotton and jute

prices, tea values having remained fairly constant throughout the period. The failure of the wheat harvest, for the second year in succession, and the uneven distribution of the rains were no less important contributory factors, the effect of which is likely to be even more apparent in the current year.

Sir Abdur Rahim has been re-elected to the Bengal Legislative Council in the Calcutta North (Muhammadan) constituency.

Official confirmation is now given of the appointment of Mr. Srinivasa Sastri to be the Agent of the Government of India in South Africa.

Sir F. D. Couchman, late member of the Railway Board, India, has been appointed to fill the vacancy on the board of the Madras and Southern Mahratta Railway Company, in place of the late Mr. George Deuchars.

An India Office *communiqué* states that the King has been pleased to approve the appointment of Mr. Tiruvalangadu Rajusastri Venkatarama Sastri to be Advocate-General of Madras, in succession to Mr. Chettur Madhavan Nayar, who has been appointed a Puisne Judge of the High Court.

The *Statesman* understands that the Eastern Bengal Railway has drawn up a revised and comprehensive scheme for the electrification of the suburban lines of the system and submitted it to the Railway Board for approval and sanction, prior to its presentation to the Secretary of State in Council.

News has been received from India that Lieutenant-Colonel Richard Humphrey Tyacke, late 1st Battalion, The Border Regiment, died suddenly of heart failure, on April 24, at Naggar, Kulu, and that Mrs. Tyacke died at the same place on the following day. Lieutenant-Colonel Tyacke received his first commission in 1869, and retired in December, 1888, on promotion to the rank of lieutenant-colonel.

It is announced in the *Gazette of India* that Mr. P. P. Ginwala has been confirmed as President of the Tariff Board, consequent on the appointment of Sir George Rainy as Commerce Member of the Government of India. Mr. Mathias has been confirmed as member of the Board. It is understood that Mr. Ginwala is shortly proceeding to England on leave, and that Mr. Mathias will act for him during his absence.

The War Office announces that the following officers vacate their appointments in India on the expiry of their present leave:—

Major E. J. Atkinson, 15th Lancers, Commandant, His Excellency the Governor-General's Bodyguard.

Brevet Major C. M. Maltby, M.C., 3rd/9th Jat Regiment, General Staff Officer Second Grade at Army Headquarters.

Lieutenant A. G. L. Maclean, The Queen's Own Cameron Highlanders, A.D.C. to the Viceroy.

During the absence on leave of Lieutenant-General Sir Andrew Skeen the duties of Chief of the General Staff in India will be performed by Major-General W. M. St. G. Kirke.

The death is announced from Nagpur, at the advanced age of 87, of Sir Bezoni Dadabhoy, one of the pioneers of the Indian cotton textile industry. Originally a Goods Superintendent on the G.I.P. Railway, Sir Bezoni joined the late Mr. J. N. Tata in 1876 and after two years was installed as manager of the Empress of India Mills at Nagpur. Under his control the original enterprise was expanded into a great and prosperous concern, which is a model of efficiency and care for the welfare of the workers. After Mr. Tata's death in 1904 Dadabhoy was offered a directorship in the Tata firm but preferred to remain in his old position. He received his Knighthood on the occasion of King George's Durbar Tour in 1911 and only last year rendered service in connexion with the Tariff (Textile) Board's inquiry into the depression in the Bombay mill industry.

The inclusion of Sir Campbell Rhodes in the Indian delegation to the International Economic Conference, which opened at Geneva on May 4, is severely criticised by the Indian Merchants' Chamber, Bombay, and other Indian Chambers of Commerce, on the grounds that the appointment of a member of the Secretary of State for India's Council is opposed to the spirit, if not the letter, of the rule that the delegation should be chosen for their personal qualifications and not be spokesmen of official policy. A formal protest has been lodged with the Indian Government and the authorities at Geneva. The personnel of the Indian delegation was announced in a recent issue of THE NEAR EAST AND INDIA as under:—Sir Campbell Rhodes, C.B.E., member of the India Council and a former President of the Bengal Chamber of Commerce and of the Associated Chambers of Commerce of India and Ceylon; Sir N. N. Wadia, C.I.E., late Chairman of the Bombay Millowners' Association; and Dr. L. K. Hyder, Professor of Economics at Aligarh University, at present serving as a member of the Royal Commission on Indian Agriculture.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Oil Developments in Iraq.

A further stage in the development of the oil resources of Iraq is marked by the recent opening of the Alwand refinery in what are known as the Transferred Territories, on which occasion the interesting statement was made by King Feisul that it was hoped shortly to give news of the construction of a pipe line from Iraq to the Mediterranean. At the last general meeting of the Anglo-Persian Oil Company Sir Charles (now Lord) Greenway, referring to the Naft Khana area, said that the wells drilling in that field extended over a length of $5\frac{1}{2}$ miles, and that the object was to determine whether the oil deposits in the region were so extensive as to justify the large expenditure that would be involved in the construction of a pipe line to the sea-board. From King Feisul's remark it is to be assumed that developments in that region have been most hopeful, for, as has already been pointed out in these columns, a pipe line to the Mediterranean will be an extremely expensive undertaking.

The Nag Hamadi Barrage Contract.

It is excellent news that Sir John Jackson, Ltd., the famous firm of contractors, have secured the contract for the Nag Hamadi Barrage with a tender of £E1,976,621 (£2,029,300). The work is an immense undertaking, as will be gathered from a few particulars. The length of the dam and barrage which will be of masonry will be about 2,500 ft. i.e., wider than the Thames at Gravesend. The total number of sluices or gates for allowing the water to pass through will be 100. The time allowed for completion is in the neighbourhood of three years. Virtually a new town will have to be set up for housing the large number of men required on the works, and this will necessitate the provision of electric light, water, fuel, hospital accommodation, etc. Cableways will be employed spanning the whole width from bank to bank, amongst the largest ever constructed. Three large quarries for stone and granite will be required for the works, and these will have to be established and set to work, and will involve the employment of a large fleet of river craft for transporting, from quarry to site, some of them from up-stream, viz., Assuan and some from below. The engineers are Messrs. Coode, Fitzmaurice, Wilson, and Mitchell.

Bridge over Euphrates.

This is not the only contract which Sir John Jackson Ltd., have recently obtained in the Near East, for the Crown Agents for the Colonies, on behalf of the Government of Iraq, recently placed a contract with the firm for the construction of a new road bridge across the Euphrates at Falluja. The bridge will consist of five spans, each being 180 ft. in length, supported by cylinders which will have a diameter of 12 ft. in the lower section and 8 ft. above, and the clear width of the bridge between kerbs will be 12 ft. The bridge has been designed with a view to accommodating, for example, a 15-ton tractor drawing two 12-ton trailers, with a pedestrian load of 80 lb. per sq. ft. on the remainder of the bridge. Falluja town is about 43 miles from Baghdad, and is on the desert route from Damascus to Baghdad. So far a floating bridge, capable only of carrying vehicles of a gross weight of

4 tons, has done duty, and the fact that it was always liable to damage by floods combined with its low carrying capacity made a more permanent structure essential. The new bridge will be erected about 200 yards from the floating bridge on its down-stream side, at a site where there is now a ferry.

Ottoman Debt Negotiations.

The hopes raised by the news of the pending resumption of the negotiations on the Ottoman Debt question, have not been justified, for the meeting with the Angora delegates in Paris last week was without definite results and the negotiations have again been suspended. It would appear that the difficulty on the present occasion was whether the initial annuity was to be immediate or not. It is understood that it was proposed to reduce the first annuity from the £T2,500,000 which was originally asked for to £T1,980,000, but the conditions attaching to this reduction was that the payment should be immediate. However the Turkish delegates insisted on the initial annuity dating from the commencement of 1928. The fact that the difference of opinion over this point has led to the suspension of the negotiations once more is not regarded as an unduly serious development, for it is believed that the Turks are now sincerely desirous of a settlement of their outstanding obligations, and it may be assumed that the delegates will obtain fresh introductions from Angora which will result in a renewal of the negotiations at no distant date.

Roads in the East.

It was, I think, Sir Arnold Wilson who once said that the Nairn Transport Company had done more to unite Arabia than even the political schemes of the pan-Arabs had ever accomplished. These words of wisdom have sunken deep; so deep, apparently, as to penetrate through the considerable wall of officialdom. For, speaking a few days ago at a court banquet of the Paviers' Company, Sir Samuel Hoare, Secretary of State for Air, said: "Possibly one of the most useful gifts which we could confer upon the East was not so much political institutions and Western thought as scientific development, such as the development of transport." This is an excellent and encouraging sign, that our own statesmen should be perceiving that Parliaments may be natural to the West but

unnatural to the East, that conduits may be more than Constitutions, roads more than rumps, and bridges more than bicameral systems.

Pending Greek Bank Loan.

It is understood that the final arrangements will shortly be made for the issue by Hambros Bank of a loan of the National Land Bank of Greece, and that the prospectus will probably make its appearance in the course of the next four weeks. Naturally precise details as to the loan are at present lacking, but it is believed that the issue will be for an amount of £1,500,000 to £2,000,000. The establishment of this bank was authorised in 1925, but conditions in Greece since then have not been such that it has been possible to carry out the project until the present time. This issue is likely to be only one of a number of Greek loans that are likely to be floated in the near future. Greece's financial needs include a supplementary refugee loan, and a loan to cover the Budget deficits. Hitherto Greece's financial and political situation has been such that it was impossible to look for further assistance abroad, but recent developments, the settlement of the debt question, and the earnest efforts that the Government is making to redress the financial position and to stabilise the currency have materially altered the outlook.

End of Famous Contractors.

Following the death of Lord Cowdray comes the news that the famous firm of S. Pearson and Son (Contracting Department) Ltd., has come to a decision to try for no more contracts. This decision, which will ultimately entail the closing down of the department when the existing contracts, which will take some years to complete, are finished, will be received with widespread regret for the name of the firm had come to be synonymous with British enterprise overseas, and it means the end of a great enterprise which has lasted over eighty years. The development, it must be pointed out, does not affect the other activities of the parent company of S. Pearson and Son, Ltd. In referring to the late Lord Cowdray last week I mentioned what is probably the greatest achievement of the department—the Makwar Dam, which was officially opened only a little over a year ago. That of itself was a prodigious undertaking, and it is only one of the many engineering enterprises which have been undertaken by the firm in almost all parts of the world.

The Rubber Position.

It would not have been unreasonable to expect the further restriction to 60 per cent. to have had an immediate effect on the price of the commodity, but all that has happened so far has been that the price has firmed up a fraction. The explanation is to be found in the fact that the London stocks still continue to increase. They are now over 68,000 tons, and it is expected that for a few weeks yet further increases will be recorded. Then the restriction should begin to have its effect, and the price will begin to rise, but in default of a spectacular movement there can be no great increase in the percentage for six months; for an average price of 2s. per lb. for the quarter will only make the percentage 70, and only in the event of an average price of 3s. being reached will the percentage be 100. The immediate outlook for the companies is therefore not unpromising in so far as they would seem to be assured of a fair price for their actual production. Taking the long view, however, it cannot be maintained that the position is in any way satisfactory. Demand is the crux of the situation, and until it more nearly balances the possible production there can be no stability in the outlook. We may find, for instance, that when the reduction of stocks leads to the 100 per cent. level the stocks will again begin to mount up with the result that further restrictions will be imposed. It is, in fact, inevitable failing the adequate development of the demand.

COMMENTATOR.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, May 3.

The New Customs Tariff.

The New Customs Tariff has given rise to much complaining on the part of importers, as most of the import duties are greatly increased. On the other hand, Roumanian manufacturers will benefit from the high protective duties imposed on articles manufactured in this country. Indeed the main object of the tariff is to protect home industries and to encourage them to develop so as to meet all the requirements of the home market. For each article of the tariff there is a maximum and a minimum duty, the former being applicable to countries with which Roumania has an agreement or convention based on "the most favoured nation" clause. Apparently Russia is the only country not coming under this category. Formerly the importation of certain so-called "articles of luxury" was completely prohibited. Now all such prohibitions are removed (except on explosives, arms, etc.) and instead high tariffs are imposed, which will no doubt have much the same effect. Under this category the larger makes of motor cars apparently fall, as the duty on these is enormously increased, while that on light cars is now lower than before. This will hit the motor car agencies here pretty hard, for the number of motor cars has been increasing lately by leaps and bounds; one agent in Bucharest selling 3 to 6 cars daily. There are very few British cars on the market, however, the majority being American, Italian, and French, as British builders do not appear to have (with one possible exception) realised Roumania's possibilities in this direction. It is true that the exchange has been against them, as regards price, for generally speaking, British cars are more expensive than those of competitive countries. There are now some 7,000 cars on the streets of Bucharest alone.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, in their monthly report, dated April 19, state:—

Arrivals: Kordofan Hashab including Tendelti were about 14 per cent. more than for the same period last year, but this is largely explained by the factor of the movable feast of Bairam (Mohammedan holidays). Inferior Hashab arrivals are practically at an end.

Arrivals of Kordofan at Tendelti, Um-Ruaba and Rahad are now rapidly declining. For the whole of March the arrivals at these stations are down 36 per cent. and for April 39 per cent. as against last year.

The large arrivals at El Obeid and Nahud are in our belief likely to be temporary and are caused by the natives bringing all possible gum as picked and not storing as in previous years.

Between the 17th and 31st March prices gradually rose, the total rise being 1/6. 1st to 5th April the markets were closed owing to Mohammedan Holidays. On 6th April the market re-opened 3d. lower and remained steady to the 14th, but on the 16th and 18th, the days when the market was open, prices were down 9d., so that the net rise between the above dates was ultimately 6d. only.

Customs statistics show that for the period January-February-March shipments exceeded those of last year by 422 tons. During March alone the increase was 23 per cent. We believe, however, that exports during April will be less than last year.

The full rise in Sudan prices was paid in nearly all the important markets overseas, but after the first rush of acceptances demand slackened.

We continue our belief that the crop this year will be much smaller than 1926.

Prices even including the rise are extremely low—the lowest monthly averages for the past eleven years—and there should be no fear of any serious fall in rates.

COMPANY NOTES AND REPORTS.

FRANCO-BRITISH OIL TRUST.

The report of the Chairman of the Franco-British Oil Trust states that with regard to the Roumanian oilfield, he determined, in the interests of the company, to make an exhaustive inquiry as to the possibility of acquiring, on its behalf, a participation in the Roumanian oil industry, and was successful in obtaining an offer of a most valuable group of properties in the best districts for part cash and part shares in this company, the owners desiring to retain an interest in their properties. The conditions of the purchase agreement provide that the Franco-British Oil Trust shall provide a minimum working capital of £10,000 for the purpose of bringing the work already started to a successful conclusion. In order to provide the required working capital the Board has decided to offer 20,000 of the Ten per Cent. Participating Preference shares of £1 each to the shareholders at par.

BRITISH ASSAM TEA.

The report of the British Assam Tea Company, Ltd., for the year ended December 31 last states that the revenue account shows a profit of £9,056, and after adding the balance from season 1925 (£621), also transfer from reserve account (£5,000), gives a total of £14,677. From this has to be deducted:—Corporation Profits Tax, 1924, adjustment, season 1925, preference dividend, garden managers', etc., commission, directors' extra remuneration, and staff provident fund, leaving a balance for disposal of £11,918; out of which the directors propose:—Interim ordinary dividend at 10 per cent. (already paid on December 1, 1926), £3,000; to transfer to income tax reserve, £500; to write off block account, £772; the payment of a final dividend of 20 per cent. (making 30 per cent. for the year) on the ordinary shares, £6,000—£10,273; leaving to be carried forward, £1,646.

GINGIA TEA.

The report of the Gingia Tea Company, Ltd., for the year ended December 31 last states that the revenue account shows a profit of £5,702, and after adding balance from season 1925 (£456), gives a total of £6,158. From this has to be deducted:—Adjustment, season 1925, income tax, and garden manager's, etc., commission, leaving a balance for disposal of £4,266. An interim dividend of 7½ per cent. (less tax) was paid on December 1, 1926, and the payment is now recommended of a final dividend at 12½ per cent., less tax (making 20 per cent. for the year), leaving to be carried forward, £184 5s. 1d.

The value of Turkey's exports to the U.S.A., as declared through the American Consulates of Constantinople, and Smyrna during 1926, showed an increase of more than 26 per cent. over the 1925 total (says an American Consular report). This result was due chiefly to the leading commodities—tobacco, rugs, and mohair—though wool shipments contributed, coming chiefly from Smyrna. Tobacco shipments from Smyrna were about the same for the two years, but these shipments through Constantinople were seven times those made in 1925. Rugs are shipped in about equal quantities from the two ports, Smyrna production having about doubled in the last year. Mohair and gum tragacanth are exported only from Constantinople. The value of the latter export, though not large in proportion to other commodities, was doubled in 1926. Figs, raisins, and emery ore, all Smyrna exports, showed decreases during the year, that in emery ore being particularly noticeable. Nut shipments from the Black Sea coast through Constantinople were also somewhat lower than in 1925.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Electrical Equipment.—The Ministry of Education, Cairo, invites tenders for electrical equipment for Beni Suef Trades School. May 28. (D.O.T.)

Plant for School of Engineering, Giza, Cairo.—The following plant is required for a School of Engineering, Giza:—One 100 k.w steam turbine D.C. generator set with condensing plant; one water tube boiler; one 150 B.H.P. Diesel engine; one Booster set; one experimental Diesel engine of 40-40 B.H.P.; one overhead travelling crane of 10 ton capacity. June 15. (D.O.T.)

General Stores.—The Prisons Administration, Cairo, invites tenders for the supply of various articles required for the year 1927-28. The schedule of requirements is divided into the following sections:—(1) Cotton yarn, cloth, clothing, sacks, etc.; (2) buttons, eyelets, needles, threads, etc.; (3) tents, cordage, twines, bedsteads, enamelled articles, cardboard, etc.; (4) metal polish, blacking boot, heel balls, chalk marking, etc.; (5) paints, oils, grease, acids, etc.; (6) leathers, native and English; (7) fibres (Indian and Mexican), rattan, horse-hair, bristles, etc.; (8) electrical lamps and articles, etc.; (9) copper hardware; (10) tools (carpenters', saddlers', shoemakers', and smiths'), machines, files, etc.; (11) buckles, nails, ironmongery, fire hose, belting, mild steel, galvanised plates and steel, etc.; (12) timber, sindian wood, sanaa wood, handles shoum, etc.; (13) dyeing of clothing, cloth, etc. May 24. (D.O.T.)

Oils, Etc.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of oils, paints, etc. May 15.

Metal Cabinets and Safes.—The Department of the Survey of Egypt invites tenders for the supply of 120 metal filing cabinets and 12 safes. May 18. (D.O.T.)

THE SUDAN.

Plant and Material for Water Installation.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply only of plant and material required for a pure water installation at Malakal for a daily capacity of 20,000 gallons. The contract will be in the following five sections, and any contractor may submit tenders for one or more of the sections: (a) water tower and tank; (b) pump and prime mover; (c) Paterson's Filter, etc.; (d) settling and clear water storage tank; (e) piping and fittings. May 26.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, May 23). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (Birkenhead, May 14); s.s. Holywell for Port Said, Colombo, Madras, and Calcutta (Birkenhead, May 28).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, May 18).

British India Line.—S.s. Dumana for Bombay and Karachi (London, May 14); s.s. Nalgora for Colombo, Madras, and Calcutta (London, May 21).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers if inducement offers (Liverpool, Glasgow, and Swansea, May 14); s.s. Phrygia for Melilla, Cete, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool May 14, and Swansea May 17).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21).

P. and O. Line.—S.s. Rajputana for Bombay (London, June 3); s.s. Nagoya for Colombo, Madras, and Calcutta (London, June 11).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 21).

Ellerman and Papayanni Lines.—S.s. Assyrian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool May 20, Glasgow May 21); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 27); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool May 28, Swansea June 2); s.s. Dido for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (Liverpool, May 28); s.s. Algerian for Algiers*, Malta, Smyrna, Constantinople (Liverpool, June 11). * Subject to sufficient inducement. Cargo taken on through B/Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CIRCASSIA ...	June 1	*BRITANNIA ...	July 8
*MASSILIA ...	June 28	*ELYSIA ...	July 28

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. California, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool Oct. 26; Marseilles Nov. 1.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 10.

Markets this week have worn a much brighter appearance. Gilt-edged stocks are firm, the market feeling confident of another downward movement in money rates. In other investment sections there is good buying and the public are at last showing signs of the speculative spirit, which has been dormant for so long. Dunlops and Courtaulds, the two great industrial favourites, have shown particular strength, while British controlled oil-fields have attracted a large volume of speculative purchases. Rubber shares have not benefited from the latest cut in the exportable quota to 60 per cent. of "standard," the price of the commodity remaining at 1s. 7½d. per lb.

The Economic Conference.

Although it may appear that the deliberations of the World Economic Conference, which opened at Geneva last week, are not attracting general attention, much store is set by the proceedings of the next few weeks by London financial circles, which fully recognise the importance of the gathering. Before their departure the Governor of the Bank of England gave a dinner at the Bank to the British and Dominion delegates to the Conference (the company including ten directors of the Bank, representatives of the Clearing Banks and of the leading acceptance houses and other prominent financiers), thus signifying his recognition of the importance of the occasion. It is not, of course, expected that the Conference will produce any sudden or miraculous results. Even if complete agreement is reached between the delegates from over forty nations, such agreement is not binding on the respective Governments. But much can be achieved by the economic experts assembled at Geneva in mapping out the road towards a restoration of world prosperity. A hopeful point with regard to the Conference is the exhaustive manner in which the field to be surveyed has been explored in advance, independent experts having produced a large volume of documents

covering almost every aspect of the international economic problem, so that data upon which the Conference may base its recommendations will not be lacking.

Shipping Shares.

The proposal of the Royal Mail Steam Packet Company to pay an ordinary dividend of 4 per cent. for 1926, though 1 per cent. below the previous year's distribution, was evidently regarded as satisfactory in the circumstances, for it was followed by a slight advance in the price of the stock. It is expected that the company will return better results for the current year. There is, indeed, a disposition in shipping circles to take a somewhat more optimistic view of the future, but so far shipping shares have shown no considerable response.

With regard to the factors making for optimism, it is pointed out that our overseas trade is recovering, that shipowners are showing their confidence in the future by placing orders for new ships, and that the quantity of laid-up tonnage is on the decline. On the other hand, a document prepared for the Economic Conference puts the world's surplus tonnage at the enormous figure of 10,000,000 tons, while it would seem that those lines engaged in the South African trade are confronted by a serious rate war. It is thus clear that, in considering shipping shares, discrimination is necessary. Doubtless the most promising shares are those on which a dividend has been paid throughout the years of depression, but unfortunately the prices of the majority discount higher earnings in the immediate future.

The Diamond Debacle.

Last November attention was directed in these notes to the changed outlook for the diamond industry which had come about by reason of alluvial discoveries in the Transvaal. The idea entertained in some quarters that these would not prove of lasting significance has turned out to be incorrect; the monthly outputs have continued to show a value of something like £500,000. Moreover, a new threat to the old established producer has arisen in the shape of extremely rich discoveries in Namaqualand. The latter, of course, adjoins South-West Africa, which is already an important producer of the precious stones. The powerful influences behind the Diamond Syndicate, which controls the bulk of the world's output, have made great efforts to induce the Union Government to pass legislation calculated to restrict the production of stones from alluvial sources. In his speech in support of the Bill Sir Ernest Oppenheimer gave figures and made suggestions of an alarmist character. The result was to accelerate the decline for some time past proceeding in the shares of the diamond companies. For example, the deferred shares of the big De Beers undertaking fell to under £16, and those of the Consolidated South-West Africa Company to 19s., and there has since been only the slightest recovery. When our warning appeared prices stood at £18 10s. and 23s. 6d. respectively.

Although the Constantinople districts are the entry points of approximately 70 per cent. of Turkey's total imports, according to recently published figures the Smyrna area leads as an export centre (says an American Consular report). Smyrna and Mersina together, the two Mediterranean ports of Anatolia, are the shipping points for over half of Turkey's total exports. This may be regarded as an indication that the Smyrna hinterland, the rich producing centre for tobacco, figs, raisins, rugs, valonea, opium, and liquorice root, is resuming much of its pre-War activity.

The opening of the Australian Parliament Buildings by the Duke and Duchess of York at Canberra on May 9 imparts a special interest to the illustrated brochure prepared by the Canadian Pacific Railway descriptive of the All-Red Route to the new Capital of the Commonwealth. The short sea journey by a Canadian Pacific liner is followed by a two-days' steam up the majestic St. Lawrence River. Drawing room and observation cars on Canadian Pacific express trains speed the traveller across the prairies and through the Rocky Mountains to Vancouver, where a Canadian-Australasian Royal Mail liner is joined for the journey across the Pacific Ocean. Calls are made at the Hawaii and Fiji Islands, and at Auckland, New Zealand. The brochure, which contains a large coloured map of the world, may be obtained free on application to the Canadian Pacific Railway, 62-65, Charing Cross, London, S.W.1.

Near East Markets

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclay's Bank contains quarterly reports from Alexandria, Khartoum and Jerusalem from which we give the following:

Egypt.

Alexandria, April 16.—The period under review has been marked by a rather better demand for Sakellarides cotton, especially in the lower grades. The supply, however, was more than equal to the demand and, in consequence, prices did not show any marked appreciation. Of late, demand has fallen off, and it would seem that spinners are awaiting the arrival of larger quantities of Sudan Sakellarides. The first arrivals from Tokar have been easily disposed of at prices comparing favourably with the best Egyptian Sakellarides, and if the first samples of the Gezireh crop are any indication of the quality of the bulk, the Egyptian variety, especially the existing stock, will suffer in competition. Upper Egypt has also been neglected, presumably because consumers have secured supplies for some time ahead.

In spite of the general lack of demand, the 'Futures market has remained steady, and although there has been a good deal of tendering, the cotton has all been taken up without apparently straining the market.

Arrivals continue on an extensive scale and total 7,290,177 kantars against 7,043,359 kantars last season. Shipments also show signs of improvement at 5,229,763 kantars in comparison with 5,298,417 kantars. Should shipments continue at their present rate, the carry-over into the new season, although likely to be heavy, should be fully offset by the reduction of acreage.

Owing to anticipations that the situation in China might cause a suspension of the shipment of soya beans and that consequently the consumption of cottonseed for oil production would increase, there has been an active demand for spot supplies of cotton seed. Later, however, the demand declined, owing to the large supplies of seed and oil available, and for the past month, the market has been scarcely steady. Large quantities of seed, which have been reserved for sowing, are still in the Interior, but the crop has had such a good start, owing to favourable weather conditions, that these supplies will soon be liberated for commercial uses.

Sugar.—The market generally is irregular without any special feature. Under the influence of American markets, spot quotations gradually declined and the latest reports from our consuming districts confirm that the demand has slackened. Prices are Russian spot £18½ and Java spot £18½. The stock at the Bonded Stores on April 7, consisted of about 111,000 bags, of which only 5,000 were Java.

Cotton Goods.—Markets were quiet throughout the early part of the past quarter, but later, owing to the native holidays, the situation improved. Prices have continued easy, as a result of the keen desire to sell shown by holders, but the substantial improvement in the local statistical situation is now giving a steady undertone to the markets. The stock at the Bonded Stores shows a reduction of about 3,000 packages, as compared with the middle of January.

Flour.—The market continues to be active, and the demand for local consumption and export has been satis-

factory. Prices are steady, owing to reduced stocks, Australian being quoted £17 spot.

The Sudan.

Khartoum, April 12.—The situation has undergone no appreciable change during the last three months. Durra prices are still high and are the main cause of the general depression, while there is a general financial stringency, accompanied by a lack of money in all the import markets. Cotton exports last year amounted to 120,000 bales (400 lbs.) against 43,000 in 1925, and this year's crop is estimated at 120,000 bales of Sakel and 21,000 bales of American. There has been some disease in plantations north of Khartoum and yields in these districts are poor, but the Gezireh scheme is not affected.

The foreign demand for gum has been regular and prices are steady, at piastres 56/66 per kantar, at El Obeid. The arrivals this year are about the same as last year, but reports and estimates as to the crop are conflicting. During 1926, exports of gum amounted to nearly 23,000 tons, or 4,000 tons more than in the previous year, but prices averaged only piastres 73 per kantar, at El Obeid, against 105 in 1925, and although the value at Port Sudan, with freight and royalties paid, was £E50,000 more, the actual amount paid to the native is estimated at £E18,000 less than in the previous year. The groundnuts crop was short this season, being only 2,000 tons, against 10,000 tons last year, while the sesame crop was about 4½,000 tons, as compared with 8,500 tons last season. The prices of both commodities were high, and this fact, if climatic conditions are favourable, should stimulate the natives to increase production next year.

The import market is still depressed. Business has been slack in Khartoum, Omdurman and Wad Medani, which are the most important local markets. Medani seems to have been severely affected, and the success of the Gezireh scheme is certainly not reflected, at present, in the local native trade.

Palestine.

Jerusalem, April 16.—General financial and economic conditions continue to be difficult. With the exception of a slight improvement, which still continues, due partly to the approach of Easter festivals and partly to funds realised on orange sales, market activities have remained unchanged, and hopes of permanent improvement in the near future are not strong.

Cereals.—The market has displayed a certain amount of activity and most of last year's stocks are now exhausted, owing to the export of large consignments. The price of sesame has been decreasing, as a result of imports from India and the Sudan. Late sown barley has germinated evenly in southern districts, but it is anticipated that the crop will not be of great importance. In the north, late wheat and barley appear to be more promising, while along the coast, prospects for both early and late sown cereals are satisfactory. In central and eastern districts, cereal plantations appear to have developed well and show promise of an excellent yield.

Oranges.—Latest prices reported from England range between 13s. and 14s. per case, as compared with 20s. and 22s. per case during the corresponding period last year. This wide difference is attributable to the heavy storms which occurred in February and the first half of March and which caused considerable dislocation of shipping. In consequence, a great deal of gathered fruit was shipped in bulk, during the intervals of finer weather, resulting in an uneven supply and a fall in prices. The amount of exportable oranges was reduced as a result of bad weather, by about 25 per cent. The season is now nearing an end and the last shipments of about 40/50,000 cases will probably take place within the next two weeks. The total amount so far exported to the United Kingdom is about 2,269,000 cases, against 1,1590,300 cases last

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester, and FURNESS, WITTHY & CO., Ltd., Royal Liver Building, Liverpool

year, but, in view of the prices obtained, the season is not considered to have proved a very successful one.

Manchester Goods, etc.—A slight activity was felt on the Palestine markets, owing to the approach of the Easter Festivals, but a very considerable reduction in sales is recorded, compared with the corresponding period last year.

Commercial Bookshelf

PALESTINE'S CHIEF INDUSTRY.

"Citrus Fruits in Palestine: Their Development and Prospects." By A. Goldwater. (Palestine Corporation, Jerusalem. 5s.)

This little brochure makes its appearance at a very opportune moment. For many weary months Palestine has been enduring an economic depression which still prevails, and one result of which has been a rise in the emigration figures. There is nothing remarkable in this depression, though the causes which have produced it are widespread. Viewed broadly, it is indeed the inevitable development when an attempt is made to force the industrial progress of a country which has hitherto looked to agriculture (using the term in its widest sense) as the main foundation of its economic life. The operative causes have included those which have affected all the world markets, but if these had not been present Palestine would probably still have been faced with serious difficulties, for a region whose primary need at the moment is for agriculturists cannot absorb instead an undue proportion of town dwellers. That is the problem of Palestine. The many growing industries which have been established in recent years hold out considerable promise for future development, particularly when the great schemes now in train are completed, but the greatest scope for Palestinians at the present time lies in the extension of fruit growing. The Jaffa orange has been Palestine's stand-by for very many years, and it is very clear that the possibilities for an increase in production are very great, while the orange is only one of many fruits that Palestine can grow for the world's markets. In this direction there is ground for marked optimism, and Mr. Goldwater's work is very welcome because it will help to concentrate attention on this very remunerative branch of agriculture.

In his introduction Mr. Goldwater emphasises the importance of the Jaffa orange in Palestine's export trade. Thus in 1925 it represented 46.8 per cent. of the total exports. He further points out that climatically the conditions in Palestine resemble those in Southern California. The fruits grown in addition to oranges include water melons, olives, almonds, grapes, figs, apples, pears, apricots, peaches, dates, and bananas, which, it doubtless will be admitted constitute an imposing list, and are an obvious testimonial to the conditions which obtain in the country. Apart from oranges, however, only water melons play a really important part in the export trade. As regards oranges Mr. Goldwater remarks that while "Palestine holds a relatively high position as a supplier to the United Kingdom it holds so far a very unimportant position in the world's production." Actually Palestine's production of oranges in 1922 represented no more than 1.8 per cent. of the world's output. As illustrating the productivity of the country, however, it is interesting to note that Palestine's output per dunam was higher than the corresponding figures for Spain and California, the respective figures being 50 cases, 43 cases, and 26 cases.

More than half the brochure is devoted to a detailed survey of the financial side of the orange industry, including a number of tables showing the comparative cost and yield of various orange groves. As Mr. Goldwater shows, however, there are various difficulties in the way of an appreciable expansion of the industry, and he cites the following essential requirements of the settler; (1) land at a reasonable price; (2) the avoidance of heavy expenditure for irrigation plant; (3) the possibility of obtaining a part of the capital required as a long-term

loan; (4) expert advice to be available until the settler is proficient. There is also the very important question of the marketing of the oranges. Half the problem of the Jaffa is to place the fruit on the market in first-class condition. Mr. Goldwater also touches on grape fruit, which is coming in for increased attention in Palestine, and points out that it has two advantages over the orange, for it comes into bearing one or two years earlier and it commands a higher price. It is not surprising, therefore, that most of the new groves contain a substantial percentage of grape fruit trees. The citrus fruits, with which Mr. Goldwater deals, are, of course, as will be gathered, only one part of the wide question of fruit growing in Palestine. Great hopes are based on the production of grapes, for instance, and of certain other fruits, but they are, and are likely to remain, the largest part for the Jaffa will not easily be displaced from its present proud position.

Sir Alfred Moritz Mond, Bart., M.P., has been appointed a director of Westminster Bank Limited.

Sir Francis Dundas Couchman, M.Inst.C.E., late member of the Railway Board, India, has been appointed to fill the vacancy on the Board of the Madras and Southern Mahratta Railway Company in place of the late Mr. George Reuchars, C.I.E., M.Inst.C.E.

An exhibit of Southern Rhodesian oranges was awarded the gold medal at the Poona Agricultural Show, and this success is stated to open up the prospect of a profitable market for Rhodesian oranges in India, says a report of the Empire Marketing Board. Three consignments, each of 200 cases, are to be sent to India during the coming season.

The launch took place on April 30 at the shipbuilding yard of Messrs. John Readhead and Sons, Ltd., South Shields, of the steel screw steamer Tunisia for Messrs. Frank C. Strick and Co., Ltd., of London. The vessel is designed to carry about 7,340 tons on a light draft, and is of the following dimensions, viz.: 384 ft. overall by 52 ft. 3 in. by 28 ft. 3 in.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK

Head Office: 41 Lothbury, London, E.C.2

Company Meeting.

CALCUTTA ELECTRIC SUPPLY.

Presiding on May 4 at the annual meeting of the Calcutta Electric Supply Corporation, Ltd., in London, the Chairman (Lord Meston of Agra and Dunottar, K.C.S.I.) said that in 1926 they issued 150,000 ordinary and 150,000 preference shares, the premium on the former, £97,500, being added to the capital reserve. The redemption of the first mortgage debentures substantially reduced the prior charges and the balance-sheet was considerably simplified. The normal growth in the sale of current was hampered by trade depression, recurring outbreaks of mob violence, and, towards the end of the year, prolonged labour troubles experienced by one of their chief manufacturing customers, rendering it unable to take its usual supply of electricity. Against this, and the additional cost of running the new Southern station, they were again fortunate in getting coal at very low prices. They were also beginning to realise the economies arising from the greater efficiency of the thoroughly modern plant now forming the greater part of the equipment. On balance the net profit was about £8,000 more than in 1925, and the dividend was maintained at 12 per cent. for the year. The outstanding feature of the year was the bringing into commission of their second power station at the Calcutta Docks, on a side on the river bank admirably situated with reference to the downstream mills and for any service they might render to the future electrification of the railways south of Calcutta. There were three 6,000 kw. generating sets, to which a fourth was being added, and it was planned with a view to extension as required up to 100,000 kw.

The report and accounts were unanimously adopted and the proposed capitalisation was approved.

CHESS.

By "CARO-KANN."

I give this week another difficult end game. White has to play. What is the result?

Until the Whitsuntide congress at Scarborough there will not be much activity in the chess world.

Complaints are becoming more frequent of the dullness of the average tournament game, and it really looks as if chess as well as cricket is in need of some alteration of the rules. As things are at present games are not infrequently decided by sheer staying power, and while there may be a good deal to be said for a victory that is due to superior stamina, it has to be admitted that the nature of many of the present-day games is enough to break the heart of the stoutest exponent of real chess. Only too often one feels, to use a cricket allegory, as if one was bowling at a series of stone-wallers. If the slightest prospect of combination play develops one has to face a number of exchanges until all danger of the development of difficult positions has been averted. The frequent draws that now occur point the moral. What I personally would like to see would be the annulment of the right of castling. That, if anything, would bring about lively games and would most effectually cancel the tactics of the stone-waller.

NEWS FROM ALL SOURCES.

Crop prospects in the Balkans, particularly in Roumania and Yugoslavia, are very favourable.

The Roumanian Maritime Service is to order eight new vessels—three passenger and five cargo—of medium size.

Roumania's foreign trade returns for the first three months of the year show an excess of imports over exports amounting to 243,387,258 lei.

Sir Malcolm Stevenson, the first Governor of Cyprus (1925-26), has been appointed Governor and Commander-in-Chief of the Colony of Seychelles.

The production of the Dacia Romano Petroleum Syndicate for April amounted to 1,956 tons. Eleven wells were in production, nine wells are in drilling and one is being fitted up.

It is announced that offences against exchange regulations in Yugoslavia to the detriment of the dinar are to be severely dealt with, the fines impossible reaching a maximum of 300,000 dinars.

Work has been begun on the new Danube bridge at Belgrade which is to join that city with Panchevo. The bridge, which will be 1,280 metres in length, will cost 300 million dinars.

The Greek President, Admiral Koundourotis, convinced of the Chamber's intention to pass the Constitution before May 12, has officially withdrawn his resignation, promising to remain in office till September at least.

The Ceylon Association in London will give a dinner at the Hyde Park Hotel on May 19 in honour of Sir Herbert J. Stanley, who has been appointed to the Governorship of Ceylon in succession to Sir Hugh Clifford. Those wishing to attend should communicate with the Secretary, Ceylon Association in London, 6, Laurence Pountney Hill, Cannon Street, E.C.4.

At a lonely point of the road some 20 miles north of Jerusalem, says *The Times*, three brigands on May 5 shot at and stopped the car containing the Anglican Bishop in Jerusalem and Mrs. MacInnes, and robbed them of all their money and valuables. The brigands murdered the driver of the following car, which was full of tourists, and wounded a woman who was travelling in it before making good their escape. All the members of the Bishop's party were unhurt. The brigands had already robbed a party going north.

Reference is made by the United States Consul at Aleppo in a recent report to the slump in the export of Armenian hand-made handkerchiefs from Aleppo. In addition to a decreased demand, the industry was also somewhat adversely affected by a scarcity of workers at times during the year. Linen imported for handkerchiefs is exempt from duty, but a deposit is required at the time of importation. The formalities and length of time required to obtain refunds of such deposits are said to have discouraged some concerns from undertaking this business.

NEAR EAST MARKETS FOR AGRICULTURAL MACHINERY.

Some progress has been shown in Turkey since the War in the introduction of modern agricultural implements, although a setback occurred in 1926, as unfavourable climatic conditions caused a material decrease in the agricultural production of the country last year (says Mr. Charles D. Martin in an article in the United States "Commerce Reports" on the markets for agricultural machinery in Western Asia). The economic and commercial situation was generally uncertain throughout the year, and this was aggravated by the enactment of new measures of taxation and the creation of a number of State monopolies. In 1925, however, there was a general improvement in the agricultural and economic situation, which stimulated the trade in agricultural implements. The Turkish market gives decided preference to American power farm and harvesting machinery.

Horse ploughs and old-fashioned reaping machinery are the most important items among the horse-drawn implements imported into Turkey. Excepting for the Smyrna, Aidin, and Magnesia districts, the horse ploughs used in Turkey are mostly of German and Czechoslovak makes. The preference for German ploughs is largely the result of sales by the Bagdad Railway Co. of German implements of various kinds to farmers along the line of their railroad.

In general the use of modern farm equipments is increasing steadily but slowly in Turkey, and the Government and agricultural schools are making a strong effort toward acquainting farmers with the use and advantages of up-to-date machines. The principal imports of implements into Turkey are ploughs, reapers, binders, and threshers, imports of other classes of implements being unimportant.

Syria is of moderate importance as an agricultural country, and modern agricultural implements and machinery are used, but the poverty of the population and the abundance of relatively cheap labour serve to prevent the extensive use of such equipment. The demand for implements in Syria is limited. However, the farm land is well adapted to the use of machinery, and, although this market does not offer much inducement at present, there are possibilities for creating a demand for modern implements.

The market for implements in Palestine lies principally among the Jewish and German colonies, of which over 100 exist in the country. Most types of modern implements are used in these colonies, and a favourable factor tending to their greater use is the rapid increase in the number of young farmers with skilled knowledge of modern agriculture. The native Arabs still cling to the primitive methods of their ancestors, but a number of British steel ploughs have been sold to the Arab farmers. Germany is the chief source of supply for the implements used in Palestine, followed by the United States, the United Kingdom, France, and Czechoslovakia.

The Arabian Peninsula consists of a large desert area

with the exception of a few fringes around the coast. There is, of course, some agriculture in this region, but none of any importance. The agricultural methods prevailing in Iraq (Mesopotamia), which lies to the north of the Arabian Peninsula proper, are similar to those in vogue in the same region centuries ago, and, consequently, the country does not yet rank as an important market for agricultural implements. Its annual purchases are small and the chief promise for an increase lies in the development of irrigated areas. The country is largely dry and arid and irrigation is essential to agricultural development. At present there is an ample labour supply to cultivate the crops grown on existing irrigated areas, but when the various agricultural schemes in contemplation are completed it is expected that the demand for labour will exceed the supply, and this will naturally create a demand for labour-saving farm equipment. A few tractors have been introduced, nearly all of one American make, and a few reapers and binders are being used in the country. There is some demand for pumping outfits for irrigation work but, on the whole, the present market for agricultural machinery is negligible.

Conditions in Persia are similar to those in Iraq. Present agriculture is still in the primitive stage in which it has been for centuries. The ox is the work animal of the peasant and a primitive wooden implement serves as a plough. The water supply is insufficient throughout a large part of the country, but little has been done toward establishing modern irrigation works, although some irrigation is effected by a system of shallow and open ditches owned and administered by the large landholders. The principle problem is one of water conservation, as the water supply is dependent upon the winter snowfall, except in the Caspian and Gulf littorals, where precipitation is heavy. The most encouraging features about Persia as a market are the recent economic improvements in the country and the favourable attitude of the Government toward the introduction of modern agricultural implements.

The traffic receipts of the South Indian Railway Company for the week ended March 31 amounted to Rs.19,41,802, making the total from April 1 Rs.5,23,82,666.

Lord Greenway took the oath and his seat on elevation to the peerage in the House of Lords on May 4.

The directors of the South Indian Railway Company announce the payment on July 1 of an interim dividend from surplus profits of 2 per cent., less income tax (compared with 2 per cent. paid on July 1, 1926), making with the interest guaranteed for the half-year ending June 30, 1927, namely, 1½ per cent., less income tax, a total distribution for the half-year of 3½ per cent.

Holders of not less than 25 shares of the Suez Canal Company who are desirous of being present or represented at the general meeting to be held in Paris on June 13 must justify, at the head office of the Company, 1, rue d'Asorg, Paris, before June 9, having deposited their shares with the company or at any of the company's appointed agents. Shares may be deposited in London with N. M. Rothschild and Sons, who will in due course deliver a card of admission to the meeting, or a form of proxy to enable the holders to be represented by other shareholders having the right to vote.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report dated April 28, state :—

Since our last report the market has been active and prices show a substantial rise. The week's summary of price movements is as follows :—Sakellaridis : May, 28.45 dollars, 1.68 dollars up; July, 28.85 dollars, 1.85 dollars up; November, 29.75 dollars, 2.04 dollars up; January, 29.65 dollars, 2.09 dollars up. Ashmouni : June, 20.48 dollars, 0.81 dollars up; August, 20.80 dollars, 0.89 dollars up; October, 21.65 dollars, 1.35 dollars up.

Sakel.—The news received during the week of serious floods in the cotton belt of America, particularly the Mississippi valley, induced short covering in our market and this, coupled with heavy buying on Liverpool account, caused a sharp advance in prices. The market is firm but the rise has not behind it the one fundamental factor necessary to maintain the advance, a real revival in the trade demand.

The demand from spinners has been slightly better than last week but with the very heavy existing stocks, it requires more than a slight improvement to justify an advance in prices such as we have seen during the last few days. The rise is more or less speculative and is based on a prospective smaller supply of cotton next season; the greater part of the buying has been on November.

Uppers.—This market has also been active and prices show a considerable rise, the season for the advance being, naturally, the same as for Sakel. Reports are that the districts most affected by the floods in America are those producing the long staple cotton with which Ashmouni competes. If serious damage is confirmed, the position of Ashmouni will, of course, be considerably improved; for the time being, however, reliable information is meagre.

The demand from abroad continues to be fairly good and we should say that the volume of business put through is about equal to that of last week. We consider the statistical position of Ashmouni to be fairly sound and, on present indications, we do not anticipate that the carry-over of this variety at the end of the season will be at all heavy. There has been heavy speculative buying of October during the whole week and the premium over June has increased to 117 points.

At the third April tender, 12,250 kantars dockets were issued, making a total for the month of 50,250 kantars.

The week's receipts amount to 97,982 kantars against exports 131,548 kantars; the stock in Alexandria stands at 2,981,728 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to April 21, 1927, are as follows :—Arrivals : Lower Egypt, 4,483,000 kantars; Upper Egypt, 2,749,000 kantars; total, 7,232,000 kantars. Exports : Sakel, 2,351,139 kantars; Ashmouni, 2,834,021 kantars; Various, 361,756 kantars; total, 5,546,916 kantars.

Spot : We have had another short week due to holidays, and Minet el Bassal has only been open four days. A moderate business has taken place and spinners have shown rather more interest in our cottons. Sales for the four days amount to about 10,800 bales, of which we estimate 5,100 bales Sakellaridis, 5,200 bales Ashmouni and Zagora, 250 bales Pilon and 250 bales other varieties. The sharp rise in contracts has brought out a lot of cotton, and all varieties have been freely offered, though the quality of the Sakel offerings shows no improvement.

Sakellaridis : The demand has improved a little and a very fair business has been done, covering all grades except the best. Spot differences are without much change except for the grades below Good Fair, which have eased slightly.

Ashmouni and Zagora : Have been in very fair favour

with buyers, and a fairly good business has taken place. All grades have been dealt in. Spot differences are without much change for the medium grades, slightly easier for the low qualities, and distinctly dearer for the high grades.

Pilon : Continues in fair request. Spot differences are without much change.

White : A fairly good business has been done. Spot differences are about as last week. A few bales of Nahda and Fouadi have been done.

Up-country : The reports that the ginning factories will not be allowed to work after the end of the month are still unconfirmed and inquiries on the point at the Ministry of Agriculture have not, so far, elicited any definite announcement. There is still plenty of cotton in the villages; a large proportion of this cotton is pledged against Government loans.

New crop business has been practically nil during the past week. The rise in prices has had the effect of rendering growers very pretentious whilst, on the other hand, the export houses, having very little new crop sold ahead, are not at all prepared to pay the prices at present being asked.

Crop, 1927 : Weather conditions have been slightly less favourable during the past week, especially in the North Delta, but the crop has not suffered and is progressing normally. Crop news from Upper Egypt is very satisfactory. Water is in ample supply everywhere.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 4 :—

Egyptian Futures.—Sakel Contract.—Values in this market throughout the past week have shown a strongly advancing tendency, consistent speculative support from both Continental and American sources, coupled with highly successful "bullish" manipulation in Alexandria driving prices within measuring range of the highest of the season, to-night's close showing a gain of 37 to 41 points for near and 37 to 43 points for distant positions since we last wrote.

The underlying influence in the present movement continues to be furnished by the increasing seriousness of the floods in the Mississippi Valley, and no doubt much of the recent buying that has been attracted to our market is due to fears that most of the inundated area, which comprises a greater part of the best staple growing districts on the other side, will be unworkable this season. Owing to the fact that the Sakel acreage in Egypt has been restricted by Government decree, the new crop position at the other side had been previously rather vulnerable to any decided detrimental news; consequently, so far, the recent movement, which we must confess is of a mainly speculative character, has met with very little opposition, and we fail to see any fresh supply of contracts coming into the market of sufficient weight to cause values to develop any material reaction. Spinners, generally, have been quite disconcerted by the

Notes of the Week.

The Little Entente.

One of the regular meetings of the three States comprising the Little Entente was held last week at Joachimstal. The regularity of these gatherings tends to rob them of any special significance that they might otherwise have, as they resolve themselves of necessity into a mere friendly exchange of views, which is not intended to lead to any definite action. In its original conception the Little Entente was a warning to Hungary that she must not expect to profit by any lack of watchfulness on the part of the Allied Powers, if she attempted to drive a coach and four through the Treaty of Trianon. As the years pass, most European States are beginning to realize that peace and friendliness all round are likely to be more useful to the Continent as a whole and to individual countries in particular than the maintenance of a stereotyped hostility based on the conditions in which the Great War was fought out. Yugoslavia has been the first of the three States forming the Little Entente to realize that economic co-operation with Hungary would have its advantages. Rather, however, than admit that the Entente has outlived its purpose, Dr. Benesh, its creator, is likely to look round for ways and means to justify its continued existence. The pact gratifies the *amour propre* of Czechoslovakia, but is of no manifest use at this stage to either Roumania or Yugoslavia. The subjects of more vital importance to these two States are debarrd, if not from discussion, at least from any practical decision. The Little Entente provides no reason why Yugoslavia should burn her fingers in a Russian fire for the sake of Roumania, and it is no concern of Roumania, if Yugoslavia fails to hit it off with Italy, who has gone out of her way to do Roumania a good turn. If, however, Roumania and Yugoslavia were to substitute for the Little Entente a Balkan federation based on geography and sound economic considerations, they would have a reason for standing four-square with the

rest of the Peninsula against all encroachments from whatever quarter they came, and the fact of their solidarity would bring them both peace. The existence of the Little Entente on the other hand, has encouraged Italy to seek to curry favour with Roumania, and has not made the Soviet Government in any way more amenable on the subject of Bessarabia.

The Albanian Dispute.

Further reference at question time in the House of Commons last week to the subject of Albania shows how unwilling those who have the interests of the Balkans at heart are that a more definite attempt than is at present contemplated should not be made to clear up the unsatisfactory situation in which the Italian effort to raise a scare over Yugoslav designs on Albania has been left. Mr. Noel Buxton was anxious that any inquiry that might be carried out in regard to Albanian affairs by representatives of France, Great Britain and Germany should be undertaken with the authority of the Council of the League of Nations; but the reply that he received was to the effect that the step was considered unnecessary and liable to interpose delay in the prosecution of the inquiry indicated, for which however, it was not anticipated that the need would arise. He also elicited the information that, as far as was known, no representations were addressed at the time of the recent scare by the Albanian Government either to the Yugoslav Government or to the League of Nations. The Government spokesman might have added that Albania had not even approached the Italian Government on the subject and that the latter's action in addressing the Powers was taken entirely without reference to the Tirana Government. This latter aspect of the matter is, perhaps, the most sinister, as it indicates misplaced zeal on Italy's part in interfering in Albanian affairs before the conditions contemplated in the Tirana Treaty had actually arisen.

In these circumstances Ahmed Beg Zogu's action in endorsing Italy's action after the incident will have strengthened the conviction of those of his fellow countrymen who contend that he is too subservient to his Italian benefactors for the real interests of Albania.

The Colonies in Conference.

The Colonial Office Conference that has been in session for a week is covering in the nature of things a sphere that extends far beyond the immediate interests of Cyprus and Palestine, the only territories represented which come within the purview of THE NEAR EAST AND INDIA. The sound note struck by Mr. L. S. Amery, Secretary of State for the Dominions and Colonies, in his opening speech in which he laid stress on the necessity for correlating and unifying the technical services of the Colonies, must appeal to Cyprus with its forest wealth and other natural resources. The island would also stand to benefit by any scheme which improved the status of the Service from which its officials are drawn. The reproach that Cyprus has been too long the Cinderella of Great Britain's colonial possessions could probably never have been levied, if there had not been a more or less watertight system of Colonial service in vogue, which helped to place the island in a very remote corner of the map. Similarly both Cyprus and Palestine stand to gain from any improvement in the machinery for making their trade conditions better known and from extending information regarding their products. For Palestine inclusion in the Colonial Office Conference will serve to emphasize the anomaly that hitherto the Mandated Territory has not been accorded the advantage of Imperial Preference in regard to some of its products, notably its wines. There will not be time in the deliberations to discuss all the points that individual representatives would wish to raise; but the status of the Mandated Territories in the matter of Imperial Preference applies to Tanganyika as well, and it should be possible to have the problem authoritatively decided before the delegates disperse.

Egypt and the Wahhabis.

The conduct of the Egyptian Government in regard to the *hajj* of 1926 was noteworthy for its common-sense, and the fact that it was then persuaded to send the Holy Carpet to Mecca was taken by the supporters of the Wahhabis as one of the most encouraging signs for the future of Arabia and of Islam. The dispute that subsequently occurred, by Mina, between Egyptians and Wahhabis, was an ominous sign, admittedly; but by many observers it was thought soon to have been forgotten.

Certainly King Ibn Saoud, in sending his eldest son on a mission to Egypt and by various gifts to King Fuad, did what he could to smooth things over. The Egyptian Government, however, who may naturally have accepted the Egyptian version of the incident last June, was not satisfied with such manifestations of good-will, and a few weeks ago specifically inquired of the King of the Hijaz concerning the conditions under which hajjis might this year perform the traditional ceremonies. It is stated that the Wahhabi leader has declared that he could not permit the armed escort of the Mahmal to accompany it to Mecca—remembering, no doubt, the reputation that the "Amir al Hajj" gained last year, and the danger that might arise out of an armed defence of it. He is also stated to have declared that the camels bearing the Mahmal would not be allowed to perambulate the Kaaba, and that pilgrims must not embrace the tombs. Smoking, however, is said to have countenanced, provided that it be done without ostentation. For the Egyptian Government this statement has proved unsatisfactory; and it is declared from Cairo that neither the Holy Carpet nor the Mahmal will be sent to the Hijaz this year. Even more: the Government of King Fuad has warned Egyptian pilgrims that they journey to the Holy Land of Islam at their own risk.

A Question of Dignity.

Now it seems fairly obvious from the nature of the Egyptian Government's inquiry and of King Ibn Saoud's reply that the hitch has arisen mainly over a question of dignity. The willingness of Egyptians in general to make the pilgrimage is beyond doubt; nor does there appear any disposition on the part of the Egyptian Government to make open quarrel over possible doctrinal differences between Misris and Wahhabis. The dispute amounts to this: that the Egyptian Government insists upon an armed escort to accompany the Holy Carpet and Mahmal in a land for the security of which King Ibn Saoud holds himself supremely and wholly responsible. No doubt in times past, when *badawin* were wont to raid the pilgrims, an armed escort was desirable and necessary; but since, according to the Wahhabis, the pilgrim routes are now entirely safe, such a force would be derogatory to the dignity of King Ibn Saoud. To Egypt, however, the renunciation of such a precaution appears like a surrender of traditional rights. This upshot of the affair must be a disappointment to those who saw in the better administration of the Hijaz under the Wahhabis the possibility of a revival of Islam, although, even without Egyptian official participation, the 1927 *hajj* is an assured success. Muslims who are hostile to the Wahhabis will doubtless be encouraged by this latest rebuff to one who fain would rule as an independent and sovereign head of a State. To other observers, who are not so disposed to take sides in this Islamic matter, the negotiations between King Ibn Saoud and Sir Gilbert Clayton will have assumed additional importance.

A Strike in Persia.

Whatever be the fate of strikes in Great Britain, it is manifest that they have not lost their efficacy in all countries. On May 9 the Persian Majlis reduced the wages of Government employees by ten per cent. On May 10 the Government employees struck against this decision. On May 11 the Majlis relented. Nothing very strange in this, perhaps, but what makes the incident worthy of record is that the Majlis, despite the opposition of the American Financial Advisers, had voted themselves a fifty per cent. increase of salary. A charmingly Oriental way of robbing Peter to pay Paul! The piquancy of the situation lies in its effect upon the American Financial Mission, whose conscientious endeavours have more than once been met with ingratitude. Dr. Millsbaugh is not afraid, indeed, of unpopularity, but it remains to be seen whether he will be able to force his own terms concerning renewal of contract next September upon the still elementary Majlis.

THURSDAY, MAY 19, 1927.

JUBILEE DAY IN ROUMANIA.

Dispersal of effort is rarely sound in principle, and there is nothing to be said in its favour when it is applied to national celebrations. In addition to a generous supply of public ecclesiastical holidays, in keeping with the custom of the Eastern Orthodox Church, the new Roumania has had four national fête days, to celebrate the Union of the Principalities in 1859, the Declaration of Independence in 1877, the Union of Transylvania proclaimed on December 1, 1918, by the National Assembly of Alba Julia, and a Heroes' Day, in memory of those who fell in the Great War for the unification of the Roumanian race. This year the decision has wisely been taken to make one day of rejoicing do duty for the first three celebrations, and May 10 is the chosen date. The day is a red-letter one in the history of Roumania. It was on May 10 (Old Style), 1866, that Prince Charles of Hohenzollern-Sigmaringen entered Bucharest and inaugurated a reign of nearly fifty years that was to achieve so much for the material progress of the nation; on May 10, 1877, the Chambers of the Principalities of Moldavia and Wallachia proclaimed the independence of the country; on May 10, 1881, King Carol, who had assumed the title two months earlier, was crowned with a crown made of metal from Turkish guns captured at Plevna in 1877, and the Principality of Rouman'a became a Kingdom. In recent years the Gregorian Calendar has been adopted, but the Old Style date has been retained for the commemoration of the outstanding landmarks in Roumanian history, and May 10 is now the principal Fête Day. The omission of two public holidays, if enforced, will be an earnest of the determination of the people to concentrate on the economic restoration of the country. The effects of the War, the straitened conditions of the world market, and the amount of organisation required to bring about the practical cohesion of the component parts of the new State, combine to confront Roumania with a problem that can be solved only by hard work and intensification of effort.

The Roumanian people have no reason to be dissatisfied with their record of achievement in the short space of fifty years that has passed since they secured their independence. Roumania is essentially an agricultural country, and the frequent attempts to perfect agrarian reform are evidence of the difficulties that have been experienced in the evolution from the state of general serfdom that existed sixty-five years ago to the system of peasant-proprietorship, on which, it was hoped, the Agrarian Law of 1921 would be found to have placed the finishing touches. Although the problem may not have been entirely solved, it can safely be said that the new conditions

have removed all danger of a recurrence of the peasant revolts of 1888 and 1907. The great accession of territory since the War, however, has brought special difficulties of its own, the most urgent among them being the question of communications. In Transylvania the new Roumania acquired a province five-sevenths the size of the Old Kingdom, with forty-three separate railway systems, the majority of them privately owned, and all based on Budapest and Vienna. Under the new conditions it is the lower Danube and the Black Sea that claim their traffic. Connecting links have, therefore, had to be constructed between the systems in the new provinces and in the Old Kingdom, the Russian broad-gauge lines in Bessarabia have had to be converted into normal gauge, and new lines have been built between towns lying near the frontier to prevent traffic between them from having to cross the frontier into Hungary or Yugoslavia. The damage done to the railways during the War was considerable, and the deficiency of rolling-stock and the inadequacy of the lines—only three per cent. comprise double tracks—still constitute a serious hindrance to the recuperation of the country. Roumania was not the only State that the disorganisation caused by the War found unable to cope with an entirely new set of conditions. With a population increased from seven to seventeen millions, with a sudden impetus given to industrial undertakings, fired by the example of Transylvania, to attempt to meet the economic requirements of the New Kingdom, and all expecting to be financed at once, it is not to be wondered at that Roumania drifted rapidly into a severe financial and economic crisis, in which she is only now beginning to turn the corner. The jubilee of her independence brings at least this consolation to a people who have had to lament the fact that their troubles seemed greater than those of neighbours far less favourably endowed by Nature.

Fifty years ago the chief note struck by Prince Carol in his appeals to the Roumanian people was the need for unity. That note has to be repeated to-day, perhaps with even greater insistence. The accession of new territory to the Kingdom has brought in its train rivalry between the different provinces, and impatience when every need, real or imagined, is not at once satisfied. In the place of the two parties that before the War shared alternately between them political power are now four or five main Parliamentary groups, with a number of smaller units. Political life has become keener, and it is noticeable that the display of military force occasionally plays its part as an argument in the enforcement of political views. At the same time, the question of minorities has acquired additional complications as a result of the incorporation of Transylvania and the Dobruja, while the Jewish problem shows signs of being liable to become acute with little or no warning. Some allowance has to be made for a people sorely tried in the War and immediately called upon to face the ordeal of a prolonged economic crisis. The country has also not yet freed itself from anxiety in regard to its foreign relations. Bessarabia remains a source of weakness rather than of strength; the Little Entente is not definite enough in its scope to give any real sense of security, but constitutes to some extent a hindrance in the way of the more practical solution of the problem, a Balkan Federation that with a clearly defined defensive alliance among the component States and close economic co-operation would free each of them from entangling commitments in other directions and enable them to devote more undivided attention to economic matters.

The Near and Middle East*

From Our Own Correspondents.

Cairo, May 7.

The Residency.

Last Monday evening the High Commissioner and Lady Lloyd held a reception at the Residency, which was attended by over fifteen hundred guests including the Egyptians and members of the foreign communities. Their Excellencies received in the ball-room and afterwards joined their guests in the gardens which had been very beautifully illuminated. During the evening the Argyll and Sutherland Highlanders gave an exhibition of Scotch dancing, which particularly interested the non-British element, and later on the guests themselves took the floor and dancing was kept up until a very early hour next morning. There was an excellent buffet and everyone enjoyed themselves immensely. In fact this reception which was in a manner the adieux of Lady Lloyd, who left yesterday for home, was one of the most successful functions that have taken place there of late years.

The High Commissioner in Upper Egypt.

Last week-end the High Commissioner paid a visit to Minia in response to an invitation extended to him by the local notables through a deputation which had waited upon him recently under the leadership of Gallini Pasha Fahmy. His Excellency was accorded a most enthusiastic reception. A great tent had been set up on the station platform in which over 1,500 notables awaited his arrival. Here a speech of welcome was pronounced by Gallini Pasha to which Lord Lloyd replied thanking for the invitation and for what had been done and adding: "You, gentlemen, have extended the hand of friendship. I have come here to grasp that hand in return. That is all. My coming here to-day gives me a welcome opportunity to tell you and all the people of this Province that they may be sure that England, and the people of the British Empire, take as keen and as friendly an interest in all that appertains to your welfare and that of the fallaheen, as ever they did in the past, and that your prosperity, your peace and your happiness are matters of close and sympathetic concern to His Majesty's Government. The more I see of Egypt and the people of Egypt, the more sure I am of their friendliness to my country, and our people, and that the closer we can draw the bonds of friendship and co-operation between us, the better it will be for England and for Egypt. We have worked together for so many years that we have, I hope, learnt that old friends are the best friends."

His Excellency concluded by calling "Long Live King Fuad, Egypt and the Province of Minia" and his speech, which was translated into Arabic by Mr. Grafftey Smith, the Assistant Oriental Secretary, aroused loud applause. Lord Lloyd then shook hands with a large number of the assembled notables and went to the British Consulate where he lunched with Mr. Shirley, the British Consular

Agent. Afterwards he drove through the town visiting the Mudiria, the Waterworks and the electric power station and the Girls' Primary School, where he watched a display of dancing. He then went to the Allied Cemetery, where he and the Mudir laid wreaths on the War graves, and returned to the tent at the station where six hundred notables awaited him and tea was served—during which Arabs from the province gave an exhibition of horsemanship. The Residency party returned to Cairo the same night after a most enjoyable day, the success of which is entirely due to the generous and spontaneous effort of the Minia notables who bore the entire cost of the receptions. I am sorry to say that the Zaghoulouist Press, particularly the official party organ, have been writing most disgraceful articles about this visit and have referred to the High Commissioner in terms strangely in contrast with the traditional Oriental ideas of hospitality and courtesy towards a distinguished visitor and certainly scarcely in keeping with the professions of friendly disposition so frequently made by the members of the Wafd.

Lord Allenby.

Lord Allenby spent a day in Cairo on his way to Jerusalem as the guest of Lord and Lady Lloyd at the Residency. He had a great reception at the station on arrival and seemed as pleased to be back in Cairo as his old friends were to see him here. The manner in which people, Egyptians as well as foreigners and members of the British community and the army, have flocked to greet him shows what a deep affection there is for our ex-High Commissioner. The only regret, which found widespread expression, was that it had not been possible for Lady Allenby to accompany her husband.

An Overseas Gathering.

A memorable gathering took place on Wednesday evening at the Turf Club, where what was called an Imperial Overseas dinner was given to the representatives of the Dominions, who were passing through Cairo on their way to the ceremonies in connexion with the unveiling of the War Memorials in Palestine. The principal guests were Sir James Parr, New Zealand High Commissioner in London, Brigadier-General Dodds, representing the High Commissioner for Australia in London, Major-General Sir Edward Chaytor, who commanded the New Zealand cavalry in Palestine and Sir Edward Ellison, member of the Imperial War Graves Commission. As Lord Allenby's arrival coincided with this function he was also a guest, sitting on the right of Lord Lloyd, who presided and had on his left Sir John Parr. About fifty residents were present, many of them having been members of the Anzac Force, and a most cheery evening was spent thanks to the excellent arrangements made by Lieut.-Col. C. E. Hughes, C.B.E., the local Commissioner of the Imperial War Graves Commission. Speeches were made by the Chairman, Lord Allenby, Sir John Parr and General Chaytor and General Dodds, but they were of too intimate a character for it to be possible to quote from them. All that one can say is that what was said showed that the union between the various parts of the Empire is as strong as, nay stronger than, ever, and that the spirit which has in the past prompted our kin across the seas to come to the assistance of the Mother Country has by no means diminished but is still there ready to find practical expression, if unfortunately the occasion should again present itself.

A Popular Frenchwoman.

Great sympathy is felt with Monsieur Gaillard, the French Minister, at the death of his sister, Miss Denise Gaillard. That this sympathy is by no means restricted to the French community but extends to all, foreign and Egyptian, without exception was evident from the character of the procession which followed the hearse to

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

the church and the attendance of the subsequent celebration of Mass. In addition to a representative of King Fuad, Lord Lloyd, who was accompanied by Mr. Henderson and Mr. Wiggin and Mr. Hartopp, first secretaries, Sarwat Pasha and his colleagues and the entire Diplomatic Corps, there were hundreds of members of the various communities who held no official capacity and merely came because, in addition to their high esteem for Monsieur Gaillard himself, they had a great admiration, in many cases deep affection, for his sister, who had gained a place in the hearts of the outside public to which few attain.

Sofia, May 3.

Macedonia and the League.

In accordance with a decision to which I referred in a previous letter, the National Committee of Macedonian Emigrés in Bulgaria has just addressed a petition to the League of Nations in which it explains the real state of the question of the projected liquidation of Bulgarian schools and churches in Greek Macedonia, and it appeals to the Geneva international organisation not to sanction the resolution of the Græco-Bulgarian Mixed Commission, and to preserve the sacred property of generations of Bulgarians in Macedonia.

The Electoral Campaign.

Bulgaria is passing through a curious phase just now; there is less than a month before the legislative elections, which have been fixed for May 29, and it is not possible at the moment to say that the electoral campaign has effectively begun. What is more interesting is the fact that it is not yet known precisely which groups will take sides—which forces will oppose one another in this battle, the result of which will have so great an influence on the development of the political life of the country.

Indeed, the May 29 election must make normal the situation which was created by the *coup d'état* of June 9, 1923, and by the events which have followed since, throwing the veil of forgetfulness over that sad past and definitely directing the political struggles along the paths of lawful competition. The conspiratorial methods and revolutionary troubles of the past must be condemned for all time, in order to leave the way clear for the process of peaceful evolution and progressive development. Another result which is awaited from the legislative elections, considered from a more immediate point of view, is the election of a Sobranie, in which parties will be represented according to their actual strength, and faithfully reflecting popular feeling will permit the formation of a truly national Cabinet. The latter, relying on a solid parliamentary majority, will be able to undertake a policy in conformity with the necessities of the moment, which are severe, and to remedy, as far as possible, the political crisis and in particular the economic crisis which is consuming the country and threatens to compromise it in the future.

It is just this aim which is being jeopardised by the electoral campaign; the general confusion and desperation into which all parties, without exception, have been thrown and the uncertainty surrounding the intentions of the mass of the electors will end not in a *rapprochement* but in a estrangement between the different political groups, rendering their necessary collaboration in the future Parliament an impossibility. And it may be said that

never has Bulgaria found herself in such a state of anarchy at the approach of legislative elections, and never have the candidates been surrounded with more mystery. On the one hand are the ambitions of the great and small leaders—they are legion—who wish to thrust themselves on their own organisations and make the latter adopt their methods; and on the other hand is the resistance of these organisations against the pressure from above and their desire to choose for themselves the persons whom they are going to propose by popular suffrage. In the first place there is the electoral antagonism between the capital and the provinces, the former wishing to dictate to the latter, and the provinces desirous of freeing themselves from the tutelage of the capital, but both being surfeited with an excess of candidates. There are 273 deputies to be elected and already there are probably 5,000 candidates throughout the whole country. This state of affairs makes the classification of the candidates under the different lists of paramount importance and inevitably provokes in one and the same group endless conflicts and divisions which become all the more frequent the more the group consists of coalition units.

The groups which have been formed up to the present are: (1) the Democratic Entente, which is the Government party, composed of 3 or 4 sections, the centre of which was formed in the previous *Sobranie* by a group of former officer conspirators, but which on the lists of the coming elections will be specially represented by friends of MM. Liaptcheff and Bouroff, thus leaving in the background the friends of M. Tsankoff, the number of which will be greatly reduced. To this party the Government has recently added, in the form of a coalition, for some unknown reason, the insignificant group of Stamboulovists, who were about to disappear from the political horizon. (2) The coalitions of the Opposition parties, comprising 3 or 4 groups—that of the sectarian Radicals of M. Kostourkoff and the orthodox Agrarians of M. Draghieff, two parties which play but a very mediocre rôle in the life of the country, and which can in no way expect success. Infinitely more important is the group formed under the leadership of the former President of the Council, M. Al. Malinoff, by the alliance of the Democrats, of whom the latter is the universally respected head, the Liberal Nationals of M. Kiortcheff and of the centre Agrarians of M. Thomoff, to which have already adhered a large number of the Radicals; the left wing Agrarians, lacking a leader and allied to the Social Democrats and to a small professional party of artisans; and lastly a new Labour party composed of a group of former Communists, of whom it is not yet known whether they will present themselves openly at the elections.

But this classification is only provisional and quite superficial, since it is stated that an interpenetration of the different groups may take place which will perforce lead to a change at the last moment, especially in regard to the Agrarians, whose electors refuse to place on their lists the Socialist candidates and claim the union of the centre and left of their party in M. Malinoff's group which, in that case, will assume the proportion of a large anti-Government *bloc*, comprising practically the whole of the Opposition.

It is interesting to note that the pressure brought to bear in the formation of this Opposition *bloc* is on the wane, through the influence of the masses, not the leaders, and will not, therefore, cause any anxiety to the observers of Bulgaria's political evolution.

But, as I have said, this country has never been seen before to be in the grasp of such an electoral anarchy, which will certainly tend to complicate the pressure, inevitable in the Orient, of the administrative organs.

In spite of all it is, nevertheless, believed that the elections of May 29 will result in a satisfactory majority for the Liaptcheff Government.

IRAQ.

Baghdad, May 5.

The Budget.

The Budget for 1927-1928 was presented to the Chamber of Deputies on April 28. The following are the figures: Estimated receipts, Rs. 5,70,88,000; estimated expenditure, Rs. 5,70,78,000; estimated surplus, Rs. 9,472.

Drastic reductions were made by the Minister of Finance in the estimates submitted by the various Departments. A real effort at economy has been made, the Army estimates in particular being cut down by Rs. 54,00,000; though the proportion of Iraq's income which is spent on the Army is still a very high one.

In introducing the Budget, Yasin Pasha explained the reason for the Government's delay in preparing it. The Coalition Government came into power last November, but the newly-formed Cabinet could not immediately reach conclusions on the important questions of departmental expenditure. He thanked all the Advisers, and particularly those of the Ministry of Finance, for their co-operation.

The Budget was opposed on general lines by eight deputies. The late Minister of Auqaf complained that the Coalition Government had made no effort to increase the productivity of the country. Money was being spent on schemes of secondary importance, when it would be better employed in assisting agricultural development, particularly as regards the introduction of modern machinery.

Answering a criticism of the very small surplus provided by his Budget (Rs. 9,472), the Minister of Finance said that he had followed the example of the greatest financial Power in the world. His surplus, judged by the comparative wealth of Great Britain and Iraq, was no smaller than Mr. Churchill's.

Income Tax.

All the clauses of the Income Tax Law have now been passed by the Chamber of Deputies. The Minister of Finance has aroused a good deal of comment by a speech on the subject, in which he attributed the present poverty of Iraq to her "exploitation" by the big business firms, who derive immense incomes from the country without paying any taxes. The bugbear of exploitation is one which looms large in the mind of the Iraqi politician, and

it is to be hoped that the knowledge that the foreign companies are now to pay their share towards the expenses of government may do much to remove it.

Another much-discussed point was the incorporation of a married woman's income with that of her husband for purposes of taxation. The Minister of Finance argued that a woman's business affairs were in Iraq invariably managed by her husband, and the clause was passed.

The ordinary session of Parliament having terminated before the important measures connected with the Budget and the Income Tax Law had been settled, an extraordinary session was opened by the King on May 3. In the speech from the throne he commented on the importance and gravity of these measures. With reference to the National Defence Bill, His Majesty said that the negotiations of Iraq with Great Britain had "lately developed in a fashion which gives rise to a satisfactory tranquillity of mind." It was the duty of Iraq to assume as soon as possible full responsibility for the defence of her own boundaries and existence, so that she could take her place among the other independent nations.

The Alwand Refinery.

The new refinery of the Khaniqin Oil Company at Alwand was ceremonially opened by King Faisal on May 2. A special train conveyed the large gathering of Iraqi and British guests from Baghdad to Khaniqin, whence a new macadamised road is being constructed by the company to the refinery at Alwand, six miles away. The refinery has been built to deal with the crude oil from Naft Khanah, in order to supply northern Iraq with oil, petrol, and kerosine without the extra cost of transport to and from the great refinery at Abadan. It will have a capacity of one and a half million gallons per month, and three pipe-lines will run from it to the railhead at Khaniqin. The steam valve which set working the pumps transmitting the refined products to the railhead was opened by the King at the ceremony. As a souvenir of the occasion a silver casket was presented to His Majesty, and also a silver miniature of a B. P. petrol can.

The King referred to his previous visit to the Naft Khanah oilfield, saying that the hopes then raised had been fulfilled by the perfection of this new development of the industry. He remarked how greatly Iraq was in need of oil products for the improvement of her agriculture and irrigation. Her economic development was in no small measure dependent on the success of the oil companies; they had great hopes for the future, and hoped before long to be "able to give the good news to the world that there would be a pipe-line from Iraq to the Mediterranean."

The King then made a tour of the refinery. The Prime Minister and several members of the Cabinet were present, with many notables and British officials. The American, Italian, German, and Persian Consuls were also present.

Tribal Raids.

A Bill for the prevention of tribal raids has been passed by the Chamber of Deputies, though not without some opposition from the members who feared that the tribes would be unfairly handicapped in defending themselves from attack. The Prime Minister pointed out that the matter was one of diplomatic importance. Iraq must show to other countries that she was carrying out her obligations, and would not permit any raids which might make difficulties with her neighbours. They realised the Government's responsibility for the maintenance of good foreign relations, but would, if necessary by force of arms, assist the tribes to defend their honour and integrity. He thought that by virtue of the treaties and conventions already concluded Iraq was now fairly safe from outside aggression.

Imperial Airways.

Imperial Airways has instituted a service of short flying trips over Baghdad, twelve passengers being carried on each flight, at a cost of Rs. 10 per head. The diversion is

becoming increasingly popular among Iraqis, a number of Muslim ladies having already shown great eagerness to fly.

The institution of a weekly air mail brings us in closer touch with England than ever before. The letters from home arrive on Thursday, having been exactly a week on the way; the outgoing mail leaves on the following Saturday morning, so that letters may be written and the answers received in sixteen days—truly a marvellously swift exchange between Baghdad and the West.

ALBANIA.

Durazzo, May 8.

Lack of News.

Albania at the moment presents the curious spectacle of a country which is being much spoken about, but in which it is forbidden to speak of itself. The Tirana Pact raised important international questions, and every newspaper is daily filled with articles in which the names Albania and Tirana occur. Nevertheless, in the country itself the Press is publishing not a single original article on the question, and the Government has issued no *communiqué* indicating its point of view. Every day the Stefani Agency of Rome is received in Tirana, and its *communiqué* is translated, affixed to the walls of the town, transmitted to the Albanian newspapers and published under the auspices of the Press Bureau, which works at the Ministry of the Interior. In the whole of Albania there are seven political newspapers, not one of which is a daily, and these papers publish only translations of Italian articles; all, doubtless, favourable to Italy, to Signor Mussolini and to his influence in Albania.

Articles from the English, German, French or Serbian Press, which might open up a political horizon, are never quoted in the Albanian papers.

Parliament.

The Chamber of Deputies is showing an activity and a certain freedom which had been somewhat lacking of late. Among these manifestations may be noted, in the first place, the attacks made against the Minister of Public Works, Musa Juka, who is accused of abuses and of having protected certain small officials guilty of theft. Musa Juka has enjoyed the unlimited confidence of the President, Ahmed Zogu, to such an extent that for more than two years he has at the same time been directing two ministries—Public Works and the Interior. Juka

displayed a certain amount of seeming activity in connexion with the construction of new roads, which were inaugurated amid much noise and pomp. As a matter of fact, however, the greater part of the roads, according to certain Deputies, are fictitious, having neither ballast nor bridges.

About the same time as the attacks were made on the Minister of Public Works, certain Deputies presented a motion to separate Agriculture from Public Works and to make the former into an independent department. This demand is actuated by the small amount of activity which so far has been displayed in the Department of Agriculture.

On the other hand the Chamber has begun the discussion on the Budget for the year 1927-28. Fejzi Alizoti, Minister of Finance, presents a budget showing 29 million gold francs expenditure as against 26 millions revenue, thus allowing for a deficit of 3,000,000 francs, or more precisely 3,314,042 gold francs, the expenditure being 29,314,042 gold francs. In this budget the expenses of the Army are estimated at 11,695,000 frs. showing an increase of 2,170,046 frs. on the previous year. Against this the Ministry of Public Instruction has been subjected to an economy of 51,880 frs. having this year to be satisfied with only 2,400, frs.

In spite of the official figures it is certain that receipts will not exceed from 20 to 22 million gold frs.—which will make a deficit of at least seven or perhaps ten million frs. And in the budget which has just been presented the sum of five million frs. which ought to be used to pay the interest on the 50 million frs. loan advanced by Italy in 1925 (interest which, not having yet been paid, constitutes a very real danger to the country's independence) does not figure in the expenditure column.

As has been stated above, the increase in expenditure is due mainly to the Army. For one thing, the body-guard of the President, Ahmed Zogu, which used to comprise 200 men, has just been raised to 1,000. In addition, according to the Government's official *communiqué*, 240 persons from Malissia, that is to say from the mountains of Scutari, Luma, Dibra, Central Albania and Southern Albania (from Elbasan to Kuroelesi) have been given military rank, from second-lieutenant to colonel, will be treated as officers of the Reserve, and will be on half pay in peace time, but on full pay in case of mobilisation.

Petroleum.

At Patos, near the place where soundings gave positive results last year, the D'Arcy Exploration (Anglo-Persian Oil Company) has just found a second stream of petroliferous liquid at a depth of 350 metres, of a better quality than the liquid of the year 1926.

It is evident that in the part of Albania which extends from Himara in the south to Kavaja in the north and from the Adriatic Sea to Berat and Elbasan the sub-soil, to a more or less considerable depth, contains naphtha streams. It only remains to discover whether this liquid is sufficiently rich in hydro-carbons and whether exploitation will prove remunerative or not.

An English Scout in Albania.

Mr. Arthur Gaddum, the English scout who has recently arrived in Albania with a view to organising a corps of boy scouts, has become a familiar figure in the streets of Tirana during the past week. The corps of scouts dates from 1920, when it was inaugurated at Tirana by

Miss Mosley Williams, an Englishwoman in the service of the American Red Cross. At the present time there are boy scout organisations in six Albanian towns, and much still remains to be accomplished. Mr. A. Gaddum will give a new impetus to this movement.

CYPRUS.

Nicosia, May 4.

Greek Athletics.

The outstanding events of last week have been the Pan-Cypriot Athletic meetings at Nicosia, in which Greeks from Athens have taken part. They included a football match. Among other visitors was the Mayor of Athens, and they all received a great ovation. Some had been on a pilgrimage to Jerusalem.

The Bust of Cimon.

At Larnaca an interesting event took place, namely, the unveiling of a bust of Cimon the Athenian, whose memory was thus revived and honoured. Cimon (son of Miltiades) was born in B.C. 504, and frequently commanded Athenian fleets in the wars against Persia. In 466 he defeated a large Persian fleet, and—landing in Pamphylia—vanquished their army. When Aristides died, and Themistocles was banished, Cimon's influence was paramount in Athens, till the rise of Pericles. In 449 he sailed with 200 ships to besiege Citium (near Larnaca), where by the way Zeno the Stoic was born. Here he died probably from the effects of a wound. The bust was unveiled by the Mayor of Athens, M. Patses, and speeches were delivered. At Nicosia a great welcome was given, and the events were spread over several days, many receptions, banquets, dances and other festivities taking place. On April 28, Sir Ronald Storrs gave a luncheon party; some of the distinguished visitors, the Greek Consul, and English officials being invited. On April 29 the Governor witnessed the contests. Numerous Greek flags were displayed, the British only being visible at the stand occupied by the Governor. Sir Ronald Storrs, who invited the Mayor of Athens to his stand, remarked in conversation that he was wearing a neck-tie of Greek colours in honour of the visitors.

An Anglo-Cypriot Company.

A Company has been formed, starting with a capital of £100,000 (which is likely to be increased in the future) with headquarters at Nicosia, and branches in other towns, for import and export trade. It may probably extend its operations to banking enterprises. There are three directors—Mr. Jenkins, of the Asbestos Mining Company; Mr. Buracres, of London; and Mr. A. A. Artémis, a well-known citizen of Nicosia. The general director, at Nicosia, will be Mr. A. A. Artémis, whose brother will manage the central establishment in this town. The two Messrs. Artémis have already a commercial house at the capital.

General News.

A Greek lady, Miss D. Z. Laniti, has been appointed Librarian of the new Public Library, which is being started under the auspices of the Governor. Mr. A. K. Amilianides is to be Hon. Librarian.

Lady Storrs is taking lessons in Greek from Mr. K. K. Parlides, Proprietor and Editor of the leading Nicosia paper, the *Voice of Cyprus*.

Cold and wet weather interfered with one day of the sports, but the hot season is creeping on. Harvesting is in full swing, and prospects are good in all districts. Raisins and locust beans (caroubs) are fetching good prices.

King Fuad of Egypt, attended by his Ministers, and Lord Lloyd, British High Commissioner, were present at the last performance, on May 14, of the tattoo given by the British Army and the Royal Air Force in Egypt, at which the closing manœuvre was the formation of the words "Vive Fuad" by men carrying torches.

THE LOST LANDS OF OPHIR.

Under the auspices of the Central Asian Society Commander C. Craufurd, R.N. (Ret.), gave a lecture, on May 11, at the Royal United Service Institution, on "The Lost Lands of Ophir." Sir Michael O'Dwyer presided.

Commander Craufurd said that three thousand years ago the Land of Ophir solved for Solomon a political problem. We had the same political problem facing us to-day. His northern borders were safe, for he had rendered them safe by his building activities, which brought employment to his Northern borders. His Southern borders were safe, for he was married to Pharaoh's daughter. Also, he had developed a horse-breeding industry, so that there was a steady market between Egypt and Palestine. His Eastern borders, however, were threatened by Bedou. Though his army would certainly cope with bedou raids, the bedou were tireless enemies, and would tax his country till they eventually drained its prosperity. For a while Solomon held the Bedou in check by developing the gold mines of the Hijaz. The Bedou were transport agents between Arabia and Palestine.

It seemed the surface outcrop of the gold mines was being worked out, and in those days no deep mining was undertaken. Solomon sought further afield for the trade incentive to keep the Bedou quiet. Somewhere to Eastward there lay the lands of Ophir. Their ruler was Bilkis, Queen of Sheba. If Ophir was lost to modern geography, it was not through lack of information.

After long and exasperating negotiations, Solomon succeeded in persuading the Queen of Sheba to visit him. More than an hour could be spent in telling old tales of history about that meeting and the costly gifts that Bilkis brought to Solomon. The lecturer gave two examples of the means by which Bilkis tested the wisdom of Solomon's wisdom: the story of the girls and boys who were dressed exactly alike, and the story of the real and artificial flowers.

Proceeding with his investigation of the Ophir problem, he said that King Hiram inquired into the wholesale markets from which the goods were obtained. It was obvious that such an assortment of goods could not have been procured from one dépôt. Hiram planned a trading scheme that could not be bettered in these days. His ships were to set out on a three years' cruise. Taking advantage of the changing monsoon winds his fleet visited all the markets by sailing always with a fair wind. They visited Ophir and returned to Ezion Geber and Tarshish within three years. It was by placing the problem on a practical trading basis that we could find the locality of Ophir.

By using this three years' limit falsely Ophir has been "found" all over the world. The lecturer had visited most of those localities, including China, South America, Africa, the Persian Gulf, India, and Ceylon. The false result was that Ophir had been "placed" hundreds of miles outside the Sabaean Empire, while it was evidently the main seaport of that Empire.

It took the Commander and his fellow-searchers twenty years to unravel the tangle and find the true Ophir. Once it was found it was unmistakable, but he had taken another seven years to arrange the proofs. He had to find the same ship as Hiram used. That was done by tracing sailing ship development from pre-Diluvian days to the present day.

He had the same ship as in Hiram days, the same trade winds, and the same wholesale markets. So he could trace the cruise with accuracy all along its coast lines, and he reached Ophir exactly half way through the three years' cruising time. With practically all his imports completed he returned over fresh cruising grounds, and reached his home port three years later in the same month as his departure.

Tarshish was not very definitely located, so Commander Craufurd started from Ezion Geber. He suggested that was the Greek or foreign pronunciation. The ancient

pronunciation was more probably *Azzion Gebbir*, for which the modern Arabic would read *Al Zion Kebir*, "the Greater Zion." In colloquial Arabic the *Lam* is often muted, irrespective of whether it were a solar or lunar letter. The solar and lunar distinctions only formed about A.D. 600. The point of this muted *Lam* had a bearing on the problem, for the city of Ophir is still called the City of Ophir if we granted this muted *Lam*.

Leaving Ezion Geber so soon as the North monsoon set in, he coasted inside the coral reefs down the Hijaz, and down the Arabian coast, anchoring at night, and eventually reaching Aden.

Aden was then called Eden, "the place of pleasantness." In those days there was a water conduit that took advantage of the wadis and brought the rains of Marib to their terminus of Tuwaila tanks Aden. These tanks were sometimes inaccurately called the "Tanks of Solomon." They were as a matter of fact 500 years older. With its water course palm-fringed and with its marble baths from the quarries of Shuqra, Aden was then a true place of pleasantness, though now it was merely the fly-blown gateway of the British Empire eastern sphere.

The monsoon, growing stronger, also grew more northerly. It took the lecturer and his fellows to Somali lands that fringe Abyssinia. He found many Sabaean traces, and specially many tales of Bilkis, or Makeda, as she was called there. Abyssinia was the land where she finished her reign and was succeeded by her son by Solomon, David who has fulfilled the prophecy that Solomon should never lack an heir. He obtained some incense there. Onward he went, past Socotra, and round the eastern extremity of Africa. He coasted all the way down the East African shores till he came to the Sheba lands, made famous by Sir Rider Haggard's romances. Sheba was merely a name repetition of the Sheba of Arabia, just as Darfur was probably a name repetition of Ed-Ophir. South African Sheba was his southern limit. He obtained some gold, though not the gold of Ophir. He refitted and waited for the south monsoon to begin.

He set sail again for Ceylon and the Malabar coast. Ceylon had been suggested as Ophir because so many of the goods were obtainable there. The Malabar Coast had been suggested as the land of the *Almug* and *Algum* trees. Of the *Almug* trees the lecturer said that it might probably be so, but of the *Algum* trees, certainly not. The two words could not have the same meaning. The *Almug* was probably the red cedar of the mahogany. (Commander Craufurd thought the mahogany). The *Algum* was a tall, straight, white timber, most suitable for the Temple Porch, since it was white wood and was ant-proof. It was only to be obtained in the lands of Ophir. He obtained ivory, apes, peacocks, some jewels, but not the most important, and the *Almug* trees. His cruise up the Malabar coast drove him northward to Karachi to escape the full force of the south monsoon.

Sabaean ruins at Qishm had given the suggestion that Ophir lay there. But the greatest seaport of ancient days had more than a few crumbling ruins to fix its identity. There were also ruins at Bahrain. These he identified as Sabaean and the most complete Sabaean ruins other than those of Ophir lands. He gained pearls of price, and when the new north monsoon, the third of his cruise, set in, he sailed southward coasting along the Arabian Oman coast, and as he sailed southward the Sabaean ruins and inscriptions grew more plentiful. After a short cruise from the Persian Gulf he reached Ophir.

Of Ophir the lecturer said that it had all the requisites of a large seaport for vessels not exceeding 18 foot draft: a harbour to north, another to south and a river entrance. Its geographical position rendered it open to far Eastern trade at all times of the year. Its ruins, that could only be those of the necropolis, were extensive and massive. When he arrived at Ophir he tried his best Arabic thus: *Fain al bilad al Ophir*. He was not understood, so he broke into bedou or colloquial Arabic . . . *Wain al bilad*

ed-Ophir? "Where is the City of Ophir?" He was immediately understood and shown the city. The lands of Ophir stretched further back and furnished jewels of the type most sought after for priestly breastplates, algum trees, spices and incense, and lastly the gold of Ophir.

In conclusion, Commander Craufurd said that present day Palestine was not so developed as the Kingdom of Solomon or as that of David. It was closely comparable with the Kingdom of Saul. The Bedou threat could be eliminated by the development of the lands of Ophir. Then once again Palestine might become the manufacturing centre of the Middle East, and the Kingdom of Sulaiman might extend eastward through Arabia and Abyssinia with its trading influences. If that were so, it would be the fulfilment of the dreams of Sulaiman the Wise and of Bilkis the Beautiful.

The lecturer illustrated his lecture with lantern slides, showing, notably, the ruins of buildings in the place that he identified with Ophir.

In the subsequent discussion Sir Percy Cox showed himself unwilling to accept the identification of Ophir with a place in Southern Arabia. He suggested that the buildings of which photographs had been displayed were post-Muhammadan, that the word "Ophir" had no connexion with "Dhofar," or with "Darfur," and that, in any case, the English translation of the Bible was not necessarily of such strict verbal accuracy that, for instance, the peacocks referred to might not be merely any bright birds, such as parrots.

Admiral Sir Herbert Richmond strongly supported the lecturer in his remarks upon the monsoons. In so far as Commander Craufurd's theory was concerned with the winds as they now were known, there was nothing against it. His own difficulty was:—how was the remaining year and a half spent between Ophir and Ezion Geber? (The lecturer afterwards suggested, in answer to this, that there were far more ports of call in this section of the route).

Sir Michael O'Dwyer told an amusing story of how, when he was Resident at Hyderabad, there was a dispute between the Nizam and the Shaikh of Mokalla, during which reference was made to the gold mines in this part of Arabia. The quarrel concerned the payment for Arab mercenaries in the Nizam's army, demands for which became so heavy, apparently, as to cause the Nizam's supporters to exclaim that the Shaikh wished to get back, out of Hyderabad, one of the historic gold mines of his country!

The Persian Government has notified the Powers enjoying special jurisdictional privileges that those privileges will be abolished on May 10, 1928.

The definite settlement of the military question in Greece, namely, the restoration to the Army of officers removed by previous Governments, was announced by the Greek Premier on May 13.

Belgrade experienced at 4 a.m. on May 15 fairly strong earthquake shocks and tremors, recurring three times within a quarter of an hour. No damage was recorded.

Sir S. Hoare (Secretary for Air), replying to Lieutenant-Commander Kenworthy in the House of Commons on May 12, said the preparatory flights on the Cairo-Khartoum-Kismu-Cape Town line had been held up for some time as the result of a mishap to the seaplane which was being employed on the experimental service between Khartoum and Kismu. In consequence of this mishap, the Royal Air Force flights between Cairo and Khartoum had been suspended for the present. It was expected, however, that they would be resumed next month.

THE OUTLOOK FOR CYPRUS.

The Near and Middle East Association met at 133, Queen's Gate (by kind permission of Miss Spalding and Mlle. Griboval) on May 11, to discuss "The Outlook for Cyprus." Sir E. Denison Ross presided.

The following were among those present:—Prince Soumbatoff, Lord Lamington, Viscountess Dupplin, Constance Lady Cozens-Hardy, Sir Harry Lamb, Sir Frederick and Lady Graham, Sir William Clark, the Hon. Katharine Thring, Lady Tighe, Lady Hewitt, Colonel Hawkes, Dr. Ernest Griffin, Mrs. Eckstein, Mrs. Parnell-Parnell, Mrs. St. John Cooke, Mrs. Margaret Hasluck, and Mrs. Charlotte Mansfield.

Mr. Ronald L. N. Michell began by stating that he had left Cyprus in 1911, but that he had kept closely in touch with the island ever since. In a reference to the insignificance of, or rather, the ignorance surrounding, Cyprus, he mentioned that the Colonial Office would seem (after 50 years' occupation) not to have discovered where Cyprus was, seeing that it was placed in the official list as in Europe. Cyprus was the third largest island in the Mediterranean, being thirty to forty times the size of Malta. In some correspondence which the lecturer had with some Insurance Offices in London, Cyprus was definitely placed by some of them as in Europe, while others were in doubt.

Mr. Michell referred to the taking over of Cyprus by Britain in 1878, under the Anglo-Turkish Convention. In 1896, he said, Lord Rosebery summed up the main provisions of the Convention as follows:—"Now, gentlemen, what is the Cyprus Convention? I will give it you in three words. By the first clause (which is somewhat extraordinary) Great Britain pledges herself to assist the Sultan to defend the Empire against aggression (i.e., by Russia). In the second, the Sultan promises to introduce reforms (i.e., into Asia Minor and Turkey generally). In the third, Great Britain takes over Cyprus in order to enable Turkey to carry out those promises. The first clause has never been attempted to be carried out. The second has never been attempted to be carried out. The third (the occupation of Cyprus) has been most conscientiously carried out."

The population (the great majority landowners and agricultural labourers) in 1878 was said to be about 180,000: it was now about 330,600. This included about 60,000 Turks and 250,000 Greek-speaking Cypriots. The lack of population was a serious thing, and the repeated attempts that had been made from time to time to introduce foreign immigrants—Circassians, Maltese, Jews, Armenians—had all been unsuccessful.

Of the character of the people of Cyprus, Mr. Michell said that physically they were a strong, hardy race of frugal habits. Their apathy was common to many agricultural communities. They were hospitable, quick-witted, and religious. Vindictiveness, however, was one of their failings, though crime had much diminished since Turkish times. The lecturer amusingly illustrated the state of affairs in Turkish times. Then, he said, it was the custom of an officer in charge of a Police patrol, on entering a village, to inquire about bad characters. The *mukhtar* (village headman) gave the list. These men were at once tied up, and severely beaten without any further inquiry! On one occasion a British official, arriving at a village, asked whether there were any persons of bad character. "No," replied the *mukhtar*, "we had two very bad characters, but, thank God, we have got rid of them both; they have both joined the Police." On another occasion, at which Mr. Michell himself was present, a High Commissioner asked the village priest or Pappas, in the absence of the *mukhtar*, whether his flock was in a good state of order. "Yes, thank God, your Excellency," replied the priest, "our village is in complete order; we have nothing to trouble us, or disturb the peace at all." Later on, one of the elders went to the lecturer, and complained that the priest had entirely misrepresented the state of affairs. "Our village," he said,

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

74, Grosvenor Street, W.1.

E. H. Keelling,
Hon. Sec.

"is in a deplorable state. Not a night passes without theft and other disorders. The Pappas did not tell his Excellency this, as the bad characters are all his own sons."

But, taken all in all, the lecturer had great praise for the Cypriot's character.

Gratitude among leading Greeks of the island was scanty, but at least they were ungrudging in their praise of the reformed judicial system.

He then referred to the development of *enosis*, the agitation for union with Greece. The Imperial Government, with its habitual easy toleration, had allowed the movement to be carried to its present proportions. The Greek flag had been displayed in such manner as no other Power would tolerate in similar case. Only when such movement pointed to, or caused, a breach of the peace, were British officials allowed to intervene. The Greek flag, to which Cypriots had no right whatever, was flown from belfries, clubs, and so forth. Where but one Union Jack was visible, fifty to a hundred Hellenic flags might be seen; and not one Turkish flag, except, perhaps, on Friday, on a minaret. In the towns, especially, this "Union" movement increased.

But the Greek leaders had been told categorically by successive Colonial Ministers that (1) as regards the petition for union with Greece the matter must now be regarded as closed; and (2) as regards the extension of the Cypriots' powers, the island is not regarded as ripe for a further change. These pronouncements had much annoyed Greek leaders and the Greek Press. But, in the lecturer's view, there had been a want of vision on the part of the Cypriot Greeks, who were their own enemies. He believed that the agitators had not approved the circumstances which governed the situation, that their tactics had been an obstacle to progress, causing also much loss of time and money, that their action had not been approved at Athens, and that it had damaged their own cause.

Of the Turkish community, the lecturer said that it had accepted from the beginning, with dignity and loyalty, submission to British rule. The Turkish language had precedence in Government *Gazettes* and documents, and the speeches of Members in Council were translated into Turkish before Greek; as also in the Law Courts. Recently, since the island ceased to be Turkish, the Greeks had resented this procedure.

Among the reasons why Cyprus should remain a British possession, Mr. Michell said that it might be useful from a strategical point of view, that it could be, and had been, useful as a sanatorium (as in the Egyptian, Sudan, and Palestine campaigns), that it could be a valuable half-way house for young soldiers going to India, and that it might be valuable as an air base, or station. In any case, Britain would almost certainly have reason for apprehension or regret if Cyprus were to fall into the hands of any other Power.

The outlook for Cyprus was obscure; so much depended upon the extent and nature of British commitments in the Near and Middle East, and so much upon the situation of domestic politics in this country. However, Sir Ronald Storrs had recently told the Cypriots that the Imperial Government was sympathetic towards a reopening of the "Tribute" system. If that meant that the £42,000 now taken from the island revenues, as the Cyprus portion of the Ottoman Debt (as reduced from £92,000) were to be remitted, it would be a good help towards progress. In fine, an optimistic view could be held, but only conditionally. Progress in any near future depended upon whether the island would remain British, and whether the people would co-operate with the Government. If British policy were to follow the lines that governed our rule in other Colonies, and encouraged a forward movement for development of the island, there should be a better chance for agriculture, which was the life of the country.

Mr. H. Pirie Gordon explained that the union of Cyprus to Greece, demand for which originally arose out

of the untimely death of an Archbishop, was not quite so simple as it sounded. Greece would be quite unable to protect the island should a neighbouring Power covet it; and, of course, that Power, even apart from the memories of Venetian and Genoese sway in Cyprus, would covet it. Down to the middle of last century, in fact, the King of Italy was officially called King of Sardinia, Cyprus, and Jerusalem. In regard to the backward development of Cyprus, the British Government had been dogged by bad luck. Egypt, which was occupied four years after Cyprus, detracted from the attention that might have been given to the island. Moreover, there was never a great reserve fund at the disposal of the Nicosia Administration. As an instance of the bad luck, he said that a small harbour was built at Famagusta, but no sooner was its construction completed than the steamship line which chiefly used the island decided to increase the size of its vessels, with the result that the harbour was inadequate. He then showed graphically how the main need of the island was water. The conservation of water was first attempted by the construction of tanks. These, however, soon filled up with gravel and grit. Recourse was then had to the older idea of terracing, and this method the Forestry Department was using with considerable success. The crops of Cyprus, however, varied from year to year, or rather their export value. For the Cypriot was quite content to hold things up unless world prices were good. Incidentally, the Cypriot merchant, as was proved at the time of the British Empire Exhibition, when large orders were sent to Cyprus, had little conception of what the West meant by time and quantity. Among the benefits which had been brought to Cyprus by the British he mentioned roads. Maintenance allowance for these was increasing, the motors being much heavier on them than the old carts. The roads were so good, in fact, that there was talk of dispensing with the railway, which, of course, ran only along the plains. Another great thing which the Cypriots had learned from the British was the necessity (which did not appear urgent in many Near Eastern countries) of making their Budgets balance. The great problem in Cyprus was to mould people with an Oriental mentality to Western ideas of progress.

Archdeacon Beresford Potter, after examining the early history of Cyprus, which had been kicked about like a football by the various rulers of the Near East, emphasised the "spiritual" nature of the British occupation. The problem was not only a material but also a moral one. The hearts of the people of the island could be won by trusting them and by holding out opportunities to them. (He mentioned with approbation the recent promotion of M. Pascali.) The best thing that the British could do would be to select Cypriot co-operators.

Wireless communication has been effected through Central Arabia from Riyadh, the capital of Najd, to Mecca, and from Hayil, the old Shammar capital, to Madina.

Sir George Beeton Alderson, K.B.E., of Norland House, Bulkeley, near Alexandria, Egypt, a director of Allen Alderson and Co., Ltd., died on December 2, aged 82, leaving property of the value of £53,005.

The Persian Government has denounced the trade treaty with Germany, to take effect in a year's time. It is rumoured in Teheran that the French have also received notice of the denunciation of their treaty, but nothing, says *The Times*, is known definitely in regard to that matter.

It is stated from Constantinople that some three thousand White Russians are affected by the recent decision of the Angora Government to give such exiles until August 1 next to leave Turkish territory. After that date the Turkish authorities will not recognise passports issued by the League of Nations to Russian refugees.

The Foreign Office announces that the municipality of Belgrade has issued an order requiring all persons possessing rented vaults and ordinary graves at the new cemetery at Belgrade to pay fees due for the upkeep of such graves. Immediate payment is also required of fees for gravestones on graves. The time allowed for payment of fees, as far as British graves are concerned, has been extended to June 10.

Book Reviews

INDIA'S GOVERNORS-GENERAL.

"LORD CORNWALLIS." By the late Sir George Forrest. Two volumes. (Oxford: Basil Blackwell. 36s. net.)

This is the second of the "Selections from the State Papers of the Governors-General of India"—the first having been those of Warren Hastings. The first volume, which is somewhat oddly described as an Introduction, is a history of the main occurrences of Cornwallis' Governor-Generalship: the story of his campaign against Tippu being told in great detail. The second volume contains the selected State papers. Both are of great interest to the student, though the first volume suffers from the absence of an index; and, in the second, the arrangement of the papers might have been improved on, if it had been made in chronological sequence rather than in order of importance. Thus, for instance, "Mahratta Affairs" and "Oude affairs" might well have preceded the "Campaign against Tippu." The papers do not seem always to have been well placed—the second letter among "General Affairs" would have been better under "Oude Affairs," while the first letter under the latter heading, only a small part of which refers to Oude, might well have changed places with it. The long and interesting letter on Army Administration was written after the close of Cornwallis' (first) term; and no reference is made to his second—certainly very short—term, though the last two letters under "General Affairs" were written during its currency.

Among matters of special interest to the ordinary reader are the evidences of the unwisdom of allowing an interregnum between Governors-General, when the post was held by the senior local official: Cornwallis wrote, on this point—having himself suffered from the eighteen months' interregnum that occurred between the departure of Warren Hastings and his own arrival—"it is very difficult for a man to divest himself of the prejudices which the habits of twenty years have confirmed, and to govern people who have lived with him so long on a footing of equality": an opinion that few will contest to-day. The letters also show the continued attempts at nepotism with which the Governor-General of India has to contend: among others, there is one in which Cornwallis declines to find a post for the protégé of an important English nobleman—"I could never bring myself to assist any man in obtaining a seat in the Supreme Council of Bengal who had dissipated his fortune at the gaming table." And modern soldiers will read with astonishment the rules regarding officers of the Company's European regiments: "No officer, even if compelled from bad health to solicit a short furlough, could return to Europe without resigning his commission: and, if he remained in Europe beyond a very limited time, he could not be readmitted into the service. Should he be allowed to return to India, he was seconded, upon greatly diminished pay and allowances, until a vacancy occurred in his own rank. Those permanently quitting the service had no retirement, except the pittance they could derive from Lord Clive's Fund."

A MODERN TALE.

"UNDELIVERED LETTERS." By Cosmo Hamilton. (London: Hurst and Blackett, 7s. 6d.)

In the form of letters written by a frank American girl to a reserved English husband, the author of this novel has depicted, with freshness and sufficient accuracy, life as it was lived by a certain section of English society in 1925. It all seems a little old-fashioned now, although it is true that some of the undesirable characteristics of society life as unmincingly described in these pages still

obtain. To those who are entertained by a combination of daringness and sentimentality this novel will make instant appeal; others may be generally impressed by its cleverness; and others yet may find a trifle wearisome the whole band of its unsatisfactory though well etched types, from the rootless American bride to the heroic villain who attracted her from her husband (though of course not permanently) because of his "awfully nice aroma of soap, hair tonic and tobacco."

MIXED COURTS IN EGYPT.

We have received the following communication from the Royal Egyptian Legation in London:—

"An article recently published in the London Press dealing with the proposals of the Egyptian Government concerning the Mixed Tribunals did not exactly express the nature and meaning of those proposals. Actually, the Presidents of these Tribunals may be nominated, by the Government from among the Egyptian judges but they exercise only honorary functions. The effective functions of direction in these Tribunals are exercised by the Vice-Presidents and Substitute Vice-Presidents, who are annually elected by the Court and who must be foreigners.

"The Government proposals consist of two points:—First, to abolish the functions of the Honorary Presidents now reserved to Egyptians; secondly, to maintain the designation of Presidents and Vice-Presidents elected by the General Assemblies of the Court of Appeal and Tribunals where the Foreign Judges are in the majority, on condition that one of the nominated Judges should be an Egyptian; this decision to be sanctioned by a Royal Decree.

"It is impossible to consider these modifications as being of a nature to infringe upon the independence of the said Tribunals. In fact, they merely concern the Presidency and Vice-Presidency, i.e., the Organisation of the internal machinery, and do not in anyway affect the Administration—properly so termed—of Justice which constitutes the real mission of the Mixed Tribunals.

"The nomination of the President and Vice-President will increasingly continue to be effected by means of election by the Judges of the Tribunals themselves, the majority of whom are foreigners, without the least intervention on the part of the Egyptian Government; and these Judges will choose for these two posts only those candidates who inspire them with confidence owing to their impartiality, their independence and their professional capacity.

"As for the fact that the nomination of the President and Vice-President will be embodied in a Royal Decree, this is purely a matter of form, since, as mentioned above, their designation by the Tribunal itself will be maintained. It is simply a question of sanctioning this designation by an Egyptian official document.

"This system does not, therefore, deviate in any way from the Rules now applied to the nomination, transfer and promotion of Judges, which Rules are to be maintained. Such maintenance is explicit proof that the Egyptian Government has no intention of introducing any substantial modification in the Organisation of the Mixed Tribunals."

The Yugoslav Government has informed Bulgaria that it has no objection to the dissolution of the Inter-Allied Military Mission of Control in Bulgaria, which is now being discussed by the Conference of Ambassadors in Paris. Colonel Rink, the Head of the Mission, left Sofia last week for Paris to report to the Conference as to the extent of the disarmament of Bulgaria.

Two of the four sloops stationed in the Persian Gulf, the *Crocus* and *Cyclamen*, are at present at Bombay and Colombo, respectively, for refit after recommissioning. The refit of the *Cyclamen* should be completed on June 4. The *Lupin* was last reported at Henjam, and the *Triad*, ship of the Senior Officer, Captain R. St. P. Parry, D.S.O., M.V.O., left Henjam on May 8 for Bunder Abbas, Khor-Kawi, and other places in the Gulf.

PERSONAL AND GENERAL

TO-DAY

May 19, 1927 (New Style).

May 6, 1927 (Old Style).

Julkaada 17, 1345 A.H., of the Muslim Calendar.

Iyar 17, 5687, of the Jewish Calendar.

Lord Sinha has been elected an Honorary Bencher of Lincoln's Inn.

The Maharaja of Burdwan has arrived in London for a prolonged stay.

The Bulgarian Minister returned to London last week from Paris.

Mr. and Mrs. Hubert Martineau have returned to 7, Chesterfield Gardens, from Egypt.

The Maharaja of Vizianagram sailed on May 11 from Southampton in the *Homerick* for New York.

Lieut.-General Sir Peter Strickland left London on May 13 in the P. and O. s.s. *China* for Port Said.

Mr. H. Charles Woods has returned to 171, Victoria Street, S.W., from a visit to Yugoslavia, Bulgaria, Salonika, and Albania.

Lord Leconfield, who has been on a visit to Lord Lloyd, the High Commissioner for Egypt and the Sudan, at Cairo, is expected home next week.

Four Sikh officers, who recently arrived in London to do duty as the King's Indian Orderlies, were received by his Majesty at Buckingham Palace on May 14.

General Sir Charles Harington left York on May 15 after four years as General Officer Commanding-in-Chief the Northern Command, on appointment as G.O.C.-in-C. Western Command, India.

Commander C. Craufurd, R.N., (Ret.), a report of whose lecture to the Central Asian Society upon "The Lands of Ophir," we publish elsewhere in this issue, left London for the Yaman on May 13.

Muzahim Beg Pachachi, the newly-appointed Diplomatic Agent for Iraq in London, presented his Letters of Appointment to Sir Austen Chamberlain at the Foreign Office on May 10.

Field-Marshal Lord Plumer, High Commissioner for Palestine, and Lady Plumer, left Jerusalem on May 15, embarking on leave at Port Said, on the liner *Rawalpindi* for Plymouth. Lt.-Col. G. S. Symes, Chief Secretary, is acting as High Commissioner.

It is announced by the War Office that Major-General E. S. Girdwood, C.B., C.M.G., has been appointed Commandant (Major-General, General Staff) of the Royal Military College, Sandhurst, in succession to Major-General C. E. Corkran, C.B., C.M.G. General Girdwood was a brigade-major in Gallipoli. In Palestine he commanded the 74th Division, and since the Armistice has commanded on the Rhine, in Iraq and in Bombay.

The United Empire Circle of the Lyceum Club, with Viscountess Elibank, Mrs. S. C. Sen, and Mrs. Rose as hostesses, gave a reception on May 13 to meet distinguished Indian visitors. The guests included: The Maharani of Cooch Behar, the Rajah Saheb and the Rahi Saheba of Tehri, the Countess of Birkenhead, the Maharajah of Burdwan, the Maharaj-Kumar of Burdwan, Lady (Graeme) Thomson, Lord Headley, the Rani Mati Devi of Pratapgarh, Lord Sinha, Mrs. W. C. F. Robertson, Sirdar and Sirdarini Shitale Deshmukh, Mrs. Eccles Smith, Lady Blomfield, Sir Mahomed Rafique, Dr. and Mrs. Paranjpye, Sir Maneckji and Lady Dadabhoy, the Misses Sen, the

Nawabzada of Dehra, Mr. Justice Darvar, Mr. P. N. Tagore, Major and Mrs. Shaha, and Mr. and Mrs. Surendra Nath Mallik.

LUNCHEON TO THE IRAQ DIPLOMATIC AGENT.

Mr. L. S. Amery, Secretary of State for the Dominions, was present at a Luncheon given at the Carlton Hotel on Tuesday, May 17, by Mr. H. T. Montague Bell, on behalf of the Directors of THE NEAR EAST AND INDIA, to Muzahim Beg Amin al Pachachi, Iraq Diplomatic Agent in London. Among those present were:

Sir Percy Cox, Sir John Shuckburgh, Sir Arnold Wilson, Sir Charles Stewart-Wilson, Sir Valentine Chirol, Sir Montagu Turner, Sir Edward Manville, Colonel H. Picot, Atta Beg Amin, and Messrs. C. T. Allen, J. S. Haskell, Frederick Palmer, Percy Westacott, J. M. Wilson and A. Kenneth Williams.

After the toasts of "The King" and "King Faisal" had been honoured, Mr. Amery proposed the health of Muzahim Beg. Mr. Amery referred to the presence in London of their guest as a romance, in that from the chaos that existed but ten years ago in Iraq, a prosperous Arab Kingdom was now being built up. In reply, Muzahim Beg expressed the gratitude that all Iraqis felt towards Mr. Amery for his splendid defence at Geneva of the cause of Iraq in regard to the Mosul vilayet. He averred his belief that Great Britain was the only Power in co-operation with which a State of Iraq could be established, and promised to do all that in him lay to confirm the good relations already so happily existing between the British Empire and his own country.

We understand that Wahhabis, under the direction of the Amir of Hall, invaded Iraq recently at a point about 70 miles south of Najaf.

At a sale in London on May 11 a copy of Colonel T. T. Lawrence's "Seven Pillars of Wisdom" was sold for 400 guineas to a private purchaser.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

MOSQUES IN WESTERN CAPITALS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I am sure every Mussalman will feel much humiliated to know that the mosque in Paris "has become the home rather of feasting and bargaining, than of worship, and its main purpose has been subordinated to making it a sensation for tourists," and that it "is being used as a restaurant, in which instead of plain Oriental fare, elaborate menus are provided."

Perhaps the custodians of the mosque are not more to blame than those Mussulmans who visit it not as a place of worship but merely as one of the sights of Paris. It is no wonder that the mosque is being used for want of worshippers for other than its intended purpose. In *The Times* Mr. Ameer Ali has issued an appeal for funds to erect a mosque in London on a scale like that of the Paris mosque, befitting the position of Islam as a world religion. I am afraid the number of regular worshippers here does not justify the erection of such a mosque. It requires no exceptional acumen to foresee that, judged from the present state of affairs, if a mosque were built on the grand scale contemplated by Mr. Ameer Ali, the London correspondent of a journal in Persia or India some day would have to tell the same tale about this mosque, as, to our great sorrow and humiliation, the Paris correspondent of the *Morning Post* has told about the Paris mosque.

Excuse me, Sir, for not agreeing with you that "for a certain section of Mussalmans who reside permanently or occasionally in England these places of worship (mosques at Southfields and at Woking) appear, however, to be insufficient." The mosque at Southfields is more than sufficient for the spiritual needs of the Mussulmans in England and can hold more people than there are Muslims in London who can get time or care to go to a mosque for the five daily prayers. It proved to have room enough and to spare on the day of its opening ceremony, when, in addition to a huge crowd attracted from all parts of London, Muslims came from places as far as Manchester, Edinburgh and Dundee to attend the ceremony.—I am, etc.,

GHULAM FARID MALIK.

63, Melrose Road, S.W.18.

MR. S. PETROFF-TCHOMAKOFF AND MISS L. DE POORTER.

The marriage of Monsieur Stoyan Petroff-Tchomakoff, Counsellor of the Bulgarian Legation in London, and Lily, second daughter of Mr. and Mrs. Edward A. H. de Poorter, took place on May 11, at the Russian Church, St. Philip's, Buckingham Palace Road, London.

The bride, who was given away by her father, was attended by Miss Marie Weiser, as train-bearer, Prince Galitzine, as page, and six groomsmen. After the ceremony Mrs. de Poorter held a reception at Ambleside, Wimbledon Park. The bride and bridegroom left for the Continent. The guests included, among others:

The Belgian Ambassador and Baroness Moncheur, the Bulgarian Minister and Mlle. Hadji-Micheff, the Estonian Minister and Mme. Kallas, the Swedish Minister and Baroness Palmstierna and Baroness Margareta Palmstierna, the Polish Minister, Prince and Princess Reginald de Cröy, the Albanian Chargé d'Affaires, Sesostris Sidarouss Bey and Mlle. Sidarouss, Major and Mme. Nerinex, M. and Mme. Martin, M. J. Windart, Princess M. Galitzine, Baron and Baroness W. Engerth, Mr. K. von Zeileissen, Dr. and Mme. Weiser, M. D. Naoumoff, M. and Mme. Viktor Braf, M. and Mme. Elias

Eztko, Count A. Bernstorff, Baron Plessen, M. E. Nelky, Marchese Pallavicini, Colonel Ostoitch, Colonel Mossberg, M. and Mme. Walter de Bourg, the Right Hon. Noel Buxton, M.P., M. Peter de Bark, Lord Justice, Lady and Miss Sargant, the Dowager Lady Boyle, Sir Edward and Lady Boyle, Sir Harry and Lady Lamb and Miss Lamb, Mr. Heber Hart, K.C., the Hon. Mrs. Stanhope Tolle-mache, Mr. and Mrs. Leland Buxton, Chevalier de Wouters, Mr. and Mrs. Guépin, Mr. and Mrs. C. Mullins, M. and Mme. Sabline, and Mr. and Mrs. Montague Bell.

THE BRITISH INDIAN UNION.

In connexion with the British Indian Union, Mrs. Wardlaw Milne held a numerous attended reception at 50, Kensington Court on May 11, "to meet the Earl Winterton, M.P., and the Countess Winterton." Mr. J. S. Wardlaw Milne, M.P., who was present, was the recipient of many congratulations on his complete recovery from his recent ill-health. Among the guests were: Viscount and Viscountess Erleigh, Lord and Lady Strathspey, the Hungarian Minister, Lady Swaythling, the Dowager Lady Cozens-Hardy, Field-Marshal Sir Claud and Lady Jacob, the Hon. Emily Kinnaid, Colonel Howard Bury, Sir Charles and Lady Yate, Mr. and Mrs. Surendranath Mallik, the Dowager Lady Boyle, Sir Muhammad Rafique, Sir Maneckji and Lady Dadabhoi, Lady (Thomas) Bennett, Sir Samuel and Lady Roberts, the Hon. Joan Grant, Sir Thomas and Lady Carey-Evans, Mr. V. J. Patel, Lady Pinhey, Sir Stanley and Lady Reed, Sir Henry and Lady Burt, Brigadier-General W. W. Warner, Mr. and Mrs. N. C. Sen, Dr. and Mrs. Webb-Johnson, Sir Henry and Lady Cowan, Sir Montague Turner, Brigadier-General Charteris, Lady Robertson, Sir Alfred and Lady Knox, Lady Tighe, Professor N. N. Gangulee, Sir Newton and Lady Moore, Brigadier-General and Mrs. Makins, Sir Frank Beaman, Sir Montague Barlow, Mr. and Mrs. Montague Bell, Mr. J. A. Madan, Sir Arthur and Lady Froom, Mr. and Mrs. Pattam, Mr. F. B. Bradley Birt, Lady Bloomfield, Lady Morgan, Sir Howard d'Egville, Sir Richard Luce, and Sir Arthur and Lady Benn.

The death of Mr. Arratoon Stephen, the wealthy Armenian who gave useful assistance to the Mount Everest expeditions, is announced from Calcutta.

Colonel Philip J. H. Aplin, D.S.O., whose death occurred on May 10 at the age of 68, served in the second Afghan War and also in the Burma campaign of 1885. He gained the D.S.O. in Somaliland.

M. Kambas, the President of the Egyptian Mixed Courts of Appeal, has resigned. This creates a vacancy in the Higher Court, and the Egyptian Government has decided to nominate M. Vriakos, the senior Greek Judge of the Lower Court, to fill it, subject to the ratification of the General Assembly of the Mixed Courts.

On the occasion of the extraordinary session of the Roumanian Parliament on May 10 to commemorate the Jubilee of the Declaration of Roumanian Independence in 1877 the Government decided to introduce the Bill for readjusting the salaries of public officials.

THE ELECTORAL PROBLEM.

As the time approaches for the appointment of the Statutory Commission to examine the progress of the Reformed Constitution in India, and to consider the possibility of its extension, it is desirable to endeavour to judge whether any real advance in the proper use of representative institutions has been made. In a striking lecture delivered by Lord Ronaldshay last February, the ex-Governor of Bengal pointed out that the authors of the Morley-Minto Reforms, while aiming at the ultimate grant of responsible self-government to India by gradual stages, stated clearly their view that parliamentary government in its Western sense would be inapplicable to India and uncongenial to its people. The Government of 1917, on the other hand, while professing the same object, specifically regarded the establishment of parliamentary institutions in their Western form as the means to be adopted for obtaining that end. It was not unnatural that the members of the Government of India, themselves imperfectly acquainted with the parliamentary system, should follow the lead thus set to them. As a consequence, the leading politicians, who would, by the tradition of Indian legislative bodies, object to almost every proposal made by Government, found themselves treated as an official Opposition, with a deference that caused amusement and sometimes annoyance in the Provinces from which these politicians came. For the same reason, doubtless, the Viceroy showed the greatest reluctance in those days to exercise the power given him by the Constitution to override the vote of the Assembly, with the result that the Indian public were inclined to believe that the last argument lay with that body. Apart, however, from the desire to apply parliamentary government in a form as near to its full Western development as possible, irrespective of its suitability for Indian conditions and traditions, the Government of India had at least the excuse that the first Assembly contained many members whose views were reasonably moderate, if generally biased against Government, and who had considerable experience of the procedure of public assemblies, through their membership of the previously existing Legislative Councils.

The point for our present consideration is whether the Assembly has succeeded in so moulding or improving itself as to justify a belief that parliamentary institutions have been successfully inaugurated and can be with safety and advantage extended. It is extremely difficult for the on-looker, however friendly disposed, to see any sign of such progress or improvement. The moderate members in the Opposition have to a great extent disappeared. The leaders of that Opposition have become increasingly abusive, with the result that the members of the Government front bench have greatly reduced the amount of deference and attention which was at first yielded to their outpourings. The overruling by the Viceroy of the Assembly's vote now attracts comparatively little attention. It is generally considered that the standard of the Assembly is definitely lower than that of the previous Legislative Council.

The only section of the Assembly that has made any clear advance has been the loosely-welded Muslim group, and that only since it abjured participation in Swarajist tactics, and solidly united to further Muhammadan interests. A curious, though probably unconscious, confirmation of this view is to be found in the speech of Dr. Moonje, the President of the recent All-India Hindu Mahasabha at Patna. He said that the Mussulmans combined a better physique with greater political instinct and more independence of thought. Bitter, indeed, it must have been for the Hindus, who remembered their old leaders among the Bengalis and Deccani Brahmins, to find their spokesman admitting the superior political sense of the followers of the rival religion. The strength of the Muhammadans is, however, based on a strongly stressed communalism, which Dr. Moonje described as a state of perpetual civil war, and which is certainly not compatible with successful parliamentary government.

It was clearly stated by those responsible for the reforms foreshadowed in the declaration of 1917 that the first period should be purely transitional, and Lord Ronaldshay pointed out, in the lecture already referred to, that Parliament reserved the power to modify the changes to whose introduction it had given sanction. There is, therefore, no pledge that any changes that may in future be made should be in the direction of following Western institutions still more closely. Such institutions, so far as they depend on the election of the popular representatives by a mass of uneducated voters, have proved a failure, or a farce, in every Eastern country. Possibly even the Mediterranean countries might without injustice be included in this statement. Such methods of election present peculiar drawbacks in India. The electorate is, to an exceptional degree, uneducated and ill-informed: it is also exceptionally swayed by sectarian or racial feelings. Men of good family are to an exceptional, and possibly to an excessive, extent susceptible on the point of personal respect and dignity. They are becoming increasingly unwilling to face the personal abuse and the solicitation of votes, which are unfortunately inseparable from an Indian election. If the natural leaders of the people stand aside, a lowering of the standard set by individual representatives becomes inevitable. Meanwhile, overshadowing everything, is the communal question, which has become intolerably acute. The proposals put forward by certain Muslim leaders, at the close of the last session of the Assembly, for the institution of joint electorates upon certain terms and conditions do not appear to be meeting with the support that their sponsors may have anticipated. From the beginning the terms proposed were far from receiving the unanimous approval of the Muslim community. The Working Committee of the Congress, it is true, has expressed its cordial appreciation, but that body, as at present constituted, is by no means representative of Hindu feeling as a whole, although it claims to speak for all the peoples of India. The Hindu Mahasabha, at the session to which we have referred, was not, for example, disposed to accept the Delhi proposals as they stand and went so far as to say that any decision on the part of the All-India Congress Committee, which

meets this week, at the present stage would be premature and harmful. In expressing that view it emphasised the fact that the proposals have not been endorsed by the Muslim community; and other objections were also raised, including opposition to the proposed changes in the provincial electorates. It is undoubtedly desirable that the participation of Indians in every branch of the administration should be increased; but, as Lord Lytton reminded his hearers in his farewell address to the Bengal Legislative Council, "So long as either community aims at utilising the machinery of the Constitution for the purpose of dominating the other, the antagonism will not merely persist but increase." How best to frame a Constitution which will facilitate the organisation of parties on political rather than communal lines, and, while safeguarding the due representation of all communities, especially those which are in a minority, make all the representatives answerable to a mixed rather than to a communal electorate was a problem to which he invited specific attention. For our part we consider that it is a matter for serious consideration whether the object in view could not be best attained by a system of indirect elections, and nomination by public bodies. Lord Lytton anyhow rightly interpreted the facts of the situation which will confront the Statutory Commission when he frankly stated that "while all parties in India desire the main principles of the British Constitution to be applied in this country as nearly as possible, no Constitution is likely to be acceptable which proceeds on the assumption that the political conditions in India are similar to those which exist in Great Britain and, equally, no Constitution is likely to work well which is based more upon an abstract political theory than on a study of the actual political conditions of the country."

CURRENT TOPICS.

The Church in India.

The publication of the draft Indian Church Measure and the Indian Church Bill, together with the draft statutory rules proposed to be made if the Bill passes into law, marks a definite stage in the efforts that have long been made to obtain autonomy for the Anglican Church in India. An interesting article from the pen of Canon Fisher, of Lucknow, who has been actively associated with the Metropolitan and the Bishop of Bombay in the preparation of the detailed proposals, which appears in another part of this issue, explains why the Measure is necessary, and answers—not for the first time—many of the objections that have been taken to it. In the ordinary acceptance of the term there is no established Church in India. An Ecclesiastical Establishment is maintained for providing religious ministrations, primarily, to British troops and, secondarily, to the European Civil officials of Government and their families. Seven out of the eleven Anglican Bishops in India are officers of the Establishment, though their episcopal jurisdiction far transcends the limits of the Ecclesiastical Establishment. The exceptions are the Bishops of Chota-Nagpur, Tinnevely-Madura, Travancore-Cochin, Dornakal and the Bishopric of Assam. The stipends of the three Presidency Bishops are paid entirely by Government and they hold an official status which is clearly defined. The Bishops of Lahore, Lucknow, Nagpur and Rangoon enjoy the stipends of Senior Chaplains only but their episcopal rank and territorial titles are also officially recognised. The passing of the Measure will mean that the present Church in India will be free from the jurisdiction of the Church of England, and will be able to ordain its own priests, consecrate its own Bishops and, if it so chooses, prescribe its own liturgy, using the word in its wider sense. The draft Measure will be considered by the National Assembly of the Church of England this summer, and the Bill was read a second time in the House of Lords on Tuesday.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 28.

Lord Irwin and Baluchistan.

Lord Irwin's speech at the recent Durbar in Quetta is of some significance. Fifty years ago the Khan of Baluchistan ruled independently. Quetta came under British control in 1877, and for some time it was administered on the Khan's behalf, to be annexed later in consideration of the payment of a certain sum, annually, to the Ruler of Baluchistan. It formed a new province called British Baluchistan. It is the best portion of the country. The rest is still ruled by the Khan under British control. Quetta has been turned into an important military station, and the vulnerable points of the North-Western frontier are well guarded against a possible Afghan or Russian invasion. The sudden visit of Lord Irwin to Quetta has given rise to much speculation. His Excellency said that Quetta was one of the historic places of the Empire, and that "it was destined to play a part in the history of the North-West Frontier." He also alluded to "the peace which brought warfare (in Europe) to a close," but was "a false dawn of peace for the frontiers of India." Other references in Lord Irwin's speech would seem to indicate that the Baluchistan people are not quite reconciled yet to the loss of their freedom. Beside its strategic position, Baluchistan offers tempting riches in the shape of minerals and oil springs, sulphate of iron and aluminium (bauxite). They explain and justify British anxiety.

New Governors Appointed.

Sir Charles Innes, whose work as Commerce Member will be remembered on account of the protective duties he has introduced, has been appointed Governor of Burma, to succeed Sir Harcourt Butler. The other new Governor is Sir Alexander Muddiman. He succeeds Sir William Marris as Governor of the United Provinces. Both are K.C.S.I., C.I.E., men. It is said that the announcement was received with satisfaction in Simla; but, on the other hand, it is rumoured that Burma would have preferred a Governor straight from Home. The *Statesman* remarks that "whether a man is a good or a poor Governor is determined, not by his origin, nor by the fact that he is fresh from England or tanned by thirty years or so of service in India. Given the right spirit, the man from the Indian Civil Service is just as likely to make a success of his Governorship as is the European-trained politician, who has to spend the first years of his stay studying the strange conditions in which he finds himself." It is probably thought that the man straight from England will be more enthusiastic. Sympathy and zeal seem to disappear in proportion to the number of years one remains in India—or in Burma. Sir Alexander Muddiman has been closely associated with the reforms. His task as Home Member has not been an easy one.

Indian States and Reforms.

There was lately an announcement that a new journal, devoted to the interests of the Indian Princes, was about to make its appearance in Delhi, financed by the Native Rulers, among whom the Maharaja of Patiala figured with a subscription of several lakhs of rupees. This, however, was promptly denied by the interested parties. There is, none the less, a movement afoot to safeguard the interests of the States, in case there is a constitutional revision. The date on which the Royal Commission will visit India is not fixed as yet, but Professor Rushbrook Williams, Foreign Minister to the Maharaja of Patiala, and Colonel Haksar, a member of the Gwalior Council, are shortly proceeding to London. A Conference of Princes for the discussion of important political questions will soon open at Jannagar. Another will take place at Simla in May, regarding the production and consumption of opium. The Government of India have found that, while they can account before the League of Nations for every ounce of opium grown and used in India, they are not so sure of their facts where the Indian States are con-

cerned. From speeches recently made by the Maharajahs of Bikanir, Benares, and Kashmir, it seems clear that the Princes intend to play a more active part in the constitutional and political evolution of India, and to assert themselves more definitely than they did when Mr. Montagu paid his famous visit to India, and when the Duke of Connaught inaugurated the New Councils.

The Bengal Detenus.

There is much ado in the Indian Press this week about the *détenus*. It is alleged that some are confined in unhealthy jails, whilst others are left in huts surrounded with jungle, at the mercy of tigers and snakes. From the reports in the papers, it appears that the Bengal prisoners, who have not been tried, are scattered all over India, and are constantly transferred. Mr. Subhas Bose, in a lengthy and not altogether dignified letter, has declined the offer of Government. He is not prepared to exile himself indefinitely, and he pleads perfect innocence. His health is giving anxiety to his friends, and he has again been removed to Insein Central Jail. If he cannot be persuaded to go to England or to Switzerland, he will probably be transferred to Almora Jail, or to Bangalore or Ootacamund Jail. One of the other *détenus* died a few days ago. He was stricken with paralysis whilst in jail, but the authorities did not think necessary to inform his friends and relatives. After that the unfortunate man had small-pox. He was then removed to the hospital, where he died a few days after his admission. Another is getting blind, and a third, a mere boy, is said to have been forced to live in a hut, alone in a large area, far from any other habitation; a maddening ordeal, it is said to be. Some say that the idea is to make the most of the Indian's tendency to abandon hope in this life, and cultivate an ascetic mind, which will end, as it ended in the case of Arabindo Ghose, in the nation losing her most energetic champions. So the papers say. What truth there may be in it all we shall learn by and by.

Boycott of British Goods.

One of the resolutions passed at the Bengal Provincial Conference at Howrah (Maju) runs as follows: "That, as a measure of effective protest against the continued detention of the political prisoners, without definite charge and fair trial, the adoption of a vigorous programme of boycott of all British goods be urged." The boycott idea was taken up twenty years ago, and has given some lasting results, though it has not been carried out with the intensity and persistence demanded by the leaders. Opinions differ in the local Press as to the wisdom and utility of the measure. The *Bengalee* says that the distinction between British and foreign goods is a foolish idea put forward, periodically, by impractical minds. Besides, the boycott of all British goods at once cannot be done. Are the lawyers ready to give up their fat incomes to obey the non-co-operation orders? Are the papers prepared to run their show without advertisements of British goods? Are the *khaddar* patriots capable of making *khaddar* marketable without the help of foreign machinery? Are student-patriots to be blamed for reading from English books, and paying fees to secure British degrees? Can all those who deal in English goods be penalised? Will they become political untouchables? (They may sell European *khaddar*, which is the name for the coarse material called homespun, and none will be the wiser.)

Here and There.

As previously announced, Mrs. Annie Besant's paper, *New India*, has made its reappearance in Bombay as a weekly. Whatever Mrs. Besant's faults may be, she is a vigorous exponent of Indian thought and a great lover of India, and her sacrifices for this country cannot be questioned. The Indian public have hailed the new paper with delight.

By the removal of one and a half million pounds from sterling securities and currency reserve, the Indian Merchants' Chamber maintain that Government's action is against the provisions of the Currency Bill. It lays down the rates at which the currency authority shall buy or

sell gold or gold exchange. The Chamber notice that the currency authority has effected such deflation on the basis of 1s. 6d. per rupee, and they would like to know the section of the Act which authorises it.

Comrade Saklatvala has left a message. He wants India to be a country where one man lives with another and not upon another. There is something in that, but it applies to many countries. The striking part of his parting message is his parable of the vicious circle—by it he explains why poverty is incurable in this system of society: "Old rags and old books make paper; paper is sold and thus makes bank-notes; bank-notes are put in banks and lent out for interest; that interest is the cause of poverty, if only one thinks of it for a moment; then poverty, again, means rags, and rags mean paper, and so forth. Rags mean poverty, poverty means rags, no matter what the colour of the notes is." He told the peasants that they are the producers of all wealth, and that they should not part with real wealth for so fictitious a wealth as paper that does not even represent sanitary houses and the necessities of life. The remotest origin of wealth, he added, is labour. It is not only the rich who pay revenue—indeed, the best part is paid by the toilers. Then he blamed those who say that "religion teaches them that poverty is desirable."

Sir J. C. Bose, in a Press interview, said that one of the most serious drawbacks to research work in India was the attempt at slavishly copying foreign methods. Conditions in India are quite different, and India must evolve her own way of tackling all her problems. He said that all the instruments in his Institute were made specially for the purpose they were serving. There is nothing ready-made there—nothing could be.

Professor Indra, the son of the murdered Swami, upon Mr. Saklatvala's suggestion, has sent a petition to the Viceroy to obtain the pardon of his father's murderer. And, naturally, he has been adversely criticised, but many hold that his conduct is worthy of his venerable father's memory, and sets a good example.

Useless to say that amusements are scarce in the hot season. A company of heroic men and women have consented to cater for the rare theatregoers. The Revue is funny enough. It includes a skit in which Madame goes to the Palais de Danse, while Monsieur remains at home to mind the baby, a rather stale story. Another company is announced. They will give popular London successes, including "Fallen Angels." The title is enough! "Bluebeard's Eighth Wife" (it is too hot for this, really) and "Half a Loaf," probably meaning that it is better to have some sort of play acting than none at all. Poor Calcutta! The cinemas announce ten-year-old films. The stalls are empty, and the Indians only pay four annas. What is to be done?

THE CHARM OF ASSAM.

An interesting paper on Assam, "The Cinderella of the Indian Empire," was read before the Indian section of the Royal Society of Arts on May 6 by Mr. B. C. Allen, C.S.I., late Commissioner, Assam Valley Division. Sir Edward A. Gait, K.C.S.I., C.I.E., Member of the Indian Council and Chairman of the Indian section, presided. Mr. Allen dealt very comprehensively with his subject, and showed a number of excellent lantern slides illustrating the life, the scenery and the industries of the province. Confining his remarks more especially to events of recent years and in particular to the charm that hangs about Assam—that land of witchcraft—the lecturer continued:

"Take a lump of dough, press down into it the two forefingers and the thumb of the left hand, keeping them well spaced apart, and you will have a very fair replica of Assam. The province consists of the Assam Valley, the Surma Valley, and the intervening range of hills, the hills to the south and east which link us up with Burma and the native states of Manipur. Two valleys and some ranges of hills, that sounds a small affair, but, as a matter of fact, the area is about the same as that of England and Wales.

The Assam Valley is what is known in the Highlands as a corrie, for it is surrounded on three sides by hills. But it is a corrie of colossal size. It stretches as far as from Dover to Edinburgh, has an average width of about 50 miles, and some of the hills that shut it in are over 20,000 feet in height.

Down the centre of this majestic valley flows the Brahmaputra, a river which still retains some of the charm and attraction which belong to the unknown. For though it is certain that it is identical with the Tsanpo of Tibet, no civilized man has ever followed its entire course through the Himalayas. Where it leaves the hills it is known as the Dihang, and it is only after the Luhit has joined it from the east that it is styled the Brahmaputra. Near Sadiya, the river is of extraordinary beauty. Wide enough to be like a narrow loch, the view on three sides is bounded by mountains whose snowy tops in winter gleam brightly in the sun. Further west it stretches out over its sandy strath, but throughout almost the whole of its course the hills are visible, on a clear day, generally on either side. The immediate foreground, as a rule, is flat, but this detracts little from its majesty. In the rainy season I have known it so wide that on a stormy morning neither bank could be seen from the steamer's deck, though we were hundreds of miles up-stream from the sea. If you travel at that time, as I have often done, in a steamer of but modest size, you acquire a very wholesome respect for the river's power. When evening falls you anchor in the lee of some small sandbank and watch the enormous flood sweeping along carrying trees and huge masses of reeds and grass upon its bosom. The bank is possibly a mile or more away, low rain clouds shut in the horizon, and you hope that they will not discharge a sudden squall which might upset your rather cranky craft. This is no impossible contingency, for only a few years ago one of the large river-steamers was blown over with dreadful loss of life.

Near the river the land as a rule is low and is covered with reed jungle, much of which has in recent years been taken up by hardy immigrants from Bengal, who are trained to snatch a living from places which an up-countryman would consider to be quite unfit for human habitation. Further back the level rises and there are wide plains covered with rice, and dotted over with villages buried in clumps of bamboo and fruit trees, with tea gardens or forest stretching, often for miles, over land which is too high for transplanted rice. Near the Himalayas there are grassy plains, the home of the partridge and the florican.

But the great glory of Assam is its mountains and its rivers. Over the Assam range one can travel: the Himalayas offer the continual temptation of the unexplored and the unknown. During the winter the hill tribes come down, Bhutias, Tibetans from Towang, Akas, Daflas, Miris, Abors, Mishmis, and so on round the eastern end of the valley through Khampis and Singphos, and the independent head-hunting Nagas, till we reach the administered Nagas of the Assam range. Curious folk are they, who might have walked straight from the stage of the pantomime or a fancy dress ball at Covent Garden. Decent people for the most part but absolutely independent. They know that a strong government, whether our own or that of the Ahoms in the zenith of their power, can follow them into their rocky fastnesses. But they also know that this is a very costly and a very difficult proceeding, that there is no possibility of getting any compensating advantage, and that no Government will embark on such an unsatisfactory undertaking unless driven to it by the severest provocation. In time, no doubt, we shall be compelled to occupy the unadministered territory between Assam and Burma. But successive Secretaries of State have rightly shrunk from adventures north of the Brahmaputra. The tribes occasionally give trouble in the plains, but if you push your frontier into the hills you will have trouble there, and the further north you go the greater will your difficulties be."

(To be continued.)

THE INDIAN CHURCH MEASURE.

BY THE REV. CANON F. H. B. FISHER.

The constitutional development of the British Empire may be compared to the process of dividing off bulbs from the parent stock. As each Dominion has arrived at that stage of growth when it begins to be cramped by its close connexion with the mother country, it has been set out with legislative and administrative room for its own natural development. And, with the *differentia* resulting from local conditions, it has in every case proceeded to grow true to type: the history of the last fifteen years has abundantly proved that. In effect, exactly similar has been the process of development in the Church of England in those Dominions: the Church in Canada, South Africa, Australia and elsewhere is autonomous but still in full communion with the Church of England; so that the decennial meeting of Bishops, known as the Lambeth Conference, is a Conference and not a legislative body, parallel to the Imperial Conference.

It is now just fifty years since the Church in India, through its Synod of Bishops, expressed the desire to attain the power to control its own affairs; but when in 1912 a representative Assembly in Calcutta, called for the purpose of considering the question, resolved on taking action, it was found that it was legally impossible for the Church to set up the legislative bodies that it desired. The passing of the Church of England Assembly (Powers) Act in 1919, however, put a new complexion on the matter, providing the means through which it seemed that the Church could be given its freedom. The question was taken up again and for seven years the details of the proposals have been thrashed out thoroughly in Diocesan Councils and in the central Provincial Council, on all of which the laity are strongly represented, and every such body has expressed its approval of the suggested procedure. The result is a petition from the General Council of the Church in India to the National Assembly of the Church of England asking the latter to pass a measure giving autonomous powers to the Church in India. Meanwhile the negotiations which had been carried on with the India Office showed the necessity that some parts of the legal provisions should be effected by a Bill in Parliament: this is the Indian Church Bill introduced into the House of Lords by the Secretary of State for India on May 10.

The necessity for action lies partly in the confusion and doubt inherent in the present situation of the Church in India. Lawyers are simply unable to say exactly what the law is which now governs the Church there. The *hexus* between the Church in India and the Church of England is in the Letters Patent of the Bishops which enjoin them to administer "the ecclesiastical law of England"; but whether that is the law as it was in 1813, or in 1833, or at the date of the Letters Patent to each Bishop, or as it is now, is a question which legal opinion fails to decide; though it is generally agreed that it is not the last, so that, for instance, the new Prayer Book, if passed in England, would probably be illegal in India; and there would be no way of making it legal. The result of this state of uncertainty, and of the sheer impossibility of observing much of the English ecclesiastical law under Indian conditions (even in English congregations), is that much of it is disregarded either with or without the definite (but, of course, strictly speaking illegal) sanction of the episcopal synod. Moreover there are administrative things which cry out to be done but which it is impossible to get done, such as the division of dioceses or the provision of forms of worship more suited to the genius of the country. By curiously anomalous methods some absolutely necessary divisions of dioceses have been with difficulty achieved for practical purposes: the English Book of Common Prayer of 1662 remains the only manual of worship, translated as it stands into the various vernaculars, which can be used by the various races included in the Indian Church. And, apart from the

essential urgency of the need, there is an urgency in the matter of time and opportunity; for the Government of India Act of 1919, and all that it involves in the present and the immediate future, makes the relation of church and State in India increasingly difficult and the negotiations between the two, which the drafting of the present Bill and Measure have required, quite uncertain at any future date.

The effect of the Indian Church Bill is to repeal such parts of the Government of India Act as refer to the legal union of the Church in India with the Church of England, to annul the Letters Patent under which Bishops have been appointed by the Crown and to provide that no such appointments shall be made in the future: it also makes arrangements for the legal passing of the property of the Church as it is now to the Church as it will be, and for the continuance of the present practice of the provisions of chaplains and churches by Government for the British-born servants of government.

It has not been without long and careful discussion and some controversy that the Church in India has finally agreed on this step. The opposition that there has been is due not only to that natural distrust of change of any kind which is in some men, such as many years ago inspired opposition in Canada to the first proposals for autonomy of the Church there, but to definite peculiarities of the position in India. There is an element of embarrassment in the fact that the British-born community in India is numerically a minority, and increasingly so, in the Church of the country; and that has led to special and very carefully drawn provisions for the securing to them of ecclesiastical ministrations of the kind in which they have been brought up. There is a clause in the Bill allowing for rules to be agreed upon between the Metropolitan of India and the Governor-in-General on this subject, and the draft of these Statutory Rules, which has been issued, contains provisions which have received the approval of practically all those whose distrust of the proposed Measure had been expressed, and make it impossible that the Church in India—even in the very remote contingency of its wishing to do so—should deprive British residents of these services of the Church to which they are accustomed.

Actually the position of the laity in the Church will be much stronger and more influential than it is now, whether in India or in England. Not only are they fully represented by election on all the Councils of the Church, but it is they and not the clergy with whom will rest the decision as to the particular form of authorised service which will be used in their own church, and the Prayer Book of the Church of England will always be one (and for many years the only) alternative.

The fears for the future which have found expression among English people in India have largely been based on their experience in matters political. It may surely be doubted whether the implied analogy is a true one. The Indian Christian is much more closely bound up with his fellow-Christian of different nationality than is the Indian politician with what he regards as the ruling race of foreigners. The two or three almost purely Indian dioceses have already expressed with striking emphasis, by resolution of their diocesan councils, their desire that their British fellow-Christians should be deprived of nothing of their natural heritage of use and custom. And experience shows that the English-speaking Indian Christians, who may in some places become a majority in English-speaking congregations, are the most conservative of people in their religious tastes.

In the most essential things, doctrine, worship and moral standards, the connexion with, and influence of, the Church of England will remain as strong as it is now, so long as clergy and people continue to pass from England to India; while the Church there will be relieved of the real danger of subordination to an increasingly non-Christian government, and will be free among the Indian peoples to become more and more the natural home of their spirit and the expression of their religious instincts.

INDIA IN PARLIAMENT.

BY SIR FRANK NELSON, M.P.

A propos of the present campaign for National Economy a group of Members, discussing the cost of Questions to the Government, recalled one which some time ago found its way into the Order Paper inquiring as to the number (and cost of upkeep) of locks in the Suez Canal!

I instance below a few examples of the thirst for information about India on the part of Socialist Members of Parliament, and, although I do not wish in any way to be taken as holding up to ridicule this desire for knowledge, I am emphatically of opinion that the cost of compiling some of the replies to queries of this nature must be out of all proportion to their value.

Mr. Lansbury was anxious for Lord Winterton to tell him if H.M.'s Government had received any requests to constitute the Andhara-Telegu districts of Madras into a separate province.

The same gentleman wanted information as to a Buddhist monk who was in prison pending prosecution for sedition. Lord Winterton in this case, however, stated he could not oblige with the details.

Mr. Baker wanted to know if the India Office, in order to increase the purchasing power of the Indian people, was prepared to consider financial proposals to provide irrigation and sugar-crushing machinery on loan to approved Co-operative Societies and local committees.

The textile districts are uneasy over the momentarily expected report of the Indian Tariff Board, which was reported in the Press to have recommended an increase from 11 per cent. to 15 per cent. in the import duty on certain classes of cotton goods into India.

It was officially denied in the House on May 11 that the report had up to then been published, but it may be expected any day now.

It is earnestly to be hoped that simultaneously with publication of the Board's recommendations, the decision of the Government of India in regard to the same may be promulgated, for it is obviously in the interests of the textile trades, both in India and in Lancashire, that they should know as soon as possible whether or not any change in the tariff rates is to be effected.

It would be premature, and, possibly, mischievous, to animadvert at this juncture as to the commercial and political effect of any such duty as is rumoured, but it may be mentioned that the improvement in the Lancashire piece-goods trade, which was noticeable some months ago, has unfortunately not been maintained, and reports are at present the reverse of cheerful.

It is generally assumed—with what accuracy I cannot say—that the conference of the Indian Princes in Simla has to do chiefly with the position of the Princes in the light of such constitutional reforms as may possibly be recommended by the Statutory Commission. This is indubitably a matter of first importance, and by no means the least of the many problems which will confront the Royal Commission. The independence of the various Native States is, quite naturally, a very prized possession of their rulers, and a privilege very rarely abused.

Since I last commented on India in Parliament, the House has been almost wholly occupied with the burning question of the moment—viz., the Trades Union Bill—and circumstances have so combined as to render it necessary for me to pen these few lines after having sat in the House from 2.45 p.m. on May 12 until shortly before 4 a.m. on May 13th, debating this controversial measure.

It is, in this connection, therefore, interesting to note that in a few weeks an Act will come into force in India providing for registration of Trade Unions in British India, and it is doubly interesting inasmuch as the Indian Act lays down that the constitution of a separate political fund shall be permissible, but expressly provides at the same time that no member shall be compelled to contribute to that fund.

INDIAN MAIL.

Life Insurance in India.

The impending revision of the Indian Life Assurance Act of 1912, in the light of the valuable experience gained during the War and post-War periods and the recommendations of the Committee which has just concluded its inquiry into the working of the corresponding English legislation, invests with more than ordinary interest the latest annual report of the Government Actuary on the administration of the Indian Act in 1926. Since the Act was passed, out of the 86 companies constituted in India which have become subject to its provisions a third have gone into liquidation, either by reason of the excessive costs of management, or on account of the depreciation of investments. It is not, therefore, surprising to find that a vigorous plea is advanced for the more economical conduct of life insurance business in that country. The oldest of the existing Indian companies are the widows' funds established nearly a century ago by Christian missionaries in Madras and the United Provinces. Some of the widows' and pension funds for Government servants were started at an even earlier date, but they have received exemption from the operation of the Act. Of the 57 companies now in existence roughly one-third are mutual and two-thirds proprietary institutions, the oldest of the former being the Bombay Mutual, founded in 1871, while the Oriental, also of Bombay, which dates from 1874, is the oldest Indian proprietary company transacting ordinary life insurance business. It was not until the Swadeshi boom of 1906 that proprietary companies were started in Bengal and the report draws pointed attention to the fact that "several of the pioneers succumbed to the temptation of paying too heavily for new business or adopted other reasoned methods of conducting their affairs, with the inevitable result that nearly half of them had to go into liquidation within a few years of their establishment." Of the many Calcutta companies now remaining a few still conduct their business, Mr. Meikle adds, "at a dangerously high cost, but an enlightened public opinion is growing up to expose the evil of extravagant management."

India has to buy her experience, as in other fields of financial organisation, and in the sphere of insurance, *Capital*, the Calcutta journal, observes, "there is evidence of a gathering momentum, the total life assurance income of Indian companies in 1925 standing at 298½ lakhs, compared with less than 219 lakhs in 1921." Since the end of the War, to return to the Actuary's summary, "there has been an increase of over 90 per cent. in the total income and over 70 per cent. in the life insurance funds. Both the income and the funds have, however, more than doubled since the Act was passed in 1912." The average rate of annual premia payable under the policies is nearly 5½ per cent. of the sum assured. This is much lower than the corresponding rate in the case of companies operating in England, the difference being, no doubt, partly due to the fact that endowment assurances constitute a larger proportion of the policies issued by Indian than by British companies. Dividends paid out of life assurance funds have risen to a little over 3 per cent. of the sums paid as claims to policy-holders. Before the Act came into force nearly all the proprietary Indian companies were in the habit of paying dividends to their shareholders, irrespective of whether or not their life assurance funds permitted of the distribution. Now no dividend is ever paid by any company out of its life funds except out of profits ascertained by an actuarial valuation of its assets and liabilities. Consisting mainly of stock exchange securities, the aggregate net value of the former, returned at 10.42 crores, shows an increase of about a crore upon the corresponding total of the previous year and the new sums assured, under ordinary life policies, rose during the same period by the record figure of over 8 crores to 47 crores.

NEWS IN BRIEF.

The Government of India (Indian Navy) Bill passed its third reading in the House of Lords on May 12. The measure does not, however, come into operation until certain consequential legislation has been adopted by the Indian Legislature.

Mr. V. J. Patel, President of the Legislative Assembly of India, and Joint-President of the affiliated branch of the Empire Parliamentary Association in the Central Legislature of India, has left London on a visit to Dublin and Belfast and will return to the National Liberal Club on May 22.

Lieutenant-Colonel H. B. St. John, C.I.E., C.B.E., Agent to the Governor-General in the Punjab States, has been appointed to succeed Mr. F. W. Johnston, C.S.I., C.I.E., as Agent to the Governor-General and Chief Commissioner in Baluchistan.

Dr. Malan, South African Minister of the Interior, according to a Reuter message from Cape Town, has sent a telegram to Mr. Srinavasa Sastri expressing great satisfaction on behalf of himself and his colleagues at the appointment of Mr. Sastri as Agent-General for India in the Union of South Africa.

India has defeated Spain in the first round of the Davis Cup Lawn Tennis Competition by three matches to two. In the second round against Czechoslovakia India will be represented by Dr. A. H. Fyzee, Dr. A. A. Fyzee, and Mr. K. Prasada.

In reply to a question in the House of Commons on May 9, the Under-Secretary for India said the plans of the new India House in London were being prepared, and it was hoped that work would be started before the end of the year. It was not anticipated that the building would be ready for occupation before the year 1929.

In the House of Commons on May 9 Earl Winterton stated that the estimated total cost of the curtailed programme in connexion with the Bombay Back Bay Reclamation Scheme was Rs.6½ crores, of which Rs.5 crores had been incurred up to March 31, 1927. Replying to a supplementary question, he added that he could not say when it was anticipated that the whole of the work would be completed. Some had already been completed.

Earl Winterton, Under-Secretary for India, replying in the House of Commons on May 9 to an inquiry by Mr. Lansbury (Bow and Bromley, Lab.) about the health of Mr. Bhose, one of the prisoners detained under the Bombay Ordinance, said:—I have no very recent detailed information, except that, since his examination in February by two doctors disclosed the possibility of early tubercle, Mr. Bhose's health has unfortunately not improved. In consequence it has been decided to transfer him from Burma to Almora—the best climate in India for tubercular patients—and he was to leave Rangoon last Saturday. The Governor of Bengal is arranging for a special medical examination by his own surgeon and a physician of the Medical College when Mr. Bhose passes through Calcutta.

A later message from Calcutta, dated May 16, states that as a result of the examination the Bengal Government has decided to release Mr. Bhose "in order that he may be free to proceed with his treatment unhampered by any restrictions as to any place he may select."

General Sir Charles Harington, who is leaving shortly to take up the Western Command in India, and Lady Harington were the recipients of a magnificent Milan casket of embossed antique leather from the directors and workers of Rowntree and Company, Limited. Striking tributes to the Viceroy and Field-Marshal Sir William Birdwood, the Commander-in-Chief in India, were paid by Mr. B. S. Rowntree, recently returned from a visit to India, who made the presentation. On behalf of the police force the Lord Mayor of York afterwards presented General Harington with a gold-mounted fountain pen.

THE NEAR EAST AND INDIA regrets to announce the death, which occurred at Wimbledon Cottage Hospital on May 10, as a result of an accident, of Mr. Francis Guy Selby, C.I.E., LL.D. Mr. Selby, who was in his 75th year, was appointed to the Indian Educational Service in 1877 and, except for two brief periods during which he officiated as Director of Public Instruction in Bombay, spent practically the whole of his service at the Deccan College, Poona, which became during his principalship one of the foremost educational institutions in the country. He was created C.I.E. in 1908 and retired from the Service in the following year.

A Reuter telegram from Peshawar states that Gul Akbar, the Afridi, who with four others is alleged to have taken part in the murder of Mrs. Ellis and the abduction of her daughter at Kohat in 1923, has been arrested.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Oil in Iraq.

The recent statement by King Faisal, to which I have already referred in these columns, with regard to the prospect of a pipe-line from Iraq to the Mediterranean may possibly have aroused hopes of promising oil developments in Iraq outside the Naft Khana area. In answer to a question in the House of Commons this week, Mr. Amery threw a cold douche on such expectations. "As far as concerns the concessions of the Turkish Petroleum Company," he said, "oil has not yet been discovered in paying quantities in the vilayet of Mosul or any other part of Mesopotamia." There has all along been a doubt as to the nature of the Mosul oilfields, but, of course, the fact that up to the present oil has not been discovered in paying quantities, while it is naturally disappointing, is not in any way conclusive or final. The exploration of a vast oil area is a matter which must be expected to take a considerable time. All that Mr. Amery's statement does mean is that if the construction of a pipe-line should be determined on in the near future it will be solely on account of the Naft Khana area, and should this development take place it is scarcely necessary to emphasise the significance which would attach to it as pointing to the richness of the oil deposits in that area.

Trade of the Sudan.

The figures of the trade of the Sudan for the first two months of this year, while showing a considerable improvement as regards volume, are at the same time disappointing in a sense, for their increase is wholly in the value of the exports and the imports show a decline, reflecting the continuance of the adverse commercial conditions which have persisted for so long. Turning to the figures, the volume of trade was £E2,027,224, an increase of £E222,812. The value of the imports was £E875,115, a decline of £E92,611, comprised of Government imports £E336,290 as against £E409,104, and public imports £E538,825 as against £E558,522. The value of the exports, however, shows an increase of £E318,484 at £E1,093,150, which, of course, bears tribute to the importance which cotton now plays in Sudan commerce. It must be pointed out in connexion with this increase that the value of cotton per kantar was much lower than for the corresponding months of 1926.

Anglo-Egyptian Oilfields.

In 1926 there was a decline in the net production of the Anglo-Egyptian Oilfields from 175,758 tons to 169,211 tons. This was due, the report states, to the fact that the production from the six wells completed during the year did not offset the decline in the older wells. Further work was carried on in the Ashrafi area, but without success, and the prospect of obtaining commercial production from this area is now regarded as very doubtful. The company has spent large sums in the past in testing every oil producing possibility in Egypt, but with disappointing

results, and the directors have now deemed it their duty to look further afield, and have formed a subsidiary company, called the Red Sea Petroleum Company. A concession has been acquired by this concern in respect of the Farsan Islands, granted by the Ruler of the Idrissi, in whose territory they are situated. The geological reports received are stated to be sufficiently promising to warrant the drilling of a test well, and it is hoped that drilling will be begun this month. As regards the results of the year, the net profits amounted to £245,136 as compared with £244,098 for 1925 and £176,609 for 1924. The dividend on the "B" shares is maintained at 12½ per cent., leaving £249,491 to be carried forward, subject to taxation.

Burmah Oil Dividend.

The preliminary statement of the Burmah Oil Company, which was issued at the end of last week, shows that the past year was a highly satisfactory period for the company. A net profit was made, after allowing £491,254 for depreciation as against £488,609 last year, of £2,502,818, which compares with £2,404,958 for the previous year. A dividend is recommended of 4s. per share, making 6s. per share as against 7s. for 1925, but the capital has since been considerably increased by the capitalised bonus of 33½ per cent. which was distributed in 1926, so that this year's dividend actually marks an increase in the distribution. The allocations include £200,000 to the general reserve as against £292,580, £20,000 to insurance reserve, and £150,000 to fields expenditure equalisation reserve. The carry forward will now be £453,469, which compares with £395,903 last year and £302,340 for 1924.

The Cotton Outlook.

It is difficult not to regard the recent upward trend of cotton prices with a certain amount of misgiving, for it cannot be too strongly emphasised that it lacks the firm foundation of a marked development in the consumption of cotton goods. There is, unfortunately, no doubt as to the effect of the Mississippi floods, but even if it be assumed that the yield from that area this season is negligible, the American crop should still be sufficient for requirements on the present basis. If, however, there is an expansion in the demand of a general nature—and it may be pointed out that there have been encouraging signs of late in some of the important outlets—then the position

will be materially changed, a rise in prices will be fully justified, and further cotton growing in the Empire will receive a much-needed stimulus. It must be understood that I have written here of the immediate situation. If, as has been suggested, the Mississippi cotton fields are permanently affected by the floods (these fields produce the best qualities of American cotton), then obviously the ultimate results are bound to be far-reaching. It would mean a serious gap in the world's cotton production, which would have to be made good by the further development of the cultivation of American cotton in the Empire.

Eastern Telegraph Company.

The gross revenue obtained by the Eastern Telegraph Company amounted to £3,436,690, or much the same as the previous year's level. There was, however, an increase in the expenditure from £2,151,921 to £2,338,729, and the profit after meeting all fixed charges is £920,909 as compared with £1,114,399. The allocation to the reserve is £400,000 and the dividend is maintained at 10 per cent., tax free, leaving £506,625 to be carried forward as against £555,717.

Turkish Debt Question.

There is no news at yet with regard to the continuation of the negotiations in regard to the Turkish debt, and the fact that the delegates have left Paris may be taken as an indication that an early resumption of the pourparlers is not anticipated. It is abundantly clear, however, that the Turkish authorities are really sincere in their desire to effect a settlement of this long-standing question, and with that fact in view it may, I think, be assumed that before very long there will be a further development of the position. It would be strange, indeed, if Turkey were not desirous of a settlement, for the country has everything to gain by it and nothing to lose. Whatever may be said by the Turks on the subject, it is self-evident that the country cannot do without financial support from other countries, but that support will not be forthcoming while Turkey's credit remains at a low ebb, as it is bound to do while a debt settlement is in abeyance.

The Rubber Position.

The reduction on a week of even a little over 100 tons in the London stocks is so rare an event of late as to call for some comment. In my opinion it would be a mistake to deduce from this development that we are at the end of the rise in the stocks here, though that event cannot in any case be far distant. I look, as I have already pointed out, for further increases for perhaps three or four weeks, and after that there should be a gradual and increasing reduction. The position with regard to rubber is, however, in a sense akin to that of cotton, since both commodities are suffering from the restriction of demand. There is, however, a possible important difference. No one has suggested that the production of cotton is on a scale which is too great for the world's needs; on the contrary, it is very obvious that if buying was on a normal scale there would be something like a shortage. It is not at all clear, however, that this is the case in regard to rubber. Most of the companies have continued year after year to plant new areas, and new companies have been formed, and it

seems at least probable that production (possible production, I mean, of course) has for the time being gone far ahead of consumption. An opinion given to me last week on the outlook may be of interest. The tenor of the view was that within a year the rise in the price of the raw commodity will bring about a boom in the shares, and that after that there will be a further prolonged "slump." This supports what I said last week on the subject. If the view is correct then buyers will have an unexampled opportunity when the "slump" comes, for ultimately consumption will overtake production.

COMMENTATOR.

SUDAN COTTON POSITION.

The current report of the Central Economic Board of the Sudan Government gives the following particulars:

Mongalla Province.—The cotton crop throughout the province has been most disappointing. The failure of the late rains and pests materially reduced the yield per feddan. Except from Meridi District where the number of cars were inadequate, the transport of the crop to the river has proceeded satisfactorily. There is, however, considerable congestion at Rejaf.

Nuba Mountains Province.—A few kantars of cotton are being kept in Talodi and Kadugli for testing the ginneries now in the course of erection. The work on these ginneries is now proceeding fast. Practically all the parts have now been delivered at Talodi and Kadugli and erection in both places should be completed about the end of May.

Red Sea Province.—The Tokar cotton crop is now estimated at 85,000 kantars.

Gezira Irrigation Scheme.

Cotton came in very well throughout the month. The amount picked on February 15, was 1.93 kantars per feddan; being exactly the same as the figure at the corresponding date last year, while the figure up to the end of the month was 2.59 against 2.6. It is not expected that the ultimate results will be quite as good as last year as there is a certain amount of bad cotton which gives its results quickly and then stops. An ultimate yield of four kantars per feddan may, however, be regarded as assured.

The ginning factories are still working excellently and are turning out about eight hundred bales a day, but this only represents the produce of about 3,000 bags or rather under, while cotton has been arriving at the rate of 5,000 bags a day. The amount of cotton round the factories is therefore gradually increasing, though it has not yet attained the dimensions it reached last year.

Steady progress is being made with the widening of the main canal and with the canalization in the first part of the extension of the scheme.

A large area of wild coffee has been found in the south-west corner of the Kinati Valley, Latuka District, Mongalla Province (says the report of the Central Economic Board of the Sudan Government), but unfortunately too late to make the crop worth collecting this year as most of the berries have fallen on the ground and rotted.

CHESS.

By "CARO-KANN."

I give this week another game from the Murton Cup tournament at the City of London Chess Club. In this game White receives the odds of two moves.

1, P—K4, . . . ; 2, P—Q4, P—QKt3; 3, P—KKt3, B—Kt2; 4, B—Kt2, P—KB4 (1); 5, Kt—QB3, Kt—KB3; 6, Q—Q3, P—K3; 7, Kt—K2 (2), Kt—B3; 8, P—QR3 (3), PxP; 9, KtxP, B—K2; 10, O—O, O—O; 11, Kt—B4, K—R; 12, Kt—Kt5, P—K4 (4).

Position after Black's 12th move, P—K4.

13, Kt—Q5, P—K5; 14, BxP, KtxKt; 15, KtxP, Kt—B3; 16, KtxR, QxKt; 17, B—Kt6, B—Q3; 18, B—Kt5, Kt—K2 (5); 19, R—Kt, KtxB; 20, QxKt, Kt—R2; 21, R—K3, KtxB (6); 22, QxKt, Q—B2; 23, P—B4, P—B4 (7); 24, P—B3, PxP; 25, PxP, R—KB; 26, P—QKt4 (8), Q—B5; 27, R—Q, K—Kt; 28, Q—R5, P—R4 (9); 29, PxP, PxP; 30, QxP, R—R; 31, Q—K, Q—Q4 (!); 32, R—K8 (ch), K—B2; 33, R—K2, R—K (!); 34, Q—B, Q—R8 (ch); 35, K—B2, QxP (ch); 36, K—K, B—R3; 37, R—Q2, BxR; 38, RxB, QxP (ch); 39, K—Q, Q—Q6 (ch); 40, K—K, Q—B6 (ch); 41, K—B2, QxP (ch); 42, K—Kt3, Q—Q6 (ch); 43, K—B2, B—B4 (ch); 44, K—K, Q—Kt8 (ch); 45, resigns.

(1) With this move Black attempts to seize the initiative.

(2) This move proved embarrassing for Black whose plans had envisaged B—Kt5 with a view to increasing the pressure on the centre Pawn.

(3) Not PxP, for then Kt—Kt5, etc.

(4) 11 . . . K—R was to make this move possible. Kt (B4) to K6 is still playable, but White would now only obtain a Rook and one Pawn for two Knights, which would not be good enough. Play would proceed as follows:—13, Kt (B4)—K6, PxKt; 14, KtxP, Q—

Q3; 15, KtxR, RxKt; 16, PxP (better than P—Q5), QxP; 17, B—Q2, Q—Q3.

(5) It is necessary at all costs to remove the Bishop at Kt6.

(6) White should not have allowed this exchange. B—Q2 should have been played. Apparently it was thought that R—K3 followed by P—Kt4 would win.

(7) It is a maxim that the best way to meet an attack is to hit at the flank.

(8) If now P—Kt4, then 26 . . . BxP; 27, R—R3 (ch), K—Kt; 28, Q—R4, B—R3; and if 29, P—Kt5 then Q—Q4 winning.

(9) A curious situation would arise if Black played instead B—Q4. There would follow 29, R—R3 (!), Q—R7; 30, R—B2 (!), QxR; 31, QxB (ch), R—B2; 32, R—K, and White would have the better of it.

The solution to last week's end game is as follows:—1, Kt—B4 (ch), BxKt; 2, PxP, P—K5; 3, K—K2, K—K4; 4, K—B2, K—B4; 5, K—Kt2, K—Kt5, and wins.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, May 23). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, May 31); s.s. Maihar for Calcutta (Birkenhead, June 7).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, June 1).

British India Line.—S.s. Mandala for Bombay and Karachi (London, May 28); s.s. Nalgora for Colombo, Madras, and Calcutta (London, June 4).

Cunard Line.—S.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, June 18); s.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool June 11, Swansea June 14).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21).

P. and O. Line.—S.s. Rajputana for Bombay (London, June 3); s.s. Nagoya for Colombo, Madras, and Calcutta (London, June 11).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 21); s.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Famagusta, Larnaca, and Limassol (London, May 25).

Ellerman and Papayanni Lines.—S.s. Assyrian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool May 20, Glasgow May 21); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 27); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool May 28, Swansea June 2); s.s. Dido for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 28); s.s. Algerian for Algiers*, Malta, Syra*, Smyrna, and Constantinople (Liverpool, June 11). * Subject to sufficient inducement. Cargo taken on through B/Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port; Fiume via Trieste.

For the first three months of this year Yugoslavia's export trade amounted to 1,065,000 tons of the value of 1,548 million dinars.

The traffic receipts of the South Indian Railway Company for the week ended April 16 were Rs.10,38,939, making the total from April 1 Rs.23,26,610.

The Greek Chamber has approved the commercial agreement between Greece and Great Britain and provisional agreements with Belgium and Yugoslavia.

The traffic receipts of the Suez Canal Company for the week ended May 6 amounted to 3,780,000 francs as compared with 3,730,000 francs for the corresponding period of the previous year.

The Oriental Telephone and Electric Company recommends a final dividend of 6 per cent. on the ordinary shares, free of tax, making 10 per cent., plus a bonus of 2 per cent. on the ordinary shares, free of tax.

Spies Petroleum Company announces that cabled advice has been received from Bucharest by Hamilton's Oil Concessions (Roumania) as follows:—"Production for week ended May 13, 120 tons. Well No. 8, cleaning. New well No. 9, 970 metres deep; new well No. 10, 237 metres deep."

GERMAN MOTORISTS' VISIT TO YUGOSLAVIA.

*(From a Correspondent.)**Liubliana, May 2.*

Motoring as a sport has developed rapidly of late in Yugoslavia, as indeed it has throughout Europe. That it has not progressed quite as much there as in the neighbouring States, Austria and Italy, is due to the fact that Yugoslavia has no motor car works of her own, but is dependent upon imported cars. Yet the country occupies an important place in international road traffic, for one of the most attractive routes from Italy to Vienna runs through a corner of Yugoslavia and at the same time gives access to the beautiful Yugoslav Riviera.

This year the summer motoring season in Yugoslavia opened with a very important event. For the first time since the War, a body of German motorists visited the country. Although the feeling of hostility between Germany and the Southern Slavs was never so very acute—the Empire was never contiguous with any part of the present Kingdom of Serbs, Croats, and Slovenes—yet until recently the people still saw in every German a member of the dominant element in the late Austrian Empire which was wont to curtail their freedom and prevented their national independence. To-day conditions have changed, and the free Yugoslav people gave a warm welcome to the German guests. Of course, the event had a political as well as a merely sporting side to it. Yugoslavia, it should be remembered, exports annually 80,000,000 dinars worth of goods to Germany, and her imports from Germany amount in value to 83,000,000 dinars.

The German cars crossed the frontier on Saturday, April 30. It was interesting to note that by no means all the cars were of German make. There were Chrysler and Buick cars, Daimlers and Steyrs, but, of course, out of the whole procession of 125 cars the greater number were German. Besides cars, a contingent of 15 motor bicycles took part in the excursion, altogether an excellent turn-out for a course of 2000 km. The motorists had come from Munich and were travelling via Venice and Abbazia to Vienna. In Italy flowers had been showered upon the cars.

When the German president of the excursion, M. Kroth, arrived at the frontier, he was welcomed by the

delegates of the Liubliana Automobile Club, who explained to him the arrangements made for the German visitors during their stay in Yugoslavia. The Governor of Liubliana telegraphed his greetings and welcome. The visitors, who were specially impressed by the smart discipline of the Yugoslav police and customs guards, then drove on over good roads and through delightful scenery, first through Liubliana, Slovenia's chief town, and then to Bled, the acknowledged beauty-spot of Slovenia. Bled is a small village, enlarged by a colony of villas, hotels and all the establishments necessary to an up-to-date summer resort, and situated upon the shores of a small, but lovely lake surrounded by lofty mountains, still snow-capped at this season. Year by year its medicinal springs, bathing facilities, and an Alpine climate tempered by the shelter of the mountains, attract large numbers of visitors, both native and foreign. The roads are good, though beset with turns—an inevitable difficulty in a hilly country.

At Bled the guests were billeted at the various hotels, and after supper there was a reception at the largest café with speeches by the presidents of the automobile clubs, who spoke in cordial terms of the international character of sport and the far-reaching importance of motoring in the interests of bringing the nations together. The German Consul-General referred to the activity and rapid development of Yugoslav agriculture and industry, and the visitors again and again expressed to their hosts their surprise at the organised efficiency and the sporting spirit displayed by their Yugoslav colleagues. German is a compulsory subject in all Yugoslav schools, and so the visitors were able to converse with the natives without difficulty.

Early next day the procession of German cars went to Bohinj, preferred by many even to Bled for its more sombre beauty. There they had a look at the dark lake of Bohinj and the falls of the Savica—natural charms hardly equalled anywhere else in the Alps. At the foot of the Triglav they enjoyed a picnic. At this point it is possible to proceed by car along a good road to within easy distance of the region of the snows, far up the valley and to the source of the Sava, where it gushes from the rock in a great fall, then hurries through Slovenia, a swift, turbulent Alpine water, broadening and slowing down as it passes through Croatia, until at last it joins the Danube at Belgrade, a Yugoslav river from source to confluence.

Meanwhile representatives of the Yugoslav automobile clubs had left Bled for Kranj to make arrangements for the further progress of the German motorists, and by midday had arrived at Jezersko, the picturesque Alpine pass between the Karavanke and the Savinja Alps, known equally well under the name of Kamnik (Stone) Alps. This road has been scoured out by the terrible floods of last autumn which had simply played havoc with it. The most necessary of the repairs have already been completed. The bridges are only wooden ones; the surface is not smooth, but any one who had seen the devastation along this route last winter could not but marvel that it was possible to take motor vehicles over it at all, so completely had it been demolished by the floods. The water carried away half the village, cattle-sheds disappeared together with the animals in them, houses collapsed and left no trace, while the inhabitants barely escaped with their lives. This happened little more than six months ago, and already new houses are rising, embankments and bridges have been restored—in rather temporary fashion, it is true, but there they are, and on a higher level in the gardens cherry trees are in bloom, hiding the ruins with their blossom, as if to comfort the victims of the flood with hopes of other and fairer springs.

In wide, smooth zig-zags the roads winds up the mountains, the summit of which was reached a quarter of an hour before the first of the German cars, all decked with flowers, came snorting up the steep incline. The Germans expressed most cordial thanks for their reception. The customs formalities went off quickly and

without a hitch, and amidst endless cheering the guests proceeded on their way.

The Jezersko road is not really difficult for hill-climbing cars; but it proved something of a test for motorists accustomed to driving only in the plains. All the same, not one engine gave out, save that of a motor cyclist who was then taken in tow by a Yugoslav car and so conveyed in safety to the top of the pass. A good many of the cars arrived over-heated; but the reason for this was the wretched state of the road further down. Within a few months, however, it will have a surface as good as that of the rest of the Slovene roads.

The visit of the German motorists has opened up fresh international connexions for Yugoslavia; over four hundred foreign visitors have gained some insight into the country's political conditions and have seen something of the landscape charms of the country. They have been shown that the Near East is still Europe and that life is quite worth living in the Balkans. If a party of British motorists were to visit Yugoslavia they would experience a welcome no less cordial, a hospitality no less warm and spontaneous.

EGYPT EXPLORATION SOCIETY.

A lantern lecture on The City of Sais will be given by Professor P. E. Newberry, O.B.E., M.A., on May 25 at 8.30 p.m. in the Meeting Room of the Royal Society, Burlington House (by kind permission of the Council). This lecture is the last of a series arranged by the Egypt Exploration Society, and a few free tickets are available for non-members upon application to the Secretary, 13, Tavistock Square, W.C.1.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 20 amounted to £E7,515, making the total from April 1 £E14,840.

NEWS FROM ALL SOURCES.

The production of the Minerva (Roumania) Oil Company for April, including oil received from royalty wells, is 1,037 tons gross.

A recent Greek decree permits the import of certain vegetables, fruit and plants, etc., under certain conditions.

According to a notice recently published by the Roumanian Post Office the use of coded telegrams, either for Roumania or abroad, is suspended until further notice.

Furness Withy and Co. have obtained the Egyptian State Railways' contract for 100,000 metric tons of Welsh coal for delivery at Alexandria over May, June, and July at 32s. 3d. c.i.f. The lowest tender was 32s. by the Evans and Reid Coal Company, whose tender included coal not on the railways' list.

Egypt offers a very limited market for motor boats and engines (says an American Consular report). Very few are used, and those largely by Government officials. The only type of engine for which even a small market is believed to exist is the outboard motor, and its proper introduction would entail a considerable amount of missionary work.

Mr. Philip H. Mortimer, who has been one of the joint general managers of the Westminster Bank since 1922, has retired after 47 years' service. Mr. Mortimer is a member of the Art Workers' Guild and paints in water colours, and examples of his work have been shown in many exhibitions. The directors of the Westminster Bank have appointed Mr. E. F. Robinson, an assistant general manager, to succeed Mr. Mortimer. Mr. W. Bentley, a superintendent of branches, of the head office, has been appointed an assistant general manager.

Apart from the large railway contract secured by Sweden in Turkey, the Turkish Republic has shown interest in deliveries of other materials from Sweden (says a report from the United States Assistant Trade Commissioner at Stockholm). It is possible, also, that the large unexplored forest areas in Asia Minor will be subject to Swedish surveying work, probably from the air; with this end in view, negotiations are being carried on with the Aeromaterial and Aerotransport Corporations. Swedish lumber experts have made a hasty estimate of the forest supplies and, according to commercial Press reports, it is expected that an air survey will be made and maps drawn.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 16.

There were still a good many optimists who anticipated a reduction in Bank Rate on Thursday last, but the decision to make no change had little effect on the gilt-edged market, where prices have maintained their steadiness. A reduction in Bank Rate was not expected by the money market, which is now taking a more sober view in regard to the monetary situation and the outlook for Bank Rate. It is realised, for example, that now that we are again working on the gold standard, with a free gold market, Bank Rate movements are primarily determined by the tendency of the foreign exchanges and the movement of gold. Our present gold reserve, though large, is smaller than before the War, when considerable amounts were held by the banks in addition to that held by the Bank of England. The necessity for very large gold reserves at the present time is emphasised by the continuance of an unfavourable trade balance, and the expansion in banking liabilities. The directors of the Bank of England, no doubt, have in mind the advisability of conserving our gold resources as far as possible in order to meet the autumnal drain without undue disturbance.

The Markets.

Business on the Stock Exchange was not on a very large scale during the past week, the attention of members being largely occupied with arranging the details of fortnightly settlement. As already mentioned gilt-edged stocks have remained quietly firm and a good tone has prevailed in the foreign market as a whole, Chinese bonds showing a tendency to recover. Home rails, however, after early strength on the favourable comparisons made by the traffic returns for the year to date with those of last year, which now show the first effects of the strike period, have reacted a little. Industrials, generally, have been quiet and the tone irregular. Dunlops have fluctuated little, but maintain their recent rise, Courtaulds are good, and iron and steel shares have been steady, but in the textile group British Celanese weakened. The rubber section has witnessed no expansion in business and oil shares have shown uncertain movements, the centre of interest being British Controlled shares. The publication of the delayed report, showing a profit for the year ended July 31 last of £410,100, after writing off development expenses of £233,100, did not seem to be a factor in the movement of the shares, which have fluctuated erratically. There has been considerable buying of the shares of the new Imperial Chemical combine and the prices of the three classes of shares have hardened.

The Trade Balance.

The returns of overseas trade for April, although a little better than those of the previous month, still record a very heavy adverse balance, reference to which has been made in a preceding paragraph. There was an excess of imports last month of over £36 millions, as compared with £41 millions in March and £38 millions in April 1926, while for the first four months of the current year the import surplus is no less than £155 millions, against £133 millions in the corresponding period of 1926. Although the present balance is much worse than at the corresponding date of last year, this excess will no doubt be redressed in the coming months, when comparison comes to be made with the strike months of last year and a better position may be hoped for at the end of the year.

European Investments.

The leaders of British finance and industry continue to follow the proceedings of the Economic Conference, to which we called attention last week, with the closest interest. It is earnestly hoped that the Conference will indicate—and that the world will follow—the main lines along which prosperity may be restored. The investor, it is interesting to recall, has played an important part in assisting the measure of financial rehabilitation so far achieved in Europe. We refer to the Reconstruction Loans. These securities provide the investor, and especially the investor of modest means, with excellent foreign investments. They are mostly well-secured and give fair yields.

The Austrian Guaranteed Sterling Bonds return £5 19s. per cent. The Belgium 7 per cent. Stabilization Loan gives a yield of £6 11s. per cent. An equal return is obtainable on the German 7 per cent. Sterling Bonds. The Hungarian 7 per cent. Sterling Bonds give a very generous yield, the figure being £7 6s. per cent. In each case principal and interest are payable in sterling.

COMPANY NOTES AND REPORTS.

EASTERN TELEGRAPH COMPANY.

The report of the Eastern Telegraph Company, Ltd., for the year ended December 31 last states that the revenue amounted to £3,436,690, from which is deducted £2,338,729 for the ordinary expenses, leaving a balance of £1,097,961. After providing for income tax payable in England, interest on mortgage debenture stock, and dividends on the preference stock, which in all absorb £247,053, there remains a balance of £850,909, to which is added £555,717 brought from the preceding account, making a total available balance of £1,406,625. The directors have placed £400,000 to the general reserve fund, and have applied £493,002 from that fund to write off the balance of the expenditure on new cables and cable renewals, etc. Three interim dividends of 2½ per cent. each, and a final dividend of 2½ per cent. have been paid on the ordinary stock, amounting together to £500,000, making a total distribution of 10 per cent., free of income tax, for the year ended December 31, 1926. These appropriations absorb £900,000, and leave a balance of £506,625, which is carried forward to the next account.

It was announced at the general meeting of the Julius Berger Contracting Company in Berlin that railway construction in Turkey and Roumania had been obtained to a total value of 160,000,000 marks.

The Economic Conference.

The conditions of commerce in Central Europe are still by no means ideal, and the International Economic Conference has raised many hopes and fears in the hearts of its members. Turkey shows a tendency to leave her isolated position and is seeking an opening in Western affairs. Certain other Balkan States view with great misgiving any attempt at consolidation which would weld together the former members of the Dual Monarchy. Russia supports a policy which aims at making each State self-supporting, but in such a manner as to impede trade. Talking of the Conference, *L'Indépendance Roumaine* states:

The fight will be sharp, for competition is great. Large industrial countries who are beginning to realise that trade is slackening will direct a powerful attack on countries producing raw material, who are now desirous of establishing their own factories to use their own material. One knows their cry: it's that of the division of labour, such as would eventually draw a hard line of demarcation between agricultural countries, who would no longer be permitted to start a national industry, and countries of industrial export, who would be free to sell their products to the former without suffering any competition in autochthonous enterprises. Another attempt to realise the same object, on a smaller scale, is shown in a telegram from Vienna in the *Temps*. A "Committee of the Economic Congress of Central Europe" has sanctioned and will present to the International Conference a memorandum elaborated by M. Elemer Hautos, the Hungarian economist, with the object of establishing a new economic régime in Central Europe. This memorandum begins by describing... the situation in Central Europe in the darkest of colours.

The remedy could only be to establish a special customs régime for all States successors to the old "Austria-Hungary," on the basis of a preferential and reciprocal customs contract.

Emanating as it does from Budapest and Vienna, it is evident that the proposition would only tend to reintroduce under another form the economic régime of pre-War days, which was so favourable to both cities:

The Austro-Hungarian industries were grouped round these two capitals, as a result of the systematic policy of exploiting the provinces of the Habsburg Empire. The raw material arrived from Transylvania, Croatia, and Slovakia, but their conversion took place in Vienna and Budapest, to the profit of Austrian and Hungarian workers and contractors.

When the oppressed provinces were freed, the Austro-Hungarian industry was suddenly found to be without raw material, and the artificial centralisation which the former Governments had established then came to light. Such was also the case with the flour milling industry, which converted Roumanian and Yugoslavian corn to the profit of Hungarian capitalists: with the petrol refineries which worked on the products of Galician pits; with the famous factories of musical instruments, the wood for which is grown in our magnificent forests of Buco Vinia....

Roumania, and all other countries successors to the Empire, are in duty bound to start industries for converting on the spot their own raw material. It is a national necessity, which coincides moreover with an incontestable economic truth. If the Geneva Conference would do useful work, it is in this direction that it must turn its efforts.

Turkey in European Affairs.

Turkey's present constructional policy vies with almost any of the Near East States. She is now looking for

some opening in the West, and considers her admission to the Conference as a hopeful sign that she may soon join the League. *La République* writes:—

In the December session to decide the convocation of the Conference, the Council of the League of Nations agreed that it was desirable that not only the State members of the League should participate in the Conference but also those countries which had not entered the Society, mentioning very specially Russia and Turkey. The Council also decided that all the work and the documents collected and printed by the Commission should be communicated to the League during the suspension of the Convocation....

It is doubtless in this hope (of assuring a universal peace) that the Government of the Turkish Republic has not hesitated in sending a representative to the heart of this Areopagus, which also the non-members of the Society, America and Soviet Russia, are attending.

Europe seems to attach the greatest importance to the participation of Russia and Turkey in the Conference, in which event she seems to see the first step or proof that we will end by entering the League.

To that end, the distance is still long and the difference too great between the economic conference and the League of Nations, but the truth is nevertheless that close contact may modify to a certain degree the humour of the members....

And why should we not ourselves enter the League, if it were decided to reform the organisation in essential ways and in such a manner as is suitable for the high and supreme mission of which the Society is in charge?

The Danube Commission and the Iron Gates.

L'Indépendance Roumaine, in an article on the recent Paris Conference on the Danube, begins by giving a history of the International Commission and continues:—

The side of the problem under discussion to-day is that of the financial administration of the portion of Danube from Turnu-Severin to Bazias and known under the name of the Iron Gates. This part of the large river, where the Hungarian Government, by virtue of the Convention of London of 1871 and the Treaty of Berlin (1878) in the position of delegate of the Great Powers, has executed important works, was before the War under special Hungarian Administration. After the War, owing to certain treaties, the Iron Gates, together with the administration of the canal and the special pilotage service, passed into the hands of a mixed commission, members of which were one delegate from the C.I.D. (Bratislava) and one representative of each bordering State: Roumania and Yugoslavia....

In 1895, in order to cover the huge expenses necessary for the important work to be effectuated on the Iron Gates, the Hungarian Government issued a loan of 45 million gold kronen or 47½ million gold francs.

This loan was distributed not only in Austro-Hungaria but also in England, Germany, France and the Netherlands, where the majority of title-deed holders are to be found. (According to the Austrian Annual Report of 1901, 94 per cent. of this issue was found to be in foreign hands.)

At the end of 1918 the amount of this loan unredeemed still remained at 41 millions 712,000 gold kronen. The Reparations Committee, by their decision of December, 1922, and March, 1924, have laid all this loan at Roumania's door.

This was an injustice in that not only the Hungarian Government, of whom we are to-day the successors, profited by this loan, but it had been used for works of general European interest. All the States without exception which fly their flag upon the banks of the Danube have profited by it.

The Reparations Commission did not understand this point of view and made Roumania solely responsible for the settlement of the loan.

It was natural that the Roumanian Government should protest against this decision, which moreover the Commission have ended

by altering, at any rate, in part. Thereupon the Commission, realising the iniquity of their first resolution, entered into negotiations with the Serbian and Roumanian Governments, together with the syndicate of title-deed holders of the old Dual Monarchy. Out of these discussions have come two agreements:—

(a) The first contains the obligation assumed by the C.I.D. (Bratislava) of contributing annually to the funds of the syndicate of the Austro-Hungarian title-deed holders, in order to guarantee the interest, the total revenue from the taxes of the Iron Gates, deducting the necessary expenses of the respective administrations.

(b) The second agreement contains the following decisions: (1) The coupon of the loan title-deeds is reduced to 32 per cent. of its former value. A revision of this figure can only be made in 1932. (2) The Yugoslavian Government has undertaken the responsibility of 25 per cent. of the amount of the loan. (3) In case the yield of the taxes be insufficient to cover the coupon, the Roumanian and Yugoslavian Governments are guarantors for the whole of the loan, capital and interest, at the reduced value of 32 per cent., in the proportion of 25 per cent. for Yugoslavia and 75 per cent. for Roumania.

This second agreement has only been signed by the Roumanian delegate *ad referendum*. It is stipulated that if the agreement is not ratified by September 1, 1927, it will become void. . . .

The article continues by mentioning that the yield from the taxes of the Iron Gates, after deducting expenses, will only leave 200,000 gold kronen, an insufficient sum to cover the interest, thus causing the balance to be found by the State Budget. Moreover, if new works and repairs were to become necessary for the navigability of the Danube, Yugoslavia and Roumania would be called upon to put up the necessary money.

The administration should either be left in the hands of Serbia and Roumania, in which case the two States could come to an international agreement: or it should continue in the hand of the C.I.D., who would then be responsible for all past financial agreements. The result of the Paris Conference denies both States the natural right of sovereignty in their own waters while imposing on them the financial responsibilities for this same right. The article closes by expressing a hope that the Government will refuse to ratify such an unjust agreement, and one which can therefore never prove successful.

M. J. A.

The exports of senna from the Sudan for the first three months of this year amounted to 168 tons.

The profit of the Anglo-Greek Magnesite Company for 1926 was £15,370, making available, with £10,184 brought forward, £25,554. A dividend is proposed of 5 per cent., £5,000 being allocated to the reserve, leaving £10,304 to be carried forward.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 5 state:—

Since our last report the futures market has been very excited and fluctuations have been wide; to-day's closing prices show big rises on the prices of a week ago. The week's summary of price movements is as follows:—Sakellaridis: May, 30.50 dollars, 2.05 dollars up; July, 30.73 dollars, 1.88 dollars up; November, 31.70 dollars, 1.95 dollars up; January, 31.40 dollars, 1.75 dollars up. Ashmouni: June, 21.90 dollars, 1.42 dollars up; August, 22.25 dollars, 1.45 dollars up; October, 22.85 dollars, 1.20 dollars up.

Sakel.—Rather alarming news on the situation in the flooded areas of the cotton growing districts of the Mississippi Valley has continued to pour in during the week, and local speculators, who, for some months, have taken little or no interest in the market, have not been slow to seize upon the opportunity to do something; they have bought thousands of kantars, mostly Novembers, during each session and the wildly extravagant advance of the past few days is the result. Commercial houses have shown but little interest in the market; the demand from abroad has been little, if any, better than that of recent weeks.

If there is any improvement in the news from America and it is shown that the damage caused by the floods will not have any very serious effect on the outturn of the crop as a whole, a good part of the long position will be hastily sold out and this liquidation in a market already heavily overbought may produce a serious reaction in values.

At the first May tender, 5,000 kantars dockets were issued.

Uppers.—We have had a series of active markets and prices show big advances all along the line; the same factors which have induced the rise in Sakel are responsible also for the rise of Uppers prices. Uppers have not advanced to the same extent as Sakel, but this is explained by the fact that several operators have been selling October against their purchases of November Sakels. On the other hand, however, it is said that England and the Continent have been heavy buyers of October during the week. The demand from spinners has not been exceptionally good, being about the same as last week.

The week's receipts amount to 118,320 kantars against exports 175,824 kantars; the stock in Alexandria stands at 2,924,224 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to April 28, 1927, are as follows:—Arrivals: Lower Egypt, 4,528,000 kantars; Upper Egypt, 2,794,000 kantars; total, 7,322,000 kantars. Exports: Sakel, 2,391,223 kantars; Ashmouni, 2,891,164 kantars; Various, 368,279 kantars; total, 5,650,666 kantars.

Spot: During the week under review we have had an improved demand from abroad and more active markets at Minet el Bassal and spinners have shown more interest. Sales for the week amount to about 18,300 bales, of which we estimate 9,000 bales Sakellaridis, 8,500 bales Ashmouni and Zagora, 500 bales Pilon, and 300 bales other varieties. Sellers have in some cases profited by the rise to get out of their cotton and have met the market readily, but a good deal of cotton is hedged and so cannot be offered at a cheap basis. Offerings are about the same as last week, both in quantity and quality.

Sakellaridis: Has met with a better inquiry and a fairly good business has been done covering all grades. Spot differences are unchanged and well maintained for the grades from Good Fair/Fully Good Fair upwards, but for Good Fair and below they have eased.

Ashmouni and Zagora: Are in very fair request for all grades and a good business has been done largely in the medium qualities. Spot differences are without change from last week.

Pilon: A fairly good business has been done at about last week's differences.

Brown, etc.: A small business has been done. Spot differences are unchanged. A few bales of Nahda have also changed hands.

White: Has met with a fairly good demand. Spot differences are unchanged for Fully Good Fair and better, but rather easier for the lower qualities.

Up-country: A good deal of spot business has transpired during the past week as a result of the rise in futures but it has been practically all speculative buying, without discussion as to price, and naturally the purchases have not been hedged. New crop business has been practically nil owing to the exaggerated ideas of growers.

The Ministry of Agriculture has issued a decree prolonging the period during which the ginning factories may work up to May 7. With so much cotton in the factories and the village stores, this prolongation is generally considered insufficient and it is expected that a further delay of several days will eventually be allowed.

Arrivals in Alexandria during the next few days must, of necessity, be heavy as a result of the rush to gin before the factories close.

Crop, 1927: All our interior agencies are unanimous in reporting that the plant is progressing satisfactorily. The condition of the crop is better than the condition of last year's crop at the same date. Weather conditions during the past week have been favourable and the water supply is everywhere sufficient for requirements. On the subject of the acreage, the same uncertainty exists. There does not seem to be much doubt that the law restricting the acreage to one-third has not been strictly observed. We estimate the reduction of acreage at about 20 per cent.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 11:—

Egyptian Futures.—Sakel Contract.—Throughout the past week this market has developed a rather nervous undertone; consequently price movements have been somewhat sharp and erratic; in the earlier days reactionary tendencies were kept in check by fresh speculative buying, but more recently this support has been withdrawn and with many operators inclined to realise their holdings values have gradually declined, to-night's close showing losses on the week of 24 to 21 points for near and 50 to 77 points for more distant positions. American new crop reports and assessments of damage caused through the floods continue to monopolise considerable attention; however, judging from the action of the markets directly concerned, these influences appear to be discounted for the time being, and probably "bullish" enthusiasm in our option will continue on the wane unless any fresh detrimental news from the above source commences to be circulated. The very rapid appreciation recently witnessed in the Alexandria market had undoubtedly resulted in the working up of a rather unwieldy speculative long account, and, with the necessary outside trade support not being forthcoming at the higher levels reached, the subsequent unloading process could not be affected without an easing in values. We are now at the period when new crop news will be the deciding factor, and from now onwards the progress will be carefully noted. The Alexandria General Produce Association's monthly report for April is as follows:—"Sowing generally effected usual time, now finished everywhere. Area planted cotton is, according to locality, 15 to 20 per cent. less than 1926 on account of application of law restricting area of cultivated cotton. As to varieties planted, proportions are almost the same as 1926. Sakellariidis still occupies first place. In certain districts South Delta, Zagora predominates as formerly. For some days at the beginning of the month there was sharp wind with slight showers, but in general temperature during the month was favourable to germination and growth of plants. Their development is normal and young plants have healthy and robust appearance. Resowing has been slight, and water irrigation has been sufficient. Cutworm caused slight insignificant damage."

The fluctuations witnessed have been rather too drastic to enable spinners to operate with any degree of freedom. However, trade reports have shown a rather better tone and provided prices show steadiness at around present levels, or perhaps better still commence a slow recovery, we think considerably more support from this quarter would be encouraged. On the other hand, probably a continual falling away would be detrimental and lead to a further curtailment in the offtake which at the present juncture can only be described as moderate. With regard to local differences, the current position, which at the time of our last report ruled distinctly on the easy side, has started to firm up again, and now stands at only about 17 points under July, also our option has hardened somewhat in comparison to Alexandria, but even so, we continue

to run so far below parity that it is not feasible to expect any short commitments of importance being attracted here. For the immediate future it would appear probable that prices will continue to fluctuate round the present level, with the main controlling influence being centred in the American market. We consider the best policy to follow for the time being is to take advantage of any outside easing to effect conservative purchases, preferably in the later summer months.

Upper Contract.—There has been rather freer trading in this option during the past week, and a fair number of buying orders, the majority of which have emanated from American sources, have been in evidence. The support accorded has been sufficient to maintain values at a very steady level, so that despite adverse movements in other markets, we have practically no alteration in our level to report on the week. Only a moderate amount of trade buying has been in evidence and spinners at the present moment appear to be holding off until some factors crop up to sway values decidedly one way or the other. New crop news is as follows:—"Planting effected normally. As to area planted same remarks apply to Upper Egypt as to Lower Egypt. Zagora and Ashmouni have been planted almost exclusively. Condition of young plants good and water for irrigation is, generally speaking, sufficient and no attack of worm notified." To conclude, we do not think prices will show much alteration for the time being.

Egyptian Spot.—The market has not displayed such a confident tone during the past week, and has reacted rather nervously to the mixed news which has been received from America regarding the flood damage. Nevertheless, a further slight advance in quotations has been registered.

Purchases of Egyptian cotton proper have continued to be of merely moderate dimensions, although the daily inquiry has been perhaps on a slightly broader scale. If anything, the tendency has been towards the cheaper grades, and holders of the so-called "inferior" cotton have undoubtedly benefited. More interest has been shown in Pilon cotton, but buyers appear unwilling to pay more than about 13½d. for their quality. Uppers have continued in very fair request at the usual range of 11½d. to 12d. Sakels, 8½d. to 10½d. and 14d. to 16d., have received a share of attention. In Sudan a steady business has been maintained, but the American seed variety has not been so much in request as was recently the case. Sudan Sakel has sold freely in the neighbourhood of 17d. to 17½d.

C.i.f. business has shown some slight improvement. Forwardings to spinners for week ending the 6th inst. were returned as 7,381 bales Egyptians and 1,679 bales Sudan. Estimated sales, 1,400 bales Egyptians and 3,000 Sudan. Quotations of Sakel have been advanced 15 to 25 points, and those of Uppers 10 points. F.G.F. Sakel to-day, 16d. F.G.F. Upper to-day, 12.30d.

Notes of the Week.

Egypt and Constitutionalism.

In a number of countries constitutionalism is not proving as easy to work successfully as was confidently anticipated by those who favoured its adoption. One of the difficulties that confront those who are novices in the science is to understand where the dividing line between executive and legislative functions has to be drawn. Even in Turkey, where sovereign power is vested in the Grand National Assembly, the latter has too shrewd an understanding of its position to attempt any serious encroachment upon the duties of the Council of Ministers. In Egypt, as in Persia and elsewhere, the Legislature shows a disposition to regard Ministers as entirely under its orders in regard to details of administration. It is not content merely to legislate and to advise and to act as a check upon the Government; it is anxious itself to exercise the functions of any and every Department of State. This, at least, would seem to be the only explanation of a state of affairs that led to the resignation of Adly Pasha and has now forced Sarwat Pasha to threaten to lay down his office within a few weeks of his acceptance of the post of Prime Minister. The immediate cause for legitimate for any body of persons, whether Deputies or Senators, who sought to dictate to the Government in regard to the reinstatement of a dismissed official. It is legitimate for any body of persons, whether Deputies or not, to urge their views on the Government; but the policy of the Egyptian Deputies would seem to be to insist that their point of view must immediately be carried into effect. The parliamentary position in Egypt is admittedly anomalous, inasmuch as one political party possesses a large majority in the Legislature, while the Prime Minister belongs to a different, and very small, group. Yet it is by no means certain that the troubles of Sarwat Pasha, and of his predecessor, are due solely to this anomaly. A Wafd Prime Minister, in all probability, would be exposed to the same treatment, which arises from the failure of Deputies to understand that ordered Government in a country requires that a Cabinet, which has been accorded parliamentary sanction in the ordinary way, should be free

from interference in its executive duties, although subject to the approval or disapproval of the Legislature.

Persia and the Imperial Air Route.

The obstacle that was encountered, through the decision of the Persian Government not to allow the construction of landing stages in Southern Persia, on the opening of the Cairo-Karachi air route, was most unfortunate; but it is by no means final. The Air Minister, Sir Samuel Hoare, indeed, in a speech a few days ago to the Colonial Conference in London, said of this Persian section of the Imperial Air Route: "Sooner or later this obstacle will be surmounted or circumvented, and the line will reach its original destination." The probability would appear to be in its circumvention, for the Persian Government, which has no objection to the passing of foreign aeroplanes over Persian territory, wishes to fix another, more northerly line, for international aerial traffic. Obviously this change of plan from the original agreement of certain Persians with the British is due to the fact that the country of Riza Shah Pahlavi desires to be brought into closer contact with the outside world than the southern, original line across Persia would have implied. From the Imperial point of view this consideration may provide difficulties, but they should certainly be capable of amicable solution. It is to be hoped that the urgency of a settlement of the matter will be impressed upon the Teheran Administration.

Science in Arabia.

The days of romance in Arabia are not yet dead; in a sense, indeed, her career is but now re-beginning. For centuries the Peninsula has lain unchanged, and apparently unchangeable, with now this, now that chieftain exercising transient and local control. Now, however, it is feeling closely the contact with the West, a contact which, as we reported last week, has already resulted in the establishment of wireless communication between Riyadh, Hail, Mecca, and Madina. A few days ago King Ibn Saoud, under whose auspices this modern development has become possible, sent the first wireless message be-

tween his two kingdoms of Najd and the Hijaz. It is to be remembered, further, that motor-cars now ply in the Hijaz between Mecca and the Red Sea coast, and in Najd between Riyadh and the Persian Gulf. By such mechanical means, in short, the Arabian Peninsula is coming, slowly but surely, to some comprehension of what scientific progress consists. There seems to be no doubt that the only limit to the introduction in Arabia of modern methods of travel and of communication is that imposed by the financial situation of the country. It may be that Arabia will always be a poor country, but there is no question that the ruler of the Wahhabis is resolved to exploit what resources his section of the Peninsula may hold. It is even possible that the Hijaz and Central Arabia may take more kindly to contact with Western civilisation than the Yaman, that happy land to which European eyes perhaps more naturally turn in expectation of discovery, but in which it seems, despite considerable "propaganda," exceedingly difficult to make headway. The chances are at least reasonable, however, of greater progress being made in Arabia generally in the next decade than was made during the preceding century.

Autres Temps, Autres Mœurs.

There may be those who will thrill with pride in the achievement of the new Turkish Republic in having turned Yildiz Kiosk, the residence of Sultan Abdul Hamid, into a Casino. For our part, we should doubt the desirability of this particular form of change. The thought that in the spot where Sultans and other mighty rulers foregathered now stands a restaurant, gives rise to something more than philosophic musing. Could the Kemalists have done nothing better than to introduce—or, rather, to superimpose—here a cabaret show, gaming tables, and the like? Is it so fine a boast that, where once the tyrant dwelt, now haunts that restless but eternal element of Turkey's population, the Jew and the Levantine? The suspicion, which at first was modified by the genuine achievement of patriotic Kemalists, that political changes in Turkey were not preceded by any moral change, grows deeper. It is true that in the Casino at Yildiz Kiosk, officers and officials of the Turkish Republic are forbidden to play, but evidence goes to show that, in addition to the cosmopolitan band which such institutions always attract, there are a large number of real Turks, including many females, at the gaming tables. Turkish visitors to Europe will, admittedly, have seen similar things in the more advanced West; but it seems necessary to point out that night clubs, cabarets, and the like are not a sign of civilisation. If Turkey wishes to copy the West, she should, through her representatives who come to Europe, search a little deeper than the glittering surface of things.

The Exodus from Palestine.

The end of the Zionists' depression in Palestine is not yet in sight. It is stated that last March there were 265 immigrants into and 734 emigrants from the Holy Land. This emigrating movement is assuming serious dimensions, for it has been indulged in every month since last autumn, and the total excess of emigrants over immigrants since that time is given as 2,910. Nor does there appear any immediate probability of any marked tilting of the scales. The large schemes of construction have not yet come into full play, and though the position in the country districts is fair enough, prospects for Zionist workers in the towns are far from favourable. Indeed, the enforced doles which Zionist organisations have paid to unemployed Jews have been a considerable tax on their financial resources. This is, in fact, a most critical time, and it should be said that on the whole Zionists are bearing their woes and shouldering their responsibilities in a most admirable way. Here and there, it is true, one detects a tendency to allot the chief blame for the present state of affairs to the Mandatory Power for Palestine, but for the most part Zionists are keeping a stiff upper lip, convinced that the clouds will eventually break, and resolved, when the sun shines again, to go forward on sounder and surer lines than in the past. The mistakes that surrounded the booming of Tel Aviv, for instance, will not be repeated, and it is reasonable to suppose that, as a result of the Commission of Inquiry, a firmer, more constant and comprehensive endeavour will be made to enable Jews to produce from the land of Palestine, and not merely to stay there in order, as is said, "to take in one another's washing."

Foreign Rights in Persia.

Quickly following our recent comments upon the capitulatory régime in Persia comes the announcement from Teheran that the Persian Government has notified the Powers enjoying special jurisdictional privileges that those privileges will be abolished on May 10, 1928, the intention being for Persia to negotiate fresh treaties from which capitulatory rights shall be absent. As we remarked in our issue of May 12, this step has been provoked by the reorganisation of the judicial system under Davar. The Persian Government is, of course, quite within its rights in denouncing, at twelve months' notice, capitulatory rights contained in treaties with certain nations. It is interesting to note, however, that France and Spain through their treaties with Persia claim the perpetuity of capitulatory rights. On the basis of "most-favoured-nation" treatment, therefore, it is to be assumed that Great Britain could, if she wished, claim similar privileges. In any case, the working of Davar's new organisation will now be more minutely watched than ever.

Italy and Abyssinia.

Abyssinia, or at least the capital, Addis Ababa, has been keeping high day and holiday in celebration of the visit of the Duke of the Abruzzi. All business, it is reported, was suspended during the week of the Duke's stay, which ended on May 25, and a full and varied programme was provided in his honour. The significance of the occasion lies in the fact that the visitor is an Italian and that, seemingly, all parties and all classes in the country took part in the festivities. The Duke stayed with the Regent Ras Tafari, but on his arrival he proceeded first to the palace of the Empress, where a reception was held. There was a big muster of chiefs, as well as a military display. In the face of the special honours shown to the cousin of King of Italy there can hardly be room for serious misgivings among the Abyssinians that their country is in immediate danger from Italian penetration; and the Duke may be able to satisfy himself that the dispatch of the Abyssinian protest to the League of Nations regarding the Anglo-Italian Agreement entailed no permanent cloud on the relations between Italy and Abyssinia. Of the success of Signor Mussolini's gesture there can be little doubt.

COALITION DIFFICULTIES IN GREECE.

Greece is finding the path of political coalition a difficult one to follow. When last December General Kondylis, who had successfully burst the bubble of the Pangalos Dictatorship, was preparing to hand over the reins of power to a constitutionally-formed régime, the popular demand for a coalition was so strong that the political leaders were obliged to fall into line and a Cabinet was formed under the presidency of M. Zaimis, comprising the heads of all the chief parliamentary groups. As a result of this sound move it was confidently expected that Greece would enter upon a period of political quiescence and would at last be able to bring the united genius of the people to bear upon the more serious problems with which the country is confronted. Practically for the last twelve years Greece has been able to call upon only fifty per cent. of the national talent for the difficult task of administration. The division of the people into two hostile camps has compelled whatever Government has been in power to rely almost entirely on those of its own political complexion, or less than one half of the nation, not only for filling all official posts from that of Prime Minister to that of village postman, but also for staffing its military, naval, educational and judicial services. It was only when a genuine coalition of all parliamentary parties had been formed, in response to the manifest wish of the nation as a whole, that there seemed a prospect of Greece's being able to rise superior to the obstacles that have retarded her material reconstruction and her moral rehabilitation. The early promise of the Coalition Cabinet has, unfortunately, not yet been fulfilled. From the outset it was seen that, even if the desire to bury the hatchet was as strong among the political leaders as it was in the nation as a whole, the traditional individualism of the Greek was going to prevent some of the Ministers from subordinating their own personal interests to the national interests. The first six months of the Coalition Cabinet's history have witnessed a series of crises within the Ministry that appear to have turned more on personal considerations than on questions of principle, although, no doubt, in the background have been the antagonism that still prevails between the monarchical and the republican systems, and the misgivings with which a section in each party regards the activities of the other. In this respect individual Ministers seem to have paid deference to the extremists of their parties rather than to have responded to the desire of the majority of the rank and file for a genuine political truce.

It is inevitable that a series of recurrent crises in a Ministry during the short period of six months must circumscribe the scope of the Government's achievement in the practical work of administration. Thanks to the sound foundations laid by foreign helpers, the scheme for refugee settlement has been carried on without serious interruptions. Much still remains to be done, and the Government requires a further loan for the purpose. This matter is closely connected with the general question of Greek finances, and in no direction has the administrative

paralysis engendered by Cabinet disagreements been more apparent than in the absence of any successful attempt to grapple with the financial situation. The difficulties are admittedly great; but in the face of the urgency of the problem it is apt to strike the foreigner as incongruous that practically everything else should not have been made to give place to the most pressing national necessity. Good will on Greece's part is not lacking; but the trouble has been amid the frequent Ministerial changes to work out any adequate scheme of financial reform and to secure for it the necessary period of application. Successive Finance Ministers have had to adopt makeshift measures; under the Coalition Government, although a marked improvement can be recorded in the financial situation, the troubles within the Cabinet cannot fail to affect the feeling of confidence abroad in the stability of the political situation in Greece, which is essential to any comprehensive scheme of reform.

What little headway the Government has made in healing the nation's wounds is shown by the nature of the recurring crises. To take the more recent incidents; there has been the delay in the passing of the Constitution to which the President, Admiral Koundouriotis, called attention when suddenly announcing his decision to resign on the ground that he was unwilling to hold a post which promised to remain indefinitely without constitutional sanction. His gesture, there can be little doubt, was intended as a warning to Ministers that they ought to abandon their petty squabbles and make some effort to advance the nation's business. Admiral Koundouriotis has withdrawn his threatened resignation, because the representations made by the Prime Minister must have convinced him that his withdrawal at that moment would have rendered M. Zaimis's task impossible and must have plunged Greece back into a still more hopeless political morass. Both this question of the Constitution and that of the reinstatement of dismissed officers in the Army and Navy turn on the old feud between Republicans and Monarchists; but behind the second question lies the all-important problem presented by the interference of the Army in politics. When the Coalition Cabinet was formed it was understood that the political leaders had agreed among themselves that the burying of the hatchet should include the reinstatement of officers who had been dismissed for their political opinions. Ever since that day a considerable proportion of the Government's time appears to have been taken up by attempts to clear this question out of the way. The anti-Venizelist Ministers have pressed for the fulfilment of the undertaking, while the Republican Ministers have been forced to try to whittle down the arrangement owing to the attitude of the existing Officers' Corps in the Army, which refuses to accept the reinstatement, at least of all the officers whose claims have been endorsed by the Anti-Venizelists. Neither party to the dispute wishes to give way, in the belief that their political future is at stake. The only common meeting-ground is a desire to eliminate the interference of the Army with politics. Discretion, therefore, points the way to a compromise in regard to the actual number of officers reinstated, provided that there can be real agreement subsequently as to the measures to be taken to render the Army politically impotent. The offenders to-day are the Venizelist or Republican officers now in the Army, who are dictating to the Ministers representing their political group in the Cabinet. A condition of reinstatement for the Monarchical officers must be an oath to abstain from all political interference in the future. If the leaven provided by this group is not going to be sufficient to keep the Army on right lines, it may be better for Greece to meet her trouble now once for all and to challenge the Officers' Corps to a final trial of strength. It is the attitude of the Army that is responsible for the ineffectiveness of successive Greek Governments, and a repetition of the incidents that marked the abolition of General Pangalos's Praetorian Guard would be preferable to an indefinite prolongation of the present state of affairs.

The Near and Middle East

From Our Own Correspondents.

Cairo, May 14.

King Fuad in the Fayum.

Last week-end King Fuad motored to the Fayum and inaugurated the new road that has been constructed across the desert from the Pyramids. He spent four days there and received such a warm reception that it is to be hoped that this will encourage him to visit the various other provinces of his kingdom. His Majesty, who has now taken up his residence at Kubbeh Palace, will leave Egypt at the end of the next month for London, where, as already announced, he will be the guest of King George. He will spend from ten to fourteen days in England, and will then cross to the Continent in order to take a cure and pay an official visit to the King of Italy. In October King Fuad will return to Paris, as the guest of the President of the French Republic. This will be the first time he has left his country since he ascended the Throne in 1917.

Searchlight Tattoo.

The British garrison, in collaboration with the Royal Air Force, gave a really brilliant Searchlight Tattoo this week on the racecourse at Gezira. Every arm of the British forces in this country took part, and the display made a very deep impression on the foreigners and the many Egyptians who attended it. Lord Lloyd was present on two of the four evenings, King Fuad being his guest on the last night. The Tattoo, like last year's, was given in aid of military charities, and it has proved so conspicuously successful that it seems a thousand pities that it cannot be given earlier in the year, when it would provide a welcome addition to the attractions for the tourist public and a correspondingly greater accession to the funds of the charities. It is understood that the difficulty lies in the fact that the movement of so many troops on the racecourse would cut up the turf too much and make it impossible to carry on racing. But if Gezira cannot be used, there is Heliopolis racecourse, where the enormous space in the

centre would constitute an admirable arena for such a display.

The Mixed Court of Appeal.

There is great agitation in Alexandria over the proposal to remove the Mixed Court of Appeal to Cairo, and a special meeting was held under the presidency of His Excellency Ahmed Ziwar Pasha in order to discuss the situation. A resolution was passed putting on record the serious prejudice which would be caused to Alexandria if the transfer were to be made. Subsequently the Municipal Council considered the question, decided to support the movement against the transfer, and delegated a committee to wait upon the Minister of the Interior and bring the matter to his notice.

The protagonists of the proposal, who are leading members of the commercial community in Cairo and the Egyptian and European members of the Cairo Bar, state in support that the situation has completely changed since the Mixed Tribunals were created in 1876, when it was laid down that the Court of Appeal should sit in Alexandria. One of the great reasons for this provision was that it was desired to remove the appellant jurisdiction as far as possible from the influence of Ismail Pasha, which was much feared at that time, and as a guarantee against which this jurisdiction had been created as a protection for the European commercial community.

Another strong reason was that the commercial centre in Egypt was Alexandria, where all the business houses had their head offices and the foreign representatives were stationed. Since then the interior has undergone considerable development. Alexandria is still a commercial centre, but only for the export of cotton; Cairo has become the heart of the import trade and of the other export activities of the country. In fact, from a capital of purely native character it has developed into a cosmopolitan city of outstanding commercial importance. Its population is more than double that of Alexandria. Its courts command an area many times the size of that within the jurisdiction of Alexandria. The cases which go forward to appeal are greater than those which emanate from the Alexandria Court of First Instance, and it is the University and Law School centre.

While there is a good deal to be said for the point of view of Alexandria, which stands naturally to lose by the transfer of the appellant jurisdiction to which its lawyers and merchants have been accustomed for nearly six decades, it does seem wrong that the litigants from the whole of Egypt, with the exception of the provinces of Behera and Dakahlia, should be compelled to incur the expense and inconvenience of going to Alexandria when Cairo is the strategical as it is the more natural centre for them all. The principle of bringing the appellant jurisdiction as near as possible to the litigant most concerned has already been sanctified in the case of the native courts, where a Court of Appeal has been instituted at Assiut in order to save the people in Upper Egypt from the trouble and expense of coming all the way down to Cairo. There seems no just reason why the same principle should not be followed in the case of Mixed Courts litigants. Indeed, the time is not far distant when, just as there is a Court at Mansourah for the convenience of the community in the eastern portion of the Delta, so there will be an offshoot of the Mixed Courts at Assiut or Minia to meet the growing needs, in the matter of judicial facilities, of the population of Upper Egypt.

Constantinople, May 11.

The Ex-Khedive's Claim.

The most prominent question during the past week has undoubtedly been that of the claim of Abbas Hilmi Pasha, ex-Khedive of Egypt, against the British Government. It came before the Anglo-Turkish Mixed Arbitral Tribunal yesterday and to-day. This case, which is the most important with which the Tribunal will have to deal, has excited great interest here, and was followed as attentively by certain Turkish and foreign diplomatic representatives as by the Press and general public. Very able counsel was engaged by both claimant and respondent, Sir Maurice Sheldon Amos, K.B.E., representing the British Government, while Tahir Bey, Member of the Permanent Court of The Hague and Maitres Bergery and Kayser, two eminent French lawyers, appeared for the ex-Khedive. The latter's claim is preferred under Articles 65 and 66 of the Treaty of Lausanne, but in order to invoke these the following must be established:—(a) that claimant is a Turkish subject; (b) that Egypt comes within the interpretation of the term "territory detached from the Ottoman Empire in virtue of the present Treaty" or (c) that Egypt was, on October 29, 1914 subject to the sovereignty or protectorate of His Britannic Majesty.

At the opening of the proceedings Counsel for the defence was invited to state his case, and Sir Maurice Amos, despite the disadvantage of the pleadings being in French, delivered a lucid and convincing exposition of the British Government's contentions. These contest the Tribunal's competence to deal with the claim on the grounds that the ex-Khedive is not a Turkish subject (he represented himself as an Egyptian subject in a document entitled "Memorial of Claim" dated November 23, 1923, communicated to the British Government) and that, according to Article 19 of the Treaty, his property is situated in territory regarding which the provisions in Articles 65 and 66 have no effect. The point regarding the ex-Khedive's nationality was one upon which there was much discussion, and at the close of the proceedings a telegram from Ismet Pasha was read in which the claimant is described as being "incontestably Turkish." No judgment has yet been given, but this will be communicated to the interested parties in due course.

Luxurious Motor Cars.

According to the local Press there is a movement afoot to compel the public to curtail their extravagant tastes. Someone—it is not stated whom, but apparently some Authority is indicated—objects to the expending of so

much money on the *de luxe* type of motor cars. Since the adoption of meters on the taxis in Constantinople the owners have disposed of the poor looking objects which used to serve as taxis and have gone in for more luxurious types—which naturally gain the preference of the public—and this fact is deplored on the grounds that too much money is finding its way abroad. The above-mentioned Authority, contemplates, therefore, restraining this indulgence by compelling future taxicab owners to adopt standard all-weather cars of modest price and looks. Furthermore, there is now some question of changing the present mode of application of Customs duties on motor cars which is based on the weight of the article to that of imposing duty according to price. The latter modification does not appear to be at all unreasonable, but the intention to dictate what one shall pay for a car is nothing less than absurd.

Reform in Dress.

Apart from the above project regarding motor cars, Nexiha Mouhieddine Hanoum is now agitating for the adoption by Turkish women of a modest and uniform mode of dress with a view to preventing the expenditure of the national fortune for the acquisition of "unnecessary" articles *de luxe* made abroad which form so important a part of the present-day fashions. There is no doubt that Nezih Hanoum will find little support in this idea, unless it be from the husbands concerned, as the Turkish woman of to-day is only too weary of the recently discarded uniform costume of bygone days and eager to be able to compete with her European sisters on equal ground.

Sport and Temper.

An extremely regrettable incident occurred here on Friday last during the football final for the "Jumhuriyet" Cup between the teams Galata Serai and Fener Bagtche. Shortly after half-time, with the score at one all, a certain amount of rough play was apparently introduced into this hotly-contested match, which soon developed into an indiscriminate rough and tumble between the players. The referee being utterly powerless, the police were constrained to lend their assistance, but this unfortunately acted only as the signal for the beginning of a tumultuous battle amongst a large portion of the 5,000 spectators. The sporting authorities here and official circles at Angora are naturally exceedingly grieved at this occurrence which, as they point out, demonstrates that the sporting instinct has not yet completely triumphed over the primitive passions. Galata Serai and Fener Bagtche are two teams of which Turkey has just reason to be proud and they have on more than one occasion proved their mettle against visiting national teams, who took away with them a different conception of what they had previously been content to describe as uninitiated beginners. It is to be hoped, therefore, that these footballers will take the wise counsel from Angora that the written and unwritten laws of sport be completely respected and that the pursuance of vendettas be abandoned.

An Arbitrary Measure.

A new difficulty which, while not being of any great

The NEAR EAST YEAR BOOK and WHO'S WHO, 1927

Edited by

H. T. MONTAGUE BELL.

A comprehensive survey of the affairs, political, financial, commercial, industrial and social of YUGOSLAVIA, ROUMANIA, BULGARIA, GREECE and TURKEY. With the text of Near Eastern Treaties, Lists of factories, &c., Who's Who of prominent people and five maps.

980 pp. Demy 8vo. Price 25s. net.

To be obtained from *THE NEAR EAST & INDIA*, 170 Strand, London, post free, for 25s.

SOME PRESS NOTICES:

The Spectator. "An important book which every student of international politics will want. Here, clarified and condensed . . . will be found information which is of the greatest value . . . Some of it is better reading than the average novel, and all of it is of great interest. Only an expert on the Near East could have attempted the task, and we are grateful to the author for having succeeded so well in supplying us with something that (now that it is available) merchants and journalists and politicians will discover they have been needing since 1919."

The Scotsman. "Makes a welcome addition to the works of reference at the disposal of publicists and students in general of contemporary affairs. . . A real want has been uncommonly well supplied."

The Daily News. "An extremely valuable work of reference."

The Times, in the course of a half-column notice (under "Books of the Day") says: "With best part of 1,000 pages at his disposal, Mr. Montague Bell is able to deal with them (the Balkan States) very thoroughly, and to find room for ample and detailed information about every form of political, financial, economic, commercial, and educational progress. . . Mr. Bell is not content to limit the information he imparts to the geographical details and statistics of all sorts usually to be found in books of reference. He deals very fully with finance, debts, banking, commerce, shipping, insurance, and industry, and provides useful historical summaries, complete with lists of past Prime Ministers and the present strength of parties in the various Legislatures. Indeed, even those who are well acquainted with Balkan and Near Eastern affairs will be surprised at how much there is to learn about those countries; and Mr. Bell himself seems to hope that if the Near Eastern nations can be persuaded to take a greater interest in the present, and its multitudinous and important interests and activities, they may begin to forget about that unpleasant past which has hitherto been such a drag upon their progress. He has certainly provided them and their friends with ample means for taking that interest."

The Morning Post. "A long-felt want is supplied . . . For purposes of reference his book is invaluable. . . Good maps and detailed information regarding every sphere of the activities of these countries are provided in a clear and accessible form."

The Financial Times. "Every branch of activity in these countries is exhaustively and authoritatively reviewed. From its pages a very clear idea can be obtained of the countries' great natural resources . . . while lists of manufacturers and factories make the book of practical utility to the individual merchant. For the student and politician the timely appearance of the work is enhanced by an appendix embodying the text of recent Near Eastern treaties and agreements. . . Mr. H. T. Montague Bell, who has edited the compendium, which is at once informative, comprehensive, and withal accurate, is heartily to be congratulated on an admirable production."

importance, is nevertheless causing considerable unnecessary inconvenience, is arising from the recently applied measure prohibiting the delivery in Turkey of bound books sent from abroad by book post. These are now subject to customs duty, and in order to eliminate the necessity for the Postal Authorities of recovering from addressees the duties liable on such parcels, instructions have now been given to return all books unless sent by boat and included on the ship's manifest. Such procedure is absolutely without precedent, and causes, apart from the trouble of clearing these articles from the Customs House, a month's delay of the boat journey.

May 18.

Greeks and Mussulmans.

The *Jumhuriyet* published on May 13 the information that the Greek Authorities at Dedeagatch had dismissed—on the pretext that they wished the port services to be assured exclusively by Greeks—seventy-five Mussulmans who were natives of that town. "It is obvious," this paper stated, "that the Greek Government still persists in its determination to force all Mussulmans to leave Greece by depriving them of the means of subsistence." While it is very possible that this report is by no means erroneous, the *Jumhuriyet* appears to forget (or perhaps prefers to ignore) the fact that thousands—not tens—of Greeks have been summarily dismissed from their employment in Constantinople in order to make room for Mussulmans. Furthermore, the Port Monopoly of Constantinople—not to mention numerous other public services—does not permit the employment of Greeks in its services, and only a week ago the Prefecture of Constantinople attempted to refuse the granting of a motor driving licence to an Austrian who wished to work as a taxi-driver. This would appear to be another instance of a very black kettle making disparaging remarks about a pot.

Municipal Improvements.

A mission, under the presidency of Assif Bey, Prefect of Angora, sent to make a study of the manner in which European cities are administered, has now returned after visiting France, Italy, Belgium, Switzerland, Germany and Austria. Assif Bey states that the services of experts have been engaged in France, Germany, and Austria and these will shortly arrive at Angora, where they will undertake the planning and building of a modern capital.

Angora, however, is not the only town in Turkey which it is determined to modernise. According to Mezim Bey, the Mayor of Diarbekir, his counsellors have planned considerable improvements to be introduced this year. Diarbekir's municipal revenue, which for 1924 was only £T31,000, has now been brought up to £1,93,000, and with this they intend to build an ice factory, a theatre, cinema and casino, and organise a decent fire brigade. Last year's revenue was devoted to the construction of a new Town Hall and the repairing of the main street, and with the coming financial year's improvements Diarbekir will certainly assume the aspect of a quite modern town. There is no doubt that the numerous municipalities of the interior towns are now each vying with the other. Angora is decidedly pleased with this state of things.

Popular Party Congress.

The Popular Party Congress, which was to have been held on May 19, has, owing to the great amount of work still to be done in the Grand National Assembly concerning the examination of new Bills, been postponed until some time about the middle of June. Great importance is attached to this Congress as Mustapha Kemal Pasha is expected to pronounce an epoch-making speech lasting for some hours. Feverish preparations are being made in order that this momentous discourse may be broadcasted. The broadcasting of concerts has already started in Constantinople on a modest scale, but the occasion of the President's speech will be the first on which radio has been used for such purposes.

Book Reviews

WORLD POLITICS THROUGH AMERICAN SPECTACLES.

"EUROPE AND THE EAST." By Norman Dwight Harris. (London: George Allen and Unwin, Ltd. 20s. net.)

"IMPERIALISM AND WORLD POLITICS." By Parker Thomas Moon. (New York: The Macmillan Company, 15s. net.)

The more or less simultaneous appearance of these two studies of world politics by two American professors affords a stimulating contrast in historical writing. Professor Harris of Northwestern University sets out to relate the story of European expansion and intervention in Asia and the Pacific Ocean, while his colleague of Columbia University covers the same ground as one item in a wider review which embraces all five Continents. Each approaches his task fortified by wide knowledge and conscientious study; but the former is as obviously possessed of critical ability that can approach each subject impartially as the latter is handicapped by the fact that, having given his dog a bad name, he cannot help hanging it. In "Europe and the East" we have a very readable and valuable study of the relations of Western Powers with the Near East and with Asiatic countries, and Professor Harris has rendered good service in condensing his subject within the present compass without sacrificing the details that are of importance. He is happier, indeed, in his detailed reviews, as, for instance, in the chapter on the Defence of India, than in some of his rapid surveys. Thus in a reference to the Balkan Peninsula, it is inaccurate to include Montenegro among the Balkan communities which had thrown off the Ottoman yoke between 1829 and 1878 and had arisen from dependent nationalities to independent self-sustaining States, and it is straining history to enumerate as among the factors that led to this successful evolution "Pashitch in Serbia, Venizelos in Greece," in view of the fact that the former made his first appearance in Serbian politics in 1878, and the latter in that year was only fourteen years old.

On the subject of Turkey Professor Harris follows up a trenchant analysis of the Lausanne negotiations with the verdict that the Treaty, in spite of serious drawbacks, contains a real basis for a lasting peace and for the work of reconstruction in the Near East.

... By giving the Turks a square deal and making possible the re-establishment of a Moslem Power at the gateway between Europe and Asia, the fears of the Mohammedan peoples were quieted, a strong friend acquired by France and England in the Moslem camp, and the way opened for the creation of a just and honourable relationship between the European States and the Mohammedan communities of the Near and Middle East. And with the establishment of a stable Turkish State co-operating with European Powers and with a galaxy of independent Moslem communities, such as Egypt, Palestine, Iraq, el Hedjaz, Afghanistan, and Persia, a splendid step will have been taken toward the stabilisation of conditions in the Orient and the development of international confidence and good-will between the Christian and Moslem worlds. But this is not all. The permanent settlement of the old international feud for the possession of Constantinople and the Straits is set at rest by the official recognition of the Turkish claims to that region.

Certain "dark clouds" on this fair horizon are the exchange of populations, the method of providing protection for Christian minorities and aliens in Turkey, and the failure of the European Powers to keep their promise to Bulgaria regarding an outlet to the Aegean Sea for that State. With regard to the first cloud, it has to be supposed that Professor Harris wrote this passage some time before the book was published (there is no indication in the book of any date, either by the publisher or by the author), as it is generally allowed to-day that the exchange has worked out far better than was anticipated and must be regarded as in the long run the best course for both countries. Our author is somewhat fearful of the Turks'

capacity to maintain financial, economic and commercial independence owing to "the web of intrigue and diplomatic manoeuvres which will be spun about them by the Powers in order to promote the selfish ends of European capitalists," and in spite of his recognition of the great improvement that the new order in Turkey is on the old comes back in the end to a note of interrogation as to whether the new national régime will succeed.

From the Near Eastern question Professor Harris turns to the Middle East, and after a chapter describing the expansion of Russia comes to "The Persian Muddle." The Kingdom of Persia, one of the oldest monarchies in the world, has lived, he points out, through more tragic vicissitudes than any other nation on earth, and fallen, at length, into a state of decay that has been more stultifying than anything experienced by any modern political community. After playing an important part in the politics of the Middle East, it gradually declined during the 17th, 18th and 19th centuries, until it became an impotent, disorganised and discredited State of the third grade, without resources, leaders or friends. "And one may truthfully say that it exists to-day only through the grace of God and of the British Empire." In spite of this exordium, Professor Harris has little commendation for British policy towards Persia during the 150 years over which Anglo-Persian relations have extended.

This sympathetic and praiseworthy policy failed to get either party anywhere, because it was neither constructive nor continuous. And it failed to inspire confidence, since it was not accompanied by enlightened, sustained efforts to promote the development of Persia. For, unfortunately, the British diplomacy blew hot and cold by turns. And the Home Government by its procrastination and indifference deliberately threw away, from time to time, those favourable opportunities for constructive statesmanship which the genius of individual Ministers, such as Sir Henry Drummond Wolff and Sir Frank Lascelles, created. Nevertheless, thanks to the energy of the Viceroys of India and the labours of British diplomats, consular representatives and merchants in the Middle East, British influence remained dominant in Persia almost to the end of the 19th century.

In the meantime, however, the Russians, had been acquiring "a most remarkable strategic position" in northern Persia. Tracing the growth of Russian influence, the author comes to the Anglo-Russian Agreement of 1907. This celebrated treaty he regards as one of the most remarkable diplomatic triumphs of recent times. "It was a great step in the direction of international conciliation and co-operation, being based on the principles of fair play, equal rights and free competition." Yet "no other treaty of modern times has been more bitterly assailed and criticised, both in Europe and in Persia." Its three weaknesses were: It was made without reference to the interests or welfare of Persia; the way was left open for a joint interference in the affairs of Persia at any time and for any reason that might be considered a "difficulty"; and, thirdly, being drawn on broad and indefinite lines, the document was open to various interpretations. The subsequent course of events is described in scathing terms by Prof. Harris. On the Shuster affair he is particularly incisive; "the proofs are conclusive that the guilt of Great Britain in this affair was as great as that of Russia, because the British Government not only countenanced the Russian intervention, but abetted her in it." In general, Great Britain knew what was required in the interests of Persia, but for one reason or another failed to carry it out. For the Anglo-Persian Treaty of August 9, 1919, Prof. Harris has only good words to say. "No State was better qualified to assist Persia in this labour of reorganisation than Great Britain, or more favourably disposed to co-operate on a just basis. And there was no reason to doubt her good faith." But the Treaty was a complete failure.

The British statesmen had grasped the salient points in the situation in the Middle East with rare insight. (The reference is to 1919.) ... Unfortunately, through short-sighted diplomacy, stupid blundering and unpardonable delays, the English Government threw away

an unprecedented opportunity to advance the interests not only of Persia and the other States of the Middle East, but also of the British Empire and of Europe. A more colossal diplomatic failure has seldom been seen in recent times.

It is of interest at this point to turn to Professor Moon's version of these events. Imperialism, it has to be remembered, is not only the title of his book, but is also an ever-present obsession. He writes :—

The end of the War found Persia occupied by British troops, and Britain relieved of Russia's partnership. In vain the Persians sought to avert the clearly impending British protectorate by appealing to the Paris Peace Conference. The Conference was deaf.

On August 9, 1919, the Persian Cabinet accepted the inevitable by signing an Anglo-Persian Treaty. . . . If, in the preamble, the British Government reiterated its pledge "to respect absolutely the independence and integrity of Persia," the formula need not be taken too seriously. What Great Britain intended was a modern, subtle form of imperialist control no less effective, but much less candid, than what it used to be the fashion to designate by the euphemism "protectorate."

To show that prejudice and ignorance recognise no limits, Prof. Moon thus sums up Persia's wonderful accession of good fortune in the developments of the Anglo-Persian Oil Company :—

"The development of the oil industry may mean an end of Persian independence; but in these days of more subtle forms of imperialism, Persia is more likely to remain nominally independent while her underground wealth is owned and exported by foreigners, from whose prosperity a few crumbs of economic benefit will fall to Persia's share, in the form of taxes, increased commerce, increased business."

As millions of pounds sterling in royalties would disturb the picture of Prof. Moon's indirect economic crumbs, they are ignored.

The two books afford many similar instructive contrasts in the interpretation of contemporary events. The general attitude of the two historians is well brought out in their estimate of Great Britain's activities in various parts of the world. Prof. Harris, as we have seen, knows how to castigate blunders and to put his finger on weak spots; but he does examine actions and analyses their effects. Prof. Moon is convinced at the outset that everything is for the worst and merely marshals his evidence in support of this useful and stimulating theory.

Here is Prof. Harris on Great Britain's work in India :—

The world owes a debt of gratitude to those intrepid and valiant men who, with a just and cheerful spirit, amid privations and difficulties, served as policemen and pioneers along the route to the East in a noble effort to promote the welfare of mankind and the interests of European States. . . . The policy of Great Britain was one of conciliation, co-operation and friendship. She gave a fair compensation for value received, and strove honestly to win and retain the confidence of all the border peoples.

Prof. Moon's reading is as follows :—

In Africa and in southern Asia British imperialism since 1874 has been principally concerned, as the imperialism of other nations in the same period has been concerned, with the economic exploitation of coloured peoples, rather than with white settlement.

There may be good points in "Imperialism and World Politics," but the manifest bias of the author must necessarily make him suspect as an interpreter of world tendencies. We have dealt here only with parts of the two books of special interest to readers of THE NEAR EAST AND INDIA. As already indicated, both cover wide ground. "Europe and the East" devotes nearly half its pages to the Far East, and enhances its usefulness as a book of reference by a Selected Bibliography of 29 pages.

HELLAS AND PERSIA.

"THE CAMBRIDGE ANCIENT HISTORY." Vols. IV. and V. (Cambridge University Press.)

There is no use wasting the space at our disposal in recording praises of the "Cambridge Ancient History." It has already established itself firmly as a necessity for the student and for the ordinary cultivated man. It needs no words of praise from us.

We propose, therefore, rather to indicate what the prospective reader of these two volumes may expect to find in them. First, he may be sure of finding editing as nearly perfect as is humanly possible. The total effect is almost epic. It was partly in order to bring out this quality that we have preferred to review these two volumes together. In them we see the Persian Empire rising and growing, the progress of the Grecian City Powers, the clash of the two, with the miraculous victory of the latter. Then follow the rapid growth of the Athenian Empire with its strength and fatal weakness, the brilliant but suicidal wars between the Greeks, and, finally, the entrance once more of Persia on the scene with results fatal, at first to Athens, but, as we shall learn in future volumes, indirectly fatal in the end to Greek freedom. The story flows on, evenly and inevitably, from step to step, from epoch to epoch, and the beginning is in Vol. IV. and the tragic end in Vol. V. The two together make a wonderful tale of a wonderful time.

As regards detail, we do not propose to say much. It is, in general, sufficient to say that each section is in the hands of a writer very specially qualified by his scholarship to take charge of it, with the one conspicuous exception of those relating to Etruscan matters which seem to us to be definitely below the standard of the rest of the work. The writers, most of them, can write as well as they can instruct. Perhaps the sections which stand out above the others in this respect are those by Professor Bury and, very specially, the masterly chapter on Herodotus and Thucydides by the veteran scholar Dr. Macan. The narrative torch is passed on from one hand to another with amazingly little loss in continuity. Many of what we may call the supplementary chapters are particularly well done, as, for instance, that on the economic background in Greece in the fifth century by Mr. Tod, and that on the outer Greek world in the sixth century by Professor Ure. The latter subject is one of great importance and it is a pity that so little space could be given to it. Could the author not give us the treatise on the subject which is so badly wanted? Chapters on Greek art by Professor Beazley are excellent. The same may be said of Mr. Cornford's lucid summary of what we know of Greek Mystery Religions and of the course of Greek Philosophy before Socrates. It is far from easy to produce, on such large subjects, a chapter which is at once a sufficiently full and clear summary of the available knowledge, while retaining literary grace. To us it has seemed that Mr. Sheppard, in his brilliant essay on Attic drama in the fifth century, has rather allowed the latter quality to overshadow the former.

Not only is a sixth volume to appear very soon, but we are to have volumes of illustrations to accompany those volumes which have already appeared. To these all readers of this invaluable history will eagerly look forward. In the matter of bibliography and index they are already splendidly cared for. It only wants the promised pictures to make the feast complete.

KALIDASA'S SAKUNTALA.

"KALIDASA'S SAKUNTALA." Edited by the late R. Pischel. (Harvard University Press. Published in Great Britain by Humphrey Milford: 22s. 6d. net.)

This fine edition of the famous romantic play has a certain romance of its own attached to its production. As long ago as 1898 the late Professor Pischel undertook to prepare for the Harvard Oriental Series a revision of his

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

E. H. Keeling,
Hon. Sec.

edition of the Bengali recension of the "Sakuntala," which had appeared in 1877. At last the result is before us. How Pischel died before his work was ready for the press, how Professor Cappeller carried on that work, how the War intervened between the printing—at Stuttgart—of the first 26 sheets and that of the remainder—these and other vicissitudes are described or hinted at in the prefatory note by Professor Lanman, general editor of the series. Yet the book well maintains the standard of its predecessors: it is a satisfying, substantial volume, well printed on good paper, and the Nagari type used is as pleasant to the eye as any I have seen.

The 1877 edition mentioned above was the first critical edition of the play to be made; at any rate, the first from the longer recension. It was a great work, prepared from a collation of many MSS., Bengali, Nagari and Dravidian, and containing a very full list of variant readings. The present edition remains strictly critical (there are no explanatory notes), but the number of variant readings included has been greatly reduced by the exclusion of such as are evident blunders, or as occur merely in the stage directions; and the text has been improved, especially in the Prakrit passages, the divergences from the first edition being clearly shown in a special list. Further, Professor Cappeller has added a section giving Sanskrit equivalents for all the Prakrit words, in the order in which they occur in the play, with references to Candrasekhara's commentary, to Pischel's edition of Hemacandra, and to Pischel's own Prakrit Grammar; satisfying thereby the needs both of students of the Prakrits, and of those who read only Sanskrit. Finally there are schemes of all the metres used, with a list showing the metre of every stanza in its proper order.

In consideration of the vast amount of Sanskrit literature that survives, and of the great importance of much of it, there has been remarkably little critical work done upon the texts; time will bring more, but at present it is still a new study for Western scholarship. Hence the importance of a work such as this of Pischel and Cappeller: it makes a landmark in the history of Oriental textual criticism. The book's value for the promotion of Prakrit studies has been already mentioned; it only remains to say that even those who are not scholars, or even students of Sanskrit, should be grateful for the provision of a good text of this play, which through the medium of translation may become accessible to all.

C. A. RYLAND.

THE FRANCO-POLISH ALLIANCE.

"THE COMEDY OF POLAND." By Major O. d'Etchagazer. (London: Allen and Unwin. 7s. 6d.)

We make no apology for calling the attention of our readers to a book which deals with a country just outside those treated of in THE NEAR EAST AND INDIA. After all, it has a common boundary with Roumania, and the dissolution of Poland, if it comes about, is not unlikely to have very serious effects even farther afield.

This is not the book of propaganda to which readers of works on the Near East are usually treated. It is written by a French Army Major who has seen much service in Poland since the Armistice and has spent much industry in efforts to ascertain in what way the alliance between his country and Poland is likely to benefit the former. Having arrived at the conclusion that its effects can only be disastrous to France, he wrote, in 1925, his book which he called "Pologne, Pologne . . .," which now appears in English under the rather unfortunate title of "The Comedy of Poland"; for it is no comedy that is represented by the author. His object is to warn his countrymen, before it is too late, that they are backing a horse which may easily lead them into great danger and even

disaster, while this terrible risk has no compensations to make it even apparently acceptable. We cannot but think that his efforts must have had some effect, though it is hard to see how France can now honourably withdraw from the position which she rashly took up after the Armistice.

Shortly, he looks upon the Polish nation as a hopeless jumble of antagonistic peoples, only half of whom are Poles. These latter are found by him to be dishonest, inefficient, ignorant, lazy, self-satisfied and corrupt to the core, with the exception of some of the well-educated higher and middle class. The Government seems to him to exist mainly for the enrichment of its members and their underlings, while the Army is, even apart from its dangerous admixture of race, a perilous fraud, useful only as a means of getting rid of war material and money. The only return which the French have had for their sacrifices, pecuniary and otherwise (and these have been great), is the almost entirely successful prevention of any French trade with Poland. His conclusion is that, if France helps Poland to remain an independent State, she is letting herself in for a task of enormous extent and danger. To him the only really possible solution of "la question polonaise" is another partition. But between whom?

This somewhat crude summary of the Major's book does no justice to its clever writing, to its documentation and to the wealth of witty anecdotes which it contains. It may well appear to many readers, as it does to the present writer, to indicate a curiously one-sided view. We have no space now to enter upon such questions. The fact remains that the book is serious, well-written and is well worth reading.

C. S-W.

What of ARMENIA? A Gesture of Friendship

towards the Armenians is now being carried out with the support of the Christian public of Great Britain, the League of Nations and the French Government. Land in Syria has been secured, on which some thousands will be able to live and prosper by agriculture, the recognised industry of 85 per cent. of the Armenian People. Thus the pitiful congestion in the unsanitary refugee camps will be relieved and one of the greatest problems of the present day will be partly solved.

In view of this great opportunity for succour which God has presented, The . . .

Friends of Armenia

earnestly appeal to readers of "The Near East & India" to show PRACTICAL SYMPATHY towards these destitute and sorely distressed fellow-Christians

Please help to make this CONSTRUCTIVE EFFORT A GREAT SUCCESS. Any gift will be gratefully received by Captain G. F. GRACEY, General Secretary, 47 Victoria Street, London, S.W.1

ARABIAN TRADE RESOURCES.

BY COMMANDER C. CRAFTURD, R.N. (RET.)

Arabia holds undeveloped trade resources. Here is a small incident that illustrates the point. Our little ship buried her nose in the green seas. Shaikh Yusuf clasped his hands to his stomach. "Oh Allah The Merciful," he wailed. Shaikh Yusuf was my guest; he was growing seasick, and he needed rousing. In a few moments our ship would be running between the sheltering reefs of Kamaran roadsteads and into the calm waters of Kamaran Harbour, one of the best harbours of the southern Red Sea. Meanwhile, she bobbed and curtsied to the dancing waves while Yusuf wailed his distress.

"Oh! I wish I were back on the firm ground of my own home land," he sighed. "Nonsense, Shaikh," I laughed. "Here you have all the riches of the seas, freedom and the strength of the salt sea breeze. What is there in your land? Nothing but fleas, flies, and sand." Yusuf was roused. "My land holds everything," he answered indignantly. He told me tales of waving crops, sheep, goats and camels; a land flowing with milk and honey. "What would you?" he queried. "You Europeans are always greedy for gold. Would you like a bag of gold?" We were coming to the calm waters, so I ended the conversation. "Why, yes, Shaikh, if you like." I laughed. "Every Arab is greedy for a cup of coffee. Come along and have one."

I forgot Shaikh Yusuf and his fairy tales, till one month later. We were cruising in the Farisan Bank, a network of coral reefs and atolls. A canoe hailed us. "Ho Qabtan. Ho Captain, stop your ship. I have a present for you." The canoe came along side, and a fisherman stepped aboard. He carried a sack over his shoulders and dumped it down on the deck. "Thank God that job is over," he remarked, and turned to go. "Wait a minute, Muhammad, we are just beginning to like you. What have you got in that sack?" we asked. "I do not know," he answered. "I was told it is a sack of gold." It was gold, an alluvial gold sand, and while we were examining it Muhammad and his canoe disappeared.

It is unfortunate that in the pressure of war service I lost Shaikh Yusuf's address; for in his Eastern manner he had offered me the development of his gold deposits.

That experience was by no means an unique one. I have made inquiries all round the Arabian sea coasts. There is gold in plenty; there are plenty of undeveloped resources in Arabia, both mineral and agricultural. "Render Arabia self-supporting": that is my message, and it holds a perfectly practical proposition.

If His Majesty's Government had devoted one per cent. of its Middle Eastern military expenditure to commercial development, both Arabia and Iraq would be self-supporting. From 1918 onward His Majesty's Government has been forced to undertake responsibilities in Iraq, Palestine, Transjordan and Arabia proper. In 1918 we were somewhat ignorant of Arab problems, though it is probable that we were not so ignorant as other European Powers. There is no sense in finding fault; the price of ignorance is a large one. We have paid for our ignorance to the tune of over four hundred million pounds. The point that needs emphasis is that Arabia is not yet self-supporting.

Now a hungry man is an angry man: a body of hungry men is a danger to the community. If we bring industry to Arabia, we still abolish the many dangers which threaten us, so long as the Cradle of Islam is restless. We could certainly render Arabia self-supporting. We do not need a subsidised trade, but we do need Government encouragement. It is quite justifiable to ask for that encouragement. In the past our Government has gained political concessions that have proved of very little value, while the practical-minded Arab rulers have gained British cash. They have invested the cash in ammunition. In other words the Arab ruler buys trouble for a neighbouring State. He pays in British gold; and it often happens that further British gold is required to quieten the trouble. Now that we have gained experience, it is time to stop fooling with the British tax-payer's money. Whenever it is necessary or politic to pay money to an Arab ruler, we should make some endeavour to forward British trade interests at the same time. If we give an Arab ruler several thousand pounds we have a perfect right to ask: "What are you going to do with the money?" Each Arab State has some trade or trade resources awaiting development. We can insist that some of our payment shall be devoted to the development of trade. We are dealing with a race who are mainly Semitic. If we demand a full twenty shilling value for our pound, they think all the more of us.

In all the districts under the rule of King Ibn Saoud the industries are mainly pastoral. They would shoot ahead if more water were available. In most of the Tihama and probably in most of this King's territories artesian well boring would prove a success.

All the Arabian Tihama is backed by high hills that catch the monsoon rains. The rainfall is lost to the surface, but it is probable—indeed almost certain—that all of that rainfall is recoverable through artesian well boring, that will tap great underground streams and rivers. Artesian well boring has been started in the Bahrain districts and has met with marked success.

The pilgrim trade of the Hijaz is well established and will continue so long as Islam exists in its present form. If the pilgrim trade is developed satisfactorily the import of pilgrims should easily reach one million pilgrims per annum. At present the only pilgrim port for Mecca is Jidda, but the deep water port of Lith offers better navigational possibilities and has a shorter road to Mecca. The Lith road is at present impractical, but it is probable that a full development of the Pilgrim trade will eventually open both roads. After the pilgrimage to Mecca, a large number of pilgrims journey to Madina. Some of the pilgrims journey overland from Mecca to Madina, but the majority return to Jidda, travel by sea to Yanbo, and from there by road to Madina. The main requirements of these pilgrims are, cotton goods, grey sheetings, and blankets. Practically all low price goods can find a market. In 1912 and prior to that date, cheap Austrian glass and cheap china goods figured largely among the imports to the Hijaz. In 1920, I gave the Overseas Trade Department detailed information regarding the imports and exports of Arabia from about 1912 to 1918. A great deal of that information was gathered from Turkish sources. I now learn that the Turkish statistics were exaggerated, and cannot be regarded as reliable. They do serve, however, as some guide to the requirements of Arabia, and the openings for Red Sea trade. In 1918 and 1919, the

Late Mr. Wyman Bury also furnished trade reports regarding Southern Arabia, and he certainly knew what he was writing about.

At present it is advisable to remember that low priced articles may meet with a ready market during the pilgrimage season; but I should advise *quantity* not *quality*, as the guiding maxim in initial ventures of Red Sea trade. So soon as Red Sea trade develops to steadiness, quality will, of course, tell. The retail trade must be in the hands of Muslims, and the Indian is a good middleman, acceptable to the Arab. The wholesale trade can be developed through Aden, or through the Red Sea ports direct. I should advise merchants who are not well acquainted with Arab trade to begin their activities through Aden. The Arab is averse from the Western banking system, and though there is no reason why payments should not be made through a bank it will be best to commence operations at a British port. My own experience suggests that it is inadvisable to give large credit accounts to Arab merchants, until all reasonable precautions have been taken. While the Arab merchant does not use a Western banking system, he fully understands a cheque, and frequently prefers a cheque to a cash payment.

With a reasonably good pilgrim season, the pilgrim ports will stand an import of £750,000 and an export of £500,000. Neither that import nor export could be attained immediately. Arabian trade has been at a standstill since 1914 and must redevelop. The Hijaz ports in their present state could not handle a greater trade than I have indicated, but both the ports and their trade could develop to a greater state. The export resources can certainly develop to balance the import trade.

The main imports are: light cotton goods, grey sheetings, light blankets and low price goods of every description, excluding toys, dolls and non-Muslim articles. The main exports are "Mocha" coffee (the genuine article), skins and hides of poor quality. The Mocha coffee is of high quality, being hand picked, hand graded and sorted, from trees that have never known the coffee disease. The skins and hides are of poor quality because they are not scientifically dried. They are cured with insufficient wood ash and are baked in the hot Arabian sun and deteriorate accordingly. They are suitable and known to the Indian market. During famine time, and when the monsoon rains fail, the skin market is at its best, because the badawin then kill off their animals, throw away most of their meat and sell the skins.

The trade resources of Southern Arabia seem far more plentiful than those of the Hijaz. Southern Arabian trade is not ready for immediate development, being somewhat unsettled at present. The unrest, however, between the Yaman, Asir, and the Aden Protectorate, can be quietened very quickly. In the past various representatives of the British Government made treaties with minor Arab rulers. Now the Imam of the Yaman, who is the main Arab Ruler of Southern Arabia, objects to those early treaties with minor rulers, whom he considers should be subject to his control.

In my opinion the divergencies of opinion that exist between His Majesty's Government and the Imam can be adjusted. The adjustments may take from six to twelve months, and after that Southern Arabian trade will be open.

When we dive into obscure Middle Eastern history, we find that Al Yaman, "The Happy" land, held and still holds amazingly rich resources. The Yaman of ancient times was not limited by what we consider its present geographical boundaries, but most of its wealth was contained in the Yaman country of the present day.

My article, however, grows over long. I had intended to take you round the Arabian coasts that I know so well, past many a forgotten seaport of Sabaeen times, ports of world renowned wealth, and on to the Persian Gulf ports, and their pearl fisheries. I have merely taken you through two thousand miles of sea coast. That, perhaps, is sufficient for one article.

In conclusion, I repeat my main conviction. I have waited seven years, watching for the propitious time. Now I deliver my message: "Render Arabia self-supporting."

NEAR EASTERN PRESS.

A Balkan Locarno.

The suggestion in the Near East Press of a Balkan Locarno, although the obvious solution of the great problem, seems a little previous in appearance. Certain questions remain unsolved—such as Macedonia, the perpetual hotbed of trouble, minorities in all countries, access to the sea, and transport in commercial enterprise. Moreover, one is still confronted with the difficulty of settling agreements with unstable Governments.

With regard to Turkey's part in Balkan affairs and the prospect of a Balkan Locarno, it is evident that the lesson of the Great War has not yet been lost and that the intervention of any Power in Balkan affairs is viewed with mistrust. With regard to this *La République* (Turkey) says:—

If one is to believe a telegram sent from Vienna to the French Press, the efforts of our Minister for Foreign Affairs to prepare a Balkan Locarno, or a Union of Balkan States, are on the eve of a great success. Negotiations to this effect, which have begun, and tend to end in an agreement between Angora and Belgrade, in which Greece and Bulgaria would equally participate.

To nullify the efforts of Italy to encircle Yugoslavia, the latter has agreed with the point of view of the Turkish Minister for Foreign Affairs. Turco-Bulgarian relations have for some inexplicable reason entered a better phase. A *rapprochement* between Greece and Turkey would be possible, owing to the settlement of the larger part of those questions pending between these two countries.

We state here, every time that occasion presents, what we think of a Balkan Union in which Turkey would participate. It is not that we do not desire such a Union, but the fact is that circumstances have never been favourable for its realisation, and are not more so to-day than yesterday. The impossibility of such a realisation can be explained by the fact that the Balkans and the Balkan peoples are far from combining those aptitudes necessary for such an organisation. And whence, therefore, are all these rumours which have been spread for some time past in order to persuade the world that they are on the eve of realising such a combination?

The reason is so simple that anyone could see it without thinking for long: it is that most likely one of these Balkan States is in an uncomfortable position and that it believes it possible to draw certain advantages from such an announcement. Well, let us say at once that in parallel circumstances, of imperative and urgent necessity, it is impossible to dream of such a union or alliance. The Balkan States can only form a Locarno between themselves with a cool head, and at a moment when they have no external complications. It is

only thus that they could show a proof of their maturity and peaceful sentiments.

Thus, from one point of view it seems not only absurd and impossible but even injurious to talk of a Balkan union in which Turkey would take part, as long as the conflict between Italy and Yugoslavia has not definitely subsided, for in this case we should be but fanning the flames. And that is not all, since in justice we cannot but lay a large part of the responsibility at the door of Yugoslavia, in this affair of the Treaty of Tirana and its consequences. Yugoslavia, formerly but a small State, having swiftly grown larger owing to a lamentable aberration in the succession of Austria-Hungary, has been seized with a great desire to walk into the shoes of the fallen Empire in the Near East. We believe it to be impossible for Yugoslavia to deny this. Moreover, although Bulgaria continually shows her dislike for Serbia, Yugoslavia nourishes the hope of one day winning to her side this rather fierce neighbour.

Greece fears Yugoslavia, because she is aware of her plan to descend on Salonika, and the perpetual fear of Serbian imperialism pushed Albania into the arms of Italy. If Yugoslavia is to-day about to be seized in an iron grasp, she should certainly be fair in owning that she is herself responsible for this state of affairs up to a certain point. How, then, can Turkey suggest, under these conditions, a Balkan Union in which she would take part?

And what is worse is that these States come and beg the assistance and favour of the Great Powers. For example, Greece is always ready to receive orders from England, Albania has made an agreement with Italy, Bulgaria is looking everywhere for somewhere to hang on, and Yugoslavia herself is but an ally of France who defies everyone by declaring to whoever may wish to listen that she can make an agreement with Russia or ally herself with Turkey whenever circumstances demand.

All these complications obviously show that no Balkan Union could work under present conditions, for the very reason that those elements which should serve as foundations are far from secure.

Foreign Intervention in the Balkans.

Another article in the same paper contains the following:—

The Balkan question consists of two truths which are in perpetual conflict, and which are responsible for great misfortunes, not only for the Balkan people, but also for the whole community. These are the truths:—

1. The formula of "the Balkans for the Balkans," for which, may it be said, no solution has been found.
2. The intervention of some Great Power in Balkan affairs, wherever she sees an opening for executing her political designs. Humanity has always had to suffer terribly for such an intervention in the Balkans. Read the whole history of this unhappy region, and, observing recent events, you will always see these two truths in perpetual opposition.

We know the situation which has existed since the end of the War: the Balkan States lack confidence in each other, and each one looks for external support. This is where the second point quoted above comes in:—

Everytime a Great Power sets foot in the Balkans to carry out its own designs it will bring disaster not only to the Balkans themselves but to the whole world. Such is the present Balkan policy of Italy—a policy supported by England—which shows the sinister signs preceding a great danger. And what else can the Balkan people expect from such a policy, but loss and disaster?

Macedonia.

After such a discussion of a Balkan treaty one turns with mixed feelings to the Balkan trouble. Macedonia, the source and victim of much injustice on all sides, presents a further difficulty with regard to the exchange of Greek and Bulgarian communities, in which Bulgaria is, as often, the loser. One can but hope that the question may be settled

before an unprejudiced court. The Yugoslav representative of the *Morgenblatt* writes:—

For some time past already the Macedonian Emigration—by which is understood the "legal" grouping of the Bulgaro-Macedonians living in Bulgaria—is displeased with the Government coalition and the Liaptcheff Cabinet. The Macedonians feel further supported in their apprehension by the firm resolution of the Government, in accordance with the undertaking in 1919 between Venizelos and Stamboliski, for the taking over of the Bulgarian churches, schools, monasteries and cemeteries under Greek control. According to the International Greco-Bulgarian Commission for voluntary emigration, the pecuniary value of these societies must be valued and liquidated, as also should the Greek churches, schools, monasteries, etc., in Bulgarian territory be valued and taken over by Bulgaria. So a reciprocal exchange would take place between the two States. Now, the Bulgarian possessions are much more significant in number and value—more than 300 to the 70 Greek institutions—so the Bulgarian Government would suffer a severe loss in this transaction, which in the precarious financial situation of the State would be hard to bear. It is also questionable whether the Greek Government would be prepared to pay the balance. On the other hand, if Bulgaria does not hold to the definition of the Agreement, she loses her rights of all indemnity and the articles concerned pass into the possession of Greece; and Bulgaria much nevertheless pay for the Greek common property on her territory, which according to the gold standard amounts to several millions. . . . On these grounds it has been resolved to set the liquidation in motion and the Prime Minister, M. Liaptcheff, the well-known Macedonian, declared to one of the Macedonian Delegation that he agreed with the intention of the Minister for Foreign Affairs and that the liquidation would be started.

The Macedonian Emigration protests with all its strength against this and contradicts the Bulgarian Government's right of disposal of the institutions and their goods. The churches, schools, monasteries and cemeteries and similar institutions in Greek Macedonia belong solely to the communities concerned, and only these can dispose of them. They are *res sacrae* and unsaleable. . . .

The article concludes by saying that the Macedonian meetings of protest against this exchange have been forbidden by the Government. The National Macedonian Committee has laid the matter before the League of Nations, but with very little hope of success. There has also been a suggestion of bringing the matter before the International Law Court at The Hague. If this matter is left unsettled it will bring greater trouble to Bulgaria's foreign affairs. M. J. A.

ALBANIA AND ITALY.

The Albanian Legation in London has received from its Government the following telegram:—

"By an exchange of Notes made on April 26, 1927, between the Albanian Minister Plenipotentiary in Rome, H.E. Jemil Bey Dino, and the Italian Premier, H.E. Signor Mussolini, the Governments of Albania and Italy declare that, if requested either jointly or separately by one or more Powers to enter into negotiations which relate to the interpretation or application of the Treaty of Tirana, or the participation in it of third States, or which in any way affect the relations between Albania and Italy, neither of the two Governments will take part in such negotiations without previous consultation on the subject between Albania and Italy or without a perfect agreement and a simultaneous participation of both countries in such negotiations."

The Greek Ministerial crisis arising out of the proposed nomination of M. Politis as head of the Greek Legation in Paris has been averted by a compromise. M. Karapanos, the present Minister at Paris, is to be recalled and the post left vacant till the Foreign Minister returns from Geneva, says the Athens Correspondent of the *Morning Post*.

Draft suggestions for a commercial treaty between Turkey and Bulgaria have been handed to the Bulgarian Minister in Angora by the Turkish Government. It is expected that the Greco-Bulgarian negotiations for a definite commercial treaty to take the place of the provisional agreement at present in force will be resumed shortly.

Mr. V. H. Patel, Speaker of the Indian Legislative Assembly at Delhi, and other distinguished Indian visitors were the guests of the Ulster Parliament and the Speaker of the House of Commons (Mr. R. W. H. O'Neill) at luncheon in Belfast on May 18. Mr. Patel, responding to the toast of "The Indian Legislative Assembly," which was proposed by the Speaker, said that they had been warmly welcomed in places where they least expected it. Speaking of India, he said that the people there wanted to remain within the Empire, but on grounds of equality. There had been an extraordinary awakening among the masses of the people, and they wanted perfect equality with other nations. They had come to realise that the British Government would never yield to threats or violence, and they knew that only by constitutional and peaceful methods could they come to attain their ideal.

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

PERSONAL AND GENERAL

TO-DAY

May 26, 1927 (New Style).
 May 13, 1927 (Old Style).
 Julkaada 24, 1345 A.H., of the Muslim Calendar.
 Iyar 24, 5687, of the Jewish Calendar.

Lord Leconfield will return to London this week from Egypt.

Captain the Earl of Altamont has arrived at 7, Upper Belgrave Street from India.

The Maharaja of Rajpipla, with his suite, has arrived at the Savoy Hotel for the season.

The Prince of Wales received the Maharajahdiraja Bahadur of Burdwan at St. James's Palace on May 18.

Field-Marshal Lord Plumer and Lady Plumer, who left Palestine on May 15, expect to arrive at the Rembrandt Hotel to-morrow.

Dr. Raghunath Purushottam Paranjpye (upon his appointment as a Member of the Council of India) was received by the King at Buckingham Palace on May 17.

Dr. C. A. Hewavitarne (who was Commissioner for Ceylon at the British Empire Exhibition in 1924) and Mrs. Hewavitarne have arrived in London from Colombo, and are staying at 43, Hill Street, Berkeley Square, W.1.

Mr. Ganeshilal, Jnr., of Agra, India, had a command audience of the King and Queen at Buckingham Palace on May 21, to show to their Majesties his collection of Indian historic and other jewels and embroideries. The King and Queen were much interested in the collections.

Professor Sir Flinders Petrie, F.R.S., is giving a public lecture on "Recent Discoveries in Palestine: The City of Gerar" at University College, London, this afternoon (May 26), at 2.30 p.m. The lecture will be repeated on Saturday, May 28, at three p.m., and on Monday, May 30, at 5.30 p.m.

We regret to have to record the death of M. Kyril Popoff, the able Director of the Bulgarian Statistical Bureau. M. Popoff, who died while attending the International Economic Conference in Geneva, was largely responsible for raising the Statistical Bureau under his charge to a level that has at present not been attained by the similar organisation in any other Balkan State.

Mrs. Charles Hancock and Mr. C. G. Hancock gave a luncheon party at the Ritz Hotel on May 18, their guests including the Roumanian Minister, the Greek Minister, the Czechoslovak Minister and Mme. Masaryk, the Egyptian Chargé d'Affaires and Mlle. Sidarouss, the Countess of Haddo, Lord Airedale and the Hon. Angela Kitson, Lord and Lady Strachie, Viscountess Pirrie, Lady Whitburgh and the Hon. Sybil Borthwick, Sir David Murray, the Roumanian Consul, and Lady Stavridi.

Air Vice-Marshal Sir W. S. Brancker will preside at the 6th Annual R.A.F. Middle East Dinner at the Trocadero Restaurant on June 2. The dinner is a reunion of those who served as officers with the R.N.A.S., R.F.C., or R.A.F. during the War in Palestine, Mesopotamia, Salonika, Mediterranean, Egypt, East Africa, India or Aden. Applications for tickets should be made not later than to-morrow (Friday) to Brig.-General W. B. Caddell, Vickers House, Broadway, Westminster, S.W.1.

The report that the Nizam of Hyderabad was sending his sons to England for their education is unfounded. The question, however, may be considered at a later date.

NEWS IN BRIEF.

M. Rakitch, Yugoslav Minister in Rome, left for Belgrade on May 19.

The Mediterranean Fleet, it is understood, will leave Malta, under Admiral Sir Roger Keyes, on June 22 for a two-months' cruise.

Mr. Joseph C. Grew, American Under-Secretary of State, has been appointed United States Ambassador to Turkey.

M. Alexander Karapanos, who has been Hellenic Minister in Paris since November, 1925, was recalled by telegram to Athens on May 19.

M. Marinkovitch, Yugoslav Minister for Foreign Affairs, returned to Belgrade on May 18 from the conference of the Little Entente at Joachimstal.

The Bulgarian Government have given the Aero Company of Prague the right to erect an aircraft factory at Kazanlik, on a site to be provided free of cost by the State.

M. Briand lunched on May 20 with M. Mitileneu, Roumanian Minister for Foreign Affairs, who had arrived in Paris especially to confer with the French Foreign Minister.

The Pope has appointed Mgr. Andrea Cassulo, Titular Archbishop of Leontopolis, and at present Apostolic Delegate in Egypt and Arabia, to be Apostolic Delegate in Canada and Newfoundland.

Mr. Richard Griffith, who died on May 21, at Carnarvon Hospital, served with the Royal Welch Fusiliers at Suvla Bay, and afterwards, with the R.A.M.C., in Egypt and Mesopotamia.

Official figures show that during the month of March 265 persons entered and 734 left Palestine. Each month since last August (inclusive) emigrants have exceeded immigrants, the total excess figure being 2,910.

The Bishop of Dornakal, speaking at the Church Army headquarters on May 20, said that he hoped to study Church Army methods in order to establish an Indian Church Army, adapted to the special needs of India.

The Palestine police officially announce the arrest and identification of the brigands concerned in the hold-up on May 5, when the Anglican Bishop in Jerusalem was robbed. The whole episode was witnessed by shepherd boys.

Excavations carried out at Agrinion [Vrakori] at the expense of a wealthy local tobacco merchant, M. Papastratou, have resulted in the discovery of the walls of the ancient town and the foundations of various temples, says *The Times* Athens Correspondent.

Flying Officer Cocks and Leading Aircraftsman Bowston, who are flying to Lympne (England) in a privately owned D.H.9 aeroplane, left Karachi for Basra on May 19. The flight began at Lahore on May 11. They arrived at Karachi on May 16.

According to the daily Hebrew newspaper, *Davar*, the Palestine Budget for 1927 to 1928 shows a deficit of £90,000, because Palestine is covering part of the expenditure of Transjordan. Otherwise the Budget would show a surplus of £80,000.

While the Archbishop of Athens was officiating on May 21 at the Feast of St. Constantine in the Church of St. Constantine at Piræus, a barber tried to cut off his beard as a protest against the Gregorian calendar, introduced in 1923. The barber severed part of the beard, wounding the Archbishop's cheek and hand.

The Royal Air Force fliers under the command of Air Commodore Samson, who left Cairo for Cape Town on March 30, which they reached on April 21, and who left Cape Town on the return journey to Cairo on April 25, landed at the Heliopolis aerodrome on May 22, thus completing their 11,000-mile flight without a hitch.

Mr. Walter Leaf, of Sussex Place, Regent's Park, N.W., Chairman of the Westminster Bank, and one of the founders of the International Chamber of Commerce, Chairman of the Central Electric Supply Company, Limited, who died on March 8, aged 75, left estate of the value of £124,186, with net personalty £117,640.

THE CHURCH IN INDIA.

The approaching dissolution of the legal union at present existing between the Church of England and the Anglican Church in India may not attract any great measure of public attention. It is, nevertheless, a matter of much historical interest, which may vitally affect the spiritual welfare of a large section of our Indian fellow-subjects, and particularly of our European and Anglo-Indian brethren, who are resident, whether temporarily or permanently, in that country. It was well pointed out in the article by Canon Fisher which appeared in our last issue that some such development as that now proposed is inevitable. The Churches in the great Dominions of the Empire have obtained full autonomy. It would be difficult to refuse similar rights to the Church in India, which aspires to the full status of a Dominion. Moreover, the more purely missionary Churches in China and Japan have also reached practical autonomy. Further, the present legal position of the Church in India is so confused and anomalous that legislative reform would in any case be necessary. It would, for example, be illegal, as Canon Fisher points out, to use the Revised Prayer-book in Indian Churches, however fully it had been accepted and sanctioned in England. Apart from these national and legal considerations, it is obvious that the Anglican Church in India can have no sure and permanent foundation if it is open to the charge of being an exotic institution, subject to alien control. With smaller grants from Government, such as must be expected under the altered constitution, and possibly reduced financial support from the English in India, and from missionary bodies in England, it is increasingly necessary that the Indian Church should be self-supporting, even if such a condition was not demanded by a proper self-respect. While, however, we must agree with the necessity for some change, and cannot but admire the broadmindedness and skill with which the proposals for this change have been prepared and brought forward, it cannot be denied that the conditions are very different from those prevailing in the Dominions or countries above referred to, and that problems of considerable complexity are involved. It is in particular almost as morally incumbent to safeguard the spiritual interests of the domiciled Europeans and Anglo-Indians as it is to save them from political destruction.

It is, however, desirable to give some figures which may remove possible misconception. It might be imagined from the references to the Church in India that the Anglicans comprise the greater part of the Christians in India, or, at least, the great majority of the Protestant Christians. It must, in the first place, be remembered that, while the Christians in India increase proportionately more rapidly than the adherents of other religions, they still only number four and three-quarter millions, or about one and a half per cent. of the whole population of the country. Of these four and three-quarter millions, the Anglicans can claim little more than half a million. While it is true that they comprise about two-thirds of the Europeans, and about one-third of the Anglo-Indians, their Indian members are less than one-eleventh of the

total Indian Christians. They are far out-numbered by the Roman Catholics, and even by the Syrian Christians. They exceed the numbers of any separate Protestant denomination, but are far less than the total of these denominations, some of which are, through working in the aboriginal tracts, likely to add more rapidly to their numbers than the Anglicans can do, and are also likely to add to their strength by amalgamation. On the other hand, the Anglican Church has an importance out of proportions to its mere numbers, on historical and official grounds, through the adherence of the majority of Europeans to it, and through the possession of an able and respected hierarchy. Already its Indian members are to the Europeans and Anglo-Indians as eight to three; and more than one-third of its thousand ordained clergymen are Indians.

The first difficulty or danger that must be regarded as at least possible is one of departure from the doctrinal or moral standards as they exist at present in the Anglican Church. Such departures may take two forms. First, there may be assimilation with other Protestant Churches, or even with branches of the Syrian Church. Such assimilation may obviously be very desirable in itself. It cannot be other than disconcerting and undesirable to find in a non-Christian land so many different sects nominally following the precepts of the same Holy Book. Such dissensions and rivalries as exist would doubtless have had a more unfortunate effect, had not the Hindus themselves been divided into an infinite variety of sects and beliefs, and did they not therefore regard it as natural that the followers of another intellectual religion should be similarly divided. But, however desirable such union of fellow-Christians may be, it may not be acceptable to followers of Anglican tenets, if it involves, as it inevitably must, some sacrifice or compromise of principle. The second form of doctrinal departure would be more serious, though perhaps less probable. It is well known that all the leading Indian religions are profoundly and continually affected by each other. This is particularly the case when a large number of the adherents of one religion are comparatively recent converts from another. Everyone acquainted with district life in India knows how one family will keep the tenets—or, at least, the observances—of two religions, and how the followers of many religions will worship together amicably in one shrine. There is no reason why the Indian Christians should be exempt from similar tendencies. The census reports show how narrow is the line in some places between recent Christian converts and their unconverted brethren; and in Roman Catholic Churches on the West Coast we believe it is still the case, after centuries of Christianity, that those who claim Brahmin descent sit separately from their fellows. There is the possibility also of undesirable political activities. Some of the Indian Christian bodies have already indicated a tendency to extreme materialism, as shown by resolutions of sympathy with Nationalist leaders, apparently unnecessary and superfluous. It would doubtless be unwise to attract too much attention to this tendency. The Indian Christians must naturally include a large proportion of well-educated but disappointed men, for whom advancement or even employment is difficult.

while the whole number of Indian Christians is proportionately so small that they may not unnaturally feel it necessary to stand well with the majority, if the strong and impartial control of the English is to be weakened.

Doubtless the Indian Church must be allowed to work out its own salvation. But it is clear that doctrinal changes and political tendencies may not only alienate the sympathy of the European population, on whose support and guidance the Indian Church must for many years rely, but may cause real hardship to isolated communities, and particularly to the domiciled Europeans and Anglo-Indians. Such opposition and misgivings as have been expressed in connection with the proposed changes have been founded on this possibility. The inherent dangers have been guarded against by a series of elaborate clauses. Their very elaboration, however, suggests the possibility of friction. Moreover, they limit the ministrations of chaplains of "maintained" Churches to the European troops, and the Civil Servants of Government and their families. It may be observed that it is not these that require protection so much as the non-official community. Perhaps a more probable danger than actual friction is alienation of sympathy and a consequent spirit of indifference on the part of the Europeans. In small stations in India the Roman Catholic Church has sometimes been known as the "Kristân" Church, while the Anglican Church has been called the "Sahib's" Church. It would indeed be lamentable if the "maintained" Churches in the big cities were separated, either in fact or in spirit, from the Indian Anglican Church. Other possibilities of difficulty naturally present themselves. There are, for example, the questions of marriage and divorce which have caused such confusion in the past. It is claimed generally by the supporters of the proposed legislation that the position of the laity will be greatly strengthened. It would appear, however, at first sight that the Bishops of the new Church, instead of being appointed as they are at present, by an outside authority whose position and impartiality is beyond cavil, will be elected by their fellows on the Episcopal Bench. If the principle of popular election is admitted, the drawbacks and abuses which have occurred at all other popular elections in India, may not be found absent.

So far we have considered only the practical aspects of the question. A word may perhaps be allowed on its sentimental side. There is always sadness about the end of an old song. The ecclesiastical connection between the Church of England may be said to have begun with the despatch of Edward Terry as Chaplain to Sir Thomas Roe. It has seen many honoured names, of whom Cobbe and Heber may perhaps be especially recalled. The union of three hundred years is being, in effect, dissolved. Change of a revolutionary nature was, however, in fact inevitable, and the doubts and dangers above alluded to must not blind us to the value of the sincere efforts made to make the change as little injurious as possible. An especial tribute is due to the patient labours of the Bishops of Calcutta and Bombay to achieve this end. The good wishes of all interested in the welfare of India must go out to this considerable adventure.

CURRENT TOPICS.

The Great Flight.

On Sunday evening, after several hours of anxious suspense, the news was received in this country that the two intrepid airmen, Flight-Lieutenant C. R. Carr and Flight-Lieutenant L. E. M. Gillman, had been picked up in the Persian Gulf, 45 miles from Bunder Abbas, and less than 700 miles from Karachi, their first objective. They had not, it is true, reached their goal but disappointment at their failure, in that sense, must not be allowed to detract from the very great merit of a magnificent achievement. As the airmen left Cranwell Aerodrome shortly before eleven o'clock on the Friday morning and were apparently forced down, owing to a mechanical defect, at just after eight o'clock on Saturday evening they had

been in the air for nearly 34 hours during which time they must have covered at least 3,415 miles. Details of the trip will be awaited with very great interest, both in India and this country, for the idea of a non-stop flight from England to India has captivated the imagination of the public in both countries, however unversed in the science of aeronautics. The airmen, when they started, hoped to be over Constantinople by midnight of the first day, to cross the Taurus Mountains through the night with the aid of the full moon reflected in the great lakes below, to spend Saturday above the country of the Tigris and the Euphrates, and in the evening, also guided by the moon, to be cruising along the Persian Gulf, reaching Karachi shortly before dawn on Monday. Additional interest is lent to the airman's achievement by the fact that while efforts are still being made to secure a satisfactory settlement of the unforeseen hitch in the Cairo-Karachi service, a survey has been made of the alternative route along the Arabian coast of the Persian Gulf, and the probability of making a crossing from the extreme point to Baluchistan. It is not a promising route, for it is along a deserted coast without any regular ports of call and the mishap to Flight-Lieutenants Carr and Gillman, happily as it has ended, will, we hope, serve to redouble the efforts of those responsible for the conduct of the negotiations with the Persian authorities.

Mr. S. C. Bose's Release.

It is a little difficult to follow the sequence of events that have culminated in the Bengal Government's sudden decision to release Mr. Subhas Chandra Bose "in order that he might be free to proceed with his treatment unhampered by any restrictions as to any place he may select." For some time past it has apparently been freely rumoured in Calcutta that Mr. Bose's condition was much more serious than was suggested in the earlier reports. Only a few days before the news of his release was received in this country Earl Winterton stated, in reply to a question in the House of Commons, that he was being brought to Calcutta in order that he might be examined by four doctors, one of whom was to be the Governor's own personal attendant. It was, however, generally understood that the somewhat unusual step was a preliminary to Mr. Bose's removal to Almora, a hill station in the United Province and the new development appears to have taken Calcutta by surprise. Sir Stanley Jackson's decision, which was presumably an act of clemency dictated by the state of Mr. Bose's health, has naturally been hailed in Indian circles as "the inauguration of a new policy" and the new Governor's approaching visit to Simla as the guest of the Viceroy—in accordance with recognised procedure—has given rise to the suggestion that the possibility of a general amnesty is by no means so remote as at one time appeared. No doubt the question will form one of the main subjects of discussion on that occasion and while such a contingency is viewed with considerable misgiving in many quarters the *Statesman*, which reflects a large body of responsible and informed European opinion, is by no means antagonistic towards the suggestion. "In the new atmosphere created, with new minds weighing the risks and difficulties involved by a general release," the paper says, "it should be worth while to consider whether a policy of amnesty is not within the bounds of statesmanship. If the Government should decide that it is, the conclusion will be as welcome to Europeans as to Indians." As we have previously observed, the question is essentially one for the Bengal Government to decide, and its responsibility is a grave one.

Sir Atul Chatterjee, High Commissioner for India, returned last week from a visit to the Scottish universities, where he discussed with the authorities matters affecting the welfare of the Indian students, some 300 in number, in Scotland. He found general satisfaction with the conduct, discipline, and industry of the young Indians at Edinburgh, Glasgow, Aberdeen, St. Andrews, and Dundee. Accompanied by Lady Chatterjee, Sir Atul Chatterjee left for Geneva on May 21 to attend a meeting of the governing body of the Labour Conference organisation and subsequently to serve as a delegate for India at the International Labour Conference.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 5.

The Viceroy and Calcutta's Mayor.

Their Excellencies Lord and Lady Irwin, who were in Quetta last week, have now returned to Simla. There is a lull at present. The Ministers are touring. Hot weather holidays are being enjoyed, and Calcutta has nothing more exciting than the Mayor's election to report. Mr. Sen Gupta, the Swarajists' own man, obtained 45 votes against 40 secured by Mr. J. N. Bose, after much canvassing. The *Englishman* remarks that Mr. Sen Gupta's success "may be acclaimed by the extremists as a political triumph, but it means that the interests of the people are likely to remain subordinate to the interests of a school of political thought."

Indian States' Future.

The proposed appointment of a Statutory Commission seems to have created a stir among the Indian Rulers. There is evidence of a kind of fear, lest the Commission should be in favour of a Constitution that would be adverse to their present Governments. The Ruling Princes appear to be determined to maintain their own rule in their respective States. *Forward* says that "their attempt at checking the tide of democracy in the country will be bringing odium on their name." A great number of Indian States have agreed to send representatives to the Opium Conference. Patiala and Kashmir, however, do not appear in the published list. The Conference will be held in Simla, under the Presidency of the Hon. Mr. S. R. Das.

The Ryot and the One-Rupee Note.

Several papers here support Sir D. M. Hamilton's criticism of the suppression of the one-rupee note. It is alleged that the discarded bit of paper stood for the moral and material progress of the country. Without the development of her paper currency, especially of the one-rupee note, India can have no future worthy of the name, they say. Paper being cheaper than silver, it is difficult to understand why the one-rupee note has been lopped off on the ground of economy. But it will be reinstated by the Currency and Finance Commission, and everybody, especially the ryot—that is, the peasant, the cultivator, and the workers—will save more easily, it is proved, than when silver coins are used. "The proper banking system for India," says Sir Daniel, "is the one which makes provision for the financing of the great industry by which India lives. India has no use for an automaton sitting on a heap of 400-ounce gold bars in Bombay, throwing men out of employment by raising the bank rate when he finds the gold bars wearing thin." A sane view.

The Y.M.C.A. Controversy.

We have not heard the last word in the controversy about the alleged political activities of the Association. The *New Empire* very wisely remarks that if it be a heinous crime to couple religious views with any reform movement, then the English Churches are guilty of that crime. The prominent Church leaders have been in the habit of preaching their political views from the pulpit. In the turmoils of Shanghai the National Christian Literature Association has identified itself with the present national movement. It is considered as a very encouraging sign of the times that in most branches of the Y.M.C.A. an opportunity is given to young men for mastering facts and figures about the problems of the day, without being led away by partisan notions. Whatever Mr. Hobbs and Mr. Becker may say to the contrary, it would certainly be absurd to restrain the curiosity of the younger generation regarding men and things of their time.

Broadcasting in India.

The Manager of the Indian Broadcasting Co., Ltd., wishes it to be known that the service is to be drawn—

at present, at any rate—from material available in India, exclusively. It is not a practicable proposition to relay the programmes from England, because the reception is too uncertain, and the time six hours ahead. The service will start with market reports, weather forecasts, and daily events, in several languages; the rest of the broadcasting will consist of lectures, concerts, dance music, educational matter, and Government *communiqués*. It will be arranged in such a manner as to appeal in some respects to Europeans and in some other respects to the Indians. The studio is almost ready to receive lecturers and performers. The building of the broadcasting station is growing fast in Cossipore, and will be finished before the rains.

Here and There.

It is understood that the Maharaja of Kashmir and the Raja of Poonch have given permission to Messrs. Leete and Widdicombe for visiting their respective States by air. They are allowed to arrange joy-rides and to take aerial films.

Four years ago, at this time of the year, the Alliance Bank of Simla closed its doors. It is reported that the liquidators have informed the *Pioneer* that they hoped to pay a third dividend of one anna in the rupee next month or so. Another four years will probably elapse before the assets are realised in full.

The Japanese Tennis Champion, Okamoto, has returned to India after a trip to Japan. He married Miss Sumie Hayama, the Singles and Doubles Champion of Japan, during his recent visit there. She intends to play in the next Bengal Championship. She will be the first Japanese woman to take part in a championship in India. Okamoto says that there are many tennis players of promise at present in Japan.

The Tramways Co.'s season tickets are exceedingly popular. Within the last week more than Rs. 50,000 worth of season tickets have been sold. On one trip the monthly ticket is Rs. 5s., but on paying Rs. 10s. per mensem, one may travel any distance on any of the lines and any number of times a day. It saves taxi hire, and that's what the taxi drivers do not like. It also saves the trouble of carrying small change.

Messrs. Shaw, Wallace, and Co. have just started a new Agricultural School at Tollygunj, Calcutta. It is fully equipped with up-to-date appliances, and the young men will be taught both theoretically and practically. Sons of middle-class gentlemen with a fair amount of education will be admitted. Tuition, board, and lodging are free. Perhaps I ought to have said, to begin with, that Messrs. Shaw, Wallace, and Co. are representing a great enterprise—The Fertiliser Propaganda of India, Ltd. The sale of nitrates and phosphates is involved.

Those who have visited Calcutta and know what Chinatown was, will be pleased to hear that the narrow, dark, and smelly winding lanes are being replaced, gradually, by wide roads with adequate lighting. The dingy shops are fast disappearing under the Improvement Trust's schemes, and it is doubtful whether another Chinatown will ever be re-created in those wide and well-lighted avenues. Tortuous Blackburn Lane has sheltered many an evil deed. Those who will want to see the real Chinese eating-house and the shady gambling dens will have to go elsewhere—Rangoon or Hong Kong—but Calcutta is purged of them now.

The Bengal National Bank has closed its doors and suspended payment. It is an event of great importance to the supporters of the *Swadeshi* movement. The Bank has passed through many vicissitudes, and it can be said that it has lived only on the affection and the patriotism of the people of Bengal. The fall was not a wholly sudden event. It was expected, and the inevitable has happened. The "great tragedy" is the loss of confidence in indigenous enterprise. *Forward* appeals to the Bengalis to save the institution, to keep the lamp of *Swadeshi* burning, but up to date there has been no generous offer to save the concern.

BOMBAY NOTES.

The financial feature of the week has been the refusal of Government to accept tenders at rs. 5 27-32d. for Council Bills, the rate being a very fair one in the present market. It is of course open to Government to bring the price back to rs. 6d. by a further deflation of currency: but it is a little surprising to find that Government withdrew forty crores last year, and has already since this financial year began on April 1 withdrawn eight crores more.

How far this policy can be continued, nobody knows: but the opponents of an eighteen-penny rupee are at any rate entitled to claim that deflation is being carried pretty far. And while something drastic in the way of deflation is no doubt necessary when a currency is below par, it seems to be a rather dangerous policy to adopt such extremely vigorous measures in order to raise exchange above its pre-War figure.

An Interesting Contrast.

It is rather amusing to contrast Sir Basil Blackett's stern determination to deflate, with Sir Malcolm Hailey's policy seven years ago. The rupee having then been fixed at 2s. gold, its sterling value was governed by the value of sterling in the only then existing gold currency, that of America, with the result that its theoretical value at one time reached nearly 3s. The Government of India, instead of waiting for 2s. and conserving their efforts to maintain the rupee at that level, which might quite conceivably have been possible, took the exceedingly heroic line of attempting to establish this theoretical, not to say wholly fictitious, gold standard, and backed their fancy to the extent of offering several millions of Reverse Councils weekly, at rates which were eventually about 3d. above the bank's prices. This may have been advisable and it might conceivably have even succeeded, but Government determined to combine high exchange with cheap money, and the proceeds of the Reverse Councils of every week were handed back to the market with which to buy the Reverse Councils of the succeeding week. Such a policy inevitably failed, and when the rupee eventually reached the 2s. level, Government had no resources left with which to attempt to stem the tide.

Sir Basil Blackett knows that you cannot get a rising exchange without deflation, but he has managed to deflate without, so far, causing any apparent stringency of money—a remarkable performance which he and his successors may be able to carry on indefinitely. But unless relief comes, the strain is likely to become more and more serious as time goes on.

A Point for Consideration.

In Bombay we have only one market from which to look for this relief. A serious shortage in American cotton, which would bring prices up to a shilling, would, no doubt, create an active demand for Indian cotton at prices which would stand the incidence of a high exchange. If this year's cotton crop is to be on the same scale as last year's, there is no prospect of higher prices. But we are already beginning to hear rumours of disastrous floods in the cotton-growing belt. These rumours are, no doubt, exaggerated: and America is a big place in which the devastation of a million acres or so will not necessarily make a very appreciable difference to the total area under cotton. But even so there seems at any rate a possibility that prices will next season be at a level which will give Indian cotton a better chance of competition.

We in Bombay, no doubt, take a narrow view of Indian finance. It may well be that Calcutta's exports of jute and tea and Madras' shipments of nuts and seed may be sufficient to support the balance of trade without much help from Bombay cotton. But it is pretty clear that with the rupee at rs. 6d. there will not be very much cotton exported from Bombay except at famine prices: and this is a point which seems to me to be well worth the consideration of those who rule the exchanges.

Two of Bombay's Best.

The present hot weather sees the retirement from India of two Bombay men with more than a Bombay reputation. Sir Robert Dunlop, C.I.E., D.S.O., came to Bombay thirty years ago, to join the solicitors' firm of Crawford, Brown and Bailey, which has brought so many prominent citizens to Bombay. A most successful lawyer, he had very wide interests, and by 1914 he had been for many years Lt.-Colonel of the old Bombay Volunteers, M.F.H. of the Bombay Hunt, and a leading figure in Bombay lodges of Scottish Freemasonry. When the War broke out he managed to become an officer in the Gunners, and got a D.S.O. He returned to India as Solicitor to the Government of India, a post exactly suited to his character and abilities, and has ever since held a unique position as confidential adviser to Government on all legal matters. Few men have had such a varied and useful experience of life in the great cities in India.

Mr. L. W. Hartley, the retiring Commissioner of Income Tax, is one of the few cases in which a man has risen from the uncovenanted ranks to a high position in the Civil Service in India. He began life, the writer believes, as an assistant in a mercantile office up-country, and was selected to join the lower grades of the Revenue Department as a collector of income tax. In that service his rise was amazingly rapid, and for many years he has been the senior income tax authority in Bombay. It is safe to say that there has never been so popular an income tax collector before. He has certainly not been remiss in his duties: but he has exercised them with so much courtesy and fairness and with so much knowledge of his intricate subject that it has become the boast, and not the lament, of the citizen of Bombay that his city pays far more income tax, in proportion to its wealth, than any other town in India, and the present scribe does not know what more an income tax authority can hope for.

INDIAN ART.

The history of painting in India is admirably illustrated in an exhibition which has been arranged by Mr. Laurence Binyon in the King Edward VII gallery of the British Museum. A few supplementary examples of painting produced in neighbouring countries, such as Turkestan, Tibet and Siam, under Indian influence, are included in the collection which has been made from the extensive store of the Prints and Drawings gallery of the Museum. Since the last exhibition of a similar kind was held in 1922, the series has been enlarged and enriched, notably by the addition of some fine examples of the Rajput schools, which give an especial interest and charm to the present exhibition, that is greatly enhanced by the interesting and instructive guide in which Mr. Binyon traces the historical development of Indian art from the early Buddhist frescoes right down to the present century.

Mr. H. Denning, C.I.E., I.C.S., Controller of the Currency, is proceeding to England on leave. Mr. J. B. Taylor, I.C.S., will officiate during his absence.

General Sir James Willcocks, of Bharatpore, India, and the Naval and Military Club, Piccadilly, left £5,568. He gave the gold Sword of Honour, presented to him in 1901 with the Freedom of the City of London, to the Royal United Service Institution.

The Judicial Committee of the Privy Council delivered judgment on May 17 in an interesting appeal relating to the question whether certain admissions and denials, on which a partition of property was based, were made in the presence of a deity. The litigation in the suit has extended over 12 years, the parties being members of a wealthy Hindu family, Lala Indar Prasad being the appellant and his brother, Lala Jagmohun Das, the respondent. The Committee agreed with both Courts in India that the statements made by the respondent in the presence of the family deity and before the Commissioner were binding upon the appellant and advised that the appeal should be dismissed with costs.

THE CHARM OF ASSAM.—II.*

"Through the Himalayas a number of glorious rivers force their way to join the Brahmaputra. In the hills these rivers come foaming down in furious rapids, or sweeping silently but relentlessly along deep reaches between cliffs clothed in thick vegetation if there is so much as a cranny in the rock to give shelter to a seed. When they reach the plain they spread out over stony bottoms where the mahseer lie, and one at any rate intersects a game reserve. Here you may see wild buffalo, bison, deer and pig as you fish, or come across a tiger taking his evening drink, while in the recesses of the forest Government is once more accumulating a fine stock of that interesting beast, the great Indian Rhinoceros.

"I hope that I shall not weary you, but so much of India is so ugly (could anything be duller and flatter than the Gangetic plain between Calcutta and Delhi?), that I can't help trying to get across to you the charm of "the mystical valley of the Brahmaputra." Travel up with me by road, then, if you will. You leave Gauhati and drive seven miles across a plain golden with rice stubble, and shut in on every side with hills. At the seventh mile you enter the hills themselves, hills covered with every form of vegetation. After a few miles you swing to the east, cross an outlying range and drop down to the valley again, travelling along through rice fields with the mountains close on your right hand. And so on through patches of jungle and forest, wide plains of rice, an occasional tea garden, an occasional river, till you come to the small town of Nowgong. Thence you head up towards the Brahmaputra, but before you reach it you turn again to the east through hills and at the foot of hills, till you reach a great swamp lying between the road and the river, where buffalo and deer and rhino can breed in peace. And so on with the gardens beginning to appear on the high ground at the foot of the Mikir hills, till you cross the Dhansiri and the mountains drop away almost out of sight to the south. On and on through tea gardens and villages, past Jorhat with mountains visible both to the north and south on a clear day, past Sibsagar, with its temples on the bank of a huge tank nearly two miles in circumference, till, after crossing more rivers, passing more villages, tea gardens and forest, you finally arrive at Dibrugarh, and look out across the stately floods of the Brahmaputra, to the blue mountains ten or so miles away.

"The Surma Valley is less interesting. It is wider, flatter, more densely peopled, its rivers are smaller and more sluggish, its opportunities for sport less good. But were it not for their great rival across the Assam range, northern Sylhet and Cachar would be thought beautiful enough, while Manipur and the Lushai Hills to the south are full of charm. And here, lest you may think me too much of an enthusiast let me quote a former Chief Commissioner of Assam, Sir Bamphylde Fuller. He is describing the journey from the Sylhet border up the steep scarp of the Khasi Hills.

"Before us the stream, now become a torrent, rushed with clear cool water down a rocky bed. Beyond the stream our view was closed by a wall of long grass. Behind us rose the cliffs, dark blue, scarred in places by bare precipices down which tumbled a lacework of waterfalls, in places dense with vegetation. The rain ceased; we climbed the scarp by a steep, winding path, discovering that what seemed thickets of jungle, were really hill-side gardens of oranges, betel, palm, pepper and bread fruit trees. As we mounted the cliff side the stifling heat of the plain fell away below us, and when at last we stood on the summit, refreshed by a cool breeze that surged with the noise of a hundred waterfalls, we understood the imagery of the Delectable Mountains."

After describing the early history of Assam under British rule, the lecturer continued: "Difficulty was

experienced in governing from Bengal so remote and inaccessible a country, and in 1874 it was formed into a separate province. The officials, other than the military civilians, served on deputation from other provinces in India, and there were no self-contained cadres. In 1905 Assam was incorporated with Eastern Bengal to form a new province which came to an untimely end in 1912. It is now a governor's province, with members of council, ministers, a local legislature and a self-contained commission. But it contains seeds of weakness. There is no community of interest between the Assamese and the people of Sylhet, some of whom, for sentimental rather than practical reasons, have demanded reunion with Bengal. This request was supported by Assamese politicians, who found in the Sylhetis formidable rivals, and who believed that much of the money spent in that district was raised in the valley of the Brahmaputra. With the indifference to hard facts frequently found in those who have been newly invested with political power, they demanded that the system of government should remain unaltered, though that system was already exceedingly top-heavy and expensive for so small a province. This is one defect of the present government. Another is the size of the official cadres, which are almost too small for healthy competition and development. But, though these may be defects, their removal would be dearly purchased at the price of amalgamation with a province which has hardly any points of contact, cultural, historical or racial, with Assam.

"During the last hundred years the history of Assam has, on the whole, been one of peaceful progress. On the frontier there has from time to time been trouble but the toll of European lives has in sum been small. For generations Assam proper was almost entirely free from political agitation. Commerce was for the most part in the hands of enterprising Marwari merchants: the Bengali dominated the Bar and filled many Government appointments, and the Assamese needed all the help that Government could give them to hold their own against these keen competitors. Officers serving in Eastern Bengal after the partition, as with most inadequate resources they waged an unequal first against widespread civil commotion, looked with longing eyes on the untroubled calm of their old province. This happy condition of affairs continued till 1920. The reforms were accepted in the Assam Valley, the recognised leader of the Assamese readily agreed to serve as Minister, the common people were indifferent, the intelligent Bengali community estopped from causing trouble in a country which was not their own, even had they wished to do so. Two misguided men were enough to stir up the valley and bring it to the side of Mr. Gandhi. Government pushed forbearance almost to the limit, but when it acted, acted with effect. The leaders were prosecuted, and convicted, though the doors of the jail at all times stood open to those who would abjure their revolutionary doctrines. One of the weapons of the Swarajists was the withholding of supplies from Europeans, and the people were organised for a no rent campaign. Under the ordinary procedure arrears are realised from those who will not pay, first by the sale of moveables and then, if that proves insufficient, by sale of the land itself. "Have no fear," the agitators said, "no one will bid at the auctions, so that we shall retain our goods and lands and keep the money we ought to pay as revenue." But they had overlooked the existence of a section of the law which empowers an officer, at his discretion, to remit the arrears and to resume the land. The mere threat of employing this section was enough, and land revenue flowed in at a pace even above the normal. Officers who for years had lived on terms of friendliness with the Assamese were astonished and distressed at this change in the demeanour of the people. But the reason was not far to seek. They had been told that Gandhi was a god. They had been told that when this god came to reign over them, land revenue would be reduced to one-fourth of the existing demand, that forest dues and forest restrictions would be abolished, and in ears which would receive the news with pleasure, it was whispered that

* Further extracts from a paper on Assam read by Mr. B. C. Allen, C.S.I., late Commissioner, Assam Valley Division, before the Indian Section of the Royal Society of Arts on May 6. Sir Edward A. Gait, K.C.S.I., C.I.E., presided.

opium could once more be grown and spirits distilled without fear of an excise department. Small wonder that a simple people should turn to a ruler who brought such blessings in his hand. They were misled, but many of them soon repented of their folly. I was camping once in a remote village, and reproved the people, then friendly as ever, for having followed strange gods. "Sahib," they said, "the babu log told us that Gandhi was Raja, and we believed them. Now that we know once more that you are Raja, of course we shall obey you. He who is Raja his subjects are we." "*Je Raja tahar proja*," were the words they used, and they represent, I beg leave to think, the political philosophy of many million Orientals.

Fear of communal tension served as a check on Hindu swarajist activities in the Surma Valley. But an immense amount of misery was caused by a movement which led thousands of garden coolies to sell all that they had at knock-out prices and start on the long and weary trek back to the villages which they had left to seek a fuller life in Assam. The talk of swaraj even spread a little way amongst the wild tribes on the frontier. To encourage unrest amongst people of this kind is the most reckless folly, yet I notice in the report of the last meeting of the Indian National Congress a reference to work amongst Assamese hill tribes. This meeting was held at Gauhati. Ten years ago the suggestion that the Congress pandal might be erected in Assam would have been dismissed as beyond the bounds of probability. The incident shows the distance to which Assam has advanced along the path of politics. May it not also suggest that a cause which has to take refuge in the beautiful valley of the Brahmaputra has forfeited the place it once held in the better mind of India. The congress at Gauhati. Does not this recall the time when the old religion disappearing before the growing force of Christianity was known as paganism, the religion of the villages?

Though the agitators were active in the valley, the Legislature was more reasonable than in the neighbouring province of Bengal. Even the Swarajists abstained from adopting an entirely obstructive programme, and the formation of a strong independent party rendered the working of the reforms quite feasible. It is permissible to doubt whether the benefits derived from the new system of government are commensurate with the heavy increase in expenditure it entails. One of the most intelligent of the non-official Bengalis in Assam had no illusions on the subject. A democrat might say that he was prejudiced, as he was ineligible for office, but his point was clear. The old Government, with which also he had no concern, was not a bad one. The new one was much more expensive and no better. The speaker was a very orthodox Hindu, and though his manner was always courteous and correct, I should imagine that he did not like the English. His testimony in favour of the old régime is, therefore, entitled to consideration.

(To be continued.)

INDIAN MAIL.

India's Future Governors.

The appointment of Sir Alexander Muddiman and Sir Charles Innes to the Governorship of the United Provinces and Burma has not unnaturally provoked further discussion in the Indian Press regarding the method of selection observed. The tradition that reserves certain provinces for the senior members of the Indian Civil Services, as opposed to the convention under which the heads of the administration in Madras, Bombay and Bengal are selected from the ranks of public men, often without previous experience of Indian conditions, has often been adversely criticised but the matter, as the *Statesman* points out, is largely one of sentiment. "Whether a man is a good Governor or a poor Governor is determined," it pertinently remarks, "not by his origin, nor by whether he is fresh from England or tanned by thirty years' service in India, but by the kind of man he is. Given the right spirit the

man from the I.C.S. is just as likely to make a success as is the European-trained politician who has to spend his earlier years in acquiring the alphabet of governing amid the strange conditions in which he finds himself." At the same time it must be agreed that the question of how future Governorships are to be filled is by no means the least difficult of the many that arise under the new conditions which obtain in that country. The *Statesman* believes that on the whole the present system of discrimination between provinces works well and there is no reason why it should not continue to do so. "Let those who are suspicious of the I.C.S." concludes its editorial comment, "and believe that they would find better rulers in the inexperienced politician from Great Britain take account of the fact that the new generation of the Civil Service will be trained from the beginning in a fresh tradition, and need not necessarily be more opposed to Indian aspirations or less inclined to allow them play than any type of man likely to be selected for Governorship by a Prime Minister at Home."

NEWS IN BRIEF.

Sir Lancelot Sanderson, K.C., former Chief Justice of the Calcutta High Court, and member of the Judicial Committee of the Privy Council, will be the chief guest and Sir William Currie will preside at the Calcutta Dinner, to be held at the Hotel Cecil on May 31.

The Annual Assam Dinner will take place at the Connaught Rooms on Monday, May 30. Mr. L. T. Carmichael, Chairman of the India Tea Association (London) will preside. Applications for tickets (£1 15s. inclusive) should be made to the hon. secretary, Mr. W. H. Pease, at 21, Mincing Lane, E.C., where a plan of the tables can also be inspected.

The approximate sum taken in the Calcutta Turf Club Derby Sweepstake this year is £400,000. Entries closed on Saturday and the draw takes place at Calcutta on May 28. The prize money is divided as follows:—First prize, 40 per cent.; second, 20 per cent.; and third, 10 per cent.; with 20 per cent. to be divided among those drawing a horse and 10 per cent. for expenses.

OBITUARY.

The death, at the age of 64, is announced of Sir Venkata Swetachalapati Ranga, G.C.I.E., C.B.E., late Maharaja of Bobbili. The first Indian member of the Madras Government under the Morley-Minto reforms, the late Maharaja was one of the best-known zemindars of Southern India. He was an exceptionally enlightened landowner and apart from his active interest in public affairs—for many years prior to taking office he represented the Madras zemindars in the Provincial Legislature—he was a great philanthropist and keen sportsman. A few years ago the Maharaja abdicated in favour of his elder son.

Sir Charles Porten Beachcroft, whose death is reported in his 57th year, entered the Indian Civil Service in 1890 and was appointed district and sessions judge in Bengal in 1906. In 1915, after serving for two years as an additional judge of the Calcutta High Court, he became puisne judge in 1915 and retired in 1921, receiving the honour of knighthood in the following year.

Lieutenant-Colonel G. A. Agnew, late of the 90th Light Infantry now the 2nd Scottish Rifles, who died at Edinburgh on May 16, at the advanced age of 92, was one of the few survivors of the Indian Mutiny. The seventh and only surviving son of Sir Andrew Agnew, of Lucknow, seventh baronet, and M.P. for Wigtownshire at the time of the passing of the Reform Act of 1832, Colonel Agnew served under Sir Henry Havelock at the first relief of Lucknow and was wounded during the second siege. On May 10, the 70th anniversary of the outbreak at Meerut, *The Times* recorded the death of Lieutenant-General O. Ludlow Smith, in his 99th year, one of the beleaguered garrison.

Lieut.-Colonel Charles Eckford Luard, C.I.E., the foremost authority on the history of the States of Central India, died at Oxford on May 17, at the age of 57. Commissioned in the 8th Gurkhas, he was transferred to the Political Department of the Government of India as assistant to the Agent to the Governor-General in Central India in 1898 and later was appointed Political Agent in Bhopal. In 1919 he became private secretary to the Maharaja of Indore and retired in 1925. He was responsible for the compilation of the Central India portions of the "Imperial Gazetteer," the author of a "History of the States," and also of a valuable bibliography of that history, in addition to directing and preparing no fewer than three decennial census reports.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Economic Conditions in Palestine.

The trade figures of Palestine for February, which are now available, suggest *prima facie* a marked improvement in the economic situation, which, it may be hoped, will not prove merely temporary. The value of the imports shows a marked decrease compared with the corresponding month of 1926, the figures being £E436,675 as against £E527,320, pointing to a reduced purchasing power, but on the other hand the exports show a remarkable expansion from £E123,584 to £E242,324. This development is, however, almost entirely due to the increased value of the orange trade, the value of which for the month was £E153,384, or nearly £E30,000 more than the whole of the export trade in February, 1926, and while this expansion is a very welcome sign, and means much for the country, Palestine as a whole cannot benefit except indirectly. Briefly, it is the same as in the Sudan, where the prosperity accruing to the workers in the Gezira has so far left untouched the greater part of the country. An indication of the position is to be found in the latest figures for immigration and emigration, which show that in March the emigrants from Palestine considerably outnumbered the arrivals. That points very plainly to the fact that whatever may be position with regard to agriculture the economic depression still presses heavily on the towns. Happily there is no question that the outlook is more promising, though it may be a considerable time before there is any general improvement. A main factor in the depression in Palestine has been the situation in the Egyptian market, which is Palestine's immediate outlet for her produce. If, as appears probable, the cotton market maintains the harder tendency which has been in evidence of late, it will not be long before Egypt is again importing her normal supplies.

Importance of Fruit Production.

One thing the experience of the past few years has made abundantly evident, and that is that until the economic foundations of Palestine are firmly established there cannot be a great scope for small industries. When the Rutenberg scheme is carried out, and cheap power is available, the position may be different, though even then there is the question of raw materials to be considered. The immediate scope for development is in agriculture, and in this connexion the remarks made by Sir John Russel, the Director of the Rothamsted Experimental Station, in a lecture delivered recently at Tel Aviv deserve to be noted. He expressed the view that the soil of Palestine is as exhausted as that of England was 80 years ago, and suggested that the hope of progress lies in the direction of concentration on fruit production. He instanced in this connexion oranges, grapes, and bananas, and said that as soon as Central Europe was restored to its former prosperity it would want as much of these fruits as Palestine could

supply. He would, in short, have Palestine continue in the one direction which has proved really profitable in the past, but if this policy is to be logically pursued it is evident that in future the town dweller as an immigrant will be as much at a discount as he is to-day in, say, Australia or Canada.

Bulgaria's Trade.

On another page in this issue will be found a detailed analysis of Bulgaria's trade in the past ten years. Last year the value of Bulgaria's imports fell considerably below the figures for 1925, while that of the exports was fairly well maintained. In both years Germany headed the list of imports and exports, a fact which is not without interest as showing the attention she has for some years been devoting to the Near Eastern markets. Italy was second in imports and exports in 1925, but in 1926 yielded second place to Greece in the exports list. Great Britain was third in the imports list in 1925, but was displaced by Czechoslovakia in 1926, but the fact that Great Britain has so far been able to do so well in this market is an earnest of the possibilities for British trade in this outlet, and, be it added, in other Near Eastern markets.

Anglo-Egyptian Oilfields.

Special interest attached to the speech of Sir Reginald Macleod at the meeting of the Anglo-Egyptian Oilfields because of the concession which has been obtained in the Farsan Islands in the Red Sea. The Chairman pointed out that the year had been one of steady progress as regards the Hurghada field, which has been for many years the mainstay of the company. As regards outside areas drilling was continued at Ashrafi, but it is considered that the results must now be regarded as negative, and it is prosed to abandon the well. The failure to discover new oil resources in Egypt has led the directors to look further afield, hence the Farsan Islands concession, which is to be operated by the Red Sea Petroleum Company, Ltd. The results of a geological survey have been sufficiently promising for it to be decided to drill a test well at once, but Sir Reginald Macleod urged that high hopes should not be placed at this stage in the results of the operations. He added, however, that it is believed that the acquisition of the concession is a venture with a reasonable chance of success.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Conditions in Egypt.

At the general meeting of the Egyptian Markets, Ltd., Mr. G. H. Redwood gave a survey of the economic situation in Egypt. He pointed out that the past year in Egypt was one of acute depression which had affected adversely all industrial, commercial, and financial undertakings in the country. This is, of course, the price that every country must expect to pay from time to time if it is dependent mainly on one commodity for its prosperity. As regards the outlook Mr. Redwood was able to strike an encouraging note. The general opinion among commercial people in Egypt, he said, is that the worst has been seen and that things will gradually improve. As he rightly remarked, the country is financially sound, and, as we have seen in the past, has very great recuperative powers. Given good cotton prices in the next year, and it will not be long before the last vestige of the trade depression has disappeared.

The Rubber Position.

A somewhat surprising reduction in the London stocks of rubber took place this week, and this development has naturally given rise to speculations whether at last the reduction of the quota is going to have its effect and henceforward the stocks here will show a steady decrease. In view of what has happened in the past it is unwise to be dogmatic on the subject, but the prospects certainly are in favour of this possibility. So far, however, the price of rubber has only shown a fractional improvement, and the average price for the current quarter is well below 1s. 8d., but it can well be imagined that a reduction in stocks for a few weeks might bring about such a rapid change that the necessary average for an increase in the quota would be attained. When all is said, however, the main interest in the rubber market lies not in what is happening now, but in

the prospects a year hence, when if there is an inadequate development of demand we may find the quota again being reduced.

COMMENTATOR.

CHESS.

By "CARO-KANN."

Here is one of the best examples that I have ever come across of a successful attack. In the position given below White (J. W. Showalter) played 1, Kt—K7, and there followed 1 . . . QxP (ch); 2, K—R, QxB; 3, Kt—Kt6 (ch), QxKt; 4, R—B (ch), and mates in two moves.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, May 20.

Sales of Tobacco.

At present out of the 26 million kilogrammes of the 1926 tobacco crop (of which 6 are allocated to local consumption leaving 20 disposable for export) 15 million have been sold by the peasants, and the houses which negotiate sales abroad have partly placed the tobacco. It is understood that the 1926 tobacco is not deliverable before the autumn.

Some important sales have been carried out recently of stocks of previous crops. In February the Austrian Régie bought 2,500,000 to 3,000,000 kilogrammes of the 1926 tobacco. In the same month the Polish Régie bought about 900,000 kilogrammes of the 1925 crop. This last sale was of the superior qualities. Besides these transactions certain Bulgarian houses have recently obtained from Germany large orders for the 1926 crop; it is said that the amount is 5 to 6,000,000 kilogrammes.

During April the representatives of the Italian Régie arrived in Sofia, but no business has yet been concluded. Normally this Régie buys from 1,500,000 to 2,000,000 kilogrammes, and an order of the same importance is hoped for this year. The Czecho-Slovak Régie has asked Bulgarian houses to send them offers by April 30 of tobaccos of 1925. It is not known yet what amounts they propose to purchase.

It is as yet too soon to give a forecast of the 1927 crop. As was the case last year it appears that the sowings will be reduced on lands unsuitable for tobacco cultivation.

Bulgaria's Trade by Countries.

Other Countries	491	565	195	512
	7,291	5,642	6,246	5,617

Germany is the chief exporter to Bulgaria and also the principal purchaser of Bulgarian goods. She exports machinery and various apparatus (377 million leva in 1925 and 307 in 1926), metallurgic products (334 and 414 respectively), textiles (239 and 220), chemical and pharmaceutical products, tannin, leather, etc. On the other hand, Germany buys from Bulgaria a large part of the tobacco production (778 and 645 leva for the two years), eggs (145 and 256), raw skins (58 and 52), maize, etc.

Great Britain chiefly sells to Bulgaria textiles (712 million leva in 1925 and 461 in 1926), and also metallurgic and chemical products and machinery. Attar of roses and a little tobacco are purchased. Austria's exports include textiles (219 and 139), metals (163 and 113), machinery (115 and 110), etc.; while she imports large quantities of eggs (139 and 282), tobacco (270 and 61), maize, and raw skins.

Belgium exports metals (101 and 112), textiles (56 and 50), etc., and imports tobacco (63 and 66) and cereals. The United States exports cereals, and in normal times machinery on a considerable scale, while her exports are attar of roses (30 and 39) and tobacco (30 and 4).

France provides Bulgaria with textiles (188 and 162), leather (64 and 36), and oils and fats (58 and 79), etc.

Her imports have greatly decreased. They amounted in 1923 to 514 million leva and in 1924 to 632 millions. At present she imports in particular maize, haricot beans, and attar of roses. Greece sells little to Bulgaria, her exports being mainly preserves (53 and 40) and olive oil (63 and 24), but she occupies the second place among the countries importing from Bulgaria. Last year Greece took almost the whole of Bulgaria's disposable flour (405 million leva out of a total of 488 millions), and the greater part of the cattle exported (210 out of 228 million leva). This trade development is the more remarkable as it is restricted by the absence of direct railway communications between the two countries.

Holland sells to Bulgaria oils, Colonial produce, and textiles, and imports tobacco (76 and 154) and cereals. Hungary exports metals and machinery, and imports only tobacco (63 and 158). Italy is the chief supplier of textiles to Bulgaria (815 and 723), and she also sells motors, Colonial produce, etc. She imports a large amount of tobacco (479 and 387), and almost the whole of the production of cocoons.

Roumania exports wood from the Carpathians (234 and 142) and oil (131 and 164), but her imports are insignificant. Switzerland receives a large part of the exports of Bulgarian eggs (389 and 244), and also purchases attar of roses. She exports to Bulgaria textiles and various manufactures. Czecho-Slovakia exports textiles (234 and 183), metals (140 and 151), machinery and glassware, but only imports tobacco (338 and 388).

Trade between Turkey and Bulgaria has been declining for some years. In 1922 Bulgaria's exports to Constantinople, consisting especially of flour and cereals, amounted in value to more than one milliard leva. In 1923 they were not more than 532 millions, and they declined to 225 millions in 1924, 214 in 1925, and 112 in 1926. Turkey also purchases wood fuel (42 and 38), and cereals, while she sells textiles and various manufactures.

The Grain Market.

During the winter the cereal market has not been active except for maize. Wheat only holds a secondary place in Bulgaria's exports, a normal crop being absorbed by the consumption of the country, the needs of which are growing with the rapid increase in the population. It is interesting to note all the same the importance of the exports of flour which in 1926 were 43,700 tons as against 18,700 in 1925. The exports of flour are, however, below the pre-War figures; in 1911 67,200 tons were exported.

Business in rye and barley has been much reduced. Haricot beans have this year changed their destination, the greater part being exported to Greece and not to Marseilles.

Maize has been an active market all the winter. The white maize which Varna has dispatched in previous years to Marseilles and Italy has met with the competition of the white maize exported from Russia. It has therefore been sent to Greece, losing the drawback of about a lev by which it benefited in comparison with yellow.

Yellow maize has been especially negotiated for the Danubian ports for consignment to Vienna and Passau. Varna has been completely abandoned this season. At the markets in January and February for spring delivery prices ranged around 3.60 leva per kilogramme f.o.b. These rates declined in March on the news of an excellent Argentine crop, 3.30 leva being quoted for some time; then in April to cover pressing needs which could not wait for arrivals from La Plata the rates rose to 3.80 to

3.90. Business was very brisk in April, and it is estimated that the stocks of maize are almost exhausted.

The sowings appear to have been good everywhere this year. The work in the spring has been carried out in the best weather conditions.

The Sugar Industry.

The production of the sugar refineries in 1926 amounted to 31,700 tons. It is estimated that this output will exceed by about 5,000 tons the needs of the country's consumption.

As regards the 1927 season the conditions agreed to by the cultivators are the same as for the previous season—620 leva per ton for beetroot. The customs tariff remains fixed at 8.25 leva per kilogramme for imported sugar. The sowings of beetroot will not exceed 19 to 20,000 hectares.

FRUIT GROWING IN CYPRUS.

Fruit is grown on a considerable scale in Cyprus, and there is an appreciable export trade in oranges, lemons, grapes, and pomegranates (says a report of the Empire Marketing Board). In the year 1926 exports amounted to 27,890 cwt. of grapes, 98,329 cwt. of pomegranates, 14,275,000 oranges, and 1,392,000 lemons. Almost the whole of the exports were to Egypt, although fair quantities of oranges were sent to Greece.

Orange cultivation is stated to be increasing rapidly, old plantations being extended and new gardens started. It is estimated, according to the *Cyprus Agricultural Journal*, that in about ten years' time oranges grown in the vicinity of Famagusta will require special vessels for export to England.

Contracts have been obtained by Clayton Waggon, Ltd., for railway steam cars for the Ceylon Government Railways and the Aden Railways, and for light locomotives for the North-Western Railways of India.

The report of the Aboukir Company for the year ended March 31, 1927, states that the sales of land sold partly by instalments totalled £17,540. The cotton crop grown was of the variety "Pilion," and gave a satisfactory yield, the increase of the last few years being more than fully maintained. Unfortunately the price at which it was sold was low. The gross receipts from purchasers amounted to £26,931, as against £32,379, of which £22,484 went to reduce their instalments, as against £27,978. The percentage of profit in these payments was higher than in the previous year, and the profit amounted to £13,178, as against £14,103. The profit, after making provision for income-tax, was £18,860, plus £22,570 brought in. A dividend of 5 per cent., free of tax, is proposed, leaving to be carried forward £11,429.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Iron and Steel Materials, Metals, Etc.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of their requirements during 1927-28 in respect of iron and steel materials, metals, etc. June 14. (D.O.T.)

Boots and Laces.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 16,550 pairs of boots and 8,300 pairs of laces to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. June 28.

General Stores.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of general stores required by the Police Stores, Bulaq, in 1927-28. July 2.

Rails, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 5,000 tons rails. August 10.

Engineers' Instruments, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of engineers' instruments, drawing materials, etc., required for the schools during the school year 1927-28. June 30.

Leather, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of leather, heel ball black for boots, eyelets London for boots, pegs wood for boots and rivets shoe, stain black for leather, leather band for tarboushes and for a sheepskin with wool to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. June 1.

General Stores.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of general stores required by the Police Stores, Bulaq, in 1927-1928. July 2.

Plant for School of Engineering, Giza, Cairo.—The following plant is required for a School of Engineering, Giza:—One 100 k.w steam turbine D.C. generator set with condensing plant; one water tube boiler; one 150 B.H.P. Diesel engine; one Booster set; one experimental Diesel engine of 40-40 B.H.P.; one overhead travelling crane of 10 ton capacity. June 15. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, June 4). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, May 31); s.s. Maihar for Calcutta (Birkenhead, May 31).

Bibby Line.—S.s. Shropshire for Port Said, Colombo, and Rangoon (Birkenhead, June 1).

British India Line.—S.s. Mandala for Bombay and Karachi (London, May 28); s.s. Nalgora for Colombo, Madras, and Calcutta (London, June 4).

Cunard Line.—S.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, June 18); s.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool June 11, Swansea June 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 11).

P. and O. Line.—S.s. Rajputana for Bombay (London, June 3); s.s. Nagoya for Colombo, Madras, and Calcutta (London, June 11).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, June 4); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, June 15).

Ellerman and Papayanni Lines.—S.s. Dido for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 27); s.s. Polo for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 28); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool May 28, Swansea June 2); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, June 2); s.s. Algerian for Algiers*, Malta, Syria, Smyrna, and Constantinople (Liverpool, June 11); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 18). * Subject to sufficient inducement.—Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 24.

The stock markets have passed a very quiet week, a definite explanation for which is difficult to find. Events in China are put forward as one reason, but developments in this direction have recently ceased to be a factor. The diplomatic trouble with Russia is not enough in itself to account for it. A more feasible explanation would appear to be the recent heavy slump on the Berlin bourse, which almost reached panic proportions. The markets in London most closely affected were the mining sections, and as these have of late been in rather good fettle the setback in Berlin has been reflected more strongly in the price of mining securities than in any other department. To some extent the feeling of depression may have spread to other markets, though hardly to an extent sufficient to account for the general quietude. Recent high hopes of a further reduction in Bank Rate have been damped by the course of the gold exchanges and by the large efflux of gold from the Bank. It should not, however, be supposed that all chance of a 4 per cent. rate has been postponed. It is, of course, possible that uncertainty as to Bank Rate movements is the underlying cause of the dullness of investment markets, which during the past week have been in a very uninteresting condition.

An Interesting Experiment.

When the prospectus of the Independent Investment Company appeared in January, 1924, considerable interest was aroused in financial and investment circles. For the document heralded something in the nature of an experiment in joint stock enterprise in the country. The object for which the concern was formed was to carry on the usual business of an investment trust, but with this difference, that the Directors—Mr. J. M. Keynes among them—proposed to take advantage of "certain principles of investment which are now well recognised, but have as yet been acted on in only a limited measure." The principles were explained as follows: "It is now known that fluctuations in the relative values of long-dated and short-dated fixed interest securities and also of fixed interest securities generally and of ordinary shares are all affected by a periodic credit cycle. Changes in the short period rate of interest affect the value of long-dated securities to a greater degree than should strictly be the case, with the result that considerable profits can be made by changing from one class to another at the appropriate phases of the credit cycle." It was then explained that the Directors proposed anticipating impending changes in the cycle, a course they were able to follow as "the result of accumulated experience on these matters." The report of the company—the third since its formation—for the year to March 31 last appeared last week, and is of considerable interest as it permits some idea to be formed as to the practicability of the credit cycle theory when actually exploited over a period of years. The accounts show that a fair rate of progress has been made, but those who expected anything phenomenal in the way of profits will be disappointed. The net profits have been as follows: 1925, £18,176; 1926, £20,229 and 1927, £21,836; while dividends have been 5 per cent. for 1924-25 and 5½ per cent for 1925-26 and 1926-27, though in the latter year the payment was made on a capital increased by £70,000. Investments, taken at cost, have increased, but the gain in their market value has been at an almost identical rate. On the whole, then, nothing exceptional has yet been achieved. Nevertheless the operations of the enterprise will continue to evoke much interest, especially as a better picture of the possibilities in the credit cycle

theory will be obtainable after the lapse of another three or four years.

Newfoundland Securities.

A number of Newfoundland loans are quoted on the London Stock Exchange, so that the investor is interested in the economic condition of our oldest colony. At present prospects are more encouraging than they have been for some time past. Fishing is the chief industry of the colony and before the War provided the community with a fair measure of prosperity. But the low prices for fish, combined with the depreciating exchanges, which have been a feature of the post-War years, seriously depressed Newfoundland's chief industry. This has been reflected in a shrinkage of revenue, which has been a source of embarrassment to the Government. But to-day there are signs that the tide has turned. The fishing outlook has materially improved, that for sealing being particularly bright. Again, there is evidence of increasing mining activity. But the most important factor of all is the Privy Council's recent award of 113,000 square miles of territory in Labrador to Newfoundland.

The returns given by the Newfoundland loans do not indicate any nervousness on the part of the investor regarding the future. Thus the 3½ per cent. sterling bonds, finally redeemable 1951, give a yield of £5 3s. per cent. The 5 per cent. sterling bonds—also finally redeemable 1951—return £5 per cent. The 3½ per cent. inscribed, finally redeemable 1950, yield £5 6s. per cent. It may be added that there are fairly large amounts of each of these loans outstanding.

A large commercial firm in Athens is endeavouring to organise the regular importation of Bulgarian coal from the Pernik mines into Greece (says a Reuter message). Factories and other industrial enterprises at Athens consume about 700 tons of coal a day, which they now buy almost exclusively from Newcastle at a cost of 31s. a ton in Greece. The Greek railways also import their coal from England, but have recently made a small trial purchase of Pernik coal. The Athens firm mentioned has asked the Bulgarian Minister of Commerce for the exclusive right to import Pernik coal into Greece, and the application is being considered.

Company Meeting.

EGYPTIAN MARKETS.

The Situation in Egypt.

The annual general meeting of the Egyptian Markets, Ltd., was held on May 18 at Winchester House, Old Broad Street, E.C., Mr. G. H. Redwood presiding.

The Secretary (Mr. F. R. Parker) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I am sorry to say that your Chairman, Colonel A. St. John Cooke, is unable to preside at this meeting for the reason that he is now in Egypt, where he has been unavoidably delayed by pressing business. Needless to say, he has made every effort to be here, but unfortunately without success.

As is the custom, I will, with your permission, take the directors' report and accounts for the year ended December 31, 1926, as read. (Agreed.)

During the year with which these deal Egypt has passed through an acute period of financial depression, which has acted adversely upon all industrial, commercial and financial undertakings in that country.

In an endeavour to minimise the effect of the slump in cotton prices and to assist the agriculturist to avoid the seizure of crops and forced sales at ruinous prices to meet financial obligations, which in the autumn of the year are heavy, the Government of Egypt announced it was prepared to make advances to cotton growers up to an aggregate amount in excess of £4,000,000, if required.

This has afforded temporary relief to the fellaheen, and since the close of the year there has been a distinct improvement in the ruling market price of cotton, which has also somewhat relieved the position.

I am glad to say that this company has been able materially to assist the Government by allowing the use, free of charge, of space in its markets for the storing of cotton bales pledged by the growers against advances made by the Government. This assistance has, I understand, been greatly appreciated by the Government Departments concerned.

With regard to the high rentals of agricultural land, this became so serious and the complaints so numerous as to cause special reference to be made to the subject in the Egyptian House of Parliament in January last, with the result that it was decided to appoint a Commission of investigation, which it is hoped will bear good fruit.

I mention specially both the above subjects because they have so intimate a bearing upon the economic conditions of the provinces and directly affect the revenues of this company.

As an instance of the effect on our cattle markets of the financial depression on the trading capacity of the merchants attending them, only 1,681,000 large animals passed through our markets during the year, as compared with 2,064,000 during 1925, and of small animals, including goats and sheep, 3,356,000, against 4,026,000, or a total decrease in the numbers of all animals of 1,053,000.

You will, I think, agree with myself and my colleagues that, under these adverse circumstances, the results for the year are as satisfactory as could possibly be expected.

The gross receipts from cattle markets amounted to £60,523, a decrease of £13,737 as compared with the previous year, and those from the general markets £34,414, a decrease of £1,517. These figures refer only to the 120 cattle and general markets which are included under the Government concession. Gross receipts from the three cattle and general markets outside the concession aggregate £1,212, a decrease of £154.

Most fortunately, the valuable inoculation work done by the Government Veterinary Department is showing progressively improving results. During the year only 85 cattle market days were lost in consequence of cattle plague, as compared with 134 during 1925, 464 during 1924, and 1,564 during 1923. For the 13 years ended 1922 an average of 2,093 cattle market days per annum were lost to us for this reason. In one year (1918) as many as 4,431 days were lost.

The net receipts from the 40 abattoirs worked during the year were £1,056. The Government took over two more of these slaughter-houses at the end of 1926, reducing the number to 38.

The remaining item to the credit of the trading account is that of "Net profit on sale of chemical manures, salt, and sundries," £8,840. This, I am pleased to say, shows an increase of £2,237 as compared with last year.

With reference to our trading business, I would like to say that every effort is being made to extend this side of our activities by taking up new agencies on a commission basis for commodities for the sale of which our organisation is best fitted.

Since our last meeting we have entered into two promising agency agreements for the sale of artificial manures, but in every direction competition is so keen, and is becoming increasingly so, that I hesitate to forecast any great improvement in our receipts from this source until economic conditions in Egypt have readjusted themselves.

As to the prospects for the current year, I understand the general opinion in Egypt among commercial people is that we have seen the worst and that matters will gradually improve. We can only hope this will be the case. Egypt is financially sound and although the country is going through a hard time, it has great recuperative powers. It must necessarily take time, however, before the provinces feel the benefit of any improvement in the general situation and before such improvement is reflected in the company's receipts. A great deal depends on the next cotton crop and the price then ruling for cotton, which, of course, it is too early to forecast.

The debit side of our trading account calls for little explanation. The item "Rent, salaries, wages and expenses" shows a decrease of £340, and "Maintenance and repairs of markets" a decrease of £801. The Government charge for inspection, being a fixed amount, is the same as for previous years.

Now with regard to the revenue account.

After making provision for the share of profits payable to the Egyptian Government, which this year amounts to £22,783 7s. 10d., and after meeting the payment of debenture interest, £2,840, share capital and debenture sinking fund premiums, £3,698 1s. 6d., and carrying to general reserve £4,685 9s. 2d., your directors recommend the payment of a final dividend of 5 per cent. and a bonus of 1 per cent., making, with the interim dividend of 5 per cent. paid in November, 1926, a total of 11 per cent. for the year on the ordinary shares, absorbing £19,217, and the payment of a dividend of £10 17s. 7 27-100d. on the deferred shares, which will absorb £3,264 1s. 9d. After payment of these dividends a balance of £13,241 4s. 3d. will remain to be carried forward, as compared with £11,954 0s. 9d. brought into the accounts from the year 1925.

In conclusion, I must record an expression of appreciation of the most excellent work which has been done during the year by our staff in Egypt.

The resolution was carried unanimously.

ANGLO-EGYPTIAN OILFIELDS.

The Farsan Islands Concession.

The sixteenth ordinary general meeting of the Anglo-Egyptian Oilfields, Ltd., was held on May 19 at Winchester House, E.C. Sir Reginald Macleod, K.C.B., Chairman of the company, presided.

The Secretary (Mr. W. A. Turner, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—As you will have seen from the report which has been in your hands for some days, the Board are again able to recommend to you that a dividend should be paid on the "B" shares at the rate of 12½ per cent. for the twelve months ending December 31, 1926.

proposition.**

The production of net crude oil during the year was 169,211 tons, showing a decrease of 6,547 tons over the results for the previous year. You will recollect that the production for 1925 showed an increase of over 15,000 tons on that for 1924, and at our meeting last year I indicated that I did not expect that we should be able in 1926 to equal the production for 1925. I explained then that the increase of 15,000 tons was in part due to the fact that by the completion of our dehydrating plant it had been possible for the first time for several years to pump certain of the older wells which naturally gave a higher production when first put on the pump than they could be expected to maintain over a longer period. As we had anticipated, this proved to be the case and the new production obtained from wells completed during the year did not suffice to make up the whole of this deficiency.

The Accounts.

Turning for a moment to the accounts, you will see from the credit side of the profit and loss account that the figure for "Oil proceeds and value of oil stocks" is only down by some £2,200 in spite of the lower production. On the debit side it is satisfactory to see that "Working, drilling, and general expenses" are lower by £9,955, while "Refinery working cost" is also down by £7,890. Unfortunately the receipts for refining imported oil are also lower by £11,509, and "Licences, leases, and royalties" have cost us an additional £1,708. The net result is that we are able to carry to the balance-sheet a sum of £245,136, which is £1,038 more than for 1925.

From the balance-sheet itself you will see that, with the amount carried forward from last year, the sum at our disposal is £482,990. The advisability of carrying forward this comparatively large sum will, I think, be apparent to you when I come to deal with certain operations which are now being carried out on a new territory, as well as the additional requirements of our Suez Refinery.

Before dealing with other matters I will give a summary of our operations during 1926.

During the year we completed four wells on the northern extension of the field and one well on the main field, all of which gave production.

We also completed two wells on a small structure to the east of the main field which yields, from a shallow depth, a lighter and more valuable oil than is present in other parts of the field, but only in comparatively small quantities. One of these wells was successful, but the other encountered a negligible quantity of oil and was abandoned.

I have referred on previous occasions to the electrical dehydrating plant, in the successful operation of which we take a very real interest. It is correct to say that without the existence of this plant, the material parts of which were specially designed for us by the technical staff of the Royal-Dutch Shell Group, it would be impossible to operate commercially a large number of the older wells on the field. During the year this plant was further extended and has given even better results than in previous years.

I mentioned last year that a gas compression plant had been put into operation. This also has given excellent results throughout the year and is now being enlarged.

The Hurghada Field.

As far, then, as concerns the Hurghada Field, which has been for many years the mainstay of the business, the year 1926 has been one of steady progress, during which much attention has been paid to effecting economies in the working of the field by the provision of additions to central pumping powers, and to increasing our efficiency by means of the dehydrating plant and gas compression plant.

Our Gemsah Field has still further declined in production and contributed a very small proportion of the total production.

With regard to outside areas, we continued drilling at Ashrafi, but I regret to say that, while the well was located on a definite structure, drilling at depth has not revealed any favourable indications of the existence of oil. This well was still in process of drilling at the date when the report was issued, but our experts consider that the results must now be regarded as negative and final and we propose to abandon the well.

The many failures which we, in common with others, who have drilled for oil in Egypt, have experienced, have led your directors to devote their attention to the possibilities of obtaining oil in other countries, which, while outside of Egypt itself, are still within comparatively easy reach of your field at Hurghada and your refinery at Suez. I need not emphasise the importance of this latter point, and you will readily appreciate the advantages which would be derived if a concession could be obtained which in its earlier stages could be staffed, equipped and managed from Hurghada, and which in its later stages could produce oil for treatment at Suez.

With this object in view your directors decided to avail themselves of an opportunity to obtain a concession over a group of Islands in the Red Sea known as the Farsan Islands, which are situated some 800 miles from Hurghada and 1,000 miles from Suez. The concession will be operated by a company formed by us for that purpose and called by the appropriate title of The Red Sea Petroleum Company, Limited, the whole of the share capital of which is owned by your company who will finance its operations. A geological survey has been made of the area and the results have been sufficiently pro-

missing to enable the Red Sea Petroleum Company to decide to drill a test well at once. Men and material were put at their disposal from Hurghada and it was anticipated that drilling would commence there by the beginning of this month.

I would take this opportunity of advising shareholders not to place too high hopes at this early stage on the successful result of these operations. We have had disappointments in other areas and there is no certainty that this will prove to be an exception. Your directors believe that the acquisition of this concession is a venture having a reasonable chance of success, and one which can be attempted without incurring too heavy a financial risk.

Current Year's Prospects.

You will no doubt wish me to make some mention of our prospects for this year. So far our production has been maintained at almost exactly the same level as for the corresponding period of last year, and I hope that we shall be able to maintain this rate throughout the year.

With regard to the disposal of our products, the over-production of oil in America is a less serious factor in our market than in other countries nearer to the source of over-production, but in view of the low price at which coal is now sold in Egypt, your directors have decided to instal further plant so as to be in a position to carry the manufacture of products from the crude oil further than has hitherto been convenient. In our new process of manufacture additional products are obtained which it is believed will meet the future requirements of the Egyptian market more fully than has been possible hitherto.

One outstanding event of the year 1926 was the fact that His Majesty King Fuad of Egypt paid a visit to the Hurghada Field. His Majesty has always taken a deep interest in the industries of his country, and I think that we may consider that his visit to our fields is in some measure a recognition of the importance to Egypt of our industry. His Majesty made a close inspection of the fields and was good enough to express to the concessions manager his satisfaction at all that he saw. In particular he commented on the good relations existing between the management, the European staff and the native labour employed there.

I feel sure that you will wish me once again to record on your behalf our deep appreciation of the services of our managers and staff at Hurghada and Suez throughout the year. I very much regret to have to report that one of our engineering staff lost his life during an accident at the end of the year.

The report was unanimously adopted.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C. 2

EASTERN TELEGRAPH COMPANY.

Developments in Near East.

The ordinary general meeting of the Eastern Telegraph Company, Ltd., was held at Electra House, Moorgate, E.C.2., on May 24, Sir John Denison-Pender, G.B.E., K.C.M.G., presiding.

The Secretary (Mr. Edward Wilshaw) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—You will see by reference to the revenue account the net profits amounted to just under £1,000,000, and after charging income tax payable in England and allowing for the interest on debenture stock and the full dividend on the preference stock, there remains a balance of about £851,000, which I think may be considered satisfactory in view of the depressing conditions which have existed during the greater part of the year, largely as a result of the general and coal strikes.

We have made a transfer of £400,000 to the reserve fund and, while maintaining the same dividend on the ordinary stock that we have paid since 1919, viz., 10 per cent. free of income tax, are able to carry forward to the next year's accounts the very substantial sum of over £500,000.

I now draw your attention to the statement of the general reserve fund, from which you will see that in addition to the £400,000 contributed from the revenue account, we have received a contribution from one of our subsidiary companies of £206,500. We have thus been able to write off entirely the remaining balance of £493,000 odd, which appeared in the last balance-sheet in respect of "Expenditure on new cables and cable renewals." Notwithstanding this, the general reserve fund shows an increase of about £95,000 over the amount of the fund as at December 31, 1925.

As you well know, the company is always examining fresh fields for the development of its business, and negotiations have practically been completed both with the Palestine and Egyptian Administrations for the laying of a new cable between Egypt and Palestine. This will place the latter country in direct communication with our main cable system and benefit the trade with that country generally. I have also to report that the negotiations with the Greek Government, referred to at the last meeting, have been brought to a satisfactory conclusion, and that we have been granted a concession for fifty years which commenced on July 1 last. Negotiations were recently re-opened with Turkey, and a convention has been agreed upon and signed, and now only awaits ratification.

With a view to improving communication "East of Suez," it has been decided to lay further submarine cables between Alexandria and Port Said and underground lines between Port Said and Suez. Hitherto our communications transited Egypt by overhead landlines with consequent liability to interruption and loss of capacity due to induction troubles chiefly during the night. This improved means of communication, will enable us to instal our direct regenerator system between London and India, with substantial benefits to the service.

In my speech at the last general meeting, I referred to the excellent results obtained from the installation of the "Regenerator" system on some of our cables. During the last year, every effort has been made to instal the system on further cables as rapidly as possible.

As mentioned last year, the new system overcomes the disabilities inherent in the old system of relaying from one cable into another cable at landing points, so that it is now possible to link up these cables by mechanical relays. A notable example of this is the direct working now operating between London and Cape Town without any intermediate handling through five relaying stations. The regenerator working on the direct Cape route was demonstrated to representatives of the Press at London and Cape Town on January 19, and facilities were given them to exchange messages. The replies were received with only the delay necessary to dictate them as must be apparent when it is realised that the actual time taken for a signal to transit the six sections of the cables on the route is instantaneous. There are also the two routes now being worked direct to Alexandria, and the remaining apparatus for the balance of the main line cables throughout the whole system is being installed as rapidly as possible.

The regenerator system has proved to be extremely flexible, its adaptability having already been shown to advantage in meeting the various traffic conditions which arise in the large network of cables operated by the Eastern Associated Telegraph Companies. The feature will be accentuated when the whole of the main cables are finally equipped with the new apparatus.

You will doubtless expect me to say something on the subject of wireless, although I have little to add to what has been said on previous occasions. Having carefully watched the development of wireless during the past 20 or 30 years, I have no cause to alter the opinion formed and expressed over that period that the cables will remain more reliable than the wireless service.

The prospect of the return to normal trade conditions will, I feel sure, counterbalance to a very large extent the present-day competition with which we are faced, but the obvious solution, in the interests of the public and others, is co-operation in some form or another which would eliminate wasteful and unremunerative expenditure and, at the same time, provide a dual and alternative means of communication.

I do not think, however, you need have any misgivings as to the future, for I am confident that, given a fair field for the unrestricted development of the cable industry, it will continue to prove itself the best and most reliable means of telegraphic communication. (Applause.)

The motion was carried unanimously.

VICKERS LIMITED.

A Good Report.

Strong Financial Position.

The following is an extract from *The Times* of April 21, 1927:

The Vickers' Report.

The report of Vickers Limited for the year 1926 makes a remarkably good showing. It is the first report to be issued since the re-organisation, and it therefore covers the first year of office of the new board. It is an obvious tribute to their skill that they were able to earn a substantially larger sum than in 1925, for the year was one of the most troublous periods of our industrial history, covering a general strike as well as a prolonged coal stoppage, when business in many cases must have been very difficult to conduct, let alone at a profit. After setting aside £110,788 for depreciation and meeting debenture charges which required £173,000, the Company earned a net profit of £562,284. This is £141,310 more than was shown for 1925, but the actual increase is greater, for in 1925 practically nothing was written off for depreciation out of profits. The dividends on the two Preference stocks and on the Five Per cent. Preferred stock absorbed £418,190, leaving £144,093. This, added to the sum brought in, makes a total of £334,868. The directors have wisely decided not to pay any dividend on the Ordinary Shares, although it would have required only £205,000 to pay 5 per cent. They pursue the more conservative course of transferring £200,000 to reserve, and carry forward £134,868.

Strong Financial Position.

The directors explain that under normal conditions a dividend could have been paid, so that, unless something unforeseen occurs, the shareholders have every reason to anticipate a distribution next spring. During the year, the report states, the business of the Company was re-organised, as a result of which considerable economies both at the Head Office and at the Works, were effected.

The most striking feature of the balance sheet is the strong liquid position of the Company. Its holding of cash and British Government securities alone amounts to £1,795,848. In addition it holds marketable securities amounting to nearly £600,000, besides bills amounting to nearly £300,000. The Company is therefore well supplied with financial resources, with which to take advantage of a revival of business at home or abroad.

A Consolidated Balance Sheet.

An important innovation is the presentation of a consolidated balance sheet of the Parent Company and its subsidiary undertakings. It shows a surplus of nearly a million, the principal figures being shown in the subjoined table:—

LIABILITIES		£
Share Capital of Vickers Ltd.	...	12,468,968
Share Capital of subsidiaries (held outside group)	...	172,556
Debenture stock (Vickers)	...	3,284,784
Deb. issues of sub. coys. (held outside group)	...	107,142
Insurance fund (Vickers)	...	62,228
Reserve Fund (Vickers)	...	200,000
Creditors—Vickers	...	1,939,609
Creditors—Subsidiary Companies	...	1,188,971
Contingent Liabilities, etc.	...	2,032,873
Final Preference dividends of Vickers	...	201,595
Surplus	...	944,409
Total		£22,603,135

ASSETS.		£
Fixed Assets—Vickers	...	3,315,056
Fixed Assets—Subsidiary Companies	...	4,009,385
Stocks—Vickers	...	1,789,672
Stocks—Subsidiary Companies	...	1,526,272
Debtors—Vickers	...	1,640,407
Debtors—Subsidiary Companies	...	1,384,185
Investments—Vickers	...	817,128
Investments—Subsidiary Companies	...	*4,071,940
Cash—Vickers	...	305,848
Cash—Subsidiary Companies	...	2,051,497
Bills—Vickers	...	298,121
Bills—Subsidiary Companies	...	3,772
British Government Securities—Vickers	...	1,490,000
British Government Securities—Sub. Coys.	...	19,943
		4,169,181
Less Bank Loans, etc., of Subsidiary Coys	...	120,091
		4,049,090
Total		£22,603,135

*Including investment in Metropolitan Vickers Electrical Company.

Here again, the most striking feature is the strong financial position of the group. Cash, bills, and British Government securities held by the various Companies, after deducting bank loans and overdrafts (which amount to only a small sum), amount to no less than £4,049,090. Further, the group holds securities totalling £4,889,069. These are taken at cost or market price, whichever is the lower, so that this item probably covers a hidden reserve, since it includes the shares in the Metropolitan-Vickers Electrical Company, which stand at a considerable premium. The directors explain that the surplus includes £809,541, the sum by which the assets, less the liabilities of the subsidiary companies as shown by their audited balance sheets, exceed the value placed on them in Vickers' books."

THE ECONOMIC DEVELOPMENT OF ABYSSINIA.

The increased interest recently shown in Abyssinia, warrants a review of conditions in that little-known country—a region which is one of the few productive portions of the African Continent in which no new modern development projects have been undertaken during recent years, although some are under consideration (says an article by Mr. M. Bainbridge Hayden, in the United States "Commerce Reports.") The country's situation as a sovereign nation places it, however, in a somewhat different relation from foreign capital than is the case with its neighbouring areas that are parts of the colonial systems of European Powers.

Although the political independence of Abyssinia has been recognised by the Great Powers since 1906, and that country, under its regent, Ras Tafari Makonnen, has been a member of the League of Nations since 1923, nevertheless the modern economic developments there have been largely accomplished by foreign enterprise. The Franco-Ethiopian railway, connecting the capital, Addis Ababa, with the French Somaliland port of Jibouti, is the only railroad in the country and is entirely in French hands. The only exploitation yet made of the valuable deposits of potash salts in the north-eastern part of the country has been carried on by Italian capital. The country's foreign trade is largely negotiated through resident Greek and Armenian merchants. Even the currency of the country, the Austrian Maria Theresa dollars, is imported and distributed by foreign agents.

The subject of recent British and Italian notes was a proposed concession by the Abyssinian Government to

British interests for the construction of a dam near Lake Tana, to control the waters of the Blue Nile for the benefit of the Anglo-Egyptian Sudan, and a similar concession to Italian interests for the construction of a railroad north and south across Abyssinia, connecting Italian Somaliland with the Italian colony of Eritrea. Both these projects, while carried on by foreign capital, would be subject to the approval of the Abyssinian Government and would contribute to further the economic progress of the country.

At present, transport to the interior by the Blue Nile or by caravan through Gambela, the trading station leased by Abyssinia to the Sudan Government, is both slow and difficult, and the bulk of the country's trade is carried over the French railroad to Jibouti. The volume of trade over this route amounted in 1924, the last year for which figures are available, to 18,693 metric tons of imports and 23,885 tons of exports. These figures represent a trebling of exports since 1914, but comparatively no change in imports. Prior to 1924 there had been a heavy annual import surplus.

The chief commodities entering into the export trade, via Jibouti, are such pastoral and agricultural products as coffee, hides and skins, beeswax, grain, and ivory. The leading imports are salt, sometimes used in Abyssinia instead of money; cotton goods, constituting almost exclusively the dress material of the native population; kerosene, sugar, hardware, and empty sacks, the last being used extensively to cover the loads carried by pack animals.

Records of Abyssinian trade, via the Sudan, are kept by value rather than volume, and are therefore not easily comparable with those of the Jibouti trade. The total value of exports by the Sudan route in 1924 amounted to £262,000, and total imports to £111,000. The exports consist chiefly of coffee and beeswax; the imports, mainly textiles, salt and Sudan products.

The country's resources remain still largely unexploited, and the industrial development is negligible. Most of the coffee and beeswax exported are wild, and millet has been cultivated only since 1915. Although there are reported to be rich resources of rubber, coal, copper, silver, sulphur, potash, mica, gold, and iron, only the last four have so far been extracted commercially, and these only to a slight extent. Abyssinia may be said to represent, therefore, an almost virgin field for productive effort, and with its increasing economic development and augmented purchasing power it represents as well a new and promising market for the products of the industrial world.

The first essential to further economic development, however, is the improvement of the country's transportation and the reduction of freight charges. Such possibilities of new trade outlets as those presented by the Italian plan for a railroad to Massawa and the British suggestion for a good road to Berbera would therefore seem to offer good opportunities for Abyssinian expansion.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended May 12, state:—

Since our last report the futures market has been very active but the tone has been decidedly less firm, especially for Sakel. The week's summary of price movements is as follows: Sakellaridis—May, 29.10 dollars, 1.40 dollars down; July, 29.38 dollars, 1.35 dollars down; November, 30.45 dollars, 1.25 dollars down; January, 30.25 dollars, 1.35 dollars down. Ashmouni—June, 21.41 dollars, 0.49 dollars down; August, 21.76 dollars, 0.49 dollars down; October, 22.33 dollars, 0.52 dollars down.

Sakel.—The market during the early part of the week was firm. Reports from America were pessimistic on the extent of the damage occasioned by the floods in the Mississippi Valley and on the strength of these reports, speculators continued to buy. Reports received from America during the last two or three days have been much better, and the better news has induced some profit-taking, as a result of which a good part of the recent advance has been lost. At the close to-day the tone of the market was undecided and should the reaction in New York continue, we do not think that prices here will hold.

The demand from abroad this week has been very poor, and, on some days, the amount of business put through has been practically nil. On the other hand, cotton continues to come down from the Interior in fairly large quantities and there is still more to come.

At the second May tender, 250 krs. dockets were issued; the total so far this month is 5,250 krs.

Uppers.—Price fluctuations of this variety have more or less followed those of Sakel, although, at to-day's close, the tone was much firmer than that of the latter market. The difference between the near positions of the two varieties, after having reached 9.15 dollars on the 4th instant, is now back to 7.75 dollars.

The better tone of the Ashmouni market must be put down, firstly to the fact that the spinners demand for this variety is fairly satisfactory and secondly, to the fact that, as the greater part of the recent speculative buying was concentrated on Sakel, the profit-taking sales of Ashmouni have been correspondingly less in volume. The statistical position of Uppers is decidedly stronger than that of Sakel; the spot stocks for sale are getting smaller every day.

The week's receipts amount to 182,957 krs. against exports 189,446 krs.; the stock in Alexandria is 2,917,735 krs. The official figures of arrivals and exports for the period September 1, 1926, to May 5, 1927, are as follows:—Arrivals: Lower Egypt, 4,602,000 krs.; Upper Egypt, 2,841,000 krs; total 7,443,000 krs. Exports: Sakel, 2,464,781 krs.; Ashmouni, 3,012,870 krs; Various, 380,152 krs.; total 5,857,803 krs.

Spot.—During the past week demand has fallen away somewhat and we have had a series of rather quiet markets at Minet el Bassal. Sales for the week amount to about 13,000 bales, of which we estimate 5,000 bales Sakellaridis, 7,000 bales Ashmouni and Zagora, 750 bales Pilion, 250 bales White and a few bales other varieties. Cotton continues to be offered freely but the quality of the Sakel selection is very poor and it is very difficult to get hold of decent cotton.

Sakellaridis.—The demand has fallen off and only a mediocre business has been done, though all grades up to Fully Good have changed hands. Spot differences are without much change, and the few good lots of decent staple cotton which appear command a fairly ready sale.

Ashmouni and Zagora.—Here also demand has been distinctly quieter and only a fair business has transpired. All styles have been dealt in and spot differences are about as last week, with a slightly easier tendency for the grades below Fully Good Fair.

Pilion: has been in fair demand and a good business has

been done at about last week's spot differences.

White.—A fairly good business has transpired. Spot differences are fractionally easier than last week.

Other Varieties.—In Brown a retail business has been done without much change in spot differences. A few bales of Maarad have changed hands.

Up-Country.—The Ministry of Agriculture has published a new Decree postponing, until the 21st instant, the date for the closing of the ginning factories. A large number of the factories are now working day and night and there is no doubt whatever that by the time the factories are definitely closed down, the arrivals in Alexandria will have passed the 8,000,000 kantar figure.

Crop 1927.—All our agencies in the interior report that the crop is going along satisfactorily. Temperature during the week has been very favourable and the plants show good growth. A slight attack of leaf worm is reported but the damage is insignificant. In Upper Egypt, especially in the Province of Minieh, some of the early plants are already flowering. Water supply, both in Upper and Lower Egypt, is sufficient for requirements and complaints, if any, are few and far between.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 18:—

Egyptian Futures.—Sakel Contract.—Since we last wrote, this market has shown a steadier tendency and improved undertone, somewhat better trade support and the withdrawal of profit-taking orders inducing a gradual hardening, prices closing to-night at 46 to 51 points advance for near and 54 to 61 for distant positions. In addition to the local improvement, the recent action of the Alexandria market has been distinctly encouraging to the "long" element, values at the other side maintaining a somewhat remarkable steadiness even at the higher levels now attained; however, as the contract here has not fully responded to the appreciation witnessed in the overseas market we now stand, at a heavier discount than for some time past and it would rather appear as if the large stock of Sudan now offering here is going to be responsible for a readjustment in previous ideas regarding the relative values of the two contracts. Whilst trade reports in the Egyptian section show a moderate improvement, the whole outlook in textiles at the moment is rather unsettled; however, judging from the inquiry for the finer staple cottons, it appears that more business is developing, and provided consumers have the encouragement of steady markets in the raw material we are rather of the opinion that the offtake in yarns would begin to show a more favourable situation. On the whole, spinners' takings keep up well, and the Egyptian figures now total 293,000 bales, an increase of roughly 5,000 bales over the corresponding period last year; this would have been further augmented except for the competition from Sudan Sakel, which is borne out by the latter showing an increase of 45,000 bales.

Upper Contract.—This option continues to enlist more support, and speculative buying, especially of new crop position, is becoming somewhat a feature. Local stocks of old crop cotton cannot be termed particularly heavy for this period of the season, and holders are gradually getting more difficult to deal with; in addition to this, the Alexandria basis for any desirable cotton continues to be distinctly firm. Trade reports of yarns spun from the Upper variety are moderately satisfactory, and spinners, recognising the comparative strength of the statistical position, are beginning to show increasing anxiety to cover their requirements for the summer months. Whilst admitting that the course of values will be mainly governed by the action of the American markets, we still consider that, even from the present level, there is scope for further appreciation, and on this account we recommend that any easing markets should be taken advantage of to get conservative purchases.

Egyptian Spot.—There is little change to report in the conditions ruling in our market. Trading has continued on quiet lines, and there is nothing in sight at the moment to justify optimism in the immediate future. Flood and weather news from the U.S.A. still largely dominate the situation, and, in spite of a considerable amount of uncertainty, prices generally have registered a further slight advance. Financial trouble in Lancashire has caused much uneasiness during the past week, but up to date the Egyptian section has been comparatively immune. Discussions are now taking place as to the advisability of enforcing a cash before delivery basis for spot sales transacted in this market. No decision has as yet been arrived at.

Sakel cotton has again continued in rather better demand from rod. up to about 17½d., but beyond the latter figure, which represents roughly to-day's value of Good cotton, there is no inquiry to speak

of. Good Fair Uppers at from 11½d. to 12½d. have met with a fairly good offtake and the selection of this range is becoming rapidly thinned out. Pilon at from 13d. to 13½d. has been in moderate request. Sudan cotton has maintained its popularity, the white variety at from 150 to 275 on, and the Sakel at from 17d. to 17.75d. An improved inquiry for Tokar Sakel has lately been noted, but the high prices asked for this growth, 18½d. to 19½d., are checking business at the moment.

C.i.f. business has been done on only a very moderate scale. Forwardings to spinners for the week ending the 14th inst. were returned as 5,512 bales Egyptians, and 1,272 bales Sudan. Estimated sales:—1,400 bales Egyptians and 1,350 Sudan. Quotations of Sakel have been reduced to 10 points for the growths above F.G.F., whilst F.G.F., Good Fair, and Fair are all 10 points harder. Upper has been advanced 20 points all round. F.G.F. Sakel to-day, 16.10d. F.G.F. Upper to-day, 12.50d.

Sales of medium and low priced passenger cars in Greece during the first quarter of this year have shown a slight improvement over the last quarter of 1926, and the market for high-priced cars remains dull (says an American Consular report). The Greeks are showing a well-defined tendency to standardise on the medium and low priced cars, whose reputation has been firmly established in this market by time and experience. The Cab Drivers' Association still constitutes the most important source of automobile orders in Greece. The market for lorries has shown considerable improvement, and a further advance is anticipated for the second quarter. The market for parts and accessories has been very active, dealers generally expressing satisfaction with the amount of business done. Prospects for the second quarter are encouraging.

FROM THE WEEK'S MEETINGS.

Greece's Financial Position.

The Greek Government in 1926 carried through various measures enabling it to fund the major portion of the floating debt, and it is now actively engaged upon a programme of monetary stabilisation and budgetary equilibrium. During the last fifteen years, i.e., since the Balkan War of 1912, Greece has had, in addition to her normal expenditure, to face extraordinary outlays totalling about £173,000,000, of which she has provided from her own resources about £137,000,000; even so her uncovered budgetary deficit is estimated at not more than about £2,000,000. A small country like Greece, that has been able to stand such a strain almost unaided and, in addition, to continue all through these troublous times to meet all its external obligations in gold, should be capable of wonderful progress in the years of peace which it is hoped are now before us.—Sir Eric Hambro, K.B.E., at the annual meeting of Hambros Bank.

The production of the Anglo-Egyptian Oilfields for the week ending May 13 amounted to 3,154 tons.

Notes of the Week.

The Constitutional Issue in Greece.

On what thin ice the present coalition in Greece exists was shown again last week in the course of the debates in the Chamber on the new Constitution. The draft that was under discussion provided that the form of government should not be subject to revision. In the absence of the leader of one of the monarchical parties a zealous follower proposed that this clause should be submitted to a plebiscite, only to find the suggestion strongly opposed by members of his own party. After an interval in the course of which the absent leader, the Minister of the Interior, was consulted, a formal statement on behalf of the Popular Party was read recording its view that the present Chamber ought not to deal with the question either of the revision or of the confirmation of the form of government, for the reason that the Coalition Ministry had been brought into being on the understanding that this particular issue should not be raised. The Chamber agreed to the elimination of the offending paragraph regarding non-revision, but the proposal was subsequently made by one Cabinet Minister that the question of the form of government had better be settled once and for all by a plebiscite. Before the discussion had proceeded far, a remark by another Republican Minister caused resentment to the Popular Party, whose members left the Chamber amid cheers for the Monarchy and counter-cheers for the Republic. A plebiscite in existing circumstances would not only be a waste of time, but would also cause fresh bitterness. It is practically certain that it would give a majority in favour of the Republic, if only for the reason that a large proportion of the Greek people realise that any change at this point would not bring peace to the country. Yet the Monarchists would not accept the verdict as the final word on the subject. The Greeks have yet to prove that they can make a success of a Republic; but at the moment they are committed to the attempt. From the point of view of the Monarchists it is far better to allow the Republic a longer trial, if only for the reason that the question of the form of government cannot be argued or voted upon solely on the merits of the two systems by a people weary of political

squabbles and their disastrous consequences. In a few years' time both sections of the nation should be able to approach the matter more dispassionately with more evidence at their disposal on which to base an unprejudiced opinion.

The Bulgarian Elections.

On the principle that a large number of entries for the Derby bespeaks a healthy condition for English racing, it might be thought that a list of forty thousand candidates for less than three hundred seats in the Sobranie argued a similar condition for Bulgarian politics. There can, however, be over-production of politicians as well as of potatoes, and the time would seem to have come for a scientific overhauling of the Bulgarian political system. In the first place a Chamber of 273 seats would seem to be an over-generous allowance for a country of less than six million inhabitants. Yugoslavia has one Member of Parliament for forty thousand inhabitants, Roumania one for forty-six thousand. Bulgaria, however, requires one Deputy for every twenty thousand of her total population; and so great is the attraction of a seat in the Sobranie that this year forty thousand candidates are reported to have offered themselves for election. If the English system of a substantial forfeit for every candidate who fails to secure a certain proportion of the total number of votes polled were in force in Bulgaria, the Bulgarian Exchequer would reap a welcome harvest, although we do not suppose that the whole forty thousand actually figured on the final list of candidates. It is to be feared that this abnormal list of parliamentary candidates reflects a chaotic phase in the country's political history, resulting from its domestic troubles of recent years, as well as the tendency of the provinces to assert themselves at the expense of the capital. In the early days of Bulgaria's existence as an independent State, wholly agricultural in character, it was inevitable that Sofia should dwarf the rest of the country; but with the growth of trade the provinces have acquired a sense of their own importance. At the beginning of the century there were only six towns with a population above

twenty thousand; to-day there are at least a dozen. The capital, it is true, has grown to a greater extent than any other town, but the towns whose numbers give them some claim to attention are now numerous enough to challenge any attempt on Sofia's part to usurp sole control of the country's politics. Hence the multiplicity of electoral lists. In the long run this tendency, as distinct from the present particular form of its manifestation, will be all to the good, but in its early stages it may well bring about a situation that will not conduce to the smooth running of political life in Bulgaria.

M. Liaptcheff's Success.

In spite of the competition for seats in the Sobranie the result of the elections has given M. Liaptcheff a substantial majority, about two-thirds of the total number of deputies. This success for the Government party had been anticipated, but it is noticeable that the next largest group in the Sobranie will be the Extreme Agrarians with fifty-five seats. The middle parties have again gone to the wall. M. Malinoff, who is regarded as the only possible alternative to M. Liaptcheff as Prime Minister, will have a following of only twelve. In the interests of Bulgaria it is to be hoped that the result of the elections will encourage the country to settle down peacefully to the hard work of reconstruction. King Boris is reported to be contemplating this year a second tour abroad, which should take him to London and Paris. His Majesty's visit to England is long overdue, but the reasons of State that have prevented him from leaving Bulgaria for any length of time until now have been appreciated, however much they may have been regretted.

Yugoslav Politics.

When the present Government in Yugoslavia assumed office in the middle of April the Skupshtina was at once prorogued, to give the new Prime Minister time to consolidate his position. The interval has witnessed much coming and going among the politicians. M. Voukitchevitch is credited with the intention of consolidating the present understanding between his own Radicals and the Democrats, with a view, if possible, of forming a homogeneous party, deriving its main strength from Serbia, but not necessarily confined to Serbs. According to general expectation a decree dissolving the Skupshtina is shortly to be issued, and elections will be held in September. By that time there may have been considerable modifications in the political grouping. A noticeable feature of the last two months has been the unwonted silence of M. Raditch. The wish is probably farther to

the thought among those who affect to believe that he has been ousted from Croatian political life; for he is still the accepted leader of the chief Croatian party. There are, however, signs that the other political units among the Croats are trying to coalesce with a common programme. It appears to have been realized that under the leadership of M. Raditch Croatia has little chance of playing the part in Yugoslav politics to which her intellectual attainments and economic importance entitle her. One effect of the rupture of Anglo-Soviet relations has been to discredit among the Yugoslavs all leanings towards Moscow—a movement which at one moment was regarded as being gradually forced upon the country by the supposed success of Italy in isolating it in South-Eastern Europe. As the high-priest of the cult of close relations with Soviet Russia, M. Raditch will be liable to be thrust still farther in the background, if emphasis comes to be laid on the essentially "European" destiny of Yugoslavia. Discussions on these lines reflect a certain amount of nervousness still prevailing with regard to the international position of Yugoslavia; but complete confidence is hardly to be expected before more stability has been achieved in home politics.

The Army Controversy in Egypt.

An unfortunate controversy has arisen between the Egyptian and British Governments over the Sirdarship of the Egyptian Army—a post hitherto held by a British officer. In keeping with the policy of eliminating the British connexion with Egyptian affairs the Legislative Assembly has marked down the Sirdarship either for an Egyptian officer, or, failing that, for abolition. The British Government, on the other hand, in view of its ultimate responsibility for the integrity of Egypt and the security of foreign interests in the country, does not see its way at present to agree to a step, which, coming on the top of the almost complete elimination of British officers from the Army, would deprive it of any voice in the disposition of Egyptian troops. It is a very obvious controversy. The Egyptian Government can point to the omission of any reference among the Reserved Points to military matters, and the British Government can reply with equal force that the whole contains the part, in other words, that responsibility for the protection of the country and foreign interests in it covers a measure of supervision over the Egyptian Army. If the Egyptian Legislature is anxious to bring disagreement to a head, it could probably not find from its point of view a better subject on which to do it. Great Britain, on the other hand, will meet with a very wide measure of support from all countries with interests in Egypt that have acquaintance with the practical side of military affairs. Some way out of the difficulty will have to be found, as it is very evident that the interests of Egypt require smooth relations between the two countries. There must admittedly be anomalies in the status of Egypt, but we could wish that the Egyptian Parliament would realize that these anomalies acquire practical significance only when they are pushed to the forefront and made the subject of agitation. At all other times they will be found to make little or no difference to the daily life of the country.

Reason or Force.

There could be no more regrettable development in Anglo-Egyptian relations than that every few months the Egyptian Government, under pressure from extremists in the Legislative Assembly, should find itself obliged to test, in one way or another, the consistency of British policy, only to beat an uncomfortable retreat when the final argument on Great Britain's side is brought forward. The crux of the whole problem is that Great Britain cannot step out of Egypt and allow another Power to take her place. As the Egyptians recognize that they cannot defend their country against all comers, it should follow that they concede willingly a special position to Great Britain in return for her protection and their independence. The point at issue should thus be just where the line of

the special position can be drawn. Clearly a satisfactory settlement can be reached only by friendly negotiation. Yet it appears to British public opinion that Egypt has so far refused such negotiation, and under the lead of extremists in her Parliament has sought either to browbeat Great Britain into acquiescence in Egyptian claims or to steal a march on the British position. Such tactics inevitably defeat their own ends, because they create suspicion and prevent many concessions from being made which offer no risk when accorded to a friendly nation, but which may prove a dangerous weapon in the hands of a hostile one. Even in this case of the Sirdarship, it is obvious that the Egyptian Army would provide no protection for the country, if its loyalty to the supreme command were undermined; yet no British Government could allow the question to be taken out of its hands and settled by a few extreme speeches in the Legislature. Nothing could be more fatal to Egyptian interests than that the impression should gain ground that there is no possibility of any points at issue between Egypt and Great Britain being settled by reason, and that, therefore, a show of force must always be kept in the background. Great Britain's record in China and elsewhere shows how far she is prepared to go along the path of peaceful solution and it is a pity that she receives no credit in Egypt for this attitude.

An Anglo-Wahhabi Treaty.

Until the actual terms are known of the Treaty which Sir Gilbert Clayton has signed with the Wahhabi leader, King Ibn Saoud, it is idle to speculate upon the future of Arabia and particularly of Anglo-Arab relations. The essential thing is, however, that an amicable conclusion has been reached to the negotiations that were started last November at the request of the ruler of the Hijaz and of Najd. Whether there has been any marked conciliation on either side, and whether points that appeared extremely doubtful of settlement have actually been smoothed over—all this must be left for comment until Sir Gilbert Clayton has returned to London. In the meantime we may cordially congratulate both the British and the Arab parties to this new agreement. And, apart from personalities, it is obvious that the various Departments of the British Government which issued instructions to the British representative also deserve credit for their envisaging of the new situation that has arisen in Arabia. That a second rebuff should have succeeded the negotiations last year with another Arab chieftain, the Imam Yahia of the Yaman, was, indeed, almost unthinkable, but it is highly satisfactory that the Anglo-Wahhabi position is now settled.

The Iraq Budget.

The report of the debates in the Baghdad Majlis upon the Iraq Budget makes interesting reading. Criticism appears to have been fairly severe, having been directed against such things as the salaries of both British and Arab officials, the Government Press, the inadequacy of the allotment to productive departments, like Agriculture and Irrigation, the failure of the Government to cope with such problems of health as is provided by the malaria evil in the Euphrates Valley, and other alleged mistakes. It is asserted that this criticism was both able and intelligent, and if that is so, such Iraqis as the present Prime Minister and Finance Minister will be the last to resent it. It is, however, obvious that there must be a near limit to which an Administration so embarrassed as is that of Jaafar Pasha with a multitude of duties and with so scant resources to carry them out can rightly be criticised. The tendency for more than one Oriental Parliament at the present time is to indulge rather in hindering than in assisting the rulers of the country, and though on occasions such procedure may serve a useful purpose, its indiscriminate use is manifestly likely to be generally harmful. We are not in possession of sufficient details to pass an opinion upon the recent debates on the Iraq Budget, but it

would certainly seem improbable that so patriotic a man as Yasin Pasha could justly be accused either of extravagance or of neglect of his country's interests.

Palestine and its Critics.

During the past few days two interesting criticisms have been made upon the way in which the Mandate for Palestine is being exercised. The first emanates from the Arab Executive, who have sent a Memorandum to the League of Nations; the second from the Radical and Revisionist section of the Zionists. Both these parties are minority parties—at least the Arab Executive did not fare conspicuously well in the municipal elections in Palestine, and the Revisionists are disclaimed by the Zionist Organisation—but their views are certainly worthy of notice. The Arab Executive begins by stating, as do practically all critics of the British Administration in Palestine, whether Arab or Zionist or neither, that the Mandatory Power has “failed to carry out the terms of the Mandate.” This complaint is at least arguable; but the Arab document proceeds strangely when it claims that “excessive and uneconomic” Jewish immigration has injured the Arabs more than the Jews. It is just this particular way of asserting facts that makes such Arab documents so easy of rebuttal. Further complaint is made that the population of Palestine is “further away from local autonomy than the inhabitants of the degraded Colonies of Great Britain,” and protest is entered against the floating of the Palestine Loan, the introduction of a new Palestinian currency, and the granting of the Dead Sea Concession without consultation of Palestinians. There is in this Memorandum, we think, not very much that is likely to commend itself to the League of Nations, which has heard before some of its major arguments. Not that it vitally misrepresents Arab opinion in Palestine (or, for that matter, Arab opinion on Palestine), for the decline of the Arab Executive may be due as much to expediency and to personality as to any yielding on principle; but the *non possumus* attitude of the recalcitrant anti-Zionists has already been disapproved of by the League.

The Jewish Extremists.

The Conference of Zionist Opposition parties which recently met at Berlin was unequivocal in its condemnation alike of the official Zionist Organisation and of the Mandatory Power in Palestine. In its statement it asserts that the recent extension of the Jewish Agency (which involved “the humiliating agreement with the Marshall group”) has resulted in shaking the Zionist Organisation, and that the policy of the Jewish Agency has failed and is, indeed, futile. Turning to the British Government, it declares their attitude to be most unsatisfactory; the British Administration, according to the Revisionists, “persists in its policy of passive neutrality towards the Jewish upbuilding work.” What must be done is to get rid of the Churchill Memorandum (“which retards our colonisation work”), and oblige the British Government, in accordance with the Mandate, to reconstruct the Jewish National Home, especially in the matter of agrarian questions, taxation, customs laws, public concessions, a Jewish unit in the Palestine Defence Force, and so on. Certainly this Berlin Conference, if not contributing any very new ideas to the problem of Palestine, did not mince its words; and it is well to know what the less compromising Zionists, as well as the less compromising Arabs, are thinking. Comparison of these two Memoranda, the Arab and the Jewish, will, we think, convince most people of the necessity of holding the balances as evenly as the British Government is now preserving them.

The Basra Correspondent of *The Times* states that the instructions recently issued by the Baghdad Government to Departments not to appoint Indians, except Indian experts, to official posts, are causing concern among the large Indian population in Iraq, and that prominent Indians have protested against such a reward “for the blood and money spent by India in liberating Iraq from the Turkish yoke.”

THE EAST AND THE ANGLO-SOVIET RUPTURE.

As was to be expected, the rupture of Anglo-Soviet relations has caused many words and much ink to flow in the Near and Middle East. Owing in part to the exigencies of telegraphic summaries, which give only the bare outlines of the story, and in part to a limited acquaintance with the bearings of world politics, there is a disposition to concentrate attention on the dramatic repercussions that are expected to occur immediately rather than to apply the moral of the whole proceeding. In the first place, an attempt is made by some of those who seek to enlighten public opinion in their own country to show that the rupture was the inevitable outcome of the accession to power of a Conservative Government. It is assumed that there is a natural incompatibility of temperament between such a Government and Soviet Russia which sooner or later had to come to a head, whereas a Labour Administration could be relied upon for a more sympathetic disposition towards Bolshevik doctrines and methods. This assumption, however, ignores certain essential points—that the Anglo-Russian Trade Agreement, which has now been denounced, was not the work of a Labour Ministry, but of the Coalition Government of 1921; that, although Mr. Ramsay MacDonald's Government conceded *de jure* recognition to Soviet Russia, it showed by its reference to propaganda in the very letter according this recognition that it was well acquainted with Soviet viciousness, and at a later date it had occasion to protest against violations of the letter and spirit of the Trade Agreement. There has been no opportunity for the Press of South-Eastern Europe to learn the story of the long-suffering patience and toleration of the British Government as unfolded by Ministers in Parliament; it knows practically nothing of "these constant and flagrant breaches of the understanding (Trade Agreement), and of diplomatic courtesy and friendly relationships," some of which Sir Austen Chamberlain described with such telling effect to the House of Commons. It is supposed that the British Government merely took advantage of a missing document to carry into effect its resolve to break with Russia, and staged the Arcos raid as an appropriate setting. The facts of the case, however, are that the present Cabinet has gone out of its way to preserve diplomatic relations with Russia by the exercise of a patience and forbearance which the Prime Minister very rightly characterised as probably unparalleled in the relations of diplomacy.

As far as Great Britain is concerned, the point at issue is between this country and the Soviet Government. No attempt has been made to engage the action of any other Powers or to embarrass them with Great Britain's problems and difficulties. The search for possible repercussions in Europe is based on a misunderstanding of the situation in regard to Russia. All of which the Soviet Government is capable has been done during the last few years, in spite of treaties and pledges. It had flattered

itself that the walls of the so-called capitalist and bourgeois system would fall at the first blare of the Communist trumpets; but when it found that the only immediate result was the slow starvation of Russia, it tried to make use of the proscribed system, while scheming all the time for its overthrow. Great Britain was the first country to act upon the belief that Soviet Russia might still be saved from itself, and she was prepared to give all the help in her power, on condition that the decencies of international relations were observed. The stipulation, however, proved to be too exacting for those who now constitute the Government of Russia. They have paid the British the compliment of regarding them as the main, if not the only, obstacle to the success of Communism, and for this reason have concentrated on an attack on the British Empire, while availing themselves to the full of the patience and tolerance that had been accorded them by no other country. To-day Great Britain has had enough of the Soviets and their outrageous ways. If, as may be expected, they continue to intrigue against the British Empire, it will not be, as hitherto, with the advantage of a monster organisation in the capital of the Empire, enjoying certain diplomatic privileges. That there should be important developments elsewhere as a result of this rebuff would require more vitality in the Soviet system than it has hitherto shown. The concentration on the British Empire was an admission that Soviet resources could not deal with the whole world at once, and it has had to buoy up its deluded followers with the belief that the collapse of Great Britain would mean the final triumph of the Soviet system. How much nearer they are to this goal as a result of the rupture of Anglo-Soviet relations it will be for the facile spokesmen of the Moscow Government to explain.

The countries of the Near and Middle East, in regard to Soviet Russia, are divided into two categories—those that have hitherto kept the Bolsheviks at arm's length, and those that have made a parade of their friendly relations with Moscow. To the first category belong the Balkan States; to the second, Turkey, Persia, and Afghanistan, although Persia may have wished to qualify for the former category. To these three countries the recent events in London may well give occasion for serious thought. The story of the incidents that led up to the rupture of Anglo-Soviet relations will, when known, open their eyes to the true character of the Moscow Government. They will realise that, if they have hitherto been spared these special attentions associated with Bolshevik propaganda, it has been because they were not regarded as worthy of Soviet shot. The situation might easily become embarrassing and dangerous for them, if the Moscow Government should be compelled, owing to dwindling resources, to admit defeat in Europe and to try to consolidate its position in Asia. There must be even now in Moscow longer-sighted disciples of Communism who are inclined to regret that Soviet Russia essayed her world-task single-handed, instead of winning over Asia first and then advancing, thus strengthened, to the final conquest. Certain it is that the Soviets must be aggressive or perish; if they have missed the big game, they may have to fall back on the smaller. Neither Turkey nor Persia, whether single-handed or acting together, could hope to withstand a serious onset from Moscow, and they know to-day exactly what protection their solemn treaties with the Soviet Government afford them. Both countries, it will be noted, represent a social system abhorrent to Bolsheviks. In these circumstances, their chance of salvation would seem to rest solely in their identification with the non-Soviet forces of the world, in the hope that community of interest may supply both the strength from without that will help them to resist the cruder forms of aggression, and, more important still, the strength within, based on domestic content and material progress, which will render the country proof against insidious undermining by propaganda. They should, therefore, wonder less what will now happen to Great Britain at Soviet hands, and pay more regard to their own prospects.

The Near and Middle East*

From Our Own Correspondents.

Cairo, May 21.

Another Ministerial Crisis.

Another ministerial crisis has arisen this week. The actual cause was in itself a trivial one, viz., a deputation of Senators and Deputies asking for the reinstatement of an Omda. But it was the fact that this was only one of a long series of similar attempts, which during the past year have been making the task of those responsible for the administration almost impossible and have become accentuated during the past few weeks, that provoked the outburst from Sarwat Pasha and the decision of the Cabinet to resign.

In this the Ministers were perfectly justified. The Adly Cabinet fell because of the encroachment on the Executive by, and the lack of support it received from, the Chamber, and it was no secret that the Sarwat Cabinet accepted office only on assurances from all its Wafdist friends that these tactics would cease. It has been barely three weeks in office, and yet it has been subjected to exactly the same annoyances as its predecessors, i.e., daily, almost hourly, pressure in favour of this or that Omda or subordinate official and questions in the House, each of which has had for object to make its position difficult and against which none of its Zaghoulouist supporters have ever raised their voices in protest.

Sarwat Pasha and his colleagues fully realised that their resignation would produce a serious situation—so serious indeed that the news of their intention to resign brought Zaghoul Pasha post-haste back to Cairo. But logically they could not continue to submit to tactics which had been the cause of their previous resignation; and if they had not resigned on this incident they would have been compelled to such action by some other similar incident in the near future. They have renounced their intention on further assurances from Zaghoul Pasha and his supporters, and the position of Sarwat Pasha and his colleagues should be considerably strengthened, for undoubtedly the Chamber, which, as a body, has no wish for a dissolution, has had another good fright, though, to judge by past experience, the effect of such shocks does not appear to be very lasting. The trouble is, of course, that the Chamber suffers from impetuosity and a lack of political sense and so is easily led astray by certain elements, which have their own axes to grind, to follow courses conducting whither it has least desire to go. It is this inability to see ahead and this susceptibility to passing influences, rather than any deliberate intentions, that have really been responsible for the recent crisis and troubles.

But whether the Chamber has this time had a salutary lesson or not, it is too much to expect that matters politically will continue without incident, for there is a Nationalist opposition in the Chamber, which seeks not

unnaturally to annoy the Government, and it is now being reinforced in such tactics by the Left Wing of the Zaghoulouist party, which is disappointed at its failure to secure posts, and by the Liberals, who are still sore at the exclusion of Dr. Hafez Afifi from the Cabinet. But if the main body of Zaghoulouist deputies will only stand, as it should, by the Government and oppose, instead of lending itself to, these vexatious tactics, it will be possible for the Sarwat Cabinet to ignore these attacks and preserve in its efforts to carry on the administration of the country for the national good. Any other course on the part of the Zaghoulouist majority can but lead to political disaster.

Two Interpellations.

On the day the Cabinet agreed to remain in office two important interpellations came up for discussion in the Chamber, one on the fact that the High Commissioner does not present credentials like the members of the Diplomatic Corps, and the other on the recent assaults on European women. In both instances the opportunity was taken to make very violent attacks on Great Britain; in both instances it was noticeable that these attacks were made by the Liberals and Nationalists, and that, as in the case of the criticism of the Palace Budget three days previously, the Wafdist deputies, as a whole, refrained from actual participation in the debate, though many of them joined in the applause; and in both instances Sarwat Pasha cleverly contrived in his replies to escape with dignity from the delicate position in which he had been purposely put and he did not hesitate to administer a well-merited rebuke to the speakers for their intemperate language.

It may be that Sarwat Pasha's firm attitude had a great deal to do with the manner in which the debates, including that on the Palace Budget, ended, but one cannot help feeling that, if after such outbursts a negative or passive attitude is adopted when it comes to the point of decision, the deputies would do well to refrain from these unedifying exhibitions and so avoid wasting time which could so profitably be devoted to matters on which definite decisions are urgently needed.

A Tea Party.

The leading Ulema were entertained to tea by the High Commissioner at the Residency this week. A similar party is always given during Ramadan, but this year it had to be put off owing to the death of Prince Ibrahim Hilmy. Tea was served in the house, and afterwards the guests went out into the garden and seemed thoroughly to enjoy themselves.

CYPRUS.

Nicosia, May 17.

Opening of the Odeum.

On May 2 took place the opening of the Odeum at Nicosia, the establishment of which is due to the initiative of Sir Ronald Storrs. All the notabilities of the capital were present. The British national anthem was played by the band of the Armenian Philharmonic Society. The

Governor made a long and appropriate speech. The fact that at the proceedings precedence was, as usual, given to the Chief Kadi and the Mufti over the Greek Archbishop, was the subject of adverse comment by leading Greek journalists.

The Governor and the Greek Archbishop.

Sir Ronald Storrs in a recent visit to His Beatitude urged the importance of the proposed Byzantine Museum. The view of the Prelate and the Holy Synod is that all busts, memorials, etc., should remain in the Churches to which they belong, but that catalogues should be prepared in order to prevent the sale or exportation of any of these. The suggestion has been approved that a Professor, Dr. G. Soterios, of the University of Athens, should be invited to undertake the work contemplated. The Governor took occasion to address the Archbishop as Patriarch, holding the view that the Autocephalous Church of Cyprus ranks as a Patriarchal See. Sir Ronald continues actively to promote various projects, a museum of Byzantine art being one of them.

Nationality of Non-British Cypriots Abroad.

The problem of those who failed to qualify as British subjects, especially those in Egypt, where the Cypriot colony is very large, is still in suspense. The question is now complicated by the fact that, by a new law in Egypt, these people must either become Egyptian subjects or leave the country within six months. The dilemma is a serious one for the Cypriots affected. The Governor has promised to do what he can in the matter.

The Mail Service.

Sir Ronald Storrs has recently conferred at Nicosia with the Director of the Khedivial S.S. Co., with a view to a more advantageous rearrangement of the Cypriot itinerary; but various objections are said to stand in the way. General feeling appears to support the view that if acceptable terms cannot be agreed to, it would be better to terminate the present contract with whatever loss may be entailed, than to continue a service that does not correspond to the commercial needs of the island.

More Tourists in Cyprus.

On May 2 the s.s. *Stella d'Italia* brought 230 British and American pilgrims to Larnaca, to do honour to St. Barnabas. Some of them brought letters of introduction to the Archbishop from Canon Douglas, now well known in Cyprus. General Sir Edward Chaytor was among them. Some of them were entertained at lunch by the Governor. They were received with great courtesy and friendship by the Archbishop. Their visit was in many respects similar to that of the 400 English and Canadian tourists who visited Nicosia some weeks ago.

General News.

Greek members of Council are urging that permission to return to Cyprus may be given to two exiles who were expelled from the island—M. Katalanos and Dr. Zannetos, of Larnaca, who refused to comply with a law passed in 1922. They have been living at Athens.

The Summer Festival of Venus, generally called that

of the Kataklysmos, or Flood, which is celebrated annually on the coasts, especially at Larnaca, is to be carried out after unusual preparation. Besides a regatta and swimming races there will be Cypriot dances, songs, poems, pipe-playing, and beauty competitions for villagers, and and exhibition of island embroideries. Sir Ronald and Lady Storrs have promised to attend the fête.

The value of exports for the first three months of the current year exceed those of imports by £18,266—a satisfactory sign of improvement.

ID-UL-AZHA.

On the occasion of the Muslim Festival of Id-ul-Azha, June 11, the Imam of the Mosque at 63, Melrose Road, S.W.18, is holding a Garden Party, at 3 p.m. Sirdar Ikbal Ali Shah will speak on "The Importance of Islam to the British Empire," and Sir Michael O'Dwyer will preside.

NEWS IN BRIEF.

The Persian Cabinet, which took office on February 8, resigned on May 28.

Sir Thomas Best, Lieutenant-Governor of Malta, sailed for England last week on leave.

H.M. battleships *Malaya*, *Royal Sovereign*, and *Barham* left Malta on May 29 for Egypt.

Lord Lloyd, British High Commissioner in Egypt, attended an Empire Day gathering at the Sporting Club, Alexandria, on May 24.

The Duke of the Abruzzi, having concluded his visit to the Abyssinian Court, left Addis Ababa on May 25 by special train for Jibouti.

The King of Roumania left on May 24 for the Palace of Sorofiste, in the Royal domain of Buftea, not far from Bucharest.

The Custom House at Beyrout was completely burned out on May 23/24 and goods were destroyed of a value estimated at £1,000,000.

Seifullah Pasha Yusri, the new Egyptian Minister to Warsaw, presented his Letters of Credence to the President of the Polish Republic on May 24.

General Milosavlyevitch, who was included in the present and last two Yugoslav Cabinets as Minister of Communications, has now been put on the retired list of the Yugoslav Army.

Lieutenant-General Sir Peter Strickland, successor to General Sir Richard Haking as G.O.C. British Troops in Egypt, arrived at the Residency, Cairo, last week.

A good many Persians have died of typhoid fever, which has been prevalent in Teheran for the last three months, but there have been no victims among Europeans.

Brigadier-General Sir Gilbert Clayton, who has been negotiating with the Wahhabi Government, arrived in Cairo on May 24 from Jidda, staying at the Residency. He left for England on May 29.

Excavation was resumed on May 23 on Mount Ophel, just below the south-east corner of the modern wall of Jerusalem, where Professor MacAlister made discoveries in 1925, by Professor J. W. Crowfoot, Director of the British School of Archaeology, on behalf of the Palestine Exploration Fund.

The Little Entente.

Spectators of Balkan affairs looked for nothing new from the meeting of the Little Entente at Joachimstal. Although these meetings serve hardly any other purpose than the mutual exchange of ideas, there is always the chance that differences of opinion may arise.

It is said that certain treaties will affect the Little Entente, but since the former were made on commercial and peaceful grounds, they would appear to be in no way dangerous to the status of the Entente. The Correspondent of *L'Indépendance Roumaine*, quoting from an interview with Dr. Benesh, states that European events can have no effect in shaking the power of the Little Entente; yet one cannot but recall the powerlessness of the Little Entente on the occasion of certain recent South European events.

Quoting again from Dr. Benesh, *L'Indépendance Roumaine* says:—

What is usually said about the effect produced on the Little Entente by various European political events rarely corresponds to the truth, for either the conception of the very aim and essence of this Entente must be wrong or else a false impression has been created of the actual changes and events. Not a single political event has taken place recently without certain papers and certain people having deduced therefrom some menace for the Little Entente. In spite of this, the Little Entente continues to exist; it is stronger than ever, and the Conference at Joachimstal will furnish an occasion not only of proving its solidarity but also of determining its ultimate object and of rendering the co-operation of its members more efficacious. . . .

Bulgarian Electoral Campaign.

The large number of groups and factions in Bulgaria partly accounts for the amazing lack of preparations for the elections. Each small group being powerless alone, amalgamates with some other party. Such a system leads to intrigue and lack of co-operation, and therefore cannot make for strength. The representative of the Yugoslav *Morgenblatt* in Sofia gives the following account of the election campaign:—

On May 29 the Parliamentary election takes place. Four weeks of emotional struggle are pending for the country.

The inter-negotiations of all parties and groups of the Opposition are drawn exclusively towards the distribution of the seats. Not one of them will entertain a combined programme and each is working for its own constituency; each has amalgamated with less powerful factions or groups in order to acquire as many seats as possible. Programme and platform are similar things, formalities of inferior significance on which one can discourse later.

The plan of Alexander Malinoff to unite all the Left Democratic

parties, such as the Democrats, Radicals, the moderate Agrarians and Socialists in one powerful Opposition group, which would have been possible in the régime of the "Demokratitscheski Sgovor," has not been realisable; instead of which Dr. Malinoff, who has been allowed more than once to carry out significant changes in the political life of his country, must content himself this time with a very small absurd Coalition, consisting of his own group, a part of the Agrarian party under the leadership of Tomoff and a fraction of the National Liberal group under M. Koertscheff.

The small group of Stambolovists, which seemed at first on the decline, and was likewise following him, has changed over at the last moment, considering it better to coalesce with the hitherto ardent fighting Government party of the "Sgovor." From a purely practical point of view the Stambolovists are in the right: the hand of the "Sgovor" is strong and will make for power: it has more to offer, and the offer is surer than Malinoff's who only sets to work with projects and promises.

Very interesting is the fact that also the Prime Minister, M. Liaptcheff, and his "Sgovor" are attempting an agreement with small factions and groups and try constantly to buy over seats with valuable concessions and sacrifices. After the Prime Minister has united with the Stambolovists, he starts negotiations, as at present, with another faction of the National Liberal party under the leadership of Smiloff. To what purpose and with what idea is M. Liaptcheff working, since according to the prevailing franchise the parliamentary majority of the "Sgovors" is assured? Is M. Liaptcheff thereby making sure of a "loyal" Opposition in the Sobranye or is it a question of, as many maintain, the influence of the "Plemena" to weaken Tsankoff, Kalfoff, and Rousseff within the "Sgovor" and thus to free himself from the "stock"? . . .

In such a casual light does the kaleidoscope of Bulgarian party politics appear four weeks before the elections. Concerning the prospect, there remains only this much to be said, that the "Sgovor" must retain power with a significant majority of mandates, even if the absolute and complete majority of votes be absent.

Turkish Railways.

Turkish reconstructive policy falls as a heavy burden on the Turkish Government and mitigates the advantages of maintaining the State control of railways. Turkish railways in course of construction are particularly affected by the lack of foreign capital invested in the country; and industrial and mineral enterprise is bound to suffer from the state of Turkey's credit. *La République* states with regard to the railways:—

When H.E. Ismet Pasha proclaimed in Parliament, with his usual precise language, the extreme importance which the Government attracted to the construction of railways, certain people objected that Turkey was far from able to succeed, alone and with her own capital, in this huge enterprise, and that it would be unjust to burden one generation alone with this enormous expenditure. Thus indeed would all nervous or envious people think. For in the first place Turkey had no intention of disdaining foreign capital, provided that foreign capitalists do not harbour political designs. The conventions recently passed by the Republican Government for the construction of various railways, abundantly show the breadth of view of our national rulers. In the second place, one must totally ignore the ideals and energy of the Republic and believe that one still has to deal with the old Ottoman Empire, were one to imagine that the Republic was resignedly and stoically waiting for foreign capital to be put to use over here. . . .

The railways which are working, together with those under construction, belong solely to the State and are the property of the Turkish nation. Those States which gave up the running of their railways to foreign enterprise are attempting to reclaim possession of this means of communication which constitutes the vital point of public life. Thus, in our opinion, nothing justifies States control better than its application to railways, and therefore the present generation could not follow a better and safer policy than this one which assures their own defence and that of their descendants. . . .

M. J. A.

According to *The Times* Sofia Correspondent it is reported that after the General Election and the Ministerial reorganisation which will follow, King Boris of Bulgaria will undertake a foreign tour, in the course of which he will pay official visits to Rome, Paris, and London. The King will travel with a small suite, and will be attended by a Cabinet Minister.

Etchings of Iraq.

The work of Mr. Charles W. Cain, a young artist who has made a name in the representation of Eastern subjects, has been noted more than once in *THE NEAR EAST AND INDIA*, but the occasion has arisen, through the exhibition of his works that was opened on May 31 by Sir John Ferguson at Greatorex Galleries, Grafton Street, Bond Street, for a rather more comprehensive explanation of the particular niche which he is filling in contemporary

Daughters of Israel.

As is obvious from their apparel, the Jewesses here depicted are married women, who have to wear the full veil.

British etching. In one word, Mr. Cain has made the East his own, and at the same time ours. There is no other artist that we know who has so caught and retained the essence of Mesopotamia. In water-colours, it is true, Mr. Revel has vividly depicted certain scenes of Baghdad for us; but in etching Mr. Cain had and still has this field to himself.

But first a word on the artist himself, who is but in his early thirties. He is a Londoner—no very great advantage, this, to the career of an artist—and was trained at the Camberwell School of Art. At the age of seventeen he went to South Africa as political cartoonist to the *Johannesburg Star*. There he joined the Imperial Light Horse; so that the Great War found him ready. In 1915 he was commissioned to the Border Regiment, and early in 1916 went to India. After serving on the North-West Frontier, he volunteered for Mesopotamia. Here he served until the end of the War as a machine gun officer. After the Armistice he went up to Karind, so that he knows a little of Persia as well as Iraq. How he organised the first art exhibition in Baghdad, and what he owed in this connexion to the late Gertrude Bell, are, I think well known. Suffice it to say that before he finally left Baghdad in 1919, he had visited the Shan States in Burma. Since his sojourn in the East he has studied earnestly; with results that may be seen in the Royal Academy, in the Royal Scottish Academy, in the Paris Salon, and in many other places from America to Florence.

I should explain that for these details I am indebted to the artist himself and to Mr. James Greig's Introduction to the catalogue for this exhibition. Reproduction of

the three plates is possible owing to the courtesy of Mr. Cain's publishers, Messrs. Greatorex Ltd.

The most striking thing about Mr. Cain's Iraq scenes is that they convey not so much the transient impressions of the British soldier as the soldier, chronic facts of the life of Mesopotamia. The trials and excitement of the War are, in fact, nowhere to be seen in these tranquil dry points. It is the immemorial, the unchanging, which for the most part is recorded. The still beauty of immutable custom or of ceaseless reverence pervades his representations. One would mention, as illustrating the point, one from the first Mesopotamian set, done in 1921, "Three Men in a Mahsoof," in which the eternal palm fringes a broad sheet of water whereon are three such Arabs as may have existed before Islam; "Ezra's Tomb" and "Ctesiphon Arch," "Aka-Kuf," "The Cherad" (the primitive instrument by which an ox hauls water up from the river), "Loading Dates, R. Tigris," "Bellying Sails," "Gufas, Baghdad"—and there are many others which show how deeply the objects and subjects of Mesopotamia have bitten into the artist's memory.

In a sense, however, some of these things are interesting mainly as a record; certain of Mr. Cain's earlier plates, particularly, do not add considerably to one's general artistic appreciation of the beauties of Mesopotamia. But even in the early years after the War, when his technique was not nearly so rich and finished as it now is, he could produce plates that evoke admiration or a much quickened interest. "Swinging the Lead, Fao," for instance (is there not here, by the by, a mixture of nautical and military metaphor?) is an etching that, somewhat in the manner of Briscoe, sets one fretting to "go down to the seas again." It is delicately done, and shows already that command over river space which is so notable a feature of many of the Iraq etchings. Again, "The Port, Basrah," with its busy cluster of British ocean-

Entrance to Kazimain Mosque, Baghdad.

Mr. Cain's Note on this was:—"Kazimain, with its sacred Mosque, the burial place of the Seventh and Ninth Imams, Mousa Kasim and Muhammad Taki, lies some three miles to the north of Baghdad, the two cities being connected by a ramshackle horse-drawn tram system. Decorated with glazed tiles, this gateway is the barrier beyond which the foot of the Infidel is not allowed to tread, and the beauties of the inner shrine are thus hidden from the Unbeliever."

going vessels, native craft, gufas, and so on, is a jolly representation of a scene that is ever-changing. "The Shamal, Mesopotamia," which depicts camels travelling before a sand-storm is uncommonly well-managed; but best of all in this genre is "120 degrees Tigris" (done in 1923). Here the wide, still sweep of the water and the artful bend of the bank which occupies so little space in the etching are combined to yield unerringly the sense of stifling heat. Subject and representation are like Rupert Brooke's Grantchester: "unforgettable, forgotten."

Before passing to what are incomparably the finest achievements of Mr. Cain—the Mesopotamian etchings done during the last two years—one may draw attention to other Oriental pictures. He gives but two impressions of his experiences on the Frontier; "The Raider, N.W.F.," depicting a huddled but hawk-eyed tribesman (of course with rifle) watching and waiting on a primitive

passes finally from the mere record to the illuminating review. "Loading Dates, R. Tigris," again, which superficially is but an example of how dates are transferred from the smaller boat to the larger, is a beautiful work. "Baghdad: Exchange Square" was exhibited in the Royal Academy in 1925; and a year later the same institution accepted "Entrance to Kazimain Mosque, Baghdad," which we are enabled to reproduce here.

A favourite work of mine is "Bellying Sails." This is, for subject-matter, unique. It reveals a date-laden vessel sailing the Gulf of Oman on the way to Karachi. The vessels and the roughish sea are finely managed, and, in the distance, stands the town of Muscat, with the old Portuguese ports clearly visible.

We have approached the flowering time of Mr. Cain's present career; the years 1926 and 1927. Now his touch is surer, whether in architecture, in living types, or in the water-scenes which are his joy. In "Baghdad: The

KIFL.

The town of Kifl, which is one of the few remaining Jewish shrines in Mesopotamia, is situated on the left bank of the Shutt-al-Hindia, a backwater of the River Euphrates. Its chief mark of interest is the Tomb of Ezekiel, the minarets of which rise above the flat and squat surroundings.

bridge; and "The Snake Charmer, Peshawar, N.W.F.," showing a music-blower and a snake erect. In the Burmese sets Mr. Cain manifests again his remarkable skill in the use of expanse of waters. Of these river scenes, which all possess a certain poetical loveliness, "A Peaceful Quest," with its solitary man in a noiseless boat, "Drifting Homewards," a ramshackle boat almost carelessly a-stream, "From Forests Far" (logs on the river), and "Crossing the Creek, Burma" seem the most fascinating. But perhaps the best Burmese etching is "Rice Fields, Burma," wherein the angularity of the living things, men and oxen, in the scene is forcibly suggested.

In 1925 Mr. Cain produced more Iraq scenes, and it is in these, I think, that can be definitely seen evidence of expansion into his later, grander manner. For instance, "Latticed Windows," which shows an Arab house by the river, tells us not only what the building looks like, but also what it looked like to the artist. For all its simplicity it holds mystery: it is more poetical than photographic. In other words, Mr. Cain is beginning more completely to invest his subjects with feeling and with personality; he

Great Mosque," for example, his sense of distance and his balance as between human beings in the foreground and the mosque at their back are notable. In "Kifl," which, incidentally, was exhibited at the Paris Salon and the Royal Academy this year, the detail is remarkable. (This town, by the by, contains Ezekiel's Tomb, the crumbled structure by which is depicted separately by Mr. Cain). And in "The Bent Palm," return is made to the simplicity of his earlier river scenes—palms fringing the river, boats lazily floating, and so on—but with a naïveté that is full and satisfying.

Lastly we come to the works which are fairly generally known and the merits of which are recognised: "The Water Carrier, Baghdad," "Indian Silversmith" in this year's Royal Academy, and "Hassan's House" (in this year's Royal Academy and in the R. S. A.). The characteristics of these two works were described a few weeks ago in THE NEAR EAST AND INDIA; and further study of them detracts nothing from what was then said in their praise. Mr. Cain's latest work is "Daughters of Israel, Baghdad," and it is certainly one of his finest. The reproduction of it here gives some idea of the beauty

of its shadows, which, it may be of interest to note, were obtained from the model that the artist made in England of "Hassan's House." There is a strange allurements about these married Jewesses and their quarters; the subject is one which, in its rareness and remoteness, makes a curious but quite certain appeal. Its technical excellence is patent.

Mr. Cain's exhibition is open for the whole of June. I think that I have said enough to indicate my belief that readers of THE NEAR EAST AND INDIA will be sorry if they miss the opportunity of a visit to it. Those who know Iraq best may appreciate it most; but these etchings will attract very widely. To re-present a country is not a simple task for the most accomplished artist, whether in words, by brush, or by other means; but of Iraq it is true to say that Mr. Cain has wizardry which can give to all something more than a glimpse of "that unforgotten land."

Book Reviews

THE PROBLEMS OF ISLAM.

"LE CONGRES DU KHALIFAT ET LE CONGRES DU MONDE MUSULMAN." By Achille Sekaly. (Paris: Editions Ernest Leroux.)

Although the problems raised at the Caliphate Congress at Cairo in May last year, and at the Grand Muslim Conference at Mecca about a month later, have not this year so agitated the world of Islam as to impel further conferences, they remain; and are certainly exercising the minds of many thoughtful Mussulmans. Now there has been spread about these two conferences of 1926, especially about the latter, a considerable amount of misleading and incomplete information, and all students of Islam are once more under a debt to *La Revue du Monde Musulman*, under whose auspices M. Sékaly has published his excellent and full record of the two Islamic meetings. And, as if the *procès-verbaux* were not enough, M. Sékaly has contributed an admirable preface, in which he emphasises the

salient points of the two congresses. Thus he notes how, in both conferences, the domain of politics, despite injunction to the contrary, was invaded. In the Mecca Conference, for instance, politics were broached by Muhammad Ali, in his motion for guaranteeing the independence of Arabia, by its convener, Ibn Saoud, in his declaration that the neutrality of the Hijaz should be guaranteed by all independent Muslim States, and by Shaikh Rashid Rida in his demand that Maan and Aqaba be retroceded to the Hijaz.

This volume is quite indispensable not only to daily observers of Islam but also to life-long students of the religion of the Prophet Muhammad. It will help them to understand and to sympathise with the manifold difficulties, both internal and external, that confront the Muslim world to-day. We unreservedly congratulate the author upon his enterprise; yet wonder to ourselves why such things should be left to Frenchmen, whose responsibilities in Islam are less considerable than those of the British, to undertake and so successfully to accomplish.

THE FUTURE OF THE JEWS.

"APELA, OR THE FUTURE OF THE JEWS." By a Quarterly Reviewer. (London: Kegan Paul, Trench, Trubner and Co., Ltd. 2s. 6d.)

This essay attempts to foretell the future of the Jews in the light of old convictions adjusted to new experiences. The Talmudic Doctors, from whose regulations "Quarterly Reviewer" tries to release English Jews, have a saying: "Since the destruction of the Second Temple prophecy was removed from true prophets and given to children and imbeciles." Did they guess that all prophets, good or evil, would fail in their prognostication? The greatest skill and widest knowledge combined are still poor qualifications to lift the heavy veil of the future. The writer's old convictions are really shaken, and his new experiences not very intelligently understood. Despite his criticisms, Zionism is a fact, sanctioned by the British Government, and a common ideal and hope of world Jewry.

The hopes which "Quarterly Reviewer" puts in the Reform-Liberal movement remind every student of Jewish history of the beginnings of this activity in Germany about 120 years ago. English Jewry passes through the same metamorphosis which German Jews experienced a hundred years ago. The trial failed there, and will fail here.

"Quarterly Reviewer" forgets, further, that there are many international bonds which keep Jews of all countries together. There is the Law. English rabbis consult and abide by decisions of Russian or Hungarian authorities. Then there is history, which unites the dispersed members of Judah. Jewish studies and research are not limited to one country or to another. One must not judge Jewish problems of the past, present and future from a narrow sectarian point of view, but from the undivided opinion of the majority of Jews, whose religion and nationality are so strongly knit together that stupid slogans of Shemah and Hatikvah Jews will make no difference whatsoever. Judaism is by nature and history progressive, listening to the voice of Time and accommodating itself more or less to the surroundings. Even that does not avert Anti-semitism. The Reform-Liberal movement among the Jews in America, which is by the way more Christian than Jewish, could not prevent the growth of anti-Jewish feeling. Why should Judaism, with convictions and experiences of so many thousand years, yield to ill-conceived experiments, dangerous destructive devices, or unmanly defacement of most sacred sentiments? All of them stand condemned by history, and will disappear sooner or later.

Whether Zionism will reap its full harvest or not, is still a question of the future, but one thing is certain, that it helped to defeat the destroyer, who was "not able to smite the House of Israel." Can we say the same of Reform-Liberal Judaism? I wonder what "Quarterly Reviewer" will have to say in 1956!

A. MARMORSTEIN.

A PAGEANT OF INDIA

By ADOLF WALEY. 15/- net.

Morning Post: "Adolf Waley sets forth the history of India down to the death of Aurangzeb in terms of picturesque character and episodes. It would be well if all British politicians were to read this story of poignantly constructed light and shade of heroic loves and fierce hatreds of almost quixotic chivalry and barbarous cruelty, and never forget that it is the basis and background of all that is happening to-day."

THE LIGHT OF EXPERIENCE

By SIR FRANCIS YOUNGHUSBAND, K.C.S.I., etc. 15/- net.

Yorkshire Post: "The Light of Experience may rank as Sir Francis Younghusband's greatest contribution to literature and is certainly one of the remarkable books of these days . . . a volume of wise and thoughtful things, some timely views on China and India born of rare experience and an observing mind, sharp pictures of the great ones of our own time, and an appeal and a prophecy directed to the best minds of the British Empire of to-day."

PERSONAL AND GENERAL

TO-DAY

June 2, 1927 (New Style).
May 20, 1927 (Old Style).
Julhiggia 1, 1345 A.H., of the Muslim Calendar.
Sivan 2, 5687, of the Jewish Calendar.

The Maharaja of Baroda is among recent arrivals at the Hyde Park Hotel.

Lord Treowen returned to 9, Great Stanhope Street last week from Palestine.

Sir Kay and Lady Muir have returned from South America to Blair Drummond, Perthshire.

Madame Yovanovitch has left London for Scotland, and will be away about three weeks.

General Sir Reginald and Lady Wingate left Queen Anne's Mansions last week for Karlsbad.

Mr. V. J. Patel (President of the Legislative Assembly in India) had the honour of being received by the King at Buckingham Palace on May 25.

Mr. B. S. Kamat, member of the Royal Commission on Indian Agriculture, arrived in London from India on May 26 to join the Commission.

Field-Marshal Lord Plumer and Lady Plumer arrived at the Rembrandt Hotel on May 27 from Palestine, and will remain there for about two months.

Sir Maneckji and Lady Dadabhoy left the Hotel Metropole on May 30 to take up residence at their home, Kingsnympton Hall, Kingston Hill, Surrey.

Lord Meston presided on May 26 at the Overseas Club at a luncheon in honour of Sir Frederick Whyte, K.C.S.I., given by the committee of the "Four and a Half Indian Cottages Fund."

Viscount Inchcape, who left London on May 27 to join Viscountess Inchcape in Paris, will be there over Whitsun, staying on for the general meeting of the Suez Canal Company on June 13.

The Maharaja of Rajpipla, who has arrived in England to see his tenth Derby, has bought the Manor House, Old Windsor, in which he intends to set up a permanent establishment.

Among those who obeyed their Majesties' command to attend the Court at Buckingham Palace on May 24, was Mrs. Alexander van Millingen, who presented her daughter Miss Frances van Millingen.

Sir Jagadis and Lady Bose have arrived from Calcutta, and are staying at the Artillery Mansions Hotel. Sir Jagadis is attending the meetings of the Committee on Intellectual Co-operation of the League of Nations.

The King received Colonel his Highness the Maharaja of Ratlam and his Highness the Raja of Pudukota at Buckingham Palace in May 25. Colonel A. D. Bannerman, Political Aide-de-Camp to the Secretary of State for India, was in attendance.

Among the many patrons of the Garden Fête, which will be held in July at the residence of Sir Herbert and Lady Samuel, 35, Porchester Terrace, in aid of Women's and Children's Welfare Work in Palestine, are the Earl of Balfour, the Marquess and Marchioness of Reading, Sir Robert and Lady Waley Cohen, Sir Wyndham Deedes, Sir Alfred Mond, Mr. and Mrs. Philip Snowden, and Mr. and Mrs. James de Rothschild.

Prince Alexander Bogovidy, of Rue de Saint Cloud, Suresnes, France, Governor-General of Easter Roumelia under Sultan Abdul Hamid of Turkey, and an ex-Ambassador, who died on July 7, 1910, left property in England of the value of £34,988.

Mr. Cecil Frank Beadel, C.I.E., of Hartley Court, Reading, a partner in Becker, Gray, and Co., Calcutta and Hong-kong, merchants, who died on April 4, aged 55, left estate of the gross value of £71,206. He left £500 to the Oxford Mission in Calcutta, for the Behala Mission; and £500 to the District Charitable Society of Calcutta.

Mr. and Mrs. Surendra Nath Mallik gave an at home at 10, Grosvenor Gardens, the rooms of the British Indian Union, on May 25 to meet the Countess of Lytton, who was accompanied by the Earl of Lytton, Viscount Knebworth, and Lady Hermione Lytton. The other guests included the Maharajahdhiraj of Burdwan, Lord Sinha, Countess Winterton, Mr. and Mrs. Syed Ameer Ali, Sir Robert and Lady Holland, Sir Stanley and Lady Reed, Sir Ganen and Lady Roy, Lady Pinhey, Sir Evan and Lady Cotton, Mr. and Mrs. N. C. Sen, the Misses Sen, Sir Walter and Lady Wilson, Lady Carey, Sir Robert and Lady Mant, Sir Thomas Richardson, Mr. Prafullah Tagore, Major Hassan Subrawardy, and Sir Jagadis and Lady Bose.

THE PERSIAN LEGATION.

The Persian Minister and Madame Sadri gave a dinner-party at the Persian Legation on May 27, and among the guests present were:—The Turkish Ambassador, The Afghan Minister, Sir Charles and Lady Marling, Sir Percy and Lady Cox, Sir Hugh and Lady Barnes, Mr. Lancelot Oliphant (Foreign Office), Sir John and Lady Cadman, Counsellor of the German Embassy and Frau Dieckhoff, Mr. J. B. Monck (Foreign Office) and Members of the Persian Legation.

The Greek Cabinet on May 22 considered M. Kaphandaris's Budget proposals, which provide for the reduction of the deficit, originally estimated at 2 milliard drachmæ (\$45,000), by more than £400,000.

Mgr. Myron, Roumanian Patriarch, arrived on May 25 in Athens, where he was received by the Government and the Ecclesiastical authorities. He left the following evening for Alexandria and Palestine.

According to a Constantinople message, British archaeologists excavating at the Stamboul Hippodrome have dug out a fine Greek marble bas-relief of a throned goddess or woman, and have also identified the first gateway known.

On May 25 an aeroplane crashed at Gaza. The pilot, Flying Officer R. D. V. Howard, R.A.F. Reserve, of Imperial Airways, Ltd., and the wireless operator, A. E. Turvey, were killed instantly. The funeral took place the following day at Mount Zion, Jerusalem.

The Harvard-Michigan Sinai Expedition [under Professors Lake and Blake] has taken to the Cairo Museum fragments of the Sinai inscriptions, which are alleged to be in the earliest Semitic script. The expedition also found two other inscriptions, according to *The Times* Cairo Correspondent.

TRADE UNIONS IN INDIA.

The Indian Trade Unions Act, which came into force on the first of June marks an important stage in the progress of the labour movement in that country. Moreover, from the standpoint of the student of industrial legislation, it is an event of more than purely local interest, in that it represents a considered attempt at the solution of a problem, which is very much to the fore at the present time, on what we believe to be somewhat novel and original lines. At no previous period in the history of the country have the conditions of labour received such attention in India, both in the way of legislative enactments and social services, than during the past quinquennium, and it is particularly appropriate that Sir Atul Chatterjee, who as Member for Industries and Labour in the Governor-General's Executive Council, was largely instrumental in securing many much-needed reforms in that direction, should, only last week, have received the unusual distinction of being elected President of the 10th International Labour Conference now in session at Geneva. While, however, the trade union movement might reasonably have been expected to have made concomitant progress, it is idle to pretend that trade unionism is still in anything but an extremely inchoate state. Even in the Bombay Presidency, where it has been afforded unusual opportunities for development and enjoyed the advantages of close association with a special department of the Government, many of the existing bodies are still little more than strike committees consisting of a few officers and a relatively small number of paying members around whom the rest rally in times of trouble, and the bulk of the operatives in the premier industry of the Presidency still remain outside the movement. The reason for this state of affairs is not far to seek. The bulk of the heterogeneous industrial population was aptly and accurately described, nearly ten years ago, as "agriculturists first and agriculturists last" and the intervening period, while it has witnessed such a remarkable advance in the economic and industrial progress of the country as a whole, has brought no very marked change in that all-important respect. The evolution of any form of organisation and of corporate responsibility from such a floating and illiterate body, lacking any kind of homogeneity, remains a task of well-nigh insuperable difficulty. There is, it is true, an All-India Trade Union Congress, but its strength and influence are, in such circumstances, greatly circumscribed; and since the Government of India made it clear that so long as that body included political propaganda among its activities State employees would be debarred from membership, the Congress remains shorn of its principal source of members. At the same time it is incontestable that with the spread of education and social consciousness, and the gradual evolution of a more permanent labour force, the trade union movement will grow in strength and in numbers. The main object of the legislation under review, which, although still regarded as premature in many quarters, has on the whole met with remarkably little opposition from employers or the public at large, is to ensure its development on right and healthy

lines from the beginning, with special reference to India's own particular requirements. In that way it is hoped that India may be spared many, at any rate, of the mistakes and anomalies which have characterised the corresponding legislation in England and other countries and proved so fruitful a cause of irritation and friction. In the words of its sponsor, Sir Bhupendra Nath Mitra, the Act "will constitute a useful framework which we can alter, as our experience of this subject under Indian conditions progresses. Meanwhile it will help trade unions to make a beginning on right lines in the direction of organising and educating the labouring classes and of starting co-operative institutions for conferring on them benefits in various directions. . . . It is on this organisation, education and co-operation that the uplifting of the labouring classes in this country will depend more than any amount of legislation that this Assembly may pass."

The present measure had its origin in the resolution adopted by the Legislative Assembly, on March 1, 1921, on the motion of Mr. N. M. Joshi, a nominated member and prominent advocate of the labour cause, recommending that steps should be taken to provide by legislation for the registration and protection of trade unions in India. The resolution was accepted by the Government of India, but it was not until the Delhi Session of 1925 that, after protracted discussion with the local Governments and the employers' and workers' associations throughout the country, the necessary legislation was introduced. The Act was finally passed at the beginning of last year but has remained in abeyance pending the framing of the statutory rules by the several local administrations. As we have previously observed, its provisions present many features of interest to students of contemporary British politics. The first point of importance is that registration is optional and that only registered unions come within the purview of the Act. There was an acute division of opinion in India as to the relative advantages of the compulsory and voluntary systems of registration, which was recognised as being a question on the settlement of which the whole character of the Bill depended. From the beginning the Government of India maintained that optional registration afforded the only sound basis for legislative action. While the main anxiety of many of the advocates of compulsory registration appeared to be to place restrictions on trade unions, the object which the Government of India had consistently in mind was to grant to such bodies a position in the eyes of the law which should be at once definite and privileged. And while it recognised that such a position must be attended by limitations in the interests not only of the body politic but of trade union members themselves, the Government contended that to impose general restrictions on combinations for trade purposes would be as unnecessary as it would be unwise. Compulsion, it pointed out with some force, necessarily involves penalties for evasion, and if registration was to be compulsory an attempt had to be made to ensure that those who failed to register were suitably punished. In other words, that would mean the introduction of legislation on lines attempted in this country a century ago and now

CURRENT TOPICS.

generally regarded as inequitable and unjust. The argument, in the particular circumstances of India, was irrefutable and it was accordingly decided that registration should be optional, and that trade unions should be given every reasonable inducement to register by conferring upon them certain definite privileges more or less analogous to those enjoyed by their prototypes in this country. Unregistered unions are left, both as regards privileges and obligations, in their previous position. Although the advantages conferred by registration appear to be sufficiently attractive to ensure recognition of all responsible unions, we cannot urge too strongly the necessity for immediate recourse to the alternative should that not prove to be the case. On general grounds the case for compulsion in such circumstances requires no emphasis, for if the legislation is largely designed to advance and protect the interests of the vast body of illiterate workpeople and imposes no unreasonable restrictions upon the activity of registered unions, no body of men have a greater claim to such protection than the members of those unions, the so-called executive of which, having succeeded in attracting the attention and money of a particularly gullible section of the community, prefer for obvious reasons to remain outside the scope of the Act.

In the Bill as originally drafted registered unions were required to confine their expenditure to definite trade union objects which were specifically enumerated, but a clause was afterwards inserted, during the Committee stage, providing for the formation of a separate fund to be raised entirely by voluntary contributions on the "contracting-in" principle, and utilised for the promotion of the civic and political interests of its members. The specified purposes of the separate fund comprise the payment of expenses of candidates for any legislative body or local authority; the holding of meetings or the distribution of literature in support of such candidates; the maintenance of members of legislative bodies; the registration of electors or the selection of candidates for legislatures or local authorities; and "the holding of political meetings of any kind, or the distribution of political literature or political documents of any kind." Contribution to the fund is not to be made a condition for admission to the trade union and a member who does not so contribute "shall not be excluded from any benefits of the trade union, or placed in any respect under any disability as compared with other members of the trade union (except in relation to the control and management of the separate fund)." While in the above respect the Indian Act is seen to be in advance of the corresponding English legislation, though the anomaly is in the process of being removed, it is interesting to note that the Act contains no provisions relating to picketing. In the first instance it was tentatively suggested that the difficulties in the way of following even the somewhat indeterminate English law in that connexion might be overcome by making the trade union executive responsible for the prevention of the issue of orders authorising picketing in any form. The objections to such a course were not, however, inconsiderable, and as the experience of the last few years has not revealed any urgent necessity for imposing a general restriction upon picketing, it has been decided to defer action on the ground that intimidation, as opposed to systematic persuasion of a peaceful nature, can be dealt with by the ordinary criminal law. There are many who view the omission with considerable misgivings, but on the whole the decision appears to be a reasonable one.

The Bishop of Calcutta, Metropolitan in India, is expected to reach England on June 4. He hopes to be able to assist the passage of the Indian Church Measure and Bill. If these are passed without important amendment the Metropolitan and the Bishop of Bombay, who is already in England, have the authorisation of the General Council to accept them on behalf of the Church of the Province.

A special meeting of the shareholders of the Imperial Bank of India will be held at Calcutta on August 8 to consider and approve a "Bill further to amend the Imperial Bank of India Act, 1920, for certain purposes" and the subsequent cancellation, upon certain terms and conditions, of the agreement between the Secretary of State for India in Council and the Imperial Bank, dated January 27, 1921.

The Opium Problem.

The success of the Conference between the opium-growing Indian States and the Government of India encourages the belief that the Viceroy's lead in promoting by such means the discussion of internal affairs of mutual concern will be widely followed. The new departure, as we have previously indicated, acquires an especial significance in view of the close interest with which the rulers are following the trend of developments in the matter of the reformed constitution. The main object of last week's conference, which was opened by Lord Irwin in person, was to secure the fulfilment of the international obligations assumed both by the Indian Government and the States through their representatives present at the Versailles Peace Conference and the later international gatherings. The signatories of the Second Geneva protocol were required to take measures to prevent, within five years, such smuggling as was likely to hinder the suppression of the use of opium in the Far East. The Government of India have interpreted the spirit of that obligation in the widest sense, and notwithstanding the heavy loss of revenue involved, ultimately decided to reduce progressively the export of opium to all destinations, so as to extinguish the trade altogether within a definite period, except for strictly medical purposes. The period has been fixed at ten years. A ten per cent. reduction will accordingly be effected this year and the last export will therefore take place in 1935. Meanwhile, considerable difficulties are occasioned by the extent of the current poppy cultivation in certain Indian States and the comparatively large smuggling outward therefrom, both for purposes of export and also for consumption in neighbouring territories and in British India. If the situation is to be brought under complete control it is obviously desirable that the States should agree to suppress poppy cultivation within their borders and to purchase at cost price from the Government of India all the opium they may require to meet the needs of their populations, like the provincial administrations. Whether the rulers are likely to be impressed by the argument that sugar and wheat cultivation will prove equally profitable is conjectural, but it is satisfactory to learn that the conference has decided to recommend the appointment of a committee, on which the Indian States should be represented, to undertake a comprehensive investigation of the problem in all its bearings. The result will be awaited with interest.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 12.

The Move to Simla.

It does not appear very clear whether the Government of India's decision to make a saving on the move to Simla is a happy idea. The papers inform us that the stay at Simla will extend to six months instead of to seven. At New Delhi, however, some of the subordinate Departments should be permanently retained. This step is proposed to effect economy, partly to balance the huge amounts spent on New Delhi. The move to Simla was a feature of the time when the seat of Government was in Calcutta. Any old resident can say that the exodus of the higher officers to the hills has always been a cause of controversy between the political economist and the "sundried" bureaucrat, as the *New Empire* calls him, adding that it would be far better if the Delhi season should begin in December and terminate in March. The exodus from Simla should start early in December, so that the Secretarial staff would not miss the climate of Simla when it is at its healthiest, and, as they would be living in Simla during November and in Delhi during January, they would get the best of the two places. A lower sick rate in the Government offices could be anticipated. The increased efficiency would pay in the end. Only those who have been

in Government service in India can see the importance of the question. An apology is due to other readers for touching a subject apparently so dry and uninteresting.

The Bengal National Bank's Failure.

The political event of the week has been the failure of the Bengal National Bank of India. *Capital* also used the adjective political, giving as immediate cause of the Bank's collapse the revenge of the Swarajists on the Director, Mr. B. Chakravarty. The latter has accepted a post of Minister in the Government of Bengal, thus helping to prolong that Dyarchy which was thought dead and buried. Perhaps it was a mistake to mix politics with business. Naturally *Forward* denies that the collapse of the Bank may be due to the machinations of Mr. Chakravarty's opponents. There were great irregularities and carelessness in the management of the funds entrusted to the concern; but, after all, as the deficit is caused by too much leniency regarding overdrafts and unsecured, though not desperately irrecoverable, loans, it might be possible to re-float the sinking ship. A Bengali enterprise is bound to be the prey of favouritism and *laissez-faire*. Yet some one who has studied the case says that, with a little real generosity and patriotism, the reconstruction is quite possible. Delay is dangerous, but the bank can be and should be saved, they say.

The Y.M.C.A. Controversy,

The Indian National Council of the Young Men's Christian Association has decided to appoint a committee of inquiry to study the allegations concerning the political activities of the Association. One would have thought that every one was by now satisfied that nothing serious could be said against the Institution. But the Quarterly Review of the European Association has published new correspondence on the subject. Among other statements and questions, the purport of which are already known, Dr. S. K. Datta asks whether the European Association Council wishes to dissociate itself completely from the statements made by Mr. Hobbs. He finds it difficult to accept the European Association's assurance that their resolutions were not intended as a censure upon Mr. F. E. James. The question whether the Secretary of the Y.M.C.A. should or should not be a member of the Legislature is a matter for the Y.M.C.A. itself to decide. It appears that Dr. S. K. Datta has been granted an interview by the Viceroy at Simla this week. The President of the Y.M.C.A. Council, the Hon. Sir Ewart Greaves, who is at present on leave in England, has cabled his approval of the Secretary's letter to the European Association.

Chandernagore.

This tiny place, whose name takes so much space on the maps that the average Frenchman believes it to be larger than Calcutta, is in the limelight just now for different reasons. One is that Mr. Rabindranath Tagore, the ubiquitous great man of India, has been busy laying the foundation stone of a Prayer Hall, visiting the Girl's School, and inaugurating an Exhibition of Indian crafts. The poet pronounced immortal words and received a purse of Rs.1000, a very acceptable fee for so much trouble. The other thing that may make Chandernagore famous is the possibility of its having a racecourse in the near future. There are many objections to the project, but the French authorities are in favour of it, and a few speculators are already scenting the road to big profits, and are negotiating, *in petto*, the purchase of lands adjoining the proposed racecourse. The promoters have promised substantial percentages of profits to the Municipality. Fame is sometimes bought at too high a price. It is the hope of many that the scheme may fall through.

Here and There.

There are not many events to report this week. Storms have been frequent, lately, causing great damage, especially in East Bengal. To help the villagers to reconstruct their huts demolished by the storm, passes have been

granted to them to fetch bamboos and wooden poles from the forests. Moreover, Government has granted Rs.5000 as agricultural loans for the Chittagong area alone. Other relief has been tended, but the damage is estimated at Rs.75,000.

A few days ago a portrait of Mr. Eardley Norton was unveiled in the presence of members of the Bench and Bar by the Chief Justice of the Madras High Court. Mr. Eardley Norton's portrait has been placed on the wall of the Sessions Court, where the great advocate fought so many battles. The Norton Memorial celebrated the famous lawyer's jubilee in a fitting manner.

It is rumoured that the betting tax is going to injure horse racing in Bengal. A well-known owner, Mr. Galstaun, who often "invests" money to the tune of £5,000 in an afternoon, said that the betting tax was seriously curtailing the volume of wagering on the Tollygunge Course. The horses are not half so good, and the game is not what it used to be. If the tax continues, Mr. Galstaun will give up racing altogether. A wise course already adopted by another big racing man, Mr. Thaddeus; only the latter leases his horses to a Bombay man! There is perhaps some vague connexion between the decline of the Calcutta race-course and the project of creating another, on French soil, where conditions will probably be more advantageous to the betters.

There is a strike going on in the Burma Oil Co.'s establishment at Tondiarpet. The men persist in declining the terms offered by the Management.

The scarcity of matter may be responsible for the fact that the local newspapers have contrived to fill up a whole column and more with the story of the play "Fallen Angels," to enjoy which a greater number of people than could reasonably have been expected crowded the Empire Theatre twice this week. The fact that the two drunken women played their part "effectively" and "brilliantly" was such an enticement that the public arrived at the theatre in time. We are told that there were no late comers! This is more than we could ever hope for when there were concerts by the Symphony Orchestra, and the first bars of the Unfinished Symphony were absolutely drowned in the creaking of chairs caused by late arrivals. This is a discouraging country, full of unexpected extremes and contrasts. It is very much like the story of the mote in someone else's eye.

BOMBAY LETTER.

(From Our Own Correspondent)

Bombay, May 13.

The A.I.C.C.

With a blare of trumpets and any amount of gratuitous advice from a variety of people, the All-India Congress Committee has begun on the preliminaries to its annual meeting which commences in Bombay on Sunday next. These preliminaries have taken the form of informal discussions between the leaders as to what policy is to be followed during the sitting but, like all such discussions, there is little to see in the way of result. The Congress is a very moribund body at the present moment, and for this it has to thank the insecure and absolutely foolish policy that it has so far adopted. Once upon a time—for it is actually something in the nature of a fairy story, is the story of the Congress—it was *the* movement in India, and held the imagination of both the educated and uneducated masses of India. But non-co-operation, civil disobedience, Council wrecking, and the various other planks that it has adopted from time to time have gradually weaned its following, until now it is barely existing.

An Opportunity.

A significant feature in this connection is the blatant claim of the Hindu Mahasabha to be the mouth through which the Hindus of India speak, and it certainly has

much more right to make such a claim than the Congress, even though it is one that may not quite conform with the actual facts. Be that as it may, the grip of the Hindu Mahasabha is not such as will withstand a real bid for power by some other body—and that is the Congress' only real hope of staging a "come-back." To do so it must settle down to a sane programme, and the principal features of that programme should be the determination to secure unity in its own ranks by the elimination of such catchwords as Swarajists, Responsivists, and No-changers, and then to secure communal unity and present itself as the expression of the country as a whole. Much good might be done by the birth, or, should one say, re-birth, of a Congress prepared to work on constitutional lines; but it is much more likely that the forthcoming meeting will be productive of a deal of worthless oratory and a complete lack of constructive effort.

Sir Leslie Wilson.

How such rumours get about is a marvel, but, nevertheless, they do. It came as something of a shock, therefore, to learn the other day that the Governor of Bombay intended to relinquish his office before the expiry of his five-year period. Subsequent inquiries have disclosed the fact that it was merely fickle rumour, and not based on fact, and we can sigh with relief once more. It would be rather a shame for Sir Leslie to leave at present, for he has his work—and very good work it is, too—well on the way to a fruitful completion, and were he to leave too soon, there is no knowing what might exactly happen to it. For instance, there is the Hospital Fund—Sir Leslie seems to specialise in hospitals and hospitality—which, one feels sure, he would like to see equitably distributed before he leaves. His plans at present, it appears, include a very full programme of work prior to leaving Bombay in December, 1928.

Sukkur Barrage.

The news that the Bombay Government intends conducting a party of journalists over the Sukkur Barrage next cold weather has, one fears, quite failed to achieve the object which the Government apparently hoped to obtain from the announcement. Indeed, it has increased the clamour for the institution of a publicity bureau, or something of that sort, in connection with the scheme; for the Press apparently regards the suggested visit as a cheap holiday for certain picked journalists so as to keep them saying all the nice things they can about the scheme and putting a stopper on all criticism. Unfortunately for their intentions, Bombay has once been bitten, and now is naturally fighting shy!

Plague in Bombay.

How things *can* be hushed up was demonstrated the other day, when a cable from Holland announced that Bombay was a plague infested port! We had not been aware of this fact, but inquiries by the ferreting reporter of a local paper elicited the fact that it was only too true. Although in the first months of the year the mortality from plague in Bombay did not exceed six in any week, no less than fifty people succumbed to the disease in the month of April, and twenty-three deaths were recorded in the first week of the present month. These facts were duly made public through the columns of a wideawake evening paper, and for their pains they were given a rather severe slating next day in the Municipal Corporation, where it was indicated that a scare had been manufactured out of nothing at all. Unfortunately, the paper had secured its facts from official circles, and no doubt the worthy Municipal Corporators are still thinking over the reply they received.

"Washing" Day.

We are threatened with receiving our weekly washing a day late as a result of the decision of the local dhobies to carry out a one-day strike as a protest against the Municipality's alleged "regardlessness" towards their grievances. It appears the conditions prevailing at the Municipal *ghats* are not quite to their liking, and they

want these brought up to date—but also want that their fees should not be increased. The utility of the strike is rather difficult to appreciate. Probably it will mean our shirts will reach us a bit less clean than usual—but with one button more than usual left on them!

Position of Securities.

The market for Government securities has sagged considerably during the past week, principally owing to the further deflation of currency by the Government of India and to the unloading by the Imperial Bank of a large block of $3\frac{1}{2}$ per cent. paper at a price over Rs. 79. To the ordinary investor this should prove of little but passing interest, for it is the "Bulls" in the market who are due to suffer in having their calculations rather badly upset, and to carry over their forward transactions they will have to dig rather deeply into their pockets for the wherewithal. The currency deflations, however, are viewed more seriously, for it is feared the policy the Government is following will lead to economic disaster before long. These deflations from April, 1926, amount to the large figure of nearly 41 crores of rupees, and we do not appear to have seen the last of them yet.

Other Markets.

Exchange has been an unusually steady market during the week, owing to Government's activities, while little or nothing has been done of any interest either in the gold or silver markets. Similar has been the state of the Stock Exchange, where mill shares have declined owing to lack of purchasers, while miscellaneous shares kept firm. Cotton is an optimistic market, and higher rates are looked forward to in the future with some confidence, the brightest feature being heavy daily spot sales in Liverpool. The piecegoods market records the best report of them all, and with demand more encouraging, and Manchester prices a little easier, there is every chance of better times being experienced in general.

BRITISH INDIAN UNION.

Among the many interesting and successful functions which have been organised by the British Indian Union, the luncheon at the Hotel Cecil on May 25, in honour of Sir Henry Wheeler, who has returned home on completion of his term as Governor of Bihar and Orissa, and Lady Wheeler; Mr. V. J. Patel, President of the Indian Legislative Assembly, and Sir Laurie Hammond, who leaves to-day to assume the Governorship of Assam, and Lady Hammond, must be accorded a very high place.

Referring to the distinguished service rendered by Sir Henry Wheeler in the course of nearly 36 years residence in India, Lord Reading, who presided, said that he spoke from personal knowledge of their guest's work, especially as Home Member in the Bengal Government during 1921 and 1922, when the times were not quite so tranquil as at present. Fortunately, the troubles associated with that period, and which were almost inevitable at the initiation of the reformed Constitution, had now practically disappeared. Sir Henry had presided over Bihar and Orissa during the transition to better conditions, and his whole Indian career had been in accordance with the highest traditions of his service and had contributed further to the reputation of the great Indian Civil Service, than which no higher praise could well be accorded.

Sir Laurie Hammond was another of those distinguished members of the I.C.S. who had eventually won a "Field-Marshal's baton." By a strange coincidence the greater part of his service had also been in Bengal, and latterly in Bihar and Orissa, where he had occupied an important executive appointment under Sir Henry Wheeler. In the Chair of the Assembly Mr. Patel had carried out his duties with due regard to the traditions of Parliament; and in his charge the Assembly had shown a decorum and dignity that compared favourably with that of some Parliaments. He believed that the reforms had proved more successful than was thought when they were launched, and perhaps even than when they were shaped.

In Mr. Patel's Presidentship they had an illustration of the way in which India could adapt itself to Parliamentary procedure. It gave some indication, he hoped, of what might happen in the future.

Mr. Patel, in reply, said that he became a candidate for the Presidency primarily to demonstrate to the British Government that, however irresponsible Indians might be in their present political position, once they were given responsibility they were able to rise to the occasion. It was with that view, and that view alone, that the party to which he belonged (the Swarajists) asked him to stand for the Chair. The feeling was still in his mind when he was elected to the Chair a second time with unanimity. He did not know what the outcome would be. Indians had demonstrated times without number that given responsibility they could rise to the occasion. It was good that the British Indian Union should seek to bring British and Indians together in social intercourse; but there could be no real true friendship and understanding without political adjustment. Social intercourse should be but the prelude to political equality of the two countries. Sir Henry Wheeler and Sir Laurie Hammond also suitably replied.

Among those present were: Lord Sinha of Raipur, Viscount Erleigh, Sir Arthur and Lady Froom, Sir Maneckji and Lady Dadabhoy, Sir David Chadwick, Sir Thomas and Lady Carey Evans, Sir Thomas Middleton, Brig.-Gen. Sir George Cockerill, the Dowager Lady Cozens Hardy, Lady Innes, Sir Stanley and Lady Reed, and Mr. G. Pilcher.

THE SHIVAJI TRICENTENARY.

The tricentenary of the birth of the great Shivaji has been recently celebrated in the Bombay Presidency, with the result, almost inevitable in India at present, that some attempt has been made to excite communal feeling over it. No one, however, can reasonably object to the importance given to the occasion. If we leave aside the somewhat shadowy Chandragupta, it might be reasonably argued that Shivaji is the greatest of Indian rulers, indigenous to the soil. Few would indeed put him on a level with Akbar. But the latter was a Central Asian Turk in birth and language, and even in upbringing. Let us consider the condition of Shivaji's people and country at his birth and at the end of his reign. The whole of the Deccan and of the West Coast was divided between Muhammadan kingdoms. They had finally defeated the Hindu rulers of the South; no danger threatened them, except from the central Mogul power in Delhi, which was ultimately to swallow them up, with results disastrous to the cause of Islam. Shivaji's own people, the Marathas, were hopelessly disunited. The highest ambition of their chiefs, such as Shivaji's own father, was to hold fiefs from the Muhammadan Kings, and commands in their armies. Before Shivaji died he had established not only a Maratha kingdom, but a Maratha nation. He had easily defied the weakening Kings of Ahmednagar and Bijapur; he had even held his own against the full strength of the Mogul Power. He had mastered the sea coast, and had led victorious armies into Guzerat and far south to Guzerat. Such was the respect, if not apprehension, felt towards him by the European traders on the coast, that for many years after his death they still called the Marathas the "Sewagees," after his great name. He had laid the foundation of the Maratha power, which was to sweep across India to the gates of Calcutta and to hold Delhi and Agra in its dominion. Above all, he had given life to the feeling of Maratha nationality, perhaps the truest form of national feeling that has yet been found in India.

Nor is there any real reason why other races should not join in the celebration of his greatness. It is true that, as a religious man according to his lights, he honoured the Brahmins and assisted Hindu temples. It is true, also, that to him the Muhammadan rulers were the enemy. No serious historian can dispute that his slaying

of Afzal Khan was a treacherous murder. But he behaved at least as faithfully to his own countryman, the Rana of Javle. It is not quite fair to judge such acts, however indefensible, by modern standards. If he fought against Muhammadan rulers, he did not indulge in persecution of Muhammadans as such. This being so, it seems rather unnecessary for some Muslims to take exception to the celebrations and to revive Aurangzeeb's term of abuse, "the mountain rat."

The history of the Shivaji movement in recent years is not without interest. The Maratha Brahmins sought to make use of the great name for purely anti-British agitation. Even the Bengalis, whom generations of Marathas had regarded as eminently suitable subjects for looting forays, joined in the movement. But to the true Maratha the Brahmin is much more to be distrusted and disliked than the British officer, with whom he has always been on the most friendly terms. There has been a considerable increase of Maratha feeling of late years; but its most marked feature has been a desire to deprive the Brahmin of his monopoly of office and local influence.

One feature of Shivaji's administration which might well be imitated by present-day leaders was his use of all his followers without distinction of caste. He employed Parbhus as freely as Brahmins. His armies included Muhammadans and Kolis, and even the despised Mahars and Parwaris, as well as the Maratha and the Dhangar. It would, therefore, be eminently suitable that he should be regarded as the National hero of the Western Presidency. Nor need the Government of Bombay have any hesitation in the matter. The loyalty of the Marathas has been without stain since they measured swords at Assaye and Argavm. In the recent War they showed that the spirit which animated Shivaji's men was not extinct. We understand that the Government of Bombay did this year announce Shivaji's birthday as a public holiday; but, after the way of Governments, so late as to cause serious inconvenience to business circles in Bombay, whose interest in the celebration was somewhat remote.

INDIA IN PARLIAMENT.

BY SIR FRANK NELSON, M.P.

It may, of course, be possible that the constituents of Colonel Day take a wide Imperial interest in India, but I am frankly sceptical as to whether their interest is deep enough to demand for Southwark information in reference to the date of completion of the bridge that is being constructed over the River Ravi, in the Punjab, so that the North-Western Railway can be extended from Dehra Nanak to Narowal!

I propose to raise this whole question in debate at the earliest opportunity; for, as I have pointed out before, the preparation of replies to the hundreds of questions of this kind must in themselves demand the retention of a considerable staff, with its attendant cost. Moreover, there is also the point that many of these questions on Indian subjects relate to matters that are now dealt with in the ordinary course by the Indian Legislative Assembly and the Government of India, without any supervision by the Secretary of State for India, and in such cases the discussion by means of question and answer on the floor of the House of Commons is both unwise, and discourteous to the authorities who are now responsible for the administration of India, besides constituting a quite unwarrantable expenditure of the British taxpayers' money.

Interest in the House of Commons has, of course, centred almost entirely during the past week in the consequences of the Home Office raid on Arcos—which, by the time this appears in print, will have resulted in the breaking-off of diplomatic relations with Soviet Russia and the cancellation of the immunity clauses of the Anglo-Russian Trade Agreement. So far as it is possible to judge from the publication of a selection of the documents discovered in the search of the premises of Arcos, India

was not one of the countries to receive Communist attentions directed from 49, Moorgate Street. Personally, I have always felt that the Allahabad convictions very effectually stamped out any revolutionary activities in the Indian Empire directed from Moscow, and although a watchful eye must and is being kept on any incipient recurrences of the trouble (especially from the direction of the Pamirs), I consider it may fairly be said that India is reasonably free from unpleasant visitations of that nature.

Those of us who know a little of India are frequently coming across instances of deplorable ignorance on the part of people who should know better—in particular reference to the trade of India. One such instance (which I do not propose to quote) was brought to my notice recently, and I am consequently moved to reflect how desirable it is occasionally to reiterate some of the more elementary factors concerned in the good government of this part of the British Empire.

Indian trade prosperity is, of course, mainly dependent (as is trade prosperity in all other countries) on the efficient administration of the country under the Government of India Act, 1919; this, in itself, is a task, the magnitude of which is often insufficiently appreciated, and one that might with advantage be more frequently stressed in the Press and elsewhere than is at present the case.

Some 250 million Hindus are engaged in almost constant religious and political controversy, of the most acute and often bloody description, with some 70 million Mohammedans.

The total population of India is about 350,000,000, 70 per cent. of which is still illiterate (despite the steady advance in primary education), and lives on and by the land, the fruitfulness of which is wholly dependent on the amount of rain that falls between June and September. The area to be administered is about 2,000,000 square miles, and roughly 150 languages are spoken. Such, in brief, is the country which the Indian Civil Service and the other public services have administered and are still administering, with conspicuous ability.

And, finally, to come back to my original thesis, here is a country with an annual revenue of £100,000,000, exporting jute, cotton, wheat, tea oil seeds etc., yearly to the extent of about £200,000,000, and importing manufactured goods to the extent of about £100,000,000—more than half of which come from Great Britain. To say that it is sad occasionally to find in this country an ignorance of even these elementary points, and, consequently, of the basic fact that the trade prosperity of India and Great Britain is inter-dependent, is surely a very moderate presentment of my case.

THE BOMBAY DINNER.

The annual reunion dinner of past and present European residents in the Bombay Presidency was held at the Hotel Cecil on Friday night. The Right Hon. Lord Lamington, Governor of Bombay from 1903 to 1907, presided and proposed the toast of "The Presidency of Bombay," coupled with "Our Guests."

The Hon. Mr. V. J. Patel, President of the Legislative Assembly, responded on behalf of the guests, who included Sir William Vincent, Sir David Chadwick, Sir Maneckji Dadabhoy, Sir Campbell Rhodes, Mr. H. A. F. Lindsay, Mr. F. A. Beane and Mr. F. H. Brown. The toast of "The Chairman" was entrusted to Sir William Sheppard.

Lord Lamington expressed gratification that the reforms had worked with less friction in the Bombay Presidency, as he believed, than in any other part of India. Bombay had carried them out in a reasonable and statesmanlike manner. Recently the Bombay Government had lost the supervision of the States of Western India. Whether this was for good or bad time would show, but he would have thought that the States were so interlaced with the Presidency that the transfer of supervision to the Government of India would make administration more difficult. Bombay being the great importing centre, as Calcutta was the

exporting centre, its trade was affected by the increasingly heavy duties. The great cotton manufacturing industry found Japanese competition hard. It was strange that Japan should be able to get its raw cotton from India, return it manufactured, and even then undersell the Indian product. However, this must mean that the grower of cotton was doing well, even though the manufacturer suffered.

Mr. Patel, in reply, said that it was with peculiar pleasure, as belonging to the Bombay Presidency, that he saw so many Englishmen who had lived there and contributed in their various ways to its welfare, continuing their interest in its concerns. He hoped that at no distant date at this annual function they would drink the toast of a free and autonomous Bombay Presidency in a free and self-governing India. The only other toast was that of "The Chairman," which was proposed by Sir William Sheppard.

Among others present were: the Right Hon. Lord Harris, the Right Rev. the Bishop of Bombay, Sir Charles Armstrong, Sir John Bowen, Sir James Begbie, Sir Thomas Birkett, Sir Arthur Froom, Sir Frederick Graham, Hon. E. J. Hawke, Sir John Heaton, Sir Lawless Hepper, Sir Malcolm Hogg, Sir Joseph Kay, Sir Henry Lawrence, Sir George Lowndes, Sir Norman MacLeod, Sir Amberson Marten, Sir Stanley Reed, Sir Thomas Strangman, Sir Montagu Turner, Colonel R. Owen, Major-General H. A. V. Cummins, Lieut.-Col. R. Markham Carter, Messrs. V. A. Grantham and W. A. Haig Brown.

CORRESPONDENCE.

THE NATIVE STATES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I do not wish to be hyper-critical, but your Calcutta Correspondent must surely be in error when he calls Mr. Rushbrook Williams "the Foreign Minister of the Maharaja of Patiala," (THE NEAR EAST AND INDIA May 19). The State of Patiala is, like other native States, debarred by treaty from entertaining relations with foreign Powers, nor can the relations of the Maharaja with the Government of India be described as foreign relations since he is a feudatory of the King Emperor. So inappropriate in appellation would doubtless be disclaimed hotly by His Highness and by Mr. Williams, but English writers should be careful not to encourage any misreading of the constitutional position of the ruling chiefs of the Native States at a time when they are reported to be engaged in discussing that subject amongst themselves in view of the proceedings of the forthcoming Statutory Commission on the Indian Constitution, though it can only deal directly with British India. Perhaps the best service which Lord Reading rendered whilst in India was to recall very clearly in connexion with the affairs of Hyderabad what are the fundamental relations between the Native States and the Supreme Government.—I am, etc.,

VALENTINE CHIROL.

34, Carlyle Square, S.W.3.

Sir Atul Chatterjee, the High Commissioner for India, has been elected President of the tenth session of the International Labour Conference which opened at Geneva on May 26.

The annual Ceylon "At Home" will be held at the Hyde Park Hotel on June 19. Those responsible for the organisation of the function hope that all Ceylon planters will endeavour to be present at the gathering and to bring the date to the notice of any friends who may not have received a notice, owing to change of address, etc.

On May 23, in reply to a question by Mr. Johnston, Earl Winterton stated that the Secretary of State for India has not received any estimate of the time likely to be taken to complete the Bombay (Back Bay) reclamation scheme in its abridged form.

While regretting his inability at present to add anything to his previous replies on the same subject, the Under-Secretary for India has informed Mr. Johnston that if a question as to the probable date on which the report of the Indian Tariff (Textile) Board is likely to be published is put down just before Whitsuntide, he may be able to say something more definite.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Suez Canal Traffic.

The traffic passing through the Suez Canal affords a very reliable indication as to the state of world trade generally, and it is satisfactory to know that the reports of the development of trade are borne out by the returns for the first quarter of the present year which show a very marked improvement on the figures for the corresponding quarter of 1926. Actually there was an increase in the net tonnage of the vessels transiting the Canal of 529,000 tons, the total being 7,825,000 which very nearly reaches the record tonnage for any quarter. The outward bound vessels had a tonnage of 3,510,000, an increase of 308,000, while the homeward bound tonnage totalled 3,775,000, an increase of 220,000. The merchandise transported during this period totalled 7,164,000 tons, a net increase on the first quarter of 1926 of 387,000 tons, this being due to an increase in the homeward traffic of 446,000 tons. In the homeward trade cereals increased from 451,000 ton 830,000 tons, mineral oils from 643,000 to 762,000 tons, textiles from 533,000 to 647,000 tons, and rubber from 149,000 to 158,000 tons. Australia was responsible for an increase of 222,000 tons. The British percentage of the tonnage of the vessels transiting the Canal was 56.6 as against 57.7 despite an increase of 23,000 tons as against the next largest increase, that of Germany, of 137,000 tons. As was to be expected the tonnage of motor vessels shows a further increase. It amounted to 828,000 tons which represents 11.3 per cent. of the total tonnage for the period.

Roumania's Free Zones Project.

An indication of the efforts that the Roumanian Government is making to improve the economic conditions in the country is afforded by the Bill for the establishment of Free Zones at Roumanian ports which was recently presented to Parliament. The creation of free zones by itself, however, will not go far to improve the country's commerce. The difficulties with which Roumania is faced to-day arise from the inadequate transport and the prohibitive duties, which, incidentally, have recently been modified but still stand at a level which is calculated to impede trade. Roumania, as a matter of fact, is an outstanding example of a country which is not in a position to obtain a large revenue by means of heavy duties, and any attempt to do so can only have an unfavourable reaction. At the present time the conditions in its chief industry—oil—have become extremely unsatisfactory, a situation which finds a reflection in the prices of the oil shares which have for some weeks now shown a dull tone. Once the transport question is solved the situation in Roumania will assume a very different complexion, and the energy with which the Government is devolving itself to the various problems which have to be solved encourages the hope that before very long the country will be really in a position to profit by her great resources.

Conditions in Greece.

A very interesting and detailed survey of conditions in Greece was given by M. Diomedes at the meeting of the National Bank of Greece, a report of which will be found elsewhere in this issue. Despite the adverse situation almost throughout the year and the general unsettlement occasioned by political developments commerce would appear to have developed. The outstanding feature on the import side was the further reduction in the imports of

cereals to 454,460 tons, from which the conclusion may be drawn that the work of the refugees is beginning to have the desired effect on the country's economic situation. Exports showed a good expansion, the value showing an increase of 950,000,000 drachmæ on the 1925 figures, and M. Diomedes is of the opinion that there is every hope of an important increase in the export trade in the future. An unfavourable factor during the year was the flight of capital due to the lack of confidence, and this represents a very serious matter for Greece, whose great need at the moment is for capital. It scarcely needs emphasis that if Greece is to attract the much-needed financial resources from abroad it is essential that a feeling of confidence should be engendered in the stability of conditions in the country. A great step in the direction of restoring confidence was taken by the settlement of the British War Debt—a development which, it may be added, promises to have important consequences by opening the London money market for Greece's requirements. The question of the exchange was naturally the subject of extended comment by M. Diomedes who pointed out that the instability of the drachmæ is the chief cause of the country's lack of equilibrium. He showed himself to be opposed to the gradual appreciation of the drachmæ, and said that the country must aim at the restoration of the currency by fixing the value of the monetary unit at the level which has emerged by itself.

Burmah Oil Results.

Very satisfactory results were obtained by the Burmah Oil Company in 1926. The profit was £2,502,818 as compared with £2,404,958, and a final dividend is recommended of 4s. per share less tax, making 30 per cent. for the year. The proposed allocations are £20,000 to the insurance reserve as before, £200,000 to the general reserve as against £292,580, and £150,000 to the field expenditure equalisation reserve as before, leaving £453,469 to be carried forward as against £395,903.

Cotton Growing and Prices.

In the annual report of the Empire Cotton Growing Corporation, extracts from which are given in this issue there is a survey of the position of cotton growing in the Empire as affected by the low prices which have prevailed until recently, and the opinion is expressed that it is possible that the striking rate of increase of production will not be maintained in the next year or two. BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

the current season it seems clear from the estimates so far available that there will be an actual, if slight falling off in production. The one region which shows a further substantial increase in output is the Sudan, which is due, of course, to the fact that the bulk of the cotton grown there is of the Sakellaridis type, and as there is now a very marked preference in favour of Sudan Sakel in the English market it is clear that, given the maintenance of the present standard, there will be no difficulty in disposing at good prices of all the cotton that is produced. If, however, the future of the production of Sakel is thus assured it is only part of the cotton problem. It is essential that Lancashire should be able to look to the Sudan and other parts of the Empire for large and increasing supplies of American. While developments in this direction in the Sudan and elsewhere hinge largely on the question of price that is not the only important factor. The expansion of transport facilities is a vital consideration, and as pointed out in the report, it is not capable of rapid solution. It is satisfactory that prices are now much higher than they have been for some time, and, if they are maintained, another year may see further progress in Empire production.

COMMENTATOR.

CORRESPONDENCE

THE DANUBE COMMISSION AND THE IRON GATES.

To the Editor of THE NEAR EAST AND INDIA.

Monsieur,—Nous lisons dans le numéro de THE NEAR EAST AND INDIA portant la date du 19 mai, 1927 l'analyse d'un article de *l'Indépendance Roumaine* relatif aux accords conclus récemment, sous les auspices de la Commission des Réparations, en vue de réorganiser le service de l'emprunt Hongrois 3 per cent. or 1895 (Portes de fer).

Etant donné que notre institution a été mêlée aux négociations relatives à la reprise du service financier de cet emprunt, nous sommes en situation de vous affirmer, d'après les informations officielles communiquées par la Commission internationale du Danube elle-même, que le produit net annuel des taxes de navigation dans le secteur des Portes de fer est sensiblement supérieur au montant de 200,000 couronnes-or indiqué par *l'Indépendance Roumaine*. Il a dépassé, en 1926, 500,000 couronnes-or et il est vraisemblable qu'il pourra être maintenu à ce niveau dans les prochaines années. Dans ces conditions, le produit net des taxes de navigation suffira non seulement à assurer le service de l'intérêt d l'emprunt, sur la base d'un pourcentage de 32 per cent., mais encore à couvrir, au moins partiellement, le service de l'amortissement. La charge assumée par les Etats garants sera donc, en fait, ou inexistante ou extrêmement minime.

Vous jugerez sans doute, avec nous, nécessaire de corriger ainsi les assertions par trop inexacts de *l'Indépendance Roumaine*.

Veuillez agréer, Monsieur, l'assurance de notre considération très distinguée.—I am, etc.,

BARDE,
Le Directeur.

Association Nationale des Porteurs Français de
Valeurs Mobilières.

Paris, le 25 mai.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 31.

The quietude of the Stock Markets, which has continued this week, is to be ascribed, in the main, to disappointment at developments in the monetary situation. A fortnight ago the Stock Exchange was sanguine as to a further reduction in Bank Rate to 4 per cent. in the immediate future. Last week and the week before the change was regarded as a practical certainty and the resultant disappointment led to the selling of stocks and shares which had risen to levels which were reasonable on the basis of a 4 per cent. Bank Rate, but looked high with the Official Minimum at $4\frac{1}{2}$ per cent. The outward movement of gold, which incidentally puzzled the money market for a few days until it was officially announced that the metal had been taken for France, hardened money market rates appreciably, and removed any prospect of an immediate change in Bank Rate. It is not surprising, therefore, that the prices of investment stocks have gone back. Indeed, it might have been expected that the fall would have been of greater proportions, in view of the large volume of new capital issued in recent weeks, some of which is still only partly-paid. But stocks which have come to market have been readily absorbed, and in many sections there are securities the demand for which cannot be met owing to there being none on offer. Business, however, remains on the quiet side, as we have said, additional influences to those already mentioned being Derby week and the approach of the Whitsun holidays. The account, by the way, which began last week, runs for 21 days.

The Russian Rupture.

The rupture of Anglo-Russian trade relations has not had any visible effect upon stock markets, but in the City generally it is considered that the incident has occurred at a most inopportune moment, for there have recently been signs that business between this country and Russia is growing appreciably and it is known that a large number of important contracts were about to be concluded. It is, of course, impossible to say at this stage how far-reaching the present rupture will be, or how long it will last. New credits and new contracts recently under discussion have been cancelled, and dealings with Russia will obviously be much more difficult, for the moment, for British traders and manufacturers. Other countries will, of course, be quick to seize the opportunity of supplanting Britain in the Russian market. British manufacturers in many of the heavy industries claimed that they had practically ousted German competition in Russian trade, but the German manufacturers will now get a second chance. On the financial side, interest attaches to the negotiations now proceeding in Paris for a Franco-Russian debt agreement. It is rumoured that the Soviet was anxious to open similar negotiations for the settlement of Anglo-Russian debts, which, if successful, would have paved the way for more normal relations between the two countries. Such a development, however, is now of course indefinitely postponed, and last week's events have made a further addition to the difficulties and anxieties which trouble certain important sections of British finance and industry.

Indian Gold Mining.

The output of gold from the Indian mines in 1926 showed a further falling off in comparison with the previous year, owing to some extent to the less satisfactory position of one of the companies concerned, but mainly to a temporary reduction of output by several of the undertakings. Of the five principal companies the Balaghat reduced its dividend from 9d. to 3d. per share, the Champion Reef, the Mysore, and the Ooregum maintained their rates at 9d., 2s. 6d., and 2s. 3d. respectively, while the Nundydroog raised its rate from 1s. to 1s. 3d. per share. For the Balaghat and the Nundydroog, which are situated at the northern end of the field, the outlook has materially improved as a result of recent developments. Discoveries at lower levels on the Balaghat property are considered to possess considerable significance for the adjoining Nundydroog property, in which some highly encouraging developments have also occurred. In the case of the Champion Reef prospects are also brighter now that the heavy expenditure upon sinking is coming to an end. The high yields obtainable on the shares of these companies signify the risk which attaches to gold mining operations in India.

A Prosperous London Property Concern.

The London property companies continue to enjoy prosperity. The largest of these undertakings—the City of London Real Property Company—has recently issued its annual report, record profit figures being returned. Though only a few hundreds larger than for 1925-26, the net profit for last year was £550,743; the dividend of 5½ per cent. is repeated. The company has an issued share capital of nearly £9,000,000, of which no less than £6,000,000 represents a capitalisation of reserves in 1923. This undertaking undoubtedly occupies a position of great strength. The properties owned have a balance-sheet valuation of nearly £12,000,000, while sinking funds and reserves exceed £1,500,000. Last year's dividend was earned with the considerable surplus of £161,000, which is the amount added to reserve and carry-forward. The ordinary shares give a return of approximately £5 10s. per cent. In view of the position of the company, however, an increase in the distribution to the ordinary shareholders sooner or later is not impossible. In any case, the 4 per cent. cumulative preference shares, returning £4 5s. per cent., free of income tax, are not without attractions.

The Secretary of the Ottoman Railway Company announces that an agreement dealing with reparations for losses and damages suffered by the company in Asia Minor during the War was ratified by the Turkish National Assembly at Angora on May 28. The agreement provides that a certain sum shall be added to the purchase price of the line at the expiry of the concession. Greater latitude is to be given with regard to tariffs. Major articles of equipment are to be imported duty free for a period of 15 years.

SUDAN CHAMBER OF COMMERCE.**Annual General Meeting.**

At the recent annual general meeting of the Sudan Chamber of Commerce, Mr. W. T. Bostock, the President, pointed out that the cause of the trade depression in the country was the scanty rain, with consequent failure of the durra crop for the second year in succession. He said:

"The price of durra—the staple food of the natives—was enough in itself to reduce their by no means considerable purchasing power at any time and the failure at the same time of rain-grown cotton in the Blue Nile Province and the slump in price of this commodity in the world market left the resources of the country even more depleted. The gum crop was good—the export in 1926 was nearly 23,000 tons—but prices have averaged P.T. 73 per kantar at El Obeid against P.T. 105½ in the previous year and while nearly 4,000 tons more were exported the total value was only £50,000 more, and as these are Port Sudan figures and include rail freight and royalty the actual amount received by the natives is even less than last year, although the crop is much bigger. The price seems an uneconomic one considering the distance some of the consignments have to be brought and there is food for thought as to what effect a fall in the cost of the necessities of life might have in this direction.

Sesame and ground nuts crops were both short of last year and well below the average. The result of all these causes was a general lack of money and the absence of demand for any imports but the bare necessities of life. Importers have had a bad time. Cotton piece goods were less in 1926 than in the previous year by 630 tons in spite of a heavy fall in price largely borne by the unfortunate importers here. The drop in value between the two years was no less than £353,000. Sugar increased by 8,500 tons and £110,000 in value. Tea showed an increase of 360 tons and £60,000, while coffee showed a drop of 1,000 tons and £75,000 in value. Soap imports were lower by 700 tons equivalent to £23,000. I have quoted for articles chiefly consumed by the natives which should reflect the state of their prosperity or otherwise. It is a poor result considering the prospects held up before our eyes by the heavy increase in cotton production in the Gezira. In this connexion I see the value of the cotton exported during last year was £2,800,000, or an increase of £1,200,000 on the previous year. Properly speaking the share to the natives of this amount would be some £1,000,000 or an increase of £450,000. Where has this surplus money gone? There are various theories and an examination of the durra figures helps to explain the situation. In 1925 the durra export was 26,000 tons, of the value in Medani, say, of £140,000; last year the export was nil, and not only that we had to import 21,000 tons of say £230,000 value in the consuming centres. A certain amount of this is still held by the Government and therefore has not been

actually paid for by the consumers but the two figures could easily account for a loss to the country of £E300,000 or more. This still leaves a considerable balance to be accounted for and it is suggested that a large part of this may be due to the system adopted by the Sudan Plantations Syndicate of advances to their cultivators. Last year these cultivators were living to a great extent on the advances from early in the cotton season whereas up till January this year they were still receiving a distribution from the proceeds due to them, and eventually will be in a position to carry their own expenses through the season in this fashion. If this theory is correct the outlook is not so black as it appears. I have dealt at some length with this subject and inflicted on you a lot of figures but a close examination of the facts suggests that there is hope for the future. Optimism is out of fashion at the moment but I think there are better times ahead and given an average rainfall this year I see no reason to be despondent. One thing I think needs to be emphasised—we are depending for our main food supplies on an area where, sooner or later—it may be next year or in 10 years time—the rainfall will be insufficient with the result that the cost of living to the natives is immediately doubled. A prudent man would be willing to insure against a calamity of this sort and I think it is time steps were taken to make certain of a sufficient food supply in the country without relying on the vagaries of the Northern rainbelt.

The general state of trade in the country was the main subject of a discussion between representatives of the Chamber of Commerce and the Central Economic Board recently, and the case was put forward to them much on the same lines as I have just indicated. Some of the remedies suggested were a flat rate of freight on produce from up-country stations to encourage durra and other produce where now freights do not allow cultivation for export, and a general reduction of rail freights particularly on essential imports such as flour, tea, sugar, etc. Another subject discussed at the meeting was the Traders Tax. This has always been represented as a tax on profits only whereas in actual practice it hardly seems to come under this category. No form of taxation is popular, but I can safely say that this one is the least of all.

In conclusion, I should like to thank the members of the committee for their co-operation and support, also Mr. G. A. Contomichalos, Mr. Geo. Dello Strologo, Col. G. C. Stanton and others who have acted on sub-committees and who have given a great deal of help in the work of the Chamber.

A vote of thanks to the President was moved by Mr. W. E. Law, who said that with few exceptions, it had been a bad year for business generally but they all hoped better things were in store. He felt sure he voiced the feeling of the meeting in saying they were grateful for the hard work done by the committee during the past twelve months, not only in the interests of the Chamber but for the good of the commercial community generally.

With the opening of the Bourse he looked forward to even greater co-ordination among the members of the commercial community, as they would have a common meeting place for the exchange of views.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, June 4). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Maihar for Calcutta (Birkenhead, June 7); s.s. Mahanada for Calcutta (Birkenhead, June 16).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, June 15).

British India Line.—S.s. Merkara for Bombay and Karachi (London, June 11); s.s. Manela for Colombo, Madras, and Calcutta (London, June 18).

Cunard Line.—S.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, June 18); s.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool June 11, Swansea June 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 11).

P. and O. Line.—S.s. Rajputana for Bombay (London, June 3); s.s. Nagoya for Colombo, Madras, and Calcutta (London, June 11).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, June 4); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, June 15).

Ellerman and Papayanni Lines.—S.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Swansea, June 4); s.s. Algerian for Algiers*, Malta, Syra, Smyrna, and Constantinople (Liverpool, June 14); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa (Liverpool, June 18); s.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 29); s.s. Roumelian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool July 9, Swansea July 19). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume, via Trieste.

The export duty on eggs in Yugoslavia has been abolished.

The South Behar Railway Company announces a dividend of 5 per cent. per annum, less tax, on the capital stock for the half-year, payable July 15.

The Yugoslav State railways are to purchase railway material in Poland to the value of 7,500,000 dinars in addition to 250,000 sleepers. These purchases are to be set off against Polish purchases of Yugoslav tobacco.

An illustrated booklet entitled "Canadian Pacific Playgrounds" has been issued by the Canadian Pacific Railway, 62-65, Charing Cross, London, S.W.1, from whom a copy may be obtained free on application.

A Reuter message states that M. Lapedatu, Roumanian Minister of Finance, has arrived in Berlin to carry on negotiations for a credit of 200,000,000 marks to be used to finance Roumanian orders for railway supplies given to Germany.

EMPIRE COTTON GROWING.

The annual meeting of the Empire Cotton Growing Corporation was held in London on May 26. The report of the Council of the Corporation, presented at the meeting, gave a comprehensive survey of developments during the year. We give the following extracts:—

The report on the work of the Corporation for the past year relates to a period during which the price of cotton fell from 10d. to a little more than 6d. a lb. While difficulties are admittedly encountered in encouraging cotton-growing in the Empire at the lower price, it is nevertheless mainly to an extension of the area from which the supply of raw cotton can be drawn that consumers can look for a stabilisation of the price which is perhaps of first importance in bringing about an improvement in trade. For this reason there is especial need for the work which the Corporation are endeavouring to achieve.

It is true that in some parts of the Empire where cotton is grown by white farmers the lower price is said to be on the borderline below which it no longer pays to grow the crop. And where the growers are natives working on their own holdings, and costs of production cannot therefore be determined, the fall in values has caused the price that buyers could offer to be drastically cut. In these circumstances it is not surprising that the native cultivator cannot understand these fluctuations in price; he is apt to conclude that he is being exploited by the buyer, and to cut down his acreage next year in consequence. It is possible, therefore, that the striking rate of increase of the Empire crops may not be maintained during the next year or two, but, as some compensation, the necessity for laying plans for the future very carefully has shown up clearly wherein lie our advantages and which are our weaknesses. On the one hand, it is all-important that the quality and staple should be maintained; so long as Empire cotton generally can retain its premium on American Middling, this factor will be our most valuable asset and the ratio of Empire to American cotton is likely to increase. On the other hand, the experience of the Corporation has brought out clearly that quality alone will not suffice to establish Empire cotton on a firm basis: two other factors are of equal importance—an increased yield per acre, and, lastly, though possibly most important of all, more and better transport facilities. The fact that the total acreage under cotton this year (and perhaps for the next year or two) may

possibly show little increase may not be altogether a disadvantage from the point of view of those engaged in assisting the industry, more particularly in the three directions mentioned above. In most parts of Africa an improved seed supply, upon which the quality of the crop depends, is an urgent necessity. Unfortunately, this improvement cannot be effected rapidly, and the Corporation's scientific staff will doubtless utilise the next year or two in doing their utmost to produce and multiply a type of seed which will be both more prolific and resistant to disease than the mixed types which have been characteristic of much of the cotton from Africa in the past.

At the same time, the steps which the Government has taken in the last few years to increase the number of agricultural officers and to improve their qualifications by a course of post-graduate training will assuredly be reflected in the further and better instruction of the native in improved methods of cultivation.

Finally, although the transport problem will not be capable of rapid solution, the fact that both the Imperial and local Governments are fully alive to its importance should ensure that the methods by which facilities can be increased will receive thorough investigation and lead to some definite progress.

The results of the study that is now being carried out along all these lines should effect such economies in production that even a slight recovery in raw cotton prices should provide the stimulus necessary to enable cotton growing within the Empire to resume the uninterrupted progress which it has hitherto enjoyed.

India.

The Cotton Transport Act, which was passed in 1923 by the Indian Legislature, aims at preventing the mixing of short and long staple cotton in India. It enables Local Governments to notify areas in which long staple cotton is grown, and to prohibit the import of short staple cotton into such areas. During 1926, the Cotton Transport Act was in force in six zones of the Bombay Presidency and in three zones of the Madras Presidency. The Baroda State has enforced a cotton transport law on the same lines as the British Indian Act, while the Rajpipla State has, by special ordinance, made it illegal to sow short staple cotton in any part of the State. The effects of this legislation are satisfactory, and considerable improvement has resulted in the condition in which long staple cotton is marketed from the notified areas.

The Cotton Ginning and Pressing Factories Act of 1925 provides for the marking of bales to indicate the factory where they were pressed. It also enables Local Governments to prescribe standard weights to be used at ginning and pressing factories within its jurisdiction. Finally, it provides for the enforcement of structural requirements for ginning and pressing factories, with a view to ensure cleanliness of handling. The Local Governments chiefly interested in the production of cotton have taken action under this Act, the working of which was satisfactory during 1926. Moreover, under Section 14 of the Act, any purchaser can now require that only bales marked in accordance with the Act are a fair tender in fulfilment of a contract, and the East India Cotton Association, Ltd., have introduced a by-law requiring all bales to be so marked in order to fulfil the requirements of a fair tender in Bombay.

Special measures have been taken under the Destructive Insects and Pests Act to guard against the spread of cotton pests in India. American cotton must be fumigated before importation.

The Indian Central Cotton Committee took an active part in pressing for the adoption of the above legislative enactments. It has also interested itself in the improvement of marketing conditions in the principal Indian cotton markets. Its technological laboratory was completed in September, 1925, and has done excellent work throughout the year. In regard to agricultural research, the policy of the Committee is to promote cotton research in India, partly by grants-in-aid to provincial agricultural

departments and other institutions, and partly by the creation of research studentships. The new Institute of Plant Industry at Indore receives a subsidy from the Indian Central Cotton Committee, and has adopted a definite cotton research programme.

The following table is of interest as showing the success that has rewarded the efforts of the Indian Central Cotton Committee to promote the growth of improved cottons of a longer staple than that which formerly characterised Indian cottons:—

	Average of seasons 1915/16, 1916/17. and 1917/18. Bales.	Season 1925/26. Bales.	Per cent. Increase.
Short staple (under $\frac{3}{8}$ in.) ...	2,999,000	3,893,000	29.8
Long staple ($\frac{3}{8}$ in. and over)	1,161,000	2,145,000	84.8

The final official forecast of the Indian cotton crop shows a total area of 25,006,000 acres under cotton in India, and an output of 4,952,000 bales. These figures show a considerable reduction on last year's cultivation of 28,491,000 acres, with an output of 6,038,000 bales. Both in Bombay and in Madras weather conditions were unfavourable to the crop. In the irrigated areas the output was normal, but in the unirrigated areas the sowings were retarded by the deficiency of early rainfall and a shortage of rain during October.

The Sudan.

The season under review saw cotton cultivated on over 80,000 feddans in the Gezira, and a crop of 384,106 kantars, or approximately 94,000 bales of 400 lb. While this large yield is very satisfactory, it was due in some respects to a combination of favourable circumstances, and the Chairman of the Sudan Plantations Syndicate warned their shareholders that it was not a result on which calculation of future prospects should be based. However, this season more than 100,000 feddans are under cotton, and it is understood that at the time when this report was written (March), the prospect of a yield approximating to last year's was not unpromising. Steps are being taken to extend the canalised area in the Gezira, and up to another 150,000 feddans may thus be brought under cultivation.

On the recommendation of the London Committee for the co-ordination of agricultural research in the Sudan, the Corporation agreed to provide an additional chemist for work in the Gezira for a period of three years. Mr. R.

Peto was appointed to this post, and he took up his duties in January last.

Gratifying progress is being made with the extension of rain-grown cotton in the South. Transport problems undoubtedly present a difficulty, but the Government are investigating these closely, and it is hoped that satisfactory arrangements will be made. Meanwhile, the Corporation and the British Cotton Growing Association are discussing with the Government the provision of adequate ginning and marketing facilities.

Cyprus.

The Government have renewed their request to the Corporation to send an expert to advise on the extension of cotton cultivation in the island. As stated in this report last year, however, any increase in the area devoted to the crop appears to be dependent on irrigation by wells, and the Corporation are awaiting the Government's report on the trial borings that are now being made; this information is required especially for the districts which are reported to be suitable for cotton, so far as the soil and other factors are concerned. If the results show that a satisfactory large area can be developed by means of the increased supply of water, the question of the provision of an expert and of the establishment of an experiment station, as suggested by the Governor, will be sympathetically considered.

The Triumph cotton seed which the Corporation secured from America at the request of the Agricultural Department, did well last season, the yield being nearly 1,500 lb. of seed cotton per acre, as compared with 850 lb. from local seed.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Tent Cloth.—The Ministry of Agriculture, 20, Chareh El Falaky, Cairo, invites tenders for the supply of tent cloth 140,000 yards. July 10.

Uniforms.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of winter uniforms for guards and employees during 1927-1928. August 9.

Iron and Steel Materials, Metals, Etc.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of their requirements during 1927-28 in respect of iron and steel materials, metals, etc. June 14. (D.O.T.)

Boots and Laces.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 16,550 pairs of boots and 8,300 pairs of laces to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. June 28.

General Stores.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of general stores required by the Police Stores, Bulaq, in 1927-28. July 2.

Rails, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 5,000 tons rails. August 10.

Engineers' Instruments, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of engineers' instruments, drawing materials, etc., required for the schools during the school year 1927-28. June 30.

General Stores.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of general stores required by the Police Stores, Bulaq, in 1927-1928. July 2.

Plant for School of Engineering, Giza, Cairo.—The following plant is required for a School of Engineering, Giza:—One 100 k.w steam turbine D.C. generator set with condensing plant; one water tube boiler; one 150 B.H.P. Diesel engine; one Booster set; one experimental Diesel engine of 40-40 B.H.P.; one overhead travelling crane of 10 ton capacity. June 15. (D.O.T.)

The negotiations between Yugoslavia and Switzerland for a commercial treaty have been postponed until the autumn.

At a meeting of delegates of the Roumanian and Hungarian State railways at Timisoara recently an arrangement was concluded by which the Hungarian railways will lend wagons to the Roumanian railways.

Company Meeting.

NATIONAL BANK OF GREECE.

A Year of Unrest and Retrenchment.

M. Diomedes' Review.

The ordinary general meeting of the shareholders of the National Bank of Greece was held on April 30 at the head office of the bank, Athens.

The Governor (Mr. Alex. N. Diomedes), in submitting the report for the year 1926, said:—Gentlemen,—The past year was not a year of calm, and the various incidents which occurred exercised a profound influence—an influence which was chiefly psychological—upon the whole economic life of the country.

No fresh issue of uncovered notes took place during the year. Notwithstanding the stringency which on many occasions made itself acutely felt, the consciousness of the blow which would be dealt, were the slightest issue authorised, was clear to all. The fixed circulation thus remained at Drs.4,530,000,000.

The circulation, however, of notes issued on the basis of the Decree Law of April, 1923, and fully covered by exchange, suffered considerable fluctuation during the year. On December 31, 1925, it amounted to Drs.1,016,100,560, and on December 31, 1926, to Drs.1,184,486,375.

The maximum limit of authorised circulation on December 31, 1926, amounted to Drs.5,715,676,000, of which, however, Drs.851,035,000 remained disposable in the coffers of the bank, leaving an actual circulation of Drs.4,864,641,000, as compared with Drs.5,339,249,000 on December 31, 1925.

The circulation covered by exchange acquired by virtue of the Decree Law suffered, as I have mentioned, many and sudden fluctuations.

On December 31, 1925, the reserve amounted to £3,182,825 with a circulation of Drs.1,016,100,560.

The heavy sales to which the Government of the day thought good to proceed resulted in the State reserves of exchange falling from £3,182,825 on December 31, 1925, to only £606,000 on July 31, 1926, whilst the corresponding circulation fell from Drs.1,016,000,000 to only Drs.198,000,000. It will be understood that this shrinkage exerted considerable pressure on the market.

From the month of August, 1926, the curve representing the rates of foreign exchange commences clearly to fall, whilst the reserves begin to be strengthened again, after the manifest endeavour of the Government to curtail all superfluous foreign expenditure. It was thus found possible to raise the exchange reserve on December 31, 1926, once more to £2,970,605, thus approaching the level of the previous year, with a corresponding circulation of Drs.1,184,486,375.

Foreign exchange rates bore witness to the trials experienced during the year. The greater part of the year is characterised by wide and continuous upward tendencies, with large fluctuations, giving a faithful picture of the political unrest prevailing.

From the month of August, however, the return of peace and quiet, and a more prudent administration, brought rates of exchange back to a lower level with less violent fluctuations.

Foreign Trade.

Although we have no accurate statistics of Greek foreign trade during 1926 we are able to conclude, both from the reduction in sales of exchange to commerce and from the Customs returns, that imports were lower than in the previous year.

But we have accurate information showing that the imports of cereals in general have shown a steady decline during the last three years, as the following figures demonstrate:—

	Tons.
1924	544,573
1925	476,268
1926	454,460

and, consequently, we know that this principal item of imports was lighter in the year under review.

On the other hand, the exportation of Greek produce is shown by the Customs House figures to have increased in 1926 by about Drs.950,000,000, as compared with 1925, and it is safe to say that the development, perfection, and distribution of many of our products, agricultural and industrial, show a steady upward trend, which justifies every hope of an important increase of our export trade.

No year presents a more faithful picture of the influence which the psychological factor alone exercises upon the rates of exchange.

Whilst all real factors—circulation, exports, and remittances—were manifestly more favourable during the year under review, nevertheless, the influence of moral factors counteracted their material effect. The want of confidence which prevailed throughout the year on account of the political anomalies led to a heavy flight of capital abroad in search of security. And this flight of capital—which, as has elsewhere been observed as well, is capable of reducing to nought even the most favourable balance of trade—can be prevented only by the return of confidence and of the trust that the economic life of the country will remain undisturbed.

Movement of Business.

The past year has to show a general and important reduction in all branches of productive business. This fact came as an automatic

reaction from the sudden expansion observable during previous years. Business declined both because the various branches of productive work shortened the radius of their action after the former exaggerated expansion, and because capital was lacking. Capital was scarce because a great deal, owing to its having been tied up in business which had not yet made sufficient return, could not easily or without loss be liquidated. Another cause was the difficulty due to the uncertainty of the situation, which frightened away capital, thus depriving the country of an important factor of production. The consequent maintenance of rates of interest at a very high level, obliged even the Bank to raise its rate of discount to 11 per cent., and compelled many important concerns to reduce to the minimum their demands for new capital. This advance in interest certainly cannot be allowed to continue, and it is hoped that we shall soon come down to a lower level.

The generally irregular situation obliged the administration of the Bank to see that no danger should be run of a shortage of cash and that the Bank's immediately disposable liquid funds in bank notes should bear a high proportion towards its sight liabilities.

In spite, however, of this policy, the Bank did not put pressure on any of its clients but preferred to see arrears temporarily increasing. It continued, too, as in the past, a policy of mild and hardly perceptible retrenchment. Towards the end of the year the slackness began to diminish, and a more intense movement in business in general became perceptible.

Compensation of Refugees.

The manner of payment by the bank for account of the State of the compensation due to the refugees was settled by the Conventions of October 25 and November 4, 1926.

Special bonds to the value of Drs.3,000,000,000 bearing interest at 8 per cent. were issued with the guarantee of the State on mortgage of the properties which were handed over to us and which we administer through our branches. The agrarian and urban properties handed over to the bank numbered 51,469 and their value exceeded Drs.4,000,000,000 at a strict valuation.

By these bonds, which were distributed direct to the exchangeable populations entitled to compensation, a small percentage only of what they had to receive in all as the balance of the properties they had abandoned in Turkey is paid.

These bonds will be settled chiefly by the sale of the properties under the bank's administration. Such sales have already begun and are continuing regularly.

The final paying off of the bonds is a question of not many years. Nevertheless, what we must emphasise is that the interest of this delicate and difficult work requires absolute respect for the rights which have been granted with this object to the bank. Any intervention by third parties would be contrary to the interests of the property itself.

National Defence Bills.

On January 23, 1926, short-dated notes of a value of Drs.1,272,029,800 were in circulation, and long-dated notes to the value of Drs.96,180,000.

By the Decree-Law of January 23, 1926, "Concerning the conclusion of a forced loan, etc.," it was ordained that the short-dated notes in circulation should be paid off, half in cash, upon expiry, and half by conversion into a loan with a term of ten years at 8 per cent. per annum.

On March 31, 1927, when all the short-dated notes expired, such notes of a value of Drs.29,848,000 had not yet been presented for payment, half of this amount being payable in cash.

The long-dated notes (three, five, and ten years), the value of which

FOREIGN EXCHANGES.

Teheran	Krans to £	50½	50½
Vienna	Sch to £	34.58½	34.50½
Warsaw	Zloty to £	25.22½	43—44

amounts, as had been said, to Drs.96,180,000, will be paid off on expiry in full, and in cash.

Second Forced Loan, 6 per Cent., 1926.

The sum provided by the bank notes of Drs.50 and above, in circulation on January 23, 1926 (which contributed one-quarter of their face value to the loan on the basis of the provisions of the Decree-Law of January 23, 1926), amounted to Drs.1,232,300,000 in round figures.

Out of the proceeds of this loan Drs.711,789,007.39 were devoted to the payment of floating debts on the part of the State to the bank, and the balance of Drs.518,210,992.61 was taken up in cash by the State.

Thus, in the year 1926, through the forced loan and the proceeds of the 20 per cent. tax, there were paid off

(a) State debts to the bank	...	Drs.711,789,007
(b) State debts from National Defence Bills	...	Drs.538,000,000
Total	...	Drs.1,249,789,007

This radical clearing up of the floating debt was the commencement of a healthier adjustment of the financial affairs of the country.

Deposits.

The movement of deposits during the year shows a clearly ascending line, as shown in the following table:—

	1923.	1924.	1925.	1926.
	In millions of drachmæ.			
Deposits at sight	1,362	1,592	1,421	2,026
Savings bank	221	214	257	555
Deposits at fixed dates	944	1,004	956	844
	2,527	2,810	2,634	3,425

Whilst the circulation of notes during the year was steadily lower than that of the previous year, and, consequently, the public had at their disposition a smaller quantity of notes, nevertheless the movement of deposits was greater and, generally, the level remained high. This fact, too, is evidence of the tendency to retrenchment which characterised the period under review.

Deposits at fixed rates, especially those for long periods, alone show a decrease. This form of investment, formerly very popular, is destined in time to lose its original importance. The popularisation of various stocks was the cause of this decline.

War Debt Agreement : Its Importance.

The agreement recently concluded between the British and Greek Governments concerning the War debt and the questions connected therewith is destined to exercise an important influence on Greek finances and, more generally, over the whole of the shaping of the economic life of the country. Its importance lies in this: that it provides elements for the further regulation of our financial and currency question; it constitutes a starting-point from which our considered efforts, destined to clear up the burdened past, may safely set out.

The Sequel of the National Disasters.

The series of successive disasters which overtook Greece laid upon the country a heavy liability. Obligatory expenditure, unavoidably heavy, a faulty appreciation of the kind and of the extent of the expenditure which the country had to undertake, the necessity of immediately assisting and settling an entire new population; all these things created liabilities with which the country was unable, by its own unaided efforts, to cope, even if it were strained to the utmost possible limit. The conclusion of the Refugee Loan, achieved with the aid of the recommendation of the League of Nations, certainly assisted us in a very high degree, but the requirements, even though restricted, exceeded the resources capable of being derived from the country itself. Thus the State expended from November, 1922, to 1927, from funds raised from the country itself, a sum of about Drs.2,000,000,000 for the maintenance, housing, and settling in general of refugees, exclusive of other expenditure.

Such a weight of expenditure as for many years past has burdened the State could not, of course, be met without recourse to measures

and combinations which inevitably affected the economic equilibrium of the country and injured the value of its currency.

A further continuation of this empirical method is not possible. An accumulation of fresh liabilities and deficits would lead to the creation of additional burdens, and, in spite of every effort to economise, the threat of sudden collapse would be continually present. It is, consequently, unavoidable that, together with the introduction of order into our finances, we should endeavour to find capital abroad, in order that we may both complete the settlement of the refugees and reinforce the public treasury, so as to cover the deficits left by various liabilities.

The search for capital, however, ran up against two insurmountable obstacles:—

1. The usual markets—which indirectly rule all the others—were found to be hermetically sealed, because the question of the War debt remained unsettled.

2. It was impossible to issue a State loan so long as the position of the national currency remained uncertain. The unsteadiness of the currency gives birth to lack of confidence, because the guarantees given are likely to become stale, and, from a more general point of view, it was considered disastrous to aid in the protraction of the state of economic unhealthiness which might lead to unexpected and dangerous surprises.

So, if it were considered necessary to have recourse to foreign markets, we ought, in the first place, to examine as to how we should cleanse our financial and monetary situation, and in this task we should find ready assistance.

But, it is asked, may it not be that this path is wrong, that our country, although it has so many manifest needs, should avoid looking for a loan? Should it not defer all endeavour to establish a sound currency on the ground that it is too early, and perhaps injurious, and should it not through internal measures and financial combinations both assure easiness for the public treasury and grant whatever means are required for expenditure on the refugees?

If there are any who support these views, they forget very quickly the tragical examples of other Governments which, led astray into a similar currency policy, brought general ruin upon their countries.

Greece must follow the straight path pointed out by the teachings of science and experience.

Two important points in our economic life are overlooked by, or are unknown to, those who are afraid of the country being burdened with foreign capital.

Financial Exhaustion.

The first point is that during the last 15 years—i.e., from the date of the Balkan Wars—Greece, having been engaged in immense struggles, has expended for extraordinary requirements, military needs, and in the settlement and maintenance of refugees (including the Refugee Loan), a total sum exceeding £173,000,000.

Of this amount, the fraction representing assistance from abroad amounts only to £36,000,000, which was received in the form of loans. The whole of the remainder was found by the country from its own resources.

It is, consequently, not a matter for surprise if after this immense effort some exhaustion is noticeable. This exhaustion is so much the greater as, during recent years, there has occurred a large increase of immobilised capital in many works of agricultural and industrial productions, which give slow returns.

Another remarkable characteristic of our present economic and social complex is also ignored. Greece has increased her population suddenly, but her production has not yet been able to adapt itself to the additional requirements, especially owing to the insufficiency of disposable liquid capital. The result of this is the unbalanced condition of production to be noticed, the concentration in the towns of the movable population, the suspension of many businesses—events which, to those who wish to see clearly, present points of view not devoid of danger.

It is, consequently, imperative that capital should be attracted to the country in order that the public treasury may balance its expenditure, that the productive level of the country may be raised and improved, that fruitful and continuous work may be assured to the daily increasing ranks of unemployed, that industry, which is at present in an embarrassed position owing to insufficiency of financial resources, may be able to continue to work without impediments. fine, that with the assistance of all the above elements an automatic reduction shall take place in rates of interest, which may be said to have reached prohibitive heights.

Burden of National Debt.

Our country is certainly one of those which have the lightest burdens to bear on account of the National Debt. In spite of the wars, the disasters, and the heavy and sometimes unreasonable expenditure, we have a National Debt amounting to only about 341 gold drachmæ per head of population, whilst, in 1912, the proportion amounted to 381 gold drachmæ. On the other hand, the actual wealth of the country is incomparably greater, the production is more plentiful and of a higher order, the amount invested in savings more regular and wider spread, and our country is, in general, richer and endowed with an industrial and an agricultural organisation incomparably more complete. There is, consequently, no economic argument against turning abroad for capital of which the destination would be the assistance of production and not investment in unfruitful objects which serve but to increase our liabilities.

Nothing of the above can be realised, however, unless we do our best to place the drachma on a sound footing. The instability of the drachma is the chief cause of our economic want of equilibrium. Instead of the drachma being a stable unit, in which values can be accurately measured, it has come to be a mere name, representing a value which fluctuates according to the appreciation of the public. The drachma has thus inevitably become an object of speculation, with all the disastrous consequences, moral and economic, which result from the resulting instability of all values.

How are we to make our way out of this unhealthy state of affairs, which unceasingly weakens our national economic condition, and recover a sound monetary unit, which shall bring back a condition of stability?

The idea of the appreciation of the drachma is a dangerous chimera, at any rate for those States whose economy has already for many years fallen far below par, and the real value of which is now but a small fraction of its original value. The old drachma unit, equivalent to 0.290322 grammes of fine gold is, for the future, only a historical reminiscence. The force of circumstances, the inevitable intervention of the State, and the flexibility of economic life which adapts itself to the monetary conditions on every occasion, have abolished it, as other units of value before it have been abolished by the force of other conditions and are now mentioned only in history.

Consequently, we in our turn, following the example of other States before us, must aim at the restoration of our currency, not by a rise in value but by fixing the value of the monetary unit at the level which has emerged by itself, which facts themselves will dictate—the level which will protect all the legitimate interests of the community. This fixing of the value of the monetary unit, which is called stabilisation, in order that it may produce the good results which are expected from it, must first be guaranteed by law—that is to say, the law must fix the rate at which the drachma will be converted into currency of real international paying value—and, secondly, it must have behind it all the real guarantees for this rate—i.e., liquid cover, absolutely sufficient, bank credits both ready and of adequate amount—so that the aid of all these elements, law, cover, and credits, shall create a real easiness and shall give the impression of complete security and the conviction that at any moment the local currency can be converted into foreign exchange freely and without expense.

The Benefits of a Sound Currency.

The confidence which will certainly return with our monetary convalescence will not only bring back to the country the capital which has flown abroad, and will lead it to demand Greek drachma securities which are now in a weak condition, but it will, above all, remove all psychological impediments to that free movement of capital between the different markets which automatically creates an equilibrium. This capital will be attracted wherever there is more profitable temporary or permanent employment; it will fill the deficiencies in our balance-sheet, and will contribute most powerfully to the reduction of the rate of interest, which it will bring down to lower levels, not much above the rates prevailing elsewhere. The various businesses and undertakings which are now languishing for lack of cheap capital will easily find supplies of money, and will be strengthened, will be set in motion, and will progress with ease and will contribute with advantageous conditions to the whole national economy.

Then the public treasury will also automatically benefit by the increase in the yield of taxation, which will follow the prosperity of the sources from which it draws its revenue.

British Support.

It is, however, unthinkable that we shall succeed in reaching this goal—to which we look after many years of trial and of whose importance nobody is ignorant—if we are left to ourselves. No State, however wealthy and economically organised, can restore its faltering monetary condition by resting on its own resources. The question is only what extent and what form assistance from abroad shall take. For the problem goes beyond the limits of the State left to itself. In order that a successful solution shall be found, in addition to strong and prolonged endeavour on its own part, active assistance on the part of others—assistance which sometimes goes as far as solidarity—is required.

I believe that our country has obtained this assistance as far as was possible by the recent settlement of the War debt. In return for abandoning the balance of the credits of the 1918 agreement, we have the assurance of the British Government that in the effort which the

country will make to restore the national finances and to obtain a sound currency—and which will take the form of an adequate plan—it will enjoy the full support of that Government in finding the necessary means and in the successful realisation of the proper combination for that object.

COMPANY NOTES AND REPORTS.

ORIENTAL TELEPHONE AND ELECTRIC.

The report of the Oriental Telephone and Electric Company, Ltd., for the year ended December 31 last states that the net revenue of the company for the year was £68,282 5s. 11d., and after adding £14,218 brought forward from 1925, and deducting the interim dividends paid on November 1, there remains a balance for disposal of £58,735. The directors recommend that this sum be appropriated as follows:—In payment of the final dividend for the year of 3½ per cent. on the preference shares issued (less income tax), £6,608; in payment of a final dividend of 6 per cent. and a bonus of 2 per cent. for the year (free of income tax) on the ordinary shares issued, £34,315—£40,923; to carry forward, £17,812.

The Bombay Telephone Company, Ltd., shows an increase in lines at December 31, 1926, the number in service at that date being:—exchange lines, 8,278; extension lines, 2,909; private lines, 397. Whilst there has been improvement in the actual results of working during the year, it has not been possible to declare a dividend owing to the exceptionally heavy charges for depreciation, etc., which have had to be met. The Government sanction for the introduction of the message rate has not yet been obtained, but it is hoped that this will be received at an early date. Satisfactory improvement has been shown by the Bengal Telephone Company, Ltd., both in the number of lines and revenue. The total number of lines at June 30, 1925, was:—exchange lines, 8,066; extension lines, 2,878; private lines, 605. The dividend paid for the twelve months ended June 30, 1926, was 6 per cent. (free of Indian income tax) compared with 2 per cent. for the previous year. The Madras Telephone Company, Ltd., shows an increase in the number of subscribers, the lines in service at December 31, 1926, being:—exchange lines, 1,391; extension lines, 838; private lines, 57. A dividend of 7 per cent. has again been declared, free of Indian income tax. The Rangoon Telephone Company, Ltd., also records an increase in lines, the number in operation at December 31, 1926, being:—exchange lines, 1,920; extension lines, 1,008; private lines, 74. Owing to special charges for depreciation, this company has only been able to pay a dividend of 5 per cent., free of Indian income tax, for the last year as against 8 per cent. in the preceding year.

MORTGAGE COMPANY OF EGYPT.

The net profit of the Mortgage Company of Egypt for the year ended March 31 amounted to £129,112. A balance of £125,000 was brought forward, and £9,450 has been recovered in respect of taxation. The distribution for the year on the ordinary shares is again 15 per cent., while an addition of £21,062 is to be made to the special reserve. A balance of £155,000 is carried forward. A large area of land in Egypt was put under cotton in 1926, and the crop is estimated to exceed 7,500,000 kantars; production in other countries being also on a large scale, prices weakened from the beginning of the selling season. Landowners therefore found their anticipated revenue considerably diminished, and borrowers were not able in all cases to pay their instalments in full, with the consequence that there is an increase in the amount of arrears. Land sales effected during the year were unimportant. There was a more active demand for loans, and there is an increase in the amount outstanding of some £22,000, compared with a reduction of £171,000 during the previous year.

NATIONAL BANK OF EGYPT.

Position at March 31, 1927, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £2,925,000. Reserve Fund: Statutory reserve, £1,462,500; special reserve, £1,145,625; current, deposit and other accounts, £15,803,336; Egyptian Government, £19,692,386; Sudan Government, £317,124; Mixed Tribunals, £1,559,708; bankers' accounts, £319,184; cheques and bills payable, £302,150; sundry other accounts, £1,572,902—£45,099,915. Assets: Government securities and securities guaranteed by the Egyptian Government, £24,992,178; sundry securities, £356,869; advances on merchandise, £2,216,911; advances on securities, £3,235,552; advances otherwise secured, £1,370,551; sundry other advances, £1,119,249; bills of exchange, £3,210,273; local bills discounted, £604,405; buildings and furniture, £128,476; money at call and at short notice, £1,506,375; bankers' accounts, £3,081,854; sundry other accounts, £1,017,620. Cash: Notes, £1,537,268; gold, £306,625; silver, nickel, etc., £415,709—£2,259,602—£45,099,915. Issue Department.—Notes issued, £28,500,000. Gold, £3,339,576; *British Treasury Bills, £10,910,424—£14,250,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £1,355,896; British Treasury Bills and National War Bonds, £12,894,104—£14,250,000—£28,500,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold (see *Journal Officiel* of October 30, 1916).

A GOLD MINE.

The discovery of a gold mine at Vizeh, in Turkey, is reported in the Turkish Press, with all the romance suitable to such an incident. The lucky discoverer is a Bulgarian subject, grandson of a *komitaji*, who is said to have hit upon in his search for a safe retreat a cave in the Strandja Mountains which was covered with a carpet of gold coins. He retired from the *komitaji* trade and spent the rest of his life in his native village "rich and respected." Convinced that the cave contained natural gold, the old *komitaji* on his deathbed confided the story of his discovery to his family, but all the members remained sceptical on the subject, until this particular grandson determined to put the story to the test. It is to be hoped that his experience will be more fortunate than that of others who have learned the truth of the old definition that a mine is a hole in the ground owned by a liar.

SUMMER HOLIDAYS.

Messrs. Thos. Cook and Son's tour book entitled "Summer Holidays" at home and abroad grows in volume and scope each succeeding year. The 1927 edition contains close on 300 pages, packed with alluring suggestions and useful facts. Among new features are tours to Czechoslovakia and Poland and vacation tours to Egypt and Palestine. Undoubtedly the book is the most comprehensive vade-mecum of holiday arrangements ever published. A copy can be obtained at any of Messrs. Cook's offices.

The annual Trade Fair at Liubliana will be held on July 2.

The directors of the Imperial Tea Company, Ltd., recommend the payment of a final dividend of 12½ per cent., less tax, making 20 per cent., less tax, for the year ended December 31, 1926 (against 15 per cent. for 1925). Transfer books will be closed from June 2 to 15 inclusive.

An Exhibition of Aeroplanes and Aeronautical Appliances is to take place at Bucharest on June 23 under the auspices of the Aeronautical Propaganda Association. The Roumanian Minister of War has extended an invitation to British aeroplane manufacturers to participate. The exhibits will include models, blue prints, diagrams, sections of parts, etc.

BULGARIA'S RAILWAY DEVELOPMENT.

The problem in regard to Bulgaria's railways is not so much one of extending mileage, as in Turkey, (it is pointed out in a recent American Consular report), but rather of improving the mileage already in operation. For a small, mountainous country, Bulgaria already has a fair percentage of track. The chief ports—Varna, Bourgas, and Rustchuk—are connected by broad-gauge lines with Sofia, the capital, and there is a through line from the north-western to the south-eastern frontier. The main problem of the moment is to improve station facilities, relieve the pressure on existing lines, and clear up the congestion. The station at Sofia was built some 40 years ago when Bulgarian traffic was small; it has few, if any, sidetracks or switches. Now, however, the station has to serve a modern city of 200,000 inhabitants—the industrial centre of a developing country, the meeting point of several railway lines, and the biggest transit point between Nish and Constantinople. Freight cars passing through *en route* to Turkey and the Near East often are held up for days and even weeks by congestion. The same is true, in a lesser degree, of the stations at Philippopolis, Gornia Orechovitz, and Svilengrad. The Bulgarian Government would like to remedy this state of affairs by widening and rebuilding the stations, but that would entail more expense than the Government has funds available to meet. Consequently, it is desired to obtain this cash abroad. After port, timber, and shale oil, it is possible that one of the next concessions granted by the Government will be for the purpose of modernizing Bulgarian railway stations.

CHESS.

By "CARO-KANN."

I gave last week an example of an admirably conducted attack. Here is another game in which a winning combination for Black was available, but was not seen at the time. Black (M. Tchigorin) played P—Kt3 and drew, but R—R8 (ch) led to a mate in six. Actually it is not difficult to miss these chances at the end of a hard played game. I remember a game some years ago in the Metropolitan Chess Club Championship which lasted 110 moves or thereabouts. Towards the end of the second sitting a very complicated sacrificial win was overlooked, and like the game above the end was a draw.

Spies Petroleum Company announces that cabled advice has been received by Hamilton's Oil Concessions from Bucharest as follows:—"Week ending May 20 production No. 8 nil, owing cleaning. Well again making small bows. New well No. 9 cleared and drilling restarted; depth now 971 metres. New well No. 10, depth 500 metres. Romano Belgiano participation strong flow."

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended May 19, state:—

Since our last report the futures market has been very active and very firm, prices improving day by day. The week's summary of price movements is as follows:—Sakellaridis: May, 31.37 dollars, 2.27 dollars up; July, 31.52 dollars, 2.14 dollars up; November, 32.55 dollars, 2.10 dollars up; January, 32.20 dollars, 1.95 dollars up. Ashmouni: June, 22.95 dollars, 1.54 dollars up; August, 23.45 dollars, 1.69 dollars up; October, 24.05 dollars, 1.72 dollars up; December, 24.20 dollars, 1.77 dollars up; February, 24.30 dollars, 1.67 dollars up.

Sakel: We have had a series of very firm markets; all the ground lost last week has been recovered, and prices to-day marked the highest point attained since the advance started. As we have said in our recent reports, the movement is an almost entirely speculative one.

On several occasions recently, the news from America with reference to the damage to the crop caused by the Mississippi floods has been contradictory; without doubt, the damage caused is serious, but, for the moment, it is difficult to fix the extent of the damage. The New York market, whilst firm, is far from being out of hand, like this market; since the floods started, New York prices have advanced about 125 points, whilst here we mark a rise of about 475 points.

The demand from abroad has again been poor, and the turnover on the spot market at Minet el Bassal is relatively small. Cotton continues to come down from the interior, and the stock in Alexandria shows a slight increase on the week, an unusual thing for this time of the season.

The competition of Sudan Sakel with Egyptian Sakel in Liverpool has become rather more accentuated; the Sudan Plantations Syndicate is reported to have the cotton unhedged, and consequently is able to under-offer Egyptian Sakel every time.

Another factor which has contributed to the reduced takings of Egyptian Sakel is the poor quality of this season's cotton, and, in our opinion, it would be a wise move on the part of the Government to release at least a part of the half-million kantars which it holds; the greater part of this cotton is good-style stuff, and its release would tend to re-establish Sakel with spinners before the crop now in the ground is put on the market.

Uppers: This market also has been very firm, especially the October option. As with Sakel, most of the operations have been for speculative account. The demand from abroad has been only moderate.

The week's receipts amount to 182,374 kantars against exports 132,371 kantars; the stock in Alexandria stands at 2,967,738 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to May 12, 1927, are as follows:—Arrivals: Lower Egypt, 4,735,000 kantars; Upper Egypt, 2,899,000 kantars; total, 7,634,000 kantars. Exports: Sakel, 2,539,934 kantars; Ashmouni, 3,097,011 kantars; various, 359,701 kantars; total, 6,032,646 kantars.

Spot: During the week under review we have once again had a series of very quiet markets, and a continued poor demand from spinners. Sales amount to about 10,300 bales, of which we estimate 4,300 bales Sakellaridis, 5,400 bales Ashmouni and Zagora, 400 bales Pilon, 100 bales white, and 100 bales other varieties. The spot situation is about as last week in respect of quantity and quality of offerings.

Sakellaridis: Has met with a poor inquiry, and a very moderate business has taken place, covering all styles,

however. Good lots of decent staple cotton continue hard to find. Spot differences are easier for the lower grades, unchanged for the medium styles, and somewhat dearer for the better grades.

Ashmouni and Zagora: Have been in very moderate demand, and all grades have been dealt in. Spot differences are generally unchanged.

Pilon: A moderate business has been done at about last week's spot differences.

White: A small business has been done. Spot differences are distinctly easier.

Various: Brown is neglected and no business is reported. Spot differences are quotably unchanged. A few lots of Nahda have changed hands, and a few bales of Fouadi have also been done.

Up-country: With the approach of the date fixed for the closing of the ginning factories, business has been brisk. A fresh communique published by the Ministry of Agriculture states that it is the intention of the Government to enforce strictly, as from the 22nd inst., the law relative to the storing of cotton in seed on all cotton still in the village stores or markets, or in factories which have closed down for the season. The tenor of this communique leaves one to suppose that the factories which are still working on the 21st inst. will be allowed to go on working until they have ginned all the cotton actually in the factory compounds.

Crop, 1927: Reports from all districts are satisfactory in every respect. Weather conditions have been favourable during the week: Water is sufficient, and the growth of the plant is quite up to the normal. Some cases of leaf worm are reported, but damage is insignificant. Complaints of shortage of water are rare, and only apply to fields at the tail-end of canals.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 25:—

Egyptian Futures.—Sakel Contract.—The improved undertone to which we drew attention last week has since continued in evidence, and with increasing trade support and speculative buying, backed up by good Alexandria reports, prices have shown a further substantial advance. Periodical bouts of profit-taking generally attributable to American sources have been in evidence and these at times have caused prices to react sharply, but, so far, the contracts so released have been well absorbed and, whilst not closing at the best of the week, the gains registered are 79 to 87 points for near and 63 to 72 points for distant positions since our last report. The principal feature of the week, in our opinion, has been furnished by the local trade; Manchester reports in the fine section have been more encouraging than for some time past and these have been backed up by considerable activity in the raw material. Egyptian Sakels, however, have not participated in the improvement as much as the Sudan variety, in which a large business has been transacted. Whilst it must be conceded that much of the appreciation that has taken place since the early days of April is due to speculative activities based on the assumption of a shortage of staple cotton in the

TEXTILES.

If you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester. (Established 1887).

next American crop, and also to a reduced acreage in Egypt, it would appear that we are now beginning to encounter the consolidating evidence of increasing trade at the level now obtaining. We are rather optimistic that the latter will continue, provided that prices remain steady or develop a gradual hardening tendency. Throughout the week the Alexandria market, apart from periodical bouts of liquidation, has shown a firm undertone, and provided ruling conditions in our market and in the United States show no radical change, we cannot anticipate any weakness from this quarter, as apart from supplies of tenderable cotton in the existing stock being rather limited, the opinion is gaining ground that the restriction of acreage decreed by the Government has been more effective than generally anticipated. Some of the more conservative houses are now beginning to believe in a 20 per cent. decrease.

Uppers.—Trade in this option continues on broader lines, and with the encouragement of hardening American values and a satisfactory amount of trade support prices on the week have advanced 48 to 60 points for near and 36 to 46 points for distant positions. We still consider that there is room for further appreciation.

Egyptian Spot.—The week has been characterised by an all-round broadening of the daily inquiry, but, unfortunately, except for a sudden demand which has sprung up

during the past few days for low and "inferior" cotton, very little improvement in the sales of Egyptian cotton has taken place. Nevertheless, the continued strength of the various markets is having its effect and signs are not wanting that the trade, after holding out very persistently for a long time, is now becoming seriously perturbed, and we should not be surprised to see an improved business doing in Egyptian cotton before long, provided that the current level holds.

Of course, sellers' ideas of the value of Sakellaridis cotton will have to be considerably modified if business is to be attracted, otherwise buyers will continue to bestow their custom on the products of the Sudan. During the past seven days a very large business has been done in Sudan Sakel at prices ranging from 16.75d. to 19d. A fair inquiry has continued for the White (or American seed) variety. Rather more interest has been shown in Egyptian cotton for shipment.

Forwardings to spinners for the week ending the 20th inst. were returned as 3,797 Egyptians and 1,860 bales Sudan. Estimated sales, 1,700 Egyptian and 15,000 bales Sudan. Quotations of Sakel have been reduced 10 points for Extra Fine, and Fair is unchanged on the week; other grades have been advanced 40 to 70 points. Quotations of Upper and Brown have been advanced 50 points. F.G.F. Sakel to-day, 16.70d. F.G.F. Upper to-day, 13d.

Notes of the Week.

The Egyptian Contretemps.

No one can contend that the British Government has not justification for the steps that it has suddenly taken in connexion with the situation in Egypt; whether those steps were altogether expedient is another matter. We are still within three years of terrible outrages in the streets of Cairo; six years ago there were riots in Alexandria. A Government that receives reports of fresh efforts to foment political excitement among Egyptians can hardly be blamed for being unwilling to run further risks and for wishing to forestall any possible excesses. To-day, however, there is a crucial difference in the Egyptian situation. The Egyptian Government is a friendly one. At its head is an able man of affairs, not only well disposed towards Great Britain, but striving to bring about the improvement in Anglo-Egyptian relations that the sane people on both sides desire. It is true that the position is complicated by the fact that the Ministry of Sarwat Pasha not only includes members of the Wafd—the party that has shown determined hostility to Great Britain—but is also dependent on that party for its majority in the Legislative Assembly. Egypt is very young and inexperienced as an independent country; it has more than its fair share of unballasted individuals, politically half-educated, and is further handicapped by the absence of men of strong character who will stand up for what they know to be right and can hold the agitators in check. This state of affairs is not to be rapidly altered. Political education can be acquired only by slow degrees. Under Sarwat Pasha, to an even greater extent than under his predecessor, Adly Pasha, the irresponsible extremist, who was for a time encouraged to believe that he was the Government of Egypt, is beginning to learn his limitations. It was most desirable that this process of political schooling should not be interrupted, and for this reason the British Government might well hesitate to take any step which tended to weaken the position of Sarwat Pasha. There can be little doubt that the presentation of the British Note to the Egyptian Government and the dispatch, at the same time, of

British battleships to Alexandria will add to the difficulties of Sarwat Pasha's position, but it should not make it actually untenable.

The Question of Expediency.

Within the question of expediency comes the consideration of the reasons that led up to the steps taken. These have been stated by Sir Austen Chamberlain in the following words:—"For some time past the Egyptian Army has attracted the attention of a section of Egyptian politicians. The aims of this section are, first, to increase the existing numbers of the Army, and strengthen its armament, and ultimately to convert it into a weapon at the disposal of one political party, the Wafd." To this end recommendations had been made by the War Committee of the Egyptian Parliament for the cancellation of the budgetary credit for the Sirdarate, which would have the effect of transferring the functions of the Sirdar, hitherto a British officer, in the main to the Ministry of War. "The party in power would, as a result, be enabled to exercise for their own purposes unchecked political influence over the Army." It is a natural assumption that the War Committee was deliberately working to this end and hoped at the same time to drive a wedge into the Reserved Points, which constitute the unimportant but inevitable limitation on Egypt's independence. On the other hand, when we have to bear in mind the wisdom of not weakening Sarwat Pasha's position, it may be asked whether even the potential interference with the Egyptian Army—a relatively unimportant force of some seventeen thousand men—made it expedient at this particular moment to run the risk of losing at the head of affairs the only man, as far as can be seen, that stands between Egypt and chaos. Of the exasperating nature of the extremists, who owing to the noise that they make in Parliament claim to rule the roost in Egypt to-day, there can be no question; they are wholly responsible for the troubles that have been brought upon Egypt and for the strain in Anglo-Egyptian relations. Their kind, however, is to be met with in every country, and, in view of the

fact that friendly relations with Egypt may be said to be essential to Great Britain, prudence might have suggested the desirability of "waiting for the tortoise to put out its head," rather of taking action on account of the noise that it was making.

The Passing of the Crisis.

If the Egyptians are capable of a dispassionate analysis of the situation, there is no reason to despair of a satisfactory issue. The earliest proceedings in the Assembly since the presentation of the British Note were entirely correct and there is no need to submit the War Committee's recommendations to Parliament, which has already sat too long into Egypt's hot weather for the good of the deputies' tempers. King Fuad was on the point of leaving Egypt, accompanied by his Prime Minister, for a visit to Paris and London. There can be no doubt that the presence of the King and Sarwat Pasha in England would help towards a smooth solution of outstanding problems. The British Note was intended as a warning to the extremists that the question of the Reserved Points can be settled only by friendly discussion and that Great Britain's position is not to be breached by direct assault or by mining. It expressed the willingness of the British Government to open negotiations and urged the necessity for an agreed settlement. That it should cause the leopard to change his spots is not to be expected; but it is to be hoped that it will not have the effect of compelling Sarwat Pasha, as the representative of the political sanity which Egypt is gradually acquiring in increased measure, to withdraw from his office, out of disgust for the apparent hopelessness of the task of inculcating political wisdom and common sense among the more vocal of the present members of the Egyptian Parliament. At the moment of writing the reply of the Egyptian Government to the British Note would not seem to have produced a solution of the matter; but the manifest good will of both Governments is a hopeful feature of the situation.

Yugoslavia and Albania.

An incident that might conceivably have serious consequences has occurred in Albania, where the authorities have arrested an Albanian subject employed as a dragoman at the Yugoslav Legation in Durazzo. A demand for his immediate release was at once made by Yugoslavia, but has not been complied with by the Albanian Government, on the ground that compromising documents have been found on the man. The Yugoslav Government instantly recalled its Minister from Durazzo,

and relations between the two countries are thus officially ruptured. Both parties will now have time to consider the matter at more leisure, and it is to be hoped that common ground for agreement will shortly be found, before the League of Nations is called upon to take action. On the evidence available it is quite impossible to gauge the rights and wrongs of the case; but undue precipitancy would seem to have been indulged in on both sides. If the arrested dragoman has been guilty of unlawful activities, it is natural that the Albanian authorities should wish to seize him unawares and without notifying the Yugoslav Legation. The first concern of the Yugoslav Government, it would be thought, would be to dissociate itself from the dragoman's illegal practices, if committed; and only if it had reason to suppose that he had been unjustly arrested would it press for his release. The haste with which the stage of a rupture has been reached would seem to reflect the strained situation left by the Tirana Treaty and the recent Italian Note to the Great Powers. Nothing could be more unfortunate for Yugoslavia on the threshold of negotiations with Italy than that she should seem to play into the latter's hands. It must be taken for granted that the Tirana Treaty would not allow Italy to stand on one side, if Yugoslavia attempted to correct Albania for a diplomatic solecism. It is, however, the essence of Yugoslavia's grievance against Italy that the latter is pushing things to a head in the Balkans at the present time, because the Italian Government realises that the Yugoslavs will be much stronger from a military point of view in three years' time than they are now. It would, therefore, be entirely bad tactics on Yugoslavia's part to pick a quarrel with Italy at a favourable time for the latter, or to advance, in connection with Albania, along a road from which retreat would not be easy. If the need should arise, British influence might well be brought to bear to heal the breach between Yugoslavia and Albania to the advantage of both parties.

A New Roumanian Government.

For the sudden resignation of a Government with a substantial two-thirds majority in both Chambers a reason outside parliamentary exigencies must be sought. There is, however, no need to press for any other explanation in regard to the resignation of General Averescu's Cabinet than that by common consent a Coalition Government was held to be necessary in the wider interests of the country. The fact that General Averescu was invited to form one, but failed, would seem to dispose of the suggestion that he was suspected of planning a dictatorship in certain events. His supersession by Prince Barbu Stirbey is significant. Prince Stirbey has hitherto been more conspicuous as a close friend of the Royal Family than as a politician. Even apart from the complexion of his Cabinet, his relationship to M. Ion Bratianu, who married his sister, would indicate that the Liberal Party, in spite of being represented in the Chamber by only fifteen seats out of 387, had lost none of its hold on the country or its political life. Prince Stirbey has secured the co-operation of representatives of all the chief parties, with the exception of the People's Party of General Averescu, although an attempt is still to be made to overcome its formal refusal to be represented in the new Ministry. For the most part Prince Stirbey's colleagues will be "second strings" rather than the leaders of the respective parties. Among them, however, is Dr. Lupu, the leader of the Peasant Party who seceded from the Transylvanian fusion which brought the National Peasant Party into being; there are four members of the National Liberal Party, including M. Lapedatu, Minister of Religion in the last Bratianu Cabinet, M. Inculetz, and M. Stelian Popescu, both former Ministers, the latter being proprietor and Editor of a leading Roumanian newspaper; other members of the Cabinet are Dr. Argetoianu, who seceded from General Averescu's Party, and General Angelescu, who is presumably Marshal of the Court. In the light of recent events a strong case can be made out for a Government representative of all parties, which will preclude the re-opening of the question of the suc-

cession to the Throne. The new Ministry will proceed at once to hold elections, and it may be expected that the Liberals will not be content with their present exiguous following in Parliament.

Agitated Days in Greece.

M. Venizelos's last incursion into Greek politics will not have added to his reputation. Unwilling to trust himself to the mainland, he is paying a long visit to his own island, Crete, and from there, in spite of his self-denying undertaking not to interfere again in Greek politics, he has called upon his countrymen to force a plébiscite on the electorate to decide anew the question of the form of government for Greece. The reasons against this step, which were elaborated in these columns last week, are so obvious that only one who has never understood the domestic politics of his own country or is incorrigibly a revolutionary at heart would have made the suggestion. It may be that M. Venizelos's return to Greece has brought home to him the tragic consequences for his country of the policy associated with his name, and that he desired to have the consolation which a further vote in favour of the Republic might afford him. His counsel has been repudiated with wonderful unanimity by all parties. For a moment it promised to lead to the very military interference that M. Venizelos professes himself anxious to eliminate. The situation has been far from clear. At one time it was thought possible that the Army would prevent the reinstatement of officers agreed upon by the Cabinet, and in so doing would bring the Coalition to an end; but the Government found support in another section of the Army, and the Republican *coup* was frustrated. Whether this is a case of "out of the frying-pan into the fire" remains to be seen. The immediate result, however, is that the officers have been reinstated in the Army, the Constitution has been published, and the position of the Cabinet is considered satisfactory enough to allow M. Michalakopoulos and M. Kaphandaris to leave Athens for Geneva.

A Temporary Crisis in Iraq.

To anyone aware of the convictions which Jaafar Pasha, Prime Minister of Iraq, in common with several of the Arab statesmen and soldiers, possesses concerning the reorganisation of the Iraq Army upon a compulsory basis, it is not surprising that a clash of opinion on this subject between the various authorities in Iraq should have caused him to offer his resignation to King Faisal. It seems fairly evident that the schemes proposed by Major-General Daly have been enthusiastically supported by many of the better-known Arabs in Iraq; the departure of this British soldier has, indeed, been genuinely regretted. Nor is it yet proved that Jaafar Pasha's scheme for imposing a limited form of conscription on Iraq will yet prove impracticable, for, contrary to some reports that have found credence, the Conscription Bill has not yet been put before the Baghdad Majlis. The whole problem is still in the preliminary stages. However, King Faisal has not accepted the resignation of the man whom he sent for from London as being the one Arab who might resolve the differences of Iraqi politicians, and it is stated that the whole matter has been postponed until the next Parliamentary session. The downfall of Jaafar Pasha's Cabinet at this particular moment would have been doubly unfortunate, for already in some quarters there was being exhibited a misleading tendency to link up the crisis in Iraq with that which has arisen in Egypt on the question of the native Army there and of the degree of British responsibility for it. In any case, conscription for Iraq is not a question on which it is desirable that any lay commentator should set down a definite opinion, for it is obvious that in such a country as Iraq, with its ambitious townsmen and conservative tribesmen, the problem is far different from that obtaining in more developed and closely-knit countries. The urgency of Iraq's problem of cheap defence, and the difficulty of its solution, make delicate indeed the task of those Arabs who, agreeing with or disagreeing with

such advice as is offered them in various British quarters, are attempting to lead their country to complete independence.

The Position in Syria.

The prolonged sojourn in Paris of M. Henri Ponsot, High Commissioner for Syria, would appear to bear the implication that the position in Syria has passed the danger stage. Unfortunately, another implication is also possible: that the French Government has not yet made up its mind upon the policy to be adopted in Syria. The account of his charge which M. Ponsot gave in Paris on June 2 to the Foreign Affairs Committee of the Senate was optimistic indeed; we should, however, prefer this optimism to be made a basis of action. Examination is useful, but animation is better. According to M. Ponsot, the military situation in Syria can be regarded as stabilised; and the effectives of the French forces are being reduced. Financially, he said, the position is sound, the State Budgets are balanced, and "the regular development of resources, which strengthen the credit of the country, will facilitate the beginning without delay of an economic process which will increase the prosperity of the State under the French Mandate." We hope, indeed, that this last dictum is correct: but what a comment upon the activities of M. Ponsot's predecessors in Syria! The beginning of an economic process! And this after seven long, pregnant years! Perhaps, after reading this, we were less moved than we might otherwise have been by the High Commissioner's special reference to the scheme of railway extension which would ensure the junction of the European railway system with that of Egypt. The project for linking Beyrouth and Haifa by railway is, of course, no new thing; it was, indeed, one of General Weygand's most favoured notions. It is an excellent project; but Syria must first be saved from within. In time, one must confess to a certain disappointment with the present handling by the French Government of the Syrian problem; and if, as has been reported, M. Ponsot is taking back no new plans, no definite Constitution, no political innovations, it may be that further disappointments are in store. We shall be freer to comment, however, when M. Ponsot has actually gone back to the charge which so anxiously awaits his return.

Change in Persia.

Change in Persia is a curious thing, belonging either to the category of the unceasing and unimportant, or to that of the very gradual and significant. Instances of either sort of change have recently been provided by the purveyors of news from Teheran. First, is the new Cabinet formed under the ex-Lord Chief Justice, Mehdi-gholi Khan Hadayat, who has surrounded himself with a strong element of the Cabinet which, under Mustafî-al-Mamalîk, resigned on May 28. And secondly, and perhaps of more lasting interest than the formation of a new Cabinet—which, however, should be noted as containing high representation of the new political ideas in Persia—is the announcement of a "Fight for Liberty" campaign on the part of the women of Persia. It is said—and one supposes that these things are always said at first of but a minority—that Persia women are attacking the veil, and show open and impudent resolve to wear the European hat. But the natural resources of Persia are not thus to be thrown open to all and sundry without some struggle, and the police order which has been issued in Teheran prohibiting veiled women from conversing with males in the streets or bazaars (it is also alleged that the police have been ordered to whip any Persian woman who shows herself unveiled in the streets and in the company of men) is an indication that the superficial imitation of the West is not to be so easily achieved in Persia as, say, it is being achieved in Turkey. Of itself this "feminist" movement in Persia is perhaps insignificant, but taken by and large it may be held to herald some sort of new

(Continued on page 690.)

MISUNDERSTANDING IN EGYPT.

Great Britain is being called upon to pay a heavy price for the mistake made five years ago, when the Government of the day hurriedly proclaimed the independence of Egypt, subject to certain "Reserved Points." In 1920 the same Government had rejected the solution proposed by Lord Milner, that a reciprocal treaty should be concluded between the two countries; yet, when the problem became acute in 1922, it conceded the independence recommended in the Milner proposals, but with the important difference that it did not wait for Egypt to bind herself by the obligations that were to be a *quid pro quo* of the grant of independence. The event has proved that, instead of being a solution of the Egyptian problem, the Declaration of Independence has served every now and then to aggravate the relations between the two countries. A section of the Egyptian people which has sought to dictate the country's policy to successive Governments has set itself to resist the British claim to any restrictions on Egypt's independence. Far from admitting that the Reserved Points are a subject for discussion and mutual adjustment, it has left no stone unturned to render the reservations null and void. It is lost sight of in Egypt that the Reserved Points do not represent peculiar villainy on Great Britain's part, from a desire to give independence with one hand and to take it away with the other. The conditions laid down in the British Declaration are inherent in the whole situation. Egypt could not defend herself against the world in case of need without the assistance of a Great Power, and Great Britain's record in Egypt is such that she is not called upon to yield that rôle to any other Power. In this circumstance lies the measure of restriction that there must inevitably be on Egyptian independence. As in so many other cases, such restriction may be made to loom large by constant emphasis or can be reduced to vanishing point by frank and friendly acceptance. Unwisely, as it seems in British eyes, the Egyptians have elected to keep in the forefront the Reserved Points, until the issue is in danger of becoming: No Reserved Points, no Independence.

The position is complicated by the failure of the Egyptians to understand the essentials of constitutionalism. The parliamentary system as practised in the country threatens to become a parody of constitutional government, when Ministry after Ministry strives to promote good relations between Egypt and Great Britain, but is thwarted by a group in the Legislature. The trouble, we believe, is due not so much to viciousness as to ignorance. Fired with a patriotic zeal for their country, the extremists have made up their minds that it is their duty to resist all encroachments upon their independence,

as they understand the term. They are too ignorant, too unsophisticated to appreciate Egypt's position in the world, and as in the case of all ignorant people they are inaccessible to argument and reason. In any other country they might rage never so furiously, but Government and the Chamber would proceed quietly on their own way and the country would not suffer overmuch. In Egypt, owing to the peculiar circumstances in which the country finds itself, these extremists can dragoon both the Chamber and the Ministry. They have driven Adly Pasha from office, and they have forced his successor into a wholly false position by thrusting the military question into the foreground. Great Britain, unfortunately, cannot deal directly with these extremists; she has to lodge her complaints with, and to press her claims on, her friends who form the Government, which as a body desires nothing better than to live at peace and amity with the British. It is impossible not to feel sympathy with Sarwat Pasha and his colleagues in their predicament. They must realize, as other Governments in the East are learning, that Western constitutionalism is a plant that is not easily acclimatised in an Eastern country; but they are bound by the fetish that constitutionalism is essential to progress. What they have now to bring home to the extremists of the Wafd is that, unless an Egyptian Government is allowed to administer Egypt according to its own lights, free from the encroachment of the Legislature on the Executive, constitutionalism in Egypt is doomed. It has contrived in five short years to reduce Anglo-Egyptian relations to an exchange of insults in the Chamber on the one hand and the presentation of Notes on the other. It is impossible that this state of affairs should be tolerated indefinitely, and there must be many Egyptians who would secretly welcome the cancellation of the Declaration of 1922 as an escape from the farce which the Wafd extremists have made of constitutionalism.

In view of all that has happened during the last five years the immediate cause of the latest crisis in Egypt may be held to be of little moment. The main point at issue remains one and the same, that Great Britain, in virtue of her responsibility for the defence of Egypt, has to retain a privileged position in the country, while anxious to make Egyptian independence as real and as practical as possible. It is admittedly a complicated problem: one that calls for detailed discussion with frankness and good will on both sides. Yet so long as the Egyptian Parliament remains what it is, no Government in Cairo seems able to initiate such discussions. With regard to the military matters now under dispute, it is conceivable that Egyptians should hold different opinions regarding their Army and its purpose from those of the British Government and its advisers, who cannot lose sight of the fact that the ultimate safety of the country must rest on British shoulders. If the subject had been broached in the right spirit, rather than seemingly as a device for driving a wedge into the Reserved Points, it should not have proved difficult to find a solution. To prevent further mischief from being done to the relations between the two countries a British Note has had to be presented to the Egyptian Government, and the exceptional position of Great Britain in Egypt has been emphasised before all the world. With more reciprocity on Egypt's part, the Reserved Points by now would have passed into oblivion, and the nations would have been led to suppose that, whatever reservations there might be on paper in regard to Egyptian independence, they were non-existent in practice, and that Egypt had made a wonderful bargain by securing independence with effective protection from all aggression, whether military or political, from without.

The Near and Middle East*

From Our Own Correspondents.

Cairo, May 28.

Empire Day.

Empire Day was fittingly celebrated in the four principal towns of Egypt. Thanks to the initiative of Lord Lloyd the British communities in all those centres now participate in the celebration. Until last year celebrations had been confined to Alexandria. In each instance the day was made into a children's day, sports being held—in Cairo at Gezira and in Alexandria at the Sporting Club—with a march past the flag followed by an address on the significance of the day—delivered in Cairo and Alexandria by the High Commissioner, who prefaced his speech by a message from the Council of the Royal Colonial Institute. All the celebrations were a conspicuous success and the various committees are deserving of every congratulation at the result which their efforts have achieved. Lord Lloyd took the opportunity of his visit to Alexandria to stay a couple of days, during which he received and discussed questions of the moment with leading residents and attended the great Garden Fête in aid of the Y.M.C.A., which was given the following evening in Mr. Ralph Carver's garden at Bulkeley.

New Telephone Exchange.

King Fuad this week inaugurated the new telephone exchange, which has just been completed in Cairo. Egypt has undergone such development that while ten years ago there were but 20 exchanges and 30 trunk lines, to-day the service needs no less than 90 exchanges and 180 trunk lines, while the number of subscribers has doubled and the revenue risen from £E193,000 to £E600,000. An idea of the increase in work entailed can be gauged from the fact that the total length of line is now 15,000 kilometres compared with 1,300 kilometres ten years ago, while last year there were nearly 2,500,000 trunk calls as against 1,500,000 in 1919. The question of rapidity of telephone communication is a vexed one, and efforts are being made to introduce the automatic system so as to minimise the delays. One exchange is already so organised, and it is hoped within the next year or two to make the automatic system general in Alexandria as well as in Cairo. The difficulties at present to be con-

tended with by the authorities are exceedingly great, particularly when one bears in mind the number of languages current in which the telephone girls have to proficient. While now and again one does get exasperated at the vagaries of the system, yet, taking everything into consideration, we might fare much worse. Indeed, I am told by people qualified to judge that Egypt is much better off than many other parts of the world.

Parliamentary Scenes.

Parliament started the week well, but ended very badly. The work opened on Monday with a unanimous and highly proper decision that the salaries of its members should be reduced from £E600 to £E480. It closed on Thursday with a most unusual debate on the question of the High Commissioner's recent visit to Minia in response to an invitation proffered to him by the notables. This debate was but a continuation of what had happened the previous weeks on the occasion of similar interpellations in connexion, for example, with the non-presentation of Letters of Credence by the High Commissioner and his Note regarding the sentences on servants convicted of assaults on their European mistresses. Like these questions this one was raised as a sign of defiance of the British Government and as before the deputies took the opportunity of giving expression to sentiments which were extremely hostile to Great Britain. The Chamber signified throughout its complete approval of what was being said, and the venerable President Saad Zaghloul Pasha, who appears to be none the worse for his recent illness, never intervened to ask the orators to moderate their tone and language, thus giving the direct lie to those who aver that he strongly disapproves of these attacks and that he still retains complete control over the rank and file of his party. Apart from the complete lack of taste of Thursday's debate nothing could have been more untimely.

ROUMANIA.

Bucharest, May 21.

Roumanian Independence.

On May 10 a great celebration took place in Bucharest of the fiftieth anniversary of Roumania's independence. On May 10, 1877, the United Principalities of Wallachia and Moldavia proclaimed their independence from Turkish suzerainty and elected as their ruler Prince Carol of Hohenzollern-Sigmaringen, who in 1881 became King of Roumania, his Royal crown being forged from parts of the cannon taken from the enemy. All good Roumanians have retained in affectionate remembrance this wise, if austere and autocratic ruler and his amiable and talented Queen, Princess Elizabeth of Wied, whose lyrical writings made her known far beyond the frontiers of her own country under the *nom de plume* of Carmen Sylva. Every

Cross the Sea in a Good Bed **L · N · E · R**

year since 1877 a solemn mass has been celebrated in the Bucharest Cathedral with the attendance of the Royal Family, High Officials, and the Diplomatic Corps in ceremonial dress. A general holiday is observed as a rule, and the King reviews the troops and drives in state through the city, followed by a long procession of troops, priests, and school children bedecked with flowers, suggesting the May Day celebrations in England.

This year, owing to the delicate health of His Majesty, King Ferdinand, only the religious ceremony was held. His Majesty is still weak (though he goes to his study and receives his Ministers daily) and a consultation is to be held shortly between his Roumanian physicians and medical experts called from abroad.

Foreign Relations.

The public and Press during the last week have been preoccupied with the meeting of the Little Entente at Joachimov (Joachimstal), and great satisfaction is felt that the friendly relations of the three countries concerned have been so well preserved up to the present, in spite of the various side issues of recent date which might have been calculated to upset them.

The demonstrations of friendship between Roumania and Italy still continue. An Italian squadron recently visited Constantza and was given a great reception by the Roumanian authorities.

The breaking off of diplomatic relations between Great Britain and the Soviet Government has created a profound impression here and is causing lively speculation on what the immediate and ultimate consequences will be.

The Anglo-Roumanian Society.

With a view to cementing the friendly relations between Roumania and Great Britain, by promoting more intimate personal relations between nationals of the two countries, the Anglo-Roumanian Society was formed three years ago under the auspices of some prominent Roumanian friends of England, such as Dr. C. Angelescu, General Randu Rosetti, Professor Jorga, Mme. Pantazzi, and M. Boncescu (then *The Times* Correspondent). The Society holds its meetings in the new and splendid building of the Academy of Higher Commercial and Industrial Studies every Sunday morning. Professor Jorga gave a lecture last Sunday on "Anglo-Roumanian Relations in the Past," and made some interesting allusions to the earliest British influence on Roumanian commercial life, which he traced to the traders from the Ionian Islands (when under British rule), who came and settled in Braila and Galatz.

Dr. Seton-Watson, who is at present sojourning in Roumania, was present at Professor Jorga's lecture, as an honoured guest of the Society, but he modestly refused to respond to General Rosetti's kind invitation to him to say a few words to the audience.

The new Bulgarian Sobranie is expected to meet for an extraordinary session on June 20, to discuss financial matters.

The Yugoslav Government have given a contract to the Polish foundries Huta Krolewska and Laury for 20,000 tons of rails, 1,500 tons of metal parts for the construction of bridges, and several cranes.

A copy of the first Edition of the "Seven Pillars of Wisdom," the wonder book of Colonel T. E. Lawrence, "of Arabia," privately printed at 30 guineas a volume, has been presented to the London Library by a friend of Dr. Hagberg Wright, the head of the library.

Brigadier-General Andrew William Proudfoot, Indian Army (retired), Colonel, 4th Battalion; 4th Bombay Grenadiers (109th Infantry), temporarily residing at Fulford House, Fulford, Yorks, who died on April 20, aged 78, left estate of the gross value of £3,389, with net personality £3,295.

In a dispatch addressed to the Secretary-General of the League of Nations, Sir John Maffey, Governor-General of the Sudan, states that the progress made in abolishing slavery in the Sudan has been remarkable. Slave-raiding is a thing of the past and the various forms of "domestic slavery" have undergone such rapid adjustment to new ideas that the term, broadly speaking, is hardly justified.

MINDAN AND AQRA.

BY GEORGE STANLEY.

Anybody traversing the last few miles of the approach to the Mindan ferry on the main, and only, Mosul-Aqra track, might well be excused for momentarily imagining it to be a portion of the moon's surface, for the landscape is of a type that might readily be associated with that luminary. Of course, everything is in miniature, but is positively grotesque—a veritable rash of rocky pimples with an occasional touch of dull red, connects totally unreasonable craters, the sides of which maintain menacing projections of top-heavy ledges; a swiftly-moving stream winds in and out of the confusion, with the sombre Jabal Maqlub blocking out the horizon, and a few bold scarlet and pink anemones, protesting against this manifestation of fatuity, wage a losing fight midst the clumps of camel thorn, and droop their heads in the bitterness of defeat.

Of Man and his works there was but little evidence unless, indeed, some of the hummocks and hillocks were the covering of centuries over worn-out and decayed buildings. High up in the heavens, a few hawks sailed on motionless wings like ill-omened spectres, whilst on the hard-baked mud an occasional Emperor beetle, in the remorseless struggle for existence, rolled his pellets of food in between the numerous eggs of the locust, along to his underground larder. Good luck to this indefatigable little creature which rolls his little pellets with his hind legs backward! Ever and anon he loses them in his blindness, and then rushes hither and thither in an agony of despair, eventually regaining his property.

The landscape was so unique that the Convoy was halted, and it was decided to climb the 3,000 ft. Jabal on foot, in order to gain an impression of the locality from that altitude.

Divesting ourselves of our jackets, and taking haversacks and sticks, three of us set off to climb the challenging Jabal.

"Faithful John," the one bearer that accompanied the Convoy, delighted at the prospect—for these Assyrians are true mountaineers—led the way carrying a humble Chokodar gun lest Sisi or other "Goose-s" should inadvertently cross our path.

Once over the monotonous foothills, the actual base of the Jabal was soon reached, but there were no convenient signposts, as in European climbing resorts, showing the way and distance to the top, nor were there any defined pathways. True, there was the semblance of a track, but it did not seem to lead up the mountain side, merely round it. On being appealed to, "Faithful John" pointed to an almost vertical ascent as the best way of getting up, but, not possessing prehensile toes, we proceeded to look for an easier, if longer, ascent. John's usual idea of a short cut was an impossibly steep one, and his estimations of time and distance were peculiar, to say the least. Running down the side of the mountain was a dried watercourse—for the Jabal had ceased its weeping—and as it seemed to be a more or less reasonable gradient, we headed in its direction.

At first conversation flowed freely, but shortly we relapsed into silence, reserving energy for the work in hand, and as the ascent became steeper and stonier, breathing was more laboured. Thus, for an hour and a half in a scorching sun. The last 500 feet were almost an agony; there were no "chimneys" to climb or anything thrilling like that, merely sheer solid grind, stepping sideways in order to obtain foothold on the steep surface.

At the summit, after the haversacks had been emptied of their foodstuffs and liquids, out came compasses and maps for a perfect orgy of taking bearings, locating landmarks, and so forth. Much to our disappointment, the aspect from the top was uninteresting. Though a clear view was obtainable of most points of the compass, the sharpness and fantastic shapes of the mounds below were not readily distinguishable.

The first sign of life we had seen at the bottom of the Jabal was the Emperor beetle, and now the next was up here at the top. Two small lizards, each about eight inches long, were engaged in mortal combat and so occupied that our presence at first had no effect upon them; it was not until the camera clicked about a couple of feet away from them that they scuttled off and hid behind some rocks. One of them had been deprived of its tail, and that is why, perhaps, it frequently found itself lifted bodily off the ground and carried a distance of feet in the other's jaws. An even worse tragedy happened, for the photograph was a failure owing to the film's not unreeling properly.

From the starting point of our climb to the ferry itself was a comparatively short run, but the main problem that concerned us was whether the recent rains and floods had washed away the ferry, and if so, whether the river bed was fordable at any spot. This latter question was answered as soon as the state of the river was seen. At the usual fording place there were at least eight feet of water, although the ferry was still intact. The ferry consisted of a couple of pontoons lashed together and a top covering of planks. A hawser connected the pontoon to an overhead wire cable stretching across the river. An Arab ferryman at the stern, by using a large oar as a tiller in conjunction with the current and cable, manoeuvred the craft across the stream—a simple application of the triangle of forces.

Three ferrymen reside in a tumbledown hut overlooking the ferry, and it is their business to assist all vehicles on to the planking. This assistance usually amounts to laying down running boards from the pontoon on to the stones and then shrieking at each other, with appropriate—sometimes inappropriate, it is to be hoped—gestures. About thirty feet of rough sandstone and limestone rocks have to be traversed by the unfortunate car before it can

hope to reach the running boards. The three Arabs in their excitement invariably all talk at once and wave the disconcerted driver in opposite directions. That individual's only hope of avoiding a complete disintegration of his car's gear-box is to ignore the ferrymen entirely and trust to his own intelligence or that of the second driver, who by now will be waving him on to the running boards. "Left lock—right, no dash it—more, more—left lock—mind the gear-box—oh, that's torn it properly." Somehow or other the car manages to flop down on to pontoons which shift during the operations a few feet downstream, and the driver mops his brow in the interval of crossing, possibly fearing that the descent from the pontoons will be equally difficult. In this he need not be disappointed.

As the ferry can take only one car at a time, we spent over half an hour in getting three cars across the twenty yards width of river. On the other side, once the high ground has been attained, the rocky surface ceases and soft sand takes its place at a village called Shurak. From here over the sand ridges down into the Jujar Plain driving is unpleasant, and in wet weather quite impossible, for the wheels cannot get a grip. If caught in this particular belt during the rains, it may mean being stuck for over a week—a not particularly pleasant prospect, as even if the sand is negotiable, the river may be impassable.

After descending into the Jujar Plain, a distinct rise in temperature was noticeable, probably owing to the reflected heat of the flat surface. There are several villages near the track over the Plain, the chief being Simla, Great Jujar, and Little Jujar, and the inhabitants are nearly all Kurdish. We stopped with carburation trouble at Great Jujar—the difference between Great and Little Jujar would appear to refer to the number of pi-dogs, the villages themselves being almost identical. Three Kurds walked the half-mile from their mud huts to the track and stood watching us. They certainly "stood," but whether these particular individuals were engrossed in anything but merely "standing" was not apparent, and they were not nearly as attractive looking or intelligent as the Kurdish hillfolk.

Leaving the Plain, the convoy entered a locality which suddenly became very stony, though this time the stones were all lying on the surface of the ground instead of being embedded, and weighed about ten pounds each. It was a very deserted part and looked as though it might once have been the bed of a river. Perhaps these conclusions are incorrect, for a local legend, as explained by

"Faithful John," is that once upon a time a race of very wicked men lived there and so annoyed *le bon Dieu* that He pelted them with these stones and ever since then nobody has cared to live in the accursed spot.

Into the foothills, a few more turns, and the Aqra Dagh loomed right ahead, for, be it noted, here the term Dagh is used for the Arabic word Jabal. After the stony-ness of the wicked locality, the sight of emerald green grass and miles of narcissi bursting into flower, intermingled with the scarlet, blue, and pink anemones, was a most pleasing sight. Though the costumes of the Kurdish inhabitants were not perhaps so picturesque or striking as those met in other parts, the countryside compensated for it in its flowering beauty.

At Aqra there was a large camp of Assyrian Levies—where we had arranged to stay the night—but it was situated on the top of a large hillock immediately in front of the actual village, which is built on the slopes of the Dagh at a slightly higher altitude than the hillock and about a mile distant. To get to the Assyrian Camp, we had about an hour's run through flowery undulations and after fording a small stream at the foot of the hillock, were faced with an extraordinarily steep gradient. The Ford of the Convoy gave up the attempt half-way up, and help had to be obtained from the Camp to drag them up the remaining portion of the slope. Although we had encountered a certain amount of engine trouble during the run, the failure to get up the slope was expected, as rarely, if ever, do many cars going to Aqra manage to negotiate this hill.

At the entrance to the Camp were the Officers' Quarters and Mess, in a long trim building, and a hundred yards or so behind, fenced in with barbed wire, the married quarters of the Levies. For the Assyrian Levy, "married quarters" does not mean merely accommodation for wife and children, but also includes parents, relations, and wife's relations: they all live together in long mud huts and in consideration of all their difficulties managed to keep their surroundings in a wonderfully sanitary and tidy condition.

The Assyrian Levy, dressed in military khaki and equipment, with a slouch hat and plume or feather of his tribe, is a model of smartness and keenness, comporting himself in a manner worthy of the best trained soldier.

At the far end of the married quarters was another wire entanglement and then the quarters of the single men, with the W/T hut in the distance. It was from this hut that the most comprehensive view could be obtained. Facing due north was the mountain wall of the Aqra Dagh, with its village perched half-way up, looking from a distance as though the houses were built one on top of the other just like some Thibetan village; to the East, the Dagh merged into other ranges, still higher and white-topped. Distances were deceptive and the nearest limestone Dagh, apparently only a stone's throw away, was perhaps a distance of five miles from the Camp. On the South, looking across the Jujar and Mindan, the Jabal Maqlub interrupted the featureless aspect and served as a useful weather indication, for when clouds covered its nakedness, heavy rains were to be expected, according to the Aqra-ites.

That evening we dined with the four lonely officers stationed there, and by pooling our food resources, a most excellent meal resulted for such an out-of-the-way spot. A plentiful supply of game and Kurdish fruit was available, whilst our little party produced loaves of bread, butter, and tins of jam—of which there was a complete scarcity, the Mess having already been on Chuppatties for several days past.

After dinner, a few rubbers of Bridge and so to bed.

Sunrise the next morning gave promise of fine weather, but shortly after breakfast the sky clouded and a few preliminary raindrops decided us to leave before the Maqlub became entirely covered and the sand belt at Shurak impossible.

The departure was delayed at the last moment by the breaking of a couple of front springs on one of the Rolls.

Pindi and Murree.

It then became a question whether the Convoy should move off, leaving the damaged Armoured in the security of Aqra camp, or whether to delay the departure until new springs had been fitted, and Convoy could proceed intact. The latter course was decided upon, and it became a grim race with the weather. The Convoy—thanks to the complete absence of engine trouble—eventually won, crossing the sand belt before it was rendered impassable, and negotiating the ferry at Mindan as the storm broke.

This little excitement over, the cars formed upon the hard and higher ground of the "Moon" locality and continued the reconnaissance patrol.

BIRTHDAY HONOURS.

The following selection from the list of Birthday Honours published on June 3 is likely to be of particular interest to readers of THE NEAR EAST AND INDIA:—

Baron.

DAZIEL, Sir Davison Alexander, Bt., M.P. M.P. for Brixton Division 1910-23 and since 1924. For political and public services.

Baronet.

CONGREVE, Lieut.-Commander Geoffrey Cecil, R.N., son of the late Governor and Commander-in-Chief, Malta.

Knight.

MIFSUD, Ugo Pasquale, Esq., LL.D., B.Lit., Head of the Ministry and Minister for the Treasury, Malta.

K.C.B. (Civil Division).

TYRRELL, Sir William George, G.C.M.G., K.C.V.O., C.B., Permanent Under-Secretary of State for Foreign Affairs.

WILSON, Brigadier-General Sir Samuel Herbert, K.C.M.G., K.B.E., C.B., Permanent Under-Secretary of State for the Colonies.

C. B. (Civil Division).

VANSITTART, Robert Gilbert, Esq., C.M.G., M.V.O., Counsellor in the Foreign Office.

Honorary K.C.M.G.

ABDULLAH, His Highness the Amir, G.B.E., of Trans-jordan.

C.B.E. (Civil Division).

ABRAMSON, Major Albert, O.B.E., District Commissioner, Northern District, Palestine.

GALLAGHER, Lieutenant-Colonel Albert Ernest, D.S.O., Chief Commandant of Police and Inspector of Prisons, Cyprus.

SMITH, Arthur Lionel Forster, Esq., M.V.O., Inspector-General of Education, Iraq.

O.B.E. (Civil Division).

CRITIEN, Attilio, Esq., M.B.E., M.D., Chief Government Medical Officer and Superintendent of Public Health, Malta.

CROSBIE, Robert Edward Harold, Esq., Assistant District Commissioner, Southern District, Palestine.

DIMITRIOU, Dimitrios Nicholas, Esq., Member of the Executive Council of Cyprus, and President of the Municipal Council of Larnaca.

JOHNSON, William Joseph, Esq., Deputy Treasurer, Palestine.

MIFSUD, Edward Robert, Esq., M.B.E., Private Secretary to the Governor of Malta and Clerk of the Executive Council, Nominated Council and Privy Council of the Island.

PRICHARD, John, Esq., President of the Court of First Instance, Baghdad, Iraq.

ROACH, Edward Keith, Esq., Deputy District Commissioner, Jerusalem District, Palestine.

ROYDS, George Freeman, Esq., Director-General, Tapu Department, Iraq.

SMITH, Joseph Mario, Esq., Chief Veterinary Officer, Palestine.

ZIA-UD-DIN, Haji Hafiz Mehmed, the Mufti of Cyprus.

M.B.E. (Civil Division).

JOHNSON, Herbert Montague, Esq., Assistant Telegraph Engineer, Sudan Telegraphs.

KIDD, Captain Herbert Frederick, Assistant District Commissioner, Sudan Political Service.

LASSELL, Miss Harriet, Matron of Kasr el Aini Hospital, Cairo.

LEE, John Manly, Esq., Assistant District Commissioner, Sudan Government.

SILLITOE, Frederick Sampson, Esq., Superintendent of Government Gardens, Khartoum.

STOWE, Sidney Duncan, Esq., Mercantile Marine Service, Board of Trade, acting British Vice-Consul at Port Said.

WALKLEY, Charles Edward Joseph, Esq., Inspector, Civil Department, Sudan Government.

British Empire Medal.

(Medal of the Civil Division. For Meritorious Service.)
 FADL MUSA, Sergeant, Darfur Province Police.

Foreign Office List.

C.M.G.

HUGHES, George Lewis Hollingsworth, Esq., Chief Inspector of Parquet, Egyptian Ministry of Justice.
 MACMICHAEL, Harold Alfred, Esq., D.S.O., Civil Secretary, Sudan Government.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association will be held on June 23, at 8.30 p.m., at the Hans Crescent Hotel, where Mr. H. G. Hart (formerly Inspector-General of the Persian Ministry of Finance) and Lt.-Col. Sir Arnold T. Wilson, K.C.I.E., C.M.G., D.S.O., will speak on "The Outlook in Persia." Mrs. L. Cobham will act as hostess and the Lord Lamington, G.C.M.G., G.C.I.E., will preside.

The Shah of Persia has ordered the embargo on the entry of Russian goods into Persia to be lifted.

M. Skefery, who has been appointed Consul-General for Greece in Alexandria, is expected to arrive in Egypt shortly from Athens.

M. Zamaria, the new Greek Vice-Consul at Alexandria, arrived in Egypt at the end of last month.

The Greek Ministers of Finance and Foreign Affairs embarked on June 3 for Geneva. The Foreign Minister intends later to visit Paris and London.

The tour which the King of Bulgaria proposes to make in Western Europe this summer will not have an official character, according to *The Times* Sofia Correspondent.

All pending questions being settled, the text of the Greek Constitution was published in Athens on June 3 and the lists issued restoring the Royalist officers to the Army. The Chamber was prorogued the previous day.

The Worshipful Company of Ironmongers have recently decided to grant on "Empire Exhibition" of the value of £50 per annum, tenable for a period not exceeding four years. The first award has been granted to the Colony of Cyprus, and is to be given to a student of the Agricultural School, Nicosia.

In accordance with ancient tradition large numbers of people from Minia make a yearly pilgrimage to a hill near Samallout (15 miles south of Minia) to commemorate the birth of the Blessed Virgin. On June 2, according to a message from Cairo, a boat which was transporting some of the pilgrims came into collision with a tug. The tug capsized and sixteen persons were drowned.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

ITALIAN AMBITIONS IN AFRICA.

"L'ITALIA NELLA POLITICA AFRICANA." By Dr. Paola ol' Agostino Orsini di Camerota (Bologna: Licinio Copelli. Lire 15.)

Dr. Paolo Orsini di Camerota is a well-known leader of the party in Italy which is clamouring for a greater share of the world's surface for the needs of her teeming population and for the growth of her trade and commerce. He and his followers argue that Italy is like a super-heated boiler without a safety-valve and that a terrific explosion is certain unless the steam, in the shape of redundant population, is allowed to blow itself off. His school believe that the only safety-valve of any value is territory of which Italy is either the owner or the protector, possibly in their eyes a distinction without much difference. The errors of her own (pre-Fascist) statesmen and the greed of France and England at Versailles have so far prevented her from expanding as her needs and position as a Great Power required; it is now necessary, therefore, to consider how the damage done can best be repaired. This is the object of this book, and Africa is its theme because he feels that Italy has to become a Mediterranean Empire. Syria he does not trouble about, because, in his opinion, there is no doubt that it will drop, like a ripe pear, into Italy's mouth. All she has to do there is to await events.

A book written by an Italian for Italians cannot be judged by the same standard as one written by an Englishman for Englishmen. So we do not propose to find fault with the constant blare of trumpets proclaiming the greatness, generosity and wisdom of Italy and generally magnifying her qualifications for Empire. We do not usually indulge in this ourselves, but that is probably merely because we happen to be Anglo-Saxons and not Latins. But we feel that, while big talking may be harmless or even natural, megalomania is a real danger in international matters. For this megalomania there may be some justification. We do not propose to enter into that question. The point we want to make is that Dr. Orsini's plan cannot tend to produce a state of idyllic peace. These ideas are given as his own. He himself says that Il Duce has given no hint so far of his views on colonial expansion. We may hope, therefore, that the Government of Italy may have other notions.

The book is well and cleverly written. On the whole the author dots few "i's" and crosses few "t's," while making it easy for the reader to do so. One of the instances where he performs the operation himself concerns Tunisia. The following quotation speaks fairly clearly:—

The French dream in Northern Africa is destined to crumble and to give place in time to the formation of independent States, of which Tunisia will certainly be one. Italy knows that on that day it will her fate to take the place of France in the agricultural and industrial exploitation of the country and in its economic development; called on to do so by the Tunisians themselves to give them, to crown victorious independence, riches and prosperity, and to provide the Italian colonists with work. On Italy it depends whether these events are accelerated or retarded in Tunisia. France ought to see this and meet our desire for collaboration half-way. If she does not, we Italians will hold out our hands to the natives and say to them, "We and you will make a new Africa, free, independent and rich," and will say to ourselves that on that day will begin on the Mediterranean our true greatness.

To save space we do not propose to dwell further on Dr. Orsini's views of what Italy should do in French North Africa. He frankly hates the French and does not propose to spare them, especially as he has decided that they are effete. It will be more profitable to give some account of his hopes for Italy in Egypt and the neighbouring countries of Abyssinia and the Sudan. Here our author treads very carefully, but it is not difficult to read between the lines. Our reading gives us curious results. Let us make it plain that the author seldom speaks really openly and that we are merely attempting to interpret in plain English what he sets forth delicately and in hints.

There are two main objects in view. One is Abyssinia, to be approached from the existing Colonies of Eritrea and Italian Somaliland; the other is Egypt and, apparently, the Sudan.

On the subject of Abyssinia he writes at great length and, except that he thinly disguises the desire for conquest by the blessed word "collaboration" with a free but backward nation (without interference, of course, from the French or any other nation—the English can easily be settled with by giving them what they want in the way of Nile control), he makes it perfectly clear that what Italy wants is complete control of the whole Somali coast, extinction of competitors there and full control of Abyssinia. He feels there is no time to be lost in doing this, as otherwise the English Cape-Cairo Railway may cut into the game and "dish" the Italians. The French will doubtless object vigorously, but their day is drawing near to its end, while assistance can fairly be expected from the English. All a little wild, but there it is, without the literary embellishments which may possibly have confused the thoughts of the writer himself. Anyhow Abyssinia is to be Italian and to be "collaborated" with, or in other words, annexed and exploited for the good of Italy.

About Egypt Dr. Orsini is much more cautious. He gives us a dithyramb on the present proud position of Italy in Egyptian commercial and social spheres. He is able, at the end of the book, to express intense satisfaction at the statesmanlike solution of the Jarabub difficulties which had seriously worried him at its beginning. Finally, he greatly deplores the numerous tragic errors of England in regard to Egypt and the bullying attitude of the English Government to the Egyptians from the War-time till the present, and takes the opportunity to express the deepest sympathy with the Wafd in their patriotic endeavours to make the country really free.

Egypt has the sympathy of the Italian nation as well as of Fascism. These may be of use to her to-morrow, as to us also may well be useful the friendship of a country rich and near to us like Egypt, where there are so many working Italians and so many traditions of Italian collaboration.

This may remind an Englishman of the Walrus and the Carpenter. It seems clear that this sympathy and friendship are to be used in order to enable Italy to step into the shoes which Dr. Orsini believes England to have discarded. In the meantime it is of great importance that Egypt should enjoy to the fullest degree Italian sympathy

with her determination not to allow the Sudan to be filched from her. The reason seems obvious. Surrounded by Libya, Egypt and Abyssinia, all in Italian hands, it is clear what the fate of an Egyptian Sudan is to be. Finally, Italy is to secure "collaboration" with Belgium and Portugal in their African colonies, while the Suez Canal is to be internationalised with Italian preponderance in its control. Quite a programme!

Much space is given to indignant sympathy with Germany's colonial treatment in the Treaty of Versailles. The reason is obvious. Germany and Italy are to combine in demanding a revision. For this reason too Dr. Orsini loudly disclaims all desire to see Italy securing a mandate on any ex-German colony.

We prefer to refrain from further comment on this dangerous propaganda, but close with another quotation which follows on a disquisition on the ideal way of settling these matters:—

"For our part, we affirm our scepticism and repeat that there is a hard law of Nature that he who has, keeps, and he who has not has to take by force."

C. S-W.

NOTES OF THE WEEK

(Continued from page 681.)

order. Whether that order will be better than the old, it is hardly for us of the West to say, who have stretched to the limits toleration of female fashion and female freedom. One might have thought that the East has nothing to learn concerning the Eternal Woman, but, if once it confesses even to partial ignorance, it will surely be found that there is no turning back.

The Wahhabis and the Mahmal.

As has already been announced, the Egyptian Government has decided this year not to send the Mahmal to the Hijaz, and the Egyptian Press has on the whole supported the Government as against the Wahhabis. Most of the Arabic journals in Cairo appear to absolve King Ibn Saoud from the chief blame, asserting that he is surrounded by Wahhabi ulama and tribal leaders whose fanaticism he cannot assuage. The Wahhabis have, however, found a champion in the Egyptian Press in the person of Shaikh Muhammad Rashid Rida, who points out that the independence of the Hijaz is a fuller thing than that of Egypt. He asserts, as we suggested recently, that King Ibn Saoud considers Egypt as a foreign State which has no right to send an armed force to the Wahhabi Kingdom, and that the traditions of the Cairo Mahmal have vanished as completely as the traditions of the Damascus Mahmal, with the change in the status of the Government in Egypt and Syria. Further, this Shaikh states that the Mahmal is a religious innovation and not a Shari practice. It is obvious, therefore, that this question is not one not so much of right or wrong as of national dignity. But Egypt has by no means forgotten its duty towards the Hijaz, and the Government has specifically inquired—with what results we do not yet know—whether King Ibn Saoud objects to the sending of the Holy Carpet (Kiswa) in boxes and without any guards or ceremony for the pilgrimage.

Egyptians and the Pilgrimage.

It is extremely unfortunate that this dispute between the Governments at Cairo and at Mecca should have arisen, for the reforms which the Wahhabis have made in the interests of the pilgrims have manifestly appealed to the devout Misris. Some time ago it was reported that the number of Egyptian pilgrims who had received passports to proceed to the Hijaz this year exceeded 15,000; and it is significant that, of the 820 pilgrims who took passports from the Alexandria Governorate, only ten decided not to proceed when the refusal was published of the Egyptian Government to accede to King Ibn Saoud's

demands in connexion with the Mahmal. To-morrow, June 10, the actual ceremonies of the pilgrimage are due to begin, and we must await reports to see whether the fears of the non-Wahhabis have any justification in fact. It is one of the most interesting experiments in the world, this attempt of King Ibn Saoud to make Islam return to the fundamental principles of the Sunna and to conform with the original rules of the Hajj.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ANGLO-EGYPTIAN RELATIONS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—During my stay in Cairo last winter, I spent a considerable amount of time in a study of the Egyptian political situation and of the state of Anglo-Egyptian relations. In course of conversation I discussed the question of the Egyptian Army with several members of the Parliamentary Army Commission and the Minister for War.

At the beginning of last April there was no question of any general anti-British sentiments in existence in Egypt, nor in the Wafd party was there more than an odd individual who could be labelled an "extremist."

The following is a summary of the Egyptian point of view of the Egyptian Army.

(1) The Egyptian Nation would prefer to have an Egyptian as Commander-in-Chief of the Army, but it is quite prepared to accept an Englishman. It desires, however, that an Englishman appointed to this position should be one capable of fulfilling the functions and thoroughly trained in matters of modern war.

(2) If there is to be an Egyptian army and Egyptian money devoted to its upkeep, (£1,200,000), the army should be one capable of taking part in modern warfare. The Egyptian Nation is not so rich as to be able to spend money on a useless organization. One of the steps which the Egyptian War Minister desired to carry out was to create a College on the lines of Sandhurst or Woolwich where future officers could be efficiently trained and whither present senior officers could return in order to become conversant with modern military science. (The Egyptian Government recognises that the first requisite for an efficient Army is an efficient corps of officers.) The Sirdar refused his consent to the creation of such a school.

(3) The numbers of the Egyptian Army can be left for a decision at a later date, but the recruitment of the present Army should be brought to a higher level by raising the exemption of Military Service from the sum of £20 to that of £100.

(4) The Egyptian Army has ordered two batteries of modern howitzers from England. After inordinate delay four of these guns have been delivered. Up to this moment the artillery has consisted in guns dating from the Battle of Omdurman.

There are no machine guns except a few stored in the Citadel and under British guard. Such are the views of the Egyptians; and I do not think that these views can be considered either as extreme or illogical.

It is my belief that in April last that there was so much goodwill in existence among the Egyptians towards Great Britain, that there had never been any more opportune moment for Anglo-Egyptian relations to be finally put on a definite basis; when not only would Egyptian *amour propre* in its ideal of national independence have been fully satisfied, but every essential British demand and guarantee for the safety of the Empire's communications would have been recognised and accepted by the Egyptian Government.—I am, etc.,

R. GORDON CANNING.

PERSONAL AND GENERAL

TO-DAY

June 9, 1927 (New Style).

May 27, 1927 (Old Style).

Julhiggia 8, 1345 A.H. of the Muslim Calendar.

Sivan 9, 5687, of the Jewish Calendar.

The Aga Khan has left the Ritz Hotel for Paris.

Lady Jejeebhoy arrived last week at the Hyde Park Hotel.

Sir Alfred Mond, Bart., M.P., and Lady Mond, left 23, Lowndes Square on June 3 for Melchet Court, near Romsey.

The Prince of Wales received Major C. A. L. Howard and the King's Indian Orderly Officers at St. James's Palace on June 3.

Sir Herbert and Lady Dering have returned from the Continent, and are staying with Sir William Geary at Oxon Heath, Tonbridge, Kent.

Lady Clifford, wife of Sir Hugh Clifford, Governor of Ceylon, left London last week to join the P. and O. ss. Rajputana at Marseilles for Colombo.

Mr. and Mrs. Howard William Kennard, who arrived in London recently from the British Legation, Belgrade, will be at 18, Bruton Street for a few weeks.

The Egyptian Minister in London, accompanied by Mme. Izzet and their son, Abdullah Bey Izzet, arrived at Claridge's Hotel last week from the Continent.

Sir Edward Manville has been given authority to wear the Insignia of Grand Officer of the Order of the Crown of Roumania, conferred upon him by the King of Roumania.

The Greek Minister left London on June 5 for Geneva, and will be away for some weeks. M. Collas, Counsellor of the Legation, is acting as Chargé d'Affaires in his absence.

Mr. V. J. Patel, M.L.A., President of the Legislative Assembly, India, left London on June 2, for the Grand Hotel, Harrogate, where he is staying until June 15, when he will return to the National Liberal Club.

Mrs. Arthur F. Walter returned last week to 35, Courtfield Gardens, S.W., after five months' absence in Southern India and Ceylon. Mrs. Walter joined the National Pilgrimage to Rome on her way home, and was received by the Pope in special audience on May 27.

A sharp earthquake shock lasting for five seconds was felt in Allahabad at 10.15 p.m. on June 2.

The Rev. R. A. J. Chute, chaplain of Jamalpur, India, has been appointed by the Bishop of Chelmsford vicar of Canvey Island, Essex.

It has been decided, according to the *Pioneer*, to revert to the title of Brigadier-General instead of Colonel Commandant in the Indian Army.

Mehdigholi Khan Hadayat, the Mokhbar es Saltaneh, who became Lord Chief Justice of Persia on May 8, has undertaken the formation of a new Cabinet, in succession to that of Mirza Hassan Khan Mostofi, the Mostofi ul Mamalek, which resigned on May 28.

The Dean of York announced at a meeting of the York Minster Anniversary Celebrations Committee, with reference to the decision to earmark one-third of the Thankoffering Fund to church extension overseas, that he had received among others a request for a new church at Delhi. It was decided to grant half the amount to Delhi.

A MAHARAJA IN ABYSSINIA.

(From a Correspondent.)

Addis Ababa, May 8.

The Maharaja of Kutch, who had planned a hunting expedition in the forests of the Hawash basin, Chercher and Arosi mountains, arrived with his grandson and party at Jibouti on April 15. He was obliged to stay there for five days, owing to trouble on the railway line. During his stay at Jibouti he was the guest of Messrs. G. M. Mohamedally and Company.

His Highness entrained at Jibouti for Hawash on April 20. He passed one night on the way at Dire-Daoua, and arrived on April 22 at Hawash, whether Mr. F. M. G. Azad, representative of Messrs. G. M. Mohamedally and Co., had specially come from Addis-Ababa to receive him and to make all arrangements for his hunting caravan at Hawash basin.

Sir Geoffrey Archer, ex-Governor of Sudan, met the Maharaja at Hawash and joined the hunting party. They came here by special train on May 5, when the railway station was crowded by the members of the British Legation, British Indian merchants, and others. The Abyssinian Government has sent two representatives and some town police to receive the Maharaja, who went to the Legation with H.M. Minister and Sir Geoffrey Archer in the motor car of the Empress, with an escort of twelve Abyssinians.

The Maharaja during his short stay here was very busy paying visits and receiving Abyssinian and other officials. On Thursday morning he saw the Empress and the Regent and was introduced to them by the British Minister. In the afternoon of the same day he visited the Regent at his own Palace. On Friday he, with members of the staff of the British Legation, attended the lunch given by Messrs. Mohamedally and Company at their premises. Later on the same day the Regent went to see the Maharaja at the British Legation, and dined there in the evening. On the following day the British Minister arranged a tea party for Indian and Arab merchants at the Legation, to enable them to see the Maharaja, who was much pleased to talk with them in this country. The Indian communities on Sunday afternoon invited the Maharaja and some of the members of the British Legation to a tea party. The Maharaja with Sir Geoffrey Archer and party will leave Addis Ababa for Modjo on May 9. From Modjo the party will go into the beautiful mountains of Chercher and Arosi and thence, shooting and hunting, will go to British Somaliland.

At a meeting of the Anglo-Russian Literary Society held on June 7 at the School of Slavonic Studies, an address was given by Mr. N. B. Jopson, entitled "Early Slavonic Funeral Ceremonies."

Two rock tombs, one quite untouched, were discovered in the grounds of St. George's Cathedral, Jerusalem, during the excavations for the foundations of a pilgrim hostel. The tombs, says *The Times*, are of the late Roman period and closely adjoin what are known as the "Tombs of the Kings." Both contain human bones, and in one a glass phial and a good earring were found.

The issue of regular stamps for Palestine began to appear on June 1, in succession to the overprinted issues of the old Egyptian Expeditionary Force stamps, which was first issued nine years ago. The stamps for three and 13 milliemes of the new issue are now on sale, the former in green with an illustration of Rachel's Tomb on the Hebron Road, the latter in blue with an illustration of the Dome of the Rock in Jerusalem.

INDIAN AGRICULTURE.

The first interim report of the Royal Commission on Agriculture in India which, as it is confined entirely to the evidence given by officers serving under the Government of India during the first week of the Commission's tour, may be more accurately described as the first official report of its proceedings, makes an eminently timely appearance. On Tuesday the Commission entered upon the London stage of its inquiry, during which time the evidence of home experts in agricultural research and administration and authorities on the question of marketing Indian and other Empire produce will be taken. It is understood that before returning to India in the autumn to complete its investigations on the spot by a visit to Burma, Bihar and Orissa and Sind—none of which provinces were included in the earlier itinerary—the members of the Commission will visit Rothamsted Experimental Station and other research centres in this country, while the deputation of a small Sub-Committee to survey the position on the Continent and in Egypt is not improbable. The first Indian tour, which extended from the second week in October to the beginning of April, was extensive, reaching from the Frontier Province and Assam to Madras and Coimbatore; no less than 256 witnesses were examined and the list is likely to be greatly extended before the Commission retires to the inevitable hill-station to prepare its report. On the whole, while the President's appeal for public confidence in an inquiry from which political considerations have been rigidly excluded, met with wide response, and the Commission's reception everywhere was of the most cordial character, the non-official evidence generally, with certain notable exceptions, was not noteworthy. Owing to the delay in the publication of the questionnaire, the Simla sittings, to which the present volume relates, were devoted only to the examination of about a dozen official witnesses and were primarily designed to provide the non-official members of the Commission with first-hand information respecting the existing policy of the several departments whose activities have both a direct and indirect bearing on the subject of the inquiry. The wide scope of the Commission's task is indicated by the fact that, in addition to Dr. D. Clouston, the Agricultural Adviser to the Government of India, whose evidence is naturally of outstanding importance, the officers selected for that purpose included the Educational Commissioner, the Public Health Commissioner, the Director-General of Observatories, the Officiating Director, Imperial Institute of Veterinary Research, the Chief Controller, Indian Stores Department, the Officiating Inspector-General of Forests, the Director-General of Posts and Telegraphs and the Chief Commissioner of Railways. The remainder of the Indian evidence will be issued at intervals of, probably, a fortnight or three weeks during the summer and should provide much valuable material for all who agree with Lord Irwin in the view that the "Indian agriculturist is the foundation upon which the whole economic prosperity of India rests and upon which the

structure of her social and economic future must in the main be built."

The evidence so far published has made it abundantly plain that the question of how to increase the earning capacity of the Indian cultivator is at once the most urgent and the most important of all the problems which confront the Royal Commission. It raises not merely technical agricultural issues relating to the fertility of the soil but also questions of the pressure of the population on the land; rural indebtedness; the financial accommodation afforded by co-operative societies; marketing facilities and the like. In areas where the population is dense—and in many parts of rural India the pressure is 800 or 900 persons to the square mile—the size of individual holdings is naturally much reduced, and the breadwinner has to maintain a family on an acre or so of land. Relief is to some extent afforded by migration and emigration. In the Punjab particularly, but also in the United Provinces and Central Provinces, Bombay and Madras, irrigation projects have considerably increased the cultivable area. These remedies suffice at the moment, but irrigation cannot be indefinitely extended, and its ultimate effect on productivity has yet to be gauged. Some means must be found whereby the general standard of cultivation will be raised, with proper safeguards against undue exhaustion of the soil. Agricultural experts have done wonderfully successful work in evolving improved types and inculcating more up-to-date and efficient methods. The Indian cultivator is by no means slow to follow a sound lead, but he is seriously hampered by lack of capital. There exists, therefore, a vicious circle whereby, through lack of means, the cultivator is unable to increase his revenue or to build up capital resources for future development.

As the Delhi Correspondent of one of the leading financial journals recently remarked in this connexion, a vicious circle, considered broadly, is, however, not really a circle at all. It is a spiral. At some point in the vortex the economic trend is deflected downwards and matters progress from bad to worse. Find that point and introduce an upward trend and the retrogressive spiral becomes progressive. For example, how is it that America has been enabled to progress industrially and commercially since the War? The explanation is that money was poured into her railway systems. Railway extensions, obviously paying propositions, were planned and financed. The industries helped the railways and the railways helped the industries. National prosperity, with efficient organisation, was unavoidable. What the railways have been to America agriculture must be to India. If agriculture can be stimulated so as to yield increased returns, not only is the taxable capacity of the people enhanced, with beneficial results to education and hygiene, but their spending capacity is also enlarged, to the advantage of both local industries and overseas trade. The solution must be sought, and undoubtedly be found, in the single word—organisation. Nobody who has been in close touch with the mainsprings of Indian economic life can have failed to realise how great is the faith in the powers of Government

and how ready is the response of the private individual to an efficient lead given by the powers that be. Undoubtedly the organisation required is one that must have official initiative and sanction behind it. The inspiration already exists in the work of the Agricultural Departments and the mechanism is to be found in the co-operative societies, which are slowly but surely extending their beneficial activities throughout India. What is necessary is some form of State organisation which will bring the influence of the Agricultural Departments to bear, through co-operative channels, on the everyday activities of the cultivator, leading to the more extended and profitable use of improved types of seed, effective manures, efficient implements, improved methods of sowing and weeding and harvesting, of rotation and storage. Provided this organisation is efficient capital will be forthcoming—either local capital on local terms or British capital on British terms. The two must compete, as they have competed in the past. Indian capital is willing to take risks but is expensive. British capital is cheap, but demands assured conditions of intermediate profit and ultimate repayment. In the past, both rupee and sterling capital has been forthcoming in adequate measure to finance the productive debt of India—chiefly railways and irrigation. We shall feel, and that strongly, that the present inquiry has failed of one of its primary purposes if we do not see, as an outcome of the Commission's proposals, the gradual development of a new class of productive debt—that incurred on account not of railways and posts and telegraphs, but of agriculture and of forestry. The assets in each case are enormous; the returns are no less certain.

CURRENT TOPICS.

The Indian Honours List.

The list of Birthday Honours present no striking features so far as India is concerned, and contains the usual admixture of well-deserved, conventional and somewhat surprising awards, with, also as usual, a few conspicuous omissions. Among the knighthoods, Sir Padamji Pestonji Ginwala has shown good sense and moderation on the important Tariff Board over which he is at present presiding. Sir Manmohandas Ramji Vora represent the old and conservative class of Hindu merchants in Bombay. He has done much public service on the Bombay Municipality, the Bombay Legislative Council and the Council of State. Although his attitude has generally been one of somewhat unreasoning suspicion towards any proposal emanating from Government, he has always been honest in this opposition. Sir Sorabji Mehta adds another to the little band of Parsis who have been decorated for their excellent management of industrial concerns in the Central Provinces. Sir Charles Fawcett is a well-known member of the Bombay High Court Bench, which has of late years been somewhat neglected in the honours list, so far as the judges who are members of the Civil Service are concerned and his distinction is the well-merited reward of long and exceedingly able service. The many friends of Frank Crawford, the late Director-General of the Hyderabad Police, will greet his knighthood with much pleasure. The K.B.E. of Sir Geoffrey Corbett is perhaps to be reckoned among the surprises; but this able member of the Indian Civil Service rendered good service on the Commission to South Africa. The K.C.I.E. given to Sir Cowasji Jehangir, junr., is doubtless justifiable on the length of his service in the Bombay Legislative Council. Although he was in no way responsible for the original mistakes in the Bombay Development schemes, the evidence given before the Commission certainly failed to show much ability on the part of the Department over which he presided to correct the miscalculations, or to set the facts clearly before the public. The honour granted to him will, however, doubtless please the Parsi community, in which his family holds so prominent a place. Those who know Colonel Ferrar, the Commissioner of the Andaman Islands, will

be delighted to see his good work there and in the Punjab recognised by a C.S.I. The good work of Mr. A. G. Edie in the Forest Department of the Bombay Presidency has been very properly recognised by a C.I.E. As usual, the award of the Kaisar-i-Hind medal is an indication of much patient medical and social work. None, perhaps, of the present awards is better deserved than that given to Miss Rachel Piggott of the Zenana Mission in Hyderabad, Sind. Apart from her mission work, she has organised a system of trained maternity nurses throughout the Province of Sind, which is especially backward in the medical treatment of female patients.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 19.

The Failure of the Bengal National Bank.

There seems to be a widespread desire to revive and remodel the Bengal National Bank. Of course, there cannot be any question of resuming business in the sense of just reopening the doors. But there might be a chance of utilizing the patriotic feelings stirred by the disaster—while they are still fresh—to raise a practically new concern, the object being to escape as much as possible the obligations of the old one. That sponging does not please everybody, and it may not be considered at all. Many schemes of reconstruction have been put forward, but it is doubtful whether any will be carried out successfully. As things stand, it is bold of the papers to say that the unfortunate depositors may, some day or other, get back 4 annas in the rupee. The bank has been dying, and was almost dead several times already. In 1923 there was a great resurrection, and deposits began to pour in again to the tune of 85 lakhs of rupees. But from that year up to date its life was again threatened, the directors borrowing twice in the same year 10 lakhs of rupees, against certain securities mortgaged to the Imperial Bank. The causes of failure were indiscriminate advances and excessive overdrafting. The affairs of the bank have undoubtedly been mismanaged, yet it has helped many a small industry, and its help will be missed.

Death of Mr. Arratoon Stephen.

The late proprietor of the Grand Hotel in Calcutta was a prominent citizen of this place. Those who have resided in Calcutta during the last thirty years or so have known him as a business magnate. His beginnings were humble, but his fortune was based on exceptional abilities in the commercial line. He has considerably enlarged and developed the Grand Hotel, both in Calcutta and in Darjeeling, also building magnificent blocks of houses in Park Street, Chowringhee, and Dalhousie Square, commodious and modern mansions, which will remain as monuments to his successful business enterprise. Mr. Stephen was also an art collector with a flair for good pieces, engravings, and china. They say that when Lord Kitchener was in India, he visited Mr. Stephen at his home, to inspect his magnificent collection of curios. While handling a specially remarkable vase, he let it drop on the ground, where it broke to pieces. Graciously, Mr. Stephen remarked that the vase was now doubly precious. He sent it to Europe for repair, and it came back, patched up and perfectly done up. That vase was one of Mr. Stephen's most treasured possessions. It will be remembered that he had arranged for a clock tower to be erected in Ispahan, his native town, and the sanction of the Persian Government had just come, when the generous donor passed away. The Armenian community loses a good friend. His two sons are at present in England. His daughters are in Calcutta or in the Hills. The late Mr. Stephen was one of those romantic figures from the Near East, one of those industrious, persevering Orientals, who manage to do something out of nothing. He leaves a widow, two sons, and five daughters, three of whom are married. His interest in the Armenian College and the Persian School had earned for

him the Order of the Lion and Rising Sun from the Shah.

Political Detenu S. C. Bose.

Mr. Subhas Chandra Bose, who was to have arrived last week by the s.s. *Angora*, did not leave Rangoon before Thursday last, on the *Aronda*. Crowds waiting for his arrival were disappointed on both occasions, as, to avoid demonstrations, the authorities stopped the boat downstream, to make the prisoner alight "somewhere near Calcutta." The passengers who were on the *Aronda* say that the prisoner appeared to be emaciated, and was clad like a *sunnyasi*. The stopping of the boat caused some anxieties to the other passengers, who, not being aware of the presence of the political prisoner on board, thought some accident had happened. A large number of reporters were disappointed, not to have any item to report. Mr. Bose, who has not accepted the conditional release offered by the Government of India, is being directed to Almora, a cool and resting place in the U.P. The Indian Press, naturally, admires Mr. Bose's attitude, whilst the Anglo-Indian Press condemns it. In all the papers one finds the text of Bose's letter to his brother, on his departure from Insein Jail, in Burma. In this letter the prisoner expresses his regret to read that some papers have considered his refusal as an attempt to bargain for better terms. A passage of his letter reads:—

"My decision follows directly from my general outlook on life, and closer thinking only serves to confirm it. The longer I live in gaol, the stronger does the conviction grow within me that the struggles of this world are at bottom conflicts of ideas, conflicts between false ideas and true, or between different degrees of reality and different degrees of truth. Ideas are the stuff of which human movements are made, and they are not static, but dynamic and militant. They are as dynamic as the Absolute Idea of Hegel, the Blind Will of Hartmann and Schopenhauer, the *élan vital* of Henri Bergson. Ideas will work out their own destiny, and we, who are but clods of clay encasing sparks of the Divine fire, have only to consecrate ourselves to these ideas. A life so consecrated is bound to fulfil itself, regardless of vicissitudes." The *Statesman* still hopes that Mr. Bose will accept the Government's terms, as, "apart from other considerations, he would make more easy the reconsideration of the cases of his compatriots who are still under detention." On Monday morning there was a *coup de théâtre*; H.E. the Governor of Bengal ordered the release of the prisoner: Mr. Bose is free.

Here and There.

Governments are just as pleased as any ordinary people at being able to make a little extra money. Advertisements have been inflicted on us even on telegraph forms, and someone has suggested that advertising should be resorted to on postage stamps, in order to reduce postal rates. There is no knowing where it will end. There is plenty of billposting space on Government House gates and railings, and sky-sign on the top of the Ochterlony monument would certainly look striking.

Mrs. Sarojini Naidu, in a recent speech, said that what was driving India to revolt, perdition and death was communal hatred. "Leave Government alone," she said, "leave the leaders alone. All your fight against Government is nothing but delusion. Indeed, what matters to me is that you and I should endorse the great ideals of yesterday, to leave our children freedom and unity." Mrs. Naidu has received from Romain Rolland's sister an invitation to represent India at the International League for Peace and Freedom. But Mrs. Naidu replied that she could not accept the invitation, as her activities are necessary to her own country, and she cannot see her way to undertake external peace-making missions. The League's object is to enlighten public opinion on the problems raised by modern civilisation, and to examine impartially the claims of various native populations, with a spirit of justice and brotherliness. Mrs. Naidu added that the freedom of her own motherland was first and foremost in her heart.

It is reported that the latest move of the strike leaders of the Burma Oil Co. is to try to bring about a general strike in Madras. The management of the Asiatic Petroleum Co. has issued a notice saying that in view of some A. P. Co.'s workmen have been enticed against their better judgment to join the B. O. Co.'s strikers, they have decided to take back those among them who wish to return to work on the old terms, provided they return at once, otherwise their places will be filled with fresh men. The shooting of unarmed people, mostly workmen, has been severely condemned and the Chief Presidency Magistrate is making inquiries into the matter. The labour leaders are appealing for funds.

The President of the Rotary Club of Calcutta will henceforth wear a chain of office, similar to that worn by mayors and sheriffs and Rotary Presidents at Home. A generous rotarian, Mr. J. H. Simpson, has presented the embellishing decoration. A contemporary says that "it will add lustre to the already scintillating radiance of wit and intelligence met at the Club's functions."

A funny story, typically Indian, is going round. A European took a letter to the Post Office to be registered. He had affixed one stamp more than was required. The *babu*, after considering the cover for some time, remarked that there was one stamp too many, and that it should be removed. The gentleman was in a great hurry and did not mind the stamp. "Never mind," he said, "come along, man, I am in a hurry." But the *babu* looked much distressed. "No, Sir," he said, "it cannot be." And he shook his hand in the well-known Indian way. "Please remove it yourself, Sir," he pleaded. The gentleman was getting hot. "Never mind the blooming stamp; it will be damaged when it is removed. After all, if you want to remove it, do it yourself, and be quick about it." The postal employee wetted the stamp and carefully removed it. Then he handed the letter back to the gentleman. "Please, Sir," he said softly, "be kind enough to initial the empty space." "Oh, Hades!" exclaimed the *Sahib*, but he signed the blank space. Then a thought struck him. "I might as well get an acknowledgment," he said. "Yes," replied the clerk, "but you must then put on an additional stamp." "Why not put back the one you have taken off?" said the client, with a sound logic. But the stamp could not be used again, being damaged, and when the *babu* affixed another, he would not place it on the initialled blank space, so that, when ready for dispatch, the letter was covered with so many stamps and stampings that the address was scarcely legible. There may be a sequel to that story, but I don't know it; yet it would be easy to add to it until it became a kind of endless story, like Mark Twain's Locust-and-Grain-of-Corn Tale-without-end.

A committee of inquiry has been appointed by the Government of Bengal to investigate the question of the excessive consumption of raw opium in the Calcutta area, including Howrah and Bally, and in Serampore and Barrackpore. The consumption is markedly in excess of the standard laid down by the League of Nations. The Committee include the Rev. Herbert Anderson of the Temperance Federation of Calcutta. The leakage is due to the smuggling of crude opium from up-country. Those smugglers carry on the trade, in spite of the activities of the Government officers who are constantly engaged in suppressing it. The cumulative effect is harmful.

The "Angels" continue to fall on the "Empire Theatre." The company, whose success has been tremendous, announced "Morals" for next week. The public is getting ripe for that. A film, "The Triumph of the Rat," has been advertised, but the Board of Censors of Calcutta have banned it as unfit for consumption. The film is nevertheless shown every night in Balgalore. What is food for the Madras Presidency is apparently poison for Bengal.

The New Delhi railway station was opened for traffic on June 1 as the first step in a scheme for providing a large central goods shed for accelerating goods traffic on the broad-gauge lines. Transport facilities between Old and New Delhi will probably be provided by the opening up of motor-omnibus services.

BOMBAY LETTER.

(From Our Own Correspondent)

Bombay, May 21.

The A.I.C.C.

"On the right track at last!" That just about sums up public opinion on the recently concluded sitting of the All-India Congress Committee. What precisely the Committee set out to do during this Bombay session it is not very easy to define, and of results there are none. Yet it has succeeded! This probably appears a paradox, but it is easily explained. The Committee simply had to meet, and in having done so and still retained as much if not acquired more homogeneity than it had before, it has succeeded where it might most justifiably have been expected to fail. And its failure to fail is the measure of its success. Indeed, one would not be at all surprised to see the Indian National Congress figuring very prominently on the list of witnesses that the 1929 Royal Commission will examine.

A President's Strategy.

Easily the most prominent feature of the proceedings was the strategy employed by the President, Mr. Srinivasa Iyengar. Many Congressmen expected the sitting would clarify the policy and programme of the Indian National Congress. In this respect the deliberations have proved a blank, for the attempts of the Diehards of the Left Wing to stiffen the programme and embark on a general walk-out from the Councils failed signally. The credit for this goes to Mr. Iyengar, who ingeniously ruled out of order every inconvenient motion calculated to create a further split in the ranks of the party. He failed only in one instance, and, knowing that he would fail, he vacated the Chair in favour of Pundit Motilal Nehru and allowed that gentleman to go through a very difficult hour, while he himself became an interested spectator.

Joint Electorates.

The communal question engaged attention first, and the acceptance of the Muslims' joint electorates proposals after due modification was principally the outcome of numerous informal discussions between the leaders in the truly cosmopolitan surroundings of the Taj Mahal Hotel. The A.I.C.C. finally accepted joint electorates in principle and also the Muslim demands for the constitution of Sind into a separate province and for the introduction of reforms in the Frontier Province, but as a counter-blast to this demanded the constitution of Andhra and Karnatic, two predominantly Hindu areas, into separate provinces as well. As a first step in the preparation of the Congress case for presentation to the Royal Commission the move is quite an ingenious one, but whether it is calculated to another question.

Which is Better?

Another side to this question is raised by the *Bengalee*, which while admitting that in themselves joint electorates are preferable to communal electorates from the national viewpoint, doubts whether the advantages to be derived will not be more than outweighed by the reservation of a fixed number of seats for each community. For one thing, it will lead to the return to the legislatures of a class of men who will do much more harm to the country than good. Sincere men who feel strongly, the paper points out, will be handicapped by having to rely solely on the support of the voters of one community; while men of accommodating views will be able to bid for the votes of both communities by declaring themselves equally prepared to defend contrary interests.

Facing Facts.

Having sought to emphasise its importance in the political life of the country by a paper pact on communal unity, the Congress has cleared the ground for conditional co-operation. Thus, and thus only, was it able to adopt the proposal to frame a brand new constitution for India in consultation with other parties whose representative

character the Congress has hitherto disputed. It is all part of the propaganda to rehabilitate the Congress, other instances of which were evident in the refusal to censure the Madras Swarajists for permitting the establishment of a Ministry in Madras and meeting the Responsivists halfway so as to prevent a breach. Altogether, Moderate Indian opinion is inclined to the view that the Congress leaders, and particularly Mr. Srinivasa Iyengar and Pundit Motilal Nehru, are at last showing their courage to face facts and to readjust, although gradually, the Congress programme to fit it with realities.

Mahableshwar Doings.

The yearly two months' stay at Mahableshwar of the Bombay Government is fast drawing to a close, the move to Poona being due in the first week of June. Meantime, much has been afoot at the former. When not playing golf, tennis and billiards, the residents have been discussing the future of this pretty little hill station. Rumour states that the annual visit of the Governor is to be discontinued after the present year, but that is very doubtful indeed, for it is far too popular in official circles, and not least of all with the Governor himself. A sensation was caused there the other day when Captain W. H. Brett, of the 8th Cavalry, up on leave from Bolarum, fell out of a window in the Club while sleep-walking and sustained more or less serious injuries. The Governor and Lady Wilson with a small party have left for visits to Simla and Kashmir, to Lord and Lady Irwin and Maharaja Sir Hari Singh, respectively.

Panic on Stock Exchange.

The tightness of the money market, due principally to the Government currency deflations, caused a virtual panic on the Stock Exchange a day or two ago, when Government securities suffered a sudden decline owing to heavy sales by "bear" operators which the "bulls" were not prepared to take up. The panic, however, was only temporary, and towards the close the week securities steadied up and, in the event of there being no further deflations, a substantial rise may be anticipated in the near future. Cotton also is expected to rise, the local market being firm despite adverse American reports. Cotton mill shares are quiet pending the publication of the Textile Tariff Board's report, which is expected soon. Exchange is quiet, demand for silver is less in evidence and gold is lifeless.

THE CALCUTTA DINNER.

The annual Calcutta dinner, founded 25 years ago by Mr. A. H. Wallis, who was unfortunately unable to be present at its silver jubilee, was held at the Hotel Cecil on June 1, with Sir William Currie in the chair, and the Right Hon. Sir Lancelot Sanderson, K.C., ex-Chief Justice of Calcutta, as the guest of the evening. No less than five ex-Governors of Bengal and other provinces and two Governors-designate were among the 340 present, a record in the history of the gathering.

The Chairman said that times were changing in India, but, as in the past, so at the present time, service in that country, whether in a civil, military or mercantile capacity, called for the best of Britain's sons. If the political repercussions of the past six years had not been very severely felt in the commercial world, the path of the Indian Civil Service had not by any means been strewn with roses, and he paid an especial tribute to the way in which the members of that great service had continued to give unstintingly and unhesitatingly of their best, in increasing association with public spirited Indians, to the administration of the country, thereby providing an effective guarantee that, even under the altered conditions, the high traditions, efficiency and moral fibre of the Government of India, would be faithfully maintained.

Appealing to his fellow "box wallahs" to take up their share of the burden, Sir William Currie said that it was essential that the representation in the Legislatures allotted to the European community should be adequately

filled. Signs had not been wanting that growing political consciousness and political power had inspired among some the ideas of handicapping British commerce, of restricting the free flow and use of British capital, and of dictating who should be employed in business firms, irrespective of capability or efficiency. Such methods must be combated, not only because there must be free play for all, but because of their economic unsoundness. For this reason, and in the interests of India itself, it was necessary for the European in India, in co-operation with those Indians who were working for the good of the country untrammelled by racial prejudice, to bear his share and give of his best in its administration.

Sir Lancelot Sanderson spoke of the remarkable success of the judicial administration in India. A most satisfactory feature was the confidence which the people had in it. It had been a pleasure for him, since taking his seat on the Judicial Committee of the Privy Council, to hear the words of praise uttered by colleagues with reference to judgments delivered by some of the subordinate judges of Bengal, and on the learning displayed therein. Indians had adjusted themselves to the system of administration of justice instituted under British rule. They had become very efficient advocates; they had shown themselves learned and capable judges.

Sir Alfred Pickford proposed a vote of thanks to the Chair and at the unanimous and vociferously expressed request of the assembly Lord Ronaldshay and the Maharajahderaj Bahadur of Burdwan also spoke. The company included:—Lord Sinha, the Earl of Ronaldshay, Lord Meston, Sir Charles Innes, Sir Henry Wheeler, Sir Charles McLeod, Sir George Sutherland, Sir John Hewett, Sir Henry Burt, Sir Benjamin Robertson, Sir Archibald Birkmyre, Sir John Cumming, Sir Robert Carlyle, Sir Thomas Catto, Sir Stephen Demetriadi, Sir Edward Every, Sir Arthur Froom, the Archdeacon of Calcutta, Sir George Godfrey, Sir Robert Highet, Bishop Hope-Gill, Colonel Sir Gordon Hearn, Sir D'Arcy Lindsay, Sir Duncan Macpherson, Sir H. McMahon, Hon. Kenneth Mackay, Sir Robert McLean, Mr. F. Noyce, Mr. George Pilcher, Sir Alfred Pickford, Mr. F. Palmer, Sir Campbell Rhodes, Sir T. Richardson, Mr. H. M. Haywood, Sir B. Scott, Sir Thomas Smith, Sir Trevredyn Wynne, Sir Robert Watson Smyth, Dr. Cecil Webb-Johnson, Sir W. S. J. Wilson, Sir Arthur Yapp, Messrs. C. H. Bonpas, Mr. C. B. Chartres, J. B. Crichton, L. T. Carmichael, Mr. M. M. S. Gubbay, N. Gupta, N. Gangalee, H. A. F. Lindsay, P. C. Sheridan, Mr. Walter Davies (hon. treasurer), and Mr. E. J. Bowrey (hon. secretary).

THE SIND DINNER.

The Sind Dinner was successfully held at the Café Monico on May 31. Field-Marshal Sir Claud Jacob presided, and amongst those present were Sir Henry Lawrence, Sir Charles Mules, Sir Rayner Barker, Sir James Begbie, Mr. A. D. Younghusband, Mr. P. R. Cadell, Mr. Robert and Mr. Edward Giles, Major-Generals A. le G. Jacob, G. A. Leslie, D. G. L. Shaw, and F. H. Jelly, Mr. Justice N. Kemp, and many other connected with the Province.

The toast of "The Province" was given by the Chairman, and was coupled with the name of Mr. Cadell, its most recent Commissioner, who, in his reply, reviewed its progress and position. The Chairman has had a long-standing connexion with the Province, being the grand-nephew of General John Jacob, whose memory is still revered as a soldier and administrator. Another great-uncle raised and for many years commanded Jacob's Rifles, afterwards the 130th Baluchis. Sir Claud Jacob himself joined this regiment more than 40 years ago, in the days when the Baluch Brigade was practically a localised force, whose stations were always in Sind during times of peace.

THE CHARM OF ASSAM—III.*

"Assam is not a military recruiting ground, but in spite of this it made some contribution to the Great War. 174 of the civil officers were spared for military duty. The I.C.S. has a cadre of only 43, and under the orders of the Secretary of State, no Indian Civilian might leave India for any theatre of war without his express permission. Twenty-two joined the army for shorter or longer periods, 2 of whom were killed. The highest mortality was amongst the regular officers serving with the military police battalions. Fifteen went, one third of whom were killed, and their places were taken by the wreckage of the war. 278 non-official members of the Volunteer Corps joined the Indian Army Reserve of Officers, the regular forces or the Labour Corps. The military police battalions served as training grounds for the regular army, and over 3,000 officers and men were drafted to fighting units. Manipur and the three large hill districts sent labour corps 2,000 strong to France, the Garo hills sent 500, and Sylhet 1,000 to Mesopotamia.

"Many of these hillsmen had never so much as seen a railway train before they started. Yet they settled down quite happily in France and fitted into their old simple haunts just as easily on their return. The Nagas caused quite a sensation in their journey across India. At each halt all dogs in sight were killed and eaten and at one place it is said a dhobi's donkey added substance to the meal. The Indian staff were terrified at these naked men, armed with their spears and axes, and messages flashed down the line warning their friends to send their families away.

"The war took its toll even from the most unlikely places. In 1919, I was camping in forests which seemed incredibly remote from Europe. In the evening the villagers squatted round the camp fire, with the light flickering on their faces and lighting up the tree trunks which loomed in the darkness like the pillars of some huge cathedral. And they told us how some of their men had gone, and how those who had returned had told them a little of the war, 'but only a little, sahib, because there was an order, and what a curious war it was. How men would be gathered together and a box would arrive and when the box was opened men died.' That was the Mikir's description of a bursting shell. The jungle folk took things very much for granted. The first railway tunnel was an alarming experience, but once you have swallowed a railway train, you can manage an ocean-going steamer and an aeroplane. Sea sickness was a disease which it was held only attacked 'black men,' and those who crossed in the monsoon certainly suffered terribly.

"Of the 8 million people in the province, 55 per cent. are Hindus, 28 per cent. Muhammandans, and 16 per cent. adhere to those primitive forms of belief known as animistic. The bulk of the Muhammadan population is in the Surma Valley and in Upper Assam there are comparatively few. Assam was originally a stronghold of the Saktist form of Hinduism and the temple at Kamakhya is a noted place of pilgrimage. The shrine covers Sati's organs of generation which fell there when her body was lopped in pieces by Vishnu. It is situated on the top of a rocky hill about 600 feet in height, whence a glorious view can be obtained on a clear day. To the south the Khasi Hills descend almost to the river; immediately below the mighty Brahmaputra flows between the rocky hills which shut it in on either side; to the north the plain, dotted with outliers from the Assam range, stretches away to the blue mountains of Bhutan. East and west the river spreads out like a great inlet of the sea till it disappears in the horizon. Nothing could be more striking than the contrast between the natural beauties of the scene and the squalid surroundings of the temple.

(To be continued.)

* Further extracts from a paper on Assam read by Mr. B. C. Allen, C.S.I., late Commissioner, Assam Valley Division, before the Indian Section of the Royal Society of Arts on May 6. Sir Edward A. Galt, K.C.S.I., C.I.E., presided.

THE ASSAM DINNER.

Over 400 of those connected with the Province of Assam and other tea districts of India were present at the annual reunion dinner held at the Connaught Rooms on May 30. The attendance constituted a record even for a gathering that is always the largest of the many similar functions which take place at this time of the year. Mr. L. T. Carmichael, Chairman of the Indian Tea Association (London), presided and Colonel Sir Ronald Ross was the principal guest of the evening.

Extending an especially hearty welcome to those of the guests who were, or had been, members of the Indian Civil Service, the Chairman said that, like the Navy, in that and other respects, they understood the use of camouflage, and "often contrived to conceal beneath a mask of aloof indifference a very real and deep regard for the welfare of the people committed to their care." They were fortunate in having with them the Governor-Designate of Assam, and in offering Sir Laurie Hammond the company's sincere congratulation on his appointment, he felt that the Province was equally to be congratulated on securing his services. Sir Ronald Ross, who had shown the way to rid the world of malaria and had made possible the construction of the Panama, needed no introduction to such an assembly. It was said that the ancient Grecian and Roman Empires had declined largely as the result of the enfeebling effects of malaria. With the knowledge Sir Ronald Ross had given to the world it would be our own fault if the British Empire in the East should decline from the same cause. The Indian Tea Association was glad to be financially responsible for Sir Ronald's recent visit to India, and it was hoped that his work there would serve to quicken interest afresh in this great work of malaria prevention.

Sir Ronald Ross said that his recent visit to Malaya and Assam was the 13th tour he had undertaken to tropical countries in anti-malarial work. It was time that the British Empire undertook its proper duties in connexion with that disease. It was 30 years now since Sir Patrick Manson and he succeeded in finding how malaria was conveyed. At that time he hoped that the scourge would be got rid of in the Empire within a few years, but the latest of his journeys had shown him that they were only just beginning in this work. He admitted that a great deal had been done in Malaya, but Assam had not gone so far. He wanted to see the formation of an anti-malaria committee for each group introduced in Assam. No doubt there were difficulties in securing the help of the Indian villagers, but they could be overcome. The planters should organise independently of Government action; they should rule their own house, and he was quite sure that as soon as they set the example the Government would act too.

The company included:—Sir B. Robertson, Sir Laurie Hammond, Sir C. S. Bayley, Lord Russell, Sir Archdale Earle, Sir J. Cumming, Sir W. Simpson, Sir W. H. Clark, Sir W. J. Reid, Sir D'Arcy Lindsay, Dr. Andrew Balfour, Mr. C. H. Hilliard, Major-General Sir A. W. F. Knox, Brigadier-General F. E. Metcalfe, Lieut.-Col. H. C. Manders, Colonel A. J. M. MacLaughlin, Lt.-Col. A. H. C. Sutherland, Major Norman McLeod, and Messrs. A. H. Abbott, B. C. Allen, H. C. Barnes, A. W. Chaplin, W. H. Duncan, W. M. Fraser, P. F. Howlett (President, Tea Buyers' Association), G. M. Kingsley, H. A. F. Lindsay, W. J. Lucking (South Indian Tea Association), H. M. Haywood, T. McMorran, G. H. Masefield, E. A. Mitchell, F. A. Roberts, and W. H. Pease.

Sir Henry Wheeler, lately Governor of Bihar and Orissa, has been offered a seat on the India Council.

The whole of the Amritsar-Narowal Railway, including the section which crosses the Ravi river by the bridge now under construction, is expected to be completed in December, 1928.

It is semi-officially reported from Colombo that the Rt. Hon. Mr. J. M. Thomas, the railwaymen's leader, will be the chairman of the Special Commission appointed by His Majesty to consider the revision of the Constitution of Ceylon.

CORRESPONDENCE

THE FIRST INDIAN HALF ANNA BLUE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is believed that many stamp collectors all over India and elsewhere who are not members of the Philatelic Society of India, will be interested to know that Messrs. E. A. Smythies, I.F.S., and D. R. Martin, R.E., have collaborated in writing a book on "The First Indian Half Anna Blue, 1854," which deals with the different dies of this stamp, their "touches-up," retouches, flaws, and plating, in a manner which has never been attempted before. Their work has been described by two of the most eminent experts in London as "the most interesting philatelic study" which they have ever seen. It is very fully illustrated and will appear, in the first place, as a supplement to the Philatelic Journal of India, and it is hoped that the first instalment will be issued in the current month. It will afterwards be published in book form. If any *bona fide* collector interested in the subject will apply to me, I shall be very glad to give him any further information on the subject which he may require.—I am, etc.,

J. E. B. HOTSON.

Editor, Philatelic Journal of India.

The Secretariat, Bombay, May 2.

NEWS IN BRIEF.

Mr. Justice Blackett has dismissed with costs the suit filed by Mr. J. B. Petit in the Bombay High Court to set aside the election of Dr. Batiwalla as President of the Bombay Municipal Corporation.

The Secretary of State for the Colonies, in reply to a question in the House of Commons on May 23, said that he had not received any representations from the Planters' Association of Ceylon with regard to the agreement between the Government of Ceylon and the Government of India as to standard conditions and standard wages for Indian workers in the plantations.

Mr. O. A. Smith has been appointed acting Managing Governor of the Imperial Bank of India, vice Sir Norman Murray, who is at present in this country on leave. The term of office of Sir Norcot Warren, Joint Managing Governor, has been extended to December 25, 1927, and it is understood that Mr. Smith will be promoted to the substantive post on Sir Norcot's retirement.

In the House of Commons recently, in reply to a question by Mr. Lansbury, Earl Winterton said that Sir Herbert Baker, the architect of the new India House, is now preparing final plans. Before the Indian Legislature, he added, voted a grant of £60,000 for the current year's expenditure preliminary plans had been submitted to that body and the estimated cost of the whole scheme was £300,000.

During the debate in the House of Lords in Committee on the Indian Church Bill on May 31, the Earl of Birkenhead, Secretary of State for India, gave an undertaking that the third reading of the Bill would not be taken until the Measure had passed through the Church Assembly. The Bill passed through Committee.

It is announced that the Governor-General of Portuguese India has agreed to a request from the Indian Government for permission for four seaplanes to land on Diu Island (170 miles N.E. of Bombay) on their way from Karachi to Singapore, and possibly to Australia.

The Times Bombay Correspondent states that the Viceroy will visit Bombay on July 23 and will open the Indian Broadcasting Company's station, which is now practically complete. He will also open on that day the beam wireless service to England. The Viceroy is also expected to visit Ootacamund in July. On December 11 the Viceroy will begin a week's visit to Bombay, subsequently going to Kolhapur.

The third memorandum on the Indian wheat crop of 1926-27 shows an increase of just over a million acres on the sowings at the same date last year—namely, from 30,000,000 to 31,000,000 acres. The total yield is now estimated at 8,700,000 tons, as compared with the revised estimate for the corresponding period of 1926-26 of 8,600,000 tons. In other words, while the area under cultivation has increased by 3 per cent., the actual outturn is only expected to show an improvement of just over 1 per cent. The general condition of the crop, on the whole, is reported to be good.

In a written reply to Mr. Lansbury, who had invited his attention to the resolution passed in the Burma Legislative Council stating that in the opinion of that body the best interests of the Province are likely to be served by State management of the Burma railways on the termination of the present contract in 1928, the Under-Secretary of State for India stated on May 23 that the Secretary of State is still awaiting the recommendations of the Government of India in regard to the management of the Burma Railways after 1928.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Notable Honours.

In the Birthday Honours list there are a number of awards of special interest. A detailed list will be found elsewhere in these columns, and I only refer here to a few of the more notable honours. Sir Davison Dalziel, M.P., the executive head of the *Compagnie Internationale des Wagons Lits* and the Pullman Car Company, is made a baron. Then among the new baronets is Sir Harry Goschen, who is a director of the Chartered Bank of India and the National Provincial Bank. In the Diplomatic list an outstanding award is the K.B.E. conferred on Captain E. C. Midwinter, Controller of the Sudan Government London Office. Among the numerous awards in this list mention may be made of the appointments to the C.B.E. of Mr. J. A. Jameson, Fields Manager of the Anglo-Persian Oil Company, Mr. G. H. Griffith, Deputy General Manager of the Egyptian State Railways, Mr. A. C. Parker, General Manager of the Sudan Government Railways and Steamers, and Mr. V. L. Osborne, Surveyor-General, Survey of Egypt. Those I have mentioned are only a few of the many names connected with the Near East which figure in the list.

Egypt and the Cotton Revival.

How quickly under favourable conditions the economic situation in Egypt is likely to recover as a result of the improvement in cotton values may be gathered from the trade statistics for March, which show a great increase in the value of the exports as compared with the same month a year ago. While the value of the imports was £3,702,772 as compared with £4,530,453, plainly reflecting the reduced purchasing power of the country, that of the exports was £4,897,525 as against £4,198,547. The share of cotton in this increase may be gathered from the fact that the exports of raw cotton were valued at £3,804,238 as against £3,510,543, while those of cotton seed were valued at £385,941 as against £196,644. It is an axiom, the truth of which has been shown more than once in the last few years, that Egypt possesses wonderful recuperative powers, and if, as now seems probable, we are in for a prolonged period of higher cotton values, then the factor responsible for the trade depression in that country will have disappeared and before very long we may anticipate that the improvement in the situation will be reflected in the expansion of imports. The recovery of the country may be hindered, however, by adverse political developments, and it cannot be too strongly insisted on that in common with every other country Egypt needs a period of complete freedom from internal difficulties the result of which must be to retard the country's economic convalescence. As I have had occasion to point out before the depression in Egypt has had an effect on neighbouring countries, and has been a principal factor in the difficult situation which Palestine has had to face in the past year. A recovery in Egypt thus means also a much better outlook for Palestine.

Burmah Oil Report.

The full report of the *Burmah Oil Company* indicates the reason for the increase in the net profits, and at the same time renders possible a more comprehensive comparison with the results in previous years. It is stated that increased benefits realised during the year from refinery reconstruction, together with savings in other

directions, more than compensated for the lower values ruling for almost every petroleum product, and for the reduced income from investments consequent on receipt of the normal one year's dividend on the company's holding in the *Anglo-Persian Oil Company*, in place of two years in 1925. Operations in the Burma fields were interrupted for over a month by labour troubles, with the result that crude oil production there was somewhat less than for 1925. The ample stocks customarily carried secured the company's other activities against disturbance and it is anticipated that the consequent reduction in stocks of crude oil should shortly be completely made good. As regards the results as usual field expenditure has been charged direct to income, and the trading profit and other income after allowing for depreciation amounted to £3,167,662 as compared with £3,009,597 for 1925 and £2,881,198 for 1924. The proposed dividend of 30 per cent. compares with 35 per cent. for 1925, but it will, of course, be paid on a much larger capital, and is, in fact, equivalent to 40 per cent. Promising indications have been forthcoming in regard to the test wells being drilled in three areas in Lower Assam, but completion of the tests has been delayed by the heavy gas and water measures encountered. A satisfactory account is given of crude oil production in Upper Assam by the *Assam Oil Co., Ltd.*, in which the company has a large interest. Finally, reference is made by the directors to the further fall in oil values that has occurred during the current year and to the unstable character of the market as a consequence of over production in America.

Ottoman Bank Dividend.

The announcement of the proposed distribution by the *Ottoman Bank* of 5s. per share which represents 2½ per cent. is a welcome indication of the improvement of conditions abroad generally and in the Near East, notably Turkey, of course, in particular. The last distribution by the bank was in 1921, when the dividend was 5 per cent., and for seven years before that date there was no dividend. It may be recalled that but for the advisedly prudent policy pursued by the directors a dividend might have been paid last year. At the meeting a year ago the Chairman, General Sir Herbert Lawrence, paid a tribute to the energy and perseverance with which Turkey has pursued the work of economic restoration, and no doubt at the forthcoming meeting an interesting light will be thrown on developments during the past twelve months.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.

C. De CERJAT, Esq.

General The Hon. SIR H. A. LAWRENCE, G.C.B.

LORD ORANMORE AND BROWNE, K.P., P.C.

Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Egyptian Tourists.

An illuminating light on the tendency in the modern State to take cognisance of every activity of its citizens is provided by a report by the Egyptian Government to the Financial Commission of the Senate, giving the number of passports issued between 1921 and December 1926. It is stated that though the statement shows that the number of passports issued has decreased the Commission considers it necessary to draw the attention of Egyptians to the harm done by spending money outside the country purely for pleasure. I only refer to this matter because it seems to illustrate so aptly the new development of the theory of a State. Those who have followed the course of events in Great Britain in recent years will understand exactly what I mean. In the new State theory which is arising liberty of the individual *per se* will be a thing of the past. As regards the report to which I refer it seems to come with particularly bad grace from Egypt which has benefited, and promises always to do so, far more than any other country from visits taken abroad for pleasure.

Company Journalism.

Far too little is known by the general public of a development in journalism which is comparatively recent in the shape of the issue by large concerns of house journals. Admittedly they are mainly, though by no means all, primarily of local interest in so far as their main *raison d'être* is to be a chronicle in the main of the social activities of the employees of the concern. They are united in one thing that they all reach a remarkably high standard, showing that the technique of journalism is not an art that cannot be acquired with some facility. These remarks have been inspired by the receipt in the last few days of a copy of *Vickers News*, an admirably produced little journal, which certainly merits a very high place among house organs. This particular issue is certainly not merely of local interest, for it contains a number of most interesting illustrated articles dealing with the activities of the famous concern. Social news, is, of course, a very prominent feature, and the illustrations throughout make the issue one of which those responsible for it may well be proud.

The B.I.F.

Whatever the fate of the Department of Overseas Trade the British Industries Fair for which it is responsible will go on just as if nothing had happened. It is, it may be added, a strong argument in favour of the Department that the Fair is now recognised as an essential weapon in our trade offensive. Already the preparatory work for the 1928 Fair is being carried out, and I recently received detailed particulars of the Birmingham section. The Fair is to be held there and at the White City (if that is to be the London venue) from February 20 to March 2, and the opinion seems to be general that great as were the applications for space at this year's event they will easily be surpassed next time. That goes to show the place the Fair has now come to have in relation to British industrial endeavour. Each time it has been held the results have only served further to point to the conclusion that when world trade conditions are really favourable the Fair will prove a really valuable spearhead for British trade enterprise. How it is coming to be regarded abroad is apparent from the increasing volume of visitors, for it is being increasingly recognised that the Fair is now a business

event of the year which must not be missed by those who wish to be in a position to provide their customers with the latest commodities.

The Rubber Position.

It cannot be said that anything has yet occurred to throw a great deal of light on the puzzling situation with regard to rubber. After a substantial decrease in the London stocks a fortnight ago there was a slight increase last week, and possibly because there is not a continuous decrease the price of the commodity remains much as it was. With the position as it is there seems but a small prospect now of the price reaching a figure which will enable an increase in the exportable quota at the end of the quarter, but on the other hand it is equally obvious that there is no risk of a further decrease in the quota—a development which, it may be added, could not be regarded as otherwise than a misfortune to the industry. If, as now appears probable, we are to have a restriction to 60 per cent. for a full six months—a contingency which seemed wildly improbable only a little time ago—then it is clear that at the beginning of the autumn if not before we shall see high prices ruling. As I have pointed out before, however, the situation is wholly an artificial one, as the demand which could absorb the whole of the possible supplies is not in sight. If therefore high prices result in the 100 per cent. quota being reached there is absolutely no assurance—in present conditions—that the swing of the pendulum will not again take place with the result that in a year or so we may be back at the 60 per cent. quota. The only thing that can avoid this eventuality is the development of the world demand.

COMMENTATOR.

SMYRNA'S EXPORT TRADE IN 1926.

The British Consul-General at Smyrna reports that exports in 1926 amounted in value to £T60,709,175. The values of the chief items (in thousands of £T) were, Tobacco 28,000; raisins 9,424; figs 6,386; carpets 4,622; cotton 1,866; valonia 1,123; boxes 980; barley 854; liquorice root 559; raw hides 455; and valonia extract 349.

The principal exports to the United Kingdom last year included barley, 9,855 metric tons; raisins, 9,472 tons; figs, 9378 tons; valonia, 2,957 tons; boxes, 2,213 tons; cotton and hemp seed, 2,079 tons; emery, 666 tons; millet, 655 tons; beans, 640 tons; valex, 115 tons; liquorice root, 100 tons; tobacco, 92 tons; oats, 87 tons; cotton, 83 tons; cereal refuse, 74 tons; dressed hides, 61 tons; liquorice paste, 50 tons; furs, 9,129 kilograms; pine kernels and pistachio nuts, 5,346 kilograms; opium, 4,466 kilograms; mercury, 2,074 kilograms; almonds, 2,051 kilograms; chestnuts, 1,024 kilograms; and raw hides, 907 kilograms.

PUBLIC LIBRARY IN CYPRUS.

On the initiative of the Governor, Sir Ronald Storrs, the first Public Library in Cyprus was recently inaugurated at Nicosia. A splendid start was made, thanks to the valuable assistance given by the Victoria League, which has shown great interest in the scheme and has contributed upwards of 200 volumes.

Her Majesty the Queen has also graciously presented about 50 books from her own private collection, an act which should afford special gratification to the Island. The Imperial Institute and various private donors have also generously made further gifts of appropriate books.

Steaua Romana (British), Limited, are advised that the production of Steaua Romana Company, Bucharest, for May was 49,040 tons (compared with 29,800 tons for the corresponding period last year), which is the highest monthly production yet obtained by the company.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 7.

The Whitsuntide holiday and the growing habit of extending it, is sufficient in itself to explain the quietude which has reigned in the Stock Exchange markets this week. At the same time the monetary situation continues to present something of an enigma, and, until some more light is forthcoming on the future of money rates, fixed-interest securities are marking time, while the uncertainty also affects many other sections of the House. Furthermore the new complication in Egypt has now come to reinforce Chinese and Russian anxieties as disturbing factors in the international sphere. However, the continued success of a series of new issues shows that there is plenty of money available for investment; the wild movements of American Celanese and the support accorded to other speculative favourites show that the spirit of speculation is not dead. Should the political and monetary situations become clearer, there should be some basis for renewed market activity when the Whitsuntide holiday is really out of the way, for the increase in the country's industrial activity, as revealed by the drop in the unemployment figures, is an important fact which should inspire confidence.

The Midland Bank and the Unstamped "Cheque."

The Midland Bank's new scheme for attracting small depositors has aroused a good deal of interest and discussion in financial circles. The scheme, which, in brief, allows clients to draw upon their accounts for amounts of less than £2 by means of a receipt form, which does not require the 2d. stamp compulsory on all ordinary cheques, if generally adopted by other banks should become very popular for the settlement of small tradesmen's bills. It is, therefore, somewhat surprising to learn that the scheme has been approved by the Board of Inland Revenue, since if used to any large extent it will deprive the Exchequer of a considerable amount of revenue both in the form of cheque stamps and in poundage on postal orders. To what extent the new instrument will be negotiable is not yet clear, and until it is adopted by other banks it will be presumably confined to local transactions. If the scheme is taken up by other banks and the new "cheque" is used as a negotiable instrument and passes through the bank clearing, it is difficult to see how it can escape stamp duty, since it will come under the category of a bill of exchange. The Committee of the Bankers' Clearing House has decided not to handle these unstamped cheques and the Chancellor of the Exchequer has stated in the House of Commons that the Government are taking the advice of the Law Officers on the question of their liability to stamp duty. We are unlikely, therefore, to see any wide development from this new and enterprising move by the Midland Bank.

Artificial Silk Shares.

In the past week or two the artificial silk share market has been the centre of speculative interest. The shares of the Celanese Corporation of America, however, have practically monopolised attention. The activity in these shares has been characterised as a "wild gamble" and this is no exaggeration. Making up last account at £38, these shares of no par value have advanced to £61, and the buying fever continues. At £60 the valuation of the common shares is no less than £13,200,000. This enormous figure is all the more remarkable since no dividends have yet been paid on the shares. The speculation is based upon the belief that the factory is working at full capacity, and that sales considerably exceed production. The company's present earnings are stated to be at the rate of 3,000,000 dollars per annum, the surplus available for the common shares for this year being put at 7½ dollars per share and for 1928 at 24½ dollars per share.

These are, of course, extremely optimistic estimates. The present buying movement is reported to be chiefly on account of New York, and the English investor would be well advised not to share in New York's extreme optimism. This is especially advisable in view of the fact that the rise is partly due to the technical position of the market. The bulk of the shares are apparently being held off the market, so that the buying has had disproportionate results. Courtauld's shares have benefited by the wave of speculative interest, the price being around £6½. There is undoubtedly more justification for this comparatively modest rise, particularly if the long view is taken. Courtauld's have handsomely repaid the investor in the past and will probably continue to make satisfactory profits. A cautious attitude should be taken with regard to the shares of the new and smaller companies.

A Sound Preference Share.

The investor seeking a sound preference share giving a good return will find the Manchester Ship Canal Company's 5 per cent. preference shares excellent for the purpose. The Ship Canal is now well past the experimental stage, and in recent years it has returned steadily advancing receipts. Despite even the disturbed conditions obtaining last year, it was able to show an increase as compared with the previous year, for there were large importations of coal into the Port of Manchester. Ship Canal tolls, ship dues and miscellaneous receipts have recently been as follows: 1924, £1,463,656; 1925, £1,493,544; and 1926, £1,592,219. An ordinary dividend of 5 per cent. has been paid for some time past.

Those who are responsible for directing the undertaking by no means lack enterprise, as is proved by the Company's record; and it may be assumed that they will not rest on their oars. Indeed, at the last meeting the chairman was optimistic. He referred to developments in the past year and indicated the lines along which further progress could be made. The advantages of the Port of Manchester are only just beginning to be realised. There are £4,000,000 preference shares outstanding and they give the satisfactory return of £6 8s. per cent.

TRAFFIC IN THE FREE ZONE OF SALONIKA.

The following report of the traffic in the Free Zone of Salonika appeared in the *Messenger d'Athènes* :—

The directors of the free zone of Salonika communicate the following figures of traffic in the zone for the current year 1926 :—

Arrivals.

- | | | | | | |
|---|-----|-----|-----|-----|---------|
| (1) In the port of the free zone of Salonika, 1,119 steamers loaded with various merchandise of total tonnage | ... | ... | ... | ... | 320,421 |
| (2) By railway, 10,936 trucks loaded with various merchandise of total tonnage | ... | ... | ... | ... | 125,476 |

Total in tons 445,597

The following are the principal commodities: Corn, 71,000 tons; cereals, 45,000 tons; flour, 41,000; minerals and metals, 37,000; sugar, 16,000; rice, 5,500; and other products in lesser quantities.

To this should be added 72,500 cubic metres of wood for constructional purposes, unloaded outside the zone.

Further imports by shipment include 8,185 head of animals from various sources. The service of the zone calculates on the grounds of assembled information—not having to hand the declarations of the respective customs—that the following livestock have been imported from Yugoslavia by rail: About 400,000 goats and sheep, 27,000 cattle, 1,700 pigs, and 200 horses.

The total tonnage of this merchandise corresponding to their various sources is established as follows: Serbia, 114,000; Italy, 56,000; United States, 47,000; Roumania, 34,000; Great Britain, 31,000; Belgium, 30,000; Holland, 28,000; Russia, 25,000; France, 20,000; Hungary, 17,000; Germany, 11,000; Canada, 10,000; Turkey, 8,000, etc.

Exports.

- | | | | | |
|--|-----|-----|-----|--------|
| (1) Loaded on 990 steamers, merchandise imported relating to the above tonnage | ... | ... | ... | 55,891 |
| (2) By rail in 2,629 trucks, etc. | ... | ... | ... | 24,771 |

Total tonnage 80,662

Of which about 20,000 tons were destined for Greek ports and stations and the rest for abroad. Merchandise sent by sea and rail consisted chiefly of cereals (27,000 tons), corn (16,000), flour (5,000), and other articles in lesser quantities.

The chief destinations for exports were France (17,000 tons), Yugoslavia (16,000 tons), Belgium (10,000), Egypt (5,000), etc.

(3) 10,000 head of cattle were exported, and the rest were consumed in the country.

(4) Of the 10,936 trucks which arrived in 1926 in the free zone of Salonika 9,150 came from Yugoslavia and the other 1,786 from other countries.

Thirty-five per cent of Yugoslav merchandise was sent abroad and 54 per cent. was consumed in Greece, and 11,168 tons were found in the warehouses of the free zone of Salonika on December 31, 1926. To judge from the propositions which we have just cited, most of the merchandise in question will be placed in Greece.

These figures must be compared with the Memorandum of the Commercial Syndicate of Salonika, which we published in our number of April 26. The merchants of that town shown a considerable increase in Serbian exports to Greece, owing to the facilities granted to Yugoslavian commerce, whereas Yugoslavia is taking prohibitive measures against Greek exports into Yugoslavia.

M. J. A.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, June 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, June 16); s.s. Anchoria for Calcutta (Birkenhead, June 13).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, June 15).

British India Line.—S.s. Merkara for Bombay and Karachi (London, June 11); s.s. Manela for Colombo, Madras, and Calcutta (London, June 18).

Cunard Line.—S.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, June 18); s.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool June 11, Swansea June 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 11).

P. and O. Line.—S.s. Nagoya for Colombo, Madras, and Calcutta (London, June 11); s.s. Malwa for Bombay (London, June 17).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, June 15); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 18).

Ellerman and Papayanni Lines.—S.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Swansea, June 4); s.s. Algerian for Algiers*, Malta, Syra, Smyrna, and Constantinople (Liverpool, June 14); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa (Liverpool, June 18); s.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 20); s.s. Roumelian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool July 9, Swansea July 19). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume, via Trieste.

CHESS.

By "CARO-KANN."

The mate in six in last week's diagram was really quite simple. The moves are as follows:—1, R—R8 (ch), Ktx R; 2, B—R7 (ch), KxB; 3, R—R (ch), B—R6; 4, RxB (ch), K—Kt3; 5, Kt—B4 (ch), K—Kt4; 6, R—R5 mate.

I give this week a simple pawn study. White has the move. The solution will be given next week.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

*MASSILIA ...	June 28	*ELYSIA ...	July 28
*BRITANNIA ...	July 8	*CASTALIA ...	Aug. 16

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. California, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool Oct. 26; Marseilles Nov. 1.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

NOTES FROM ALBANIA.

(From Our Own Correspondent.)

Scutari, May 25.

National Bank of Albania.

As will be recalled the National Bank of Albania was established on September 2, 1925, with a capital of 12,500,000 gold francs, with the participation of the Credito Italiano, the Banca Commerciale Italiana, the Banca Nazionale di Credit, the Banco di Roma, the Banque Commerciale of Basle, the Banque Belge pour l'Etranger, the Zadrouga Banque of Belgrade, the Banque Serbe of Zagreb, the Banque Adriatique Danubienne, and the Banque Serbo-Albanaise.

It will perhaps not be out of place here to recall that from 1922 onwards Albania was asking the League of Nations for its support with a view to the creation of a bank with foreign capital and the raising of a small loan. In 1924 the Ottoman Bank made an offer to Albania for the establishment of a national bank, but the concession was given to Italy for reasons of a political order by the Government which at present is in power.

In principle 49 per cent. of the capital of the bank must be held by Albanian shareholders and 51 per cent. by foreigners; but at the present time the share of the capital is unknown. The head office of the bank is at Rome and the chief office in Albania is at Durazzo, there being branches at Tirana, Valona, Scutari, and Koritza.

On April 27 the balance sheet for a period of eighteen months was before the board of directors at Rome—a board composed of Italians, including the managing director, M. Mario Alberti, Minister Plenipotentiary, and one Albanian, M. Stéphan Zurani. It is doubtless of interest to mention also that in the office of the bank in Albania this country is represented neither by a director nor even a commissioner, and that the notes of the bank do not bear the signature of an Albanian official. For these reasons the bank is rather regarded in the country as a foreign institution, despite its official national title.

The balance sheet of the bank has been published in the form of a brochure, and has since been reproduced in its entirety in the *Telegraf* which is published at Tirana. It is in the Albanian language, and no translation has so far appeared. I propose to summarise the principle points.

The report commences by describing the position of the bank as very satisfactory, better indeed than the most optimistic forecasts. The first duty of the bank has been to give Albania a national currency in replacement of a dozen different currencies which circulated in the country. For this purpose bank notes have been issued by virtue of the concession granted to the institution by the Albanian Government. These banknotes are four in number, of 100, 20, 5, and 1 gold francs, and, as the report points out, they have kept their value as against gold, and circulate in the country thanks to the confidence placed in them by all Albanians. At March 31 last banknotes had been placed in circulation of a total value of 2,657,000 gold francs, divided as follows according to each category: in 15,000 gold francs for the banknotes of 5 leks, that is to say of one gold franc, 418,000 for the banknotes of 5 gold francs, 1,640,000 for the banknotes of 20 gold francs, and 584,000 for those of 100 gold francs.

The small number of notes of one franc is due to the fact that these notes have been declared no longer valid from February last; at that period their number was equal to 113,000 francs. I ought to add that despite the stability of the exchange the peasants, and even the merchants, take care not to keep paper money but to exchange it against gold. It must be mentioned here that the first notes of the Albanian Bank were issued in February, 1926.

Besides the banknotes the bank has also placed in circulation coins of a total value at March 31 last of 455,000 gold francs, as follows:—145,000 francs in 100 gold franc pieces, 14,000 francs in 20 gold franc pieces, 75,000 francs in 5 franc pieces and 2,000 francs* in two franc pieces (both of them silver coins), 156,000 francs in one lek† coins, 55,000 francs in ½ lek coins, and 16,000 francs in ¼ lek coins (these coins being nickel), and finally 2,000 franc in 10 centime coins in bronze.

The receipts and expenditure of the eighteen months total at 692,384 gold francs. The expenditure is as follows:—General expenses and administration 424,345 gold francs, interests due and discounts 687, devalorisation and amortisation 26,203, net profits of the year 1925-26 241,055; total 692,384. The receipts are:—interest on current account abroad 220,655, interest on shares and financial operations 451,913, various profits 9,805; total 692,384.

During the period the business transacted at Durazzo has been 82,384,000 francs, at Tirana 21,707,000 at Koritza 4,744,000, at Valona 2,810,000, and at Scutari 1,040,000 giving a total of 112,685,000. If to this total is added the amount of the transactions at the head office at Rome a total is obtained of 245,383,092 gold francs. The business of the bank has enabled the distribution of a dividend of 5 per cent. on the ordinary shares, 5 per cent. to the board of directors and a bonus of 10 per cent. to the personnel, 24,259 francs being carried forward.

The Bulgarian Direction of Public Debt, Sofia, notifies that in conformity with a new law, published in the Official Journal dated April 29, 1927, the period from August 1, 1914, to December 31, 1922, is not to be taken into account in the period of prescription fixed for coupons and drawn bonds of the following loans:—Bulgarian Six per Cent., 1892; Five per Cent., 1896; Five per Cent., 1902; Five per Cent., 1904; Four and a-Half per Cent., 1907; Four and a-Half per Cent., 1909; Five per Cent. Ville de Sofia, 1906; Five per Cent. Ville de Varna, 1907; Four and a-Half per Cent. Banque Nationale de Bulgarie, 1909; and Four and a-Half per Cent. Ville de Sofia, 1910. The coupons and drawn bonds of the above loans due for payment after December 31, 1922, will be prescribed at the expiration of the period allowed in the respective contracts of the above loans.

* On January 20 40,000 two-franc coins were in circulation, but since then they have been declared to be no longer valid.

† The lek is equal to one-fifth of a gold franc.

NOTES FROM ROUMANIA.

*(From Our Own Correspondent.)**Bucharest, May 21.***Demand for Stabilization.**

The refrain of all conversations and articles in the Press in connexion with the present financial and industrial situation of this country is stabilization of the currency. The recent rise of the leu from 1200 to 800 combined with the high transport rates established last year has produced what may be called a "crisis" in several of the industries including oil and timber. One of the Roumanian petroleum companies has been obliged to close down, while some of the largest companies have reduced their staffs and overhead expenses, stating that under present conditions it is only at a loss that they are able to produce oil at all. A memorandum has been addressed to the Ministry of Industry petitioning for a reduction of freights in order to allow the companies to compete in price with foreign products on the world market, where the high proportion of available supplies in relation to the demand has reduced the prices.

The timber industry is in the same position. Last week a congress of timber merchants was held in Bucharest to consider the situation and they also decided to petition the Government for reduced freights on the Roumanian State Railways. It was stated at the congress that the timber industry employed 20 per cent. of the whole motor power used by all the Roumanian industries and that 50 per cent. of the total exports in 1925 and 21 per cent. of their value represented timber. The recent rise in the value of the leu is causing grave anxiety to this industry also, and the delegates to the congress added their voices to the general cry for stabilization, without which they said there was the gravest danger that their important industry would be completely ruined.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated May 31, state:—

Currants.—The month opened with a fair degree of activity, but unfortunately this was not maintained, demand slackening off gradually, so that business can only be described as disappointing when account is taken of the proximity of Whitsuntide. A good consumption at this season is always looked for, and consequently it is reasonable to expect a brisk inquiry for some little time in advance, in anticipation of the holiday trade. The arrival of Australian fruit, coupled with the fact that quotations from Greece are easing slightly, probably influences the cautious attitude adopted by buyers, who refuse to purchase beyond what they need for their immediate requirements.

Gerano, Phrygia and Sea Victory arrived with fresh quantities to replenish the market, but very little business resulted, except in lower and medium grades. Slightly lower rates were established, sales having been made as follows:—Cleaned Amalias 41s. 6d. to 42s. 6d., cleaned Patras 42s. 6d. to 43s. 6d., Zante 42s. 6d. to 43s. 6d., Gulf 43s. 6d. to 45s. Vostizza is neglected, and difficult of sale, although some business has taken place in smalls at 43s. to 45s., bold fruit 45s. to 50s., up to 54s. for Choice. Quotations:—Amalias and Patras 42s. to 43s. 6d.; Zante 42s. 6d. to 43s. 6d.; Gulf and Panariti 43s. to 46s.; Vostizza 45s. to 52s.; Vostizza small 43s. to 45s.

Sultanas.—Smyrna and Cretan.—The market has shown a weaker tendency, sellers realising that in order to meet the competition of old crop Australian they would have to accept lower prices, but even at reduced rates only very small progress was possible. Ordinary have been sold at 56s., good 60s. to 63s., fine 70s. Greek 60s. to 66s., ordinary to good, and 70s. to 77s. fine qualities.

Figs.—Difficult of sale, Genuine 26s. 6d. to 27s. New crop offered 24s. 6d. c.i.f. without arousing interest.

NEWS FROM ALL SOURCES.

The Yugoslav American Shipping Company, Ltd., recently placed an order in Glasgow for a vessel of 10,000 tons.

The production of the Slovenian coal mines in 1926 amounted to 1,678,559 tons as compared with 1,822,582 tons in 1925.

After considering the accounts for the year 1926 the Committee of the Ottoman Bank has decided to propose to the general meeting, which will be convened for July 11, the distribution of a dividend of 5s. per share. In Paris this dividend will be paid without deduction of taxes.

The Rohilkund and Kumaon Railway Company has declared an interim dividend of 4 per cent., together with a bonus of 2 per cent., or 6 per cent. in all, on the ordinary stock. The dividend will be paid, less tax at the rate of 2s. 3d. in the £, on July 25.

Yugoslavia's exports in March amounted to 425,865 tons of the value of 55,561,638 gold dinars. The corresponding figures for March, 1926, were 409,347 tons and 62,667,215 gold dinars. For the first quarter of 1927 the exports totalled 1,062,005 tons of the value of 141,297,409 gold dinars as compared with 1,113,041 tons and 161,503,304 gold dinars for the first quarter of 1926.

The Bengal and North Western Railway Company, after transferring £50,000 to reserve and placing, as usual, £35,000 to sinking fund, has declared an interim dividend of 4 per cent., together with a bonus of 4 per cent., or 8 per cent. in all, on the ordinary stock. The dividend and bonus will be paid, less tax, at the rate of 2s. 1d. in the £, on July 25.

A contract worth £300,000 in connexion with the electrification of the main line of the Great Peninsula Railway of the Indian State Railways has been placed with W. T. Henley's Telegraph Works Company, London and Gravesend, states the British Engineers' Association. The contract covers the supply and erection of 269 miles of overhead line on lattice steel towers. The conductors will be of steel-cored aluminium for a working pressure of 110,000 volts.

M. Cafandaris, the Minister of Finance, and M. Michalakopoulos, the Minister for Foreign Affairs, are leaving for Geneva to-morrow (says a Reuter message from Athens dated June 2). It is understood that the Greek Government is asking for three loans—namely, a £3,000,000 refugee loan, £2,500,000 for the covering of the deficit, and £5,500,000 for the stabilisation of the drachma.

A large and representative gathering, including Prince Omar Toussoum and a number of Ministers and ex-Ministers and diplomatists, attended the inauguration of the new Bank of Misr on June 5 (says a Reuter message from Cairo). The managing director, Talaat Bey Harb, traced the history of the development of the bank, pointing out that it was established in 1920 with a capital of £80,000 and sixteen employees, while its capital to-day is about £1,000,000 and it has 500 employees.

The Greek Government has instituted new proceedings in the Court of International Justice against the British Government with regard to concessions obtained before the War by the Greek national Mavromatis for the supply of water and electricity to Jerusalem (says a Reuter message from The Hague dated June 2). The Greek Government contends that the British Government has, by unduly delaying approval of plans for the readapted concessions, caused injury to Mavromatis. It asks Great Britain therefore to make good this injury, which is estimated at £217,000, with interest of 6 per cent. The case should be put down for hearing at the next session of the Court.

REGIONAL AND TOWN PLANNING.

An interesting course of four public lectures on "National, Regional, and Town Development Planning" has just been given by Mr. W. H. McLean, M.Inst.C.E., M.T.P.I. for the University of London. The course embraced a survey of development planning from its widest general interpretation, that is, the Imperial or international aspect, down through the stages of national and regional planning to its comparatively detailed application in town planning.

The lecturer explained that those who have been called upon to plan the future development of a city have found that, besides the usual civic survey, there is the necessity for a wide study of the region beyond its boundaries which may contribute materially to, and may even determine, the future progress of the city. This study, called a regional survey, is made in order to enable the planner to perform his task with due regard to all the probabilities of the future. It is further found that the regional scheme must be linked up with adjoining regional schemes, and that they probably all contain elements of larger issues which are national in character, so that a national survey becomes necessary to co-ordinate the regions which go to make up the national economic unit.

The scope of this study embraces, amongst others, such subjects as population, communications, and transport, commerce, and industry (minerals and agriculture), and the public services (water, light, and power supplies). For example, it was pointed out, a trunk road, forming part of a proposed national system, which passes through a region or regions, would materially affect the planning of these regions, and, again, a national project, like the suggested Mid-Scotland Canal from the Forth to the Clyde, would vitally affect the development planning of several regions and of many towns; and so would the opening up of new coalfields or the "working-out" of existing ones.

It is evident, therefore, that to gain even an approximate idea of the future development or requirements of towns, which contain the greater part of the population in most countries and are the centres of development, it is necessary to make a very wide study in directions which, at first sight, may not appear to have much to do with towns; and that this study should embrace the whole economic unit, that is, usually the whole country. It is also evident that the results of such a study would be of a greater use to the community than merely the planning of their towns, for it would serve also to guide development in many other directions, and assist in making clear the whole economic position.

Unfortunately, in England, owing doubtless to the restrictions imposed by the system of local government, it has been necessary to follow the admittedly illogical course of beginning with the detail, that is, town planning, and working up to the general framework, that is, regional planning, and now the desirability of national planning is becoming recognised. In England a great deal of town planning has been done, and nearly one-fifth of the country has already been planned regionally, but, it was remarked, in Scotland relatively little planning has yet been accomplished.

In order to illustrate the subject, the lecturer described some of the planning schemes and works for which he has been responsible in practice. In the first lecture were described the interesting town planning schemes for the protection of the City of Jerusalem, for the development of Alexandria, and also of Khartoum, the plan for which was prepared by the lecturer under the personal direction of the late Lord Kitchener; and a comparison was made with practice in England.

In the second lecture the larger aspects of planning were dealt with, and the national and regional scheme for Egypt, the suggested national scheme for Scotland, as well as schemes for the development of Colonies, were described, while the proposal for the planning of the Continent of Australia was referred to. Considering the very widest application of planning, a reference was

made to suggestions for Imperial development planning and for international development planning, which are studies not less desirable, but admittedly more difficult, than the narrower and more obviously necessary national, regional, and town planning schemes. Economic pressure, it was remarked, has already necessitated a consideration of planning on this vast scale, and the good work already done by the Imperial Conference and by the recent Colonial Conference was noted.

In the third lecture the methods of procedure in Egypt, Palestine, and the Sudan in the matter of regional and town planning were dealt with, more especially the laws relating to the improvement and redevelopment of built areas, which is a matter much exercising local authorities in England, and legislation is being demanded to deal with this difficult and important matter; while in the fourth lecture various problems of regional and town planning were discussed, such as the more local aspects of population, communications, and transport, electricity for lighting and power, commerce and industry, water supplies for towns and power, town drainage and housing.

The lecturer remarked that the difficulties of co-ordinated planning are increased by Governments and their departments tending to work in watertight compartments, and by local authorities often taking a somewhat parochial view of their duties. Economic pressure and public opinion, it was thought, appears to be gradually changing this, and the value of planning as an aid to the solution of many problems of the day is becoming recognised.

It is sometimes stated that it is difficult to forecast the future, and that the practical utility of development planning is not so great as is claimed; but it must be admitted that the alternative of leaving things to develop by chance is much worse with its uneconomic and deplorable results, which may be, perhaps, more obvious in regard to towns, but exist nevertheless in all other branches of development. It is merely commonsense to make a survey of past and existing conditions, and from these to estimate possibilities and tendencies, and from that again to lay down probable general lines of future development, always on the understanding that it is largely tentative and subject to revision and modification from time to time as conditions change and experience indicates.

Such a study, the lecturer remarked, would tell us where development of any particular kind might be expected, and its probable extent, so that provision might be made for it, as far as practicable; and also it would enable us to take the necessary "bird's-eye" view of the whole, which is difficult when the various branches of development are dealt with separately, for then the wood cannot be seen for the trees.

It is expected that these lectures will be published later.

NEW PERSIAN CABINET.

The new Persian Cabinet, which was formed at the beginning of June, includes:—

Mehdigholi Khan Hadayat, the Mokhbar-es-Saltaneh, Prime Minister; *Ali Kuli Khan Ansari, the Mushower-ul-Mamalek, Foreign Affairs; *Mirza Mohamed Ali Akbar Khan Daver, Justice; *Firuz Mirza Firuz, the Nusret-ed-Dowleh, Finance; Mirza Husain Khan Samy, the Adib-es-Saltaneh, Interior; Mirza Mohamed Tadayyon, Education; Jaffar Kuli Assad, the Sardar Assad, War.

At the time of going to press no appointments have been announced for the Ministries of Public Works and of Posts and Telegraphs.

* Members of the late Cabinet at the time of its resignation. The new Prime Minister was Minister of Public Works until May 8, when he resigned on appointment as Lord Chief Justice.

The traffic receipts of the South Indian Railway Company for the week ended May 7 amounted to Rs.10,77,853, making the total from April 1 Rs.55,03,884.

SPLIT AND SHIBENIK.

Just as there were two favoured seaports under the late Austro-Hungarian Empire, Trieste and Fiume, so Yugoslavia now has two large seaports, namely Split and Shibenik (says M. Slavko Sirischevich in an article in the *Belgrade Economic Review*). But between the two pairs of ports there is a great difference. The former were the outlet of a State counting 50 million inhabitants, whereas the latter are the partial outlet of a State with a population only one quarter as large. On the other hand, while Trieste and Fiume could reckon only on the trade of their own State, Split and Shibenik can count on transit traffic from Hungary and Austria and from practically the whole territory of the late monarchy.

By 1925 Split had achieved 750,000 tons, while Shibenik remained at 162,000, but it made up something of its deficit in 1926 when it reached one-third of the total of Split. Both of the ports, however, have increased their traffic five-fold in the course of the last five years.

Split's goods traffic consists primarily in its export of large quantities of first-class cement and cement material, which go to Italy. The chief goods imported are British coal, flour, marble, broken stone, soil, crude asbestos, and sacks. Other exports are asbestos slate, wine, and carbide. Shibenik exports goods of quite a different nature: wood primarily, then bauxite, brown home coal, carbide, cyanide, and cellulose, while its exports are very small, mainly coal and flour. The proportion of imports to exports at Split is 23/100 and at Shibenik 5/100. Both are therefore pre-eminently exporting ports. Shibenik's great advance in 1926 was caused by the great competition of Dalmatia in the export of brown coal to Italy as a result of the coal strike in Great Britain, and by the larger export of bauxite to America.

Since Sushak, as a part of the old port of Fiume, is

such an exposed port, apart from its other disadvantages, that it is impossible to direct most of the overseas trade that way, and since also Dubrovnik has too small a port and the Bay of Cattaro no constructed harbours or railway connexions, these two ports are of special importance to the foreign trade of the Kingdom. Split, indeed, has been a point of great importance for shipping from the earliest times. Its northern harbour has advantages possessed by no other port in Dalmatia in the facility and cheapness of port construction owing to the gentle slope of the sea bottom. The northern harbour also has the advantage of two entrances, one of which is very wide and convenient. Moreover, it is not exposed to the terrible storms of the eastern Dalmatian shores. Split also has the superiority of being situated in the richest part of Dalmatia, both from the agricultural and general points of view, and of having in its vicinity great sources of water power and mines of coal and other ores. Then it has the special advantage for Yugoslavia of lying in the centre of the coast, and of a triple row of islands to make it the best protected point of the shore.

Shibenik possesses an admirable harbour or fiord, which attracted the attention of the Austrians as an excellent naval harbour. It has also long been considered as a good base, before the War, for wood and coal, and now for bauxite. It also has the great water power provided by the river Krka, which has made possible the building up of industries. Its disadvantage as compared with Split lies in the fact that, in entering, ships have to pass through a very long, narrow, winding strait, while the harbour is too deep and the sea bottom very rocky, which has made it difficult to construct quays. Neither has it so much plain as Split, though since it has a smaller trade than Split, the amount is sufficient.

Split's inferiority as compared with Shibenik is its longer and not well constructed railway, built by the Austrians. The difference would be 27 kms., but since the northern port of Split is 6 kms. to the north, the difference is decreased by so much.

Before the War, Split had only one small steamship company, but now that the headquarters of maritime shipping have been transferred there, there are, in addition to a number of small companies, the two largest navigation companies of Yugoslavia. Split already has two large shipbuilding docks, and new ones are being planned in both ports.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Erection of Water Supply Works at Edkou.—Tenders are invited by the Egyptian Ministry of Public Works for the supply and erection of machinery, filters, and piping, for the water supply works at Edkou. July 25. (D.O.T.)

Uniforms.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of winter uniforms for guards and employees during 1927-1928. August 9.

Iron and Steel Materials, Metals, Etc.—The Ministry of Communications, Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of their requirements during 1927-28 in respect of iron and steel materials, metals, etc. June 14. (D.O.T.)

Boots and Laces.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 16,550 pairs of boots and 8,300 pairs of laces to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. June 28.

Rails, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 5,000 tons rails. August 10.

Engineers' Instruments, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of engineers' instruments, drawing materials, etc., required for the schools during the school year 1927-28. June 30.

General Stores.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of general stores required by the Police Stores, Bulaq, in 1927-1928. July 2.

BULGARIA.

Coasting Steamer.—Tenders are invited by the Bulgarian Mercantile Navigation Company for a coasting steamer. September 6.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

Company Meeting.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY.

Review of the Various Undertakings.

Sir Henry McMahon's Speech.

The thirty-third ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held on June 3 at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, E.C. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (Chairman of the company), presided.

The Secretary (Mr. T. K. Brown) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Our report and the accounts for the year 1926 have been in your hands for several days and I therefore presume you will take them as read. (Agreed.)

As you will have observed from the revenue account the result of the year's working shows an appreciable improvement over that of 1925, and, taking into consideration the adverse trade conditions by which enterprises such as ours have been affected—though, fortunately, not to so great an extent as many others—I think we may congratulate ourselves on having made so good a showing for the past year. There is, I am glad to say, good reason for anticipating steadily improving results as normal trade conditions return.

The gross income for the year is £155,754, or £9,874 more than in 1925. On the other hand, expenses have increased by £8,609, principally under the headings of working and maintenance charges at our own branches, £4,089, and income-tax, £2,204.

On the other side of the revenue account there is a slight drop in dividends received from the associated companies, which is principally accounted for by smaller receipts from the Rangoon and China companies, to which I refer later, and in "Sundry commissions and interest," by reason of a reduction in the amount of material and apparatus purchased on commission on behalf of the associated companies.

The net result, therefore, is an available balance for the year of £68,282, as against £67,017 for 1925, or an increase of £1,265, and this, together with the amount brought forward from 1925 and less the interim dividends already paid during the year, it is proposed to deal with as shown in the report—i.e., in the payment of a final dividend for the year of 3½ per cent. on the preference shares, less income-tax, and in the payment of a final dividend of 6 per cent. and a bonus of 2 per cent. for the year, free of tax, on the ordinary shares.

The balance-sheet, I think, calls for little or no comment, there being no very substantial variation from that presented to you a year ago. The diminution in the value of shares and debentures in associated companies is due to the redemption by the China and Japan Company of its issue of 7 per cent. debentures, of which this company held £12,500. I might also mention while on this subject that the valuation of these holdings has been arrived at on a very conservative basis, and that the actual value, based upon market prices at December 31, 1926, where quotations are available, and on a modest estimate of the value of those shares which are not actually quoted, represents a figure substantially in excess of that shown—namely, £711,921.

Of the associated companies, the Bombay company shows an increase in gross revenue and a decrease in working expenses for the year, the net result being an improvement of some three lakhs of rupees over 1925. But the charges for debenture interest and, even more so, the appropriations necessary for depreciation and the writing off of the old magneto plant, which has been superseded by the automatic system of exchange working, still constitute a heavy burden upon the resources of that company that the directors have felt unable to recommend the payment of a dividend. A diminution in these charges, however, may be looked for in the near future, and, with a revival of trade and the introduction of a more attractive tariff of charges, which, as in Calcutta, cannot fail to stimulate that

development of which the Bombay company stands so greatly in need, we may soon hope to see that company firmly re-established once more on a dividend-paying basis.

We have lately received from Sir William Plender a most valuable and instructive report on the position of the Bombay company as the result of the examination which we asked him to make last year. I am glad to say that his advice and recommendations practically endorse the policy which has been adopted by your board, and which is being carried out by the very able chairman of the Bombay company, Mr. Bunbury.

The Bengal Telephone Corporation, whose financial year ends on June 30, continues to make remarkably good progress, and has been able to declare a dividend of 6 per cent. for the year ended June, 1926, as against only 2 per cent. for the previous year. The message rate—introduced in September, 1924—has fully justified expectations in the matter of attracting new subscribers, who are coming on now at the rate of over 1,000 a year. There has been a steady improvement in the efficiency and rapidity of the telephone service, which, you will be pleased to hear, earned the warm commendation of the Commissioner of Police during the disturbances which broke out in Calcutta in the early part of last year.

The Rangoon Telephone Company pays a dividend of 5 per cent., as against 8 per cent. for 1925. This reduction is due to exceptionally heavy charges last year for depreciation, as in the case of the Bombay Company, and to the writing off of old plant and material displaced by the new common battery installation at the central exchange. Here, too, the chief need is for development, against which the present flat-rate charge of £20 per annum militates severely. It is understood, however, that as soon as the heavy pressure of work and the temporary disorganisation resulting from the rebuilding of the exchange premises, the installation of new switchboards, and so on, come to an end, steps will be taken to obtain Government sanction to a system of message rates similar to that in force in Calcutta.

Madras continues to progress, surely if slowly, and maintains its dividend of 7 per cent., as for 1925. The new automatic system was brought into service early in 1926, and, except for such few minor defects and necessary adjustments as are inseparable from any new installation of that nature, has proved itself an unqualified success.

In reporting the appointment to the board of Sir Thomas Catto, the Chairman said his name will doubtless be familiar to you as the managing director of that important and old-established Calcutta firm, Messrs. Andrew, Yule and Co. Sir Thomas is numbered among the most prominent business men, not only in Calcutta, but also here, and in the United States as well; and, as his business necessitates his presence in India annually, we shall reap the great advantage of having a member of your board on the spot to consult with and advise the local boards of the associated companies in which you are so largely interested.

The report was unanimously adopted.

The Fuller Accumulator Company, Chadwell Heath, Essex, have received a contract for dry cells from the India Store Department.

Messrs. John I. Thornycroft and Co., Ltd., Basingstoke, have recently received a repeat order for seven six-wheeler lorries for the Sudan Government.

A contract has been received by the British Ropeway Engineering Company, London, for an aerial ropeway in three sections, having a length of ten miles, for the transport of the exports and imports of the Anamelli Tea Planters' Association.

A Reuter message from Sofia states that representatives of the Bulgarian Development Co., of London, have left for the provinces, accompanied by a Commission appointed by the Minister of Commerce, to make arrangements for the starting of work under the concession recently granted the company for the manufacture, sale and export of bacon and other pork products.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson in their report for the week ended June 1, state:—

Egyptian Futures.—Sakel Contract.—In the earlier days of the week value in this market showed a further hardening tendency, fresh speculative support being encouraged by the strength of Alexandria and further indications of increasing trade activity. More latterly, however, the upward movement in Alexandria has received somewhat of a check, as "long" liquidation, probably induced by the political situation, has been in evidence. This has somewhat unsettled sentiment at this side, and whilst the tone remains very steady, prices have reacted somewhat with the result that the level at to-day's close ranges from 9 to 23 points decline from our last circular rates.

The improved demand for actual is evidenced by the contraction that has taken place in near positions. At the beginning of last month, Mays were running at a discount of 3 points under July. During the later days of the month in question a consistent narrowing took place, and the final going out price showed a premium of 5 points. This, of course, reflects the much improved offtake that has latterly been in operation and engenders a feeling of greater confidence amongst those who are holding cotton or who are operating on the "long" side.

Trade reports in the section mainly concerned with fine spinning continue to be satisfactory, and mills are operating with greater freedom than usually witnessed at this period of the season. Were it not for the fact that Sudan Sakels are monopolising the bulk of the covering, our contract would have been even more favoured than it has been so far by the improved outlook.

Generally speaking, we maintain our "bullish" views, but, at the same time, consider that some reaction, especially should the American market show a hesitating tendency, is likely to be manifest. Should this be the case, we would certainly recommend purchases, as there is little doubt that throughout the coming months, owing to fears of a reduced supply of long staple American cotton, added to the reduction in the Sakel acreage, which has taken place, will make prices particularly susceptible to detrimental crop reports or to sustained trade activity.

Upper Contract.—Values in this contract have shown a very steady tone throughout the week, a moderate amount of trade support and a gradual hardening in American values combining to influence this tendency. Even at the level now witnessed, the Upper basis appears reasonable in comparison with prices demanded for other competitive growths. Trade reports in the coarser counts have latterly shown some falling off in the amount of business transacted, but, in view of the comparative smallness of actual stocks, this has, so far not had any effect on the outlook. We continue to anticipate higher prices later in the season.

Egyptian Spot.—A very fair inquiry has again been in evidence and prices have been well maintained all round. Unfortunately, actual business in spot Egyptian has not shown the improvement which might have been expected in view of the large inquiry, the strength of the futures markets, and the fact that the spinners of the finer counts at Bolton are reported to be doing a larger amount of trade than has been the case for some time past.

As regards Sakel, of course, there is now no doubt whatever that spinners on a whole have definitely decided against it this year, on account of the high prices asked, and that conversely they have found the Sudan Sakel cotton very good value for their money. It appears obvious to us that, if holders of Sakel cotton desire to reduce their holdings this season to any material extent, a very drastic reduction in prices will have to be considered. Uppers are a somewhat different proposition, although 13½d. for Fully Good Fair Upper seems to be a fairly high price considering the moderate amount of

business passing. The bulk of the local inquiry has been for Uppers at 12.00d. to 12.50d., with a small quota ranging from 13.00d to 13½d. Sakel, at from 10.00d. to 12.00d., has been in considerable request, but the better grades have been only sparingly asked for. Pilon, at from 13.00d. to 14.00d., has been in moderate request. Sudans of all descriptions have maintained their popularity, and a large business has again been recorded for the Sakel qualities. With regard to Egyptian cotton for shipment, some slight improvement has been reported from various quarters.

Forwardings to spinners for the week ending 27th ult. were returned as 7,572 bales Egyptian and 2,950 bales Sudan. Estimated sales for the week 1,200 bales Egyptian and 11,600 Sudans. Quotations of Sakel have been advanced 30 points, and those of Upper and Brown 35 points. Fully Good Fair Sakel to-day 17.00d. Fully Good Fair Upper to-day 13.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended May 26, state:—

Since our last report the futures market has again been very active, with wide fluctuations in prices; the tone, in general, has been firm. The week's summary of price movements is as follows:—Sakellaridis: July, 32.30 dollars, 0.78 up; November, 33.07 dollars, 0.52 dollars up; January, 32.82 dollars, 0.62 dollars up. Ashmouni: June, 23.55 dollars, 0.60 dollars up; August, 24.05 dollars, 0.60 dollars up; October, 24.57 dollars, 0.52 dollars up; December, 24.67 dollars, 0.47 dollars up; February, 24.97 dollars, 0.67 dollars up.

Sakel.—In spite of the better tone of the reports from America concerning both the damage caused to the crop by the floods in the Mississippi Valley and the weather conditions over the cotton belt generally our market has kept very firm, and prices show a further gain on the week. The firmness must again be attributed principally to speculative buying, and the position at present open for account of speculators must be considerable.

The demand from abroad has been slightly better than that of last week, but this better off-take is far from being sufficient; for the position materially to improve a much larger and sustained demand is essential. Arrivals during the week have been very heavy, but, since the interior movement came to an end on the 21st inst., these heavy arrivals must, of necessity, very soon cease. At the third May tender, 6,000 kantars dockets were issued; the total of the dockets issued during May is 11,250 kantars.

Uppers. This market, whilst not so active as that of Sakel, has nevertheless been quite firm; business has been mainly concentrated on the October option. Commercial houses have recently shown some increased interest as a result of the better demand from abroad during the last few weeks; the inquiry for Ashmouni is in marked contrast to that for Sakel. The statistical position of Uppers is fairly satisfactory and, in view of the poor outlook for the long staple crop of American, we look for some narrowing of the difference between prices of this growth and Sakel.

The week's receipts amount to 222,927 kantars, against exports 104,390 kantars; the stock in Alexandria stands at 3,086,275 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to May 19, 1927, are as follows:—Arrivals: Lower Egypt, 4,844,000 kantars; Upper Egypt, 2,965,000 kantars; total, 7,809,000 kantars. Exports: Sakel—2,583,774 kantars; Ashmouni, 3,158,472 kantars; various, 407,186 kantars; total, 6,149,432 kantars.

Spot. The past week has seen a slightly improved demand from spinners, with a consequent rather better turnover at Minet el Bassal. Sales for the week amount

to about 12,200 bales, of which we estimate 4,700 bales Sakellaridis, 6,850 bales Ashmouni and Zagora, 500 bales Pilon and 150 bales other varieties. The spot situation is about the same.

Sakellaridis: A moderate business has been done covering all grades. Spot differences are without much change for Fully Good Fair and better, but rather easier for Good Fair and the grades below.

Ashmouni and Zagora: A fair business has been done in all grades. Spot differences are unchanged except for the grades below Good Fair, which have eased a little.

Pilon has been in fair request. Spot differences are unchanged except for the lower grades, which are a little cheaper.

White: A small business has been done. Spot differences are easier.

Various: Brown is neglected and no business is reported. Spot differences are quatably unchanged. A few bales of Fouadi have changed hands.

Up-Country: The ginning factories are one after the other now closing down, and the volume of business in the villages is rapidly becoming negligible.

The stock still existing in the various factories of Upper and Lower Egypt must amount to about 100,000 kantars, and if all this cotton is ginned and sent down,

the arrivals in Alexandria from September 1 last up to the re-opening of the factories in August next, will top the 8,300,000 kantars mark.

Business in new crop has, up to now, been slow. Rumour is rife that the Government proposes shortly to bring a Bill before Parliament for the prohibition of "call" cotton business in Egypt. The commercial world is absolutely opposed to any such law as being contrary to the interests of all parties, the grower, the merchant, and the spinner, and it is very probable that the Government will drop the project.

Crop, 1927: Reports from all points of the interior are to the effect that the crop is progressing quite satisfactorily. Temperature is fairly high, but water, except in rare cases, is sufficient, and the plant is developing well. Leaf worm attacks are reported, but the damage so far caused by this pest is insignificant.

A Reuter message from Sofia states that the Commission appointed to examine the tenders for the construction of a powerful wireless station here has recommended that the contract be given to the English Marconi Co., the price being 33 million leva, or about £50,000. The Minister of Posts and Telegraphs has confirmed this decision. Two big German firms and one French firm also competed for the contract.

Notes of the Week.

The Egyptian Contretemps.

If the urgency of the matter justified the dispatch of the British Note to the Egyptian Government, it is to be hoped that no attempt will be made to effect a settlement of a wide range of problems by means of Notes and answers. The temper of the Egyptian Parliament gave rise to the belief that Great Britain was on the point of being presented with a decision which would have made the diminution of the authority of the Sirdar a *fait accompli*; and, in order to forestall this, a communication was addressed to the Egyptian Government to remind it that the position of the Sirdar was linked up with the wider question of the Reserved Points, which could not be settled by any unilateral decision. Provided that Egypt agrees not to proceed any further with the contemplated changes in the command of the Army—it is not clear that they had actually been recommended in a plenary sitting of the parliamentary War Committee—it would seem to be in the interests of both countries that no attempt should be made to settle other matters until the whole question of the Reserved Points can be discussed by plenipotentiaries. By taking up one subject at a time, and, as might happen in this instance, by settling it on lines that may commend themselves to Great Britain but be resented in Egypt, a wholly false impression of the relations between the two countries would be created. The underlying idea of a treaty of Alliance between Egypt and Great Britain is that both parties accept the terms as being in their entirety a reasonable solution of a complex question. When carefully examined, such a treaty, no doubt, will be found to be favourable to Egypt in certain respects and to Great Britain in others. Only when the mutual concessions are weighed against each other can the value of the agreement be appreciated. It would be a mistake, therefore, to encourage the wrongheadedness of which the British Government has to complain in a section of the Egyptian people by allowing it to argue from one point alone that Egypt is being required to yield all along the line.

The Need for a Treaty.

Both Governments will be justified in pressing that there should be no further delay in the negotiating of a treaty of alliance. The Egyptian Government has had ample opportunity of gauging the unwisdom of allowing discussion in Parliament to range continually on the vexed question of Anglo-Egyptian relations. Under present conditions no speech in the Legislative Assembly is likely to help in a solution of the various questions outstanding between the two countries. On the other hand statements are being made every day which are apt to embitter those relations and render agreement more difficult. Embarrassed as it is by these proceedings, the Egyptian Government must be as anxious as the British Government to put an end to unedifying incidents. It has been made abundantly clear that, until it is confronted with a complete treaty of alliance which will enable the compromise between the two countries to be considered as a whole, the Legislative Assembly will never express acquiescence in the "reservation" of a single point bearing on the independence of Egypt. This particular Gordian knot can be cut only by ignoring Parliament until the negotiations have been terminated. With a treaty of alliance the Reserved Points disappear, as the questions to which they refer will have been settled and the Egyptian Parliament will be free to direct its attention to more profitable themes. With good will and common sense leading to a smooth settlement of the recent crisis, the prospects of the negotiation of a treaty improve.

The New Government in Roumania.

The change of Ministry in Roumania has brought about an interesting and significant situation. For the first time there is a real Coalition Government in power, with a non-Party Prime Minister, and for the first time also there is a chance that the elections on which the political groups are now concentrating all their attention, will be conducted with a reasonable amount of impartiality. In these circumstances it is almost inevitable that the National Liberal Party should reap the benefit of its

superior organisation. The National Peasant Party would stand a better chance of running it close in the final results, if it had been able to retain within its ranks Dr. Lupu and the three Ministers who joined General Averescu's Government. According to reports from Roumania the People's Party which held 286 out of 387 seats in the last Government is expected to disappear for all practical purposes from the parliamentary scene. General Averescu talks of withdrawing altogether from politics and it is still uncertain whether his followers will go to the elections as a separate party or will distribute themselves among other groups. The sudden rise and eclipse of this People's Party, if it is now disbanded, will be eloquent of the artificiality to which politics in Roumania have been exposed in the past. The mandate to form a Government was given to General Averescu in March 1926 without any reference to the strength of his following in the Legislature, and the elections, according to plan, returned him power with an overwhelming majority. With similar inconsequence he is called upon to resign and his large following melts away. In all the circumstances Roumania stands to gain by reverting to political bedrock, and it is to be hoped that Transylvania will now have an opportunity of pulling its full weight. The elections are to be held in the second week in July, so there is time, if the leaders wish, for the various groups to come together again and to go to the poll on a unified programme.

Greek Statuary in London.

M. Philadelphus, the distinguished Greek archaeologist, who some time ago raised in the Greek Press the question of the return to Greece of certain antiquities now in the British Museum—in particular the Caryatid of the Erechtheum and the Elgin Marbles—has now made a direct appeal to the British nation and Government through the medium of *The Times*. His first concern is for the Caryatid and the Column of the Erechtheum, on the ground that they are indispensable elements to the temple and that the absence of the column renders the superb monument subject to collapse. There is much to be said for the return of the Caryatid; its acquisition was in no way on all fours with that of the Parthenon marbles purchased from the Turks who then owned them. Unfortunately for the Greek appeal the request for the return of the Greek statuary has evoked the retort of prominent classical scholars that there should be no question of returning the Caryatid until the atmosphere of Athens, now polluted by corrosive industrial smoke, has been made fit to receive it. Other more aggressive con-

troversialists point out that if the principle is to be generally applied, all the museums in the world will be denuded to overstock Athens and Rome. Against this can be urged that the Caryatid stands in a different category from that of other pieces of Greek sculpture.

The Albanian Dispute.

Neither the lapse of time nor fuller details of the incident invest the action of the parties to the dispute over the Tirana dragoman with much credit. Both Governments convey the impression that they would like to recede from an embarrassing position, but are fearful of losing face. The Albanian Government is prepared to release the arrested dragoman, if the undiplomatic phraseology of the Note of the Yugoslav Chargé d'Affaires is repudiated—an indication that the crime for which he was arrested was not so very heinous after all; the Yugoslav Government is prepared to withdraw the expressions complained of, if the Albanians will release the dragoman, who is called Jurasko in the Serb Press and claimed as a Yugoslav official, and in Albania is called Juraskovitch and claimed as an Albanian. In a less Gilbertian world Tweedledum and Tweedledee could meet to shout simultaneously "Released" and "Withdrawn," and the incident would be at an end. As things are, both sides have submitted their versions of the episode to the League of Nations. As no gathering of polite persons can endorse the use of "brutal" and "violent" in diplomatic correspondence, the Albanian Government may consider itself on safe ground. On the other hand, the Yugoslav Government has scored a pretty point by stating that it does not think that the Juraskovitch case alone is sufficiently important to justify its discussion under Article 12 of the Covenant, and for that reason it does not ask for any discussion; but it holds itself at the disposal of the Council if the latter wishes to inquire into the whole Albanian problem. As the whole Albanian problem includes the Tirana Treaty, the mere suggestion will cause perturbation in certain quarters—a result no doubt foreseen by the Yugoslav Government. In the meantime the cause of peace in the Balkans has not been promoted by this regrettable disagreement, and Albania, it is to be feared, has been driven a few paces farther in the direction least desired by Yugoslavia and least desirable in Balkan interests.

Motors and the "Haji."

The Baghdad correspondent of the *Manchester Guardian* has given some illuminating figures to show the influence of the Pilgrimage to Mecca upon the motor-traffic in the Middle East. This year, of course, the Pilgrimage assumed unusual proportions—and, in addition to the hajjis already mentioned in THE NEAR EAST AND INDIA this correspondent reports that several thousand Persians passed through Baghdad in April and May on their way to Mecca—and the motor companies have consequently benefited. Thus the usual fare from Baghdad to Beyrout has arisen from £3 or £4 to £8 or £10, although with the conclusion of the ceremonies of this Pilgrimage and the eastward, homeward journey of the hajjis, the journey from Baghdad to Beyrout will be made for a nominal sum, £1 or so. Next year, when the new bridge at Falluja has been completed, even greater developments in motor transport would seem probable, not only for passenger, but also for freight traffic. British manufacturers of motor-cars have already lost a considerable market in failing to interest themselves in the Middle East, but it is to be hoped that the events of this year will finally convince them that the commercial development of lands which the force of British arms so largely made possible should not be left entirely to trade rivals.

Great Britain and Iraq.

It is probably inevitable that, in consideration of the unique circumstances which govern the relationship between Great Britain and Iraq, certain differences of

EGYPT AND GREAT BRITAIN.

The moral of the misunderstanding that has recently clouded the relations between Egypt and Great Britain is clear; it is that no time ought to be lost in placing those relations beyond the chance interpretation of any agitator or ignorant deputy who can achieve notoriety by no other way than by surpassing a rival in the intensity of his abuse of Great Britain. It is common ground that there should be a treaty of alliance between the two countries. The scope of that treaty has been indicated, but at no time has there been any round-table attempt either to discuss its provisions or even to clear the ground for formal negotiation. In the place of the usual method of procedure the relations between the two countries have been, as it were, a bone thrown among rival packs of dogs in the market place. No agreement in any part of the world is likely to be advanced, if every provision is to be made dependent on acceptance by popular clamour in one country or the other. Yet in Egypt this appears to be the method adopted. Contrary to all the rules of diplomacy, Great Britain has made public the precise questions which she has to bring up for settlement in the treaty. They are admittedly intricate and of international significance; yet instead of their being subjected to the critical consideration of experts on both sides, the Egyptian Government by an unfortunate chain of circumstances has been obliged to abrogate its functions and to allow the questions to be made the sport of mob oratory. It would be rash to resume that even in a country with the political experience of the British any satisfactory result could follow such tactics. In Egypt, where the great majority of the people are wholly lacking in the political sense, these tactics have proved highly dangerous. They held up Great Britain as a target for popular attack, until the belief gained ground among the British that the verbal excesses were about to be translated into deeds, and all that was wanted was an attack of nerves or the exhaustion of patience to convey the impression that Anglo-Egyptian relations had at least reached breaking point.

An Anglo-Egyptian treaty of alliance is essentially a matter for the dispassionate consideration of the two Governments. To this end both will have to retrace their steps. The British Government must realize that it is called upon to deal with the Egyptian Government alone and must ignore the vapourings of deputies and newspapers alike. Egypt, it has to be admitted, has set a standard of irresponsible mischief-making in Parliament and in Press that has probably never been attained in any other country. Its very extravagance should have saved it from being accorded serious notice. In discussing the military question, which has given rise to the recent crisis, the *Ahram*, the leading newspaper in Egypt, has informed its readers that for the Egyptian Govern-

ment to allow a British officer to continue to be Sirdar of the Egyptian Army would entail as a consequence that the British "might use the Egyptian nation as an instrument in their service anywhere in Asia and throughout Africa, under the pretext of defence." The paper adds: "To justify such defence it is not necessary for Egypt to be invaded; England could say that it is necessary for her to be strong and victorious everywhere, so that she may be able to fulfil her promise—to defend Egypt." If such a statement appears in a serious organ, it is not difficult to imagine with what arguments it is sought to inflame public opinion throughout the country. Even where the intention is not malicious, it is evident that ignorance and lack of intelligence combine, as in the case of the *Ahram*, to render attempt at argument useless. In these circumstances it is the duty of the Egyptian Government, which does command expert knowledge and the highest intellect, to see that a subject such as Anglo-Egyptian relations is reserved for its own consideration, unhampered by the amazing fatuity of press and parliamentary comment. The British Government on its part can afford to ignore the lucubrations of extremists in the Legislative Assembly, and should defer action, until it is evident that a wrong move has been made, or is on the point of being made, by the responsible Government in Egypt.

Events during the last five years have proved that the question of Anglo-Egyptian relations is not one that can be settled by the Egyptian "man in the street." He is too devoid of political instinct to understand the complex character of the Egyptian question or to realize the restrictions imposed on Egypt's capacity to stand alone. In its handling of the problem of the employment of foreigners in the Civil Service the Egyptian Government has shown a reasonable grasp of the situation; it is prepared in regard to public security, the maintenance of communication and the furthering of irrigation to retain for the present foreign help. In so far as these points have been settled by definite agreements, they may be regarded as now removed from controversy. It should be equally possible to substitute in regard to other matters—the so-called Reserved Points—clearly defined undertakings on the part of the two countries in the place of the vague responsibilities that are continually the subject of challenge in the Legislature. A treaty on these lines might well escape the adverse criticism so freely levelled on the subjects reserved for discussion. The question of the Sirdar, for instance, may possibly become of wholly secondary importance, if a scheme on comprehensive lines were agreed upon for the adequate protection, by land and sea, of Egypt's integrity and Great Britain's imperial communications. At the same time the childish and mischievous contentions, such as those with which the *Ahram* has sought to prejudice the British position, would be eliminated. The future of the Sudan might not be settled according to the claims of extremists, but a *modus operandi* can be evolved which will remove all genuine anxiety in Egypt regarding the country's water supply, and will satisfy the legitimate aspirations of those who want to retain the political connexion between Egypt and the Sudan. A treaty, moreover, would pave the way for the abolition of the Capitulations and might at once remove some of the anomalies which hinder the progress of judicial and financial reform. Finally, as it would carry with it a commercial agreement, it would strive to strengthen Egypt's economic position. Practically all the trouble that has arisen between Egypt and Great Britain in recent years is due to the failure to conclude the treaty foreshadowed in the Declaration of 1922. If the good will professed by both parties is sincere, the two Governments will lose no more time in drawing up that treaty.

The Near and Middle East*

From Our Own Correspondents.

Cairo, June 4.

The King's Birthday.

His Majesty's Birthday was celebrated by the usual garden-party at the Residency, which was exceedingly well attended. For the first time admission this year was not by invitation; but a notice was issued announcing that the High Commissioner would be glad to receive all members of the British community. This is a welcome innovation, advocated several times, by the way, in this correspondence, for the invitation system owing to omissions or miscarriage in the post often gave rise to friction and misunderstanding, which were as unnecessary as they were quite unintended.

The British Forces in Egypt.

Major General Sir Peter Strickland has arrived and taken over his new duties as General Officer Commanding the Troops in Egypt, and Lieut.-General Sir Richard Haking has left for England. His departure has aroused the liveliest regret in all communities. It is no reflection on the popularity of his various predecessors to say that General Haking had gained a position in this country unique in the annals of the British Army, and by none will his departure be more regretted than by the men who have served under his command. General Strickland is no stranger to Egypt, having served in the Egyptian Army which he left in 1903. There are, of course, exceedingly few Englishmen left in the country who remember him; but he has received a warm welcome from those of his former Egyptian colleagues and subordinates who are still alive.

The Honours List.

For the first time for many years Egypt and the Sudan have secured their proper quota in the Honours List, and the announcements made seem to have afforded genuine pleasure. Major-General Spinks Pasha, who receives the K.B.E., is, of course, the Inspector General of the Egyptian Army to whom, on his becoming Commander of the Sudan Defence Force, Huddleston Pasha delegated his authority as Sirdar, which he assumed on the murder of Sir Lee Stack. The other K.B.E., Mr. John Percival, is the Judicial Adviser to the Egyptian Government, who for a long time rendered eminent services as Vice-President of the Native Court of Appeal. Mr. Harry Barker, well merits the knighthood conferred on him, for he has of late years played a very conspicuous part in the affairs of the British community in Alexandria, of which he is the Chairman. Mr. George Hughes, who has the C.M.G., receives long delayed recognition of the valuable work he has done as Chief Inspector of the Parquet of the Native Court of Appeal, particularly in regard to the recent political murder cases, which owed their working up and presentation in great part to his industry and personality. The other recipients of the C.M.G. are Mr. Harold MacMichael, Civil Secretary to the Sudan Government, who is regarded as one of the most brilliant members of that administration, and Mr. Arthur Wiggins, Senior First Secretary at the Residency, whose work during the past few eventful years affords promise that he will go far in his future career.

A Diplomatic Solecism.

Consternation and exasperation are the only two terms which in any way can describe the feelings of the European communities in general and of the Diplomatic Corps in particular at the latest escapade of the American Minister, Dr. Morton Howell. Having, quite contrary to usage, circulated in the local Press a copy of his letter of resignation addressed to President Coolidge, he proceeded to accord an interview to one of the Arabic papers, in which, after paying somewhat fulsome compliments to the Egyptians, he gave expression to statements in regard to the political situation and the position of foreigners in Egypt, which constitutes a glaring breach of diplomatic etiquette, rendered all the more deplorable by the inopportune moment which he chose for his declaration. At a tea-party given to him by his Egyptian friends, from which it may be noted the doyen and principal members of the Diplomatic Corps, as also the Prime Minister, absented themselves, he made further references to the political situation which can but be regarded by the Egyptians as a direct incitement to continue, and to look to the United States for support in, the tactics of which all the European communities bitterly complain. I would add that the American community seems just as perturbed and annoyed, as the other colonies, at the tactlessness, to call it by no other name, of their Minister.

You will, I know, not expect me to deal in any detail with or comment on the serious crisis which is now raging. The situation is in such a fluid state and the development is so uncertain that any remarks I may have to offer would, even before they reach the printer's hand, be rendered out of date by the cables to the daily press. All that I can say is that so far what has happened has not led to any excitement or disturbance and that all the indications point to a satisfactory settlement as a result of good will on both sides.

Sofia, June 1.

The Elections.

There are two things above all which call for examination in connexion with the parliamentary election which took place on May 29—on the one hand the manner in which the elections were conducted, and on the other the political orientation which they showed.

With regard to the first point, mention must be made of the numerous complaints formulated by the Opposition parties against all manner of violence, for which they throw the responsibility on the Government. Acts of violence certainly were committed, and it is possible that these were more pronounced than usual, since administrative pressure, more or less active at election times, is traditional in this, as in every other Balkan, country. But, if there were cases, and they do not seem to have been small in number, where brute force was openly resorted to against over-recalcitrant electors, the Government should not be too hastily accused. The special atmosphere surrounding these parliamentary elections, which is characterised by general over-excitement, must not be forgotten. It tends to make everybody, both on the side of the Government and on that of the Opposition, anxious to play an active rôle in public affairs instead of merely offering the contribution of a passive spectator. This fact explains, quite apart from the attraction of parliamentary emoluments, the extraordinary number of candidates for Parliament. In these circumstances, electoral violence, which has everywhere been much exaggerated, was inevitable in certain districts, where candidates who considered it to be their duty to be elected at all costs thought that they were at liberty to use every kind of pressure to attain their aim. It remains to be seen whether this political excitement, which is at the bottom of the deplorable excesses, will not counteract, at least for some time, the work of pacification so resolutely undertaken by the Liaptcheff Cabinet.

The question assumes more interest when one considers the election results. Although the Government has obtained a very considerable majority, and has a strong position in the new Chamber, it is also a fact that the Agrarians have doubled their representation and these Agrarians, for the most part extremists, are not all inspired by the Gospel spirit, and what has happened before may become once again the order of the day.

According to published reports, of the 273 Deputies elected 170 belong to the Government, or at least to the Government party, and 92 to the different Opposition groups. Between the Government and the Opposition there is the neutral political group composed of 11 Macedonian Deputies, elected, or rather nominated, by the Macedonian Union in the Department of Petritsch, where no other list of candidates was allowed to be submitted to the electorate. The total number of Government mandates are divided between the following sub-groups, which form the Democratic Entente: 70 Democrats, 55 Unionists, 15 Radicals and 30 Tsankoffists, adherents of the former National Entente which, after the Army, played the principal rôle in the organisation and execution

of the *coup d'état* of June 9, 1923. It is assumed that after these recent elections this division of the Democratic Entente into sub-groups or tribes, as they are dubbed here, will disappear, to make way for a compact union of the party, whose existence dates only from August, 1923. It is to be hoped that such will be the case and that the Democratic Entente will become at last a united and homogeneous party, for its eventual disintegration would introduce grave dangers for the peaceful evolution of the political situation.

In the face of this great Government majority the Sobranye will include an Opposition of 92 members, divided up as follows: 25 mandates for the Agrarian-Democratic coalition of MM. Malinoff, Thomoff and Kiortcheff, comprising 12 Democrats, 8 Liberals, 3 Thomoffist Agrarians and 2 Dissident Radicals (elected with the support of the Democrats, to whom they will probably finally adhere), 1 Liberal Independent, who is the ex-Minister M. Smiloff, 5 Communists, who officially call themselves Labour ("Workers"), the Communist party having been dissolved by parliamentary decree, 63 mandates for the Agrarian-Socialist coalition, comprising 4 Artisans, 9 Socialists and 50 Agrarians, among whom it is claimed that there are also distinguished Communists.

A study of the preceding figures shows, in the first place, that the electorate has awarded its preference to big groups, namely, the Democratic Entente and the Agrarian Union. The centre, formed by the Malinoff coalition, has perceptibly weakened, which does not augur well; while all the small parties, such as the Radical (Kostourkoff) party, the Right wing of the Agrarians (Draghieff) and the moderate Socialist group (Djidroff) have been literally swept away and have not obtained a single seat in the Sobranye. If the two other small groups, the Stamboulovists and the left-wing Socialists, have not equally disappeared from the new Chamber, they owe it in the first place to the complacency of the Government and in particular of M. Liaptcheff, and secondly to the kindness of the Agrarians, who placed them on their lists and had them elected at their own expense. Here we have an indication of a re-grouping of the political forces in the country, which will tend to force the insignificant fractions to adhere to the stronger currents and to establish themselves there in order to help in the formation of a small number of powerful parties capable of effective action. No less significant is the bearing of the Communists who, having changed their name, keep all their former fanatics, in spite of the official prohibition of their party. Further, most noticeable is the increase of strength acquired by the Agrarians and more particularly by the Left-Wing, with whom must be associated the Left-Wing Socialists and the Artisans, that is to say, the whole Agraro-Socialist coalition. This Agrarian ascendancy, which has not failed to give rise to serious misgivings in certain Government circles, constitutes the visible sign of a salutary and definite orientation towards a lawful struggle, for it is most unlikely that a political force which counts 50 to 60 representatives in Parliament should be led astray into treasonable activities. The presence of all these elements of the Left in the new Sobranye must, therefore, be considered as a firm pledge that the country has definitely taken the road leading to national reconciliation and complete pacification.

Tabriz, May 24.

Military Movements.

For the last two months Tabriz has been living in the midst of rumours, which have tended to cause some alarm to the hapless folk of Suj Bulak and Mianduab who live near the Kurdish-Persian boundary and have in recent years had to leave home, lands and belongings at least ten times. As the Persian proverb has it: He who has been bitten of a serpent will get scared by a black rope. Only last August during the Pitchdari troubles these people had to flee to Maragha for safety. For over a month now troops have been sent to Suj Bulak from Tabriz, from Kermanshah, and from Hamadan. All the State *galla* (grain) in the frontier towns and villages of Mianduab has been transported—as much as fifteen *kharvar* (15,000 pounds) of barley a day, it is said—to the same destination. This is not for the immediate use of the troops, but is being stored for future requisition. The troops now in Suj Bulak are estimated at 7,000 Persian Cossacks, and it is believed that they are to be increased to 12,000—a more than adequate force to deal with any Kurds or Pitchdaris. The Amir Loshjiar (Commander-in-Chief) went to Suj Bulak ten days ago, and is now at Serdesht. He left Tabriz with three armoured cars, carrying officers and ammunition.

As might be expected, speculation is rife as to the purpose of all these preparations. In some quarters it is supposed that the intention is to disarm Persia's Kurds, once and for all, in order to put an end to their insurrections and the consequent drain on the Treasury. Another version is that the Pitchdaris, who this year are being led by Simko (Ismail Agha), Sayid Taha and old Shaikh Mahmud, are to be dealt with again. The Cossacks themselves were convinced that they were going to fight the English, who, they declared, wanted to create a Kurdistan at the expense of Persian territory. All talk to this effect was sternly forbidden by the officers, and a proclamation was issued threatening penalties to anyone discussing military matters with the Cossacks.

The idea that the Kurds are to be disarmed is at variance with the fact that Kurdish chieftains have been summoned to Suj Bulak and have been ordered to have their forces ready. To this end the rank and file have been told to procure rifles and horses. As a result a clandestine traffic in arms is taking place between Persians and Kurds, which the authorities are trying to stop.

Russo-Persian Relations.

The tension between Persia and Russia, which has continued since February 1926, shows signs of becoming still more marked. The embargo on Persian imports into Russia has caused many Persian commercial firms to go bankrupt; while others are holding their heads above water with the greatest difficulty. Merchants of Kazvin,

Resht and Pahlavi (Enzeli) have done all they could to help the situation by refusing to buy Russian sugar, oil, etc., and in one instance have even compelled the Russians to reload their goods on to ships; but to no purpose, as Russia has stood to her guns. She went further. A number of *Litsenzias* (permits) had been issued to Persian merchants to import sobza for the Baku fair during April and May. These permits were given in March to a few chosen firms, the price of the sobza being fixed by the Russians at 7.50 roubles per pood. After the decision to boycott Russian goods was taken, the Russian authorities found that a clerical error had been made in fixing the price of the sobza, which would be 4.20 roubles per pood instead of 7.50. To add to the troubles of the Persian merchants, the *Litsenzias* had been given on no fixed principle. Some firms with special influence might have several, others would get one or none; again many who were not merchants secured them, and a lively traffic ensued in permits, the price of which rose to between two thousand and three thousand krans. A certain well-known Mollah is reported to have done very well for himself in this way.

The vagaries that have marked the negotiations between Russia and Persia for a commercial treaty are connected here with the progress of events in China. It is argued that when things did not promise well in that country for Russia there was a sudden anxiety for a treaty with Persia; as soon as the China situation eases off in Russia's favour, the negotiations in Moscow are prolonged indefinitely.

In this connexion it may be noted that the Soviet Consul-General here has been showing considerable interest in the happenings at Suj Bulak. His visit to the town not long ago was explained variously as a pleasure trip; as a tour of investigation of the road which is being built by Persia from Haydarabad, on Lake Urmi, to the Iraqi frontier, near Rowanduz; and as prompted by the necessity of inquiring into the affairs of the Russian State Commercial firm which has branches in Maragha, Mianduab and Suj Bulak and is reported to have made a loss of 600,000 krans. The Tabriz manager of the firm was sent under escort to Moscow for trial, the managers at Maragha and Suj Bulak have been dismissed, and the Mianduab branch has been closed. The Consul-General's critics, however, are inclined to connect his visit with a tendency among the Mollahs and others "Bolshevistically" disposed to stir up dissatisfaction against the existing régime in Persia. The fear is expressed here that the Soviet Government is only waiting for some insurrectionary movement to start to introduce its Red Army into this province. Recently the police raided a house where a Bolshevik meeting was being held. A number of arrests were made. The Russians who were arrested were liberated on condition that they returned to Russia; the fate of the Persians taken is not known here.

CYPRUS.

Nicosia, May 23.

The Colonial Conference.

The Press warmly praises the decision arrived at on May 10 that high officials should be sent periodically to colonies, and dependencies, to inquire into and report on the state of things generally. Hitherto, it is said, the Colonial Office has practically relied entirely on the reports of High Commissioners and Governors for their opinion and decisions on all questions and problems. It is through these officials that petitions and complaints are forwarded to Downing Street, and these are almost invariably returned for report to these same officials whose views are then adopted. Cyprus, they submit, is a place where it is very desirable that such investigation should from time to time take place.

The Greek Flag.

The question of the Greek flag is again being taken up.

THE PERSIA SOCIETY.

E. H. Keelling,
Hon. Sec.

This is chiefly due to the fact that on the occasion of visits by Sir Ronald Storrs to certain villages, the people were notified through the police that the Governor did not wish for displays of flags. This was resented and the Greek flag was largely conspicuous. The truth, of course, is that the people, not being Hellenic subjects, have no right to use this flag. While the Island remained Turkish—i.e., up to 1915—they were Ottoman subjects and since that date British. But by degrees they have come to regard the use of the Greek flag as a right; often to the exclusion of the Union Jack.

Drought and Locusts.

When Britain took over Cyprus, the chief plagues of the Island were said to be drought and locusts. The former may be almost regarded as a thing of the past, so great has been the improvement in the rainfall. The question of fresh water supplies for irrigation, however, continues to be the most important problem, and it is very satisfactory to note that at two places where borings are being carried out, viz., near the villages of Morphou and Ayios Sergios, some very encouraging results have been obtained. It is too early to say much, but there are good hopes that operations will be to a great extent successful, in spite of the fact that some of the water, when first obtained, is brackish.

As regards locusts, full credit is given to the Government for the system now in force of purchasing locusts and eggs. But some dissatisfaction is expressed that, with a view to economy, expenses are too much curtailed, prices not fairly fixed, and centres for collection too distant; and that in consequence complete extermination is not achieved. The history of the locust war in Cyprus forms a very interesting chapter of her annals. Though not exterminated, they have been reduced to comparatively insignificant numbers, and, should fresh invasions of foreign swarms not occur, the situation may be regarded as satisfactory.

Local Committees of Inquiry.

The Committees and Commissions appointed by the Governor to inquire into and report on the system of taxation, forest policy, agricultural matters, etc., have been diligently carrying out their duties, which involve visits to various village centres. Some impatience, however, is being manifested in the Press, and the committees appear to be the subject of some scepticism, as regards their utility; ironical comments being made as to the advantages likely to be derived. It is questioned whether there will be any serious outcome, or whether they are merely a sop, and a means of relegating any reforms to the "Greek Kalends."

The Recent Athletic Contests.

Telegrams and letters have been received from the Mayor of Athens by the Governor, the Mayor of Nicosia and others, expressing the warm thanks of the athletes and others who participated in the hospitality and cordial receptions of their hosts in Cyprus. The Athenian papers

express great satisfaction over the treatment accorded to the Greek representatives. Some criticisms, however, have appeared regarding defects which were observed in the organisation and carrying out of the athletic meetings, and these, no doubt, will receive careful consideration from the Cypriot Committees, who have shown very commendable zeal, with a view to future contests.

THE HIJAZ.

Jidda, May 28.

The Pilgrimage.

The long silence of your Jidda Correspondent has been due to his absence from his headquarters for several weeks—a period which overlapped three important occurrences, the advent of the hot weather in all its wonted viciousness, the arrival of Sir Gilbert Clayton at Jidda to resume negotiations with Ibn Saoud, and the return of the Wahhabi King of the Hijaz and Najd and its dependencies from Central Arabia to Mecca. These events were followed by a hectic fortnight, which ended as suddenly as it began, leaving Jidda hot enough in all conscience, but tranquil and depopulated except for the last batches of pilgrims hurrying through by all manner of transport—motor-cars, camels, donkeys, and flat feet—to be in time for the pilgrimage ceremonies. Nearly a score of ships of all sizes ride at anchor in the roadstead waiting to take away the first batches of homeward-bound pilgrims, who will begin to arrive here from Mecca about June 15. The long-awaited climax of the pilgrimage is almost upon us and not less than 120,000 overseas pilgrims will take part in the culminating ceremonies. The final lists are not yet ready for publication, but it would seem that among the great congregation will be 30,000 souls from India and about 15,000 from Egypt, which is this year not sending the *Mahmal*.

It would almost seem that the *Mahmal* controversy is settled for all time, and that famous litter, commemorating the empty carriage which was destined to bring but never brought a long-forgotten queen to the holy land of Islam, will never again figure in the ceremonial of the great pilgrimage. Justice compels the admission that, however one may regret the passing of a picturesque pageant, the Hijaz Government has been within its rights in declining the assistance of an Egyptian military force in maintaining law and order within its own territories for the benefit of its pilgrim-visitors. Everyone knows that no one is more capable of assuring the safety of Egyptian and other pilgrims in the Hijaz than its present King, and the flutter in the dovecots of Egypt over the imaginary dangers attending the visit of Egyptian nationals to the Hijaz this year will within a few weeks have spent itself on the empty air. The *Mahmal* procession is in no way essential to the Hajj ceremonies and, if the Egyptian Government has decided not to send it again, it is but a controversy less to agitate the counsels of Islam hereafter. "Out of evil cometh good" and it is to be hoped that the Egyptian Government will now

take the lead in establishing between itself and Ibn Saoud the harmonious relations which should exist between all Islamic States and the cradle of Islam.

Fancies, Facts and Fahrenheit.

As for the painful subject of the climate, it is execrable and no words can describe it better than those of Lawrence: "The atmosphere was oppressive, deadly. There seemed no life in it. It was not burning hot, but held a moisture and sense of great age and exhaustion such as seemed to belong to no other place. . . ." That is what we are all feeling like but, as if that were not enough, a libellous rumour has gone the round of the European community to the effect that the thermometer has touch 138 deg. Fahrenheit. Some say 132, some 120, and others 112, but my own instrument, duly vouched for by a respectable British firm, has refused to record anything higher than 94 deg., which is a good deal worse than it sounds.

In the circumstances Reuter's Agency is to be thanked for a noble attempt to amuse us—the local Reuter's correspondent is in no way responsible for it—by a daring leg-pull, which appears in a recent issue of the world's leading newspaper in the following terms: "Wireless communication has been effected through Central Arabia from Riyadh, the capital of Nejd, to Mecca, and from Hayil, the old Shammar capital, to Medina.—*Reuter.*" There is of course no foundation for this statement, unless it be the hope that some day it will represent the truth. Arabia is taking to the amenities of modern civilisation with encouraging rapidity.

Missionary Enterprise.

Two American missionaries who recently entered Wahhabi territory from the north and succeeded in reaching Taima, were duly held up by the local governor pending the receipt of orders from the King. The latter, in reply to a wireless message from Al Ula, directed that they should be treated with every consideration and sent back to whence they came.

The Anglo-Hijaz Negotiations.

The centre of the stage has during the past month been occupied by the negotiations between Ibn Saoud and Sir Gilbert Clayton, which were brought to a satisfactory conclusion by the signing of a treaty of friendship on May 20. This treaty, which will not, of course, be published until it has been ratified by both parties, supersedes that of Uqair, made in December, 1915, and places the relations of the two countries on a satisfactory basis, the recently announced status of the Wahhabi monarch as King of the Hijaz and Najd and its dependencies being presumably recognised. For the rest, it is understood that owing to the shortness of time available no attempt was made to arrive at a settlement in respect of various problems which have been mentioned in connexion with the negotiations. The British Government is to be congratulated on the selection of Sir Gilbert Clayton for so delicate a task and it is perhaps not premature to suggest that, when that task is completed, the time will be ripe for the raising of the status of His Britannic Majesty's Agency and Consulate at Jidda in recognition of the important diplomatic duties now and hereafter falling on its incumbent. The old Persian Gulf arrangements afford a reasonable precedent for the appointment of a Resident and Consul-General at Jidda, but it is important to realise that an officer of that standing should be relieved of the vast mass of petty pilgrim work by the addition to his staff of a British Vice-Consul. And it is equally important to remember that so important a post—a disagreeable one from the point of view of the amenities of life—should at the same time be made financially attractive to the best brains of the Levant Consular Service and be reserved as a prize for such members of that service as have taken the trouble to make themselves proficient in the Arabic language—an absolutely vital consideration.

Miscellaneous News.

The official return published in the local paper of May 27 gives the number of overseas pilgrims up to May 23 inclusive as 110,800.

On May 13 Shaikh Hafidh Wakba and Dr. Abdullah al Damluji returned to Jidda to resume their former functions as Chief Adviser and Director of Foreign Affairs respectively. They travelled by air from Basra to Cairo and after by sea, the whole journey being accomplished inside a week. Dr. Abdullah al Damluji has received from the French Court the insignia of an Officer of the Legion of Honour, to which rank he has been admitted by the French Government.

NOTES OF THE WEEK

(Continued from page 712.)

opinion upon the extent of the advice which British representatives may justifiably offer and upon the acceptance of which they may justifiably insist shall occasionally arise as between the High Commissioner and the Iraq Cabinet. Adequate and striking proof, in fact, is found in the infrequency of such differences of the excellent terms of friendship which prevail in Iraq as between Arabs and British, and the prominence given to the recent Cabinet crisis in Baghdad and to its apparent cause is of itself manifestation of the rarity of conflict. In view of the fact, however, that rumours of such a conflict had extended beyond the borders of the desert, it may be well to record that this "incident" between the British High Commissioner and the Cabinet of Jaafar Pasha to all intents and purposes has been amicably smoothed out. At the close of the session of the Majlis a banquet was held at the Palace. The opportunity was taken by King Faisal to refer to this recent difference of opinion, which, he said, "has merely given the opportunity for material consideration and for renewed co-operation." And, as if to underline the very correct observation, Sir Henry Dobbs explained that the sole purpose of his mission, as of any other British representative in Iraq, was to co-operate with the Iraqis in the progressive establishment of an independent government in Iraq, friendly to and bound by gratitude and obligation to his Britannic Majesty's Government." With such a reference to the ties of gratitude and of obligation none but the extremist Iraqi would, we imagine, be provoked to disagree. The aim of Iraq and of Great Britain is identical: it is upon the ways and means to that end that differences of opinion may quite properly arise. As far as we know there has been no disposition at all on the part of Jaafar Pasha's Cabinet to overstep the boundaries imposed by "gratitude and obligation," and it is an encouraging sign that the crisis has been stifled as it ought to have been. In the East it so often happens that the services of good men are lost through petty inability to take an elastic view of things. It may be said in fact that such elasticity, where it does not imply manifest surrender of principle, is a sure sign of friendliness.

According to messages received in Constantinople the Druse rebels have broken out again and launched a violent offensive against the French in the Gouta region. The French forces are reported to have had many killed and wounded. Three villages were burnt down and sixty loyal villagers massacred.

The Amnesty Commission in Athens has recommended the release from prison of Colonels Dertilis and Zervas and Captain Papadopoulos, former officers of the Greek Republican Guard. The two colonels were sentenced on October 3, 1926, to imprisonment for life and Captain Papadopoulos to three years' imprisonment for mutiny.

According to a Constantinople message the British archaeological expedition has discovered parts of what may be the Byzantine baths of Zeuxippos. It is connected with the Hippodrome by a columned archway. New excavations have been begun by the Turkish museum authorities at the Emperor's triumphal gate in the Byzantine walls at Yedi Koule, known as the Golden Gate.

Book Reviews

FLOWERS OF MEMORY.

LAMURIAC AND OTHER SKETCHES. By Ruby Cromer. (London: Methuen & Co. 7s. 6d.)

The proceeds of this book by Lady Cromer are to be devoted to three organisations, including the Order of St John in Jerusalem—a fact which makes adverse criticism undesirable.

With Lady Cromer's motives in writing of the days of the Great War, so that future generations might know something of the intimate agony of those times, one may have every sympathy; but the unfortunate truth is that neither the impressions then set down nor the impressions subsequently gained by travel in East Africa and in Palestine are likely to be particularly illuminating to those who come after.

The author, who has hit upon a very happy title—for "Lamuriac" means "the Everlasting Flower," and, as she tells us, is "the name given by that ancient and valiant tribe the Masai to one of their choicest gifts from Nature's garden in East Africa"—is at her best when at her simplest. Her instincts, perhaps her unshaped thoughts, are beautiful; but words are apt to trip her up, lead her down blind alleys, make vague and blunt the fineness of her feelings. A diary becomes irritable if it ceases to be intimate and unaffected; but in the English, and especially in the African section, there are considerable "poeticising" and a proneness to fall back on the versified thoughts of someone else.

The Indian section starts with this, upon Rajputana: "The pitiless sun had well-nigh outspent its fury; the western goal of its warlike path was all but reached." That is the sort of tautological unoriginality which jars, and unhappily it recurs more than once. For instance, under "Palestine, Monday, March 15," we read: "Soft fell the shadows on Moab's massive ridge. The Judean Hills beckoned from the threshold of the Promised Land, and there above, peeping over a pointed peak, arose in the heavens the crescent of a moon just born, that smiled welcome from the skies." However, we finished the book—which in itself speaks volumes for the rightness of Lady Cromer's spirit.

POMP AND CIRCUMSTANCE.

"A PAGEANT OF INDIA." By Adolf Waley. (London: Constable. 11s.)

Frankly we have been disappointed in Mr. Waley's book. It has clearly been a labour, and not a little one, of love, and it is greatly to be regretted that it has not been more successful. For this disappointment we feel that the author's method is largely to blame. For one thing the book is wanting in balance. More than half of it is devoted to the Moghal Emperors. The much shorter portion is devoted to Indian history from the arrival of the Aryans, which is placed quite 1000 years before the generally accepted date. Even within this section the space given to various periods is quite disproportionate. Much space is also wasted and the reader's attention distracted by the introduction of much unnecessarily complicated matter which has no real bearing on the general narrative and merely succeeds in introducing an endless procession of names and consequent confusion. This is largely due to Mr. Waley's effort to make history out of the historical romances, Court poems and "tendencious" narratives which have come down to us. It is a little like an attempt to tell mediaeval European history from documents like the "Chanson de Roland." This method may have something to say for it in the hands of a very accomplished scholar, but Mr. Waley makes no pretensions to any such position. The general result is a confused and largely undigested account of the doings, mythical, legendary, or at least highly coloured, of very numerous rulers, large and small. The narrative leaves one with the idea that the Indian people consisted entirely of blood-

thirsty monsters, religious saints and chivalrous heroes. Now, we all know that India has not, and never has had, a people of this nature. No doubt, like other countries, it has had, and has, bloodthirsty monsters. It has always possessed a very deep religious sense. The chivalry of the Rajputs has ever been remarkable from the early days to those of the late Maharaja Pertab Singh. But the great mass of the Indian peoples have, throughout the centuries, been cultivating their fields and doing their business without too much attention to the alarms and excursions of their rulers and little moved by any of the events recorded in this book. The author pays the Indians no attention whatever. In other words his book is, in no sense, a "Pageant of India" but merely a picturesque and largely uncritical "Pageant" of its rulers.

These remarks apply with somewhat less force to the Moghal part of the book, which is indeed quite the most successful portion. Here the method has more chance of success and comes off better, though here too the real history of the Indian people is neglected. The author takes us to the death of Aurangzeb, when European influences were beginning to throw the shadows of a forthcoming entire change in the rule of India.

It is a pity that Mr. Waley should have been so dazzled by the pomp and glitter of his "Pageant" that he has apparently allowed himself no time to read and study the works of Mr. Moreland and his fellow students. It is to them that we owe most of the knowledge we have of real Indian history. And it is on their lines and not on the lines of this book that we trust to seeing progress made.

While we have not been able to give unreserved praise to this picturesque book, it would be unfair to leave its consideration without pointing out one very outstanding merit. We are all only too familiar with the so-called communal dissensions which have recently been so prominent throughout India. They are the despair of all who desire to see India advancing towards self-government and we hear much of their superficial nature and of hopes that they will soon die out. The fact is that Hindu-Muslim hatred in India is always smouldering and is liable to break out into violent conflagrations on the smallest provocation. We know of no book which, half so well as this, makes the origins of this deep-seated hatred clear. We fear too that it effectually disperses any hope of its rapid disappearance.

C. S-W.

THE AMERICAN ADVISERS TO PERSIA.

We have received the Seventeenth Quarterly Report of the Administrator-General of the Finances of Persia (September-December 1926: or Mehr, Aban, and Azar 1305). This report is notable in that it deals with the question of the Civil Service in Persia, which, it will be recalled, constitutes a problem of some urgency. One of the difficulties lies in the existence of the number of "disponibles." Dr. Millspaugh lays it down that "in making provision for payment of disponibility salary to unemployed Cabinet officers and other high functionaries, it therefore seems necessary to adopt the principle that civil servants cannot be created by service in extra-administrative positions except during the years when civil servants were created by length of service in administrative positions. Unless this principle is adopted there is grave danger of totally demolishing the structure which is being laboriously built up on the basis of the Civil Service Law."

Dr. Millspaugh states that in the last five years in Persia the deficit has been eliminated and a surplus created. Moreover, the increase in revenue has been devoted to useful purposes. He states that the decrease, in the first half of the year 1305 as compared with 1304, in imports, was due to the existence within the country of merchandise which, owing to the reduced purchasing

power of the country had not been sold; and the decrease in exports (other than petroleum) occurred on the northern frontier, and was, of course, owing to the Russian embargo.

For the rest, one notes that the Sugar and Tea Monopoly revenues amounted to krans 45,080,025 for the first nine months—this was equal to the estimate for the whole year—and that at the close of the quarter under report the situation of the Treasury-General was highly satisfactory. In almost all bank accounts there were substantial balances, "the public debt has been further reduced, and cash resources are much in excess of the total of the public debt."

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

JACOB'S RIFLES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to the report of the Sind Dinner in your issue of June 9, I would point out that the officer who raised and commanded Jacob's Rifles under General John Jacob was my stepfather, the late General W. G. Mainwaring, C.I.E., who was in no way related to, or connected with, Sir Claud Jacob, whose great-uncle your report states him to have been.—I am, etc.,

CHARLES MULES.

Hon. Sec. Sind Dinner Club.

[In the report to which Sir Charles Mules refers we regret that the name of Major-General F. H. Kelly was given incorrectly, owing to a printer's error.—Ed.]

ISLAM AND THE BRITISH EMPIRE.

The Eid-ul-Azha, the Moslem festival which marks the close of the Mecca Pilgrimage, was celebrated on June 11 at the London Mosque, Southfields. Prayers were recited by the Imam, Mr. A. R. Dard, in the morning. In the afternoon a garden party was held, among those present being Sir Michael O'Dwyer, Sir William Simpson, Sir Edward Maclagan, Sir Thomas Arnold, Sir Patrick Fagan, Lieut.-Colonel Douglas, Sirdar Ikbāl Ali Shah, Mr. Said-Ruete, Dr. Chorley, Dr. A. M. Shah and Kazi Nazir Ahmed.

Speaking of the importance of Islam to the British Empire, Sirdar Ikbāl Ali Shah pointed out that the change that had come upon the East within the last ten years demanded immediate attention. If a world-wide catastrophe was to be avoided, England had in some way or other to act as mediator. The Sirdar gave a lucid survey of Islam's relations with Great Britain, who had always been looked upon as a friend of Islam until the time of Mr. Lloyd George's Government. The foreign policy of this country had become a party question, and there was a complete absence of a national policy towards Islam. He thought that despite the fact that earnest efforts are now being made to bring about a closer friendship between England and Islam (of which the Treaty with the Sultan Ibn Saoud was an example) there was still room for a closer approach, a heart to heart talk. Just as word had gone round the Muslim East that England was actuated by anti-Muslim feelings, in the same way there was the idea in the minds of many in this country that Islam was not so loyal to Great Britain as it had been. The real facts, however, did not bear out the contention. The misgivings that had arisen in many British minds regarding the disloyalty of Islam were chiefly due to certain actions and pronouncements of the nationals of those Islamic countries over which the wave of nationalism had surged, and the first flush of nationhood had been manifested with such unprecedented force and such suddenness as to strike the West as too vigorously self-asserting.

That was always the case with young nations; and need not be taken as embodying any spirit of antagonism towards Great Britain. Again there was always a chance that they had been misinformed by the enemies of England; the wrong impression could be removed only by a more intimate association of this country with the new-born Islamic nations of the East, and need not startle any critical observer of world politics. Those who believed in the theory of a Khilafat-cum-Non-co-operation movement were ignorant of the real facts of the case. The Khilafat agitation in India was but a passing phase which arose chiefly on account of three years' delay in making a treaty with Turkey, and when all causes of that friction were removed, its promoters kept up the organisation, because it paid them to do so. It was a business which had been very lucrative for many of its officers. No Muslim worthy of his name in India would own that his alliance with any party hostile to the British in India could either benefit him personally or provide a safeguard for his community. The Sirdar concluded his speech by once again emphasizing the need of a closer union between Great Britain and Islam.

After a speech by Sir Michael O'Dwyer, who presided, warmly commending the lecture of the Sirdar, the company partook of tea in the beautiful gardens of the Mosque.

M. Stoentcheff, a Bulgarian Deputy, formerly Minister for Public Works in Professor Tsankoff's Cabinet, has died suddenly of heart trouble.

The Chargé d'Affaires and staff of the Yugoslav Legation in Albania arrived Belgrade on June 7 from Tirana. The Minister, M. Yeffitch, has been on leave in Belgrade since Easter. M. Marinkovitch, Minister for Foreign Affairs, immediately received the personal report of M. Sakovitch.

The Greek Government has asked that its case against the British Government with regard to the concessions obtained before the War by M. Mavromatis, a Greek national, for the supply of water and electricity to the City of Jerusalem should be put down for hearing on the list for the next session of the Permanent Court of International Justice, which opens at The Hague on June 15.

The Egyptian Mixed Court of Appeal in Cairo on June 9 condemned the Wafd to pay 62,000 dollars (£12,400) to the widow of the United States politician, Mr. Falk, who entered into a contract with Mohamed Pasha Mahmud, representing Zaghloul Pasha, to assist the cause of Egyptian independence by propaganda influencing American political circles. In return, if Egyptian independence should be secured, Mr. Falk was promised a big money reward. Mr. Falk died and the Wafd declined to pay on the ground that Egyptian independence is unreal.

PERSONAL AND GENERAL

TO-DAY

June 16, 1927 (New Style).
 June 3, 1927 (Old Style).
 Julhigga 15, 1345, A.H. of the Muslim Calendar.
 Sivan 16, 5687, of the Jewish Calendar.

Sir Alexander and Lady Kay Muir arrived last week at the Ritz Hotel from Scotland.

Mme. Izzet, wife of the Egyptian Minister in London, left Claridge's Hotel last week for Bournemouth.

The Aga Khan has been visiting the Hon. Dame Margaret Greville this week at Polesden Lacy for Ascot.

Field-Marshal Lord Plumer and Sir Francis Aglen will be the principal guests at the Central Asian Society's annual dinner, which will be held at the Hotel Cecil on July 6.

The Maharajahdiraja of Burdwan, who had been staying at Prince of Wales Terrace since his arrival in London, has now moved into the flat that he has taken for the season at 20, Kensington Gore, S.W.7.

Lieut.-General the Hon. Sir Richard Montagu-Stuart-Wortley (upon relinquishing his appointment as Quarter-master-General, India), had the honour of being received by the King at Buckingham Palace on June 10.

We are pleased to be able to state that Lord Oranmore and Browne, who was in the motoring mishap in which Lady Oranmore and Browne met her death, is making steady progress. He is suffering chiefly from shock.

On the occasion of the Qurban Bairam a reception for the Egyptian Colony was held on June 10 at the Legation by Aziz Izzet Pasha, Egyptian Minister in London. A large number of Egyptians were present.

Djemal Bey Frasheri, Albanian Chargé d'Affaires, left London on June 13 for Tirana, to take up a post at the Ministry for Foreign Affairs. The Albanian Minister to Paris and London, Elias Bey Vrioni, is at present in Tirana, but he is expected to arrive in Paris shortly.

Sir John Marshall, who has been elected a Fellow of King's College, Cambridge, was a scholar of the college, and after work at the British School at Athens he was appointed in 1902 Director-General of Archaeology in India. Last year his excavations in the valley of the Indus disclosed a civilisation which goes back to the Third Millennium, B.C. He became C.I.E. in 1910 and was knighted in 1914.

Mr. J. S. Haskell entertained Muzahim Beg Amin al Pachachi, Diplomatic Agent in London of the Government of Iraq, at dinner at Claridge's Hotel on June 9. The following were also present: Sir John Shuckburgh, Atta Beg Amin, Sir Montagu Turner, Sir James Leigh-Wood, Sir Percy Newson, General Grey, Mr. Samuel Samuel, Mr. J. H. Batty, Mr. Bromley Martin, and Mr. F. H. Sutton.

The Earl of Lytton, late Governor of Bengal, will be the guest of the Royal Colonial Institute at luncheon to-morrow (Friday) at the Hotel Victoria. Lord Stanley of Alderley will preside, supported by the Earl of Birken-

head, Secretary of State for India. Among those who have also accepted invitations to be present are the Countess of Lytton, the Marquis of Reading, Lady Stanley of Alderley, Earl Winterton, M.P., Sir Arthur and Lady Hirtzel, the Maharaja of Burdwan, Sir Charles and Lady McLeod, Sir Godfrey Lagden, Sir Archibald Weigall, Sir Muhammad Rafique, and Mr. J. Sandeman Allen, M.P.

BALKAN UNITY.

A deputation comprising a number of those interested in Near Eastern affairs recently waited upon the Minister of the S.H.S. State and upon the Bulgarian Minister at their respective Legations. The deputation expressed to each Minister its congratulation that recent official utterances in Belgrade and in Sofia gave ground for hope that a new chapter was about to be opened in the political and economic relations between the two countries, and pointed out that the friends of all the Balkan States in Great Britain were convinced that closer understanding between the S.H.S. State and Bulgaria was in the best interest of all the countries of South-Eastern Europe. The speakers were: Mr. Wickham Steed, Sir Henry Penson, K.B.E., Lord Henry Cavendish Bentinck, M.P., Sir Edward Boyle, Bt., The Rt. Hon. Noel Buxton, M.P., Mr. H. W. Nevinston, and Sir Harry Lamb, K.C.M.G. The Minister in each case made a suitable reply. Among those present were:

Lord Henry Cavendish Bentinck, Sara, Lady Bloomfield, G. H. Boffin, The Dowager Lady Boyle, Lady Boyle, Sir Edward Boyle, H. Bruce-Dick, The Rt. Hon. Noel Buxton, M.P., Mrs. A. M. Henryson-Caird, W. C. Clark, Mrs. James Conchie, Constance, Lady Cozens-Hardy, W. M. Crook, K. O. Crowbury, Lady Dickinson-Berry, W. M. Dougherty, J. M. Dreshful, Mrs. E. Elles, The Hon. Mrs. Fulcher, Mrs. E. Garrett, Mrs. E. Gibson-Smith, Major-General Lord Edward Gleichen, Major G. M. Goldsmith, Mrs. Goldsmith, Lady Graham, Sir Frederick Graham, Charles H. Gray, Mrs. Halford Hewitt, Mrs. Halahan, Mrs. Charles Hancock, Mrs. C. P. Hawkes, Mrs. Hibben, Dr. S. A. Kapadia, Sir Harry Lamb, Mrs. Geoffrey Mander, C. P. Melville, Roland L. Mitchell, H. W. Nevinston, Captain E. C. O'Connor, Mrs. Monteith Ogilvie, Mrs. Paget, Mrs. Parnell, Sir Henry Penson, Captain H. V. Phillips, Lady Polson, Archdeacon Beresford Potter, Mrs. C. Pritchard, S. G. Roberts (I.C.S. retd.), Mrs. Brice Robinson, Miss E. Samuel, Mrs. A. Serge, Miss E. Sharp, Mrs. Henry Shaw, Wickham Steed, Mrs. E. Storey, Lady K. Tighe, Miss I. Toovey, Mrs. B. O. Tufnell, Dr. Vaughan Morgan, E. S. Williams. Regrets at being unable to attend the Deputation were received from: Sir Robert Kindersley, Sir John Hewitt, W. E. Allen, J. S. Haskell, The Rt. Hon. Ameer Ali, Lady Grogan, Brigadier-General Sir George Macaulay, The Rt. Hon. W. Graham, M.P., J. A. Spender, Lt.-Col. Cuthbert James, M.P., The Rt. Hon. Sir Willoughby Dickinson.

ANGLO-EGYPTIAN ASSOCIATION.

The Annual General Meeting of the Anglo-Egyptian Association will be held at 3 p.m. on July 7 at the Royal Colonial Institute, Northumberland Avenue, W.C.2. A Reception at the Hotel Victoria, immediately opposite the Institute, will follow the meeting, from 4 to 6 p.m. The Annual Dinner of the Association takes place the same evening at the Hotel Victoria at 8 p.m.

We regret to have to record the death on June 7 of Lady Oranmore and Browne as the result of a motor accident at Southborough, near Tunbridge Wells. Lord and Lady Oranmore and Browne were travelling in a Daimler saloon car in the direction of Tonbridge, accompanied by Miss Morrison, a companion, with a gardener seated beside the chauffeur, when the car skidded on the greasy road and came into violent collision with an omnibus. The rear of the car was smashed, and Lady Oranmore and Browne received such severe injuries that she died almost immediately. Lord Oranmore and Browne was injured about the legs. Miss Morrison's face was cut and she was conveyed to Tunbridge Wells General Hospital, while the chauffeur, with injuries to the scalp, was taken to Tonbridge Cottage Hospital. The gardener was thrown out of the car, but he was uninjured.

Lady Olwen Verena Ponsonby, who married Lord Oranmore and Browne in January, 1901, was the eldest daughter of the late Lord Bessborough. She was a Lady of Grace of the Order of St. John.

The death is reported from Baghdad of the Naqib of Baghdad, His Highness the Seyyid Sir Abdur Rahman al Gallani. With the death of the Naqib passes a very venerable figure and a leader of the Sunni sect in Iraq. He was a loyal supporter of the British connexion, and his co-operation could always be relied upon by Great Britain. The Naqib was President of the first Council of State and became Prime Minister in August, 1921, holding the post until November, 1922.

BOMBAY'S COTTON TROUBLES.

The decisions of the Government of India on the recommendations of the Indian Tariff Board have created consternation in Bombay. Whatever the root causes of the trouble may be, the cotton industry in the Western city is unquestionably in a parlous condition. The Excise duty, which was declared to be exercising so prejudicial an effect on the interests of the Bombay manufacturer, has been swept away, but the relief thus provided failed to satisfy the claims of the industry, which put forward a strenuous demand for protection against the growing competition of the Japanese mills. In its report, however, the Tariff Board point out that the depression in the cotton industry is largely due to causes which are world-wide, and that in India itself it has been much more acutely felt in Bombay than elsewhere for a number of reasons. These include causes for which the millowners are themselves responsible, notably undue conservatism and insufficient diversification of production; competition of mills in other parts of India which are in a more favourable position in regard to wages, proximity to markets or to areas from which their raw materials are available; and finally, competition from Japan, which is facilitated by the inferior condition of Japanese labour. The Board indeed was convinced that the increasing competition from other Indian mills is as serious a menace to Bombay as the competition from Japan, the only foreign competition from which Bombay is suffering. The advantage which the Japanese mills enjoy will continue until July 1, 1929, when the amended Japanese factory law comes into full operation. The Government of India accept the finding of the Tariff Board that the present advantage to Japan in cost of manufacture, resulting from labour conditions, is about 4 per cent. both for yarn and cloth, but they maintain that, if a reasonable return on capital be included, the advantage should be 10 per cent. on cloth and not 12½ per cent. as is stated by a majority of the Board. The advantage to Japan in respect of cloth, they add, is already covered by the existing import duty of 11 per cent., and while in regard to yarn the advantage may not be offset by the 5 per cent. revenue duty, an additional duty on this product would affect prejudicially the handloom industry and should not therefore be imposed.

The main recommendation of the Board, designed to provide protection against Japan, has therefore been rejected by the Government of India. This comprised a bounty of one anna per pound on yarn of 32 and higher counts, to be paid for a period of four years at an estimated annual cost of Rs.39 lakhs, the necessary funds to be provided by enhancing the import duty on cotton piece-goods from 11 to 15 per cent. for a period of three years. The President, Mr. F. Noyce, an Indian Civilian of exceptional experience in regard to the cotton industry, dissented from this proposal, but recommended the imposition for three years of an additional duty of 4 per cent. on all cotton manufactures imported from Japan. In rejecting these recommendations, the Government of

India express agreement with Mr. Noyce that a long-established industry, such as the cotton textile industry of Bombay, should need no stimulus at the cost of the taxpayer. This view has been consistently urged in India. During the boom period of a few years back the Bombay mills distributed colossal dividends. A wild gamble in the shares led to dangerous inflation. The leading journal in that city asserted during the agitation for the repeal of the Excise duty, in 1925, that without an exposure of abuses and a guarantee of internal reform, all concessions to the industry in the shape of the abolition of the duty or the granting of protection would "do little more than widen the scope for those exercises in sharp finance and sectional profiteering which have characterised the management of very many mills in Bombay for years." The Simla correspondent of *The Times*, moreover, states that the main value of the Tariff Board's report lies in its elaborate and shrewd dissection of the failings on the business side of the Bombay industry which the depression caused by world factors has made worse, but which by energetic organised efforts might have been largely overcome. The report further states that of the 175 directors of mills in Bombay only 11 have received a practical training, and of these four are directors of only one mill and that one of the most successful. The report appears to have created resentment in Bombay. Sir Victor Sassoon, in an interview in London, has declared that while he does not contend that nothing further could be done to increase the efficiency of the management, the margin for improvement, even on the Board's own showing, must be very small. In point of fact the overhead charges in Bombay—that is to say, the charges under the control of the management—were very much lower than in other centres. Bombay's greatest disadvantage was in regard to wages. The Tariff Board, as we have seen, admit this disadvantage. But an attempt to reduce wages, which have been substantially advanced since the War, might lead to grave industrial troubles in Bombay. The Government of India's contribution to the relief of the cotton industry is comprised in its proposal to remove the import duties on machinery and on certain materials used in cotton manufacture, at a cost in Customs revenue of Rs.45 lakhs in 1927-8 and Rs.85 lakhs in a full year. This is a step in the right direction, though it will fail to satisfy those primarily concerned. Incidentally, it will be of advantage to British manufacturers of textile machinery, though in all these matters, as Lancashire is wisely recognising, decisions must be taken in the interests of India alone. The Tariff Board unanimously recommend the establishment, with financial assistance from Government, of a combined bleaching, dyeing and printing works at Bombay; but the Government of India intimate that they are unable to express an opinion on this proposal until they have ascertained the views of the local Government and of the cotton mill industry in Bombay and elsewhere.

Whatever sins of omission or of commission may be laid at the doors of the millowners, it is impossible not to

sympathise with Bombay in the position in which she finds herself to-day. Her prosperity must obviously be a matter of concern to India as a whole. Meanwhile, it is of interest that a few weeks ago the Bombay representative of the Japanese Spinners' Association asserted that if the import duties on cotton were enhanced the Japanese manufacturer would build mills "all over Upper India and in close proximity to areas growing cotton." There is already a Japanese mill in Bombay, but it is clear that any such step as the wholesale erection of mills by Japan in order to evade the consequences of a tariff would lead to undesirable complications.

CURRENT TOPICS.

The Indian Princes.

There is abundant evidence that the Ruling Princes are concerned as to their position in the changed conditions that obtain in India. A deputation consisting of Colonel Haksar, President of the Council of Regency, Gwalior, and Dr. Rushbrook Williams, Foreign Minister of Patiala, is now in London for the purpose, it is said, of obtaining the opinion of eminent lawyers in regard to certain legal questions affecting the interests of the States. This deputation is the outcome of the recent conference held by the Princes with the Viceroy, at which ninety per cent. of the rulers qualified for membership of the Chamber of Princes were represented. According to a special correspondent at Simla, one of the reasons for the privacy which attended the proceedings was reluctance on the part of the Princes to have their conversations with His Excellency "hammered into all kinds of shapes on political anvils throughout British India." Some of the most active politicians in India have, indeed, shown a hostility towards the Indian Rulers which is deplorable. This was notably in evidence in the Legislative Assembly when the Bill to protect the Princes against seditious and calumnious attacks by the Press was brought forward. A number of the more enlightened and powerful of the Princes have, within the past few months, shown that they regard the outlook with anxiety. His Highness the Maharaja of Benares, speaking at the State banquet in honour of the Viceroy, pointedly affirmed that the British Government's attempt to build a twentieth century Constitution with materials of the Middle Ages had not been successful, and proceeded to point out that the situation was complicated by the presence of 600 more or less independent Native States, whose position in the future Indian Commonwealth and their relationship with the Paramount Power demanded a definite and unambiguous declaration. Their Highnesses the Maharaja of Kashmir and the Maharaja of Bikanir have raised the same issue. Lord Irwin, in reply, has enunciated the sentiment that in the India of the future the States will have to strive with British India as joint workers in the building of the new edifice, and that there must be mutual agreement and confidence between the parties concerned. The whole question is discussed at length by Sir Michael O'Dwyer in the current *Fortnightly Review*, and, in view of the manner in which the States have accorded their loyal support to the Government in the past, they have a strong claim to generous consideration.

Indian Railway Films.

The efforts now being made by the Indian railways by means of advertisements to induce larger numbers of tourists to visit India in the cold weather season ought to be productive of good results. The Indian Railway Board, it seems, has been producing cinematograph films with the same end in view. One series of films shows the beauties of India, old and new, including, of course, the famous Taj, and other picturesque monuments. Nor is sport forgotten, for a film has been produced illustrating *shikar* in the jungles of the Central Provinces, and this, no doubt, will appeal to many who might remain cold to

other inducements. It is a sign of the times that the Indian railway authorities should resort to such modern methods of enterprise. So little is known of India and its attractions by people in the West that the departure is one to be welcomed on broader grounds than are involved in the increase of railway revenue.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 26.

Sir Stanley Jackson.

The new Governor's anxiety to know the popular feeling regarding the detention of the political prisoners without trial has, as the *Statesman* remarks, produced results. In one of his speeches, His Excellency declared that detention for an indefinite period without trial was most repugnant to the feelings of Englishmen. Since his arrival Sir Stanley has been carefully studying the case of the political prisoners and in order to ascertain the actual condition of Mr. Subhas Bose he sent his personal physician in the launch that brought the latter to Calcutta. The result of the consultation was the immediate release of Mr. Bose. All shades of opinion agree that His Excellency has acted wisely. The general impression is that the matter will be put before the Viceroy very soon, when Sir Stanley Jackson goes to Simla. Mr. Sen Gupta, the mayor, has in offering the olive branch to the new Governor said that if His Excellency and his Government really show a desire to follow up the course of action taken in the case of Mr. Bose, the Corporation will gladly extend one hand to him and co-operate. A contemporary, commenting on this particular part of Mr. Sen Gupta's speech, asks what the Mayor is to do with the other hand.

The Other Detenus.

While the papers were still full of praise of the Governor for the release of the Executive Officer, they published a list of proposals regarding reforms in the jails. A point sought to be made is that the political *détenus* are treated too leniently, the staff themselves showing them sympathy and abetting them in many breaches of jail discipline. "Political convicts," the Committee of Inquiry say, "should be entitled to no special consideration by reason of their offence, their superior education or their social standing." The presence of favoured *détenus* in the jails creates discontent among the ordinary convicts, who are treated with great severity, whilst great latitude of treatment is accorded to the political prisoners. There is a proposal to make a special camp for them.

The Bengal National Bank.

Many schemes have been put forward for the reconstruction of this ill-fated concern. But there has not been so far a proposal that can stand the scrutiny of a practical banker, or any one well versed in the intricacies of banking. Perhaps the money that a handful of rich and patriotic Bengalis are going to lock up in the resuscitation of the Bank would be more wisely invested in furthering national industries. It has been suggested that, if the Bank is floated again, the Bank Manager and the Managing Director should have no connexion with any other concern, and none of their relations should hold responsible posts in the bank. The revival of the Bengal National Bank appears to be the unanimous wish of Bengalis. Letters are pouring into the Press, suggesting or praying for reconstruction.

Anglo-Indians and Education.

In regard to the controversy on the relative importance of the Matriculation and Senior Cambridge Examinations to the Anglo-Indian community, Colonel Gidney said he thought the Senior Cambridge Examinations should be abandoned, and suggested that it was advisable to fall into line with the Indian Universities, or to introduce the examination for the London University degree. Ex-

aminations for the London University degrees are held in Colombo. Colonel Gidney wonders why they are no longer held in Calcutta. Some years ago it was said that the Indians were side-tracking the Anglo-Indians by their educational activities. Formerly the Senior Cambridge was sufficient to secure entry into the Medical College: now one must pass in physics and chemistry. After a few years Col. Gidney predicts that candidates for the Medical Service will have to pass the I.Sc., and a Cambridge certificate will become useless. Col. Gidney deplores that the Anglo-Indian community have no say in the shaping of an educational policy, whilst the matters in the hands of the Indians, whose leaders are determined to advance. Father Roeland of the St. Xavier's College supports the Cambridge system on all grounds, emphasizing the fact that commercial firms invariably demand the Senior Cambridge qualification.

Broadcasting in India.

The Philips Radio achieved great success the other day, in its experimental broadcasting of a London programme which was perfectly picked up by Calcutta. There are many drawbacks to making the relaying a regular feature. The hours at which the really good programmes are given make it an impossibility for the people of Calcutta to listen-in, and if the hours were altered in London for the purpose, then there would be a difficulty in transmitting over a long distance during the day. This explains why the I. B. Co. are trying to use material available in India and the Philips Radio, whilst showing the possibilities of broadcasting over long distances, are merely making interesting experiments, and are not in any way thinking of competing with the Indian Broadcasting Co., a new and steadily progressing enterprise.

Here and There.

In spite of Swami Shradanad son's appeal for mercy, the murderer of the Swami has been sentenced to death, the court dismissing the appeal, the alleged defective mental condition of the murderer not being considered as amounting to an extenuating circumstance. The plea of religious mania was also set aside.

The travellers who come a few years hence will find the suburbs of Calcutta lit up by electricity. Several schemes have already been approved or at least considered. Hoogly and Chinsura already get electric current from the Gourepore Jute Mills power-house, by means of cables laid over the Jubilee Bridge, which spans the river between Hoogly and Gorifa. Chandernagore gets its supply from cables overhead from the same source, but it is alleged that the system of overhead cables is a danger and it is intended to lay the cables underground whenever possible.

The strike in the Burmah Oil Company and the Asiatic Petroleum Co., has ended. The workmen have resumed work. Extra hands are being engaged for the arrears of work that have accumulated during the strike.

There was plethora of small motor-buses last year in Calcutta, and this sudden avalanche of new enterprises threatened for a time the tramway organisation. But the owners of these small vehicles failed to renew their licences or neglected to pay their dues, or to make the necessary repairs to their cars to make them acceptable on the road. The result of the procrastination and neglect so often seen in India is the sudden disappearance of a great number of the tramway company's competitors. The Walford Transport Ltd., were the pioneers of motor buses in Calcutta, and experience has shown the best types of bus chassis for Calcutta and suburban services. A co-ordinated service of buses is what the public want, and the buses run by private owners are not sufficiently reliable or regular to meet with a permanent success.

It is reported that a girl who had been bitten by a mad jackal and had thus received 93 wounds, was treated at the Pasteur Institute of India and perfectly cured. During the year 8,623 cases were attended to, the average cost of the treatment being about Rs.10. The patients fail to send the cards stating the state of their health after

they leave the institute. Those who are opposed to the anti-rabic vaccination say that probably the patients do not write because they are dead or because they were not bitten by mad animals. There has been heated controversy on the subject.

With a view to improving agriculture and the allied industries, an organization has just been formed. It is styled the Bengal Agricultural Association. It will be run on non-party and non-political lines, and all persons are eligible for membership. The objects are to increase agricultural production, to improve the cattle and to extend the co-operative system. Improved seeds and scientific methods will be used; agricultural farms will be established and markets opened.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, May 27.

Empire Day.

Bombay, like all the other cities and towns of India, celebrated Empire Day on May 24. But, whereas other places mainly looked upon the day as the occasion for military and semi-military displays, Bombay's chief celebration was in a gaily decorated hall and the chief celebrants were a large number of Hindus. During the course of the proceedings Rao Bahadur P. B. Joshi was the principal speaker, and he made a very interesting appeal for the working of the Reforms which were the outcome of Queen Victoria's Proclamation in 1858. Unfortunately, the appeal is not likely to have very much effect on the Extremist section, the principal offenders. But continual repetition of this fact may bring them to their senses, and so we welcome it.

Mr. Gandhi's Pronouncement.

Mr. Gandhi, who is reported to be making good progress towards a complete recovery as a result of his change to Nandi Hills, has celebrated the occasion by having a dig at the Government of Bengal in *Young India* on the release of Mr. Subhas Chandra Bose. Incidentally, he indicates that he is afraid the agitation for the release of political *détenus* may be relaxed as a result of this action on the part of the Government of Bengal, which he suggests was due to the fact that the authorities were anxious lest Mr. Bose's health should grow worse and serious results ensue. What Mr. Gandhi says may be of little consequence, but what his words portend is that he will soon be endeavouring to stage a "come-back" and is now carefully preparing the way. What with the comic opera efforts of Mr. Avari and his "Republican Army" at Nagpur, where drawn swords are carried by both men and women volunteers as a measure of "non-violent" agitation against the non-release of the *détenus*, he could not have chosen a more inauspicious or inappropriate occasion for his effort.

"All is Well."

"All is well" is the comment of Mr. Joe Addyman, M.L.C., on the progress of the Sukkur Barrage scheme, the biggest irrigation scheme in the world. Mr. Addyman's authority is the evidence of his own eyes during a complete tour of the work, which he undertook in the company of some of his fellow Councillors recently at the invitation of Government. That we are glad to hear it goes without saying—but will it definitely and finally settle the uneasiness that prevails outside Sind or lay to rest the many rumours that are continually disseminated from some untraceable source? It seems unlikely. Nevertheless, this has been Government's first step towards inviting public examination of what is going on at Sukkur, and probably the more we have of it the happier we will be.

Aviation in India.

That the Air League of India gives promise of being a live organisation was demonstrated at its first public meeting, held a few days ago at Karachi. It has taken some time for this to materialise, but meanwhile the League has very sensibly been enrolling members with considerable success and preparing the way for the inauguration of a light aeroplane club in Karachi. When this club materialises it ought to be named the Leete Club in recognition of the very valuable assistance this British pilot has been giving, with the help of his "Moth" plane "Gold Flake," both at Karachi and further north. It does seem time, however, that the League extended its activities further afield, for it has a very long way to go before it can secure universal support for aviation in this country. Clubs will have to be formed at every town of importance, and the sight of an aeroplane buzzing along overhead will have to be so common as not to evoke comment, before it can be taken for granted that aviation has "arrived."

Broadcasting "Experiments."

The Indian Broadcasting Company has adopted a superior air in dealing with the recent successful relaying of 2LO programmes to India and Australia by a Dutch wireless station. Admitting that Calcutta's being able to listen-in so well was more luck than anything else, the fact that the B.B.C. is seriously considering relaying programmes to the Dominions with the aid of the beam stations surely indicates that it is not to be regarded quite so much as an "experiment" as they suggest. Then again, they appear to be keener on broadcasting their own programmes in preference to relaying 2LO's. We are not overburdened with good musical or other talent out here, and one feels certain that, with all the undoubted imperfections that relaying would introduce, the wireless enthusiasts would much rather hear, say, Jack Hylton and his orchestra or the Savoy Orpheans than the best of local dance or symphony orchestras.

Versova Goes "Dry."

The residents of Versova, just out of Bombay, have decided to go "dry." Considerable excitement has been caused in the locality and the police are likely to have a busy time—not searching for bootleggers, however, but finding out what price each person has paid for his liquor. For the intention is not Prohibition, but merely to point out to the local liquor seller that he cannot charge Rs. 1-6 for a bottle of country spirit when it ought only to be Rs. 1-4!

Stockbroking.

Apparently we have a surplus of stockbrokers in the city. We were not aware of this, though it certainly seemed as though every second man one met followed that calling. But the Atlay report on the Native Share and Stockbrokers' Association points out this significant fact in no uncertain manner, and the Indian Merchants' Chamber has fastened on it as the main plank in its protest to the Bombay Government against permitting the institution of yet another Stock Exchange in the city. As a second telling fact, it also points out that such a thing as two Stock Exchanges in the same city is unknown, only that it actually mentions "civilised city" for some equally unknown reason! Whether Government will grant the new body recognition remains to be seen.

Commercial Outlook.

Business circles are concentrating their attention on the discussions to be held here next week regarding the Gold Standard and Reserve Bank Bill, but opinion at present has hardly unified. Indian opinion generally favours a State Bank in preference to a private undertaking, and holds that no privileges should be given to the Imperial Bank. Others think that the Bill ought to be postponed and a committee of bankers sent round to study similar conditions in other countries and report on

the system that should be adopted here. Meanwhile, the Money Market remains steady, as also exchange. Government securities have been very unstable, the final movement being a downward one; and shares are weak to steady with only a little business passing. Gold has been dull, but silver as a result, it is said, of a Calcutta "corner," and sustained demand from Shanghai, has improved. Cotton moves with the Home market, with some Japanese and local demand, while piece-goods continue to be in fair demand with slight reduction in stocks.

BOMBAY AND PROTECTION.

The Bombay Millowners' Association, resenting the criticisms of certain Calcutta papers regarding the supposed recommendations of the Tariff Board in favour of Protection for the cotton industry, recently issued a statement in reply. The actual recommendations, together with the decisions of the Government of India, have since been published, but the statement is of special interest in view of the present position. In the course of their statement the Association say:—

There are about 300 mills working to-day in India in direct competition with each other. At the same time, the products of these mills are competing directly and indirectly with a large proportion of imported piece-goods which, apart from all other adventitious aids, can be placed on the Indian market at prices 12½ per cent. lower than they could have been if exchange had remained at 1s. 4d.

In addition, consideration has to be given to the fact that owing to the unavoidable loss of India's yarn export trade with China, Indian mills have to sell 2,000,000,000 yards of cloth per annum to-day as against about 1,000,000,000 yards per annum in pre-war years. After assimilating the above facts and the new factors which come into existence, namely, the grave menace of dumping by Japan owing to the recent depreciation of the yen exchange and the dislocation of her trade with China by the civil war in that country, no fair-minded critic can maintain that owing to the imposition of an additional import duty of 4 per cent. on piece-goods, the Indian mills would be in a position, in the face of such competition, to charge any inequitable prices for the products of their looms.

The statement made in one paper that "as regards up-country mills, a higher tariff is neither required nor demanded and higher duties upon imported manufactures are sought by, and solely to the interest of, the cotton-mills located at Bombay," is a wilful perversion of facts, for, not only does the Millowners' Association, Bombay, represent the interests of cotton mills located in every presidency in British India, but demand for protection was and is an All-India demand.

In regard to the unwarranted insinuations of inefficient management of the mills in Bombay City and Island, the Association has submitted to the Tariff Board a case which in the opinion of the Association, conclusively establishes the fact that the management and efficiency of Bombay mills compare favourably with that of mills in any other part of India.

One paper stated "that Indian cotton cultivators would suffer by any action which would curtail the external demand for their products." It is obvious that any reduction of the external demand for Indian cotton owing to foreign cotton goods being shut out of the Indian market would increase in like proportion the demand for Indian cotton by Indian mills, and the country would reap the additional advantage which the manufacture of large quantities of piece-goods in Indian connotes in regard to employment and production of economic wealth.

THE CHARM OF ASSAM.—IV.*

Continuing his description of the temple at Kamakhya, a noted place of pilgrimage, Mr. Allen said it was erected to exalt and magnify impulses which, though essential to the perpetuation of the race, have enough natural vitality to need no stimulation or encouragement from religion. And for personified desire blood is considered to be the most appropriate offering. The finest sacrifice of all was man, and in the 16th century, when the temple was rebuilt, the heads of 140 men were offered to the goddess.

"But repulsive though the temple is with its obscene carvings and its dripping victims, this is not the characteristic form of Hinduism in Assam. In the 16th century, the milder doctrines of Vaishnavism were preached by Sankar Deb and were adopted by most of the Assamese. The great centre of Vaishnavism is to be found in the Majuli, a huge island formed by a change in the course of the Brahmaputra in the Sibsagar district. Here there are a number of sattras or monasteries, presided over by men who still are held in the greatest reverence by the villagers. Situated in a tract which recalls the simplicities of 50 years ago, some of these sattras, with their quadrangles and fish ponds, suggest the peace and conservatism of Matthew Arnold's Oxford. When Lord Chelmsford visited Assam in 1920, the principal abbots, men of the greatest dignity and charm of manner, asked to be allowed to present him with an address. The nationalist lawyers did all that they could to get the meeting boycotted, but the authority of the abbots and the desire to see the Viceroy made opposition futile. The villagers assembled in thousands round the great pandal in which the leading abbots, dressed in their robes of state, awaited the arrival of their distinguished guest. The wall opposite the dais was formed by a row of elephants standing side by side, and so great was the concourse that it was with difficulty that the Viceroy could make himself heard above the murmurs of the multitudes who had come to see him. The whole scene was so unusual, so spontaneous, so old-world, that Lord Chelmsford told the Secretary of State that it was one of the most impressive things that he had seen in India.

"The Assam hills afford a most excellent field for missionary zeal, and the Welsh Presbyterian Mission has done sterling work especially amongst the Khasis and the Lushais. Of the former one-sixth and of the latter one-fourth are now Christians. A short time ago there was some discussion on the effect of missionary work in China. I have no desire to tread on dangerous ground. But even convinced evangelists would, I suppose, admit that there was risk in invading countries in which an old-established religion held the field. We, for instance, should hardly welcome an active and successful Hindu or Muhammadan mission in England. In the Assam hills there is no such obstacle. The rather vague and conflicting animistic beliefs have none of the solidarity or binding force of the old religions, and no one who has been brought into contact with them has anything but the highest praise for the Welsh missionaries. The Christian hillmen are the cleanest, the most prosperous, the best educated, the most reliable of their tribe. Amongst the Khasis, a very democratic people, there is no racial bar within the church, and Khasis have, I believe, presided over synods. It is, perhaps, a matter for regret that there are so many who wish to labour in this fertile vineyard. The Welsh Mission were the pioneers and are by far the strongest organization. But the Roman Catholics, prior to the War, were pursuing a very active policy. The capable and cultivated head of the mission and all his assistants were Germans, and were in due course interned. Their place was taken by Belgian priests, but the work of the mission received a certain check. There are also the Church of England, the Unitarians, and a curious

American body known as the "trumpet." One cannot but feel that it is rather hard on the Khasi, to ask them to choose between so many types of doctrine, and to the detached onlooker a competition for converts seems scarcely in accord with the principles that all the sects profess. The American Baptists have also worked amongst the Nagas, the Garos, and in certain parts of the Assam Valley, but, on the whole, with less success."

INDIAN MAIL.

An Indian Commissioner.

Kunwar Maharaj Singh who has just taken over the officiating charge of the Allahabad Division of the United Provinces is the first Indian in that Province to reach the rank of Commissioner. The second son of Sir Harnam Singh of Kapurthala, the Kunwar was educated at Harrow and Balliol College, Oxford, and was called to the Bar at the Middle Temple in 1902. He entered the Provincial Service of the United Provinces in 1904, writes the *Pioneer*, and after officiating as Registrar of Co-operative Societies he was appointed Assistant Secretary to the Government of India in the Department of Education in 1911. He later returned to his province for service in the District and in the Secretariat and in 1902 was again appointed to the Education Department at Delhi where he became Deputy Secretary. He was sent on an important mission to Mauritius and also to British Guiana where he reported on the conditions under which Indian immigration could be satisfactorily worked in those Colonies. His recommendations were in the main accepted both by the Indian Legislature and by the Governments of the colonies concerned. The Kunwar, like other members of his family, is a keen lawn tennis player. While at Oxford he represented the Varsity in the featherweights in 1899 against Cambridge.

The Statutory Commission.

The suggestion of the European Association to the Secretary of State that the Royal Commission which is to inquire into the working of the Reforms should include no past or present resident in India, official or non-official, has aroused widespread comment in that country. The *Statesman* after declaring that the suggestion is not likely to be adopted goes on to say:—Yet an impartial tribunal from Home might not be a bad solution, and since every kind of evidence from all sections of the public in India is sure to be heard there would be no question of any interest not being considered. But whatever form the Commission takes it will be advisable that its recommendations should be considered by an authoritative body in India, such as a joint committee of the Houses of the Legislature, before Parliament goes to the trouble of giving them statutory effect. There is no point in a Constitution unless political parties accept it and agree to work it. The important thing is to get the constitutional question out of the way, so that the field may be clear for constructive work. If a fresh constitutional fight is to begin as soon as the new Act is passed Parliament will merely have wasted its time.

The Simla Exodus.

The question as to whether the Government of India shall prolong its annual stay in New Delhi is again being discussed, and the matter is apparently to be thoroughly considered by an inter-departmental Committee. According to the special correspondent of the *Englishman* at Simla, the view is held in some quarters that the period spent in Simla might well be curtailed. Departmental opinion he says has been collected and the view of the Delhi administration on health conditions during April, May and October has also been invited. It seems that the Delhi authorities are quite favourably inclined to the view that April and a part of May will not be disagreeable from the health point of view and that, like the Punjab Govern-

* Further extracts from a paper on Assam read by Mr. B. C. Allen, C.S.I., late Commissioner, Assam Valley Division, before the Indian Section of the Royal Society of Arts on May 6. Sir Edward A. Gait, K.C.S.I., C.I.E., presided.

ment, the Central Government can prolong its stay in the plains till the first week or the middle of May. October presents some difficulty in view of the fact that, closely following on the rainy months, it is malaria-ridden, and it may not be quite wise to migrate to Delhi early in October.

NEWS IN BRIEF.

The Indian Civil Service reception was held at the Hyde Park Hotel on June 10. Those who accepted invitations to be present included the Countess of Castlestewart, Lord Meston, Sir Patrick Fagan, Sir Michael O'Dwyer, Sir Arthur Knapp, Lady Campbell, Sir Charles Bayley, Sir Reginald Craddock, Sir Louis Dane, Sir Richard Dane, Sir Selwyn Fremantle, Sir Robert Holland, Sir Henry Lawrence, Sir Verney Lovett, Sir Edward Maclagan, Sir William Sheppard, Sir Charles Spencer, and Sir James Walker.

Officers past and present of the Madras Pioneers held their annual dinner on June 8 at the Trocadero Restaurant. Major-General Sir Charles Mackenzie-Kennedy presided, and among those present was Major-General Sir Harry Brooking.

According to a Reuter message from Peshawar, the hostile Lashkars which recently made a night attack on blockhouses held by friendly tribesmen in the vicinity of the Shabkadar and Michai posts in the Mohmand country have been dispersed.

The Royal Commission on Agriculture in India began its public sittings at the Office of Works, King Charles Street, on June 13, when evidence in regard to technical and educational questions, and also in regard to the reputation of Indian agricultural products in the British market, was taken.

In consequence of the stabilisation of the exchange, the Government of India has decided to reduce the charges for telegrams to places outside India. The charge per word to Great Britain is reduced to 1 rupee 2 annas (1s. 8½d.).

The Hon. James Crerar, C.S.I., C.I.E., Secretary to the Government of India, Home Department, has been appointed Home Member of the Executive Council, vice Sir Alexander Muddiman, appointed Governor of the United Provinces. Mr. Crerar has been Home Secretary to the Government of India for the past five years.

The United Provinces Government have sanctioned the introduction during the current financial year of compulsory primary education for boys in the Allahabad, Benares, Firozabad and Kasganj Municipalities.

It has been notified by the Jamnagar State that no export duty of any kind will be levied on merchandise other than jute, rice, tea, hides and cotton exported to Europe and other foreign countries by direct steamer sailing from Bedi Bandar. This is expected to give a fillip to the export trade through this port.

The following telegram relating to the monsoon rains has been received by the Secretary of State for India:—"Rainfall, week ending June 8. Excess: Assam, Bengal, Bihar, Malabar and Madras Deccan. Normal: Lower Burma, Punjab (South-West), Baluchistan, Sind and Madras (South-East). Fair: Upper Burma, Orissa, Bombay Deccan, Hyderabad, and Mysore. Scanty elsewhere. Monsoon extended South Konkan and Bengal.

The first interim report of the Royal Commission on Agriculture in India, April, 1927 (Cmd. 2878) published last week, contains the evidence taken up to October 18, 1926, from officers serving under the Government of India. The Commission hope to issue similar reports every fortnight or three weeks covering the remainder of the Indian evidence.

Flight-Lieutenants Carr and Gillman, who returned to London on June 7, after their long-distance flight which ended in the Persian Gulf, called at the Air Ministry the following day and were received by Air Chief Marshal Sir H. M. Trenchard.

At the annual meeting of shareholders of the Burmah Oil Company, which was held on June 10 in Glasgow, Sir John Cargill, presiding, said the directors had offered £100,000 to establish a college of mining and engineering in the new Burma University.

The route of the French air line which is shortly to link up Beyrout with Baghdad will be *via* Aleppo, and the total time of the journey will be seven hours. It is claimed that by taking the overland route *via* Marseilles, boat to Beyrout and then the new air line, Baghdad will be only a week's distance from London.

OBITUARY.

Lieutenant-Colonel Barton Edward Anderson, D.S.O., died at the British Military Hospital, Delhi, on May 23, at the age of 45. Commissioned in 1901, he was transferred to the Indian Army in the following year and served in the Bazaar Valley and Mohmand expeditions on the North-West Frontier in 1908. His subsequent service with the 59th Royal Sind Rifles (now the 13th F.F. Rifles) and on the Staff, was in France, from the autumn of 1914, in Iraq and Palestine, and in the Third Afghan War of 1919. Colonel Anderson also took part in the operations connected with the Mesopotamian Rebellion and the Waziristan Campaign, 1921-23.

Colonel Reginald Beavan, whose death, at the advanced age of 83, is reported, rendered notable survey service in connexion with the second Afghan War. Commissioned in the Indian Army in 1861, he was transferred to the Topographical Survey Department seven years later, and on the outbreak of the second Afghan War carried out, among other responsible duties, a survey of the Baluchistan country between Quetta and Sibi under conditions of exceptional difficulty. In 1881-82 he accompanied General Wilkinson's expedition and became Deputy Superintendent of the Survey of India in 1884, retiring from the service in 1892.

Colonel Algernon Currie, I.A., retired, died at Worthing on May 28 at the age of 86. He was gazetted to the 3rd Bombay Cavalry in 1857, though he served chiefly with the 1st Bombay Lancers, and later with the 34th Poona Horse, which regiment he subsequently commanded. From 1872 to 1882 he was commandant of the Governor's Body Guard under four successive Governors of Bombay, and also held at different times Staff appointments as Brigade Major and Assistant Adjutant-General, Bombay. He retired in 1897.

The death occurred at Lee-on-Solent on May 30 of Surgeon-General Henry Cook, M.D., F.R.C.S., F.R.G.S., J.P., formerly Principal of the Grant Medical College, Bombay, in his ninety-sixth year. He joined the Indian Medical Service in 1855, and served in the Persian War. He was formerly Chairman of the Bombay Municipal Corporation, and, returning to England in 1886, he became a J.P. for Gloucestershire.

Mr. John Kelsall, late Indian Civil Service, died at his residence, the Cottage, East Sheen, on June 6, at the age of 83. He entered the Indian Civil Service in 1863, and served in the Madras Presidency for 26 years.

Mr. William Rucker Stikeman, C.I.E., of 61, Onslow Gardens, died last week at St. Leonard-on-Sea, at the age of 73. He went out in early life to a mercantile career in Calcutta. Subsequently he went to Rangoon, where his large business interests were supplemented by various forms of public service. He was an additional member of the Burma Legislative Council soon after its constitution, and for some time he was Chairman of the Burma Chamber of Commerce and vice-chairman of the Rangoon Port Trust. He was created C.I.E. in 1911.

Lieutenant-Colonel Edward Temple Harris, D.S.O., Indian Medical Service, who died at Maymyo, Burma, where he was serving as Civil Surgeon, on May 24, from the after-effects of enteric fever contracted on duty 18 months ago, entered the Indian Medical Service in 1904. After six years of regimental duty he was gazetted to civil employment in Burma. In the Great War he served with the East African Expeditionary Force and was present at the battle of Tanga, being mentioned in dispatches and awarded the D.S.O.

News has been received from Dharmasala, in the Punjab, that Major H. D. Minchinton, 1st King George's Own Gurkha Rifles, was killed in a mountain accident on June 3. Major Henry Darrell Minchinton entered the Indian Army in 1908. He served in France, Mesopotamia, and Palestine, and in Waziristan in 1920, when he was awarded the Military Cross. He was an experienced mountaineer who had climbed famous peaks in the Alps, Norway, and the Himalayas. He was a member of the Alpine Club and was employed last year on a special survey with the Shaksagan survey expedition in the Karakoram Range, Kashmir.

WILLS.

Mr. Hugh Hamlyn O'Connell, of Southsea Terrace, Southsea, late superintendent engineer, P.W.D., Madras (net personality £6,869), has left £7,156.

The will of Mr. Arthur Hill, C.I.E. (69), of Babbacombe Cliff, Babbacombe, Torquay, late Chief Engineer for Irrigation in the Bombay Presidency (net personality £8,261) has been proved at £13,439.

Mr. Charles Butterworth Bayley, C.V.O., of Cantonments, Barrackpore, Bengal, India, secretary to the Victoria Memorial and late of the Public Works Department, Bengal, left £1,675 unsettled property in this country.

Mr. Lancelot Hugh Corbett Palmer, of Moor House, East Hanningfield, Essex, civil engineer, late Great Indian Peninsula Railway, who died on February 24, left estate of the gross value of £7,668, with net personality £7,623.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

National Mortgage Bank of Greece.

In accordance with expectations the offer yesterday at 93½ per cent. of £2,000,000 Seven per Cent. Sterling Mortgage bonds of the National Mortgage Bank of Greece met with a heavy over-subscription and the lists were closed at 9.45 a.m. The bank has been founded to take over from the National Bank of Greece its long-term mortgage business and to provide additional sums for the important expansion in this business which has become necessary owing to the general development of the country and the enormous increase in the population of cities such as Athens, the Piræus and Salonika. The proceeds of the issue and of any further issue forming part of the total authorised amount of £3,000,000 are to be utilised by the Mortgage Bank for the purpose of making advances in sterling on first mortgages of freehold property of individuals and companies, or on first charges on the freehold property or on the revenues, rates and taxes of public bodies. The bonds, which are to bearer in denominations of £500, £100, and £20, are guaranteed as to principal and interest by the National Bank of Greece, and are to be redeemed by means of an accumulative sinking fund sufficient to repay the whole of the loan by December 1, 1957, this sinking fund being applied by half-yearly drawings at par exclusive of accrued interest. The first repayment of bonds is to take place on June 1, 1928.

Roumanian Oil Position.

The news that the Roumanian Council of Ministers has approved the recommendations of the Special Commission for the reduction of the export and transport rates for petroleum is satisfactory as an indication of a further advance on the road to freeing Roumania's trade from restrictions. The new rates are still very high, but they represent a very appreciable decrease on the existing rates, and the change will in all probability be followed by a further move in the same direction at no distant date owing to the present situation in the oil industry. Petroleum is, of course, Roumania's great standby, and the production has been rapidly increasing, but falling world prices and the gradual accumulation of stocks have tended to produce a crisis, and the curtailment of production has even been considered as a way out of the difficulty. Obviously if Roumanian oil is to find the increasing market abroad that it requires it is necessary that it should be handicapped as little as possible by heavy rates.

Increasing Suez Canal Traffic.

The increase in the Suez Canal traffic during the first quarter of this year, to which I referred recently, was continued in April when 495 ships of a net tonnage of 2,582,236 transited the Canal as compared with 427 of 2,210,520 tons in April, 1926. For the first four months of this year the ships transiting the Canal numbered 1,878, the net tonnage being 9,866,906 as compared with 1,722

ships of 8,966,116 tons for the same period of 1926. The figures for the movement of merchandise through the Canal in April are very significant. The amount was 2,786,000 tons which exceeds the previous highest total for a month in March, 1925, of 2,723,000 tons. The outward traffic totalled 1,034,000 tons, showing an increase on the figures for April, 1926, of 183,000 tons, while the homeward traffic at 1,752,000 tons was higher by 348,000 tons. This development of the traffic goes to show that, provided nothing unforeseen happens to disturb the development of world commerce, we can now look forward to the gradual expansion of trade.

The Burmah Oil Meeting.

The annual meeting of the Burmah Oil Company is always an event in the oil year on account of the interesting review of the situation that is always given by the Chairman, Sir John T. Cargill, Bart. He commenced by referring to the postponement of stability in the oil position, and pointed out that owing to the overproduction in America once again the not entirely unexpected has happened. The forward swing of the pendulum of the United States production has brought about a "spate of overproduction unprecedented even in the record-breaking history of that wonderful country, and the prolific sands of Seminole, coming on the top of the enormous expansion in the volume of light petroleum distillates secured in recent years from cracking and casing head sources, returned the whole industry to still another phase of price conditions which, if not definitely unprofitable for a great deal of the world's production, cannot be sufficiently profitable to be in the best ultimate interests of consumers and the industry alike." Sir John Cargill went on to express the view that the process of readjustment is likely to be a painful one for many producers, but he has no anxiety with regard to the future prospects of the Burmah Oil Company. In the circumstances, however, he very naturally abstained from any forecast as to the outlook, though the wonderful progress made by the company since 1886 leaves no doubt that it is in a position to face any difficulty with which it may be confronted.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
LORD ORANMORE AND BROWNE, K.P., P.C.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

It was started then with a capital of £60,000 which now stands at £10,868,256 with a market valuation of over £53,000,000, and may be said without any exaggeration to have made a very great contribution to the economic progress of Burma and India. An interesting feature of Sir John Cargill's speech was his statement that the directors have decided to offer to the authorities of the University of Rangoon £100,000 for the establishment of a college of mining and engineering, an offer which further illustrates the solicitude that the company has always displayed for the welfare of the population in its particular sphere.

The Rubber Position.

The past week has seen very interesting developments in regard to rubber. The price has been as low as 1s. 5½d., has reacted to 1s. 6¼d., and has again declined to 1s. 6d. at which it stands at the time of writing. A variety of reasons has been advanced for these fluctuations, but while the immediate cause is undoubtedly the selling that has taken place in America it is necessary to look no further than the London stocks to realise that there can be no rise in the price of the commodity until these stocks have considerably decreased. At the moment the outlook is more uncertain than it has been for some time, and though, as I have previously indicated, I doubt the possibility of such a development, the prospect of a further reduction in the quota is being discussed.

COMMENTATOR.

The Sudan Government Railway have given a contract for 10 locomotives, of the 4-6-2 type, and for tenders to the North British Locomotive Company, Glasgow.

William Boby and Co. have received an order for India for gravity filtration. The plant will have an initial capacity of 3½ million gallons of water a day.

The Yugoslav Government have given a contract for two submarines to the Ateliers et Chantiers de la Loire, Nantes.

A Cairo telegram states that the condition of the cotton crop in Egypt is as follows:—Percentage of normal—Lower Egypt, 101; Mid-Egypt, 101; Upper Egypt, 101.

The final dividend recommended by the directors of the Burma Corporation in respect of the year to June 30, 1927, is six annas per share, free of Indian and British income-taxes, payable August 15 to shareholders registered July 15.

A legislative decree was drawn up in Athens on June 10 providing for a reduction of the pay of Greek Army officers by 7 per cent. and the application of a system of alternate service and retirement to about 150 officers and petty officers of the Navy. These economies are the outcome of the authority vested in the Minister of Finance by the Greek Chamber after the introduction of the Budget.

A Reuter message from Constantinople states that the Anglo-Turkish Panel of the Mixed Arbitral Tribunal, constituted under Article 78 of the Treaty of Lausanne, has declared itself competent to try the questions that have arisen in connexion with the Constantinople Five per Cent. Municipal Loan of £1,000,000 which was floated in London in 1910.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Supplies for War Department.—The War Department of the Egyptian Government invites tenders for the undermentioned supplies:—Boots, ankle, with laces—Infantry, 15,690 pairs; Cavalry, 860 pairs; spare laces, 8,300 pairs. June 23. Hides, collar, 6,430 lb.; hides, bridle, 3,640 lb.; basils, unstrained, European, each, 140; leather buff bridle, weight 100 lb.; pig skins, each, 7; chamois leather, each, 146. June 21. Tenders to be delivered to the Chief Inspecting Engineer, Egyptian Government, 41, Tothill Street, London, S.W.1.

Cement.—The General Manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 7,000 metrical tons artificial Portland cement. July 16.

Bedsteads, Etc.—The Director of Supplies, Department of Public Health, Cairo, invites tenders for the supply of iron bedsteads, clothing, draw sheets, woollen shawls, canvas hoses for fire pumps and blankets required for the year 1927-1928. July 25.

School Furniture, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of school furniture and miscellaneous articles (such as tables, cupboards, iron bedsteads, cotton, ticking and unbleached calico for making mattresses and pillows, kitchen copper utensils, cane chairs, table service, etc.) required for the schools during the school year 1927-1928, July 7; and for the supply of different kinds of timber required for Trades Schools and Model Workshops in 1927-1928. July 16.

Copper Discs, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of metal copper discs and metal copper sheets (July 4); articles of saddlery and harness such as chains iron, hooks, rings brass, rivets tubular copper (July 4); and wool hair and hair horse for pads, cotton raw, creta vegetable, cotton waste, matting cocoa nut fibre, Jute, sacks jute, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 6.

Iron Pipes.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply of iron pipes for irrigation or drainage. July 10.

Erection of Water Supply Works at Edkou.—Tenders are invited by the Egyptian Ministry of Public Works for the supply and erection of machinery, filters, and piping, for the water supply works at Edkou. July 25. (D.O.T.)

Uniforms.—The Chief Inspector, Direction General, Customs-Administration, Alexandria, invites tenders for the supply of winter uniforms for guards and employees during 1927-1928. August 9.

Boots and Laces.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of 16,550 pairs of boots and 8,300 pairs of laces to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. June 28.

Rails, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 5,000 tons rails. August 10.

Engineers' Instruments, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of engineers' instruments, drawing materials, etc., required for the schools during the school year 1927-28. June 30.

General Stores.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of general stores required by the Police Stores, Bulaq, in 1927-1928. July 2.

BULGARIA.

Coasting Steamer.—Tenders are invited by the Bulgarian Mercantile Navigation Company for a coasting steamer. September 6.

The Banca Commerciale Italiana and Bulgara, Sofia, has opened a branch at Plovdiv (Philippopolis).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 14.

While there are many factors in the financial and economic outlook which might be expected to make for optimism in City markets the keynote of business remains one of caution and hesitancy, and the Stock markets have not shown the anticipated revival of business after the Whitsuntide holidays. This, of course, may be partly ascribed to the various international political factors, which include, in addition to the continuance of the troubles in China, the Albanian controversy and the Warsaw assassination. The fundamental cause, however for the hesitancy in investment markets would appear to be the uncertainty as to the future course of the money market. The purchases of gold in London and New York by the French Treasury during the past three weeks, which are being made, presumably, with a view to diverting speculation from the franc exchange, has had an unsettling effect upon the money market, which is also disturbed by the fear that the drain of gold to France may continue and thus raise money rates in London. This would, of course, produce a decline in the prices of investment securities, and a large part of the business on the Stock Exchange has been diverted to semi-speculative markets. Less than a month ago the City was looking for an early reduction in Bank Rate to 4 per cent. As a result of the French Treasury's operations it has now completely changed its views to the opposite extreme and is pessimistic as to any change being made in Bank Rate before the usual autumnal pressure on the exchanges may necessitate an increase. The gilt-edged market is thus marking time, while other sections remain rather quiet pending the close of the three week's account, which ends on Monday.

Argentine Railway Dividend Prospects.

One of the most active sections of the Stock markets during the past month or two has been the Argentine railway market. The companies close their financial year on June 30 and as the dividend season approaches, interest in the ordinary stocks of the four principal companies increases, especially since the traffic returns to date show a substantial increase in comparison with the corresponding period of the previous year. From the speculative point of view perhaps the most popular ordinary stock is that of the Buenos Ayres and Pacific. A year ago this stock received a dividend of 7 per cent., but the market looks for an increase to $7\frac{1}{2}$ per cent., which at the present price would give a yield of about 8 per cent. Central Argentines, whose gross traffic receipts already show an increase of over £1½ millions, a year ago received a dividend of 6 per cent., but an increase to 7 per cent. is spoken of, which would also give a yield of about 8 per cent. at the present price. Last year's distribution of 8 per cent. on Buenos Ayres Great Southern ordinary stock is expected to be repeated. If this anticipation proves to be correct the yield at the current price would be about $7\frac{1}{2}$ per cent. The Buenos Ayres Western received 7 per cent. a year ago, which gives a yield of $7\frac{3}{4}$ per cent. An increase to $7\frac{1}{2}$ per cent, which is regarded as possible, would make the return about 8 per cent.

Lyons' Profits.

Although the accounts just published cover the strike period the profits disclosed in the annual report of J. Lyons and Co., the well-known caterers, have been more than maintained, amounting to £757,200, as compared with £756,000 for the preceding year and £718,600 for 1924-25. The reserve fund is again credited with £100,000, and while the dividend on the ordinary shares is unchanged at $21\frac{1}{4}$ per cent. the total dividends cost a little more, but the carry forward is nevertheless increased from £49,000 to £53,000. This is an excellent showing and emphasises the prosperity of this well-managed concern. The report

mentions that twelve new establishments have been opened during the past year and that additional premises have been acquired. In order to provide further capital to meet the expansion of business the 7 per cent. preference capital is to be doubled by the creation of 2,000,000 7 per cent. preference shares, of which one million are to be offered shortly to shareholders. At the current quotation the ordinary shares yield just over 5 per cent.

New Era for Westralian Mining?

For years past mining in Westralia—and especially gold mining in the Western State—has been but a shadow of its former self. In the main this is the outcome of the exhaustion of the richer deposits; but increased wages and taxation have played their part. Redirection in the prosperity of a mining industry anywhere speedily has a repercussion in trade and business circles. Endeavours have been made—without success—to bring relief to Australian gold mining in the shape of a Government subsidy on production; a thoroughly unsound policy. The weakness of the present position has been pointed out in the report of the committee appointed to investigate by the Development and Migration Commission. There are too many different, and to some extent rival, undertakings; existing treatment plants are in the main inefficient; waste occurs under various headings. The remedies suggested by the Committee include consolidation, co-operation, and the introduction of improved treatment methods. More radical methods are scarcely warranted by the development position. But even the measures recommended will involve some outlay; how the money is to be provided remains to be seen.

A final dividend of 3 per cent. is proposed by the directors of the Bank of British West Africa, making 5 per cent., less tax.

The production of crude by the British Burmah Petroleum Company and the Rangoon Oil Company for May amounted to 44,226 barrels.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended May 20 amounted to £E7,997, making the total from April 1 £E37,067. The figures for the corresponding periods of 1926 were £E7,987 and £E39,668.

The Bengal Coal Company, Calcutta, announces a profit of Rs.1,145,000 for the half-year ended April 30, 1927, including Rs.135,000 brought forward. The dividend is at the rate of 40 per cent. for the year.

The production of Hamilton's Oil Concessions for the week ended June 3 was 52 tons. Well No. 8 restarted flowing; production for 12 hours about 36 tons; flow continues. New well No. 9 successfully passed water test and drilling resumed. New well No. 10, 746 metres.

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclay's Bank, Ltd., contains the following reports:—

Egypt.

Alexandria, May 28.—Cotton—The local market has shown strength, owing to continued unfavourable crop advices from America, but the movement has been largely speculative, legitimate trade being conspicuous by its absence. Spot cotton, therefore, has been neglected and premiums have fallen in consequence. Sakellarides is completely out of favour and is obviously suffering from the competition of Sudan Sakel, which is underselling Egyptian by 3d. per lb. There is more demand for Uppers, but the stock is large and owing to the liberal supply, premiums have suffered. Ginning in the interior has been stopped by the Government, but cotton still continues to arrive. New crop reports are excellent.

Cotton Seed.—After a fair demand and a consequent spurt in prices at the beginning of the month, the market became stagnant, and aroused little interest. Stocks are ample for existing demands, and though local consumption continues to be on the heavy side, premiums have fallen, owing to the large supply of good seed arriving from the interior, not required for planting.

Cotton Goods.—The statistical position has improved, and prices are steady in sympathy. The stock is 8,700 packages, weighing 2,600 tons, of which 3,200 packages weighing 1,600 tons are Manchester goods.

Miscellaneous.—The flour market is active and prices are steady in sympathy with American markets, but the tendency is uncertain, owing to the large quantity afloat. Quotations are Australian Spot £15½; May shipment £15½. Stocks of wheat are decreasing, but of other cereals are increasing. Prices remain unchanged, except for wheat, which dropped by 10-12 per cent. owing to heavy arrivals of Australian flour and approaching arrivals of the new crop. The market for Indian rice is quiet, in consequence of the keen competition of Egyptian rice. Stocks amount to 147,000 bags.

The Sudan.

Khartoum, May 27.—The market in cotton piece goods is fairly good and prices are steady. Other imports show regular sales, but the quantities are not large. Coffee prices dropped from 400 piastres per kantar to 385 piastres, in anticipation of the arrival early in July of the new crop at slightly slower prices and the probable carry over of 4,000 kantars. Arrivals of gum are steady, but demand is weak. Prices are Kordofan natural 38s., cleaned 40s. per cwt. c.i.f. United Kingdom. The cotton picked to the end of April amounts to Sakel 135,000 bales and American 14,400 bales (one bale—400 lbs.), the total crop being estimated at Sakel 144,000 bales and American 15,000 bales.

The general situation is improving, good rains in the

South and early rains in the Blue Nile Province making the position more hopeful.

Palestine.

Jerusalem, May 30.—The failure of the orange season is reflected in the markets and trade conditions have consequently been depressed. The sugar market, after showing a good deal of strength, is again quiet, and prices tend to fall. Quotations are Java £17½, Cuba £17½, Czecho Slovakia £17½, Russian £17½ c.i.f.

Alexandria coffee prices are declining, quotations being Minasse 73s. and Santos 89s. The rice market has been very restricted, but prices remain nominally steady, while in flour, although the market maintains its activity, business is difficult.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, June 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Anchoria for Calcutta (Birkenhead, June 23); s.s. Mangalore for Calcutta (Birkenhead, June 30).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, June 29).

British India Line.—S.s. Domala for Bombay and Karachi (London, July 2); s.s. Margha for Colombo, Madras, and Calcutta (London, July 2).

Cunard Line.—S.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, June 22); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool June 25, Swansea June 28).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 25).

P. and O. Line.—S.s. Malwa for Bombay (London, June 17); s.s. Delta for Colombo, Madras, and Calcutta (London, July 9).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 22); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, July 6).

Ellerman and Papayanni Lines.—S.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 29); s.s. Roumelian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool July 9, Swansea, July 14); s.s. Lesbian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 16). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The Egyptian State Railways have received six offers for the construction of fifteen bridges on the Cherbin-Kallin line (says a Reuter message). The tender of Dorman, Long and Co., Ltd., was the lowest at £E6,752. The Baume-Marpent concern quoted £E6,942, and a German company £E11,690.

The directors of Harrisons and Crosfield have declared a dividend on the cumulative preference shares at the rate of 6 per cent. per annum for the three months ending June 30, 1927; and on the preferred ordinary shares at 10 per cent. per annum for the six months ending June 30, 1927. Warrants will be posted on June 30 to shareholders registered at that date, including approved transferees in respect of transfers lodged at the company's office not later than June 15.

During the season which has just concluded, Great Britain purchased 1,803,368 boxes of oranges from Palestine, or 446,000 more than last year (says a Reuter message from Jerusalem). The principal towns of entry were Liverpool (620,447 boxes); Glasgow (423,804); Hull (301,432); and Manchester (306,186). In view of the favourable prospects for the exports of grapes, particularly to England and Egypt, ways and means are being considered to secure appropriate packing and transport conditions for the fruit, which has been widely and successfully planted in late years.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

NOTES FROM ALBANIA.

(From Our Own Correspondent.)

Scutari, May 25.

The National Bank Report.

The report of the National Bank,* signed by M. Mario Alberti, does not refer only to the bank itself; it deals also with another institution, in form independent but actually a powerful auxiliary of the bank, and one which Albania has had to accept and put up with at the same time. That is the Svea, Company for the Economic Development of Albania, a purely Italian concern.

The Svea is the company which advanced to Albania a loan for forty years of 50,000,000 gold francs. This debt Albania will not be able to redeem, even if she finds the money necessary to free herself; the interest on these fifty millions is five millions, at the rate of ten per cent., for the payment of which and of the capital the Customs of Albania and the State Monopolies are allocated. Further, Albania is pledged not to carry out any public works without the consent of the Svea, which, in equal conditions, has to receive the preference over any other concern taking part in adjudications.

The report mentioned, among the works carried out or in the course of execution, roads, the bridge of reinforced concrete on the Mati between Durazzo and Scutari, the jetty at the port of Durazzo, and the project for a railway between that port and Tirana.

The report refers also to the "Société pour les magasins et entrepôts généraux" of Albania, whose warehouses are already constructed at Durazzo and are designed to facilitate the trade of the country; this company is in close relations with the bank and the Svea.

Finally, the report gives the text of an agreement of fifteen articles according to which the National Bank of Albania is called upon to carry out the service of the Treasury.

I propose to take advantage of the opportunity that my analysis of the report gives me to refer to two other matters:

(1) The communications by sea between Albania and Italy are being intensified by the establishment of three

* Details of the report are given in the first part of this letter in THE NEAR EAST AND INDIA of June 9.

sailings weekly between Bari and Durazzo instead of one up to the present time.

(2) The advance made by the Svea, the 50 million francs, has been deposited in the Italian banks, in Italian liras at a rate of 4 liras 85½ centimes for a gold franc, which represents 242,734,000 liras.

The senator, M. Eshref Frasheri, the week before last asked that these liras should be retransferred into gold francs, taking advantage of the present exchange, which would mean to the Albanian State a profit of 16 million gold francs. The Finance Minister has been invited to carry out this project.

Besides the National Bank there are also in Albania two other banking institutions, the branches of the Bank of Athens at Durazzo and Koritza, and the branch of the Banque Serbe at Scutari.

ROAD CONSTRUCTION IN NORTHERN PERSIA.

The construction of the caravan road from Mosul, via Rowandiz, to Tabriz, Persia, was to be resumed early in the spring. The road expert of the American financial mission has visited Tabriz in connexion with this and with the Government's plans to improve the Trebizond highway (says the American Consul at Tabriz, Mr. A. W. Ferrin, in a recent report).

The Trebizond road was the principal link between Azerbaijan, in northern Persia, and the outer world; it was also one of the most important routes into and through central Persia until the building of the Russian railway extension from Julfa to Tabriz. The Russian railway diverted so much outbound traffic from the road that caravans, having sometimes to go to Trebizond half-loaded, were compelled to increase their charges for bringing goods into Persia. This threw imports also to the Batum-Julfa rail line. The road was demoralised by the World War, many battles of which were fought on its route, and later by the Kurdish disturbances, until now it is used only for the slowest freight and is practically impassable for any vehicles but two-wheeled carts. It is proposed to make it a motor road, thus reducing travel between Tabriz and Trebizond to five days instead of the weeks now required.

The Rowandiz-Mosul road will bring Tabriz much closer to Baghdad than it is now, and the two roads together will greatly diminish Azerbaijan's commercial dependence on Russia.

Improvement of the Teheran-Tabriz road also is included in the programme. This improvement is of more political than commercial consequence, in comparison with that of the other two roads named, but will probably result in larger trade between the parts of the Persian Empire.

The National Bank of Greece has reduced its rate of discount from 11 to 10 per cent. It has stood at 11 per cent. since July 7, 1926.

The gross production of crude oil by the Phoenix Oil and Transport group of companies for May was 44,280 tons. This is a record output. The production for April was 31,565 tons.

Yugoslavia's exports in 1926 amounted to 4,884,178 tons as against 3,398,466 tons in 1925 and 3,915,700 tons in 1924. The weight of the imports in 1926 was 1,241,054 tons as against 1,513,862 tons in 1925.

W. T. Henley's Telegraph Works Company, London, have received a contract for the supply and erection of 269 miles of overhead line on lattice steel towers, in connexion with the electrification of the main line of the Great Indian Peninsula Railway. The conductors will be of steel-cored aluminium for a working pressure of 110,000 volts. Two parallel double circuit lines will run from Kalyan Power Station to Kalyan, a distance of 2½ miles and from there two parallel single circuit lines, one on each side of the railway track, will run north to Igatpuri, 50 miles away; and two parallel single circuit lines will run south to Kirkee, 82 miles away. These lines will supply current to the railway from Igatpuri to Poona.

BULGARIAN MARKET FOR AGRICULTURAL EQUIPMENT.

Bulgaria, under favourable circumstances, offers a good market for agricultural equipment. However, the value of the lev, the unit of Bulgarian currency, has been maintained at the low level of approximately 0.0074 dollar for considerably more than two years and this has had a very unfavourable effect upon the importation of agricultural implements from countries having a higher exchange rate (says an American Consular report).

The Government is endeavouring to educate the peasant to the advantages of scientific farming through several agricultural experiment stations, but the farmers are conservative and are generally averse to the use of new or modern methods of agriculture. Advancement in farming, therefore, is necessarily slow, and in many cases primitive methods are still in use. A small percentage of the agricultural population, which represents about 85 per cent. of the inhabitants of the country, is beginning to appreciate the advantages derived from the use of modern implement and machinery. There is a trend towards the more extensive use of modern agricultural implements, although labour is abundant and the wages are low. Most of the farm hands are fairly intelligent, but have had little or no training in modern methods of agriculture.

Agricultural implements are one of the most competitive lines on the Bulgarian market, and owing largely to favourable credit terms and proximity to the market, European implement manufacturers secure the bulk of the business. There was an increase in purchases of American implements in 1926. The principal suppliers of implements to Bulgaria were Germany, Austria, Great Britain, Hungary, and Czechoslovakia. All are anxious to share in the trade and the European manufacturers frequently offer extremely favourable credit terms, since the Bulgarian farmers have a limited amount of working capital and in order to purchase farm implements at all must have credit. Long-term credit is necessary to meet their requirements and there are European manufacturers who are willing to provide it. Some German and Austrian firms offer as much as two and a half years, and in some instances even three years. The granting of credit, therefore, is an important factor in the Bulgarian market, one that has a substantial effect on importations from the United States.

The small size of the farms in Bulgaria, as well as the rocky nature of the soil in parts of the country, call for special types of implements. European manufacturers are generally familiar with conditions in Bulgaria and cater for the special requirements of the market. American standard sizes, however, in some lines, like tractors, farm engines, and binders, are adaptable to Bulgarian conditions and have good sales. Most of the ploughs

used are furnished by European manufacturers, and threshers are also purchased principally from European producers, most of those in use coming from Hungary and other countries of Central Europe. American firms had most of the trade in threshers before the War, but the market has now turned largely to European makes as a result, no doubt of the favourable credit terms granted by European manufacturers. There is a fair market for spraying and dusting machines for use in vineyard work, and much interest is being shown in spraying generally because of the heavy losses to other crops from plant diseases and insect pests. Knapsack sprayers are largely used, most of them being French and German makes. In one line, however, American implements dominate the market, and that is in tractors.

CHESS.

By "CARO-KANN."

The solution to last week's pawn study is as follows:—1, K—Kt2, K—Kt3; 2, K—R2, K—B3; 3, K—Kt3, K—K3; 4, K—Kt2, K—K4; 5, K—B3 and the game is drawn, for while Black can exchange pawns he cannot force the remaining pawn through.

I give this week another similar study.

The production of the Dacia Romano Petroleum Syndicate for May was 3,338 tons. Fourteen wells were in production, seven wells are in drilling and one is being fitted up.

In connexion with the Yugoslav-Albanian dispute Albania is stated to have forwarded a request to the League of Nations that the League should circularise the Member States acquainting them with the situation from the Albanian point of view.

The Mizpah expedition of the Pacific School of Religion, under the direction of Professor William Bade, which is investigating the city of Tel-el-Nisbh, seven miles north of Jerusalem, recently discovered an exceptionally fine, well-preserved Israelite house of the seventh century B.C., including the street entrance, several rooms, a large stone basin, the bread trough, and a private cistern behind the house. A large four-handled earthenware pot, containing the remains of food, was found still embedded in the ashes of the fireplace, left there when the inhabitants departed 2,500 years ago.

Company Meeting.

BURMAH OIL COMPANY.

A Prosperous Year.

Uncertain Market Outlook.

Sir John Cargill's Speech.

The annual general meeting of the Burmah Oil Company, Limited, was held on June 10 in the Merchants' Hall, Glasgow.

Sir John T. Cargill, Bt. (chairman of the company), presided over a large attendance of shareholders.

The Chairman said:—My lord, ladies, and gentlemen,—I presume that, as usual, you will allow us to hold the notice calling the meeting, and also the reports and accounts which have been in your hands for some days, as read, and I would merely ask the secretary to read the auditor's report.

Mr. F. G. Holdsworth (the secretary) read the auditor's report.

The Chairman, continuing, said:—My lord, ladies, and gentlemen,—My reference at our last annual meeting to the conditions and characteristics of the petroleum market as a whole, and to our own prospects for the year, which had then run almost half its course, has been fully justified by the events. The industry then appeared once more to be achieving the equilibrium between production and consumption necessary to those sound and stable price levels which are as vital in the case of petroleum to trade generally as in the case of other commodities, but, warned by past experience of the rapid changes to which the petroleum industry is peculiarly prone, I hesitated to embark on the uncertain seas of prophecy and confined myself to an expression of confidence in the continued prosperity of your company.

State of the Industry.

And once again the not entirely unexpected happened. Arrested on its forward swing to the more stable situation so much to be desired in the best interests of the industry and of all dependent on it, the pendulum of United States production only shortly after I had spoken swung round to a spate of over-production unprecedented even in the record-breaking history of that wonderful country, and the prolific sands of Seminole coming on the top of the enormous expansion in the volume of light petroleum distillates secured in recent years from cracking and casing head sources, returned the whole industry to still another phase of price conditions which, if not definitely unprofitable for a great deal of the world's production, cannot be sufficiently profitable to be in the best ultimate interests of consumers and the industry alike. That very fact will, as usual, provide the remedy in due course, but the process is likely to be a somewhat painful one for many producers.

Even with such a possibility as this before me, however, I felt justified in the confidence I expressed in our own immediate prospects, and I think you will all agree with me that the accounts you have before you provide ample confirmation for that confidence.

I characterised your 1925 balance-sheet as the finest and strongest I had had the pleasure of submitting to you during the 22 years of my chairmanship, but I have no hesitation in saying that that for 1926, which I am now submitting to you, marks a still further improvement and puts your company in a position from which you can regard with reasonable composure those periodical cycles of depression through world over-production so characteristic of the industry as a whole.

Increased Profit.

Despite the lower values ruling for the company's products during a considerable portion of the period, the improvements and economies referred to in the report have secured an increased balance of profit in the profit and loss account of £235,024 2s. 6d. at £2,478,075 4s. 9d., and the balance to the balance-sheet is higher by £284,004 os. 1d. at £2,526,721 17s. 6d.

Depreciations, it will be observed, are slightly up. The allocations to general reserve, insurance reserve, and field expenditure equalisation reserve aggregate £370,000 as in recent normal years and increase these reserves to £600,000, £480,000, and £450,000 respectively, while the fire and marine insurance account has been increased to £851,608 18s. 7d. by £89,736 5s. 11d. of net premium revenue earned in the period.

Refinery block, again liberally depreciated, shows a net increase of some £72,000 consequent on the further advance made with concentration and reconstruction.

The oilfields block has been kept down to the same very low and conservative figure we have shown in recent balance-sheets, and field electrification account shows a net decrease of some £80,000, while tankers and tank installations account has been reduced by some £63,000.

Sundry creditors are some £300,000 up, while sundry debtors stand at about last year's figure and loans, deposits, cash, etc., are up by fully £180,000.

Investments at £6,834,578 13s. 6d. are up by over £1,000,000, but have yielded some £77,000 less income mainly for the reason mentioned in the report, and, finally, the carry forward at £453,469 7s. is greater by some £57,000.

The Dividend.

The interim dividend of 10 per cent. paid in November was 2½ per cent. less than for 1925, but, paid as it was on a capital greater than that of 1925 to the extent of the bonus shares distributed in 1926, it actually represented an increased distribution of £37,739 12s. 9d. on the 1925 figures. In all the uncertain circumstances of the petroleum market at the moment your board does not feel justified in recommending a larger final dividend than 20 per cent. This at £1,207,668 7s. will require £188,698 3s. 8d. more than in 1925, and with the interim dividend of 10 per cent., the distribution for the year of 30 per cent. subject to tax, or the equivalent of 40 per cent. subject to tax on the issued ordinary share capital before the above share bonus distribution, will, I feel confident, be regarded by shareholders as a whole as a most liberal and gratifying one.

The company's employees' provident and profit-sharing fund capital, removed last year from the balance-sheet, now stands at £1,575,545 19s. 2d. The difference between that amount and the £998,940 14s. 8d. of War Loan taken out of the company's investments and invested in the names of trustees for the fund at the end of 1925 will be taken and treated similarly in respect of 1926.

So much for the year's financial results and your board's proposals with regard to them which I will formally put to you on the conclusion of my remarks. As regards the actual operations behind and responsible for these results, there is really little I can usefully add to the report itself which would justify my keeping you for the extra time I would require to detain you. In recent years particularly, I, and your managing director also, have given you intimate and detailed insight into every aspect of your business. In its broad essentials it has not changed during the year, and, as I have said, the report with the accounts gives you a concise but completely comprehensive survey.

Position on the Oilfields.

The oilfields in India held on prospecting licence and/or lease from the Secretary of State are, of course, the keystone of the arch of the whole of the operations and interest of the company there. Apart from its outside investments, your company's present and future depend entirely on its enjoyment to economic exhaustion of these concessions and on their degree of productivity in the period and the relation of the cost to the value of production. My annual speeches have kept you completely *au fait* with the untiring and unstinted efforts your company has consistently put forth both to discover new fields in India and to develop to the economic hilt those which already exist mainly as a result of your own earlier enterprise. Such a policy must have the firm foundation of security—security of tenure and of the enjoyment of the rewards of our own expenditure and enterprise. Without that it would be impossible, and the heavy return of surplus profits to the industry would not be justified. So far as these surplus profits have been returned for the testing of the possibilities of new fields, they have up to date unfortunately met with no reward, but, "hope triumphing over experience," we continue our efforts in that direction wherever there seems any prospect of success. For the rest, the situation is the unchanged one that proved fields are yielding our requirements only at the expense of greatly intensified drilling operations involving annually increasing expenditure. In the small freehold producing area under operation at Bodarpur in Lower Assam a deep test is now in progress, but unless this reveals more prolific or valuable oil the field there cannot have a much longer life. As it is, it is being carried on the back of our general position. It could not exist independently as an economic proposition, and failing satisfactory results from the deep test to which I have referred, or royalty terms more in relation to the value of its oil, its continued operation much longer by your company may be impossible.

The Assam Oil Company.

On the other hand, our friends the Assam Oil Company, Limited, continue, under our management and with the assistance of our resources, to improve their position, and, while it is unlikely that their territories can add very materially to the indigenous petroleum resources of India, they and we are hopeful that they will be a useful factor in steadying the curve of the decline in these resources.

Electrification of the Singu Field of Burma is being pushed forward as rapidly as possible and current should be available there before the end of the year.

Refinery reconstruction and concentration, interrupted by the recent United Kingdom labour troubles, is now being rapidly pushed forward to completion and should be consummated by the end of this or early in next year.

I have already referred to market conditions affecting last year's results. Petroleum commodity values have since suffered further serious declines which must react to some extent on the results of our trading operations, and with the outlook at the moment so uncertain I would be extremely foolish if I to-day attempted to give you a forecast of what the results of the current year's trading are likely to be. You have in any case the satisfaction that, thanks to the conservative policy which your board has consistently followed and you have confirmed in the past, your company is as well placed as the best—and much better placed than most—to regard with reasonable equanimity the vacillations in values which are so characteristic of the petroleum industry.

Phenomenal Progress.

You will all, I am sure, have read with much interest the outline of the history of your company received with the annual report. This reprint of one of a series of articles appearing in the *Daily Telegraph* on some of the principal commercial and other enterprises of India and Burma was written by your managing director, Mr. R. I. Watson, to whose untiring energies and great ability so much of the success of the company in recent years has been due. It gives a vivid picture of the phenomenal progress and wonderful developments of the company since my late father started it in 1886 with the very modest issued capital of £60,000—now increased to £10,868,256, with a market valuation of over £53,000,000—and will have brought home to you and to a wider public what it has directly contributed to the prosperity and general progress of Burma and India in so many directions through its widespread and varied operations and activities there, and indirectly the millions of pounds it has saved the native population of our great Indian Empire through its broad-minded and self-denying kerosene maximum price policy carried on without a break from 1905 to the present day.

Burma University.

Some of you may be aware of the movement which, after years of incubation, has at long last succeeded in securing for Burma its own University. Under the relative Act the nucleus of this is the old Rangoon College, and the Judson College, the former a State educational institution and the latter a foundation of the American Baptist Missionary Society, which has done so much for the education of the Province. Government has made itself responsible for the cost of part of the scheme, but the State aid available is not sufficient, and cannot be anything like sufficient, to finance the creation and regular running of a University on the scale and to the effect essential if the University is to fill adequately and efficiently the functions which are generally recognised to be those of such institutions. While opinions may differ as to methods of education, there can at this time of day be no two opinions as to the value of it to the individual and through him to the State, and to the appeal which the new University authorities have issued in Burma for private financial support I feel confident that there will be still further generous response to that which has been already given. While one might almost think from what one hears and reads on occasions that the association of your company with Burma and India has been entirely one-sided in its advantages—and that side the shareholders of the company—Mr. Watson's brochure will, I hope, do something to correct loose thinking of that sort. Your board is and I am sure you all are also fully conscious and appreciative of the benefits which the company has secured from that association and will feel, like your board, that an opportunity presents itself here of marking that appreciation by helping to advance the higher education of our friends in Burma.

Offer of £100,000.

At the same time your board has felt that a more directly practical turn should be given in the assistance which we contemplate to this scheme than might be secured by a donation to the general purposes of the University. To assist applied and not merely, or at least solely, higher general education will we feel convinced be the line best calculated in such a country as Burma to give the young Burman the opportunity to advance both his own position and the development of his country. Your directors have therefore decided in that direction to offer the University authorities a sum of £100,000 to establish a College of Mining and Engineering in the new University to be associated in some way with the name of your company. In the light of all that I have said I am satisfied that this decision will have your unanimous and cordial approval, and I am hopeful, if our offer is accepted, that the College of Mining and Engineering will in due course further our own efforts to find among our Burmese friends keen young men to take and fill efficiently technical positions of greater responsibility in our organisation in their country than has been possible in the past.

Tribute to Employees.

I referred last year to the labour troubles in the early part of that year in the Burma fields. Since then labour there, and elsewhere,

with the exception of recent and isolated trouble in our installation at Madras, has been working steadily and well, and I can only repeat here once again that we make it our constant and especial business to see to it that our labour everywhere has no economic or other cause for complaint at the conditions under which it serves your company and that these conditions are second to none in the Indian Empire.

Here I would like to ask you to confirm the expressions, which have already been conveyed to all your employees in the East and on this side, of the board's appreciation of their untiring and whole-hearted efforts in the company's interests during the past year. We have a loyal, capable, and energetic body of men—in the East working under difficult conditions—all pulling together and giving of their best not only to advance your business but, through it, to give the best possible service to the consumer with a commodity which plays such an important part in the whole life of India.

Visit to Anglo-Persian Company's Properties.

Last winter—in company with two of my colleagues on the Anglo-Persian Company's Board, Mr. W. Fraser and the late Mr. H. E. Nichols—I paid a most interesting visit to Persia and inspected the properties and operations of that great company in which your company holds such a large stake. The pleasure of the trip was marred by the sad death in Persia of Mr. Nichols, and here in a word I would like to pay my personal and public tribute to the memory of one with whom I was closely associated in connexion with the Persian oil concession and the Anglo-Persian Oil Company for over 20 years—who gave up almost his entire life and energies to its affairs and laid down his life in its service—and for whom I had the greatest admiration and the sincerest regard.

Having from this side closely followed every move and development of this great enterprise since 1905, when the Burmah Oil Company formed the concessions syndicate to test—and in the end successfully prove—the Persian oil concession held by the late Mr. D'Arcy, you will understand with what deep interest I visited the scene of its activities and wonderful developments in Persia. I will not attempt to describe what I saw, or venture to comment on the company's present position or prophesy as to its probable future. These are the prerogatives of the company's chairman, who always deals with them very fully and in a masterly manner at the annual meeting, and I will merely say that I was deeply impressed by the extent and richness of this wonderful oilfield the company has already proved; by the completeness and efficiency of the company's works and whole organisation, and by the keenness, loyalty, and enthusiasm of the whole staff, and I feel that I can again congratulate the shareholders of the Burmah Oil Company on their large interest in an enterprise which apparently possesses every element and prospect of a great and prosperous future.

"In the Interest of Historical Accuracy."

Like your own company, the history of the Anglo-Persian is sufficiently romantic in itself to be able to dispense with anything in the shape of adornment of the plain tale, and, since Mr. Watson's brochure incidentally disposes of some of the adornments which have gathered round the history of the Burmah, perhaps I might here be permitted once and for all to "lay" the apocryphal cable to Persia to the late Mr. Reynolds to which, metaphorically, he is alleged to have done as Nelson did at Copenhagen—turned a blind eye—or rather a deaf ear! While it is true that the directors of the concessions syndicate—of whom I am unfortunately the only survivor—had under serious consideration the abandonment of the syndicate's operations in Persia and had made all preparations for that eventuality in the event of oil not being struck in the Musjid-i-Suliman test at or above 1,500 feet—the depth their geological advisers had recommended drilling to—no instructions finally to abandon operations were ever sent to Mr. Reynolds either by letter or by wire, and oil was eventually struck at 1,180 feet. In the interest of historical accuracy it is perhaps as well that such frills as these should be removed from the story while there are those still alive who can, with real and documented knowledge of the facts, remove them.

I now beg to propose: "That the report of the directors and audited statement of accounts, including the balance-sheet and profit and loss account to December 31, 1926, presented at this meeting, be

received, approved, and adopted," and I shall call on Mr. R. I. Watson, our managing director, to second this motion. After the motion has been seconded an opportunity will be given to the shareholders to ask questions or make any remarks.

The Discussion.

Sir Frederick C. Gardiner, K.B.E.: Mr. Chairman, ladies, and gentlemen,—You, Sir, have invited any shareholder to make any observations or to ask questions, and I avail myself of that invitation, in the first place, to congratulate you, Mr. Watson, and all who are associated with you in the direction of this company, the staff at home and abroad, and, indeed, all who are in its employment, on the very splendid report you are again able to submit to us. There is one announcement you have made in your speech which appeals to me very specially, and it is really in order to further that that I venture to say a few words. It is your proposal to contribute the sum of £100,000 to the University of Rangoon for the purpose of setting up a college of mining and engineering. I think that is a peculiarly fitting direction in which you should give further testimony of your deep interest and sympathy with our great Eastern Dependencies. The history which you circulated to your shareholders, drawn up, as I gather, by Mr. Watson, showed that the Burmah Oil Company, while it had been developing this great field, had not been forgetful of the interests of the millions and millions of our fellow-subjects in India and in Burma. You are not there to exploit the resources of Burma and of the workers, and to take the last penny out of them, if I may say so, but you have shown your sympathy with the very great mass of the poor people of India by supplying them over a course of years with their oil, their kerosene, at a price substantially below the world's price, and now, in another direction, out of your affluence, you decide to contribute £100,000 to this university, which has my own very cordial support, and, I cannot doubt, will have the support of every shareholder present.

Suggested College of Chemistry.

But one suggestion I venture to make for your consideration. For many a year we had much talking, one might almost say babbling, about German chemists, and nothing was done, or very little done, to challenge their undoubted supremacy; but at long last, if my memory serves me right, the oil companies banded together and contributed to Cambridge University something like a quarter of a million sterling in order to provide that something worthy of the industry might be done in that direction, and it occurs to me that chemistry must have some very intimate connexion with the Burmah Oil Company, and that it would be appropriate that this company should do something for chemistry as well as for those two other subjects. It may be that some of the large companies in Burma, such as the Burma Corporation, may have already contributed, or may have it in their minds to contribute adequately for a chair or college of chemistry, but, if they have not, might I in a word respectfully suggest to the consideration of the board, and to you, ladies and gentlemen present, whether it would not be a very fitting thing to do something for that great subject? Let me, in conclusion, say that the setting up of this chair will be a lasting monument, which will test the fact that the Burmah Oil Company has been something more than a mere money-making concern, extracting the last penny out of Burma and of India, and it will be a monument to our sympathy with all our fellow-subjects in our Great Eastern Dependencies. (Cheers.)

The Chairman: Are there any other remarks any shareholder may care to make, or question to ask?

No questions being asked, the Chairman said:—I would merely thank Sir Frederick for the very kind way, and generous way, in which he has referred to the directors' decision. While we have in our deliberations decided that the establishment of a college of mining and engineering is the direction in which our donation would be best spent—and we have had in our minds that the university will make ample provision for chemistry—we certainly will take into consideration what Sir Frederick has said. I will now formally put to the meeting the resolution which has been moved and seconded.

The resolution was declared carried unanimously.

The Chairman: I have now pleasure in moving "That the dividend on the ordinary shares recommended by the directors, at the rate of 20 per cent. per annum, 4s. per share, less tax, for the year, be adopted, and that the same be hereby authorised to be paid on June 17, and that the balance of £453,469 7s. be carried forward.

Mr. David Young: I have very much pleasure in seconding the motion so nicely put before the meeting by Sir John Cargill.

The motion was carried.

The Chairman: I now beg to move, "That Sir Campbell K. Finlay be re-elected a director of the company." In that connexion I would just say that Sir Campbell Finlay has been laid up in a nursing home in London for a week and has been unable to come North. I am glad to say he is getting on all right.

Mr. W. J. Hill: I beg to second the motion.

The motion was approved.

The Chairman: I beg to move, "That Mr. G. C. Whigham be re-elected a director of the company."

Mr. James A. MacArthur seconded, and the motion was approved.

The Chairman: Lastly, I have pleasure in moving "That Mr. David McCowan be re-elected a director of the company."

Lieutenant-Colonel D. S. Morton seconded, and the motion was approved.

Mr. Alfred Macdonald: I beg to propose the reappointment of Mr. James Herbert Wilson, C.A., as auditor for the current year.

Mr. Thomas H. Gollan seconded, and the motion was approved.

The Chairman: That is all the business, ladies and gentlemen, and I thank you for your attendance.

Vote of Thanks.

Mr. J. A. Ralston Mitchell: Ladies and Gentlemen,—Before we leave the hall I am sure it is your pleasure, as it is mine, that we should accord to Sir John Cargill a very hearty vote of thanks for presiding over this meeting to-day. I understand this is the 23rd consecutive year in which Sir John has been present at the annual meeting of the Burmah Oil Company. We welcome him all the more to-day when we realise that he has just risen from a bed of sickness in order to maintain the continuity of his chairmanship. We hope, Sir John, that your noble effort to be with us to-day will cause no bad results. We again congratulate you and the directors on the progress and development of this great organisation during the last year, and we would also thank you for the carefully considered indication as to the prospects for the current year. I should also, on behalf of the shareholders, like to thank you, the board, and more especially Mr. Watson, for the most interesting and attractive brochure which we shareholders received along with the annual report. (Cheers.) It was, I think, a very happy thought to send it to us, and I can assure you it is very much appreciated by your shareholders. Last year I visited Burma, and through the great kindness of your officials I had an opportunity of going all over that great and prolific field of yours at Yenangyoung. I was greatly struck by the power station there, which is second to none in the world. I have also had the opportunity of being taken over the new refining plant at Syrian. It is most up to date, and was, while I was there, approaching completion. I am sure it will prove a great benefit to the company. With regard to the finances of this company, we shareholders would like to refer to the conservatism with which it has been managed in the past, for we realise that it is owing to that conservatism that we are in the proud position of being such a powerful company to-day (Hear, hear.) Ladies and gentlemen, I will not detain you longer, but would merely ask you to accord Sir John Cargill a most hearty vote of thanks for his presence in the chair to-day and to give him our assurance that he has our entire and continued confidence. (Cheers.)

The Chairman's Reply.

The Chairman: Mr. Mitchell, ladies, and gentlemen,—For so long now, the 23 years that Mr. Mitchell has mentioned, that I have presided at the company's annual meeting I have had each year to try to convey to you my thanks for the vote of thanks which has always been proposed in a similar kindly way to which Mr. Mitchell has proposed it, and also has been accorded in the same hearty way you have kindly done, and I feel it is very difficult for me to say anything new; but when I look round this meeting and see so many bright and happy faces—(laughter)—I feel that really, in a way, I have earned a vote of thanks for sending so many of you away from this meeting in such a happy and contented—I won't go the length of saying optimistic—frame of mind—(laughter)—that my speeches somehow or other seem to engender. There is something quite new in having a shareholder proposing a vote of thanks who has recently visited your properties in the East, and I think, from what Mr. Mitchell has said, that you will all feel that anything I have ever said in praise of our people and what they do to carry on your business has been fully justified. (Cheers.) I have said it before, and I say it to-day with the greatest confidence, that under the able command of Mr. Watson, your managing director, and Mr. Whigham, your assistant managing director—who, I may mention, is going to pay a visit of inspection to India and Burma this coming cold weather—we have a staff which for loyalty to the company, for enthusiasm in their duties, and for ability to carry out those duties, is second to none, not only in the oil world, but in the whole world of commerce. (Cheers.) It is to the efforts of your staff and those gentlemen that the continued progress and prosperity of the great company are so largely due; and while to-day the oil world is undoubtedly passing through trying times, due to the passing phase of over-production, which will come to an end one of these days, I personally to-day look forward with greater confidence than ever to the future of this company with which I have been so closely associated from its infancy. (Cheers.) I would only thank Mr. Mitchell again most cordially, on my own behalf and on behalf of my colleagues, for the extremely kind remarks he has made, which, I can assure him, are most cordially appreciated. (Cheers.)

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report dated June 2 state:—

Since our last report the futures market has been somewhat less active and fluctuations have not been so wide. The week's summary of price movements is as follows:—
Sakellaridis: July, 32.17 dollars; 0.13 dollars down; November, 32.90 dollars, 0.17 dollars down; January, 32.70 dollars, 0.12 dollars down. Ashmouni: June, 23.88 dollars, 0.33 dollars up; August, 24.35 dollars, 0.30 dollars up; October, 24.97 dollars, 0.40 dollars up; December, 25.07 dollars, 0.40 dollars up; February, 25.37 dollars, 0.40 dollars up.

Sakel.—This market has been quieter than recently but the tone, on the whole, is rather firm. Although latest advices received from Lancashire report some improvement in textile conditions, the demand has again fallen off but this may be put down to the fact that the English mills, our best customers for Sakel, at the moment find it advantageous to take Sudan cotton for their requirements. Most of the business continues to be concentrated on the November option. There has been some selling out of long holdings of November during the week. The selling was not at any time heavy; it was induced by the uneasy feeling prevalent as a result of a Note by the British Government to the Egyptian Government regarding certain changes which the latter wish to make in the Egyptian Army and which, apparently, do not meet with the approval of the British authorities; it is, however, generally expected that the matter will be settled in an amicable manner. Arrivals from up-country, contrary to expectations, are still heavy and the Alexandria stock shows an increase on the week.

Uppers.—We have had a series of firm markets and straddlers have continued buying October against sales in New York. There has also been some straddle buying of October against sales of November Sakel. The demand from abroad has been only moderate, and it appears that spinners consider that the recent advance has been extravagant and that present levels are too high; it seems that competing growths are now relatively cheaper than Ashmouni.

At the first June tender, 27,250 kantars were issued, the biggest tenderer being one of the local banks. The dockets were quickly stopped, the premium of the distant months being sufficient to cover the cost of carrying the cotton.

The week's receipts amount to 153,112 kantars against exports 116,369 kantars; the stock in Alexandria stands at 3,123,018 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to May 26, 1927, are as follows:—
Arrivals: Lower Egypt, 4,992,000 kantars; Upper Egypt, 3,038,000 kantars; total, 8,030,000 kantars. Exports: Sakel, 2,627,316 kantars; Ashmouni, 3,213,004 kantars; Various, 416,565 kantars; total, 6,256,885 kantars.

Spot: Sales this week amount to about 12,000 bales, of which we estimate 4,000 bales Sakellaridis, 7,150 bales Ashmouni and Zagora, 700 bales Pilon, and 150 bales other varieties.

Sakellaridis: All grades are covered in this week's sales. The turnover has perhaps been a little restricted by some of the owners of the better style cotton abstaining from offering. There is plenty of cotton on the market, but good staple and character require a good deal of searching for. Spot differences remain unchanged.

Ashmouni and Zagora: There still continues to be a fair demand for these varieties and the turnover shows a slight increase over last week. Spot differences are about the same with the exception of the Good grades, which have somewhat hardened.

Pilon: A small business has been done at about last week's prices.

Various: A few bales of White and Fouadi have changed hands.

Up-Country: Only a few ginning factories are still working but there is still a fair quantity of ginned cotton in the compounds and cotton will continue to come down for some time yet. The 1926 crop has exceeded all estimates; 8,375,000 kantars have come down to Alexandria since September 1 last, and there is still cotton up-country.

Crop, 1927: The crop is making normal progress but fears are now expressed that there may be a shortage of water during the summer months, especially in the North Delta districts. Leaf worm is reported from all districts but this pest has, so far, been successfully dealt with. We see no reason to change our estimate of about 20 per cent. as the reduction in the acreage. The land planted in cotton has been, in some districts, measured up, cases of planting more land than the proportion (one-third) allowed have been found, but only in a few cases has the crop been up-rooted.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 8:—

Egyptian Futures.—Sakel Contract.—Owing to the holiday intervening, our market has only been open for four sessions since our last report. Although trading has been of a rather light description, a steady tone has been in evidence and at times a marked shortage of contracts has been noticeable. Following on the week-end break in the New York market, Alexandria opened

EASTERN DEPARTMENT:

14, KING WILLIAM STREET, LONDON, E.C. 4.

LLOYDS BANK now has the following Offices in INDIA and BURMAH, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

yesterday morning a dollar below Friday's close, but the greater part of this decline has since been recovered. Apart from this sharp decline, the markets on that side have been of a fairly normal character, fluctuations approximating closely to the movements in New York and Liverpool. The two markets (Alexandria and Liverpool) at present are running at such a narrow difference, especially in new crop months, that for any decline to materialise the lead must be from the other side. At the moment, weakness here is immediately met by straddle buying, and it certainly appears a reasonable proposition for those prepared to run the operations well into the autumn months, to purchase November locally against sales of the same position in Alexandria, whenever Liverpool shows a discount of anywhere round 20 points.

"Bull" speculation in Alexandria had recently reached the stage where the local situation was rapidly losing its significance, and in which the course of the New York market was proving the main influence. Consequently, the first sign of a break in that quarter resulted in a prompt, and perhaps exaggerated, reaction in Egypt, where support of any kind was temporarily lacking. Here, on the contrary, short covering on the down scale has been a feature of the decline, and straddlers also availed themselves of the quick turn in the Egyptian/American difference to take profits.

From a speculative point of view, the market looks extremely dangerous, especially on the short side, owing to the scarcity of contracts when any fresh buying, or short covering, makes an appearance. At times, the trade demand has shown improvement, but latterly the offtake has become quieter. Values since our last report show an advance of from 17 to 18 points, with October exceptionally 35 up.

Upper Contract.—The Upper contract during the last week has failed to attract much attention and only isolated transactions have taken place, the market being very narrow. Values, since our last report, are unchanged for old crop months. September is exceptionally 14 points lower, and other months 8 to 12 points higher.

Egyptian Spot.—The approach of the Whitsuntide holiday coincided with a more hesitating tendency on the part of the various futures markets, with the result that immediately following our last report business showed signs of becoming quieter. Over the week-end, the more favourable weather news in the U.S.A. caused a considerable amount of futures liquidation, and when our market reopened yesterday the spot inquiry for Egyptian cotton proved to be an almost negligible quantity. Spinners at the moment are inclined to hold aloof until prices become more stabilised. The reaction of course has not been unexpected and, provided it is not carried too far, will probably bring about a more healthy state of affairs and prove to be merely the precursor of another steady buying movement. Interest in Sudan cotton has been on the whole well maintained, although since the break in futures occurred buyers, for the time being, are curtailing their purchases as much as possible until the situation becomes clearer. C.i.f. business has become very slow again, but it is satisfactory to note that last week's forwarding figures reached the large total of 13,571 bales (8,555 Egyptian and 5,016 Sudan). Estimated sales for the four business days under review total 700 bales Egyptians and 3,400 bales Sudan. Quotations of Sakellaridis show a reduction of 25 points for Extra Fine and Fair cotton, other grades remaining unchanged on balance. Quotations of Upper are 10 points dearer. F.G.F. Sakel to-day, 17.06d. F.G.F. Upper to-day, 13.45d.

The sudden death has occurred of Admiral Sir Francis Harrison-Smith. Born in 1861, he took part in the Egyptian campaign of 1882 and the Eastern Sudan campaign of the succeeding two years.

Seventeen men were burned to death on June 7 in a fire in the Moreni oilfields in Roumania. The fire broke out at No. 10 Well, belonging to the Steaua Company, and quickly spread to neighbouring wells.

COMPANY NOTES AND REPORTS.

ATTOCK OIL.

The report for the year ended December 31, 1926, states that the profit before providing for depreciation amounts to £43,414, to which falls to be added unappropriated balance of profits from 1925 of £52,444, making £95,858. There has been written off as depreciation on field and refinery plant £70,000, leaving a balance for disposal of £25,858, which the directors propose be carried forward to 1927. The profits figure is arrived at after charging up all well-boring expenditure. No drilling operations were undertaken at Dhulian Field during the year. The decline in profits as compared with 1925 is accounted for by a decrease in the quantity of crude oil won during the year by the increased drilling costs due partly to drilling now being carried on at greater depths. The exploitation of previously worked sands gave moderate results only and drilling for deeper sands carried on concurrently did not give results until end of July, 1926, when a payable well was brought in at about 2,800 ft. One further well was drilled into that sand towards the end of the year, the good flush production being obtained. It is too soon to judge if this new source of supply will prove more reliable than the higher sands. Meantime, however, certain other wells have been drilled into it with satisfactory results overhead, and the daily average production of crude in 1927 to date has shown a steady increase over the daily average figure for 1926. Further wells are going down to this sand, and additional tests are being carried to greater depth.

NATIONAL BANK OF EGYPT.

charges (including contribution to staff profit-sharing fund), rebate on bills and for all bad and doubtful debts, was £116,929, plus £42,400 brought forward. The directors recommend a final dividend of 3 per cent., making 5 per cent., less tax, transferring £25,000 to the contingency fund and £25,000 to writing down premises and furniture account, leaving £49,330 to be carried forward.

The East Indian Railway Company has given a contract to P. and W. McLellan, Ltd., Glasgow, for the erection of a steel bridge over the River Jumna, near Allahabad.

The directors of the Imperial Bank of Persia propose paying a final dividend of 6s. per share, plus a bonus of 1s. per share, free of tax, for the year ended March 20 last. With the interim payment of 4s. per share, the distribution is 11s. per share, as against 10s. for 1925-26.

The Bengal Nagpur Railway Company has declared an interim dividend of 15s. per cent. on the ordinary stock, payable July 1, which, together with the guaranteed interest of £1 15s. per cent. then due, will make the total distribution 2½ per cent. for the half-year, less tax.

The net profit of the Bank of British West Africa for the year ended March 31, 1927, after providing for current

Notes of the Week.

The "All's Well" in Egypt.

The best commentary on the proceedings of the past week in Egypt is that King Fuad's visit to London is not postponed, the date of his arrival being July 4. In other words, not only has all tension between Egypt and Great Britain been removed, but, further, the relations between the two countries may be said to have sensibly improved. This fortunate issue is attributable in the main to the fact that the Egyptian Government has come into its own; Sarwat Pasha, supported by Zaghlul Pasha, has taken charge of the situation, and the extremists of the Legislative Assembly, silenced, if not convinced, have withdrawn into their proper sphere. In the absence of the official text of the Notes exchanged in Egypt, which will be published only if the Egyptian Government so wishes, public knowledge of their contents has to be derived mainly from Sarwat Pasha's statement to the Chamber of Deputies. That statement, it will be readily allowed, was a masterpiece of tact; its correctness, from the British point of view left nothing to be desired, and it achieved the unexpected in satisfying the Chamber of Deputies after a show of heat by a few Nationalists. The regrettable misunderstanding to which Sarwat Pasha referred as the *causa causans* of the British Note is accounted for by the contrast between irresponsible utterances in the Chamber and the considered policy of the Egyptian Government. The latter's assurance that the desire to improve the efficiency of the Army did not connote the far-reaching changes which had been read into them finds confirmation in the acceptance of the British point of view that the Egyptian Army must be kept out of politics and politics out of the Army, that the guiding principle of military administration must be efficiency, good order, and discipline, and that there must be cordial co-operation between the British and Egyptian Armies. Finally, Sarwat Pasha paid a generous tribute to the friendly spirit manifested in the negotiations as conducted by Lord Lloyd and the real desire that the High Commissioner displayed to maintain the best possible relations between the two countries. His words will have stated in this respect only what was well known already, but it was well that they should have been publicly uttered

in the Chamber, where not long before bitter attacks had been made on Lord Lloyd.

Amantium Ira, Amoris Integratio.

The understanding thus happily reached by the British and Egyptian Governments can now be used as the ground work of the wider agreement that it is the obvious and bounden duty of the two countries to ratify without further delay. To this end it is to be hoped that King Fuad's visit to England will pave the way for formal negotiations, as he is to be accompanied by his Prime Minister, Sarwat Pasha. The recent "crisis" in Egypt will have secured for the subject of Anglo-Egyptian relations more careful reflexion than has been given to it before. From the tenour of the British Note the Egyptians will now have been able to satisfy themselves that Great Britain has no sinister reservations behind the Declaration of Independence. Such reservations as she felt obliged to make, jointly in Egypt's interests and from the British Empire's necessity, were intended to cover the whole ground, and within those openly expressed limits it was her desire to see Egyptian independence as real and as complete as the Egyptians themselves could make it. It is not Great Britain's fault that no practical attempt has been made during the last five years to test the full range of that independence. There has been a tendency to push against the one barred gate rather than to explore the holding to which nature and international circumstances alone have set boundaries in any other direction. That mistakes may have been made on both sides is not unnatural. It is possible that the attention suddenly paid to the Egyptian Army is connected with the resentment at what is regarded as a British surrender to Italy, which compelled Egypt to give the Italians a strategical position on her west flank at Jarabub. Yet fuller consideration will have shown that British protection is a more effective asset for Egypt's territorial integrity than the possession of Jarabub without that protection. It is certain that any negotiations now undertaken for a treaty of alliance between Great Britain and Egypt will be begun in a much happier atmosphere than would have been possible six weeks ago or at any period during the last six years.

The Albanian Dispute.

The dispute between Yugoslavia and Albania over the arrest of the Albanian dragoman of the Yugoslav Legation at Tirana still drags on in an unconvincing manner. The only possible solution has been obvious from the beginning—mutual admission that neither side is guilty and a promise not to do it again; but each party is anxious to be able to say that the other was the first to retreat. An unimportant development during the week has been the return to Albania of the diplomatic free-lance by whom the Tirana Government has been hitherto represented at Belgrade and the withdrawal of the Yugoslav Consular staff from Albania. As the ground is now cleared of all actual and potential embarrassments, it would be well if the two Governments, on resuming relations, would realize the importance of being represented in the other's capital by men who understand that their first duty is to promote good relations between the two countries. As a recognized Serbophil, Tzena Beg may have deserved a better fate; it is probable that he failed to please his own Government as much as he pleased the Belgrade authorities. His independence of action tended to defeat his good intentions, as it left the Yugoslavs uncertain whether he was speaking on his own behalf or in the name of his Government. For Yugoslavia the only possible policy would seem to be to cultivate closer relations with Albania the more that Italian designs in the Balkan Peninsula become suspect in Belgrade.

Turkish Railway Construction.

The Turks have every right to be proud of their achievement in having completed, without recourse to foreign help, whether financial or technical, the railway from Angora to Kaiseria, a distance of 250 miles. This line it is interesting to note, originally figured in a concession given to the Anatolian Railways at the time of the construction of the railway to Angora, which was opened in 1892. The Kaiseria extension, which was to be part of the railway to Mosul and Baghdad, *via* Diarbekir, was, however, not built at the time. It figured again in the Chester Concessions, but in the end was constructed by Turkish engineers with Turkish funds. Whatever the intentions of the Angora Government may have been at one time, experience has shown the limitations of Turkey's unaided efforts in railway construction. Almost immediately after the ceremonial opening of the new railway—traffic on which, unfortunately, suffered immediate interruption from serious floods—it is announced that a contract has been signed by the Government with a German firm for the line which is to connect Kaiseria with the Baghdad Railway at Ulukishla, and for a second short

line from Kutahia, a branch railhead south-west of Eskishehir, to Tavshanli. This latter railway which is ultimately to serve the Chardi chrome fields beyond Tavshanli, now for the most part closed owing to the costliness of transport, has been contemplated for some time. In 1925 the Assembly voted a total credit of sixteen million Turkish pounds for this railway, and a sum of one million pounds appeared in the 1925-26 Budget as a first instalment. If it is the case that the Deutsche Orient Bank is now advancing more than three million pounds sterling to Turkey to cover the construction of the two railways, it may be presumed that the credit voted did not materialise. The importance of extending railway communications has been thoroughly appreciated by the Turkish Government, and if satisfactory arrangements can be made with foreign firms for the construction of some of the lines contemplated, the progress of Turkey will be materially accelerated.

Sport in Turkey.

Two incidents have recently aroused the Turkish Press and public to an intense pitch of excitement. The first was the formal opening of the Angora-Kaiseria railway, and the second was the victory of two Turkish Association football teams in Constantinople over a visiting eleven from Czechoslovakia. If credit can be given to the Turks for the first, they are no less to be congratulated on the enthusiasm with which various forms of sport, in particular football, are now indulged in, and seemingly followed with public interest. It involves no blind worship of sport to appreciate the ultimate advantage to the countries of the Near East, if their youth can be weaned from the excessive interest devoted hitherto to politics in the absence of any absorbing counter-occupation. It may even be a salutary experience in the early vogue of sport in Turkey that a recent match between the two leading teams in Constantinople ended in free fight, which evoked columns of reprimand and regret in the local press and a vow on the part of the rivals never to meet again. They would seem, however, to have combined a few weeks later in good fellowship to defeat the visitors from Czechoslovakia. This extension of games among the youth of Turkey, it may be added, is being warmly encouraged by the Government.

Parties in Roumania.

The letter that we publish this week from our Bucharest Correspondent throws interesting light upon the causes that led to the enforced resignation of the Averescu Government. The provisional character of the new Ministry is indicated by the fact that the political stage has since been held almost exclusively by the negotiations between M. Bratianu, the National Liberal leader, and M. Maniu, the head of the National Peasant Party, formed by the union of the Transylvanians and the Peasants' Party of the Old Kingdom. It is now reported that these negotiations have definitely failed. M. Bratianu has not been able to win over M. Maniu to his idea of, or his terms for, a coalition of the Parties to tide over the period during which King Ferdinand's health causes so much anxiety, and the two groups go to the electorate independently. It would be entirely in keeping with the artificiality of Roumanian politics, if the present Coalition Cabinet were now declared to have lost its *raison d'être* and had to make way for a Liberal Ministry, which would proceed to hold the elections. If there are to be elections, they should be held at all costs by a Cabinet as free as possible from extreme party bias. M. Stirbey (by the Roumanian Constitution titles of nobility are inadmissible; the Stirbeys, Ghikas, Bibescos, etc., reserve theirs for foreign use only) counts as a non-Party man and by incorporating in his Ministry representatives of various Parties, he can hold out the promise of genuinely free elections. It is significant that the National Liberals are now calling for the resignation of M. Stirbey and the appointment of a

YUGOSLAVIA AND ALBANIA.

The peace of South-Eastern Europe is so closely linked up with the general policy of Yugoslavia that the course of events in that country, even in matters of primarily domestic significance, has some bearing on international affairs. At the present time the Yugoslav people have on their hands the complication with Albania, the chronic strain on Italo-Yugoslav relations and a political situation at home which represents the accumulated intensification of six years' political paralysis. In these circumstances it is hardly a matter for surprise that, in taking stock of the position, many keen observers in Yugoslavia are inclined to be pessimistic and are wondering in which direction a solution is to be found for the country's failure to make the most of its opportunities. It is not that Yugoslavia is standing still, but the progress that she is making is held to be merely an earnest of what might be achieved, if the nation's attention could be less distracted by alarms without and constant unrest within. A fresh appeal is to be made to the electorate. The last elections were held in 1925. During 1926 M. Ouzounovitch reformed his Cabinet four times, and yet once again before he made way last April for the present Prime Minister, M. Voukitchevitch. Although a member of the Radical Party, M. Ouzounovitch was regarded as representing a less exclusively Serb outlook than was associated with the régime of M. Pashitch. He tried hard to make a success of the experiment of working with the Croatian Peasant Party, with M. Raditch eliminated from the Cabinet, and when that scheme failed, he sought co-operation with the Slovenes. It was to be expected therefore, that the new Prime Minister would try to extend the system of widening the basis of government by bringing into his Cabinet all the component units of the population and as many parties as possible. M. Voukitchevitch, however, has now completed his Government, exclusively from Radicals and Democrats—both essentially Serb parties—and in the case of the former has not included any member of the Radical Centre. His appeal, therefore, will be made mainly to the Serbs, to whom he must look for his majority in the new Skupshtina.

Some justification for racial homogeneity in the present Government may be found in the peculiar task before it. The intention can hardly be to perpetuate the parliamentary stalemate that has existed for so many years; but as the Vidovdan Constitution was carried through Parliament by a Serb majority, so it may be considered necessary now by the new Prime Minister to have a compact majority behind him to enable the contemplated changes in the central administration and in the electoral law to be carried

out as far as possible on their merits, without making them the basis of bargains in other directions. Past experience must hold out little hope of introducing any measure of political stability in the country by means of the existing system of proportional representation. If the desire of M. Voukitchevitch, whose Cabinet comprises six Ministers without seats in Parliament, is first of all to conduct fresh elections and thereafter to reform his Government on a more representative basis, he is probably right in taking the line of least resistance by limiting the constitution of his Ministry of Affairs to politicians who consent to co-operate with him on the strength of his good intentions, without consideration for personal or party interests. At best, therefore, the new Government and the appeal to the electorate are stepping-stones to a new order, which, it is to be hoped, will bring Yugoslavia out of the political morass in which she has been floundering for so long.

It may not be an unfortunate coincidence that at the very moment when these new ideas are surging through the body politic the country should be genuinely stirred by an incident all too typical of the impetuosity which has characterized Yugoslav policy, both at home and abroad, in the past. The Albanian question is an admitted difficulty for Yugoslavia. At the same time it has a direct concern for Europe, and every Yugoslav Government must realize that the only possible solution consonant with the interests of Yugoslavia is one which carries with it the approval of the Powers. Now the latter are no more anxious than Yugoslavia to see Italy obtain an undue hold on Albania; to this extent, then, European sympathy starts on the side of Yugoslavia in respect of any honest policy for keeping the Balkans to the Balkan people. Quite recently the Italian Government made a false move in publicly laying at the Yugoslav door charges that could not be substantiated. There has been no definite outcome from the incident, but it served to make Italy more suspect in regard to the Balkans and correspondingly increased sympathy with Yugoslavia. If on the top of this Albania were to make a *faux pas*, which might in any way be identified with outside prompting, Yugoslavia would have the satisfaction of seeing her opponents deliver themselves a second time into her hands. Yugoslav impetuosity, however, allowed no time for a verdict on the Albanian action. Any quarrel with Italy on the subject of Albania, it might be thought, would make the Yugoslav Government resolved to retain Albanian good will at almost any cost. The attitude of the Yugoslav Chargé d'Affaires in Tirana, however, could have no other effect than to embitter still further the relations between the two peoples, and that at a moment when misgivings in Albania in regard to the intensification of the Italian hold on the economic life of the country were starting a reaction in favour of Yugoslavia. A Belgrade Government that makes it its policy to antagonize both Italy and Albania ought to have considerable difficulty in meeting the enlightened criticism of its own followers. The only explanation of the anomaly would seem to be that political affairs in Yugoslavia have been in such an agitated condition for so long that there has been no time for any Government to formulate a foreign policy and to carry it out with vision and resolve. In aiming at political stability at home M. Voukitchevitch is taking a step in the right direction, and in the interests of Balkan peace it is hoped that the policy will succeed.

The Near and Middle East*

From Our Own Correspondents.

Cairo, June 11.

A Disturbed Bairam.

This has been a disturbed Kourban Bairam. Usually the Court has been at Alexandria for this, the most important feast in the Moslem year, and usually there takes place at Ras-el-Tin on the first day one of the largest receptions of the season. Usually also there is a great exodus to the seaside for the five days during which all official work is suspended and Government offices are closed. But this year the Court has postponed its transfer to Montaza owing to the Egyptian Army crisis and for the same reason the King has decided to depart from tradition and not hold his usual reception. There has been a slight exodus to Alexandria for the feast, but nothing like what it has been in former years, and, generally speaking, there are a depression and an uneasiness which after all are not surprising, when one bears in mind that the country is still waiting to learn whether the attitude it has taken towards Great Britain's requirements in the matter of the Egyptian Army is to have the serious consequences which many affirm are unavoidable. But while pessimism reigns in political circles or rather in the more responsible centres thereof, optimism continues on the Bourse where, if anything, prices have hardened since the start of the crisis.

The Bank Misr.

The Bank Misr on Sunday last entertained a large and distinguished company at its new offices. This establishment, founded in response to the demand among Young Egyptians for a financial organisation which would make them less dependent in foreign enterprises, has made a certain amount of progress, but not that which everyone who was interested in its creation prophesied for it. For one thing it is exclusively Egyptian in that it is run entirely by an Egyptian staff and its clients and shareholders must all be Egyptian. To many experienced Egyptians the exclusion of the European element from the direction of an institution of this nature rather deprives it of the confidence which attaches to a not exclusively native-run show, and there is no doubt that, while its directors include some very capable men, this has stood for a lot in the holding aloof of numbers of the more prosperous Egyptian clients. That, although it caters particularly for the Egyptian element, the latter has by no means taken it to its arms and therefore there is not the field for business that would lie before it if it had its proper share of the "native" banking, is proved by the alarm felt by its directors when it was announced that certain members in the Chamber intended pressing for the transfer to it of the Government deposits at the

National Bank. The Bank Misr could not possibly have made any use of these funds and the Government deposits would indeed have been a white elephant to it. The day is indeed still far distant when it will have acquired the confidence of its fellow-countrymen to the extent of tempting them to do business with it rather than with the foreign banks.

Public Health.

Parliament has been mainly taken up with the Budget during the past week. One of the interesting debates has been on the estimates for the Department of Public Health. Among the suggestions made was one for the replacement of the village barbers by Egyptian youths, who had received a short course of elementary training. But the Chamber rightly referred the proposal back to the Public Health Department for the presentation of a more practical scheme. While the "village barber" may not respond altogether to the modern ideas of health control, yet they certainly provide a service which is far better than anything a body of raw youths having merely a smattering of the "trade" and no local knowledge could furnish, and the Chamber was very wise in deciding to retain this ancient service, until some really practical substitute can be supplied.

Out of the debate emerged an interesting, and to many a astonishing fact, viz., that the extension of irrigation as at present practised is responsible for the increase in the many ills from which the peasant classes suffer, such as anklyostoma and bilharzia. Sir William Willcocks recently gave a conference on the subject before the Egyptian Institute. He pointed out that basin irrigation was better suited to the health conditions of Egypt, and that the effect of the extension of the perennial system had been to raise the sub-soil water level to a point where it water-logs the land while at the same time it affects the health of the people, inasmuch as it causes the cesspits to overflow. He instanced Edfu in the basin area, which was particularly immune from anklyostoma and bilharzia, and Kom Ombo, the centre of perennial irrigation in Upper Egypt, where 25 per cent. of those examined had anklyostoma and 66 per cent. bilharzia.

Sir William mentioned that one of the authorities on the subject of native hygiene, Dr. Harpur, considers that the greatest hope of success in combating anklyostoma and bilharzia lies in the provision of public latrines in every village in the perennially irrigated tracts. He says, however, that this is not possible so long as the sub-soil water remains at its present high level and he maintains that, until adequate drainage is provided in the perennial irrigation, the threat to the sterility of the soil and to the health of the masses will continue. His opinion in regard to the close connexion between the provision of proper irrigation drainage and the public health of the villages is strongly supported by the leading Egyptian hygienic experts.

The Wafd Propaganda Case.

The Mixed Court of Appeal gave judgment this week in the case brought against the Wafd and Mohamed Mahmud Pasha by Mrs. Folk, widow of the American Senator of that name. The Wafd employed Mr. Folk in 1919 to carry out propaganda in the United States and from that date and during the negotiations with the Milner Mission, Zaghloul Pasha was in constant communication with the Senator, whose advice he sought throughout. Incidentally Mr. Folk advised the Wafd that the Milner Memorandum was an excellent settlement for Egypt, which could be accepted without quibble. Folk who died in 1923 never received any of the remuneration promised him under the contract, and, the Wafd repudiating all liability, Mrs. Folk accordingly brought the action referred to and has been awarded 62,000 dollars against Zaghloul Pasha as head of the Wafd.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

ROUMANIA.

Bucharest, June 15.

The Fall of the Averescu Government.

The unexpected fall of the Averescu Government during the first week of this month caused consternation among the general public and has once more plunged the country into a state of political excitement. In seeking to explain this and most other important political changes in the country in the present generation, *il faut chercher le Bratiano*, as the saying goes here. It has long been the laudable aim of the Liberal Party, inspired by the Brother Bratianu, to create in this country two main political parties which, though in opposition, would not each undo all the work of its predecessor and cancel each other's enactments, but would adopt a continuity of the basic policy of the State in financial and other fundamental matters. With this end in view the Liberals have for years been negotiating with the Transylvanian National Party of M. Maniu, and it was on their failure to come to an agreement with the Transylvanians that they "invented" General Averescu as their successor. It has always been understood that General Averescu owed his position to the Liberals, and that there was some agreement between them as to the policy to be followed. In the beginning the Averescu Government followed faithfully in the footsteps of the Liberals, but gradually it has become more independent, and several recent measures have greatly displeased the Liberal leaders, e.g., the reduction of export taxes and railway freights, the Italian Loan, and the interference with the independent railway administration by the creation of an Under-Secretary of State for Railways. This last measure was probably the one which annoyed the Liberals most, and with good cause, for they had reason to be proud of the railway organisation as they had left it—a self-governing body independent of political parties, and with revenues which covered the ordinary current expenditure. Whether or not the rumour be true that General Averescu's ambition had been fired by the example of Mussolini, and that his tendency to shake off the shackles of his protectors had gone so far that he was planning to proclaim a dictatorship, if the King's illness took a fatal turn, it is clear that he had lost the confidence of the powers-that-be. In the opinion of a large section of the community he was perfectly innocent of any design to become a dictator, and has been rather badly treated. But apart from the mass of contradictory rumours, the facts seem to point to the reality of the Liberal supremacy. General Averescu having failed them, and M. Maniu remaining obdurate on certain points of policy, they were obliged to have recourse

to a friendly neutral in the person of Prince Barbu Stirbey, to form an interim government, and allow them to continue their negotiations with M. Maniu, who now has daily conference with M. Bratianu.

Opinion is divided as to whether the Liberals or the National Peasants' Party are likely to win the elections. The victory of the latter is a good deal feared, as they might carry the land policy to extremes, and, moreover, they are warm supporters of Prince Carol and might thus introduce another element of discord in regard to the succession to the Throne. (In this regard they would have the Army behind them.) Altogether the situation is full of uncertainty, and Government business has come to a complete standstill, just at a moment when some important measures were on the tapis.

The elections are to take place on July 7, and it is stated that they are to be really free elections, contrary to the usual practice in this country.

King Ferdinand.

The health of the King still gives cause for considerable anxiety. His Majesty has now gone to Sinaia.

Miscellaneous.

General Berthelot is at present visiting Roumania, and on June 4 was formally received as an Honorary Member of the Roumanian Academy.

The International Tennis Championships are now in full swing in Bucharest, and the Roumanian players are playing a very strong game against the Austrian champions, having won several matches on the first day of play.

Mr. R. J. E. Humphreys, Commercial Secretary at the British Legation in Bucharest, left Bucharest for England on six weeks' leave on June 2.

Petroleum.

The new Government has just passed a decision by which the export taxes on petroleum products have been so greatly reduced, as to be quite insignificant. It is hoped that this measure will help the petroleum companies out of the critical situation into which they were plunged recently, mainly owing to the sudden rise in the value of the leu.

The export tax on benzine is now 500 lei per wagon, and that on all other products 300 lei per wagon.

M. Athanasoff, Secretary of the Bulgarian Department of Public Security, was attacked and wounded in Sofia on June 17 by three men, who escaped.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

EGYPT AND ENGLAND, 1927.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the numerous articles on the subject of Egypt which have recently appeared in the English Press there has been a great lack of true appreciation of the present situation of Anglo-Egyptian relations. These articles, with few exceptions, have been noticeable for an absence of facts and a surfeit of general statements. In some cases it can be seen that these general statements are devoid of truth from an obvious lack of knowledge on the part of the writer, in others by deliberate misrepresentations, which are concocted either to harmonise with the political opinion of the particular newspaper or to provoke the oversensitive Egyptian politicians to regrettable actions.

The English public and English diplomats have become famous for their dislike of facing facts until there is no alternative, and the Egyptians bid fair to follow the same course. Unfortunately, such an attitude creates more difficulties than it evades, and it is therefore just as well that the actualities of the present Anglo-Egyptian situation should be stated and action be urged in place of procrastination.

The details of the British occupation of Egypt, of the Cromer régime, of the War period, of the 1922 Declaration have been placed before the British public on numerous occasions. I will concentrate, therefore, on the aspect of the moment. The following points are incapable of evasion or refutation:—

- (a) That Egypt has need of England in the military and economic spheres. That England similarly has need of Egypt.
- (b) That by the Declaration of 1922 Egypt has become an independent nation.
- (c) That the four Reserved Points, which placed a limit on this Declaration, were intended for an early solution and must be shortly solved, if Anglo-Egyptian relations are to remain amicable.
- (d) That the *amour propre* of a recently liberated nation is almost as sensitive as that of a Great Power.
- (e) That the present Egyptian members of Parliament are as representative of the country as are the elected members in any country with a democratic form of government.

For any future and lasting benefit to be derived from Anglo-Egyptian co-operation and for any chance of creating the correct atmosphere to further negotiations it is essential that these five points be recognised and accepted by both countries.

I, therefore, propose to touch upon these points in the above order and hope, in so doing, to give a just appreciation of the actual situation and to demonstrate the possibility of England and Egypt being able to arrive at a real accord and to frame a sincere Treaty of Alliance.

(a) The geographical position occupied by Egypt made that country of premier importance economically and militarily to both Eastern and Western nations, even before the opening of the Suez Canal. Since the date of that historic event, the occupation of Egypt by England and the rapid development in the agricultural resources of

Egypt, that country has become of even greater magnitude in the problems of world economics and world strategy, until it can be regarded to-day, with the rapid advance of air communication, as the probable centre of future aerial radiation, especially for the British Empire. Egypt thus remains as a cynosure for many European Powers. The nation, freed from the thrall of Turkey, failed to recognise immediately the lustful regards of its neighbours and, in its new-found freedom, felt prepared to cope with all aggressors. Without entering into details, it suffices to state that the events which have taken place since 1920 in Syria and Tripoli have caused the illusions which beclouded the Egyptian vision to dissolve, and the sun of understanding to flood the brain cells of the nation with the reality of its vulnerability. The vast majority of educated Egyptians now accept and admit that Egypt can only attain its true independence in alliance with England. That England has need of Egypt is but an obvious corollary to the explanation of Egypt's geographical position. For the safety of the Empire's sea and aerial communications a friendly and not a hostile Egypt is of the highest importance and of the utmost necessity.

Why, then, this difficulty, when each would be a friend to the other, of finding a solution to the existing difficulties, which, however formidable, are but infinitesimal before the ultimate aim of both nations.

(b and c) On February 28, 1922, the English Government declared Egypt an independent nation subject to four reservations. These latter, although a considerable hindrance to the realisation of a 100 per cent. independence, were never intended to be left unsolved for a long period. Unhappily, mistakes on both sides and the tragic events of 1924 culminated in creating a greater barrier between the two nations than that which existed at the time of the Declaration.

Therefore, to-day, the four Reserved Points remain as far off solution as formerly, and the pole to which both countries are harnessed appears to be so spiked that both, instead of pulling together, jib and draw apart. The fundamental point resides here:—Is the Declaration of 1922 to be withdrawn or is the Declaration to be carried out in its full significance? With few exceptions British opinion appears to be unanimous that the Declaration cannot be withdrawn. Well, after a close, careful and impartial survey of the position I am confident that a continuation of the present régime can only bring about disaster to the Declaration. The many points of friction caused by the Reserved Points will in time, and a time not far distant, provoke the Egyptian nation to such an extent that regrettable actions will once again be the order of the day; actions which a weak nation is only capable of undertaking against the strong, and which will ultimately do more harm to the cause of the weak than to that of the strong, but which, despite their failure, push the roots of hatred and bitterness deeper underground, and these roots, being deep, become strong, hardy and enduring.

Such results will not bring security to the Oriental communications of the British Empire.

Therefore, if the Declaration is not to be withdrawn, if the Declaration is to be pushed to its full reality, the sooner negotiations upon the four Reserved Points—even if two only were solved, it would be an immense step in advance—the better for both Egypt and England.

The protection of the foreign community residing in Egypt, the protection of Egypt from external aggression, and the protection of the British Empire's Oriental communications are problems which should be negotiated upon at the earliest opportunity, on account of the reaction which the present arrangements bring on the internal legislation and executive work in everyday acts of the Egyptian Government.

That the foreign communities have done much for the recent economic development of Egypt, there can be no doubt; but that they have augmented their own riches at the same time, equally there can be no question. They came as beggars and are now in luxury. The Capitulations, which have been in existence since the sixteenth

century, and iniquitous in many cases as they have become, cannot be suddenly abolished except by superior force. (Technically speaking, granted by Turkey, the grant should lapse on the extinction of the Turkish suzerainty.) The Egyptian Government must, therefore, concentrate on those European privileges which damage the order of the State or hinder the progress of social reform. There can be no hesitation by any English Government to support the Egyptian nation in such obvious cases of inequality, as lesser penalties inflicted upon Europeans who are guilty of the same crime as Egyptians, or the exemption of Europeans from the imposition of an income tax. But the Egyptian Government can afford to be tolerant towards certain privileges under which Europeans have lived so long and which do not interfere with the smooth running of State organisation. It can afford to leave Mixed Tribunals and a European-officered force of gendarmerie for the cities of Alexandria and Cairo for a further period, until the law and order of the newly-independent Egypt have filled the Europeans with complete confidence. Such tolerance would not be a proof that Egypt accepted the legal right of Europeans to such measures, but a proof of reasonable broad-mindedness and a confidence that the future would satisfy the Europeans that they would be equally safe under Egyptian judgment and protection. The Capitulations were granted by the strong for the protection of the weak; to-day they are held by the strong for the exploitation of the weak.

There should be no necessity, with a Treaty of Alliance between Egypt and England, for a British army to be garrisoned in Cairo or in Alexandria, but an Anglo-Egyptian force can be stationed in the vicinity of the Suez Canal for the defence of Egypt and the protection of the Empire communications at the invitation and free consent of the Egyptian nation.

The harbours of Alexandria and Port Said can be open equally to British battleships for the defence of mutual interests. If Egypt wishes to take an important share in a military agreement, let her concentrate on the development of a first-class aerial force for the defence of her lengthy desert boundaries. She can participate in this branch without burdening the people with heavy military expenditure. If these questions are first confronted, grappled with and solved, the last and perhaps the most difficult—that of the Sudan—might be ready for discussion. This question of the Sudan should be no more impossible of solution than the others, and if rival arguments of conquest yield to the logic of economics, the views of Egypt and England on this subject should quickly coincide.

(d) The "touchiness" of a small nation—especially if it happens to be exhibited in a brown race—is to-day labelled as due to an inferiority complex. I cannot, however, recall any great Power being particularly tolerant and thick-skinned when questions, however trivial, are treated as affairs touching the "prestige" of a nation and outside the League's jurisdiction. Without entering upon details and personalities I have been informed of several incidents which have aroused Egyptian sensitiveness, which with a little more tact and insight need never have occurred. At the present juncture of affairs in Egypt minor official actions become imbued with undue significance, and every care should be taken by Englishmen, official or non-official, not to offend unwittingly the susceptibilities of Egyptians.

For instance, the British Government without derogation to its dignity might well have told its representative in Egypt to present his credentials in a like manner to other foreign Ministers. Failure to do so was, no doubt, an oversight, but one which has led the Egyptians, in concurrence with others, to believe that it was a deliberate slight to their national independence.

(e) In reference to the members of the present Egyptian Parliament one has become accustomed to reading such phrases as:—"The foreign Cairene politicians," or "the extremist members of the Wafd." During the months I passed in Cairo last winter I spent a considerable time in a discussion of the political situation with members of

the Egyptian Parliament, with prominent agriculturists and editors and with several Europeans. The majority of the members represented districts where they own properties and on which estates they pass a large proportion of their time. There can be no question but that these men stood for the fellahin more fully than many English M.P.s and French Deputies stand for their constituents to-day under the existing English and French electoral systems. The American Minister, who had been in Egypt for several years, told me one day that he had been surprised to perceive with what acumen the supposed uneducated fellah had chosen his parliamentary representative, and how scarce were the cases of electoral corruption.

The Wafd, which is invariably cursed by the critics for responsibility for every misdeed or constitutional mistake, is not the party of extremes. The honour of this belongs to the Nationalist Party, which professes to be, anyway in public declarations, hostile to all compromise with England and demands that all territory which was once under Egyptian rule should be incorporated in an independent Egypt; this includes districts now held by France and Italy. The Wafd, in the political sense, is not a party. It is a group formed round Zaghloul Pasha, whose aim is to create an independent Egypt which is realisable. In this aim the Wafd are not hostile to an Alliance with England. It has often been said that the present Parliament should concentrate on internal questions and forget for the time being the Reserved Points.

The difficulty of this is at once apparent to anyone who studies the position. There are three main reasons:—

(1) Any profound change in internal organisation immediately comes in contact with one of the Reserved Points.

(2) The Wafd, which is united in its aims of National Independence, not being a real political party, finds itself split into many factions on questions of social reform.

(3) Under the existing régime there is a triarchy—the Palace, the Residency, and the Parliament. Each of these parties is pursuing different methods and even, it seemed at times, pursuing aims.

It can certainly be said that the extremists in the Wafd carry less weight than the Die-Hard section of the English Conservatives and the Communists in the Labour Party. In fact, extremists in the Wafd are very limited and have no authority. If Egyptian parliamentary members have been recently attacking the Ministry, it is because they recall the promises in the King's speech at the opening of the session, and because they perceive that there has been little advance achieved towards the realisation of these promises. In fact, a Minister avowed to me, that, if he had been a deputy, he would have become a critic of the Ministry as, owing to the difficult circumstances surrounding the present Constitution, the Ministry had been unable to progress as they had promised Parliament.

The present crisis over the Egyptian Army has no political significance as many correspondents claim. First of all, in my conversations with members of the Parliamentary War Commission there was no question of abolishing the post of Sirdar, but there was manifest annoyance because the acting-Sirdar refused to permit any change in the organisation of the Egyptian Army, and secondly because the acting-Sirdar was not considered to be trained in technique of modern warfare. On June 3 I received a letter from a leading editor of the Egyptian Press, in which he stated that the recommendations of the Parliamentary War Committee had been based on the idea

of making an Egyptian Army Council similar to that in England, and that there was no question of turning the Egyptian Army into a political machine.

In every country there are minorities who are dissatisfied for various reasons with the existing form of government, and it is a pity to see that certain English people in Egypt prefer to believe in the declarations of a few rather than in the acts of a vast majority.

It is obvious that in the great changes that have taken place and are still taking place in Egypt, there must be some individuals, some body of people, such as the religious leaders, for instance, in Egypt, who must suffer and lose their positions of authority established for generations.

It is unnecessary stupidity to believe that the complaints of these represent the nation, and that in supporting them a just act is being performed.

Neither the Egyptian nor the English Government entertains extreme views, and if the political leaders of both sides would but act more courageously, would but proclaim their views with greater frankness, there should be no difficulty experienced in finding a common terrain for negotiations. In March last not only I, but Englishmen long resident in Egypt, believed there had never been a moment more favourable for negotiations.

Let us hope that the dispatch of warships will not have changed Egyptian views; it is so profoundly necessary for the benefit of the two countries that they should be friends and not enemies. In conclusion I would say that the political leaders on both sides must act as statesmen, negotiate on broad outlines and refuse to quibble over details for success to meet their efforts of peace. Political leaders—Egyptians especially—must recognise that, having been elected as leaders of the nation, and by an overwhelming majority, they must guide the nation with courage and without hesitation to the end which they are convinced will be the most beneficial to their nation; they must eradicate their tendencies to prevarication and equivocation and lead in place of being led. English statesmen, having accepted the fact of Egyptian independence, must not act as if they would change the reality into a shadow.

If Anglo-Egyptian relations are established on a sound and amicable basis the world prestige of England will be greatly enhanced and the first arch erected in a bridge of cordiality and co-operation between East and West.—

I am, etc., R. GORDON CANNING.

June 13.

THE WAHHABIS AND THE MAHMAL.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your issue of May 19, 1927, contains an article in regard to the Egyptian Mahmal and Ibn Saoud. In that article it is said that: (1) In times past when Badawin were wont to raid the pilgrims, an armed escort was desirable and necessary; but since, according to the Wahhabis, the pilgrim routes are now entirely safe, such a force would be derogatory to the dignity of King Ibn Saoud. (2) Muslims who are hostile to the Wahhabis will doubtless be encouraged by this latest rebuff to one who would fain rule as an independent sovereign head of a State.

Desiring the publication in your valuable paper of what is right and truth, I give you the following information, and I believe I am entitled to request you kindly to publish the same.

(1) For a period of over a hundred years the Mahmal used to be sent to the Hijaz every year at the pilgrimage season, first from Turkey, and later from Egypt. The Mahmal contains the income of the Wakfs in Turkey and Egypt, which said income belongs to Mecca and Medina; and it also contains the gifts made by Muslims and especially the Holy Carpet of Mecca, etc.

The people of the Hijaz always welcomed the Mahmal and no raid was ever made on that score, nor is there any reason for such a raid.

Last year, as is universally known, the Mahmal was raided by Ibn Saoud's men and the Egyptian forces were compelled to defend it by force of arms. It is remarkable that neither the people of the Hijaz nor the other Muslims who had come to Mecca for pilgrimage participated in that raid, inasmuch as all Muslims with the exception of Ibn Saoud's men know that the Quran distinctly prohibits the slightest friction during the pilgrimage season at Mecca.

In order to understand the true phase of the Mahmal question it is necessary to read the recent speeches delivered at Najd between Abdul Aziz Ibn Saoud and the people of Najd as published in the papers of Palestine, Syria, Egypt, Iraq, Persia and India.

I am sending you a copy of *Saout el Shaab* dated Ayar 7, 1927, and numbered 330, which is one of the papers I have mentioned. I am translating the words uttered by the people of Najd in reply to Abdul Aziz Ibn Saoud. You will find that on page 3 of the said paper:—

"O! Abdul Aziz! you promised us that the religious law will have to be enforced in the Hijaz. That God's countries will have to be purified of all blemish and there will be no scandal therein, whilst as a matter of fact these affairs relative to the religious rights and religion have been disregarded.

"Did you not give permission that the Idol which Egypt designates as Mahmal will enter the Hijaz with the Infidel forces of Egypt?"

"When we attempted to kill this Infidel Force as a religious duty did you not defend that Infidel Force last year?"

"Did you not send your sons to infidel countries such as Egypt, England, France, Holland etc.?"

Ibn Saoud gave them the following reply:—

"In future I will not recognise the Mahmal. In this matter I participate in your ideas and I shall do all I can in order to prevent it, and in order to prevent the tobacco-smoking and music, I shall do everything with God's help.

"I did not do the things you have mentioned and did not reject that idol, because I was fond of it or because I wanted it. I had done that in order to prevent any sedition against the Muslims from the misdeeds of those infidels."

Now you see that the Mahmal question is totally due to other reasons than those mentioned in your paper.

Finally I do not see the necessity of saying anything more in regard to the virtues of the previous administration at the Hijaz prior to Ibn Saoud, and about the mentality of Ibn Saoud and his party, and I leave judgment to the opinion of the civilized public.

Without the necessity of saying anything more in regard to the Hijaz it may be said that the circumstances of the last three years have afforded sufficient experience. At the end of these three years it has been understood that all the Muslim world is hostile to Wahhabis.

It appears from the Iraq paper dated April 25, 1927, that even among their own selves there appeared enemies, such as Douvesh, against Ibn Saoud.

In this century by reason of the mentality of the Wahhabis above referred to, it is very difficult to trust that it will produce a good effect for Arabia and consequently for Europe.

With this opportunity I tender my respects to you.

I have the honour to be Sir, Your obedient servant.

SAID KEVAKIBY.

Secretary to His Majesty the Ex-King of the Hijaz,
Hussein.

Nicosia, Cyprus, June 1.

THE GREEK CHRISTIANS OF CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I hope that my old friend, THE NEAR EAST, will kindly give me once more the hospitality of its columns, by publishing this letter in reply to certain parts of a lecture delivered by Mr. W. Bevan at the Royal

Colonial Institute, a summary of which appeared in its columns.

The readers of THE NEAR EAST AND INDIA have been thus acquainted with the views expounded by Mr. Bevan in that lecture; but I have no doubt that British readers, fully appreciating the wisdom of an ancient adage of ours which forms the very basis of all fair and sound judgment: "*Me dikases prin amphoin muthon akouses*," will want to hear the other side as well, and in the present case for this other side, the people of Cyprus, I wish to be allowed to say a few words.

From the context of Mr. Bevan's lecture one thing is made clear, that he unfortunately has no correct knowledge of the history of this Island; for by no means would I think of attributing to him bad faith.

Mr. Bevan, in complete disregard of the history of thirty centuries, expresses with easy conscience the opinion that the Greek Christians of Cyprus are not Greek in race. He evidently did not interest himself in the struggles of the Cypriots by the side of the rest of the Greeks in the war against the Persians or in the struggles of the other Greeks for the liberation of Cyprus. Alexander the Great and the Ptolemys, in connexion with the Island, the 800 years' Greek administration by the Byzantine Empire are as nothing to him. The pure Greek civilisation that flourished here for centuries and of which the excavated Hellenistic antiquities and the ruins of Greek temples speak so eloquently, have left quite unmoved the lecturer of the Royal Colonial Institute. The great number of ancient Greek words used by the Cyprus peasants till this day in their pure archaic form, the worship of Venus by the sea, which still continues in Christianised form and several other such links have no bearing for him. It is only a month ago, that the Mayor of Athens unveiled the statue of Cimon, the son of Miltiadis, erected on the shores of ancient Kitium by the people of Cyprus in grateful memory of old services and as a salient monument of long and unbroken ties.

But he need only look up the Encyclopædia Britannica to see that we are Greeks or glance at the "History of the Ottoman Empire" by William Miller, where it is said: "We are having in Cyprus much the same political experience we had in Corfu; the Greeks who form the vast majority of its inhabitants desire union with Greece." William Gladstone in that famous letter to the Duke of Westminster of March 13, 1897, quoted by his biographer John Morley, writes "I subjoin the satisfaction I should feel, were it granted me, before the close of my long life, to see the population of that Hellenic Island (Cyprus) placed by a friendly arrangement in organic union with brethren of the Kingdom of Greece."

And if only Mr. Bevan had followed more closely the development of the Cyprus question, he would have seen the answer of Mr. Winston Churchill, then Under-Secretary of the Colonies, to the members of the Legislative Council of Cyprus, published in the Cyprus Gazette of October 1907:

"I think it is only natural that the Cypriot people, who are of Greek descent, should regard their incorporation with what may be called their mother country as an ideal to be earnestly, devoutly and fervently cherished. Such a feeling is an example of the patriotic devotion which so nobly characterises the Greek nation."

or a letter of the then Prime Minister of England to the Cyprus mission in London, running as follows:—

"The Prime Minister is fully aware of the sentiment which exists among the Greek population of Cyprus in favour of the union of the Island with Greece. He directs me to make it clear to you that the wishes of the inhabitants will be taken in the most careful and sympathetic consideration by His Majesty's Government, when they consider its future." But surely Mr. Bevan should have seen that authoritative book on Cyprus: "Cyprus under British Rule," circulated at the Conference of Paris in 1919. It is perhaps worth while to quote a few lines:—

"There is a Greek word, which figures very largely and is used with peculiar emphasis in many of the leading articles which appear in the Greek newspapers published in Cyprus: it is seldom omitted from the political harangues which the Greek Cypriot loves to deliver on every possible occasion: it is to be heard in the Greek Orthodox churches, in the sermons preached on the occasion of each national

festival: clubs endeavour to obtain members and newspapers subscribers by adopting the word as their official designation; and it is to be found in practically every one of the many memorials which have been submitted from time to time by the leaders of the Greek community in Cyprus, either to the local or to the Imperial Government. The word in question is "Enosis," meaning "Union," and it is used to designate the political aspirations for the union of Cyprus with the Kingdom of Greece, which is professed by a large portion of the Christian population of the island."

But, after all, why was Cyprus offered to Greece in 1915? Because, as Sir Charles Dilke in his speech in the House of Commons on March 20, 1879, just after the British occupation of Cyprus, put it: "Cyprus was a branch of the Greek question."

However, the best way of ascertaining the feeling and the will of the inhabitants is to have a plebiscite, for which we have repeatedly asked, and Mr. Bevan knows quite well, or ought to know, that the Greeks, namely, four-fifths of the population, will vigorously vote in favour of union with Greece.

I should like to end my letter with the following very characteristic words of my much respected and honourable friend, the father of the House of Commons, found in his preface to the book: "Greece before the Conference," by Polybius: "Within the last few weeks there has been some mysterious influence—some hidden hand—raising objections to our surrender of Cyprus to Greece. I do not think a more absurd, more unjust, even a more monstrous and dishonouring suggestion has ever been made to a great nation."

I hope that Mr. Bevan will give a reply. I am a friend of argument and ready to fight it out.—I am, etc.,

NIC. KL LANITIS.

Ex-Member of Legislative Council of Cyprus.

Limassol, Cyprus, June 3.

[The passage in the report of the lecture to which Dr. Lanitis takes exception read: "The population . . . are neither Turks nor Greeks in race, but only in religion . . . As to the Greek Cypriots, we should remember that in old times many traders were called Greeks, and spoke the Greek language, when most of the Near and Middle East was under the general influence of Greece."]

THE CAUSE OF ARMENIA.

The Annual Meeting of the Friends of Armenia was held at the Central Hall, Westminster, on June 15. The chair was taken by Lord Radstock, who read a letter from the Archbishop of Canterbury wishing success to the meeting and to the appeal that would issue from it. That appeal, His Grace added, rested on both moral and religious grounds, and matters of honour were at stake.

The chief speaker was Sir Arnold Wilson. He stated that it was his conviction, based upon personal knowledge and experience, that the cause of the Armenian nation was a just cause, that their need was great, and above all that the good name of Great Britain was deeply pledged to ensure that, if we could no longer do justice to Armenia, we might at least make some reparation to the surviving remnants of the Armenian race. Sir Arnold Wilson continued:—

"It is not a popular cause and it is not as well known as it should be. It is a cause which has excited opposition in some quarters and has been treated with indifference in others. The expert on Middle Eastern politics regards the Armenian question as an insoluble incubus on international politics in the Middle East. Like the Jews, the Armenians are a race without a home; like the Jews, they have for twelve centuries or more clung passionately to their religion and have kept their national spirit alive in spite of a persecution more relentless than that which has been suffered by any other nation; like the Jews, they can live and thrive by their industry and their pertinacity, where other races can scarcely maintain a penurious existence; like the Jews, the Armenians cannot be assimilated. Unlike the Jews, the Armenian cause has repeatedly been utilised by European Powers in their

dealings with Turkey. Almost every catastrophe in which they have been involved has been due to their having become implicated, by the deliberate policy of European nations, in an attitude of hostility to Turkey. The blame for this state of affairs rests not on the Armenians, but primarily on Europe.

"I will not attempt to recapitulate the pledges which we gave to the Armenians during the War. We promised them a national home and freedom in terms not less explicit than those which form the charter of the Jews in Palestine. These pledges were given by Mr. Asquith, by Mr. Lloyd George, by President Wilson, by M. Clemenceau, and by the late Lord Curzon, between 1916 and 1920; whilst the League of Nations itself in September, 1921, urged the Supreme Council of the Allies to provide the Armenians with a national home entirely independent of Turkish rule: but nothing happened, and to-day, of all the minorities whose claims were the object of President Wilson's special solicitude, the Armenians alone have been abandoned by the Allied and Associated Powers, mainly because, by the time their cause came up in concrete form, the United States had disowned President Wilson's schemes, which included the assumption by the U.S.A. of a mandate for Armenia, chiefly, if not entirely, because the Harbord Mission had reported that American troops would be required in the early stages. Whatever the Americans may have done elsewhere, in their dealings with Turkey they betrayed European civilisation and Christianity. They refrained from declaring war against the Turks, and took full advantage of this attitude in post-Armistice years to further American economic interests in Turkey; they gave no help to the cause of Armenia at Lausanne, but made haste to sign a separate treaty by which they virtually renounced every single plank on which they had taken their stand. But this action on the part of the United States Government has not passed unnoticed at Washington, and last January the Senate definitely refused to ratify the offending treaty, a refusal which testifies to the strength of American convictions and to the fact, which those who know America have never doubted, that the motives which actuated the United States in entering the Great War still appeal to large numbers of her citizens. The same is true of Great Britain, and during the past twelve months the success which has attended the activities of the 'Friends of Armenia' in this country and to a less extent in Europe shows that, though Governments find it convenient to spurn those whom they have injured, the man in the street realises more than before that we owe it to our own good name to set the Armenians on their feet.

"There are, broadly speaking, two schemes to this end—one, sponsored by Dr. Nansen, has for its object the settlement of Armenians in the Erivan district under the authority of the Union of Soviet Republics. For this scheme we in this country and in Europe generally have no responsibility. The other scheme, which has been attended by very considerable success, is for the settlement of Armenians in Syria—some at Alexandretta, some in the Lebanon, and some elsewhere in Syria. The French Government and also the Government of Syria have contributed liberally, and the scheme is working well beyond the hopes of its promoters. It is this scheme which I commend to you this afternoon, and I appeal to your generosity and to your sense of justice to give it financial backing. This is the great question outstanding from the War; a great national obligation that has not yet been honoured. It had, as you know, the unqualified support of Mr. Baldwin and Mr. Asquith when Mr. Ramsay MacDonald was Prime Minister, and I cannot doubt that it would have had a not less unqualified support from Mr. Ramsay MacDonald, had he been out of office. Mr. Asquith and Mr. Baldwin put their signatures to a memorial urging a substantial grant towards the resettlement of the Armenians as a final liquidation of our responsibilities, but no grant was given by the then Government, and none has been given since.

"So much for the pledges given by British statesmen

on behalf of the British nation. It is, however, possible for us to rise superior to our own Government. It is often said that every nation has the Government it deserves. My experience leads me to think that no nation has as good a Government as it deserves, and we are no exception to the rule. More is done in England by voluntary effort than in any country in the world. Voluntary effort has made us what we are, and has given us almost everything of which we have a right to be proud. I have seen a good deal of the world, and nothing has struck me more, wherever I have been, than the immense superiority of the innumerable good works and enterprises, whether patriotic, philanthropic, religious, or commercial, over the efforts of Government organisations, and for this reason I would urge all to give something to the funds of the 'Friends of Armenia,' in order that this settlement scheme may be a success. Broadly speaking, for every pound that is contributed by this country, another pound will be contributed by the French Government. The money thus subscribed will not be lost; it will go to a revolving fund, the money loaned to settle Armenians upon territory which has been made available for them by the wisdom of the French Government being utilised as soon as required for fresh settlers.

"I am not blind to the frailties and to the faults of Armenians, but I beg you to accept my assurance, which is based upon considerable personal experience of them in many different situations, that they are worthy of our support. They are, for example, a very valuable element in the population of Persia. No race has such a large proportion of its able-bodied men engaged in skilled work as mechanics, carpenters, builders, and skilled agriculturists. They are known outside their own country mainly as traders, as also are we: but whether in Baghdad, or in Isfahan, or Tabriz, in Buenos Aires, or Calcutta, or Shanghai, wherever you find an Armenian colony, you will find a large proportion are earning their living as craftsmen, and this affords the best prospect for the success of the scheme. I have spent some twenty years in Persia, and never have I known any trouble between the Persian Government and the Armenians. Some ten or twenty thousand have been in Mesopotamia since 1918. They have been absorbed into the population, and have proved a useful element. They have caused no sort of difficulty with the local Government, and the readiness of the French Government to settle them in Syria is the best evidence of their ability to become good citizens when they get the chance.

"We have as a nation a reputation as lovers of justice and for keeping our word, a reputation which our Government shares, but in a much less degree. The 'Friends of Armenia' have taken upon themselves the responsibility for bringing home to the people of this country the justice of the Armenian cause, and for collecting the funds necessary to enable what Lord Curzon described in November, 1922, as 'one of the great scandals of the world' to be settled in an honourable manner. I appeal to you and to all who care for justice and mercy to give, and to give liberally."

A sale of Armenian work was held in connexion with the meeting, the goods having been made by refugee widows and orphans or by women and girls rescued from harems.

Professor Tsankoff, late Bulgarian Prime Minister, was on June 19 re-elected President of the Sobranye.

A British fleet was due to arrive at Phaleron yesterday under Admiral Sir Roger Keyes. It will subsequently visit Thasos, Kavalla, Volo, Skiathos, Gytheion, Nauplia, and Cephalonia, leaving Greek waters on August 15.

The Rev. John Cameron Young, of Sheikh Othman, Aden (Arabia), and of George Street, Edinburgh, medical missionary, for over thirty years working in the Keith Falconer Mission in South Arabia, who died on February 2, 1926, left personal estate in Great Britain now valued for probate at £6,364. Subject to several small legacies to his native servants and others he left:—

All his property to the United Free Church of Scotland for the benefit of the Keith Falconer Mission in South Arabia.

NOTES OF THE WEEK

(Continued from page 744.)

Government by their own Party, which would, of course, be charged with the holding of the elections.

The Hajj.

The hopes which have been duly recorded in these columns that the 1927 Pilgrimage would reveal unusual numbers and would, in fact, vindicate the Wahhabi régime in the Hijaz, have been most strikingly justified. The number of hajjis at Mecca during the Pilgrimage season has been estimated at the relatively enormous

The 1927 Hajj. A corner of Jiddah. Pilgrims waiting by their stacked baggage for camels to carry the covered palanquins.

figure of a quarter of a million: a figure which certainly has not been approached for decades. There are no statistics available for comparing this figure with the figures of the numerous attended Pilgrimages of the past, but it is doubtful whether it has ever been exceeded, even in the days when the Turkish Empire included much of Asia, Africa, and Europe. Most of the credit for this manifestation of Islam's unilateral purpose should be given to the great leader of the Wahhabis, King Ibn Saoud, who, whatever may be said of his political experiments in the Hijaz—and upon them the judgment of Mussulmans themselves is varied—has certainly provided the means of a revived religious resolve. It can no longer be said, as it has been said by certain Indians and Persians, that this Puritan of the Desert does not deserve well of Islam. Already Abdul Aziz Ibn Saoud is assured of permanent glory in the annals of Islam; and even in the shifting history of Arabia his place stands secure. Only a man of uncommon will and resource could so fashion the internal conditions of the Hijaz as to induce 250,000 Mussulmans to congregate therein. Accounts of this year's hajj will be studied with eager scrutiny; but it seems improbable that the anti-Wahhabi manifestations in places like India or Persia can in the future base themselves on anything else than temperament. For facts, which became the more distorted the farther they travelled from the Hijaz, have finally run all in favour of the Wahhabi leader.

An Arab Conference.

The success of this year's hajj represents, of course, the more important aspect of King Ibn Saoud's career; we mean his resolve to regenerate Islam. But on the smaller

and more immediate scale, he also is showing wisdom and breadth of view. Arabia itself for many months past has been agitated with rumours of war between the Wahhabis and the Zaidis of the Yaman, and the province of Asir has constantly been pointed to as the theatre of the inevitable conflict between King Ibn Saoud and the Imam Yahia. But these two monarchs appear to have abandoned the time-honoured weapon of settling disputes in the Peninsula, and it is a credit to both of them that negotiations should have been arranged to attempt an amicable settlement of the differences existing between the two main States of Arabia. It is stated that, at the suggestion of the Imam Yahia, a conference is to be held at his capital of Sanaa, to settle problems relating to frontiers and other matters. King Ibn Saoud, on his part, has shown good will by deputing three representatives to attend at Sanaa. The outcome of this conference, the calling of which will surely meet with cordial approval on the part of all European Powers interested in the peace and security of Arabia, will be watched with intense interest. Additional significance will be lent to this Arab Conference by the visit, now being undertaken, of the Imam's second son, the Saiyid Muhammad Ibn Yahia, to the King of Italy. The Yaman is strongly represented by the mission which left Massowa last week for Rome.

Settlement of Armenians.

Mention of the Armenian problem is apt to provoke thoughts of the Turkish problem, and defence of or hostility to the unfortunate Armenians is often synonymous with the taking up of an anti- or of a pro-Turkish attitude. This frame of mind is now, however, an anachronism; for the Armenian problem to-day is largely extra-Turkish. Two separate endeavours are being made, not, indeed, to redeem the Allies' pledges to the Armenians—pledges which were made, as Sir Arnold Wilson remarked last week, as explicitly as those which formed the Charter of the Jews in Palestine—but in some way to piece together the tattered fragments of a nation. The

Bahra: Half-way between Jiddah and Mecca.

first of these endeavours, which Dr. Nansen last week once more brought before the League of Nations, is being conducted in the Erivan Republic; it contains at once considerable promise and considerable difficulties. The second, which has every possibility of success, is being conducted in Syria under the direct auspices of the French mandatory authority. This Syrian experiment, as far as can be seen, needs only adequate financing to ensure its accomplishment; and if Britain with official eyes cannot see her way to support of the Nansen scheme, there is all the more reason why unofficially she should support the lead of the French Government in Syria.

NEW BOOK.

MALAYALAM SELF-TAUGHT

By DON M. de ZILVA WICKREMASINGHE, Hon. M.A. (Oxon.), and T. N. MENON, B.A. Dip. Ec. (Madras).

For learning the language by the Natural Method, with Phonetic Pronunciation. Containing the Malayalam Characters, with Roman Equivalents and Pronunciation; Vocabularies, Outline of Grammar; Conversational Phrases and Sentences; Commercial and Trading Terms; Travel, Shooting and Fishing; Planting and Public Works; Money and Weights, etc., etc.

In connexion with the recently authorised economies in the Greek Army, the Government on June 16 published a decree suppressing 1,676 military appointments in the peace organisation of the Army. In virtue of another decree 12 regiments of various arms, the headquarters of the V Corps and the 7th Division, various minor units and the armoured car corps are being abolished.

PERSONAL AND GENERAL

TO-DAY

June 23, 1927 (New Style).

June 10, 1927 (Old Style).

Julhigga 22, 1345, A.H. of the Muslim Calendar.

Sivan 23, 5687, of the Jewish Calendar.

King Fuad of Egypt is due to arrive in London on July 4 on a visit to the King and Queen. His Majesty will be at Buckingham Palace for three days, and afterwards will stay at Bute House, the Royal Egyptian Legation. During his stay in England King Fuad has planned to visit Lancashire and other parts of England.

Lord and Lady Inchcape have returned to 4, Seamore Place from Paris.

The Aga Khan left the Ritz Hotel at the end of last week for the Continent.

H.E. Monsieur Titulesco, Roumanian Minister in London, left last week for Geneva.

Mrs. Charles Bruce has returned to 12a, Chapel Street, S.W.1., from Cairo and Cape Town.

The Maharaja of Kapurthala, who arrived in London recently, is staying at the May Fair Hotel.

Lady Stavridi was at Home to members of the Anglo-Hellenic League on June 16, when Sir John Campbell spoke on Refugee Settlement work.

The Right Rev. Tyre Chatterton, late Bishop of Nagpur, and now Rector of Merstham, Surrey, has been nominated by the Archbishop of Canterbury to an Honorary Canonry in Canterbury Cathedral.

Mrs. Harold Nicolson, wife of the First Secretary at the British Legation in Teheran, who writes under her maiden name of Victoria Sackville-West, has been awarded the Hawthornden Prize (£100) for her poem "The Land," which was written in Persia.

During the progress of the Renown through the Suez Canal, with the Duke and Duchess of York on board, Lord Lloyd, who had motored from Cairo to Suez, boarded the ship and accompanied their Royal Highnesses to Ismailia. The Renown left Port Said on June 15 for Malta, which was reached on June 18.

THE SALONIKA DINNER.

The sixth annual dinner of the Salonika Army and Black Sea Forces was held at the Hotel Cecil, London, on June 17. General Sir George Milne presided, and among those present were:—

Major-General Sir Anthony Bowly, Lieut.-General Sir Charles Briggs, Brigadier-General T. Bruce, Lieut.-Commander F. Cadogan, R.N., Major-General Sir G. N. Cory, Major-General Sir H. L. Croker, Colonel Sir Crisp English, Major-General Sir H. J. Everett, Rear-Admiral W. W. Fisher, Major-General Sir G. Forestier-Walker, Brigadier-General F. D. Hammond, Commander C. B. Hampshire, Lieut.-Colonel A. P. Heneage, M.P., Commander R. G. Hunt, Brigadier-General C. G. W. Hunter, Bishop Keatinge, Brigadier-General H. E. T. Kelly, Commander J. P. Landon, Major-General Sir J. R. Longley, Major-General Sir William G. Macpherson, Major-General Sir Charles Mathew, Lieut.-Commander H. F. B. Maxse, Colonel Sir James Purves-Stewart, Commander H. M. Robson, Rear-Admiral C. M. Staveley, Colonel Sir Charles G. Watson, Brigadier-General B. F. Widdrington.

The Salonika Reunion was represented by Lieut.-Colonel G. R. F. Levenson, Major S. E. Calder, Captain S. B. Donald, R.S.M. Evans, and Sergt. Baker.

DEATH.

VAN MILLINGEN.—On June 20, 1927, at Alexandria, Egypt, Charles Alexander Mackenzie van Millingen, M.C. (with bar), elder son of the late Rev. Professor Alexander van Millingen, M.A., D.D., and of Mrs. van Millingen, of Florence, Italy, and beloved husband of Marjorie van Millingen, aged 30.

OBITUARY.

Judge John Felix Kershaw.

We regret to have to record the death on June 16 at the age of 53 years, of His Honour Judge John Felix Kershaw, formerly Judge of the Native Appeal Court of Egypt. It was only last year that Judge Kershaw's name came into considerable prominence through his resignation from the Egyptian service as a protest against the action of his native colleagues of the Cairo Assize Court, in acquitting by a majority vote six of the seven men accused of complicity in various murders and attempted murders of Englishmen and Egyptians. On leaving Egypt, he returned to England, and last January was appointed Judge of the Southwark, Greenwich and Woolwich County Courts. Judge Kershaw was a son of Sir Louis Kershaw, Chief Justice of Bombay. Educated at Shrewsbury and Balliol College, Oxford, he was called to the Bar in 1897. He was appointed Civil Judge at Khartoum in 1902, and after being transferred to Egypt, became Inspector in the Native Parquet from 1904 to 1909, and a Judge of the Native Tribunal at Alexandria from 1909 to 1912. In 1913 he was appointed to the Native Appeal Court.

CYPRUS SUPPLEMENT.

Next week's issue of **THE NEAR EAST AND INDIA** will contain a **Special Illustrated Supplement devoted to Cyprus**. It will comprise among others, articles on **Agriculture, Trade, Forestry, the Silk Industry, the Mineral Wealth, Cyprus as a Tourist Resort and the Cyprus Museum**.

The Egypt Exploration Society will be holding an exhibition of antiquities, plans, drawings, etc.—the result of the season's work at Tell-el-Amarna—in the Society's room, 13, Tavistock Square, W.C.1., from July 5 to 22 (Saturdays included) from 10 a.m. to 5.30 p.m.

Under the auspices of the Egypt Exploration Society M. Henri Frankfort, M.A., Director of Excavation, will deliver a lecture (illustrated by lantern slides) in the meeting room of the Royal Society, Burlington House, on Thursday, July 14, at 5.30 p.m.

Turkish Minorities.

The most salient feature in recent Turkish papers is the campaign against the ill-treatment of Turkish minorities in the Balkans. Both *La République* and the *Milliet* accuse each Balkan State of actions similar to those perpetrated by the Turks themselves many years ago: nevertheless, they are this much right—in pointing out that these same actions cannot make for peace or facilitate negotiations.

Whenever the question of the Turks in the Balkans is discussed, our compatriots in Eastern Thrace are first in one's thoughts, because of the exceedingly difficult position to which they are reduced in this region. Greece has not yet decided to fulfil her engagements which she undertook towards the Turks in Thrace. In the Exchange Agreement which we concluded with Greece, it is known that the Turks in Western Thrace were excluded from the exchange in compensation for the Greeks established in Constantinople, who were to stay in their homes while retaining their full rights and interests. Now the Greeks were seen to dispose at will of the possessions of the Turks on the false pretext of assuring the establishment of the Greek immigrants. In spite of their reiterated promises and solemn pledge, they have not ceased for one moment from behaving in such a manner as to make the life of our compatriots unbearable. With regard to the Turks of Thrace, the Greek authorities continue a policy of persecution and oppression. The personal property which has been seized has not yet been restored to the owners.

It is also certain that Turks established in Yugoslavia are the objects of much worse treatment than are the Serbs and Christians, and their position is very little better than their compatriots in Western Thrace. It is true that we have been told that amongst the Mussulmans of Yugoslavia, those who live in Bosnia-Herzegovina are subject to relatively better conditions, but nothing will reassure us on the fate of those Turks living in the new part of Serbia, called to-day Southern Yugoslavia.

Such is also the situation of Turks who lead a very hard life at Prishtina, Kossovo, Monastir and in this vicinity. We cannot conceive of what interest it can be to Serbia to see these Turks leave the country owing to their life in these countries having been made unbearable.

Roumania, who was celebrated for her excellent dealings with the Turks in the Dobruja, changed her conduct towards them on the morrow of the Great War. The Turks along the line of Turtakaia-Baltchik have been subject for some years to deplorable conditions. The Roumanian Government started to install Wallachians, who come or are sent from Macedonia, in the region of the Dobruja, beginning from the aforesaid line of Turtakaia-Baltchik, a policy which condemned the Turks inhabiting these districts to a wretched life.

The Turks in Bulgaria suffer equally a miserable existence, which grows worse. It appears that Bulgaria, who hitherto treated her Turkish subjects with the greatest generosity, is tending to imitate the bad example set by other Balkan States.

As to our brothers other than those inhabiting Thrace, it seems to us that the Turkish Government will finish by consenting to their immigration into Turkey, but as it is no easy matter to provide for such a multitude, of which the number is over a million, it will be necessary to proceed methodically and according to a regular programme, if we eventually come to make such a decision. Needless to say, those States in question would be in honour bound to facilitate our task with whatever means they possess. They would thus be giving not only a proof of their friendship but would fulfil a duty of the greatest humanity.

Talking of the reinforcement of minority nationalities by the various States, *La République* quotes the *Milliet* :—

The policy of inauguration and establishment pursued by our neighbour, Greece, is, in this respect, worthy of attention. We saw, several days ago, in the *Messenger d'Athènes*, a map borrowed from an English newspaper on which the regions were indicated where Greeks transported to Greece owing to the exchange of minorities had settled. Nearly the whole of the population, which numbers more than a million and a half, of which a large quantity arrived from Turkey, has been settled in Macedonia and Western Thrace. The object is clear: in those regions where the Greek element is in the minority or constitutes a very small majority, the intention is to install the refugees in order to ensure a numerical preponderance of the Greek population.

By establishing these *immigrés* in Western Thrace, they want to create a Greek majority, and by settling *immigrés* in Macedonia they hope to reinforce the ethnical population against the Serbian and Bulgarian elements.

What interests Turkey is the situation in Western Thrace. . . . It is known that Bulgaria has made a loan of two hundred and fifty thousand pounds for the *immigrés*. The refugees for whom this sum is destined number 300,000. According to a decision approved by the League of Nations the refugees are established at a distance of 50 kilometres from the Yugoslavian, Greek, and Roumanian frontiers. We have heard that for those refugees from Greece this distance has been reduced to 10 kilometres in the territory on the east bank of the Maritza. That is to say, that they have consented to the settlement of Bulgarian *émigrés* in close proximity to our frontiers. We have no right to protest, nor to interfere in this affair. But such actions—even if they emanate from our friends—cannot but attract our attention.

We must pursue a special policy in establishing *immigrés* in Thrace similar to that carried out in our Eastern provinces.

Yugoslavia and Salonika.

Owing to a possible revision of the agreement with the Pangalos Government, Yugoslavia greatly fears that the use of the free port of Salonika will be limited. The use of foreign transport to the port would also be scarcely satisfactory and she holds to her right over the Ghevgheli-Salonika railway as well as to the free use of the port. The *Morgenblatt* reports :—

After the fall of the Pangalos Government the question, which has already arisen between the Greek Government and our men, must again be taken in hand. The difficult internal political relations in Greece were for a long time unfavourable to a reopening of negotiations. Now the preparations for the opening of negotiations are in progress and two delegates from the Yugoslav Government, Dr. Milan Todorovitch and Mr. Savakukitch, are already staying in Athens. They are dealing, as is known, with the questions of the zone of the port of Salonika, and with the not less difficult question of the use of the Ghevgheli-Salonika line, which is the property of the S.H.S. State. The present Greek Government requires a thorough revision of the agreement, concluded with Pangalos concerning the Free Zone of Salonika and the railways from Ghevgheli to Salonika, on the ground that this Treaty limits the Greek rights of sovereignty. The negotiations with the Greek Government are not moving quickly, and a complete understanding seems unlikely to be reached within a conceivable time. According to the information of our correspondent the following questions are under discussion: (1) The question of cabotage of our ships and the arrival of foreign ships in the Free Zone of Salonika.

According to the convention concluded with General Pangalos the zone was completely free to us, without any payment or compensation either for Yugoslav or for foreign ships. The present Greek Government demands a modification, that all ships must pay a harbour duty for the upkeep of the Harbour of Salonika. The delegation could not agree to the modification of the original agreement, for it would make profitable traffic conditions in our Free Zone impossible. (2) In conformity with the agreement with the Pangalos Government Yugoslavia holds to her right to her own administration, her own rolling stock, and traffic personnel, on the line from Ghevgheli to Salonika. The Greek Government now demands a modification entailing that Yugoslavia would be debarred from her unlimited right over and support of her traffic with the Free Zone. (3) As to the question of transit tariffs, several opinions are common both to our delegation and the Greek, out of which an agreement should be reached. (4) According to the settlement with Pangalos, the decision of a French arbiter would be taken in case of disagreement. Greece now requests that a representative of the League of Nations should arbitrate.

Taking everything into consideration, the previous negotiations give little room for optimism on this state of affairs. It would seem that the Greek Government under the influence of propaganda of unknown foreign Powers unfavourably disposed towards us, is endeavouring with every means in its power to make impossible Yugoslavia's access to the sea. The Greek fears, that our political influence owing to the possession of the Free Zone would be of disadvantage to Greece, are entirely without foundation, since the Yugoslav State is pursuing no other object than a strictly economic one.

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

INDIA AND BRITAIN.

The proceedings of the Royal Commission on Indian Agriculture, now sitting in London, have not attracted much attention in this country. This may be due to the fact that the evidence which is being taken, important though it may be for the purposes of the inquiry, is to a great extent of a technical character. But the need of a better understanding of India and her economic problems is a crying one, and there was force in the friendly appeal made to the Press by the Maharajahdiraja of Burdwan at a dinner given in honour of the Empire delegates in London, when he pleaded for increased publicity for Indian affairs. Great Britain's interest in India is two-fold. The India of to-day contributes the most important market for British manufacturers, and this market still has enormous potentialities of expansion. In one year the exports from this country to India have amounted in value to £90,000,000, and a very small increase in the purchasing power of a population of 320 millions represents in the aggregate a large addition to the demand for imported commodities. That the standard of living of the Indian people is improving is beyond question, though the economic disabilities under which they labour owing to social and religious customs form an obstacle to rapid advance. Progress, however, is evident, through the extension of railways and irrigation, the improvement of agriculture, and the spread of education. One great Indian project now in course of construction, the Sukkur Barrage scheme, will provide water for an area equal to the whole cultivated area of Egypt, and those who have seen for themselves how in the Punjab arid desert tracts have been converted into rich wheat-growing country by the provision of water will realise what irrigation means to India.

There is another and a wider aspect of the life of India which calls for the consideration of thoughtful men and women in this country. The British have assumed a responsibility for India which cannot adequately be realised without greater knowledge of her problems and her needs. It may be declared with truth that we have made mistakes in India. But does any country in the world possess a Government that is free from imperfections? No man or woman of British blood who approaches the subject with an unbiased mind can deny that on the whole the rule of Britain has conferred inestimable benefits on India; that its representatives are inspired by an honest desire for the welfare of the Indian people, and that, often in the face of discouragement and disillusion, they have patiently laboured for the advancement of the masses committed to their charge. It is little to the credit of a small section of politicians here that they have systematically endeavoured to belittle the achievements of their fellow-countrymen in India. It is easy enough by means of statistics carefully chosen to that end,

by comparisons between the East and the West which are fallacious and misleading to the verge of the grotesque, to induce the ignorant and the credulous to believe that India has suffered from misgovernment in the past and is the victim of oppression in the present. The fact that literature of this kind is being widely disseminated is an additional reason why greater knowledge should be sought, and the need for enlightenment is the more clamant in that in the near future a Royal Commission will be charged with the task of inquiring into the working of the Constitution created by the Government of India: Act. Whatever the resultant recommendations may be, it is of supreme importance that no false impression may be created in regard to the aims and achievements of British rule in India.

There are notable signs in India that differences of opinion exist among the educated classes in regard to the Constitutional scheme. Vocal opinion, in so far as it finds expression in the Indian newspapers, is not an infallible indication of the trend of thought. Many Indians of weight and standing, who share in the desire to have a larger voice in the administration of their country's affairs, are averse from violent and ill-considered Constitutional departures. But we are not primarily concerned now with discussing the question of the Reforms. The essential need of the moment is a wider knowledge of India, so that counsel may not be darkened by untruthful indictments of the Government and its officers, many of whom to-day are themselves Indians. Pictures of unrelieved misery and distress in India, of British official arrogance, of declining prosperity and rising discontent are being painted by men who, while British themselves, seem to delight in decrying their own race, whether in the West or the East. The truth is that the economic condition of the Indian masses is undergoing steady improvement; that the surplus produce of the soil available for export has greatly increased in recent years, to the benefit of the cultivator; and that in times of crop failure the people are showing powers of resistance to distress never before experienced in India. The work of creating this silent revolution has been long and arduous, and much still remains to be done. But the outlook is full of promise. The labours of the Royal Commission now sitting will, it may be hoped, give a stimulus to the magnificent work already accomplished by the application of science to agriculture; the strenuous efforts of Government, with non-official assistance to free the peasant from the toils of the moneylender is bearing good fruit, and the deposits in the Post Office Savings Banks bear testimony to the growth of thrift and an improvement in the condition of the people at large. The more the position in India to-day is examined with an unprejudiced mind, the more apparent will it become that Britain has not played the part of the unjust steward in that country. The poverty that exists there to-day cannot be laid at the door of the Government, though the Government can rightly claim that it has done much to increase the country's wealth, and that its activities continue to be directed towards alleviating the lot of the masses of the people.

CURRENT TOPICS.

The Commons Debate on India.

The debate on India in the House of Commons on Friday was noteworthy for the comparative moderation of the speech delivered by Mr. Lansbury in opening it. Mr. Lansbury and his friends have not been so restrained in their utterances outside the House, and there is being circulated at the present time literature from a Labour Publishing Press, in which the most slanderous attacks are being made on British officials and British merchants in that country. Mr. Saklatvala's characteristic rhetoric may be treated with the contempt it deserves, but Mr. George Pilcher performed a useful service in reminding the House that the member for North Battersea had been closely and profitably connected with the Bombay industrialism which he denounced. The fallacy that nothing has been done for the agricultural masses is dealt with in our leading article to-day. The recommendations of the Linlithgow Commission, when they are forthcoming, may give a stimulus to the work of the agricultural departments. But the policy of enhancing the profits of the agriculturist through the application of modern science to cultivation has long been in practical operation. It is shown in the latest annual review written by Dr. Clouston, Agricultural Adviser to the Government of India, which has just reached this country, that the area under improved crops introduced by the Departments is now nearly $7\frac{1}{2}$ million acres, and the enhanced wealth of the cultivation received from the new varieties of seeds is at least $7\frac{1}{2}$ crores of rupees. This estimate is a very conservative one, as in some cases the increased profits from new strains of cotton have reached 42 rupees an acre. Lieut.-Colonel Howard Bury directed the attention of the House to a matter which is causing grave concern to the military authorities in India. The shortage in the number of British officers coming forward for service in the Indian Army is pronounced, and it is to be hoped the subject will be adequately dealt with by Lord Winterton in the full statement he is to make later in the Session. In regard to the Reforms there is nothing new to be said. Lord Winterton's speech gave the impression that the Royal Commission to inquire into the working of the new Constitution would be appointed before long. The task to be entrusted to that body will be a momentous one, calling for exceptional sagacity and courage, and it will not be rendered less difficult by the grave communal differences which continue to manifest themselves in India.

Indian Trade.

Mr. H. A. F. Lindsay, the Indian Trade Commissioner in London, in giving evidence before the Royal Commission on Agriculture on Friday, stated that European and American markets in general are more critical of the quality and condition of the goods they buy than they were before the War. This was due partly to keener competi-

tion and the necessity of eliminating waste and reducing costs of raw material, and partly to the higher cost of labour and the importance of obviating unnecessary trouble and expense in manufacture. In general, according to Mr. Lindsay, Indian commodities conform to these altered conditions, but in some cases they do not. In regard to jute for instance, the difficulties experienced in foreign markets are very slight, but hemp, or the other head, would benefit considerably by the introduction of improved methods of cultivation and preparation in India. The Trade Commissioner declared that the main factor in the situation, as viewed from European markets, appeared to be the overwhelming need for wider and better organisation of India's agricultural resources, and he made the important suggestion that an organisation should be created in India which could negotiate on level terms with the overseas importer. Mr. Lindsay was impelled to the conclusion that such an organisation is needed by his experience as a member both of the Imperial Economic Committee and of the Empire Marketing Board. The investigations of the markets of the United Kingdom by these bodies have shown that the seller who secures best prices is he who knows and can meet the exact requirements of the consumer. The Dominions have their own producers' organisations and control boards, which attempt to ensure uniformity and economy of handling their products at home, and in some cases by means of agents abroad to reach the consumer. India has already her Cotton Committee, which is doing excellent work in the improvement of the quality and the enhancement of the reputation of cotton, and Mr. Lindsay apparently would not include this product in the proposed organisation, on the principle of "leave well alone." But he believes that a new organisation which would exercise a direct influence for the improvement of methods of production and preparation for market would perform a useful service, and the experience of the Cotton Committee certainly seems to support his view. It is to be feared that under existing conditions the Indian cultivator suffers from malpractices which are resorted to after his produce has left his hands. In any event, a well considered scheme which would secure better prices for Indian exports and enhance their reputation abroad should be welcomed.

The second Interim Report of the Royal Commission on Agriculture in India, which includes the minutes of the evidence taken in the Bombay Presidency up to November 2, 1926, has been issued as a Blue-book (H.M. Stationery Office, price 8s. 3d.).

The India Office announces that the age of retirement of General Officers in the Indian Medical Service is raised from 57 to 60. The provision by which a General Officer may continue in an administrative appointment for one year at the discretion of the Viceroy is cancelled.

A telegram to the Secretary of State for India states:—Rainfall, week ending June 15. Excess: Bay Islands, Kashmir, Baluchistan, Rajputana (West), Bombay Deccan, Hyderabad, Madras (South-East), and Madras Deccan. Normal: Lower Burma, Assam, Gujarat, Konkan and Madras Coast (North). Fair: Upper Burma, Bengal, Punjab, Central Provinces, Mysore and Malabar. Scanty elsewhere. Monsoon extended North Peninsula.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 2.

Stability of Indian Currency.

Sir Basil Blackett in the course of an interview has shown that the communiqués on the subject of the recent contractions of currency are not likely to cause any misapprehension in the market. He added that most of the criticisms start from the erroneous notion that there is something inherently evil in a contraction, and from the habit of exaggerating the extent to which any currency system can be worked without expert control by a recognized currency authority. The action that the Government have taken has done no more than impart a wholesome stability to monetary rates. The Finance Member insisted on the difficulties of maintaining the stability of exchange in India, irrespective of the ratio adopted; but difficulties, he contends, are no greater at 1s. 6d. than they were at 1s. 4d. Exchange is at the moment satisfactorily strong for the season, the recent weakness being the outcome of the speculation that forced up the market quotation of the Government of India securities in India to an unduly high level a year ago.

Indian States and Opium.

The question of controlling the production as well as the consumption of opium brought together the Government of India and the Indian Princes at a Conference held at Simla a few days ago. His Excellency the Viceroy said that India was pledged to the ultimate suppression of opium smoking, to the limitation and control of the export of the drug, and to the prevention of the smuggling of it to the Far East. The drastic reductions resorted to in the United Provinces had not caused any appreciable hardship, and the economic life of the Indian States had not been disorganized on account of those reductions. The Government can rely upon the co-operation of the Princes, the key-note of which was given by H.H. the Maharajah of Patiala's cordial response to the Viceroy's appeal. The Hague Opium Convention was signed by representatives of India, including a Ruling Prince, H.H. the Maharaja of Bikaner, and thereby India, and not merely British India, became a party to this agreement. India has further pledged herself to take effective measures to prevent the illicit traffic in raw opium from presenting a serious obstacle to the suppression of opium smoking, a habit, rare in India, but sadly prevalent farther East. A Commission of the League of Nations will visit India and other producing countries in the course of a few years, in order to determine whether the pledge has been kept.

The Howrah Bridge.

There is no further hope of a new bridge, worthy of the name and of the City. The cheapest kind has been decided upon. The cheapest is, of course, a floating bridge, which means interrupted traffic, danger due to the tidal river, and rapid deterioration. For years there have been complaints, suggestions and proposals in regard to the building of an adequate structure. But the conclusion that the bridge should be of the cheapest kind has committed Calcutta to another floating bridge. It is true that it will be wider than the existing one and that the roadway will be larger, with provision for a double tramway line and two footpaths. It will be situated ninety yards from the present site. It is a general complaint that such a structure should be deemed sufficient for the purpose of the second city of the Empire.

European Unemployment.

At a recent meeting of the Rotary Club Mr. J. H. Simpson declared that there had recently been an increasing and alarming amount of unemployment among Europeans in Calcutta, a rush of Ex-Service men to the city having been one of the factors. There are two organisations, the Ex-Services Association and the European Unemployment Relief Committee engaged in dealing with this invasion. They are assisted by the Bengal

Chamber of Commerce, the Calcutta Trades Association, the European Association, the Rotary Club, the Y.M.C.A. and the District Charitable Society. One would think that the unemployed men could easily be accommodated by so many powerful bodies. The fundamental mistake seems to lie in the fact that unless a man is absolutely destitute and fallen very low, he does not inspire the necessary sympathy, and cannot get the wherewithal to make a fresh start. Most of the unemployable men, who are so helpless that they have to hang on to the Associations, are cared for by the repatriation societies and sent home to relatives. But it is declared that men and women whose troubles are temporary, and who could, if given a chance at the right moment, avoid collapse, are not tendered the needed assistance. Old clothes and charitable rations will never be a solution of the difficulty.

Here and There.

Dr. Annie Besant has cabled to "New India" an appeal "to unite for the Mother's sake (India)". "If the Bill now in the House of Commons does not please you," she writes, "make another. I will be the first to tear up the older one and welcome the new. But no Bill will become an Act unless united India demands it."

Had Flight-Lieutenants Carr and Gilman enjoyed better luck in their "record flight" to India, the place ambitiously styled as the Dum-Dum aerodrome would have been used to justify the designation. But after a cable was received announcing the arrival of the pilots, another followed to cancel the order to prepare the bit of waste land at Dum-Dum for the landing. It was a disappointment, but perhaps it was better thus; for time will now be available to make of Dum-Dum, the chosen landing ground of Calcutta, the future junction of all air routes to the East.

The result of Professor Raman's study and research in magnetism is a new and extremely sensitive apparatus, by which the feeble magnetic properties of gases and vapours may be accurately measured. With that apparatus and auxiliary optical aid, Prof. Raman can demonstrate that the molecules of a liquid, when placed in a strong magnetic field, tend to turn round and arrange themselves parallel to one another. Benzene and carbon-disulphide produce the strongest effect. Indian savants want to prove that light really comes from the East.

A cultivator in the Madras Presidency has lately unearthed a number of Roman coins of the reign of Claudius. Did these coins buy apes, ivory or peacocks? Egyptian coins would certainly be less of a puzzle. Roman coins are a most unaccountable find.

Calcutta amusements are thinner than ever. The Forbes Russell Company after a comparatively successful season, a success due to plays such as "Fallen Angels" and "The House of Unrest," have given "The Last of Mrs. Cheney" as their farewell performance. The Empire Theatre will be closed till July, when the Joy Bells will come to charm Calcutta's monsoon nights.

A recent arrival wonders at the manner in which the last gas-lamps are being lighted in Calcutta, and suggests that the man, instead of running about carrying a ladder, should be provided with a pole. There are a number of antiquated institutions in Calcutta.

According to the *Pioneer*, Gul Akbar, one of the murderers of Mrs. Bums at Bannu, and of Captain and Mrs. Watts at Parachinar nearly four years ago, who was arrested at Peshawar on May 9, was last week tried, convicted, and hanged.

In the course of his evidence before the Royal Commission on Agriculture in India, Mr. H. A. Lindsay, Indian Trade Commissioner in England, said he received many complaints in regard to the quality of Indian produce. With regard to tobacco, it was largely a question not only of the quality of the plant, but of the curing. The existing British import duty also had an adverse effect. The new preference duty on Imperial tobaccos increased the export of leaf, but the cigar trade remained stationary, possibly because the duty was too high on weight. If there was an *ad valorem* duty it might have a good effect on increased export of cigars. If the duty were reduced by half or the method of assessing revised, the present 4½d. Indian cigar might be sold in London for 2½d., which would mean an increased demand.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 3.

Birthday Honours.

A glance through the Birthday Honours list shows that Bombay has undoubtedly secured a fair measure of recognition, and that the awards, even if in certain cases they may be tardy, deserve general approval. The Knighthood to Mr. Justice Fawcett is one of the tardy ones, for he is senior civilian judge of the Bombay High Court and is shortly due to retire. The O.B.E. to Mr. J. F. Main, Deputy Director of Agriculture, seems a small reward for his excellent services in that Department, and particularly in connexion with the Presidency Agricultural Show at Poona. Mr. Cowasji Jehangir's K.C.I.E. is rather a subtle compliment, for he is already heir to a baronetcy. Responsible for the administration of the Development Department, he is probably the most abused occupant of the Treasury Bench in the Bombay Council, but he has not as yet allowed this to worry him in the performance of his arduous public duties. Incidentally, he will be Sir Cowasji Jehangir, junior, for he bears the same name as his worthy father.

Awards to Business Men.

Two Bombay business men figure among the new Knights Bachelor, Mr. Manmohandas Ramji and Mr. S. B. Mehta. Mr. Ramji is a past president and present committee member of the Indian Merchants Chamber and the Millowners' Association, and has an excellent record of public service in the Provincial and Central Legislatures. Always a determined opponent of non-co-operation, he has withstood the attacks of the leaders of that movement, and, more recently, supported very strongly the eighteen-penny rupee in the face of even greater opposition. Mr. Mehta is not really a Bombay man, for he is manager of the Empress Mills at Nagpur. But he is a son of the late Sir Benzoni Mehta, who migrated from Bombay to Nagpur to further industrial progress there, and he has very ably carried on the good work which his father initiated. The C.B.E. to Lt.-Col. O'Brien is just recognition of much good work in the principal Indian State in Bombay, for he has been Resident of Kolhapur for several years now; and the C.I.E. to Mr. A. G. Edie, Conservator of Forests, is particularly appropriate, following the recent publication of the highly interesting report on Forest Administration in the Presidency.

Reserve Bank Bill.

The Joint Committee of both Houses of the Indian Legislature appointed to consider the Reserve Bank Bill has been sitting behind closed—but not very well guarded—doors at the Bombay Secretariat during the week. The Press were carefully excluded, and the members of the Committee warned against giving anything away; nevertheless, the morning papers have come out with long "unauthorised" accounts of almost all that has passed. It appears that the opposition, consisting of the sixteen-penny rupee protagonists and such friends as they have been able to collect, are determined to get their way or to wreck the measure. The important question of control has been postponed until the Calcutta sitting six weeks hence, and only minor questions have been disposed of during the week's discussions in Bombay.

A Change of Attitude.

A long-standing grievance of Bombay is to be removed this year. The annual visit of the Viceroy to Calcutta, while Bombay has been ignored, has always been a thorn in our side. Consequently, the news that we are to receive

two visits from Lord Irwin this year is more than ordinarily interesting. The first visit is to be in July, when His Excellency is to open the Indian Broadcasting Company's station and inaugurate the new beam wireless communication with England. He does this all in one day; but in December he proposes staying no less than a week with us, and it is likely to be a very full week indeed. All we want now to fill our cup of happiness to the brim is the appointment of a Bombay man on the Viceroy's Executive Council.

Corporation Presidentship.

Dr. Batliwalla's election to the Presidential chair of the Municipal Corporation has received legal support in the shape of Mr. Justice Blackwell's judgment in the case brought forward by Mr. J. B. Petit, who questioned the legality of the election owing to the retiring President having drawn lots to decide between Dr. Batliwalla and Mr. Petit, who tied in the ballot, instead of giving his casting vote right away. It was contended that the case should never have gone to the High Court at all, but Mr. Petit persisted in his action. Presumably, therefore, his intention was to prevent similar questions arising in the future, and he has at least the satisfaction of having registered a protest against Mr. Chinoy's method of settling an important issue.

Greater Bombay.

Bombay's suburban schemes are at last beginning to justify themselves. Very steadily the overcrowded portions of the city are disgorging their surplus residents, who are moving out to take advantage of the financial help that Government is offering to persons desirous of building garden houses of their own, away from the din and congestion and unhealthiness of city life. The progress of the various suburban schemes is indicated by the fact that at Khar two sectors have already filled up and two new ones have been opened, and Rs.8½ lakhs have so far been expended as State-aid to builders; at Bandra only eleven plots out of 144 remain unsold; the Danda scheme nearby has proved unusually popular and the land will soon all be taken up. Chembur has been very slow to attract public support, but even here progress is being made and a co-operative society has taken over a large holding for its members. The price of land in these suburban areas varies from Rs.3 per square yard at Chembur to about four times that amount in Danda.

The Parasnis Pictures.

The Parasnis collection of historical Indian pictures is likely to be saved for India after all. A new scheme has been drawn up which provides for the collection being acquired through the formation of a Parasnis Memorial Fund of Rs.1½ lakhs of rupees and proposes that it should be housed in the Shivaji Memorial Hall to be erected in Poona. Government, however, will have to release the Parasnis family from their recently-signed agreement handing over the book collections in the Satara Museum in exchange for a monthly pension of Rs.200. However, as everyone secures some material advantage from the new proposals they will probably go through, and as they appear to constitute the last hope of saving these paintings, it is to be hoped they will be adopted.

Market Conditions.

The reduction of the Imperial Bank of India's rate of interest has had a beneficial effect, at least so far as Government securities are concerned. These have fluctuated considerably during the week, 3½ per cent. paper going as low as Rs.77½, but the close shows a steadier tendency. Imperial Bank shares met with strong demand on the Stock Exchange at the close of the week. Chinese operators have appeared on the silver market and their purchases tended to send up the price, but local demand immediately slackened. Gold, exchange, and cotton were unchanged and dull.

LUNCHEON TO LORD LYTTON.

The Earl of Lytton, formerly Governor of Bengal, was the guest of honour at a Luncheon given by the Royal Colonial Institute at the Victoria Hotel on June 17. Lord Stanley of Alderley presided and was supported by Lord Birkenhead, Secretary of State for India. Among those present were :—

The Earl and Countess of Lytton, the Marquess of Reading, the Earl and Countess of Birkenhead, the Earl of Meath, the Maharajadhiraja of Burdwan, Sir Charles and Lady McLeod, Sir Arthur and Lady Hirtzel, Sir Godfrey Lagden, Sir George and Lady Boughey, Sir Archibald Weigall, Sir Muhammad Rafique, Colonel and Mrs. Owen Pulley, Major and Mrs. Norman McLeod, Prof. N. Gangulee, Mr. and Mrs. N. C. Sen, Mr. S. N. Mallik, Mrs. Alex. Tweedie, Mrs. H. P. Cobb, Mr. and Mrs. Montague Bell, Mr. and Mrs. B. W. Leefe, the Rev. B. G. Bouchier, Messrs. L. O. H. Tripp, J. S. Tritton, J. H. Stead, C. G. Myer, S. S. Bagge, J. C. Cross, F. H. Brown, and E. Salmon, Dr. and Mrs. Gutteridge and Mr. and Mrs. H. E. Bradshaw.

The health of Lord and Lady Lytton was proposed by Lord Stanley of Alderley, who referred to the constitutional concordat which was being hammered out to unite the people of India and the Imperial interests of this country in a single whole. It was important that those who presided over the destinies of India should be men of weight, of sympathy and of vision, and Lord Lytton had amply fulfilled those qualifications.

In supporting the toast Lord Birkenhead said that Lord Lytton brought to his duties as Governor of Bengal an illustrious and interesting descent. Born in a Viceroy's palace, he had inherited the sympathy and prestige which in India counted for so much. Neither when he went to Calcutta in 1922, nor at any moment of his period of office, had he had an easy task. India, like so many other parts of the British Empire and of the world, was suffering from post-War *malaise*, through the excitements and misunderstandings and the falsified expectations and hopes which gave rise in men's minds all over the world to violent and often dangerous reaction. Lord Lytton was charged with the interests and honour of his country at a time when the danger signals were plainly discernible. His charge covered a province second in importance to none in India, in which problems trod close on the heels of problems with pitiless recurrency. That he should have preserved during the whole of that time his firm and constant serenity of purpose, never deflected by anxieties, however great, was a tribute to character which had been exhibited not for the first time in the connexion of Great Britain with India, but never exhibited with more unbroken serenity than by Lord Lytton. He had discharged the duties of Viceroy when Lord Reading was in England with dignity and efficiency and had been supported in that important period with grace and charm by Lady Lytton. The Royal Colonial Institute had done honour to the worthy descendant of a distinguished line, to the worthy holder of a great title.

Lord Lytton, in his reply, stated that it was a novel experience to find himself eulogised, as during his time in India he had become accustomed to being described as a human monster and the author of every political crime. He could think of no greater pleasure for a man who had tried to serve his country overseas than to receive so generous a tribute from his immediate official chief as that which Lord Birkenhead had uttered. India could no longer be described as belonging to "the unchanging East." It was developing so rapidly, changing so quickly, almost from day to day, that only those who were actually in the country seemed now able to speak with authority upon it. He was glad to think that at the moment when he left Bengal both the revolutionary movement, which sought to hold up the machinery of Government by violence, and the movement of constitutional obstruction, which refused salaries to Ministers, had definitely failed, and public opinion in the province had shown that it was satisfied of their futility. Ministers were once more established in Bengal, and Sir Stanley Jackson had begun his term of office under conditions which were more favourable to a review of the Constitution. He hoped that by the time the Royal Commission went out to India Bengal would have

made some use, at any rate, of those powers which she had deliberately neglected during the last five years. Lord Lytton paid a tribute to two Indians who were present who had given him valuable help—the Maharaja of Burdwan, on whom he relied as Member of Council from the first and who had never failed him; and Mr. S. N. Mallik, who was now worthily representing Bengal on the Council of the Secretary of State—but he could not help adding that there was none whose aid he had valued more than that of Lady Lytton. She shared all his anxieties, and her own duties, which were numerous and onerous, were carried out with whole-hearted devotion. The honour recently conferred upon her was one that they both valued highly.

INDIAN MAIL.

How to Keep Cool.

The problem of how to keep cool in the tropics is being solved by the Principal of the Calcutta School of Tropical Medicine, who describes in the annual report the "cool room" established at that institution. The idea of heating the air of a room which is uncomfortably cold has been accepted all over the world as a reasonable proposition, he says; but when he suggested it was equally desirable to cool the air of a room which was too hot, there was a storm of criticism and opposition. However, the Principal went ahead, and he says that the prejudice against his cool room has now died down. It is the only one of its kind in the tropics. After several years' experience of the room it is possible to assert that dangers to health which were feared were proved to be unfounded, and it is certain that sooner or later such rooms will be common in the tropics. The air which enters the room is forced in by a fan which drives it over the cold pipes of a refrigerating plant. The same fan sucks out the air of the room and an ample supply of fresh air is supplied from an inlet which can be protected by a gauze screen or layer of cotton wool so that it is possible to filter out dust and micro-organisms. The anticipated drawback has been found in practice to be negligible, in fact it is found that a spell in a cool room raises the vitality to such an extent that the person who has spent a few hours in a cool room does not feel the depression associated with high temperatures for several hours after leaving the room. It may be 20 or even 50 years before the advantages of artificial air cooling are realised in the tropics, says Colonel Megaw, but sooner or later it will be appreciated that mankind can secure suitable environment in the tropics by adopting well-known principles of air refrigeration.

Afghan Trade.

Some criticisms of the manner in which trade is at present carried on between India and Afghanistan are made by a writer under the nom de plume "Afghan" in the Kabul newspaper *Aman-i-Afghan*. He says, writes the *Pioneer*, that individual Afghan traders who are ignorant of the principles of trade and the languages of India bring their commodities to the Indian border and dispose of them at very cheap rates in cities close by, such as Peshawar, Thall and Chaman. Other traders go further into India to places like Lahore, Delhi and Bombay and buy goods on which various middlemen have already made their profits and the Government of India has realised customs duty. These goods are sold at high prices in Afghanistan, the traders looking only to their own individual profits and having no idea of service to their country. The few trading companies which exist in Afghanistan, the writer goes on to state, fail in many respects; they should, he says, keep agents at commercial centres and deal with foreign companies direct, thus saving for themselves and their customers the profits of middlemen. The suggestion is made that an expert from Europe or America should be called in to guide Afghan traders, who are advised to form

a directorate in their common interests. These suggestions appear to be admirable as both Afghanistan and India would be likely to benefit from an improved trade organisation of the former country.

The Sukkur Barrage.

On the invitation of the Government of Bombay a party of non-official members of the Bombay Legislative Council recently visited the Sukkur Barrage Works. Mr. J. Addyman, who was one of the party, subsequently made an interesting statement to a representative of the *Times of India*, in the course of which he said: In the year 1931 when water flows along the New Canals, as with ordinary luck it will flow, those who have been responsible from the commencement of the scheme to its completion, those who have built up a remarkable organisation and maintained efficiency at its highest level, among whom are not only engineers but administrators also, will be entitled to say "something attempted some done." The erection of the Barrage, the construction of 805 miles of main canals which will be chiefly perennial canals, 766 miles of branch canals and 3,724 miles of distributories assuring 5,469,106 acres of land of a regular supply of water of which 3,291,417 acres is now desert or semi-desert land, is to cost, according to the Project Estimate, Rs. 18½ crores, and it is certainly not expected that this estimate will be exceeded by more than 5 per cent. and may possibly come well within that figure. When all this land comes under cultivation, as will be the case well within 30 years, the anticipated wheat crop will be approximately 1,000,000 tons, rice 500,000 tons, cotton 200,000 tons, jowari and other crops 500,000 tons.

Volunteer Police.

The Bengal Chamber of Commerce, having been invited to express their opinion of the Volunteer Police Bill introduced in the Legislative Assembly by Sir Alexander Muddiman, state that they are opposed to the principle of the measure. In the course of their reply they say: Occasions when the force it proposes to constitute would be expected to be available here may be said to consist principally of those periods when there is communal trouble, and the Committee feel strongly that the establishment of a volunteer police force at such times might lead to grave difficulties. Members of the force would be recruited very largely from the communities between whom friction existed, and the Committee consider that it would be a cardinal mistake to incur the serious risks that would be incurred by enrolling a temporary force necessarily consisting of partisans on one side or the other. The Committee can appreciate that at times when religious fervour is high it must be a matter of some difficulty and certainly a cause of great anxiety to the responsible authorities to maintain equanimity even in the disciplined ranks of regular police, and they apprehend that this difficulty would be magnified to a dangerous extent in any temporary force.

Source of Communal Trouble.

Lahore is once more at rest, writes the *Statesman*, and the Government of the Punjab have moved to Simla. Sardar Jogendra Singh, the Punjab Minister for Agriculture, has come to the same conclusion as have observers elsewhere—that the communal trouble comes from the top and that the educated classes are to blame. The picture he draws of the present state of feeling, in which each community is expected to defend murderers with all its moral and material support, is thoroughly disquieting, though in fairness it should be said that the leaders of the Muhammadan community promptly disclaimed all sympathy with the assassin of Swami Shradanand. The Minister pays a tribute to the police, the Punjab Light Horse, and the rank and file of the Army which appears to be thoroughly well deserved. Sir Malcolm Hailey and the Government are to be congratulated on having suppressed the riots without firing a shot.

"Rotting" in Jail.

"Rot" ejaculated Sir Malcolm Hailey on a memorable occasion some years ago when an impassioned member of the Assembly referred to political prisoners as rotting in jail. The appropriateness of that monosyllable of criticism, says the *Times of India*, is once more demonstrated by the report issued by the Committee appointed to inquire into the present state of discipline in the jails of Bengal. The report shows that, so far from rotting in jail, the *détenus* are in some cases allowed to play tennis and badminton within full view of other prisoners in jail, and that each of them is allowed a convict servant. The position is made worse by the fact that there is a lack of uniformity of treatment, according to the way in which different Superintendents exercise the discretion allowed to them and, as the report says, the task of the jail authorities has been rendered no easier by "the good opinion of themselves to which the *détenus* have attained and the pinnacle of esteem to which they have been raised by their sympathisers." So far from being kept out of harm's way the *détenus* do harm in jail, since their presence is subversive of jail discipline and, very naturally creates discontent among ordinary convicts.

WATER COLOURS OF INDIA.

Traditional scenes of India are shown in the exhibition of water colours and tempera paintings by M. W. S. Bagdatopoulos, a Greek artist, at the Arlington Gallery, 22, Old Bond Street. In the collection there are things pleasing and displeasing. The artist has achieved distinctly admirable effects in some of his paintings, notably in "Looking towards Afghanistan" where the suggestion of the everlasting hills is well brought out by a foreground in which purples, blues, and greens predominate. Another good example of his work of another order, is "Passage leading up to Fort, Trichinopoly" where his treatment of light and shade is very effective. Then of the numerous figure studies mention may be made of "A Madras," a somewhat startling vision in scarlet and green. Another notable picture is "Taj Mahal, Morning, Agra," which numbers among its merits that of suggesting restfulness, in which respect it is not in consonance with all the pictures. In some of his effects the artist has been less happy notably in "Old House in Chinar Barg, Srinagar," while "The Man Singh Palace (Chit Mandir) Gwalior" is rather overwhelming. The outstanding feature of the exhibition is the realism displayed by the artist, who has undoubtedly the capacity for translating with a very vivid brush the picturesque scenes that have been before him.

NEWS IN BRIEF.

The Commander-in-Chief in India has approved the following appointments:—

To the General Staff.—Captain H. S. Bagnall, The Green Howards, G.S.O.3, at Simla; Brevet Lieut-Colonel R. S. Abbott, 12th Frontier Force Rifles, officiating G.S.O.1, at the Staff College, Quetta; Major G. O. de R. Channer, 7th Gurkha Rifles, officiating Instructor at the Staff College.

To the Administrative Staff.—Colonel A. O. B. Wroughton, Lieut-Colonel A. G. C. Hutchinson, Major H. P. Rudolf, Captain L. A. J. Graham, Lieutenant N. R. Kennedy, Captain O. T. Durrant, and Major St. J. A. Browne.

OBITUARY.

MR. DONALD COWIE.

Mr. Donald William Garden Cowie, late of the Indian Civil Service, died at Puttenham, Guildford, on June 16, at the age of 62. He joined the Indian Civil Service in 1886 under the Madras Government. When on leave in 1894 he was called to the Bar by Gray's Inn, and on returning was made Registrar of the Madras High Court on the appellate side. He was engaged both in executive and judicial work in the districts until 1908, when he was made Inspector-General of Police, a position he held until his retirement in 1914.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Forthcoming Loans.

The publication in the *Official Gazette* of Palestine of an Ordinance authorising the granting of the loan of £4,500,000 may be taken as an indication that at long last this loan is on the point of being issued. It has been a very lengthy process from the time that the project was first mooted, and in view of the need Palestine has for the loan it cannot but be a matter for surprise that there should have been such an interval after the Bill authorising the loan had been passed. Loans issued under the aegis of the League of Nations go through much more quickly than this. Incidentally the Palestine loan is by no means the only Near Eastern issue that is to be anticipated in the coming months. It is expected, for instance, that there will be three separate Greek loans—one a supplementary loan for the refugees, one to finance the Budget, and the third to achieve stabilisation. The question of this financial aid for Greece will come before the League of Nations in September, and there is every reason to suppose that the League will give its approval to a loan or loans. *En passant*, as showing the improved prestige of Near Eastern countries—or some of them at any rate—it is interesting to note the rumour that a Swedish group is prepared to make a loan of £9,000,000 to Greece, but assuming the report to be correct it would be extremely unlikely that Greece would entertain any such proposals while she can obtain the accommodation she desires through the medium of the League. Loans are also believed to be on the tapis for Roumania, Bulgaria, and Yugoslavia, but it may possibly be unlikely if the negotiations mature that all of them will be issued in this country. Yugoslavia is looking for further financial support for public works, and in view of the close financial relations which she has developed with the United States it is at least a possibility that she will try to obtain her requirements across the water.

Roumania's Trade Progress.

Despite the difficulties with which Roumania has been confronted in recovering from the effects of the War, it is noteworthy that her trade figures are showing a tendency to improve, a development which, as might be expected, is most marked in the export trade. For the first three months of this year the value of the exports was £10,397,129, and for these three months the tendency was in evidence for steady progress. Thus the figures for January were £3,153,008, for February £3,498,017, and for March £3,736,104. The value of the imports for the same period was £10,691,363, there being thus an adverse trade balance of £294,234, which compares with one of £4,122,296 for the corresponding period of 1926. The interesting feature of the export figures, however, is the steady advance they show compared with previous years. Thus for the first quarter of 1925 the value of the exports was £8,236,325, and for the first quarter of 1926 the total was £8,257,410. Last year the imports were unduly high, and this is attributed to the new Tariff which came into force, in anticipation of which imports were increased. In considering the export figures for the first quarter of this year, it has to be borne in mind that cereal exports are invariably small at this period, so that the figures must be regarded as being extremely satisfactory. Last year the ultimate result was a favourable trade balance of over £5,000,000, and in the circumstances it is reasonable to anticipate an improvement in this result.

Kassala Cotton Company.

The cotton crop of the Kassala Cotton Company for the past season amounted to 22,547 kantars as against 27,197 kantars, this reduction being due to the exceptionally poor Gash flood, and as lower prices have been ruling for cotton the results of the year were somewhat below those of 1925. The prospects for the current year appear to be much better. The crop is estimated at 48,000 kantars, of which up to the end of March 34,200 kantars had been picked. That means roughly a yield of about 12,000 bales, and as cotton prices have now taken an upward trend a more satisfactory report may be looked for in twelve months' time. The difficulties with which the company has been faced are dealt with in the report. It is pointed out that the experience of the Gash flood over three years has shown that the proportion of the volume of water that can be used for irrigation is less, and that the amount of water required for the cotton crop is more, than was anticipated when the Company's concession was negotiated. Further, the area available for cotton is reduced by the area in which the Sudan Government desires that the inhabitants should grow grain, and it is added that it is likely still further to be reduced by developments in Eritrea. Representations have been made to the Sudan Government that the Company will be placed in a difficult position unless the concession is modified or other concessions are substituted for it. Further information with regard to the negotiations will be looked for at the meeting.

Suez Canal Dividend Increased.

An interesting review of the progress of the Suez Canal Company was given at the annual meeting, a report of which will be found on another page. There was a decrease in the transit receipts in 1926 of about 5,372,000 gold francs as compared with 1925, but owing to the sterling rate being about 50 per cent. higher the receipts at 746,547,843 francs showed an increase of 137,869,950 francs. The working expenses amounted to 69,727,176 francs, while the work on the maintenance of the Canal showed an increase of nearly two million francs. After allocating 25,000,000 francs to the depreciation fund for improvement works and 24,000,000 francs for the amortisation of material there remained 617,740,029, and with the amount brought forward there was a disposable surplus of 619,810,640 francs. The dividend is raised from 300 francs per share to 420, and in proposing this

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

substantial increase it was indicated that if, as it was hoped was the case, the stability of the exchanges was assured, the directors were convinced that they would be able to avoid any decrease in the dividend. The traffic figures were fully dealt with at the meeting. The transits in 1926 numbered 4,980, the net tonnage being 26,060,377, a total which was 701,558 below the record of 1925. The average tonnage of the vessels using the canal was 7,256 as against 6,916; 25,400,000 tons of merchandise were carried through the Canal, a decrease on the 1925 figures of 1,160,000 tons, but the decrease was only in the home-ward movement, the outward movement showing an increase of over a million tons. As regards the current year it was stated that the outlook is satisfactory, and that for the first four months the net tonnage transited has exceeded by 900,000 the figures for 1925, and the hope is entertained that the figures for the whole year will exceed the record figures for 1925.

Sudan Trade.

The figures for the trade of the Sudan for the first three months of this year make a satisfactory showing as far as the exports are concerned. The total value of the trade was £E3,576,067 as compared with £E3,192,564, an increase of £E383,503 which is due entirely to the expansion of the exports, for every other heading in the list shows a decline as compared with the figures for the corresponding period of 1926. The value of the imports was £E1,460,548 as against £E1,479,480, composed of Government imports £E550,311 and public imports £E910,237. On the other hand the value of the exports was £E2,020,603 as against £E1,608,350, an increase of £E412,253, for which, of course, the increasing production of cotton is responsible. If viewed as a whole, these figures reflect the economic depression from which the Sudan has been suffering for so many months, they also

unquestionably point the moral that the extension of the effects of cotton growing throughout the country will bring in its train a great development of business activity.

The B.I.F.

The news that a lease has been taken of the White City for the British Industries Fair for the necessary periods for the next three years disposes of any doubt as to the future of this institution in the event of the abolition of the Department of Overseas Trade and also definitely settles the question of a possible change of venue. It is understood that next year the space available at the White City will be considerably increased, while extensions are also being made at Castle Bromwich, Birmingham, so that the increased demand for space at the Fair will be fully met. Incidentally there seems to be ground for hoping that after all the proposal with regard to the Department of Overseas Trade will not materialise. The question, it is announced, is still under consideration, and the fact that there has been a volume of opinion in favour of its continuance on the part of the trading community will doubtless carry due weight with the authorities. After all, with the development of trade the vital necessity for this country at the present time it would be a most short-sighted policy to do anything that would curtail in any way our sources of commercial information, and it cannot, I think, be contended seriously that in the absence of the Department our business men would have the same avenues for inquiries open to them.

Rubber Uncertainties.

During the past week the rubber position has experienced considerable variations. The price has been down to 1s. 4½d., and after a very sharp recovery has again relapsed despite a reduction this week in the London stocks which was more substantial than was expected. Even

those who are in a position to know the situation best seem a little puzzled by the development. A partial explanation is that America has been trying to depress the market under the belief that the restriction scheme is to be abandoned. The statement in the House of Commons last week should finally end, it may be hoped, any expectations on that score. But even if selling in America has had something to do with the "slump" it cannot be held to be wholly accountable for it. It must be remembered that while the British rubber estates have restricted their output the Dutch rubber growers have not been so affected, and have naturally been increasing their production as much as possible. That is undoubtedly the main reason why the restriction scheme has not had as rapid an effect as it was hoped would be the case. This week's London stock figures are, however, an indication of the probable trend of events, and it will not be surprising if henceforward there is a fairly steady reduction in stocks, and that in time will have the anticipated effect on prices.

COMMENTATOR.

COMPANY NOTES AND REPORTS.

KASSALA COTTON.

The report of the Kassala Cotton Company, Ltd., for the year ended December 31 last states that during the first half of the year a labour force of some 375 men was continuously employed upon the improvement and extension of existing irrigation works, and upon works designed to ensure the adequate watering of various well centres. Additional offices and stables were erected. Main canals excavated and in operation on the concession area as at July, 1926, were as follows (in kilometres):—Mekali, 17½; Magauda, 23; Mitateib, 22; Hadaliya, 20; total, 82½. The acreage effectively irrigated amounted in 1925-26 to 11,500 acres—as compared with 16,000 acres in 1924-25. The crop amounted in 1926 to 22,547 kantars of seed cotton—as compared with 27,197 kantars in 1925. The reduction in acreage was due to the exceptionally poor flood. The whole of the 1926 crop was shipped to the United Kingdom for sale, and about 90 per cent. of it had been realised on December 31 last. The balance was sold during the first weeks of the present year, and the amount receivable by the company in respect thereof is brought into the accounts now submitted.

The volume of the Gash flood of 1926 exceeded that of any previous flood of which record exists, although its period of flow—86 days—was not above the average. The area irrigated sufficiently well to carry a crop to maturity, and sown during the autumn, amounted to some 26,000 acres—as against 11,500 acres in the previous year. A satisfactory crop has been picked. During November and December a labour force of 225 men was employed upon works in the delta. The most important work undertaken was the digging of a new main canal, to be known as the Tendelai Canal, similar to the existing Mitateib and Magauda Canals, and designed to irrigate an area lying between them. Nine kilometres of this canal, together with a brick and masonry head-regulator, have been completed. The pumping installation at Mekali, supplying drinking water by pipe-line to the Aroma and Magauda areas, continues to work satisfactorily. The drinking water problem is however only partially solved, and borings have been carried out under expert supervision at various points—so far without success.

The experience gained from the Gash flood of the past three years shows that of the total volume of water arriving at Kaassla the proportion which can be used for the irrigation of land for cotton cultivation is considerably less, and the amount of water required per acre for carrying a cotton crop to maturity is somewhat more, than had been anticipated at the date of the negotiation of the company's concession. The area upon which it will be possible for the company to grow cotton is further reduced by the acreage of irrigated land upon which the Sudan Govern-

ment thinks it desirable that the inhabitants should be allowed to grow grain, and is likely to be still further reduced by the abstraction of water in Eritrea, where the Italians are continuing their programme. The directors have represented to the Sudan Government that the reduction of the cotton area arising from the above factors will place the company in a very difficult position unless either a variation of the terms of the company's existing concession is made, or other concessions are substituted for it. Negotiations with the Sudan Government are in progress.

The profit and loss account for the year, after deduction of all outgoings, but before charging debenture interest, shows a net profit of £21,630 7s. 2d. After bringing in the credit balance of £24,362 11s. 4d. from last year, and deducting debenture interest, there remains a credit balance of £15,992 18s. 6d., which the directors propose to carry forward.

CYPRUS ASBESTOS.

The report of the Cyprus Asbestos Company for 1926 states that 643,438 tons of rock were mined, 154,595 tons of screened ore were milled, and 6,197 tons of asbestos fibre were produced. There is every indication, it is stated, that as the quarries become more developed the recovery yield will improve. As a result of the year's working the debit balance on profit and loss account has been reduced from £27,697 to £2,017. Owing to the large amount of development work it has been necessary carefully to separate capital expenditure items from revenue account items. The overhead charges in 1926 were £23,065, equivalent to approximately £4 per ton of fibre produced. Of this amount, revenue account has been charged with overhead expenses of £2 per ton, the balance being, in the opinion of the directors, a proper charge to capital account. The directors state that they have not considered it necessary at the present stage of development to write anything off the properties or development accounts, but they have decided to write off by a transfer from the reserve account the balance of the preliminary expenses amounting to £5,000. It is estimated that the production of fibre for the next two years has been covered by forward sales.

The traffic receipts of the South Indian Railway Company for the week ended May 21 amounted to Rs.11,06,424, making the total from April 1 Rs.77,11,436.

The gross profit of the Credit Minier for 1926 amounted to 1,105,829,805 lei, the net profits being 415,728,046 lei (£506,985).

The board of directors of Barclays Bank (Dominion, Colonial, and Overseas) have declared interim dividends for the half-year ended March 31, 1927, at the rate of 8 per cent. per annum on the cumulative preference shares, and 3 per cent. per annum on the "A" and "B" shares, subject in each case to the deduction of income tax at the current rate of 4s. in the £, payable on July 21, 1927.

SUDAN PRODUCE REPORT.

The following particulars are taken from the current issue of the Central Economic Board of the Sudan Government:—

Gum.

The exports of gum during April, via Port Sudan, were 11 tons of bleached of the value of £E481; 2,088 tons of hashab of the value of £E67,401; and 140 tons of talh of the value of £E2,217.

Cotton.

Blue Nile Province.—Generally the yield is evener than last year, the highest and lowest block yield at the end of March being 4.39 and 3.12 as against 5.28 and 2.60 last year. Ghubshan block leads in both years, but Barakat is the worst this year whereas the seed farm was the worst last year. A final yield of 4.50 kantars is now assured. It is noteworthy that ginning returns are coming out higher than last year, and the final average is likely to be in the neighbourhood of 103.

Extension work is proceeding and very good progress has been made with the widening of the main canal. The northern extension has now been limited to 55,000 feddans, of which 40,000 are in Hassa Heissa Merkaz and 15,000 in Kamlin Merkaz—the rest of the extension will be west of the present area.

Dura.

Halfa Province.—April: 2,400 tons of dura were imported from the north in April.

Blue Nile Province.—Egyptian dura has now penetrated as far south as El Hag Abdalla. Egyptian dura has been sold at Makwar where prices rose until a supply of this dura was placed on the market. Dura prices rose in Kamlin, but the arrival of Egyptian dura on the market had the effect of stabilising the price.

Upper Nile Province.—5,425 tons of dura were exported from the Province in 1926. 357 ardebs of dura were sold at Renk during the period 26.2.27 to 27.3.27 at P.T. 100 to P.T. 115 per ardeb. 338 ardebs of dura arrived at Geiger Murada in March. Large quantities of dura from the Shilluk District were shipped in March and April 346 tons were exported north in March, 329 tons by steamers and 17 tons by native boats.

Maize.

Berber Province.—A report states that the maize crop on the Mikeilab Pumping Station will average 4 ardebs per feddan.

The Fung Province.—10 tons of maize were exported from the Province by rail during the month.

Coffee.

Mongalla Province.—3,203 rotls of wild coffee have been collected in the Acholi Hills of Opari District where the crop is not expected to be as good as last year. Last year 11,326 rotls were collected from the only area then

known. Since then seven new areas of considerable extent have been found, too late, unfortunately, to allow of collection this year. The Inspector of Agriculture considers that given a good season a crop of some 20 tons should be obtained next year from the areas discovered up to the present. The value of this coffee will probably always be lessened by the impossibility of picking it from the trees, owing to their height and slenderness making it necessary to wait till the cherries fall to the ground.

The condition of the seedlings sown last year in the nurseries in the Acholi Hills is generally satisfactory and transplanting will be started in April. 150 rottles of Robusta have been obtained from planters in Uganda. This will be distributed for experimental sowings in the Eastern, Latuka, Opari, Kajo Kaji, Yei and Meridi Districts.

Upper Nile Province.—3,395 tons of Abyssinian coffee passed through the Province in 1926. Very little coffee has crossed the frontier in the Eastern District, and there are only about 100 kantars awaiting transport at Jokau.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, June 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, June 30).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, June 29).

British India Line.—S.s. Domala for Bombay and Karachi (London, July 2); s.s. Margha for Colombo, Madras, and Calcutta (London, July 2).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, July 23); s.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool June 25, Swansea June 28).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 25).

P. and O. Line.—S.s. Ranpura for Bombay (London, July 1); s.s. Delta for Colombo, Madras, and Calcutta (London, July 9).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, July 6).

Ellerman and Papayanni Lines.—S.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 29); s.s. Roumelian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool July 9, Swansea, July 14); s.s. Lesbian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 16). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The production of the Anglo-Egyptian Oilfields for the week ended June 17 was 3,345 tons.

The net profits of the Credit Foncier d'Algérie et de Tunisie for 1926 were 11,599,237 francs. The dividend is 25 francs per share, an increase of 2 francs per share.

Hamilton's Concessions (Roumania).—Cabled advice from Bucharest is as follows:—"Production for week ended June 17, 380 tons. Well No. 8.—Continues flowing at approximately 50 tons a day. New well No. 9.—1,034 metres deep. New well No. 10.—881 metres deep. New well No. 12.—231 metres deep.

The directors of the Egyptian Hotels will propose at the annual meeting on June 30 that the capital of the company be increased to £265,000 by the creation of 25,000 additional ordinary shares of £1 each ranking for dividend and in all other respects *pari passu* with the existing ordinary shares.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 21.

It is not surprising that, in view of the uncertainties in the political and financial outlook, business in the Stock Markets is of a very restricted character. There is a little activity on one or two speculative favourites in the industrial markets, but otherwise business is on a very small scale. A notable feature has been the further sharp fall in the price of rubber to the lowest point touched for over two and a half years. This has naturally had a depressing effect upon rubber shares, and is explained as being due to American operations and to a growing belief that the Government restriction scheme will not be extended beyond the end of the current year. On the official denial of any intention to drop the restriction scheme there was a rally.

Interest in investment markets has been largely concentrated upon new capital issues, many of which have been of an attractive nature. The Greek Mortgage Bank Loan was heavily over-subscribed and similar receptions have been accorded to many other issues. The Estonian Government loan, issued on Monday, is under the ægis of the League of Nations and took the form of 7 per cent. stock at 94½. A larger portion of the loan will be issued in New York.

Insurance Shares.

An examination of the prices of the shares of the leading British insurance companies discloses the fact that the yields obtainable are on an exceptionally low scale. Very few indeed return as much as Five per Cent. War Loan, while several yield not much better than 3½ per cent. The only explanation for this state of affairs, of course, is that insurance shares are very strongly held by people who have faith in increasing dividends and possible bonus distributions. This faith is based upon the steady increase in dividends which has occurred in the past ten years, and upon the very strong financial position disclosed in the balance-sheets. Many of the companies, which are now paying high rates of dividend, have such large sums invested in high-class securities that the revenue derived therefrom is sufficient to meet the amount distributed to

ordinary shareholders. The profits from ordinary insurance business can therefore be used in still further strengthening the financial position. From the shareholders' point of view, moreover, a high-class British insurance company has many of the merits of an investment trust company, in that the large funds at its disposal enable it to diversify its investments on a broad scale, and thereby to secure a fairly high average rate of return. Among the best known companies Alliance £20 shares (44s. paid) return at the present price just over 4½ per cent., Royal Exchange £1 stock yields 3¾ per cent., while a return of 3 5-16 per cent. is obtainable on Commercial Union fully paid shares of £2 10s.

The Oil Position.

The Shell Transport and Trading Company, whose annual report for 1926 has just been issued, is able to show a substantial increase in profits, namely, from £4,860,000 to £5,400,300, in spite of the decline in world oil prices which has resulted from over-production. Actually, the company is a holding concern, its balance-sheet showing holdings in sundry companies valued at £27 millions, and its subsidiaries are to a very large extent concerned with the distribution rather than the production of oil. It is thus not subject to the same sort of competition as are the bulk of the companies operating in America, which depend largely on the home market. Moreover, the price of oil in Great Britain is to a considerable extent determined by the cost of shipment to this country and is therefore far less liable to the extreme fluctuations which occur in the producing centres. The production of oil, however, continues to exceed consumption and is thus falsifying the hopes of those optimists who anticipated that world consumption would rapidly overtake production. The profits of these companies which confine their activities to the production of oil are therefore likely to suffer, but most of the companies in which British investors are interested do not come under this head, and there is thus no great cause for nervousness.

Attractive Public Utility Stocks.

The issue of £2,000,000 5 per cent. stock by the West Midlands Joint Electricity Authority is a reminder of the merits of the stocks of public utility undertakings. They deserve the special attention of the investor who, though anxious to obtain a somewhat higher return on home investments than is given by British Government securities, cannot afford to take a large measure of risk. In the main, earnings are fairly steady when they are not progressive; and the revenue of many of the concerns falls under the heading progressive. Thus, in addition to giving a fair return for the time being, the stocks may often be held for capital appreciation. Moreover, there is generally a considerable amount of stock outstanding.

The ordinary shares of the Lancashire Electric Light and Power Company give a return of approximately £5 12s. per cent. Though the yield given by the Clyde Valley Electrical Power Company's ordinary shares, at £5 5s. per cent., is somewhat modest, it appears reasonable to assume that the shareholders will receive a windfall sooner or later, for the company occupies a very strong financial position. The ordinary stock of the Gas Light and Coke Company gives a return of £5 14s. per cent. A yield of £5 18s. per cent. is obtainable on the ordinary stock of the South Metropolitan Gas Company. The Manchester Ship Canal Company's ordinary stock returns £6 8s. per cent. Excellent preference shares are also available. The Newcastle-upon-Tyne Electric Supply Company's 5 per cent. preference shares yield £5 14s. per cent. and the Midland Counties Electric Supply Company's 6 per cent. cumulative preference £5 13s. per cent.

An official statement has been issued denying reports of damage to crops throughout Yugoslavia by storms. The condition of the grain and other crops, including fruit and wine, is quite satisfactory. Thunderstorms and hail have caused some damage in certain districts, but this has been only local, and recent rains have on the whole been beneficial to the crops.

THE TURKISH MARKET FOR PRINTING MACHINERY.

The development of the printing industry in Turkey has been relatively slow compared with that in many European countries (says the American Vice-Consul at Constantinople, Mr. Royal R. Jordan). Among the factors which contributed to this slow growth were the widespread illiteracy, the lack of native capital to finance extensive industrial enterprises, and the difficulties caused by the variety of languages used in many parts of the country. In the past few years a noticeable progress has been made toward overcoming these obstacles. The introduction of modern printing machinery and the greater demand for printed matter has resulted in a certain expansion of the industry.

Most of the 125 printing establishments in Constantinople are small plants doing general job printing, but 8 or 10 are equipped for large orders and the better grades of work. Each of the larger cities in Turkey also have between 5 and 10 printing establishments. Newspapers published in Constantinople usually have their own printing plants. Some conduct a job printing business in addition to the regular issue of their publications. Most of the local magazines, "house organs," and advertising pamphlets are handled by the larger commercial printing firms, which also fill a substantial part of the Government's unofficial printing. Orders for the finer grades of work, however, such as banknotes, postage stamps, and similar official printing, are sent abroad.

No wide variety of processes has been introduced into Turkey. Fine printing is in little demand, and the bulk of the work is the ordinary commercial kind, relief printing, and a small amount of lithography. A few firms are equipped to do copper engraving, but aside from the small quantity of visiting cards, announcements, and similar products, the process is little used. Lithography is often employed for this class of work.

The majority of the illustrations used in the local printing industry are copper half tones or zinc etchings; the half tones are used much less than the line cuts. Several of the newspapers are equipped to make their own illustrations, and some of the daily issues are profusely illustrated. None of the more modern processes, such as rotogravure and allied processes, have yet been introduced.

Little stereotyping is done outside of the newspapers which use rotary presses and a small number of advertising mats. Electrotyping is carried on only to a small extent owing to the fact that quantities of electrotypes are supplied direct to local agents by foreign firms for advertising purposes.

The majority of the presses in use are small semi-automatic job presses and, in the larger establishments, ordinary flat-bed presses. The latter are used by most of the newspaper plants in Constantinople, only three of the leading dailies having installed rotary presses. Nearly all of these presses, including the rotary machines, were imported from Germany, which has thus far been able to maintain its lead in the Turkish printing machinery market. As far as can be determined, but one offset press and one multicolour cylinder press are in use in Constantinople. Perfecting presses have not yet been introduced.

Several efforts to introduce composing machines into Turkish printing plants have had no marked success. Several years ago an American machine was installed in the Government printing office; it was abandoned shortly after because native compositors did not operate the machine satisfactorily. A composing machine of German manufacture was recently installed by a local Turkish newspaper for use in setting up its edition in the French language. It appears to be giving excellent service.

Most of the type used in printing in the Turkish language is cast in local type foundries; foreign type manufacturers have not found it profitable to compete. There are a number of Turkish type foundries at Con-

stantinople, most of which are in the Stamboul section. Many of the local foundries are equipped to produce type in Latin, Greek, and Armenian characters, and are thus in a position to take care of all the needs of local printing establishments. The larger plants, however, prefer to order such type, particularly in Latin, from abroad.

The standard European type faces and a few American adaptations are equipment of local printing plants. Among the more popular faces, Caslon seems to be growing in favour. The use of Cheltenham also appears to be increasing. Other faces in general use are Scotch-Roman and Goudy bold. The older type faces in many establishments are badly worn and their use often mars an otherwise perfect piece of printing.

More artistic typography has been produced the past few years; as a result new type faces are in demand. Printing establishments which cannot make extensive investments in new presses or other large equipment are nevertheless potential customers for type. Orders for type have been going to Germany because German firms have supplied the local printing market plentifully with descriptive literature and specimen type catalogues.

The annual importation of printing inks into Turkey is estimated at approximately 31,000 lb. About 85 per cent. comes from Germany, and the rest from France. About two-thirds of the imported ink is cheap or medium-grade black, the other third a superior quality coloured ink.

CHESS.

By "CARO-KANN."

The solution to last week's pawn game is as follows:— 1, K—Q3, K—K3; 2, K—K4, K—B3; 3, P—Kt5, PxP (if P—B4; 4, K—Q5 and wins); 4, K—Q5, K—B4; 5, K—B6, KxP; 6, KxP, K—B6; 7, KxP, P—B4; 8, K—B6, KxP; 9, P—B4, K—Kt7; 10, P—B5, P—B5 and the game is drawn.

I give this week a game of a slightly different character. In the position, which occurred in offhand play last week, Black is a pawn up, but has a lost pawn position.

The Palestine Official Gazette has published an Ordinance authorising the floating of a Palestine Loan of £4,500,000, to be spent as follows:—

Railways, £1,640,000; purchase of railways and other capital assets from the British Government, £1,000,000; harbour construction and port improvements, £1,115,000; public buildings, telephones, and minor works, £745,000.

As the result of a collision which occurred on June 16 near Cape Sunium (about 18 miles from the Piræus) between two local passenger steamers, one of which sank, eight of the crew and two passengers were drowned.

COTTON RESEARCH WORK.

New Strains Obtained.

At the recent general meeting of the Empire Cotton Growing Corporation, Dr. S. C. Harland described the work of the Genetics Department of the Research Station, established by the Corporation in Trinidad. After pointing out that it is only within the last thirty years that very much has been learnt about genetics, that particularly in the last fifteen years an enormous amount of information has been obtained about inheritance in plants and animals, and that the facts accumulated are proving of the greatest importance in their relation to the improvement of the yield in and quality of many crops, Dr. Harland continued:—

If you take the cotton plant you are face to face first of all with the fact that cotton exists in a tremendous number of different varieties and species. Some of these have never been under cultivation at all. There is a species which is found growing wild in Hawaii on the slopes of one of the volcanoes there which exists only as a group of scattered plants occupying an area of about 100 square yards. Then you have the wild cotton which comes from Polynesia, and the wild cotton which grows in some of the islands off lower California, and you have other types from mountains of Central India and Upper Burma. There is a huge, practically unexplored field of the species of *Gossypium* that has never yet been exploited. One of our first tasks was to get together as complete a collection as possible of every species and variety of cotton which exists, to grow them all, and to note accurately the characteristics which they displayed. The varieties of cotton which are under cultivation at present are, in our view, only more or less chance selections that people have made from a huge welter of different types, and we regard it as conceivable that among the unstudied forms in various parts of the world we may drop across something which is very much better from some points of view than the types now grown. That is, we regard it as a pity not to take advantage of the very wide variability existing in the genus *Gossypium* to which cotton belongs. Much useful information has already been obtained. Many of you, probably all of you, are aware of the fundamental difference which exists between the very short staple Indian cotton and the ordinary American cotton which is largely used in Lancashire. The Indian cotton is very short and coarse and can only be used for very low counts. But at the same time it is well known that Indian cotton is exceedingly hardy. It will grow where other cottons either will not grow at all or grow only with difficulty. There is a huge area in India known as the black cotton soil of India, which is so called not because the soil is good for growing cotton, but simply because the soil is so bad that cotton is almost the only plant which is an economic crop. As I say, these very short staple types are most remarkably hardy. They will resist drought and insect pests, and we thought that if we could make a survey of the whole group we might come across something which, by selection, could be improved and probably be brought up to the standard of the ordinary American cotton. If we could do that we should probably be able to introduce this new type of cotton into areas where the ordinary American cotton will not grow. It is rather interesting that among the types we collected was one from Upper Burma, near Mandalay, that was grown by the natives of the Shan States. This cotton was regarded as a very fine cotton, although it existed in very small quantities. We got some of the seed, and we have found that it retains its very long silky staple. The staple runs up to about 13-16 in., equal to ordinary long staple Upland. We have crossed it with a Chinese cotton known as the "Million Dollar" cotton, which is a very high yielding type, and we have now got some new strains which we hope will be ready for testing two years hence, as soon as we get a sufficient quantity. We are very much impressed by the merits of these new cottons. It is perfectly conceivable that all the American cotton which is grown in South and sub-tropical Africa will sooner or

later be replaced by new types of long-staple Indian cotton, which are very much more drought-resisting than the American type, and stand up to a very wide variety of conditions. That is one kind of investigation which is being carried out.

Then there is another point which may be mentioned. A good many of the cottons which have been grown are very susceptible to the attacks of certain insects and diseases. In the Sudan there is a disease called black-arm, which is a very virulent disease which does a tremendous amount of damage, particularly to the Egyptian cotton. It not only succeeds very often in killing the plant, but also attacks the bolls and depreciates the quality of the staple. We have in Trinidad several types of cotton which are almost immune to this particular disease, and we are building up a collection of types immune to black-arm disease for distribution in various parts of the world and for testing out in comparison with the types which are grown there. It is hoped that this will be a very profitable line of investigation. Then there is another point that may be emphasised. Although we were told when we first took up our work that we were not bound to undertake any work of immediate economic application, but were to find out as much as possible about the cotton plant, we have in our own Department taken up the point of view that there are certain problems of urgent economic importance which we can tackle even with our present state of knowledge. One of our main problems is the question of neppy cotton, its cause, and, if possible, its cure. One of the chief complaints about certain types of Empire cotton is that they are neppy, and the same complaint is made about certain types of Egyptian cotton. I believe Sakel cotton is very much more neppy than the old Joannovitch cotton, which was remarkably good in that respect. We have been going into this question of nep, and have made the interesting discovery that there are certain Mendelian hereditary factors which can cause the death of seeds inside the fruit or boll when the seeds are a quarter or half grown. Imagine a seed growing in a boll. The cotton attains its full length and begins to put on a certain amount of thickening; it begins to ripen up. Then the seed dies. Of course, the cotton from those dead seeds is weak, is thin-walled, and when it is spun it causes neps. It gives a very great deal of trouble. We have established quite clearly that these seeds can be killed through the operation of certain hereditary factors, and that by selection we can reduce the proportion of dead seeds to an almost infinitesimal amount. Some of the American-Egyptian cotton that we have tested gave up to 25 or 30 per cent. of dead seeds, and an examination of the cotton from those seeds showed that it was just of the character which would produce neps. By selection we have now got two or three types which show less than 4 per cent. of these dead seeds. Of course you will realise that in a boll where you have between 20 and 30 and sometimes up to 40 seeds there must be competition between those seeds for water and for nutrients of various kinds, salts and sugars, and if the conditions under which the plants are growing create very stringent competition between the seeds, very often it will result in the death of some of them. The latter may be further removed from the source of nutrition than some of the others, and they may die from that cause. But undoubtedly one of the main causes of nep can be removed by selection, and is due to distinct hereditary factors.

It is necessary to explain why work on such a thing

JOHNSTON LINE

as the colour of the flower or the colour of the pollen or other of these apparently unimportant characters is of value. It is a little difficult to explain, but it is of value, because very often an economic character such as the quality of the staple is linked or is inherited together with some unimportant structural feature. So by studying the inheritance of flower colour you may be able to get at the inheritance of some staple quality which it is extraordinarily difficult to work out by itself; that is, the colour of the flower may be an index of some deep-seated peculiarity of staple. We have found, for example, that in Sea Island cotton, the white-flowered forms always have very much coarser and shorter staple than the yellow-flowered forms. Very often you can walk through a field and see white-flowered plants dotted about, and they are invariably borne on inferior plants. If we know the method of inheritance of the flower colour we are enabled very often to eliminate inferior plants in the crop before much flowering has taken place, thus preventing contamination of the whole crop with inferior types.

As a second example, I mention the colour of the pollen. In American cotton the pollen is white; in Sea Island and Egyptian cotton the pollen is yellow. We have found that the white pollen types almost invariably give a heavier yield than the yellow pollen types. The reason seems to be that the pollen colour is linked with or associated in some way with the number of divisions in the boll. There are various types of boll, some having three divisions, some four divisions, and some five divisions. The white pollen forms usually have four or five divisions, and the yellow pollen forms usually have only three; so that if you selected for white pollen plants out of some strains, you would be selecting automatically for a greater number of divisions in the boll. You will appreciate, therefore, from the two examples I have given, that work on apparently such unimportant things as the colour of the flower and of the pollen is not altogether wasted, because it is associated in a very deep and intimate way with the qualities that you want for special purposes.

M. Antoine Bibesco, who has been appointed Roumanian Minister in Lisbon, is expected to present his credentials this week. Roumanian affairs in Portugal have been dealt with in the past by the Legation in Madrid.

Dame Mary Katherine Lockhart, of Queen's Gate, S.W., widow of General Sir William S. A. Lockhart, K.C.B., late Commander-in-Chief of the Army in India, died on March 31, leaving estate of the gross value of £15,485, with net personalty £15,004.

Two Roumanian soldiers patrolling the Hungarian-Roumanian frontier on June 13 near Berettyo Ujfalú, are reported to have crossed into Hungarian territory. They were warned by the Hungarian patrol, and one withdrew, but the other fired on the Hungarian, who, in a reply volley, killed him. A mixed commission is inquiring into the affair.

In consequence of the large number of illiterates among criminals in Turkish prisons, the authorities, says Reuter, have decided to start a course of instruction for such prisoners. They are to be taught at least to read and write. The Board of Education, Turkey, is in favour of no prisoner being discharged, whatever his sentence, until he knows his alphabet.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Tent Cloth.—Tenders are invited by the Plant Protection Section of the Egyptian Ministry of Agriculture for the supply of 140,000 yards of tent cloth, 36 inches wide or approximate thereto. July 10. (D.O.T.)

Camel-hair Brushes, Mackintosh, Etc.—The Department of Public Health, Cairo, invites tenders for the supply of 4,973 camel-hair brushes, 1,438 metres of mackintosh (in rolls), 85,360 kilos of Cantharidin plaster, 500 boxes (of six) ampoules metallic iodine. July 20. (D.O.T.)

Cement.—The General Manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 7,000 metrical tons artificial Portland cement. July 16.

Bedsteads, Etc.—The Director of Supplies, Department of Public Health, Cairo, invites tenders for the supply of iron bedsteads, clothing, draw sheets, woollen shawls, canvas hoses for fire pumps and blankets required for the year 1927-1928. July 25.

School Furniture, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of school furniture and miscellaneous articles (such as tables, cupboards, iron bedsteads, cotton, ticking and unbleached calico for making mattresses and pillows, kitchen copper utensils, cane chairs, table service, etc.) required for the schools during the school year 1927-1928, July 7; and for the supply of different kinds of timber required for Trades Schools and Model Workshops in 1927-1928. July 16.

Copper Discs, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of metal copper discs and metal copper sheets (July 4); articles of saddlery and harness such as chains iron, hooks, rings brass, rivets tubular copper (July 4); and wool hair and hair horse for pads, cotton raw, creta vegetable, cotton waste, matting cocoa nut fibre, Jute, sacks jute, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. July 6.

Iron Pipes.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply of iron pipes for irrigation or drainage. July 10.

Erection of Water Supply Works at Edkou.—Tenders are invited by the Egyptian Ministry of Public Works for the supply and erection of machinery, filters, and piping, for the water supply works at Edkou. July 25. (D.O.T.)

Uniforms.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of winter uniforms for guards and employees during 1927-1928. August 9.

Rails, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 5,000 tons rails. August 10.

General Stores.—The Director of Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of general stores required by the Police Stores, Bulaq, in 1927-1928. July 2.

TURKEY.

Locomotive and Wagon Screws.—The Anatolian Railway Administration invites tenders for the supply of locomotive and wagon screws. July 18. (D.O.T.)

INDIA.

Sub-station Plant and Equipment for His Majesty's Mint, Calcutta.—The Indian Stores Department, Simla, are calling for tenders for electrical sub-station plant and equipment, for His Majesty's Mint, Calcutta. July 11. (D.O.T.)

BULGARIA.

Coasting Steamer.—Tenders are invited by the Bulgarian Mercantile Navigation Company for a coasting steamer. September 6.

Company Meeting.

SUEZ CANAL COMPANY.

Increased Dividend.

Outlook for Current Year.

The seventy-third annual general meeting of the Suez Canal Company was held in Paris on June 13.

The report presented by the board of directors stated that it was pointed out last year that the traffic of the Canal for the first months of 1926 was below that of the corresponding period of the previous year. It was added that this result was due to the exceptional circumstances which had characterised the first quarter of 1925, and it was indicated that the decrease would not be accentuated during the remainder of the year. The anticipations had been exactly realised; the decrease in the traffic as compared with 1925 was for the whole year very much the same as at the end of the first quarter. It resulted in a decrease in the transit receipts of about 5,372,000 gold francs.

Converted into French francs the results naturally presented a very different aspect; the rapid depreciation of the currency during the first half of the year resulted, despite the happy recovery which followed, in a rise of nearly 50 per cent. in the average exchange rate of sterling in 1926 as compared with the average rate for 1925. The effect was a marked increase in the profits of the company which permitted a large increase in the dividend. It was proposed to fix the gross revenue on the ordinary shares at 544.01 francs, which represented an increase of 119.03 francs compared with the previous year.

In proposing that substantial increase in the dividend the directors felt that they were acting with all the necessary moderation and prudence; they had not lost sight of the fact that the quotations at which the £ had stood since the beginning of the year were lower by about 28 francs than the average rate of 1926, and they were preoccupied in avoiding as far as possible an early decrease in the dividend. It was possible to hope that the stability of the exchanges, which they had desired for so long a period, had now been definitely secured. If that was the case they were firmly convinced that the extraordinary reserve, the constitution of which they had approved during the last few years, would enable them to avoid any decrease in the revenue of the shares until the time when the expansion of traffic would permit the dividend to resume the ascending curve which characterised it before the War.

The total receipts of the year amounted to the sum of 746,547,805.80 francs, showing, as against those of 1925, an increase of 137,869,950.49 francs. This increase resulted entirely from the depreciation of the currency, of which it was the counterpart. In fact, in spite of the decrease in the transit receipts, the high rates of exchange caused the appearance, as the product of conversions of funds into French francs, of a sum exceeding by 146,279,013.33 francs the corresponding sum of the preceding year. The expenses totalled 69,727,176.80 francs. The increase in relation to those of 1926 was 5,469,842.95 francs. That increase arose principally from the augmentation of the expenses in France, which also suffered the consequences of the depreciation of the franc. On the other hand, the works carried out for the maintenance of the canal showed an increase of nearly two millions.

They proposed to fix at 25,000,000 francs, as last year, the allocation to the depreciation fund for improvement works, and to write off 24,000,000 francs for the fund for the amortisation of material, which, as they knew, was intended to provide the resources necessary for the renewal of material, which became more expensive every day. Taking those allocations into account, the excess of receipts over expenditure amounted to 617,740,029 francs; adding to this the amount brought forward from 1925, 2,070,006.13 francs, there was a disposable surplus of 619,810,640.13 francs. It was proposed to fix the profit for distribution at 598,892,394.36 francs; to allocate from the excess of 20,917,640.77 francs a sum of 20,000,000 francs for addition to the extraordinary reserve, and to carry forward the balance of 917,640.77 francs. The distribution of the profits available for that purpose among those entitled to share in it would have the effect of bringing the dividend on each share up to 531.517 francs. That dividend, increased by 12.50 francs for interest represented a gross revenue of 544.017 francs, and a net revenue of 420 francs.

The maritime movement in the Canal in 1926 consisted of 4,980 transits, representing a net tonnage of 26,060,377 tons. That total was only 701,558 tons below that of 1925, which had so far provided the record tonnage. It exceeded, on the other hand, the result of 1924 by 950,495 tons. The traffic in ballast amounted to 2,029,613 tons net, and represented 7.8 per cent. of the total movement, as against 9.6 per cent. in the previous year. The average tonnage of the ships making the passage showed further progress; it reached a gross tonnage of 7,256, as compared with 6,916 in 1925. The proportion of transits effected by ships with a measurement of over 10,000 tons gross rose from 8.6 per cent. to 10.5 per cent. The number of passengers amounted to 286,432, an increase of 16,910. The division of the tonnage by nationalities brought out a decrease of 1,047,501 tons in the British flag, which remained, nevertheless, in the front rank with a proportion of 57.4 per cent. of the total tonnage. It was followed, as last year, by the Dutch, German, and French flags, all of which showed an expansion.

The movement of the merchandise passing through the Canal

amounted to 25,400,000 tons, presenting as compared with 1925 a decrease of 1,160,000 tons. This decrease only affected the homeward movement. The outward movement, on the contrary, showed an increase of more than a million tons, a result which was all the more satisfactory because the shipments of English coal were reduced by more than 400,000 tons owing to the strike. That improvement in the outward traffic was essentially attributable to manufactured articles. About half of it was contributed by manufactured metals and machinery. Cargoes of refined sugar also helped; they attained a total of 295,000 tons. The decline shown in the homeward movement was due, as regards more than one-half, to the wheat traffic, which, as was stated last year, had benefited in 1925 by an activity which was quite exceptional. Oleaginous products, rice, and cane sugar also showed a decline. Certain elements in the homeward traffic fortunately brought an appreciable compensation. Thus the shipments of mineral oils passed the three million ton mark for the first time, while the shipments of rubber amounted to 600,000 tons. Finally the English coal strike brought about the passage through the Canal of more than 200,000 tons of coal from Bengal, South Africa, Australia, and Japan.

The results of the current year appeared so far to be satisfactory. The net tonnage transited during the first four months exceeded by 900,000 the corresponding figure of 1926. That improvement, it was true, was due partly to the special movement brought about by events in China, and it was necessary not to overlook the fact that if these events had at the outset brought a slight supplementary traffic to the Canal, it was not impossible that the consequences would be demonstrated later on in the form of a decrease in the commerce of that country. Fortunately other elements of the traffic appeared to be favourable; Europe had again a large demand for wheat, and Australia a large surplus stock; the Indian production of ground nuts and jute appeared to be abundant; the rice crops in the three large producing countries, Burma, Siam, and Indo-China, were very satisfactory; and, finally, the petroleum traffic appeared to be pursuing its regular progress. On the other hand, Europe having almost completely regained its monetary stability, would soon be able to re-establish its economic activity on sound bases. Great Britain was working energetically to repair the damage caused by the miners' strike, and her textile industry, which had benefited by the low price of cotton, would doubtless soon be able to increase its exports to the Far East. Generally speaking, the production of manufactured articles, by means of which Europe would pay for its imports of raw materials, was progressing. Taken altogether, those circumstances gave rise to the impression that the progress in the traffic which had been noticed so far in relation to last year would tend to increase rather than decrease during the ensuing months. They might, therefore, hope that the tonnage for the whole of the year, exceeding the record figure of 1925, would mark a further stage in the development of the enterprise.

The report was unanimously adopted.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 15:—

Egyptian Futures.—Sakel Contract.—This market has shown a rather more unsettled undertone during the past week. Immediately following our last report, little change in the level was experienced, but yesterday, in consequence of a weak New York report, considerable liquidation was in evidence, and this depressed prices to the lowest of the week. On the decline some trade buying developed and prices quickly responded to this, with the result that values reacted sharply to their previous level, to-night's close being 1 to 5 points down for near and 3 to 7 points advance for distant months. A scarcity of contracts whenever prices show a hardening tendency continues to be one of the main features. Trade reports during the past week have, as it was only to be expected, owing to the closing of Manchester for the greater portion of the period under review, been colourless, by this we do not mean that spinners have been altogether idle, as a certain amount of fresh business and "calling" has been in evidence, but on the whole the volume has been much reduced from that of the preceding weeks.

With regard to the Alexandria market, there is little fresh to report, fluctuations at the other side have ruled much in sympathy with the course of the New York market; at the same time, it is rather noticeable that, whenever the November position advances much over 33½ dollars the movement encounters increasing opposition and considerable profit-taking operations come into evidence.

Consumption figures continue to keep well and are now approximately the same as for the corresponding period last year; against this, however, the competition with Sudan Sakel is very marked, when due regard is given to the fact that local spinners during the past 45 weeks have taken 81,000 bales, as against only 27,000 bales for the whole of the 1925-26 statistical period. To conclude, we must say that we still adhere to our previous "bullish" views.

Upper Contract.—Considerably more interest has been displayed in this option during the past week and consistent purchases by houses with American connexions have been one of the principal features. Trade support has been of a somewhat lukewarm character, and we are given to understand that margins in the counts produced by cotton covered by this contract have tended to narrow. We see no reason to alter our recent opinions and consider that a further hardening in values is likely to be experienced during the next few months.

Egyptian Spot.—Business, immediately following the Whitsuntide Holidays, has been rather slow in maturing, a state of affairs which has not been improved by the erratic tendency of the overseas futures markets. During the last two days, however, the inquiry has broadened out considerably, and it is somewhat disappointing to find the spot sales keeping at such low figures. The daily inquiry has been devoid of special feature unless it may be mentioned that Good to Fine Sakel has attracted rather more attention. Apart from this, the usual stereotyped lines have been followed, with Good Fair Uppers easily first in popularity. Spinners still complain that it is impossible to spin the medium grades of Sakel except at a loss, and it is only the spinners of the very fine counts, apparently, who are finding Sakel a paying proposition. Pending more stable futures markets, spinners generally are curtailing their requirements as far as possible, and with the Bolton mill holidays looming up at no distant date it will probably need some specially in-

teresting feature connected with crop progress (or lack of it) before any fresh buying enthusiasm can be aroused.

Interest in Sudan cotton has again been well maintained, and a fair business has resulted at steady rates. Tokar Sakel has met with an improved offtake, and some nice lots of cotton have changed hands at from 19.00d. to 19.50d. White Sudan at from 250 to 350 on has been in improved request, but buyers are not easy to satisfy. C.i.f. business, on the surface at all events, has remained very quiet and forwardings to spinners last week (four days) were returned at only 2,279 bales Egyptian and 3,213 Sudans. Estimated sales for the week (four days), Egyptian 700 bales and Sudan 4,650 bales. Quotations of Sakel have been advanced 10 points and those of Uppers 5 points. F.G.F. Sakel to-day 17.00d. F.G.F. Upper to-day 13.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended June 9 state:—

Since our last report the futures market has been quiet but steady. The week's summary of price movements is as follows:—Sakellaridis: July, 32.27 dollars, 0.10 dollars up; November, 33.09 dollars, 0.19 dollars up; January, 32.84 dollars, 0.14 dollars up. Ashmouni: June, 23.53 dollars, 0.35 dollars down; August, 24.08 dollars, 0.27 dollars down; October, 24.80 dollars, 0.17 dollars down; December, 24.90 dollars, 0.17 dollars down; February, 25.20 dollars, 0.17 dollars down.

Sakel.—There is very little to write about this week. The turnover has been much less in volume than during recent weeks, but the general feeling remains bullish. The maintenance of this bullish sentiment is largely due to the firmness of the New York market and the uncertainty prevailing as to what extent the supply of American long staple cotton will prove to have been reduced as a result of the Mississippi floods. Local speculators are still holding their long positions, and the floating supply of contracts is so small that but little buying is required to keep the market firm.

The demand from abroad has been only moderate, but there would probably be rather more business put through if the supply of good style and staple cotton on offer at Minet el Bassal was larger. Exports have this week been large and this factor has, naturally, contributed to the steadiness of the market.

Uppers.—All that we have written above with regard to Sakel may be equally applied to Uppers; there is nothing special to remark upon. June stands at a big discount on rumours that the issues of dockets on the second and third tender days will be very heavy.

The week's receipts amounts to 73,132 kantars, against exports, 225,588 kantars; the stock in Alexandria stands at 2,970,562 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to June 2, 1927, are as follows:—Arrivals: Lower Egypt, 5,062,000 kantars, Upper Egypt 3,096,000 kantars; total, 8,158,000 kantars. Exports: Sakel 2,670,331 kantars, Ashmouni 3,299,732 kantars, various 432,615 kantars; total, 6,402,678 kantars.

Spot: The market was closed on Monday last for the Whitsun holiday. Sales amount to about 7,800 bales, of which we estimate 3,500 bales Sakellaridis, 3,900 bales Ashmouni and Zagora, 300 bales Pilion and 100 bales White.

Sakellaridis: The demand remains about the same as last week and business has been done in all qualities. With the exception of the lower grades, which are a little easier, spot differences are unchanged.

Ashmouni and Zagora.—There has been a rather smaller turnover registered in these varieties. There is always a fair amount of cotton showing on the market, but sellers have been somewhat stiffer. There is no change in the spot differences.

Pilion.—A small business has been done in grades from good fair to good at about last week's prices.

Various.—There has been a small demand for White and a few lots have changed hands.

Up-Country.—Some ginning factories are still working, but the stocks held are small. Quite a respectable quantity of new crop business has been put through in Upper Egypt, but very little has recently been concluded in the Delta.

Crop, 1927.—The crop is everywhere progressing normally. The plant looks much better than it did at this time last year. Leaf worm is reported everywhere, but the damage from this pest has been very small, and the hot weather of the last few days will do much towards killing it off or at any rate stopping its increase. Water supply up to now has been, generally speaking, sufficient, but there are fears for the summer supply owing to the large areas put down in rice, a crop which takes a lot of water.

The report of the Alexandria General Produce Association for May reads:—

Lower Egypt: The temperature during the month of May has been favourable to the crop. The cotton plants are in good condition; they look well and are more developed than at the same period last year. Some sporadic cases of the leaf worm have been reported on some of the more early sown fields. In some districts

damage of small importance has been caused by cut-worm. Water for irrigation has been sufficient.

Upper Egypt and Fayoum.—There is nothing special to report. The young plants are developing in a satisfactory manner, and, favoured by the suitable temperature experienced during the month of May, are, compared with last year, slightly more forward. Up to the present, worm has not made any appearance. Water has been sufficient.

At the request of Zaidi Imam Yahya of Sana, King Saoud has delegated three Wahhabi representatives to attend a conference at Sana for the purpose of settling frontier and other pending questions.

Dr. Koroshetz, the leader of the Slovene Clerical Party in Yugoslavia, who arrived in Sofia last week, was received in audience by King Boris on June 18.

King Alexander dissolved the Yugoslav Cabinet on June 15. On the same day a proclamation was issued ordering a general election on September 11 and convoking the new Skupstina for October 5.

The numbers are announced of bonds of the Piræus, Athens, and Peloponnesus Railway Three per Cent. bonds drawn for repayment at par on July 15 next.

The area sown in wheat in Bulgaria in 1926 was 1,047,138 hectares, the production being 1,117,583,000 kgs.; 595,121 hectares were under maize, the yield being 737,052,000 kgs.

Notes of the Week.

The New Roumanian Government.

The indications of a week ago that pointed to the resignation of the Stirbey Cabinet, as a result of the failure of the negotiations between the National Liberals and the National Peasant Party for co-operation in a new Government, have materialised. Prince Stirbey resigned and was succeeded immediately by M. Ion Bratianu, who was able to announce the composition of his Ministry within twenty-four hours of his predecessor's resignation. Several of the Ministers who had accepted office in the previous Cabinet have been retained, including General Angheliescu, who remains at the Ministry of War. M. Vintila Bratianu, as was to be expected, is again Minister for Finance. For British observers the most interesting appointment is that of M. Titulescu, hitherto Roumanian Minister to the Court of St. James's, as Minister for Foreign Affairs. It has long been a recognised fact that M. Titulescu could have had a Ministerial post in practically any recent Government, of whatever political complexion. Although identified with the party of M. Take Jonescu, it is as a politician of moderate views and pronounced ability that he has commended himself to a large section of his fellow-countrymen. In any other Cabinet M. Titulescu would probably have preferred the portfolio of Finance—a subject in which he is an acknowledged expert—but as this post was not available in a Bratianu Ministry, he will find full scope for his talent and breadth of vision in the Department of Foreign Affairs. When the last Bratianu Government went out of office, it had appreciated the necessity of modifying the financial policy which it had introduced with such conviction and insistence. It was left, however, to General Averescu to inaugurate the modifications that restored in some measure Roumanian credit abroad; and it may now be expected that the experience of the last year, as well as the advocacy by M. Titulescu of a financial policy which will conduce to a more rapid development of Roumania's resources by the encouragement given to foreign investors, will prompt the new Liberal Government to adopt a less rigid attitude on the subject of Roumania's financial requirements.

The Albanian Dispute.

The dispute that arose between Yugoslavia and Albania over the arrest of the dragoman employed at the Yugoslav Legation in Tirana has reached its obvious end after three week's display of injured innocence on both sides. The Note written by the Yugoslav Chargé d'Affaires to the Albanian Government has been re-drafted; the arrested dragoman has been liberated. This happy issue has not been reached however, without the intervention of the Great Powers; but at least the steam hammer of the League of Nations had not to be set in motion to crack this particular nut. The experience gained by both parties to the dispute will, we may hope, prove useful to the future relations between the two countries. Those who are conscious of a steady improvement in the conduct of Balkan international affairs will take heart from the smooth liquidation of the Tirana incident, even though it does not involve any improvement in the relations between Yugoslavia and Italy. A still more significant instance of self-restraint and correct procedure has been afforded by the attitude of the Yugoslav and Bulgarian Governments over a recent border affray. There is the usual discrepancy between the two accounts as to what happened and exactly where it took place, but, as the first communication on the subject between the two Governments has been described as a "courteous *démarche*," it is clear that a much healthier spirit prevails in the Balkans on which all the countries concerned may be congratulated.

Shaikh Mahmoud's Submission.

For many years past Shaikh Mahmoud, of Sulaimani, has been something more than a thorn in the flesh of the Iraq Government. Ravaging in or retreating from Southern Kurdistan, he has been a constant source of irritation, although it is doubtful whether he could so long have maintained his position had a consistent policy been pursued by the British and Iraqis in regard to the Sulaimani area. The Shaikh's story is a romantic one, and well illustrates the possibilities that still exist in the Middle East of defying civilised governments. His cap-

ture by the British, his banishment, and his re-occupation of Sulaimani constitute a fascinating tale; but the wily Kurd has, it seems, finally realised that the sands of fate have run against him. Last autumn, it may be recalled, he sent an agent to Baghdad to discuss terms of surrender. His agent accepted the Iraq Government's terms, which included stipulation for Shaikh Mahmoud to live in Persia with his family, for non-interference on his part in Iraq politics, and for the education of one of his sons in Baghdad. In return for this the Shaikh was to be allowed the revenue of all property honestly acquired; those estates taken forcibly when he was in control of Sulaimani were not to be restored. But these terms were considered far too stiff by the Kurdish insurgent. He imprisoned his agent, and all the past winter has been lording it in the mountains. Recently, however, the territories which he was wont to infest have been visited by the Royal Air Force and Iraq troops. Certain strategic points, moreover, have been strongly occupied, so that at last outlawry has ceased to be a paying game. On the whole, Shaikh Mahmoud is exceedingly lucky to be able to end his days in the Persian town of Marivan. In any case, his departure should signify the inauguration of a really settled mode of existence in the Sulaimani liwa, the inhabitants of which have surely had more than their share of the effects of an unwise or a vacillating policy.

Italy and the Yaman.

The pomp which attended the recent visit of the Duke of the Abruzzi to Abyssinia is finding a not wholly impertinent reflection in the attention given by Italians to the visit of the Said Muhammad Ibn Yahya to Rome. There is no question that, whether with an eye to immediate use or to future bargaining, the Fascist Government has set out to capture the affections of certain countries bordering on the Red Sea. The Zaidi Imam's mission was met at Naples on June 24 by Commendatore Gasparini, the able Governor of Eritrea, who signed the Treaty with the Imam last September; and by the time that these lines are printed the son of the Imam Yahya will have been received by the King of Italy and by Signor Mussolini. Italians, no doubt, will take the opportunity of convincing the Yamanite mission that "Arabia Felix" may become once again what it was in the time of their predecessors, the Romans; but it is also to be hoped that the occasion may be seized for emphasising upon the Yamanis the importance of peaceful progress in their country, and particularly the desirability of coming to an understanding with their northern neighbours, the Wahhabis of King Ibn Saoud.

Angora and Constantinople.

The decision of Ghazi Mustapha Kemal Pasha to visit Constantinople is a convincing indication of the progressive stabilization of the situation in Turkey. Relations between Angora and Constantinople have been showing a steady improvement for some time—an improvement which seemed to coincide with the gradual realization that work at the full pressure entailed by the lack of amenities in the capital could not be continued indefinitely. The city on the Bosphorus represents the chief centre of relaxation for the hard workers of Angora, and with the improved communications between the two towns there has been a steady increase in the coming and going between them. Until, however, the President himself had visited Constantinople the *rapprochement* could not be considered complete. There can be little doubt that the welcome awaiting the Ghazi will be as enthusiastic as any that he has received. Many indeed of those who will be glad to see him will hope that his stay on the Bosphorus will lead to a fuller appreciation of the Constantinople point of view in regard to many problems which Angora has found it easier to regulate by law than to solve.

THE PALESTINE EXPLORATION FUND.

The sixty-second annual general meeting of the Palestine Exploration Fund will be held to-day (Thursday) at 4 p.m. in the rooms of the Society of Antiquaries, Burlington House, W.1. Professor Sir Flinders Petrie will give some account, illustrated by lantern slides, of his recent excavations at Tell Jemmeh (the ancient Gerar), on the southern borders of Palestine. The latest reports from Mr. V. W. Crowfoot on the resumed excavations at Ophel will be read.

NEW ROUMANIAN CABINET.

Following the resignation of Prince Stirbey's Cabinet the previous day, M. Jonel Bratianu on June 22 formed a Roumanian Liberal Cabinet composed as follows:—M. Jonel Bratianu, Prime Minister and Foreign Affairs; M. Duca, Interior; M. Vintila Bratianu, Finance; M. Argetoiano, Agriculture; M. Angelesco, Public Instruction; M. Lapedatu, Public Worship; M. Stelian Popesco, Justice; M. Inculetz, Public Health; M. Loulos, Labour; M. Dimitriu, Communications; M. Nistor, Public Works; General Anghelesco, War; M. Mrazec, Industry and Commerce.

Antiquities found at Ur of the Chaldees are now on view at the British Museum.

Captain Alexander Milne Gardiner, R.N., retired, died, on June 21, at 8, Augusta Gardens, Folkestone, at the age of 78. He saw considerable service in the Sudan and Egypt.

An etching entitled "Dawn, Camel Patrol Setting Out," by James McBey, which represents a camel patrol of nine Australian soldiers setting out at dawn into the desert of Sinai towards Beersheba, has realised £440 at a London auction sale.

The *London Gazette* has announced the retirement, on half pay, of General Sir R. C. B. Haking. Sir Richard Haking, who has been General Officer Commanding the British troops in Egypt since 1923, is succeeded by General Sir Peter Strickland.

The death occurred last week in Dublin of Mr. Henry Philip Kerney, late of the Administration of the Ottoman Public Debt. Mr. Henry Kerney went to Constantinople in his early youth and became an authority on Turkish finance. He was in charge of the administration of the Salt Tax.

Before leaving Bulgaria, Dr. Koroshetz, leader of the Slovene Clerical Party in Yugoslavia, issued to the Press a message of thanks for the welcome extended to him in Bulgaria. He said that his stay in Sofia had filled him with hope for the achievement of a Bulgarian-Yugoslav *rapprochement*.

The death occurred last week of Mr. Percy Stewart Peache Handcock, who at one time held an appointment in the Babylonian and Assyrian Department of the British Museum, and lectured widely under the auspices of the Palestine Exploration Fund. He was keenly interested in Semitic studies. He published a valuable series of books, including "The Latest Light on Bible Lands," published by the S.P.C.K., and "The Archaeology of the Holy Land."

THE REBUILDING OF PALESTINE.

With the Permanent Mandates Commission of the League of Nations in session again at Geneva, when not only the Mandatary's report on the Administration of Palestine will come before it for consideration, but also communications from the Zionist Organisation and the Arab Executive, the more familiar side of the affairs of Palestine will be forced afresh on public attention. The Memorandum of the Zionist Organisation is in the form of a report on the development of the Jewish National Home in Palestine for the year 1926-7, and deals objectively with its subject. Indeed, the only reference to matters which have been under discussion between the Organisation and the Palestine Government appears in the covering letter addressed to the High Commissioner, requesting that the Memorandum may be transmitted to the Commission. In this letter it is stated that the Executive desire to place on record their grateful appreciation of the substantial increase in the grant-in-aid to Jewish schools and of the timely assistance afforded by the Palestine Government to Zionist efforts to alleviate unemployment, both by the provision of credit to certain municipalities, and by the execution of public works somewhat in advance of actual requirements. The petition of the Arab Executive may be expected to follow familiar lines, and it will be mainly with the political side of the Palestine question that the Permanent Mandates Commission will be concerned. There is, however, another side of the question—the more purely economic—which deserves attention in wider circles than those which have hitherto given it a thought. One effect of the politico-religious propaganda in which Palestine was enveloped immediately after the War—however inevitable it may have been in all the circumstances—was to destroy for the time being any chance that the country might have had of being considered as a business proposition. One of the advantages that most countries that are being newly opened to economic development have is that they offer a special attraction to capital on the look-out for profitable investment. Palestine, however, which at the end of the War was essentially a new country from the point of view of economic development, was an exception to the rule, and this shyness of capital, amounting almost to a boycott, would have been far more conspicuous if the country had not been able to rely on the very considerable sums of money which reached it as a contribution to the Zionist ideal.

In the long run it will be the economic aspect which will determine the success or the failure of the Palestine experiment. Insistence on the importance of the politico-religious aspect has passed its zenith. It is noticeable that, although there has been a provisionally successful issue to the negotiations between the Zionist Organisa-

tion and the leaders of the American non-Zionist Jews, having for their object the ultimate enlargement of the Jewish Agency for Palestine, no definite steps in this direction are to be taken until a Commission has made a thorough survey and investigation of conditions in the country, including an expert study of the resources and of the agricultural, industrial, commercial and other economic possibilities of Palestine and neighbouring territory. This stipulation on the part of American non-Zionist Jews and its acceptance by the Zionist Organisation suggest a fairly general recognition in Jewry that business principles are to play a more important part than hitherto in the rebuilding of Palestine. It is on this point that the Economic Board for Palestine has taken its stand from the outset. At the fifth annual meeting, held earlier in the month, a report of which is published elsewhere in this issue, both the chief speakers emphasised the fact that the time had come to regard Palestine as a business proposition and not merely as "a reservoir for the receipt of charity." No member of the Economic Board—a body of prominent English Jews which was formed to promote the economic development of Palestine on sound business lines—is likely to allow his enthusiasm for the Jewish National Home to outrun his discretion and business instincts, and it is the Board's considered opinion that in the orange industry, in irrigation, in small industrial concerns manufacturing goods for consumption in Palestine, as well as in the tourist traffic and in other directions there is a considerable field for the profitable investment of capital in Palestine. It is to be hoped that with the admission of non-Zionist Jews to the Jewish Agency and the identification of the Zionist Organisation no longer with a policy which, in the words of one speaker, "had helped to create the impression that Palestine was a country to which money must be given," instead of one in which it should be invested, the country will be freed from recurring crises which are due to no small extent to the absence of working capital.

Some of the grievances that have been nursed against the Palestine Government in Jewry will be found to have an economic, rather than a political, basis. With its limited and backward population the task of establishing sound industries in Palestine must necessarily be attended by difficulties, and the principle of protection in such cases is generally accepted. The Government, as far as is known, is not averse from the principle, but would seem to hold that it has discharged its obligations when it offers fifty per cent. or less of what is demanded. If it is a question of disagreement among experts, the two parties should be able by joint discussion to arrive at a *modus operandi*. The success of a few industrial concerns in the country can be relied upon to attract further capital, and, as there can be no question of any form of Government support for other than objects of the soundness of which it is convinced, there would seem to be much to be said for a policy that will shorten the period within which a given undertaking can be made to prosper. Government, no doubt, has to take into consideration other points than those which are apt to enter into the philosophy of purely business men; but in view of the special circumstances of Palestine, where the future of the country is essentially linked up with the cordial and active co-operation of Jew, Arab, and Mandatary, the policy of laying all cards upon the table is one which should rarely, if ever, be departed from, least of all by the Mandatary. A line of action that commends itself to one party may not have the support of the others; but if it is publicly backed by an adequate show of reason, the ground will have been cut away from any grievance that might in other circumstances be nursed to the prejudice of the relations between the three parties and the general interests of Palestine.

The Near and Middle East*

From Our Own Correspondents.

Cairo, June 18.

Optimism Ascendant.

The Egyptian Stock Exchange, which, as I reported last week, maintained an optimistic tone in the midst of the prevailing pessimism, has been proved by subsequent events to have appreciated the situation correctly. The cables will have already advised you that the serious crisis which threatened a week ago is over, and that a settlement has been arrived at, which, for once in a way, seems to satisfy all parties.

Time, as has often happened in Egypt, came to the rescue of what appeared to be a dead-lock, from which it looked as if only drastic action on the part of the British Government could extricate the two countries. The Bairam feast, with its five-days' cessation of public business, provided an admirable opportunity for third parties, who had no other interest in the matter beyond preventing a crisis, to get to work and to try to devise the formula, which in Egypt is the panacea for all questions which in the minds of the Egyptians affect their *amour-propre*. And since there was at bottom goodwill on both sides the necessary formula was found.

Responsible Egyptians were brought to realise that the policy followed since 1922, and particularly since 1925, in the matter of the Egyptian Army, constituted a potential danger for their country, and that Great Britain, even if in their view she was not entitled to impose her will in this matter, certainly had the right to make representations which, since they were in reality for the good of the country in general and of the Egyptian Army in particular, should be taken into serious consideration. On the British side it was also realised that the Egyptian Note in reply to the British was unsatisfactory, not through lack of goodwill, but through force of circumstances, which made it exceedingly difficult for the Egyptian Government to accept right away the proposals in the form in which the British Government presented them.

Lord Lloyd, who throughout the seven months' discussion which had preceded the presentation of the British Note, had displayed the greatest sympathy with, and desire to meet, the peculiar difficulties in which the Egyptian Government found itself, readily entertained the proposal for mediation put forward by disinterested third parties, and it is undoubtedly due to the great firmness and courage, coupled with tact and patience, which he showed, that the Egyptian Government was induced to face the consequences of acquiescence in the British demands.

At the same time Sarwat Pasha and Zaghloul Pasha are deserving of the warmest recognition, the former for the statesmanlike manner in which he manœuvred, both during the negotiations and before the Chamber on Thursday, a situation which was exceedingly delicate, and the leader of the Wafd for the courageous manner in which, when it came to the point, he brought to bear all the weight of his personal influence to overcome the objections which certain elements in his party had raised. Both Sarwat Pasha and Zaghloul Pasha have on this occasion rendered to their country a service which only history will be able to appraise at its proper value.

It is now possible to reveal that the man who as intermediary played such a determining part in the last phases of the conversations was Mr. George Antonius, Assistant-Director of Education in Palestine. At the time when the recent crisis was most acute he happened to be in Cairo on his way back from Jidda, whither he had accompanied Sir Gilbert Clayton in connexion with the recent negotiations with King Ibn Saoud, and the success of his mission in the matter of the Egyptian Army question was due to the ability with which he managed to interpret the views of the two parties and thus remove the misunderstandings which stood in the way of an amicable solution.

Royal Visitors.

Their Royal Highnesses the Duke and Duchess of York passed through the Suez Canal this week on their way home from Australia. The High Commissioner motored down to Suez to greet them, but as the s.s. Renown had already entered the Canal, Lord Lloyd and his staff embarked on one of the Suez Canal Company's motor-launches and steamed northwards to catch her up. Lord Lloyd remained with the Duke and Duchess for about an hour, and then went again on board the motor-launch and proceeded to Ismailia, returning by special train to Cairo where very urgent business connected with the Egyptian Army crisis awaited him. The s.s. Renown stopped a short time at Ismailia. Here the Duke of York landed and inspected the Somerset Light Infantry but, owing to the lateness of the hour, no stay was made at Port Said, and the s.s. Renown passed right out to sea, where after receiving the mails for the Royal Party from the P. and O. Multane she sailed for Malta.

Parliament.

Parliament is still in the throes of the Budget. Despite the heat, members still find no end to say about the most trivial details, and certainly in no country in the world can the financial estimates be subjected to a more minute examination than is the case to-day in this country. Whether the actual saving in money which results from so close an examination justifies the immense amount of time expended thereon it is difficult to say, just as it is sometimes a moot point whether the economies thus affected are, in the long run, in the real interests of the country. However, the Chamber is gradually working its way through the Budget and, realising that, if it does not speed up the debate, it may find itself with a very short recess, it has at last decided to increase the number of sittings per week, and from now onwards until the Budget has been completed the deputies will have only Fridays off-duty.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

BANK MISR.

We have received the following telegram from the Managing Director of the Bank Misr, Cairo:—"Re letter published in your issue of June 23 from your Cairo Correspondent about Bank Misr, Bank Misr declared that since its establishment no European element has ever taken part in its management. Confidence of all Egyptians especially prosperous classes, unanimously and completely acquired. Government deposits in the Bank are employed in industrial loans, financing agricultural co-operative societies and other similar productive concerns.—FUAD SUITAN."

PERSONAL AND GENERAL

TO-DAY

June 30, 1927 (New Style).

June 17, 1927 (Old Style).

Julhigga 29, 1345, A.H. of the Muslim Calendar.

Sivan 30, 5687, of the Jewish Calendar.

Lady (John) Nuller, who has been spending the winter in India, has returned to 22, Mount Street, W.

Ex-King George and Queen Elizabeth of Greece visited the King and Queen at Buckingham Palace on June 25.

Princess Sophia Duleep Singh has been on a visit to the Dowager Lady Glanusk at Hay Castle, Breconshire.

The Greek Minister for Foreign Affairs and the Greek Minister of Finance arrived in London on June 27 on a short visit.

H.E. Monsieur Caclamano, Greek Minister in London, returned on June 23 to 51, Upper Brook Street, from the Continent.

Lady Lloyd has arrived at 5, Portman Place, where she will be joined by Lord Lloyd on his return from Egypt to-morrow (July 1).

The King and Queen inspected Professor Sir Flinders Petrie's Palestinian Exhibition during their visit to University College on June 23.

Mr. Sachchidanada Sinha, formerly Finance Member of the Government of Bihar and Orissa, arrived in England last week on a short visit, and is staying at 22, Jermyn Street, W.

Captain D. McCullum, of the British Legation Guard, Peking, has set out for Home by motor-car, his route being through Indo-China, Siam, Burma, India, Persia, and Constantinople.

The guests entertained by Field-Marshal Viscount Allenby and Viscountess Allenby at a luncheon at the Ritz Hotel on June 22 included Prince Mohamed Ali, the Earl and Countess of Stradbroke, Field Marshal Lord and Lady Plumer, General Baird, General and Mrs. Herbert and Major Hindley.

The Prince of Wales received their Highnesses the Maharaja Gaekwar of Baroda and the Maharaja of Ratlam; and also Air Chief Marshal Sir Hugh Trenchard, Bart. at St. James's Palace on June 21.

M. Nicholas Titulesco, Roumanian Minister in London, has accepted the Ministry of Foreign Affairs in the new Cabinet of M. Bratiano. He will continue, however, to act as Roumania's delegate on the League Council.

Previously to the Court held by the King and Queen at Buckingham Palace on June 22, the King received his Highness the Maharaja of Rajpipla, his Highness the Raja of Mandi, and his Highness the Raj Saheb of Vankaner. Colonel A. D. Bannerman, Political Aide-de-Camp to the Secretary of State for India was in attendance.

The examiners in Oriental studies at Oxford University have issued the following class list:—

CLASS 1.

None.

CLASS 2.

N. S. Doniach (Wadham) in Hebrew and Arabic; and W. S. de G. Rankin (Christ Church) in Sanskrit and Pali. Overstanding.—G. H. Rooke (Oriel), in Sanskrit and Pali.

King Fuad of Egypt is due to arrive in London on July 4. Ahmed Hassanein Bey journeyed to Paris yesterday to make the final arrangements concerning the Royal visit. He will be entertained at Buckingham Palace for 3 days. On the evening of July 4, the King and Queen will give a State banquet at Buckingham Palace; on July 5 King Fuad will be entertained at luncheon by the Corporation of the City of London, and to dinner at the Foreign Office. At the time of writing it is uncertain whether King Fuad will stay at Bute House or at Claridge's Hotel, but the State banquet to be given to King George will be held in Bute House.

NEAR AND MIDDLE EAST ASSOCIATION.

Lord Lamington presided at the meeting on "The Outlook in Persia" at which Sir Arnold Wilson and Mr. H. G. Hart spoke, held at the Hans Crescent Hotel and followed by a reception at 14, Hans Crescent on Thursday, June 23. Mrs. L. Cobham was the hostess. The following were among those present:—The Persian Minister and MM. Ardeshir and Sheybany, Count Los, Count Ostrorog, Orhan Halid Bey, M. E. Nelky, Major Ugula, Herr von Zeileissen, Viscountess Dupplin, Constance Lady Cozens-Hardy, The Dowager Lady Boyle, Sir James Heath, Sir Percy and Lady Cox, Sir Percy Sykes, Sir Harry Eyres, Admiral Sir Edmond Slade, Sir Graham and Lady Bower, Lady Barker, Sir Henry and Lady Burt, Sir William Clark, Sir Harry Foster, M.P., Sir John Foster Fraser, Sir Denison Ross, Sir Malcolm Stevenson, Sir Frederick and Lady Graham, Sir James Roberts, Sir John and Lady Stavridi and Miss Stavridi, Lady Tighe, Baroness de Knoop, The Hon. Mrs. Edward Feilden, The Rt. Hon. Noel Buxton, M.P., Monsieur Emile de Nagy, Brig.-Gen. and Mrs. Bateman Champain, Captain and Mrs. E. N. Bennett, Mr. and Miss Eckstein, Commander Kenworthy, Mr. Percy Molteno, Dr. Cloudeley Brereton, Mrs. Elliott Lynn, Mr. and Mrs. Leland Buxton, and Mr. and Mrs. Bruce Dick.

THE OUTLOOK IN PERSIA.

By SIR ARNOLD T. WILSON, K.C.I.E., C.S.I.,
C.M.G., D.S.O.

When we in England discuss the affairs of other nations it is very necessary that we should do so with a sense of responsibility. Great Britain and Persia have very important mutual interests: our mutual interests, by whatever standard they are measured, are greater by far than those of any other nation. But we must remember that in the nature of things we can for the most part only play the part of spectators: whatever solid progress is achieved in Persia is due, as it should be, primarily to the efforts of Persians; we should be chary even of applauding what seems to us to be praiseworthy; our motives may be misunderstood, and we ourselves may be mistaken, for in the East, as in the West, only too often

"The fire is only fireworks,
The smoke is only steam,
Things are not always what they seem."

There is no lack of evidence of material progress in the last ten years, or for that matter in the last twenty years. The value and bulk of imports and exports have continued to increase. Net Customs revenues last year were eight times as great as in the first year of this century, when a regular Customs administration was first established, and now total nearly £2 million sterling, imports being valued at some £18 million and exports at £12 million sterling: the excess of imports over exports has been continuous over a long period of years and may properly be regarded as a sign of real prosperity, due to hidden exports which find no place in statistics.

Revenue from posts and telegraphs, from Crown lands, and from land tax is steadily rising: public order has never been better maintained: education and public hygiene are receiving greater attention than ever before. These aspects of the outlook in Persia are familiar to all who have taken the trouble to study the periodical reports of the Administrator-General of Persian Finances.

But the outlook in Persia in the eyes of the Persian townsman or tribesman who does not belong to the official class is very different from that indicated by the serried rows of progressive figures marshalled by Dr. Millspaugh. He sees the old local officials, born and bred in the district and province in which they spent their official life and generally of well-known local families, replaced by officials from Teheran, frequently changed, with few, if any, local attachments, and not seldom frankly out of sympathy with or contemptuous of provincial ways; the authority of local magnates replaced by that of military officers, sent as a rule from Teheran, and seldom kept in one place for long; and the familiar, if not always efficient, local forces of order replaced by soldiery from other provinces, whose ways are apt to be less sympathetic and more often misunderstood.

In past centuries the system of government in Persia was organised by provinces. The Shah was Shahin Shah—King of Kings: the central Government consisted of the Shah's entourage: the provinces were autonomous and the Provincial Governors supreme. In two provinces Turkish was the principal language; in another Kurdish, in another Baluchi, in another Arabic, in another Luri. But the Persian Empire maintained its independence, and its integrity was seriously menaced only by the Russian Empire, which in the last century deprived Persia of two provinces.

The provincial Persian recognises that a more centralised form of administration is to-day inevitable: but he feels vague misgivings at the local manifestations of the process: and he regrets the great increase of minor officials, mostly Teheranis, and he grudges the increasingly large sums which are sent to Teheran from every province.

For Teheran stands in some respects apart from the main currents of Persian political, religious and commercial life. "La Perse," said Pierre Loti, when he reached Teheran from the South, "finit à Islahan."

Teheran is situated far from the great Persian-speaking centres, and from the principal centres of population, both ancient and modern, and as a capital is not invulnerable to foreign influences. Thoughtful Persians have seen the capital of Russia shifted from Petrograd to Moscow, of Turkey from Constantinople to Angora, of India from Calcutta to Delhi. Some are beginning to wonder whether in the long run it will not be wise to revert to the capital of the Safavi monarchs, and go back to Isfahan, which was abandoned only at the whim of the Qajar dynasty. There, and there only, think some, will a Persian Government be able to control the destiny of the country free from all foreign influences.

Vested interests are strong: but Persians are certainly not inferior to Turks in patriotism and in determination, and, if convinced of the necessity of a move, would be capable of taking the decision.

But there are other and far deeper forces at work in Persia to-day. To quote the Psalms, "There is neither speech nor language, but voices are heard among them."

Unmentioned in the Press, and seldom heard by Europeans, there are at work, beneath the surface, spiritual forces, which are of greater import by far than the material and political matters which are apt to fill the horizon of the observer, whether in Persia or abroad.

I am confident that something approaching a renaissance is in process of realisation in the minds of the active minority, which, in Persia as elsewhere, controls all movements, whether Right or Left. It is only incidentally and occasionally anti-foreign, for Persia has less to complain of from Christian nations (a term which excludes the Russia of to-day) than any other country in the Middle East; it shows itself in increasing interest in Persian history, in a higher standard of probity amongst officials, and in a growing determination to make unity a reality and to purify the national tongue.

Persia was overrun by Arabs in the ninth century, by Mongols in the thirteenth and by Afghans in the eighteenth century; she has absorbed her conquerors so completely that only relics of their languages remain.

"Our country," said a Persian recently, "has had three things imposed on us from without by Arabs—a foreign government, a foreign language, and a foreign religion. We have long been rid of the first, we are ridding ourselves of the second."

What of the third? The Coronation of the Shah was celebrated by a widely circulated lithograph of His Majesty, supporting his country, and surrounded by the figures of Cyrus, Zoroaster, and other great figures of the past, but no Islamic prophet or symbol appeared in the whole picture. The fact is not without significance. But it is not new. The truth is that Persia has been from the first non-conformist and schismatic in its outlook on Islam: the Islamic shrines of to-day are the Zoroastrian fire temples or high places of yesterday, and in mysticism and philosophy Persians have led the way whether in Cairo, Damascus or Baghdad. Their national greatness dates long before Islam, which arrested rather than developed their civilization; their position, geographically, ethnologically and historically, has given them in the past a commanding position in the Middle East: the development of communication by sea between Europe and India deprived them of their geographical advantage for a time: but they will, I believe, again come into their own.

I know no race, whether Eastern or Western, with a higher general level of natural intelligence, or with greater ability to acquire knowledge and turn it to account. They

Hon. Sec.

have, like us, the advantage of mixed blood, of a climate generally temperate, of a higher standard of living than any Eastern race; of their military qualities I have written elsewhere: and Sir John Cadman has borne testimony to their industrial abilities: of Eastern poetry that of Persia is more widely known within the East and the West than that of Arab, Indian or Turk. The art of Persia is of another convention than ours, but flowing in a stream side by side—both streams from the same source, they are a divine gift to Humanity—the love and perception of the Beautiful. Of Eastern art that of Persia, whether in the design of carpets, or in the painting of miniature, is better known and more highly appreciated than that of any other Eastern nation, if we except the pottery of China, but even in this branch of art Persia has undisputed pre-eminence in the Middle East.

Dr. Hertzfeldt has recently shown that a great number of silk stuffs, preserved in Egyptian tombs, of great beauty, were products of the looms of Khuzistan, which from the 2nd to the 7th Centuries was, as it is to-day, industrially the most highly developed part of Persia.

The Persian language has been for centuries to the Middle East what French is to Europe, and remains supreme as a vehicle of literary expression. Almost alone of Eastern nations Persian currency and Persian credit have remained unimpaired during the past decade: exchange fluctuated with price of silver, and since the latter has been fairly stable Persian currency has fluctuated within narrow seasonal limits. It is officially announced from Persia that the establishment of a gold standard is in contemplation. As an aspiration towards the most modern form of financial stability this expression of intention compels admiration, but challenges criticism, which it will, doubtless, receive at the hands of acknowledged experts, such as Persian merchants with large dealings abroad and the Parsee community in Bombay, who probably know as much about currency questions as any community in the world.

Such are the grounds for the belief that is in me that the renaissance which I have referred may well come to pass. Action provokes reaction, and those who guide the reins of state in Persia are, doubtless, not blind to the danger of going too fast. Internal rather than external complications are likely in the future, as in the past, to be the principal danger to be feared by those who seek to establish a new order in Persia. We are all conservative at heart, especially when our pockets are touched, and low taxation is the greatest of all forces on the side of law and order and of reform. The pity is that the two so seldom go together.

King Fuad of Egypt left Alexandria in the Royal yacht *Mahrussa* en route for London on June 23.

The Times states that Sir Ronald Storrs, Governor of Cyprus, who, as Oriental Secretary in Cairo, was in very close relations with the Field-Marshal while he was British Consul and Agent-General in Egypt before the War, officially unveiled in Nicosia on June 24 a commemorative tablet on the house occupied by Lord Kitchener when, as Director of Survey and Head of the Land Registry Office in Cyprus from March, 1880, till February, 1883, he was making the first accurate map of the island. The occasion was the 77th anniversary of Lord Kitchener's birthday.

NEWS IN BRIEF.

The King of Roumania and the whole Court left Bucharest on June 23 for Sinaia.

Prince Stirbey, Roumanian Prime Minister, on June 21 handed to the King the resignation of the Cabinet.

Tzena Beg, Albanian Minister to Yugoslavia, arrived on June 21 in Tirana from Belgrade with the Legation Staff.

The British Government is reported to have agreed to the Turkish request that a number of badges and effects of Turkish prisoners of war should be restored.

The Turkish National Assembly has voted a tax of five piastres (about 1½d.) a metre on imported films, and also a tax of 25 piastres on gramophone records, and 100 piastres per pack on cards.

The Kurdish rebel leader, Shaikh Mahmoud, who has returned to Mariwan, has signed an agreement with the Iraq Government promising to abstain in future from all activities against Iraq.

M. Henri Ponsot, French High Commissioner for Syria, on his return to Beyrout on June 21 from abroad, proceeded direct to the Residency without receiving the deputations which were awaiting him.

The Egyptian Council of Ministers has approved the appointment of Rear-Admiral Tomlin to be Director-General of the Ports and Lighthouses Administration, in place of Captain Philip Streatfield, R.N.

The British Academy's archaeological mission under Mr. Casson, which has been excavating the site of the ancient Byzantine hippodrome in Stamboul, having finished its work, left Turkey last week for England.

The Athens police last week arrested three Communists on suspicion of attempting to blow up the Italian Legation there in circumstances resembling a similar attempt on the British Legation in March, 1924.

According to *The Times* Teheran Correspondent, a new contract has been presented for consideration to Dr. Millspaugh, of the American Mission (which has had control of the Persian finances since the end of 1922), by the Persian Government.

Lord Lloyd, High Commissioner in Egypt, left Alexandria on June 24 for Trieste en route for London. He was seen off by Lieutenant-General Sir E. P. Strickland, General Officer Commanding the British troops in Egypt, Spinks Pasha, the Inspector-General of the Egyptian Army, and a number of members of the British community.

The Right Hon. Lady Ermytrude Malet, of Eaton Square, S.W., and of Wrest Wood, Bexhill, a Lady of Grace of the Order of St. John of Jerusalem, who died on March 22, aged 71, younger daughter of the 9th Duke of Bedford, and widow of Sir Edward Malet, left unsettled property in her own disposition of the gross value of £20,232, with net personalty £5,540.

It is stated from Teheran that four officials of the Persian War Office were recently found guilty of tampering with important documents and codes, and were condemned to death. On the recommendation of the Prime Minister and the Minister of Justice, the sentence on one of them (a son of a member of the Majlis) was commuted to fifteen years' imprisonment, while the three others were executed.

Dr. Ernest Barker, M.A., D.Litt. (Oxford), Principal of King's College, London, has been elected Professor of Political Science at Cambridge University. The new professorship was founded for the development of teaching in the social sciences at Cambridge by the gift of 150,000 dollars by the trustees of the Laura Cpielman Rockefeller Memorial, made in October last. The stipend of the professorship is £1,200, to be paid from the income of the invested funds.

OPIMUM AND THE INDIAN STATES.

The opium problem in India has entered on a new phase as a result of the conference recently held at Simla between the Government of India and 40 representatives of the Indian States. The outcome of the deliberations of the conference is found in the constitution of a committee, on which the States will be represented, which is to carry out local inquiries in order to make recommendations as to the possibility of replacing the cultivation of the poppy by other crops, and to consider the effect of such substitution upon the economic prosperity of each State concerned. In his exposition to the Simla Conference of the reasons which had impelled the Government of India to move in this matter, Lord Irwin naturally emphasised the sacrifices which British India has willingly made with the laudable object of minimising the evils arising from the abuse of opium, especially in China. But the adoption of measures which caused a loss of Indian revenue amounting to £4 millions annually failed to convert the Chinese opium-smoker into a virtuous citizen. On the contrary these well-intentioned measures gave a great impetus to opium growing and China itself, which now produces about 80 per cent. of the world's output of the drug. Still, the Government of India have continued to pursue a humane and enlightened policy in regard to opium, and there is no substance in the allegations made against them by ill-informed critics that they have sought to profit by the vices of smokers of opium. In India itself opium smoking is a rare practice. Opium eating, on the other hand, is not uncommon. The drug is often used for medicinal purposes by the people, and it is also used sparingly as a refreshment. The Royal Commission which made a careful investigation of the whole subject in 1893 reported that they found no evidence of any extensive moral or physical degradation from its use. A member of that Commission on interrogating a highly intelligent and physically robust Rajput as to whether there were any opium consumers among his neighbours was astonished when the Rajput replied that he himself consumed opium daily. Still, the Government of India have attempted to reduce the use of opium within the country by enhancing the price, and the measure of their success is found in the fact that while in 1910-11 the local consumption was 12,530 maunds, it amounted in 1923-24 to 7,406 maunds.

The position as it exists to-day was clearly described by the Viceroy and the Finance Member at the Simla Conference. The Treaty of Versailles, which was signed by the representatives of India as a whole, including a Ruling Prince, the Maharaja of Bikaner, pledged the country to the ultimate suppression of opium smoking, to the limitation and control of the export of the drug, so that none may reach other countries without the consent of their respective Governments, and to the prevention of smuggling to the Far East. By her ratification of the Geneva Dangerous Drugs Convention, India further pledged herself to prevent the illicit traffic in raw opium from presenting a serious obstacle to the suppression of

opium smoking in Far Eastern countries. As a matter of fact, the policy embodied in these pacts has been faithfully carried out by the Government of India. They prohibit the export of the drug to countries which forbid imports, and they allow no opium to be despatched to any country beyond the quantity certified by the Government of that country to be required for legitimate purposes.

The Indian States, however, are in a different position so far as checking the consumption of opium is concerned. They possess, as Lord Irwin pointed out at the Simla Conference, enormous stocks of opium for which there is no legitimate outlet, and the poppy continues to be cultivated extensively within their territories. The consequence is that opium is constantly smuggled from producing States to the seaports, as well as into British India and into other Indian States. The policy tentatively formulated by the Government of India to deal with this evil involves the ultimate discontinuance of poppy cultivation in the States and the supply of opium for their requirements by that Government at cost price, thus placing them in the same position as the Provinces of British India. The principle involved in this policy appears to have commended itself to the representatives of the States attending the Conference. Indeed, in his speech at the opening session of the Chamber of Princes in November of last year, the Maharaja of Patiala declared that the Government of India might rely on the co-operation of the Indian Rulers in what he described as the noble pursuit of an admirable ideal. The most formidable obstacle to be surmounted is the financial one. This aspect of the case was discussed at the Conference both by the Viceroy and Sir Basil Blackett. Lord Irwin cited the experience gained in the United Provinces, where drastic reductions of the area under the poppy, amounting to 50 per cent. in three years, had not caused any appreciable hardship. Again, between 1906 and 1916 the total area under opium cultivation in Central India and Rajputana was reduced from 244,000 acres to 10,000 acres; and so far as Lord Irwin was aware, the economic life of the States was not disorganised in consequence. In fact, notwithstanding the hereditary taste of the cultivator for opium growing, it was difficult to induce him to continue it owing to the profits he could make from other crops. The Finance Member, in his turn, reminded the Conference that out of the 34,644 acres under poppy in the States in 1924-25, some 24,000 acres were cultivated, not for internal consumption, but to produce opium for sale to the Government of India for Excise purposes. The reception accorded by the Indian Rulers to the tentative proposals thus laid before them seems to have been in accordance with their best traditions, and the labours of the Committee appointed will apparently be conducted in an atmosphere of good will. It is of especial interest that the Viceroy, who has practical knowledge of agriculture, stated at the Conference that the researches of Mr. Howard, Director of the Institute of Plant Industry, Indore, entitled them to hope that in Java sugar cane and in the improved variety of wheat known as Pusa 4, profitable crops could be found to replace poppy on the lands irrigated by wells that are now devoted to its cultivation.

CURRENT TOPICS.

Communist Party of India.

The "Communist Party of India," which has been holding a session in Bombay, has adopted a "minimum programme" of a slightly ambitious character. One of its proposals is the establishment of a democratic republic based on universal suffrage; and it also intends to abolish landlordism, nationalise public utilities and industrialise the country with State aid. In regard to foreign affairs the "Communist Party of India" has emphatic views. It condemns "the Imperialist designs on China," denounces the Anglo-Soviet rupture as one of the many attempts of Imperialism to drive Russia on (sic) the verge of war," and assures the working classes of Great Britain of its "fullest sympathy in their struggle against capitalist aggression." For the Indian Congress the party has nothing but contempt. "It is only the dynamic energies of the toiling masses that can bring Swaraj to India" whereas the present bourgeois leadership has been "gradually compromising with Imperialism" and is in direct opposition to the masses. That being so the Communist Party, in a fine outburst of confused rhetoric, calls on its members to enrol themselves as members of the Congress, and "form a strong left wing in all its organs for the purpose of arresting them from the present alien control." Some of these statements are singularly reminiscent of the advice given from Moscow to the men convicted in the Cawnpore conspiracy case, and although the Communist party is no doubt contemptible to-day, it may give trouble in a country in which the masses are exceptionally credulous and liable to be swayed by cunning and unscrupulous propaganda.

Local Self-government in India.

A deplorable condition of affairs in local government in the United Provinces is disclosed by the Government Resolution on the working of Municipal Boards. The audit for 1925-26 shows that of the 85 municipalities in the Province the accounts of 36, including almost all the important Boards, were distinctly bad or indifferent. There were embezzlements in Agra, Cawnpore, Muttra, Allahabad, Brindaban, Unao, Ghazipur, Mainpuri and Mirzapur. In some of the big cities the record of municipal administration is "not unencouraging"; but in the lesser municipalities it is too often most unsatisfactory. In the case of the Bara Banki Board, for example, little or no attempt has been made to supervise the administration. "The staff is uncontrolled and discontented, sanitation is disgraceful, collection is so bad that a number of contributions remain unpaid." Ghaziabad is in almost as discreditable a state. It has not repaired its roads, and it is reducing expenditure on education. In Tilhar "the late secretary and accountant are being prosecuted for embezzlement, and there can be no doubt that there has been very scandalous mismanagement." The Jhansi Board, again, has failed to realise its position as guardian of the public interest. "It fritters away its time, energy, and money on tennis courts, libraries and statues." A melancholy record, indeed!

CORRESPONDENCE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your issue of June 23 your Calcutta Correspondent expresses surprise at the discovery of Roman coins in the South of India. If he will look up Gibbon's Second Chapter, with Bury's note (i.55 of the edition of 1900), he will see that in the first century there was a persistent drain of the precious metals from Rome to the East, for the purchase, not of "apes, ivory or peacocks," but of diamonds and pearls, silk and spices. Ceylon was the entrepot of this trade, and there is no occasion for surprise in the reappearance in Southern India of a few of the coins by means of which it was carried on.—I am, etc.,

W. H. MORELAND.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 9.

The King's Birthday.

A general holiday was observed all over India to celebrate the King's birthday. Parades and fêtes were organised at Shillong, Darjeeling, Barisal, Bangalore, Ranchi, Madras, Ootacamund, Bombay, and Calcutta. The list of his subjects whom His Majesty "delighted to honour" in India is a long one. But it shows that the distribution has been wide, and the allegation that honours go mainly to Simla officials has been disproved this time. One of the Bengal knights is Mr. David Ezra. The Crown of India has been conferred on Lady Lytton, who during her five years in India took an active interest in the welfare of women and children. Mrs. Cottle gets a very well deserved bar to her Kaiser-i-Hind medal. Mrs. Cottle is a clear-headed lady with a sympathetic heart. The relief of suffering is her line of activity, if she cannot always do as much as she would like to do. Mr. James Donald must also be congratulated. The Finance Member in the Government of Bengal will henceforth be known as Sir James Donald.

Bengal National Bank Failure.

The latest development in regard to the Bengal National Bank is an application made to the High Court on behalf of the Imperial Bank of India for the appointment of three receivers to protect the interests of the Imperial Bank. The application was granted, and Messrs. Walker, Ashworth and Stanley of Messrs. Lovelock and Lewis, Chartered Accountants, were appointed Receivers. Thereupon the Receivers took possession of the premises and assets of the defendant, i.e., the Bengal National Bank. The amounts due and owing to the Imperial Bank for principal and interest, under debentures dated May 4, and August 1, 1927, respectively, were Rs.6,55,236 and Rs. 10,11,835.

The New Howrah Bridge.

The trend of local engineering opinion in recent years has been definitely in favour of the erection of piers in the river. The decision of the Port Authorities to have a floating bridge built, is finding support in few quarters. It has been suggested that the Port Authorities may have been advised at a time when the depth of water at the Strand Road jetties was of more importance than it is now, when the King George's docks are approaching completion. If the contractors are prepared to say that it is impossible to design a pair of piers, or two groups of cylinders, which will not seriously affect the traffic of the river, all controversy and all doubts regarding the advisability of and the necessity for, a floating bridge will be set at rest once for all. Otherwise there will be permanent grumbling and dissatisfaction.

Indo-Japanese Commercial Museum.

The opening ceremony of the Indo-Japanese Commercial Museum proved very successful and was largely attended. The Museum is located at 135, Canning Street. The representative of Japanese Trade here is Mr. Iwas Nishi. Samples and specimens of Japan and India made articles were on display. There will be a bureau to provide information regarding the economic conditions of both countries. The public are invited to visit the Museum, and inspect the latest novelties in toilet specialities, toys, glassware, rubber goods, aluminium and china, silks, paints and bicycles. Exports from India to Japan reach 394 million yen, whilst Japan's exports to India are 156 million yen, or only 8 per cent. of its total export trade. But India is now Japan's third largest customer, and Japan is the second largest purchaser of Indian goods.

The Cholera Peril in Calcutta.

Dr. C. A. Bentley, Director of Public Health, Bengal, in the course of a lengthy and interesting address on

cholera epidemics, at the meeting of the Rotary Club a few days ago, said that some hundreds of thousands of people in Calcutta were harbouring cholera germs, and that Calcutta heads the list of cholera-infested places. Dr. Bentley also stated that the continued existence of cholera in Calcutta is not only a danger to each one of us, but in the eyes of the world is now a grave reflection upon the whole community. Foreign countries will sooner or later take steps in regard to shipping from Calcutta. This may become prejudicial to the convenience of travellers as well as to the general trade and prosperity of the port. After giving appalling figures and trying to rouse wholesome apprehension among Europeans, Dr. Bentley put forward the example of Java, which formerly was a hotbed of cholera, and has been free of the disease for many years, thanks to anti-cholera inoculation. As a sanitary measure for the masses, this may be the best preventive way, but individually, especially among Europeans, it will be difficult to get people to submit to the treatment. Nowadays there are two distinct camps: those who believe in inoculation and those who do not, and when you hear or read their reasons, they appear to be both in the right.

The Proposed Chandernagore Race Course.

The people of Chandernagore, at a meeting presided over by Mr. S. N. Nandi, protested against the proposed race course in the French Settlement. All who spoke at the meeting condemned the idea. They dwelt eloquently on the immoral effect it would have on the inhabitants of Chandernagore and neighbouring towns. They would all, it was declared, take to gambling, and Chandernagore would become a hotbed of vice and crime. It is proposed to send telegrams to the Senator, the Minister, the Governor of Pondicherry and the President of the Council in Paris, in short to all those on whom depends the future of the proposal, so that they may know the opinion of those who are strongly opposed to it.

Hère and There.

The far-travelling Rabindranath Tagore is to visit Malaya and Java shortly, and will then rush back to be here to receive Mr. George Bernard Shaw, who is expected at the beginning of the cold season. This indefatigable traveller always said that he felt at home everywhere in the world, and that he had many homes abroad.

The Commissioner in Sind, speaking on the local problems of the Y.M.C.A., endorsed the wise words of the report on the rather burning question of the Association's politics. "As we all know," he said, "there has been a good deal of unpleasant publicity on this subject during the last few months, and much has been said on both sides that would perhaps better have been left unsaid. I am glad to know that no charge has been brought against this Association, and I am sure that no charge was deserved."

There has been a centenary in Simla; of the visit of Lord Amherst. He was the first Governor-General to visit the town that has become the summer capital of the Government of India. This visit took place ten years after Simla was handed over by Nepal to General Ochterlony, whose monument adorns (if one may say so) Calcutta.

The monsoon seems to have come to stay. It is considered as premature to have torrential rains and deafening storms before the 15th of June or so. But considering that these provide a well needed respite, one cannot complain, though the landlords of Calcutta have now an excuse for not having repaired the roofs in time. All who have lived in a top flat in Calcutta know how the monsoon damages everything and how all roofs leak, more or less.

The widow of the late Sir William Lockhart, Commander-in-Chief in India from 1898 to 1900, died at her home in London in March. Her remains have been brought here, at her express desire, to be buried in her husband's grave, in the Military Cemetery of Bhowanipore.

The Committee of the Indian Chamber of Commerce have made a representation to the Government of Bengal, Marine Department, with regard to the admission of Indians to the Bengal Pilot Service. There have been a certain number of appointments reserved for Indians, but it is alleged that no Indians were found suitable for the posts.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 10.

No Protection.

To say that Bombay is amazed at the decision of the Government of India on the Textile Tariff Board's report is to put it very mildly indeed. It is contended that the mill industry has been very badly let down. The industry, say the complainants, asked for bread—and the Board has made certain suggestions that might have proved sustaining, in the shape of either a four per cent. rise in the import duty or bounties as a stimulus to spin higher counts of yarn—and has been given a stone, in the shape of remission of import duty on mill machinery and mill stores. That a fight will ensue is inevitable. Whatever may be the shortcomings of the millowners, and no one will deny that these are numerous, the report amply shows that they have been hard hit.

The possibility of the mill-owners cutting the wages of operatives has been foreshadowed by Sir Victor Sassoon in the course of an interview granted to the Press in London, and he says such a step is implied in the Tariff Board's report. The implication is not easy to find, but it is the last thing that the millowners should contemplate. From what one can learn of their future plans, it is the last thing they are prepared to consider; but in the meantime a deputation is to wait on the Viceroy, and an agitation is to be carried on so as to gain public support for their demand for protection.

The Reserve Bank Bill.

With the close of the Bombay sitting of the Joint Committee of the Central Legislature on the Reserve Bank Bill, we are given time to speculate on what has happened—or what we believe has happened—at the meetings, and what looms ahead in the future. One outstanding fact is that Sir Basil Blackett has scored a victory where it was believed he had suffered defeat. The Currency Commission recommended the formation of a Central Bank on the basis of subscribed capital, and the arguments in its favour are too well-known to need recapitulation. The Swarajists and the followers of Sir Purshotamdas Thakurdas, however, preferred a State Bank, a suggestion opposed by the Hilton Young Commission, and by the resolutions passed at the International Financial Conferences of Brussels and Genoa. By force of numbers the opposition "turned down" Sir Basil's suggestion, but he persuaded them to allow their alternative to stand over. In the interim, it is to be hoped that the time allowed for consideration will produce a saner outlook before the Committee next meets.

Village Medical Scheme.

For the past three years the Government of Bombay has been struggling along in an endeavour to solve the difficult problem of providing medical relief for the rural areas. Success has not yet been achieved, but a means has been found which might well result, upon further development, in a permanent solution. The scheme consists in the training of school-masters in elementary medicine and surgery on "First Aid" lines, so that when they return to their villages they can give help to the villagers in minor ailments, sending on cases with which they are unable to deal to the nearest dispensary or hospital. Thirty schoolmasters have been at work during the past sixteen months, during which time 22,992 cases in Poona, 54,799 in Bijapur, 19,573 in Sholapur and 23,897 in Dharwar Districts have been dealt with.

Official opinion regarding the scheme is very optimistic, and it is a common sight to see a villager with a clean dressing to a wound instead of the usual dirty rag, leaves or feathers. It is hoped to further increase the number of these medical teachers and widen the area over which they operate in the near future.

Market Conditions.

There has been little of any interest in the commercial markets this week, the general tone, except in cotton, being quiet. Cotton has been very strong, and a small demand has arisen from Japan. Securities firmed up a bit after a decline at the opening of the week, while mill shares slumped owing to nervous operators unloading their holdings on the publication of the Government's decision on the Textile Tariff Board's report. The money market is quiet and trade demand is slackening, so that there is a prospect of the Bank Rate declining again unless the Government carries out further deflation. Exchange is quiet, as also is silver with a falling off in up country demand, while gold is inactive.

INDIAN MAIL.

The Viceroy and Farming.

Lord Irwin, writes the *Pioneer*, is a landholder and expert agriculturist as well as the Viceroy of India, so that anything His Excellency has to say regarding the interests of landholders and on the subject of agriculture should carry great weight. It may be hoped, therefore, that Indian landlords will pay heed to the appeal he makes to them in the foreword he has written to the "Journal of the Central Bureau for Animal Husbandry and Dairying." Lord Irwin emphasises what the Government is doing through the Imperial and Provincial Department of Agriculture to improve animal husbandry and dairying, but he pertinently points out that this is not enough and that the country must depend on other assistance if real progress is to be made. He cites the gentleman farmers of England who have taken the lead in stockbreeding. As a result of their efforts stockbreeding has become the mainstay of British agriculture and England the stud farm of the world. His advice to India's landed aristocracy to follow the example given by English farmers is to be heartily commended.

A Protection Puzzle.

In presenting the problem of the tea chest for the consideration of the Tariff Board, says the *Statesman*, the Government gives that body a typical protection puzzle to solve. Tea chests, plywood and the lead sheets used in their making are subjected to an import duty of 15 per cent., recoverable to the extent of $\frac{1}{3}$ of the tax when they are re-exported. Recovery involves identification and other troubles which are obstacles to business. On the other hand, India has a tea chest industry of its own that asks for protection, which must mean that tea chests will cost more. That extra cost will have to be carried by the tea exported in chests. The tea chest industry would like to get its raw materials duty free, while imported chests paid a heavy duty. The tea trade on the other hand wants its packing material at as low a price as possible and regards the completed chest as raw material. Between the two the Tariff Board is left to choose and we do not envy it the task of finding a solution agreeable to all.

Emigration of Indian Labourers.

In their order recording the emigration report submitted by the Labour Commissioner, the Government of Madras says the number of emigrants who went to Malaya was double that of the previous year owing partly to the active demand for labour in the country and partly to the bad season locally. The number of emigrants to Ceylon fell from 76,410 in 1925 to 56,722 in 1926. This gradual decrease seems to bear out the opinion of the Agent to the Government of India in Ceylon that Ceylon is slowly

reaching saturation point in absorbing Indian labour on estates. The question of enforcing the presence of medical officers among ships carrying more than 99 passengers by amending Section 184 of the Indian Merchant Shipping Act is under consideration of the Government of India.

The I.A.R.O.

We observe from the latest number of the Army List, writes the *Daily Gazette* of Karachi, that 650 officers have been obtained for the Army in India Reserve of Officers since the opening of the recruiting campaign. That is a very satisfactory beginning, but Army Headquarters are still anxious to secure a few more officers. Taking India as a whole, there must be many thousands of young Europeans of the age and type that would make good officers. The revised rules of the new scheme are generous in the matter of pay and allowances, and special consideration will be given to those with War or Auxiliary Force service. It should be noted that officers of the Reserve will only be called up in case of a general mobilization consequent upon a grave national crisis. We hope that those who served in the last War who are qualified to do so will join the Indian Army Reserve of Officers so that Army Headquarters may have a substantial number of reliable and experienced men to call upon should the necessity arise at any time in the future. There is plenty of material available in Karachi and other parts of Sind, and we believe that the above facts have only to be more widely known to induce a larger number of men to join.

"THE LONDON DRAGOMAN."

"The London Dragoman" is the appropriate title borne by a monthly guide-book devoted to "What to see, Where to go, and All you really want to know in London." A brief study of the book suggests that it has been compiled with care and thoroughness; (an Indian Restaurant is omitted on p. 92); it is wonderfully full of information and contains just what the visitor to London, and residents, want in handy form. In addition to recording what is "on" and where, the book gives times and prices, and details as to how to get there. In one respect there is room for improvement—the different sections are not well served in the type used for headings.

NEWS IN BRIEF.

The King of Afghanistan's personal Secretary is reported to have arrived recently in Teheran with letters to the Shah in connexion with a treaty between the two countries.

Sir James Lewis Walker, C.I.E., of Worpleston Place, Worpleston, one of the founders and for 25 years chairman of the Alliance Bank of Simla, formerly one of the proprietors and managing director in London of the *Allahabad Pioneer* and of the *Lahore Civil and Military Gazette*, who died on April 13, aged 82, left estate valued for the purposes of the English grant at £59,444 gross, with net personalty £33,313.

Colonel C. R. Bakhle, Indian Medical Service, has been appointed Honorary Physician to the King, in succession to Colonel J. H. McDonald, Indian Medical Service, who has retired.

The following will represent India this year at the Assembly of the League of Nations:—Delegates: The Rt. Hon. the Earl of Lytton, G.S.S.I., G.C.I.E., Lieut.-Colonel His Highness Maharaja Sir Jagatjit Singh Bahadur, G.C.S.I., G.C.I.E., Maharaja of Kapurthala, Sir C. P. Ramaswami Ayyar, K.C.I.E. Substitute delegates: Sir Edward Maynard Des Champs Chamier, K.C.I.E., Khan Bahadur Mian Sir Fazl-i-Hussain, Sir Basanta Kumar Mulick.

OBITUARY.

Mr. Julian James Cotton, of the Indian Civil Service, who died in Madras on Monday, was a member of a family which has served India for five generations. He was the second son of the late Sir Henry Cotton, formerly Commissioner of Assam, and a younger brother of Sir Evan Cotton, first President of the Bengal Legislative Council under the Reforms. Mr. Cotton joined the Indian Civil Service in 1892, and at the time of his death had been a district and sessions judge for about 17 years.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Palestine's Needs.

Elsewhere in these columns will be found a report of the annual meeting of the Economic Board for Palestine, at which important speeches were made by Sir Robert Waley Cohen and Sir Alfred Mond. These speeches and the succinct report on the economic situation in the country in 1926 by Mr. Goldwater (a comprehensive survey of which is also given in this issue) give a very clear picture of the present conditions, and of the country's requirements if the hopeful future which has been prophesied for it is to be realised. The past year, as my readers are well aware, has been overshadowed by the economic depression which has resulted in unemployment on a large scale among the Jewish immigrants and has led to the development of an emigration movement from Palestine. Both Sir Robert Waley Cohen and Sir Alfred Mond, who expressed themselves satisfied as to the prospects, drew attention to two vital needs for the development of Palestine—the protection of young and promising industries against “dumping,” and the provision of capital. With regard to protection, the complaint is made that the Government of Palestine has hitherto failed to meet the requirements of the situation. Emphasis was laid on the point that there is no need to appeal for funds for Palestine, but on the contrary it must be shown what an attractive field for remunerative investment is offered by the country. Idealism has carried the Jewish development of Palestine to the point which has now been reached, and it is to the Jewish community in the main that the country will have to look for the capital that is required.

Palestine's Chief Asset.

A point which must not be overlooked in considering the position in Palestine is that the depression from which the country has suffered for so long is due in some measure to external causes, such as the adverse conditions in Egypt owing to the fall in the price of cotton. The situation in this respect has altered and Palestine may now expect to benefit once again by the Egyptian market. In one respect at least Egypt and Palestine are alike, as they each have one product on which they chiefly depend—cotton in one case, the Jaffa orange in the other, and Palestine has so far failed fully to exploit the possibilities of the cultivation of the Jaffa. Prudence dictates concentration in this direction, while, as pointed out elsewhere in this issue, ample scope exists in the country for the development of other branches of fruit farming, but the realisation of the prospects in this as in other directions depends on the provision of capital.

Free Zone at Constantinople.

The forthcoming establishment at Constantinople of a free zone for transit trade is an indication of the realisation by the Turkish authorities that something must be done to further the restoration of the pre-War position of the port as one of the world's great trade junctions. It is also of interest as a sign of the realisation in Turkey that a policy of insularity not infrequently has unpleasant and unexpected repercussions, and that in the modern world no nation can afford to live independently of its neighbours.

Ultimately this free zone will no doubt have efficacious results, but it is difficult to see grounds for overwhelming optimism in regard to its immediate effects, for the causes which have taken the transit trade from Constantinople are not even remotely concerned with Turkey. The date when normal conditions obtain in Russia will mark the resumption of shipping activity at Constantinople.

The Forthcoming Greek Loan.

The impending Greek Loan—the phrase is permissible for there is no doubt that the League of Nations will readily grant its sanction for the issue at its next session—lends special interest to the present visit to this country of the Greek Finance Minister, M. Cafandaridis. One of the purposes for which the loan is required is for the stabilisation of the drachma, and this important question for Greece will probably be the subject of important discussions during the Finance Minister's stay here. A loan of £9,000,000 is desired by Greece, one third being a supplementary loan for the refugees, one third being required to pay off the floating debt—an essential measure for stabilisation—while the remaining £3,000,000 is intended to serve as a support for the currency.

Ottoman Debt.

There have been further developments in regard to the Turkish debt negotiations since I last referred to the subject. It will be remembered that the previous negotiations came to a conclusion without any result being reached. Since then there have been discussions among the representatives of the bondholders, and an agreement was finally reached as to the terms of a Note to be dispatched to the Turkish Government. Since the Note has been sent there have been rumours that a provisional settlement has been arrived at, but while there is every reason to hope that that will be the outcome of the present development there is no reason for thinking that at present anything definite has been settled. The one thing that is certain is that it is the clear desire of the Turkish authorities to settle this outstanding question as soon as possible, for while it has been maintained that Turkey can do without foreign capital, it need not be supposed that this is seriously believed in official circles at Angora, and the one way to obtain assistance is to re-establish Turkey's credit, and that can only be achieved if Turkey meets her foreign obligations.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
LORD ORANMORE AND BROWNE, K.P., P.C.

THE ECONOMIC BOARD FOR PALESTINE.

Fifth Ordinary General Meeting.

The fifth ordinary general meeting of the Economic Board for Palestine was held at 7, Queen Square, London, W.C.1, on June 9, under the chairmanship of Sir Alfred Mond, Bart, M.P. As the Chairman had been delayed, Sir Robert Waley Cohen was voted to the Chair and declared the meeting opened.

Sir Robert Waley Cohen said: I beg to move that the report of the Executive Committee and the accounts for the period ended December 31, 1926, be adopted.

As I have recently visited Palestine with my cousin, Mr. W. S. Cohen, I think you may probably be interested to hear our impressions. I do not suppose that there was ever an easier, simpler, and more satisfactory colonising proposition than that which presents itself in Palestine. You have an industry which is practically a monopoly in the orange industry. You have an unlimited market growing up for large supplies of what can be made into a primary industry of the country and ought to be made into a primary industry of the country.

You have a population fired by an ideal, which makes them ready to sacrifice themselves for the need of the country to an almost unlimited extent, and you have conditions which are far more favourable than were to be found in any similar colonising proposition that I think has existed in the history of the British Empire.

But you have one serious obstacle which is standing in the way of the country and is producing a series of what are called crises, but which I think are nothing more than the natural consequences of the absence of capital from which the country is suffering. In all other new countries—which Palestine is in the economic sense—there has been a great shortage of labour, but so far as I know there have never been found wanting men willing to risk their capital in countries that offer promising futures. In Palestine there is no shortage of labour at all. On the contrary, there is rather at the moment an excess of labour, and that excess is only there because the country lacks capital. It seems to me, therefore, that this Board has more than ever a destiny carved out for itself by the circumstances of Palestine. The country has been over-developed in its political sense, and it has been under-developed in the only sense, I think, in which a country can lay up for itself a prosperous future. I think that Palestine is suffering from a number of quite divergent and different influences, which have hitherto apparently frightened capital from investing in the country in ways that are as hopeful and as attractive as a hundred other opportunities that capital has in other parts of the world, and of which it is taking very full advantage. I think that if this Board is to serve the elementary, fundamental purpose for which it was set up, namely, to further the economic development of Palestine, there is one very simple, direct and outstanding task that lies in front of it, and that is to improve the credit of the country, not in the ordinary sense the credit of the Government but to improve the appreciation by the world at large of the fact that here is a country which is not merely a reservoir for receipt of charity; it is a country that offers in a most extraordinary way an attractive field for capital investment. The day that we can persuade and explain and bring home to those sources of capital in the world which are accustomed to provide for the development of industry and agriculture, and all the other activities upon which prosperous countries depend, the day upon which we can convince them as Mr. Walter Cohen and I are convinced, that the country offers an attractive, reasonably safe outlet for capital, that day, I think, the future of Palestine will be assured.

The factors which we have to attack in order to carry out that which I think is a supreme and fundamental task are rather diverse. First of all there is the Government. One would have thought that the Government of Palestine would do its utmost to foster any sound industry that can be built up in the country. I am sure that if you ask them,

they would tell you that that is their desire. But if you go a little further than lip service and ask them for a reasonable measure of protection for capital; if you ask them to foster industries which can be proved to be profitable in the country and to offer a future both for the utilisation of the raw products of the country and for supplying the needs of the country; if you ask them to help by protecting those industries in the early days of the country's history, you are met with what I am bound to call very unsatisfactory replies.

Mr. Walter Cohen and I studied in particular two industries to which that applies. First, the Nesher Cement Company, an extremely sound and well-managed concern, which by the use of labour, largely Jewish labour, which is so anxious to work for the country, converts raw material lying there of no value in itself into a product of which the country has a constant need.

There is a temptation on the part of the great cement industries in the old established countries to dump their products into Palestine, and of course there is no new country which could have built up any industry at all against the free importation of dumped products of that kind. We have therefore done our utmost to persuade the Government of Palestine to put on a reasonable and proper protection to enable the Cement Company to fulfil its task for the country. They have expressed the utmost goodwill, but up to this moment they have not agreed to put on a sufficient protection to make the industry safe from the dumping of cement from the old-established countries. I think if this Board and all those who have studied the question exert all the influence in their power, we may succeed in raising the duty which has been proposed to a proper figure, and so establish in Palestine a splendid industry, well-managed on purely business lines, employing labour of the best kind, and turning out an absolutely first-rate product to supply the needs of the country.

Then there is the salt industry. The salt industry offers an exactly similar problem, with the addition that if that industry can be built up in the way that it can and ought to be built up, it will drain marshes that are not only of no value to the country but are harbouring harmful mosquito and similar sources of disease. That industry—if it is given the measure of protection which it ought to be given—can be made an absolutely paying business, and it can with the help of protection provide salt for the consumer in Palestine at a lower cost than Palestine has ever been able to obtain salt from foreign sources. I do not believe that there is any member of this Board who would say that if in those circumstances protection is required to create a new industry in a new country, it ought not to be given.

The history of the salt industry in Egypt is very much in point. I think we made an error in telling the Palestine Government that there is now a monopoly of salt in Egypt reserved for the local salt industry, but it is an error that I hope may be of value in bringing home to them the lesson of the Egyptian salt industry. At one time the Egyptian Salt Company was regarded as a derelict industry, bound to go to the wall. To-day they speak of the salt industry of Egypt as such a powerful concern that nobody can hope to stand against it. The whole difference between those two things was created by the Government creating a monopoly for salt in Egypt in the early days. That monopoly has been abolished. Why? Because entirely owing to the protection, the complete protection, that was given to the salt industry of Egypt in the early days, they have now a powerful supply of their own and do not need to have any artificial means of keeping out salt from other countries. The Egyptian Salt Company supplies the requirements of the country, and no one thinks of importing it there.

Exactly the same conditions can be established in Palestine. We are satisfied that even with the physical difficulties that now exist, a reasonable measure of protection would enable the Salt industry to be prosperous, to earn good profits and pay good dividends to its shareholders, as well as good wages to its workers. But again

we have not yet succeeded in gaining from the Government the promise that they will do it.

I think one cannot, in speaking of the influences which have frightened off capital, altogether leave out of account the great efforts which have been made to secure what I may call charitable help for Palestine. I do not, of course, use charity in any disparaging sense, but I mean that people have been impelled in very persuasive and very far-spread ways to give money to Palestine, and I think perhaps that has helped to create the impression that Palestine is a country to which money must be given; whereas I think the true fact is that Palestine is now a country in which money can render a greater service by being invested than by being given away. For every pound that is available in the world as a gift, there are many thousands of pounds available for sound investment. Therefore I feel that the greatest service that a man can render to Palestine to-day is to invest money there and make profits. That is showing the way to a permanent building up of the country which I think is the only way in which the country can build itself up on a permanent footing.

Of course, there is the labour question. The Jews who have gone to Palestine are idealist, and they come mostly from countries in which to be an idealist is to be—well, for want of a better term I think I must say a Socialist. I use it not as a political expression but as an economic expression. It is a disease that is very virulent and very widespread in the countries from which these men and women come, and I think one of the things that we have to try to teach is that you can be an idealist, and a much more practical and valuable idealist, if you are a constructive idealist, a capitalist idealist, than you can if you are a Communist idealist. I am using expressions such as Communism and Socialism which have rather sinister associations, but there is no sinister association with these things in Palestine. They are merely theories of life which have grown up in the minds of men possessed of a fine and splendid ideal which has been diverted into a false course, and I think that the Economic Board can render an enormous service, if its members will go to Palestine and will show that you can be an idealist and a much more valuable man to Palestine, if you invest your money there and do it in such a way as to build up the country and offer to it the future which, I believe, it can have on thoroughly sound economic principles.

Those are the views which impressed themselves upon Mr. Walter Cohen and myself as a result of our visit to Palestine. The time has come when the ideals of the Economic Board are the ideals that can render the greatest service to the country, and I believe that as we succeed in bringing home that fact to the large number of men and women of goodwill who are anxious on every ground to see Palestine built up into a prosperous country, worthy of its history, I believe that with their help we shall succeed in fulfilling the fine ideals upon which we were founded. (Applause.)

Mr. Leonard L. Cohen: I am sure we have been very much interested in the account which Sir Robert has given us of the conclusions at which he has arrived after his visit to Palestine. I am not competent to add anything to what he has said. I feel that if the Economic Board were capable of carrying out a propaganda campaign based on the views he has enunciated, we should be more successful perhaps in the future in attracting capital, of which we stand sorely in need, than we have been in the past.

I beg to second the adoption of the Resolution before us.

Mr. J. A. de Rothschild and Mr. Sigmund Samuel were re-elected as members of the Advisory Committee, and Mr. G. S. Engle was re-elected as auditor.

Sir Alfred Mond, Chairman: I must apologise for being so late. I am sorry that I did not hear Sir Robert Waley Cohen's remarks, though I know fairly well the line on which his mind is travelling, and I am sure that his visit to Palestine very much stimulated the work and the interest taken there. I think it is very important that we should try to get this body on a much larger footing. We

must take steps in that direction. That is why I welcome the suggestions made to-day.

We are in an extraordinarily difficult position in regard to finance in Palestine. Palestine is not yet looked on as a business proposition, and, as has been rightly pointed out, you cannot treat it as you can any ordinary promotion business. On the other hand, there is no doubt that money can be invested in Palestine, if properly administered, at very remunerative rates. Schemes have been put forward—three or four, probably more. A scheme for irrigation; a scheme for a good modern hotel; a scheme for developing orange culture: all schemes which have a good economic basis, and, if situated in any other part of the world, the money would be fairly easy to find. But I think, if we could get a larger nucleus behind us, we ought to be able to raise the small capital required, and if we could only get a few things started in a satisfactory way, the task would become very much easier than it has been.

A set-back has taken place recently, which is not unexpected to anyone who knows the fluctuations which must occur in establishing any new country, but has caused a certain spirit of discouragement. Personally I think it is unjustified, because since we were moving ahead at a speed which could not possibly continue, there was bound to be a certain reaction. At the same time, the complications and difficulties in Syria must very seriously affect the economic life of Palestine.

There is one thing, I think, we are entitled to say, and that is I do not think we are obtaining from either the Government there in Palestine or from the Government here, all the support which we are entitled to as pioneers in a difficult new country. I would like to refer especially to the position of the Salt Company, which was really founded in order to enable Palestine to become independent of Egypt in its salt supply, and to the cement factory which was started in a very public spirited way by Mr. Polak. We took an interest in order to develop the industry in the country. Given time for the market to develop, it would undoubtedly become a very first-class proposition. It is scarcely fair that a new enterprise of that kind should be severely cramped in its inception stages by the dumping policy of exporters to that market, who naturally are able to sell at very low prices in order to stop any competitor. I hope the Government will take some steps by raising the duty on cement to enable that concern to become a success.

It is, perhaps, curious that I, a Free Trader, should be advocating a policy of this kind, but even as good a Free Trader as John Stuart Mill, who was asked this specific question when Australia first started, in reply to a correspondent wrote to him and said that he thought it was a perfectly economic and right thing to help industries of this kind in new countries. Anyone who has studied the position in these countries, and especially in a country like Palestine, must feel that in view of the extraordinary difficulties of establishing new industries in countries which are entirely non-industrial, you cannot build up any form of industry, unless in their initial stages they have a certain amount of support of this character. It enables you to increase your population more rapidly; and to employ those among the immigrants who are used to industry. That is a consideration which anyone building up a new country should bear in mind, though Palestine will never be an industrial country on a large scale.

Then there is another point which is of importance and which, I hope, is at last going to make some progress, and that is the old question of the harbour. It is, of course, essential to the economic life of the country. Every scheme you examine, like the Dead Sea potash, could only be put into operation on any considerable scale, if you were in a position to ship your goods easily and cheaply.

The Economic Board will be glad to know that the Palestine Electric Corporation is making very good progress. Its finances are all in order. The technical part of the programme is now also settled, and the Company is earning quite a nice little profit on what it is already

doing, and, as far as that enterprise is concerned, we can now say with safety it is in very able hands, and there is no reason whatever to anticipate that its development should not be one of continuous improvement, and, I hope, finally very considerable financial success.

I think myself the one urgent matter is to increase the capital of the Palestine Corporation, which is really our active and executive body. If the turnover of the business were increased, the overheads would not necessarily go up by any considerable amount, and the balance sheet would show quite a different aspect as regards profit and loss. It is impossible really to decrease our overhead charges. We must be represented in Palestine by gentlemen of position, in whom we have confidence. We must have a certain office accommodation and a certain staff, small as it is. In reality, if we had a larger capital, I think we could within a relatively short time make the Palestine Corporation into quite a reasonably good dividend payer, and carry out many of the schemes which are being put forward, either by taking them altogether or by participating in them to a partial extent.

I would invite members of the Economic Board who are not shareholders of the Palestine Corporation seriously to consider whether they should not undertake to subscribe a certain amount of the ordinary capital which is at present unissued, very nearly £100,000. If members of the Economic Board could induce some of their own friends to find that relatively small amount of money, it would be a very great encouragement to Sir Robert Waley Cohen as Chairman of the Corporation and to myself and to other members of the Board. We Jews seem to be able to finance everything except a few hundred thousand pounds for Palestine.

Annual Report.

The following report of the Executive Committee was submitted at the general meeting:—

The Executive Committee submit their report and audited accounts for the year ended December 31, 1926, and also a report of their representative in Palestine, Mr. A. Goldwater, the General Manager of the Palestine Corporation. His survey of the economic conditions during 1926 shows that while the year has been prosperous in the orange and fruit industry generally, the conditions have been difficult for the newer immigrants in Tel-Aviv and Haifa. The almost complete cessation of building in these towns, due to the shortage of capital, has led to a large amount of unemployment and to a considerable decrease in immigration, the number of immigrants entering the country being under 14,000, compared with over 34,000 in 1925. The character of the immigration has also changed, about 85 per cent. of the immigrants being classed as wage-earners and less than 10 per cent. as having means, as compared with 47 per cent. and 34 per cent. respectively in 1925. Over 9,000, or about 66 per cent. of the total immigrants, emigrated during the year, leaving a net balance of about 4,500 immigrants, the lowest figure recorded since the year 1919, with the exception of the year 1923, when it was only 3,044.

There has been a fall in the Government Revenue of £E223,000 for the first ten months of the year, but, notwithstanding this, it is expected that there will be a surplus of over £E500,000 for the completed year.

Exports (Palestinian produce only, £E1,275,625) were £E21,934, and imports (£E6,513,331) £E1,090,592 lower than in 1925. To a small extent, as Mr. Goldwater points out, the decrease in imports was due to increased local manufacture. The orange industry was very prosperous, the export for the year being 1,887,510 boxes of a value of £E566,493, as compared with 1,868,291 boxes of a value of £E551,465 in 1925. It is estimated that a further 5,000 dunams (1,150 acres) were planted with oranges during the year.

The great need of Palestine is that capital should flow there on ordinary commercial lines, because only in this way can it be obtained on the scale which the country requires. This was the principal object with which the Economic Board was formed, and secured the co-operation of the other organisations working in Palestine. We hoped to be able to show that, with proper management, the conditions in Palestine are favourable to the investment of capital, and that good returns can be obtained. As the result of five years' work, we are now prepared to indicate definitely three main directions in which we believe a considerable amount of capital can be employed, with every prospect of profit to the investor and to the great advantage of the country.

The number of visitors to Palestine increases every year, but the hotel accommodation in Jerusalem has not kept pace with the demand and is still inadequate and unsatisfactory. At the request of the Palestine Corporation, who regard the provision of a good modern hotel as of the greatest importance to the country, Mr. Frank Goldsmith was good enough to visit Jerusalem at the beginning of 1926, in order to examine the commercial prospects of an hotel. His financial statement, which is entirely favourable, is forwarded herewith.

The Palestine Corporation made a net profit for the year of £E829, derived from interest and commission received on loans. These loans are for the most part in sums up to £5,000, for periods

of up to five years, and they have proved safe and profitable. In the opinion of the Board this form of business can be extended if further capital is obtained for the Corporation.

The whole of the capital of the Central Bank of Co-operative Institutions in Palestine has now been paid up, and stands at £E30,100 share capital and £E70,000 loan capital. The total amount issued in loans during the year was £E130,112, as compared with £E80,797 during the preceding year. There was a net profit of £E332 for the year, after providing for interest and sinking fund on the loan capital and £E943 as a reserve for contingencies, as compared with a loss of £E291 for the preceding year. The payments in arrear and bad debts at August 31, 1926, amounted to less than ½ per cent. of the outstanding bills receivable, a very satisfactory result in view of the difficult financial conditions prevailing in Palestine during the whole of the year.

THE ECONOMIC SITUATION IN PALESTINE IN 1926.*

By A. GOLDWATER.

(General Manager of the Palestine Corporation.)

The year 1926 in Palestine provided the anomalous coincidence of prosperity in many branches of industry and agriculture, coupled with a serious reduction in the Government Revenue receipts and an alarming increase in unemployment; and the country experienced what will probably prove to be the severest setback in its economic development since the establishment of the Mandated Government.

Yet it may be said that the foundations of the economic power of Palestine have been strengthened during the year. A number of industrial undertakings have increased their output and the quality of their products, rendering the country less dependent upon imported goods, and some have established trade with the neighbouring countries. Notable amongst these are the cement factory at Haifa, the salt works at Athlit, the hose and underwear manufacturers, and the match, chocolate and alcohol factories. There was also an increase in output from manufacturies depending upon agricultural products for their raw materials, including flour, matzoth (unleavened bread), dairy produce, tobacco, etc.

About 50,000 tourists visited the country, or about the same number as in the previous year. The majority of these came during the first four months of the year, but a satisfactory feature is the increasing numbers in the summer months during the past three years.

Orange growers had a very successful year; the production was high; the quantity exported was about equal to that of 1925 and prices were high. New groves everywhere were thriving. Good yields were obtained from all staple crops, both summer and winter, including barley, the yield of which had been extremely low for a number of years on account of droughts in the Southern district, where it is chiefly grown; but prices generally receded throughout the year and fell in some instances to as much as 20 per cent. below those of 1925.

With a decline also in the price of other commodities, the index figure of the cost of living fell during the first six months of the year to about 5 per cent. below that of 1925. But it rose to about 5 per cent. above the 1925 figure during the next three months, and stood at the 1925 figure for the last quarter of the year. This increase during the year was due to the outbreak of Rinderpeste in the neighbouring countries—Syria and Transjordan, as a result of which an embargo was placed upon the importation of cattle and animal products from those countries, and the prices of meat and other foodstuffs rose. When later the disease spread to Palestine, all cattle were quarantined and all possible measures were taken by the Government to combat the disease, so that by the end of the year it had practically disappeared. The list of villages declared as infected areas revealed the fact that the majority were Arab, and that very few of the Jewish settlements were affected.

* Summary of the Report presented at the General Meeting of the Economic Board for Palestine.

The total trade of the country at £E8,000,000 was approximately £E1,200,000 below that of 1925, but it is satisfactory that practically the whole of this amount is accounted for in the decrease in the imports of commodities for actual local consumption. The exports were about the same figure as for 1925.

The reaction from the apparent prosperity which the country enjoyed up to about October in 1925 is evident from the statistics of bankruptcies and unemployment during the year. There were 18 bankruptcies, of which all were registered during the first quarter. In 1925 there were no bankruptcies, nor had there been any prior to 1925.

Unemployment, which had already begun in October, 1925, had reached 3,500 by the end of that year, rose during 1926 to about 7,000, at which number it stood at December 31. This number, for Jews only, is taken from the statistics of the Jewish Labour Federation, and does not include those employed on part time only, probably one or two days in the week, which if added to the register would bring the number to about 8,000 (at which it is said to stand now—April, 1927).

There was a considerable decrease in immigration; the number of immigrants entering the country was under 14,000, compared with over 34,000 in 1925. The character of the immigration had also changed; about 85 per cent. of the immigrants were classed as wage-earners; and less than 10 per cent. as having means, compared with 47 per cent. and 34 per cent. respectively in 1925. Over 9,000, or about 66 per cent. of the total immigrants, emigrated during the year, leaving a net balance of about 4,500 immigrants, the lowest figure recorded since the year 1919, with the exception of the year 1923 when it was only 3,040. Nevertheless the unemployed figures demonstrate clearly that even at this low rate, immigration was far in excess of the country's capacity for absorption, and out of all proportion to the amount of capital that was brought into the country.

What that amount was it is of course impossible to state with any degree of accuracy; but it must evidently have fallen far below the amounts of previous years. The deposits in the various "people's" banks—the Credit Co-operative Societies financed chiefly by the Central Bank of Co-operative Institutions—showed at August 31 a decrease of over £E40,000 from the figure at August 31, 1925, when it stood as high as £E74,000, and a certain amount of capital was no doubt withdrawn from the country by emigrants.

There was also a noticeable decrease in the capital invested by private companies; the total registration having amounted to only £E800,000 or about one-third of 1925.

Government Revenue and Expenditure.

The financial depression which prevailed throughout the year caused a considerable shrinkage in the receipts of all revenue earning Departments of the Government. For the ten months (April 1 to January 31, 1927) of the financial year, the revenue was £E1,892,441 compared with £E2,116,110 for the corresponding period of the financial year 1925-26, or a decrease of £E223,559—as shown in the following details of Revenue, in which the figures for the year 1925-26 are calculated as ten-twelfths of the total revenue for the year.

	REVENUE.		Decrease.
	10 months ending January 31 1925-26.	1926-27.	
	£E	£E	£E
Customs	720,120	655,757	64,363
Licences and Taxes	652,080	594,818	57,262
Railways	327,000	293,048	33,952
Fees of Court or Office	244,000	194,623	49,377
Posts and Telegraphs	128,300	123,859	4,441
Revenue from Govt. Property	17,300	16,372	928
Ports and Marine	7,070	5,915	1,155
Land Sales	14,200	4,027	10,173
Miscellaneous	6,030	4,122	1,908
	£E2,116,100	£E1,892,541	£E223,559

The decrease in the customs revenue, which is derived almost exclusively from duties, must be attributed to (a)

the reduction in the volume of imports; (b) the exemption from import duties (granted under the Customs Exemption Ordinance) of all raw materials required for industries—such as seeds, olive oil, caustic soda for soap-making, cotton and woollen yarns and dyes for the textile industry, pipes used for draining agricultural land and for irrigation purposes; and (c) the abolition of all export duties on Palestine products.

Licences and Taxes include the tithe and animal tax. The abundant harvests should have helped to swell this item considerably, yet there is a heavy decrease; this may be due to the abolition of the Tobacco Land Tax of £E2 per dunam, and the decrease in revenue from animal tax, owing to the embargo placed upon cattle during the year.

Railway receipts were probably affected by the decrease in goods and passenger traffic, both subject to variation with the economic conditions prevailing; and also to some extent by the increasing use of the motor car.

Fees of Court or Office.

It is only natural to find a serious decrease in the revenue under this head, which includes, in addition to the usual Court Fees, Passport and Registration of Immigrants Fees, and Registration of Land Fees. Immigration fell considerably and land purchases were confined within very small limits, contrasting with the record immigration of 1925 and the large land purchases made during the boom period, the revenue from six months of which (April to October 1925) are included in the last financial year.

The expenditure for the ten months ending January 31, 1927, including the cost of maintaining the British Gendarmerie, was £E1,459,896, compared with £E1,524,500 for the corresponding period in the previous year, an apparent decrease of £E64,604. But as the grant-in-aid from the British Government for the Gendarmerie was reduced from £E199,755 in 1925-26 to £E44,850 for 1926-27, the ordinary expenditure provided from the Palestine Budget actually showed an increase of £E64,000 over the previous ten months, as follows:—

	10 months ending January 31	
	1926. £E	1927. £E
Total expenditure	1,524,500	1,459,896
Less grant-in-aid	166,500	37,400
	£E1,358,000	£E1,422,496

From the foregoing it will be seen that despite the financial depression, there will be a surplus of revenue over expenditure of about £E470,000 for the ten months, corresponding to about £E560,000 for the whole financial year to March 31, 1927.

Agriculture.

The older and well-established farmers and more particularly those engaged in the production of the citrus fruit had an exceptionally prosperous year, the prices generally having been higher than in the previous year; but cereal crops, although more abundant, were lower in price in some instances than in 1925.

Conditions in many of the newer settlements were far from satisfactory, having been established in some cases less than two years ago and in no case more than four years; they do not yet pay their way, and in almost all cases the capital charges for establishment have still to be met by the Zionist and other organisations under whose auspices these settlements have been created.

The outbreaks of cattle plague and typhoid and the unemployment, already referred to, reduced considerably the amounts available by the Zionist Organisation for the development work already undertaken, and in some cases, such as the Haifa Bay Lands and the settlement in the Kishon Valley (referred to in the report for 1925) work was actually suspended. To further the development of the various settlements already created much larger sums are required than the organization is at present able to dispose of, and until these are forthcoming there would seem to be little or no prospect of their forming new

settlements. On the other hand, there has been a further increase in the area of orange plantations, about 5,000 dunams having been developed during the year, bringing the total up to approximately 42,000 dunams.

The orange exports for the year amounted to 1,887,510 cases having a value of £E566,493 (f.o.b. Jaffa), for 1926 as compared with £E551,465 for 1925. The f.o.b. value, PT30 per case, is an arbitrary value placed by the Government upon oranges for the purpose of collecting the export duty, 1 per cent., but now that this has been abolished, the Government it is hoped, will report absolute values in its statistics in order to show the real importance of oranges to the country.

The prices realised for oranges exported during the year ranged from PT65 to PT110 per case for certain varieties, and averaged about PT85. This is equivalent to about PT60 f.o.b. Jaffa, and makes the value of oranges exported approximately £E1,100,000; shipments to England amounted to 1,147,000 boxes, or 63 per cent. of the exports; the greater part of the balance was shipped to Egypt, and small quantities only were shipped to European countries, which included Roumania, Russia, and for the first time, Germany.

The production of other fruits, as shown by the returns of the Department of Agriculture, was as follows (in tons):—melons, 25,571 (export 31,681); almonds, 302 (export 448); grapes, 6,735 (export 216); figs, 7,275; all other fruit, including raisins, 3,905.

These figures are the tithed yields only, that is the estimate of yield made by the Government estimator upon which the tithe tax is levied, and may therefore differ from the actual production. How great this difference may be is well illustrated in the case of almonds and melons. The almonds exported are 50 per cent. to about 90 per cent. higher than the "yield," and in the case of melons the exports for 1926 are about 25 per cent. higher than the "yield."

The reduction of the tithe from 12½ per cent. to 10 per cent. of the total crop in 1925 could only be a reduction in effect if definite standards of measurement or weight were adopted, but this it must be extremely difficult to do. There is no doubt that any benefits the Government had hoped to confer upon the farmers by reducing the tithe may be quite easily nullified by the vagaries and arbitrary decisions of the tithes estimator, although it would seem from the foregoing figures that the benefit of the doubt is always given to the farmer. It must be apparent also that the tithe tax falls more heavily on those farmers who use machinery and up-to-date methods for improving their crops than upon those whose methods are primitive and whose capital outlay for plant is practically nil. The Government, fully aware of the iniquity of the tithe tax and the abuses which accompany its collection, is now investigating the question with a view to replacing it by a Land Tax if possible.

The estimates of the yield (that is the tithe yield) of cereals and vegetables for the year were as follows (in tons):—wheat 99,000; barley 69,400; beans 2,700; peas 1,100; lentils 3,320; kersennah 8,000; durrah 24,000; sesame 1,800.

As in previous year, the fruit crops (oranges excepted) were shipped chiefly to Egypt and Syria, and the cereal crops chiefly to Syria.

Other Agricultural and Dairy Products.

Tobacco.—The area planted during the year was only 8,971 dunams, being 3,300 dunams, or about 25 per cent., less than in 1925; and the crop "estimated" at 550 tons (500 Turkish and 50 Baladi—Native) was also about 25 per cent. less than the crop for 1925. There were 13 factories engaged in the tobacco industry, the combined output from which totalled 489 tons—380 tons cigarettes, 27 tons smoking tobacco, and 82 tombac, as compared with a total output of 434 tons in 1925 from all factories. Two factories closed down, but a large factory, their second one in the country, was under construction in Haifa by Messrs. Matossian, the important Egyptian tobacco manufacturers.

As the consumption in the country is now at the rate of about 750 to 800 tons in the year, growers were able to dispose of part of their crops locally for the past two years, but they still have large stocks, approximately 1,400 tons, of various kinds of tobacco on hand and unsold.

The exports of wine declined from 1,637,000 litres in 1925 to 1,357,000 litres. The export price also fell from PT2.5 per litre in 1925 to PT2.3 in 1926. The wine industry has shown a gradual decline since 1922, in which year the exports reached 2,700,000 litres.

No wool was exported during the year, although the production in the country is estimated at about 750 to 800 tons. It is typically of the carpet variety, and is now being extensively used locally for the manufacture of carpets.

The milk supply of the country has been much improved. The Colonisation Department of the Zionist Executive provided a number of its settlements during the past two years with about 3,500 head of imported cattle, including thoroughbreds from Holland and Syria. Modern well-equipped dairies have been established in these settlements, and also in the settlement of the Palestine Colonisation. A central organisation was formed during the year for the distribution and sale of milk, and also for making dairy products, such as cheese and butter, practically the whole of the country's requirements of which are at present imported. Butter comes chiefly from Australia, cheese from Turkey.

Trade and Industry.

The value of the imports during 1926 for consumption in Palestine, that is excluding the import of specie and goods in transit, was £E6,429,245, and the value of exports of Palestine produce £E1,275,625, being an excess of imports over exports of £E5,153,620.

Compared with 1925, the imports of products for consumption in the country had decreased by £E909,246, and the exports of Palestine products had decreased by £E21,934. Too much importance should not be attached to the adverse trade balance of the country. As pointed out in the previous report, the values of exports are considerably higher than those given in the Government statistics, and the country's buying capacity is to a great extent dependent upon the amount of capital that is sent from other countries for the various institutions which are maintained in Palestine for religious and other purposes. Imports must naturally be high during the period of development in a country like Palestine, which must import all machinery, plant and accessories, and much of the raw material required for its industries, and no appreciable difference in the trade balance can be expected until the capital is made available for the development of the country's resources.

The imports in 1926 were lower than in 1925, chiefly because there were large stocks of merchandise in the country which had been imported during the boom period in 1925. The restriction of credits, which made it extremely difficult for merchants to place orders abroad, stimulates a demand for local products. Thus, the import of cement fell from 82,530 tons in 1925 to only 31,075 in 1926, the difference between this and the quantity consumed in the country having been supplied by the Cement Company at Haifa. Imports of hose and stockings fell by about £E13,000 in the last six months of 1926, or by about the same amount as was produced locally and sold by the Lodzia Textile Works. Imports of olive oil, unrefined, were down to approximately £E38,000 below the 1925 imports, due to the increased manufacture in the country, and the sale of salt manufactured in the country increased to 5,549 tons as compared with 4,794 tons in 1925.

On the other hand, the closing down of certain factories resulted in an increase in the import of such articles as soaps, leather goods, chocolate and confectionery, but these factories have since been restarted and further improvements in trade should result this year.

The output of the flour mills in the country is still much short of local requirements; 20,083 tons of flour were imported, having a value of £E353,016, compared with

16,339 tons in 1925, valued at £E306,165, being an increase of £E4,700, or 3,750 tons.

The exports at £E1,275,625 were £E27,000 lower than for the year 1925. There was a considerable increase in the quantity and value of cereals exported, but in other cases, although the quantities exported were higher than the preceding year, the prices realised were lower.

Orange exports showed a slight increase, but soap exports were 1,500 tons or about 30 per cent. below the 1925 amount. There was an increase in the tonnage of water melons exported, but a considerable drop in price from £E4.4 to £E3.3 per ton. Cereal exports, which included wheat, durrah, barley, were almost treble the amount exported in 1925. The export of tobacco was also higher, but almonds, grape wine and hides were down. Passover bread and cement appeared in the list of exports for the first time. The quantities exported were small, as both factories had only just completed the first year's work, but they indicated positively that Palestine manufacturers are able to compete in foreign markets.

Immigration and Unemployment.

Towards the end of 1925, when it was already apparent that the boom of the previous twelve months had given way to depression in trade and industry, and the number of unemployed was rapidly increasing, it was obvious that it would be necessary to exercise rigid control over immigration so long as there was no prospect of employment for the labour already in the country, and immigration was to some extent restricted as unemployment increased.

The total number of immigrants during the year was 13,910; except for the month of March, when over 2,000 entered the country, the number of immigrants fell off steadily throughout the year from 1,711 in January to 513 in December.

Emigration, on the other hand, increased throughout the year, and for the last six months it was almost double the rate of immigration; 9,419 people left the country, leaving a net gain for the year of only 4,491 immigrants.

The emigration figures for 1926 show that persons leaving the country consisted of 1,684 "emigrants," that is, people who had been residing in the country prior to August 31, 1920 (the date of the Palestine Immigration Ordinance), and 7,735 "returning immigrants," that is, people who had come to the country since that date and are registered as immigrants under the Ordinance. The latter were composed of 6,952 Jews (3,569 men, 1,734 women and 1,649 children), 635 Christians and 148 Muslims. Of the returning immigrants 21 per cent. were said to belong to the capitalist category, 75 per cent. labour and 8 per cent. dependents. Thus of the 6,935 immigrants, about 5,200 left the country, and of the 2,578 immigrants about 200 left the country; and there was a net increase of about 4,000 labour immigrants and dependents for the year.

Unemployment.

The returns for labour compiled by the Industry Department of the Zionist Executive show that the number employed in the industries in 1926 was about the same as for 1925. The figures made available by the Jewish Labour Federation which is concerned only with its members, show that on January 1, 1926, there were 3,600 members of the Federation out of employment. The number rose to about 5,000 by April, and to 6,000 by July. A slight reduction was noticeable by September when the Zionist Executive undertook road construction and other work in the Jewish quarters, but at the end of the year the number of unemployed was about 8,000. This large increase was due principally to the general stoppage in housebuilding and the allied trades, in which almost 50 per cent. of the members of the Federation were engaged.

The amount of private capital brought into the country for investment in new enterprises being inappreciable, and the capital at the disposal of the various land settlement and colonising organisations far from adequate for carry-out the works projected for their settlements already

established, or for the establishment of new settlements, the presence in the country of so large a number of unemployed taxed to their utmost the financial resources of the various public Jewish bodies such as the Municipality of Tel-Aviv and more particularly the Zionist Executive who bore practically the whole burden of unemployment.

As a temporary measure of relief, road construction and other improvements, financed by means of loans from the Zionist Executive, were carried out by the Jewish urban and rural settlements. But the amount of such work that could be undertaken was limited by the small amount of capital at the disposal of the Zionist Executive and the low borrowing power of the Jewish settlements. By June, when no further relief work could be undertaken, the Zionist Executive was obliged to institute a system of "doles" which it distributed through the General Federation of Labour, at the rate of PT25 per week for single men and PT34 to PT50 for heads of families. The amount of such doles rose progressively from £E800 in the month of June to £E1,800 in July, £E2,300 in September and to £E8,000 in December. This small sum, far from adequate for the maintenance of the recipient, was augmented by the levies voluntarily imposed from time to time on those members of the Federation who were in employment; and it is very largely due to the united effort of the Labour groups in co-operation with the Zionist Executive that so much was done to alleviate the conditions of the unemployed.

The amount of capital required to secure permanent employment for the present number of unemployed may be estimated at approximately £E8,000,000, based upon the assumption that an average sum of £E1,000 is required to establish an immigrant in Palestine in productive enterprise. Part of this £E8,000,000 will be provided shortly for the various enterprises about to be started. The Government will expend out of the Palestine Loan approximately £E2,000,000 for projects already under contemplation, such as the construction of harbours and other revenue producing public works, the improvement to railways, etc. The Rutenberg Concession Company will expend almost one million pounds for the construction of the hydro-electric power plant on the Jordan and the network of wires throughout the country, and the various colonisation bodies spend about £E1,000,000 annually, about 50 per cent. of which is for reproductive work (the remainder being public services, such as education, drainage, public health, etc.). But this still leaves the capital requirements unsatisfied to the extent of about four million pounds.

Shortage of Capital and Credit.

The shortage of capital and also of credit was one of the dominant features throughout the whole year, and no radical change in the present situation can be expected until private capital is made available for establishing sound productive enterprises.

That such capital, if provided, could be invested to give a fair return, there is little doubt. Amongst the enterprises recently established, two have already paid dividends; one, the Palestine Electric Corporation, has already paid its second dividend—8 per cent. for 1926 as against 6 per cent. for the previous year; and the second, the Levant Bonded Warehouses, paid its first dividend of 7 per cent. for the year 1926. Other industries, as already stated, have increased their output and they should also enter the dividend paying list within a reasonable time.

To have developed these industries successfully in relatively so short a time is no small achievement. They were created in 1922-23, when the prices of all materials required in construction were at their highest, when transport facilities were extremely limited, and road transport practically impossible.

The success of these enterprises should give capital confidence in the future. There is room for considerable expansion in existing industries such as flour milling, cement, textiles, edible oils, tanneries, boots and shoes, furniture making, etc., the outputs from all of which fall very short of local demand, and there still remain large areas of most fertile land awaiting development.

By far the most productive enterprise in Palestine is the cultivation of citrus fruits; profits made by growers during the past four years ranging from £E60 to over £E.150 per acre has stimulated a lively interest in this industry, which is now attracting the attention it merits. The country possesses all the necessary climatic conditions favourable to the cultivation of citrus fruits, and it is estimated that along the coastal plain, where these are chiefly grown, there are available some 330,000 dunams (75,000 acres) of the most suitable land. The capital required for developing this area would be about 30 million pounds, assuming a conservative estimate of £E90 to £E100 as the cost of developing one dunam until the trees bear fruit.

The agricultural possibilities extend also to other varieties of fruits, including the almond, grape, apricot, fig, apple, peach and banana. Of these fruits so far only the grape has been developed on an appreciable scale, chiefly for the manufacture of wine.

Ranking equally in importance to industrial and agricultural enterprise is the business of catering for tourists. The amount of money spent annually by tourists cannot be exactly estimated, but it cannot be less than one million pounds, and is probably much more. The tourist traffic constitutes therefore a source of wealth production.

The economic development in many directions will be speeded up when cheap power will be supplied by the Jordan hydro-electric scheme (the Rutenberg Concession). One of the first works contemplated is the establishment of a central irrigation works on the Auja River, from which it will be possible to irrigate about 100,000 dunams (25,000 acres); and orange growers at present drawing their water from underground sources by means of wells will be enabled to reduce considerably their irrigation costs by using electric power in place of the expensive pumping plant now being used.

It should be possible also to establish mills for the purpose of utilising the eucalyptus trees from the vast groves in the various parts of the country for the manufacture of plywood, to be used chiefly for orange boxes. The boxes at present used in the country, about two million annually, are all imported. A start has already been made by establishing a small mill at Hederah, near Haifa, where there are extensive forests planted some 30 years ago, and the plywood manufactured is already being used by the flour mills at Haifa for exporting their matzoth (unleavened bread).

Cheap power should also materially improve the prospects for exploiting the Dead Sea on a large scale. This is, for the present, the only known mineral deposit in Palestine of potential value, but its inaccessibility, which makes transport a problem, may prove to be the

chief obstacle to commercial success. It should be possible, however, with cheap power, to establish an electric train service from the Dead Sea up the Jordan Valley to Haifa (*via* Beisan).

The successful development of the Dead Sea would undoubtedly be followed by other enterprises which would assist very materially to create greater economic stability in Palestine. The large tracts of land along the Jordan Valley which are at present fallow could be opened up once railroad communication, now lacking, is established, for growing many tropical products such as rice, sugar, flax and tropical fruits.

Credits.

While capital is required for opening up the country, there is a great need in Palestine at present for the long term credit, for the expansion of industrial enterprises already established, for farmers to enable them to develop additional land, and for land and building companies, and others whose capital resources have become immobilised in their assets and immovable property.

The shortage of credits for industries during the financial depression—that is since October, 1925, resulted in the elimination of a number of weak and unprofitable undertakings, their business going to the surviving concerns which have benefited greatly in consequence. The most notable examples are provided by the manufacturers of building materials, such as bricks and tiles made from cement—out of a total of 37 operating in the previous year, 25 have ceased to exist—and by the tanneries—the number has been reduced from 60 in 1925 to 31 in 1926.

But these surviving concerns and others are seriously handicapped by the shortage of credits. Their great need is a long-term credit at a rate of interest which can be earned without undue strain on the concern and which will enable the borrower to create his own working capital. A certain amount of caution is of course necessary in the selection of suitable concerns, but a number of them could undoubtedly be developed successfully if the requisite long-term credit were made available.

Long-term credits to farmers are practically unknown to-day in Palestine, and this probably accounts for the slow rate of progress in agricultural development. A large body of farmers has grown up in Palestine within quite recent years whose success is due in no small measure to the credits they were able to obtain from time to time, and more particularly immediately after the War for reconstruction purposes, from the various Zionist colonising organisations. The Government also came to the assistance of farmers immediately after the occupation of the country by making advances up to about £E560,000.

But credits from these sources are no longer available. The Zionist bodies have no further funds for the purpose, all their available resources being required for their fixed capital charges in acquiring and developing land for new settlements. The Government loan was in the nature of relief to farmers to enable them to restore their homesteads and generally make good the losses incurred by the War.

The development of orange groves requires a considerable amount of capital—about £E80 per dunam (£E320 per acre)—when efficiently and economically worked; to over £E100 in some cases. There are at present about 10,000 dunams of orange groves under development,

ranging from one to four years old, and representing a capital investment of approximately £E500,000. To bring them into bearing a further amount of about £E300,000 to £E500,000 is required in the form of credit to enable growers to complete their development work. These figures embrace, of course, all growers, Arabs, Jews and others—it having been found on investigation that a large majority of Jewish plantations are able to supply about 60 per cent. to 70 per cent. of the required capital, and it has been assumed that this applies also to other planters—and they provide some indication of the credit that will be required for the expansion of the orange industry to its absolute maximum of over 300,000 dunams.

COMPANY NOTES AND REPORTS.

EGYPTIAN HOTELS.

The report of the Egyptian Hotels Ltd., for the year ending April 30, 1927, states that after providing for the charges payable in London and Cairo, the accounts show a profit of £100,955. The balance of undivided profit brought forward from last account is £6,770: £107,725. From this has to be deducted—depreciation of plant fixtures and fittings at hotels £6,321, leaving an available balance of £101,405. The directors recommend (1) the payment of a dividend of 5 per cent. per annum on the preference shares for the year to April 30, 1927, absorbing £5,750. (2) The payment of a dividend on the ordinary shares of 35 per cent. for the year £43,750 and a bonus of 4s. per share £25,000 which will absorb £68,750. (3) To place to special reserve £20,000. £94,500, leaving a balance to be carried forward of £6,905.

During the year under review, the Local Board have realised the company's holding in Egyptian Government securities, and the profit of £11,349 has been transferred to special reserve, which, together with the recommended appropriation referred to above, will make a total reservation for the year of £31,348, compared with that of the previous year of £30,000. At a general meeting of the shareholders of the company held in Cairo on April 20 last, a resolution was passed recommending that the capital of the company be increased by 25,000 ordinary shares of £1 each. In pursuance of this resolution the shareholders will be asked, at the general meeting, to authorise the increase of the capital of the company by the creation of 25,000 additional ordinary shares of £1 each ranking for dividend and in all other respects *pari passu* with the existing ordinary shares in the company. These additional shares will be available for issue by the board if and when required, to provide for considerable extensions necessitated by the increasing demands for accommodation at the company's hotels and for the general purposes of the company.

IMPERIAL BANK OF PERSIA.

The report of the Imperial Bank of Persia for the year ended March 20 last states that the profits, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, royalty, and bad and doubtful debts, amount to £135,367, to which has to be added £33,968 brought forward from last account, making a total of £169,335. From this amount there has to be deducted £20,000, representing the interim dividend for the current year of 4s. per share, paid free of tax on December 18 last. The directors now propose to pay a final dividend of 6s. per share, and a bonus of 1s. per share, both free of income tax, which together will require £35,000; to add £50,000 to reserve, increasing the account to £520,000; to write off bank premises £30,000, and to carry forward the balance of £34,335.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, July 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, July 7).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, July 13).

British India Line.—S.s. Domala for Bombay and Karachi (London, July 2); s.s. Margha for Colombo, Madras, and Calcutta (London, July 2).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, July 23).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9); s.s. Avimore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 30).

P. and O. Line.—S.s. Delta for Colombo, Madras, and Calcutta (London, July 9); s.s. Kaiser-i-Hind for Bombay (London, July 15).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, July 6).

Ellerman and Papayanni Lines.—S.s. Roumelian for Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool July 9, Swansea July 14); s.s. Lesbian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 16); s.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 29). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Air Ejectors.—The Main Drainage Department of the Ministry of Public Works, Cairo, invites tenders for the supply of ejectors and accessories for Station No. 1. The contract comprises the supply of four 250 gallons (liquid capacity) ejectors for Station No. 1 and for the supply of ejectors and all accessories including platforms, platform girders and ladders inside the tubbing, and exhaust air piping, silencer and ventilation column, piping 12 inches diameter outside the tubbing up to valve chamber No. 1 of the 9 inches diameter rising main to be laid under contract No. 1 and for air inlet piping 6 feet clear of the outside of the tubbing. July 20. (D.O.T.)

It is understood that the Turkish Parliament has ratified an agreement with the Eastern Telegraph Company under which the company has been granted a cable concession for a period of thirty years. Turkey will thus once more be placed in direct communication with the rest of Europe and the world. Since the War Turkey has had to rely on land lines almost entirely. A cable ship is now on its way to restore the Odessa-Constantinople cable.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 28.

The general tone of the Stock Markets this week has been fairly steady and the volume of business shows some improvement. Gilt-edged stocks continue to resist fairly successfully the competition of a steady stream of new issues which bids fair to continue for some little time. Amongst the latest offers is the City of Danzig issue; while among impending issues are loans by Finland, by the City of Berlin and an issue of £2,000,000, of which £1,200,000 will be offered in London by the Municipal Mortgage Bank of Ireland. Some interest in industrial issues is also promised, including preference shares by J. Lyons and Co. A new investment trust company is also shortly being floated under the title of Second London Scottish American Trust, with a capital of £1,000,000 in £10 shares, which will be under the same direction as the successful London Scottish American Trust.

The feature of the industrial markets has been the spectacular movement of British Celanese shares, resulting from a battle between the "bulls" and "bears" in the Stock Exchange. There is nothing in the present position of the company to warrant the rapid advance which occurred on Tuesday, and it is open to question whether the shares are yet worth the figure to which they have since fallen. Rubber shares have taken on a firmer appearance, and there is more confidence in the outlook. We return to the subject in a later paragraph.

Bank Dividend Prospects.

In a short time the English banks will announce their interim dividends for the first half of 1927, and no changes are anticipated. From a banking point of view the past half year has probably been quite a satisfactory one, for although Bank Rate was reduced in April from 5 to 4 per cent., there has been a stronger demand for money owing to the improvement in trade, and the monthly statements of the Clearing Banks show that the total of loans and advances outstanding has risen to a new high record level. Since the greater proportion of the revenue of the banks is derived from interest on advances, it is to be presumed that the banks have increased their profits. It is, however, unlikely that any change in dividends will be made at the half-year, for surprises, if any, are

usually reserved for the January announcements. At present prices the yields obtainable from the shares of the great joint-stock banks are not very attractive, but as in the case of the insurance companies, to which reference was made in this column last week, holders of bank shares are looking to the future and to further plums in the shape of higher dividends on shares issued to shareholders at a price substantially below the market quotation. At present prices the yields obtainable on the shares of the "big five" range from $4\frac{1}{2}$ per cent. on Lloyds fully paid £1 shares to 5 11-16 per cent. on National Provincial £25 shares, £3 10s. paid; for the ordinary investor the potential liability on certain of the shares of the "big five" banks need not act as a deterrent, for shareholders are most unlikely to be called upon to meet it. For those who prefer the fully paid shares the most attractive yield obtainable at present is 5 per cent. on National Provincial £5 shares. Midland Bank fully paid shares yield less than 5 per cent.

The Rubber Outlook.

The price of rubber has steadily recovered from the lowest figure touched more than a week ago, and share prices have hardened in sympathy. The collapse of rubber prices is a reminder that, though values recently showed signs of reasonable stability, the unexpected can still happen in the rubber market. There is considerable uncertainty regarding the future. It is pointed out that the full effect of the maximum restriction will not be felt until September at the very earliest, while the world's visible supplies are on a generous scale. On the other hand, certain factors make for stability, among which are the Government's promise to continue the Restriction Scheme and the extension of the life of the American pool. Again, though it is admitted that the use of reclaimed rubber is increasing in America, it is stated that the foreign demand for rubber is of encouraging proportions; and the demand for the home market is also vigorous. But it is not easy to foretell how these forces will affect the price of the commodity. Despite the recent recovery, the quotation is still appreciably below the pivot figure. In these circumstances, it is not surprising that cautious observers are somewhat concerned as to the dividend outlook for the current year. The average price for the year to date is no better than 1s. 7½d. per lb., which compares with an average of 2s. per lb. for last year. The difference is substantial, and unless there is a material improvement in the price during the remainder of the year a number of reduced dividends seem certain. Nevertheless, the holders of rubber shares have shown good sense in retaining their shares: this is, of course, especially advisable in the case of good shares.

Reflections on the Rand Dividends.

Some three months ago we gave an explanation of new methods of working designed to secure improved results from the gold mines of the Witwatersrand. This was one of several factors responsible for the activity then prevalent in the shares on the Stock Exchange. No change has taken place in regard to the benefits arising from these new methods—although time is of course required for their more general application. But in several other directions disappointment has been experienced. One of the more important undertakings—the Robinson Deep—has found itself unable to pay any dividend at all upon the "B" shares, which for some time past have received 1s. 6d. each half year. This is due partly to reduced profits, owing to certain temporary difficulties in the operation of the mine, and partly to the need for spending such profits as were made upon additional plant, the benefit of which will now be felt. In somewhat similar circumstances City Deep has declared only 1s., as against 2s. for the June and 1s. 6d. for the second half of 1926. The chance of contingencies such as these does not usually suggest itself when the public is in an optimistic frame of mind. In common fairness it should be mentioned that a few of the companies increased their rates, particularly the New Modderfontein, which will pay the record amount of 6s. 6d. per 10s. share.

NEW BEAN COMMERCIAL CHASSIS.

A demonstration was given at the works of Bean Cars, Ltd., at Tipton, on June 21 of the company's new 30 cwt. commercial model. It is now nearly three years since the concern put their 20-25 cwt. model on the market, and the new model incorporates all that the latest developments and a long experience could suggest.

Up to the present time Bean Cars, Ltd., who are now under the sole control of Hadfields, Ltd., the Sheffield steel makers, have had three works—body building and finishing shops at Dudley; mechanical engineering shops at Tipton; and the forge and stamping works at Smethwick in the Birmingham area. Now the works at Dudley have been sold and larger and better equipped shops are being erected at Tipton alongside the engineering works. Thus the whole car will now be assembled at Tipton; the Smethwick works will continue to deal with raw material. The transfer from Dudley to Tipton will be complete by the middle of August.

At the luncheon on the occasion of the demonstration an interesting speech was made by Sir Robert Hadfield, Bart., who presided. He said that the trader who did not want a heavy lorry of three or four tons, but who wanted a van, heavier than one ton, capable of going comparatively long distances with speed, safety, economy, while carrying large loads, had not been, he thought, very well catered for up to now. That was one of the reasons why they had introduced the new 30 cwt. commercial vehicle. It was a type of vehicle which, they believed, would eventually carry a substantial proportion of the ever-increasing quantities of manufactures and merchandise which were transported by road, as well as being widely used in various public services.

It was, at present, he added, the mode for carping and gloomy individuals to make diatribes against British manufacturers for what they call "ignoring their finest avenues for possible sales" and generally to accuse manufacturers of remaining indifferent to overseas markets. Now those people seemed to forget that a dozen years ago this country was very fully occupied defending the liberty of Europe; and one of the competitors was very fully occupied in establishing his goods in the overseas markets. When, therefore, the British manufacturer, who had given his factory over for the making of munitions, guns, tanks, or lorries, began to set it in order again to continue making, for example, touring cars, he had to start pioneer work in developing his own home market. After those struggling years following the War, after he had re-established his goods in the home market and had attained a sufficient production, then and then only had he time—and money—to turn his attention to the needs of customers overseas. That was what he was doing now.

To have re-established his goods in the home market alone must be recognised as no mean achievement when it was remembered that an American manufacturer could, and often did, sell here at a loss, this being possible because the market from his point of view was a very small one, the cars sold here representing perhaps not

more than one week's output from his factory.

Overseas the British manufacturer was faced with greater difficulties still, for some of his competitors had been in possession of the market for 12 or 14 years, had studied it at leisure, organised very thoroughly their sales management, and—a very important point—had accustomed the buyers to think of the names "America" and "motor-car" as being synonymous. Shakespeare had told them of "how use doth breed a habit," and overseas countries had, by the use of the only kind they could get, contracted a habit of buying foreign cars. Within the last year or 18 months that habit—partly because of the great efforts to push British products and partly because of the attention attracted by the brilliant performances of British cars—had been considerably weakened; and within the next few years, it was safe to say, that it would have disappeared altogether. That did not mean that nobody would buy foreign cars; but it meant that nobody would buy a foreign car simply because he did so the year before and the year before that; and it meant that he would have the choice—on equal terms—of a British car.

It was important, in his opinion, that if they were to break the foreign car habit speedily—that they would break it in the long run there was no doubt at all—they must set out to attract attention overseas by vigorous advertising and by convincing demonstrations. They meant to tackle the overseas markets with both their commercial and private vehicles, and he was sure they would find favour there.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 22:—

Egyptian Spot.—The past week has produced a distinct broadening in the inquiry, and a somewhat improved business has resulted for Egyptian cotton. A very steady tone has been in evidence and prices, on balance, show practically no alteration. Fresh features of any kind have been absent and the demand has been met by the various qualities to which we have become so well accustomed during the past six months. Inquiries for Sakel 16.00d. to 18.0d.; 14.50d. to 15.50d., and (roughly) 10.00d. to 12.00d., have all figured prominently in the list each day. Strictly Good Fair cotton, with staple, has again been the mainstay of the Upper market. "Low" Egyptians at from 4.00d. to 10.00d. have been much asked for. Pilon has been in moderate request only at from 13.50d. to 14.50d., and other Egyptian growths have been neglected. The steady offtake for Sudan Sakel has continued unabated, and sales of this cotton have averaged over 1,000 bales per day. Prices have remained steady at from 18.7d., down to 16.50d. for the lower qualities. Tokar Sakel has been rather neglected this week.

The American seed variety of Sudan cotton has been in good request at from 175 to 300 points on, but buyers are apparently finding some difficulty in filling their requirements at price. Only cotton distinguished by its staple appears to find favour at the moment.

Palestine in the Making

AS Rome was not built in a day, there is no reason for surprise, still less for despair, if the task of making of Palestine all that it is capable of becoming should proceed slowly and occupy many years. It will not have been the first occasion on which an optimistic scheme of reconstruction has outdistanced the more prosaic facts of everyday life.

A country, however, benefits in the long run from having its foundations firmly laid, and Palestine will not be the loser, if those who are responsible for her development are compelled to test the soundness of each stone before they handle the next. For the earnest people who are spending freely of their enthusiasm and treasure it must be galling indeed to find that achievement falls behind the will; but nothing has so far shown itself to justify pessimism regarding the future of the country. The basic fact is that Palestine is a small country, with its resources still for the greater part undeveloped. It is as unpractical to hurry into it new workers for whom employment is not available as it would be to develop its resources beyond the capacity

of the country to deal with them, either for home consumption or for export. Accordingly when it is recorded that four or five hundred Jewish immigrants entered Palestine in one month and seven or eight hundred left, the failure of the Zionist movement is not implied. There are Jews in the world enough to provide Palestine many times over with the number of immigrants that the country can absorb; it may be all to the good that some of those who

come to it shed their illusions and seek a home elsewhere. Those who remain are the more likely to be of the material of which successful colonists are made.

At the stage now reached it may be inferred that the supply of immigrants, which was one of the first concerns of the Zionist Organisation, has for the moment reached saturation point. The significance of the Palestine Economic Conference, held last October under the chairmanship of Sir Herbert Samuel, seemed to lie in the fact that it represented an appeal from political Zionism to economic Zionism to speed up its activities. In other words, it has been proved that all the immigrants required can continue to be supplied; but the need for the moment is to consolidate the position of those already in the country and to widen the scope for employment held out to those still to come. The Conference was naturally concerned with practical details, and to this end its recommendations dealt with the formation of an agricultural bank, with a view to the adequate provision of agricultural credits, and with the development of industries. The need for co-ordination of effort is the more urgent as the great project for the supply of electric power throughout Palestine is about to be carried into execution. In what is known as the Rutenberg scheme the country will have an important stimulus to industrial enterprise—cheap and abundant power—apart from the immediate help given by the employment of labour in the building of the dams and in the provision of power distribution. In the boom period that

has marked the steady expansion of Tel Aviv the existence of the trial power station at Jaffa has proved a valuable asset and its success is held to justify the adoption of the larger scheme.

It is inevitable in all the circumstances that the story of the development of Palestine in recent years should be largely a story of Jewish endeavour. The unique experience of a foreign community, with world-wide ramifications, devoting themselves unstintingly, from the highest motives, to the economic development of the country must needs work wonders in a backward land such as Palestine still is. Their efforts, however, would not have gone as far as they have done, if they had not been supported by an enlightened Administration, which within the inevitable restrictions has made itself responsible for necessary public works, such as the improvement of road and railway communications and water supply, and—no less important—for public security and general well-being. Those who derive the ultimate benefit of all these activities, it should hardly be necessary to point out, are the people of Palestine as a whole, five-sixths of whom are Arabs. If the latter

seem to be left out for the present from immediate participation in the schemes associated with Jewish enterprise, they can reflect that theirs is the advantage which comes from the material progress that is being made all the time by Palestine. By holding aloof from public affairs they have created the false impression in their own minds that progress is being made for the benefit of others and not for them. Let them abandon their mistaken

Damascus Gate, Jerusalem.

policy, and they will quickly experience the satisfaction of contributing their share in the advancement of the interests of a joint Palestinian nationality.

The time is particularly opportune for a revision of the attitude that the Arabs, or at least their leaders, have adopted towards the steady progress that Palestine has been making under the stimulus of Jewish colonisation and Jewish money. Although it is customary to talk of the blight of Turkish rule, there is nothing in the history of the country to show whether the former administration lagged behind the capacity of the inhabitants or was actually ahead of it. If the Arab leaders persist in their present tactics, they run the risk of letting the outside world infer that the people are incapable of benefiting under any administration, however progressive. Before that happens, however, it is to be hoped that the rank and file of the Arab population will have adopted a more practical line of their own. Already there are signs of a revolt against the short-sighted policy of the leaders, which has condemned the Arabs to lose at a most critical period half-a-dozen years' administrative experience. Palestine stands on the threshold of a notable development, but it rests with the Arabs whether this development is to have an exclusively Jewish character, or whether it will become identified with the country as a whole, so that Arabs no less than Jews can take a pride in a common National Home.

Harnessing The Jordan

The River Jordan: Looking Down Stream.

THE ELECTRIFICATION OF PALESTINE

Topographically Palestine is divided into three main parts, viz.,

- (1) The coastal plain and Esdraelon Valleys.
- (2) The mountainous plateau.
- (3) The Jordan Valley.

and to this difference in topography is due the diversity in climate and rainfall. The climate on the whole is semi-tropical, and although the rainfall is quite large—an average of about 26 inches—it has the specific feature that the rains are concentrated mainly during the four winter months. This distribution of rainfall makes irrigation a necessity of primary importance for the agricultural development of the country.

The intense winter rains coupled with the very rapid run-off caused by the absence of forests and by the steep slopes of valleys render the storage of the winter waters a matter of fundamental importance for hydro-electric development. The comprehensive scheme for utilising the water resources of Palestine by Mr. P. Rutenberg deals very thoroughly with the matter of storage; by damming the rivers at the most suitable points, several artificial lakes will be formed for the efficient utilisation of the available water in the future, and in the first stage of the scheme the large natural reservoir of Lake Tiberias will be used for storage purposes.

The hydro-electric development of Palestine is connected with the Jordan—its largest river. At Baniyas this river is about 1,000 metres above sea level; at Lake Merom (Lake Huleh) it is 3 or 4 metres above sea level and then, about 12 kms. further along its course it passes through Lake Tiberias at 200 metres below sea level. Finally it flows into the Dead Sea about 400 metres below sea level.

On its way to the Dead Sea the Jordan receives several of its tributaries, the most important of which is the River Yarmuk, with a water catchment area of about 7,000 square kilometres.

The Proposed Hydraulic Works.

The main advantage which the utilisation of the River Jordan presents for the production of electric energy as already mentioned is the possibility of regulating the waters of this river in winter and summer by means of Lake Tiberias, which has a surface area of 170,000,000 square metres. The presence of this storage reservoir makes it possible to store all the excessive waters of the rainy winter months and to utilise the reserve during the arid summer months.

The first part of the projected development provides for the utilisation of the 50 metre fall between Lake Tiberias and Jisr-el-Mujamieh. The topographical and geological conditions render the utilisation of this fall most efficient and advantageous when divided into two steps with one power house near Jisr-el-Mujamieh and the other near Abadieh. The following works will be required for the first Jordan power house at Jisr-el-Mujamieh :—

- (a) A dam near Delhamieh retaining water to a depth of 6 metres.
- (b) A dam of the Yarmuk waterfall retaining water to a depth of 8 metres and creating the intermediary Yarmuk reservoir, which together with the reservoir formed by the Jordan, will have a total surface area of over 1,000,000 square metres and serve as night storage of the Yarmuk waters.

- (c) A canal 1.9 kilometres long conveying the Jordan waters into the above-named intermediary Yarmuk reservoir.
- (d) A canal 400 metres long from the Yarmuk reservoir to the Jisr-el-Mujamieh pressure reservoir.
- (e) A pressure reservoir, penstocks and power house at Jisr-el-Mujamieh.

The capacity of the first Jordan power house will be 24,000 h.p. divided into three units of 8,000 h.p. each, and a fourth unit of the same size will be provided as reserve. All the civil engineering works will be designed for full capacity, the generating sets being added gradually with the increase of consumption of energy.

The Second and Third Power Houses.

The second hydro-electric power house on the Jordan will be erected at Abadieh when the requirements for power approach the maximum capacity of the first power house, and at this stage the Yarmuk waters will be diverted into Lake Tiberias. The second power house

GENERAL SCHEME

FIRST STAGE

POWER HOUSE I-24,000 H.P.

" " II-24,000 " "

" " III-50,000 " "

will be equipped with machinery of the same type and capacity as the first, and both power houses will then utilise all the waters of the Jordan and Yarmuk rivers, the joint effluent of which will be drawn through Lake Tiberias and pass through the turbines of both power houses. The railway line from Haifa passes along the site of the projected works and makes the power houses particularly favourable for the transport and delivery of the machinery and requisite materials.

The third power house will be situated to the north of Lake Tiberias and will utilise the Jordan fall of 200 metres which occurs in the short distance between Lake Merom and Lake Tiberias.

The works described above will constitute the first stage of the project for the comprehensive electrification of Palestine. The total amount of power which can be made available by utilising the water resources of the whole country is some hundreds of thousands of horse power.

Transmission of Energy.

In order to transmit electric energy over long distances, the use of high tension is essential. For this purpose a step-up transformer station will be erected at the Jordan power house, where the electric current will be transformed to a pressure of 66,000 volts. The overhead transmission lines of this pressure will run from here to the main sub-stations at Haifa and Jaffa where the pressure will be stepped down to the values required for the distribution in the towns and corresponding districts. The second and third power houses will be at a later date inter-connected with the first one. The further development of the transmission scheme will go along the Jordan valley, as shown in dotted lines and will link on to the Jaffa sub-station from the East, thus giving the possibility of supply to any point from both sides.

The continuity of supply is secured by stand-by power stations at Haifa and Jaffa which are equipped with Diesel oil engines and generate current at 6,300 volts. These two stations as well as the Tiberias power station have been erected first, in order to satisfy the existing requirements for electric energy, and it is to a large extent due to the establishment of these power stations that the in-

The Tiberias Power House.

dustrial development of the country during the last few years has taken place on such a scale.

The Jaffa power house was completed in 1923 with a capacity of 1,000 h.p. and in 1924 an additional generating set of 250 h.p. was installed. The growing demand for power made a further extension necessary, and another set of 1,125 h.p. has now been added.

The development of industry in Tel-Aviv and Jaffa may be realised from the fact that, during 1923-24 160 motors were connected, while in July 1926 the number of motors was 510.

The Haifa power house which was completed in 1925 is equipped with a plant of 1,200 h.p. and during the first year of operation has shown very satisfactory results. The distribution from these two power stations is effected at 6,300 volts by means of high tension underground cables, terminating in transformer stations from which the town supply at 380 to 220 volts is derived.

Rural Electrification.

Great attention is being given to rural electrification. From the main sub-stations the overhead transmission lines of 22,000 volts will run throughout the countryside. A number of secondary stations for giving local supply to all the settlements and villages are fed from these high

voltage lines. The importance of this for the country is obvious. Cheap and abundant power supply will greatly help the agricultural development, at the same time stimulating the growth of various rural industries. A part of this work has already been done. Two high tension lines were built in the Jaffa district, one from the Jaffa power house at Surafend and Rishon-le-Zion, and the other from the same power house to Petach Tikvah, an important centre for orange growing.

Transformer Station, King George Avenue, Jaffa.

Such in bare outline is the great Rutenberg Scheme, on which high hopes are justifiably built for the future development of Palestine. The project, it will be noted, will provide that small country, on the threshold of its industrial development, with a commodity—cheap and abundant power—for which Great Britain can almost be said to be still awaiting the carrying into effect of the Government's electrification scheme. Not the least interesting feature of the enterprise is that it reverses the usual sequence of supply waiting on demand. The electrification of Palestine will have been possible only as the result of a happy combination—the technical skill of an expert engineer, the driving power of a convinced enthusiast, and the practical confidence of those who are financing the undertaking.

The Lake of Tiberias: Showing the Distribution System.

The Jewish National Fund

The Jewish National Fund, known in Hebrew as the Keren Kayemeth Leisrael, was founded by the Fifth Zionist Congress, in December, 1901, for the purpose of purchasing land in Palestine to be the *inalienable possession of the Jewish People*. The Fund was, however, obliged also to foster agricultural settlement on the land and to pursue other functions of colonisation. On the agricultural settlements which the National Fund founded before the War, many hundreds of Jewish workers were trained in horticulture, vegetable growing, dairy farming, etc., and thus the first foundations of nationally Jewish rural life were laid in Palestine. The Fund built houses for Yemenite and other working Jews, extended credit for building-construction and also agricultural credit. It granted the loan which made possible the founding of Tel Aviv, carried out afforestation through its Tree Fund, reclamation works, water supply, terracing, etc. At the close of the War it was recognised that a special colonisation fund was needed to relieve the Jewish National Fund of tasks other than its original purpose—land buying. In consequence the Keren Hayesod (Palestine Foundation Fund) was founded. The National Fund has since limited itself strictly to the purchase and amelioration of the ground.

Up to 1920 the National Fund had acquired some 22,000 dunams (5,500 acres). Now its land holdings amount to

200,000 dunams (50,000 acres) on which are established 34 rural settlements (in 25 of which it has also installed a water-supply), 4 residential suburbs, and public institutions in the towns as the Hebrew University, Bezalel Art Schools, Synagogues, Hospitals, and many other educational, medical, religious, and art institutions. Further, it has drained 20,000 dunams of swamp, planted nearly half a million trees, and laid roads, etc.

From £41,000 in 1904, the income of the Fund has been doubled and trebled, until in 1926, its *Silver Jubilee Year*, its total income has reached the figure of nearly £1,900,000. Its chief collecting means are the famous Golden Book of the Jewish people and the little Blue Money Boxes which are to be found in nearly a million Jewish homes in all parts of the globe. Other forms of help are endowments, bequests, insurance policies, the Tree Fund, Bazaars and Social functions, Synagogue offerings, and the JNF Stamp.

The policy of the Keren Kayemeth is dictated by the spirit of the Mosaic Law "The Land is Mine; it shall not be sold for ever." The land is allotted on hereditary lease. Rentals are based on 2 per cent. of the value of improved rural land, and 3 per cent. and 4 per cent. of the value of unimproved suburban and urban land respectively. As the community grows and public improvements are made, the new value which accrues to the land—the "un-earned increment"—reverts back to the public through periodically increased ground rents.

The Haifa Harbour Project

Haifa Bay from Mount Carmel.

THE harbour problem with which Palestine is faced is a relic of Turkish rule; for, if the region had been under more enlightened administration, it is beyond question that the need for improved port facilities would have been met decades ago by the construction of a modern harbour. Actually before the war the Turks did reach the stage of granting a preliminary concession for port works at Haifa, which were to be constructed at a cost far in excess of what would be sanctioned to-day, but the war stepped in to prevent the carrying out of this enterprise. The *laissez-faire* policy of the Turks may possibly be attributed to the knowledge that the trade of Palestine was small and to the belief that as traders had managed to carry on with the existing facilities they could be safely trusted to continue to do so. Apart, however, from the loss and damage entailed under present conditions, there is the inherent probability that the absence of a modern port was a hindrance to the development of the country before the war, even in circumstances that were certainly not conducive to progress. There is no doubt at all that that is the case to-day, for, while the construction of a port will not bring trade by itself, it is beyond argument that it is useless to press forward with the economic development of a country if the facilities for foreign trade are lacking.

When the British authorities took over the administration of Palestine it was quickly realised that at the first possible opportunity steps would have to be taken to give the country a port which would not only serve the development of trade that was to be expected in the near future, but would also leave an adequate margin for further expansion. While Palestine has a number of places where goods are landed, the choice of a site for a harbour lay only between Jaffa and Haifa, for all the other "ports," such as Acre, Gaza and Caesarea, are mere open roadsteads. The first two towns mentioned serve between them the great bulk of the external trade of the country. In 1925, 2,472 vessels of a total tonnage of 1,895,042 entered the ports of Palestine, the respective figures for Jaffa and Haifa being as follows:—

	Sailing Vessels.	Tonnage.	Steamers.	Tonnage.
Jaffa	734 ...	16,414 ...	504 ...	1,143,405
Haifa	542 ...	7,516 ...	250 ...	688,134

The volume of trade passing through these towns in the same year was as follows:—

	Exports.	Imports.	Total.
Jaffa	£854,323	£4,031,772	£4,886,045
Haifa	£133,371	£1,877,287	£1,143,485

On figures alone it might have been thought that Jaffa would be the chosen place for the necessary works of port construction; but in this case, as so often happens, figures are not everything, and here they reveal only half the

truth. To anyone who did not know the facts it might reasonably be assumed that Jaffa had obtained its present position owing to its supreme natural advantages, that it was in short the obvious gateway to Palestine, and that the development of a port elsewhere would mean a wholly unnecessary diversion of trade. Actually the position is far different, and it is worth while examining briefly the various advantages and disadvantages of the two towns from the point of view of a port.

It will be convenient to take Jaffa first. The port has hitherto served the most thickly populated and wealthiest part of the country, and with the rapid development of Tel Aviv and other Jewish settlements in the vicinity, there is no question that the region promises to gain greatly in wealth and prosperity. Jaffa also serves what has been up to the present the principal industry of Palestine, that of oranges. The part that the orange plays in Palestine's economic life may be gathered from the commerce statistics for 1925. The value of the total exports was £E1,297,559, and the contribution of the orange was £E551,465. Jaffa is, moreover the outlet to the sea for Jerusalem. These are the main points in its favour. On the other hand, there are two great drawbacks. In the first place, the area it serves is severely circumscribed. Secondly there are the disadvantages of the port itself. Jaffa has no protection from the winds, with the result that on from 80 to 100 days the work of loading or unloading vessels has to be suspended. Then there is the further point, of vital importance in regard to the expenditure that would be entailed by the construction of a port, that there has been no survey of the sea bed at Jaffa.

The facts with regard to Haifa can be told in a few words. In comparison with Jaffa it is a relatively new town, and in 1904 the population was no more than 10,000. It had risen to 25,000 by 1922, and to-day it is over 35,000, and of this total approximately one-third are Jews, the numbers of this community at the port having doubled in the past four years. The increase in population, it may be pointed out, is largely due to the establishment in recent years of important industries in the neighbourhood. Haifa is, of course, connected by rail with the H.az Railway, and serves Damascus and Southern Syria, and may not inaptly be described as a gateway to the East. It will thus be seen that Haifa is certainly in a much more advantageous position than Jaffa as regards the development of trade with the interior, and when one comes to the question of the harbour the advantage is all on the side of Haifa. The harbour is protected to the south by Mount Carmel, and there are only a few days in the year on which work is liable to be interrupted. An additional point, and one of some considerable importance, is that while the stone necessary for works at Jaffa would have to be brought a considerable distance, at Haifa it is at hand on Mount Carmel.

Such, briefly, are the elements governing the choice of a port for Palestine, and it remains to summarise developments in regard to the matter in the last few years. After Palestine came under the British Mandate a number of schemes for port construction were put forward; but it was felt that they were of too ambitious a character, and the Government of Palestine decided to invite Mr. Frederick Palmer, of the firm of Rendel, Palmer and Tritton, to visit Palestine in 1923 for the purpose of examining the various proposals which had been put forward. He came to the conclusion that a harbour and port were necessary at Haifa, and he submitted a scheme of which the estimated cost was well within £1,000,000. This scheme could not then be adopted owing, among other reasons, to lack of funds.

The question was also considered by Mr. Anthony in the course of the inquiry which he made in 1925 into the administration of the Palestine Railways. He recommended that a less ambitious and substantially less expensive scheme should be adopted at Haifa. This recommendation formed part of a general plan for capital expenditure on railway and harbour improvements in Palestine, including the improvement of port facilities at Jaffa. Mr. Palmer's advice has been taken on these alternative proposals, and the various considerations involved are now engaging the attention of H.M.'s Government and the Government of Palestine. No final decision regarding the exact scheme to be carried out has yet been reached; but it may be taken for granted that in broad outline the plan is likely to be followed of a long breakwater running from the spur of Mount Carmel, with a short breakwater running out from the existing jetty to protect the east side. A comprehensive scheme of port construction would result in the reclamation of a strip of land in the harbour, and this would be available for Customs houses, warehouses, railway lines, etc. Now that the question of the Palestine loan has been settled, a decision is likely to be taken in the near future.

SOLEL BONEH.

The University Buildings on Mount Scopus, of which an illustration appears below, are among a number of buildings erected in Palestine by Solel Boneh, a Co-operative Association of Jewish workers. The number of workers employed by this Association, which has become

Hebrew University, Jerusalem.

the largest employer of labour in Palestine, reached 3,196 at one time in last year, and among the works for which it has been responsible are the Power Houses of the Palestine Electric Corporation at Tel Aviv, Haifa, and Tiberias, bridges over the Jordan and Yarkon Rivers, several factories and over a thousand houses in various towns.

HAIFA BAY DEVELOPMENT CO. Ltd.

Develops the area along the Haifa Bay between the towns of Haifa and Acre on the most modern lines of colonization and town planning.

Within the limits of the existing Town Planning Scheme the Company offers for sale plots of various sizes for industrial, urban, city-garden and agricultural purposes, in a sanitary condition, provided with roads and supplied with water.

The Development of Haifa Bay

AMONG the projects of improvement now in train in Palestine none is of more importance than that for the development of the land on, and in the vicinity of, Haifa Bay. The plain behind Haifa, which can be seen from Mount Carmel, has an area of about 60,000 acres, and this land for hundreds of years has lain undeveloped. There is an abundance of water in the plain, but instead of being enlisted in the service of agriculture it has produced nothing but marshy wastes with a serious effect on the health of the two towns on the Bay—Haifa and Acre, where malaria is very prevalent despite the efforts that have been made to cope with it. The solution, of course, lies in the development of the plain, which is one of the objects for which the Haifa Bay Development Company was founded.

The aims of this company are to carry out a comprehensive scheme of sanitation throughout the region, to render available for irrigation the abundant water supply, and to lay down roads in the hitherto impassable plain. The transfer of the land to the company was accomplished in 1925. Investigations were then begun to obtain the necessary data for carrying out the work of sanitation, and on the basis of these investigations plans of sanitation were drawn up by well-known experts. A beginning was made with the work in the spring of 1926. Considerable progress has been made in the region of the Kishon and the Fuwarah, and the sources of the Naaman have been rendered sweet, and regulated. The works in the southern part of the plain, in the Kishon basin, should, under normal conditions, be completed this year, whilst the sanitation of the Naaman region, which is more difficult and costly, may take a year or two longer.

Simultaneously the construction has been begun of the main roads of communication. This work has been greatly facilitated by the Government, which has been prevailed upon to lay down through the territory of the company the last part of the highway from Haifa to Beyrout. A second road to connect the centre of the territory with the coast was begun last summer. At the same time the company commenced the elaboration of plans for a scheme of building. The town planner was here afforded what is perhaps the most interesting task that Palestine has to offer in the sphere of town planning. An area of 15,000 acres is available and included in this territory is the hinterland of the future chief harbour of Palestine. Here is the obvious place where the future industrial quarter of Palestine must be developed. The expansion of the town of Haifa from a little coast town into a modern city had to be taken into consideration, and provision has had to be made for a modern sea bathing resort, while suitable places have had to be chosen for modern sports—golf, polo, tennis, etc. It has been necessary, too, to make provision for a flying station. The remaining territory has had to be divided into plots of 1-5 acres suitable for modern intensive cultivation. The result of this work has been the drawing up of a regional plan. The present-day town of Haifa stands at the foot of Mount Carmel and its only possibility of expansion is eastward into the plain where the development of any new urban centre must naturally take place. The land destined for the new town comprises in a semi-circular region the projected harbour and the industrial quarter. As is necessary in the planning of any modern city, the plans of the company naturally look far beyond the requirements of the immediate future. Obviously in the next few years only a part of the projects with regard to the harbour and the industrial

quarter can be carried out, and in the meantime the remaining land has to be held in reserve. In the middle of the bay, in the exact centre, the company has in view the laying out of a garden city. This suburb will be characterised mainly by the building there of the bathing resort.

The development of the remaining territory will require the building between Haifa and Acre of a new centre, which will serve local requirements. It will be rather in the nature of one of those satellite towns which are becoming more and more recognised by town planners to be necessary in the decentralisation of towns. This centre will bring within the reach of farmers, dwelling in its immediate neighbourhood, the possibility of obtaining the conveniences of the town more cheaply than they would otherwise be able to do.

A railway and a main road cover the territory lengthwise. At first they will connect the towns of Haifa and Acre, but later they will run from north to south and thus connect Palestine with Egypt, Syria and Asia Minor. Moreover, modern methods of communication will shortly bring places in the Middle East into convenient communication with Haifa.

Besides these plans which will affect Haifa in the near or more remote future, the company has for its chief and immediate object the agricultural development of the territory. There is no point at all in planning towns when the surrounding territory cannot be occupied by a population which can carry on its agricultural work on a sound economic basis. Here, too, the development of the Haifa Bay has brought into existence new tasks of a magnitude hitherto unknown in Palestine. A water supply of approximately 300,000 cub. m. daily, in addition to a quantity of underground water of a volume as yet unascertained—flows unutilised into the sea. This water must be collected, controlled, and applied to the irrigation of the soil. Properly utilised this water might have an invaluable effect on agricultural production, as yet scarcely imaginable. An eminent Egyptian expert of the French School, who last December investigated the soil, gave an extremely satisfactory report both as regards the quality of the soil and the work of sanitation already carried out. He expressed the hope that out of this territory a new Nile Delta in miniature might be made in the future. The question of the nature of the cultivation which may be carried on here is still under investigation, and for this purpose a number of eminent agricultural experts have been consulted. In all probability there will be a great number of small farms, and in these a great rôle will be played by dairy farming with the object of reducing the prices of milk and milk products which have hitherto ruled extremely high in this country. A great variety of vegetables will thrive in the plain and may even be produced for export.

Banana growing—and Palestine already produces one of the best kinds of this fruit—can be developed on a great scale. A very extensive part of the plain will probably also be devoted advantageously to the production of oranges, which is, of course, already such an important industry in Palestine.

In this development of the plain a leading part is being played by the Jewish National Fund. On the territory of this Fund, the object of which—as is well known—is to bring as great a part of Palestine as possible into communal ownership, will be formed, among others, settlements of urban and agricultural workers. For instance, in the immediate neighbourhood of the industrial and harbour territory it is intended to form a settlement of about 2,000 families of urban workers, each of whom will receive a plot of land of about $\frac{1}{4}$ acre for growing the agricultural products he needs. A settlement of small holders is also planned on a area of about 700 acres, and this scheme is being carried through by the Palestine Small Holdings Promotion Company Ltd.

The Easy Way to Palestine and Egypt

CONSIDER the journey as a whole—how much more comfortable and satisfying when everything is provided *before* you leave England. No trouble about tickets—you have them all. No worry about hotels—your rooms are reserved. You are free really to enjoy

Palestine

AS A Tourist Resort

By H. Charles Woods.

View of Bethlehem.

AS a traveller well acquainted with the Near and Middle East, I find that Palestine and its post-War position are remarkable because of the ease and rapidity with which it can be reached, because of the facilities for seeing the historic sights and because of the scenic and racial contrasts which exist in the country. In pre-War days the traveller was compelled either to drive or to ride across country for many days or to take ship to Beyrout, Haifa or Jaffa; and then, if he decided to land at either of the two first-mentioned ports, a lengthy journey over bad roads still separated him from Jerusalem and its surroundings. On the other hand, as was the choice of many a tourist, should he have preferred to go direct to Jaffa or to travel thither by sea from Beyrout his final disappointment was sometimes supreme, as there are many days in every year when disembarkation at Jaffa is impossible owing to the exposed nature of the port and to the poor facilities that exist for landing. The War and the establishment of the British Mandate have made these difficulties a matter of history, for in the present day the student, the politician and the tourist can reach Palestine in comfort and with a rapidity which compare favourably with first-class travel in any part of the civilised world.

Palestine, with an area, which is somewhat larger than that of Wales, and with a population, which more or less equals that of Liverpool, possesses a diversity of scenery, of climate and of population. There is the coastal strip bordering upon the Mediterranean and the plain of Jezreel running in a south-easterly direction from the neighbourhood of Haifa, there are mountains which ascend to several thousands of feet about the sea, and there are the Valley of the Jordan and the Dead Sea, which latter occupies the lowest portion of the earth's surface. One comes upon districts the picturesqueness of which it is impossible to describe, in spring one sees vast expanses of wild flowers the beauty of which cannot be exaggerated, and one gets views, such as that of the Dead Sea from the Mount of Olives and of the Mediterranean from a point upon the road between Jerusalem and Jaffa which may be equalled but which can hardly be surpassed elsewhere. Alternatively one passes through areas which remind one of Salisbury Plain, of the Kopjes of South Africa or of the lower slopes of the Rocky Mountains.

With regard to the inhabitants, very roughly 85 per cent. of whom are so-called Arabs and 15 per cent of whom are Jews, there are the Bedawin, who still live under the

conditions described in the Old Testament, there are the limited class who form the Arab intelligentsia, and there are the extremely modern and astute politicians, financiers and business men, who represent the interests of Zionism. The great majority of the population live in mud huts of primitive dwellings, but side by side with these are the new Jewish Colonies, which form oases in the desert, and the great philanthropic, religious and educational establishments supported by various countries.

Every language seems to be spoken or understood and therefore those who know only English need not fear that they will meet with any difficulty on this account. There are three official tongues, English, Arabic, and Hebrew, and all information, whether in the public offices or on the uniforms of railway or other officials is written in the three scripts. A very efficient telephone service connects up the various parts of the country and this is of great convenience to the traveller, since he can order rooms in advance, which is absolutely necessary especially at and close to Easter, and if he finds that any particular hotel is full, he can easily modify his itinerary and spend the night elsewhere. Equally well, whereas the average visitor will probably prefer to move from place to place by road, he may go from Jerusalem to Jaffa or to Haifa or vice versa by train. And then what is of vital significance to those who have not much time at their disposal, the roads, many of which were constructed by the Turks for military purposes have been improved and are maintained by the British authorities in such a way that an average of, say, thirty miles an hour can easily and safely be maintained in an ordinary motor. Moreover, at the present time the hiring of cars from one or more Jerusalem firms, who have excellent and varied types, is satisfactory. Thus, whereas people who desire to be economical can take one or more seats in motors, which can be found

THE HANDBOOK OF PALESTINE

Edited by HARRY CHARLES LUKE, C.M.G., and EDWARD KEITH-ROACH. With an Introduction by the Right Hon. SIR HERBERT SAMUEL. With Frontispiece and Map. 12s. net.

The Geographical Journal: "This volume is a storehouse of concentrated information about Palestine, much of it entirely new and all up to date. It deals with a variety of subjects—geography and history, peoples and religions, places of interest, communications and tourist information, Government activities and natural history. There is no volume of its size which contains one-half of this information, and accuracy has as far as possible been secured in every department by consultation with the best modern authorities on the spot."

MACMILLAN & CO. LTD. - LONDON, W.C.2

going to almost any part of the country, the better provided and those travelling in parties can make arrangements for special cars, which, if they are furnished by the right firm or firms, can be relied upon to take you out to dinner or to drive you to any part of the country at or within the exact time which has been pre-arranged.

It is useless even for an enthusiast to pretend that the hotels come within the same class as the better establishments of Egypt or that living in Palestine is cheap in

Palestine: The Old and the New.

relation to the comfort secured. Generally speaking the hotels of Jerusalem are not up to the expected standard in a world-famous city, their prices are relatively high, and they are extremely crowded at the busy season of the year. Elsewhere, however, and in places such as Jaffa, Nazareth, Tiberias, Haifa and Jericho there are really quite good simple establishments, and in many of the tourist resorts hostels, maintained by the various religious

orders, are available for the accommodation of the traveller. Moreover, most of the things which you do or buy, either as a resident or as a stranger, are comparatively expensive and, therefore, it is fortunate that the terms for car hire, especially for the longer distances and for tours extending over days or weeks, compare very favourably with those which prevail in most other parts of the world.

It is usual to regard the last half of March and the month of April as the best period for the Holy Land, but as it is not necessary to spend more than a few hours in the hot areas and as these can always be visited by day and left behind before night, it is possible to go to Palestine both later and earlier than the above-mentioned time, and it is quite pleasant to be there in the autumn. With regard to the countless points of interest which should be visited, it would be out of place here to suggest a detailed itinerary, for some tourists are compelled to "do" all Palestine in a day, whereas others can afford to spend weeks or even months in this entrancing land. In ordinary circumstances, the traveller coming from Egypt will do well first to visit Jerusalem. Here he will see the wonders of the Holy City with all the thoroughness for which he has time and from here he should make various excursions in Southern Palestine. Thus after visiting Bethlehem, with its mainly Christian population, with its feminine costumes, which are so famously picturesque and with its Church of the Nativity, which is to me by far the most impressive thing in the country, and some of the other places neighbouring upon Jerusalem, the visitor ought to drive to the orange-growing district, to Jaffa and to Tel-Aviv—the new and completely Jewish twin city, with its great power-house which forms part of the Rutenberg scheme—returning thence to Jerusalem, should he so desire upon the same evening. And then, if time and money permit, a longer excursion may be made to Hebron, where it was, and I believe is still, necessary

to have special permission to visit the Haram, which is sacred alike to the Jew, the Christian and the Moslem. Lastly, no tourist should leave Jerusalem before he has driven to Jericho and the Dead Sea—a trip easily accomplished upon a spring day. Leaving Jerusalem, and its altitude of about 2,500 feet above the sea one passes Bethany and winding through magnificent scenery, reaches Jericho, located over 800 feet below the sea level, by a steep descent. Further on or a little more to the South, and standing at what is the lowest point of the earth's surface, and upon the edge of the Dead Sea one looks upon the forbidding, magnificent mountains of Moab to the east, and upon those of Judæa to the west. Again, should leisure and funds be available it is from Jericho that the traveller may prolong his journey to Amman, the capital of Transjordan, to Jerash and to

A Street in Jerusalem.

Petra each in its turn possessed of archæological treasures well worthy of the attention of all who are interested in such things.

The plan of a tour in Northern Palestine depends upon whether or not the visitor desires to go, and whether it is practicable for him to go, also to Syria. In either alternative, however, he should proceed by car from Jerusalem by way of Nablus (Shechem) Sebastieh (Samaria) and the plain of Jezreel, where he may inspect numerous Jewish colonies, to Nazareth, in which town it is interesting to spend a night. Hence the journey should be continued past Kefr Kenna (Cana of Galilee) to Tiberias and the Sea of Galilee, which lie nearly 700 feet below the level of the sea. Sleeping at Tiberias, seeing the new Rutenberg power-house and the curative bathing establishment and visiting the exit of the River Jordan from the southern end of the lake, one may or may not prolong the excursion to the site of the all important Rutenberg works a little further to the south. Afterwards having gone to Capernaum and to other places near the northern extremity of the lake the traveller may then proceed direct to Damascus, should political conditions permit of such a

visit. After a stay in that city he can pursue his way across the Anti-Lebanon to Baalbek, thence winding across the Lebanon range to Beyrout, the headquarters of the French Administration in Syria. From Beyrout a beautiful road follows the coast past Sidon, Tyre, the Franco-British frontier and Acre to Haifa. Alternatively, and if Syria is to be excluded, the tourist will retrace his steps from the Sea of Galilee to Nazareth driving from there direct to Haifa. From here he will ascend Mount Carmel, whence he will see the world famous view of the Mediterranean, here he will visit the Rutenberg powerhouse and some of the Jewish industrial undertakings, and here he will catch a comfortable and well appointed train which will convey him to Cairo or to Port Said in one full day of travel.

The average tourist has neither the time nor the inclination to enter into the details of the political situation. Sufficient, therefore, be it to say that public security and law and order now exist throughout the country, that whilst the Government is direct and unrepresentative, it is carried on in the interest of the people and that the present condition of the country is incomparably better than anything which existed in Turkish times. One may sympathise with the Arabs in their dislike of the Balfour Declaration, and of the Jewish immigration, but that Declaration has been definitely accepted by the British Empire and by the League of Nations and that immigration means a great deal to the prosperity of Palestine. Consequently, whereas the traveller will do better to study the situation for himself rather than to base his opinions upon information acquired from what are usually partisan sources, the Arabs will be well advised to devote their attention, as they are now beginning to devote their attention, to the interpretation and working of the Mandate instead of to futile attempts to get rid of arrangements which have received the assent of the civilised world. Unjustified complaints are merely vexatious. Constructive and reasoned criticism may have its results.

PALESTINE AND THE EAST.

A beautiful book.

The Arts and Crafts of Palestine

THE mention of the Holy Land conjures up instinctively the vision of the many native arts and crafts which are inseparably associated with that country. It would be passing strange if a country like Palestine with its age-long traditions, which have laid so indelible an impress on the history of the world, had failed to develop through the centuries an indigenous art of some kind, especially in view of its constant intercourse with neighbouring countries with a high standard of civilisation. It is not so surprising, if one looks back at the troubled history of Palestine, that these minor arts and crafts have not loomed larger in the economic records of the country than they have. The real wonder, perhaps, is that native craftsmanship should have managed to survive at all in the disturbed conditions that have obtained in Palestine in the past centuries. Whatever might be laid to their charge, it could not be said of the Turks that they were unduly careful in preserving the culture of the regions over which they ruled. In the circumstances, we should be grateful that Palestine craftsmanship has survived sufficiently to promise, under the favourable conditions of the Mandate, a new renaissance of Palestine art.

Some of these minor arts and crafts are very old, dating back to the dim mists of antiquity; others are relatively new, and owe their presence in Palestine to the arrival of migrants from neighbouring countries. But whether old or new, the work of the craftsman has a *flair* which seizes the imagination. The work in some cases may lack the painstaking accuracy that one looks for in pottery; it may be rough and perhaps even crude workmanship, but one cannot deny it a form and style peculiarly its own. And if something may be lacking in outline, colour and artistic effect provide compensation. One does not condemn a Cubist impression simply because it does not conform to established custom, nor, to give an example more familiar to many of our readers, does one criticise Indian art because to the uninformed eye it seems crude and bizarre, and the work of the potter and glass maker must be judged on its merits and not by the standards of production in other countries. The main point is that Palestine art is indigenous and is artistic. It would be surprising were it otherwise, for in an atmosphere so saturated with the glories of a remote past artistic endeavour should surely find a soil specially favourable to it. Certainly it is a

known fact that surroundings affect the artist of whatever type, and so it doubtless comes that the work of the Palestine craftsmen is quite distinctive in type, attractive in appearance, and of a charm essentially its own.

Anything in the nature of a catalogue is tiresome, dull, tedious, and it is not proposed here to give a detailed survey of the lesser industries of Palestine. It must suffice to say that they include pottery and glass making, weaving, embroidery, jewellery, and stained glass window making. They cover, in fact, just the ground that might be expected in a country dependent on agriculture and largely devoid of natural resources. Jerusalem is the seat of the old pottery industry—probably the most ancient craft in the country—which, it is of interest to record, is to be found in the Via Dolorosa on what is supposed to be the site of the house of Pontius Pilate, hard by the Mosque of Omar. This pottery, which represents a revival of the old Persian ware, is notable in design, colouring, and in the fact that no two pieces are alike. It is impossible not to be impressed by the skill displayed in the floral and geometrical patterns; they are the product of leisure and inexhaustible patience, and would only be conceivable in a country where time is a consideration of no importance. The principal charm of this pottery lies in the colouring, in the deep, restful, fascinating blues and greens which make the pieces a delight to the eye. It is interesting to note that the work is done entirely by hand, and no mechanical process is employed apart from the potter's wheel.

The glassware of Hebron is noted for its beauty, delicacy of craftsmanship, and fascinating colouring. Glass making at Hebron was in existence before the time of the Romans, and it has been suggested that this ancient city was the original home of this industry, but there is no evidence to support this and in the circumstances there cannot be any. The glass is made by Arabs in that town, and the secret of its manufacture is known only to one Arab and his two sons. This industry has been peculiarly affected in recent years by external circumstances. Before the War it was beginning to be seriously influenced by competition, while the War brought the industry practically to a standstill. The glass is made in a beautiful blue tint, and in the same shapes as centuries ago. Another characteristic industry, that of the manufacture of mother-of-pearl objects, is almost too well known to need more

than a passing reference. This industry is carried on in Bethlehem, and the large shells are brought from the Red Sea. The mother-of-pearl is made into necklaces, beads, bracelets, etc., and the finished articles are delightful examples of what can be done by the native craftsmen in this direction.

Weaving is another very old industry, for in the time of Christ eighty looms were working in the little town of Migdal in Galilee. It is still carried on as a cottage industry, providing an occupation for the natives during slack seasons. In spite of the primitive conditions the products are distinctly good. The manufactures include wraps, sweaters, and knitted ties. Of the relatively new arts and crafts of Palestine, mention must be made of the Yemenite silverwork. As the name suggests, this industry came to Palestine from the Yemen, and was installed in the country rather over twenty years ago, when a number of Jewish gold and silversmiths arrived from that region, though, as a matter of fact, some thirty years before some filigree workers came to Palestine. The filigree work now being produced can only be described as exquisite, and for sheer beauty of workmanship is unexcelled.

Another notable product of the country is olive soap. This was prominent among the Palestine exhibits at the British Empire Exhibition, and the demand for it was then considerable, which is not surprising, for it is a soap of

THE ZIONIST ORGANISATION.

THE Zionist Organisation in its present form came into being in 1897, when the first Zionist Congress was convened at Basle by Dr. Theodor Herzl, the founder of the Organisation. That year marked a turning-point in the history of the Jewish people. The Zionist idea was not new; the Jews had never given up the hope of returning to the land of their ancestors—a hope which helped them to preserve their national identity and to endure untold sufferings throughout the centuries. But the assembly at Basle converted pious wishes and passive hopes into an active and organised movement. The Basle Congress laid it down that "Zionism strives to create for the Jewish people a home in Palestine secured by public law." To this end, the Congress decided to promote, on suitable lines, the settlement of Palestine by Jewish agricultural and industrial workers, to organise the whole of Jewry and to strengthen the Jewish national sentiment and consciousness.

Since then the Zionist Organisation has become the largest and most representative body in Jewry, with branches in almost every country in the world. A powerful impetus was given to the movement by the Balfour Declaration of November 2, 1917, by which Great Britain

Some excellent examples of Jerusalem Pottery.

excellent quality and of a variety calculated specially to appeal to the ladies. There are in addition, of course, many other crafts ranging from the production of olive wood objects, etc., to such things as soya bean necklaces, fashioned as they have been made for centuries, and charms. These things only cover, it goes without saying, one of the two aspects of the traditional industries of Palestine. The other—the purely utilitarian—covers such objects as ploughs of the ancient type, carts, saddlery, and tents, and does not come within the purview of this article.

Sufficient has been said here to show something of the survival in Palestine of the spirit of the past in the shape of small industries which provide a link between ancient history and the modern period. In the new Palestine, now more truly a land of promise, as in the old, they will continue to play their part, and while their influence on economic developments may be small, they will none the less be valued as the arts that the centuries have handed down in a land of age-long tradition. It remains to add that those who wish to see something of the range of the crafts of Palestine should pay a visit to "Palestine Arts and Crafts" at 5, Harrington Road, South Kensington, S.W.7, where they will see a delightful display of the industries of the country, in particular of the pottery and glassware and mother-of-pearl objects. "Palestine Arts and Crafts," it may be recalled, was founded by Mrs. H. C. Kelly, M.B.E., who introduced Palestine pottery and glassware to Great Britain. About a year ago Mr. T. B. Bruton took over the enterprise, and considerably extended its scope, and his belief that there is room in this country for an enlarged range of Palestinian products has proved to be fully justified.

engaged herself to facilitate the establishment in Palestine of a national home for the Jewish people. This opened a new chapter in Zionism, and indeed, in Jewish history. The movement spread enormously, and since the War steady progress has been made both with the practical work of colonisation and with the development in Palestine of a distinctive and many-sided Jewish life. The main responsibility devolves upon the Zionist Organisation, which is recognised by the Mandate as the Jewish Agency, authorised to advise and co-operate with the Government in matters affecting the establishment of the Jewish national home. The financial burden is born by the Jews themselves, who have sunk about £10,000,000 in Palestine since the British Occupation.

The main financial instrument of the Zionist Organisation is the Palestine Foundation Fund (Keren Hayesod), which was formed in 1921. Up to November 30, 1926, its receipts reached a total of £2,692,550. The largest contributor is the Jewish community of the United States, but the Keren Hayesod has supporters throughout the world wherever Jews are to be found. Its activities embrace educational and medical work, the control of immigration, and—above all—agricultural colonisation, which accounted for nearly half its expenditure in the last financial year. The Jewish National Fund (known as the Keren Kayemeth) was founded twenty-five years ago for the purpose of acquiring land in Palestine as the inalienable property of the Jewish people. Two other institutions are the Jewish Colonial Trust, founded in 1899, with headquarters in London, and its subsidiary in Palestine, the Anglo-Palestine Company, which was founded in 1903, and has since played an important part in the economic development of the country."

Prominent Industries of Palestine

The Tobacco Industry

Tobacco Growing at Ein-Harod.

THE history of the cultivation of tobacco in Palestine can be said to date only from 1921 when the Government abolished the monopoly. Under the Turks the crop could be grown only on a very small area, though during the War tobacco growing was permitted in the northern part of the country to supply the requirements of the Ottoman troops, and it is understood that considerable quantities were produced for this purpose. The abolition of the monopoly, which meant that there was no longer any restriction in the cultivation of, and trade in, tobacco, affected the country in two different ways. It gave a great stimulus to tobacco growing, and it further led to the development of cigarette manufacture in Palestine.

The rapid development of the cultivation of tobacco in the four seasons after the abolition of the monopoly is very striking. The enthusiasm for the crop can easily be understood, for tobacco is a popular and a remunerative branch of agriculture, and, as is well known, has proved a veritable boon to many Near Eastern countries; but it was eminently desirable that in Palestine there should be no undue haste to develop the cultivation of a this crop. Experience has shown that some districts in Palestine are very much more suitable for the crop than others. Then there is the question of the most suitable type, a consideration of vital consequence, and finally the very important matter of outlets for the tobacco, for it is of no use producing unlimited supplies of tobacco if there is no possibility of disposing of it profitably within a reasonable time. The result of the great increase in the production of tobacco was a crisis in 1924, in which year the output was roughly seven times the total for 1921. The following tables illustrate the position:

Year.	Area (In dunams*)	Production (in tons.)
1921	1,779	265
1922	4,832	694
1923	5,122	645
1924	27,137	1,845

* 1 Dunam = 1,099 sq. yds.

The effect was witnessed in 1925, when the area fell to 11,676 dunams, and the output was estimated at 678 tons. The main reason for the problem of over-production with which the industry has been faced is the fact that the country itself can only utilise so far limited supplies of the home-grown tobacco. It resolves itself into a question of the quality of the tobacco, and in the early years the crop produced was distinctly inferior to tobaccos produced elsewhere. Extensive experiments have been carried out with a view to determining the most suitable varieties of tobacco for the country, and it is significant that since 1921 the tendency has been for Turkish varieties to represent a constantly increasing percentage of the output. It is worth while giving the

figures. The crop of 1921 was composed entirely of the local "Baladi" types ("Baladi," it may be pointed out, is a coarse type of tobacco in favour with the fellaheen). In 1922 Turkish varieties represented 3 per cent., in 1923 14 per cent., in 1924 65½ per cent., and in 1925 80 per cent. Concurrently with the growth in favour of the Turkish varieties a tendency may be noted to develop the cultivation in the Northern District, where investigations have shown that a number of areas are suitable for Turkish tobaccos. Thus the crop of 1925 was mainly grown in the Northern District, the area under tobacco there being 8,599 dunams, and the output being 506 tons out of a total of 678 tons. The output in the chief regions in 1925 was: Acre, 198 tons and Semakh, 148 tons.

With the passing of 1924, the industry would appear to have survived its worst period. In that year the exports of tobacco in the form of uncut leaves amounted to only 43 tons of the value of £10,195. On the other hand, the internal consumption of manufactured and unmanufactured tobacco for 1924 was estimated at 600 tons. Between these totals and the output was a wide margin. The improvement which has taken place may be gauged from the fact that in May last year 178 tons of tobacco were exported of the value of £27,095. It will be noted that the average of the prices obtained is appreciably lower than in 1924, and that simply illustrates the difficulty in disposing of the tobacco at the present time. It would not have been easy in the last year or so to find a market even if the tobacco had been of the finest quality, for the world output of tobacco has been considerably above the visible requirements, and Bulgaria and Greece, to mention two outstanding cases, have found it essential to curtail production in order to dispose of the existing stock of tobacco. It is so much to the good that Palestine tobacco is now finding a modest market abroad. The future of the industry depends, as has been already pointed out, on quality. Given consistent production of a good Palestine tobacco there will be no difficulty in finding a market.

The abolition of the monopoly resulted in the opening of many cigarette factories in the country. At the beginning of 1924 there were over twenty factories in existence, and the number is tending to increase. A number of them are small concerns, but there are a few large factories, which are equipped with the most up-to-date cigarette-making machinery, the use of which, it is scarcely necessary to remark, has been the great factor in the advance of this industry. As in 1925, the value of the imports of cigarettes was £40,328, it will be realised that the industry has plenty of scope for development. It must, of course, provide the principal market for Palestine tobacco, and it is satisfactory to know that the percentage of this tobacco utilised has risen to 40.

Prominent Industries of Palestine

The Wine Industry

RISHON-LE-ZION: The Famous Cellars.

IN an age of which it would not be far from the truth to say that nothing succeeds but advertisement, it is perhaps not surprising that until the hoardings in Great Britain began to pay their tribute to the virtues of Palestinian wines, the ordinary citizen in this country scarcely associated Palestine with the wine industry. Wembley was a great educator in this respect, and it is probable that we are as yet very far from an adequate appreciation of all that the Exhibition silently accomplished in showing the potentialities of the various regions which were represented at it.

Actually, of course, the production of wines and spirits is one of considerable importance among the industries of Palestine. It does not yet bulk large in the export trade like the golden orange, it is true, but then the Jaffa orange is at present on a plane by itself among the country's industries, and while it has long been famous as a product of Palestine, the wine industry as it exists to-day dates back only a few decades. In view of that fact, it is significant that the value of the exports in 1925 was £E41,012, and that it ranked fourth in the list of exports.

The development of the industry, or, to be quite correct, its revival, dates back to 1882, when the colony of Rishon-le-Zion was established by Jewish colonists, and Baron Edmond de Rothschild, who was closely concerned in this undertaking, dispatched some experts to report on the possibilities of viticulture in Palestine. The prospects were favourably reported upon, and large acres of land round Rishon-le-Zion were planted with vines. Varieties of the best vines of other countries were grafted on American types, while in addition the best varieties of the vine in Spain were also introduced. It remained to be seen how the vines would do in the Palestine soil, and it may be said at once that the results have been fully in accordance with expectations. The grapes produced are of the finest quality, and it has been possible to make from them wines and spirits whose excellence is such that they are fully capable of holding their own in the world's markets.

The cultivation of the vine on an extensive scale naturally brought about an immediate demand for presses and other facilities for the manufacture of wines and spirits, and the construction of the vast cellars at Rishon-le-Zion was commenced. The cellars, a visit to which is a most interesting experience, are the largest in the Near East, and are regarded as being among the finest in any part of the world. The building itself has two storeys with an extensive cellar. The presses and the large vats for the fermentation of the wine are in the upper part of the building, while the lower storey contains receptacles to receive the wines after fermentation, each having a capacity of 100 to 125 hectolitres. The cellars contain upwards of 100 huge vats, each of which has a capacity of 300 hectolitres.

The cellars were under the control of Baron Rothschild

until 1911, but in that year their administration was handed over to the growers on the condition that a co-operative society was organised by them to look after their interests and the "Co-operative Society of Rishon-le-Zion and Zikhron Jacob Cellars" was the outcome. The society is administered by a council of ten, and the colonies controlled by it include Rishon-le-Zion, Rehoboth, and Zikhron-Jacob. Of these Rishon-le-Zion, as already pointed out, was established in 1882, when 3,300 dunams of land were acquired by ten colonists near Jaffa. It is strange to relate that for the first year the colonists devoted their attention wholly to cereals, and the fact that the crops were a failure doubtless made the pioneers very willing to turn to the cultivation of the vine instead, as offering a much more hopeful prospect of gaining an adequate return from the soil. The success of the experiment from the commencement led to the rapid extension of the area under cultivation, and while in the early years the colony concentrated on viticulture, it now possesses, in addition to great stretches of vines, large plantations of almond trees, to say nothing of orange groves and olive and other plantations. Of the two other colonies mentioned, Zikhron Jacob, which lies south of Haifa, dates from 1883, while Rehoboth, which is on the Haifa-Kantara railway, was established in 1890. The total area at Zikhron Jacob is about double that at Rishon-le-Zion, but only a fraction of it is devoted to viticulture, cereals, olive and almond tree plantations, etc., taking up the greater part of the area under cultivation. Both at Zikhron Jacob and at Rehoboth there are small wine presses. The area at Rehoboth is very similar to that at Rishon-le-Zion, and the only pronounced differences in cultivation at the two places is that at Rehoboth vines take second place to almond trees, while the orange groves are much more extensive.

It remains to say a few words with regard to some of the wines that are produced in Palestine. The industry has not yet, of course, distinguished itself by the production of a vintage that will name a year; it is too young for that, though it is a development, it may be hoped, of the future. But it does produce sound wines and spirits of a quality quite as good as the productions of the more famous wine producing countries. There is, for instance, a very excellent red wine which claims to be soft, with admirable bouquet, and deserves a high place among the clarets on the market. Another wine worthy of note is similar to a Sauterne, dry, and of a most delicate flavour. Then the port of Rishon-le-Zion is another wine which deserves well of the public. In addition to the wines mentioned, the productions of the industry include a sound sherry and a brandy of excellent quality. It may be mentioned that the sale of Palestine wines in Great Britain is in the hands of the Palestine Wine and Trading Co., Ltd., which trades under the name of "Palwin."

History of the Island*

Definite history in Cyprus begins with the establishment of the first Egyptian dominion over the Island, *circa* 1450 B.C. Prior to this date our knowledge is largely derived from conjecture and legend. Of the aboriginal inhabitants few traces remain, although it is fairly clear from antiquarian research that the pre-Phœnician inhabitants were Aryans with a language, written as well as spoken, distinct from both Phœnician and Greek and resembling in its caligraphy the ancient Lycian alphabet. This pseudo-Lycian writing and the Phœnician existed side by side and both ultimately disappeared.

Greek settlers came in large numbers to Cyprus in these early days and seem to have fused so completely with the Aryan or pre-Aryan Cypriots as to be indistinguishable from them. The Phœnician colonisation is noteworthy in that it was the peaceful penetration of the trader rather than the descent of the conqueror, and their settlers seem to have had a ready welcome.

From the reign of Thotmes III. a succession of Phœnician, Assyrian and again Egyptian rulers held sway for some centuries, all leaving their imprint on the life and culture of the inhabitants. Some of them, like the Phœnicians, left their mark on the countryside in the shape of enormous slag-heaps, the *débris* of ancient mines.

Cyprus came under Persian domination in 525 B.C. Later, about 411 B.C., arose Evagoras, King of the coast settlement of ancient Salamis, who had been previously banished from Cyprus and for whom descent from Teucer is claimed on somewhat shadowy grounds. He it was who, himself a vassal of Persia, gave asylum to Greeks fugitive from ruined Athens and founded and fostered the Hellenic culture which has survived all the vicissitudes of the Island. From the time of his death, about 374 B.C., the old Cypriot inscriptions vanished from the coinage, giving place to Greek or Phœnician.

With Persia, Cyprus came into the all-conquering grasp of Alexander the Great. On his death in 323 B.C. it was allotted to Antigonos, one of his generals, but was recaptured for Egypt by the Ptolemaic dynasty in 296 B.C. While she herself remained neutral and to some extent a pawn in Near Eastern politics, the trading communities of Cyprus, and especially Salamis, destined afterwards to become the *Constantia* of the Romans with an *agora* claimed to be the largest in the world, profited by the demand for supplies from the neighbouring countries, then continually at war.

A Trading Centre.

"There is no surer test of the art and wealth of an age than its currency, and the later coins of Evagoras and those of Nicocles (*his successor*) are the finest which Cyprus produced. Their workmanship is in the best Greek

style, and the prevalence of statues in gold attests the general wealth of the population."

With brief interludes of re-conquest by Antigonos,, Cyprus remained Egyptian territory until about 58 B.C., when it became a Roman province. Towards the close of the fourth century A.D., on the partition of the Roman Empire, it was appropriated by the Byzantine emperors, who retained it, in the face of numerous Arab invasions, until 1184, when Isaac Comnenus, Governor of Tarsus, established himself as despot.

During the eight centuries of Byzantine rule Cyprus became a haven for refugees from religious persecution in neighbouring countries. Many of these were agriculturists and artisans and the Armenians and Syrians among them engaged in industry and trade. During this period the silkworm was introduced and with it the mulberry tree.

Following the defeat of Isaac Comnenus by Richard Cœur-de-Lion on his way to the Third Crusade, Cyprus became a British possession and remained so until sold by Richard to Guy de Lusignan, titular King of Jerusalem. It is here worthy of record that King Richard first disposed of the Island to the Knights Templar, but the Order found itself unable to spare men and money from its other activities for its upkeep and thus, by a series of fortuitous events, Cyprus was made a Latin kingdom and an outpost of Western chivalry.

A Period of Prosperity.

For three hundred years Lusignan kings ruled the Island, though the republic of Genoa held sway over portion of it for a considerable time. During these three centuries it was renowned, not only as a model of feudal administration, but as a country of vast wealth and magnificence. Its revenues were no longer strained by providing tribute payments to absentee sovereigns, but were utilised for the development of the arts and crafts. Great mediæval buildings, many of which remain to this day, survivors of earthquake and invasion, uprose at the bidding of its Latin kings. Scholars and soldiers flocked to this feudal Utopia. Agriculture flourished, though the once luxuriant forests were depleted to build ships. The country, indeed, appears to have been entirely self-supporting; even sufficient sugar cane, no longer an Island product, was grown to satisfy the needs of the inhabitants. Cyprus wines acquired a European reputation and the weaving of silk and velvet fabrics received new encouragement. Cotton, introduced during this period, became an important export.

This apparent prosperity is remarkable when it is remembered that differences of religion and customs between the Frankish ruling caste and the Greek Orthodox populace fixed a great gulf between them.

Kyrenia.

In 1489 Cyprus came definitely under Venetian rule through the abdication of Catherine of Cornaro, a daughter of a wealthy citizen of Venice and widow of James II. of Cyprus, and once again its revenues went to fill the coffers of an alien race. Trade diminished and a military occupation supplanted the spacious Lusignan autocracy.

Gradually during Lusignan times the centre of the Island trade had moved westward, and Famagusta, from being the "Emporium of the East," sank to a mere fortified stronghold of the Serene Republic, while Larnaca came into prominence as the resort of those who bought and sold. This was not, however, the first appearance of Larnaca as the trading headquarters. Both it and Amathus, an ancient port near the modern Limassol, must have at one time been the channels for much of the commerce of the Island in Egyptian days. The latter was the shipping place through which the ores mined by the Phoenicians were exported.

The Coming of the Turks.

In 1571, after an arduous and protracted campaign, Cyprus was conquered by the Turks, who, then at the zenith of their power, were surging westward over the ruins of the Roman Empire. Henceforward, for three hundred years, its record is one of decline or of stagnation at best. Neglect and apathy paralysed the trade and agriculture established by the Lusignans and no attempt was made to revive the energies of the people, already moribund. The only industry which seems to have survived the general depression was cotton, 770,850 lb. of which were exported in 1871, but, for its production, the manufacture of olive oil, a necessity to every Cypriot, was largely abandoned. The forests were denuded, not wholly for the laudable object of shipbuilding, but for firewood, and no replanting was done; goats and sheep pursued their ravages unchecked and the way was paved to a gradual change in climate due to increasing drought, and to the now almost insurmountable problem of the irrigation of cultivable lands which is the unenviable inheritance of the Government of to-day. But little of the revenues were devoted to works of public utility and most of what remained after the payment of tribute to the Sublime Porte found its way to the pockets of the local officials.

On the final submission of Cyprus to the Turks, local governors were established in Famagusta and Paphos, and in Nicosia a Pasha of high rank was installed as Governor-General. A census of the population and property revealed that there were then 85,000 taxable inhabitants between the ages of 14 and 50, excluding women and children. Land and the power to alienate it was granted to these persons, and a poll tax and probably a religious tax were imposed. Slavery, from which the Island had not been free for centuries, was abolished and in general the coming of the Turks was hailed with pleasure by the Greek inhabitants. 20,000 Turks remained, more as settlers than as a garrison; the Island,

having been laid waste by war, being unable to bear the expense of maintaining a large and unproductive body of men.

The current of Turkish administration was disturbed at various times: by revolt of the Aghas in 1680, by the assassination by an infuriated mob of a Governor in 1764 and by the frequent outbursts of disaffection due mainly to grievances against taxation.

Writing in 1788 the Archimandrite Kyprianos says:—"... the Island pays yearly and inevitably to its masters more than it paid under the Venetians. Yet it is scourged by locusts and often wasted by drought: it is deficient in the inhabitants, farmers, artisans and merchants, adequate to its extent, and necessary for the development of its soil. As regards its administration, ... if anyone would compare the conduct of the former authorities, albeit Christians, with that of the rulers of to-day, conquerors and aliens in faith and race, he would find both equally oppressive to the people under them."

From the concluding portion of this extract it is evident that the historian had forgotten the undoubted liberty restored to the Church by the Turks on their arrival and the general tolerance extended to the Orthodox Christians which in time brought their prelates into the position of chief advisers to the Government. Under Lusignan and Venetian rule the Orthodox Greek Church had been completely subordinated to the Latin Archbishop and compelled to acknowledge him as its ecclesiastical chief. Even until after the assumption of the title of Caliph by the head of the house of Osman the absence of religious bigotry was a characteristic of Moslem rule.

The facts, based on the testimony of unbiased observers, are that it was through the agency of the bishops that the Turkish Governor was enabled to collect his taxes from the Greek Orthodox inhabitants. The latter, whose numbers and tax-paying capabilities were known only to their clergy, paid what sums were demanded of them and the bishops in turn satisfied the rapacity of the Government. So long as the administrator of Cyprus was not in receipt of a fixed salary, but permitted to extort what taxes he could, so long this practice continued; it flourished indeed, until the beginning of the nineteenth century.

Their knowledge of the country and of its inhabitants and their usefulness as tax gatherers made the bishops indispensable to the Turkish rulers. So great was the power ultimately acquired by them that the growing discontent of the Turkish people culminated in the political massacre of 1821.*

In 1821 the opportunity arose, through the outbreak of the Greek War of Independence, to weaken the ecclesiastical influence on the pretext that Turkish rule was endangered by allowing potential, if not actual,

* There had previously been a rising against the hierarchy in 1804 which, strangely enough, was suppressed by the arrival of Turkish troops from Asia Minor at the request of the bishops, who paid for them largely by loans from the Foreign Consuls; soon afterwards the bishops had recovered their prestige, if not their freedom from debt.

The Mountains behind Kyrenia, as seen from Lapithos.

sympathisers with Hellenism to exercise so much power. Accordingly, having obtained the tacit consent of the Grand Vizier, Kutchuk Mehmed, the Governor of Cyprus, arrested the Archbishop and other prelates who were subsequently assassinated. Shortly afterwards many of the leading Greeks were put to death in the palace precincts and the throwing of their bodies into the street started a general massacre of the Orthodox. These events ended the political influence of the bishops.

From the time of the accession of Abdul Mejid the Island entered upon a phase of tranquillity and, in theory at any rate, good government. A memorial of greeting* prepared by the Greek-Christian community in 1859 for presentation to the Sultan gives a fair idea of the conditions of life and the grievances of the people. While somewhat fulsome in its tributes to the recipients, it calls attention to the uncombated locust plagues, to the lack of Government measures to oppose the spread of vine and silkworm disease and to the rapacity of certain tax-collectors.

The British Occupation.

The Russo-Turkish War of 1877-8 led, by the "Convention of Defensive Alliance" between Great Britain and Turkey, to the occupation and administration of Cyprus by England "in order to enable England to make the necessary provision for executing her engagements," which were, in certain eventualities, to assist the Sultan in defending his Asiatic possessions. Under an annexe to the Convention certain rights appertaining to the Sher' or Moslem religious courts, the administration of property, etc., in the hands of Evkaf or the Board of Pious Foundations (a Turkish synonym for mortmain) and the power to alienate Crown and State lands were reserved to Turkey, and an annual payment, based on the average excess of revenue over expenditure, was fixed as a contribution by England to the Porte. Two supplementary agreements gave power to the English administration to make laws for the government of the Island and fixed an annual payment of £5,000 to the Porte in commutation of the rights of sale and lease over Crown and State lands. The Convention was terminable, should Russia restore certain Turkish possessions then in her hands.

On July 12, 1878, Vice-Admiral Lord John Hay, who had arrived off Cyprus some days previously, hoisted the British flag at Nicosia, the capital of the Island, and took over the administration from Bessim Pasha, the last Turkish Governor. Ten days later Sir Garnet Wolseley landed at Larnaca and became the first High Commissioner and Commander-in-Chief.

In 1880 Cyprus was transferred to the sphere of the Colonial Office.

Though the Turks did nothing to increase Cyprus trade, it must be admitted that they did not deliberately hamper the exertions of the foreign commercial community, who, moreover, benefited by the Capitulations until the cession of 1878, when their disappearance removed the disability under which the native merchants had been at a disadvantage compared with the "Frankish" settlers.

The taxes imposed from time to time, uncertain in their amount and incidence, varying with each new and often fantastic notion of state finance and levied almost entirely on the agriculturist, did not encourage prosperity or thrift.

Larnaca continued to be the chief port and the residence of the Consuls, as it is to this day. Here also were established the Commercial Tribunal and the head offices of the Customs, Quarantine and Sanitary Departments.

The first mention of a British Consulate in Cyprus occurs in 1626, but Consular records are very incomplete prior to 1750 and, these and Kyprianos' history, published in Venice in 1788, excepted, there is no early source of information now available but travellers' tales of not unimpeachable veracity.

British trade with Cyprus during the years 1581 to 1825 was represented first by the Turkey Company and later by the Levant Chartered Companies of London

merchants. The latter Company appointed and paid the British Consuls during these years and looked after the welfare of British subjects in general and British merchants in particular. They took charge of the provisioning of such British vessels as put in to the ports and amongst them, it is worthy of record, one or two of Nelson's ships then operating against Napoleonic designs in Egypt.

"The English Levant Company was the pioneer of all the great undertakings associated with British Colonial enterprise and development. It preceded by twenty years the formation and incorporation of the first East India Company, and may perhaps be considered the parent of that mighty undertaking. The English merchants whose bones lie in the little cemetery of Larnaca were representatives of commercial interest of considerable importance in Cyprus during the seventeenth century, and serve as interesting historical links in the succession of events leading up to the present British occupation of the Island.

"In the older 'Factories' of the Levant Company stringent regulations were enforced for the orderly life of the merchants constituting the community. In addition to the elaborate regulations affecting the transaction of business, nature of exports and imports, terms of credit, etc., each member of the factory was bound to conform to the religion of the Church of England, and in any case

Graves of Members of the English Levant Company, at Larnaca.

he was not permitted to attend to secular affairs on Sundays, nor during the preachings on fast-days."

Annexation.

On November 5, 1914, when Turkey ranged herself against the Allies in the Great War, Cyprus was formally annexed to Great Britain by Imperial Order-in-Council. No changes were made in the administration, and matters in the Island went on much as before; the Turkish population loyally stood by their new country and accepted the turn of events with Oriental placidity.

One of the most important results of the Annexation was that it conferred British nationality on Ottoman subjects then resident in or temporarily absent from Cyprus. Provision was also made for the retention of Ottoman nationality by such persons as did not desire to become British subjects, and for the acquisition of British nationality by persons born in Cyprus but not ordinarily resident there at the date of the Annexation.

In 1925 a further step was taken and the Island was declared a Crown Colony.

Freed from the uncertainty which so long clouded the future of Cyprus, the administration is now in a position to feel that its work will endure and that every endeavour to improve is a step further along the road leading to the solidarity of the Empire. But there is still hesitancy on the part of investors to sink their capital in an Island whose past has been subject to so many turns of the wheel of fortune.

Agriculture in Cyprus

Cyprus is eminently an agricultural country, and the land provides a livelihood for a large majority of the people. For the most part the peasant cultivates his own land; but both the leasehold system, entailing the payment of a fixed rent, and a system of partnership, in which one partner supplies the land or stock and the other the labour, also exist. The number of large landowners is not great.

Among the chief products of the land are cotton, barley, wheat, oats, carobs, flax, grapes, olives, oranges, tobacco, fruits and vegetables. From the fourteenth to the sixteenth century the sugar cane was cultivated in sufficient quantities for the needs of the inhabitants. The carob, or locust tree, grows wild, but all cultivated trees are grafted; the fruit, in the form of a pod containing from six to ten beans, is exported mainly to England, France and Egypt, for cattle food and for use in the preparation of sweets. Olive trees are both wild and cultivated. Silkworm-rearing is an important industry, the white mulberry tree being grown for the purpose.

Cotton Cultivation.

Cyprus has been famous since the days of antiquity for its cotton production and its cotton fabrics. In its suitability for the cotton plant the soil is, in fact, equal to, if not better than, that of Egypt.

The area under cotton cultivation—both dry and wet cotton—in 1925-6 was 10,500 acres, and the production 1,328,122 lb. as compared with an average for the five years, 1921-25, of 6,100 acres and a production of 830,000 lb.

The available area for cotton may be estimated up to 50,000 acres, the only drawback which hampers the extension of cultivation, and affects also a great deal the annual production as well as the quality, being the lack of water for proper irrigation.

In old days there was only one variety of cotton grown in Cyprus, *Gossypium herbaceum*, which still exists in the Island in very limited areas, where it is grown as a perennial plant. The life of this cotton extends up to 15 years, the plant being cut back every year. This variety has now, however, been displaced by the American varieties, which are giving very good results. The following American varieties have been tried from time to time:—Triumph, Durango, Allens' Long Staple, Sea Island, Mebane, Culpeper, Griffin's Sunbeam, Simpkins, Peterkin, Fruitt's, New Orleans, Webber, Brown Hartsville, Acala, Long Star, etc. The cotton now produced in the Island is thus a mixture of the above varieties, in which predominate the Sea Island, New Orleans, Allens' Long Staple, and Triumph.

The following Egyptian varieties have also been tried:—Sakellaridis, Zagora, Pilion, and Assili.

The best results are obtained from Sakellaridis. This shows clearly that the cultivation of Sakellaridis is worth consideration, provided that arrangements are made to sell the cotton produced at better prices and that the cotton is marked as Sakellaridis and not mixed with other varieties, as has happened in the past. Although the production of Sakellaridis is less than the production of the American varieties, the higher price obtained compensates the grower. Encouragement of cotton cultivation in Cyprus requires on the one hand the improvement of the water-supply for irrigation purposes and on the other hand the scientific grading of the cotton produced.

Orange Growing.

The cultivation of oranges in Cyprus is not of very long standing. During the occupation of the Island by the Turks, and at a time not much prior to the British occupation, citrus trees generally were very rare; oranges were imported from Palestine and sour pomegranates or unripe grapes were used for cooking purposes instead of the juice of lemons.

The cultivation of citrus trees began after the British occupation. Lemons were at first the most favoured, as there was at that time a great demand for them in Russia, Roumania, etc.—a trade in which merchants from Greece acted as middlemen. The cultivation of lemons, however, has since fallen off, owing to attacks of scale pest, which caused most of the lemon plantations to be uprooted, and secondly as a result of the low prices realised by lemons in recent years.

Considerable impetus has now been given to the cultivation of oranges. Thousands of trees are planted out every year, and there is not the least doubt that orange growing will soon become one of the leading industries of the Island. The fruit is not only of very good size, but possesses an excellent flavour.

The further cultivation of orange trees would be helped considerably by better transport facilities with overseas markets and by the erection of factories in the Island to utilise bitter oranges for marmalade, and lemons for lemonades, etc., the present price of lemons being as low as from 2s. to 3s. per 1,000. A start has been made in the preparation of lemon-oil and citrate of lime, and there is every prospect of a development of these industries.

The extension of orange cultivation depends upon the amount of available water for summer irrigation, and thus upon the development of irrigation schemes.

All trees belonging to the *Hesperideæ* do very well in the Island. At present bitter and sweet oranges, mandarins, and lemons are the leading citrus plants cultivated.

Citron trees were cultivated some years ago at Akanthou, where fruits of immense size used to be produced. These have now disappeared as a result of scale disease.

Where to Spend an Ideal Summer Holiday

CYPRUS

Try the **HOTEL MONTE CARLO** at Platres, the most beautiful, the most romantic the healthiest and most bracing **HILL** station in the **NEAR EAST**.

PLATRES which is 4,000 feet above Sea level enjoys the same climate as a perfect English Summer and the views in all directions are unrivalled anywhere.

The **HOTEL MONTE CARLO** is a high class English Hotel under European management, with every modern comfort and convenience, including hot and cold running water in the bedrooms, etc.

**TERMS MODERATE
AND INCLUSIVE**

Please Address the Manager.

HOTEL PAFSYLIPON **PLATRES ——— CYPRUS**

OPEN APRIL—NOVEMBER.

Situated in the midst of magnificent scenery at an altitude of 4,500 feet. Perfect climate. 50 bedrooms. Large drawing-room and dining saloon. Spacious verandahs. Every modern comfort, excellent cuisine. Motor cars from Limassol to Platres £1. Tariff from 7/- to 8/- a day. :: Special arrangements for large families.

Proprietor and Manager :: **H. G. Skyrianides.** LIMASSOL and PLATRES

HOTEL "HELVETIA" **PLATRES**

4,000 ft. above sea level (on Mount Troodos)

Proprietor and Manager : **N. KYPRIOTIS.**

Thousands come to the Hotel "Helvetia" to enjoy amongst pine forests a cool summer at a very moderate price.

Electric light—single and double bed rooms—up-to-date toilet systems—bath rooms with hot and cold water—excellent cuisine—prompt service.

No one can have a more wonderful summer holiday.

HOTEL "HELVETIA" — the real summer resort hotel of your dreams!

H.R.H. Prince George of England has found Hotel "Helvetia"

"very comfortable and the proprietor, Mr. Kypriotis, 'very obliging and attentive' and 'recommends with pleasure the hotel to visitors.'"

TERMS : BOARD and LODGING,
From 8/- to 9/- per day.

Special terms to families and their servants.

Special Automobile Service.

The Manager will be glad to give any details and particulars.

GEORGE **HOTEL** **NICOSIA** **CYPRUS**

English patronage and English cuisine. Scrupulously Clean Throughout. Attentive Management and very Moderate Terms.

Proprietor - - **GEORGE GRAHAM**

The production of citrus fruits during the years 1921-25 was as follows (total numbers):—

	Oranges.	Lemons.	Mandarins.
1921 ...	2,323,904	15,880,630	10,395,735
1922 ...	25,377,560	15,391,778	1,439,410
1923 ...	20,058,400	9,590,460	936,361
1924 ...	25,968,355	10,293,975	1,570,600
1925 ...	23,081,580	11,852,526	963,850

The leading varieties of sweet oranges grown in Cyprus are the Jaffa and the round orange.

Out of the Jaffa variety there has been created, through soil and climatic conditions, two distinct sub-varieties, the Famagusta orange of larger size with a thick, rough skin, and the Levka orange of smaller size, with a smooth, thin skin. The former, being cultivated in the Famagusta district, ripens earlier and is the first to be exported from the Island, while the Levka variety ripens later and keeps for a long time during the summer season.

With good direct communication with England and proper packing, Cyprus oranges and mandarins would be among the best on the English market.

Flax.

The cultivation of flax (*Linum usitatissimum* Linn) in Cyprus can be traced to the oldest times, but until recent days no fibre was exported and therefore little was known about it.

The Cyprus flax belongs to the Mediterranean variety, to the species *macrosporea* and may be classed botanically as an *intermedium* between the European long fibre flax and the Asiatic shrub flax.

Two distinct varieties can, however, easily be recognised; the Messaoria and the Morphou. Both are indigenous to the Mediterranean seaboard, and belong to the species "*macrospereae grandiflorae*," but whilst the Morphou is a very typical *intermedium* approaching sometimes the *elongatae*, "*Messaoria*" is nearer the *brevimulticaules* and never approaches the *elongatae* although single plants may reach the height of 40 cm.

The tillering does not appear to be a varietal characteristic, although it is frequent. A varietal characteristic is the large seed capsule; this contains 6 to 9 grains, and the average number of capsules per stem is 9 to 11; as many plants have 4 or 5 tillers, the aggregate number of seed capsules per plant frequently amounts to 50. Plants with as many as 15 tillers are not rare.

The diameter of the dry straw for "*Messaoria*" is round about 2 m.m.; for "*Morphou*" 0.8 m.m., the length is 40 and 65 cm. respectively.

The percentage of fibre is round about 16 per cent. long fibre and 8 per cent. tow.

The grain is of a light brown colour, flat, plump and of large size. One gram "*Messaoria*" contains 100 grains, one gram of "*Morphou*" 80 grains.

The chemical analysis of the "*Morphou*" variety shows that 100 grams air-dry seed contain: moisture 8.05 per cent.; oil 45.70 per cent.; albumina 27.53 per cent.; carbohydrates 6.67 per cent.; woody fibre 6.60 per cent.; ash 4.45 per cent. The "*Messaoria*" variety contains usually 2 per cent. oil less.

The fibre is very strong, although usually pretty hard, if compared with Belgian flax; the degree of softness appears to be in direct proportion to the number of waterings. All the flax is sown as winter crop; the time of sowing is November; in Morphou district all the flax gets at least one or two waterings; in the Messaoria it is dependent solely upon the rain.

In the Messaoria, the straw is abandoned altogether; in Morphou it is water-retted and worked as a home industry into a 30 or 40 leas yarn, which forms the basis of the beautiful "*Levaritika*" embroideries. The tow is worked into cord, sacks and saddlebags of great durability. Until 1924 only small quantities of half-worked straw used to be exported to Turkey, from 500 to 1,000 cwt. per annum.

In 1924, under the auspices of Government, a modern scutching plant was established in the Morphou District; the fibre produced here was well appreciated on the Dundee market, and prices up to £130 per ton were realized.

In the following year, two more factories were built by private enterprise, and large plantations were laid out; in the Paphos District these are extending every year.

Experiments were made with Belgian seed; this was proved to grow well and to give good results; but it was found to have no drought resistance whatever, and under failing irrigation large crops were lost.

The highest percentage of fibre in relation to dry straw was found to be 22 in long fibre and 5 per cent. in tow. The yield in dry straw at its best was found to be 2 tons per acre, and the highest yield in fibre (long) has been 7 cwt. per acre.

The flax industry is well capable of development; 114 tons of long fibre and tow have been exported in 1925 at an average price of £100 per ton; the figure of 500 tons per annum should be reached shortly. Most of the land in Cyprus is suitable for flax, and flax is a very safe and remunerative crop. The difficulty lies in the transport, which compels all the flax growers in the Messaoria simply to abandon all the straw on the field; only the seed being made use of.

The Wine and Brandy Industry.

Cyprus wines may be said to have been famous for all time, for their praises have been sung through the ages by the early Greek authors as well as by the poets of later days. According to an old French belief the champagne of France owes its origin to Cyprus. Cuttings of the best vines of Olympus were brought as an offering to the Count of Champagne, and, as they multiplied on the chalky cliffs of the Marne, gave the wine of champagne to France.* A less fortunate result of the fame attained by Cypriot wine—the Comanderia produced from vineyards which once were part of the Grand Commandery of the Knights of St. John in Cyprus—may be found in the circumstance that Sultan Selim the Sot was so enamoured of it that he "determined to annexe to his dominions a land which produced so magnificent a beverage, and in 1570 dispatched an expedition to Cyprus," which fell under his sway.

The chief wine-growing regions are Kalochorio, Zoolpighi, Trimiklini, Lania, Ayios Mamas, Kapilio, in the Limassol district, and the Siroumbi region in the Paphos district. The wines of these centres possess the necessary flavour, bouquet and finesse which render them, when matured, comparable with the better known European wines.

The best table wines of the Island are:—Comanderia, prepared from half-sundried grapes, resembling the best Spanish, Portuguese and Sicilian dessert wines; a kind of port wine without any additional alcohol in it; and Xynisteri, a white wine, particularly the wine of the Kalochorio-Zoolpighi region, which will stand comparison with French and Italian wines.

Recent years have witnessed an increased willingness on the part of cultivators to adopt improved methods of viticulture, and to seek the advice of the Agricultural Department with a view to the manufacture of wines of pure and standard quality suitable for export to countries outside the Levant. Several companies at Peraedhi have made a start with wine-making on an industrial basis and are meeting with success. One company in particular is paying special attention to the production of wine for export, and has introduced up-to-date machinery for the handling of large quantities of grapes.

The production of brandy is also a flourishing industry. One of the notable results of the Cyprus Pavilion at Wembley was to call attention to the superior quality of Cyprus brandy, which was found to be able to hold its own with the better French cognac. The oldest established firm at Limassol is that of Messrs. C. Haggipavlu and Sons, who in addition to being the recipients of a number of the highest awards and of medals at international exhibitions have secured a contract for the supply of brandy to the British Army.

The Silk Industry

The Cyprus silk industry is one which seems to hold out special prospects. Silkworm weaving has long been an important industry in the Island, but the development on up-to-date lines of a native silk industry is a new development. The Imperial Institute Advisory Committee on Silk Production came to the conclusion in 1916 that the Island would afford promising scope for this industry. Steps were taken with the assistance of the Cyprus Department of Agriculture to obtain all the necessary information with regard to the position. It was found that the peasants were producing cocoons in small quantities, that the cocoons were collected by local merchants and prepared for export, and that the industry was very far from being a remunerative one for the peasants, with the result that its condition was not satisfactory. There was a keen demand for Cyprus cocoons in France and Italy, but they were simply merged in the general silk production of these countries and the Island received no special credit for them. The Committee, therefore, decided to experiment with the reeling of Cyprus cocoons in order to establish their value for anyone desirous of undertaking silk weaving. Arrangements were made for cocoons to be reeled in France, and the resultant raw silk was distributed among various members of the Committee for throwing and weaving trials, and the waste silk produced was spun by another member. The results of these trials were entirely satisfactory. It was found that Cyprus silk had special characteristics of its own, and that a first-class grade of thread could be obtained from the Island cocoons. During the experiments, which, it may be pointed out, lasted over a term of years, Queen Mary chanced to make one of her visits to the Imperial Institute, and saw an exceptionally fine piece of damask which had been woven from Cyprus silk, and Her Majesty commanded that some damask should be specially woven from Cyprus cocoons for one of the State Rooms at Buckingham Palace. This act duly became known in the Island, and had the very satisfactory effect of concentrating attention on the silk industry.

The next step was for some organisation to interest itself in, and develop, the industry, and a firm which for many years had been engaged in the reeling of raw silk took up the matter, and after prolonged negotiations a

representative was sent out to investigate the question on the spot, and, following a favourable report, arrangements were made to establish an up-to-date silk filature in the Island. The site for the filature was chosen in June, 1925, and the following month saw the work begun, and on March 25, 1926, the filature commenced operations. It had, in short, taken a little over eight months to erect the group of buildings and to import and erect the machinery required. The buildings, it may be added *en passant*, provided a good illustration of Cypriot masonry. The reeling hall—the principal building—is 180 feet long, 33 ft. wide, and 16 ft. high to the eaves, and provides ample accommodation for the 150 workers occupied in reeling silk. The buildings also contain a room for the examination of the silk, an office and cocoon issuing room, an engine room and boiler house, and an accumulator room. There are further a store 200 ft. long constructed of stone with a cement floor and a roof of reinforced concrete for storing the cocoons, a reservoir with a capacity of 150,000 gallons, a shed for the dryer and three dwellings for the manager and his staff.

The filature is situated at Yeroskipos, or Hieroskepos, (the Sacred Garden), about three miles from the port of Paphos. The district of Paphos, it may be pointed out, produces about half the total of Cyprus cocoons, and there is an ample water supply at Hieroskepos; the water is of a quality excellent for silk reeling, so that it will be seen that there are considerable advantages in the site chosen to set against the distance of 45 miles that the filature is from Limassol, the principal port of the Island. The filature was formally opened on May 24, 1926 (a day most appropriately chosen for the purpose) by the then Governor, Sir Malcolm Stevenson, K.C.M.G., who had done much to further this important development for the Island, as he was convinced that the establishment of the filature would give a great stimulus to the cocoon industry and would be of lasting benefit to the peasants. While it is too soon yet to be dogmatic on the subject there is every reason to hope that the enterprise at Paphos will lead to marked and continued progress in one of the most promising of the Island's industries.

The silk industry of Cyprus is described by Mr. Norman Breton, M.B.E., in an article in the *Bulletin of the Imperial Institute* in the following words:—

Cyprus Silk Filature.
Overseer's house in right foreground, beyond the Drying Shed and Cotton Store (flat-roofed). In centre Reservoir, Boiler House, Reeling Hall and Silk Examining Room.

Cocoon raising is essentially a cottage industry. It is difficult to carry it on by one firm under the mass production principle owing to the enormous space required by the silkworms during the feeding period. The production of cocoons, therefore, is best left to the peasant, who raises a small quantity and devotes a room or two in his own house to the worms. It is only necessary to state that about 8,000 peasants would be engaged in producing sufficient cocoons for one average-sized filature to give an idea of the space required to feed the worms for such a production.

The peasant procures for himself a quantity of silkworm eggs. According to the number of mulberry trees he possesses he buys anything from $\frac{1}{4}$ oz. to 2 oz. These eggs, called technically "seed,"

feeding lasts about 42 days, but during that time the worms pass through four periods of sleep lasting 24 hours each. During this time the skin of the worm cracks and when the creature wakes up it is able to shed the old skin and continue with a new skin which Nature has provided. The importance of the regularity of hatching out, mentioned above, now becomes apparent. The worms hatched out the same day all sleep at the same time, and during that period do not require nourishment. If, however, the hatching out is irregular, sleeping and active worms are mixed up, with the risk either of a waste of mulberry leaf, or of malnutrition of the active worms. It must be remembered the worms will not touch faded leaves; the latter must be quite green and fresh. After the fourth

Examining Room.

are either produced locally by experts engaged in this special business or are imported from France or Italy. The seed, as it will now be called, is microscopically examined for the detection of any of the diseases to which silkworms are prone. If, during examination, disease manifests itself, all the seed from that particular lot is destroyed, as strict Government regulations exist to prevent the sale of disease-infected seed.

As soon as the mulberry trees begin to show signs of budding, the peasant starts to incubate the seed. In Cyprus this is mainly done in the primitive fashion by imparting to the seed the necessary heat by contact with the human body, with the result that incubation is

sleep, the worms, which have grown to about $1\frac{1}{2}$ in. in length, and in girth about the size of an ordinary penholder, start their great and final feed. It is calculated that in the ten days concerned they consume about twenty times their own weight of leaves and they grow rapidly to the size of a little finger.

The peasant must now provide the structure on which the worms can spin their cocoons. This consists of "bushes" of scrub-oak or other many-branched shrub which are placed vertically on the shelves on which the worms have hitherto spent their lives. Obedient to the dictates of Nature, the worms, now replete with glutinous fibre, mount up into the bushes and proceed to spin the

Reeling Hall.

irregular and unduly protracted. Simple incubators are in use in Europe which make incubation regular and the eggs all hatch out together, which is a great advantage, as will be seen later. This is one improvement that the establishment of the Filature in Cyprus may bring in its train.

The seed has now become thousands of minute worms which require nourishment. Young and tender mulberry leaves are collected and chopped to the fineness of mint in mint-sauce. This pulp is spread lightly over the worms and is consumed. After three or four days the worms are sufficiently grown to be able to consume whole young leaves, and from this time onwards their powers of consumption run parallel with the maturity of the mulberry. The

cocoons around themselves. After eight or nine days, the bushes are removed and the cocoons collected and placed in baskets. The peasant takes them to market and sells them to the highest bidder, and with that ends the peasant's share in the industry. Here, again, the importance of an even incubation may be seen, for if the hatch-out was irregular, some worms would be ready to spin before others and the peasant would run the risk of taking down the bushes before all the worms had completed their spinning. This would mean cocoons of inferior quality. On the other hand, he dare not wait more than eight or nine days, otherwise the chrysalis, as the worm has now become, will complete its stage and change into a moth,

(Continued on page xxii.)

The Forests of Cyprus

From the earliest times the forests were renowned, as they covered nearly the whole Island, so much so that tracts of land equal to the area cleared were granted to individuals who undertook the cutting down of the trees and the cultivation of this land with agricultural crops.

Such a mode of procedure may have been admissible in the times of the Ptolemys, 300 years before the Christian era, but its continuance from those early days through the centuries, for supplying Lusignans, Venetians, and finally the Turks with timber requirements until 1878, has meant the ruin of the Island. Now even after a painful process of demarcation, survey, and protection, the 400,000 acres of scanty forests still have to struggle against the browsing and trampling of 35,000 goats and nearly as many other animals, including sheep.

At the present day there are three large areas of forests in the Adelphi, Troodos, and Paphos mountainous tracts towards the south-west of the Island. Here even the Cyprus cedar (*Cedrus brevifolia*) flourishes, encircled by lower mountains and hills covered with Aleppo pine. In the narrow northern Kyrenia range of mountains, a mixed forest of cypress and pine extends along the crest of the sharp and broken ridges from Korno in the west to the original Mount Olympus in the east, a distance of

[Photograph by Mr. A. H. Unwin.
Mature Troodos Pines, with self-sown seedlings and young trees of the same species.

about fifty miles. Other smaller areas, such as Akamas in the south-western corner of the Island, Kormakiti in the north-west, Akrotiri, the most southern, Ayia Napa in the south-eastern extremity and the detached forests of the Karpass in the east are nearly all of inferior quality, though just as necessary for the conservation of the scanty rainfall and consequently small water supply.

During the last forty-eight years, since the enactment of the first forest law in 1879, steps have been taken to preserve the forests, but the time has been all too short to repair the accumulating damage of centuries. During this period more than £822,000 has been spent on the management, replanting, and improvement of the forests, and no less a sum than £640,000 has been drawn as income from them. It is estimated that there is now a stock of 90,000,000 cubic feet of pine timber, worth about £2,500,000, which has been largely created by the cumulative effect of the net investment of about £150,000 in the management of the forests. Without the grazing damage going on year in year out it is certain that at least double the amount of growth would have taken place, and nearly double the income would have been obtained.

For over thirty years the Government has established a gradually increasing number of timber stores in the towns and villages with a view to supplying the peasants

with timber for cash, instead of their having to resort to borrowing from moneylenders at exorbitant rates of interest, mostly in kind (carobs, olives, grain, etc.).

At eight sawmills situated in widely separated localities in the Paphos, Troodos, and Adelphi forests, as well as at Nicosia, the damaged, dead, over-old or mature trees are converted into planks, boards, or scantlings by contractors of the Forest Department, and are subsequently transported and sold at the 54 timber stores.

Every year in November an exhibition of all forest products, including timber, wooden implements, articles, seeds, and plants is held in Nicosia for the purpose of inviting attention to the value of the forests and the need for preserving them, especially for their value as recreational resorts.

During the last few years forest roads wide enough for the ordinary motor car have been made into the Kartal Dagh Forest, 2,500 ft. above sea-level, fourteen miles from Nicosia, and partly through the Paphos Forest from the northern to the southern side. On both these routes, as well as on the main roads round Troodos, some of the finest scenery in the Island is to be encountered. Glimpses of the deep blue Mediterranean alternate with cool groves of cedar, pine, or evergreen oak. The roads pass along rocky precipices to emerge on to gentle slopes, thickly covered with light green Aleppo pines of all sizes.

Occasionally the shy moufflon may be seen, but unfortunately this charming member of the sheep family is being ousted by the very hardy, almost "wild," goat, whose unwelcome presence has to be tolerated, browsing in the forest, for the time being.

In the valleys plane, alder, oak, bay, laurel, and myrtle cluster together in thickets, giving the forest a darker green amongst the pines, though lighter than the evergreen dwarf oaks.

For a tour in the forests, partly by motor and partly on foot, at least a month is required, though in less time some of the finest mountain and forest scenery can be reached. A few foresters' huts are situated in some of the more distant forests. Armed with a permit from the Forest Department (to occupy a room), it is possible, if desired, to spend a night far away in the heart of the forest.

Although the plantations and forests occupy only 18 per cent. of the land area of Cyprus, yet in varied and differing character as to elevation, species, and climate they present many distinctive features compared with European forests, as also with those of the tropics. Although pine and cypress trees predominate, yet acacia may be seen in plantations, whilst eucalyptus, cypress and Persian lilac may be noticed on the roadsides.

A. H. UNWIN, Principal Forest Officer.

CYPRUS CHAMBER OF COMMERCE.

The lack of a Chamber of Commerce in the Island has been a handicap to business enterprise in the past. This shortcoming was remedied this year when a Chamber of Commerce was established at Nicosia, a development which was greatly furthered by the sympathetic interest taken in the enterprise by H.E. the Governor and by the help which he provided in overcoming difficulties. The Chamber follows closely on the lines of the other Chambers of Commerce in the various parts of the Empire, and the objects in view are the same. The number of members so far enrolled is more than was anticipated, and it is hoped that traders in England and elsewhere who have, or are desirous of developing, business relations with Cyprus will support the Chamber by becoming subscribers. The subscription is £1 per annum which is a very modest sum to pay for the protection and assistance which the Chamber can offer business men and firms dealing with the Island.

The Cyprus Jubilee

1878—1928

Next year fifty years will have passed since, by an arrangement with Turkey, Cyprus was occupied (although not until Turkey in 1914 declared war against us annexed) by Great Britain. Until the final incorporation of the Island in the British Empire as a Crown Colony Cyprus was administered by British High Commissioners, of whom the first was Sir Garnet Wolseley, afterwards Field-Marshal Lord Wolseley. In 1925 Cyprus received the name and status of a Colony, and the office of Governor of the Colony was constituted in place of that of High Commissioner, the reading and proclamation of the Letters

are rumours of an open Golf Tournament for the Near East on the 18-hole links of Nicosia, of two special Race Meetings to which entries from Egypt, Palestine and Syria will be admitted, and of an Agricultural Show on a large scale.

At least one new hotel should have come into existence in the Island well before the various events take place. They are being planned for Spring and Eastertide, 1928, by which time special road maps will have been issued for the thousand miles of "motorable" roads on the Island, and signposts will have been erected where most needed.

Sir Ronald Storrs, C.M.G., C.B.E. Governor and Commander-in-Chief of Cyprus, and Lady Storrs.

Patent being made the occasion of a public ceremony conducted on May 1 in the Konak Square in Nicosia. The High Commissioner, Sir Malcolm Stevenson, became Governor for the remainder of his period of office, and was succeeded by Sir Ronald Storrs, who was appointed Governor and Commander-in-Chief of Cyprus in 1926.

It is the intention of the Cyprus Government to commemorate the Jubilee of the British Occupation by a series of celebrations, the object and, it is hoped, the result of which will be to link the destinies of the Island more closely to those of the outer world. A special coin will be struck and a stamp issued of ten denominations, roughly illustrative of the long and varied history of Cyprus, will be published for a strictly limited period, on the expiry of which all remaining specimens will be destroyed. There

H.E. THE GOVERNOR OF CYPRUS.

Sir Ronald Storrs, who was nominated Governor of Cyprus in 1926, was Oriental Secretary to the British Agency in Egypt from 1909 until the Great War. After service with the Anglo-French Political Mission, Egyptian Expeditionary Force, in 1917, and the Mission in Baghdad and Mesopotamia, Brigadier-General Storrs was appointed Military Governor of Jerusalem, becoming subsequently Civil Governor—a post that he held until his appointment to Cyprus. Sir Ronald Storrs is a Knight of Grace of the Order of St. John of Jerusalem. He married in 1923 Mrs. Louisa Lucy Clowes, widow of Lt.-Colonel H. Clowes and daughter of the late Rear-Admiral the Hon. Algernon Littleton.

The Cyprus Museum

The Cyprus Museum had its beginning in the first years of the British occupation of the Island, but it was not until 1905 that a grant of money was obtained from Government for the construction of a special building, which was erected in memory of Queen Victoria. The Museum has been added to from time to time, and assumed its present proportions in 1924. Mr. Menelaos Murkides, the present Curator, was appointed Assistant to the Museum in October, 1909. He subsequently proceeded to Oxford, where he obtained the Diploma of Classical Archæology, and after a further period of study in the British Museum and in the chief museums of Europe he returned to Cyprus in December, 1911, and took over the post of Keeper of the Museum and Secretary to the Museum Committee. The classification, arrangement, and exhibition of the objects in the Museum were begun by him immediately, and are still in progress.

The vast collection of pottery, greatly enriched by excavations, purchases from private collections, and donations, is exhibited in six consecutive rooms of the South Wing according to chronological order.

The Early Bronze Age and Middle Bronze Age pottery

[Photograph by Mantovani Tourist Agency.]

The Cyprus Museum, Nicosia.

is in the first room. The red-polished fabric is richly represented by large jugs, amphoræ, and bowls from the Early Bronze Age, most of which were found in excavations at Lapethos, Arpera and Kadydata by the Keeper of the Museum. The incised red-polished ware is comprehensively represented by a variety of specimens exhibited in five wall cases. The characteristic fabrics of the Middle Bronze Age are fully represented in this room, e.g., the White painted ware with the variety with lustrous paint, the Red-slip, and the Black-slip ware, with its variety with red paintings.

The Late Bronze Age pottery is shown in the second room, i.e., the White-slip, the Base-ring, and the Cypro-Mycenæan ware. In the central cases are shown the minor fabrics, the bucchero ware, the black-punctured ware, the red wheel-made ware, the red flasks, the ox-vases, the stone mortars, the alabastra and the rare vases of fayence. A wall case contains a large tomb excavated by the Keeper at Arpera in 1914. Next to it are the vases and potsherds with Cypro-Minoan inscriptions, the forerunners of the later Cypriot syllabic writing.

The Early Iron age is represented in the third room. In the first two cases are the black bucchero ware and the White-painted of the Transitional period, and in the other cases specimens of the Geometrical period. There is an excellent collection of Plate with ornamented rims, notable for their variety and richness of design.

In the fourth room are to be found the geometrical red

ware with their rich ornamentation of concentric circles. The Cypriot Kylikes with various rich ornaments and the barrel-shaped vase peculiar to Cyprus are also shown in that room.

The fifth room is devoted to the pottery of the Greek period. The black-figured, red-figured, and plain-black Attic vases, imported in olden times from Athens and found now in the tombs chiefly of Polistes Chrysochous, the site of ancient Marion, are arranged in a central case. Contemporary with these vases is a special Cypriot fabric of vases with a spout in the shape of a small vase or bull's head held by a female figure standing on the shoulder of the vase. Some other vases with floral designs and red-ware with anthemia of the Greek period are also displayed in the same room. Conspicuous among them is a vase bearing a Hathor's head painted on its shoulder.

The red Hellenistic vases and the glass vases of the Ptolemaic and Græco-Roman period are in the sixth room. The glass vases, with their variety of colours and their bright iridescence, form an almost unique collection.

The first room of the North Wing at the entrance is the Terra-cotta room, where in the first wall case are shown the flat prehistoric figurines of the Middle Bronze Age. Then come the figurines of the Late Bronze Age with their more anthropomorphic form, their bird noses, and big ears with ear-rings, representing the mother-goddess. In the adjacent small case are the Mycenæan figurines similar to those found all over the Mycenæan world. The Early Iron Age is represented by votaries coming to the Temple with their offerings, by musicians playing to the god, by warriors, water-carriers, and horsemen. Some groups of subjects from daily life, for instance, grinding corn and ring dances, are among the rarities of the collection. Then come a series of statuettes and statues showing Egyptian and Assyrian influence, among which mention must be made of a colossal terra-cotta statue. Among the statuettes is a series of heads and statuettes bearing a ring at the nose. The collection ends with heads of statues and statuettes showing Greek and Roman influence and a group of fine terra-cotta figurines similar to the terra-cotta figures.

The next room is devoted to relics of the Bronze Age—daggers, knives, axes, spear-heads, pins, needles, and tools (including a saw) exhibited in chronological order. There are also tripods and vases of the Late Bronze Age and several vases and tools of later periods and a collection of bronze mirrors. Safety pins of the Early Iron Age and bronze and iron strigils of a later period are shown in central glass-topped cases.

Two collections of sculptures are in the third room of the North Wing, the one found at Lepkoniko by Professor Myers in 1913 and the other found by the Keeper at Arsos in a temple of Aphrodite Golgia in 1917. Both are arranged in chronological order from the 17th century down to Roman times, and form a valuable series among the Museum exhibits.

In the fourth room is the fine statue of Aphrodite in marble of the Hellenistic period, found at Soloi, and a statue of the Sleeping Eros found at Paphos. Cypriot capitals with papyrus and lotus flowers and volutes, which might be regarded as the prototypes of Ionic capitals, stand in the three corners of the room, while in the fourth is a fine stela.

The Museum possesses also a special gold room, in which are the gold ornaments of all periods. Worthy of note are the gold and enamelled sceptre of the Mycenæan period or of the 7th century B.C., and the gold necklace found at Arsos by the Keeper in the excavations of 1917. In the same room are five of the famous discs of Lampousa, similar to those acquired by the late Mr. Pierpont Morgan, also valuable Byzantine pearl ear-rings and a rare collection of bracelets, ear-rings, rings, and necklaces of several periods.

Cyprus as a Tourist Resort

Cyprus has many attractions for the visitor. Perhaps its greatest charm, next to its scenery and its architecture, is that it still remains almost unknown to the ordinary tourist and has not so far, like its neighbours of Palestine and Egypt, been invaded by hordes of tourists. It is easy to reach, whether from Palestine, Syria or Egypt, and there are occasional boats from Athens and Constantinople. Its hotels, though not luxurious, are clean and inexpensive, and the capital, Nicosia, is an excellent

picturesque in their decay, full of villagers in their quaint costumes leading in camels and donkeys, bearing the produce of their gardens, to the mediæval doorways and Venetian Coats-of-Arms which, walking through the town, one finds at many an unexpected corner. But it is impossible in the space of so short an article to mention all the historical monuments in Nicosia, still less of the Island itself. Many interesting expeditions can be made from Nicosia through fields red with tulips and anemones to the villages with their quaint churches often dating from Byzantine times or else built on the site of a mediæval church and containing the tombstone of some member of a noble house of aristocracy which flourished under the Lusignan dynasty.

Kyrenia.

There is the Abbey of Bella Paise, five miles east of Kyrenia, one of the finest Gothic buildings in the Levant, the refectory still as perfect as at the time when it was built. The castle of Kyrenia commands the tiny harbour of that town; its deep dungeons must have witnessed many a dark deed in the days gone by. High up on the hills which tower above Kyrenia stands the castle of St. Hilarion, its ruined towers appearing more like the castle of a fairy story than a royal residence, more like an eagle's eyrie than the habitation of man.

Limassol and Larnaca.

In the south of the Island are the towns of Limassol and Larnaca. The former holds a special interest, for here on May 12, 1191, was Richard Cœur-de-Lion married to Berengaria of Navarre, and here on the same day was she crowned Queen by John, Bishop of Evreux. The very chapel where these historic events took place is still extant and can be seen by the visitor to the old fort now occupied by the Police. Larnaca, one of the most important harbours of the Island, contains the Church of St. Lazarus, with its cenotaph shown as the tomb of the Saint, whose remains were transferred to Constantinople and afterwards to Marseilles.

The space at our disposal is too restricted to describe one-tenth of the interesting places on the Island, nearly all of which can be visited by car, for there are nearly

[Photograph by Mantovani Tourist Agency..]

Larnaca: Old Quarter.

centre for making expeditions all over the Island. The climate is dry and healthy. In the summer the plains are apt to be hot, but at Platres on Mount Troodos at an altitude of 4,000 ft. the air, laden with the scent of the pine trees, is bracing, and there are excellent hotels. To those interested in antiquities Cyprus will make a very special appeal, with its memories of all the ages. It was at Paphos that Ægean civilization was first planted; here are the ruins of the great temple of Aphrodite, and here it was that St. Paul converted Sergius Paulus, and Elymas the Sorcerer was struck blind. In its mediæval buildings Cyprus is particularly rich.

Famagusta.

The first view of Famagusta from the sea is a sight not easily forgotten, with its walls and ruined churches, walls still nearly as perfect as on that fateful day in August, 1571, when the brave Bragadino was forced to yield the city to the all-conquering Turk and himself went to meet a martyr's death. Towering above the walls the visitor on the ship can descry the Cathedral, a gem of Gothic art, with the incongruous minarets added after the conquest. Built about 1300, it is worthy to rank with the great Gothic Cathedrals of France and of our own country.

A walk round the walls of Famagusta, in places twenty feet thick, will give a good idea what a mediæval fortress was like; but the builders of Port Said have, like vandals, quarried the stones of its building to erect their own town, so that to-day inside the walls of Famagusta the ruins of churches and palaces lie like the ribs of camels dead on a caravan route in the desert.

The Capital.

A railway runs to Nicosia, the capital, still encircled by its Venetian-Turkish walls. Its greatest monument, the Cathedral of St. Sophia, is now a mosque, but was once the glory of the Latin East. Begun about 1200, it undoubtedly owes much of its beauty to the artists and architects who came in the train of St. Louis, when he visited the Island. The town itself is full of many a monument worthy of a visit. From the Khans,

Famagusta. In the centre the Cathedral of St. Nicholas, now a Mosque.

a thousand miles of good motor roads in Cyprus. Those who may wish to know more about Cyprus are advised to read "The Historic Monuments of Cyprus" by Mr. Jeffery, and with that book in one's hand and with the sunny wealth of Cyprus one of the most delightful holidays it is possible to imagine can be spent in the still unspoilt Island of Venus.

Mining in Cyprus

There is ample evidence that the Island formed a very considerable source of supply of minerals—principally copper—in Roman, and even in Phœnician times. Documentary proof exists that Cyprus was visited as early as in the days of the Emperor Marcus Aurelius; in the year 166, by an eminent Roman doctor, whose description of the mines and their workings is of interest both to mining men and to doctors. Mining activities, which had been on a fairly large scale were suppressed for some reason, and it is only within the last 20 years that any attempt seems to have been made to revive them. Since then two large mines have been developed, and other prospecting areas show such signs of promise that in 1925 the Government added a new post of Inspector of Mines to the existing administrative machinery of the Island.

It became evident at once that the geology and minerals of Cyprus are not only interesting in themselves, but likely to prove of some importance. No systematic geological survey of the Island has ever been made, neither have its mineral resources been thoroughly investigated. Its mining laws proved to be antiquated, and a thorough revision will be necessary to bring them up to the standard of modern mining practice. As a preliminary to this step the Mines Regulations of 1926 were issued to govern the working of the larger mines, and definite steps are now being taken to bring the mining laws of the Island into harmony with those of other parts of the Empire.

Mining Leases.

Prospecting permits are issued for a period of 12 months, with an extension of a further 6 months, provided that the holders show reasonable endeavour to open up their areas. At the end of 1926 there were 33 permits in force.

Mining leases are granted for any period up to 99 years, but usually for 50 years. There are at present nine leases in existence, the principal ones being:—

A.—The Cyprus Asbestos Company: Two leases in the Troodos State Forest.

For 21 years, since 1906, asbestos has been mined by this Company and its predecessors, the total production during this period being approximately 25,000 tons. Latterly the Cyprus Asbestos Company has carried out development work on a large scale, and the estimated production for the year 1927 is 12,000 tons, representing a value of about £250,000, which would place this product at the head of the list of all products exported from the Island.

There are altogether 8 mills in operation, on the most modern and up-to-date lines. The fibre is of good quality and is in great demand from all parts of the world, including Japan and Australia. Operations in the quarries are carried out on a large scale, and over 1,000,000 tons of rock will be mined during 1927. Some idea of the extent of these quarries may be gathered from the fact that 25 miles of light railway track is in operation for the purpose of transporting rock to waste and ore to mills. The Company give employment to about 1,200 workers during the winter and about 6,000 during the summer.

The mine is connected to the port of Limassol by a bi-cable ropeway, the distance being about 18½ miles. The time taken for goods transported between the mine and Limassol occupies 2 hours 50 minutes. The central power station supplying power to the mills, etc., consists of four 330KW sets and one 85KW. The whole operation of quarrying, extracting the fibre, and delivering the finished product to the port of Limassol, occupies only a few hours.

The supply of asbestos-bearing rock on the area worked by this Company may be assumed to be inexhaustible, and there seems to be every probability of the production of asbestos being increased year by year, as the quarries are developed, and that the economic posi-

tion of the Island will be correspondingly improved.

B.—The Cyprus Mines Corporation: Two leases, one at Skouriotissa and one at Mavrovouni, near the village of Levka in the Nicosia District.

At several places in Cyprus there are slag dumps indicating the sites of ancient mines, but as these mines had not been worked for about 1,500 years the location of the ore, if any remained, was not easy to determine. After some work by the more common methods of small shafts and adits, the plan was adopted of prospecting systematically by churn-drills. This proved the solution of the problem, both for discovering the lost ore-body and also its extent and value. The first drill was put in operation in the year 1914 and eight holes were bored before ore was discovered. Altogether forty-five drill-holes were put down at Skouriotissa. This work was completed in 1919.

In January 1922 the first train of ore left the mine in 14 five-ton cars (drawn by a Baldwin Locomotive imported by the Cyprus Mines Corporation) for Morphou, from whence it was hauled over the Cyprus Government Railway to Famagusta for shipment to Europe. About 1,200 tons of ore were stored there and shipped in two cargoes in May and September 1922 to England, after which all shipments have been made from Morphou Bay. The first steamer taking ore from the Pendayia jetty, Morphou Bay, was loaded in April 1922. This cargo consisted of

Xero Jetty. Crushing and Screening Plant and Ore Storage Sheds in centre and Power Plant in right middle distance.

4,643 tons. Up to date over 600,000 tons of ore have been shipped.

For the transport of the ore from the mine at Skouriotissa to the port at Pandayia, a 2 ft. gauge railway was built. The grading and bridges and culverts were completed by August 1919, and the tract was finished early the following year. The loading jetty at Pandayia was also finished early in 1920. In order to classify and crush the ore to the various sizes required a crushing and screening plant was built at Skouriotissa. This was completed during the last months of 1925. In the following February, it was burned to the ground. It was found more convenient to build a new one at Xero, as this would make it more convenient for loading ore at the new jetty situated near Karavostassi and completed late in 1926. This new jetty was built, at a cost of £10,000, in order to give better protection for loading ore; it has increased capacity and improved loading features as compared with the jetty at Pandayia. The new crushing and screening plant was completed in March 1927. This plant has a capacity of 1,200 tons per day, and it includes a storing shed with a capacity to hold 50,000 tons of ore.

The Corporation generates its own electric power, a power plant having been built at Xero during 1924 and 1925. Extensions have been added during 1926. At present it is equipped with 1,000 h.p. coal-fired boilers, and with condensing uniflow steam engines driving electric generators. The power is stepped up to 11,000 volts by a bank of transformers for transmission to the

mine, about eight miles distant, where it is stepped down to the desired voltage.

A modern and quite extensive hospital was built near Pendayia in 1924 and a fully qualified medical officer engaged from England. The Corporation has enlarged its shops greatly during 1926 and now has a well equipped machine shop, blacksmith's shop, carpenter's shop and foundry at Skouriotissa. In order to ventilate the working places in the mine a number of new blowers were installed in 1926 and more are being installed at the present time. By the end of 1927, the blower capacity will exceed 300,000 cubic feet of air per minute.

C.—*The Cyprus Sulphur and Copper Co., Ltd.* holds one mining lease at Lymni, Polis, Paphos District.

Extensive old workings and a large accumulation of slags indicate ancient mining activity on a considerable scale at Lymni. In 1882 it is recorded that serious prospecting work was carried on, and in 1886 exploration work was undertaken on a large scale. Since that time several Companies have carried out underground work, but it has finally been decided that the body of disseminated cupriforous pyrites, although undoubtedly very considerable in extent, is of too low a grade to warrant it being worked by any other than the leaching process.

(3) Philani, another pyrites area with excellent indications, but not yet properly prospected.

(4) Dhierona, where quantities of chrome have been discovered.

(5) Asgata, another chrome area, not yet opened up.

(6) Kalavasso, where large quantities of ancient slags cover the area and many old galleries have been exposed, with indications of copper at depth.

In addition to the above, there are many other areas showing evidence of mineralisation, and it is hoped that the attention of the mining world will be directed to the potentialities of Cyprus as a mineral field. It is the Government's desire to encourage mining ventures in the Island, and every assistance will be given to prospect and to open up the mineral resources of this Colony.

Among minerals other than cupriforous pyrites and asbestos that are being mined and exported are: Gypsum, umber, terra verte, manganese, chrome and magnesite. Salt is procured from the Salt Lake in the Larnaca district, but most of this mineral is consumed in the Island.

Extensive deposits of gypsum and terra umbra occur in the Island, and expert opinion places the quality of both in the highest grade. Gypsum makes admirable

General View of Lower Quarries of The Cyprus Asbestos Co., Ltd. property at Amiandos.
(Staff houses in background).

At present water is being pumped into the old and new workings, and the liquid is precipitated. In 1926 over 50 tons of precipitate assaying about 80 per cent. copper were produced by this method.

D.—*The Troodos Chrome and Asbestos Co., Ltd.*, was granted a mining lease in September, 1925, in the Troodos Forest. Since the beginning of operations the Company has produced 165 tons of asbestos, and over 500 tons of chrome iron ore.

Prospecting Areas.

Among the most promising prospecting areas in the Island are:—

(1) Mitsero, where a fairly large deposit of Covellite (Copper Sulphide), assaying over 6 per cent. copper has been discovered. This area is being worked by the Hellenic Company of Chemical Products and Manures of Athens, who have applied for a mining lease.

(2) Kapedhes, where pyrites has been discovered and work is in progress.

material for floors, stairs, shelves, sills, etc., and it is widely used throughout the Island in houses and public buildings of all classes. Indeed, it is so serviceable for indoor constructional work that, if better known, a demand for it outside Cyprus would, doubtless, arise.

Marble is represented by white, coloured, veined and brecciated varieties along 60 miles of mountain range, and the available quantities must be very large; but the question of water enters into the problem of quarrying.

In conclusion, it seems again desirable to emphasize that a more thorough investigation of the mineral resources of the Island should be made, and serious and systematic prospecting undertaken to locate mineral deposits, of which there is every indication. Prospecting on a large scale would necessarily involve large capital outlay and considerable risk, but in view of the mineral resources of some parts of the Island, would, in expert opinion, be justified.

H. G. MOUNTAIN,

April, 1927.

The Commerce of Cyprus

The volume of the trade of Cyprus in 1926 was much the same as in the previous year. The value of the imports was £1,572,682 as against £1,593,436 in 1925, while that of the exports was £1,103,571 as compared with £1,198,615. In 1924 Cyprus had a favourable balance of trade for the first time for some years, when the exports were £1,271,399 as against imports of £1,243,405, but for the past two years, as will be seen from the figures given above, there has been a very considerable adverse trade balance. As in the case of other countries in the Near East this is due partly to the gradual development of enterprises in the Island. Thus machinery and implements and manures for agriculture have contributed substantially to the imports in both 1925 and 1926, while the increasing use of motors and motor cycles, with the resultant development of the demand for petrol, has also had its effect. It may be noted that in the imports for 1926 the heading "machinery, parts, fittings, etc." figures for £155,942. It is not only because the larger volume of imports in the past two years is in a measure indicative of industrial progress that the figures are of interest. They point also to the capacity of the population to make increased purchases abroad, and are a visible and significant sign of the gradual improvement of conditions in the Island. The development of the export trade may be hoped for in due course as the new enterprises progress.

Trade Within the Empire.

The distribution of the trade in 1926 varied somewhat from the previous year, and was not quite so satisfactory as the share of the British Empire showed a decrease in both imports and exports, slight as regards the former but more marked as regards the latter. Of the imports the British Empire was responsible for £688,482 as against £701,342 in 1925, and £516,365 in 1924, the United Kingdom's share being £421,786. Of the exports the British Empire's share was £156,914 as against £263,992 in 1925 and £313,673 in 1924. The British Empire Exhibition provided Cyprus with a great opportunity for the development of trade with other parts of the Empire, but unless representation on an occasion of that kind is consistently followed up in other ways its effects are likely to fall short of what is desired. A permanent show-room in London of Cypriot produce, preferably in the Strand, which has become the Empire thoroughfare, is an inevitable development, if the Island is to make the most of the United Kingdom market.

An interesting feature of the year was the considerable increase in the number of steamships calling at the Island. The total was 498 as compared with 400 for 1925 and 330 for 1924. On the other hand, the number of sailing vessels visiting the Island declined from 1,020 to 990. The tonnage of the steamers was 753,724 and of the sailing vessels 41,991. Of the steamers the British share was 136 vessels of a tonnage of 223,292 and of the sailing vessels 251 of a tonnage of 11,507.

Wide Range of Imports.

As showing the comprehensive nature of the Cyprus market and the possibilities which should exist for the development of British trade the following examples of goods which are imported from foreign countries (the name of the country from which they are obtained being given in brackets) is illuminating:—sporting cartridges, gunpowder, and shot (Germany), bicycles (Germany), cement (Czechoslovakia), cotton goods (Italy and Japan), dyes (Germany), hardware and cutlery (Germany), iron bars, joists, etc. (Belgium), matches (Czechoslovakia and Sweden), soap (Greece), toys (Germany), typewriters (America), motor cars (America), woollen manufactures (Holland and Italy). Hitherto the British articles of the same nature have been handicapped by higher prices.

During the first few years after the War Cyprus was flooded with cheap articles from foreign countries, but

gradually British goods are again coming into their own. Imports from the United States of America are on the increase, but this is accounted for by petroleum, and machinery for the American mining company in the Island. Holland and Greece are increasing their exports to Cyprus, but this increase is solely due to chemical manures, and in the case of Greece to soap. Imports from Germany are gradually diminishing, but those from France and Italy are on the increase, due, no doubt, to fluctuating rates of exchange.

It may be safely said that there is a tendency in the Island to purchase more British goods, and there is plenty of scope for British firms to get a still firmer grip on this market principally in the articles enumerated above. A little cutting down of prices until trade is established would go a long way to meet the situation.

Principal Exports.

The main exports of Cyprus are agricultural products. Carobs, the principal item, are well established on the English market.

Cyprus barley was some years ago much sought after in England for malting purposes, but owing to adulteration it lost this market. Recently a law has been passed making it compulsory for all products to be properly cleaned before export: it is therefore hoped that the former trade with the United Kingdom will be revived.

Very fine potatoes from Irish and Scotch seed are grown in the Island, but owing to distance they have never yet been exported to the United Kingdom. There is no reason why they should not be. Tobacco growing is steadily on the increase, and comparatively large quantities are being exported annually to the United Kingdom. Fair quantities of flax are grown, but up to the present all exports have been to foreign countries.

Sumach, for tanning purposes, has hitherto been exported to Germany and other foreign countries: England would not take any owing to the crude way in which it was manufactured. Now, however, an Englishman has established a factory which is producing a very fine quality of sumach, equal to, if not better than, the Cilician article, it is said, and it is nearly all being sent to the English market. British firms should provide a market for this commodity before foreign firms discover its merits.

Cyprus produces about 6,000 cwt. of wool per annum, but unfortunately more than half is taken to France, only some 1,000 cwt. going to the United Kingdom. This wool also might be brought to the notice of British firms.

Production of Fruit.

The export of oranges commences about the middle of November and continues till May. The best time to export

Exchange, Insurance and Merchandise Operations Effected.

for the English market would be during the last week in November or early in December, as at this period the fruit is hard and green and stands the voyage better, ripening on the way. But oranges can be exported with ease till the end of February, but at this time there is always a greater proportion of damage. The average quantity available for export is about fifteen million. The majority of oranges exported from Cyprus go to Greece and Egypt. Those to Egypt usually go in bulk in small sailing vessels or packed in baskets: the journey being short, they travel in this way very well. Those for Greece are packed in proper orange boxes. Timber for making orange boxes is imported from Trieste or Roumania and there is always a good stock on hand in the Island.

The mandarin ripens about the same time as the orange, but lasts only till about the end of January. It is exported principally to Egypt in baskets. No attempt had yet been made to send any to England on account of the delicate nature of the fruit necessitating careful packing and handling. A few cases sent by private individuals, however, have arrived in England safely, and were much appreciated. A consignment sent from here in time to reach England during Christmas week would no doubt meet with success. The quantity available for export would be about one million. The export of green lemons commences in September and continues till May. The quantity available for export is about two millions.

The cultivation of the almond in Cyprus is a new industry rapidly coming to the front. Large numbers of trees are being planted, and the quality is being improved. The almonds are exported either in the shell or as kernels, principally in the latter form going chiefly to France and Austria. The fresh crop comes in during July, exportation taking place from August practically throughout the year according to demand. The quality available for export is about 3,000 cwt.

Grapes are exported during July, August, and September,

principally to Egypt in baskets or in wicker-work boxes. No attempt has ever been made to export this fruit to England, but there is no reason why it should not be put on the English market with success if it can be packed in such a way as to avoid bruising. The quality of the grapes is as good as that of any now being imported into England. The quantity usually exported is about 1,000 tons, but there is much more than this quantity available.

Hazelnuts are exported in the green state during August and September and thereafter as dry fruit. They go chiefly to Egypt and France. The quantity exported averages 3,000 cwt. The pomegranate grows in Cyprus to a great size and is of good quality. The fruits commence to ripen during August, and are exported during that month until the end of October. The quantity available for export is about 80,000 cwt.

Cherries ripen in May and June and are principally exported to Egypt. The quantity available for export is about 900 cwt. Apricots ripen in May and June; 2,000 cwt. are exported annually, principally to Egypt. Plums are ready in June and July; about 2,500 cwt. are exported annually. About 2,000 cwt. of peaches are exported annually to Egypt. This fruit is exported in its hard state, and would not be fit to place on the English market for eating purposes. It would, however, be useful in making jam, etc. The fruit is ready for picking in August.

The melon is a fruit which, if it could be got on to the English market, would make a good impression. The quality is excellent, and although only about 200 cwt. are exported annually, much more is available. The fruit could be exported during June, July, and August. About 200 cwt. of water melons are exported annually to Egypt. The fruit ripens from June to August and is good fruit for hot weather.

Cyprus raisins are famous for their quality and it is surprising how very few go to the United Kingdom; only 250 cwt. out of 70,000. The fruit is available for export from October onwards. It is exported principally to France, Italy, and the United States of America.

(Continued from page xi.)

which in emerging will cut through the silk fibre of the cocoon and destroy it for reeling purposes and thus render it practically valueless.

The buyer of the cocoons from the peasant has now to treat them so as to prevent the chrysalis from turning into a moth, which would cut through the cocoon. The worm spins the cocoon with one continuous thread in a manner forming the figure 8, therefore the cutting of the cocoon at one end means the cutting of the one continuous thread into many thousand short ones and naturally makes it impossible to unwind. "Reeling silk" is only another way of saying "unwinding cocoons." The problem is to destroy the chrysalis inside the cocoon without damaging the cocoon, and the only method so far discovered is suffocation. Leaving cocoons exposed to the hot sun will suffocate the chrysalis, but it also harms the thread of the cocoons. This is the most primitive method. The next method is that practised hitherto in Cyprus—suffocation by steam. The cocoons are placed on shallow shelves in a cupboard which is constructed over a common washing copper. A fire is lit below the cauldron, which is filled with water, and steam is generated. The cocoons then have to be spread lightly on canvas beds, sheltered from the sun, but where wind and air can circulate freely. They have to remain on the beds from six weeks to two months, during which time they require to be turned over twice daily. The dead chrysalis thus gradually dries up without becoming decomposed. In this method there is the danger of either keeping the cocoons too long in the steam and destroying the fibre of the cocoon, rendering the thread brittle, or not keeping them long enough, which means that the moth cuts through after all.

The safest and most practical method is suffocation by hot air. Séchoirs, or dryers, are constructed to take a large quantity of cocoons at one charge, and air is fanned through a steam-coiled chamber rendering it about 200 deg. Fahr. The hot air circulates by means of channels through the chambers containing the cocoons, and the chrysalis is suffocated and all moisture in it dried up in one process of twelve hours' duration. The Filature in Cyprus is equipped with a dryer of this type, and the cocoons can be put into sacks and stored without fear of deterioration. Exposure to air and wind, which also means exposure to dust and dirt, is unnecessary, while the water used in the reeling keeps clean. These séchoirs can only be worked economically by concerns dealing with cocoons on a large scale, though smaller plants are now being made for the small cocoon merchants to replace the old steam cupboard.

The cocoon seasons lasts about one month in Cyprus, say, May 25 to June 25, so sufficient cocoons are bought during that period to cover the requirements of the Filature for the whole year up to the following May 25. As it stands at present, the Filature consists of 80 reeling basins, at each of which eight skeins can be reeled at one time, but the plant has been designed to render duplication simple and economical. Eighty basins can cope during the year with about 370,000 lb. of "fresh" cocoons, and the production of Cyprus at present is about 450,000 lb. There is, however, a local rough-reeling and weaving industry which absorbs a large proportion of the excess. So the Filature is just about equal to taking the Island's exportable production. It may here be mentioned that since the building of the Filature was started, it is estimated that 60,000 new mulberry trees have been planted and that probably more will follow. This increase in leaf should enable production to double itself in four or five years, and the Filature will, no doubt, carry out the duplication in good time to meet this increase.

A few words may now be devoted to a description of the process of silk-reeling. First of all, the dried cocoons must be sorted into different qualities. During the transport of "fresh" cocoons, i.e., while the chrysalides are alive, there is bound to be a certain amount of crushing of cocoons. One cocoon thus crushed may be the cause of staining several others. Also, there are worms which make their cocoons but die in the process, others which die when their cocoons are only partly completed. A black fluid is exuded from some of these cocoons, which, in turn, stain all the cocoons in their vicinity. There are also cocoons spun by worms which have been ill fed: these are weak in the thread and contain less silk. The sorting is done by hand, and the cocoons separated into four qualities: (a) cocoons which are perfectly clean and firm, (b) cocoons which are otherwise firm but have been stained from without, (c) weak cocoons and slightly stained cocoons in which the worm has died, and (d) cocoons crushed and badly stained from within. The (c) and (d) qualities, which form but a small proportion of the whole, are reeled off as quickly as possible, for they are liable, if kept in store, to attack from a weevil which bores a minute hole about the size of a pin's head through them and renders them unsuitable for reeling. The (b) quality, which forms about 20 per cent. of the whole, is also susceptible to the weevil, but to a much smaller degree, so these are worked next, leaving the (a) quality for the remainder of the year's work.

TOBACCO GROWING IN CYPRUS.

Tobacco cultivation has been carried on in Cyprus for many years, but so far only an inconsiderable area has been devoted to the crop, and the tobacco produced has not attained the high standard reached in other Near Eastern regions. Those who know the fine cigarettes that Cyprus produces (cigarettes which were introduced to a large and very appreciative public at the British Empire Exhibition) will doubtless be surprised at this, but the tobacco used for the famous cigarettes is imported chiefly from Greece, the local tobacco being only used for cigarettes of an inferior quality. During the War tobacco growing in Cyprus received a considerable impetus, this being particularly the case in regard to the Latakia type of fumigated tobaccos, owing to the impossibility of obtaining these tobaccos for the European market from the usual channels. Unfortunately as a result of the ready market available in the circumstances for these Cyprus tobaccos and the high prices obtained, the growers neglected to pay sufficient attention to the question of quality. The consequence was that the reputation of the tobaccos suffered, and when the other channels of supply were open there was an inevitable decline in the demand for Cyprus tobaccos. As a British Colony Cyprus enjoys the benefit of the preferential duty on tobacco grown in the Empire, and this should be an encouragement to the growers to concentrate on the production of improved tobaccos. As a matter of fact, trials are now being made by growers with a view to the production of a high standard of Latakia and other tobaccos, and it may be hoped that the result will be that the Island will be able to produce considerable quantities of tobaccos of a quality suitable for British manufacturers.

SPONGE FISHERIES.

Owing to the fact that the rivers of Cyprus all dry up in the summer months there are no true fresh-water fish in the Island, Grey mullet and eel, however, make their way upstream and are caught in the lakes and reservoirs. The sea fisheries comprise the fish common to the Eastern Mediterranean—red and grey mullet, eels, bass, bream, cuttle-fish, goby, tunny, skate, etc.—but the industry is confined to local needs.

Sponge-fishing constitutes a more important industry, but is carried out principally by fishermen from the Greek islands (Sporades) who arrive in Cyprus in the spring and work throughout the summer. There are sponge-beds practically all round the Island; but between Cape Andrea and Cape Gata—or the eastern coast—and off the Akamas coast, in the extreme west, are found the best centres.

During 1925 the catch amounted to 1,500 okes, and in 1926 to 1,250 okes. The whole catch in both years was removed from the Island.

The industry is entirely under the control of the Government. Each boat has to be provided with a licence, for which the following fees are charged:

Boats fitted with machine diving apparatus	£100
Boats fitted with Fernex diving apparatus	50
Boats fitted with naked divers	25
Boats fitted with harpoons (kamaki) ...	12 10s.
