During the War, when wolfram became of national importance for the production of tungsten for high-speed tool steel, the Tavoy district, as the chief source of wolfram in the British Empire, attracted very great attention. The Government invited the leading firms in Burma to co-operate in the production, and gave them all the assist-

ance in its power: and for some years Tavoy was a most active mining centre. In the last year of the War, however, large and cheap supplies of wolfram came forward from China: the demand for wolfram fell off, and a year or two ago the mineral, which the Ministry of Munitions took at £210 per ton, did not fetch more than £35. At this price there is no profit in the production, and Tavoy wolfram mines are not likely to be re-opened.

With the steady advance in tin prices, however, and modern facilities of working low-grade alluvials, there has been a considerable development in tin workings. Several companies are already working with great success, and the very wild and broken hill country is being continually explored and prospected. Attempts are being made to develop the planting of rubber and other field products, and it is possible that eventually the district will become of some importance in that respect. But for the present the communications are so bad that the supply of cheap labour is a very great difficulty, and until the country has been opened up by the extension of the railway from Moulmein, the province of Tinasserim must progress very slowly.

One of the companies operating in the district has already found it necessary to advise its shareholders that the fire has in no way affected its interests: and indeed the destruction of the very insanitary bazaars of Tavoy is not likely to impede for a moment such development as is possible.

THE ARABIC HISTORY OF GUJARAT.—III.*

The Story of a Lost Manuscript.

BY SIR E. DENISON ROSS, C.I.E., Ph.D.

"To make a long story short, after morning prayers were summoned to the Amin's court (*majlis*) in the Mosque at the gate of Safa, where we found assembled the Turkish officials and the chief men of Mecca."

"First of all the Amin's letter was read out, then the Amin turned to me as if to ask my permission to action in the orders therein received. Whereupon I rose and handed him the letter I had received. This he took from me with evident disapproval of my audacity in handing him a letter: but when he examined it and recognised the handwriting, he rose out of respect to the writer and read its contents. And behold! it was a cancellation of the orders he had himself received!"

"He then handed my letter to the chief Qazi and the Amin al-Bayt, who were both amazed. After some discussion among the notables and imams, the Qazi mounted the pulpit and read out the second letter, mentioning the date it bore, and when he had descended from the pulpit again the *majlis* terminated."

In 1548 Asaf Khan was recalled to India and Siraj ud-Din was left in charge of what remained of his treasure, much of which had been expended in securing the safety of the women. In 1553 the Sultan of Gujarat and his wise counsellor, Asaf Khan, were both murdered, and two years later Siraj ud-Din returned to India, bringing with him his son Abdullah, the author of our History, then sixteen years of age. They settled in Ahmadabad, and in 1558 Hajji Dabir entered the service of his first master, Muhammad Ulugh Khan, after whom he took the title Ulughkhani. He thus describes how he first obtained employment:—

"One day I was present at an audience held by Muhammad Ulugh Khan and the sun was about to set. The Khan had before him a book, a sheet of paper and a qalamdan. His vizier, Khayrat Khan, asked me if I knew how to write: and as I thought that he was wanting me to copy what was in his book, I replied, "Yes." He thereupon ordered me to write a letter to his brother noble,

*The Sir George Birdwood Memorial Lecture read before the Royal Society of Arts (Indian Section) on February 11; Sir William Foster, C.I.E., in the chair.

Chingiz Khan, to thank him for sending back a subordinate official who had left him in anger, and this troubled me and I tried to devise some way out of the difficulty; I could only think of waiting till he should go out when the Muezzin called to Maghrib prayers from the camp mosque. So I occupied myself with cutting my pen: and ere I had finished cutting it, the Muezzin began his call, and the two went out from the private audience chamber into the portico. Then I put down my pen and followed them, and I went out into the portico with the intention of escaping to my house. But when I reached the office-room (*kachari*), which was empty, it occurred to me to perform my Maghrib prayer, lest I should be too late to do so if I waited till I got home. So I began to pray: and while I was finishing the prescribed 'sunna,' the Khan returned to his audience hall and found me flown. So he said: 'Go and fetch Hajji Dabir.' Now I was not known by this name, but was commonly called by my name, Muhammad. And the servants were busy seeking me, and while they were asking for me, one who knew me followed after them. And he stood where he was, encouraging them in their search. And suddenly he saw me and called them back and said: 'This is Hajji Dabir, and when he has finished his prayer, take him in.' And they did so, and I entered and I wrote the letter and it was a very poor effort. And I went away determined not to return and I kept in my house for several days. Then I was again sent for and I hesitated, but my father ordered me to obey. And I was told to write a letter to the Captain of the port of Diu thanking him for an Arab horse which he had given the Khan."

Shortly after this Khayrat Khan went over to the side of I'timad, the great rival chieftain of Imad and became an independent Amir. And in his new position was evidently anxious to retain his close association with the Hajji. For in the Hajji's own words we read:

"Now when Khayrat Khan Bilal became an Amir, I wandered out one day to I'timad's camp, for amusement: and while I was standing in the divan, and was gazing on the good things which God had bestowed on I'timad Khan, in the way of tents and carpets, which for the most part were in gold work and embroidery, all towering to the sky: and my eyes were also turned heavenwards in admiration, so that I did not notice who came in or went out. Suddenly I found my hand was in the hand of Khayrat Khan, and I turned round and saw him and kissed his hand. And he took me with him to his camp, and would not allow me to be separated from him. And I submitted to the command: and he presented me with a horse and a camel and a tent and two hundred mahmudis. And when my patron, Ulugh Khan, joined I'timad Khan—and he had been gracious to me—I found it hard that he should see me in someone's else's house: and yet my obligations forbade that I should leave the Amir for no reason at all, and so I returned to the town.

"Now Badr ud Din Hasan ad Daylamani, who was vazir to Jahangir Khan, was also inclined to employ me: firstly, because of his kindness and, secondly, because he was in constant correspondence with the merchants living in the sea-ports, the majority of whom at that time were Arabs, and I was competent to help him in this matter. And he took me to see Jahangir Khan, and said to him: 'Our divan cannot do without a man of this sort, and he is to-day in our hands.' And he asked me how much I had received from Khayrat Khan, and I replied, 'Two hundred mahmudis.' Then he said: 'How many of them do you actually receive each month?' I replied: 'So many and the rest are due.' He said: 'These last hang between despair and hope, but from me you will receive one hundred month by month. This will be a little always and not much curtailed!' To which I replied: 'Your little cannot be called little.' And I remained with him until the time when my Patron and Benefactor Ulugh Khan said to me: 'I have ordered you a horse and a camel. By dawn you must be there!' He then took off his coat, which was a jubba of Alexandrian qumash, and put it on me; and then let me go back to my house and bid farewell

to my people. I then went to Hasan ad Daylamani and told him what had happened, and said: 'By a fortunate chance I have not taken any of my pay: and in spite of your urging me to take an advance. For I left my pay untouched for fear of such a day as this arriving. Indeed, he (Ulugh) was always in my thoughts, and I was anxious lest something should happen which would cause a breach between myself and the Khan. And as soon as it was dawn I was at the Khan's door.'

In 1571, when Akbar entered Ahmadabad, Ulugh Khan entered his service, and Hajji Dabir received an appointment in connexion with Akbar's religious endowments in Mecca; and thus in 1572 he made the pilgrimage to Mecca in an official capacity.

He remained with Ulugh Khan down to 1576, when he entered the service of his second master, Sayf ul-Muluk, where he remained for the next twenty years. In 1595 he entered the service of Fulad Khan, who died in 1605. This is the latest date mentioned by the author, and we know nothing of his movements or his activities after that.

In the first place the author seems to have obtained employment, thanks to his knowledge of Arabic. Persian he acquired only after his arrival in India. He was not, however, exclusively engaged in clerical work, for he speaks of his own participation in several engagements, and in 1559 he so greatly distinguished himself in a battle at Baroda that he was rewarded with the gift of two villages. It is only to be regretted that a man who was both a scholar and a soldier, and who lived through fifty years of continuous adventure, should not have seen fit to write an autobiography. For his life faithfully recorded would probably have offered one of the most thrilling personal narratives. Possibly something more like an autobiography was contained in the special memoir he wrote of his patron, Muhammad Ulugh Khan under the title of "*Fawatih ul-Iqbal wa Fawa'id ul-Intiqal*," to which he refers twice in his history, and which may still turn up some day on the shelves of an Indian library.

AN INDIAN BIBLIOGRAPHY.

The Library of the Royal Colonial Institute has rendered a good service to students, public men and others who have reason to be interested in Indian affairs in compiling a Bibliography relating to India. This list, which contains books printed in English and published since 1900, may not be exhaustive, but with over four hundred separate entries, can claim to be comprehensive. It does not include technical works, and books having a purely local application have for the most part not been incorporated. Indian Art is the subject of a separate leaflet. The headings under which the books are grouped include the following:—(1) General Description, (2) Administration and Politics, (3) Economics, (4) Finance, (5) Frontiers and Foreign Relations, (6) History and Biography, (7) Literature, (8) Religion, (9) Reminiscences, (10) Travel. The sub-headings number about sixty. The Bibliography, which can be purchased from the Librarian of the Royal Colonial Institute, Northumberland Avenue, London, W.C.2., for threepence has been compiled for the Institute and the School of Oriental Studies by Sir John Cumming, K.C.I.E., C.S.I.

In this connexion it is of interest to note that the Leeds Commercial and Technical Library has also issued a special Bulletin giving a list of its books on India. A supplementary notice states:—

In addition to the books listed in this Bulletin particular attention is drawn to the fund of detailed and specialised information which is stored in the *File of Current Data*. In this file the material is arranged by subject. The following subjects, chosen at random, will suggest the type of material the file contains, all with special reference to India: Advertising; Coal Mining; Commercial Travelling; Cotton Growing; Maps of Countries; Tariffs; Textile Industry; Trade Openings.

INDIAN MAIL.

The Bengal Ministry.

It would seem that the difficulties of the Governor of Bengal have by no means come to an end with the acceptance of office by a Hindu and a Muhammadan Minister. A leading Hindu publicist complains that Lord Lytton had practically abdicated in favour of Sir Abdur Rahim by asking him to nominate his own Hindu colleague; though Sir Abdur Rahim himself apparently considers that he was nominated as a sort of Prime Minister and that there was therefore every justification for entrusting him with the task of selecting his own partner; who, by this implication would have been a junior one. Perhaps this idea was partly responsible for his failure to persuade any Hindu to serve with him; and that section of Moslem opinion in Bengal, that supports Sir Abdur Rahim, voices the counter complaint that the Hindus practically dictated to the Governor which Moslem Minister he could be allowed to choose. The Hindus urged that, Sir Abdur Rahim having been given a free hand to find a Hindu colleague, Lord Lytton's proper procedure, after his resignation, would have been to select a Hindu and give him the same powers; and this, indeed, at any rate in substance if not in form, seems to be what has been done. A determined attempt to intimidate Mr. Ghaznavi, the newly appointed Moslem Minister, is being made by a number of quite irresponsible Muhammadan students, who have discovered that "the honour of Islam" is bound up with the retention of Sir Abdur Rahim in the Ministry; by not allowing which, "the Hindus and the Government have insulted the Moslems of Bengal," with Mr. Ghaznavi as an accessory after the fact. The Muhammadan Deputy President of the Bengal Council has "issued a statement to the Press," the wording of which is by no means calculated to pour oil on the troubled waters. It says that the personal ambition of an individual, however great, should not be allowed to stand in the way of a great experiment in political development: that, if Sir Abdur Rahim sincerely desires to carry out the mandate of the Moslem electorate of Bengal, to work the Reforms, he should subordinate his personal pique and disappointment and should not be a party to silly agitation inimical to Muhammadan interests; and that it is time that he realised that "the Moslems of Bengal will not be extinct like Dodo in Madagascar without his lead. If Sir Abdur Rahim really harbours the feelings with which the Deputy President credits him, he is not likely to abandon them in deference to an "appeal" of this kind; but rather, having the will to make himself unpleasant, to look round for the power to put it into operation.

Indian Troops for China.

The "popular" protests against the despatch of Indian troops to China seem to be dying down; though the objectors will probably claim that the return of two Punjab battalions to Hongkong, and their replacement by British troops, has been directly due to their efforts. The malicious suggestion that this change was due to disaffection among the Indian soldiers has been flatly contradicted by the Foreign Secretary in Parliament; though it is to be expected that Indians of the agitator class will none the less repeat it. One of the latest pronouncements on the subject of the Concessions, made in a public meeting at Delhi, reads strangely in view of the insistence that the Union of South Africa shall honour the debt incurred towards Indian immigrants by Natal when that Colony was a separate entity: the speaker said that treaties signed by the Chinese Emperor were not binding on the Chinese people who had got rid of the Imperial Government. Another speaker offered an inspiring suggestion for a "practical demonstration against the decision to send troops, by lying on the railway lines when the troop-trains passed on their way to China." The latter speaker made a special appeal, to the Moslems among his audience, to realise "the threat of subjection of the Muhammadan population" of India inherent in the similar "threat" to the Chinese. A reasonable audience

would merely laugh at balderdash pushed to such a pitch of insane absurdity; but audiences in India are generally far from reasonable, and are apt to accept pernicious nonsense such as this at its apparent face value.

American Citizenship.

Reference was recently made in these columns to the refusal of the United States to admit the eligibility of caste Hindus for naturalisation, which had been claimed by them on the ground of Aryan descent. It appears that what the claimant has to prove is that, in the eye of American law, he is a "free white citizen": and this claim is now, after a preliminary success before the lower Courts, being sustained by an Indian, practising as a barrister in California, before the United States Supreme Court. An appeal for money to help to fight the case has been sent to India; and it is argued that the matter is one of vital importance to India's self-respect and that, in fighting for his rights, the claimant is in fact fighting for "the honour and recognition of his Motherland before the bar of American justice." Previous refusals of citizenship have, it is asserted, inflicted disgrace on the Indian nation, which should now raise a united voice in order to maintain the dignity and prestige of India and of her sons and daughters; and it is suggested that, if this is not done, "the world will treat Indians as helots."

This strikes one as a curious and characteristic example of Indian mentality. The American Courts have always recognised Indians to be "free citizens": the only question in debate is whether they can be classed as "white." In spite of its proverbial fondness for fictions, the law has an inconvenient way of taking account of facts; and it is as difficult to guess why, on a claim to original Aryan ancestry—more often than not entirely fictitious—the judges should be expected to deny the evidence of their own eyes, as it is to imagine why it should be thought worth while to ask them to do so.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Roumania's Transport Plight.

The figures our Bucharest Correspondent quotes this week with regard to Roumania's rolling stock illustrates very plainly the extent of the country's transport problem, and explain better than reams of writing could do why the country's recovery since the War has been so appallingly slow. As a matter of fact, the transport position instead of getting better has become worse. In the table given on another page, the figures of rolling stock for 1926 and 1922 are compared, and it will be seen that the situation of the railways last year was infinitely inferior to what it was four years before. In only one class of rolling stock—tank wagons—is an improvement shown, and that is due to very special efforts made last year, on account of the imperative need for the development of the export trade in oil. Nothing is said as to the condition of the lines themselves, but there is no reason for believing that they are in much better case, and the statistics show, if they show anything, that if Roumania's transport system is to be placed in a position which will enable it to meet the country's extensive needs at an early date it can only be through foreign assistance. Left to her own resources it is quite evident that Roumania cannot cope with the situation.

The Leu—A Paradox.

With the transport in this deplorable condition, it is something of a paradox that the exchange, as I recorded in a recent issue, should have improved so greatly—it has gone in a few weeks from about 950 to the pound sterling to 814½ at which it stands at the time of writing—a paradox because it is indicative of economic development and yet in the organism which is essential for commercial progress there is no improvement. The rise in the leu is nevertheless an index of the very substantial advance that the country has made towards the normal, and may perhaps be taken as a not unreliable indication of what would have happened if the development of transport had kept pace with the country's other activities. It is due to a number of factors among which, as I said, are the favourable balance of trade, and last year's good harvest which means a large surplus available for export. The trade balance in Roumania's favour is just under four milliard lei, while of the maize crop alone there are 2,000,000 tons available for export. These things, combined with the development of the oil industry, and reduced purchases abroad—the latter a very important factor—explain the present exchange movement. He would be a bold individual, however, who would expect the improvement of the leu to continue much further, for the country is still far from approaching that state of stabilisation which is the essential of a steady exchange. The transport problem, once solved, other things would settle themselves. Its present unsatisfactory state is the crux of the situation in Roumania to-day.

Bulgaria's Financial Position.

A summary of the Budget debate in the Sobranye is given this week by our Sofia Correspondent. Reading between the lines it is a little difficult to avoid the impression that the difficulties with which Bulgaria is faced are being stressed unduly for the benefit of foreign consumption. No one conversant with the facts could imagine that Bulgaria will have anything but an adverse financial road to travel for a long time, but the speeches

in the Sobranye suggest an unwillingness to venture far along the road at all. In order to obtain the Refugee Loan Bulgaria had to put her financial house in order, one of the principal steps being to make the National Bank an independent institution. That means in plain terms that the State has to rely on itself, for if the receipts are incommensurate with the expenditure there is no easy recourse to the Bank. That brings the question down to one of economy—the problem which is, in fact, the ruling factor in the finance of every State affected by the War. As everyone knows, economy is apparently an elusive element in Governmental policy, being too dependent on factors from without, but it is a problem which has to be solved, by Bulgaria as well as by every other country, and on the extent of Bulgaria's success in grappling with her individual problem will depend the sympathy and support for which she looks from outside.

Success of the Fair.

It is eminently satisfactory to be able to state that the expectations entertained that this year's British Industries Fair would be an outstanding success have been amply fulfilled. The figures for the White City are most illuminating. Among the crowds of buyers, who showed an increase of 26 per cent. on the attendance of the previous year, were representatives of 61 countries, and it is significant of the reputation the Fair has made for itself in its short existence that there were 100 buyers from Australia. The Near and Middle East, it may be noted, was much more strongly represented than before, there being a contingent of buyers from the Balkans, Persia, and elsewhere. The success of the Fair is not, however, to be measured in terms of buyers or of the number of countries represented, but by the business actually transacted, and here the position leaves nothing to be desired. The report of substantial orders is forthcoming from firm after firm represented at the Fair; in this connexion it is of special interest that some good business has been done with Persia. It will doubtless be a great encouragement to those regions which did not take part in the display of Empire goods to come forward on the next occasion to know that the trade done in this section was particularly satisfactory. The results attained by the exhibition of India's products are stated to have been most gratifying, inquiries having been forthcoming from many countries. Next time it may be hoped that regions like Cyprus, who are seeking enlarged outlets for their products will take the opportunity which the Fair unquestionably affords of establishing new business connexions.

BANK OF ROUMANIA LIMITED

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Southern Punjab Railway.

At the general meeting of the Southern Punjab Railway, a report of which will be found in another column, the Chairman, Mr. J. M. Rendel, pointed out that the past year's results from a revenue finding point of view were much the same as those of the previous twelve months. The disposable balance amounted to £170,006 which compares with £166,167 for the previous year, and the distribution was maintained at the previous rate. During the year the Sutlej Valley line was reopened, and from November 23, 1925, to the end of the twelve months the gross earnings amounted to just under Rs. 100 a mile a week, which Mr. Rendel stated was a not unpromising beginning. As regards the current year Mr. Rendel was able to state that the earnings of the main line and the Ludhiana extension are so far not unsatisfactory if not quite equal to those of the corresponding period of last year.

Recovery in Rubber.

Events in the Rubber market in the past week call for a passing notice. While stocks of rubber in London have continued to increase and now stand just below 60,000 tons, the price of the commodity has begun to firm up in an unmistakeable way, and at the moment is now in the neighbourhood of 1s. 8½d. per lb. The average for the quarter, however, is no more than a mere fraction above 1s. 7d., so that if an average of 1s. 9d. is to be attained the price for the remainder of the quarter must average slightly over 1s. 10d. It looks as if there will not be much in it when May 1 comes, but whether there is a further reduction in the export quota or whether it remains the same for the ensuing quarter the price of the commodity is likely to improve. The only difference is that with a reduction to 60 per cent. the upward price movement will be rapid, whereas in the other case it will be gradual. The situation as I have outlined it fully explains the recovery in the share market now taking place.

and Branches.

ROUMANIAN FINANCES.

Cables have been received from Bucharest reporting that, after lengthy negotiations, an agreement has been entered into, under which the Skoda Works, and Messrs. Ringhoffer (the well-known manufacturers of rolling stock in Czecho-Slovakia) have accepted Bonds of the Roumanian Government 4 per cent External Loan 1922, and Bonds of the Roumanian Government 4 per cent Consolidation Loan 1922 (calculated at present prices ruling in the market) in settlement of their claims against the Roumanian Government. These payments, amounting to about 310,000,000 Czecho-Slovakia crowns (approx. £1,900,000) plus interest, were due in four instalments payable in 1927, 1928, 1929, and 1930.

By this arrangement, Roumania is converting a short term debt, payable in a currency which may be subject to appreciation, into a long term debt, payable in a gold currency, thereby relieving herself of a possible exchange risk, and lightening her Budget and her requirements in foreign exchange for the next four years, by about 500 million lei (over £500,000) per annum. It is understood that the agreement will be submitted shortly for ratification by the Roumanian Chambers.

COMPANY NOTES AND REPORTS.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for the month of February was 35,900 tons.

The Nundydroog Mines announce a balance dividend for 1926 of 9d. per share, payable April 12. This makes the distribution for the year 1s. 3d. per share, less tax.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended February 10 amounted to £E8,959, making the total from April 1 £E271,803.

A White Paper dealing with the Ottoman Guaranteed Loan of 1855 shows that in 1926 £40,753 17s. was paid out by the Treasury in interest and management, making the total sums issued £477,424 18s.

The profit of the Constantinople Land and Building Company for 1926 amounted to £2,337, and £2,041 was brought forward. A dividend of 3 per cent., less tax, is proposed, leaving £2,378 to be carried forward.

The Balaghat Gold Mines announce a balance dividend of 3d. per share on both preference and ordinary shares, payable April 7, making the dividends for 1926 1s. 3d. per share on the preference and 3d. per share on the ordinary shares.

The traffic receipts of the South Indian Railway Company for the week ended February 5 amounted to Rs.9,71,615, making the total from April 1 Rs.4,41,31,958. The figures for the corresponding periods of the previous twelve months were Rs.9,40,507 and Rs.4,41,86,008.

THE YUGOSLAV MARKET FOR MOTOR CARS.

(By Our Liubliana Correspondent.)

The Yugoslav market for motor vehicles covers in the main two wide regions, viz., the north-western part of the kingdom—alpine country, but provided with decent roads; and the south-eastern part, where the roads are bad and the terrain—level limestone formation—is not too favourable. Therefore the north, i.e., Slovenia and Croatia, prefers to buy light, inexpensive, and economical cars, whereas in other parts there is a demand for large and heavy cars. Even in Slovenia the terrain is not easy. Some of the roads have gradients of 25 per cent., which means that small cars can scarcely negotiate them.

There are no motor car works in Yugoslavia and no shops for assembling cars. If one takes a map of Yugoslavia and goes through the adjoining States, one finds Hungary, Roumania, Bulgaria, Greece, and Albania all without any motor car industry (the Hungarian motor industry cannot be counted, since it does not suffice even for home needs); and then Italy and Austria, whose great motor car works are world-famous. Importation from both into Yugoslavia is direct and easy, by land or by the Adriatic through Dalmatia.

The Yugoslav market is supplied above all with French cars, but this can only be a temporary feature. Taking advantage of the low rate of the franc French manufacturers established large numbers of agencies in all towns of any size, and these agencies in their turn established sub-agencies. Although French cars have sold readily, and a sound foundation for further business has been laid, it is obvious that conditions must change now that the franc is rising again. Agents will not work except on a dollar or pound sterling basis. Views on the outlook differ. Some optimistic importers believe that French industry will continue to hold its own against competition in spite of the rehabilitation of the franc. All the same it is doubtful whether French manufacturers will be able to compete successfully with American and Italian goods.

The motor car works nearest in point of distance to Yugoslavia are in Austria, and the nearest works for assembling cars are Ford's in Trieste. The Austrian factories in question are Daimler's in Wiener Neustadt, and "Steyr" in Upper Austria. Yet so far Austrian goods have failed in the Yugoslav market. The cars, which are excellent in quality, are too heavy for the northern regions and too expensive for the southern. Italian cars are far more widely used. There is not an Italian make that is not met with in Yugoslavia; and although the import duty is heavy—20 per cent. of the invoice value for the trade, and 25 to 26 per cent. for private purchasers—Italian cars are nevertheless, thanks to the low cost of transport and their type, pretty well the cheapest in the market after the French. Of course, so far they have not been able to compete with French prices. In what por-

tion Yugoslavia imports motor cars from other states is shown by the following table, the figures representing percentages:—

	1924.	1925.
Great Britain	2	1
France	28	34
Germany	6	4
Czecho-Slovakia	4	1
Italy	23	21
U.S.A.	36	38
Other countries	0	1

These figures, which are only approximate, because they refer only to new cars, and, in fact, only to private cars, show how the French and American motor car industries have practically captured the whole Yugoslav market. America, moreover, does a good trade in motor tractors for agricultural purposes, which paves the way for the introduction of other American machinery as well into Yugoslavia.

It is difficult to say how far individual makes of cars may or may not be suited to the terrain, which differs so widely in the different regions of the kingdom. At the motor trial races at Liubelye last summer there was only one French car, an Amilcar. American cars with their elastic engines are able to negotiate the worst of roads and are therefore very popular. Generally speaking, Yugoslavia requires strongly-built cars, so-called rough country cars. A city car easily gets out of order, or indeed refuses to move. Almost all European cars have higher gears than American, and are more economical, but also far more delicate.

I do not know what is the reason why so few British cars are on the Yugoslav market. High initial cost is certainly not to blame, because first-class Italian cars—Isotta, Tracchino, Alfa Romeo, Lancia—are high-priced and yet find a ready sale. It is more likely that the difficulty of obtaining spare parts for repairs constitutes an obstacle. Few of the Yugoslav firms are sufficiently enterprising to send mechanics over to England to study the construction and working of British cars. Further, it is not worth while to lay in a big stock of spare parts for a small series of cars, because the goods are apt to get left on one's hands. That the British motor car industry might do well over here is proved by the popularity of British motor bicycles, e.g., the B.S.A., A.T.S., Matchless, Douglas, Rudge, and others, which are in evidence both on the road and at races.

A serious obstacle to the free development of the motor car trade may be found in high taxation. Then petrol is very expensive, owing to the enormous import duty on petrol and raw oils. Transport costs almost nothing, as all the petrol comes from Roumania up the Danube and Sava.

North-western Yugoslavia—Slovenia—has good roads and is readily accessible to foreigners at several points. Industry is comparatively well developed there, and consequently also motor traffic. Motor tractors for agricultural purposes are not practical, however, except here and there, as the greater part of the region is mountainous.

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition.

Similar conditions obtain in the Dalmatian coastlands. The mainland of Dalmatia and Bosnia has good roads, but too few of them, and for this reason it is difficult to make use of small cars only. In Bosnia most of the motor traffic is done with Ford cars. Looking at the plains along the Danube, Drava, and Sava, it will be realised that the heavy fertile soil of those parts is not conducive to good roads. Therefore the cars met with there are heavily engined—over 50 h.p. This part of the country, on the other hand, makes the most use of agricultural machinery. There remains the southern part of Serbia. Here, too, only powerful cars are of any use, because, with very few exceptions, the roads are in a wretched condition, or altogether non-existent. Long centuries of Turkish misrule, the devastation of the World War, and lack of interest on the part of the powers that be, have all set their mark upon the land. Here, too, the Ford is the car most in use.

COTTON GROWING IN IRAQ.

At the monthly meeting of the Council of the British Cotton Growing Association held at Manchester on March 1, it was reported that in Iraq a total of 3,100 bales have been purchased to date, and the total crop is expected to show an increase over the previous season of about 1,000 bales, which is most satisfactory in view of the lower values now ruling for cotton.

The Egyptian Minister of Agriculture has established a temporary department at Cairo for the execution of the law restricting the area under cotton to one third of the acreage.

A contract has been given by the Egyptian State Railways to the Metropolitan Carriage, Waggon, and Finance Company, Birmingham, for 250 steel box trucks.

Ransomes and Rapier, Ipswich, have received a contract for lock-gates for the new Kafir-Bulin regulator, midway between Cairo and Alexandria.

Mr. W. E. Rootes, who is investigating the prospects for the export of British motor cars to the Dominions and foreign countries, left Cairo on February 24 for India.

At the forthcoming meeting of the Banque de Salonique the directors will propose the repurchase of the founders' shares, which are entitled to 10 per cent. of the bank's net profit.

The Hon. Alexander Shaw, who has been a member of the Boards of the P. and O. and British India Companies for a number of years, has been appointed Deputy-Chairman of these companies.

It is announced that the date for submitting tenders in connexion with the offer made by the Greek Government to grant to salvage firms the work of raising vessels sunk in the Aegean and Ionian Seas has been extended to April 15 in the case of tenders submitted to the Greek Legation in London, and to May 5 if they are made in Athens.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Centrifugal Pump, Etc.—The Director-General of Prisons, 43, Sharia El-Bustan, Cairo, invites tenders for the supply of high lift centrifugal pump, fire hydrants, chemical fire extinguishers and air-moistening machine required for the spinning machine workshop at Delta Barrage Prison, April 12.

Tents, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of tents and shamsias for same, April 29; document and map printing paper, May 3; calico and Shash, May 9.

Photographic Materials.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. March 16.

Stationery Articles.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of stationery articles for 1927-1928. Approximate cost between £E6,000-7,000. March 22.

Paper.—The Controller-General, Administration and General Stores, Ministry of Finance, invites tenders for the supply of paper, binding materials, and metals required by the Government Press for 1927-1928. March 17.

Photographic Material.—The Egyptian Ministry of the Interior invites tenders for the supply of photographic material, including apparatus and accessories, chemicals, plates and papers, and identification films required during the year ended March 31, 1928. March 16. (D.O.T.)

Tents, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of tents and shamsias for same. April 9; aluminium and zinc lithographic printing plates, April 27; and document and map printing paper. May 3.

Paper, Printing, and Bookbinding Material.—The Egyptian Government Press invites tenders for paper, boards, printing ink, cloth, etc. March 17. (D.O.T.)

ROUMANIA.

Naval Stores.—Tenders are invited for the supply of various goods required by the Naval Dockyard at Turnu-Severin, Roumania. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—A steamer for Bombay (Birkenhead, March 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.S. Manipur for Port Said, Colombo, and Calcutta (Birkenhead, March 19).

Bibby Line.—S.S. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, March 23).

British India Line.—S.S. Querimba for Bombay and Karachi (London, March 12); s.s. Movada for Colombo, Madras, and Calcutta (London, March 12).

Cunard Line.—S.S. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume, also at Ancona if inducement (Liverpool March 19, Swansea March 22); s.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, April 9).

Johnston Line.—S.S. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 12).

P. and O. Line.—S.S. Rajputana for Bombay (London, March 18); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.S. Egyptian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, March 19).

Ellerman and Papayanni Lines.—S.S. Manchurian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Swansea, March 11); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Newport March 8, Liverpool March 16); s.s. Algerian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 19, Swansea March 19); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, 21); s.s. Dido for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 23); s.s. Mardinian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 2); s.s. Roumelian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool April 2, Swansea April 5).

* Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 8.

The outstanding feature in the Stock Markets during the past week has been the recovery in gilt-edged stocks and particularly in the new 4 per cent. Consols. This change is apparently due to the cessation of selling which has of late depressed the markets for high-class investment stocks, and to the advent of a little buying, some of which is said to be on behalf of the Government. It is suggested that some of the buying of gilt-edged stocks is prompted by hopeful views of lower money rates later on, but a reduction in Bank rate before the end of the financial year is hardly to be expected. The decision to introduce the Budget a fortnight earlier than usual is generally welcomed as shortening the period of uncertainty which always acts as a restraining influence upon Stock Market activity. In other directions markets have been somewhat irregular. Home rails are quiet, but Canadian Pacifics continued to advance. The oil share market, after its recent activity, has become erratic without any definite tendency, and public interest has very much waned. The Kaffir market has been lively but this is mostly due to professional buying from South Africa.

The Tax Outlook.

The issue of the Colwyn Committee's Report with its advocacy of orthodox, or even heroic, finance, is of peculiar interest to the taxpayer at the moment. For such data as are available at present suggest that Mr. Churchill can only balance his 1927-8 Budget either by increasing taxation or by "raiding" the Sinking Fund. This expert Committee finds that even the present level of allocation out of revenue for debt redemption is too low, and recommends that it be increased to £75 millions in the next five years and then to £100 millions. At the same time it deprecates the common idea that high taxation severely restricts business activity and enterprise. Among financial theorists both these views find strong support; but they are not acceptable to industrialists. Mr. Churchill would therefore appear to be on the horns of a dilemma, from which it will exercise all his ingenuity

to escape. Last year he quite unexpectedly produced a prospective surplus—since, of course, ruined by the coal strike—by introducing one or two minor axe measures and by producing "windfalls" through what he described as "a little judicious shaking of the tree." It is unlikely that the "tree shaking" process can be repeated. So, in spite of the Chancellor's cleverness and his obvious wish to avoid unpopular tax decisions, the rally of financial theorists to the support of "sound" policy will serve to heighten the fears which the ordinary taxpayer entertains regarding the budget prospects—fears, which, incidentally, the Civil Service and Army Estimates do nothing to allay. The period of anxiety is, however, shortened by the Government's decision to introduce the Budget earlier than usual, namely, April 11.

The Rubber Share Market.

The price of raw rubber has recently shown a tendency to harden and this has been quickly reflected in the share market, where a few buying orders are sufficient to emphasise the shortage of stock and to cause an improvement in prices which is rather out of proportion to the volume of business transacted. It has been suggested that rubber is replacing oil as the popular medium of speculative investment. The movement in the price of rubber in February suggests that a further reduction to 60 per cent. may be made in the exportable allowance under the Stevenson Restriction Scheme on May 1. If this happens the amount of rubber available for consumption may be expected to show a considerable reduction. The crux of the position, however, lies in the American demand, which is, of course, almost impossible to estimate. The future, indeed, is full of uncertainty, and there appears to be little in the immediate outlook to justify an outburst of strength in the rubber share market. But the good profits that are being made by the well managed companies may serve as the basis for an upward movement.

An Attractive Electrical Investment.

The electrical industry continues to be one of the bright spots of the British industrial world. Valuable orders have been secured, particularly on the export side. The index of activity in the electrical industry compiled by the British Electrical and Allied Manufacturers' Association shows an encouraging tendency. Thus taking 1920 as 100, the January figure for "home" was 95 and for "export" 152, giving a total of 109. Current industrial activity is described as highly satisfactory, most sections being busy, notably manufacturers of switchgear and transformers.

In these circumstances the ordinary shares of Mather and Platt, are worth consideration. At the meeting last week the chairman gave a very hopeful survey of business prospects for the current year. And the earnings for 1926 despite the adverse conditions, were only slightly below those of the previous year. Thus net profits have recently been as follows: 1924, £275,034; 1925, £260,885; and 1926, £251,636. Throughout this period the dividend has been maintained at the rate of 15 per cent. free of income tax. Moreover, the balance sheet disclosed a very strong position, there being a substantial reserve fund, while considerable sums are carried forward each year. At the present price the ordinary shares, of which there are 1,363,660 outstanding, give a return of £5 17s. per cent. free of income tax, and may be considered a fair industrial investment.

Mr. R. Davies, O.B.E., Acting Director of Intelligence, Sudan Government, has been appointed Director of Intelligence, to date January 1, 1927.

The Court of Directors of the Royal Exchange Assurance announces that the rate of interim bonus on life policies becoming claims either by death or maturity during the current quinquennium ending December 31, 1930, has been increased from 35s. per cent. to 37s. 6d. per cent., in respect of each full year's premium paid on or after January 1, 1927.

Company Meeting.

SOUTHERN PUNJAB RAILWAY.

Sutlej Valley Line Reopened.

The ordinary general meeting of the Southern Punjab Railway Co., Ltd., was held at the company's offices, 36, New Broad Street, E.C., on March 2, the Chairman, Mr. James M. Rendel, presiding.

The Secretary having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen, I am sorry to say that Mr. Gladstone is unable to be present to-day. He is abroad, and kept there unfortunately by the indisposition of his wife, and I am sure that we all sympathise with his anxiety on that account; and I think also you will join with me in congratulating him on the triumphant vindication of his father's great name which he and his brother secured in the recent action.

With your permission I will, as usual, take the report with the accompanying accounts as read. In moving it let me, to begin with, say how much we all deplore the death of our late Chairman, Sir Bradford Leslie, which is referred to in the report, and which occurred only a few days after our last annual meeting. He was the founder of this company. He presided over its fortunes from the beginning for a period of over 30 years, and there is no doubt, as we have said, that its ultimate success has been largely due to his foresight, tenacity, and watchful care. He was, indeed, a very remarkable man; keen, versatile, and strenuous right up to the end of an unusually long life. But when we think of him it is not only his gifts of intellect and mind that we remember; we remember also a personality of singular gentleness and charm, which endeared him to all who came in contact with him, and will not soon be forgotten by those who worked with him and under him here.

The arrangements which in consequence of his death have been made in the constitution of the Board are also referred to in the report. My colleagues have done me the honour to elect me to the Chairmanship. Sir Henry Burt has accepted the position of deputy chairman. To fill the vacancy in the directorate we have been fortunate enough to secure the services of Sir Ernest Bell, whose experience and knowledge of Indian Railways as a former Manager of the North Western Railway Administration which works the company's lines, as ex-member of the Indian Railway Board, and finally as Government Director in this country of Indian railway companies, cannot fail to be of the greatest value to this company.

The year has been a normal one, the only circumstance of special interest being the reopening of the Sutlej Valley Line. This line, which was constructed by us and opened in 1910, was, as you will remember, closed and, indeed, taken up by the Government during the War, and for many years, during which the Government paid us interest on its capital cost, remained in whole or in part out of action. It has, however, at length been reconstructed by the Government, with a slight change in alignment, involving an increase of four miles in length. Work was completed on November 23, 1925, when the line was opened throughout for all classes of traffic. From that date to September 30, 1926—i.e., to the end of the year under review—its gross earnings amounted to Rs.9,50,643, or just under Rs.100 a mile a week, which may, I think, be regarded as a not unpromising beginning, though not enough to clear the line of dependence on rebate, or to add anything to the total net receipts of the company, in regard to which the general position is substantially the same as it was a year ago.

The net receipts in India from all sources, including rebate, amounted in the year under review to Rs.69,82,534, realising, at an average rate of 1s. 5½d. to the rupee, the sum of £516,274. Out of this we have to pay the Secretary of State as his share the very substantial sum of £177,483; to provide for Indian income-tax and Indian super-tax; all fixed charges, including the preference stock dividend, and administration expenses; the net result, after bringing in interest on investments and making some other adjustments, being what I may call a disposable balance of £170,006. The corresponding figures for the previous year were net receipts in India Rs.70,86,825, rate of exchange 1s. 6d., proceeds in sterling £526,933, Secretary of State's share £186,346, and disposable balance £166,167. The two years are thus, from a revenue-producing point of view, in much the same position.

In these circumstances you will not be surprised if we adhere to the policy of caution, and we restrict our total distribution for the year to the £14 per cent. which of late years has become customary, and which, subject to any extraordinary variation in the rate of exchange, we hope to maintain. We have decided to transfer a further sum of £50,000 to the contingencies account, bringing it to £150,000, and thus reduce the "carry forward" to £57,794. If, as many people expect, though I decline to express any opinion on the subject, the Secretary of State should determine to buy us out at the end of 1929, such a sum is amply sufficient to serve for so short a time all the purposes for which a margin of this kind is required. On the other hand, there is the possibility, which cannot be ignored, that the Secretary of State may elect not to exercise his option and may allow us to go on as we are for at least another five years. If so, as you may easily imagine, many contingencies may arise which may make it desirable for us to be in as strong a financial position as possible.

In any case if and when the line is bought out all reserves and accumulations will come back to the holders of ordinary stock as in effect part of the redemption price, as to which I should like to add a word to what I said last year. I thought it right then to point out that, in calculating the premium which the Government will have to pay us, it is not safe to assume, as some of the estimates which have appeared lately in certain financial papers unfortunately do, that premium will be earned on the whole of the capital expended.

With regard to the Jullundur Doab Railway the earnings continue to be disappointing, and the prospect of any premium being earned by December 31, 1929, must be regarded as remote. As to the Sutlej Valley Railway, we are distinctly more sanguine than we were a year ago. Everything will depend on the way the traffic develops, and the rate of exchange at which we are able to remit the earnings from India. A fall in the exchange would make a serious difference, but with reasonably good fortune it is by no means out of the question that some premium at any rate may be earned. As regards the main line and the Ludhiana extension another year only confirms our confidence that the full premium is secure. The earnings for the current year to date, if not quite equal to those of last year, are so far not unsatisfactory. It is, however, too early to make any forecast of the ultimate result.

The report was unanimously adopted.

The gross production of crude oil of the Phoenix Oil and Transport Company for February was 26,574 tons.

A provisional commercial agreement has been made between Greece and Bulgaria on the most-favoured-nation principle.

The British Overseas Bank announces that funds for the payment of the coupon due April 1, 1927, on the bonds of the Roumanian Four per Cent. Consolidation Loan, 1922, have now been received.

LLOYDS BANK LIMITED.

HEAD OFFICE:

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

ROUMANIA'S RAILWAY TRANSPORT PROBLEM.

(From Our Own Correspondent.)

Bucharest, March 2.

The all-engrossing subject of public preoccupation at present is the condition of the railways and the urgency of finding money both for their upkeep and for the increase of their capacity. According to a report published in the *Argus* of February 26 the following figures represent the situation of the rolling stock in 1926 as compared with 1922:—

		Total	In Service	Slightly defective	Need thorough repairs	To be destroyed
Passenger	1922	6,273	2,456	865	2,768	184
Carriages	1926	5,240	2,214	832	2,033	161
Covered Goods	1922	36,670	17,097	8,943	9,565	1,065
Wagons	1926	32,301	14,998	7,701	8,606	995
Open Goods	1922	44,000	21,308	11,590	10,656	1,918
Wagons	1926	39,405	16,112	9,977	11,999	1,325
Tank Wagons	1922	7,485	5,170	1,342	917	56
	1926	9,639	7,298	1,350	931	60
Total Wagons including luggage and Port Vans...	1926	88,975	40,522	20,350	24,342	2,775

As regards locomotives there is no great deficiency and if funds were available to repair 500 of those damaged there would be a total in service of 2,500, which represents 0.23 locomotives per kilometre of the railway lines.

It will be seen from the above table that the conditions as regards wagons of all kinds, except tanks, have grown considerably worse since 1922. The exception in the case of tank wagons is due to a special effort last year on the part of the Railway Administration to keep pace with the increasing petroleum production and export requirements, at the urgent request of the petroleum companies, and in view of the policy of the Government to encourage exports by all possible means.

In order to arrest this retrograde tendency, funds are urgently needed to increase the capacity of the repair shops so as to keep a greater number of the existing wagons and locomotives in constant service. If this were done, probably the immediate requirements of the industries could be adequately met, and a great deal of wastage and unnecessary deterioration would be avoided.

As mentioned in the last letter, efforts are now being made by the Roumanian Government to obtain a loan from Germany partly for this purpose and also for the supply of materials for current repairs.

H.E.H. the Nizam's Guaranteed State Railways have declared an interim dividend of 6 per cent., less tax, for the half-year ended September 30, payable on April 14.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, March 1.

The Budget Debate.

The Sobranie has finished the general discussion on the Budget. The debate has been essentially of a critical character, and stress has been laid on the apprehensions—apparently well-founded—regarding the results of the next financial year, which, it is anticipated, will inevitably show a deficit, since in the opinion of competent speakers the expenditure maintained at a total of about seven milliards will exceed the receipts encashed by the Treasury. That view is supported by the fact that the present Budget will close with a considerable deficit of more than five hundred millions (some say a milliard), which proves the need for heroic economies, the country having reached the utmost limit of its fiscal yield. The Government explained that the deficit arises from the payment during the year of more than seven hundred million leva belonging to the previous Budget, but that does not alter the situation, for, in view of the lack of reserves and of the impossibility of having recourse henceforward to the National Bank—which has become independent of the State—it is necessary to carry forward the deficit of 1926-27 to 1927-28 thus compromising the balance of the Budget, the more so as there will be also an extraordinary Budget whose total will not be less than 500 millions and to meet which it is impossible to anticipate any extraordinary revenue. The position becomes still more menacing if one considers the payments already markedly increasing which Bulgaria will have to make in the approaching years on account of Reparations and the pre-War loans.

The difficulties of the Treasury have aggravated the situation, for after the reform of the National Bank the Treasury can only count upon the receipts to cover the current expenditure. As, owing to the economic crisis which prevails in the country, the taxes come in slowly that places the Treasury in a difficult position for the regular payment of its financial obligations and even for the salaries of the officials.

It is reported from Athens that the repayments by the refugees on account of the Greek Refugee Loan (1924) have been coming in very satisfactorily, and it is estimated that up to the end of 1926 a total sum of over £100,000 has been encashed by the Refugee Settlement Commission. Out of this over £75,000 has been handed to the International Financial Control Commission (in accordance with the conditions under which the Loan was issued) to be utilised for extra half-yearly drawings at par in addition to the ordinary half-yearly drawings carried out by means of the fixed $\frac{1}{2}$ per cent. per annum accumulative sinking fund. The sterling issue of £10,000,000 represents about 81 per cent. of the whole loan, and so far two extra half-yearly drawings, amounting in all to £23,000, have taken place.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 2 :—

Egyptian Futures.—Sakel Contract.—No fresh features of particular importance have developed since we last wrote, but the market has continued to show a firmer undertone, and under the influence of trade covering, operations against "on call" cotton, helped by a moderate amount of outside speculative buying, prices have advanced 15 to 19 points for near positions, and 14 to 17 points for more distant options on the week. Whilst the statistical position still inclines to the heavy side, and acts as a deterrent to any material advance, there is no doubt that holders of Sakel cotton have latterly received a considerable measure of encouragement from the appreciation witnessed in the values of other varieties. On top of this, of course, spinners, both in this country and elsewhere, have undoubtedly experienced since the return of the year a very healthy off-take for their production, and although, as we have written previously, the Fine section have not participated in the improvement to the extent expected, we have little doubt that their turn will shortly come round. After showing a comparative lukewarm reception to the firm tendency at this side during the early days of the week, the Alexandria market has latterly become obviously more impressed, and their contract has appreciated fairly sharply during the last two sessions.

Upper Contract.—Operations in this contract continue to be confined to a few isolated transactions, values, in sympathy with hardening American rates, and in a greater degree with the steady appreciation witnessed in the Alexandria market, have advanced 26 points to 30 points on the week. Trade reports in this branch continue to be quite satisfactory, although it is asserted in some quarters that the advance has been too rapid, and that competitive growths at their ruling basis are a more attractive proposition.

Egyptian Spot.—A fair inquiry has been present, but much of it has been concerned with low grade cotton and Sudans. Interest in Egyptian Sakel cotton, which a week or two ago showed some signs of a revival, appears to be difficult to maintain and nothing short of the most drastic reductions in price seems likely, under existing conditions, to restore this growth to favour amongst spinners. Cotton at from 13.00d. to 14.00d. has attracted more attention than the other qualities, and prices have been steady with a slightly advancing tendency. Uppers, in sympathy with the advancing American markets, have been strong, and the higher prices being asked have had the effect of temporarily checking business in this growth. Opinions as to the merits of the recent advance in Uppers are evidently divided, as here and there some very reasonable cotton has been picked up. Brown, White,

and even Pilion, have been rather neglected. Prices for the last named have remained stiff. In Sudans, a very fair business has been reported, and on one day a line of approximately 1,500 bales of American seed cotton was put down. A fresh spurt of activity in the inferior grades has been witnessed, and rather more business than usual has been transacted within a range of 4.00d. to 8.50d.

C.i.f. business has been officially reported as "Fair" throughout the week—a somewhat unusual phenomenon on our market. Manchester reports, whilst remaining full of promise, have latterly carried with them, more than once, a hint that buyers were gradually becoming satiated. Forwardings for the week ending 25th ulto. were returned at 8,265 bales Egyptians and 1,127 bales Sudan. Estimated sales 1,200 Egyptians and 3,950 bales Sudan. Quotations of Sakel have been advanced 10 points, and those of Upper 45 points (Extra Fine Upper exceptionally 80 points. F.G.F. Sakel to-day 13.90d. F.G.F. Upper to-day 11.15d.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the past month :—

Currants.—The past month opened with a certain amount of buoyancy, but unfortunately the interest dwindled away as the weeks passed by, with the result that the volume of business transacted fell very much below expectations and, in fact, approximated only to the small amount which is customary at this season of the year. A policy of extreme caution has been adopted by most buyers, and consequently the tone of the market has been very slow. Stocks on hand are moderate, and any slight increase in the consumption would undoubtedly have a strengthening effect on prices. Merchants have great confidence in the position, and see nothing to justify undesirable forcing tactics, being quite content to await the renewal of activity. This attitude is confirmed, for the closing days of the month witnessed a renewal of interest, with a firmer undertone, in sympathy with advice of strong markets in Greece, Pyrgos for shipment being quoted at 36s. 6d. c.i.f. Stocks are now exceedingly light, and as we have had only one steamer, s.s. Polo, during the past month, and no further supplies will come to hand before the middle of March, prospects seem to point to a higher range of values in the near future. Business completed, comprised, Pyrgos 38s. 3d. to 38s. 9d., Amalias and Patras 39s. to 40s. 6d., Zante 40s. to 41s., Gulf 42s. to 46s., Vostizza, ordinary, 46s. to 48s., good, 50s. to 55s., few fine 58s., one parcel of outstanding merit 63s. Smalls 42s. to 49s. Latest Quotations: Pyrgos, 39s.; Amalias and Patras, 39s. 6d. to 41s.; Zante, 41s. to 42s.; Gulf and Panariti, 42s. to 48s.; Vostizza, 42s. to 56s.

Sultanias.—General steadiness characterised the market, but business has not broadened as it was hoped, and only a moderate clearance in spot parcels has resulted, trading on the whole being distinctly disappointing. Prices are shillings below the parity of those ruling in Smyrna, where stocks are reported to be almost exhausted, the fruit remaining being of a quality below the standard suitable

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool**

for the English markets. Sales during the month have been quite insignificant. Quotations are as follows: Ordinary (3s., good 66s. to 70s. fine 78s. to 82s. 6d., Cretans 65s. to 72s., Greeks, dragging sale, and very little movement, 63s. 6d to 72s. 6d.

Australians.—In sympathy with the Smyrna fruit, this line has also been practically neglected, except for the fact that a small arrival, per s.s. Anchises, provided our buyers with a range of fruit at lower values, and this filled a demand that existed for that class of sultana. Sales were completed at 60s. to 63s., a few coloury lots making up to 66s., but the total weight disposed of was well below the expectations of holders.

Afghan.—A small quantity came to hand, and was partly sold at 50s. for Red, and 60s. for Yellow.

Figs.—A little trade was possible in pulled at 40s. to 42s., skeleton cases being neglected. A few Locoums sold at 70s., and bags are pressed for sale, genuine at 30s. to 31s.

The Department of Overseas Trade announces that the Government, in view of the success of the present British Industries Fair, has again granted £25,000 for overseas publicity for the next Fair, which opens in London and Birmingham on the third Monday in February, 1928.

GREEK REFUGEE LOAN, 1924.

Hambros Bank states that the revenues for the month of December assigned to the service of the Greek Government Seven per Cent. Refugee Loan, 1924, are as follows:—

	New Revenues.	Old Revenues.
	Drachmæ.	Drachmæ.
December, 1926 ...	56,816,375	209,419,808
Increase or decrease ...	+ 13,852,969	- 2,355,323
Jan.-Dec., 1926 ...	650,085,087	2,347,847,901
Increase or decrease ...	- 57,787,631	+ 520,809,228

The loan has a first charge upon the new revenues and also upon the surplus from the old revenues after satisfying prior charges. The decline in the new revenues is due to a reduction of Dr.99,902,497 in the receipts from tobacco in the New Provinces, but this has been much more than offset by increased tobacco receipts in Old Greece of Dr.359,793,485. The average rate of exchange in 1926 was about Dr.387 per £1, and at this rate the Ordinary service of the loan required about Dr.357,000,000, whereas the net revenues available were about Dr.2,000,000,000.

In the introduction to the report on the work done by the International Cotton Congress while in Egypt, which has been presented to the Egyptian Minister of Agriculture, the Committee pays a warm tribute to the interest taken in the Congress by H.M. King Fuad. It is further stated that the success of the Congress was greater even than was hoped and that it cannot but result in great improvements in the methods of cotton cultivation and manufacture.

Northern Persia and the Soviets

No surprise will have been caused if the report be true that the efforts to bring about a Soviet-Persian Commercial agreement have once more failed. For it has been fairly obvious that success could be obtained only at the price of the complete submission on the part of Persia to Russian demands. Ever since the Soviet Government, more than a year ago, declared an embargo upon the entry of almost all Persian goods into Russia, relations between the two countries have, to say the least, been strained. Repeated efforts have been made by the Soviets either to coerce or to persuade the Teheran Government to their way of thinking, but as often the Persian authorities have rejected the one-sided bargain. Last summer, it will be recalled, the Shah even sent to Moscow a high Court official, Sardar Muazzam Taimur Tash, to negotiate upon the increasingly urgent problems of the Caspian Sea concession, the question of tariffs, and the embargo on Persian exports. This mission, after approaching an agreement, seems now to have failed.

But even the Soviets appear to have thought that negotiations were becoming too protracted. These stubborn Persians, they may have argued, are strangely deaf to considerations of material loss; let us try them again with considerations of material gain. And so, last January, they graciously stated that the import of Persian merchandise, such as wool, cotton, rice, fruits, would be allowed for the Baku Fair. This concession, as our Teheran Correspondent pointed out, would have been of great benefit to merchants in Resht and Pahlavi; but—what happened? These same Persian merchants, their self-respect and self-resource now having been thoroughly stirred, decided on their part to boycott all Russian goods and to have no dealings with the Russians. So is the "biter bit." It will be profoundly interesting to watch the next move. Report is that the Teheran Government will shortly give official recognition to this boycott of Russian goods, unless the Soviets relax their present intransigent attitude.

It were heartening to think that the Persians could hold out indefinitely against Russian economic pressure, but, for all the courage of the Majlis in resisting certain

Soviet claims, there can, it would seem, be but one end to these economic disputes and crises. Taimur Tash, it is stated, came back to Teheran with the basis of an agreement, and this agreement, after it had been exhaustively discussed by the Teheran Cabinet and Majlis, had approached signature. Hopes of signature were, however, abruptly dashed because of the arrest early this year of Persian merchants in Baku by Soviet authorities. But that was patently a local Russian affair, not a matter of Russo-Persian relations, and is possibly capable of quite plausible if still unsatisfactory explanation. In these circumstances, it is not unnatural to suppose that the basis of a commercial agreement still holds good, and that it is merely local incidents and ebullitions of feeling which delay signature.

The whole history of Bolshevik-Persian trade relations is impressive. We will not enter here into the question of whether the fundamentals of those relations are political or economic, but it is at least patent that, in renouncing Imperialist designs upon Northern Persia, the Bolsheviks did not wholly renounce the weapon of *force majeure*. Either the economic boycott of Persian goods was an attempt to coerce the Majlis into granting the concession desired of the Soviets, or, as the Russians claim, it was dictated by internal necessity. If the latter hypothesis be true, then the rejected invitation by Persian merchants to assist at the Baku Fair was also the outcome of internal necessity. But why should the Soviets' own peculiar anxieties drive them to such measures towards a people the complete independence of which is professedly one of their heart's desires? Is it internal necessity that impels the Russians to demand a customs duty on their goods many times lower than that which other nations trading with Persians have to pay?

No doubt the Russians are acting towards Persia in what they consider their own best interests, but to the impartial observer it would appear that these methods of successive coercion, cajolery, and force would have the probable result of stimulating the Persians even more to the discovery and provision of other markets for their trade.

BESSARABIA.

Once again Signor Mussolini has set the world guessing—this time as to his reasons for deciding to ratify the Treaty between the Principal Allied Powers and Roumania respecting Bessarabia, which was originally signed in Paris in October, 1920. When, last September, a Treaty of Friendship and Arbitration was concluded between Italy and Roumania, it was stated in a letter from Signor Mussolini to General Averescu that, whereas the question of the Bessarabian Treaty had been examined in the course of their conversation, no mention of that Treaty was made in the Pact for reasons that had been submitted to the Roumanian Prime Minister; and it was added that ratification of the Treaty on the part of the Italian Government would take place only when this could be done without prejudicing the general interests of Italy. Within six months the Italian Government finds that there is no longer any obstacle to ratification, and Roumania, to whom Italy's failure to ratify the Treaty had long been a sore point, has the satisfaction, without any further *quid pro quo* on her part, of having the status of Bessarabia regularised, as far as possible in the circumstances, from an international point of view. After the advent of the Bolsheviks to power in Russia in 1917 an independent Moldavian Republic was proclaimed in Bessarabia by a Supreme Council appointed by a Bessarabian Military Congress, and Roumania was invited to send troops into the country to preserve order. By an agreement with Russia in the following March, Roumania undertook to withdraw her troops, but before she had carried out this step the Bessarabian Council voted for political union with Roumania. The Soviet Government has steadily refused to recognise the validity of this measure or of the subsequent incorporation of Bessarabia in Greater Roumania. The Treaty by which the Principal Allied Powers recognised the sovereignty of Roumania over Bessarabia has suffered from a lack of conviction on the part of the signatories. It was ratified by Great Britain only in April 1922; when France in March, 1924, took the same step the Soviet Government protested against her action in identifying herself with "a violation of the rights of the population of Bessarabia and of the Soviet Union," and it has probably looked upon the non-ratification by India as offering the best guarantee that the Bessarabian question should still be regarded as open. Its irritation over Signor Mussolini's action is, therefore, profound.

The annoyance of Moscow is more likely to turn on the effect of the ratification on the Soviet Government's international position than on any special solicitude for Bessarabia. If it had felt very strongly on the subject and had been satisfied with the condition of the Red Army, it would hardly have allowed the Bessarabian question to drift on without an effective challenge until such time as the ratification of the Bessarabian Treaty by all the Powers concerned had brought the province within the scope of the League of Nations. In its preamble the Treaty lays down that "from geographic, ethnographic, historic and economic points of view, the re-union of Bessarabia with Roumania is fully justified," and records that the population has given proof of its desire

for such re-union. Unless, therefore, exception is to be taken on other grounds, Roumania can now claim in respect of Bessarabia the fulfilment of Article 10 of the Covenant of the League of Nations, by which the Members undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all Members of the League. The Soviet Government will thus have to explain away not only the change in regard to the Bessarabian question, but also the fact that Italy has seen fit to record her indifference to any economic advantages that the policy of leaving the door of Russo-Italian relations open may have offered. To judge by recent events in Russia, these explanations are becoming increasingly difficult for the Moscow Government. The attempt will be made to attribute each fresh development prejudicial to the Soviets to British machinations; but in the present instance Signor Mussolini could, no doubt, if he were so minded, point to a sufficiently clear policy that Italy under his guidance is adopting in foreign affairs to free him from the charge of taking anti-Soviet chestnuts out of the fire for anyone else. A more likely explanation, if Moscow could view the situation dispassionately, is that one by one the countries of the world are deciding, after varying experiences of the Soviets and their ways, that the system is one that is quite unworkable in any community of nations.

While Soviet exasperation is easily explained, it is difficult to understand why Yugoslavia should have been betrayed into a display of annoyance over the Italian ratification of the Bessarabian Treaty. Political instinct, it would have been thought, required rather a great parade of satisfaction, both for the sake of the Little Entente, and also to avoid occasion for any *Schadenfreude* on Italy's part. One of the difficulties that the Little Entente has had to gloss over in the past is the difference in the attitude of the three members towards Soviet Russia. Czechoslovakia is committed to relatively close relations for the sake of trade; Yugoslavia has hitherto been indifferent, with a bias towards a non-committal tolerance; Roumania has by force of circumstances been openly hostile, and has occasionally embarrassed her partners by trying to enlist the sympathy of the Little Entente with her peculiar position. Now that she can claim, if necessary, the support of the League of Nations for the protection of her Bessarabian frontier, the Little Entente will be spared further reference to the subject, and Yugoslavia might find reason to congratulate herself on this fact, especially if there is to be a movement from Belgrade in the direction of emphasising the traditional ties between the two branches of Slavdom, now unhappily obscured by the Bolshevik usurpation. In regard to Italy it is clearly bad politics for Yugoslavia to interpret every Italian action on the international stage as one more bullet on the Yugoslav shield. Even if Italy's intention were to isolate Yugoslavia with a ring of treaties, the use that they would be to her for Yugoslavia's detriment must remain in the present state of world opinion and in the face of the League of Nations, quite problematical. On the other hand the better way to counter any such action on Italy's part is to strengthen the ties that bind Yugoslavia to her neighbours instead of trying to weaken them. The annoyance shown over the Italian ratification of the Bessarabian Treaty was by way of being an aspersion on Roumania as a partner of the Little Entente and a Balkan neighbour. King Alexander has shown more statesmanship in paying a hurried visit to Bucharest without troubling himself overmuch about the lack of political instinct shown by the public and press of Belgrade. At this time more than at any other, it behoves Yugoslavia to cultivate not only Roumanian friendship, but also the friendship of every single Balkan State. The Italian bogey is far from being all that it is painted in Belgrade, but there is no reason why the movement towards a Balkan federation should be sidetracked by the flattering attentions of Italy to the different peoples of the Peninsula.

Notes of the Week.

The Troubles of Yugoslavia.

There would seem to be some justice in the contention of a Yugoslav newspaper that no one in that country can complain of living in a time of humdrum and boring monotony, but that, on the contrary, public opinion is more than satiated with alarms and sensations. "Even if a fortnight or so passes without a Ministerial crisis," there will be some incident in foreign affairs, or, if that should not materialise, the economic situation in the country is sure to supply its excitement. Possibly as a reflexion of this feeling of satiety, the Skupshtina appears to have decided to damp down political controversy for the moment and to press on with the work of discussing the Budget, which has to be passed by the end of the month. For the general debate on the Budget scheme the Government secured a majority of forty-two, and the Chamber has now settled down to the committee stage. Unfortunately, two disturbing factors have followed hard upon these counsels of perfection. The first was the ratification by Italy of the Bessarabian Treaty; the second, the indiscretion of a prominent Radical, Dr. Lazar Markovitch, who, after a visit to Budapest, returned to Belgrade to disclose the existence of a draft agreement, that had not been signed, between Hungary and Yugoslavia, drawn up by Dr. Nintchitch, Minister for Foreign Affairs in a previous Ouzounovitch Cabinet. In regard to Italy's action the early feelings of exasperation have yielded to a more philosophical outlook, as a result of the discovery that Signor Mussolini may have been more concerned to do Great Britain a good turn than to do Yugoslavia a bad one. From this attitude it should not be a difficult step to deciding that the ratification of the Bessarabian Treaty has no significance at all for Yugoslavia. As to Dr. Markovitch's disclosures, they are probably more a domestic concern of the Radical party than of international importance. Their object was probably to further the quarrel between the two wings of the party, and to this extent they may well be an embarrassment to a Government composed mainly of Radical members.

High Rents in Athens.

The cost of living in Athens to-day, according to the Index Number published by the National Bank of Greece, is nearly nineteen times higher than it was in 1914. In Bulgaria it is over twenty-six times; but, probably owing to the difference in the character of the two States, the incidence of the increase weighs more heavily in Greece, where, as far as the capital is concerned, there is a greater aggregation of people than anywhere in Bulgaria. Concerted action on the part of the Athens shopkeepers having failed to bring about by agreement any reduction of rents, a strike was declared last week and shops were closed. The step does not appear to have been taken with much conviction and, in the face of a firm attitude on the part of the Government, the strike was called off later in the day. A demonstration in the streets caused troops to be called out, and the inevitable shooting followed. It will be a happy day for Greece when it occurs to someone, in calling upon the military to supplement the civil arm, to insist that the troops shall leave their barracks with blank ammunition only. Athens is small enough to allow reinforcements to be hurried up to the "front," wherever it is, in about five minutes, and these supplementary troops can bring with them all the impedimenta of war required to wipe out the "hot-headed youths" on whom responsibility for the rioting is generally said to rest. The trouble in the present instance is not political, but social. The prolonged economic crisis provides a favourable ground for the Communists to work upon, and they can be relied upon to make the most of each turn of the economic screw. The Coalition Government of M. Zaimis is doing its best to deal with the problem, but time is required for its measures to take effect, and meanwhile the Index Number

has a tendency to rise. The people have confidence in the Government's ability, and it is probable that for the time being the manufacture of Communists had ceased. Last Friday's shooting, however, is likely to add a score of recruits to their ranks for every Communist killed.

British Policy.

In addressing representatives of the Press in Geneva last week Sir Austen Chamberlain gave a very straightforward statement regarding British policy, which it is to be hoped will be studied and taken to heart in a number of countries. At the present time the Soviet game is being played in several unexpected quarters on the Continent. The Moscow Government, committed to a system which aims at upsetting the established order of things in the world, is very active in complaining to its own people that the world is hostile to Russia, and it is careful to add that the hostility is inspired and directed by Great Britain. The statement is duly echoed elsewhere, and even countries which have every reason to be grateful to the services rendered to them by Great Britain in the past sedulously enlarge upon the theme. "There are no secrets," Sir Austen Chamberlain said, "in British foreign policy," which can be summed up in the one word—peace. A moment's reflexion will show the truth of this statement. Every virile country may be expected to set itself some aim. Before the Great War Germany, having reached the status of a World Power late in the day, was concerned to make up for lost time by conquest; her phenomenal trade success did not satisfy her rulers. Italy to-day cannot ignore her pressing need for outlets for her superfluous population and for her industrial products, and her policy is likely to be conditioned by this need. By no effort of the imagination can Great Britain be credited at the present time with any other desire than markets, however much the extension of her Empire in the past be attributed to fell purpose rather than to successful use of opportunity. Her one object, therefore, must be peace. Even in the case of Russia it would be idle to imagine that she can bring about a change of heart by force from without. She has carried tolerance of the Soviets to the farthest extreme, and only when the latter have provoked a serious challenge to British interests in China has the British Government felt obliged to say that the limit of Soviet intrigue has been reached. If *Realpolitik* were indulged in by Great Britain, she would prefer to see the Bessarabian Treaty still unratified by Italy and to encourage the Soviets to become embroiled on their western frontier so as to have their attention distracted from the East.

The R.A.F. in the East.

In his introductory speech to the discussion of the Air Estimates in the House of Commons, Sir Samuel Hoare, Secretary of State for Air, added some interesting details to the Memorandum on the Air Estimates to which reference was made in these pages last week. The whole speech was, indeed, a stimulating tribute to the efficacy of the new arm. Last week witnessed the departure from Baghdad of the last English battalion of the Iraq garrison. It is interesting to recall that six years ago, when the decision was taken to transfer control to the Air Force, there were in Iraq thirty-three infantry battalions, six Cavalry regiments, and sixteen batteries in addition to five squadrons of the Royal Air Force. To-day there are five Air squadrons—increased to eight and since reduced in the interval—and one Indian battalion. The change is due to improved conditions in Iraq, but it is also due to the increasing efficiency of the Air arm for the protection of, and for the maintenance of law and order in, a country of great distances. Sir Samuel Hoare referred also to the work that has been carried out in very difficult conditions on the Indian frontier. Not long ago the moun-

tainous character of the country was held to make effective air work impossible. To-day "the Air Force are taking most effectively an integral share in the defence of the country. They are patrolling country and using landing-grounds in the midst of rugged and high mountains that only the high skill and training of the British pilot could render possible."

Aviation in Persia.

In Persia, as in all Eastern countries, things move slowly, and accomplishment only casually follows promise. Thus it is that, although the rivalry between German and French firms for the inauguration and running of air lines in Persia long ago ended in the victory of the former, it is but recently that the successful Company, Junkers, could actually start planes running on one of their three lines. Those lines are, it will be recalled, Teheran-Pahlavi (Enzeli), Teheran-Bushire, and Teheran-Qaraitu. At last a beginning has been made on the first route, and it is stated that planes leave the Persian capital every Tuesday at 8 a.m., and reach Baku at 4 p.m. on the same day. There a link is effected with the Baku-Moscow train express. This service will enable the mails from Northern Persia to Europe to arrive even more quickly than before—and the Russian route has generally beaten all other routes for speed. As for the other aviation routes, to the Iraq frontier, and to the Gulf, it is said that they also will be started this month. If this promise is really fulfilled, passengers to and from Persia will be able to link up with the system of Imperial Airways, and it is estimated that the London-Teheran journey via Cairo and Baghdad should be accomplished in about eleven days. If, however, the Russians ever get their air service going between Moscow and Baku, it would be possible, by this northern route, to get to Teheran from London in fewer than six days. That is a fact, incidentally, which no amount of road or railway construction can ever destroy.

Capitulations in Egypt.

The prominence which is being given in the Egyptian Press to the subject of Capitulations has been reflected in the Press outside Egypt, so that we make no apology, having mentioned the matter last week, for returning to it. It is instructive to note the arguments that are being used by some of the Egyptian papers. One journal, which expresses the hope that Britain will work with Egypt for the abolition of the Capitulations, admits that the Capitulations last century served "to give the

Egyptian cause an international character," but argues that, "since the Powers have agreed with England that the question is a national one between England and Egypt, the Capitulations have ceased to be of any use." Another journal remarks that the abolition of the Capitulations would favour the British, who reserved to themselves, in the Declaration of February 28, 1922, the right of protecting the interests of foreigners in Egypt. Yet another paper points out that "all other States which formerly had Capitulations have abolished them; the attitude of the Turks and the present fighting in China are examples."

The "Haj."

It is of peculiar interest to the greatest Islamic Empire in the world to note that the Muslim subjects of two other European Powers, Holland and France, are now preparing to do their best to restore the *haj* to its former position in the eyes of Islam. Our Jidda Correspondent has supplied the number of pilgrims from the Dutch East Indies who have already reached the Holy Land of Islam, and comments upon the favourable reception among Muslims of the provision by the French Government for the welfare of pilgrims from French colonies and protectorates. Last week we recorded the fact that so many pilgrims from Malaya and the Dutch East Indies were waiting at Singapore for vessels to Mecca as to outnumber the capacity of the ships available. How far this is due to the prosperity deriving from the rubber industry, and how far from the political relations existing between Holland and the Hijaz, it is difficult to determine; but it must be highly satisfactory to the leader of the Wahhabis, who, as King of the Hijaz, realises that the prosperity and content of the people of his newly won domain depend perhaps as much on the visit of distant Mussulmans as upon his own sagacious rule, to know that the signs so far are favourable. As our Jidda Correspondent, from whom we print two extremely interesting letters this week, points out, the Indian and the Egyptian pilgrims are an unknown quantity, and from the material aspect their participation is a most important factor, but should the maulvis and ulema of these countries encourage the *haj*, there appears to be a prospect of the 1927 pilgrimage attaining to figures even above the average of 100,000. If these hopes are realised, those Western observers who had reckoned upon the progressive decline of the pilgrimage may have radically to modify their opinions. It may indeed be that the *haj* is still the chief concreting agent of Islam.

The Defence of Iraq.

On March 10, the tenth anniversary of General Maude's capture of the city from the Turks, the last English regiment, the King's Liverpools, left Baghdad. There remains now in Iraq, of all the numerous infantry which once was required to defend the country, but one Indian infantry battalion. The fact is significant. The reduction, particulars of which were published last week, in the R.A.F. in Iraq, was in itself an unmistakable sign that the Imperial authorities have begun upon the progressive decrease of British arms in Iraq, which was an assured result of the Turko-Iraqi Treaty, and for which certain taxpayers in this country have so long been clamouring and certain Iraqis so long been hoping. To other Iraqis, however, this departure of the Kings will but freshly turn their thoughts to the defence of their country. It was not to be supposed that the ideas which the Prime Minister of Iraq, Jaafar Pasha, entertains upon the need of an Army in Iraq, would meet with ready acceptance. His opponents include those who argue on the basis that, since it is manifestly impossible to defend the whole of Iraq's long frontier line, any sort of Army becomes a luxury, and those to whom the conception of Iraq as a national State worth defending has not yet appealed.

Cairo, March 6.

Crime in Cairo.

Before Cairo had ceased talking about the sensational murder of the jeweller Bercovitz, and his son, in the middle of the day in one of the city's busiest streets, another abominable crime has been committed and now monopolizes conversation. Mr. Solomon Cicurel, senior partner in one of the biggest department stores in the country was stabbed to death in his bed shortly after midnight on the night of March 3 and 4, and £6,000 worth of jewellery stolen from his wife's dressing table. The crime was a peculiarly savage one, for it was committed in the presence of his wife and was entirely unnecessary even from the criminals' point of view, had their motives in breaking into his house been exclusively connected with robbery, for Mr. Cicurel was entirely at their mercy and they had with them chloroform with which he could have been rendered unconscious until they had made good their escape. It is known that four men were concerned in the murder and everything points to the fact that, although some members of the gang may have intended only to possess themselves of Mrs. Cicurel's jewels, at least one participated in the affair with the deliberate intention of killing her husband.

Happily, the criminals are not to benefit by their foul deed, for within twelve hours of the committing of the crime the police had placed safely under lock and key four men whom they have every reason to believe to have been the members of the gang concerned. All, indeed, have made more or less complete confessions, though none has up to now admitted to having done the killing.

It is hardly necessary to say that the crime, following so closely upon the killing of the two Bercovitzes, has caused a profound sensation here. Many of the leading business men of Cairo live, as did Mr. Cicurel, in houses in the suburbs of the city and many of these residences also contain considerable quantities of valuables. A feeling of insecurity has naturally been created amongst the owners. On the other hand, the prompt and efficient action of the police who, it should be said, were given most valuable help by the Italian Consular authorities—the arrested men including three Italian subjects—and especially by the Italian Consular Judge, Signor Impalomeni, is warmly praised. But the horror which the brutal murder has aroused is increased by the fact that Mr. Cicurel, in addition to being a very successful business man, was also a model employer. The hundreds of employees of his establishment swelled the huge funeral procession on Friday afternoon, and it was obvious that their attendance was not a mere formality, for Mr. Cicurel took a personal interest in all his assistants and his kindness and consideration for any of them who found themselves in difficulties or ill-health were proverbial.

"The 'City of Cairo.'"

Practically the whole of the British Community in Cairo was present at the Imperial Airways' aerodrome at

Heliopolis on Thursday afternoon to see King Fuad perform the naming ceremony of the air-liner "City of Cairo." Lord Lloyd, in asking His Majesty to carry out the naming, made one of his forthright and pertinent little speeches, while after King Fuad had pulled the cord displacing the canvas screen which had until then covered the liner's name, Colonel Burchall, representing Imperial Airways Ltd., presented His Majesty with a beautifully made model of the "City of Cairo." King Fuad did not take the opportunity of making a flight in the "City of Cairo," but the Premier and other Ministers did, accompanying Lord and Lady Lloyd on the first exhibition flight after the ceremony had been performed. The "City of Cairo" left on the following morning for Baghdad and has now been taken into regular service on the Cairo-Karachi route.

Insurance Companies.

Insurance companies operating in Egypt have been the subject of fierce criticism in the Arabic Press of late, and a great deal of misconception of the nature of insurance and of the profits to be made from it has been revealed. As always when discussing the operations of foreign companies here, the vernacular newspapers have assumed that huge profits are being made out of the insurance business in Egypt. So far from this being so, it may be said that, with the exception of the firms which do a large cotton insurance business in Alexandria, neither the business nor the profit is huge. There is fierce competition amongst a large number of companies for a comparatively small amount of business, and this is especially so where life insurance is concerned. Insurance in Egypt was introduced and has been developed mainly by British companies. It was a British company which first came to this country, at the request of Lord Cromer, and began operations in a large way, with a view to breaking the power of the money-lenders in the villages. The same company took steps to remove religious prejudice against insurance by obtaining from the Shaikh ul Islam at Constantinople and the Grand Mufti fatwas declaring that insurance was not opposed to the principles of the Muslim faith.

In regard to life insurance, which has been the branch of the business most discussed in Arabic journals, the point to which attention has been directed has been securing the interests of policy-holders. A number of Egyptian policy-holders have lost considerable sums since the War through the depreciation of the currency of countries wherein are situated the insurance companies with which those policy-holders had insured themselves. More recently, a British company, practically unknown in the life insurance business in England, but which has transacted this form of business abroad, has gone into liquidation. The losses which have necessitated this step have been mainly due, it is understood, to marine insurance. What will be the position of the life policy-holders remains to be seen, but, in the meantime, those in Egypt are not unnaturally, fearing the worst. It is little consolation to them to be told now that they have only themselves to blame for not choosing a better known company with which to insure their lives and that the concern with which they did business had been long regarded by other companies as unsound. This is cold comfort now, and the policy-holders concerned have been inducing the Arabic Press to air their grievances.

The local Press has taken the matter up strongly and has been demanding the enactment of legislation to compel foreign insurance companies to invest in the country sufficient funds to secure all local policy-holders. The system proposed is, in fact, very similar to that in force in Canada. To introduce such a plan here would involve meeting considerable difficulties. In the first place the assent of the Mixed Courts would have to be obtained. In the second there would be serious practical

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

obstacles, such as the fact that there is not a single Egyptian actuary, so that foreign officials would have to be engaged to carry out the provisions of such a law. Finally, it is argued that the enactment of such legislation would seriously hamper the operations of the large and sound companies, by compelling them to tie up large funds in the country, often with resultant loss of profit-earning possibilities, while not affecting the smaller concerns, for whom the required deposits would be so small as to afford no real guarantee of safety for policy-holders. At the present time there is no company operating here on a large scale which is not perfectly sound, as may be ascertained by anyone who cares to inspect the annual reports and balance sheets, so that the proposed law would not, it is argued, ensure greater safety to anyone, while it might result in decreased profits, and also, possibly, in serious economic difficulties if it suddenly became compulsory to invest vast sums of money in local securities.

The plan favoured by most of the insurance companies working here is for the Egyptian Government to require substantial initial deposits, of say, £E25,000 or £E30,000, before permitting any company to operate in the insurance business and also to insist upon foreign companies following the course already adopted by most of them in electing domicile here i.e., accepting the jurisdiction of the Mixed Courts in any disputes which might arise between them and their policy-holders. These two safeguards would, it is felt, be ample. It is probable that a good deal more will be heard of this question in the near future, in both Parliament and the Press, and it may be that some solution on these lines will be reached.

IRAQ.

Baghdad, March 4.

Trans-Desert Motor Service.

With Imperial Airways as a now formidable rival, it is unfortunate for the motor transport companies that the French Government considers the direct route by Damascus once more unsafe. The building of the police post and rest-house at Rutbah has greatly mitigated the rigours of the journey for motorists, but the longer Homs-Palmyra route makes it necessary to spend two nights instead of only one between Baghdad and Beyrout.

The severe weather lately experienced in Syria has considerably delayed the mails of the last two weeks, the road across the Lebanon being blocked by heavy falls of snow. The outward mail was dispatched last week by the Imperial Airways liner. Unusually cold weather has been experienced in Baghdad, but no snow has fallen. Rain is still seriously needed by the crops.

An Arab company, the property of one Kuwatly Tawil, has lately emerged from the welter of local enterprise in desert transport, and by reliability and punctuality has attracted a following of many whose loyalty to the European companies has been shaken by their continuing high prices. The Kuwatly Tawil company, which is now being run by a British agent, charges £10 instead of £30 for a single passage to Beyrout.

Excavations at Ur.

Mr. C. Leonard Woolley lectured on March 3 to a large British and Arab audience on the results of his season's excavating at Ur of the Chaldees. The lecture was illustrated by lantern slides which showed the very interesting discoveries made this year on the subject of domestic architecture in the time of Abraham. The plan and general design of private houses were surprisingly similar to those used in Baghdad to-day, while the burnt brick employed in building was a great deal better than that now produced by local kilns. In the graves found under the houses—for the people of Ur buried their dead under the floor, sometimes of the private chapel, sometimes of any other room, of their own houses—were found many beautiful jewels and ornaments, showing artistic skill and workmanship of a very high order.

In accordance with their agreement with the Iraq Government, the British Museum and the University of Pennsylvania divide between themselves half the "finds" of the archaeological expedition which they are financing, the other half going to the Baghdad Museum. Mr. Woolley concluded his lecture with a very earnest appeal to the Iraq Government for the appointment of a qualified curator to the Baghdad Museum. He emphasised the intense regret with which the excavator sees the often priceless treasures unearthed by his work given over to the swift and certain decay which awaits them if they are not given the skilful and specialised treatment which alone can ensure their preservation.

A hearty vote of thanks to Mr. Woolley was proposed by the High Commissioner, who promised to do all in his power to secure the appointment of a curator.

HIJAZ.

Jidda, February 18.

The Pilgrimage.

The number of pilgrims already arrived for the great pilgrimage of next June has up to date reached the respectable total of 33,371, and as many more are expected during the next six weeks. So far fortune has favoured the arrangements made by the various authorities concerned, both here and at the ports of departure (for the most part either Singapore or one of the ports of the Dutch East Indies); and though, as might be presumed from the fact that pilgrims once determined on the journey embark on it regardless of their physical condition at the time, the starting numbers are slightly reduced by deaths on the voyage and restored by births, up to date every consignment has arrived with a clean bill of health and there has been no need of landing the new-comers at the two quarantine islands which lie, ever ready to receive them in case of need, at a distance of about seven miles south of the town.

Quarantine Islands.

A visit to those islands is enough to convince the most sceptical that the medical department of the Hijaz Govern-

ment is not only fully alive to a sense of its responsibilities in the matter of quarantine, but is eminently capable of catering both for the welfare of the pilgrims and for the safety of the Hijaz population. The first island, known as Abu Sad, is a circular coral atoll fenced round against the lapping waves by a low masonry wall from which project, star-fish-wise, a central landing wharf and the many latrines of the various dormitories or barracks. The latter are four in number, with ample cubic dimensions for the 250 pilgrims which each is calculated to accommodate—clean, single-storeyed buildings, each enclosed within a wire-fenced compound of white coral-sand to facilitate the segregation of sick pilgrims when needed. At the quayside entrance to this group of buildings stand two large engine-rooms—one with the disinfecting apparatus designed to kill any microbe the pilgrims may bring in on their persons, their clothes, or their baggage, and the other containing a sea-water condenser capable of producing an average of five tons of distilled water daily—this supply being reinforced when necessary by a water barge capable of taking 100 tons of water from the two condensers in the town. A small engine provides electric illumination for the island, whose buildings are completed by the two-storeyed residence and dispensary of the doctor in charge and a small building containing kitchen and servants' quarters. The second island, Wasita by name, is primarily intended as a reserve dépôt to receive pilgrims, who have undergone disinfection and segregation in the first, in the case of a large visitation. With eight barracks the accommodation is double that of the sister island, but, as it is intended for "clean" cases only, it has not been equipped with the disinfecting apparatus necessary there, and it is also without a condenser, thus depending for its water supply on Abu Sad and the shore. The cleanliness of both islands and the complete absence of flies and other pests do credit to the staff of the department.

Cold in Jidda.

Jidda during the past week has been experiencing the rare phenomenon of a cold spell, and a biting north wind, blowing without respite for many days, reminds one of less temperate climes. A minimum temperature of 60 degrees Fahr. is always regarded here as something extraordinary, but the daily minimum of the last six days has been as low as 55.5 degrees and has not exceeded 57 degrees, while the maximum temperature of the same period has not been more than 77 degrees and has once been as low as 72 degrees. The local population has suffered somewhat in consequence, for the houses are built to invite rather than to exclude such breezes as may be blowing, but there is no serious illness to be recorded and the influenza epidemic, rampant elsewhere, seems to have drawn the line at Jidda.

Port Sudan-Jidda Cable Repaired.

The only event of importance to be recorded by this mail is the completion a few days ago of the long-promised repairs to the cable, whose restoration to working order places Jidda once more in permanent touch with the outer world. There is also active talk of the reduction of the present somewhat high cable charges, which would be generally welcomed by the commercial community.

General News.

A further change in the British population of Jidda has to be recorded in the transfer of Mr. C. McKinlay to Port Sudan after three years' service here in charge of the local branch of Messrs. Gellatly, Hankey and Co. He is succeeded by Mr. E. Mackinnon, from the Sudan, who is not new to Jidda, and whose arrival keeps the numbers of the British community up to its now normal number of eight, including one lady.

It is regarded now as improbable that the King will return to the Hijaz before the end of Ramadhan, which begins on March 5, and which he will presumably celebrate in his family circle at Riyadh. He will certainly be back

here in good time for the pilgrimage, which promises to be a large one, though it is difficult to judge yet how many pilgrims will come from India and Egypt. Great satisfaction is felt at the news that the French Government are taking steps to facilitate a pilgrimage this year from their North African colonies and dependencies.

February 23.

The King's Visit to the Interior.

The date of the King's return to the Hijaz is still in doubt and opinions are about equally divided on whether he will celebrate the fast of Ramadhan here or in the bosom of his family at Riyadh. It is quite on the cards that he may split the difference and spend the month partly there and partly at Mecca, thereby earning a much-needed respite from the fast during the few days that the journey will take. The outward journey, of which some details have now come to hand, occupied seven days, during which some 500 miles were covered without any attempt to set up an unassailable record. The first three days of the journey lay over ground apparently unvisited by any European traveller and therefore uncharted, with the result that the names of the few wells at which halts were made cannot be found on the map. At Abraqiya, however, the cavalcade of motor cars came into better known country in close proximity to routes previously traversed by Doughty and Hüber, and thence the journey lay by way of Shaara and Marrat to the barrier of the Tuwaiq plateau, which was ascended by the easy pass of Haisiya. And so to Riyadh, where the King had a most enthusiastic welcome, having previously been met by the Amir Saoud at Marrat. Among his visitors was a deputation from the Shaikh of Kuwait—doubtless to discuss matters arising out of recent Shammar raids in his territory and also perhaps the economic situation arising from the transfer of the bulk of the Central Arabian trade from Kuwait to King Ibn Saoud's own ports in the Hasa. It is difficult to see how Kuwait can prosper, unless and until it comes fully within the orbit of the Empire which the Wahhabi monarch has built up for himself, and in this connexion the sojourn there of Hafidh Wahba, former chief of the Hijaz administration staff, since last November may not be without significance.

Arabia and Europe.

Much speculation is rife here on the object and outcome of the recent Clayton-Gasparini conversations at Rome, which appear to have been concluded before the publication

CUNARD TO MEDITERRANEAN LEVANT and BLACK SEA PORTS

of the "Treaty of Mecca" between the Idrisi and King Ibn Saoud. This treaty, undoubtedly, introduces a welcome element of stability into the situation on the Yaman frontier, where, with the elimination of a weak buffer principality, the "two strong men" of Arabia "stand face to face." And so far as King Ibn Saoud is concerned it can be said with confidence that he seeks no extension by force of the *de facto* frontiers between his own and his neighbours' territories. It is for the Imam and his Italian advisers to reciprocate this feeling in the interests of Arabian peace, but the appearance of imperialistic tendencies in the Yaman on the part of the Italian Government is much deprecated here.

It is assumed that the British Government is actuated by friendly motives towards the Hijaz-Najd State, but some practical demonstration of that sentiment would be welcomed in place of the diplomatic arguments occasioned by the Maan-Aqaba and Hijaz Railway problems. And the prospective renewal of the negotiations suspended at Madina two months ago occasions a lively hope that Sir Gilbert Clayton, now fortified presumably with full knowledge of Italian policy in the Yaman, may be deputed to put the finishing touches on the Madina discussions with plenipotentiary powers to dispose of all the outstanding problems.

The Hijaz Railway.

As regards the Hijaz Railway, King Ibn Saoud has deputed a representative to visit Palestine and Syria for the purpose of making a complete study of the problem in all its aspects. In this matter King Ibn Saoud is not in the least likely to be intransigent, and, if the British and French Governments are desirous of a redistribution of the existing locomotives and rolling-stock of the line on the basis of the actual requirements of the various sections, it should not be difficult to arrive at a satisfactory formula provided that the pilgrimage season (for which that section was built) be taken as the standard of the requirements of the Maan-Madina section. King Ibn Saoud's aim is the practical one of restoring this section to order for the pilgrim traffic, and any arrangement which will enable him to do this will meet with his ready acceptance. But he will not surrender the Administration of the line in his territories to a foreign Power—much less to a Christian Power.

Pilgrims' Suffering in Cold.

The number of pilgrims arrived up to date is approximately 36,000. The recent spell of cold weather mentioned in my last letter has occasioned considerable hardship to the scantily-clothed Javanese, who certainly did not come prepared to find the Hijaz numbered among the cold countries of the world. Several casualties have inevitably resulted, especially among those who ventured out on the journey from Mecca to Madina during the cold period, and it is said (though the news is not yet confirmed) that one caravan of 50 pilgrims lost no fewer than 40 souls before it reached the half-way station of Rabigh. The cold spell is now over, and the daily minimum temperatures are back again in the neighbourhood of 70 degrees Fahr.

Affairs in the Yaman.

The German Minister at Addis Ababa, Herr F. Weiss, has recently been on a short visit to Jidda, having previously with his wife visited Sana, his sojourn at which

place coincided with that of Mr. Charles Crane and the American Consul at Aden, who, having travelled up from Hudaïda continued their journey to Aden by the land route. The *Imam*, as the recently-instituted monthly newspaper of the Yaman is named, has now reached its third number (January) and reports among other things the exchange of ratifications of the Italo-Yamanite treaty between the Imam and Commandant Cezano, envoy of the Italian Government. Apart from a few Greeks, Italian subjects, some twenty-five of them all told, are the sole resident representatives of Europe in the Yaman, but they are for the most part engaged in commercial and other peaceful pursuits. A single Italian aviator, acting as instructor to the Imam's Army, appears to be the only remnant of the various Italian politico-military missions which have visited the country during the past six months. One of the Imam's sons has recently enjoyed the novel experience of an aeroplane flight, but the only other noteworthy events in the Yaman recorded in the *Imam* are the execution of a death sentence (by beheading) on a murderer and the public amputation of the hand of a convicted thief.

Sofia, March 1.

The Population of Bulgaria.

According to the definitive results of the last census Bulgaria's population numbers 5,484,143 inhabitants, of whom 2,747,983 are males and 2,736,160 females. The increase in the number of deputies in the next Sobranye will now be not 15 (as I had predicted in a previous letter at the time when the approximate preliminary results were known), but 30, on the basis of one deputy per 20,000 inhabitants. The Sobranye to be elected in May will, therefore, comprise 275 members, to the joy of the candidates who are over numerous in the country.

The Economic Conference.

After discussing the question in the Cabinet, the Bulgarian Government has decided to participate in the economic conference convened by the League of Nations. Bulgaria will be represented by a delegation at the head of which will be the ex-Minister M. Danailoff, Professor of Political Economy at Sofia University, and the eminent Bulgarian economist, M. Cyril Popoff, Director-General of the Bulgarian Statistical Institute. The Delegation will lay before the conference a detailed account of Bulgaria's economic situation.

Turco-Bulgarian Commercial Relations.

Following the official re-establishment of Turco-Bulgarian intercourse, a provisional convention was concluded last year between Bulgaria and Turkey with a view to regulating their commercial relations. This convention was postponed for a period of six months, during which time it was hoped to be able to begin and complete negotiations for the conclusion of a commercial treaty. The postponement having expired on March 1, and the commercial treaty not having yet been negotiated, the Turkish and Bulgarian Governments have agreed to prolong the convention for a further six months, while awaiting the nomination of a Bulgarian Minister Plenipotentiary at Angora, who will confer with the respective Turkish Ministers.

The Macedonian Congress.

For some time past there has been evident a recrudescence of organised activity among the numerous Macedonians who emigrated to Bulgaria, where they have formed brotherhoods or associations of people originating from the same region in the abandoned country. These brotherhoods, which grow incessantly in number and which are grouped into a powerful union, recently held an impressive Congress in Sofia. It passed a series of political resolutions, the most important of which are as follows:—

(1) A resolution addressed to the Great Powers asking them to intervene in order to secure autonomy for Macedonia, as being the only solution of the problem which can bring peace to the Balkans.

(2) Two resolutions addressed to the League of Nations setting forth the oppressive measures adopted by the Greek and Yugoslav authorities in their respective portions of Macedonia, and urging the necessity of an effective protection of Macedonians, and the expediency of an international inquiry and the creation of a special body charged with the repatriation of the many Macedonians exiled from their homes, and with the superintendence of the effective application of cultural autonomy in Macedonia.

(3) A resolution addressed "to Bulgarian opinion and to Bulgarian Governments," declaring that the Macedonians are engaged in a sacred struggle for the preservation of their nationality; that in this struggle they have never lost sight of the vital interests of Bulgaria, in which country they have found hospitality and refuge; that they have never opposed the realisation of an inter-Balkan or even a Bulgaro-Yugoslav entente, which would guarantee the national liberties of the nationalities and the provinces which it would unite; that no Bulgarian Government ought to hesitate to intervene in favour of the ethnic rights of oppressed Bulgarians, as such a defence constitutes their duty as much from the point of view of national solidarity as from the point of view of Bulgaria's vital interests.

(4) A resolution directed against the Greco-Bulgarian Emigration Commission by reason of that Commission's decision to proceed also to the liquidation of ecclesiastical and scholastic buildings belonging to former Bulgarian and Macedonian religious communities in Greek Macedonia, a liquidation which the Congress declares to be an unjustifiable attack on popular, sacred and inalienable property.

(5) A resolution of solidarity with Yugoslavia's oppressed nationalities, struggling against the pan-Serbianism of Belgrade.

(6) A resolution of gratitude towards the defenders of the Macedonian cause in Europe and America.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE LATE PROFESSOR CVIYITCH.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your issue of February 10, M. A. Melik has paid to the general scientific work of the late Professor Cviyitch a hearty homage in which everyone must join. But I think he is wrongly inspired in adding to the merits of the late Serbian scholar, his contribution to the ethnography of Macedonia. It is unfortunately true that in dealing with the problem of the races in Macedonia, Cviyitch subordinated scientific judgment to political opportunism and to the national prejudices of the moment. His inconsistency on the question of nationality of the Slavs in Macedonia is familiar to all students of Slavonic ethnography. Let us remember the episode in which this inconsistency took the most striking form.

It is a well-known fact that until 1878 the Serbs considered Macedonia as a Bulgarian country. That year, Bosnia-Herzegovina having been occupied by Austria-Hungary, the Serbian Government began to look for compensation in Macedonia. But the new Serbian claims lacked the basis of facts. Serbian science was greatly embarrassed. Finally Cviyitch went to the help of the Serbian propaganda: he invented the theory that the Macedonian Slavs had no definite national consciousness and were capable of turning, according to circumstances, into Bulgarians or Serbians.

During many years Cviyitch defended this theory by a large display of scientific arguments. But meanwhile an event occurred which obliged the patriotism of Cviyitch to have recourse to another hypothesis on Macedonia. In October 1912 the Allied Christian Powers in the Balkans declared war on Turkey. This war was preceded by a secret Serbo-Bulgarian treaty which divided Macedonia into two zones: a large zone which both parties agreed to consider as incontestably Bulgarian, and a smaller one upon which Bulgaria and Serbia pledged themselves to accept the arbitration of the Russian Emperor.

The duty fell again on Cviyitch to explain this territorial agreement and to justify it from the standpoint of the ethnography of Macedonia. In fact, as war against Turkey began, he published in the London *Review of Reviews*, an article for that purpose.

"In what region of Turkey," asked Cviyitch, "do Serbian interests lie?" And he gave the following positive answer: "The region in question is known as old Serbia. . . . The Southern frontier of Old Serbia or the boundary which divides the Serbian and the Bulgarian spheres of interest starts from the Bulgarian frontier at Kustendil, with the dividing line between Petchine and Krilje, so that Kriva-Palanka and Kratovo remain in the Bulgarian sphere, Uskub and Koumanovo in the Serbian. The southern frontier lies through Ovce-Polje with the dividing line between Bregalnitsa and Pchinja and it crosses the Vardar River north of Velles. From there it follows the offshoots of the mountains of Yakoubitsa, and by a further dividing line on the mountain of Baba to the lake of Okhrida, so that Prilep, Kroushevo and Okhrida are in the Bulgarian sphere and Struga, Debar and Tetovo in the Serbian."

After having drafted in that clear way the future Serbo-Bulgarian frontier in Macedonia Cviyitch added, "Thus we see that a territorial and ethnographical understanding has been arrived at between Serbia and Bulgaria." (Page 515).

Such was the opinion of Cviyitch on Macedonia in November 1912. Shortly after his article from the *Review of Reviews* appeared in a Serbian translation. "But at that time, says the report of the Carnegie Commission, Serbian claims had already increased and the pamphlet was banned." (Page 44.) What did Cviyitch do in face of the new current started in Belgrade by the nationalist and military circles? He renounced his opinion. "In a second edition," continues the Report of the Carnegie Commission, "the passage describing the frontiers was simply omitted." Meanwhile the Serbs increased still more their claims. Irrespective of the treaty with Bulgaria which Cviyitch was so zealous in explaining in 1912, the Serbs decided in 1913 to keep for themselves all the Macedonian territory occupied by their Army. The Serbian Government needed now a scientific theory for supporting before public opinion abroad its new policy. Cviyitch provided for it. In the issues for March and April 1913 of *Petterman's Mitteilungen* he published a new ethnographic map of Macedonia substantially different from his article in the *Review of Reviews* and elaborated with the evident purpose of giving an appearance of reason to the increasing territorial aspirations of Serbia. Turning around Cviyitch went with great facility back to the theory he already preached about Macedonia before the Serbo-Bulgarian Treaty of 1912.

M. Melik admires greatly this theory. He says of it that it has brought "the light of unbiased criticism on the complicated dispute over the nationality of the Mace-

donian Slavs." I will not contest the right of M. Melik to appreciate in that way the work of the Serbian scientist on Macedonia. The only thing I wish to point out is that the foreign specialists on Slavonic ethnography are unanimous in professing about the Macedonia Slavs an opposite view. I shall quote but one of them: a Croatian Professor, Yagitch, who according to universally admitted opinion is in our time the greatest authority on Slavonic philology and ethnography. Writing to Professor Miletitch, in a letter which the *Macedonia Review* published recently in fac-simile, Yagitch expressed on Cvijitch the following judgment: "Prof. Cvijitch is writing and printing a large anthro-geo-graphic work on the Balkan lands, and towards the end of it he has touched upon the ethnographic question of Macedonia. He sent me some advanced sheets of his work to read and to tell him my opinion. I hold to the rule of calling a spade a spade. I told him that all this is unworthy of the scientific high position of Cvijitch: that, in neglecting the principal thing, namely the language, he has stuck to unimportant matters, as for example, that the Macedonian Slavs have no national consciousness, that they could be easily won over to the pan-Bulgarian or the pan-Serbian idea, etc. Perhaps my outspokenness has offended him; but it does not matter. I would gladly agree to Serbia putting in her programme her need of an outlet on the sea and her desire to have some authority over a part of Macedonia that leads to the sea. This would be a question of political necessity; but we ought not to mix politics with science, i.e., dialectology. We ought not to try to prove something that cannot be proved by honest arguments. We will see if he will reply to me. For me it is a sad proof how even a great learned man like Cvijitch does not understand to be objective, or, as the late Mommsen used to say, *voraussetzungslos* (free from preconceptions)."

It is useless to add any comment to this letter; it settles definitely the question about the scientific value of the publications of Cvijitch on the nationality of the Macedonia Slavs.—I am, etc.,

A BULGARIAN.

FROM VENICE TO SCUTARI.

BY ARTHUR E. READE.

Wembley, Hollywood *et hoc genus omne* have done so much to "bring romance home" to us fog-dwellers that the real thing has come to seem very garish. "Venice beneath the stars"—the words read like a cheap subtitle, and one's tongue almost cleaves to the roof of the mouth rather than utter them. Still, it was Venice beneath the stars in May, and, as I lay in my gondola listening to the *serenata* on the lagoon I heard a loud English voice exclaim: "This is unbearably touristy." A somewhat subjective attitude of criticism reflecting a very self-conscious traveller's state of mind—there was the cart perfectly hitched before the horse. But that is the worst of efficiently organised travel. We cannot remember whether the tourists come for the sake of Venice, or whether Venice has been provided for the sake of tourists. So we end by judging Venice as we might a scenario or the arrangements at Blackpool, and, being sophisticated men, we suggest to the management that it should not lay on the atmosphere of illusion too thickly, lest it cloy. No matter. Next day I fled the advertising world, leaving behind the *serenata*, and the slums, of Venice.

So exalted a being as an Englishman in "plus fours" is expected to travel down the Adriatic as a first-class passenger on a Lloyd boat or not at all; and had it not been for the services of the large lady wearing an inter-

preter's armlet, who, uninvited, and to my great humiliation, took charge of the arrangements, I doubt whether it would have been possible to persuade the Italian cabby to drive from Trieste station to the quay where the Serbian boat of the Jadranska Providba line was in harbour. For so remote was this quay from the business of the port that neither passport officer, nor customs officials, nor porters were present to officiate at the embarkation, though the first arrived by an afterthought when we were already on board. Once aboard the s.s. Beograd one felt already in the Balkans: the electric light was out of order—had been for a long time apparently; and as the steamer put off it was called back by agitated cries—some cargo, destined for Cettigne, had been left behind.

It is a dreadful thing to be tapped on the shoulder by an armed man who beckons silently: Come along with me. That is what happens at Sebenico (Shibenik) to give it the Croatian name by which it is now officially known) to the passenger who lands for a short stroll while the ship is in harbour without first surrendering himself at the customs shed. There the visitor passes in through one door which is locked behind while at the end of a passage an aged hag unbolts double doors and unpadlocks a gate of iron bars through which it is permissible to walk on to the waterside once more. That is precisely all. What magic significance attaches to a silent and uninterrupted passage through a small shed I know not, but bureaucracy is satisfied, and at the hour of re-embarkation a bayonet bars the gangway until the traveller can hand the sentry a small rubber-stamped square of paper obtainable inside the shed to certify that the procedure has been repeated reversewise. The authorities may well suspect the purpose of strangers who bother to visit the little place they guard so carefully, for there is nothing really very striking about either the domed cathedral (completed in 1555, entirely of stone and marble, with no brick or wood in its construction that it might be the more enduring a monument) or about the XVI century Venetian ruins—the triple Fort of St. Nicholas, which guards the channel leading into the harbour formed by the estuary of the River Krka, and the Castle of St. Giovanni, which crowns the city and was besieged by the Turks in 1647.

At the next port of call, Split, officialdom was so refreshingly negligent of its usual duties that, for once in a way, it did conform to the Foreign Secretary's demand, which buoys up such false hopes in the hearts of tyros with their first passports, and "allow the bearer to pass freely without let or hindrance." Not even a rubber stamp, symbol of officiousness masquerading as efficiency, fondest toy of self-conscious civilisation in its schoolroom stage of development, was brought into action to testify to a twenty-four hours' stay.

Since August 1925, Split has become marked as the terminus of the Adriatic-Danube railway line proceeding via Sarajevo to Belgrade, and the Yugoslav Government has offered to provide Hungary with a "free zone" in the harbour after the fashion of the Yugoslav free zone at Salonika. A discouraging Germanic exterior hides one of the most enchanting towns of Dalmatia, Venetian Spalato, the ancient Aspalathos, some three thousand of whose inhabitants still live within the walls of the palace, covering an area of 420,000 square feet, that the invalid Emperor Diocletian built himself for his retirement sixteen centuries ago. Hither, in the year 639, to make themselves their new city came the population of the neighbouring town of Salona sacked by the Avars. The red-tiled temple which Diocletian built, some say as a mausoleum for himself, some in honour of Diana (from the frieze representing hunting scenes which still survives within) is now the Cathedral, and the former Temple of Jupiter serves as a baptistry. One of the XVII century Archbishops of Spalato, Mark Anthony de Dominis, quarrelled with the Papacy and became a Master of Savoy and a Dean of Windsor. However, he found abuses in the Church of England, too, which did not suit him. As a result he retired to Italy—and eventually to prison.

And here there are clocks which strike each hour over twice—once for the living and once for the dead, or so

I imagined, but a fellow-traveller when I ventured the information drily replied that he thought the works must be out of order, because Baedeker said nothing about it.

What Mr. G., the Armenian merchant from Belgrade, who has lost two fortunes and is now well on the way to making a third, was doing in company of an Albanian Commissioner of Police (whom he introduced as the Minister for War), and what the latter had been doing at Belgrade I do not know. I only know that the Armenian was feeling very bucked with himself over a deal to supply the Albanian gendarmerie with uniforms of British surplus khaki at a rate of profit which would give a very substantial leg-up to that third fortune! They came on board at Gravosa, the port of Ragusa (which we must now try to remember to call Dubrovnik) Mr. G. travelling first-class, the "Minister of War" second, and the latter's escort third-class. Only Mr. G. and the two English first-class passengers were admitted to the privilege of dining at the Captain's table, the other first-class passengers being relegated to a far corner of the saloon. Among these was an extremely stout and polite young Czech who said that he was going to Tirana, the capital of Albania, to recover from a nervous breakdown (Heaven help him!). I subsequently met him there and he introduced me to the Czech Consul who had the largest black beard I have ever seen. By way of polite conversation I mentioned that the works of Karel Kapek were much appreciated in England. Whereat the two Czechs looked at each other and hastily changed the subject, much as I imagine the Duke of Northumberland and Mrs. Nesta Webster might have done if a foreigner were to have complimented them on H. G. Wells or Bernard Shaw. . .

At lunch and dinner on board the Beograd everyone had his half-bottle of *vin compris* set before him, and the captain glanced at us curiously as Mr. G. insisted that a dash from his bottle should be mixed in the glass of each diner at the table. Nor would the Armenian raise his glass until we too would drink from our own. If it was some ordinary form of courtesy, it was quite unlike both in manner and fastidiousness any that I have ever since witnessed in the course of nearly two years' residence in different Balkan countries. Was it perhaps some half-instinctive precaution conventionalised into a matter of form? There are doubtless many drinking customs which can be traced back to the days of the venom-taster, but this one struck me as startlingly direct. Mr. G. carried much gold on his person. . . . And, incidentally, when one of the second-class passengers, a Moslem merchant from Bosnia, bid a few thousand dinars for my portable typewriter, all the Armenian instincts were aroused; he laid a higher bid and offered to pay in gold. And who, even though the advance estimates of the cost of the journey were not being gravely upset by the actuality, could resist lightening his luggage in return for a glittering handful of 20-franc pieces? However, Mr. G. subsequently found an opportunity to exchange some of these for paper and to rook me neatly on the exchange in the process!

Down amid the islands we steamed, while the dolphins performed their foolish somersaults around the ship and so to the Boka Kotorska, the Gulf of Cattaro, lovely southern fjord.

As Mr. G. stepped off the gangway at Cattaro, the Yugoslav officials on the quay raised their hands and saluted. Here we parted to meet again, Mr. G. re-embarking with his companions to continue by sea the journey to Albania, where he was to visit his friend, the dictator, Ahmed Bey Zogu himself, while I was bound thitherward overland.

In 1813 the British Fleet besieged the French in Cattaro for three months, but the town's Venetian walls still remain whole, bearing their emblem, the winged lion of St. Mark. In the days of the Austrian occupation Cattaro stood as the last outpost of European civilisation down the Adriatic, and the little town, its name now Serbised to Kotor, is still a heavily garrisoned fortress where one lives in an atmosphere of alarms and excursions. One night the guard was called out and came tearing over the quay with fixed bayonets to board a small

steamer moored there. The officer, holding a light in one hand and a revolver in the other, proceeded cautiously from hatch to hatch. Were there armed smugglers aboard about to land a cargo of high explosives for some treasonable purpose? Nothing so sinister. Apparently nothing at all, and the party proceeded back to barracks.

The only other incident during a few days' stay was the disappearance of a prim party of elderly English ladies who were caught in a sudden storm while out boating on the Bocche.

The motor post-bus which runs from Kotor to-day is impressively provided with the protection of an armed escort. The old Austrian military road zig-zags up the side of the black mountain of Lovchen, that rampart, 5,770 feet high, which relieved the Montenegrin warriors from the need of any artificial fortifications during the five centuries they maintained their independence; their opposition frustrated Napoleon's plan, which would have anticipated the present road.

After a last glimpse of the green waters of the Bocche below, what was once the old Montenegrin frontier station is reached and the pass descends through a desolation of grey rocks until we see the red roofs of the township of three thousand souls that until a few years ago was the capital of the last of the medieval kingdoms of Europe.

(To be continued.)

Five bridges are shortly to be built across the Jordan in the valley of Al Huleb.

Mr. Leonard G. Montefiore, President of the Anglo-Jewish Association, left London last week for Palestine.

As from April Mr. L. M. Crump, the Resident at Gwalior, is to act temporarily as Resident at Hyderabad, during the absence of Sir William Barton on leave.

President Masaryk, of Czechoslovakia, will pay an unofficial visit to Athens in April on his way to spend his holiday in Egypt. It is stated that he intends to visit Palestine.

The appointment of His Highness Jigme Wangchuk, Maharaja of Bhutan, to be a Companion of the Most Eminent Order of the Indian Empire has been published in the *London Gazette*.

The Turkish political police in Constantinople last week arrested a certain Akounoff, one of the chief officials of the Soviet-Turkish Trade Corporation in Constantinople.

A MINIATURE HISTORY OF THE WORLD.

"*THE ADVENTURES OF MAN.*" By F. C. Happold. (London: Christophers. 4s. 6d.).

We owe much to Mr. Wells. And one of our debts to him is the realisation that it is possible to set forth the essential facts of the history of the world in really short space, but in such a way as to make a continuous narrative and picture of the progress of the nations. Also, that by this means, the man of everyday life who reads but little history in detail, is at least enabled to fit his little pieces of knowledge in the larger scheme. Mr. Wells did the apparently impossible task with what looked like the greatest ease. But he made things easier for himself by taking definite sides in the secular conflicts. Some of his readers enjoyed the little spice so introduced. Others, like Mr. Belloc, "objected."

We now have Mr. Happold following in the master's footsteps. But he has carefully marked where the master walked in miry and boggy places and has avoided them. For he is writing for the young, and prefers that they should have their panoramic view through an atmosphere uncoloured by prejudice of any kind. Possibly some may think that the masterly colourlessness which is reached by Mr. Happold in his lines on the Birth of Our Lord is a little overdone. But, granted the desirability of this manner of presentation, we may well congratulate our author on the success with which he has achieved the telling of the world's history in some 35,000 words. He carries his learning easily; tells his story well and preserves his sense of proportion in circumstances of great danger. The one bad instance to the contrary noticed by us occurs on page 100, where he wastes some precious lines in bringing home to the reader the great impression left on the minds of his contemporaries by Frederick Barbarossa. But, of course, the legend he tells referred not to this great Emperor, but to his grandson, Frederick II. The pious fraud of Ruckert and Grim in transferring the old tale to a more appropriate Emperor is little over a century old.

This excellent little book is rendered even more useful by its numerous pictures and by its liberal supply of simple and cleverly designed maps. Some of the pictures are better than others. Only very few are not good enough for their job. The worst is the picture of the Taj Mahal. We suggest that the second edition should contain either a better attempt or omit it altogether. A good word must also be said for the ingenious summary of the book in its end-papers.

C. S-W.

COOK'S TRAVELLER'S HANDBOOKS.

"*COOK'S NORTHERN AND CENTRAL ITALY. INCLUDING ROME.*" By Roy Elston. (London: Simpkin, Marshall, Hamilton, Kent and Co., Ltd. Thos. Cook and Son, Ltd., Berkeley Street, W.1. 12s. 6d.)

The pre-eminence of "Baedeker" has long since been challenged as far as the English traveller is concerned, and now with the steady growth of Cook's Traveller's Handbooks it must have almost received its quietus. There are more than a score of these handbooks, and the series is too well-known to the travelling public to need extended reference, but in passing, it may be recalled that it includes "Constantinople, Gallipoli and Asia Minor," "Egypt and the Sudan," "Jerusalem and Judaea," and "Palestine and Syria." This last volume very wisely embodies within a single cover the smaller guides, previously published, to

Milan and the Italian Lakes, Venice and Venetia, Florence and Rome; for the majority of people who undertake the journey to Italy will try to cover the chief cities of the north, even if they cannot make a dash on Rome, and the single book, provided that it is not too bulky, will be more convenient.

It is, perhaps, enough to say of a guide-book that it contains all the information that the traveller needs. In the present case, we may add a word of commendation for the clear type—a feature of the series and an important matter often overlooked in books of this kind. The author is to be congratulated on the happy mean that he has pursued in the presentation of well-worn themes. It is very easy to overload introductory references to such places as Rome, Venice and other Italian cities. Mr. Elston has preferred to skim more lightly over his subject, culling from existing descriptions of outstanding merit, rather than attempting to break fresh ground himself. For this reason the volume is more readable in itself than many guide-books, without in any way sacrificing those serried details of the contents of Museums, etc., which custom prescribes for such publications. Having betrayed himself so far, the writer had better confess to being a thoroughly bad tourist, judged by the American standard. For instance, he is barbarian enough to think that the Fiat works are worthy of mention as a *Sehenswürdigkeit* of Turin, and to hope that others will find in the Colosseum much more of the atmosphere of Imperial Rome than might be inferred from the comparatively brief notice accorded to it. To all who travel to or from the Near East this volume is warmly commended as a travelling companion; for it will be strange indeed if many of its pages can be read without creating the firm resolve to break the journey in Italy or to pay the country a more extended visit at an early opportunity. Fortunately the possibilities of Italy as a summer resort are becoming better recognised.

NEWS IN BRIEF.

Mr. Rudyard Kipling arrived at Sao Paulo, Brazil, on March 10.

The King's Liverpool Regiment left Baghdad on March 10 *en route* for Basrah, where they embarked. This was the last English regiment in Iraq.

Sir Francis Humphreys, British Minister in Kabul, was due to sail for England on March 12. During his absence Mr. B. J. Gould will act as Chargé d'Affaires.

The death occurred last week at Ashford, Kent, of Charles Redman Bey, aged 91, who had had a career of thirty-three years as a Civil Servant in Egypt. He went to Egypt in the 'fifties.

The Vice-Chancellor of Oxford University announced in Congregation on March 8 that Classical Hebrew had been added to the languages which may be offered by Oriental candidates at Responsions.

During February a census was taken throughout Egypt, the provisional figures showing that Egypt's total population was 14,168,756, compared with 12,750,918 in 1917. The present population of Cairo is 1,060,000.

The death occurred on March 12 of Miss Felicia Rudolphina Scatcherd, daughter of the late Watson Scatcherd, of the Indian Civil Service. Miss Scatcherd was engaged on preparing a life of Sir William Crookes during her last illness, and she was at one time editor of the *Asiatic Review*.

During the present month Roumania will be issuing a set of five stamps to commemorate the jubilee of the Roumanian Geographical Society. The designs include a map of Roumania, portraits of Stephen the Great, Michael the Brave, the late King Carol, and the present King Ferdinand, and a monument to Adam Clisi.

It is announced by the Colonial Office that 13,056 Jews—5,932 men, 4,580 women, and 2,544 children—entered Palestine as immigrants during the 12 months ended December 31, 1926. During the same period 7,340 Jews emigrated from Palestine, so that the net increase of the Jewish population by immigration was 5,716.

THE PERSIA SOCIETY.

PERSONAL AND GENERAL

TO-DAY

March 17, 1927 (New Style).

March 4, 1927 (Old Style).

Ramadhan 13, 1345, A.H., of the Muslim Calendar.

Adar II, 13, 5687, of the Jewish Calendar.

The Bulgarian Minister returned to London last week from Paris.

Colonel and the Hon. Mrs. Lane-Fox have returned to 88, Eaton Square from India.

Lord and Lady Oranmore and Browne have returned to 21, Portland Place from Sicily.

Julia Countess of Dartrey arrived at 3, Eaton Place on March 12, on her return from India.

Mr. R. S. Hakim, of Liverpool, last week arrived in London, from his visit to the King of Iraq

The High Commissioner for Canada and Mrs. Larkin and Miss Larkin returned to London on March 10 from Egypt.

Sir Edward MacLagan, K.C.S.I., has joined the Board of Management of the Royal Hospital and Home for Incurables, Putney.

The Marquess and Marchioness of Linlithgow are expected to arrive in London at the end of this month on their return from India.

The Persian Minister in London will be at home on Tuesday, March 22, at 47, Bramham Gardens, from 4 to 7 o'clock, on the occasion of the Persian New Year.

Viscount Inchcape left London on March 9 for Glenapp to spend the week-end with Viscountess Inchcape, who is now almost restored to her usual good health.

Lady Morvyth Benson was a passenger in the Imperial Airways air-liner City of Cairo, which left Cairo at the beginning of March on its maiden flight for Baghdad.

The Hon. Mrs. Devereux sailed in the Orama on March 5 for Egypt. The Hon. R. C. Devereux and Miss Blanche Devereux are at 26, Bruton Street for the present.

Sir Joseph and Lady Isherwood, accompanied by Mr. William Isherwood and Miss Mary Isherwood, joined the Adriatic at Monaco on March 11 for Alexandria and Gibraltar.

The King has approved the appointment of Mr. Chettur Madhavan Nayar to be Puisne Judge of the High Court of Judicature at Madras in the vacancy created by the death of Sir Cheruvuri Krishnan.

Viscount and Viscountess Combermere and the Dowager Viscountess Mountgarret are among the recent arrivals at the Semiramis Hotel, Cairo, where Sir Stanley and the Hon. Lady Birkin are also staying.

King Fuad of Egypt has conferred the Grand Cordon of the Order of the Nile on Sir Ian Malcolm, President of the British delegation to the International Navigation Congress, which was recently held in Cairo.

Sir Daniel Stevenson arrived in London on March 9, from Paris. On his return from the Near East he spent a few days in Berlin, where he lunched with the Reichskanzler, Dr. Marx. He left for Glasgow on March 12.

Sir Hugh Stephenson was received in audience by the King at Buckingham Palace on March 11, and kissed hands upon his appointment as Governor of Bihar and Orissa, when His Majesty invested him with the Insignia of a Knight Commander of the Most Exalted Order of the Star of India.

Viscountess Cowdray and Mrs. Kinnell have left 16, Carlton House Terrace for Paris, Vienna, and Belgrade, and will be away until Easter.

Viscount and Viscountess Portman have left the Cataract Hotel, Assuan, and are staying in Cairo. They will leave Alexandria on March 18 in the Mauretania for Villefranche, *en route* for Cannes, and expect to return to England on April 9.

The King has approved the appointment of Mr. Charles Frederick Belcher, O.B.E., Judge of the High Court of Nyasaland, to be Chief Justice of the Supreme Court of Cyprus in succession to Sir Sydney Charles Nettleton, who has been promoted Chief Justice of Gibraltar.

A paper entitled "The Romance of the Indian Army and its Future" will be read under the auspices of the East India Association at Caxton Hall, Westminster, on Monday, March 21, at 3.30 p.m. by Lieut.-General Sir George MacMunn. General Sir Edmund Barrow will preside.

SIR STANLEY JACKSON.

Sir Stanley Jackson, Governor-General-Designate of Bengal, and Lady Jackson, left London on March 10 for India.

A large number of politicians and cricketers gathered at Victoria Station. The Prime Minister and Lord Hawke met Sir Stanley and Lady Jackson in the Royal waiting-room, where a reception was held.

Others present included Countess Winterton, Viscount Younger, Viscount Fitzalan, Lord Carson, Sir Arthur Steel-Maitland, Sir John Simon, Sir Archibald Weigall and Lady Weigall, Sir Lancelot Sanderson, Sir Robert Hutchison, Mr. J. C. C. Davidson (Sir Stanley's successor as Chairman of the Conservative Party Organisation), Mr. R. H. A. Carter (representing the Secretary of State for India), Mr. W. D. Tomkin (representing Earl Winterton, Under-Secretary for India), and Mr. Sen (representing the High Commissioner for India).

Air Vice-Marshal Sir Sefton Brancker, Director of Civil Aviation, landed at Nairobi from Kisumu on March 9.

The will of Major James Farquhar White Ogilvie, M.C. (late Guides Cavalry, Indian Army), of Limington House, Limington, Yeovil (net personalty £40,655), has been proved at £46,624.

A meeting of the provisional committee of the Air League of India held at Karachi on March 9 elected Sir Montagu Webb Chairman of the League, and also decided to form the Karachi Light Aeroplane Club—the first of its kind in India.

On the completion of ten years' ministry at Streatham Congregational Church the Rev. W. Charter Piggott has been granted three months' leave of absence in order that he may visit the Holy Land, Egypt, and Greece, and a cheque for £200 to defray the expenses of the trip.

The death of Sir Walter Congreve has, says *The Times*, brought forward the promotion to general of Sir Charles Harington, who otherwise would not have been promoted until June, when Sir Charles Munro reaches the age limit. Sir Charles Harington now reaches the rank of general before he is 55 years of age, and becomes another of the officers of that senior rank to hold the Northern Command.

The Athens Correspondent of *The Times* states that the Greek Government has conferred the Golden Cross of the Order of the Redeemer upon Mr. Robert Blackburn, founder and head of the Blackburn Aeroplane and Motor Company, Limited, in recognition of his services to aviation in this country. This honour is thoroughly well deserved, not only for what Mr. Blackburn himself has done here but also for the good work done by his representative, Major Buck, and his staff of British and Greeks at his aircraft factory at Phaleron, where he is turning out machines for the Greek Government.

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

LONDON	ABADAN	FREMANTLE
Royal Albert Docks	ADEN	HAMBURG
and Purfleet	ALGIERS	HAVRE
AVONMOUTH	ANTWERP	KARACHI
GRANGEMOUTH	BOMBAY	MADRAS
HULL	BORDEAUX	MARSEILLES
JARROW (Tyne)	CALCUTTA	MELBOURNE
LEITH	CAPE TOWN	MOMBASA
LIVERPOOL	COLOMBO	ORAN
MANCHESTER	COPENHAGEN	OSLO
SOUTHAMPTON	DONGES(Loire)	PORT SAID
SUNDERLAND	DUNKIRK	RANGOON
SWANSEA	DURBAN	SYDNEY

Other Stations are in course of erection.

THE BUDGET DEBATE.

The Government of India has successfully carried the Bill for the stabilisation of the rupee at 1s. 6d., though by a narrow majority, of 68 to 65 votes on the amendment in favour of the 1s. 4d. rate, and of 67 to 62 on the crucial clause fixing the rate at 1s. 6d. It would seem, from the cabled account of the proceedings, that this result was largely due to excellent tactics on the part of the occupants of the official benches, who took no part in the first debate, but contented themselves with allowing their opponents to destroy their own chances by dealing in what the report describes as "prejudice, personalities and racial spite": a class of appeal which, while it could produce no effect on the votes of those who were already their declared supporters, appears to have turned those of the Muhammadans against them: a result which a more skilful use of tactics might well have prevented. Having won this vital division, the Government can afford to treat the subsequent proceedings with comparative unconcern. If it had gone the other way, it would certainly have been necessary for the Viceroy to certify the Bill, for on it depended the whole of the calculations in the Budget: and it is a great thing that, on so highly controversial a subject, this expedient should have been avoided. But the attitude taken up by the Congress Party is decidedly disappointing; since, in the course of the earlier part of the debate, there were several encouraging signs of a more reasonable temper than usual on the part of some of those leading Indian politicians who are usually to be found in the van of the opposition. For instance, in the course of the second day's discussion, Pandit Malaviya, while admitting that he felt the arguments of the supporters of the 1s. 4d. rupee to be decisive, declared that he and several others, being greatly perplexed by the complexity of the question, had tried their best to come to the right conclusion: and invited Sir Basil Blackett to reply, assuring him that he and his friends were open to conviction. The cabled report asserts that the Finance Member "easily and lucidly confronted" the arguments of the supporters of the sixteen-penny ratio: and adds that the effect of his statement "appeared to be good"; but it is unlikely to have carried conviction to the Pandit and his friends—or, at any rate, to have influenced their votes. Mr. Malaviya, it is true, is not a member of the Swaraj—now renamed Congress—Party, since his present political views lean towards those of the Responsivists; but he still gives allegiance to the Congress, though declaring to range himself with the Party that has named itself after it. The voting figures suggest that the Government majority was made up of the officials, European non-officials, nominated members and elected Muhammadans; and it will probably be found that the minority consisted entirely, or at least with negligible exceptions, of the Hindu elected members, and that the votes of Pandit Malaviya and his friends were cast with them.

Among other matters of special interest that came up

in the debate were those of the proposed remissions of taxation, of the Provincial contributions, and especially of the Army. The reduction of the import duty on motor-cars was quite naturally condemned as of benefit only to the well-to-do; though in fact it is practically certain that it will have no such effect, and that the fall in the initial price of motor vehicles, that should and doubtless will follow on the reduction, will be more than neutralised, to the individual owner, by the increase in Provincial imports that is certain to follow it. The improvement in the motor trade, that should follow on the reduced import duty, is one that, in the absence of even the beginnings of any indigenous motor industry, ought to appeal to the Indian economist; but it may be surmised, with complete confidence, that it does not do so. In the matter of the Provincial contributions, one opposition speaker made quite a neat point. He said that they were originally devised to enable the Central Budget to be balanced on its then existing scale; that it was quite unfair that they should continue to be used to balance a budget of much greater proportions; and that their complete remission ought, therefore, now to be absolute, instead of depending on future surpluses. But this argument overlooks one very important point—that, as the Budget has grown, the contributions have been progressively reduced, until their total incidence, even if Budget expectations are not realised in the future, will at the worst be a mere fraction of what it was in the beginning. The removal of the export duty on tea was criticised on the curious ground that its result would be to cheapen tea for the overseas consumer but to increase the price to India. No reason was given for the latter assumption: presumably because none exists. No mention appears to have been made of the increase, by 50 per cent., of the import duty on tobacco. The only apparent reason for this omission, if it existed, is that the increase is demonstrably in favour of the Indian peasant; since tobacco is one of his ordinary crops and its production is not, as is mainly the case with tea, in the hands of British firms; so that no capital could be made out of its condemnation.

The debate on Army expenditure was the occasion for some notable announcements by the Commander-in-Chief: who, when it was pointed out that, for 90 vacancies in the Indian Army last year, there were only 70 Sandhurst candidates, and for 118 vacancies this year only 56, admitted the melancholy fact that the Indian Army appeared to have lost its attractions for Sandhurst cadets in the number and quality formerly obtainable. He was, however, able to add that not only were all ranks of the Indian Army eager for service in China, but that he had actually received the offer of his services there from Sir Frederick Whyte, the first President of the Legislative Assembly. No indication was given of the capacity in which these services were offered, whether military or civil, but one is inclined to suspect the latter: possibly in an advisory capacity in the matter of a new constitution for China, or perhaps with the idea that service in China would be valuable training for a future tour of duty in

the neighbouring country of Burma. The offer need, indeed, occasion no surprise: what is likely to do so is that Sir William Birdwood thought it necessary to make public mention of it. Another matter of more general interest was the announcement that the Imperial authorities have at last decided to take over the military and political control of Aden, leaving the civil administration to India. This is a matter that has been under consideration for many years past: the arrangement, under which the General Officer Commanding at Aden has also been *ex officio* the Political Resident, has long been palpably out of date, though it needed a local crisis, in the course of the Great War, fully to expose the absurdity of it. The Commander-in-Chief is also reported to have "sharply criticised" the Inchcape Committee's recommendation that the Army budget should be progressively reduced until it reached a figure of 50 crores of rupees (£37½ millions, at the newly established rate of exchange), above which maximum it should not thereafter be increased. This, he declared, was a pious aspiration put forward without showing how it was calculated or how it could be reached. He believed that, on the contrary, the Army estimates would be likely to increase rather than diminish in future: and it would seem that the Finance Member acquiesced in this forecast, for he appears to have been invited to explain what his critics considered to be a too complaisant attitude. This he did by saying that, though he did not say that the tendency to increase was inevitable, he did think it probable, unless there were a sacrifice of efficiency—a prospect not to be faced in the case of any Army, whatever its size, and one for which he, at least, would not allow his own Department to bear the blame. These statements were, it is reported, received with notable anxiety by the occupants of the unofficial benches, both Indian and British: and they are certain to be subjected to strong criticism as the debate proceeds. The question is a very difficult one indeed, the arguments on both sides being so strong as to be almost incontrovertible. It is one on which it is dangerous to dogmatise, and the details of its discussion in the Assembly will be awaited with interest, especially in view of the quite evident and very gratifying signs of a tendency on the part of Indian legislators to discuss large questions of policy in a temperate and understanding spirit.

CURRENT TOPICS.

The Rupee Ratio.

The Government's narrow majority on March 8, when the first trial of strength on the Currency Ratio Bill took place, did not settle the vexed question of the rupee ratio, as the rate given was not on the Bill itself, but on an amendment in favour of the alteration of the ratio from eighteen to sixteen pence. After its defeat on this point the Congress Party proceeded to concentrate on an attempt to obtain the rejection of the Bill itself. On the motion that the Clause fixing the ratio at eighteen pence should stand part of the Bill the Government secured victory by 67 votes to 62 votes. As three European members were reported to have voted among the 65 who formed the minority on the first division, it would seem as if they had refused to join in the attempt to wreck the Budget by persisting in their opposition to the ratio on which it is based. Incidentally, rejection of the Currency Bill would entail the abandonment of the two subsidiary Bills, for the establishment of the gold bullion standard and of the Reserve Bank; both of which proposals have received considerable support even from those who are most strongly opposed to the eighteen penny ratio. It is asserted in some quarters, and derided in others, that the Moslem vote on the Assembly was offered to the champions of the sixteen-penny ratio, on conditions of a political nature having reference to the protection of Muhammadan minorities. If this is even partly true, the smallness of the minority shows the important

results that might have followed an acceptance of the conditions, and that did follow on their rejection.

"Members for India."

The denial of the rumour that Sir Frederick Whyte contemplates an early attempt to re-enter Parliament will be a disappointment to his friends in India, prominent among whom is to be reckoned the *Times of India*. The paper expresses the opinion that the House of Commons would be the stronger for the inclusion among its members of this doughty friend of India, who would be sure of having a friend at court to put her case fairly, authoritatively and with first-hand knowledge; while his views could not fail to command respect in any discussion affecting the setting up of the Statutory Commission and the grant of further reforms to India.

There are, of course, quite a number of "Members for India" already in Parliament, from Mr. Saklatvala upward; though the number who can put her case authoritatively is small, and those who can put it fairly are fewer still. Those who fail in the latter duty are mostly to be found among the comparatively large number of members who, though always ready to hold forth on matters of which they are entirely ignorant, have no first-hand knowledge of India: and the addition to the House of one whose knowledge, if not very extensive, is at least recent, would be a decided gain. It is generally believed in India that Sir Frederick Whyte would welcome a further opportunity of serving her on the spot: and a seat in Parliament would certainly be a useful preliminary. If, for instance, the generally held belief turns out to be correct, that the Statutory Commission will be recruited solely from the two Houses of Parliament, Sir Frederick Whyte would have qualified for inclusion in it. If elected, it is beyond question that he would contribute his full share of the determination and good will—qualities the possession of which he conclusively proved in India—that he has declared to be necessary to overcome the many problems with which Indian constitutional government is faced: a task in which he should provide a useful corrective to the efforts of some of his probable colleagues. Membership of the House of Commons not infrequently leads to an Indian governorship; though it is true that, in this case, first-hand knowledge of the country appears to be rather a disqualification than the reverse. Perhaps, in Sir Frederick Whyte's case, his expressed desire to serve in China has conflicted with his wish to re-enter Parliament: and he has decided to approach the problem of further employment in India from another angle. If so, this is perhaps a pity; for, in the critical uncertainty regarding India's political future, there are great opportunities for a "Member for India": much greater, one may be permitted to believe, than are likely to present themselves to any Provincial Governor. One also believes that there are few men who could take better advantage of them than Sir Frederick Whyte: and that his decision, not to make the attempt, is a matter for very genuine regret.

Mr. Saklatvala.

Mr. Saklatvala will be getting into trouble with his constituents, if he is not careful. His admirers among the Anglo-Vernacular newspapers regularly print an assortment of congratulatory messages received by him in the mail from England, obviously communicated by himself. The writer of one of these, speaking on behalf of "myself and Battersea," acclaims Mr. Saklatvala's efforts towards the establishment of the Workers' and Peasants' State: another voices the demand for full self-government for the Indian people, when "the organised workers might have better scope to eliminate the local oppressors" and to put an end to "impertinent Imperialist restrictions on their activities." This latter message ends with the assertion that, "though far apart in distance, the Indian and British workers are identical in all that matters." Mr. Saklatvala, however, does not seem to think so. At a meeting held at Karachi he contrasted the condition of Indian labourers, who were "leading lives no better than beasts," with that of the

labourers in European countries who earned eight or ten rupees (twelve or fifteen shillings) a day and "led a happy life. They have good houses and ample accommodation and were often able to enjoy possession of cycles and motor cars." It will be noted that American labourers were not included in the picture; though possibly Mr. Saklatvala will be able to explain that, by "European labourers," he intended to refer only to those inhabiting the Continent of Europe: particularly, perhaps, Soviet Russia. Otherwise, it is to be supposed that the workers of Battersea will be among the first to dispute his description of their happy, comfortable and opulent life.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 24.

The Political Detenus Again.

The Bengal Legislative Council by 71 votes to 26 yesterday passed a resolution calling for the immediate release of the political détenus. The figures appear to indicate that many non-official Europeans did not vote, while on the other hand practically every Indian elected member, except the Ministers, supported the motion. There is more than usual significance in the passing of this hardy annual by such a majority at the present time. There has probably never been so effective an answer put forward on behalf of Government as Mr. A. N. Moberley presented in his speech; he produced actual documents and memorandum books, seized in the recent arrests of terrorists, which recorded the steps now being taken to train murderers, and he read these to the House; he also read the notes of a European police officer of his interview with one of these men, whose only regret was that he had been deprived of the opportunity of assassinating someone; no one who has met and talked with revolutionaries, as the writer has, could doubt for a moment the genuineness of these papers, and it is impossible to believe that the Swarajist leaders are sincere in their suggestion that the whole thing is a fabrication. Mr. S. C. Bose, one of the leading Extremists, went so far as to state that for a Council Member to ask that the documents should be accepted as genuine was an insult to the intelligence; it is typical of the insincerity of the debate and equally of the Extremist politician; but there is no elected member of the Legislature to-day who would dare to face his constituents again, if he voted against the Resolution. Clearly a conspiracy has existed and still does exist, and most of the détenus are unrepentant and will pursue their old methods, if they are released; the problem is one for a first-class brain, and the occasion is one of sufficient importance to justify a comprehensive search for one. At the same time it is well to remember that, if this grievance, which has been worked up into a universal one, is removed, it will not mean an end of the hostility to Government; the Extremist will find plenty of other sticks for his purpose, but sentiment and propaganda have been so effectively welded as to make this a dangerous rallying point against Government as representing the forces of law and order.

Democracy in Being.

The split in the Bengal Congress Committee has become more than a crack; it has produced a definite breach between the two sections. The newly-elected President and Executive, after considering their position, resolved that they would not resign on the recent vote of "No confidence," but that on the contrary they would proceed to retain office and carry on the activities of the Congress. This was immediately countered by the announcement that the malcontents had formed themselves into a Congress Corporation Election Committee, and this body has since issued a list of candidates who had been selected to contest every seat in the Corporation in the forthcoming election. The nominal Executive replied by an announcement that

they were proceeding to select their own candidates, and the chances at present appear to be that there will be two Swarajist candidates appearing in every constituency. Most of the well-known members of the Corporation appear under the banner of the malcontents, and it may be that in such circumstances the present office bearers of the Congress Committee will re-consider their decision before the date of the elections. It is significant that up to the present nothing has been heard of any candidates proposed to fight the elections against the two sections of the Congress Party, and it is safe to say that Indian Calcutta, so far as voters are concerned, has completely gone over to the Extremists.

The Railway Strike.

The strike on the Bengal-Nagpur Railway is probably at the moment worse than it was at the time of writing last mail. Certainly there are many more strikers out, and, although reports this morning are that a few are returning, the facts appear to be that the strike is spreading throughout the whole system and that it is largely of a "sympathetic" character, most of the men being called out by so-called Labour Unions merely in order to support their fellows at headquarters. It is stated that the whole affair began with a rupee fine upon a subordinate; but it is impossible to get any clear understanding of what are the genuine grievances, if any, of the strikers. Last week a motion on the matter was moved in the Assembly, and a similar motion was moved in the local Council in the present week. This was talked out after a desultory debate, in which neither the supporters of the motion nor the Government speakers seemed to be clear as to the facts or the arguments. The debate, however, served as an excuse for the usual attack upon the British Government, the British capitalist and the British exploiter of India, and the Indian Press repeats the whole of the inflammatory matter with its usual irresponsible additions.

The Wicked British Manufacturer.

The British manufacturer and his machinations have been very much before the Legislative Assembly this week. By a majority of 12 the Steel Protection Bill was passed as it was returned by the Special Committee, in spite of its alleged preference to Home steel. On the other hand, Government were heavily defeated, mainly on a trading point, in regard to a vote of 9 lakhs asked for by the Railway Board; this was reduced to Rs. 100 at one blow, which of course makes certification inevitable. The debate turned principally upon the present position of the Railway Wagon Companies in India, and Sir Clement Hindley, Chief Commissioner of Railways, had to meet some very pointed attacks. The Railway Board was accused of bad faith in manipulating the supply of wagons in the past so as to benefit British industry and damage local works, which are financed chiefly by Indian capital; this hardly tallied with the suggestion that the Board at the same works in order that they might be able to supply wagons cheaply, and then had declined to give them orders for wagons so as to reduce prices. Sir Clement's reply was that the vast improvement in the organisation of the Railway Workshops had resulted in all the arrears of wagon equipments being made up and whereas as few years ago 6½ per cent. of the total Indian wagon stock was under repair, this figure had now been reduced to under 2 per cent. The Indian members, however, would have none of it, and carried the resolution to refuse the vote.

The Y.M.C.A. and Politics.

The Y.M.C.A. has been much in the limelight this week. At the annual general meeting of the European Association a resolution was carried almost unanimously, calling upon the Association to leave politics alone, and it was supported by a speech, typically both vigorous and rambling, from Mr. Harry Hobbs, the proposer. Considerable correspondence has ensued in the newspapers,

and one frank letter gives the impression that the actual point at issue is a personal objection on the part of Mr. Hobbs to the election of Mr. F. E. James, the Calcutta General Secretary, as a representative of the European Community on the Legislative Council. However, the speeches delivered made specific references only to Indian and American Y.M. workers. In spite of definite denials which appeared in the Press since, there are many people who are somewhat uneasy in regard to the political activities of certain of the Indian secretaries, and these not junior officials of the Association, and something more than speeches will be required to prevent subscriptions from diminishing this year. Many of the branches of the Association are doing excellent work, and these are almost bound to suffer unless the present accusations are fairly met and disproved.

Men and Things.

There is hardly a dissentient voice to be heard on the settlement of the South African question, and both the deputations from India and South Africa have received congratulations on all hands; *Forward* of course is captious, and Mahatma Gandhi in his journal comments unfavourably on one or two points; his objections, however, had already been dealt with before they were published, and his voice has passed unheeded; in fact, his voice nowadays always does so pass, at least in Bengal.

The Air Force has given a very fine display at Delhi during the week; it would have been more effective and would have done more public good, if it had taken place in the neighbourhood of a large town, particularly, let us say, Calcutta. Thanks to its protected position Bengal has always been the home of non-fighting races and it is as well that Bengal should be reminded from time to time that something more than resolutions of Congress are required to protect the weak races in these days.

The jute world is missing the *phutka* market, the unauthorised jute exchange which has been closed since a recent conviction for gambling; its operations, in spite of their speculative character, often afforded a useful lead to the more sober dealer, and there is some talk that the market might be revived in Chandernagore. It is doubtful whether it would be a success at a distance of 20 miles from Calcutta, but the Marwari is an inveterate gambler, who is prepared to go a long way to indulge in his amusements.

The Bengal Budget was duly presented by the Hon. Mr. James Donald this week, and on the whole the financial position is satisfactory; an excess of expenditure this year was balanced by the carry over from the previous one. Incidentally, the Finance Minister uttered a solemn warning of additional taxation, if the rupee ratio were fixed at rs. 4d. instead of rs. 6d.

All classes are keenly following the news from China, which changes widely from day to day; the parallel of problems and events there is too close to our local ones to be altogether comfortable.

Mr. Saklatvala is in Calcutta and has been duly addressed by the Corporation, incidentally as an "Esquire"; only Swarajists were on the platform and only students in the hall, and there were no Europeans or Muhammadans present.

Lord Lytton's last address to the University Convocation contained much common sense, and included a reminder to the students that nation-building was not to be done with dynamite, but with cement; the Extremist papers do not comment on the speech.

The Trivial Round.

Racing was continued last Saturday under most pleasant conditions, the temperature being low and the sky pleasantly overclouded; at last the books had a bad day; items of interest were the saddling of three winners by Hayhoe, the trainer; Captain Leetham's win in the jump race on "More Sanity" which Mr. Mein Austin gave him

after he had won the classic 'chase; Mr. Henry Gregson again appearing with two winners, and Mr. Henry Birkmyre leading in "Shy Warrior" after a win at 25's.

Only a small field turned out for the paperchase, the last run for the average Cup; interest was lessened by the fact that "Bright Future" had fallen out owing to lameness, and so Captain Leetham takes the Cup; Mr. Holmes Johnson scored his first win this season.

Alec Hosie scored another century in the week-end cricket, and the principal feature of tennis, apart from the ordinary games, was the progress made in the Mill tournaments; these are more numerous than ever, a most satisfactory state of affairs. Hockey League matches are just beginning.

The A.D.C. finished up their "Outward Bound" production with a full house on Friday, which enabled them to achieve a record in receipts, their returns being some 50 per cent. more than they had ever had before; Mrs. "Molly" Deane received a very handsome silver salver from her admirers. The young Operatic Society has a production on this week, but the kindly critic will be silent about it.

The Calcutta Symphony Orchestra gave its first concert in a really suitable building on Sunday night after dinner, when they played at a Recital in the Cathedral; the building was crowded and the performance reached a high standard; at its conclusion the hymn "Praise the Lord" was sung to "Austria" and such singing has never been heard in Calcutta before; it was a remarkable experience, which no one present will ever be able to forget.

Markets.

Business in the jute market has been on a very small scale during the past week, but the close is steady with rather more interest being taken; prices have remained unchanged. Little alteration has taken place in hessians, and demand has been small, Pacific Coast being responsible for most of the inquiry. The piece-goods market has passed a rather quieter week mainly on the fact of dealers having raised their prices, and this has to some extent arrested the previous keen demand. Stocks, however, are low, and this reaction should only be of a temporary nature. The tea market has made a better showing, and in London the tone opened stronger; at the sale of the balance of Indian teas it is reported to have been stronger and advancing. Here in Calcutta also, although there was a considerable amount of inferior qualities on offer, prices showed a rise of anything between half to one anna.

On the Stock Exchange, Government Securities have been a weak market with a general decline in prices, especially in the case of the long dated 6 per cent. Loans; inquiry for investment stocks has decreased further on the maintained tightness of the money market. Jute shares after a slight reaction have again firmed up, and a number of shares are changing hands at prices considerably above those obtaining last week. Caledonian, which was last marked at Rs.605, has been negotiated at Rs.670, and Kamarhati and Kankinara, in respect of which dividends of Rs.30 and Rs.20 respectively were recently declared, have almost recovered these amounts within the week. These may be taken as a general tendency of the market at the moment. Cottons are idle and coal shares have receded further on the publication of the Railway Board contracts for the coming year, which are about 8 annas a ton lower for all grades. The miscellaneous market has been less active and, apart from a fair turnover in B.I. Corporation Ordinary and in Indian Iron and Steel, business has been on a much reduced scale. The market for tea shares shows no signs of improvement and prices have tended to fall away further; rubbers have been quieter mainly on the offer of more shares from the Straits, but in view of the higher rates required few shares have changed hands. In addition, disappointment has been shown in some quarters that the recent cut in the standard allowance has not been reflected in the price of the commodity.

In the Exchange market there has been a marked inquiry for forward remittance on piece-goods account, and in the absence of bills the rate has dropped 3-32 during the week. Money is in slightly less demand and rates may be quoted 6 per cent. for call and short notice and $5\frac{1}{2}$ per cent. one month.

LANDOWNERS AND THE REFORMS.

In accordance with our policy of opening our columns to a discussion of matters bearing on the further consideration of the Reforms at the end of the nine-year period, we publish the following address given at Patna, on February 24 before the Landowners and Zemendars of Bihar and Orissa by the Hon. Maharajdhirajah of Dharbanga, Sir Rameshwara Singh, G.C.I.E., K.B.E.

We have quite recently entered the final triennium of the Reforms, and before it comes to an end we are promised the appointment of a Royal Commission to reconnoitre the political situation to discover what further advances towards Dominion status may be granted by the British Parliament to India, without danger to the integrity of the British Empire. You are all, I may take it, conversant with the opinion of our new Viceroy, Lord Irwin. He has proclaimed it in more than one speech, clearly and explicitly, and it amounts to this that co-operation with the Government of India is the only means of persuading the British people that India has acquired that sense of responsibility so essential to her admittance to equal partnership with the self-governing Dominions. It is, therefore, time that we landlords, who have a big stake in this country, should take stock of our position and agitate for adequate representation in the Legislatures which will four years hence supplant those now functioning, which are dominated by the professional element in the middle-classes. As a class we landlords willingly concede the necessity of progress, but we also maintain that the existing Constitution has been built from the top, a superstructure resting on a singularly insecure basis, offering a premium of irresponsibility and taking no count of the fundamental requirement of a firm foundation. We who have an actual and defined stake in the country would naturally contribute generously to this foundation, if we were given the chance; but hitherto we have been denied it.

Let us begin our inventory in our own household before going abroad. In the Legislative Council of Bihar and Orissa there are 76 elected members of whom five are landlords, five are representatives of special constituencies, such as Mining, Planting, European, and University, six are from urban non-Muhammadan, and five from urban Muhammadan constituencies; fourteen from Muhammadan and 44 from non-Muhammadan general constituencies. There is thus only one landlord for each of the five divisions of the province; obviously a ridiculously inadequate representation, especially when we remember that the general rural seats are gifts for the tenants. At the last election the landed interest was swamped in these constituencies by a violent propaganda. The interests of landlords and tenants have become so hard to reconcile that in future reforms these interests should be definitely separated, if the landlords are to have a look-in. This could be brought about either by dividing the 58 rural seats equally between landlords and tenants or by the creation of an Upper House. If both these alternatives are rejected, I can see no salvation for the landlord except in the abolition of direct voting, which is unsuitable to Indian conditions, and the substitution of a system combining direct and indirect voting with the same qualification for landlords and tenants. To gain our ends we must pool all our resources and make alliances with political groups of approved sincerity and responsibility. Those who have important interests at stake do realise—what others do not—the risks that may

be involved. We must possess efficient machinery for propaganda. When this principle is accepted the ways and means will readily suggest themselves.

It is too early to put forward a constructive scheme for the reform of the Legislatures and the administration. It will have to be pondered long and carefully, if the well-intentioned, yet to judge from our recent experiences, disastrous, mistakes of Lord Chelmsford and the late Mr. Montagu are to be corrected for the good of the country as a whole; but as financial freedom is the spinal cord of home rule, it should be conceded, if not entirely, at any rate in a larger measure than at present. Yet any such financial freedom must, if we are to judge by the experiences gained in the working of our district boards and municipalities, be subject to adequate control. This applies both to central and provincial finance. The corollary is that such freedom can be entrusted to custodians who realise what is due to the State and what to the people. Experience gained in the region of local self-government and in the working of the reforms surely demonstrates the need for the utmost caution before the finances of the provinces can be handed over to the Legislative Councils as at present constituted.

The feasibility of a bi-cameral system of parliamentary government in the provinces was examined by the authors of the existing reforms in a very inadequate and perfunctory manner. Only one short paragraph of their report was given to it. They dismissed it as impractical for the following reasons, which, to say the least, were merely conjectural and tentative: "In many provinces it would be impossible to secure a sufficient number of suitable members for two Houses. We apprehend also that a Second Chamber representing mainly landed and moneyed interests might prove too effective a barrier against legislation which affected such interests. Again the presence of large landed proprietors in the Second Chamber might have the unfortunate result of discouraging other members of the same class seeking the votes of the electorate. We think the delay involved in passing legislation through two Houses would make the system far too cumbrous to contemplate for the business of provincial legislation."

But the reformers had the grace to admit that circumstances might arise in an experience of nine years to alter the case, and they left it to the Royal Commission which will investigate the general political condition in 1929 to discover whether an entirely new orientation was not necessary to safeguard the important stake not merely of the landed gentry, but of all who really have a stake in the country. Under the present dispensation the landlords can be swamped, even if the crazy life-boat in which they embark is manned by the whole official crew. Nor can we shut our eyes to the advent of the professional politician who has not even a reputation to lose. To my mind the best, perhaps the sole, chance of our salvation lies in the creation of an Upper House in accordance with the system that generally prevails in countries where popular government has firmly established itself. Lord Chelmsford and the late Mr. Montagu themselves admitted that it would be possible to secure in an Upper House the representation of minority interests which would be really effective, because minority representatives sitting in a Chamber of their own would feel themselves freer to defend the interests which they represented than if they sat together with other elements in a Lower House. Such a Chamber might also develop a conservative character which would be a valuable check on the too radical proclivities of a Lower House. I am of opinion that the number of members of a provincial Upper House should be determined by the size, wealth, and number of inhabitants within its boundaries. The qualification to be either acreage or income above a certain figure or eminent academical distinction. The representation should be half the total votes for landed interests, one quarter of the votes for the commercial interests, and the balance for other classes. The members should be nominated by

the Governor for life, subject to such restrictions as are logical and traditional. The President of an Upper House would be elected every three years by a majority vote. In ordinary matters all measures passing through the Lower House would be subject to the approval or rejection of the Upper House, which would not have the power to reject purely money bills, but could amend them.

I honestly believe a bi-cameral system somewhat on the lines I have adumbrated is the only means of protecting the landholders, especially in a province like Bihar and Orissa. I do feel and feel strongly that a brake must be supplied as part of the new constitutional machinery. At present we can trust His Excellency the Governor to apply the brake, to insist on due consideration of problems affecting conflicting interests. Remove this and leave the constitutional machinery as it is, and the result will be hurried class and communal legislation and financial chaos. In the eyes of professional politicians who now rule the roost our great crime is our steadfast loyalty to the British connexion. It is an irony of fate that we are being victimised for that very loyalty by the British Parliament, which must surely be ignorant of the odds we have to fight to maintain the traditions we cherish.

It should, however, be made clear that we do not want in any way to mitigate hereby the established claims of the European community in India. A newly constituted India on the lines of the Dominion status with full internal autonomy ought not in any way to militate against the interest of its various component elements.

Besides this, it is an established fact that India would prosper more by being "within the Empire" than without it. There must, therefore, be full co-operation with the Government. But with this it has to be emphasised that a Constitution should be evolved which should take into consideration the great conservative, although less articulate, body of the landed aristocracy, which is the backbone and the most stable element in this country, and as such deserves special consideration in its own right.

INDIAN MAIL.

Trade Returns for December.

The returns of India's sea-borne trade for December show a decrease in imports and an increase in exports over the previous month, from a value of 1830 to 1654, and 2120 to 2421 lakhs respectively. India's net import of treasure amounted to 319 lakhs, compared with 335 in November, and the visible balance of trade in India's favour rose from 22 lakhs in November to 546 lakhs in December. The share of the United Kingdom fell from 49 to 46 per cent. in imports, and remained at 30 per cent. in exports: the shares of Japan, Germany, and the United States, which in November were 7, 6 and 9 under imports and 4, 5 and 13 under exports, were 8, 6 and 7, and 7, 8 and 12 respectively.

Under the major heads of imports, the value of food, drink and tobacco rose from 298 to 325 lakhs: while that of raw materials and of manufactured articles fell from 161 and 1329 lakhs to 128 and 1165 lakhs respectively. The figures given in the Department of Overseas Trade Summary do not allow of a detailed comparison with November in the matter of the import of cotton piece-goods; but its total value fell from 391 to 343 lakhs, the yardage of grey goods remaining the same, at 48 million, while that of coloured goods fell from 37 to 30 million.

Under the major heads of exports, food, drink and tobacco fell from 626 to 547 lakhs; while manufactured goods rose from 593 to 659 lakhs, and raw materials and produce from 874 to 1175 lakhs. The latter large increase is mainly due to greatly increased exports of raw cotton and raw jute, from a tonnage of 11,000 in November to one of 27,000 in December in the case of the former, and from 89,000 to 120,000 in that of the latter. Of India's exports of raw cotton, Japan took 14,000 tons, against

only 4000 in November. Italy took 4300 and China 4000 tons. The exports of gunny cloth rose, from November's figures, from 89 million yards valued at 167 lakhs to 116 million yards valued at 211 lakhs; but those of gunny bags fell, from 42 to 35 millions in quantity and from 210 to 176 lakhs in value.

A Sporting Offer.

A Bengali gentleman, writing to the *Englishman*, enlarges on the difficult position with which, as the Reforms progress, the Indian Princes will be confronted. He refers to Lord Irwin's recent assurance of the Government of India's intention still to pursue its old policy of non-interference with the internal affairs of Native States; but says that this announcement, though a consoling one, "carries little value in the absence of any certainty of the continuance of British overlordship in India, which is almost unimaginable in view of the present mentality of the Indian populace. The development of the new political slogan, "India for the Indians," coupled with the concessions of 1919, has already sounded the death knell of the present bureaucratic régime, and the Government of the country, most probably within a decade or two, will be transferred to a popularly elected legislature, carrying little or no responsibility towards the British Parliament." When this happens, the people of the States will surely call upon their rulers to hand over to them the government, "with all the valuables in their possession." In this trying position, the ruling aristocracy must begin now to direct its future policy in a manner likely to suit the requirement of the times. The writer of the letter admits that this is a difficult task, and yet one that must necessarily be carried out; and adds "I, with all the wisdom at my command, am ready to help the Indian Princes in moulding their future policy, and respectfully invite correspondence from them on this point."

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Jews in Palestine and Trade Depression.

It was known that owing to the adverse commercial conditions in Palestine last year there was a considerable emigration movement. The figures which have just been issued show that the departures from Palestine during the twelve months were considerably over 50 per cent. of the arrivals. The total number of immigrants was 13,910 of whom 13,080 were Jews while the emigrants numbered 9,429, 7,365 of them being Jews. The trade depression was already pronounced in Palestine at the beginning of the year, but it is noteworthy that it was not until June that there was any appreciable rise in the emigration, and from the following month to the end of the year the departures of Jews alone were in excess of the total arrivals. After October, the worst month, however, the movement slackened down appreciably, and for December the total emigrants numbered 751 as against 1,302 for October. There is no need to draw unduly pessimistic conclusions from these figures. 1926 is not the first year when commercial depression has resulted in an increase in the emigrants from Palestine. In 1923 the number of emigrants was double that of the previous year, while the two following years saw a great increase in the number of immigrants into Palestine. Thus while for 1923 the excess of immigrants over emigrants was 3,955 it rose to 10,819 for 1924 and to 31,650 for 1925, the peak year so far for immigration into Palestine. There is no doubt that the movement was greatly overdone in 1925. In the case of a country which is on the threshold of its development like Palestine, where new industries have to be developed and new markets found, there is bound to be a limit to the capacity for the absorption of population. It is essentially a case where the maxim *festina lente* holds good. The present year will see the commencement of several great enterprises which will enlarge the economic basis of the country and should place it in a position to absorb the new arrivals more readily.

Expansion of Cotton Growing.

The Jaffa orange has been the stand-by of Palestine in good and bad times alike, and it is only natural that in the consideration of methods of increasing the country's prosperity the question of expanding the orange groves should have an important place. I mentioned recently that the formation of an important concern for orange growing was under contemplation, and it now appears that the capital of the undertaking is to be £200,000. How large a part the Jaffa plays in Palestine's economy may be gathered from a few figures. The exports amounted to 1,341,543 cases for 1922-23 to 1,345,677 cases for 1923-24, to 1,875,415 cases for 1924-25, and to 1,515,446 cases for 1925-26. For these years the value of the exports of oranges has ranged between 21 per cent. and 32 per cent. of the total exports of the country. These statistics show

very plainly the favourable prospects before the industry, but it would be a great mistake so to increase production as to bring about a surplus in the various markets which take the Jaffa, for it must be remembered that the Palestine orange is not alone in the market; on the contrary, competition is growing every year and threatens to increase in the future. For the development of markets the first care of the orange growers should be to see that the fruit reaches its destination in excellent condition; it has been the great drawback in the case of the Jaffa that this has not always been the case hitherto.

Turkey and Soviet Russia.

After practically three years of negotiations a commercial agreement has at last been signed between the Turkish and Soviet Governments. It is for a year only, but is prolonged automatically; if not denounced by one or other of the parties. The chief point of interest in the treaty attaches to the stipulation that Turkish exports to Soviet territory may not exceed £T7,500,000 in the year. As the customs returns for 1925—the last available—show exports from Turkey to Russia amounting to less than £T5,000,000, an adequate margin would seem to be left for expansion during the current year. One obstacle in the way of the conclusion of the Treaty was the unwillingness of Turkey to trade exclusively through official Soviet channels, and these scruples have been met by leaving the door open in part to private trade. Moscow secures diplomatic privileges for three commercial agents and extra territoriality for the premises occupied by the Soviet commercial delegations in Angora and Constantinople. As far as can be judged, the Russian Government has always been the suitor in regard to this agreement, and Turkey has shown no alacrity to lend herself to Soviet aims. It is better, however, that the relations between the two countries should be regularised; Turkish trade stands to gain by the agreement, and the Angora Government is not likely to be caught napping if an attempt should be made to revive Soviet propaganda.

Egypt's Economic Strength.

The effect of the rapid decline of cotton on the economic position in Egypt was dealt with by Mr. H. E. Barker at the recent annual meeting of the British Chamber of Commerce of Egypt at Alexandria. As he pointed out the decline in the value of the exports of nearly £E17½ millions, bringing about a large adverse trade balance,

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 16, GRACECHURCH STREET
LONDON, E.C.3.

Branch - 11 CALEA VICTORIEI, EUCARIS

Directors :

E. W. H. BARRY, Esq.

C. De CERJAT, Esq.

General The Hon. SIR H. A. LAWRENCE, G.C.B.

LORD ORANMORE AND BROWNE, K.P., P.C.

Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited,

was entirely due to the cotton situation, but in his opinion, despite this development there is no real cause for anxiety in regard to the country's financial situation, owing to the recent extremely prosperous years that Egypt has enjoyed. Of course, owing to the high price of cotton Egypt has had a number of very good seasons, and while the Government has been able to accumulate large reserves the cultivators have been able markedly to improve their financial position. Sound though the country's situation may be the continuance of low prices for a prolonged period is not a contingency that could be faced with equanimity so long as Egypt has no other industry on which to rely instead of cotton. Happily the indications are now that Egypt will not be faced with a prolonged trial over cotton as the gradual improvement in trade has brought an increased demand for the raw commodity. Should events prove that cotton is again on the upgrade, however, it may be trusted that the relief from the immediate crisis will not lull Egypt into a sense of security—for there can be no real safety for a country dependent on so unstable a commodity—and that advantage will be taken of the period to use every endeavour to broaden the extent of the country's industries. Until that is done the position must remain extremely unstable, and Egypt will continue to be at the mercy of the changes and chances of the cotton trade. Clearly, whatever the developments, cotton will always be one of the principal resources of the dwellers in the Nile Valley, but it would be courting disaster not to associate it with other and less fluctuating sources of wealth. Conditions have changed too much for that. As Mr. Barker emphasised, while Egypt in the past held almost a monopoly of long staple cotton, now Egyptians no longer stand alone in the world in the production of this type, and as a matter of fact, competition from other regions is increasing every year.

British Trade with Egypt.

Mr. Barker devoted a considerable portion of his address to a detailed analysis of the trade statistics of Egypt for the past year. From the point of view of Great Britain the most unsatisfactory feature of 1926 was the further decline in the percentage of our exports to Egypt, the figure being 21.8 as compared with 25.2 for 1925, 27.6 for 1924, 32.6 for 1923 and 34 for 1922. There has thus, it will be seen, been a continuous decline over a number of years, and while the sharp drop last year can doubtless be partly attributed to difficulties arising from the coal strike, that unfortunate development is an inadequate explanation of the full results of the year, and the only conclusion that can be arrived at from the figures is that in 1926 we have still further failed to hold our ground in the Egyptian market. It is true that we were not alone in losing trade last year, for one of our chief rivals in the Near Eastern markets—Italy—also recorded the same result, but on the other hand France, Germany,

America, Turkey, and Roumania all showed increases, in some cases of a substantial character, and it cannot be maintained that we trade at a disadvantage as compared with every one of these competitors.

Lack of Initiative.

The real trouble would appear to be that we are too content in markets like Egypt to rely on the established lines of trade instead of attempting to gain ground in other directions, and the result is that when for one reason or another our normal trade declines there is no compensation forthcoming in other directions. For the first eleven months of the year the decline in British trade totalled roughly £2,800,000, and of this £800,000 was represented by coal (which, of course, was unavoidable), the balance being largely accounted for by cotton goods, trade in which was very bad during the year. In the trade in machinery of various kinds British goods on the whole made an unsatisfactory showing, though this does not apply to locomotives or agricultural machinery, in regard to which Great Britain's proportion remained about the same as before. In machine tools and parts, for instance, the value of the British trade was £5,840 as compared with £11,134 for 1925, while in electrical plant the percentage fell from 21 to 14 per cent. It might be thought that we should at any rate play a minor part in the tractor trade, but against 407 tractors from America we supplied only two, and even this meagre result was an improvement on the previous year's record, when our total was nil. In motor cars and chassis the position was practically unchanged, and how much leeway we have to make up may be gauged from the fact that the imports from America totalled 2,234, those from Italy 1,106, those from France 662, while our total was 238. Here at any rate is a field where our manufacturers should be able to do something to reduce our trade disadvantage, thus following in the footsteps of our tyre producers who doubled their trade in 1926, thus providing at any rate one bright spot in an indifferent twelve months.

Greece's Financial Position.

A supplementary refugee loan at an early date is a question to which Greece attaches the utmost importance, and it is understood that the necessary application to the League of Nations will be made this summer. It would have been made earlier but for the doubts entertained as to the reception that would be accorded to the request in the light of Greece's present financial situation, which is frankly unsatisfactory, Greece is therefore proceeding to take the wise course of putting her financial house in order before making an appearance at Geneva. A committee has had under review the whole economic situation, and in a comprehensive report which was recently presented the whole position is surveyed and various far-reaching proposals for reform are made. The problems

LLOYDS BANK now has the following Offices in INDIA and BURMAH, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

which await solution include the balancing of the Budget, the settlement of foreign debts, and the question of the adverse balance of foreign payments. The Budget is a difficult problem, and it is proposed to balance it at 7,500 million drachmæ which will entail not only considerable economies, but also the provision of further revenue. It is noteworthy that the principal economies proposed are in respect of the war services. Greece will have the best wishes of foreign countries in her endeavours to arrive at a real state of stabilisation, and if in addition to a settlement of her foreign obligations she can show a balanced Budget she will be able to make out an excellent case for herself at Geneva, where she will be assured of a most sympathetic hearing.

The Budget.

The forthcoming Budget continues to attract increasing attention, and the view seems generally to be taken now that instead of leaving well alone the Chancellor of the Exchequer has in view increases in indirect taxation, and share movements suggest very forcibly that tobacco is to come under attention. There is, of course, a point in regard to every commodity which when reached affects consumption, and a consideration of the relative prices of the various types of the "weed" to-day and the pre-War quotations rather suggests that the margin left for possible productive taxation in regard to tobacco is not very great. Of the one thing that all would like to see—economy—there are small signs. Admittedly conditions are and have been exceedingly difficult, but we are still far from achieving the Chancellor's ambition of a reduction in expenditure of £10,000,000 per annum. What with the taxes and with the rates it is small wonder if the average man should display some impatience. How heavy the incidence of public burdens is on enterprises was plainly shown last week in the speech of Sir Oswald Stoll at the meeting of the Coliseum Syndicate, Ltd. In 1913 the Coliseum paid to the Treasury and other public authorities £4,666, but for the same services in 1926 the payment was £34,138, or 750 per cent. higher. Obviously if business is to be encouraged and as a consequence unemployment is to be a thing of the past, the present handicap on enterprise arising from excessive taxation must be ameliorated.

Dr. Leaf.

The career of the late Dr. Walter Leaf, Chairman of the Westminster Bank (which is dealt with elsewhere in these columns) seems to me to be an outstanding example of the capacity for many-sidedness which has characterised many great Englishmen in the past. Of his great classical attainments and his many other activities, I do not propose to write, but it is impossible not to make some reference to his work as head of one of the great banks. Keenly interested in political economy—it is probably a moot point how classics and economics ulti-

mately came to rank in his affections—he was able to show a grasp of current economic and financial problems which made his annual address at the meetings of the Westminster Bank events of special import, for he brought to their exposition a lucidity and a penetration that gave to his speeches a weight which commanded attention far outside the audiences to which they were addressed. One particular question in which he was specially interested was the restoration of the gold standard, and there is no question that he contributed very largely to the attainment of that end. The sudden conclusion of a career brilliant beyond measure, in the course of which he was privileged to make great contributions to both literature and banking, leaves a gap which will be profoundly felt.

COMMENTATOR.

A Turkish-Czechoslovak Society is being formed at Prague.

The production of Hamilton's Oil Concessions (Roumania) for the week ended March 11 was 150 tons. Well No. 8 cleaning continues.

Of the December exports of oil products from Roumania, Italy took 23,671 tons, Egypt 22,794 tons, France 18,589 tons, and Turkey 12,960 tons.

The economic committee of the Roumanian Cabinet Council is considering a scheme for regulating the Danube so as to reclaim some 70,000 acres at present subject to inundation. The Danubian Company has undertaken to do the work in return for 15 per cent of the reclaimed area and a lease of the entire area for a term of 20 years at a rent of 5,000 lei per acre. It is proposed to grow sugar-beet on the reclaimed area.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business; how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

CHESS.

By "CARO-KANN."

The above position occurred in a recent London tournament game. White had opened with the Stonewall, and after some difficult passages, aided by a great shortage of time on the part of his opponent, had reached this situation. It is an easy win as it stands, but the interest of the position is in the facile way in which the White pieces combine after Black plays 21...Kt×Kt. There followed 22, B×Kt, Kt—K5; 23, B×R, Q×B; 24, R×R (ch), Q×R; 25, R—B, Q—B; 26, B—Kt4 (!), B×B; 27, Q×B, K—Kt; 28, Q—K7, and the game is over.

The University match is to be played on Friday week. I have not yet seen either of the teams, but judging from the form displayed in matches I anticipate that Oxford will secure a narrow victory. Still, curious things happen in this match.

The February production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company amounted to 42,225 barrels.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended February 20 amounted to £E7,868, making the total from April 1 £E299,671.

The annual general meeting of the National Bank of Turkey will be held at the office of the Anatolian Railway Company, rue Voivoda, Galata, Constantinople, on March 20.

The ordinary general meeting of the Mersina-Tarsus-Adana Railway Company will be held at the offices of the company, Rue Voivoda, Galata, Constantinople, on March 31.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

THE SUDAN.

Evaporation Tank.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of an evaporation tank for the Upper White Nile Division, Malakal. April 21.

EGYPT.

Linen, Etc.—The Director of Stores, Ministry of Education, Sharia, Kasr el Aini, Cairo, invites tenders for the supply of linen, table service, needle work materials, schools materials, and material for cleaning required for the school year 1927-28. April 18.

Postal Stores.—The Egyptian Postal Administration, Alexandria, invites tenders for the supply of stores required for use during the twelve months commencing May 1 next. The requirements include 9,310 canvas mail bags, 20,000 calico bags, 5,000 jute sacks, 2,000 pair of brown leather lace-up boots, 950 metallic filament electric lamps, 200 metal hanging kerosene lamps, 600 lamp chimneys, 177 revolving date and other stamps in steel, india-rubber and brass, and small quantities of miscellaneous items of furniture, and equipment, hardware, candles, paints, electric fans, accessories for tricycles, etc. April 15. (D.O.T.)

Tender for Photostat Paper and Chemicals.—The Surveyor-General of Egypt invites tenders for the supply of the following:—4,030 rolls of photostat paper, 14,490 tins of developing powder, 18,090 tins of acid fixing powder. May 11. (D.O.T.)

Metal Cabinets and Safes.—The Department of the Survey of Egypt invites tenders for the supply of 120 metal filing cabinets and 12 safes. May 18. (D.O.T.)

INDIA.

Postcard Board, Envelope Paper, Electric Overhead Travelling Crane.—The Director-General, India Store Department, invites tenders for:—(1) 1,000 tons of postcard board; (2) 33,000 reams envelope paper, cream laid, angle cut; and (3) two 25-ton electric overhead travelling cranes. March 29 for Nos. 1 and 2, and April 1 for No. 3.

Various Goods.—The Director-General, India Store Department, invites tenders for (1) Spruce Canada, or "Geffe" quality white-wood, for making packing-cases; (2) crossings and switches, built up from rolled manganese steel rails; and (3) about 6,030 tons of bridgework. March 29 for Nos. 1 and 2, and April 5 for No. 3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, April 7). (For passenger sailing and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Port Said, Colombo, and Calcutta (Birkenhead, March 19); s.s. Imani for Port Said, Colombo, and Rangoon (Birkenhead, April 2).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, March 23).

British India Line.—S.s. Domala for Bombay and Karachi (London, March 26); s.s. Gandara for Colombo, Madras, and Calcutta (London, March 26).

Cunard Line.—S.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume, also at Gruz and Ancona if inducement (Liverpool March 19, Swansea March 22); s.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow and Swansea, April 9).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 9).

P. and O. Line.—S.s. Rajputana for Bombay (London, March 18); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, March 19).

Ellerman and Papayanni Lines.—S.s. Algerian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 19, Swansea March 19); s.s. Dido for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool March 23, Glasgow March 29); s.s. City of Oxford for Malta, Alexandria, Jaffa*, and Haifa* (Cardiff, March 31); s.s. Mardinian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 2, Swansea April 2); s.s. Roumelian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool April 2, Swansea April 5). * Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 15.

The Stock Exchange has passed another quiet week. The gilt-edged market has been somewhat hesitant in the absence of any change in the monetary outlook, the likelihood of any early reduction in Bank rate having definitely receded into the background. The Home railway market has retired from the glare of publicity recently shed by the publication of the annual reports and appears to be settling down into a rather humdrum existence, although traffic returns are marking a fairly good showing. There have been few features in the industrial market, though Courtaulds were strong after the deduction of the dividend. The approach of the Budget is undoubtedly exercising something of a restraining influence in various sections and the tobacco group has fallen sharply on fears of an additional duty upon tobacco. Speculative attention has been to some extent diverted from the oil to the rubber share market, where prices have again been marked up a little in sympathy with the hardening tendency shown by the raw material. But there is as yet no very definite increase in business, and the outlook still remains rather obscure. The mining sections are becoming a little erratic after their recent strength, though tin shares have risen with the further advance in the price of the metal.

Budget Prospects.

With nearly four weeks of the financial year still to come, the national accounts show an increase of expenditure over revenue of close upon £67 millions, as compared with £36 millions at the corresponding date of last year. This is a very large deficit and it is unlikely that the Treasury will be able to gather in revenue during the short period that remains to a sufficient extent to avoid a deficit of at least £20 millions at the end of this month. Whatever the size of the deficit, it can rightly be attributed entirely to the effects of last year's disastrous labour troubles, but the influence of the latter unfortunately does not end with the close of the financial year, and will remain to add to the difficulties of the Chancellor of the Exchequer in framing his budget estimates for 1927-28. The Estimates for the Supply Services have all now made their appearance, and disappoint any hopes which may

have been cherished that the great spending departments would be able to give tangible evidence of the Government's frequently expressed desire to economise in the expenditure of the taxpayer's money. On defence the amount asked for is within £1½ millions of the estimate for the current year, while the Civil Services exceed the amount budgeted for twelve months ago by about a million. Assuming that the Sinking Fund payment for next year is maintained at the statutory amount of £50 millions (for the current year it was specially raised to £60 millions to make good the deficit of the preceding year), Mr. Churchill will have to find about £810 millions of revenue if he is to make ends meet. It is hardly likely that he will take so unpopular a step as to raise the rate of income tax, although the yield therefrom will be lower, thanks to the abolition of the three years' average, which means that assessments will be made on the lower profits and income of the coal strike year. Nor is he likely to "raid" the Sinking Fund in view of the recent findings of the Colwyn Committee, which recommends an increase in the annual payments thereto. If neither of these steps is taken, therefore, the Chancellor must rely upon improvement in trade bringing in larger receipts from indirect taxation, and upon such adjustments in various duties as can be made in order to increase their yield. Any surprises of a startling nature, in fact, are unlikely to be disclosed when the Budget is opened on April 11, which, by the way, is a fortnight earlier than the usual date in recent years.

A German Investment.

Recent events may have made investors nervous regarding the East as a field for foreign investment. Though this nervousness may not be wholly justified, they may prefer to confine their purchases to the stocks of Western nations. A security of this description deserving consideration is the State of Hamburg 6 per cent. sterling bonds. Two millions of these bonds were issued in October last and are a direct and unconditional obligation of the State of Hamburg. The State owns properties, mostly income-producing, which include ports and harbours valued at R.M.750,000,000. The income from port and harbour dues in 1925 amounted to R.M.12,000,000.

The proceeds were required to further railway construction and the development of harbour facilities and industrial purposes. There is an accumulative sinking fund and the State may redeem the outstanding portion of the loan in 1931 or thereafter at 102 per cent. The recovery of Germany from the chaos of the mark-depreciation years has been one of the most remarkable events of recent times. Though she is not entirely out of the wood, she has displayed an energy and enterprise which must ultimately carry her far towards success. At any rate, competent observers, among whom may be mentioned the late British Ambassador at Berlin, Lord D'Abernon, have every confidence in her future. The Hamburg Sterling Bonds, yielding £6 per cent., are therefore well worth the investor's attention.

Roumania's customs duties in 1926 produced 8,771 million lei as against only 7,527 millions in 1925. The import duties brought in 4,446 millions, the export duties 3,981 millions and miscellaneous duties 644 millions.

The bulk of two India Office contracts for 650,000 yards of silver-grey shirting and the equivalent of 450,000 yards of single-width fine white flannel, has been allotted to flannel manufacturers in the Rochdale district.

The export of Roumania's oil products in 1926 totalled 1,492,983 tons, an increase of 704,130 tons on the previous year's figures. The total was made up of benzine 424,967 tons, refined petroleum and distillates 527,069 tons, gas oil 199,808 tons, lubricating oils 42,396 tons and residues 298,713 tons.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, March 1.

Modification of Customs Tariff.

The new Customs tariff introduced in 1926 not having given all the results that were expected in redressing Bulgaria's trade balance, the Government has decided, so the Minister of Finance gave it to be understood in his recent statement before the Sobranie, to ask for its modification by Parliament with a view to an increase of the duties on imports of certain foreign products, notably cotton goods, and a marked reduction of the export taxes on cattle as well as the total suppression of export taxes on some articles of native production, such as treacle and spirits of wine.

Amalgamation of the Granitoide and Orion Companies.

"Société anonyme bulgare Granitoide pour entreprises électriques et industrielles" is the name taken by the Granitoide Company since it has taken over the assets and liabilities of the Orion Company. The Granitoide Company was established in 1905 at Batanovtzi, in the Struma Valley, 35 kilometres from Sofia for the production of lime, cement, and plaster. The business commenced to function as a limited joint stock company, but in 1912 it was turned into a public company. The capital was originally 2,500,000 leva. It was raised to 3,000,000 in 1917 and to 6,000,000 in 1921, and since it has been increased year by year. This development will be seen from the following table, which also gives the total of the reserves at the end of each year, the tonnage of cement produced, and the dividends paid:—

	Capital (Millions of leva)	Reserves (Millions of leva)	Production of Cement (Tons)	Dividend (per cent.)
1921	6	3	25,000	30
1922	20	10	24,000	30
1923	25	18	34,700	50
1924	40	29	55,700	55
1925	50	38	73,000	50
1926	70	41	80,000	—

It is intended to increase the capital to 85 millions this year and to 100 millions in 1928. These new increases of capital will enable the completion of the kilns which are in the course of construction and in view of their approaching availability it is possible to estimate a production of 100,000 tons of cement for 1927 and 150,000 tons for 1928. Owing to these new installations the company will possess a veritable monopoly of the production of cement in Bulgaria. From 1925 the works of Batanovtzi have provided about three quarters of the cement used in the country.

Apart from the works at Batanovtzi the company possesses cement depots at Sofia and also a factory for concrete, a factory at Varna similar to that at Sofia, and a factory for plaster at Kalougurovo. Thirty special wagons of twenty tons each assure the transport of cement from Batanovtzi to Sofia. The last balance sheet published (December 31, 1925) showed the value of the property of the company to amount to seventy million leva. Besides its own enterprises the company is interested in two concerns; the one, the Pirine Company, exploits coal mines in the south-west of Bulgaria; the other the Orion Company, develops hydro-electric power from the Rila stream.

The Orion was established in 1922 with a capital of 100 million leva, of which three-fifths were subscribed by the Granitoide Company. The first installations consisted of the construction at Pastra of a hydro-electric station of which the first turbine produced 3,500 h.p. and the second turbine (in reserve) was able to produce 4,500 h.p. The programme of the Orion provided for the construction of another station at Rila village. With this in view at the general meeting of March 28, 1926, it was decided to increase the capital from 100 to 250 million levas. The carrying out of this measure, it appears, has en-

countered some obstacles. So to avoid a financial crisis for the Orion the Granitoide Company decided to add its credit to that of the young company.

The fusion of the Orion and the Granitoide Companies is now accomplished. The Orion shares have been repaid by the Granitoide Company at par, or 1,000 leva, to which amount is added the interest of the year 1926—100 leva.

In order to obtain credits at the most favourable rate the Granitoide Company has established at Zurich a Swiss Company under the name Aktien-Gesellschaft für Elektrische und Industrielle Unternehmungen im Orient, with a capital of 5,000,000 Swiss francs. This company takes the form of a holding company, its capital being constituted as to 3,500,000 francs by a holding of 28,000 Granitoide shares and as to 1,500,000 by the subscription of new money. In return for the 28,000 shares the Granitoide Company receives 7,000 shares of the Swiss Company of 500 Swiss francs each. The new company is administered by directors of whom the majority are on the board of the Granitoide Company. The object of the creation of this concern is the issue of bonds in Swiss francs.

SUDAN GUM ARABIC TRADE IN 1926.

The exports of gum arabic from the Sudan last year totalled 22,745 tons, of which 5,962 went to Great Britain, 5,121 to America, 2,512 to France, and 2,452 to Germany. It is estimated that the total yield was about 23,750 tons. Reviewing the past season, the Journal of the Sudan Chamber of Commerce states that regarded solely as a revenue-producing factor in the country's budget, there are solid grounds for complacent satisfaction with the rate of progress indicated by the figures. The article continues:—"Unfortunately, the record of selling prices overseas with their predominating influence on the rate per kantar paid to the native collectors of the produce, reflects a disturbing situation which is cause for grave misgiving, and fear is entertained regarding the probable effect of low prices on the gathering of future crops. That they will have an effect is certain, and, as tapping for collection up to March begins in December, the present rate of P.T. 60 so early in the season may possibly have a serious restricting influence on the yield for 1927.

"We must accept the fact that a remunerative price to the native collector is, together with effective precautions against forest fires, the provision of passable roads for men and camels and adequate water supplies, of vital importance in fostering increased production, and the fact that the record crop of 1923 was gathered with prices ranging between P.T. 106 and 150 per kantar, was regarded with considerable satisfaction. The past season, however, has marked a consistent fall from P.T. 99 at the beginning to as low as P.T. 55 last month, and, as the large quantity of registered arrivals makes it clear that collection has not been confined to the neighbourhood of El Obeid and the other buying markets, but has been extended to the outlying gum-producing districts of Kordofan and Darfur, the level of prices paid to the collector does not appear at first glance to have had the compelling importance hitherto attributed to this factor. It is important, however, we should not lose sight of the fact that the season was exceptional, in that we had a partial failure of dura and other crops through bad rains, thus releasing a large number of camels for the transport of gum from the interior which in normal seasons would have been employed in grain-carrying, and many natives through force of circumstances so created were compelled to seek in the collection of gum a means of earning a living and paying their taxes.

"A feature of the trade which inspires optimism is the fact that an annual crop of well over 20,000 tons of Sudan gum can be absorbed in the world's markets, although in the present instance there is little cause for gratification in the trend of overseas prices. The huge crop of 1923 was disposed of at prices which seldom fell appreciably below the 50s. level, whereas, from 49s. 6d. in January this year a decline has characterised each month's quotations, until we have the low price registered last month of 40s. for Kordofan natural, c.i.f. Continental ports, to clear off old crop stocks.

"We have the evidence before us that our largest crops have so far been absorbed, and there seems no reason to doubt that with reasonable selling prices, more gum will be used in the future than in the past. The world is experiencing a period of comparative prosperity and financial stability which did not exist a few years ago, but a mark of the new era is economy in costs and, in the slow return to the normal conditions which characterised trade and manufacture before the War, the first essential is a generous supply of nature's produce at lower prices. The consumer refuses to pay the high rates which war conditions rendered necessary, and his willingness or ability to pay rules the market. If we fail to meet his requirements, he will be driven to alternatives, or the greatly restricted use of those manufactured articles beyond his means or above his ideas of value."

THE OTTOMAN DEBT POSITION.

Report of Administrative Council.

The current issue of the bulletin of the Ottoman Bank contains extracts from the rather long delayed report of the Administrative Council of the Ottoman Public Debt for the year 1924-25. The report is preceded by a "Preamble" giving the present situation of the conceded revenues and the states of the question of the annual contributive parts and of the distribution of the nominal capital of the debt; also the different phases of the negotiations between the Bondholders' Representatives and the Turkish Government for the resumption of the service of the loans are set out.

Conceded Revenues.

After recalling that as far back as April 23, 1924, the last conceded revenues which remained under the administration of the Council were seized by the Turkish Government, that in October 1924 the Government forbade the Régie des Tabacs to make payments to the Council, also that the payments by the Decree of Mouharrem were not made, the Council adds:—

"The Government has continued to modify essentially without previous accord with the Council the basis of the taxes which had been conceded to the Bondholders absolutely and irrevocably. The reserves and protests of the Council were without result, and notwithstanding the coming into effect of the Treaty of Lausanne (August 6, 1924) all these breaches have not ceased. The Council was hoping that an arrangement would soon be arrived at with regard to the resumption of the Ottoman Loans Service, and that it might resume its prerogatives under normal conditions. Unfortunately this hope has not been realised. Further, deprived of the management of the revenues conceded to Bondholders the Council was obliged to take certain measures of economy dictated by circumstances. These measures resulted in 1340 (1924-25) in a decrease of 21 per cent. in the Head Office working expenses."

Distribution of Debt Charge.

"Since the arbitral decision of Professor Eugène Borel the attribution of the Mossul vilayet having been settled by an agreement between Turkey and Iraq, and the share of this vilayet in the annual charges of the debt being indicated separately, this share must be added to that of Iraq in conformity with the principles laid down in the Treaty of Lausanne and in the above-mentioned decision.

"Among the debtor States Palestine is the only country which has paid the instalment due on March 1, 1925. This payment was made under reserve for the whole of the Ottoman Loan and in a currency other than that stipulated in the notifications of the Council for the Unified Converted Debt and the Turkish Lottery Bonds. The nature of the currency of payment adopted by Palestine gave rise to a difference of opinion between that State and the Council. Unfortunately, at the time when the Council was making efforts to solve this difference the Colonial

Office decided to suspend as from March 1, 1926, the payments to be effected by Palestine to the whole of the Ottoman Public Debt. The Council sincerely hopes that the difficulties which have arisen in its relations with Palestine may be settled by arrangement in the near future. Of the other debtor States none fulfilled during the year 1340 1924-25) the financial obligations imposed by the Treaty of Lausanne. The first steps taken by the Council having failed, they were renewed at the proper time.

"It should be noted, however, that France, Mandatory Power of the Syrian and Grand Lebanon States, has decided to give as pledge the Customs revenues of these States and other revenues in case of insufficiency. Greece has also notified to the Council the text of a Decree which the Council interprets as pledging the excess of the revenues affected to the International Financial Commission."

Further, "the Council has received a proposal from the Italian Government to discharge their contributive share in one anticipated payment, clearing up the whole of their liabilities, capital and annuities, in the Ottoman Debt. This proposal was based upon the handing over of a certain number of bonds—with coupons attached—of each Loan for their nominal value, and the payment of the balance in cash in the currency most favourable for Bondholders.

"The Council has decided to adopt, as far as they are concerned, the mode of settlement offered by the Italian Government, in view of the advantages offered to the Bondholders in the present circumstances. The account relating to this operation will be verified by the competent departments and published in due course."

Nominal Capital of the Debt.

"Independently of the distribution of the annual charges of the Ottoman Public Debt, the Treaty of Lausanne stipulated in Article 49 that a special Commission should proceed with the distribution of the nominal capital of the Ottoman Public Debt. This Commission, composed, in accordance with the stipulations of the Treaty of Lausanne, of one representative of the Debt other than the Unified Debt, and the Turkish Lottery Bonds, and representatives of other interested States, met in Paris on the 1st July, 1925, at the Ministry of Foreign Affairs, and held eleven sittings. The task before the Commission was:—

(a) to fix the amount of the nominal capital incumbent upon each of the debtor States;

(b) to fix the mode of distribution of this capital.

"Complete agreement on the first point, i.e., the fixation of the amount of the nominal capital incumbent upon each of the debtor States, was reached between the representatives of the Bondholders and those of all the debtor States, Turkey excepted. The difference with regard to the latter is determining which party (Bondholders or Turkish Government) is to be held responsible for the redemptions in arrears of the Unified Debt and of the Turkish Lottery Bonds in respect of the period 1915-1920. The Council hope that this question may be settled amicably, otherwise it must be submitted to the arbitral

decision of Professor Borel, in conformity with Art. 49 of the Treaty of Lausanne.

"With regard to the second point, i.e., the fixing of the mode of distribution of the nominal capital, the debtor States, including Turkey, in order to avoid replacing the bonds in circulation at present, have agreed to furnish General Bonds in respect of their respective shares in each of the Ottoman Loans. Turkey reserves the right, however, of issuing new Bonds eventually, with regard to its share."

COMPANY NOTES AND REPORTS.

EGYPTIAN LANDS.

An extra-ordinary general meeting of the Egyptian Consolidated Lands will be held at Winchester House, Old Broad Street, E.C., on March 29, at which resolutions will be submitted authorising a return of capital to shareholders. It is proposed that the issued capital of £350,000, divided into 1,400,000 fully-paid shares of 5s. each, be reduced to £175,000, divided into 1,400,000 fully-paid shares of 2s. 6d. each, by the repayment of 2s. 6d. per share. This is to be satisfied as to 6d. per share in cash and as to the balance of 2s. per share by the issue of a like nominal amount of debenture stock. By the issue of debenture stock the company will avoid the necessity of applying to the Court when further cash is available for distribution. Such cash will be utilised from time to time in redeeming the debenture stock. The nominal amount of the stock is limited to £140,000. The stock will not bear interest, and the company has undertaken not to pay any dividend on its shares until it has given notice to redeem or pay off the outstanding stock and has set aside sufficient cash for such purpose. After the reduction has been effected it is proposed to increase the capital to £350,000 again by the creation of 1,400,000 2s. 6d. shares.

CENTRAL BANK OF INDIA.

The net profits of the Central Bank of India for 1926 amounted to Rs.19,83,467, out of which Rs.1,00,000 is set aside for depreciation in land and buildings. The dividend for the year is again 10 per cent., free of tax, and the carry forward is raised from Rs.3,79,506 to Rs.4,31,654.

By a recent Greek Ministerial Decree the gold drachma is to be converted into paper drachmæ for the purpose of calculating the Customs and other duties on wheat, at the rate of 8½ (instead of 5) paper drachmæ per gold drachma, and, for the purpose of calculating the duties on wheat flour, at the general rate of 14 (instead of 6½) paper drachmæ per gold drachma. The Decree came into force immediately, but if it is not ratified by the Greek Chamber any excess duties levied will be refunded.

NEAR EAST MARKETS.

The current issue of the monthly review of Barclays Bank, Ltd., contains the following reports:—

Alexandria.—Cotton.—The local market has been helped by advancing prices in America and by a better demand from Lancashire, coupled with brighter trade reports. Planting has been delayed owing to bad weather.

Cottonseed.—The demand for spot and futures has improved, probably owing to the stoppage of export of soya beans from China. Premiums at one time rose to 8 piastres per ardeb and shipments are large. Local consumption has improved owing to a better outlet for cakes and oil.

Cotton Goods.—The demand has improved slightly, owing to the approach of the native holidays, but prices continue weak.

General.—The flour market is active and prices are steady, owing to good spot and export demand for Syria and Greece. Stocks of cereals are decreasing, except in barley and lentils; the rice market is normal and the stock of 4,900 tons is considered small. Sugar is steady, with spot in demand, in sympathy with New York and Trieste markets, Egyptian sugar being active.

Jerusalem.—Despite the unfavourable credit conditions which have prevailed throughout the period under review, local traders have stood the strain satisfactorily. The market in cotton and woollen goods is depressed, through merchants pressing sales at low prices to liquidate winter stocks. Importers are busily engaged in placing orders for spring and summer requirements. The market for Jaffa oranges in England has improved and prices are reported to range between 16s. and 18s. per case.

Khartoum.—The general improvement in trade continues slowly. Prices of gum have fallen to 37s. per cwt. c.i.f. United Kingdom, as arrivals are good and stocks abroad large, but the present price is not considered an economic one. The crop of sesame is 1,500 tons short of that of last year and, with a strong demand from Egypt, prices have risen by £2 per ton. The estimated crop of groundnuts at 2,000 tons is about 3,000 tons short of Egypt's requirements, and prices have risen by £E3 per ton. The estimated crop of cotton is 120,000 bales Sakel-laridis (400 lb. each) and 21,000 bales American.

A contract for a steam breakdown crane for the Egyptian State Railways has been awarded to Messrs. Ransomes and Rapier.

The net profits of the Banca Franco-Romana, Bucharest, for 1926 amounted to 14,060,626 lei, as compared with 9,200,000 lei for 1925.

A contract for 6,000 boiler tubes and 750 superheater and flame tubes for the Egyptian State Railways has been awarded to Messrs. Howell and Co., Ltd.

The contract for the main-line electrification of the Great India Peninsula Railway (Indian State Railways) has been given to British Insulated Cables, Prescott.

The following have been added to the list of articles exempted from Customs duty under Schedule 1 of the Palestine Customs Duties Exemption Ordinance, 1924, viz.:—Pipes and flumes imported for drainage and irrigation schemes, provided that the importer shall pay on importation the full amount of Customs duty thereon at the rate in force, and that the amount shall be refunded on the production of a certificate from a District Commissioner that all the pipes and flumes imported have been used for bona fide drainage or irrigation schemes; and cork wood.

THE LATE MR. WALTER LEAF.

It is not too much to say that the news of the death on March 8 at Torquay of Dr. Walter Leaf, Chairman of the Westminster Bank, roused a feeling of deep regret not merely in the City and in the academic circles in which he had obtained so well-deserved a reputation, but throughout the whole country. The world loves versatility when its possession implies the possession of unique talents in more than one direction, but while there are a multitude who are supreme or nearly so in one sphere of life, Dr. Leaf was one of the Olympians whose genius was not confined to one direction. It was a strange combination of interests which fell to his lot, classics and high finance, and it suggested very plainly that the sheltered academic groves are not by any means the worst possible training for the complexities of the financial problems that have to be faced in the City.

As in the case of so many others who have risen to positions of great eminence, it was more or less a chain of fortuitous circumstances which led Dr. Leaf to the City. The eldest son of Mr. Charles Leaf, F.L.S., F.L.A., of Leaf Sons and Co., he was born in 1852, and was educated at Harrow, where he greatly distinguished himself, and at Trinity College, Cambridge, where his career was of the perfect kind that one only looks for in novels. In 1874 he was Senior Classic with the late Mr. F. H. Rawlins, tying with him again for the Chancellor's classical medals, subsequently being elected a Fellow of Trinity. He had intended to go to the Bar, but deaths and illness in his family led to his entering the family firm, which was ultimately formed into a limited liability company, of which he was chairman from 1888 to 1892. The company in the latter year was amalgamated with a similar business, and Dr. Leaf, who had been elected a director of the London and Westminster Bank, retired to devote his energies to banking. In 1909 he became deputy chairman of the bank, and nine years later he succeeded Lord Goschen in the chairmanship. His annual speeches in that capacity, marked as they have been by a soundness and breadth of view, have attracted widespread attention. In his last address in January it may be recalled that he expressed the view that the way the country had withstood the strain of the past year showed that its economic reserves must be much greater than had been supposed.

His other great branch of activity—the pursuit of the classics—can only be briefly touched on in these columns. Throughout his City career Dr. Leaf pursued his classical studies, with results which bore fruit in a number of important works by which he will be remembered. Dr. Leaf concentrated his attention on Homeric criticism, and his investigations on the site of Troy enabled him to present the story of the Iliad in a new guise. Outside the classics and banking Dr. Leaf was an enthusiastic mountaineer. He was also for a few years a member of the London County Council. His academic honours included the Litt.D. of Cambridge and the D.Litt. of Oxford, two distinctions which aptly marked a great and distinguished career.

Sir D. Drummond Fraser, K.B.E., has joined the board of the First Co-operative Investment Trust, Ltd.

Yugoslavia's exports in 1926 totalled 4,884,718 tons, the value in gold dinars being 713,693,230, and in paper dinars 7,818,180,094.

The directors of the Eastern Bank recommend a final dividend of 5s. a share, less tax at 3s. 6.727d. in the £, after allowing for relief in respect of Indian taxation. It is proposed to place £20,000 to reserve and £10,000 to premises account, carrying forward £38,441.

Considerable progress has been made in the cultivation of hops in Yugoslavia since the War. In 1900 the total area under hop cultivation was some 2,500 acres, and hops were exported in that year to the value of 2.9 million dinars. In 1926 the area under cultivation had grown to close upon 17,500 acres, and the value of the exports to over 206 million dinars.

MESOPOTAMIAN DATES.

An Advertising Scheme.

For two years in succession Mesopotamia has had an unsatisfactory date season, and those concerned in this trade have been casting about to find a solution to their difficulties. With the quality of their product there is nothing whatever amiss. As it happens we recently received a consignment of Mesopotamian dates, and though we found their packing to be inferior to those, say, that are exported from Tunisia, their quality was so excellent as to cause wonder why they are not better known.

For this, as for so many goods that do not reach a sufficiently wide public, the remedy undoubtedly lies in advertising. And it is this aspect of the situation which, we are glad to note, is being increasingly realised by the exporters in Iraq itself. At the Annual Dinner of the British Chamber of Commerce at Basrah last month, the President, Mr. C. Wills, referred pointedly to the glut of dates on the market. He stated that his Chamber has put forward the suggestion that the only remedy for the present unsatisfactory state of affairs is to inaugurate an advertising scheme, such as has been carried on in America, where the demand has been increased, since the beginning of the century, from 50,000 cases a year to 3,900,000 cases. Mr. Wills cited the Fresh Fruit Campaign in England as an example of what might be done.

The difficulty in launching a date advertising campaign in Iraq naturally lies in the determination of who is to pay for it. Obviously this burden should fall on the shoulders of all those who would benefit by the scheme, growers, importers, and dealers. It is understood that the Iraq Government has taken the matter up, and it is to be hoped that the Arab and British officials will jointly evolve a solution to what is without doubt one of the country's more urgent problems.

Mesopotamian dates, we repeat, need fear no comparison with dates from any other country. If a judicious advertising scheme is launched there should be ahead of Iraq's date trade a prosperity untouched in the past.

The traffic receipts of the South Indian Railway Company for the week ended February 12 amounted to Rs.10,00,530, making the total from April 1 Rs.4,51,32,488.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 9:—

Egyptian Futures.—Sakel Contract.—We have experienced a particularly featureless week in this department, as not only have operations been on a minor scale, but price movements have been very restricted, fluctuations ranging within a few points either way. The undertone, however, continues to be firm, and the level on the week shows a gain of 1 to 3 points for near positions, and 2 to 5 points for more distant options, March exceptionally being 1 point down. The main attention at the moment concentrates on the trade situation and with reports from the various centres continuing on healthy lines, the rather heavy statistical position is apt to be ignored. No doubt sentiment at the moment is more or less swayed by the fact that prices are not on an unreasonable level, also, as we are now rapidly approaching the planting season, more attention is being paid to the question of reduction in acreage for this variety. Local trade takings last week were rather impressive, over 11,000 bales going forward to the mills. It has been a common occurrence recently that practically all the arrivals have gone straight through without touching the local stock, which remains at a comparatively small figure for this period of the season. Near positions have eased slightly, although only a few dockets have been tendered so far this month. We believe, however, that allowances have strongly favoured the "takers up," and with this the case, we are rather inclined to anticipate some slight closing in of the present March-May and March-July differences. The Alexandria market has remained at a very steady level throughout the week, and it would appear as if they are now experiencing sufficient demand for their cotton to maintain prices at a steady level. Whilst we certainly do not consider the position warrants any decided advance for the time being, we are rather inclined to anticipate a very gradual appreciation in values; on this account, we think, should the market show any reactionary tendency, the opportunity should be taken to enter into conservative commitments.

Upper Contract.—Business in this option has been very restricted since we last wrote, and only one or two transactions have been recorded daily. The near position has been rather depressed on account of small tenders of Pilon cotton, which have gone at allowances decidedly in the seller's favour. Apart from this, trade has been absolutely featureless. Spinners' interest in the Upper varieties continues to be very well maintained, and a satisfactory volume of business has been transacted both in spot and forward cottons. We see no reason to change the opinion we have expressed during recent weeks regarding the course of values, and consider that gradual appreciation will be witnessed as the season matures. Values on the week have declined 8 to 15 points for near and 15 points for later summer and new crop months.

Egyptian Spot.—It is pleasing to be able to record a definite improvement in the spot sales of Egyptian cotton, our modest local offtake having been supplemented during the past week by purchases for export amounting approximately to 2,000 bales. It is understood that it was chiefly Uppers that changed hands. Prices all round have remained very steady and trading prospects at the moment look bright, in spite of the fact that reports from Manchester have been rather more subdued of late. Forwardings to spinners continue to be well maintained, and, as regards the immediate future, the fact that a "fair business" in c.i.f. commitments has again been officially reported throughout the week, speaks for itself to those who can read between the lines. A good business has taken place in Sudan cotton, and, as far as the Sakel variety is concerned, something in the nature of a scramble is taking place amongst spinners in their efforts to secure the balance of certain qualities which they have tried out and found satisfactory. There is now no doubt whatever that last year's Sudan crop has proved of inestimable value to the fine trade in Lancashire. Further, we venture to predict that the number of spinners using this cotton will be further augmented before many months are past.

The local inquiry has been of fair dimensions and may roughly be summarised as follows:—Sakel at 9d.; 13½d. to 14d.; and 14½d. to 15½d. Uppers, as usual, have occupied first place, most of the business passing being between 10½d. and 11½d. Pilon has again been rather neglected, the stiffer rates now being asked checking fresh business. Sudan Sakel at from 25 to 150 on March Sakel. White Sudan 100 to 275 on American futures. Forwardings to spinners for the week ending the 4th inst. were returned as 11,351 bales Egyptian and 2,390 bales Sudan. Estimated sales 3,100 bales Egyptian and 3,500 bales Sudan. Quotations of Sakel are unchanged on the week; those of Upper have been reduced 5 points. F.G.F. Sakel to-day 13.90d., F.G.F. Upper to-day 11.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Co. (S.A.), in their report for the week ended March 3, state:—

Since our last report the futures market has been very firm, and the close to-day was at the highest prices of the week. The week's summary of price movements is as follows:—Sakellaridis: March, 26.64 dollars, 0.69 dollars up; May, 26.92 dollars, 0.60 dollars up; July, 27.20 dollars, 0.58 dollars up; November, 27.75 dollars, 0.51 dollars up; January, 27.70 dollars, 0.38 dollars up. Ashmouni: April, 19.55 dollars, 0.47 dollars up; June, 19.90 dollars, 0.52 dollars up; August, 20.20 dollars, 0.52 dollars up; October, 20.32 dollars, 0.49 dollars up.

Sakel.—At the commencement of the week the market was somewhat dull, but it soon livened up and prices show considerable appreciation since last Thursday. The good demand from spinners mentioned in our last report continues, and to this, the advance in New York, and some buying by local speculators, the change of sentiment in our market must be attributed. The rise in New York came as a surprise to our market; the rejection of the Farm Relief Bill by the United States President was generally expected to produce a reaction in American prices, and in anticipation of this there was some short selling here.

The good demand for Sakel is not a new factor, for it is now over a month since spinners awoke from their apathy and started to take considerably more interest than they had taken for months. The orders received are principally for cotton for early shipment, and this explains the activity of the spot market. This sustained demand has induced a much more optimistic feeling generally; shorts have thought it prudent to cover whilst other speculators have been encouraged to go long. We are not too confident of the present rise, and whilst the stock remains as heavy as it is at present we do not look for a continuation of the improvement in prices; on the other hand, the revival of the demand is an important factor and eliminates, at any rate for the time being, any serious decline.

Uppers.—Prices of this variety have followed, more or less, the fluctuations of the Sakel market, but the tone at the close to-day was rather undecided. The demand from abroad has been relatively good, although not as active as that for Sakel.

The week's receipts amount to 296,187 kantars against exports 274,865 kantars; the stock in Alexandria stands at 3,236,557 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to February 24, 1927, are as follows:—Arrivals: Lower Egypt, 3,632,000 kantars; Upper Egypt, 2,367,000 kantars; total,

Democracy and the East.

The feeling has for some years been present among serious political thinkers that democracy, as we know it in the West—Parliamentary institutions, the machinery of "representation," and so on—is not producing the desired end. Before the War a handful of observers, such as M. Ostrogorski or Mr. Hilaire Belloc, had exposed the system of "representation," but it was not until these later years, when the great anti-Parliamentary experiments of Bolshevism and Fascism were made, that general attention was devoted to the question whether or not Parliamentarism is the form of government best suited to the needs of the age. At the Sorbonne last week Mr. H. G. Wells gave a lecture in which he very plainly stated his conviction that "democracy is entering on a phase of revision in which Parliaments and Parliamentary bodies and political life as we know it to-day are destined to disappear." And his lecture has once more set the world a-thinking.

Now these things have a very definite bearing upon the East, and particularly upon that part of the East in which Great Britain has either a direct or indirect interest. One need but mention Turkey and Persia as two countries which of themselves have adopted, in theory at any rate, a Western constitutional form which may or may not be essential in their transition from the despotic to the modern State. But tradition in those two countries is yet so strong as very considerably to override the theoretical barriers which Parliamentarism sets up against despotic rule; the President at Angora and the Shah at Teheran are "constitutional" only in name. Nor, it must be confessed, is there any great evidence that the peoples of these countries would have it otherwise.

Nearer home, in the Balkans, irritation with the methods of Parliamentarism has been observable. Greece for a time indeed indulged the experiment of a frank dictatorship; and who, in face of the miserable efforts of Greek politician after politician, shall say that she was fundamentally in error in so doing? Of the other Balkan countries, moreover, it is at least possible to hold that Parliamentary methods of government therein have preserved their existence only in so far as they have been tempered by, or

bent to, the more traditional Balkan ideas of governance.

Is it quite certain, therefore, that Great Britain, in introducing to peoples long inured to the monarchical or despotic system the principles of representative government, is acting for the best? Who will assert of Egypt, of Palestine, or of Iraq that the theory of elected representatives ruling with a popular but constitutional head of government is without any doubt at all the mode most suited to the needs of those countries? We ask these questions, not for the mere reactionary pleasure of answering them in the negative—for the parliamentary system in these countries has hardly had a chance yet either to justify or to disprove itself—but to emphasise that the time is peculiarly ripe, especially in view of the attention being given to a similar problem in India, freshly to envisage the future governance of those countries in the Middle East which it is Britain's task to assist towards independence and self-government.

In Islamic countries there are admittedly already present certain bases for the erection of a democratic form of government; it may be argued, in fact, that Islam in itself implies a democratic polity. But this is very far from implying that the democratic forms of government in the West should be imposed thereon. Democracy is certainly possible under the traditional one-man rule of the East, just as oligarchies, or even worse, plutocracies, are possible within the democratic façade of Western government. A State in Central Arabia may be governed just as democratically as, perhaps more democratically than, a State in Central Europe. It is the duty of Great Britain, where Parliamentarism appears to be far more secure than it is in other more experimental, if more excitable, countries, to beware lest belief in the infallibility of a system should imply the wholesale imposition of it on countries where the mass of the people may neither welcome it nor want it. There are wise men still in the East; and we should by no means be inclined to deny that King Ibn Saoud, who firmly refused to set the Hijaz up as a Republic, in accordance with the ideas of certain "educated" Mussulmans from India, but preferred to rule it as an absolute monarchy, is one of them.

THE BALKAN GAME?

In matters connected with the Balkans unsupported evidence is always suspect. It is also possible for what is meant to serve as corroboration to fail to carry conviction, if it shows signs of having been too carefully marshalled or of remarkable synchronisation. Last week, on one and the same day, the Italian Government notified the British and other Governments that it had received information of preparations being made on Yugoslav territory for an incursion into Albania, an Italian correspondent in Belgrade sent his newspaper circumstantial evidence of the particular preparations, and a message reached *The Times* from Albania giving the Tirana Government's information on the subject. The action of the Italian Government in any case requires the matter to be taken seriously, and the evidence must, therefore, be examined. According to the correspondent of the *Giornale d'Italia*, military preparations almost on the scale of a mobilisation have been taking place in Yugoslavia under the direction of the General Staff. The aim, it is alleged, is to place the Army on a war footing and to distribute it along the Albanian and Italian frontiers; at the same time *komitajis* are being organised in Yugoslavia for use in Albania. These military preparations are connected, according to the same account, with a series of reforms in the Yugoslav Army, which have been accompanied by unusual activity in the State munition factories, and the inference that it is desired should be drawn is that the Yugoslav Government intends to promote a revolution in Albania and means to be in the field first in case Italy decides to intervene. The message in *The Times* from Albania lends colour to the statement of the Belgrade correspondent of the Italian newspaper by reporting that the Albanian Government has obtained information of the enrolment of *komitajis* in Southern Serbia, where Albanian elements hostile to the Government of Ahmed Bey Zogu are renewing, so it is alleged, under the auspices of Yugoslav officials, the activities which led to the unsuccessful insurrection in Albania last November.

It is one of the drawbacks of a highly censored Press, as Signor Mussolini will be the first to allow, that in the present instance the message to the *Giornale d'Italia* is of no value as evidence, because it has to be regarded as giving merely the Italian Government's version. Again, there is little likelihood of the Albanian and Italian Governments having carried out independent inquiries into the alleged Yugoslav activities without comparing notes, and the coincidence of the simultaneous publication of the results of those inquiries suggests the possibility that one of the Governments has relied mainly, if not entirely, on the evidence supplied by the other. The report of the alleged military preparations of the Yugoslav Government,

therefore, rests either on the Italian statement or on the fears of the Albanian Government. If it were the former, Italy must be prepared to hear from quarters which looked askance at the Tirana Treaty that this is precisely what was expected when the conclusion of that agreement was announced. To make provision for intervention and almost immediately afterwards to discover a pretext for intervening would not be a solecism in international relations. In these circumstances Italy would have been well advised, if she had reason to suspect Yugoslavia, to allow Albania, as the aggrieved party, to announce the discovery of Yugoslav designs and to appeal for outside help. If, on the other hand, Italy is acting merely on Albanian information, coloured not unnaturally by the fears of the Tirana Government, she has incurred a grave responsibility in the public endorsement that she has given to that information which introduces matters that can quite easily be confirmed or refuted by Military Attachés in Yugoslavia. Frontiers are the natural centres of origin of revolution or insurrection in the Balkans, and there are always to be found on either side of them those who are ready to lend a hand. It is a different matter to attribute frontier unrest to the deliberate organisation of a neighbouring Government, as a item in a military movement on a large scale.

It will require much more conclusive evidence than has yet been forthcoming to convince us of the complete accuracy of the Italian allegations. If they were true, no censure of the Yugoslav Government could be adequate; if they are not true, the Italian Government will stand convicted of an almost equally serious outrage. The world is asked to believe that Yugoslavia, considering herself to be in process of becoming isolated in the Balkans by Italy's foreign policy, is deliberately preparing for war with Italy. We know of no reason for crediting the Yugoslav Government with such a policy of madness, for it knows as well as anyone else that, whatever the issue of that war, Yugoslavia would not recover from its results in the economic sphere for a generation. Not the least tragic aspect of the whole business is that people can be found to make the allegation and to believe it when made. In this state of affairs Yugoslavia, it is to be feared, is reaping what she has sown in the past. The experiences of Montenegro, Albania, Bulgaria and Greece are all cited as evidence of a Yugoslav belief that might is right. In the case of Ahmed Bey Zogu's successful revolution it has never been possible to explain away his use of Yugoslav territory and Yugoslav help—albeit unofficial. If certain Albanians are now minded to challenge the present Government's authority, it is possible that the Belgrade authorities may argue that, as they have turned a blind eye to a similar movement before in Ahmed Bey Zogu's case, so they ought to do the same on this occasion. This, however, is a dangerous doctrine for a Government to adopt. It must not be overlooked in Belgrade that the Serbian White Hand organisation enjoys abroad much the same reputation as the Macedonian Revolutionary Organisation enjoys in Serbia. The Yugoslav Government, which never hesitates to hold the Bulgarian Government responsible for what the Macedonian *komitajis* do, can hardly divest itself of responsibility for what the White Hand does or is credited with doing. In such circumstances there can be only one policy for the Yugoslav Government; it must resolutely suppress all movements on its own territory designed against the peace of a neighbouring State. If subjects of that State have taken refuge in Yugoslavia, it must be a condition of the right of asylum accorded to them that they live as far as possible from the frontier, and the penalties on Yugoslav subjects who lend their aid to subversive movements directed against neighbouring Governments must be severe. Unless Yugoslavia sets herself a high standard of honourable dealing in this respect, she may expect to be the victim of insinuation and to give encouragement to the encircling tendencies that she professes to fear.

Notes of the Week.

A Balkan Pother.

In view of the general interpretation placed upon the Tirana Treaty Italy would seem to have been ill-advised to attempt to raise Europe's hair on end on the ground that Yugoslavia is preparing to attack Albania. The time for Italian action would properly be when the Albanian Parliament has decided that a case for Italian intervention has arisen and the Tirana Government has called upon Italy for help. The premature step now taken by Italy in denouncing Yugoslavia will confirm many in their opinion that, whatever the wording of the Tirana Treaty may be, Italy regards it as giving her the right to intervene without further ado in Albanian affairs. It was in Italy's capacity as a Great Power, and not as an excitable petty State, that the other Great Powers recognised her special interest in Albania, and she should be careful that her foreign policy conforms with Great Power standards and not with the methods of small cantankerous and struggling countries that are apt to set store on scoring a point over a rival. Italy has every right to an economic policy in the Balkans, but there is nothing great-minded or helpful to the Balkan States in the methods by which this policy is being carried out. In her attitude towards Yugoslavia the impression conveyed abroad is that whatever the issue between the two countries it is a case of "six of one and half-a-dozen of the other." In such circumstances Italy cannot be said to be acting up to her position in Europe, which requires that, either single-handed or in co-operation with other Great Powers, she should do all in her capacity to eliminate the known difficulties of the Balkan Peninsula and to promote peace in it. At present owing to the dubious methods adopted by her, any appeal to the League of Nations to intervene in the cause of peace would have to bracket Italy and Yugoslavia as provocative members of the European community jointly requiring advice in the art of international behaviour.

The Komitaji Trouble.

On the principle that there is no smoke without fire, it has to be inferred that there has been some activity on the part of armed bands over the frontier that has alarmed the Albanian Government. If this be the case, Yugoslavia will find it very difficult to secure any sympathy over her troubles with Macedonian *komitajis*. The position in Macedonia is admittedly anomalous and it is recognised that armed bands can exist on the frontiers of Greece, Bulgaria and Yugoslavia without responsibility attaching directly to any one of those Governments. The position is quite different in regard to the frontier between Yugoslavia and Albania. There is no question of the writ of the Yugoslav Government not covering this region, and it is idle for Yugoslavia to complain of Bulgarian complicity in Macedonian raids if she allows *komitajis* to operate from Yugoslav territory against Albania. It is to be hoped, therefore, that Yugoslavia in her own interests will take the necessary steps to stamp out the *komitaji* curse within her own borders. Had it not been for their existence on the Albanian frontier, Italy would probably have been unable to make her present allegations. Her fantastic story may be disproved, but Yugoslavia will have been prejudiced by it in quarters where it is to her interest that her reputation for peaceful and ordered government should stand high.

Yugoslavia and Bulgaria.

For those who believe that it is possible at no very distant date to have a Balkan Peninsula at peace with itself a distinctly hopeful note was sounded by M. Neshitch, the new Yugoslav Minister to Bulgaria, in presenting his Letters of Credence to King Boris. His predecessor, M. Rakitch, worked hard for six years to improve the relations between the two countries; but during his tenure of the post there was always room for the impression that

in this matter he was ahead of his Government. M. Neshitch would naturally refer to the desirability of a *rapprochement* and understanding between the Yugoslav and Bulgarian peoples; but he introduced into his speech a reference that lifted it out of the conventional rut of diplomatic phraseology. Such an understanding, he said, was the ideal of the youth of a whole enlightened generation and of many of his comrades who to-day are excellent Bulgarians, Croats, Slovenes and Serbs. There is a solid substratum of truth in this statement and many of the friends of the two countries have realised that the best hope for the future lies in the prospect of the younger generation's accession to political power. Not unnaturally the older men of each country have had the bitterness of war years driven too deeply into their natures to enable them easily to bury the hatchet, however much they may feel that the interests of the two countries require this to be done. The younger men realise the necessity for co-operation, and past bitternesses sit more lightly on them. One great advantage that these younger men have over their seniors is that to an increasing extent they are learning to play games, and their minds are being diverted from the bane of excessive politics. There have been football matches between Yugoslav and Bulgarian teams; the press of each country is obliged to pay attention to sport. In time the new movement will bear fruit, and Great Britain will then be able to say of the Balkan States that she does not mind with whom they make political alliances, provided that they play her national games and cultivate the spirit that is associated with them.

Political Prisoners in Bulgaria.

There cannot be the least doubt that Sir Austen Chamberlain acted wisely in the interests of the League of Nations when he took exception to the suggestion made by the Belgian Foreign Minister at a meeting of the League Council that it would be desirable for the Bulgarian Government to amnesty its political prisoners. If the practice of interfering with the internal affairs of member countries is once started, it will be difficult to know where the line is to be drawn, and sooner or later the Council may find itself badly snubbed to the prejudice of the League's position in the world. M. Vandervelde's *faux pas*, however, has, in the circumstances, probably done more good than harm. It will discourage other efforts in the same direction, and it has enabled the Bulgarian Government to disclose the actual state of affairs in regard to its political prisoners. That there were at one time ten thousand of them goes far to explain foreign interest in their fate. On this point, however, it may not be fair to judge by Western standards. The important fact is that the present Government has liberated nine thousand. Of the remainder 380 have been convicted, proceedings are still in progress against 321, and fifty stand "charged with murders during the Communist revolt in 1923." As the proceedings have been in the hands of ordinary tribunals, some idea can be formed of the work imposed upon these; in other circumstances it would presumably be an anomaly that any prisoner charged with murder should be still untried after three-and-a-half years. The Bulgarian Prime Minister points out in regard to some of those still detained that the Government's hands are tied by the intolerant attitude of the prisoners, who continue to preach their revolutionary doctrine within the prison walls and do everything that they can to encourage acts subversive of law and order. The India Government, it will be recalled, has experienced a similar difficulty with certain political *détenus*, and it is to be hoped that M. Vandervelde will not bring up the question of their release before the Council of the League of Nations nor that Members of Parliament will decide that India also is governed by a "terrorist Government."

The Syrian Interregnum.

The world in general and Syria in particular are waiting with some impatience the return from France of M. Henri Ponsot, French High Commissioner for Syria. Generally, there is a feeling of hope in the air, but this can hardly be felt by the Syrians themselves, who after the tragic experiences of the last year or so naturally are expecting concrete facts. Their impatience is being manifested in an odd skirmish or two, which the authorities in Syria are anxious to describe as mere criminal outbreaks, rather than fresh ebullitions of the "rebels." In the meantime it is hardly possible to share the profound optimism which is seemingly displayed by the French officials at the actual position. The trans-desert route via Damascus, for instance, is apparently only occasionally safe, and although this perhaps is not a factor of capital importance, it is just the kind of thing which confirms or weakens foreign confidence in Syria. In view of the forthcoming summer season and of the absolute necessity of restoring Syria's stricken prosperity, every effort will have to be made to regain both the inward and outward signs of security. Not only the Middle East but also the League of Nations is awaiting anxiously the end of Syria's interregnum; there was, it seems, some disappointment that the Organic Statute had not been prepared in time for the last Geneva meeting.

Teheran and the Soviets.

It is at least proof of the long-suffering attitude of the Teheran Administration that, in spite of the failure of the mission to Moscow last year of Sardar Muazzam Taimur Tash, it should have sent yet another in the hope of inducing the Bolshevik authorities to relax their present attitude on certain economic matters in Northern Persia. The Foreign Minister for Persia, Ali Gholi Khan Ansari, was due to leave Persia for Moscow last Sunday in what, it must be supposed, will be a final endeavour to reconcile the Russian and Persian points of view. No better proof, if proof were wanted, of the entire freedom which governs the actions of the Shah's Ministers, could be found than that which is supplied, at a time when world opinion, including a very considerable part of opinion in Persia itself, is dead against Bolshevik, or, rather, Russian

pretensions in Northern Persia, by these repeated visits to Moscow. The Persians in the North have suffered much during the last year or so from the embargo which the Soviets placed upon the import of Persian goods into Russia, and their instinct will almost certainly be to attempt to retaliate in the same language. But it is manifest that no good can come to Persia through an aggravated tension with her northern neighbour, and the policy, whether it derives from the Shah himself or from his American Financial Advisers, of exploring every avenue to find a way out, is indubitably sound. Whether such an avenue exists, or whether all routes to the Bolsheviks are not, in this economic matter, blind roads, are matters of opinion. In the meantime it is scarcely open to doubt that Persians in general will, after this experience of the Russian embargo, be keener than ever upon the provision of outlets for their trade to the South and West. The New Year that began for the Persians last Tuesday is an unusually fateful one.

Palestine's Municipal Elections.

The long-announced and much-heralded municipal elections for Palestine are now but a matter of weeks, and it is interesting to notice that this time, if one can with propriety mention the word boycott, it is the Jews who are in part refusing to participate. There has been a manifest and perhaps not unnatural reluctance on the part of Jews who are citizens of countries other than Palestine to become naturalised in their "National Home"; with the result that there is only one city, Tiberias, with a great majority of Jewish voters. There, there are 307 Jewish voters, and 149 Muslim and 36 Christian voters. But in Jerusalem, two-thirds of the population (70,000) of which are said to be Jews, the numbers of voters are given as 1,463 Muslims, 1,227 Jews, and 830 Christians. In Haifa, again, there are nearly two thousand Muslim voters registered, nearly two thousand Christians, and fewer than a thousand Jews. Quite obviously this reluctance of the Jews to become Palestinian citizens—a reluctance which is, we believe, deplored by their highest advisers—will create serious difficulties for the Administration, which had been hoping to glean from this granting of local autonomy some conception of what the future and inevitable Parliament of Palestine would be. It is fortunate that Sir John Shuckburgh, of the Middle East Department, has been on the spot to investigate for himself the probable results of this political experiment in Palestine. For the Arabs, these Municipal Elections would appear to be an admirable opportunity of demonstrating their fitness for the provision of wider measures of self-government. It is yet possible that an elected Legislative Council may again be offered to the Arabs, whose dread of the Balfour Declaration will certainly have been minimised by the experience of the Zionists in 1926. The facts that only 5,000 Jewish immigrants stayed in Palestine last year, compared with the 30,000 in 1925, and that, of a Jewish population of 160,000, 7,500 are now unemployed, must have had a considerable effect upon the Arabs. It is possible, however, that they may await the report of the "impartial" body which, representing the Jewish Agency, is in a few weeks to go out to Palestine to investigate the prospects of Zionism, before proclaiming the absolute impossibility of a Jewish majority in the country of their birth.

The King has approved the appointment of Mr. Egbert Laurie Hammond, C.S.I., C.B.E., I.C.S., to be Governor or Assam in succession to Sir John Henry Kerr, K.C.S.I., K.C.I.E., I.C.S., who will hand over at the end of June.

The Near and Middle East*

From Our Own Correspondents.

Teheran, February 26.

The New Cabinet.

As anticipated, the Cabinet fell a short time ago, and after a good deal of hesitation Mustofi el Mamalik was again persuaded to form a new Ministry—his third consecutive one—the Majliss having passed a vote of confidence in him personally though they would not do so for his former Cabinet, whose resignation he tendered the day before that fixed for the interpellation, which, therefore, did not take place. The Prime Minister, however, in a long letter to the House which was published in the Press, replied to the criticisms of the Deputies and upheld and justified the actions of his colleagues. In the new Ministry Moshaver ul Mamalik (Ali Gholi Khan Ansari), Zoka ul Mulk (Mirzu Mohamad Ali Khan Foroughi), and Mokhber es Saltaneh (Mehdi Gholi Khan Hedayat) retain their respective portfolios of Foreign Affairs, War and Public Works; the Ministry of Posts and Telegraphs has not yet been allotted, and the remaining portfolios have been assigned to members of the various parties in the Majliss. Firouz Mirza Firouz (Nosrat ud Dowleh) becomes Minister of Finance; Said Mohamad Tadayone (ex-President of the House) Public Instruction; Fatemy, Interior, and Davar, Justice. The first act of the last-named Minister, on assuming office, was to dissolve all the existing judicial organisations in the Ministry, and to close the Courts. He then submitted to the Majliss a bill granting him the necessary powers for the thorough reform of the Ministry, which was passed in one sitting by a large majority. This bill authorises the present Minister to prepare and draw up, by means of commissions of competent persons, laws for the reform of the existing judicial and administrative organisations which he will put into force, and submit to the House after a trial of six months. This reorganisation in this important department of public life is welcomed by the Press, who have seized the opportunity to start a campaign in favour of the abolition of capitulations (encouraged, no doubt, by the Nationalist movement in China), but they realise that it is useless to hope for

such a thing while the present Courts and Judges are so inadequately versed and incompetent, and that until the administration of justice is placed on a sound and equitable footing (of which they hope Davar's proposed reforms will be the foundation stones), there can be no question of this abolition of capitulations, which incidentally figured among the reforms drawn up by Said Ziaeddin in 1921, but the matter was dropped with the fall of his short-lived Ministry.

Railways.

Last Tuesday the Railway Construction Bill was introduced in the House as an urgent measure, which the Deputies were asked to discuss as speedily as possible, and, if approved, pass it without wasting time. At the second session, on Thursday, it was passed by a large majority. The Bill authorises the Government to start immediately with preliminary preparations for the construction of a railway line between Mohammarah, on the Persian Gulf, to Bunder Jaz, on the Caspian, thus completely crossing Persia from North to South, the line running through Hamadan and Teheran. The projected line, which is to be built in accordance with the plans to be drawn up by the American expert, and twelve engineers engaged for the purpose (who are expected to arrive here from America shortly), will be some 1,200 miles in length, and is expected to be completed in ten years. The Government expect to derive a revenue from the Sugar and Tea Monopoly of 7,000,000 toman each year, making fourteen million pounds in the ten years, which does not seem overmuch, even in this country where labour is cheap; and on the other hand materials are lacking and most of these will have to be imported—a fact allowed for in the Bill, which also provides for the setting aside of a sum of 4½ million toman (nearly a million sterling) for the foundation of blast furnaces for smelting iron, for which a German expert has recently been engaged. The Shah, as is well known, has always been very keen on the introduction of railways into Persia, one of the few countries in the world at present without them, if one excepts the few miles from Teheran to the mosque at Shah Abdul Azim, and the short line from Tabriz to the Russian frontier.

Opinions here are divided on the respective merits of the train and the motor-car as a means of transport and locomotion in this country of such sparse population and so great distances between the various important centres. The utter absence of any foundries or factories with up-to-date machinery, and the fact that the essential coal, though abundant, is exploited only in comparatively insignificant quantities and works out at an almost prohibitive price, would seem to militate against the idea of railways being a paying proposition; but the protagonists maintain that progress in the above direction is entirely dependent on railways and is impossible until these are constructed. Speaking from my scanty experience of the railways in this part of the world, such as the Palestine

Iraq and Syrian railways, I am inclined to the opinion that motor transport is in many respects preferable, quicker, cleaner, far more comfortable and interesting, as well as probably cheaper, at least so far as passengers are concerned, and it has the advantage of being independent of any fixed time-tables.

Air Mails.

The commencement of the air mail service with Kazvin, Pahlavi and Baku, which had been widely advertised in the Press by the Junkers Company (who have the Concession) and the Post Office, and for which specially surcharged stamps had been prepared, has not exactly been a success. The time-table was published stating that the planes would leave here at 8 a.m. and arrive in Baku the same evening in time for the mails, to catch the train for Moscow, which would have thus saved several days in the journey to England. The Company had, however, been rather premature in their announcement, and although letters were accepted for Europe at a greatly increased rate, it was found at the last moment that the planes would not be allowed to land in Baku, so they would go only as far as Pahlavi. In fact the first plane did not get even so far, as it had to return to Teheran from Menjil (between Kazvin and Resht), being unable to make headway against the strong wind which is so prevalent there. The inauguration ceremony, too, which was to have taken place in the presence of the Shah and a distinguished gathering, has twice had to be postponed owing to the inclemency of the weather. Until, therefore, arrangements are made with the Russian Government for the planes to land mails in Baku the present service is not of much use, for, as it is possible to reach Resht and Pahlavi in one day by car, the saving of the few extra hours is not worth the greatly increased rate charged, especially in this country where time is of such little account.

The Crops.

The snow and rain which has fallen practically throughout the country during the past week or two has assured the crops, and any anxiety that might have been felt in this respect has thus been relieved, while the thick layer of snow which covers the hills to the north of Teheran will ensure an ample water supply for irrigation purposes this summer.

ROUMANIA.

Bucharest, March 16.

Bessarabia.

The ratification by Italy of the re-annexation of Bessarabia by Roumania has caused tremendous enthusiasm in this country. For several days Italian and Roumanian flags were flying all over the city, and the Italian Minister received a constant stream of congratulations and grateful deputations, some of which contented themselves with playing serenades under his windows. The press of all shades of opinion is full of long articles extolling Italy, who has thus cemented her friendship with Roumania, the first signs of which—after a period of slight friction owing to the non-payment of commercial debts by Roumanian merchants—was the granting of the recent loan. This sudden action on the part of Italy at the present juncture is regarded as a sign of the latter's desire to associate herself with England against

the machinations of the Soviet Government in China, and the indignation of the Moscow press at Italy's action shows that Moscow has not been slow to give a similar interpretation to it. Up to the present the only regular steamer services from Western Europe to the Russian Black Sea ports were those of Italy. Thus in all this enthusiasm Mr. Chamberlain has come in for no small part of the glory, as it is believed that the basis of Italy's present action was laid during the conversations he had with Signor Mussolini at Livorno, and the *Argus* goes so far as to say "This is the first step in England's offensive against the Soviets." In this connexion the press further comments on the slowness of England to realise the importance of Roumania as a bulwark against the Soviets in Eastern Europe and draws a comparison in favour of France in this regard, as ever since the Armistice, she has shown an inclination to support Poland for the same purpose. This has long been a black mark against Great Britain. Another has been, and still is, the persistent refusal of British financial groups to grant a loan to Roumania for the reconstruction of her railways.

Railway Loan.

It would appear from press reports that the German Minister in Bucharest is still carrying on negotiations between the Roumanian and German authorities for the conclusion of an agreement by which Germany will grant an important loan to Roumania under favourable conditions, partly in cash and partly in railway material. If such an agreement is actually realised there is no doubt that it will lay a solid foundation for the further development of German commercial relations with this country—to the detriment eventually of the trade of other countries with Roumania. The figures given in my last letter are eloquent of the urgent need of the Roumanian Railways of outside support, without which it is obvious that they are unable to maintain transport services adequate to meet the requirements of the growing industries and trade of the country.

Cabinet Changes.

It is semi-officially reported that certain changes in the present Cabinet will be carried out next Thursday, viz.: M. Annibal Teodorescu, present Mayor of Bucharest, will be appointed Minister of Justice, and M. Manoilescu, Under-Secretary of State for Finance, will be given the portfolio of Industry and Commerce which he held with much distinction during the last term of office of the Averescan Party.

Conference of Budapest.

On March 17 a conference will take place in Budapest, between Roumanian and Hungarian delegates, which it is hoped will finally settle all outstanding political and domestic questions upon which no agreement has yet been reached between the two Governments. In the year 1924 most of the problems arising out of the provisions of the Treaty of Trianon were amicably settled between the two countries, but a few matters still remain in abeyance, one of the chief of which is the question of the share of each country in the pensions to be paid to former employees of the Hungarian State and State Railway Company, who are now Roumanian subjects. Up to the present, according to the *Indépendance Roumaine* (organ of the Liberal Party) Roumania has paid pensions to these employees amounting annually to a sum of 500 million lei, and she claims that it is only equitable that Hungary should refund her some part of this sum and arrange to undertake a share in these payments for the future. Other claims of Roumania relate to: (a) documents both administrative and historic, relating to the provinces of Transylvania now annexed to Roumania; (b) Funds belonging to institutions now on Roumanian territory whose head offices were in Budapest; (c) Certain debts contracted before the War by Hungarian administrative bodies.

Miscellaneous.

The departure of the King of Roumania for Taormina in Sicily has now been fixed for March 23. His Majesty is taking this journey on the advice of his medical advisers in the hope of re-establishing his health.

The King and Queen of Yugoslavia are at present in Bucharest on a short visit to the parents of the Queen.

Count Keyserling recently visited Bucharest and gave lectures attended by crowded audiences, upon whom he appears to have made a deep impression. Among other things he besought the Roumanians to cease imitating other (Western) countries and *to be themselves*. He is jocularly called here "le Philosophe sans philosophie."

Cairo, March 13.

Egypt's Population.

The population figures obtained in the census taken on the night of February 18 and 19 have now been published, and make interesting reading. The expectation, which had been frequently voiced in Parliament and the Press, that the total population of the country would be found to be in excess of 15,000,000 has been shown to have been very wide of the mark. The actual total is not much over 14,000,000. This means that the rate of increase during the past decade has been considerably lower than during the 1907-17 period. On the other hand, there is little justification for the view which has been expressed that this lower rate of increase means that Egypt is now sharing the experience of other countries which find that lessened prosperity is reflected in a falling birth rate. The decade just ended has probably been one of the most prosperous that Egypt has ever known, and the slightly smaller proportional increase, compared with the preceding ten years, in the population can be attributed almost entirely to the influenza epidemic of 1918-19, which affected Egypt in the same manner as most other countries. In the latter year there were actually more deaths than births recorded, and it is 1919 which must be held almost entirely responsible for the check in the normal growth in population. There is no sign of a falling off in the birth rate, owing to economic or any other causes.

Growth of the Capital.

Cairo's population now well tops the million, and Alexandria's is considerably above five hundred thousand. These totals had been expected, but they are none the less very striking and, perhaps, rather alarming, too. The rate at which Cairo is growing seems disproportionate to the increase in the country's wealth or to the very slow progress of the movement to create an industrial side to the nation's life, as a complement to the agricultural activities which supply so large a proportion of the national revenue. It is, indeed, difficult to know why the Capital should be growing so fast or how, should the growth be sustained during the next decade, all the residents will gain their livelihood. It is certainly a fact that well-to-do landowners, who formerly lived on their estates and visited Cairo only a few times annually, are now, urged as much by their families' wish to enjoy the pleasures of urban life as by any personal inclination in that direction, acquiring houses in Cairo and becoming accustomed to regarding the Capital as their home and

the country estates as places to visit a few times each year. But this tendency, which can scarcely be regarded with satisfaction, is not alone sufficient to account for the rapid growth in urban populations. It is much to be feared that there is in Egypt a drift to the towns with no economic justification behind it, and that, in consequence, the criminal element is largely recruited. This is a subject which merits close study.

Preponderance of Females.

Another interesting point in connexion with the Census figures is the fact that, while the 1917 count showed 20,000 more males than females, the latest enumeration indicates 60,000 more females than males. I was discussing this matter yesterday with Mr. J. I. Craig, Director-General of the Census, and his explanation was interesting. He was sure that Egypt, in common with nearly every other country, has a considerable preponderance of women, but thought that previous censuses had failed to disclose this fact because of the reluctance of the inhabitants, largely on religious grounds, to disclose the number of womenfolk in each household. The same reluctance, though animated by another motive, had been very marked amongst some of the Bedouin tribes the members of which would make no mention of the old women of their communities until pressed to do so by the Census takers. When it was explained to the tribesmen that the purpose of the count was to ascertain the number of inhabitants of all ages and conditions, they were still unconvinced. "The old women don't count," was the reply, "they can bear neither children nor burdens, so what is the use of putting them in?" It is an indication of the gradual spread of modern ideas in Egypt that the enumerators this year found considerably less reluctance to disclose details of the female members of families, with the result that, for the first time, an excess of females over males is recorded.

Crime and Punishment.

An attempt is to be made to legalize a custom which is responsible for a considerable part of the violent crime of the country. A deputy has given notice of his intention to introduce into the Chamber of Deputies a bill making it legal for a husband, father or brother, who discovers wife, daughter or sister *in flagrante delicto* with another man to assume the combined rôles of judge and executioner and then and there inflict capital punishment. As may be imagined, this proposal has encountered much criticism, and there is happily little prospect of the bill's becoming law. It would be most deplorable if Parliament were to pass an enactment which would encourage a form of crime already far too common and much too lightly regarded by the native courts. In Upper Egypt especially, native custom is relentless towards erring females and the number of women who are annually murdered because they are suspected of unchastity must be considerable. Unmarried girls are frequently the victims, the murderers

being their own brothers. So rooted in Egyptian minds is the belief that in such cases the punishment is merely fitting to the crime that the courts frequently pass altogether inadequate sentences, often of two or three years' imprisonment, on persons convicted of such murders. And it is to be feared that adequate punishment in such cases will continue to be rare until there is a considerable change in public sentiment.

Luxor's Library.

Luxor is to have a library for students of archæological research. On Tuesday the Oriental Institute of the University of Chicago will open its new library wing, already housing several thousand volumes and destined to hold more. Credit for this enterprising development is due to Professor James Breasted, who directs the Oriental Institute of the University, whilst the funds have been supplied by the General Education Board of New York and Mr. Julius Rosenwald, of Chicago. Considerable difficulties have to be overcome in the establishment of a library in Upper Egypt, for the intense summer heat makes necessary the provision of special storage accommodation for the books. All this has been taken into consideration, special steel book cases have been provided and now, from mid-October to mid-April each winter the library will be at the disposal of any students of archæology who may have need to refer to authorities or records on the spot.

Sofia, March 15.

The Bulgarians of Roumania.

The Dobrujans, following the lead of the Macedonians, have just held their national congress at Sofia. This conference of Dobrujan *émigrés* held a very short session. Nevertheless, it was an important one, because it terminated in the passing of a resolution in which the Dobrujans declared plainly that they formally and energetically repudiated any tendency towards Bolshevism and any resort to a struggle by arms against the domination of the Roumanians over their country. This resolution asserted that the action of bands (which were almost always formed on Roumanian territory, as a consequence of Roumanian oppression) could only compromise the political action of the Dobrujans towards securing the protection provided in the Peace Treaties for national minorities. At the same time, the Dobrujans protest vigorously against the withholding of their rights by Roumania, against the arbitrary expropriations indulged under the cover of agrarian reform, but in reality tending to the uprooting of the Bulgarian population and to compelling it to emigrate, and against the brutal treatment of the inhabitants of the Dobruja on the part of the Roumanian gendarmerie. Finally, the Dobrujans, emphasising their loyalty to the Roumanian State, claim

the liberties which are due to them as to all ethnic and religious minorities.

At the same time another conference was assembled, for the first time this year, of Bulgarians of Bessarabia. A similar motion was passed for this province, in which it is estimated that there is a Bulgarian population of 300,000, towards whom the Government of Bucharest is bound to apply the régime of national minorities. The resolution proclaims on this point the complete solidarity of the Bulgarians of Bessarabia with those of the Dobruja and with the Macedonians, and also requests the more effective intervention of the Bulgarian Government in obtaining the removal of the sequestration imposed in virtue of the Peace Treaty on the property of Bessarabian Bulgarian subjects, who have always been loyal to Roumania.

Jerusalem, March 12.

Municipal Elections.

The registers of municipal voters throughout the country are now complete, subject to appeals. In Jerusalem Muslims, Jews and Christians are represented in the proportion of roughly five, four and three (Muslims 1,463, Jews 1,227, Christians 830). Thus, while the Jews number at least three-fifths of the population of the area, they can only be represented by a third of the municipal council. The elections will take place, probably, at the close of this month.

The Incident at Caesarea.

The very curious but notable incident at Caesarea is still *sub judice*. Mr. Wadia Bustani, a well-known Haifa lawyer, has made a considerable reputation for himself by his advocacy of the rights of semi-nomadic bedouin to their pastorage areas whenever the Government has sought to dispose otherwise of these lands by virtue of their being Crown property. Thus, in the distant days when Sir Herbert Samuel was High Commissioner, he succeeded in securing legal ownership for the neighbouring Arabs of certain lands near Beisan which it was fully intended should be allotted to Jewish settlement. Last month a great outcry went up throughout the entire Jewish Press because Mr. Bustani, with a band of bedouin, defied the local police and Jewish officials at Birret Caesarea by deliberately uprooting four thousand eucalyptus trees which had recently been planted by the P.I.C.A. (the Palestine Jewish Colonisation Association). This Jewish body had, through the local government authorities, been given a concession to this strip of land (almost entirely sand-dunes) for afforestation purposes, and they assumed that they would receive Government protection. And, actually, three days after the uprooting the Official Gazette proclaimed the area in question a "protected forest area." Mr. Bustani seems to be sure of some flaw in the Association's title sufficient to justify him in adopting these somewhat high-handed measures. He alleges that the local Government acted contrary to the wish or the instructions of the Colonial Office. Official investigation is proceeding. This is just another of the many substantial grievances being piled upon the back of the long-suffering Jews in their National Home. The Jews are execrating the Government because it has not put Mr. Bustani and his bedouin in prison, while the Arabs seem to be stirring themselves up to an "and shall Trelawney die" sort of attitude.

Crime In Palestine.

The following official figures may be of interest in helping to place Palestine in the scale of civilisation. Crimes committed during 1926 numbered 19,061 (as compared with 19,701 in 1925; the total number of arrests was 32,068 (as compared with 36,642 in 1925: roughly five per cent. of the whole population); of these 14,690 were convicted. Inmates of jails in all Palestine were 1,660, of whom 1,393 had been convicted and 267 were awaiting trial; 24 are serving life sentences, while 267 are serving sentences of from 5 to 15 years. Of 971 crimes particularized as most prevalent in Palestine, there were 95 cases of murder and 56 of attempted murder, 61 cases of manslaughter and 94 of highway robbery; 43 cases of animal poisoning and 22 of bribery of Government officials.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE REAL SYRIAN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is in the interest of truth and sound international understanding that I venture to claim your indulgence for a few lines in the columns of your paper.

In the Book Review section of THE NEAR EAST AND INDIA for January 27 was a review, entitled "Syria and the Syrians," the book recently written by Miss E. S. Stevens, about that country and its inhabitants. I have not read the book, but the extract of it you give initiated me into the spirit of the authoress and her main conclusions, with which I, both as a self-respecting Syrian, and an honest historian, thoroughly disagree.

At a time when the world, after the catastrophe of 1914, is striving towards a new system of international relations, calculated to secure peace, I think it is of the utmost importance that nations should try to know more about each other than they have previously done, in order to arrive at a fair degree of mutual understanding. To give false or superficial representations of the state of things in a country is the last thing that will conduce to the establishment of international goodwill, and this is exactly what a brilliant writer, paying a brief visit to a foreign country, is apt to do.

Europeans generally know very little about the East. I was in England three years, and I was often amazed at the haziness betrayed with regard to eastern matters by well-educated Englishmen, even at so eminent a centre of learning as Oxford University. Just say "The East" to an Englishman in England, and you touch a note of mystery. No distinctions of race and country are made: the East is one homogeneous whole, including all that is not European or American. Syria and China, Egypt and India, Mesopotamia and Sumatra, are all one and the same—the mysterious East, symbolised by laziness and polygamy. And this, as far as I can make out, is the impression one gathers from Miss Stevens' book. I cannot but think it supremely ironical, in view of recent events, that Syria should be described as a "Lotus-land of forgetfulness, where *tout passe, tout lasse*." Here we have in all its absurd exaggeration, the conventional European conception of the East, applied to Syria, whose inhabitants are perhaps the most energetic and enterprising people living on the shores of the Mediterranean.

I was once going for a car-trip round the Lebanon with the late Headmaster of Victoria College, Alexandria (Mr. C. R. Lias, King's College, Cambridge) and he could not but comment on the energy of the peasants that had furrowed the steep slope of the mountain into narrow strips of cultivable land. It is also a significant fact that, though the country has, for many generations, been open to foreign competition, the Syrians have managed to retain their economic independence.

That the Syrian has little national pride is true. He

has never had a keen sense of nationality, because the religious divisions of the country have prevented the formation of a patriotic sentiment. But if the Syrian has little national pride, he certainly has much individual pride and self-respect. And that shows that his lack of patriotism is not due to servility, but rather to peculiar conditions that have made him more of an individualist than of a patriot.

"The Syrian is ever an Asiatic," says Miss Stevens. Now, I do not know that it is a bad thing to be an Asiatic, but Miss Stevens evidently thinks so. To Europeans generally, the term "Asiatic" means five things: laziness, lack of initiative, sensuality, fanaticism and morbid conservatism. That this is what Miss Stevens means is evident from her describing the Syrian as "softly-living" and "fleshy," which is flagrantly untrue of the average middle-class Syrian and peasant. No softly-living fleshy men could have attained the degree of commercial prosperity that has been the lot of hundreds of Syrians in Egypt, America and other places, and that in the teeth of keen cosmopolitan competition.

But Miss Stevens' greatest mistake is to maintain that the Syrian is a mere imitator, and that the European culture he acquired does not penetrate below the skin. The question is not whether European culture is a good thing to acquire, but whether the Syrian who tries to acquire it succeeds or not. The educational experiment of Victoria College, Alexandria, furnishes excellent data for an estimate of the relative mentality of the Syrian, and his powers of assimilation. At that English School, where Europeans (British and Greeks) are amply represented, the Syrians, always in a minority, have maintained as high a standing, both mentally and morally, as the boys of any other nationality, and it is the opinion of both the late Headmaster (to whom I have already referred) and of the present Headmaster, Mr. R. W. G. Reed—both eminent and experienced educationists—that the Syrian has a remarkable capacity, not just for copying, but for really assimilating any sort of advanced culture, and making it a vital part of himself. When I last saw Mr. Reed, he said to me: "I want more Syrian boys in the school not only for their brains, but for the good tone they help to produce." This, surely, is not in accordance with the views of Miss Stevens, as expounded in her book, and it is the opinion of one, who after a long experience as a pedagogue in the Near East, is far better qualified to speak of the psychology of the Syrians, than a mere visitor to Syria, however brilliant and acute an observer she may be.

In conclusion I cannot do better than appeal to the testimony of the late Lord Cromer—of all Europeans, past and present, the greatest authority on such matters. In chapter xxxvi, Vol II of his book, "Modern Egypt," Lord Cromer says: "A high-class Syrian is an accomplished gentleman, whose manners and general behaviour admit of his being treated on a footing of perfect social equality by high-class Europeans. His intellectual level is also unquestionably high. He can do more than copy the European. He can understand why the European does what he does, and he is able to discuss with acuteness whether what is done is wisely or unwisely done. He is not by any means wanting in the logical faculty. It would, in a word, be wholly incorrect to say that he merely apes civilisation. It may be said with truth that he really is civilised."

I venture to suggest that Miss Stevens' experience has been neither extensive nor deep enough to warrant her in disputing the authority of the late Proconsul.—I am, etc.,

E. S. ATIYAH.

March 8.

In a flying accident at Peshawar on March 12 an R.A.F. officer and two aircraftmen were killed. The machine was a Fairey III F. biplane attached to No. 60 (Bombing) Squadron. The pilot, Flying Officer R. O. Rigg (hon. Flight-Lieutenant), and two passengers, Leading Aircraftmen P. J. Sexton and W. J. Meaden, lost their lives.

FROM VENICE TO SCUTARI.

BY ARTHUR E. READE.

(Concluded.)

The plateau where Cettigne lies had at that time been turned into an armed camp. Belgrade's arm of occupation was in even greater evidence in Montenegro than in the other subject provinces, and one notes that the Triune Kingdom is held together by much the same ties as was the Dual Monarchy—with the difference, as a Dalmat said to me, that "then some of us were forcibly civilised against our will, now all of us are forcibly barbarised." However, that contrast does not of course quite apply to Montenegro in the same way as to the lately smiling civilisations of Dalmatia and Croatia. The Montenegrins—who once bore every man his rifle—still dressed in their national caps (black in mourning for the defeat of Kossovo and red for the bloodshed) and green or blue kilts, go unarmed, carrying an umbrella.

The old palace, where King Nikola used to sit outside the door giving audience to his subjects, lies deserted; inappropriate amid the universal squalor stand the former Legations of the Great Powers who had each vied with one another to impress the Montenegrins by the magnificence of their buildings. One has now been turned into a bank, the rest are mostly empty, except for the British, which became a Vice-Consulate in September, 1924. At the time of the writer's visit no other foreign State possessed a representative in Cettigne, though an Italian Consul was being talked of. In the Near East there are few pies in which either Great Britain or Italy will allow the other to have a finger alone. Among the Yugoslavs there were perceptible some curiosity and doubt on what business might be justifying the presence of a British agent in the annexed country.

The terror of the *Omladina* (the hooligan bands of young Serb nationalists) having performed its task, had just given way to the new policy of "pacification" by less sensational and more furtive methods of repression. Yet there has been no serious separatist movement in Montenegro for Belgrade to crush, and the military tyranny has been directed against the constitutional desire of the Montenegrins to have a voice themselves in the terms of their incorporation in the Kingdom of Serbs, Croats, and Slovenes. For the revival of Montenegro as an independent State would, it is generally recognised, be an anachronism without ethnographical justification. The

Montenegrins (excluding the Albanian populations they themselves annexed) are the same people, speaking the same language as the Serbs (to a much greater degree than the populations of the old Austrian provinces), and the reunion of the two people in a great Southern Slavia was always as much a Montenegrin as a Serbian aim.

To the passing traveller the modern Montenegrin may seem but the poorest of South-Eastern European peasant peoples, and that they probably are. But their history from the Battle of Kossovo down to the Great War also proves them to be—almost the whole male population—the fighting aristocracy of the Slavs in the Balkans. This indeed constituted no fair title to those Albanian lands which were subjected to Prince Nikola's yoke in satisfaction of Montenegrin claims to expansion. Nor is there adequate justification for the sentimental utterances of Gladstone, Montenegro's greatest champion, at a time when the ruler of the principality happened to find it advantageous to lend himself to be an instrument of British imperial policy: "In my deliberate opinion the traditions of Montenegro, now committed to His Highness as a sacred trust, exceed in glory those of Marathon and Thermopylæ, and all the war-traditions of the world." Nor yet can it be believed that Tennyson knew much about the sordid reality when he wrote:

They rose to where their sovran eagle sails,
They kept their faith, their freedom on the height,
Chaste, frugal, savage, armed by day and night

O smallest among peoples!—rough rock-throne
Of freedom!

—and so forth.

Discount all that (remembering that it did not avail to bring about a British intervention to save Montenegro when the need was only Montenegro's and no longer Britain's); find it hard as you may not to regard most of the Balkan Slavs as little but savages—with their history they could hardly be otherwise: still it remains the fact that the primitive spirit of the Montenegrin mountaineers will not be broken and that the only way of assuring their reconciliation to their position is that they should first recover the liberty to take up a junior partnership in the Yugoslav State as an act of their own free will.

In the 'bus coming up from the coast we met a young Serbian journalist, bound like us for Albania *via* Cettigne and Lake Scutari. He expressed great disapproval of my companion's choice in having with him a book by Miss Durham and he warned us very solemnly against her as being dangerously "anti-Serb"—whatever that might mean. The Balkans are like the Harmsworth Press: there is that nightmare atmosphere of recrimination and sensational allegation; everyone has to be labelled a "pro-" or an "anti-"; differences of opinion are considered adequately disposed of by an imputation of sordid motives to the adversary; it is treated as incredible that anyone should found their views on an independent consideration of the objective facts, and on that only, free of all nationalistic prejudices or propagandist intentions; no one ever thinks of reserving judgment with the frank admission of ignorance—everyone *must* be "pro-" or "anti-". (Till one reaches the *reductio ad absurdum* in the people of various nationalities who take up modern "philhellenism" to-day as a regular profession and devote their entire lives to explaining, excusing, justifying a single State.)

The Serbian journalist subsequently visited the British diplomatic authorities at Durrazzo and, so we learned, reported on us unfavourably.

Nevertheless, he agreed to share a Ford with us for the early morning journey from Cettigne to Rieka, whence a daily steamer services crosses Lake Scutari to Albania. It was not surprising to hear that the Yugoslav Government subsidised the service to the extent of two million dinars a year; the need was indicated by cobwebs growing over the winches!

The customs office at Rieka, standing in a handsome

garden, appeared once to have been a substantial country house. There there occurred a thing that has never happened before in history and that, as far as I am concerned, shall never ever happen again: I made a truthful customs declaration.

Had we any gold? asked the official. By one of those psychological freaks of human nature, those sudden accesses of morality that overcome our common sense (for a moment only—but then the damage has been done), I admitted Mr. G.'s gold—the price of my typewriter.

Its export was forbidden unless I could produce a certificate of having declared its possession at the moment of my entry into the country. But this was impossible; at Cattaro a customs examination had been about to be conducted when the officials, learning our nationality, instantly apologised and begged us to proceed without any formalities.

No one could have been politer, even more distressed, than the Serbian soldier officiating as customs officer at Rieka when he heard the declaration; he hunted up the regulations, but could find no possible loophole.

What was to be done? The gold represented practically all the money that remained to my companion and myself, and there was no bank in Rieka where it could have been changed into paper.

Fortunately I was brought up on the Bible and remembered my Ananias in time so that when asked the amount of the gold I repaired the original mistake as far as possible by only declaring half. Still, it was most inconvenient. On inquiry at the local post office, we learned that the telephone was not working at so early an hour and we could not communicate with H.B.M.'s Consul at Cettigne, who had been extremely hospitable and might have been able to help us out of the difficulty. At last through the obliging efforts of our Serbian friend a local tradesman was induced to buy the gold, and after a little bargaining it was sorrowfully surrendered for such exchange as he was willing to offer—and it was lucky to get that.

A few weeks later I had an exactly opposite experience, for, crossing into Yugoslavia from Albania, the authorities were most punctilious in requesting a declaration of the money brought into the country, so as to save the risk of any difficulties on leaving, although my companion and I were then travelling under cover of a *laissez-passer* very kindly furnished to me by courtesy of the Serbian Minister to Albania; and, as it happened, at the point of the frontier where we recrossed into Albania the Serbian guards seemed as if petty customs were the last thing that they would think of worrying about, apart from the exemption conferred, as it was, by the *laissez-passer*.

In spite of all the delay at Rieka there was still plenty of time to wait on board before the departure of the steamer, for the local postman who had to bring the international mail was late in turning up. At last he arrived in a rowing boat, very out of breath, and chucked the mail on board, and we steamed away down the river to Lake Scutari.

At Vir Pazaar, the one port of call, passengers disembarked for lunch in a public-house so miserable and squalid that it might almost have been English. At luncheon a bony hand, with incredibly long black nails, gripped mine, and the inevitable returned emigrant from America introduced himself, a tall skeleton of a figure, an extremely important notability of Vir Pazaar—or so he implied and seemed to be from the recognition accorded him by others—and, as it turned out, an excellent fellow who had stood as an opposition candidate in the last elections. He regretted that we had not time to go for a drive in his Ford, but there was time for him to order a great many too many glasses of rakia in hurried succession; and he spoke much more freely than many dared to do of the methods by which the defeat of opposition candidates was brought about.

A considerable cargo of ginger beer had to be disposed of before the boat could proceed. As she was about to put off a military officer on the quay, spying my com-

panion and myself, held a hurried colloquy and then came leaping aboard to demand to see our papers. Poor fellow, I hope he was satisfied; he could certainly not read them, and a washing-book might well have been a British passport for all he knew. (As a matter of fact, I make a rule of never travelling without the book issued by the laundry I patronise in London; with the royal arms "by special appointment" embossed on the cover and plenty of visalike "Received's-with thanks" stamped inside, it is invaluable whenever one happens to mislay one's passport; indeed, I prefer to keep the latter safely locked up in my bag and just to have the washing-book handy in my pocket for ordinary occasions.)

And so we left the shores of that tragi-comic Kingdom of Serbs, Croats, and Slovenes which, if it is not meant to be a parody of Czardom, at least manages to seem as much like it as possible.

Now across the strange magnificence of the great Lake, where trees grow out of the water—Lord knows why—to the country which, so each traveller inevitably records, is the home of the handsomest men in the modern world, a people who have hardly yet emerged from their Illyrian wildness into the first glooms of a nascent civilisation and who have had the opportunity to change but little since Byron sang:

"Land of Albania! where Iskander rose,
Theme of the young, and beacon of the wise,
And he his namesake, whose oft-baffled foes
Shrunk from his deeds of chivalrous emprise:
Land of Albania! let me bend mine eyes
On thee, thou rugged nurse of savage men!
The cross descends, thy minarets arise,
And the pale crescent sparkles in the glen,
Through many a cypress grove within each city's ken."

We are at Skodra.

An official with a rifle slung across his shoulder comes to the waterside, catches the rope thrown to him, and, having hauled in the steamer and made it fast, himself proceeds to officiate as the sole customs and passport examiner.

My companion makes the most of a *laissez-passer* from the Albanian Legation in London, and says: "*Laissez-passer diplomatique*."

No one knows what it means, but all the other passengers shout "*Laissez-passer diplomatique*."

The loafers by the waterside shout "*Laissez-passer diplomatique*."

We scramble over a barge-load of coal, and land.

Colour and cartridge-belts everywhere—that is the first impression during the drive up from the port to the town.

Mr. Charles Blackburn Dunlop, railway engineer, who died last week at Ealing at the age of 84, was in 1872 appointed district engineer in H.E.H. the Nizam's Public Works Department, India. In 1884 he was transferred to the Nizam's Guaranteed State Railway Company.

PERSONAL AND GENERAL

TO-DAY

March 24, 1927 (New Style).

March 11, 1927 (Old Style).

Ramadhan 20, 1345, A.H., of the Muslim Calendar.

Adar II, 20, 5687, of the Jewish Calendar.

The Countess of Sefton has returned to 17, Hill Street, from India.

Sir Howard Frank, Bt., has returned to 5, Cheyne Walk from Egypt.

Lord Sinha of Raipur has been elected an honorary Bencher of Lincoln's Inn.

Sir Henry and Lady Bax-Ironside left 23, Grosvenor Place last week for the Continent.

The Marquis and Marchioness of Reading left 32, Curzon Street on March 18 for the country.

Mr. Clarmont P. Skrine, I.C.S., has been appointed British Consul at Seistan, in Northern Persia.

The Marquis and Marchioness of Linlithgow will return to 29, Chesham Place at the end of March from India.

Charlotte Lady Inverclyde, who has been staying at the Semiramis Hotel, Cairo, has left for a trip to Upper Egypt.

Lord and Lady Kinnaid, who have been staying at the Continental-Savoy Hotel, Cairo, have left there on a visit to Palestine.

Field-Marshal Sir William R. Birdwood has been elected to an honorary fellowship at Peterhouse, Cambridge.

The Earl and Countess of Airlie, who recently returned from a visit to Egypt, are in residence at Cortachy Castle, Forfarshire.

Colonel Sir Percival Marling, V.C., and Lady Marling, who have been travelling in Egypt and the Sudan, have returned to Stanley Park, Gloucestershire.

Sir Hugh Stephenson, Governor designate of Bihar and Orissa, and Lady Stephenson left London on March 17 for Marseilles to join the Maloja for India.

Major-General A. Solly-Flood, Colonel of the Prince of Wales's Volunteers (South Lancashire Regiment), left England on March 18 for India to take up the appointment of Deputy Adjutant-General at Army Headquarters there.

The King has approved the appointment of General Sir John P. du Cane, K.C.B., Aide-de-Camp General to his Majesty, to be Governor and Commander-in-Chief of Malta, in succession to the late General Sir Walter Congreve, V.C., K.C.B., M.V.O.

Major-General J. W. O'Dowda, C.B., C.S.I., C.M.G., last week took over the command of the Baluchistan District from Colonel Commandant F. W. Ramsay, who had been officiating in that command since Sir Hastings Anderson left India for London to become Quartermaster-General.

The death occurred last week at Nice of Prince Ibrahim Hilmy, the seventh son of the late Ismail Pasha, and brother of King Fuad of Egypt. He was educated in England and showed throughout his life marked admiration for Great Britain. Of late, in fact ever since his brother ascended the Egyptian Throne in 1917, he rarely appeared as a publicist, but whenever he did it was to emphasise the importance of England's connexion with Egypt.

Sir William Phillips and Sir Philip Grey-Egerton were among the passengers who left London on March 17 to join the Maloja at Marseilles for India.

The New Yugoslav Minister to Bulgaria, M. Neshitch, on March 17, handed to King Boris his letters of credence and the letters of recall to his predecessor, M. Rakitch.

Field-Marshal Lord Plumer, High Commissioner of Palestine, performed the ceremony of naming a De Havilland Hercules biplane employed on the Cairo-Basrah air rout "City of Jerusalem" at Kalendia aerodrome (near Ramallah) on March 18.

The Earl of Lytton, the retiring Governor of Bengal, is sailing from Calcutta for England on March 28. The Right Hon. Sir Stanley Jackson, the Governor-Elect, and the Hon. Lady Jackson are due to arrive in India on the same day.

Lieutenant-Colonel F. C. Shelmerdine, O.B.E., who recently went out to Egypt to act as the Air Ministry Superintendent for the Cairo-Karachi service, has been appointed new Director of Civil Aviation in India, under the scheme authorized by the Indian Government for the development of air routes in the East. Captain F. Tymm, M.C., a permanent Civil servant who joined the R.F.C. in 1917 and has been acting for years as senior technical assistant to Lieutenant-Colonel I. A. E. Edwards, the Chief technical adviser to the Director of Civil Aviation, has been appointed to succeed Colonel Shelmerdine in the post of Air Ministry Superintendent of the Cairo-Karachi civil air route.

THE ALBANIAN FRONTIER.

Our Tirana Correspondent, in a letter dated March 13, writes as follows:—"Report has it that events are preparing, in the North on the side of Scutari and on the East on the side of Dibra, two regions where rebellion is easily made. It is very probable that the political refugees who have found refuge in Yugoslavia are attempting to raise up a movement against the present Government. Nevertheless, the majority of Albanians favour the maintenance of order, all the more because troubles can give place to violent and dangerous actions on the part of Yugoslavia and Italy."

Book Reviews

DISTORTED BUDDHISM.

"FURTHER DIALOGUES OF THE BUDDHA." Translated by Lord Chalmers, G.C.B. (Oxford University Press, 12s. 6d.)

The evolution of every organized religion is governed by the Law of Increasing Complexity, which buries the Founder's gospel under a mass of legends, speculations and survivals from anterior cults. This characteristic is most marked in Buddhism, which at its outset was an attempt to reform and simplify a vast body of pre-existent beliefs. The dialogues in the second volume of Lord Chalmers' translations from Pali MSS. show a wide divergence from the teachings of the royal sage. His attitude towards the Hindu pantheon was frankly agnostic; but in the *Sangarava-Sutta* he is represented as declaring:

Why, everyone of intelligence must come irresistibly to the conclusion that there are gods. . . . The world is loud in agreement that there are gods.

This assertion is on a par with the famous argument *quod semper, quod ubique, quod ab omnibus*, which was adduced by our old theologians in meeting objections to a favourite dogma. Although the Buddha invariably declined to satisfy his followers' curiosity regarding existence in the world of spirits, we find him expressing a positive opinion on this point in the *bala-pandita-sutta*:

At the body's dissolution after death, that wise man whose life has been so right in act, word and thought passes to a future state of bliss in heaven. Now heaven is all that is called pleasing, pleasant and agreeable—it is far from easy to picture the happiness of heaven.

The same *Sutta* enumerates the tortures of Purgatory in terms which are far more horrible than anything in Dante's *Inferno*, despite the fact that no trace of a Place of Probation can be found in primitive Buddhism. In its days, too, orthodox Hindus believed that dead men's souls were interrogated by a heavenly Judge, who decided their future fate after considering evidence regarding their conduct on earth. King Yama, who was probably an importation from the Egyptian pantheon, figures in these dialogues as addressing a sinner haled before him by the "Wardens of Purgatory" thus:

Through lack of resolution, my man, you have failed to conduct yourself aright in act, word and thought. Yes, my man, they will deal with you according to your lack of resolution. Your misdeeds were not committed by your parents, or by your brothers and sisters, or by your friends and kinsfolk; they were committed by none but yourself; and it is you yourself who will reap the fruits thereof.

Although King Yama's decision runs counter to the doctrine of Karma set forth by the Buddha, it must not be inferred that the author of these dialogues was an orthodox Hindu. In the *Madhura-Sutta* the sage Mahakaccana confutes the Brahmin's claim to superiority. Dialogues represent the Buddha himself as fulminating against pride of ancestry: and anticipating Burns's "The rank is but the guinea stamp" by affirming that "the station in which a man is born only determines his designation."

Lord Chalmers is the only European who has proved himself capable of elucidating the obscurities in these ancient Pali texts. His masterly translations will be appreciated by the small group of students who are grappling with the newly-born science of Comparative Religion.

F. H. S.

VAL D'ARNO.

"THE VALLEY OF ARMS." By Edward Hutton. (London: Constable, 21s. net.)

Mr. Edward Hutton has marvellously intimate knowledge of most of the countryside of Northern Italy and has been most generous in passing on this knowledge to others less favourably placed. He has a particular talent for doing so in beautiful English, and is always able to make the past history of the places which he describes live again before us. Also, his knowledge of Tuscan and Umbrian art is exceptionally wide and sympathetic.

So we naturally expect much from the delightful programme of a walking tour with Mr. Hutton along the entire course of the Arno, from its course in the Casentino to its mouth beyond Pisa. And we were not disappointed. Every page is full of interest, and we can imagine no more enjoyable occupation for a jaded man on holiday from the East than leisurely following our author down stream with this most satisfactory book. His enjoyment will be greatly enhanced by the interesting series of reproductions from old prints which illustrate the various places mentioned in the narrative. We should add that the book is very beautifully produced. The only fault which we have to find with it is a serious one—is the absence of any map.

C. S-W.

THE INDEPENDENCE OF AFGHANISTAN.

The Afghan Minister in London held a reception at the Legation on March 15 to celebrate the anniversary of the Independence of Afghanistan. Among those present were:—

The Spanish Ambassador, the Belgian Ambassador and Baroness Moncheur, the German Ambassador, the Italian Ambassador, the American Ambassador, the Turkish Ambassador, the Japanese Ambassador, the Portuguese Ambassador, the Austrian Minister, the Argentine Minister and Mme. de Mlle. de Uriburu, the Danish Minister and Countess Ahlefeldt Laurvig, the Estonian Minister, the Roumanian Minister, the Polish Minister, the Colombian Minister, the Greek Minister, the Bulgarian Minister and Mlle. Hadji-Mischief, the Lithuanian Minister, the Hungarian Minister, the Latvian Minister, the Czechoslovak Minister, the Cuban Minister and Mme. and Mlle. Patterson, the Yugoslav Minister, the Mexican Minister, the Finnish Minister, the Bolivian Minister, the Peruvian Minister, the Siamese Minister, the Chilean Minister, the Persian Minister, the Lberian Minister, the Nicaraguan Minister, the Chargés d'Affaires of Salvador, Albania, China, Egypt, and the Soviet Union, the Lord Mayor of London and the Lady Mayoress, Lady Beecham, Lord Danesfort, the Countess of Clancarty, Lord Clifford of Chudleigh, Sir Edward Boyle, Lord Headley, Mr. and Mrs. Amir Ali, Colonel and Mrs. Wedgwood, Sir Denison Ross, Lieutenant-Commander the Hon. J. M. and Mrs. Kenworthy, Professor Sir Thomas Arnold, Mr. O. W. Nicholson, M.P., Professor Toynbee, Captain C. F. Dixon Johnson, Mr. Hore Belisha, M.P., Captain E. N. Bennett, Sir Louis Dane, Count Bernstorff, Sir William Davison, M.P., Prince Reginald de Croy, Baron Jules Guillaume Graf Albrecht Bernstorff, Herr Ernest H. Ruter, General de Brigade Depres, Mr. Frederick A. Sterling, Kemal Bey, Orhan Halid Bey, Vedad Bey Ouchaky-Zade, the Turkish Consul, Mr. Isaburo Yoshida, Mr. Shu Tomii, Mr. Kikuji Yonezawa, Mr. Shoichi Kanki, Major-General Haushigo Ninomiya, Mr. J. B. Monck, Dr. Wilhelm Engerth, Herr Karl Zeibissen, Abdul Rahman Fikry Bey, M. Victor Braf, Mirza Ahmad Khan Ardeshir, Gholam Ali Khan Ardalani, Mirza Ali Khan Sheybany, M. D. V. Bogomolov, and Atta Amin Bey.

THE COURT OF EGYPT.

The Royal Egyptian Legation in London informs us that the Court of Egypt has gone into mourning for twenty-one days, as from March 15, on account of the death of His Highness Prince Ibrahim Hilmy, brother of His Majesty the King of Egypt.

The Receptions which were to have been held by the Egyptian Chargé d'Affaires at the Legation on March 25 and 26, in honour of the Anniversary of the King's Birthday, consequently will not take place.

HINDUSTANI SELF-TAUGHT

By Capt. C. A. THIMM.

Hindustani Text Revised by Professor J. F. Blumhardt, M.A., M.R.A.S.

London: E. MARLBOROUGH & Co., Ltd., 51, Old Bailey, E.C.4.

TURKEY AND THE LEAGUE.

Under the heading of "The League of Nations and the Far East," the leading article of the *Milliet* of March 11, signed by Agha Oghlu Ahmed, provides a curious illustration of the Turk's attitude towards the League and, incidentally, his occasional reliance upon inaccurate information. We publish the following extracts:—

"The present meeting of the League of Nations is being conducted in strange, and as regards itself, in pitiable circumstances.

While the representatives of the Far Western Powers are hurrying to Geneva, the armed forces of those same Powers are facing the Chinese in the Far East.

This shows up the League in its true light, for England and China have been members of the League since its inception.

The fundamental idea of the League is to put a stop to disputes among its members, and peacefully to settle their quarrels by means of negotiation.

As a matter of fact the Chinese Government did request the League to carry out its rôle, for, as soon as the English began to send armed forces to Far Eastern waters, it protested to the League, and requested the latter to take action.

But when the British Government replied that "The Government of Great Britain does not consider that the League has any right to interfere," this seemed to the League to be sufficient to absolve it from doing its duty.

And thus at this very hour when Chamberlain, Briand, Streseman, Benesh, and the rest are talking of peace, universal disarmament, and international brotherhood, the armed forces of the countries represented by these statesmen, are taking up a position round Shanghai which very likely will lead to bloodshed.

This is the international comedy as well as tragedy. And how strange it is that the authors of both comedy and tragedy are also the actors.

Since powerful nations are able to refuse, when they wish, the mediation of the League and accept intervention only when it suits them, what have weak nations to gain by joining?

Whilst civilised humanity is trying in vain to answer this question, the comedy continues. Now, with Germany's entry these five Foreign Ministers on the Council are considering how they can best compel the silent majority to accept their views on universal peace and disarmament.

The tragedy occurs when the big ones do not come to an agreement.

No one knows whose fault this is or the merits of the case, and no one dares to raise the curtain of secrecy and seek the truth.

Eventually some one proposes the adjournment of the meeting, and each one, heaving a sigh of relief, goes his way.

This time, however, the Geneva meeting is being held in quite another atmosphere, that is, during such a crisis in the Far East, as has never yet arisen.

* * * * *

Though the foreign armies have been sent out, with the object of protecting the lives and property of their nationals, and are far from wishing to join any side, in reality they have been sent against the Southerners' wishes who demand the evacuation of Shanghai by the foreigners. If they are not able to remain passive spectators, but have to fight, what will happen? This case for the League of Nations will not be decided in open discussion, at any rate."

Professor Breasted opened the new scientific library of Egyptology at Thebes, near Luxor, on March 15.

NEWS IN BRIEF.

King Alexander returned to Belgrade on March 17 from Bucharest.

M. Souritch, Soviet Ambassador in Turkey, left Angora last week for Moscow.

M. Lapedatu, Roumanian Minister of Finance, resigned on March 19, General Averescu, the Prime Minister, temporarily taking his place.

Akounoff, one of the chief officials of the Soviet-Turkish Trade Corporation in Constantinople, who was recently arrested by the Turkish political police, was liberated on March 15.

Abdul Rashid, the Muslim who on December 23 last shot dead the Swami Shradhanand, a noted Hindu leader, was sentenced to death by Mr. Justice Johnston, Sessions Judge, in Delhi on March 14.

Miss Violet Cordery, who left England on February 9 on a world motor-tour, has reached India. She left Bombay on March 12, toured the Central Provinces and United Provinces, and proceeded thence to Calcutta.

The Soviet Government, through its Embassy in Rome, has presented a Note to the Italian Minister for Foreign Affairs protesting against the ratification by Italy of the Treaty of Paris of 1920 concerning Bessarabia.

The Persian Minister for Foreign Affairs was to have left Teheran on March 20 for Moscow to continue negotiations with the Soviet regarding a commercial treaty. The Shah left Teheran recently for a tour of the provinces.

Mr. Henry Hoyne Fox, F.R.I.B.A., of the Ardmay Hotel, Woburn Place, W.C., late of the Indian Public Works Department, and formerly Chief Architect for Burma, who died on October 21, intestate, left £2,468, with net personalty £411.

Colonel Charles Henry Tilson Marshall, late Indian Army, of Chester Place, Hyde Park, W., at one time Sessions Judge at Lahore, author of several works on Indian ornithology, who died on January 20, aged 85, left £6,254, with net personalty £5,555.

An Athens merchant has given a building, valued at 4,000,000 drachmæ (about £11,000), as headquarters for the Greek section of the Universal Union of Teachers, founded last year by Baron de Coubertin, which was inaugurated on March 18 in the presence of the founder and of M. Arghyros, Minister of Education.

The Legislative Assembly at Delhi has voted a provision of Rs.8 lakhs (£60,000) for the preliminary work to be undertaken in the ensuing financial year for the construction of an India House for London on a site adjoining Bush House, Aldwych, W.C.2. The total cost is estimated at about £300,000 initial, and £15,600 recurring.

According to *The Times*, Dr. Edward Capps, Greek Professor at Princeton University, who has been collecting funds in the United States for excavations in front of the Acropolis, has communicated to the Greek Ministry of Education that he has completed the collection of the 500,000 dollars (£100,000) necessary for starting excavations at ancient Agora, and that he will arrive in Athens in June in order to sign the final contract for the start of the work.

A new series of pictorial stamps is in preparation for Palestine, with views of the Sea of Galilee, the Tower of David, Rachel's Tomb, and other Biblical scenes. This, says the *Daily Telegraph*, will bring the Palestine stamps in line with the scenic theme adopted by the French for the beautiful stamps issued in Syria, Lebanon, and the State of the Alaouites, although the British authorities are not likely to indulge in such a large variety of different designs.

The seven values of the Aerial post stamps of Albania, originally issued in 1925, have just been overprinted "Rep. Shqiptare," the native name for the Albanian Republic. The name on the original stamps read simply "shqiptare." The 1, 2, 5, 10, 25, and 30 quindar ordinary stamps bear the portrait of Ahmed Zogu, with the addition of a laurel wreath overprinted round the portrait, and with the President's initials, A. Z.

As a part of the jubilee celebrations of Wycliffe Hall, Oxford, the Summer Vacation Term of six weeks will be spent in Jerusalem, instead of at Oxford. The usual curriculum will be carried out, and daily services will be attended at the Cathedral, says *The Times*. The Bishop in Jerusalem, whose plan to establish a theological college at Jerusalem has been approved by the Central Advisory Council of Training for the Ministry, is actively co-operating in this scheme. It is proposed that those taking part shall leave London on July 17 and return on September 16. Expeditions will be made from Jerusalem, and about five days will be spent in Galilee. In addition to the ordinary term's fees, the inclusive cost will be £35 each. In order that no present or prospective member of Wycliffe Hall may be prevented from joining the party on financial grounds, a general fund has been formed. Contributions should be sent to the Chaplain, Wycliffe Hall, Oxford.

INDIAN BANKING.

Important and voluminous correspondence between the Government of India and the Managing Governors of the Imperial Bank has recently been published. The genesis of this correspondence was a resolution moved in the Council of State last year, referring to the report of the External Capital Committee and asking for an inquiry into Indian banking systems, which led the Government of India to address the Imperial Bank as well as the Provincial Governments—the former at length, the latter in search of their views regarding the advisability of a co-ordinated survey of banking in India and the method best suited to carry it out. The replies of the Local Governments to this inquiry are also published, at the same time as the correspondence with the Imperial Bank. These are practically unanimous in favour of the appointment of committees *ad hoc*: some favouring a single central committee, some favouring provincial committees, while some would prefer the preliminary appointment of special officers to collect the required statistics preparatory to their examination by a specially constituted body of experts. The only dissenting Government is that of the Punjab, whose recommendations only go as far as the convening of a meeting of representative bankers in order to ascertain their views as to the necessity and scope of a preliminary investigation; while the Bengal Government sounds a special note of warning against “any inquisitorial inquiries where such might be expected to be unwelcome.” Put shortly, therefore, the Local Governments’ recommendations are in favour of taking no action, though mostly obscured by the familiar expedient of the appointment of a Committee. This would, of course, entail a certain amount of expense: a difficulty which the Bombay Government proposes to get over, in the early stages of the inquiry, by the device of inviting experts to write comprehensive monographs, which should be forwarded to a Commission, to be examined by the latter in the light of oral evidence from bankers and business men.

The main points on which the Government of India invited the opinions of the Managing Governors of the Imperial Bank were the avoidance of undue competition with existing joint stock banks, the possibility of co-ordination with the indigenous banking system of the country, the advisability of creating new clearing houses, and the development of the habit of investment through such agencies as savings banks and Post Office cash certificates. So far as the published report of the correspondence shows, the Governors did not reply on the last of these points; but they replied at considerable length on the others. In the matter of competition with existing joint-stock banks, they explain that the result of the opening of branches of the Imperial Bank at places where such banks were already established has generally been an all-round drop in rates to a more reasonable level; and to that extent the existing banks have suffered by the competition of the Imperial Bank, whose policy, however, is not and never has been to drive out banks, with which it is

in competition, by reducing rates below a fair and reasonable level. As regards co-ordination with the indigenous banking system, the Governors say that the business carried on with indigenous bankers and money-lenders by the Imperial Bank is very considerable, and is one which it is its policy to encourage and develop. The Bank, they add, is desirous of encouraging the establishment of clearing houses, wherever possible, and the question is one which it has constantly before it. Clearing houses have already been established at Calcutta, Bombay, Madras, Rangoon, Cawnpore, Delhi, Lahore, Simla, Karachi and Ahmedabad, and the establishment of others at Amritsar, Rawalpindi and Peshawar will be undertaken as soon as the volume of business at these places justifies the step. The Governors point out that a clearing house is an arrangement between banks for mutual convenience, and its advantages to each one of them are so great that clearing houses are automatically established whenever the number of cheques dealt with is sufficient to justify their formation. But, at the same time, they draw attention to the fact that clearing houses are brought into existence as the result of the growth of the banking habit and the use of cheques by the public, and that they do not in themselves foster the banking habit, nor does their establishment tend to increase the public use of cheques. Finally, the Managing Governors informed the Government of India that they proposed to call a meeting of interested Banks for a general discussion of the formation of an Indian Institute of Bankers. This meeting would be held in Bombay, in preference to Calcutta, because it is in the former centre that most interest is being displayed in the movement to encourage an indigenous banking system.

The question of indigenous banking in India was discussed at some length in THE NEAR EAST AND INDIA just about a year ago. The conclusion then arrived at was that, in its pursuit of the object admitted on all sides to be of the most vital importance—the encouragement of the “small hoarder” to bank his hoard instead of burying it—the Government of India would be well advised to give every possible encouragement to the development, on sound lines, of the indigenous banking system. The Imperial Bank is necessarily not a disinterested witness in this matter; for the ideas of a great banking corporation, owning over a hundred branches all over India, as to what is a “fair and reasonable level of rates,” are most unlikely to coincide with those of a small local bank. The suggestion, quoted in the article referred to, that the work of the Imperial Bank should be confined to that of a “banker’s bank,” has gone by the board, because of the contemplated establishment of a Reserve Bank: and, in the future, the Imperial Bank will continue to compete with local and indigenous banks, though without the special handicap in its favour of being able to handle, free of interest, the Government balances averaging £15 millions. The Indian capitalist, no less than the European in India, feels the need of the great European banks whose soundness is above question: especially those whose management is in hands demonstrably safe, and not subject

to influences such as those that brought about the lamentable collapse of the Alliance Bank of Simla four years ago. But, if the Indian "small hoarder" is ever to be weaned from his uneconomic practices, it can only be through the development of the indigenous banking system: and it may be that the proposed Bankers' Institute will do something to bring this about. In any case, it may be hoped that the Government of India will proceed with their inquiries on the subject, and will not be deterred by the diplomatically veiled suggestions of the Provincial Governments in favour of doing nothing.

CURRENT TOPICS.

The Assembly and the Budget.

Though its attack on the eighteen-penny rupee has so far been a failure, the Legislative Assembly has succeeded in throwing out two very important items in the Budget—the grant for the Railway Board and the Army Estimates; with the necessary consequence of forcing the Viceroy to use his powers of "certification" in both cases. The Indian Railways have not had a very successful year, the budget estimate for 1926-27 having allowed for a net surplus of 871 lakhs of rupees, which has been reduced, on actuals, to 594 lakhs. This fact was of considerable assistance to the opposition when fighting the demand for the personnel of the Railway Board. The grant asked for appears to have been Rs. 943,900: and a Swarajist motion, for the reduction of the demand by Rs. 942,900, was carried by 59 votes to 52, all the three non-official Indian parties having combined to support it. The main argument relied on by the attackers was the familiar one of "breach of faith": it being asserted—though promptly denied—that Government had promised to fill the first vacancy, occurring in the Railway Board, by an Indian. What Government had in fact promised was that, when an opportunity occurred, the question of appointing an Indian on the Board would be considered; but this has characteristically been construed into a definite promise that an Indian would be appointed on the first opportunity: and the fact that a vacancy occurred last year, without the achievement of the desired result, has been condemned as the deliberate breach of a definite promise. In vain did Sir Charles Innes submit that, though the Indianisation of the higher railway posts had admittedly been belated, Indians were now coming to the top and would soon be capable of getting there: in vain did he appeal, in an unusually "purple passage," to the better feelings of members. As the attack developed, the argument strengthened that, since the Railways had had a poor year, this was due to the incapacity of the Board, and that its replacement by an Indian one was the best means of preventing future failures. This argument is aptly summarised by the *Bombay Chronicle*, which writes, "India wants the Railway Board to be composed of shrewd experienced business men who know how to control the railway policy, and Indians alone have the right to sit upon it. Indians have shown their capacity to manage and control large industrial and commercial undertakings, and there are many Indians available to-day to carry on the work of the Railway Board more efficiently than it is being carried on at present." This is a new variant on Kipling's theme of "The Little Tin Gods": nowadays, it would seem, it is no longer "because of the gold on his breeks," but because of the *khaddar* on his back and the Gandhi cap on his head, that a man is qualified to manage the Railways of States; though the other qualification still holds good—"because in all matters that deal not with Railways his knowledge is"—or possibly may be—"great."

The Army Vote.

The rejection of the grant for the Army Department was, no doubt, partly due to a cause similar to that on which the attack on the Railway Board was based—the slow progress of Indianisation. In this connexion, considerable stress

was laid on the failure of the Government of India to publish the "Indian Sandhurst" Committee's report, which was signed four months ago: and the defence, that this cannot be done until the orders of the Secretary of State, who is now considering it, are known, was brushed aside as irrelevant. What has given added force to this complaint is the fact, now officially admitted in the Assembly, that the candidates for appointment to the Indian Army were only about half the number of vacancies, last year: and the reasonable conclusion that, if young Englishmen refuse to offer themselves, exceptional measures must be taken to find suitable young Indians instead. But there was a greater cause for dissatisfaction than this, and one that will quite possibly be found, when the division list is available, to have influenced some of the non-official Europeans in the Assembly, as well as their Indian colleagues. In particular, it may be supposed that the "sharply-expressed" dissent of the Commander-in-Chief from the Inchcape Committee's opinion that 50 crores of rupees (£37½ millions) ought to be the future maximum of India's military expenditure, and the apparent acceptance by the Finance Member of the probable necessity for increased, so far from reduced, expenditure in the near future, had a powerful effect on the voting. It is to be remembered that, in cases of this sort, the Assembly is quite irresponsible. This is one of the necessary results of the diarchical system of government, and it is certainly a demoralising one. If the votes of the members could have any real effect, in cases such as this, they would be much more chary of recording them against the Government: as it is, their verdict is merely a gesture—an expression of opinion of which Government may, perhaps, take some notice, though it has no effect whatever on the actual facts of the position.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 3.

Self-Government in Bengal.

The 1929 Commission should not fail to take note of the results of a genuine attempt at self-government in Bengal, namely, the working of the Bengal Congress Committee. Since last week the two divisions in the Congress have descended to a discussion of their differences on the physical plane. Attempts were made to seize the headquarters premises, but thanks to an effectively organized defence the assault was defeated. The assaults were continued from day to day under the aegis of the police, be it noted; consequently hostilities never went beyond the stage of threatening attitudes, and the week's proceedings culminated yesterday in the Mayor of Calcutta marching to the scene of hostilities at the head of a procession which, finding the doors bolted, turned itself into a demonstration in the street below. The police are stated to have had the matter well in hand when suddenly a Brahmini bull appeared on the scene and mopped up the demonstrators effectively. They re-formed in an adjacent house, proceeded to elect a new Congress Committee and a new set of office-bearers, and in spite of a frantic telegram from the President of the All-India Congress, neither party is willing to give way. It is a pathetic fate for the party which C. R. Das left in possession of all the power and all the places.

The Rift within the Loot.

The Corporation elections are the nominal cause of the trouble in the Congress camp. At the time of writing last mail the rebels who are universally known as the "Big Five," had published their list of candidates for each ward; since then the so-called official Congress party have issued their list of candidates and, as a few independents have appeared, the result is that in nearly every ward in the Indian section of the city there will be three or more candidates for each seat. In a few wards the

sitting member has been allowed to pass unchallenged, in order that efforts may be concentrated where the fight will be the hardest. In such circumstances no one knows what is likely to happen, but Babu Bepin Chandra Pal in his weekly article says that possibly from six to ten seats may be won from the Swarajists. This would hardly be enough, even with a combination of the nominated members and all the others, to prevent the Swaraj Party from having a majority and, what is most important, all the patronage; for it is the latter which is at the root of the business. The Corporation has always been laughed at by those who demand efficiency first, but the difference in the quality of administration since the line of European Chairmen ended is the same as that which appears in any Indian concern in similar circumstances. Take away the ideal, and energy to seek to attain to it in the face of the heart-breaking discouragement, and you have the state of affairs which exists in the present Corporation; but this is far better than in the average Indian-run concern and to jeer at it is to jeer at the national genius, or lack of it, for management. The worst that an intelligent critic can say in regard to the present Corporation is that things have slowed up and that decisions are always delayed; the real objection of the malcontents is centred upon the fact that some one else has the patronage and some one's else friends and relations are getting the soft jobs. This is the real trouble and it is by no means peculiar to the city of Calcutta.

A Good Budget.

This week has seen the publication of the All-India Budget, one upon which Government can rightly congratulate itself. Sir Basil Blackett must be beloved of the gods as it falls to few officials to see the fruits of their labours so unmistakably and so rapidly; this is the fourth year in succession that he has been able to announce a substantial surplus. On the whole, the Budget has been well received and, in spite of the 200 motions which have been tabled in the Assembly for cuts to call attention to various grievances, the worst that the Extremists can say of it is that it is a rich man's Budget. The Government borrowing rate is down to 4.69 per cent. subject to tax, as against 6 per cent. tax free four years ago, and this will gradually be reflected throughout the whole of the business world and the money markets to their permanent improvement. To grumble because in such circumstances capital is being sent out of the country for investment is only to emphasise the success of the recent financial policy. The matter does not stop here, for one of the results of that policy is the fixing of the exchange ratio at one and six pence, and the one and fourpenny advocates are finding themselves in a very difficult situation after Sir Basil Blackett's speech. He announced that if their desires are acceded to, and the ratio is fixed at 1s. 4d., it will be necessary to face an immediate loss approaching four millions sterling with a consequent increase in taxation and withdrawal of all the remissions now proposed. The Currency debate is to take place in a few days and it would seem as if the Budget has finally deprived it of any practical significance. Lastly it may be mentioned that the withdrawal of the export tax on hides lowers the curtain on the attempt to wet-nurse the indigenous tanning industry; and the abolition of the one anna duty on each cheque is a real step towards educating the public in the use of Banks; where the unit of expenditure is a pie, say one-twelfth of a penny, an anna has a way of looking like a shilling to a Scot and in such circumstances it is not difficult to understand that the stamp on a cheque really frightens the cultivator!

Late Mails.

There has been an improvement in the delivery of the mails in the last two weeks, but there is still considerable dissatisfaction with the present state of affairs. Before the War home letters were delivered on Sunday morning, as a rule well before 8 o'clock; apparently the best that can be hoped for now is that the mail will be delivered nominally at 11.30 a.m., which in practice in the

residential areas usually means about 1 or 2 o'clock in the afternoon. The official attitude is that it is a matter of comparatively little importance if the Calcutta mail is delivered 5 or 6 hours later on a non-working day, but these 5 hours make all the difference in dealing with the mail in peace and finding it crowded over until the next day. It is an anomaly that in spite of the improvement in the ships of the mail service the mails should taken even longer to reach Calcutta from London now than they did before the War; that considerable improvements are possible is evinced by the fact that although the incoming mail steamer left Tilbury 100 hours late owing to fog, the mail will only be 38 hours late at Bombay, so that it has been possible to pick up 62 hours, or over 2½ days, on the journey. All credit to the P. and O. Company for this performance, but it only shows that there should not be the slightest difficulty in delivering the mail two days earlier than at present as a regular practice, and if a similar amount were saved on both journeys, Calcutta would be placed in the same position as Bombay and save a clear week in replying to urgent letters. Will the Steamship Companies wait until the Air Mail has deprived them of a portion of their monopoly before they move in the matter?

Men and Things.

The Steel Bill embodying the recommendations of the Tariff Committee, having passed the Assembly, has been considered by the Upper House this week, and after various amendments had been discussed and rejected the Bill was passed in its entirety. Tata's, and any new concern that may now care to cultivate the Indian steel field, can reckon on substantial benefits for the next seven years.

Unless we are being deceived by Reuter's the friends of Sir Stanley Jackson, the Governor-Elect—a poor substitute this for "F.S."—seem to have rather a pathetic faith in the efficacy of games as a weapon of Government; it may be very well to harp on "playing the game," if you are sure that the term means anything to the people at whom you are talking, but in a country where English is a foreign language, continual references of this kind, especially to the exclusion of everything else, are apt to lead to rather unfortunate misunderstandings.

No further news is to hand at the time of writing in regard to the communal disturbances near Barisal reported in this morning's papers; Muhammadan rioters here had to be dispersed by gun fire, leaving 15 dead and 30 to 40 wounded; this will not ease the communal situation.

There does not appear to be any appreciable change in the situation in regard to the strike on the Bengal-Nagpur Railway; at certain stations the men are reported to be returning to work, but these numbers seem to be more than made up by stoppages in other areas.

Mr. Saklatvala, the Communist M.P. belongs more particularly to Bombay than to any other part of India; he is a Parsee, and the Parsee rules the roost there, although he is as much a foreigner as the Briton. Unfortunately most of his countrymen are capitalists, and they have no use for communism or Saklatvala; this probably accounts for the fact that the Bombay Corporation has now finally decided not to follow the examples of the Corporations of Madras and Calcutta in presenting him with an address of welcome; it may be added also that one has yet to meet an Indian of any kind who thinks that he has been talking anything else but nonsense.

The Trivial Round.

Saturday was the last day of the Spring Meeting at headquarters and it was almost like a day of autumn rain at Home; the sky was completely overcast, and it was dull and almost cold. This may have affected the running of the horses, but certainly the public was not very fortunate in finding winners; the racing correspondents would have it also that the bookmakers were out of it, the only people benefiting by the results being "stable

connexions"; this kind of thing is getting a little monotonous.

The M.C.C. have finished their tour and are getting away with their colours flying; they have never really looked like being beaten, and they are leaving golden opinions behind them, it being universally agreed they are good sportsmen who play a forcing game, full of keenness from A to Z. Local cricket came to a light-hearted finish at the week-end.

The Hockey Leagues are now in full swing and both Calcutta and the Rangers have won all their matches; the former look like having a very strong team this year, as although they have lost many of the old hands the new men are particularly good.

There is keen interest taken here in Home Rugger; Ireland's victory over Scotland ought to open things up this year, and the chances of the former for the Championship would appear to be pretty good, to judge from the cabled accounts of the match.

The last Symphony Concert of the season took place on Sunday night at the Empire; once again the house was full and the evening finished up with a spirited and finished performance of Mozart's Jupiter Symphony, a fitting ending to a most successful season. Heifitz is giving two concerts this week, and the effect of the Symphony Orchestra's doings is seen in the fact that his "houses" are completely sold out.

The theatrical attraction of the week is a new party from Home who call themselves the "Joybells." It is really a good show on Co-Optimistic lines and it would appear that the suspension of the entertainment tax is encouraging some of the better young artists at Home to explore the possibilities of the East; the field is well worth cultivating by really competent workmen.

Markets.

Both the jute and gunny markets have shown an improvement during the past week, and prices in both cases are higher on balance. The demand for jute has mostly been for the lower grades, and sellers are now less inclined to do business, unless they can combine with it sales of the higher grades also. There has been a keener inquiry from the United States for hessians, especially for ready goods and sales have been made by mills up to March of next year, but mainly for small quantities. Business in the piece-goods market shows little change from that obtaining last week; there was a certain amount of excitement on the eve of the issue of the Budget on rumours that the import duty on piece-goods was to be raised; but, as this has since proved to be incorrect, the market has settled down again. The railway strike has had some effect on demand, but this is likely to be only of a temporary nature. The tea market in London has maintained the better tone of the previous week, and the sale here was satisfactory considering the poor quality of the tea on offer. The opinion is expressed here that the abolition of the export duty and the increase from 25 per cent. to 50 per cent. for taxation purposes will about cancel one another, but that it will give a slight advantage to sterling companies over rupee companies.

On the Stock Exchange, Government Securities have tended to give way further, but as it is generally expected that the tight money conditions at present prevailing will not last much longer, there is every probability of a reaction in the future. There are buyers of investment stocks at rates below the present quotations, but with sellers unwilling to lower their prices business has been on a small scale. The jute section has continued to be on the upward trend, and holders are thinking of their March dividends, which should be on a liberal scale, considering the excellent profits which the Mills have undoubtedly been making. With the exception of Bengal-Nagpur's, the cotton section has been dull; coals show little change on the week but shares in one or two of the best companies have changed hands at steady rates. Again this week, very few transactions have been reported in tea shares; but there has been a certain amount of inquiry for first-class shares without business being done owing to

the refusal of sellers to reduce their prices further. Rubbers have come in for rather more attention, and this may be expected to expand, bearing in mind the steadiness and, in fact, the hardening tendency of the raw material. In the miscellaneous market the chief feature has been the demand for sugar shares, almost all of which are on a higher level. Burn and Co., and Indian Iron and Steel shares have been readily absorbed and Bengal Telephone Ordinary have continued in request.

The Exchange market has been very dull, with little business passing either in bills or remittance; Ready T.T. closes at rs. 5½d. Money is in slightly less demand, and rates may be quoted 6 per cent. Short Notice, 5 per cent. One Month.

THE BOMBAY BUDGET.

The introduction of the Budget in the Bombay Legislative Council presented features of unusual interest. For the first time the financial portfolio in Bombay had been entrusted to an Indian. In fact, with a solitary exception in Bihar, we believe it was the first occasion on which an Indian had introduced a Budget anywhere in India. It would have been impossible to find anyone personally better fitted for so responsible a duty than Sir Chunilal Mehta. He had already proved his capacity for administration as a Member of Council in charge of other departments; he belongs to a well-known commercial family, and his father, Seth Vijbhukandas Atmaram, will be remembered by many of the older generation of Europeans as a Hindu merchant of the best type. Some piquancy also was added to the situation by the fact that a member of the same undivided family, Sir Parshottamdas Thakurdas, familiarly known to his friends as Nanabhai, is the bitterest critic of the policy of the Finance Member of the Government of India. Blood kinship is, however, not the only bond between the two knights. They could unite in criticism of the Government of India, though on different grounds. Sir Parshottamdas could attack the Government of India for its currency policy: while the Finance Member of the Government of Bombay lamented the inequitable treatment of that Government, as compared with other Provinces, by the flint-like heart of Sir Basil Blackett.

Everyone would have been glad, if Sir Chunilal could have introduced his first Budget in more auspicious circumstances. Unfortunately almost everything was against him. Owing to the refusal of the former Legislative Council to impose taxation, the Bombay Budget could not have balanced in the most favourable conditions. The conditions of the year, however, had been about as bad as was possible. The rains had failed throughout a great part of the Deccan and Carnatic. The black cloud of depression continued to hang over Bombay trade and industry. It had been accentuated by the failure of the Back Bay and kindred projects. The expenditure and interest on these projects hung like a dead weight round the neck of Bombay, with no fresh sources of revenue from which to meet them. Minor fields of revenue, such as Excise, had ceased to expand, in part at least through the policy of Government, while it had been necessary to increase expenditure on them. Although every effort had been made to reduce expenditure in general, the net result had been a cut of one lakh only. Other reductions had indeed been made, some to the starvation point, but the inevitable increase already referred to in the administration of departments such as Excise, had almost entirely swallowed up the economies so painfully effected.

The sad result was a deficiency of no less than one hundred and ninety lakhs, the effect of which would be to reduce the balances of the Presidency from 664 lakhs to 474 lakhs. Of this deficit, 75 lakhs were attributed to deficiency in Revenue, and 115 lakhs to the amount required to make up the payments for Capital and Debt Charges.

How heavy a burden the Development projects entail

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889.)

LLOYDS BANK now has the following Offices in INDIA and BURMAH, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

on the Bombay Revenues appear from one fact in the Budget proposals. Quite apart from the Back Bay Scheme, the Government of Bombay had embarked on a most ambitious project of Suburban Development, the effect of which, if it had been successful, would appear to have been somewhat antagonistic to the scheme in Back Bay and in the North of the Island. But the project was not successful. It had involved the notification of a very large area of land, at a time when the boom was in full force. Government were under the legal obligation to pay for the land at the inflated rates prevalent at the time of notification, and an enormous loss, therefore, seemed inevitable. Fortunately the owners of most of the land were small agriculturists, extremely unwilling to part with their land even at high prices. It was, therefore, possible for Government to withdraw from a great part of the notifications. Even so, however, the Suburban Development Schemes presented a loss of 111 lakhs. For the "liquidation" of these unfortunate schemes, the Finance Member has been obliged to provide an annual "subsidy" of 7½ lakhs, in spite of the urgent need for economy, and the crying wants of other Departments.

No one can fail to commiserate with Sir Chunilal on the unfortunate situation in which he is placed, a situation for which he is in no way responsible, except in a very minor degree, as a member of the Bombay Government during the last few years. But regret must be equally inevitable that he has proposed to take arms so feebly against his sea of troubles. To put matters briefly, he seems to rely on three sources of relief. In the first place, he hopes for a recovery of trade and industrial prosperity. Secondly, he relies on measures of retrenchment, which he hopes will reduce the expenditure by 50 lakhs. Thirdly, he girds at the continual adherence of the Government of India to the Meston Settlement, and apparently hopes to move their hearts by the contemplation of the rapid depletion of the Bombay Balances. Now, to take these points in order, everyone hopes for, and indeed expects, a trade recovery. But, in place of assuming the attitude of Mr. Micawber, the prudent course would appear to be to raise revenue to meet the inevitable obligations: if prosperity returned, it would be easy to remove the additional burdens. Retrenchment is, indeed, desirable wherever it is possible. Excessive establishments must be guarded against with special care in Bombay, because it is sometimes pointed out by other Governments that the cost of administration *per caput* is larger in that Presidency than elsewhere. As Sir Chunilal showed, any attack on that ground is unfair. Bombay has a small territory compared with the other large Provinces: much of it is barren and thinly populated. It has at the same time a highly developed commercial position. The cost of living is high, and it is, therefore, necessary to pay high rates of pay and wages to all classes of its employees. It may be added that Bombay has taken an honourable lead in paying subordinate officers, particularly in the Judicial and Educational Departments, an adequate living wage. The cry of the Indian politician is, however, always for retrenchment at whatever ultimate cost. Sir Chunilal does not appear to be altogether free from the defect implicit in such a demand. A highly paid officer has been employed to suggest economies: but it does not appear from the Budget that these will take place in the lower ranks, where some economy both in numbers and rates of pay would appear possible.

In any case, when the police are admittedly insufficient in some parts of the Presidency, when urgently required buildings cannot be erected, when roads cannot be constructed, it may be doubted whether a reduction of fifty lakhs in expenditure can be regarded as a welcome remedy. But it is in his protests against the Meston Settlement that Sir Chunilal's proposals seem to fail, as a constructive measure, however much we in Bombay believe in the justice that underlies his complaints. The Meston Settlement is a bad makeshift arrangement, and it is unfortunate that one of the Provinces that is believed (at least in Bombay) to benefit by it is that with which Lord Meston was himself connected. To the Industrial Pro-

vinces, and particularly to a Province like Bombay which has, as already observed, a small territory and scanty population, the Settlement seems clearly unfair. It is believed that the Government of India have no admiration for the Settlement in itself. They accepted it because they had to work on some base, and they do not change it, because such a course would cause turmoil in every Secretariat in India. But the Government of India and Sir Basil Blackett in particular would probably maintain that they are trying to temper the wind to the lamb of Bombay, so cruelly affected by the shears of the Settlement. They have remitted 28 lakhs in the present year to Bombay. They propose to remit, temporarily in name but more probably permanently, the whole of the Provincial contributions. It is true that this does not affect the root of the Bombay contention. But it is at least as much as the Government of India is likely to do at present. Is it statesmanlike to hope that further depletion of balances will move them? If it does, is it not likely that every Province in India will follow the dangerous example?

A deficit such as exists in Bombay can only be met by taxation: but this unfortunately is exactly the remedy from which the Indian politician shrinks. Nor is the Bombay Legislative Council any exception to this general rule. The late Council refused to renew the increased stamp duties that had been imposed for two years. In every province, moreover, the Land Revenue, which is far more truly a rent levied for the use of State property than a tax, is the mainstay of the provincial finances. In Bombay, it is true, the Land Revenue is, for reasons already given, considerably less than in other Provinces. Relatively small as it is, it has been further reduced by the demand of the Legislative Council that further revisions of land assessments which have become time expired should not be introduced till the whole agricultural situation has been reviewed. Government, dependent on the votes of the representatives of the agricultural constituencies, has yielded to the demand.

It is obvious, as Sir Joseph Kay pointed out in the Budget debate, that no Government can live for long on its balances. The reluctance to impose fresh taxation to meet necessary developments, seems to be the rock on which the wisdom of Indian politicians is most likely to come to grief. It is a natural reluctance, but one that must be overcome if progress is to be made. It is disappointing to find that the first Indian Finance member makes no effort to surmount it by constructive proposals, but on the contrary appears to share it in full measure.

BOMBAY NOTES.

Sir Basil Blackett, no doubt, framed his remarkably prosperous Budget with the conscious intention of throwing out a challenge to the supporters of the sixteen-penny rupee; and indeed to any man whose convictions are not deeply founded on the rock of obstinacy, the Budget of 1927 seems rather a conclusive argument in favour of eighteen pence. Much has been given by the forces of Nature to assist Sir Basil. Sir Fleetwood Wilson years ago, in less happy times decried the Indian Budget as a gamble on the weather; and Sir Basil has five fat years behind him in putting forward his fourth Budget. But even so, the surplus and the general stability of Indian trade and finance are due in very large measure to the soundness of Sir Basil's methods and principles.

Out of the surplus, Bombay profits chiefly by the remission of the provincial contributions. Just how far the benefits will extend is not yet perfectly clear, but it is obvious that Bombay will no longer suffer under the burden of the Meston award; an award which has from the beginning been a quite legitimate grievance to all concerned with the finances of the Bombay Presidency. Even if some part of the contribution is still to stand,

it is clear that the grievance of an unfair distribution of the burden is to be removed.

The alteration in the taxation of tea affects Bombay very little. Apart from the interests of the Bombay Burmah Trading Corporation, there is, as far as I know, no company domiciled on this side of India which has any concern with tea planting. The Budget seems to have taken a step in the right direction, by removing a charge upon cost and substituting a charge upon profits. That is to say, the export duty of R. $\frac{1}{2}$ per hundred pounds is to be abolished, and income tax will in future be calculated on 50 per cent. instead of 25 per cent. of the profit. The alteration will be a slight advantage to struggling companies, and will make little or no difference to the more successful.

In case the calculation of income tax should be a little puzzling, it may be as well to explain that all profits from agriculture in India, being derived from land on which Land Revenue has been collected, are exempt from income tax. In the later years of the War, Government attempted to make an exception of tea, on the grounds that tea planting was more akin to industry than to agriculture. This was disputed, and it was eventually agreed that three-quarters of the profits should be deemed to have been derived from the exempted land, and the remaining one-quarter from the taxable factory. There is not so much logic about the new arrangement, but, though the planters would, perhaps, have preferred a less double-edged gift, it seems to provide a fairly equitable and satisfactory readjustment of the existing taxation.

While the years of Sir Basil's Ministry in India have been rich and prosperous, there can be no doubt that there is a general feeling that India's export trade is not exactly booming. I have no statistics at my elbow, and I may be proved, by somebody who has them, to be entirely wrong; but wheat is being imported and not exported, and something of the same kind is going on in cotton; which, in view of the present parity between Indian and American cotton is not wholly surprising. The cheapest Bombay cotton cannot at the moment be sold to the Continent below 7d. while middling American is 7½d.

This apparent falling off of exports makes many people a little doubtful whether the eighteen-penny rupee is quite as impregnable as it looks, and it is the strongest argument of those who genuinely believe that a lower ratio is to the advantage of India. Sir Basil has, however, shown that, whatever may be the ultimate outcome, Indian industry will at any rate benefit, as long as the rupee is maintained at rs. 6d. from the advantages of a light taxation. Indians, *fortunati nimium sua si bona norint*, are hardly qualified to appreciate the advantages enjoyed by their industries as compared with those which have to struggle under the burden of European taxation: and it is very doubtful to me whether even the Bombay cotton mills, which have most reason to fear the competition engendered by a rs. 6d. rupee, would be very much better off with the higher taxation of a one-and-fourpenny budget. To work out this problem through all its ramifications would be a very pretty exercise in political economy, and, given normal conditions, I am not at all sure what the answer would be. The answer of the malcontents, that conditions will never be normal under the eighteen-penny rupee, must be ruled out of court, for the simple reason that the Bombay mills were never so prosperous as when exchange was over two shillings.

When the currency Bill comes up in the Assembly, the voting is sure to be very close, with, probably, a small Government majority which will obviate the necessity of certification. But it seems to me quite certain that, whether the Bill has to be certified or not, Government will not let the rupee slip back again to one and four as long as it can be avoided. If a Budget has again to be introduced on the lower basis, it will be because the exports of India have definitely failed to stand up to eighteen pence, and, whatever may be your views of the theoretical rights and wrongs of exchange, you are not likely to find this Budget very exhilarating.

INDIAN MAIL.

Bin-shoots.

The visit of the Viceroy to Bikaner has drawn public attention in India towards the great canal scheme which will, when completed, turn a hopeless desert into fertile land. The Ganga Canal will be of immense value to the State, to which it is expected to bring in an annual revenue of 75 lakhs of rupees on a capital expenditure of 300 lakhs. The Canal is to be lined with concrete, in order to prevent waterlogging: and this is made from a sort of embryo limestone known as kankar, of which a great quarry exists at the Durbari-tank, near the famous shooting centre of Gajner. The kankar is loaded into trucks which are pushed by hand to the top of a railway cutting from where the kankar is shot into iron receptacles with trapdoors, overhanging the railway line within the cutting, and from these receptacles—which are called bin-shoots—into the railway trucks waiting below. Thereby hangs a tale, which the special correspondent of the *Pioneer* during the Viceroy's visit to Bikaner has rescued from oblivion, and is given here in his own words:

"Some time ago an earnest official at Whitehall had to deal with a request from Bikaner for sanctioning bin-shoots at Durbari Tank near Gajner. He was a most earnest, not to say conscientious official. He had dimly heard of Gajner's fame in producing grouse shoots and duck shoots; so he decided that it was not for him to inquire into the habits of the bin, even though he was mystified by the intrusion of another apparently shootable animal in the kankar which, in the dispatch, was closely allied to the bin. Specifications eventually arrived; but, by that time, the earnest official had been transferred or translated; so perhaps he still hopes to see the Zoological Gardens displaying the bin and the kankar in pleasant captivity."

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Eastern Banking.

The reports of the three Indian banks are now available. Indian trade conditions during the past year were markedly unfavourable, the slack season being unusually prolonged, and it was only to be expected that the commercial movement should find some reflection in the returns of the banks. Two of them show a very slight falling off in profits, but the third which covers a wider field shows a fairly substantial increase in profits. Actually the net profits of the Chartered Bank of India Australia and China amounted to £778,576, an increase of roughly £22,400 on the previous year's figures, a result which must be regarded as particularly gratifying in view of the increasingly disturbed state of one of the spheres of the bank's operations. As a matter of fact, despite the troubles in China the trade of that country seems to have kept up remarkably well during the past year. The distribution of the Chartered Bank is maintained at the same level as for the previous year, and the carry forward is somewhat larger at £215,354 as compared with £209,278. The net profits of the National Bank of India at £534,316 are slightly below the previous year's figures, but for the past three years the variation in the profits has been very small. The proposed distribution is the same as before, and after the same allocations as for 1925 £255,401 remains to be carried forward as compared with £241,085. To these very satisfactory results must be added that of the Mercantile Bank of India, whose net profits of £250,782 are only slightly below those of 1925. The distribution of this institution is again the same and the carry forward is £160,667 as against £162,885.

Smyrna Aidin Railway Recovery.

A very favourable report is forthcoming from the Ottoman Railway from Smyrna to Aidin for the half-year ended December 31 last, the results obtained during that period having been the most satisfactory since the line was restored to full working order. There was an expansion in goods receipts of nearly 28 per cent., while there was a reduction in working expenditure of over 7 per cent., and there was a balance of receipts over expenditure of £136,120 as compared with £84,196 for the corresponding period of the previous year. The effect of this improvement has been that after meeting fixed charges it has been possible with the help of a small contribution from the interest reserve fund to meet the heavy debit balance brought forward. It is of interest to note that the company's results would have been even better but for the increased expenditure for coal owing to the strike here. Three-fifths of the coal used was from Youngouldak, and as is well known Turkish coal rose to a very high figure during the shortage.

The Sudan's Progress.

Elsewhere in these columns will be found a review of the trade of the Sudan in 1926. To some extent as we know the year was marked by considerable depression, and economic progress was hampered by the failure of the millet crop which led to the import on a large scale of this commodity which was an important item in the export list the previous year. Still, it was on the whole a period of consistent progress, and it is not a small thing in a time of falling prices that the volume of trade at £11,002,902 should show an increase of 11.9 on the

1925 figures. The development in cotton production was, of course, the outstanding feature of the year, and it is satisfactory to know that the great rise in output last year resulting from the completion of the Sennar Dam promises to be considerably increased in the present season. The Sudan has already reached the position of a producer of Sakellarides cotton that really counts in the English market, and as anyone who reads the Liverpool reports consistently will be aware Sudan Sakel is regarded in Lancashire with the greatest favour. There is now in sight the prospect of a steady expansion of the output of Sakel in the Sudan as a result of the development of the Gezira scheme, but if the Sudan is to render the fullest possible service to the cause of Empire cotton production it must also develop to the fullest extent the production of American cotton. Fair progress has been made in this direction, and the prospects for the cultivation of the American type in the Southern districts are undoubted, but the rapid development of its cultivation depends on transport and also on the price of cotton.

The Greek Refugee Loan.

In view of the fact that, as I pointed out last week, Greece intends shortly to approach the League of Nations for a further Refugee Loan it may be of interest to quote some figures from the thirteenth quarterly report of the Greek Refugee Settlement Commission which show the position with regard to the first loan. The ordinary service of the loan for the past year required 359,588,152 drachmæ, but the amount actually available was 2,143,332,004. At the end of last year the Commission had at its disposal a balance of £1,800,820, and it is anticipated that this sum will have been exhausted by the end of 1927 in the execution of the existing programme. As showing the success of the scheme for the settlement of the refugees and the valuable element that they promise to be in the country's economic position it may be noted that up to the end of 1926 £102,417 had been repaid by them of which £81,074 was in respect of last year, £40,072 being repaid in the last quarter of the year. Of the amounts thus recovered at least 75 per cent. is handed over to the International Financial Commission to be used for extra drawings half-yearly. On these facts, and provided that a state of stabilisation in regard to the country's finances is attained, it is evident that Greece will be able to make a very good case at Geneva for a further loan.

Italy and Near East Markets.

On more than one occasion recently I have referred to the growth of Italian competition in the Near East markets, and this feature according to reports is tending to become more pronounced as time goes on. This competition, it may be pointed out, is being increasingly felt by the Manchester cotton goods trade, one reason for the Italian success being that the prices are considerably below those of the Manchester goods. In an exhibition of samples in this country some 200 samples of cotton piece-goods mainly manufactured in Italy and obtained in the Near East markets at low prices are on view, and afford a valuable object lesson as to the nature of the competition that Manchester manufacturers must expect to face in the future. This competition, it may be added, is particularly in evidence in Syria, and it is stated in a recent report of the British Consul General at Beyrout that buyers are regarding Italian products with increasing favour. They have made marked progress, he points out, at the expense of the British manufacturers especially as regards coloured woven cotton goods. Apart from the question of price there appear to be several reasons for Italy's progress in the market. The Consul General cites, for instance, the question of credit. While one or two-monthly credit is the maximum that is granted in respect of British goods. The Italian gives up to three months' credit. Then there is the question of catering for the market, and here Italy holds a great advantage for her commercial travellers frequently visit the country, and so Italian manufacturers are in a position to gauge the exact requirements of the market.

Turkish Petroleum Company.

A specially interesting development is the announcement that the Turkish Petroleum Company is proposing to increase its capital from £1,000,000 to £2,000,000. There is not, I imagine, any likelihood that this fore-shadows a public issue, for the additional capital will

doubtless be provided by the various holders of shares in the enterprise who are the Anglo-Persian Oil Company, the Royal Dutch Shell, a French concern, and Mr. C. S. Gulbenkian. It is reasonable to deduce from it that considerable optimism is now entertained as to the prospects of developing the Mosul oilfields and that news of the preliminary work when forthcoming will be of a satisfactory character.

The Rubber Position.

Nothing has occurred during the past week to discourage those who are looking forward to a reduction in the exportable quota on May 1 to 60 per cent. The price of the raw commodity has fluctuated round 1s. 8½d. per lb., but has so far not gone higher than 1s. 8½d., and the position now is that if an average price of 1s. 9d. is to be attained over the twelve months the price from now onwards must average only practically under 2s. Market developments during the past three weeks suggest that the advent of buying on a scale sufficient to raise the price by 3d. per lb. is extremely unlikely; indeed were one to judge solely by present conditions it might reasonably be assumed that when May 1 comes the price will not be much over 1s. 9d. It may, I think, be taken for granted that there will now be a reduction to 60 per cent., and if that proves to be the case, granted, of course, normal trade developments, the following quarter should see a considerable improvement in the price—how great will depend on the extent to which the demand for rubber causes a reduction of the large London stocks. So long as extensive inroads are not made into them there can be no question of really high prices for the commodity, and it is obvious that even if the reduction in stocks were to proceed at the rate of 1,000 tons a week it would take a good many weeks to make an appreciable difference in stocks which may conceivably by the end of the quarter be nearer 70,000 tons than 60,000 tons.

THE SUDAN'S TRADE IN 1926.

The statistics of the trade of the Sudan for 1926 are now available and show a very marked improvement on the figures for the previous year. There is an increase in the volume of trade of 11.9 per cent., while the exports, due to the great expansion of cotton growing, have increased by 28.2 per cent. The detailed figures are as follows:—

	1926. £E	1925. £E
Imports	5,574,401	5,437,727
Exports	4,876,236	3,801,348
Re-exports	314,269	367,016
Transit	237,996	225,811
Total	11,002,902	9,831,902

The value of the import trade apart from that through the frontier stations totalled £E5,319,699, an increase of £E200,720 on the 1926 figures. This rise was mainly in respect of Government imports, which showed an increase of £E175,996, the principal feature in the list being a rise in the imports of machinery from £E170,996 to £E291,065. The value of public imports was £E3,524,386, at which it shows only a small rise. The chief item in the list, cotton piece-goods, at £E818,953 is down by £E354,721, a development which reflects the adverse economic conditions which obtained in the Sudan during the year, but is also due to some extent to the fall in the price of piece-goods. It is interesting to note that of the ten items in the import list for which the details are given all but two show declines in the unit values, thus illustrating the fact that 1926 was a period of falling world prices. Tobacco, cigars, etc., rank second to cotton piece-goods in imports with £E243,658, which compares with £E255,465 for the previous year. Next comes tea with £E216,097, an increase of £E58,540, due to an increase in the imports of 361 tons and to a rise in prices.

Millet (dura) does not normally figure among the particularised items in the import list, but this time, owing to the partial failure of the home crop, the Sudan imported this commodity to the value of £E211,817 as compared with £E1,133 in 1925. There was also a substantial rise in the imports of wheat flour at £E185,679 as against £E138,374. Of the other features of the imports three may be mentioned. The imports of metals and metalware amounted to £E154,562 as against £E182,840, while those of machinery showed a sharp drop at £E83,322 as against £E142,438. On the other hand, the imports of motor cars, cycles, tyres, etc., increased from £E65,998 to £E88,900, a development which is likely to be much more pronounced in future years.

The outstanding aspect of the list of exports is the great expansion of trade in cotton. For 1925 the value of the cotton exports was £E1,646,102, but for 1926 it was £E2,845,702, Egyptian accounting for £E2,603,040, American for £E231,805, and Scarto for £E10,857. The increase is the more significant since cotton values for 1926 were considerably below those ruling in 1925. There was also a substantial rise in the exports of cotton seed. In 1925 13,939 tons were exported of the value of £E119,269, but in 1926 the exports totalled 39,639 tons of Egyptian of

the value of £E224,552 and 7,032 tons of American of the value of £E31,962. The trade in gum was fairly good during the year, and the value of the total exports was £E844,198 as against £E791,931. Sesame is third on the list of exports with £E257,866 as against £E213,866, while there was also a large increase in the value of the exports of hides and skins, the figures being £E126,665 as against £E98,299. There were some notable decreases in the export list, chief of which is dura, which, as already noted, had to be imported on a large scale. In 1925 25,961 tons of the value of £E220,636 were exported, but for 1926 the figures are 626 tons of the value of £E7,994. Then the value of the export of ground nuts was £E114,611 as against £E170,337, while other notable declines were experienced in ivory, £E39,651 as against £E69,849, sheep and goats £E27,510 as against £E44,351, cattle £E97,605 as against £E119,853, and dates £E47,556 as against £E56,170. The fall in prices in the import list has already been referred to, and it is interesting to note that the position is the same in regard to exports, only three of the commodities showing an increase in price. These were millet, dom-nuts, and hides and skins.

The following table shows the countries trading with the Sudan:—

	Imports. £E	Exports. £E
Great Britain	1,724,107	3,434,210
Egypt	1,381,984	585,197
British India	744,736	2,670
Japan	301,968	40,012
Italy	91,001	100,599
France	84,894	110,788
Germany	65,616	108,514
United States	46,348	296,456
Other countries	879,045	183,692
	£E5,319,699	4,862,138

Great Britain, it will be seen, is easily first as regards exports from the Sudan, and is also first in the import list by a considerable margin. Actually 70.6 per cent. of the country's exports went to Great Britain, while the Sudan took 32.4 per cent. of her imports from us. Egypt occupies the second place as regards exports and imports with respective percentages of 12 and 26, while America is third as regards exports from the Sudan with 6.1 per cent., British India occupying a similar position in the import table with 14 per cent.

THE HOLIDAY SEASON.

This year's late Easter, with the prospect of spring more advanced than usual for the holiday season, is bound to give a considerable impetus to travelling. How wide the field now is for those who would spend less than a month away from home is well shown by Messrs. Thos. Cook and Son's "Spring and Easter Holiday Arrangements, 1927." The book contains some 130 pages of organised holiday tours, ranging from a steamer trip on the Thames to Egypt and Palestine. A copy of the book, which has many attractive illustrations, may be had free from any of Messrs. Cook's Offices, and it is likely to prove a boon and a strong incentive to holiday plans.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, March 15.

Refugee Settlement.

The authorities dealing with the establishment of the refugees have drawn up a detailed plan regarding their establishment in the regions allocated to them which the latest decision of the Council of the League of Nations has notably enlarged by the permission given to restrict and even abolish completely the prohibited zone along the Greek frontier notably in the neighbourhood of the Maritza.

Already special inspectors have left Sofia to direct the works for the execution of this plan, the construction of houses for the refugees being impending in five departments. Further, engineers have been sent to inspect the old buildings available in order to learn which can be used at once and which need improvements and repairs. The work of drainage of the marshy regions in the neighbourhood of the Danube and the Black Sea is also about to commence.

The general plan, as outlined in the report of M. Charron, the Commissioner of the League of Nations for the establishment of the refugees, includes:—The census of the families to be helped, the nature of the assistance to be accorded to each family, the areas of land available as well as the extent of the works to be carried out for their improvement, and finally an approximate estimate of the cost of the establishment under each of the heads of expenditure. This plan will be published shortly in Bulgaria with the name of each family to be helped and the region of its establishment.

Here is a summary of the position:—

Number of families to be helped (not including 372 families whose establishment is still under consideration) ...		31,271
Approximate Expenditure (in levas)		
Existing houses	15,262	—
To be repaired	2,068	14,616,000
Houses to be constructed	16,019	480,270,000
Agricultural Material to be distributed—		
Ploughs	23,257	49,993,600
Harrows	7,645	49,993,600
Carts	19,758	88,911,000
Fishing Tackle	...	7,000,000
Cattle	28,564	171,384,000
Land Improvement—		
Survey	...	17,360,101
Clearing	...	100,392,590
Ploughing and tilling forest land	...	195,589,550
Draining the marshes (in the region of Bourgas and along the sides of the Danube)	...	95,575,000
Total	...	1,221,091,031

Certain expenses for which there is lacking as yet the data for even an approximate estimate have not been included in the above enumeration, works of a general

character for instance, for the development of the new villages to be constructed, as well as the cost of the Rakowsky-Mastanly railway; the estimates for this railway have not yet been finally settled. The cost of the free distribution of grain has not been estimated for lack of adequate indications.

For the expenses not yet estimated the statement given above leaves of the loan a disposable sum of about £430,000. On the other hand it has to be considered that if in regard to certain heads, the construction of houses, for example, the estimates may be exceeded, as regards others they are probably too high; the detailed survey of the land has not yet been carried out and in this uncertainty the improvement of an area has been estimated for which is probably greater than is actually necessary.

The plan for the establishment of the refugees provides for the following settlements:—442 families along the Greek frontier, 1,029 families along the Yugoslav frontier, and 579 families along the Roumanian frontier. The total area of the land dealt with in the plan amounts to about 175,000 hectares; it therefore exceeds the estimate in the protocol. It is a question of the lands at the disposal of the Agrarian Funds established by virtue of the law for agricultural reforms, after satisfaction in conformity with the laws of the needs of the local population who have no lands or are insufficiently endowed.

A part of this area cannot be utilised, either because the improvement of certain lands would involve too great expense, or because the situation of the lands is unsuitable for the creation of new settlements in the terms of the decisions of the Council. It has further to be remarked that the Department of Agrarian Funds has not been able to some extent to furnish exact indications as to the delimitation of these lands, the survey not being finished. But it is realised that in many cases the reality does not correspond with the estimates; certain areas are absolutely unfit for cultivation and others are already occupied. The margin which exists in the area allocated to the settlement will beyond doubt enable all contingencies to be met.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, April 7). (For passenger sailing and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, and Calcutta (Birkenhead, April 2); s.s. Mahsud for Port Said, Colombo, and Rangoon (Birkenhead, April 14).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, April 6).

British India Line.—S.s. Domala for Bombay and Karachi (London, March 26); s.s. Gandara for Colombo, Madras, and Calcutta (London, March 26).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, April 6); s.s. Brescia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu and Gruz and Ancona if inducement (Liverpool April 10, Swansea April 19).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 9).

P. and O. Line.—S.s. Razmak for Bombay (London, April 1); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, March 30).

Ellerman and Papayanni Lines.—S.s. City of Oxford for Malta, Alexandria, Jaffa*, and Haifa* (Cardiff March 31, Liverpool April 6); s.s. Mardinian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 2, Swansea April 2); s.s. Roumelian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool April 2, Swansea April 5); s.s. Bavarian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 2, Swansea April 2). * Subject to sufficient inducement.—Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 22.

The circumstances of the moment are not favourable for any pronounced movement or activity on the Stock Exchange. The monetary position, for one thing, is disappointing. When 1926 closed it was almost generally supposed that a reduction of Bank rate would take place within five or six weeks. But two and a half months have passed and cheaper money does not appear to be in sight. At the same time, the approach of the Budget compels attention. Experts in chorus declare that there will be no increase in the income tax. But obviously the position of the public finances is such that the Chancellor may well be considering possible sources of additional revenue. A substantial deficit for the financial year now closing is a certainty; a balance for next year is dependent on the Chancellor's attitude to the Sinking Fund. It is small wonder, therefore, that the market for tobacco shares took fright this week on the rumour of fresh budget imposition. Anyhow, everyone is glad that Budget day has been put a fortnight earlier than usual. The tension will be over before Easter.

The Small Capitalist.

Investigations recently undertaken by the *Economist* and other authorities have clearly revealed that a very large proportion of the industrial capital of this country is held in small amounts by an enormous number of small investors. At the meeting of the United Kingdom Provident Institution the Rt. Hon. Walter Runciman made a fresh contribution to this line of inquiry. Confining his attention to those forms of investment in which the share of the "small man" can be more definitely determined, such as Savings Bank deposits, National Savings Certificates, Building Societies, etc., Mr. Runciman produced an estimate of a present total of no less than £1,776 millions in the possession of those who may properly be called "small capitalists," mainly wage earners. The comparative figure for 1906 Mr. Runciman gave as £639 millions. Even allowing for the changes in the value of money, the increase in twenty years is amazing, and, in spite of the widespread unemployment and poverty, we may at least claim that immense progress has been made in the diffusion of wealth over the population of these islands.

Industrial Debentures.

To the investor who plays for safety the preference share has in recent years lost some of its attractions, for in a number of capital re-organisations the preference shareholder has been called upon to make sacrifices with the ordinary shareholder. In these circumstances, the cautious investor may be tempted to turn increasingly to debentures. It may, therefore, be useful to give a short list of industrial debentures.

The Peninsular and Oriental Steam Navigation Company's 5 per cent. debentures, redeemable 1930-1948, give a return of £5 4s. per cent. The 4 per cent. perpetual debentures of Guest, Keen, and Nettlefolds also yields £5 4s. per cent. The Eastern Telegraph Company's 4 per cent. perpetual debentures return £5 2s. per cent. The 5½ per cent. mortgage debenture stock of the Dunlop Rubber Company yields £5 10s. per cent. The Mond Nickel Company's 5½ per cent. debentures give a return of £5 8s. per cent. The 4 per cent. debentures of the Metropolitan Vickers Electrical Company yield £5 12s. per cent. The ordinary shares of these companies are receiving good dividends and in each case there exists a substantial amount of ordinary and/or preference stock.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Map Printing Paper.—The Surveyor-General of Egypt invites tenders for the supply of approximately 3,000 reams of map printing paper. May 3. (D.O.T.)

Linen, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of linen, table service, needle work materials, school materials and material for cleaning required for the school year 1927-1928. April 18.

Rails.—Tenders are invited by the Survey of Egypt, Giza, Mudiriya, for the supply of about 6,200 tons of rails. April 20. (D.O.T.)

Centrifugal Pump, Etc.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of high lift centrifugal pump, fire hydrants, chemical fire extinguishers and air-moistening machine required for the spinning machine workshop at Delta Barrage Prison, April 12.

PALESTINE.

Steam Launch.—A communication has been received by the Department of Overseas Trade from a firm of agents, importers, and distributors at Haifa, Palestine, who state that they have received an inquiry for a steam launch with a seating capacity for 50 persons and suitable for the landing of tourists at the port of Haifa. (D.O.T.)

BULGARIA.

Water Piping and Fittings.—The Bulgarian Ministry of Public Works invites tenders for the supply of water piping and fittings, either of cast iron or steel. April 5. (D.O.T.)

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that the TWENTY-FOURTH ORDINARY GENERAL MEETING of The Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Wednesday, the 13th April, 1927, at 4 o'clock p.m., for the purpose, among other things, of:—

- Receiving the directors' report.
- Receiving the auditor's report;
- Approving the accounts for the period ended 31st January, 1927;
- Declaration of dividends;
- Election of directors;
- Election of auditors and fixing their remuneration;
- And the transaction of the general business of the Ordinary General Meeting.

Every shareholder holding a minimum of five shares has the right to attend the General Meeting, provided the shares are deposited at least five days before the day of the Meeting (the last day for depositing the shares in London is the 2nd April, 1927), when cards of admission and proxy forms will be handed to them at one of the following places:—

In Egypt.—At the National Bank of Egypt, Cairo; at the National Bank of Egypt, Alexandria.

In London.—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

B. HORNSBY, President

Cairo, 21st March, 1927.

BRITISH CHAMBER OF COMMERCE OF TURKEY.

Annual General Meeting.

At the annual general meeting of the British Chamber of Commerce of Turkey, held recently at Constantinople, H.M. Ambassador to Turkey, Sir George Clerk, K.C.M.G., C.B., the Honorary President of the Chamber, occupied the Chair.

Mr. F. Douglas-Watson, the Chairman of the Council, in his address, said:—We have had a chequered year. At one time it looked as if there would be no more meetings of the British Chamber of Commerce in Constantinople. The whole story of what seemed to be at the time an attempt on the part of the authorities to abolish this Chamber is contained in the Journal and I have no doubt you have all read it. That danger seems to have passed, at any rate up till now we have heard no more of it.

In common with other foreigners in this city we are all more or less upset at the moment with these new laws about the exclusive use of the Turkish language, about the new taxes which have been imposed and which rumour says are still to be imposed, about the Commercial Code which threatens to upset the arrangements of many establishments, both foreign and native, and about the institution of what appears to be an inexhaustible list of State Monopolies: tobacco, spirits, matches, sugar, petrol, the Port Authority. Telephones, of course, one can understand—that is another matter—but when it comes down to chimney-sweeping and hats being added, not to mention a monopoly of Chambers of Commerce, which everybody must join, it is really serious. However, we continue to exist, and I fancy that whatever inconveniences such things may cause us we shall so continue.

It is undeniable, however, that at the present time trade in general is not improving and that in many branches it is dwindling. The calling rate of subscribers to a telephone system can generally be taken as a very fair barometer of trade activity. I am in a position to tell you that up to a year ago the rate of calls in this city was steadily increasing. About ten months ago the calls of subscribers began to decrease and the rate of calls has steadily diminished from week to week ever since.

I would like to say a word upon another subject which is not closely connected with business, although there is a business side to it. My predecessor, Mr. Middleton Edwards referred to it, I think, in his speech last year, viz., the English High School for Boys. It is something of a reproach to us that so little should be done in this town for the advancement of the English language, and it is to be regretted that the school is no longer in receipt of any financial assistance from the British Government. There is such a marked contrast between the way this question is handled here by ourselves and by other nationalities as to make us feel humiliated when we think

of it. There are, I think, apart from the American Schools, all told, only three schools where the English language is the medium of instruction, while there are dozens of German, French, and Italian Schools. I cannot presume even to suggest what would be an effective answer by ourselves or our Government to this state of affairs. It is quite understandable how, placed as we are at home, with a crushing National Debt and oppressive taxation, any Government would hesitate to add even £500 per annum to its Budget for an object not absolutely necessary, but I cannot refrain from expressing the opinion that, while the necessity for something of the kind may not be apparent to our politicians, the absence of any such supports puts an additional obstacle in the way of the advancement of British interests here and British trade. Neither numerically nor financially is the British Community of Constantinople a very important section of the population, and in supporting as we do the British Schools that we have, I think we are doing all that can be reasonably expected. My immediate object in mentioning the question now is to suggest that should there be any danger whatever of any one of these schools shutting down for lack of funds, in addition to opening our purses ourselves somewhat wider than we do now, we should as a Chamber make a strong appeal through our Ambassador to the Government that some help should be forthcoming from that quarter.

The question of the payment of claims made by a large number of British subjects here for damage done to property during the War still drags its weary length along. There were indications given recently that a further payment was about to be made, but, so far as I know up to this present hour, these promises have not materialised and I take this opportunity of repeating what has been so often said in this place before, that it is little short of a scandal that, for one reason or another, eight years after the Great War has finished, and twelve years after the damage was done, many of our citizens in this town are suffering serious financial difficulty in consequence, although there is money available to relieve them.

The Floating Exhibition which was organised by the Turkish Government seems to have been well received wherever it went, and no doubt it has made a good impression, the effects of which will continue for a long time to come. There was some talk several years ago of a similar thing being done by our people at Home, but apparently the idea did not catch on and we have heard no more about it. It is a pity that the Department of Overseas Trade do not do something of this kind. Trade Exhibitions at Home no doubt do a lot of good, but we can hardly expect all our prospective customers to come from all over the world to Great Britain to see what they can buy from us. The Turkish method of sending samples into the countries of their respective customers seems more practical.

Sir George Clerk, who then addressed the meeting,

said:—One point, on the credit side as regards the position in Turkey itself, but possibly on the debit side in the general estimate of British trade, is that the difficulties which you have to face are not all the result of local conditions. Were you working in Tierra del Fuego or Timbuctoo they would hit you just the same. The world has not recovered, and will not for a long time recover, from the effects of the War, and those effects have nowhere been more hardly felt than in the British Empire. Strikes, cost of living and of raw materials, and so on, are all too familiar to you. But beyond that, dare I wonder whether the British manufacturer has even yet learn the lesson? Is he not sometimes still living in those happy Early-Victorian days when British products ruled supreme, and if the misguided foreigner did not choose to take them, the loss was his, and he could jolly well leave them? I may be wrong, but I have a sort of feeling that a little more enterprise and a little more adaptability on the part of our manufacturers might help our trade and commerce here. The sort of thing I have in mind is that Turkey is an agricultural country and there *must* therefore be a market for agricultural machinery. I know the competition is severe and I know that the question of payment is not easy. But I also know that before the War a British firm of that kind was able to hold its own in the heart of Germany, in the face of the most strenuous local competition, with all the advantages of support from the German Government. Is it fantastic to imagine representatives of British agricultural machinery interests getting into touch with the Ministry of Agriculture here, demonstrating the efficiency of the British machines, and working out methods whereby the Turkish Government could assist the Turkish farmer to purchase them? I believe that some of you have already tried to introduce our agricultural machines into this country, but my point is that it is for the manufacturer himself to study the market, or at least, to adapt his wares to meet the condition of which you, the local experts, advise him. Of course, this would entail a certain expenditure and might not succeed, but there is the market, and the question is whether we are going to acquiesce in its remaining closed to our products without a struggle.

Your Chairman produced some unhappy figures showing the serious diminution of tonnage, and of British tonnage in particular, at Constantinople. I should like to know how much of this is due to the general diminution of trade, especially of British trade, and how much to the drying up of the Black Sea. Constantinople will not recover her former rank among the great ports of the world until Russian commerce again becomes normal. This may not be for years, but it is inevitable, and is one of the considerations which I should put on the credit side if I were making up my outlook for the future.

Roumania's customs duties in 1926 gave a yield of 8,771 million lei, as compared with 7,527 millions in 1925. The import duties produced 4,446 millions, the export duties 3,981 millions, and miscellaneous duties 644 millions.

COMPANY NOTES AND REPORTS.

CHARTERED BANK OF INDIA.

The report of the Chartered Bank of India, Australia and China for the year ended December 31 last shows a net profit of £987,854 inclusive of £209,278 brought forward from the previous year. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £777,854 and the directors propose to pay a final dividend at the rate of 14 per cent. per annum together with a bonus of 6s. 3d. per share, making 20½ per cent. per annum for the year, free of income tax; to add £25,000 to the officers' pension fund; to write off premises account £40,000; to set aside £100,000 on account of contingencies and to carry forward the balance of £215,354.

NATIONAL BANK OF INDIA.

The report of the National Bank of India for the year ended December 31 last states that the net profits for the year amount to £534,316, and adding £241,085 brought forward, the available total is £775,401. An *ad interim* dividend at the rate of 20 per cent. per annum, free of income tax, was paid on September 15 last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £50,000 to the reserve fund, raising it to £2,000,000. They propose to write £30,000 off house property account and to add £40,000 to the officers' pension fund, leaving a balance of £255,401 to be carried forward. A branch of the bank was opened at Eldoret, Kenya Colony, on November 1.

A general census was taken in Bulgaria on December 31, 1926, according to which it is estimated that the present population of Bulgaria is 5,460,000, as compared with 4,847,000 in 1920, an increase of 12.80 per cent. in six years. Urban population increased by 16.98 per cent, pointing to a tendency to concentrate in the cities. Bourgas showed the most rapid advance, with an increase of 42.2 per cent., while Sofia showed a gain of 38.4 per cent.

The British Consul at Muscat in his report on the trade of Muscat for 1925-26 states that the total value was £673,817 as compared with £612,883 in 1924-25, an increase of £60,934, or about 10 per cent. Of this amount £447,910 represented imports and £225,907 exports. Rice, sugar, and piece-goods were the chief imports, while the exports included dry sardines and dry and wet dates. Most of the imports came from India, £394,839, while Persia and the United Kingdom provided £17,046 and £12,333 respectively. Indian with £175,164, and the United States with £26,425 were the principal countries importing goods from Muscat.

The Court of Appeal, consisting of Lords Justices Bankes, Scrutton, and Atkin, by a reserved judgment delivered recently decided that Mr. Khalil Jebara, of Princess Street, Manchester, was entitled not to the judgment of £4,366 awarded by Mr. Justice Rowlatt against the Ottoman Bank in a case relating to pre-War shipments of Manchester goods to Beyrout, but to judgment for damages which in default of agreement will have to be assessed.

In the current report of the Central Economic Board of the Sudan Government it is stated that cotton picking was in full swing on the Gezira Irrigation Scheme throughout the greater part of January. The amount picked at the end of the month was 1.16 kantars per feddan as against 1.21 kantars in the previous season. There has been of course considerable variation between the blocks, the maximum being 1.70 for the Radma and the minimum .64 for Abdel Rahman. The pickings at the end of January do not, however, give much indication of the relative yield of one block and another as the worst cotton is rather apt to open before the better. The ginning factories are working well and the daily output is 800 bales, giving, with the resultant seed, considerably over a train load a day.

NOTES AND NEWS.

(Continued from page 350.)

It is, it must be admitted, an interesting position, and one in regard to which speculation is futile in default of knowing what the American manufacturers will do for they really hold the key to the problem.

British Chamber of Commerce of Turkey.

Reference is made in the report of the British Chamber of Commerce of Turkey to the decline in the membership of that body despite special efforts during the year (which were very successful) to enlist members locally. During the year 41 new members were elected, but there were, on the other hand, 65 resignations, so that there was a net loss of 24. The membership on January 1 last was 367 as compared with 391 a year ago, 415 on January 1, 1925, 514 on January 1, 1924, and the highest figure so far recorded 633 for 1921. The figures show very plainly that the Chamber is not receiving the full support of the British community in Turkey and of British firms who wish to develop trade with that region, and in this respect the experience of the Chamber is by no means unique in the annals of British Chambers of Commerce. The British Chamber of Commerce of Turkey has done much to further the interests of our traders, and it may be trusted that the recognition of that fact will lead to greater support by British firms interested in that part of the world.

COMMENTATOR.

SUDAN DATE CROP.

The following is taken from the report of the Central Economic Board of the Sudan Government:—

Halfa Province.—The crop of each district, or rather that portion of the crops which is visible to the merchants at Wadi Halfa is as follows, in sacks of approximately 140 kilos:—Wadi Halfa 6,000; Mahas 9,000; Sukkot 12,000; total 27,000. This leaves out of account the quantities consumed locally, and amounts exported South to the Sudan from Southern Mahas, via Kareima.

The crop generally is reported to be 30 per cent. larger than the previous year in Sukkot and Mahas, and 15 per cent. larger in Wadi Halfa District. It is reported to be a good crop, but dates are small and it is said that for the first time barakawi dates of Dongola Province are both larger and finer and fetch a better price than Sukkot barakawi. Prices actually received by the natives in cash for barakawi dates in each district were (per sack of approximately 140 kilos.) Sukkot P.T.150, Makas P.T.130, Wadi Halfa P.T.145.

Motor cars, agricultural machinery, and wireless apparatus will be among the exhibits at the Zagreb Trade Fair which is to be held in May.

The value of the trade passing through the Sudan frontier stations in 1926 was £E381,163, as compared with £E427,031 for 1925. Of the imports Abyssinia was responsible for £E238,521, Eritrea for £E15,381, the Congo for £E759 and Uganda for £E41. The Sudan's exports to Abyssinia totalled £E11,710 and her re-exports to that country £E84,031, and the exports to the Congo £E697, the re-exports being valued at £E25,189.

CHESS.

By "CARO-KANN."

Here is an interesting end game which occurred in off-hand play at the City of London Chess Club last week. Black has to move. The solution will be given next week.

The chess season here so called is drawing to a close. At the City of London Chess Club the regular winter tournaments are over, and the players are now engaged in knock-out tournament, suggested by Mr. A. Elliston Fox, a Member of the Committee, who is presenting the prizes. The tournament is arranged in three sections for first, second and third class players, and two from each section will enter the Final where they will play on level terms. Apart from this tournament and a few league matches which have still to be decided the season is over.

But the close season is only in theory a period of inactivity. At Easter there is a Congress at Tunbridge Wells, and there is another one at Scarborough at Whitsuntide, while in the last two weeks of July there will be the international team tournament at the Central Hall, Westminster, when the competitors will include Yugoslavia, who is at present favourite for the event. It is proposed that this tournament should be held each year, but I am of opinion that it will be found, as is beginning to be the case with the Davis Cup, that an annual meeting is too much and that a tournament every five years or so will suffice.

Apart from these events there is the Murton Cup handicap which starts in April at the City of London Chess Club (I hope to give some characteristic games from this competition in due course), while many of the other clubs hold summer handicaps so that it will be seen that we are scarcely devoid of chess in the summer.

The New York Tournament, now nearing its end, is notable not only for the pronounced supremacy of Senior Capablanca, but also for the numerous additions to opening theory. The thing which has interested me most about the play has been the adoption by Capablanca on at least three occasions of the Caro-Kann defence. Speaking generally the text books are not in favour of this defence, though the truth is, of course, that the validity or otherwise of the line of play is a matter of temperament. Now that Capablanca has favoured it I suppose we shall have Caro-Kanns one game out of three next winter.

JOHNSTON LINE**Mediterranean, Black Sea and Danube.****REGULAR SAILINGS from:**

and **FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool**

Messrs. Samuel Montagu and Co. state in their weekly bullion letter that it is of special interest just now to notice that gold has reappeared in the holding of the Indian Gold Standard Reserve. In the return for February 28 last an item of £424,083 was shown as held in London. This amount almost exactly tallies with the amount purchased in the London market during that month for a "destination not disclosed."

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 16:—

Egyptian Futures.—Sakel Contract.—Throughout the greater part of the week this market has shown a reactionary tendency, the movement being influenced by a falling off in the trade demand, and, in a lesser degree, by the weakness witnessed in the American markets. Since the turn of the year, outside speculators have been following the trade, and the gradual appreciation in values has enlisted a fair "Bull" account. The initial part of the decline did not bring much of this cotton out, but during the past few days there has been considerable liquidation, and had it not been for trade fixings on the down scale the decline on the week of 42 to 45 points for near and 37 to 41 points for more distant options might readily have been more drastic. Another factor that has exercised a somewhat restraining influence has been the comparative strength of the current position. From reports it would appear as though certain import houses some little time ago purchased cotton at the other side at a presumably tenderable basis, and are now finding that their shipments are outside the contract. This necessitates a rebuying or switching of their March hedges, a not too easy operation at current differences, as the contracts are strongly held. At the first sign of easing values, a marked decrease in trade activity became apparent, and whilst, as mentioned previously, spinners have taken the opportunity of fixing fair quantities on the decline, the offtake, as is customary in declining markets, has suffered considerably. To-day, for the first time during the week, the market has shown rather more resistance and a slight recovery; as we are certainly not pessimistic on the trade situation, we think that, given the encouragement of steady markets for a few days, spinners and manufacturers will resume more active operations perhaps not on the scale witnessed in the earlier days of the year, but at any rate in sufficient measure to counteract for the time being the effects of the rather "bearish" statistical position. Looking ahead, it seems probable that the Sudan crops are going to have a more important effect on Egyptian values this season than during any of its predecessors. Last year's crop of this variety has been almost invaluable in enabling spinners to keep up the strength of their yarns, and consequently has made very serious inroads into the normal Sakel offtake. Provided the new Sudan crop, which is just now starting to arrive, is of equal quality, and we have no reason to think otherwise, it will continue to monopolise the bulk of the demand. The price demanded may not be competitive with the ruling Sakel basis, but if it is, it would appear probable that our contract is going to be seriously affected during the spring and summer months. In recent sessions, the Alexandria market has shown rather a poor tone, and reports from the other side indicate that commercial houses are not receiving sufficient export orders to influence contract prices.

Upper Contract.—This option has enlisted only a very small measure of support during the past week, buyers holding off on account of the decline in other qualities. The trade have only bought sparingly throughout the week, but we are inclined to think this is only a temporary phase and that at the first signs of the movement being arrested, the demand will show considerable improvement.

Egyptian Spot.—The easiness of the American markets, which has been the feature of the past week, coupled with quieter reports from Manchester, has had a market effect on spot business. The local demand has contracted to only moderate dimensions and prices have sagged consistently. Calling by the trade, however, has been quite a feature, and to-day a firmer undertone has developed. Whether the reaction (which has been more or less expected for some time) has now run its course will largely depend on the action of the American markets. The general trend of the inquiry has produced nothing fresh. Spot Sakel continues to drag heavily, except where consignors are prepared to accept prices considerably under the apparent market value.

A quiet, steady trade in Uppers has continued and spinners who have the courage to take advantage of the present level will probably reap the benefit later in the season. A fairly good trade has again been done in Sudan Sakel, and the American seed variety has also been in good request, but with what result it is difficult to ascertain. C.I.F. business has been much quieter. Forwardings last week were returned as 5,683 bales Egyptian and 1,406 bales Sudan. Estimated sales, 1,200 bales Egyptian and 2,300 bales Sudan. Quotations of Sakel show a decline of 55 points on the week and those of Upper 45. F.G.F. Sakel to-day, 13.35d. F.G.F. Upper to-day, 10.65d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 10, state:—

Since our last report the future market has been fairly active but not so good as last week. The week's summary of price movements is as follows:—Sakellaridis: March, 26.32 dollars, 0.32 dollars down; May, 26.48 dollars, 0.44 dollars down; July, 26.78 dollars, 0.42 dollars down; November, 27.43 dollars, 0.32 dollars down; January, 27.38 dollars, 0.32 dollars down. Ashmouni: April, 19.23 dollars, 0.32 dollars down; June, 19.55 dollars, 0.35 dollars down; August, 19.80 dollars, 0.40 dollars down; October, 20.07 dollars, 0.25 dollars down.

Sakel.—There has been a fair amount of business during the week but the tone of the market was easy to-day and prices show a slight decline since last Thursday. The demand from abroad has not been very good; spinners have not shown the same eagerness to buy as they have recently been showing. Reports from Lancashire, however, continue to be good and it may be that the falling off in the demand will prove to be only temporary. It is reported that a good deal of the recent shipments to England are for account of Russian buyers. Speculators have shown only intermittent interest in the market; we think that there is still a small speculative long position open. The March position is well held and the discount at which this delivery stands in comparison with the distant deliveries has recently narrowed, contrary to what might normally be expected in view of the large stocks and the relatively only moderate demand.

Uppers.—The market for this variety is quiet as a result of the reaction in New York; the demand from spinners, however, is fairly good.

The week's receipts amount to 238,254 kantars against exports 111,703 kantars; the stock in Alexandria stands at 3,363,108 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to March 3, 1927, are as follows:—Arrivals: Lower Egypt, 3,827,000 kantars; Upper Egypt, 2,455,000 kantars; total, 6,282,000 kantars. Exports: Sakel, 1,853,549 kantars; Ashmouni, 2,156,459 kantars; Various, 271,242 kantars; total, 4,281,250 kantars.

Spot: We have had a series of fairly good markets at Minet el Bassal this week, but actual spinners' demand has rather fallen off. Sales amount to about 22,600 bales, of which we estimate 10,700 bales Sakellaridis, 11,000 bales Ashmouni and Zagora, 700 bales

OVERSEAS AGENTS FOR THE SALE OF "THE NEAR EAST AND INDIA."

AMERICA.

New York: Brentano's, Fifth Avenue and 27th Street.

Boston (Mass): Smith and McCance, Ashburton Place.

Crop, 1927: Weather conditions have been favourable during the week. Sowing has been pushed along energetically and the whole of the South Delta and more than half of the Central Delta has now been sown. Ploughing is progressing steadily in the Northern districts but very little sowing has yet been done. Estimates of the acreage planted or to be planted are very contradictory: everyone looks for a reduction on last year but, for the time being, it is impossible to say what the reduction will be. Water supply is sufficient everywhere and the prospects for summer irrigation are, so far, satisfactory.

The African and Eastern Trade Corporation announces that it has been decided to recommend to the shareholders the payment on April 25 of a dividend of 6 per cent., less tax, for the nine months ended September 30, 1926. The annual meeting will be held on April 8.

Notes of the Week.

A Balkan Inquiry.

It is just possible that a Commission representative of Great Britain, France and Germany, will conduct an inquiry into conditions on the Albano-Yugoslav frontier. We are not disposed to belittle the value of such an inquiry, as it is obvious, that, even if the delegates do not come across armed men lining the frontier with rifles pointing across it, they should be able to throw some light on the general position on each side of the boundary line. As, however, the goal to be aimed at should be the elimination of friction between Yugoslavia and Italy, it will be a matter for regret, if the Commission be not given a much wider scope in its terms of reference. The present trouble, it may be inferred, has arisen in the first instance from the fact that certain Albanians are dissatisfied with the existing Albanian régime. *More Albanico* they have prepared a revolution or insurrection; across the frontier, on Yugoslav territory, are large numbers of Albanians whom the Peace Treaties have cut off from Albania and given to Yugoslavia. These have been persuaded, we may suppose, to make common cause with malcontents in Albania, and they have been able to enlist the sympathy and support of hot-headed Yugoslav patriots, who are alarmed at what are regarded as Italian designs on Albania and the Balkans in general, and consider that they will be performing a patriotic task in helping Albania to obtain a less pro-Italian Government. Now, in any Balkan State, owing to the conception that local officials have of their duties, a considerable amount of activity on these lines can take

place in frontier districts probably without the knowledge of the Central Government, and certainly without any need for interference being recognised by that Government. Unfortunately for the Yugoslav Government, it would seem to have chosen this particular moment for strengthening its troops in the frontier areas, and it is no matter for surprise that both in Albania and in Italy the military measures were regarded as being connected with the *komitaji* activity. Even so, Italy would have been better advised to draw the attention of the Yugoslav Government to what was taking place on the Albanian frontier before she raised a scare in Europe.

The Real Crux.

No problem connected with the Balkans is simple and straightforward, each one is inter-related with several others, and the only chance of undoing any Balkan tangle is to keep some fundamental proposition clearly in view. In the present instance, it is evident that the real problem is not confined to the *komitaji* evil. Balkan *komitajis* are a local curse, but need not be accorded the status of a European factor. The crux of the problem now engaging the attention of Europe is, or should be, the maintenance of the integrity and independence of Albania. As between Italy and Yugoslavia the country that is to blame is the one which does not subscribe whole-heartedly to that postulate and whose actions are not entirely consistent with it. Unless we are mistaken, Italy will find it much harder than Yugoslavia to justify before any impartial body her interpretation of Albanian integrity and independence. This is said in no spirit of antagonism to Italy nor in ignorance of the Yugoslav attitude towards Albania in the past. It is, however, very evident that the Balkan States are consciously moving towards the

goal of "the Balkans for the Balkan peoples." Tentatively, and committing many mistakes all the while, they are trying to come together. In these circumstances the attempt of Italy to claim special privileges in relation to Albania, on the strength of some arrangement between herself and other Great Powers a number of years ago, is an anachronism. The obvious destiny of the Balkans does not provide for any special position for Italy in Albania. The Balkan markets are open to her trade, and it is probable that geography will always give her an advantage over her rivals. Politically she must claim no special position. On the other hand she has a legitimate concern in maintaining her supremacy in the Adriatic Sea; but that must remain a naval question and must not be solved by territorial designs on the Balkans. Unless Italy is anxious to try conclusions one day with the whole of the Balkan Peninsula, the sooner she abandons the idea of a protectorate, veiled or otherwise, over Albania, the better for her and for the peace of Europe.

Yugoslav Responsibility.

It is to be hoped that Yugoslavia will not disturb the good impression that her attitude since the outbreak of the "crisis" has created by seeking to hamper the inquiry or to restrict its scope. At the same time it would be well for the Press of the country to refrain from the scare reports that so frequently figure in its pages. Any military movements on the Albanian side of the frontier will quickly be detected by the Commission of Inquiry, and as there is no question of those activities, if they exist, having any other object than the protection of the Albanian Government, they are no concern of the Yugoslav newspapers. On the other hand it has to be borne in mind that Yugoslavia has not, as far as is known, denied the possibility of some stirring among Albanians on Yugoslav territory, and if it can be shown that there has been anything in the nature of a *komitaji* concentration a grave and embarrassing responsibility rests on the Yugoslav Government, which in many quarters has never been forgiven for Ahmed Bey Zogu's successful invasion of Albania from Yugoslav territory. Yugoslavia could, no doubt, have counted on a much readier championship on the part of Great Britain and France, if a certain amount of misgiving had not been caused by the political instability that has characterised the S.H.S. Kingdom for two or more years. It is strange that such an ardently patriotic people cannot realise that internal differences can be carried to a point when they are no longer merely a matter of party politics but become a serious prejudice to the nation. Fully half of the economic or financial pro-

blems that weigh heavily on Yugoslavia would have been settled by now if there had been reasonable political stability in the country during the last few years.

Imperial Airways and Persia.

The report that the Persian Majlis is putting obstacles in the way of the ratification of the agreement concluded in 1925 between Imperial Airways and the Persian Government, should cause little surprise to those who know Persia. Quite patently the Cairo-Karachi air route has no political significance whatever; and the Persian Government, at any rate, appears to recognise that fact. Recently, indeed, the Persian Minister of the Interior, in reply to a question in the Majlis on this subject, stated that the Government had been perfectly justified in signing this agreement. But Ministers are one thing and Deputies another, and the Nationalist opposition that has been shown to the ratification of this agreement would seem to imply the dismal Russian influence that has latterly been too often manifest in certain action of members of the Majlis. Bolshevist complicity in this latest action cannot be proved, but it is widely assumed. The Cairo-Karachi air route, however, belongs to the realm of progress which neither Bolshevist nor reactionary intrigues in Persia can destroy. To Persia herself the route can do no conceivable harm, and it is quite certain that eventually Persians will come to accept this view. It will be remembered, however, that the Majlis works but slowly: the Junkers Company have particular reason to remember this fact. In the meantime, it is instructive to observe in which ways the hand of the Bolsheviks seeks to intrude itself into purely Persian affairs. There are grounds for believing that Bolshevist propaganda among the Persian Nationalists is on the increase—presumably the Chinese imbroglio is an opportunity not to be lost.

Minority Rule in the East.

We commented last week upon certain aspects of Mr. H. G. Wells' remarkable Sorbonne lecture upon "Democracy under Revision." Professor Arnold Toynbee, in a letter to the *Manchester Guardian*, draws attention to another. Mr. Wells spoke of the possibility of the "profoundly serious minority" taking control of the destinies of mankind, and instances Italy, Russia, and China as places in which this had taken place. Professor Toynbee suggests that Turkey, with its "Kemalists," and Egypt, with its "Zaghloulists" might have been added to this list. But he gives the caveat that "the examples all occur in countries in which the modern democratisation of the Renaissance way of life—a joint achievement of England, America, and France—had obtained only a superficial hold or else no hold at all." There is a good deal in this. But the point to be made here is that in the East it is one of the easiest things in the world for the minority to take control; the mistake that is so often made by Western, particularly by English, observers is to suppose that because it is a minority in control it will not indefinitely endure. Quite certainly the force of the original Kemalist and Zaghloulist organisations was seriously underestimated by certain Occidental authorities. The paradox would be, if this logic were pursued, that the minority is most in danger when it represents the majority. That, however, can scarcely be accepted as a guide to the politics of the Near East, although it is perfectly true that no man would care to prophesy upon the fate of Kemalism or of Zaghloulism when Mustapha Kemal and Zaghloul Pasha are no more. But to return to Professor Toynbee's original point, that alike in Russia, Italy, Turkey, and Egypt, the "Renaissance way of life" had obtained little hold. The difference between the two European and the two non-European countries is this: that whereas in the two former the prevailing system of Bolshevism and of Fascism at least spring from previously held or heard-of theories, the organisations in the two other countries, Kemalism and Zaghloulism, derive from the activities of a single man, as indeed their name denotes. There is significance to be found in this distinction.

ITALY AND THE BALKANS.

Within a week a considerable amount of cold water seems to have submerged the Italian attempt to raise a scare over alleged Yugoslav designs in regard to Albania. More than anything else, the prompt suggestion of the Belgrade Government that Military Attachés should be sent to examine the situation on the Yugoslav-Albanian frontier served to weaken Italy's case. If the Rome Government had had any evidence in support of its accusation, it would have procured the immediate departure of the Military Attachés from Belgrade, and some signs of the general "mobilisation" must have been discovered. It has, however, made no attempt to substantiate its charges against Yugoslavia, and the Governments of Great Britain and France are left to liquidate an incident which may prove as damaging to Italian prestige as was the panic-stricken bombardment of Corfu. For Italy's action in denouncing Yugoslavia to the Powers could have been justified only on the possession of unchallengeable proof of the complicity of the Yugoslav Government in a pending attack on Albania. If it had been merely a case of reported *komitaji* activity on the Albanian frontier, the proper course for Italy to have adopted would have been to call the attention of the Yugoslav Government to the matter. She chose a line of action which was a deliberate affront to Yugoslavia, and at the same time displayed her own eagerness to intervene in Albanian affairs. It is this aspect of the Albanian question which is a source of trouble for Europe. Revolutions in Albania would have little more than local interest in whatever country they were hatched, if it were not for the risk of foreign intervention. The rising that brought Ahmed Bey Zogu to power may have been prepared on Yugoslav territory, but it remained an exclusively Albanian incident. Italy, on the other hand, has trumped up a grave charge against the Yugoslav Government and in the same breath announces her intention, unasked, of moving to the support of the Albanians. Of the two rival neighbours of Albania, therefore, she is the only one who has deliberately threatened encroachment on Albanian rights, which is the root of all the trouble.

It is well to keep this aspect of the case clear. The peace of Europe requires the strict preservation of the integrity and independence of Albania. There is no evidence to-day that Yugoslav policy has any other aim in view in regard to the country; but there is good ground for suspicion that Italy is in no way content with this solution of the Albanian question. The Tirana Treaty does nothing to dispel that suspicion; this recent denunciation of Yugoslavia on unsubstantiated evidence goes a long way towards confirming it, as the communication to the Powers threatened an Italian landing in Albania. Now there is

always admittedly a wide margin for misunderstanding in the foreign policy of any Government. If Yugoslavia had been fomenting a new revolution in Albania, Italy would have had good reason for annoyance. Genuine concern for Albanian independence, however, would have prompted the Italians to any other course than the one that they actually took, and this failure to rise to their responsibilities as a Great Power is the most dangerous factor in the situation. It is possible to-day for a quarrel in the Balkans to be localised, as was done in the case of the Greek violation of Bulgarian territory in October, 1925. Italian intervention in the Balkans, on the other hand, may well provoke a general conflagration. It will be at once challenged by Yugoslavia, and quite possibly by Greece as well; France too is unlikely to remain an indifferent spectator of a permanent Italian foothold in the Balkans. In spite of local friction the idea of the Balkans for the Balkan peoples is becoming fixed in the public imagination. At the present time the only challenge to which the idea is regarded, rightly or wrongly, as being exposed comes from Italy. If Italy is not a danger to the realisation of the ideal, it is easy for her to make this point quite clear. Neither in the Tirana Treaty nor in these recent allegations against Yugoslavia has she gone the right way, if her intention is to disarm criticism. Her action will tend to confirm every Balkan State in its conviction regarding the reality of the Italian danger, and one result will be seen in an agitation for strong armies, with all the concomitant risk to inter-Balkan peace that the existence of large standing forces entail.

In view of the character of *komitaji* bands, which can dissolve into peaceful industrious peasants when required, it is unlikely that any inquiry along the Albanian frontier after the lapse of several days or even weeks will be able to throw much light on the situation. The gravamen of the Italian charge was not that *komitajis* were active but that a Yugoslav "mobilisation" was in progress, and it is Italy's failure to avail herself promptly of the Yugoslav offer for an international investigation that has damaged the Italian case. What is required now is a Committee of Inquiry appointed by the League of Nations to decide upon the measures necessary for the better conservation of peace in the Balkans. There would be no question of enforcing its findings, but its report would be there, for the better understanding of the Balkan problem and for every honourably intentioned country to act upon, if it desired the permanent peace of the Peninsula. The Committee of Inquiry would deal *inter alia* with the *komitaji* curse and the responsibility of each country in regard to the freedom of movement allowed to these organised disturbers of the peace; it would also examine the Tirana Treaty in the light of the Italian communication to the Powers before any formal request had reached the Italian Government from Albania; and it would consider the question of political refugees being allowed to settle near the frontiers of the countries from which they are exiles. We can conceive of a report, drawn up with knowledge, and without fear or favour, that would be of the greatest advantage as a basis on which the Balkan States would come together to elaborate the framework of a future federation. If there is any reality in what those States regard as the Italian danger, the only effective answer is to be found in a Balkan federation. The chief obstacles to such a federation to-day are the impressions of aggressiveness that Yugoslav policy has conveyed in the past to her neighbours, and Bulgaria's discontent with her existing territorial arrangements. Both these hindrances are capable of comparatively easy removal, if long-sighted views can be taken by the different Governments concerned.

From Our Own Correspondents.

Cairo, March 20.

A Murder Trial.

The often-heard complaint that the machinery of Justice moves slowly in Egypt found no justification in the proceedings of the Cairo Assize Court on Thursday last. On the calendar was the charge against Abbas Kandil, accused of the murder, in particularly brutal circumstances, of Hermann Bercovitz, the jeweller of Shareh Fuad el Awal, and his son René. It will be remembered that this crime, which was committed only five weeks ago, caused a considerable sensation at the time, on account of its taking place in one of the city's busiest thoroughfares, in the middle of the day. The Parquet had shown commendable zeal in getting the case ready for hearing in so short a time, for the witnesses for the prosecution numbered no fewer than twenty-one. The Assize Court was no less expeditious. Beginning the proceedings at half-past nine, the Court, by a quarter to two in the afternoon, had concluded the hearing and had announced that the papers would be sent to the Grand Mufti. This indicates that sentence of death had been pronounced. The assent of the Grand Mufti to the infliction of the capital sentence on any Moslem is a formality which takes but little time, so that there is every prospect that Kandil will be executed within two months of his arrest. The value of this speedy punishment as a deterrent to other criminals is particularly great in Egypt, where public memory is even shorter than in most other countries and where, unless trial and punishment follow swiftly upon the committing of crime, few people ever realise that a particular evil doer has been brought to book and has met with his deserts.

There was never any doubt about the verdict in the case of Kandil. The prosecution had sufficient evidence to secure a conviction three times over, and the defence did not attempt to dispute the testimony of any essential witness, the plea put forward by defending counsel being that of insanity, for which, however, he produced no supporting evidence. The most interesting evidence for the prosecution was that of an English schoolmaster who happened to be passing the shop at the time of the committing of the crime, heard the shooting inside and saw, through the glass door, the feet of a man lying on the floor. This witness described how he called the attention of the policeman on point duty near by to what was going on in the shop, to receive the reply from the policeman that he was looking after the traffic, and could not concern himself with anything else. A second Egyptian policeman was sought and brought to the shop which, however, he would not enter, as he could not do so, he said, without an order from a superior officer. Eventually, when the criminal emerged and emptied his revolver, first at the English schoolmaster, who ducked and so escaped, and then at the surrounding crowds, some of whom were hit, the witness closed with the man, wrested his revolver from him and handed it to still another policeman, who had by now

arrived on the scene. This guardian of the law gave the witness a blow with his truncheon, told him to clear out and mind his own business, and replaced the revolver in the murderer's pocket! It is all rather typical of local police methods and gives rise to a feeling of surprise that the criminal, after all, was secured.

Influenza.

A mild form of influenza has been as prevalent this winter in Egypt as, according to reports in the Home Press, in England. The latest victim is Lady Lloyd, who has been in bed for several days and has, in consequence, been obliged to cancel a large number of social engagements. Fortunately, the type of influenza from which Lady Lloyd and so many others are suffering just now, is very mild indeed, much less virulent, apparently, than the English variety, and the death-rate has been infinitesimal.

Changes in Journalism.

Russell Pasha, Commandant of Cairo City Police, has submitted to the Ministry of the Interior a report urging that effective action be taken to deal with a new form of journalism which has sprung up here during recent years and which has already been responsible for at least two violent crimes. It used to be an unwritten law in Egypt, as in most other Moslem countries, that the private lives of public men were never discussed in the Press which, indeed, scarcely ever mentioned the existence of Moslem women, or their affairs. The social evolution of the last decade has effected a considerable change in this as in many other matters. The change is, in the main, for the good, but it has also its bad side, for a number of unscrupulous journalists, taking advantage of the greater liberty of criticism now permitted them by public opinion, have produced weekly or monthly papers which are little better than blackmailing sheets. Egyptians are particularly sensitive to printed criticism of themselves, especially when, as has happened in many instances of late, purely private and domestic details, of no concern, even if true, to the general public, are published. The object of this scandal mongering is not always blackmail, being sometimes inspired by personal enemies of the victims, but in any case it is entirely reprehensible. Already two proprietors of discreditable journals have been waylaid and assaulted at night, and the police rightly regard this new form of journalism as being, apart from its obviously undesirable character, a potential cause of crime. Most of the Arabic daily Press has welcomed the step of Russell Pasha, and has expressed the hope that a means will be found to put a stop to the activities of the publicists who bring discredit on the calling to which they belong.

The Season.

This is the season in Egypt of intense activity in social and sporting circles, for the Spring is upon us and there is difficulty in squeezing into the few weeks that remain before the beginning of the hot weather exodus all the tennis tournaments, dances, dinners, football finals and other fixtures necessary to bring the winter's activities to a conclusion. The principal tennis tournament of the year, the Gezira Sporting Club's tournament, is now in progress, with a larger entry than ever before. But, in spite of the huge number of fresh adherents which tennis claims yearly in Egypt, there is little sign at present of new champions to dispute the long-maintained supremacy of veterans like the Hon. Cecil Campbell, who remains as invincible for his opponents as he is attractive to spectators. An undistinguished opera season concludes this afternoon, the company leaving to-morrow for a month's stay in Alexandria. The only noteworthy event of the winter at the Royal Opera House has been the production of "Turandot," magnificently and most expensively put on. Whether the work itself justifies the huge cost of producing it adequately is a point on which local musical critics are divided. But the production of "Turandot"

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

is certainly too much of an undertaking for this posthumous opera of Puccini to win a regular place in repertoires. There is some talk of a season of German opera next winter and many of us hope that it may materialise, for we have had a surfeit since the War of Italian opera and could well do with a change.

THE HIJAZ.

Jidda, March 8.

Ramadhan and Wireless.

The great fast of Ramadhan was ushered in with a salute of 21 guns fired at 10 p.m. on the evening of Thursday, March 3. The crescent of the new moon escaped observation at Jidda and Mecca, but the advantages [sic] of modern material civilisation are aptly illustrated by the fact that, for the first time in its history, Wahhabi Arabia was on this occasion roused by a wireless message to gird up its loins for the fast, which was to begin with the coming dawn. The message came from the wireless station of distant 'Ula on the Hijaz Railway and, though in time for insertion in the Stop Press column of the Mecca newspaper published next day, was not in time to prevent the publication of an official notification, already in type, that the fast would begin on Saturday, as indeed it would have done, but for the existence of the wireless station in question. It is always interesting to note the clash, however trivial, of ancient and modern standards, but, despite the accuracy of our modern calendars, the human eye still remains, as it will probably ever remain, the decisive factor in the determination of the beginning and ending of Ramadhan.

Jidda was not prepared for the coming of Ramadhan a day too soon and the arrangements in prospect for the continuance of the electric light supply (usually cut off at 10.30 p.m.) until 1 a.m. were not in operation the first night. Friday, however, saw the life of Jidda, private, official, and commercial, entirely switched off on to the Ramadhan current. The streets lie empty all through the day, the shops are shut, the Government offices manned only by emergency staffs, the Customs department working half-time, and so on until the sunset gunfire, when for two hours the population of the town is given over to the various processes connected with the breaking of the fast. At 8.30 p.m. the shops and offices open for the serious work of the day and a herald goes round with a drum from time to time telling the hours of the night as they pass rapidly away into the approaching dawn. For the period of Ramadhan social life is at a standstill. Work and fasting alone are the order of the day. The King will now in all probability not return to the Hijaz until the end of the month.

The Negotiations with King Ibn Saoud.

His return will open the door to the resumption of the negotiations recently suspended near Madina, although it may be that they have to be deferred until after the

pilgrimage owing to his pre-occupation with other matters. Nothing will be lost by such delay, as it is now known that Mr. Jordan, who has acted as Consul here for nearly two years, is to be succeeded by Mr. Stonehewer Bird from Rabat, who is of full consular rank and is presumably familiar with Arabic. If the latter is to conduct the negotiations he will require a few months to pick up the threads of Arabian politics before he begins; but it is hoped here that the conduct of negotiations so delicate and so important will be entrusted to the hands of so experienced a diplomat as Sir Gilbert Clayton, who is apparently unemployed and is very decidedly a *persona grata* both to the King and to the leaders of opinion here. In view of the second Moslem Congress at Mecca, which will either follow or precede the Anglo-Arabian negotiations, the utmost tact and discretion will have to be used by the British representative, who will be in a very delicate position unless, as is to be hoped, there has been a substantial reorientation of British policy on such vital matters as the Hijaz Railway, Aqaba and Maan.

Asir and the Yaman.

Peace seems to reign on the Yaman border and there need be no question of the pacific intentions of King Ibn Saoud in that direction. The Idrisi is effectively muzzled, but occasional signs of a bellicose attitude among various officials in the Imam's service are not wanting. It is to be hoped, therefore, that the gist of the understanding arrived at at Rome between Sir Gilbert Clayton and Commendatore Gasparini will be made public without delay.

The Pilgrimage.

Pilgrims continue to arrive in a steady stream, and the numbers are now estimated at some 45,000. Estimates for the future are already beginning to envisage an overseas visitation of some 100,000 in all and a total concourse of well over 150,000, from which it would seem that the movement for the suspension of the Hajj, advocated in some not altogether disinterested political quarters and referred to in THE NEAR EAST AND INDIA of February 3, is having but little effect on those who have none but religious motives to impel them towards the Hijaz. Those people have every reason to know "whether the reforms which the Wahhabis are said to have made in the interest of the pilgrims are all that is claimed for them." A safe and peaceful Hijaz is at all events a phenomenon so unusual as to merit careful study.

The Navy and Cricket.

The lighter side of Jidda life has been marked by the first visit of the "Dahlia" which has recently replaced the Cornflower and absorbed a considerable number of her officers including Commander Wickham in command. The latter has, however, now seen Jidda for the last time as he is due to relinquish his command at Aden in the near future. The sloop's visit was signalled by a cricket match between the crew and the British community at

Jidda ably assisted by Commander Wickham and some of his officers. The "Dahlia" won by the narrow margin of one wicket after a most enjoyable game played on the desert sand on a pitch that rolled out extraordinarily hard and fine.

The Question of a Flag.

In conclusion, it may be worth recording that a new flag has recently made its appearance among the gay and various emblems of the nations, that float on the breezes of Jidda. The State of Sarawak, recognised as an independent State under British protection since 1888, has long been represented here by an absentee Consul on whose behalf, although he is still absent, the State flag has been flown for some few weeks on the flagstaff of a well-known British firm for the delectation of pilgrims coming from the domains of Rajah Brooke. This proceeding is open to question on various grounds—absenteeism being not the least of them—and the problem is doubtless receiving the attention of the British Foreign Office.

Constantinople, February 23.

The Turco-Russian Agreement.

Now that the much discussed Turco-Russian Commercial Agreement is at last an accomplished fact the Press of both countries have during the last fortnight devoted themselves to eulogistic descriptions of each other and to rosy forecasts—in view of the annoying commercial differences having been overcome—of the future. There are certain commercial elements here, however, which still remain unenthusiastic as they happen to be among those omitted from the lists of past, present and future exporters to Russia. Under the new Treaty's stipulations only a restricted quantity of exports from Turkey (up to a value of seven and a half million liras) is allowed, and this has necessitated the drawing up of a list of firms already having a market for their goods in Russia. Consequently exporters who have hoped that under the new agreement everyone would stand the same chance of disposing of their products to Russia are now completely disillusioned.

There is a possibility, however, that in future years the limit of seven and a half million liras may be extended, as this operates only so long as Russia's exportations to Turkey do not exceed this figure. In the contrary event Turkey may bring the value of her exports up to that of Russia. A detailed list controlling the amount of every product exportable is annexed to the Treaty.

The Aviation League.

The Turkish Aviation League is never at a loss for discovering new sources of revenue with which to swell its already considerable reserve funds. It has now been decided, subject to the approbation of the Grand National Assembly (and there is no doubt of any opposition) to transfer to the League's coffers all proceeds derived from the disposal of abandoned and unclaimed merchandise collected from the Customs depôts.

A second national lottery is at present being run which is bringing in thousands of pounds per day. The latest appeal to the bounty of the Turkish public is made in the form of a proclamation couched in the following terms:—"If you do not want to become a slave; to see your houses wrecked by enemy bombs; and if you do not wish your wives and children to die from enemy gas, hasten to the aid—in the limits of your means—of the Aviation League. Give to it the alms prescribed in the Quran on the occasion of Bairam because our need for aeroplanes is far greater than any other." The Turkish Aviation League has certainly little to learn about enterprise.

Filming Turkish Products.

In order to demonstrate abroad the manner in which Turkish products are grown, treated, packed and transported the Minister of Commerce has had certain films specially taken in the principal packing and exporting centres. These films, which are stated to be interesting and absolutely authentic are shortly to be sent to every country in Europe for the purpose of combating the hostile propaganda which has been directed against Turkish products during the last two years.

Excavations at the Hippodrome.

The extensive archaeological excavations at the Place de Sultan Ahmed—which was once the Place de l'Hippodrome—which are to be carried out under the direction of Mr. Casson will begin to-morrow. The Museum Authorities are manifesting a very keen interest in this research, but Halil Bey, the Director of Museums, is not very hopeful about the results, as he considers that the systematic destruction of which the Hippodrome was the object during the Crusades of the thirteenth century has left nothing of any value intact. Mr. Casson's arrangement with the Constantinople Municipality extends over a period of three years, for which privilege he has had to deposit a letter of credit for five thousand liras in favour of the Municipality. The excavations will cost an enormous sum of money, as it is an established fact that the old Hippodrome is many metres below the present surface of the ground.

Tourists.

The number of tourists visiting Constantinople is considerably bigger every year. Up to 1924 not more than 5,000 to 6,000 tourists came yearly, but the figures for 1925 and 1926 are 39,819 and 45,784 respectively. If the present average continues this year will show a total of nearly 60,000.

ALBANIA.*Tirana, March 13.***Re-Opening of Parliament.**

Parliament began its summer session on March 1, and the Cabinet has been completed with the appointment as Minister of Justice of M. Pierre Poga, who on several occasions has been at the head of that department. M. Poga in his capacity as President of the Council of Ministers, has formulated a Government programme which may be summed up in two aims: at home, to balance the Budget and to effect economies in the finances; and abroad, to foster good relations with all States.

The Albanian Church and the Patriarchate.

My readers will remember that last May Mgr. Chrysanthos, Greek Bishop of Trebizond, arrived at Tirana as Delegate of the Patriarch of Constantinople to settle with the Albanian Government the question of the Autocephalous Church and its official recognition. After an agreement with the ecclesiastical commission Mgr. Chrysanthos returned to Constantinople; he has now just arrived again in Tirana. His visit was preceded by the rumour that the Phanar had issued the *Tome*, that is to say, the Act, the instrument which would legally and ecclesiastically recognise the Albanian Orthodox Church, which has indeed existed in fact and in right since 1922. The surprise may be imagined when Mgr. Chrysanthos, instead of the *Tome*, brought with him new projects to assure for the Albanian Church privileges of such a nature as to perpetuate here the advantages which Hellenism enjoyed under the Turkish régime. These propositions have met with a plain *non possumus*: and the delegate from the Phanar has once again departed for the shores of the Bosphorus. It is thought that the hand of Athens can be seen in this attitude of the Patriarch, which has been so easy and smooth-running towards Poland, Czechoslovakia, Yugoslavia and Roumania, where the Autocephalous Church has been recognised without difficulty—but proves itself so difficult with regard to Albania.

Albania and Italy.

Since 1923 there has been in Albania a German aviation company "Adriatic Aero Lloyd," which linked up Albania's four principal towns: Tirana, Scutari, Valona and Koritza. The shares of this company have just been acquired by an Italian company as the result of an agreement with the three Governments interested, Italy, Germany, and Albania. It is interesting to recall that Italy has since 1925 held the concession of the air service with Greece, through Corfu and Athens; and that she hopes that now, by the purchase of the Adriatic Aero Lloyd, further to extend the air service in the Balkans and doubtless also to Constantinople.

On the other hand, the Government has proposed to the Chamber of Deputies to limit the maximum period of lease of land to foreign subjects to 10 years, and to annul contracts signed prior to December 1925. In fact, there is a question of the cancellation of the lease of 99 years held by the Italians for 2,000 hectares of land at Shiak (between Durazzo and Tirana) and to forbid the restoration of such Acts. After somewhat lively discussions, Ilias Vrioni, Minister for Foreign Affairs, has asked for an adjournment of the debates.

CYPRUS.*Nicosia, March 14.***Mr. Amery's Dispatch.**

The *Cyprus Gazette* of March 7 publishes a dispatch from Mr. Amery to Sir Ronald Storrs, dated February 24, transmitting two Orders in Council, which provide for the appropriation of the revenues of Cyprus during 1927, and for imposing certain Customs duties, respectively. It will be remembered that these were rendered necessary owing to the action which the elected members of the Legislative Council took in rejecting, last November, the Estimates proposed for 1927. The dispatch points out that in taking that step the members failed in the responsibility which the Constitution of the island imposes on them, namely, that "on all major occasions" they should give to the Government their adequate co-operation. It thus became necessary to invoke the Royal prerogative, "to enable the Government of the Colony to be carried on with due form of law." Unless Government can rely on such co-operation, the alternative is obvious. The constitutional arrangements which at present exist will have to be modified, a course which H.M. Government would be loth to take. It is well that this warning should have been given—for the second time be it remembered—on the inevitable results of obstruction, at the present juncture. It is to be hoped, for the good of the island, that the Greek leaders will lay it seriously to heart. The comments of the Greek Press are such as one would expect. They regard the dispatch as an example of the exercise of might over "right," and observe that they have never regarded their present "privileges" as of any real value.

American Tourists in Cyprus.

On March 10 about 400 tourists, chiefly from the United States, with a few from Canada, arrived in the Cunard liner *Samaria* (of 20,000 tons) at Larnaca, whence, in parties of about 100 each, they proceeded to Nicosia. Here they visited the mosque of Ayia Sophia, formerly a Christian Cathedral, some Greek Churches, the Museum (where objects of glass and pottery were purchased), the bazaars, and other places of interest. At the palace of the Greek Archbishop, Kyrillos, they received a warm welcome from the Prelate, who in an address expressed the gratitude of Greece in general, and of Cyprus in particular, to the great Republic for the protection afforded to settlers. In a buffet arranged in one of the halls they were entertained with the famous Cyprus wine, "Commanderia," and preserves of Cyprus fruits. They were all presented with an illustrated card representing the bestowal of the peculiar privileges of the Autocephalous Cypriot Church, and bearing the signature of the Archbishop. One of the tourists, Rev. J. E. Tuttle, of the Presbyterian Church of Philadelphia, expressed the gratitude of all the visitors, and in the afternoon a deputation of three waited on His Beatitude to assure him of their deep feelings of satisfaction. This visit may well encourage the immediate establishment of an efficient tourist agency towards which some steps are at last being taken. The Governor proceeded to Larnaca by invitation, and dined on board the *Samaria*.

The Late Chief Justice.

On March 8 a farewell reception was given by members of the Bench and Bar to Sir Sydney Nettleton, who has been greatly esteemed in Cyprus by all classes. Speeches were made which showed with what affection Sir Sydney, and also Lady Nettleton, were regarded, and the great regret of the judicial body at his departure, after a comparatively short time in Cyprus. Sir Sydney, in a long speech, expressed his gratitude, and his sorrow at leaving the island. But his final words appear to have caused some surprise and annoyance. Cyprus, he said, constituted in itself a beautiful entity, which she should be careful to preserve. It stands as a priceless ornament in

School of Oriental Studies, London Institution

its position at the gates of the East, the North, and the South. There are not lacking those who are watching it like birds of prey, and the island must take care not to fall to their talons. The words are regarded as of ambiguous import. Cyprus, say some commentators, is not a separate entity, but an inalienable part of her mother, Hellas.

THEOCRACY IN THE YAMAN.

Mussolini's Arab Ally.

BY DR. WOLFGANG VON WEISL.

Imam Muhammad Yahya al Mutawakkil bin Hamid ud Din rules in the Yaman as if he were a Caliph of the days of Haroun al Rashid and as if his kingdom were a Muslim Church State. The Italians have recognised him as King; but no one in Arabia ever thinks of giving him this worldly title—least of all his subjects. For them he is and remains the "Imam," the almost sacred Law-giver, Commander of the Faithful of his land and successor of Muhammad, whose spirit and blood have passed in a mystic way through Muhammad's daughter Fatima and Muhammad's nephew Ali, her husband, and their descendant Sayyid Muhammad Yahya ibn Hamid ud Din. The Imam of the Yaman is not only a temporal ruler and religious chief, but he is also for the one million Zaidis who pay him honour the incarnation of Muhammad and forerunner of his Ambassador, the Mahdi, the last Imam, who will come to complete Muhammad's work.

All this exists—however unreal it may seem in the twentieth century—real, decisive, and definite for Arab politics of to-day. The Zaidis are a Shiah sect, that is to say, they reject, as the Persians do, the elected Caliphate, which is law for all other Moslems, and maintain that the Commander of the Faithful must be of the blood of Muhammad and of Ali his son-in-law. Like other Shiahs, the Zaidis of the Yaman on the tenth of Moharram, the anniversary of the death of the brave Hussain, son of Ali, curse the Sunni murderers of their saint, but in other respects the Zaidis and the Shiahs go different ways. The Shiahs in their prayers call upon the name of Ali, the Zaidis refer only in a mystic way to the "grace of good works"; the Shiahs scourge themselves on the tenth of Moharram, the Zaidis only mourn; the Shiahs regard as binding the sayings handed down to them in their religious books of their (sixth) Imam Jaafar as Sadig son of the (fifth) Imam Muhammad al Bakr, the Zaidis recognise as law the books of Zaid, the younger brother of Muhammad al Bakr, who after the death of Haroun al Rashid came to the Yaman and there founded a theocratic dynasty, on the strength of his qualification as the actual great-great-grandson of Muhammad, the Ambassador of Allah.

The Law of Zaid, from whom his followers are called to this day Zaidis, still holds good. The wisdom of the founder of the sect—the wisdom of the Court of Haroun al Rashid—constitutes to-day the foundation of the policy of government of his latest descendant. Nowhere in the whole world have the Muhammadan early middle-ages—in good and in bad—kept themselves so pure as in the Yaman, hardly modified by Turkish Mausers and Italian wireless.

Zaid, son of Ali, son of Hussain, son of Ali ibn Abu Talib, has established fifteen conditions which from his time have been binding on the Zaidis for the attainment of the Imamate:—

"The Imamate belongs to him who, descended from Ali, descended from Fatima, is the wisest in religious questions, the bravest in battle, grown to man's estate, of the male sex, intellectually and bodily sound, without bodily blemish, free-born, gifted in administration, upright, bold and pious, and who wins the Imamate by the sharpness of his sword."

This last condition opens the door to all revolutions, all pretenders of the House of Zaid can attempt with

impunity to snatch the rulership for themselves. If they are victorious, it is a proof of their mission; if they are defeated, it is a proof that the ruling Imam enjoys his title by right; he can, however in no circumstances punish the rebellious who have availed themselves of their lawful right, to put his divine mission to the proof.

The outcome of this wise law was that from 1251 to 1316 (of the Muhammadan era) the date of the accession of Imam Yahya, that is to say for a period of 65 years (1832-1897 A.D.) no fewer than 20 rulers reached the throne in the Yaman. Only two of them died on the Throne, only four ruled for more than five years, all the others were deposed in quick succession and there were Imams who gained the throne 5 times and lost it 5 times.

One of the greatest acts of the Imam Yahya was that he recognised how much this unfortunate law weakened his country, and while he made full use of his authority as Imam to modify or create religious laws on the strength of his inspiration and wisdom, he simply abolished the saying of the founder of the religion, Zaid, which gave the right to conquer the Imamate by revolution. He introduced hereditary succession and had his son Ahmad, a good poet and a bad general, proclaimed Saf ul Islam, the sword of Islam, i.e., Crown Prince. He had only one serious attempt at rebellion, that of Ahmad bin Qasim Duhyani in 1900 to deal with, and from that time Muhammad Yahya has reigned undisturbed. This length of reign, however, is almost the only modernism of which the Imam Yahya is guilty; otherwise nearly everything in his kingdom remains more or less as it was in the time of Imam Zaid, the army, naturally, excepted. Imam Yahya is, of his kind, a really important ruler. He is represented as kind-hearted, not in the least cruel or blood-thirsty—he has never had a single one of his enemies put to death—as mild and modest in contradistinction to the peevish King Hussain, as learned in the theology and the philosophy of the Arabian middle ages, as learned too in history and national economy, but only as they were in the time of the Abbassids. Of what has happened or been written during the last thousand years he knows nothing. The Imam Yahya passes as unusually upright (the corruptibility of many of the subordinate judges of his country does not worry him). Practically every day he sits on a chair in one of the open squares of his capital Sana and waits for his people to come to him. Everyone has the right to approach him as in the case of King Ibn Saoud. The supplicants approach, stretch out a piece of paper on which their suit is written, the Imam reads it, asks a question or two, writes his decision on the same piece of paper and the matter is settled. Even children are listened to. There is no bureaucracy in judicial matters, at least in the King's capital.

The Imam Yahya is, perhaps the only Arabian ruler who has a flair for autocratic State organisation. He is the only person of Arabia who has deliberately disarmed his subjects and formed a regular army, the largest and best organised in Arabia, which takes the place of "the

AMERICAN PRESS - BEIRUT, SYRIA

people under arms." He has 60 battalions and 150 pieces of artillery. A general staff, a military school and a company of engineers, he has had organised by the Turkish General Staff Officer, Qanan Bey; the same officer has introduced a commissariat department, and a repair shop for guns, rifles and munitions. He has kept up the military administrative system introduced by the Turks, has set up telegraph and postal services, and his Palace in Sana is lighted by electricity. In a word he understands exactly what is useful to him personally.

Two weaknesses, however, prevent him from developing his country. He suffers from morbid avarice and from an unreasonably reactionary fanaticism. Both of these, however, are in his case not chance peculiarities, but in combination with his extreme piety constitute the foundation of his governmental system, the highest wisdom of which provides that "the people must be poor, the people must be uneducated, the people must not come in contact with the unfaithful and then it is easy to rule and to remain pious."

The Imam Yahya is fanatically pious. According to the religious law a $2\frac{1}{2}$ per cent. tax has to be paid on all moveable property as well as on income. Immediately after the departure of the Turks he reduced the customs duty from 11 to $2\frac{1}{2}$ per cent. In this way he destroyed every possibility of an industrial development for his country; he ruined even the considerable home industry of the coast lands, but it is the law of Allah. Imam Yahya also compels his wives and daughters to pay annually $2\frac{1}{2}$ per cent. on all the ornaments which he gives them. It is the law of Allah and, moreover, the taxes paid by his wives go into his own pocket.

Piety and greed go hand in hand in grotesque form. Even still more striking examples of his avarice are quoted. Great Britain's representative, Sir Gilbert Clayton, gave the Qadi of Sana £10,000 for the poor. The Imam Yahya pocketed it, but without conceding anything to the British. One of his representatives in Aden, Qadi Arashi, was regularly in the pay of the English. The Imam Yahya left the Qadi alone, then took the money from him and promoted him as Commandant of Maidi. The salaries of his officials are ridiculously small. The Chief of his General Staff, Qanan Bey, receives 40 thalers, i.e., £4 a month. Officers who attend as pupils in the Flying School established by the Italians, were to receive 10 thalers a month during their period of study and were promised 20 thalers a month on qualification. The officers, however, refused to fly on this pay, and so he has closed down the Flying School, as he will not set a precedent by paying higher salaries. Officers of the Military School, like the ordinary soldier, receive only the raw material required for their meals. Each officer has to cook for himself what he wants to eat; there are neither servants nor cooks. The customary excuse of officers for non-attendance in class is "I had to cook." The Imam's avarice prevents him from building railways, roads and hospitals. He would much like to have them, but they must not cost anything. The doctors sent him by Italy he received in a friendly manner, because they are paid by Signor Mussolini. He even allowed them to establish hospitals, but the attendants who were required to serve in the hospitals and paid only the wage of an ordinary soldier, 10s. a month. Without extra pay, however, as one of the Italian military doctors complained to me, the men will not serve and simply offer passive resistance, and so it is impossible to use the hospitals. Yamani soldiers who go sick receive no pay during their illness. When they die their pay ceases on the day of their death, and their families receive nothing more.

The army's food is supplied by the Imam in the form of grain. It is supplied in part from the great granaries in which the taxes of the peasants are paid in kind. The grain for his soldiers is always taken from the oldest granaries, shortly before it becomes spoiled. The soldiers also receive kat leaves containing opium, which the Imam himself likes and uses.

This avarice, which dominates the whole land, is a method, after the manner of Abdul Hamid's. Just as the Imam Yahya has disarmed the Yaman in order to be able the more easily to rule it, so he makes his people poor according to plan in order that they should work and have no time to concern themselves with politics. When he hoards his gold in hidden subterranean cellars without using it; when he himself lives quite poorly and when he even compels his harim to sew uniforms and bags for his army for the daily pay of an ordinary workman without making his princesses any other allowance, so is it all method. The riches of the State must be kept for the Mahdi, the Messiah who will come one day. They are a war chest for the world war against the unbeliever.

This reactionary attitude of a fanatic dominates the whole life of his country. Imam Yahya forbids any bank to be established, for it is against the Quran to take interest. He forbids Europeans to own land in the Yaman, or even to rent houses for more than six months. The shipping companies in Hodaida must not hoist any flag on the arrival of their ships. Flags are the privilege of the Imam. The King of the Yaman never eats with an unbeliever. He will never rise to meet an English or Italian representative, although he would show this honour to the humblest of his faithful subjects. To an unbeliever he dare not do it. The Imam Yahya prevents the building of schools. He closed down the schools founded by the Turks after their departure, with the exception of the Military School and one or two public schools in which the Quran and arithmetic are taught. *Nahda*, or progress, is forbidden. The only modern science on which he sets any store is technical training for his munitions works and war knowledge. Medicine is tolerated when it does not cost anything, but the Imam Yahya does not think much of it as, in the long run, it rests not with the doctor but with Allah whether a man gets well or dies. The Imam is terribly suspicious of all foreigners. He forbids his subjects, especially the 40,000 Jews of the Yaman, to leave the country under penalty of confiscation of all their property. At the same time he hinders the immigration of nearly all foreigners except Turks, whom he loves, and his new Allies, the Italians. It must be borne in mind that the Imam is unusually ambitious, that he considers himself called to be King of the Hijaz in the place of "the mere Bedouin" Ibn Saud, that in order to accomplish this he even altered the rite of the Ziyud (the Arabic plural of Zaid) in order to bring his subjects nearer to the Sunnis. Such is my impression of this ruler of the Middle-Ages, who has been introduced into European politics by his alliance with Signor Mussolini.

CYPRUS.

On April 5, at 8.30 p.m., Mr. William Bevan, O.B.E., Colonial Commissioner for Cyprus, will deliver an address, under the auspices of the Royal Colonial Institute, on "Cyprus, Our Newest Colony." The meeting will take place at the Edward VII. Rooms, Hotel Victoria, and Sir Charles King-Harman, K.C.M.G., will preside:

The Earl of Lytton left Calcutta on March 29 for London.

The Viceroy and Lady Irwin left Delhi privately by special train on March 27 for Jammu and Kashmir.

Mr. Patel, President of the Indian Legislative Assembly, is leaving for London on April 2 for a short holiday. He will take the opportunity to meet the Speaker of the House of Commons and to exchange views on the procedure of the House, the rights and privileges of the Chair, and otherwise to post himself in House of Commons practices.

THE PERSIA SOCIETY.

74, Grosvenor Street, W.1.

E. H. Keeling,
Hon. Sec.

THE PROBLEM OF PERSIA.—I.

The beginning of the New Persian Year would seem to be a peculiarly appropriate time for discussing the problem of regeneration that confronts Persia, and it happens that we are fortified in undertaking this task by the receipt of two remarkable essays upon Persia. Both are in the French language: the first is an unsigned pamphlet (which reached us from Berlin and contained no other outward indication of its source or authorship) entitled "La Perse sous le Signe de la Revolution," and signed by "Parti Revolutionnaire Republicain de Perse"; the second is an article by Mirza Ishak Khodadad in the issue of March 7 of *Le Phœnix*, a Cairo monthly periodical.

To take first the pamphlet, which is patently and illuminatingly Bolshevik in inspiration. It deserves, to our mind, the closest consideration, more especially in view of present events in China. It begins:—

The history of the development of the capitalist system (economy) has, for all its anarchy, its own laws. One of the most important laws of this modern system is the tendency to free itself from the narrow national *cadre* and to get under its influence economic domains as large as possible. The market and the sources of raw materials are decisive factors of expansionist tendencies of countries having an advanced capitalist development. But there is one law more powerful than all economic conditions: that economic laws govern (are the mothers of) all politics. The laws of modern European-American capitalism end in a policy which is their own, and which is generally designated under the name of "Imperialism." The word Imperialism to-day represents, for all peoples who are in the sphere of European and American capitalism, a picture of violence, oppression, and corruption.

With the ball set rolling in such a manner, we know, so to speak, what game we are playing. The truths that are in the above statement have long ago been emphasised by our Guild-Socialists; the untruths in it are the stock-in-trade of Communists and other Marxians. But what the reader may ask, has all this to do with Persia? This:—

Persia, by reason of its importance for world economy and of its backward state, in the economic and social aspect, is soon absorbed by the foreign policy of countries with an advanced capitalist development. That is why the national economy of Persia and all that touches on public affairs depend upon political laws and the modern world's economic system. Persia constitutes an object for the expansionist tendencies of this modern economy and of its foreign Imperialist policy. But to make clear the dependence of Persia on those countries of Europe and America which have an advanced capitalist system, it is necessary to give a short analysis of the social and economic condition of Persia.

The Bolshevised Persians who are responsible for this pamphlet thereupon explain that, of Persia's population of ten millions, half belong to the peasant class.

The small artisans, the merchant bourgeoisie and the big landowners constitute from one to two millions. A million and a half to two million inhabitants constitute the dispossessed and pauperised mass of Persia. These figures show what are the interests of the small artisans, of the peasantry, and of the dispossessed mass who must play the decisive rôle in the social and political life of the country. From these figures it can be seen that the industrial bourgeoisie is almost non-existent and that the commercial bourgeoisie, by reason of the lack of national capital, can take only a feeble part in the national production. To live, it depends absolutely upon foreign capital. These foreign capitalists participate in nearly all of the most important branches of production, or even possess them entirely (production of oil, in the hands of an Anglo-Persian Company; production of carpets, in the hands of American capital) or, owing to the organisation of credit, govern absolutely the production of imports and of exports. On the other hand, by reason of the lack of national capital and of internal markets, production in Persia is absolutely dependent upon the foreigner. More than half the total production of Persia goes to foreign markets. And it is precisely this stratum of the population of which we have spoken above, the poor peasantry and the small artisans, who have to furnish the profits of foreign capital. Now it is a known fact that when a country is much under the economic dependence of foreign capital it falls inevitably into a political dependence. . . . The whole history of the Persian people, since the establishment of Capitalism in Europe and its spreading abroad, is woven with the acts of violence and the horrors which Persia had to undergo at the hands of so-called civilised neighbours.

Is this really the voice as well as the hand of Esau? The pamphlet goes on to explain that these "civilised" countries were above all others, England and Tsarist Russia. After vilifying the period of what it satirises as "peaceful penetration" on the part of England and Tsarist Russia, it boldly repeats the lie to which Chicherin first gave public utterance: that THE NEAR EAST AND INDIA suggested that the tribes should rise, in the interests of

British Imperialism, against the Central Government of Persia. It says: "Et lorsque le gouvernement central, sous la pression du peuple, opposa la résistance à l'imperialisme anglais, ce furent encore les agents anglais qui dressèrent les Nomades contre le gouvernement, et eurent même le front de s'en vanter dans un article du 'Near East,' paru en 1926." Once more, we challenge the Russians and those Persians who are attracted by Russian generalisations, to find any passage in THE NEAR EAST AND INDIA which can by any conceivable stretch of the imagination be made to bear such an interpretation.

The pamphlet proceeds to castigate Russian imperialism. But, it says, when the Persian people began, in 1906, to move, the British Imperialists were clever enough to see that they would have to change their tactics. And so it was that the English supported the revolutionary movement. At this time Russia still represented reaction, and the reactionaries in Persia, including the Shah, went to the Russian Embassy for protection. But the movement failed, and the "feudal" representatives regained power. In 1907 came the partitioning of Persia into two spheres of influence. "The feudal aristocracy which for a moment had seemed beaten, developed its power anew, and retook the reins of the State. Parliament and all the Governments were occupied by representatives of this caste."

Then came the Great War. As soon as this was over, the Persian people again asserted itself, rejected the "shameful" Anglo-Persian Agreement, revolted against the Central Government, and, in a word, once more threatened the feudal aristocracy. This aristocracy, therefore, saw that mere reaction would not do. They had need of a man whom they could put forward as a representative of advanced ideas. "The conception of this plan was born in the corridors of British diplomacy; after the defeat which it had suffered from the annulling of the Treaty of 1919, it tries another method by which to establish this Treaty." Then comes a remarkable picture of the present Shah of Persia.

The limitless egoism, the boundless vanity and the insatiable greed of a man as ignorant of politics as Reza Khan was gave an excellent opportunity to the wire-pullers of the puppets of the feudal Persian aristocracy. But Reza Khan, to satisfy his egoistic aims, has become an instrument of British diplomacy and is transformed into a reactionary. His suzerains confide in him dictatorial powers. Through him British Imperialism succeeds in making itself complete master of the mechanism of the State. The American Financial Mission which as a wholly foreign Mission was asked for the purpose of freeing Persian finances can do nothing but be the instrument of British Imperialism.

A few paragraphs are then devoted to exposing the present situation of Persia under the domination of Reza Shah. Alike from the points of view of the freedom of the Press, of speech, of meeting, of the Parliament, of the economic position, the régime of the present Shah is assailed by the authors of this pamphlet. And it is always the same class, or stratum of Persian society, which has to shoulder the burdens which the present régime is imposing upon Persia. To put an end to this state of affairs, there must be a revolution, and the pamphlet concludes with an outline of what is desired by these revolutionaries.

The sufferings endured by the Persian people during so many years and the sacrifices which they have made have not been in vain. The people understand that they cannot wage a struggle with antiquated methods. The revolutionary conscience of the masses is gaining ground. It is understood that as long as there is not a solid revolutionary party among the masses, there can be no question of a victory over either internal or external foes. The people has learned well the world historic importance of the Chinese revolution, and has profited by its organisations and experiences. The people has placed at the head of its movement the most proved, faithful, and conscientious elements. In its struggle against the enemy, it disposes to-day of a powerful army: it disposes of the advance guard of the Revolutionary Party.

We who consider ourselves as servants of and combatants for the liberation of the people and the revolution, on whom falls the duty of waving the flag of liberty, we make our appeal throughout Persia. We fight in the holy cause of the liberation of the Persian people from the foreign yoke and for the destruction of the domination of the feudal aristocracy and of its representative, Reza Khan.

How much the Russians love the present Shah of Persia, and how much he must love them!

(To be continued.)

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

PERSONAL AND GENERAL

TO-DAY

March 31, 1927 (New Style).
 March 18, 1927 (Old Style).
 Ramadhan 27, 1345, A.H., of the Muslim Calendar.
 Adar II, 27, 5687, of the Jewish Calendar.

Sir Edward and Lady Stern have returned to 4, Carlton House Terrace from Egypt.

Sir Harry and Lady McGowan returned to 40, Park Street on March 26 from Egypt.

Lord and Lady Greenway returned to England on March 26, after their visit to the East.

Air Marshal Sir John and Lady Salmond have returned to Chesnut House, Uxbridge, from Italy.

Fald Sabib Bey, the Egyptian Minister in Madrid, and Mme. Fald Sabib last week left the Ritz Hotel for Spain.

Mr. and Mrs. Raoul H. Foà have left 45, Hans Mansions for 95, Park Street, W.1., which will be their permanent London address.

Sir Stanley and the Hon. Lady Birkin were among the passengers in the *Mauretania*, which arrived at Southampton on March 27 from Alexandria and Naples.

Mr. Francis Brooke Girdlestone, of Oxford, late of the Indian Navy and Topographical Survey of India, and general manager of the Bristol Dock Estate, 1875-1911, left £27,434.

Lady Butler, wife of the Governor of the Central Provinces of India, who was in indifferent health towards the end of the cold-weather season, has come home for the summer.

Sir Ronald Macleay, K.C.M.G., who has been appointed to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Prague, has served among other places in Constantinople and Belgrade.

General Sir John Du Cane was received in audience by the King at Buckingham Palace on March 22, and kissed hands upon his appointment as Governor and Commander-in-Chief of Malta and its Dependencies.

The Greek Minister held a reception on March 26 at the Greek Legation for members of the Greek Colonies in England on the occasion of the 106th anniversary of Greek Independence. Before the reception, Lieutenant-General Sir Alfred Codrington spoke on the battle of Navarino, and Admiral Sir Reginald Tupper presided.

Mrs. Wilfred Brownlow and Miss Frances Shirley, after a journey across Asia Minor to Mersina, where they were the guests of their cousin the British Consul, Mr. R. E. W. Chafy, left for Cyprus on March 13. They were seen off on departure by the Governor, Abdullah Sabri Bey and the Chief of Police Husni Bey.

The appointment of Mr. Chettor Madhavan Nayar, Barrister-at-law, and Advocate-General for the Presidency of Madras, to be one of the Judges of the High Court of Judicature in Madras in the place of the late Sir Cheruvuri Krishnan, Diwan Bahadur, was gazetted on March 22.

The death is announced at Mombasa of Sayyid Khalid Bin Barghash, who in 1896 attempted to usurp the Sultanate of Zanzibar, causing a British Fleet to destroy at point blank range two palaces. Khalid was exiled to St. Helena but was allowed to return to Mombasa five years ago.

RECEPTION AT THE PERSIAN LEGATION.

To celebrate the Persian New Year, the Persian Minister was "At Home" on March 22, at the Legation, 47, Bramham Gardens, S.W.5. H.E. Abdol Ali Khan Sadri, supported by the members of the Legation, received his guests in the drawing-room. Masses of pink and white azaleas, tulips, and hyacinths decorated the reception rooms and staircase with pleasing effect. One reception room was used for dancing. Among the guests present were: the representatives of the Diplomatic Corps in London, the Marquess and Marchioness of Reading, Countess of Clancarty, Lord Headley, Lord and Lady Peel, Sir Atul and Lady Chatterjee, Mrs. Stanley Baldwin, Mrs. L. S. Amery, Mr. Lloyd George and Dame Margaret Lloyd George, Sir Percy and Lady Cox, Sir Joseph and Lady Cook, Lady Tyrrell, Sir Henry and Lady MacMahon, Sir E. Denison Ross, Sir Arnold Wilson, Sir John and Lady Cadman, Sir Charles and Lady Wakefield, Sir Harry and Lady Foster, Lady Chadwick, Mr. and Mrs. Ameer Ali, Mr. J. B. Monck of the Foreign Office, Lt.-Col. Fox, Major F. S. Greenhouse, Captain and Mrs. Algernon Holland, Captain and Mrs. Kelvin Greenway, Captain and Mrs. Townley, Mr., Mrs. and Misses Sen, Mr. and Mrs. V. A. Caesar Hawkins, Mr. and Mrs. and Miss Montague Bell, Dr. and Mrs. Léon, Mr. and Mrs. Storry Deans, Mr. and Mrs. C. E. Parish, Mr. Mrs. and Miss Mollinson, Mr. and Mrs. Gordon, Mrs. and Miss Halahan, Mrs. Charles Hancock, Mrs. and Miss Bruce Dick, Mrs. L. S. Cobham, Mrs. Bruce Robinson, Mrs. B. Burland Tukes, Mrs. E. Gibson Smith, Mrs. Edward Hore, Misses Parish, Miss M. A. Broadbent, Miss M. M. Farquahson, Miss M. E. Dowling, Mr. J. B. Lloyd, Mr. Charles F. de Nordwall, Mr. C. G. Hancock, Mr. H. B. Heath Eves, Mr. H. Daly Stanford, Mr. E. W. H. Barry, Mr. Dryhurst, Mr. C. Isbell, Mr. J. C. Nicholson, Mr. Reginald Soames, Mr. Hamilton Lamplugh, Dr. Ernest Griffin, and Mr. G. H. N. Boffin.

Sir Stanley Jackson, the new Governor of Bengal, and Lady Jackson arrived at Bombay on March 24 on board the *Ranchi*. They stayed with the Governor of Bombay until March 26 before proceeding to Calcutta.

Colonel William Westropp White, C.B., C.M.G., late of the Indian Medical Service, died at Rake's Halt, Cove, Bampton, Devon, on March 21, at the age of 64. He served in the Hazara Campaign of 1891. He also was in the relief of Chitral. In the operations on the North-West Frontier in 1897-98 he was in the Samana, and Kurran Valley campaigns, as well as in Tirah. He was with the Indian contingent in the Boxer Expedition of 1901. In the Great War he was with Indian troops through the whole period, in France, in Mesopotamia, and in Palestine.

The death has occurred at Monte Carlo of Mr. Langton Prendergast Walsh, C.I.E., late of the Indian Political Service. Entering the Marine Postal Service in 1873, says *The Times*, Walsh transferred to the Bombay Political Service in 1879. He was attached to the staff of the Indian Division in Egypt in 1882, and was present at Kassassin and Tel-el-Kebir. Two years later he was lent to the Foreign Office, and from that time until 1892 he was in Consular and administrative charge of Berbera and Zeila, North-East Africa. During this period he raised the Somali Coast Protectorate Police; took part in the operations against the Jibril Abuker tribes (for which he received the thanks of the Government of Bombay in 1886), and served with the Esa Expedition in 1890, and was present at Hussein Zareeba. His services were commended by the Governments of India and Bombay, and he was created C.I.E. in 1890. He served afterwards as Political Assistant in Kathiawar, Aden, and the Southern Maratha country, and as Political Agent at Sawant Wadi, and commandant of the Sawant Wadi Local Infantry Corps.

Book Reviews

SOME BALKAN PROBLEMS.

"**THE NEW BALKANS.**" By Hamilton Fish Armstrong. With an Introduction by Archibald Cary Coolidge. (London and New York: Harper and Brothers. 8s. 6d. net.)

Readers of the American Quarterly *Foreign Affairs* have often had occasion to appreciate Mr. H. F. Armstrong's trenchant handling of Near Eastern subjects. In "The New Balkans" he has incorporated a series of articles, some of which have already appeared in *Foreign Affairs*, which cover the more important problems now exercising the Near East. Starting from a point on which THE NEAR EAST AND INDIA has often laid stress, that even from the mere physical point of view the Balkan States, with a population of over 40,000,000 souls, are far from insignificant, the author reviews the chief difficulties in the way of a complete understanding among the Balkan States—difficulties that will have to be solved before the proposal for a Balkan Pact can take effect. He is satisfied that there is such a thing as a Yugoslav national spirit and that, when put to the test, it overrides sectionalism; but he realises that conciliation is more trying to the Yugoslav character than conflict. The future of the sovereign State of Albania, he holds, is still highly uncertain, but one would be rash to say that its continuance as a separate national entity was improbable. "From being a mute geographical expression Albania has become a political factor in its own right, with a voice of its own and with a world forum where it has already found that it does not appeal in vain for attention." It is to be hoped that the Tirana Treaty does not imply that Albania wishes to exchange that forum for a cruder method of obtaining recognition of her rights. As for Bessarabia Mr. Armstrong inclines to the belief that the chief indication in judging whether the present arrangement will continue—short of war—is to be found in the internal state of Bessarabia itself. "Until the Roumanian administration is able to give the economic life of the province a distinct turn for the better, agitators from over the border will always find favourable soil there for the sowing of communist tares." Other chapters deal with Fiume, the Adriatic Railway, the Unredeemed Isles of Greece and the Salonika Dispute. The subjects are handled in a manner searching yet dispassionate, which makes the author a much safer guide in Balkan affairs than many who are unable to envisage the Peninsula as a whole and

have their vision limited to a single country. He wrote before the recent Italian scare had troubled the current of Balkan affairs, but he had recognised the chief danger that threatened the Peninsula. "No outside Power," he points out, "should again be allowed to secure the Balkan keys to the East. . . . What the Balkan States need is to stand together, promising nothing more than to refrain from aggression against each other and avoiding entanglements outside their special sphere."

In the Introduction Professor Coolidge gives a brief character sketch of the peoples of the Peninsula. If there is anything to challenge in his description it is the statement that Serbs and Bulgarians are kept apart by a rivalry, not to say a hatred, "which goes back to their remote past." As a matter of fact the embittered feelings that have of late been so prominent a factor in Balkan life hardly go back more than a couple of generations. A hundred years ago the feeling of kinship and common interests were paramount.

THE NEAR EAST YEAR BOOK 1927.

This week is published a book which should be of special interest and utility to readers of THE NEAR EAST AND INDIA—The Near East Year Book. The more closely anyone keeps in touch with a subject the greater the need for the handy marshalling of facts and figures. The Year Book aims at supplying all that general information which contributes to accurate knowledge of the countries concerned; it will enable the student, the writer and the politician to inform themselves in regard to details, and it will suggest to the business man openings in a variety of directions. The countries dealt with are Yugoslavia, Roumania, Bulgaria, Greece and Turkey, and as far as possible the treatment of each country from the point of view of subject matter has been the same. Although the Great War had its genesis in the Near East, and the Near Eastern Question has not yet found its settlement, and politically, as recent events have served to remind the world, the Near East has lost none of its importance as a factor in the world's affairs. From the economic point of view this region of fifty million inhabitants has yet to come into its own and it is certain that those who recognise its potentialities early enough will reap the benefit, when the Peninsula, freed from faction, settles down to the steady development that the remarkable industry of its peoples bespeaks for it. In this connexion the Year Book is most suggestive. From its pages a very clear idea can be obtained of the resources that these countries possess—agricultural and mineral wealth, great forest reserves and water power; lists of manufactures and factories make the book of practical utility to those who want to trade with the Balkans. For those who, with no first-hand acquaintance with the Balkans, are apt to think of them only in terms of wars and raids may be commended the many pages that tell of an ordered intellectual existence, of societies, scientific, artistic, and philanthropic, and of the wide ramifications of sport. The Danube, an important trade and tourist highway, has a chapter to itself; the collection of Near Eastern Treaties is a useful feature, and the curious will find the steady perusal of the Who's Who by no means uninteresting.

Copies of the Near East Year Book may be had from the offices of THE NEAR EAST AND INDIA, 170, Strand, London, W.C.2., post free for 25s.

A CORRECTION.

We much regret that in the review of Mr. Edward Hutton's excellent book "The Valley of Arno" which was contained in this issue, the title should have been wrongly given.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

PALESTINE RAILWAYS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is stated in Mr. K. W. Stead's report on Palestine, extracts from which are published in your issue of February 17 that "the sum of £1,000,000 is due to His Majesty's Government in respect of railways, roads, telegraphs and other capital assets acquired by the Palestine Government." As you know, the assets in question were valued by experts—I think in 1922—at £2,190,000. The generosity of the British taxpayer knows no bounds, for not only has he agreed to guarantee a loan of £4,500,000 for Palestine but also apparently he has, without his knowledge or Parliament's, made that country a present of £1,190,000 by writing off its debts to that extent. It scarcely seems worth while protesting against such scandalous abuse of authority—Parliament does not care nor does the taxpayer! But it is as well to place on record that the grandiose and unnecessary project for a harbour at Haifa is in fact to be paid for not out of the proposed loan but out of the proceeds of an unauthorised gift.—I am, etc.,

H. ST. J. B. PHILBY.

[Experts may possibly have once valued our Allies' War Debts at their face value; but its is doubtful whether the Government's acceptance of considerable reductions in the amount to be paid merits the term of "scandalous abuse of authority."—ED.]

ABOUKIR.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I notice that some Egyptian newspapers, mindful of their Arabic grammar, wish to treat this place name, as two words, and so they speak of it, as Aboukir and Abakir, and Abikir, according to its being, nominative, accusative, or genitive!

Whereas the rule is, that names of places, once fixed, must not be corrupted, and hence we find our lexicographers entering Aboukir as *one* word, but Abou-Bikr as two, which is the correct thing to do.

Egyptian newspapers will, therefore, do well to correct their mistake, and keep to the acknowledged rule; otherwise only confusion and loss of identity can be the result of the corruption.—I am, etc.,

A. SEFL.

Buckingham Gate, March 26.

INAYAT KHAN.

News was received last week that Inayat Khan, Pir-o-Murshid of the Sufi movement in the West, died at Delhi of pneumonia on February 5. Inayat Khan, who was born at Baroda in 1882, was well known in this country, where, says *The Times*, he spent several years in an effort to spread the Sufi religion, with the assistance of a band known as the Royal Hindu Musicians. The professor sang his own compositions and played the sacred *vina*. Before coming to Europe he had appeared at the Courts of the leading Indian Princes, who accorded him their patronage. The Royal Hindu Musicians also appeared in America, France, and Russia, winning distinction wherever they went. Their leader, Inayat Khan, was a grandson of Mula Bux, who invented the modern Hindu notation system. At the rooms of the Royal Asiatic Society on his arrival in 1915 he gave a series of lectures on philosophy and Eastern music, with demonstrations. He described Sufism as a brotherhood with no distinctions of race, colour, or creed, and claimed that it had for its aim social and religious unity. He said there was to be no interference with special customs, faiths, and beliefs, but it was to be realised that behind all these there was a fundamental knowledge of unity, a religion of love and wisdom. The light and power latent in man was to be discovered, and the East and West brought together. Inayat Khan established his headquarters in Gordon Square in 1919, and held an anniversary celebration of the opening in the following year, when a large company assembled. He also started the *Sufi Quarterly*. Later he returned to India.

NEWS IN BRIEF.

H.H. the Maharaja of Indore arrived recently at Nice.

Mr. E. E. L. Hammond, I.C.S., has been appointed Governor of Assam in succession to Sir John Henry Kerr.

King Boris received in Sofia on March 25 the new French Minister to Bulgaria, M. Henri Cambon, who presented his letters of credit.

Mr. G. W. Dillon, an Indian Government advocate, died in Allahabad last week of wounds received while tiger-shooting near Manikpur.

The Grand Duchess Constantinovitch, of Russia, who died in Leipzig on March 24, was a sister-in-law of the Dowager Queen Olga of Greece.

Captain C. E. Turle, D.S.O., R.N., and the other members of the British Naval Mission to Greece, reported for duty on March 24 at the Ministry of Marine in Athens.

The King has given Miss Annie Josephine Dickinson authority to wear the insignia of the Order of Saint Sava, of the Fourth Class, which decoration has been conferred on her by the King of the Serbs, Croats, and Slovenes, in recognition of valuable services.

General Sir John Du Cane (General Officer Commanding-in-Chief, British Army of the Rhine) is assuming duty as Governor of Malta at the beginning of May. He will embark at a French port in H.M.S. Bryony for Malta.

General Averescu, the Roumanian Prime Minister, has taken charge of the Ministry of Finance, vacant through the resignation of M. Lapedatu in consequence of a disagreement with M. Manolescu, the Under-Secretary of State for Finance.

It is announced that Rear-Admiral Mark L. Bristol, who is at present United States High Commissioner in Constantinople, will succeed Admiral C. S. Williams in the command of the United States Atlantic Fleet in the autumn.

Imperial Airways draw attention to the fact that letters posted by Air Mail now reach Baghdad 17 days, and India five days, earlier than if sent by ordinary mail. The cost is 3d. to Baghdad and 6d. to India for a letter weighing up to 1 oz.

Reuter reports from Belgrade that Yussuf Sali Bey, a former Albanian Minister and leader of the Albanian Independents, who had for some time past been living at Ochrida (close by the Albanian frontier), has been murdered there. Yussuf Sali Bey played a considerable part at Tirana (the Albanian capital) in the time of Essad Pasha.

The *London Gazette* announces that the Secretary of State for India has approved the grant of a vacant Good Service Pension to Lieut.-General Sir Richard Wapshare, K.C.I.E., C.B., C.S.I., Ind. Army (retired). General Wapshare, who retired in 1921, commanded the Baluchistan Force during the Afghan War of 1919. He was in command of the 4th Quetta Division from 1917 to 1920 and in military and political charge of the Expeditionary Force against the Marris in 1918. He joined the Indian Army in 1882.

Two of the sloops stationed in the Persian Gulf, the *Crocus*, Commander J. G. Bower, D.S.O., and the *Cyclamen*, Commander C. R. E. W. Perryman, D.S.C., have been paid off and recommissioned at Bombay, drawing full crews from Portsmouth and Chatham depôts respectively. They are due to return to the Gulf shortly.

The King has approved the award of the Founder's Medal of the Royal Geographical Society to Major Kenneth Mason (Survey of India) for his connexion between the surveys of India and Russian Turkestan through the Pamirs in 1913, and his organisation and conduct of the Shaksgam Expedition of 1926.

The Colonial Office announces that the King has approved the following appointments:—

Sir Hugh Clifford, G.C.M.G., G.B.E., Governor of Ceylon, to be Governor and Commander-in-Chief of the Straits Settlements and High Commissioner of the Malay States, in succession to Sir Laurence Guillemard, G.C.M.G., K.C.B., who will shortly complete his term of office.

Sir Herbert James Stanley, K.C.M.G., Governor of Northern Rhodesia, to be Governor and Commander-in-Chief of Ceylon, in succession to Sir Hugh Clifford.

Sir Frederick Green, Wimbledon Park, S.W., formerly of Chigwell Row, Essex, and Fenchurch Avenue, E.C., late of F. Green and Co., one of the founders of the Orient Line, a director of the Suez Canal Co., chairman of the Trust and Agency Co. of Australasia, Ltd., deputy chairman of the United River Plate Telephone Co., Ltd., chairman of the London Board of the Bank of New South Wales, and a director of several other concerns, who died in February, aged 81 years, left unsettled property of the gross value of £338,060, with net personality £321,875.

MAIL DELAYS.

Great and growing dissatisfaction is being voiced by the European business community of Calcutta at the persistently late delivery of its mail correspondence from England. Before the War, the Home mail used to be delivered early on Sunday morning; but delivery now takes place on Sunday afternoon at the earliest, and not infrequently not until Monday morning. The chief delinquents are the Railway and Postal Departments, with the P. and O. for a period as an accessory. The contract time for the arrival of the mail steamer at Bombay is daylight on Friday morning: but, until lately, it has failed to keep its appointment punctually. The P. and O. Company has been able to marshal various excuses for this state of affairs—labour troubles at Marseilles, the enforced use of inferior foreign coal owing to the strike, fog in the Bitter Lakes on one occasion, and an accident to an anchor cable at Aden on another. It, at least, has acknowledged the error of its ways and has not only promised, but has also brought about, an improvement; while the Indian Railway and Postal Departments resolutely decline to do either. It is, of course, common knowledge that the P. and O. always has time up its sleeve, and could easily complete the run to India in less than the contract time, except when it uses its oldest and slowest boats. So it is not difficult for the P. and O. to rise to the occasion, once it has been convinced that the effort is worth while. In other matters, such as that of the proportion that the passenger fare to Bombay bears towards the fare to Sydney, which is practically twice as far though the fare is only half as much again, the P. and O. is not so easy to convince: and here also it has more or less valid excuses—the cost of the Suez Canal dues, which is the same for the Indian passenger as for the Australian, the reduced cash price that it has to accept on the “Lee Concession” fares, where the Government of India pays the Company only the contract price, credits the passenger with the full ordinary fare on paper, and saves the difference—and the undoubted fact that, at certain times of the year, the boats to or from India run partly empty, while it is, if only by implication, denied that the same thing is the case with Australia.

The Railway and Postal Departments also have excuses; but, unlike the P. and O., they have made no attempt at rectifying the causes of the delay. Before the War the postal special from Bombay to Calcutta, running over the G.I.P. and E.I. Railways, did the journey in 38½ hours. Later, the time dropped to 40 hours, at which figure it remained until the floods of last year destroyed the railway bridge over the Nerbudda and necessitated a diversion that increased the time of transit to 44½ hours, which is the schedule time now, though it is not always adhered to. The cheery optimism, of which Sir Samuel Hoare gave an example in his recent speech on the Air Estimates, is a praiseworthy characteristic of India's railway staff. He said, it will be remembered, that, while waiting at the Delhi aerodrome for weather reports regarding the advisability

of starting for Karachi, one of the most helpful messages he received was from a railway station down the line—“Everything is up to time. The express has just gone through 2½ hours late.” The destruction of the Nerbudda Bridge is, on the face of it, a thoroughly valid excuse for the time now taken by what the Anglo-Indian newspapers of Calcutta have christened “the Snailway.” But it ignores the fact that there is an alternative line—the Bengal-Nagpur Railway—by which the distance between Bombay and Calcutta is 200 miles less than by the ordinary route. The latter is used because it also serves Northern India, whereas the Bengal-Nagpur Railway does not; but this argument also ignores the fact that there is an alternative route between Bombay and Delhi—the Bombay, Baroda, and Central India Railway—which is quicker than the ordinary mail route *via* Jubbulpore in the Central Provinces, near which place the bridge over the Nerbudda was washed away. Another fairly good excuse is the increased bulk of postal matter that has to be carried nowadays, which not only needs more powerful and heavier engines to draw it at the old rate of speed, but also the strengthening of some of the old bridges in order to carry them in safety. This work, the Railway Department says, is progressing, but was unavoidably delayed owing to the dislocation caused by the War. In the absence of statistics, it is impossible to say to what extent the bulk of postal matter has increased; but it may safely be surmised that the increase is nothing like what would normally be expected if it were possible to revert to the old penny rate. It seems unlikely that such a reversion can be much longer delayed: and it would seem that, when it does occur, Calcutta residents will have to wait for their mail considerably longer than they do at present. The chief complaint against the Postal Department, apart from its refusal to take advantage of the alternative routes that would avoid the broken bridge, is its quite recent decision to stop the sorting of correspondence in the train. The excuse given for this is that it has been necessary to reduce the load of the postal special, and that the only possible way of doing so has been to cut down the mail accommodation: and the result has been several hours' delay after the arrival of the mail, while it is being sorted at the Calcutta Post Office.

The rebuilding of the Nerbudda Bridge will take some months: estimates vary between three and twelve, though inclining to the latter. After that period, say the official apologists, a reversion to the “normal” timing of 40 hours be expected. But they do not hold out any hope of a reversion to pre-War timing in any foreseeable period: and they decline to consider at all the possibility of resuming the practice of sorting in the train. The Member in charge of the Postal Department was subjected to considerable heckling in the Legislative Assembly in the middle of February, when the chief points elicited were that it was only a week previously that he had given his attention to the matter: and that, in that interval, he had been unable to acquire information whether there is a saving of mileage by the Bengal-Nagpur route and, if so, how much: whether it would be feasible to use either or

both of the alternative routes and, if so, how much this would cost: whether it would be reasonably possible to separate the Calcutta mails from those intended for Upper India before they are loaded on the train: and what is the difference between the "normal" timing of the postal special and the timing that obtained before the War. It would seem that some other authorities are involved in what the Calcutta *Statesman* calls "this welter of nescience"; for the Bombay *Times of India* describes the protest as that of "a small faction" and suggests that the claim is put forward "merely to enable the residents of Calcutta to indulge their nostalgia for distant Dundee in the privacy of pyjamas and the cool of the morning"; particularly as Sunday is a *dies non* in business circles. At the same time, it admits that the apparently unnecessary delays of the P. and O. Company definitely merited the rebukes which they earned, "for failure on its part to observe the strictest punctuality affects the whole of India"—especially Bombay: which is in the happy position, if it receives its mail betimes on Friday, to answer it the next day, and thus to gain a week on the rest of India. Being thus fortunately placed, Bombay is able to observe its Sundays as business *dies non*; whereas the Calcutta business man welcomes the chance of giving his undivided Sunday attention to important communications likely to have a vital influence on his week's conduct of business. Moreover, the Calcutta complaint is confined to the mail train that carries its own correspondence, and has no concern with the others that carry the mail to other destinations. It has been reckoned that Calcutta's share in the English mail, leaving Bombay by the postal special bound for Calcutta, amounts to about 70 per cent.; so that the Bombay suggestion, that the protest of a relatively small community has been exaggerated into a similitude of national clamour, does not perhaps accurately state the case. It is, of course, quite true that the whole of India would have to pay if extra expense is incurred by postal arrangements that will remedy a crying injustice to Calcutta; but the business community there, even if relatively small in numbers, is so important that to do what is reasonably possible to meet its pressing needs is a matter of national concern: and it is the obvious duty of the Postal Department to remedy a serious grievance where it exists, irrespective of the fact that there are other places in India where it does not.

CURRENT TOPICS.

"Pertab."

The appearance of a biography of that gallant old soldier, Sir Pratap Singh, is a great source of satisfaction to his innumerable friends. The spelling adopted by his biographer is, of course, the correct one: and, to judge by the signature on a photograph of him, which is one of the writer's most cherished possessions, it is the one he adopted himself—though he would be a bold man who would say so with any certainty, as writing in the English character was not one of the General's strong points, his a's and r's, in particular, being indicated by the same symbol—one not unlike the "pot-hook" of a child's copy book. But his English friends always knew him as "Pertab," and will doubtless continue to cherish his memory under that name. His one overmastering ambition was to be killed in action in a cavalry charge at the head of his own men: and it was a lasting regret to him that he had to return to India from the Great War without having had the chance of realising it. In these days of Indianisation, there are many people—as witness the Sandhurst returns—who look askance at the probability of themselves, or their sons, having to serve in the Indian Army under Indians; but it is safe to say that no British officer in India would not have been both glad and proud to serve under Pertab. The last time that the writer saw him was when the Jodhpur polo team won the Prince of Wales' Cup at Delhi in the presence of its

donor, after the finest game that it has ever been his privilege to see. Playing against an older and more experienced team, the Jodhpur youths were three goals down, half way through the match: a state of affairs that would have been fatal to 99 out of a hundred Indian teams. But the young men of Jodhpur never lost heart, got back two goals in the last chukker but one, and equalised and then won in the last. There can have been few prouder moments in Pertab's life than that one; for the success of his team was, above all things, a tribute to himself, who had taught them not only to play the game, but to play a losing one with the same pluck and gallantry that distinguished him throughout his life.

The Council Chamber Roof.

The alarming report of the fall of a brick, from the roof of the newly opened Council Chamber, on to the desk of a member of the Legislative Assembly, has been promptly discounted by Sir Herbert Baker's explanation that it was not a brick, but only an "acoustic tile made of light porous material for sound absorption." The original report said that the brick was not a part of the roof structure, but one of a number that had been stuck on to the plaster with cement: and that, when it fell, it brought its original cement with it. This would probably have reduced the lightness, if not the porosity, of the material: and it is certainly as well that brick catchers have now been spread under the ceiling, even if these are likely to interfere with the acoustic properties of the Chamber. For, in case other tiles should decide to follow the example of the pioneer, and should do so with a more accurate aim, they might fulfil their primary function of "sound absorbers" with regrettable completeness.

The Governorship of Assam.

His many friends will most heartily congratulate Mr. Laurie Hammond on his election as the next Governor of Assam. The fact that he was not elected for the Governorship of his own Province, Bihar and Orissa, was a source of considerable disappointment, not to say surprise, at the time that the latter selection was made: and it is pleasant to find that his claims to high preference have now been recognised, even if his new post turns out to be but a temporary one. It is difficult to believe that the Statutory Commission will recommend the retention of Assam as a separate Governor's Province of India; though, for that matter, Bihar and Orissa may perhaps be in almost equal danger as a Governor's Province. Both Provinces offer their Governor a considerable amount of leisure, though Assam is certainly the more attractive from this point of view: and their dignity is equal, though the pay is much better in Bihar. The Governor of Assam also has the additional advantage of a most beautiful headquarters at Shillong, and a comfortable yacht for his "camp office" during the touring season. In this respect, the Governor of Bihar and Orissa is not so fortunate, though he has no less than four official residences—one more than any of the most favoured of his brethren, unless one reckons the Circuit House at Dehra Dun as one of the seats of the Governor of the United Provinces: to which, at any rate, his claim has been regularly jumped, of late years, by the Viceroy. Bihar's only real hill station is at present in embryo—if, indeed, it can be said to have got even so far as that—at little out-of-the-way Nettihaat. Puri, on the sea, is pleasant for a brief season; but the official winter capital of Patna, and summer capital of Ranchi, are both set in what is little more than a wilderness, with little to choose between them, during the hot weather, in the matter of temperature. The Governorship of Assam is generally quoted nowadays as one of the only two really "soft jobs" remaining in India—the Presidency of the Council of State being the other. Mr. Hammond is to be congratulated on getting it, if only as a stepping stone to something more important; and Assam is certainly most heartily to be congratulated on getting Mr. Hammond.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 10.

Communal Troubles.

Further details in regard to the Moslem riots in the Barisal district arrived immediately after the last mail, and these do not diminish in any way the seriousness of the occurrence, although they show that the number of men who were wounded by the firing was exaggerated in the first reports. Both official and unofficial accounts appear to agree that the people who suffered were ignorant Muhammadan cultivators who had been brought into a small town under the influence of a holy man, preaching to prevent a Hindu procession from passing a mosque, and particularly to stop it from playing music while doing so. It is not denied that the procession was an annual one and that it had not been interfered with previously; but in the present state of communal ill-feeling the question of music before mosques has assumed an altogether new importance. The preacher succeeded only too well; eventually a fanatical mob, wildly excited and armed with spears and clubs, surrounded and charged the small body of officials and their armed escort, and it was not until the rioters had been fired upon that they would disperse. But Hindu and Moslem extremists are using the tragedy as a weapon for attacking Government and, although both profess to be anxious to put an end to the present tension, there is no sign of any responsible effort to do anything else but aggravate mutual distrust and animosity.

The New Irresponsibles.

One of the most unfortunate incidents in connexion with this matter is the visit of Sir Abdur Rahim to the locality and the speeches and statements that he has made from there. It is pathetic that a man who is an ex-High Court Judge, an ex-Minister and a so-called leader should so display complete irresponsibility and what might conceivably be regarded as open incitement to mischief. His speech at Barisal will have satisfied both Hindus and the remainder of the Moslems that they were completely right when they refused recently to co-operate with him as a Minister, but in a discursive press statement he makes a grievance of the fact that, although he was the senior member of the Council at the time, Sir John Kerr was brought from Assam to act as Governor when Lord Lytton was temporarily appointed as Viceroy at the end of the Reading régime. Sir Abdur has only himself to blame if it is suggested that he is not able even to govern himself, let alone a province. It would seem that we are now to have a group of Moslem Extremists to compete with the *Forward* party in irresponsibility and the prospect is not an alluring one.

Congress Amenities.

The break-up of the Congress party has become complete. The rebels, "The Big Five," are the people who have most of the power, and most of the money, and they also own *Forward*, which has always been the Congress and Extremist organ up to date. It need hardly be said in such circumstances that *Forward* can say nothing bad enough about the people who still retain control of the Bengal Congress in spite of the fact that a note of "No-Confidence" has been passed against them. Money speaks very loudly in politics here, and, if the Indian papers which are still open to the official Congress party are to be believed, the only point at issue between the two sections is who is to obtain control of the income which arises out of the corruption in the Corporation. Neither side appears to be concerned to conceal the existence of corruption itself and the worst that is said of it is that it should not be allowed to rear its head too high into the air. Meanwhile the election preparations are proceeding apace, and meetings of both sides are about equally interrupted; but at the moment the honours in regard to the throwing of stones and brickbats at speakers

must be awarded to the "Big Five" and their supporters. This probably means only that they have more money to spend in hiring the *goondas*, or roughs, who are always available for such purposes in the large cities of the East.

One and Sixpence.

The battle between the ratios has been fought, and won by Government, and, even if there should be an adverse decision upon some minor subsequent point, it appears certain that the rupee will be stabilised at eighteenpence. From some points of view it was a pity that Sir Basil Blackett should have announced in advance that if the rupee were not fixed at this figure no statutory ratio whatever would be adopted at present. This line of action, as is so often the case in similar circumstances, enabled the irresponsibles to enjoy themselves without any fear of consequences, as they knew that Government would save them from themselves, even if they won. The vote, 68 to 65, is an indication of the assiduity with which both sides have been canvassing, and it is agreed that never before has so thorough an attempt been made to whip up every possible voter on both sides. Certainly the defeat of the one-and-fourpence men has not been due to any lack of effort by the Bombay magnates.

The Y.M.C.A. and Politics.

The Annual Meeting of the Y.M.C.A. took place this week and on the morning of the day of the meeting a long statement was issued under the signature of Dr. S. K. Dutta, the General Secretary of the National Council, Y.M.C.A., in regard to the recent resolution of the European Association charging the Y.M.C.A. with interfering in politics. The principal business of the meeting turned upon this resolution, and the Bishop of Calcutta stated with some emphasis that the European Association must either substantiate its charges or withdraw them. Dr. Dutta also made an aggressive defence of the Association and its officers, and Sir George Rankin, the Chief Justice of Bengal, who presided, mildly suggested that, if the case of the Y.M.C.A. failed, it would not be for want of advocacy. Many members of the European Association are beginning to feel that they were stampeded by Mr. Hobbs when he moved the resolution, and others may rightly think that it is a pity that it should be possible for it to be stampeded in such a way; but the same people are not altogether comfortable in regard to the point at issue, and possibly this is partly explained by the fact that *Forward* finds in Dr. S. K. Dutta's statement, as well as in the Bishop's remarks, a useful text for a typical condemnation of the European community in India.

Men and Things.

On the eve of the municipal elections, the controversy in the Corporation in regard to the Deputy Mayor has solved itself by the submitting of his resignation; to judge from the brief debate which preceded its acceptance, everyone is relieved that a public discussion has been avoided.

Sir Alfred Chatterton addressed the Rotary Club this week on the desirability of the greater industrial development of India; he made the interesting statement that India is now producing the cheapest pig iron in the world, and, aided by Railway rebates, the industry is rapidly growing.

The strike on the Bengal-Nagpur Railway has fizzled out as suddenly as it began; no reason has been assigned by the so-called Labour Union for the return of the strikers, but following the refusal of the Agent to consider a series of extravagant demands, a deputation waited on him and at the conclusion of the interview they announced that "the strike was off"; up to the present no other reasons have been given.

At the annual meeting of the Indian Council of Women, Mrs. R. L. B. Gall expressed the opinion that the time had come when the Council must look forward to a considerable increase in the number of Indian women, not only as members, but as office bearers in the Council;

the social worker is following the politician in claiming self-government.

In the Assam Council a Swarajist amendment to omit the amount of the Ministers' salaries from the Budget was defeated, and provision has been made for the forthcoming year accordingly. A similar resolution will be moved at the next meeting of the Bengal Council and an organised attempt is being made to refuse supplies for the Governor's Band, his Bodyguard, his Executive Council and his expenses of going to the Hills; if the Moslem differences are not healed before the meeting, it is more than likely that the Swarajists will succeed in carrying some of these cuts.

The Trivial Round.

The first day of the March races took place on Saturday last at headquarters under a cloudy sky and somewhat uncomfortable conditions; on the whole the racing was good and the backers fared better than they have done for the past few weeks; Ryan, the trainer, led in three winners.

The paperchase season has wound up this year with the usual events and the winners of the Cups are as follows: the Average Cup, Captain Leatham; the Paperchase Cup, P. S. Warren; and the Heavyweight Cup, Ian Maitland Heriot. The latter also carried off the Light Horse Cup at the Regimental meeting. The season has been a successful one and members are now in training for the annual dinner.

The Hockey League matches are attracting larger crowds this year; at present the Customs, the Rangers and Calcutta are all undefeated.

A Tennis League has been started this year amongst the principal clubs and matches commenced last Saturday; the entries include the following amongst others: Calcutta Cricket Club, the North, South, Japanese, Dalhousie and Delta Clubs; there should be some good sport out of these.

The Joybells Company have been continuing their season at the Empire and the promise of the first programme has been fulfilled, with a satisfactory response from the public. The latter Heifetz concert on Thursday night last produced a "record" house and the eminent violinist gave an ample demonstration of his right to be deemed a master; Calcutta is beginning to appreciate real music.

Markets.

The recent improvement in the jute and gunny markets has been well maintained, and in jute particularly there has been a very fair daily business, with Mills ready buyers. On a strong demand from New York and Pacific Coast, hessians have been active both for near shipment and for forward positions, the latter up to June of next year; the market closed firm. The piece-goods market has passed a rather quieter week mainly owing to the near approach of the "Holi" festival and to the continuance of the railway strike; as a result, prices have given way in some cases, but it is anticipated that as soon as the holidays are over, buying will be resumed. The tea sale here fetched satisfactory prices considering the low quality of tea on offer; reports from the gardens indicate a normal crop for next season, but it is yet early to prophesy.

On the Stock Exchange, Government Securities continued to be very dull up to the issue of the Budget, when a somewhat improved inquiry set in; transactions in investment stocks have been restricted, mostly in debentures, but it is noticeable that a number of operators are investing their funds in jute Ordinaries in preference to Debentures and other such stocks. Jute shares have shown little material change during the week, apart from the speculative shares, and one or two of the favourite stocks, which have registered further rises. The market is strong and, with the firmness of the hessian market, is likely to go stronger. There is nothing to report in the cotton and coal sections, and little business has

been done in tea shares owing to sellers being unwilling to reduce their rates; there is, however, every evidence of inquiry for the favourite stocks at something below current prices. There has been little doing either in rubber or tin shares, but with tin at over Rs. 310 a ton and stocks at the lowest figure since 1918, there is every possibility of an improvement. In the miscellaneous section, there has been a fair turnover at previous quotations the only material improvement being in Cawnpore Sugar as a result of a satisfactory report. In the Exchange Market the rate for Ready T.T. declined to Rs. 5 27-32d. pending the decision of the Legislative Assembly on the Currency Bill, but has since firmed up to Rs. 6d. The money market remains almost unchanged, with rates as quoted last week.

KARACHI NOTES.

Aviation.

Karachi has received a larger share of the limelight during the past cold weather than usually falls to its lot in the Press of England and India. The principal reason for this has been the visit of the Air Minister, Sir Samuel Hoare, in the great aeroplane the Hercules, afterwards re-christened the City of Delhi. The air service between India and Europe was thus formally inaugurated, though it will in fact be spasmodic in operation for some time. The work of the Air Ship base at Drigh Road is, however, proceeding apace. This little suburb of Karachi is rapidly acquiring importance. It is the supply base for the whole of the Royal Air Force in India, and has the distinction of being the only Cantonment in India controlled by that Service. It is also the new site of the Arsenal, removed from the City itself.

Aviation has had a very good reception among the civil population of Karachi of all races. The moving spirit of air communication with Europe, Sir Sefton Brancker, was fêted by the leading Cosmopolitan Club. Meanwhile Sir Montagu Webb, still the dæmonic force of Karachi commercial enterprise, has, with his usual foresight, established a Civil Aviation League.

Railway Communication.

The establishment of air communication with Europe has lent further strength to Karachi's serious complaints about the insufficiency of its railway communications with the North of India. The aeroplanes and airships are likely to be specially useful for the journeys of officials and other visitors who are pressed for time, and for the carriage of specie and urgent mails. Why, ask Karachi merchants, should a great part of the saving of time thus gained have to be thrown away by the absence of direct lines to the capital of India, and to other great cities of the North?

The question of goods traffic is, however, of far greater importance to Karachi than the transport of passengers, however eminent. How badly Karachi is served may be shown by a few figures. The mileage by the shortest broad-gauge route is 905 miles to Delhi, and 1,027 miles to Agra, though the mails are actually sent round by Lahore, which adds 150 miles to the journey to either place. There is a far more direct metre-gauge route, which reduces the distance to 775 miles between Karachi and either Delhi or Agra. But the metre-gauge stops short at Hyderabad, 120 miles short of Karachi, and there are similar breaks of gauge at the other ends. The consequent transshipment is a most serious handicap to trade. This has been the subject of complaint by the Karachi Chamber of Commerce for more than a generation, and so far back as 1914 the Railway Board of the Government of India agreed in principle to the scheme for the conversion of the metre-gauge to broad-gauge, and stated that the work would be authorised as soon as estimates had been prepared. Then, however, came the War, and subsequent disorganisation, and now the Government of India and the Railway Board have taken up the position that the work must be proved to be remunerative before

it can be undertaken. The Chamber maintains that, apart from this being perilously near to the breaking of a promise, it is an entirely wrong principle to apply to a Trunk Railway Line, which must be expected to foster and create its traffic. The general recognition of the justice of the Karachi claim was shown by the Chairman of its Chamber, Mr. Pearson, obtaining the support for it of all the Chambers, with one exception, (and that the only one entirely unaffected by the scheme in any way), at the recent meeting of the Associated Chambers of Commerce. Karachi naturally hopes that the Prosperity Budget of the Government of India will enable a more liberal view of its obligations to be taken.

In the meanwhile it is pleasant to notice that the construction of local feeder lines within Sind itself is being actively assisted by the Government of India, who are doubtless influenced by the fact that the responsibility for financial loss will fall, not on them, but on the local Government or on local bodies. The practically entire absence of roads in Sind increases the need for these lines.

The Sukkur Barrage.

The Sukkur Barrage is receiving criticism in the Bombay Legislative Council, but the details of this may be left to another occasion. Probably such criticism is largely a repercussion of the Back Bay failure. To us in Karachi the scheme appears an absolute necessity, both for the Province in general, and for the trade of Karachi in particular. With the increased internal consumption of wheat in India, it is doubtful whether the export of grain will ever recover its former importance; and the trade of Karachi will depend to an ever-increasing extent on cotton, which again is entirely dependent on an assured water supply.

LANDOWNERS AND THE REFORMS.

The speech of the Maharaja of Darbhanga, reproduced in the issue of March 17, contains at least one point on which all dispassionate observers are agreed: the danger of "popular" legislation being subordinated to communal interests. This, it is true, is a point more often made by Muhammadan speakers than by members of the Hindu community, of which the Maharaja is a prominent champion; but the danger is a very real one. A recent cable from Delhi spoke of an attempt, by Muslim and Hindu members of the Central Legislatures, to co-operate in seeking a solution of the communal problem; but the bare truth is that, whatever the politicians may say, no solution is possible. So long as Islam and Hinduism remain living faiths, communal divisions must inevitably continue; the efforts of leading members of both communities may possibly succeed in bringing about the appearance of unity on the surface, but the essential gulf remains as wide and deep as ever. This being the case, as it is beyond all possibility of dispute, the presence of an impartial third party, to act as arbitrator, is indispensable. Such an arbitrator exists at present in the British official: and even the most rabid Indian extremist will admit that, if there must be a "foreign" element in India, the Englishman is very greatly to be preferred to any other foreigner. But, in order to remain an effective arbitrator while the tide of democracy advances, the Englishman needs moral as well as material power. In the restricted sense of the word, he can only obtain moral power by the force of personal example; but, in its wider sense, he needs, as well, the support of sane and sober Indian opinion.

A few days ago Lord Irwin spoke of the need for the use of cement, rather than of dynamite, in the building up of a sound constitution. In no walk of life in India do all communities meet on better terms than in industry, where the British non-official can act as the cement that binds conflicting interests together and, at the same time, supply the imagination and organising power that industry requires. It follows that any move towards the foundation

of a political party that would embrace all those with a real stake in the country, without distinction of race or creed, is one that deserves full recognition: and, if non-official Englishmen in India can assist to bring it to fruition, they will have achieved something that will go far to confirm the belief held by the great majority of India's true well-wishers nowadays—that on them, in a very great measure, depend the future greatness and prosperity of India.

It is not necessary to follow the Maharaja in his suggestions as to how such a political party could attain the important position that it deserves. The abolition of direct voting—a method altogether foreign to Indian ideas—is a reasonable probability of the future; but the institution of bi-cameral legislatures in the Provinces is much less so. A less unlikely development is the alteration of the Provincial "popular" chambers into something more nearly resembling the Central Council of State—a single chamber of the "Senate" rather than of the "House of Representatives" variety. But the suggestion that half of the rural seats in the existing Council should be reserved for landlords, and half for tenants, must necessarily remain far beyond the pale of practical politics. There are already five "landlord constituencies": and, in the 58 "general" rural constituencies in the Province, the Maharaja said that the seats are "gifts for the tenants—at the last election the landed interest was swamped by a violent propaganda." It may well be asked why the landlords should accept this state of things as a necessary one: and why they should not make a serious effort, by propaganda of their own, to change it. On their ability to do this depends, in great measure, the future usefulness of a political party of those with a real stake in the country. If they, with their special facilities and special local influence, cannot successfully combat the carpet-bagger—usually an urban lawyer—in their own rural constituencies, there is not much hope for others less fortunately situated.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Turkish Debt Question.

In the report of the Corporation of Foreign Bondholders, extracts from which will be found in another column, a detailed survey is given of the position with regard to the Turkish debt question. During the past year there have frequently been reports that a settlement has been pending, but unfortunately no definite progress has been made, and the serious statement is made in the report that the attitude of the Turkish negotiations does not encourage "the belief that they are sincerely animated with a desire to arrive at a prompt and genuine settlement, or that the Turkish Government have any intention to carry it out, when agreed to, at an early date." This is poor comfort for the bondholders, and in the light of this view the recent rise in the price of Turkish Unified is difficult to understand except on the hypothesis that buyers have been actuated more by hope than by knowledge. While nothing can excuse the attitude of the Turkish authorities in not making a real effort to achieve a settlement it must in justice to them be pointed out, however, that the problem with which they are confronted is an exceedingly difficult one because in present conditions it is an impossibility for Turkey to find the means for extensive payments abroad. If she were able to obtain foreign assistance in the shape of loans she would be able to recover economically so that such payments would soon be feasible, but at present any question of foreign loans is quite out of court as Turkey's attitude over her debts has very effectively damaged her credit in the countries which could help her. The way out for Turkey would seem to lie in a settlement which while generous to the bondholders would provide at first only for such payments as she could readily afford out of her existing resources. The effect of this on her credit would be pronounced, and it would no doubt be found that the difficulties in the way of financial assistance would speedily vanish.

The Indian Trade Position.

At the meeting of the Eastern Bank the Chairman, Mr. J. S. Haskell, dealt in detail with conditions in India during the past year. India had a good though a late monsoon, but the failure of the autumn rains counteracted its beneficial effects, and it was necessary to import considerable quantities of wheat from Australia. The cotton crop showed a reduction of about a million bales on the previous year's total, but it coincided with a record American crop, and there was a cessation of trading during the period of declining prices. The trade figures of the year are particularly interesting, and show very plainly the strength of India's trade position, for while there was a decrease of £58,000,000 in the value of the exports and an increase of £6,000,000 in that of the imports there was still a balance of trade in favour of India, including specie, of over £40,000,000 as compared with one of £76,000,000 for 1925. Mr. Haskell referred to the Report of the Currency Commission, and said that the recommendations for the stabilisation of the rupee at 1s. 6d. and for the establishment of a Central Reserve Bank are sound in principle. He pointed out, however, that other aspects of the scheme would bear very hardly on other banks, and he expressed the view that the exchange banks deserved greater consideration. It is proposed that the banks should place 10 per cent. of their current accounts and

5 per cent. of their fixed deposits with the Reserve Bank free of interest, and Mr. Haskell suggested that if a deposit were found to be necessary the percentages should not be more than 5 and 1½ respectively for current accounts and fixed deposits.

Iraq in 1926.

The position in Iraq last year was also dealt with by Mr. Haskell. It was an unfortunate period from the trade point of view, but the fall in the imports of cotton goods from £3,300,000 to £1,538,000 was indicative of the gradual fall in the price of cotton rather than of the reduced market. The rains were good, with the result that there was a large surplus of grain for export. The date harvest was also excellent, and it is to be regretted that the quantity of dates available was far in excess of the capacity of the consuming markets. Reference was made in these columns recently to the suggestion put forward at the annual dinner of the Basrah Chamber of Commerce that an advertising scheme should be instituted to remedy the present situation. Obviously it is an essential step if Iraq is to benefit as she should from this important crop. The worth of this expedient has been abundantly proved by Greece in respect of currants, and Iraq also has the precedent of Australia before her.

The Next Fair.

It is suggested that the next British Industries Fair may not be held at the White City owing to the increasing need for space for the exhibits. A change to another venue would, in my view, be all to the good, for the Fair at the White City always has a curiously straggling appearance, and in some of the long and narrow galleries it is difficult to set out exhibits to the best advantage. There are a number of buildings at the White City which have not been utilised for the Fair so far, but possibly there is some difficulty in making them available. The alternative to the White City is the Crystal Palace, it appears, and the Fair has been held there in the past. The Crystal Palace has the disadvantage of being nearly as inaccessible as Wembley, but there would be plenty of room there for the continued expansion of the Fair, and from what I remember of the exhibition there it is more suitable in some respects than the White City. The one thing which is obviously impossible is to erect a building specially for the Fair as there are too many exhibition buildings scattered round London as it is.

Egypt and the Cotton Position.

The effect of the developments in regard to cotton on the situation in Egypt was referred to by Sir Bertram Hornsby in his speech at the general meeting of the National Bank of Egypt. He pointed out that the large Egyptian cotton crop of 1926-27 combined with the record output of America and the poor demand from consuming countries has occasioned some difficulty in Egypt. The influence on the trade figures has, of course, been very marked. The value of Egypt's exports for the year ended August 31 last was £E52,855,630 as compared with £E67,952,808 for the previous twelve months, while the value of the imports of that period at £E55,973,075 was slightly down. The figures for the whole of 1926 reflect much more strongly the fall in the price of cotton, and its resulting incidence on conditions in Egypt. Sir Bertram Hornsby emphasised the point that owing to the prosperity of the last few years the economic situation of Egypt compares favourably with that of most countries in the world. It appears now as if cotton had reached its lowest point and that henceforward the trend of prices is likely to be upward, but the fact cannot be sufficiently insisted upon that Egypt is now faced with increasing competition in the type of cotton which is peculiarly her own, and that in the best conditions her crop in the future cannot be quite the asset that it has been in the past. Sir Bertram Hornsby also touched briefly on the Sudan, and expressed the view that it would be a mistake to expect any very rapid expansion of trade in that region. The commercial statistics of the past few years have, however, been of a distinctly encouraging nature, and given fair prices for cotton it is probable that the rate of progress since 1922 will be considerably exceeded.

COMMENTATOR.

ECONOMIC SITUATION IN TRANSJORDAN.

Transjordan is largely desert country, but the long strip of land between the Jordan River and the Hijaz Railway is for the most part under cultivation (says the American Consul at Jerusalem, Mr. Clayton Aldridge, in a recent report). The plain of Jabbath, south of Amman, is a very flat, fertile area of considerable size, through which passes the road from Amman to Maan, due south for an hour's journey by car. On the east the plain stretches as far as the eye can see, and on the west to the bordering mountains of Moab, 15 or 20 miles distant. Wheat is planted here after the first winter rain; when harvested, a second crop is planted of millet, which is said to require only the moisture supplied by the dew. The plain is without stones, and in every way adapted to the use of modern agricultural machinery, but crops are still planted and harvested by the most primitive hand methods. The country surrounding Amman is cultivated and very fertile. The region around Jerash, with its fields of grain and olive trees, shows surprising fertility. Jerash itself has an abundant water supply, and even poplars and other trees grow there. South of the Plain of Jabbath the land, although apparently fertile, is used only to pasture the

animals of Bedouin tribes. Because of the unsettled condition of the country, this part of Transjordan has remained virgin soil, but as public security increases it seems probable that land cultivation will extend gradually southward. Farther south the vegetation dwindles and finally disappears. Several hours before Maan is reached, even the coarse desert grass ceases to exist, leaving only barren desert surrounding the town. West of Maan the desert changes to rolling country and vegetation gradually reappears, so that the land surrounding Ain Musa is fertile and well cultivated. Throughout the rest of Transjordan there are only occasional oases and small areas of vegetation.

The resources of the country are limited to a few agricultural and pastoral products, chiefly grain and cereals, and a certain number of horses and camels. Horses are bred near Kerak. Camels are bred on the desert, but not on a big scale, for that would require a larger grazing area than is found in Transjordan, owing to the breeding camel's innate necessity for food only of its own choosing. The camel breeder is therefore obliged to follow his animals about the desert, often for a tough thistle in preference to the most tender grasses. The large number of camels seen on the Transjordan desert are chiefly *en route* from Nejd for the Egyptian market.

As regards mineral resources, there are reported to be some phosphate deposits, as yet undeveloped. Platinum has been reported in the Sinai Peninsula, across the Gulf of Aqaba, but not as yet in Transjordan proper.

While no definite plans have yet been formulated for such a project, the advantages of railway connexion between Maan and Aqaba are readily apparent. It would offer quick and easy means of exporting Transjordan grain and of importing needed commodities. It would develop the trade of Transjordan with Egypt and India and eliminate its Suez Canal dues. Through this closer contact with neighbouring countries the development of this most backward part of the country would be encouraged. The estimated cost of such railway would be approximately £E1,000 (about 5,000 dollars) per mile. Unfortunately, the obstacles to be met in the shape of mountains would add to the expense and to the engineering problem. If a line should be constructed in spite of these difficulties, it would complete the communication between Haifa and Beyrout on the Mediterranean Sea and Aqaba on the Red Sea, and would give Damascus an export outlet to the Red Sea. In view of these facts it is not improbable that the railway, which to-day can support only one train a week from Amman to Maan, might become a very profitable avenue for the country's trade.

It has further been authoritatively reported that plans are now under consideration for the construction of a new railway from Port Fuad to Baghdad, which would cross Transjordan from west to east, through El Arish, Beer-sheba, Hebron, Jerusalem, Amman, and Kaf, thence on to Rutbah Wells and Kerbela in Iraq. Funds for such a road are reported to be available, and, if an agreement is reached as to the route, construction should be begun in the spring of 1927.

THE BONDHOLDERS' REPORT.

The report of the Corporation of Foreign Bondholders for 1926, which has just been issued, deals extensively as usual with Near East conditions. With regard to the Turkish debt question, it is pointed out that the negotiations with the Turkish Government have been unsuccessful, and that the attitude taken up gives small encouragement to the belief that a prompt and genuine settlement is desired. We give the following extracts:—

Bulgaria.

In June, 1926, application was made to the League of Nations by the Government of Bulgaria for the sanction of a new loan, which was to be devoted to the humanitarian purpose of providing for the settlement of refugees. This application was favourably received, but it was indicated to the Bulgarian Government that inasmuch as the existing arrangement with the bondholders expired in April, 1927, it would be necessary, before the new loan could be issued, to arrive at a satisfactory agreement with the holders of pre-War Bonds.

M. Molloff, the Finance Minister of Bulgaria, thereupon came to London with the object of arriving at a settlement with the Bondholders. A conference was held in London, at which the delegates of the Committees representing the French and Dutch holders were present, and, after protracted negotiations, bases of arrangement, which the Council and the French and Dutch representatives were prepared to recommend their respective committees to accept, were drawn up. These, having been approved by the Minister, were embodied in a definite agreement, which was signed at Geneva on December 11, 1926. The arrangement was ratified by the Bulgarian Assembly on December 16.

The Council are of opinion that, all things considered, the settlement of the old debt is fair and reasonable, and contrasts favourably with the treatment accorded to the holders of Austrian and Hungarian pre-War Bonds.

Greece.

The total gross receipts in 1925 applicable to the service of the old Gold Loans amounted to 1,380,664,300 dr., against 1,075,659,620 dr. and £6,217 in 1924, and out of these sums the Monopolies and the stamp and tobacco duties from which the plus-values are derived yielded 129,129,498 dr. in 1925 and 110,604,206 dr. in 1924. [The amount in pounds given above consists of duties paid, at the choice of the importer, in sterling at the exchange on London.]

With the addition of (1) the portion of the revenue from the tobacco duties which is not applicable to the old Gold Loans (viz., 12,771,363 dr.); (2) the Customs receipts of the ports of Corfu, Patras, Laurium and Volo (viz., 140,066,859 dr.), which constitute an additional contingent security of the old Gold Loans, and those of the ports of Salonika and Kavala (viz., 293,536,150 dr.), on which the Five per Cent. Loan of 1914 has a first charge; and (3) the gross receipts of the revenues assigned to the Refugees Loan of 1924 (viz., 707,872,718 dr.), the total receipts in 1925 assigned to the service of the Greek Public Debt subject to the Control of the International Financial Commission were 2,534,911,391 dr.

Including (a) sums granted by the Greek Government of 4,000,000 dr. in consideration of the prejudicial effect of issues of paper, and of 416,929 dr.—the balance required to make up the full original interest on the loans of all the groups; (b) balances from the previous year, and (c) the interest saved on bonds redeemed from 1898 to 1925, the net amount available for increase of interest and sinking fund in 1926 was 20,424,813 francs, against 10,744,990 francs in the previous year. With this sum, as anticipated in the Council's last report, the full original interest was paid in 1926 on all the old Gold Loans, and the ordinary sinking funds on the loans were increased by 32 per cent. of the original interest in the case of the first and by 34 per cent. in those of the second and third groups.

In 1926 the gross receipts for the service of the old Gold Loans were 1,867,258,789 dr., and the proportion applicable to the plus values was 226,709,435 dr. With the additional receipts from the Monopolies and other sources, the total gross receipts in 1926 were 2,997,932,988 dr.

A dispute having arisen between the Government and the International Financial Commission as to the method of calculating the plus-values payable in 1927, and the former having demanded arbitration, coupons maturing on the loans concerned will, pending its result, be paid at the minimum rates, and any additions by way of plus-values decided by such arbitration will be added to subsequent coupons.

A satisfactory feature in the finances of Greece is the gradual extinction of the National Defence Bills which form the bulk of the floating debt, partly by consolidation and partly by repayment out of the proceeds of a special surtax.

Notwithstanding this favourable factor, however, the finances are still in a very embarrassed condition, and, in order to meet the most pressing needs, the Government has had recourse to such expedients as the forced loan from holders of notes, mentioned in the Council's last report, and the Swedish Loan.

Turkey.

In spite of the formal stipulations of the Decree of Mouharrem, the Turkish Government have continued to appropriate to their own uses the revenues ceded to the bondholders in 1881, and the Council of Administration is unable to carry out its duties in respect to the collection of the six revenues which the Turkish Government had solemnly and irrevocably pledged to their creditors at that time. The numerous protests of the Debt Council have received no attention, and the Treaty of Lausanne has remained a dead letter as far as the share of Turkey in the Ottoman Public Debt is concerned, no payments having been made, whilst even the reduced expenditure of the Administration has not been provided for.

The Council of Foreign Bondholders are further informed that the tobacco and spirit revenues, the property of the bondholders, have been repledged to meet certain fresh liabilities, amounting to £T200 millions, which are apparently of a more pressing nature than the desire to carry out previously existing obligations in an honourable manner.

The negotiations, commenced in July, 1925, broke down completely in May, 1926, owing to the unreasonable and entirely inadequate character of the Turkish proposals. The bondholders appealed for the support of the respective Governments, signatories of the Treaty of Lausanne, and the Turkish Government intimated, through the French Ministry of Foreign Affairs, that they were anxious to reopen negotiations. A meeting of the representatives of the French, British, and Italian holders took place in Paris on November 29 to determine what preliminary conditions should be laid down in order to render negotiations effective. At that meeting a unanimous resolution was passed stipulating the terms on which the bondholders' representatives would be able and willing to negotiate an arrangement, but, in spite of the very moderate character of the compromise suggested, no further progress has been made.

The Resolution reads as follows:—"The representatives of the bondholders having been informed by the French Ministry for Foreign Affairs that the Turkish Government desires to resume the negotiations regarding the service of that part of the Ottoman Public Debt for which it is liable, express the unanimous opinion that a reply should be given to this request for the resumption of the negotiations, interrupted in the month of May, 1926, owing to the refusal of the Turkish Government to accept the basis of the arrangement then formulated in writing by the representatives of the bondholders. The representatives of the bondholders, however, in order to ensure the successful issue of the negotiations, consider it necessary to lay down the following conditions:—1. The

Turkish Government will communicate in writing its counter proposals, which shall cover all the points referred to in the communication addressed to the Turkish Government by the representatives of the bondholders in May, 1926: amount of the annuity in £T gold, the maintenance of the right of option as to the currency of the contracts, the progressive increase of the annuity, the date of resumption of the service of the Debt, the application of the annuity to interest and sinking fund, the method governing arrears of interest and amortization, the method of settlement of the Treasury Bonds, etc., etc. 2. In the event of the Turkish Government offering to replace the ceded and assigned revenues by new guarantees (customs or monopolies, etc.), the Turkish Government will specify the new guarantees, which shall suffice, with a sufficient margin, for the payment of the annuities to be paid by Turkey. The Turkish Government will at the same time indicate the method of control and collection of these new revenues to the amount necessary to cover the total liability including all relative expenditure, the cost for which the Turkish Government is responsible, and the service of 'centralisation' of the contributive parts of the Ottoman Public Debt. 3. The Turkish Government will include in the Budget of 1927-8 the sum required for the execution of the agreement with the bondholders. 4. The Turkish Government will conclude an agreement with the Council of the Debt regarding the payment of general expenses already incurred and due to the Council, including extraordinary expenditure, such as: indemnities in connexion with the reduction of the staff, expenses arising from the reorganisation of the administration, etc., etc. 5. The Turkish Government will come to an agreement with the Council of the Debt respecting all modifications of existing stipulations affecting the rights of the Council, the conclusion of such agreement to be arrived at before such modifications are submitted to the bondholders.

"Finally, the representatives of the bondholders consider that the question of the Turkish Debt must be treated in its entirety, and that the isolated examination of one or other points only of the above conditions (such as, for example, the amount of the annuities) would have no other result but to delay the conclusion of an arrangement, which would be contrary to the common desire of the Government and of the bondholders."

The attitude of the Turkish negotiators gives little encouragement to the belief that they are sincerely animated with a desire to arrive at a prompt and genuine settlement, or that the Turkish Government have any intention to carry it out, when agreed to, at an early date.

The Turkish Government must understand that they have not only to make a paper settlement, but that they have to take immediate and effective measures to make payments under that settlement before they can hope successfully to approach international markets, and they must realise that even then it will need a long period of

regular payments before Turkey can regain her pre-War credit. In default of any arrangement, the bondholders are justified in maintaining that the Decree of Mourharrem remains in full force, and that the neglect of that solemn contract with the bondholders is a breach of good faith on the part of a debtor towards creditors who have already had to submit to sacrifices of very great importance in the past.

The Italian Government, on behalf of the territories detached from Turkey, and for which Italy is responsible, having offered to pay off the whole of their quota of capital and annuities partly in bonds at their nominal value and the balance in cash, the Council of the Debt decided to accept the offer. Negotiations with Syria and Palestine and with Iraq have not yet been concluded, and no definite proposals have been received from the other Detached States—including Greece, Bulgaria and Serbia—in spite of the express stipulations of the Treaty of Lausanne that payments are due from the date of ratification of that Treaty.

TRADE INDEMNITY COMPANY.

A satisfactory report is forthcoming from the Trade Indemnity Company for the year ended December 31 last. The amount transferred from the underwriting account to the profit and loss account is £12,583, while interest on investments amounts to £16,669, and with the balance brought forward of £5,540 the total is £34,799. After the deduction of income tax, bad debts, and commission there remains £29,552. It is proposed to place £10,000 to the general reserve and to pay a dividend of 5 per cent., leaving £7,052 to be carried forward.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, April 7). (For passenger sailing and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, and Calcutta (Birkenhead, April 2); s.s. Mahsud for Port Said, Colombo, and Rangoon (Birkenhead, April 14).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, April 6).

British India Line.—S.s. Dalgoma for Bombay and Karachi (London, April 9); s.s. Malda for Colombo, Madras, and Calcutta (London, April 9).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, April 9); A steamer for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu and Gruz and Ancona if inducement (Liverpool April 16, Swansea April 19).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 9).

P. and O. Line.—S.s. Razmak for Bombay (London, April 1); s.s. Nankin for Colombo, Madras, and Calcutta (London, April 2).

Prince Line.—S.s. Korean Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, April 7).

Ellerman and Papayanni Lines.—S.s. Mardinian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 2, Swansea April 2); s.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool April 2, Swansea April 5); s.s. City of Oxford for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool April 6); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 13); s.s. Lesbian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 16); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 27). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CASTALIA ...	April 13	*SCINDIA ...	May 13
*ELYSIA ...	May 3	*CIRCASSIA ...	June 1

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. California, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool Oct. 26; Marseilles Nov. 1.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 29.

It seems to be too much to hope that we shall get any prolonged period in which the investment markets are free to go ahead without disturbance from outside factors. Early in 1926 the only cloud in the sky was the threatened coal trouble. That particular cloud burst with a vengeance, and although investors had reason to be relieved at the way in which markets emerged from the strike period, the year was one of anxiety and restricted business. With the coal trouble over the markets might have expected a period of calm, in which intrinsic considerations would have full opportunity of exerting their influence. But it was not to be. In addition to the inevitable anxiety about the Budget, markets have had to contend with a growing menace in China and a new threat to European tranquillity arising in the Balkans; while, over and above this, the expectation of a lower Bank Rate has been disappointed. Generally, markets are, therefore, listless and irregular. Big operations are awaiting more settled conditions. Speculators are discouraged, and are coming to the conclusion that there is more chance of making money by "staggering" new issues than by dealing in existing securities. To the experienced observer there appears to be little ground for thinking that markets generally will regain buoyancy at any rate until after Easter. By that time Mr. Churchill's decision not to increase the income-tax—which we believe to be a most probable decision—may act as a stimulus, always supposing that events in China or the Balkans or elsewhere do not obtrude themselves too violently.

The Budget and Allied Debts.

Indeed the Budget prospect becomes a little less alarming as the date approaches. Alarms and excursions take place here and there. For instance tobacco shares and gramophone shares have in turn shown signs of fear that their industries are to be singled out for the Chancellor's unwelcome attention. But the general position has improved. Revenue has been coming in very well in the last week or two and the deficit is steadily narrowing. A deficit at March 31, and one of substantial dimensions, remains, of course, a certainty. But it will not be quite as large as was at one time feared. Also a slightly better complexion is put upon the outlook for next year's revenue

both by the steady recovery of trade and by Mr. Churchill's statement that he will get over £22 millions next year from German reparations and Allied War debt payments. The Chancellor gave this figure in the House of Commons in the course of a statement in answer to a recent speech by Mr. Mellon, Secretary of the United States Treasury. The latter was reported by the cables to have said that Britain was receiving more from her War debtors than she had to pay to America under the Anglo-American debt settlement. It is difficult to believe that Mr. Mellon really said anything so clearly erroneous. We shall be £11 millions short this year, and shall not be in sight of the position suggested by Mr. Mellon for some years to come. In any case Britain has declared that she will not under any circumstances exact more from her Continental War-debtors than is needed to cover the British debt payment to America.

Trade Recovery and Home Rails.

While markets mark time, two important questions are still being much canvassed:—"Has a real lasting trade recovery set in? Or does the present progress merely represent overtaking the arrears of the coal strike period?" A general review of industry does not as yet suggest any definite answer. To date, however, progress is quite satisfactory; and this leading fact is partially responsible for the comparative steadiness of Home Railway stocks in spite of the dismal showing of the accounts. Another fact in favour of Home Rails is that on February 1 of this year goods freight rates were increased. Already this increase is showing itself in the traffic returns. Indeed on the traffic figures a rise of five per cent. or so in goods receipts over the whole year would seem to be a probability. Against this, passenger receipts are still well below those of last year; while the restoration of the guaranteed week for railway employees will add somewhat to the expenditure of the companies. Well placed judges, however, are beginning to envisage the possibilities of the four great railway system earning their full standard net revenue this year (or at any rate next year), for the first time since the big railway amalgamations. If such prophecies are justified, then the quotations of railway ordinary stocks will almost certainly tend to appreciate during the next two years. On the other hand, lest investors should on this account veer towards excessive optimism, it must be remembered that the railway companies' reserves have been very sadly depleted in recent years, and that, as more prosperous conditions return, the directors are likely to devote a portion of their revenues to re-establishing their reserve resources.

Public Utility Preference Stocks.

Last week we referred to the disfavour with which some investors regard preference shares. This has its origin, as we explained, in the fact that in a number of recent capital re-organisations preference shareholders have been called upon to make sacrifices with the ordinary shareholders. There may be something to be said for this disfavour, so long as it is confined to the preference shares of industrial and similar concerns, whose earnings are liable to considerable fluctuations. But it should not extend to the whole field of preference shares. In the case of public utility undertakings, for instance, revenue is generally steady, if not progressive. These preference shares are, therefore, well worth consideration, the more so since they give a fairly good return.

The 7 per cent. cumulative preference shares of the Newcastle-upon-Tyne Electric Supply Company return £5 18s. per cent. The Midland Counties Electricity Company's 7 per cent. cumulative preference shares give a yield of £5 13s. per cent. The 7 per cent. Cumulative preference shares of the Midland Electric Corporation return £5 12s. per cent. The Newcastle-upon-Tyne and Gateshead Gas Company's 4 per cent. preference shares yield £5 14s. per cent. The 5 per cent. preference shares of the South Staffordshire Waterworks return £5 10s. per cent.

THE PRODUCTION OF SILK COCOONS IN BULGARIA IN 1926.

(By Our Sofia Correspondent.)

The total production amounted to 1,863,160 kilogrammes as compared with 1,700,000 in 1925. It is the highest total which has been reached since before the War, and it can be said that the pre-War production in this industry has now been achieved. It is necessary not to forget, however, that Bulgaria includes in her present limits regions in which the breeding of silkworms is highly developed. The districts of Svilengrad (formerly Mustapha-Pasha) and Ortakeuy, annexed in 1913 after the first Balkan War produced about 300,000 kgs. of cocoons per annum.

The increase in the production is specially in Northern Bulgaria, where sericulture has for a long time been neglected. In many of the districts, as for instance, Tétéven, Péleven, Lovetch, Elena, and Vratza the production of cocoons is double that of the previous year. In the region of Stara-Zagora there was however, a reduction.

The following statistics show the production of cocoons and of silkworm eggs in the principal producing districts where the quantities of cocoons obtained has exceeded 50,000 kgs.:

District.	Silkworm Eggs (Ounces.)	Production of cocoons (Kgs.)
Svilengrad	5,205	288,890
Harmarly	3,427	182,690
Ortakeuy	3,344	166,150
Plovdiv	2,881	131,660
Vratza	2,745	127,810
Stanimaka	1,467	75,250
Haskovo	1,205	58,880

Four-fifths of this production has been taken by the Agricultural Bank, various co-operative societies, and by individuals; the remainder has been absorbed by local spinning mills or has been utilised for the needs of the producers themselves.

Although certain districts such as Plovdiv, Stara Zagora, Pléven, and Yambol have a notable production it is all the same poor in comparison to the area and the population of these districts. Owing to the sustained interest in the sericulture and the measures taken by the Ministry of Agriculture for the development and improvement of this industry it is possible to anticipate a fresh increase in production which this year should exceed two million kgs.

Egypt's imports during February totalled £E3,277,985, as against £E4,162,226 last year, and exports £E3,465,058, as against £E4,897,117.

The annual report of the London Chamber of Commerce which has just been published, shows that, notwithstanding the prolonged coal strike, more than 1,000 new members joined the Chamber in 1926. The outstanding feature in this striking increase is the preponderance of manufacturers. A chart which is included in the annual report shows that the percentage of merchants and manufacturers is now almost equal. It is also interesting to note that practically all the banks, insurance companies, and railways are now members of the Chamber. The Chamber now has 70 Trade Sections, representing nearly every branch of trade and industry in the country. The council of the Chamber now represents more than 60,000 business men and firms.

CHESS.

By "CARO-KANN."

The University match was played on March 24 at the City of London Chess Club, and, as I forecasted two weeks ago, resulted in a win for Oxford, the score being 4-3. In the lean times through which Oxford is now passing athletically—last year not a single full-Blue event fell to the senior university—the win of a minor event is perhaps small consolation, but in the record of the chess match since 1904 Oxford has certainly every cause for gratification, for with, I think, three exceptions since that year every match has been either won or drawn with the result that Oxford now stands only one match behind in the total of 51 matches.

Speaking generally the play in this year's match was better than anything that has been seen since the War. The game at the first board between Mr. K. H. Bancroft, of Pembroke College, Oxford and Mr. P. S. Milner-Barry, of Trinity College, Cambridge, was marked by an admirable combination by the Oxford player

White, Mr. Bancroft; Black Mr. Milner-Barry. 1. P-Q 4; 2. P-Q B 4; 3. Kt-K B 3; 4. Kt-B 3; 5. P-K 3; 6. B-Q 3; 7. K PxP; 8. BxB P; 9. B-Q 3; 10. Castles; 11. Q-K 2; 12. B-K Kt 5; 13. Q R-Q; 14. B-Kt; 15. B-B; 16. Kt-K5; 17. PxKt; 18. R-Q 3; 19. R-Kt 3; 20. R-K; 21. Q-K 3; 22. QxR P; 23. BxP ch; 24. R-Kt 8 ch; 25. RxB ch (3); 26. RxP ch; 27. RxQ; 28. P-Q B 4 (4); 29. Kt-B 3; 30. B-Q 3; 31. Kt-K 5; 32. KtxB ch; 33. B-K B; 34. P-Kt 3; 35. P-R 4; 36. R-B Kt-R 6; 37. B-K 3; 38. P-B 5; 39. B-Kt 2; 40. K-R 2; 41. B-B 4 ch; 42. B-K 3; 43. B-B 4 ch; 44. B-K 3. Drawn by adjudication.

Position after White's 22nd move:—QxR P.

44. B-K 3. Drawn by adjudication. (1) Five games in the match began with the Queen's Pawn Opening. (2) This gave White his opportunity. 14. . . . Kt-Q 2 followed by R-K would have been a safe line to adopt. (3) BxB would not be quite so good, though the extra pawn plus the two bishops should be good enough to win. There would follow 25. . . . QxKt; 26. B-Q 6 (dis ch); K-Q 2; 27. RxR (ch); KxR; 28. BxQ; RxP; 29. P-B 4; (4) A mistake. The proper continuation was B-Q 2; then presumably 28. . . . K-Kt; 29. R-B, winning by the gradual advance of the King's side pawns.

The end game I gave last week is a draw. The play goes as follows: 1. . . . R-K 4 (ch); 2. K-Q 3; R-K 8; 3. R-Q (!), RxR; 4. KxB and draws. 3. KxB also draws equally well.

Company Meetings.

THE EASTERN BANK.

Conditions in India and Iraq.

Mr. J. S. Haskell's Speech.

The seventeenth annual general meeting of the shareholders of the Eastern Bank, Limited, was held on March 23 at the offices of the bank, 2 and 3, Crosby Square, E.C. Mr. J. S. Haskell (the chairman) presided.

The Secretary (Mr. R. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen,—I have now the pleasure to present to you the statement of our affairs for the year 1926, and I think you will agree with me that the results shown may be considered as satisfactory, having regard to the difficult conditions which prevailed during the period covered by the accounts.

When I last addressed you I alluded to the difficulties experienced in trade and banking generally during the year then under review. There has been no alleviation during 1926, and I do not recall a year requiring more unceasing vigilance since the slump of 1920-21.

I will not dwell upon the disastrous general strike and the prolonged coal strike, which paralysed trade all round and seriously affected our exports to all parts of the world, but I will confine myself principally to India, where we are chiefly concerned.

The prosperity of that country, as is well known, depends entirely on the monsoon, which started somewhat later than usual, but, gathering strength, caused copious rains to fall. These should have assured bountiful harvests, but unfortunately the autumn rains proved very scanty and caused the partial failure of the spring crops. The wheat crop has not yet been moved, but prices have been such that a large quantity has had to be imported from Australia.

The yield of cotton was about a million bales below that of the previous season, and, as arrivals of the commodity at the ports were exceptionally slow, the seasonal activity was retarded. In this case the shortage has been greatly counteracted by the huge American crop of over 18,000,000 bales, a circumstance which helped to depress values and led to cessation of trading till prices reached a low level, middling cotton having at one time touched 6½d. to 6¾d. a lb., being about pre-War prices. The local mill industry in Bombay has experienced another year of extreme depression, to which the slump in cotton largely contributed. On the other hand, in Bengal the jute crop was abnormally large, amounting to 11,000,000 bales, and, following a very small yield in the 1925 season, with consequent high prices, caused buyers to hold back until a lower basis had been reached. Values have fallen from about £60 to £30 a ton.

The falling-off in exports made money less usable in India, the Imperial Bank's rate of discount having been reduced in June to 4 per cent., at which level it remained until the end of the year, while day-to-day money was offering at about ½ to 1 per cent., a rate quite unprecedented, particularly during the last quarter of the year. Since the turn of the present year the Imperial Bank of India has at short intervals raised the rate of discount from 4 to 5, 6, and 7 per cent., due to the contraction of the currency by the Government and to a greater trade demand for money.

India's Trade Figures.

A few figures of the import and export trades of India as compared with the previous year will not be without interest:—Exports: £247,000,000, against £305,000,000, a decrease of £58,000,000. Imports: £175,000,000, against £160,000,000, an increase of £15,000,000. Gold Imports: £17,500,000, against £46,000,000. Silver Imports: £14,000,000, against £15,000,000. Taking all the imports and exports together—that is, including specie—there is left a balance of over £40,000,000 in favour of India against £76,000,000 last year, but notwithstanding this still large trade balance the Government of India has not been able to effect any substantial purchases of sterling on London and during the 11 months to the end of February, 1927, only £1,195,000 has been remitted against £46,317,000 for the corresponding period of the year before.

To meet their home requirements and to cover the sale of £1,425,000, which had to be effected in order to prevent the rupee falling below 1s. 5½d., they have had to transfer £23,425,000 from the paper currency reserve in England. By this means the Government also sought to deflate the currency and so cause a demand for rupees, but owing to the battle of the rupee as between 1s. 4d. and 1s. 6d. rates much uncertainty prevailed and legitimate exchange operations have been hampered. Unless some change for the better takes place in the situation the Government's requirements of sterling—viz., £35,000,000 budgeted for the year 1927-8—will be very difficult of realisation.

In August last the Report of the Currency Commission was published and its recommendations are:—The stabilisation of the rupee at 1s. 6d., a gold bullion standard and the creation of a new Central Reserve Bank to control the currency and banking reserves. These recommendations are sound in principle, to which I take no excep-

tion, but I am compelled to direct attention to certain aspects of the scheme which bear very hardly on other banks. The banks are to be called upon to place 10 per cent. of their current accounts and 5 per cent. of their fixed deposits free of interest with the Reserve Bank, and this great institution is to be furnished with a certain amount of working capital thus provided by the banks, with which in fact it will be in competition unless under stringent safeguards. Again, the Imperial Bank of India is also to be highly favoured by the Government with advances from the Reserve Bank of large sums, partly without and partly with nominal interest, very generous treatment indeed, and necessarily to the disadvantage of other banks.

The exchange banks in my humble opinion deserve greater consideration from the Government. After all they have carried the financial burdens of the export and import trade of India for many years with great efficiency and to the satisfaction of the mercantile and trading community. Perhaps it is not too late to ask the Government of India before passing these measures into law to reconsider the situation very carefully in order that no injustice may be done, and if a deposit is found to be necessary I suggest it should not exceed 5 per cent. and 1½ per cent. of current accounts and fixed deposits respectively. Further, the exchange operations of the Reserve Bank and the Imperial Bank of India should be more clearly defined or restricted, having regard to the advantageous position to be accorded to these institutions. It is also of great importance that the Reserve Bank's business should be strictly confined to acting as a banker's bank and they should not be allowed to open current accounts for other than bankers, or discount bills, or make advances to the general public.

It is reasonable to assume that legislation will be shortly completed by which the rupee will be fixed at 1s. 6d. and an important disturbing factor will thus have been eliminated. We may now hope that the Government will make regulations with regard to their sterling purchases which will allow of tenders in London or India being invited under specified conditions and thus do away with the uncertainty caused by the present procedure, under which the Government may buy sterling at any price over 1s. 5½d. without previous notice. I need not lay more stress on this point as it must be obvious that the present method constitutes a great handicap to the trade and commerce of the country.

Situation in Iraq.

In Iraq the trade situation has been very disappointing. There were hopeful expectations that the good rainfall at the beginning of the year would make for improved conditions after the shortage of the preceding year, but unfortunately during the spring the country round Baghdad was inundated by floods which caused considerable damage to goods in warehouses, resulting in heavy losses and stagnation of business for a considerable portion of the year.

Imports of Manchester goods have fallen from £3,300,000 to £1,538,000, a material reduction largely due to the continual drop in cotton prices. Owing to the heavy rains, however, the country has been fortunate in having had a good grain crop, allowing a large surplus for export. There has also been a good export of dates, but unfortunately far in excess of the requirements of the consuming markets, and the results have been far from profitable to shippers. Operations for the production of oil are now being actively prosecuted, and the prospect, I understand, is very promising, which is a good augury for the future prosperity of the country.

In the political sphere the British and Iraq Governments are to be congratulated on having concluded a Treaty settling the question of the northern frontier with Turkey, thus definitely determining the problem of Mosul, which will tend to a policy of progress and development of the country's resources.

It is reasonable to hope that in the current year in India, Iraq, and elsewhere trade will show some revival. In this country there are several welcome signs of increased activity, which should in the natural

course of events influence oversea markets and if India is favoured with a good monsoon, we may look forward with more confidence to the future.

Our profit and loss account, including the balance brought forward, shows a net profit of £158,440 14s. 6d. We recommend for your sanction a final dividend of 5 per cent., less tax, which with the 4 per cent. interim paid in October last will absorb £90,000; to carry to reserve £20,000 and to the building account £10,000; leaving £38,440 14s. 6d. to be carried forward, an increase of £538 1s. 10d. on the amount brought in.

The figures in the balance-sheet show a satisfactory increase over last year, but there is nothing of outstanding importance to which it is necessary to draw your attention.

Once more it is my pleasing duty to record the appreciation of the board for the unremitting zeal and devoted services of the managers and staff, both here and abroad, and particularly to Mr. Sutton, at the head office, and Mr. Tucker, the manager in Bombay and inspector of branches, whom I am glad to see with us here to-day on a well-deserved holiday. (Cheers.)

Sir James Leigh-Wood, K.B.E., C.B., C.M.G. (deputy chairman), seconded the resolution and it was carried unanimously.

The Chairman next moved the re-election of the retiring directors, Mr. G. Bromley-Martin and Mr. Emile Francqui.

Sir Percy W. Newson, Bt., seconded the resolution and it was unanimously approved.

The auditors (Messrs. Turquand, Youngs and Co. and Messrs. Lowe, Bingham and Matthews) were reappointed.

Mr. J. Nissim moved a cordial vote of thanks to the board and to the staff. He thought he ought to commence by saying how happy they all were to see their chairman restored to health. (Cheers.) They offered him their united good wishes that he might long continue to enjoy it. (Hear, hear.) They were indebted to him for an admirable survey of events in the two countries in which they were chiefly interested. The balance-sheet disclosed unmistakable evidence of expansion in all the important items. The net profit was well up to the standard of the last five years and that was a matter for great satisfaction, considering the times as depicted to them by the chairman.

He would like to be permitted to mention just two names out of those of the many who had contributed, and were contributing, to the strength of the bank. They were conscious of their very special obligations to the worthy founder, Mr. Haskell, and to the London manager from the inception of the bank, Mr. Sutton, whose zeal was an inspiration to their colleagues. (Hear, hear.) He therefore had

great pleasure in proposing a cordial vote of thanks to the chairman, the directors, the managers, and the staff. (Cheers.)

Colonel G. R. C. Westropp, C.B., seconded the vote, which was unanimously accorded.

The Chairman briefly replied to the compliment and the proceedings then terminated.

NATIONAL BANK OF EGYPT.

Egypt's Economic Position.

The twenty-seventh annual general meeting of the shareholders in the National Bank of Egypt was held on March 23, at the head office of the bank, in Cairo.

Sir Bertram Hornsby, C.B.E. (the Governor), presided.

The Governor said:—Gentlemen,—We have pleasure in presenting to you a balance-sheet and profit and loss account which we feel you will regard as satisfactory.

Our gross profits are £1,011,789, from which have to be deducted £372,071 for expenses, leaving a net balance of £639,718. We propose to you the distribution of a dividend at the rate of 17 per cent., requiring £510,000, and the allocation of £125,000 to the special reserve, leaving a balance of £4,718 to be added to the carry forward.

Before turning your attention to the balance-sheet, I must remind you that on December 1 last we took over the business of the Egyptian Agencies of Lloyds Bank, and the assets and liabilities of these agencies are therefore included in our figures. I should mention that for reasons of practical convenience we have not taken into account for 1926 the earnings and charges for the month of December of the ex-Lloyds Bank Agencies, which will be included in the 1927 accounts. On the other hand, we have written off, out of profits, all the charges connected with the transfer.

Our arrangement with Lloyds Bank involved the purchase of the share capital of the Commercial Buildings Company, which owned the banking premises of Lloyds Bank in Alexandria and Cairo, as also ginning factories at Benha and Wasta. The transaction was not completed at December 31, and consequently does not appear in the accounts.

Proposed Head Office Extension.

I mentioned last year that we had in view an extension of our head

Wherever Tyres are used—

the name of

DUNLOP

stands for high quality and long mileage

**SPECIFY

DUNLOP — THE STANDARD by which ALL TYRES are JUDGED

office premises. It was not possible to carry out the project during 1926, but we expect to be able to do so during the current year. Owing to the large influx of securities, to which I have several times alluded in the past, our safe accommodation has been stretched to its utmost limits, and it is principally to provide further strong rooms that this extension is required.

Turning now to the balance-sheet, the inclusion of the figures of Lloyds Bank branches makes comparison with last year difficult. Amongst the items which are not affected by this consideration you will notice that the amount to the credit of the Egyptian Government is some £6,500,000 less than it was a year ago, whilst on the other side of the account you will find a decrease of about £2,000,000 in Government Securities, £1,000,000 in Bankers' Accounts, £3,000,000 in Bills of Exchange, and £1,000,000 in Money at Call. On the other hand, largely, but not entirely, by reason of the inclusion of Lloyds Bank figures, our total advances are now £9,820,000 against £6,420,000, whilst deposits are nearly £16,000,000 against rather more than £12,500,000.

State of Cotton Trade.

The large decrease in Bills of Exchange is an indication of the state of the cotton trade. The cotton crop of 1926-27, estimated at 7,500,000 kantars, whilst not so large as that of 1925-26, is nevertheless considerably above the average of recent years. At the same time America also has produced two record crops, with the result that for the moment there is a plethora of cotton. This fact, combined with a poor demand from consuming countries, has brought about a very marked reduction in prices which has caused some embarrassment to growers, especially in Egypt, where practically the whole economic life of the people depends on cotton. Some alleviation to the state of the market was caused by the action of the Government in making advances to small cultivators on the security of their cotton, which has had the effect of withholding part of the crop from a weak market. But sooner or later this cotton must be sold, and unless the needs of the consumer increase, it seems doubtful whether better prices can prevail until existing stocks have been largely exhausted.

In the meantime it is gratifying to note that the Government is taking energetic measures with a view to maintaining and improving those qualities of our cotton to which their reputation is due. We may also hope that the Cotton Congress, held here in January last will prove of permanent benefit both to cultivators and spinners.

Egypt's Trade Position.

The following statement of the imports and exports for the last five years will, I think, prove of special interest by reason of the fact that it no longer includes the two very abnormal seasons of 1919-20 and 1920-21, and we are therefore able to get a better view of the country's trade position during a normal five-year period. It will be seen that in the first four years there was each year an excess of exports totalling over the period nearly £42,000,000; for the last year the exports have fallen short of the imports by roughly £3,000,000, and the Custom Statistics for the last four months of 1926 indicate that the results of the current season will be even more unfavourable. Despite these set-backs, I am still of the opinion that, thanks to the prosperity of the last few years, the economic situation of Egypt compares favourably with that of most other countries of the world.

Sept. 1. to Aug. 31.	Imports.	Exports (including re-exports).
1921-1922	£E46,006,529	£E50,185,140
1922-1923	„ 44,453,116	„ 53,501,788
1923-1924	„ 47,440,590	„ 64,109,696
1924-1925	„ 56,257,511	„ 67,952,808
1925-1926	„ 55,973,075	„ 52,855,630

The movement of the Issue of Bank Notes is naturally closely related to the commercial situation. The amount of the Issue at the beginning of 1926, £E35,300,000, was the maximum of the year. The minimum of £E25,300,000 was reached at the end of August; from that time the usual seasonal requirements brought it up to £E30,700,000, from which point it fell to £E29,500,000 at the end of the year.

The following statement shows the maximum and minimum Issue of each of the last five years:—

	Maximum	Minimum
1922	£E37,300,000	£E26,300,000
1923	„ 38,700,000	„ 24,000,000
1924	„ 42,400,000	„ 26,900,000
1925	„ 41,900,000	„ 28,700,000
1926	„ 35,300,000	„ 25,300,000

Trade of the Sudan.

From the table of imports and exports for the Sudan which follows, it will be seen that exports are now roughly equal to imports, the increase in the former being almost entirely due to the export, for the first time on any considerable scale, of Gezira cotton. The exports of rain-grown cotton have been small, owing to a deficiency of rainfall. Owing to the same cause the dura crop was not sufficient for the country's needs and the deficiency had to be made up by imports.

It would be a mistake to expect any very rapid extension of trade in the Sudan. The country is large, but the population is small, and its needs are in general still primitive. Progress to be healthy can only be gradual.

	Imports.	Exports.
1922	£E4,252,890	£E2,298,770
1923	„ 4,669,004	„ 2,758,425
1924	„ 5,474,910	„ 3,830,171
1925	„ 5,437,727	„ 4,168,364
1926	„ 5,574,401	„ 5,190,505

In the course of the year we have lost the services of H.E. Adly Pasha Yeghen, who in the month of May was called on to assume the position of Prime Minister, and was consequently obliged to resign his seat on our board. We do not doubt that you will join with us in wishing every possible success to H.E. Adly Pasha in the accomplishment of the important task he has undertaken.

We have had the pleasure in inviting our old colleague H.E. Adly Ziwer Pasha to resume the place which he vacated in 1924, and we submit his election for your confirmation.

The directors retiring this year are Mr. Leon Suares and Lord Cullen of Ashbourne, who offer themselves for re-election.

The board desire to thank the sub-governors, the managers, and the staff for the services they have rendered during the year.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

The report for the year ended December 31 states that the gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for doubtful debts, amounts to £1,011,790. After deducting from this sum: for directors' fees £12,950, for current expenses £359,122—£372,072, there remains £639,718. In conformity with article 49 of the bank's statutes a dividend of 4 per cent. is payable on the share capital, £120,000; after this distribution there remains £519,718. Adding to this the balance brought forward from last year, £201,354, the amount available is £721,073. The directors consider it prudent to allocate to special reserve for contingencies a sum of £125,000; which leaves £596,073. From this amount the directors recommend the payment of an additional dividend of 13 per cent. on the share capital which will absorb £390,000; and to carry forward the balance of £206,073. The total dividend for the year will thus be at the rate of 17 per cent., equivalent to £1 14s. per share. An interim dividend of 8s. having been paid on September 1, 1926, there remains to be distributed the balance of £1 6s. per share.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson, in their report for the week ended March 23, state:—

Egyptian Futures.—Sakel Contract.—We have had a rather uninteresting week in this department, only minor operations have been recorded, and in the absence of any factors of importance, price movements generally have been restricted to daily fluctuations of a few points.

The publication of the United States Bureau report on Monday was the signal of a sharp advance in the American markets, and under this influence our contract improved some 15 points or so without much real support. Since this, prices have again reverted to their former level and the general tendency of the market can be described as dull. There has been no change in the trade situation since we last wrote; spinners appear to be digesting some of their earlier heavy purchases, and, in the meantime, whilst there is certainly business about, the inclination is to adopt a very cautious attitude, and it would appear as if only steady or gradually advancing markets would cause a resumption of sufficient activity to influence values in any marked degree.

In face of the rather poor outside demand, the Alexandria market shows a commendable amount of steadiness. The Sakel stock, however, must be beginning to weigh heavily, and to our minds the critical period for holders will be in the next few months, as everything depends just to what extent the coming Sudan Sakel crop will monopolise the offtake during that period.

With regard to the differences between the local positions, there has been very little alteration, new crops hardening slightly in comparison to the near months. We hear from a well-informed quarter that a considerable improvement in the quality of the crop at present being planted is confidently expected, as a more careful seed selection has been exercised, and the Government control of planting seed in general has helped considerably to re-establish the purity of Sakel.

We cannot say that we see anything in the situation to cause any material alteration in values for the time being. Certainly, there is not sufficient trade support at the moment to warrant any appreciation; on the other hand, as soon as we approach the 13d. level, contracts become scarce, and the market begins to show resistance to any further decline.

Upper Contract.—Only a moderate amount of business has been put through in this contract during the past week, and price movements have corresponded fairly closely to the fluctuations witnessed in the American markets. Trade support has fallen off from even the reduced volume reported by us in our last report, but in face of this the market still shows a fairly steady tone. One thing in favour of Upper Egyptian this season is the scarcity that is becoming more and more apparent of competitive outsiders; for instance, at the moment there are practically no East Africans offering in the market here, and the prices demanded for shipments at sea are considerably higher than the ruling Upper basis. In addition to this, there are some detrimental rumours in circulation regarding the Peruvian crops; it is reported that these will be considerably reduced from last year's total. The statistical position cannot be termed heavy, and on this account we think that a resumption of trade activity would have an immediate effect on values.

Egyptian Spot.—Spot conditions have ruled on the quiet side during the past week. During the first day or two, the effect of last week's decline was still in evidence, and although a slight tendency to fix cotton was noticeable, the movement was not a definite one and sentiment appeared to be very mixed. Then came the U.S. Ginners' report, published last Monday; which created a temporary sensation and thoroughly upset all markets for the time being. As we write, the effect of this report is subsiding and the necessary readjustments

are being made. The main feature, as far as we are concerned, is that the volume of trade at the Manchester end does not appear to have received the stimulus that might have been expected. Business had dropped to moderate proportions before the issue of the report and it remains moderate now, three days afterwards; indeed, for Egyptian, it has shown a definite falling off.

Prices on the whole have remained very steady, particularly for Sakel. The daily inquiry has been only moderate to fair, but Sakel has occupied a larger percentage of it than usual, 12½d. to 13½d., and 14d. to 14½d. proving the most popular ranges. Uppers, except for the orders for low grade cotton (and these have been fewer than has recently been the case), have been rather quieter and the tendency has been for prices to ease slightly. Pilon at from 10d. to 10½d. has been in moderate request, and White cotton (Egyptian) has met with an isolated inquiry here and there. Sudan cotton has continued in fair request, particularly the American seed variety.

C.i.f. business has been very quiet. Forwardings to spinners for the week ending the 18th inst. were returned as 8,651 bales Egyptian and 1,568 bales Sudan. Estimated sales, 900 bales Egyptian and 1,800 Sudan. Quotations of Sakel are unchanged on the week, whilst those of Uppers have been reduced 15 points. F.G.F. Sakel to-day, 13.35 d. F.G.F. Upper to-day, 10.50d.

A distinctive cruise of some 22,600 miles will be undertaken by the Canadian Pacific liner *Empress of France*, which will leave Southampton on January 7, 1928, for the West Indies, South America, South and East Africa, Egypt and the Mediterranean, arriving back at Southampton on April 25. Fifty-nine days will be spent afloat and 51 ashore. The cruise, which is under Canadian Pacific management throughout, includes the reservation of motor cars, special trains, leading hotels, guides, interpreters, dragomans, etc. Calls will be made at all the principal places of interest *en route*—including Tristan da Cunha, the lonely island of the South Atlantic Ocean. Full particulars, including the itinerary of the cruise, may be obtained from the Canadian Pacific Railway, 62/65, Charing Cross, London, S.W.1.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Railway Carriages.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of bogie III class steel carriages, 10 with brake compartments and 10 or 20 without brake compartments. April 28.

Weighing Machines and Balances.—The Physical Department, P. W. M., Cairo, invites tenders for the supply of heavy platform weighing machines and balances. May 4.

Plant and Material for Water Installation.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply only of plant and material required for a pure water installation at Malakal for a daily capacity of 20,000 gallons. The contract will be in the following five sections, and any contractor may submit tenders for one or more of the sections: (a) water tower and tank; (b) pump and prime mover; (c) Paterson's Filter, etc.; (d) settling and clear water storage tank; (e) piping and fittings. May 26.

Liquid Asphalt.—The Tanzim Department of the Egyptian Ministry of Public Works invites tenders for the supply of 1,275 tons of liquid asphalt (Bitumen). May 14. (D.O.T.)

SUDAN

A PERFECT WINTER RESORT

KHARTOUM, a modern town at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes. The Grand Hotel is under the management of the Sudan Government Railways and Steamers.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG-GAME SHOOTING.

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

Express Steamer and Dining and Sleeping Car Service between Cairo and Khartoum.

Notes of the Week.

Italy and Yugoslavia.

A good opportunity for furthering the cause of permanent peace in the Balkans is, it is to be feared, being allowed to slip away. If immediate action had been taken when the Italian Government charged the Yugoslav Government with carrying out military preparations for an invasion of Albania and announced its own intention to protect the latter country, the good or bad faith of the two Governments in a crucial matter might have been established. It is important for the peace of the Balkans that it should be known whether Italy without adequate cause can accuse Yugoslavia of designs on the territorial integrity and the independence of Albania, in the hope of making those designs a pretext for her own encroachment upon Albanian independence; it is equally important that it should be known whether Yugoslavia is capable of using as a pretext for establishing her own hold on Albania her fear that Italy is seeking to do the same. As things are, the answers to these queries will be determined entirely by the prejudices of those giving them; the two countries will have been brought no nearer to an understanding, but will each have one more bad mark up against the other. The proposal for an international inquiry would seem to have been abandoned, and Europe is to have its conscience soothed by an invitation to Italy and Yugoslavia to discuss between themselves the points at issue. The suggestion is, of course, puerile, in the face of treaties between the two countries that are either unratified or a dead letter. Until the pressure of the public opinion of Europe is brought to bear more effectually on one or other of the Adriatic rivals the peace of the Balkans is likely to be subjected to these sudden alarms.

The Albanian Question.

The tension between Italy and Yugoslavia turns on the situation in Albania. It is unlikely that the dictatorship

of Ahmed Bey Zogu will be exempt from the laws that govern similar régimes. Even if his authority be not challenged during his lifetime, the question of a successor may well provoke civil war in the country. Attempts to challenge his authority, however, appear to follow one another frequently, and Yugoslavia affects to see in these attempts an ultimate pretext for Italian interference in the affairs of Albania. Unfortunately for the Yugoslav case, these attempts are prepared, in whole or in part, on Yugoslav territory, and it is not surprising in these circumstances that the Belgrade Government is accused of having a hand in them. In the present instance some plausibility was lent to the charge by certain military movements in the frontier districts, which were at once interpreted as preparations for war in Albania. That the Italian Government should show no more discrimination in dealing with such matters than the worst scaremonger in the Balkans is one of the disadvantages from which Europe has to suffer and offers an additional reason why an attempt should be made to place the peace of the Balkans on a more reliable basis than the whim of Italy or the fears of Yugoslavia. As the League of Nations shows no inclination to act, the remedy lies in the Balkans themselves. When the different States are satisfied that they can regard one another as partners in a joint concern, and not as rivals, they can deal successfully with outside interference and can afford to ignore domestic upheavals in Albania. The present crisis has at least obtained a semi-official intimation from Italy that the wording of the first clause in the Tirana Treaty, by which Italy and Albania recognise that "any disturbance directed against the political, juridical and territorial *status quo* of Albania is opposed to their reciprocal political interest," does not commit Italy to maintain Ahmed Bey Zogu as Dictator for ever. It should be possible for the Italian Government to reassure Yugoslavia that it is concerned primarily with the economic development of Albania, if this is the case.

The Italian Consul in Jerusalem.

For those who study the Parliamentary reports there has recently been some excellent reading, particularly in regard to two self-constituted warders of the Zionist cause, Colonel Josiah Wedgwood and Commander Kenworthy. No Jews could have been more zealous than these two members of the Labour Party concerning the alleged inactivity of the British Government in making provision for the best interests of the immigrants into Palestine. But they do not always make the bell ring in token of the moral defeat of the Government. Last week an episode typical of these encounters occurred between Sir Austen Chamberlain and Colonel Wedgwood. As is well known, Zionists in general have expressed apprehension of the appointment to Jerusalem, as Italian Consul-General, of Signor Orazio Pedrassi, who has on occasion shown himself possessed of anti-Zionist views. Colonel Wedgwood wished to know whether His Majesty's Government had assented to this appointment. The Secretary for Foreign Affairs replied in the affirmative; and added: "I think I am entitled to assume that the Italian Government would not appoint as Consul-General a gentleman whose appointment was contrary to the interests of the country to which he was accredited." The member for Newcastle-under-Lyme will, therefore, have to try again; and we have little doubt that he will. But material promotion of Zionist interests is not the sole concern of the British Government, of whose duties another aspect is to be seen in the Municipal Elections which are now almost accomplished in Palestine.

Athletics in Greece.

Although the Olympic Games have familiarised the world with international athletic contests for the last thirty-one years, it is a landmark in long-distance challenges that a British Athletic Sports team should journey all the way to Athens to compete with a Greek team in a sports meeting. The revival of the Olympic Games in 1896 gave a great impetus to all forms of sport in Greece. Two years later Athens had its first golf course, a very rough-and-ready affair, where a right-angle ricochet off a boulder more often than not took the place of a straight run for a well-pitched approach. At the same time a series of annual tennis matches between Greek and British teams was inaugurated; football, however, was not yet known, and it was necessary to go to Corfu to see cricket played. The present century, and in particular the years since the War have seen a most gratifying extension of games—mainly football, tennis and athletic sports—throughout the Balkan Peninsula. Before long Association foot-

ball at least will have attained the proportions of a national pastime in some of the countries, and the inter-State contests will be an important factor in maintaining good-will amongst the different peoples. The Achilles Club, which in past years has sent out teams to Rome, Prague, Budapest and elsewhere, is responsible for the team which left London this week for Athens, and appears to have been singularly successful in securing a strong representation. If the Greeks are successful in the contests, the Athens Stadium will have witnessed a very notable meeting.

Tourist Traffic.

No country these days can afford to be indifferent to the pecuniary advantages of a considerable tourist traffic, and the question of attracting a larger quota of the ever-increasing numbers of travellers is exercising the minds of many Governments which have hitherto overlooked this source of revenue. Two of our Correspondents whose letters are published in this issue utter words of warning on the subject that are well worthy of attention. There is a tendency in many countries to suppose that the casino or something bearing a family resemblance to one is all that is required to provide an irresistible Mecca for the tourist, and we are threatened with minor Monte Carlos at Cairo and Constantinople, Corfu and Athens. Our Athens Correspondent, however, stands aghast at the idea of Greece surrendering herself to the cult of the visitor to whom a casino, in the unique setting that she has to offer, would appeal, and believes that in the end she would diminish the traffic that she is anxious to increase. His argument receives some support from our Cairo Correspondent, who claims to be witnessing the gradual dispossessing of the capital as the chief destination of visitors to Egypt. Cairo, he declares, is so rapidly losing its Oriental character that it can no longer hope to hold for long visitors in search of the coloured East, or of rest and quiet. Lessened attractiveness to tourists, he adds, is the inevitable price which must be paid for the modernisation now proceeding so rapidly in every part of the city and of the city's life. The lesson for the Balkan States to take to heart is that they should not scheme to effect a spurious resemblance to other places, but should preserve their own individuality as long as they can. A good hotel is not incompatible with the retention of national characteristics; the choicest beauty spots and the finest ruins lose much of their value as national assets if they are not fairly easy of access. The vulgarest tourist, however, will not go to the Balkans because there happens to be a casino there, even though he may spend all his time in it on arrival; but he will go to the Balkans because it has been brought to his notice that he will see something there which he has not seen before.

SIR GEORGE SCHUSTER.

The desire of Sir George Schuster, Financial Secretary to the Sudan Government, to relinquish his office in order to take up unofficial work in England has long been known, and it was expected that he would leave the Sudan as soon as his services could be dispensed with by the new Governor-General, in all probability this month. Sir John Maffey has now informed his Council that Sir George Schuster will remain as Financial Secretary until January 1, 1928, but from May onward will be attached to the Sudan Government's London Office, except for a short period at the end of the year, when he will return to Khartoum to introduce the Budget for 1928. The Sudan Government hopes to retain Sir George Schuster's services in an advisory capacity when he has ceased to be Financial Secretary, and it is possible that a post with a still wider sphere will be found for him by the British Treasury.

The name of Mr. Arthur J. C. Huddleston, Governor of the Blue Nile Provinces, is mentioned as that of the future Financial Secretary.

THURSDAY, APRIL 7, 1927.

EGYPT AND GREAT BRITAIN.

Even if no definite results can be recorded in the immediate future, it is all to the good that in Egypt at the present moment considerable interest should be taken in the prospect of Anglo-Egyptian negotiations on the Four Reserved Points. Any overtures on this subject, it need hardly be said, will have come from the Egyptian side, and this fact serves to emphasise the great improvement that has taken place in the relations between the two countries. When Zaghloul Pasha came to England three years ago, ostensibly to negotiate with the British Government, he adopted the attitude that the Reserved Points admitted of no discussion and must simply be abandoned by Great Britain. Some advance will, therefore, have been made, if support is now found in Egypt for the view that each Point provides an opportunity for some measure of give-and-take on both sides. The initiative, as might be expected, has been taken by Zaghloul Pasha himself; for, as in 1924 he alone was responsible for the intransigent attitude then adopted, so now he has only to decide upon the advantage of a less uncompromising policy to secure its ready endorsement by his fellow-countrymen. Although the stage is well set for negotiation, in view of the fact that there has been a long spell of peace in Egypt, that the Permanent Under-Secretary of State for Foreign Affairs, Sir William Tyrrell, is on a visit to Lord Lloyd, and that there has been much coming-and-going as between the Egyptian Government, the Court, and the Residency, it would seem that the very definite proposals that have found their way into Egyptian newspapers are intended to prepare public opinion for a modification of the former *non-possumus* attitude rather than to indicate an actual stage reached in formal negotiations between the two parties. Another incentive to an early settlement of the Reserved Points is to be found in the projected visit to England this year of King Fuad. Last year's visit had to be abandoned owing to the political situation in Egypt, and it is certain that it would invest the King's stay in this country with considerable glamour if His Majesty could come not merely in his personal capacity, but also as Head of an Allied State.

The liquidation of the Reserved Points that would now be accepted by the Egyptians is set out as follows in the Egyptian press: That the British Army of Occupation should be withdrawn to the Eastern bank of the Suez Canal, with the exception of the Air Force camp at Aboukir and the new Aviation school at Heliopolis, which would be maintained for the purpose of safeguarding Great Britain's aerial communications with India and other parts of the Empire; That British military officers and civil officials should retire from the service of the Egyptian Government under indemnity; That the capitulations

should be abolished as far as British subjects are concerned, and that Egypt should be free to negotiate with the other Powers regarding the abrogation of the capitulations in the case of their respective nationals; That a treaty in perpetuity should be concluded between Egypt and Great Britain, in which the latter would guarantee the security and territorial integrity of Egypt; That the Condominium of the two countries over the Sudan should accord wider prerogatives to the Egyptian Crown in the appointment of military and civil officials; That the King of Egypt should nominate the officials in charge of the control of the upper waters of the Nile or at least of their distribution between Egypt and the Sudan. The projected treaty of alliance is further amplified. In the event of Great Britain's being engaged in war Egypt would not be called upon to furnish fighting units, but would assist only in maintaining the security of British communications, while according to British troops free movement on Egyptian territory whether for passage or for encampment, as in the case of the Great War. In this way, it is pointed out, Egypt would be freed from the heavy expense of maintaining large military and naval forces for her own defence, which must be incurred if the British evacuated the country entirely. In regard to these proposals, if it is actually intended to put them forward in formal negotiation, there is no need at this stage to say more than that they represent at least the beginning of a recognition that the special relationship existing between Egypt and Great Britain does carry with it definite advantages for Egypt.

From the British point of view there would seem to be no urgency for a hard-and-fast settlement. The Egyptians are clearly learning that there are more aspects to any international situation than they dreamt of in the early philosophy of their newly-won independence. For the last few months amicable discussions have been taking place between the Egyptian and British authorities in regard to the fate of foreign officials in the Egyptian service, whose contracts are due to expire this month, and an agreement has been reached for the retention of some eighty per cent. This arrangement, which implies a recognition of the fact on the part of the Egyptians themselves that they cannot dispense entirely with foreign assistance without prejudice to the administration, marks a considerable advance on the attitude of a few years ago and, it will be noticed, invalidates to some extent one of the proposals that have been put forward for the settlement of the Reserved Points. In these circumstances it might be advisable for Egyptians to allow the process of enlightenment in regard to international affairs to continue for a longer period before the country commits itself to responsibilities that may be irksome and even prejudicial to its own interests. Public opinion in Great Britain is also in a fluid state on the subject of Egypt. Had it not been for the regrettable incidents in Egypt that followed the 1922 Declaration of Independence there can be no doubt that the British public would have been prepared to see very easy terms granted to the Egyptians. There followed a period when the attitude towards Egypt showed distinct signs of hardening. To-day there is a tendency to stress the economic side of Anglo-Egyptian relations, and if the proposals for a settlement outlined in the Egyptian Press were to be submitted to the public opinion of Great Britain, they would be liable to be summarily rejected on the ground that Egypt expects something for nothing and a something for which the British taxpayer has himself to pay heavily. If, therefore, both peoples are given time for further consideration, it may be possible to reach an agreement which will be free from misgivings on either side.

The Near and Middle East*

From Our Own Correspondents.

Jerusalem, March 26.

The Jerusalem Dramatic Society.

Last week the Jerusalem Dramatic Society covered itself with glory by its performance of "The Gondoliers." Considering the limited English-speaking (and particularly English-singing) element in Jerusalem one would have supposed it hopeless to attempt Gilbert and Sullivan. But the indefatigable Mr. and Mrs. Aylmer-Harris provided the necessary stage-craft and Mr. Aubrey Silver, conductor of the police band, looked after the musical side; and so hard did they work together that they removed all traces of amateurishness that possibly could be removed. To the present writer (having seen the same opera only three months earlier at the Princes' Theatre) the chorus singing and "crowd management" were not obviously inferior to professional form. The principals, of course, suffered by comparison, but they were perfectly happy and natural in their parts; and our Director of Public Security, in the appropriate rôle of "The Grand Inquisitor," was both effective and audible. But it was the chorus which scored the greatest triumph: one wishes the stage managers of our Palestine Hebrew Opera had been there to take notes.

Municipal Election Anomalies.

And now the Municipal Elections in Jerusalem have taken a Gilbertian turn: they have reached a stage in which the Jews have absolute control as to which of the Arabic factions shall be elected, while their own nominated candidates are automatically elected regardless of Arab preferences. This absurd position arises out of the Turkish municipal election laws which our Government seems determined to preserve intact together with the rest of the Ottoman Code (out of respect for the Antiquities Ordinance, it has been suggested). Once the numbers of places in the Town Council are fixed (in this case, five Moslems, four Jews and three Christians), the

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Moslems, Jews and Christians each nominate a corresponding number of candidates. If no more than that number of candidates come forward, those nominees are elected without the need of a poll. But if rival parties within any community (be it Moslem, Jew or Christian) put up alternative lists of nominees, then there must be a poll of the whole body of electors, Moslems, Jews and Christians, to vote on those rival lists. The Jews have put up their four candidates, and their community discipline and inter-community diplomacy has proved to be such that no rival party has nominated rival candidates (an astonishing fact for those who know the ingrained antagonism between Ashkenazim, Sephardim and Agudath Yisrael); therefore, those four candidates are considered as elected. The Arabs, however, have got themselves entangled with three lists—one containing five Moslems and three Christians who adhere to the Hussein faction, another with the same numbers of followers of the Nashashibi family, and still another list of non-party candidates. Which of these parties gets in depends on which of them is clever enough to win the confidence of the Jewish vote, which is sure to go solidly according to orders.

The Ottoman Code.

Time and again before now, conditions in Palestine have been compared to the cock-eyed logic of a Gilbert and Sullivan opera. This week the same condition of things has provoked a most violent onslaught on the Government in the Hebrew daily paper *Doar ha-Yom*. The paper is smarting under a sense of grievance, in that while a local "notable" can dig up four thousand newly-planted trees in his neighbour's concession and (to all appearances) confidently dare the Government to do its worst, a wretched newspaper editor who publishes something in his correspondence columns in all good faith and "mentioning no names" must pay a hundred pounds bail. That, however, is not the real point: the two conditions may be perfectly just according to the law of the land. But the writer of the onslaught rightly emphasizes the ludicrousness of the present situation as regards the Ottoman Code. One or two generations ago Great Britain was among the first to revile and execrate Ottoman "judicial methods" in the Turkish provinces and to insist on the Capitulations and the protection of European nationals from the horrors of undiluted Turkish justice; whereas now, when Great Britain is in control of one of these Turkish provinces, it is Turkey who makes a clean sweep of the Ottoman Code and the old Land Laws, and it is Great Britain who applies them with the most painful scrupulousness.

There is an obvious fallacy in the argument: it is never the code that matters so much as the way it is applied and the people who apply it. None the less, it is perfectly

true that the Press Laws in the Ottoman Code do at times seem unduly stringent.

The Need of Banks.

Although the Government finances appear to be in a healthy condition, the entire population seems to be crying out at the present financial stringency, and Tel Aviv (that greatest exclusively Jewish township) is in debt to the tune of £260,000! From several quarters there now come suggestions that something like a "Post Office Savings Bank" system be introduced by the Government, or "War Savings Certificates"—something to spread the small-savings habit throughout the country. It seems an obviously useful suggestion. It might some day facilitate the creation of a Government Agricultural Loan Bank, for which the Arabs are continually crying out. As things now are, there are a few banks in the two or three larger towns, but none in most of the larger outlying villages (some of which are by far the wealthiest centres of the country). I understand that the banks charge nine per cent. interest on loans (plus three per cent. commission). Also one hears the story that the pastor of a small church is compelled to make an unseemly rush for the Sunday collections and lock it up securely to save it from his enthusiastic churchwardens, who would lend it out at sixty per cent. interest.

Blood-Feud.

The blood-revenge habit is old and familiar and almost respectable among the more primitive of the Palestinian Arabs. But it seems, if certain suggestions are true, to be capable of a most uncomfortable extension outside the two contending families. A week ago the dead body of a Jew was found in a river between Petah Tikvah and Tel Aviv. It had been stabbed and shot, stripped and thrown into the river. There was no obvious motive for the crime: the man was not known to have enemies nor was he worth robbing. A day or two later an Arab was arrested for attempted murder of a fellow Arab—just an ordinary case of blood-feud. He was found in possession of just such a gun and ammunition as would account for the wounds of the dead Jew; and it is alleged that his movements during the time in question did not free him from suspicion. Then comes the horrible suggestion. To remove the suspicion from himself of having killed one with whom he was known to have a blood-feud, this Arab kills an unsuspecting Jew; and the discovery of a dead Arab soon afterwards is easily accounted for; it was merely the revenge taken by relatives of the dead Jew.

Cairo, March 27.

Cruises-de-Luxe.

The arrival this week of the Royal Mail Steam Packet Company's motor vessel Asturias and of the Red Star Line's s.s. Belgenland will practically conclude the tourist season, so far as the big cruises are concerned. The Belgenland is concluding a round-the-world voyage, while the Asturias has been on what is called the Great African Cruise which, starting from New York, includes South American ports as far south as Buenos Aires, and then takes a course across the Southern Atlantic to Cape Town, touches at principal ports on the East Coast of Africa,

threads its way amongst some of the attractive stopping-off places of the Mediterranean, and returns to New York via Southampton. This cruise has not been in existence very long, having been planned with a view to providing a novel itinerary for American travellers who have exhausted the thrills of round-the-world, Mediterranean and West Indian voyages, but has proved to be exceedingly popular. Parenthetically, it may be remarked that the number of Americans who take pleasure in frequent repetitions of these cruises is really remarkable. Comparatively few English people seem to be attracted by the prospect of circling the globe inside of four or five months, with lightning visits to a score or more of countries, but to Americans this mode of travel is obviously alluring. Not only that, for it is not unusual to meet in Egypt during the winter Americans who are in process of completing their third or fourth world cruise and who express confident hopes of spending many more winters in the same peripatetic manner. It is difficult to resist the conclusion that it is not so much the travelling as the amenities of life on board the monster liners utilised for these cruises which are their principal attraction. And, although a cruise-de-luxe is hardly a poor man's holiday, it provides the last word in comfort, good food and service at rates which are not excessive when compared with the cost of living in first-class hotels in most winter resorts.

The Winter Season.

The Egyptian winter season which is now coming to a close rather earlier than usual, has not been quite so brilliantly successful as that of 1925-26. The periods when the hotels have been so full that bathrooms and dressing-rooms have been pressed into service to provide sleeping accommodation have not been frequent or long continued, while there have been considerable intervals when the number of visitors has been small. Especially has this been so with Luxor, which, after enjoying three or four winters of an unprecedented prosperity which was no doubt closely connected with the world interest aroused by the Tutankhamen discoveries, has this year had a rather quiet season. On the other hand, Assuan, mainly owing to the widening to standard gauge of the railway thither from Luxor having made the journey so much more comfortable, has had a better season than for many years past. It looks as though Assuan will become more and more popular with visitors to whom Egypt's winter climate is the chief attraction, while Luxor will be the point furthest south to attract visitors bent on sight-seeing, leaving Cairo, from the visitors' standpoint, as simply a place which must be passed through *en route* to destinations beyond. Cairo is so rapidly losing its Oriental character that it can no longer hope to hold for long visitors in search of the coloured East, or of rest and quiet. Lessened attractiveness to tourists is the inevitable price which must be paid for the modernisation now proceeding so rapidly in every part of the city and of the city's life.

The G.O.C.'s Departure.

General Sir Richard Haking, whose term of command here is so soon to end, has been taking farewell of the troops under his command during the past week. On Tuesday the Cairo Brigade (Infantry) and on Friday the Cavalry Brigade paraded at Gezira Sporting Club for inspection by their retiring G.O.C. The troops have just come back from manoeuvres in the desert near Heluan and the leave season is beginning, so that the present time pro-

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool.

vides the last opportunity for General Haking to see the brigade on parade at anything like full strength. Sir Richard and Lady Haking have been extremely well liked by the British civilian community in Egypt, and much regret is expressed at their departure. Since the War we have had in Egypt General Officers Commanding who have not only been very distinguished soldiers, but who also have entered into the general life of the British community to an extent only possible to men with interests and sympathies outside their profession. General Congreve has lately, alas, completed his service both as man and soldier, and now we are losing his successor.

Birthdays.

Two birthday anniversaries of note have occurred during the past week. King Fuad was fifty-nine yesterday, when Government departments and banks enjoyed a holiday to celebrate the event. On Thursday Mr. Harry Farnall, British Commissioner on the Caisse de la Dette Publique, reached his seventy-fifth year, and was inundated with congratulations on the event. Mr. Farnall is by no means the oldest British resident and is very far from being the senior in point of service in this country, having come here in 1901. But in many other respects he may be considered our doyen. Certainly nobody else more completely typifies the ideal of a cultured English gentleman and no other Englishman enjoys quite so much popularity here as Mr. Farnall, with his quaint, old-fashioned clothes, and his charming, old-fashioned courtesies.

Stagnant Trade.

Having just finished one of the least eventful winters which she has known for years, Egypt is now beginning what promises to be, in every way, an uncommonly dull summer. Business, responding to the state of the cotton market, is in the doldrums. Nobody is spending money and trade in many branches is stagnant. The agent for a very well-known and fairly popular make of American motor car told me yesterday that he had not effected a single sale during the month of March. Newspaper advertising is a tolerably good index to the general state of business, and it is significant that nearly every local journal is badly "down" on a comparison of columns of publicity printed during this winter, compared with former years. In this business, as in several others, very unsound methods are being adopted to secure turnover. Retrenchment and cutting down working expenses are everywhere the order of the day and will be so for the next eight months at least.

Liubiana, March 31.

Yugoslavia and Italy.

In December, 1926, Dr. Nintchitch, then Minister for Foreign Affairs, resigned in consequence of the publication of the Italo-Albanian Pact; because his policy, founded, as it was, upon the principle of friendship, was justifiably considered a failure. After that, his successor, Dr. Ninko Peritch, could not see his way to make a single statement, either in the Skupshtina or to the Press. Yugoslavia was placed in a very awkward position by the Pact of Tirana. By all previous treaties, Italy and Yugoslavia were to proceed jointly and in agreement in all matters concerning Albania. But now Belgrade took it that Italy desired to pursue exclusively her own policy in Albania; the stipulation that Italy should guarantee the

existing political régime in that State, Belgrade could not interpret otherwise than unfavourably, since it gives to Italy the right in future to interfere at any moment in Albania's internal affairs, and Italian troops may at any time appear on the Yugoslav frontier, on the Drina or the Lake of Skadar.

The reason why the present Minister for Foreign Affairs was so long in seeking occasion to make a statement regarding the country's foreign policy after Dr. Nintchitch's fall was mainly because, what with Yugoslavia's well-known desire for peace, he did not think it opportune to aggravate the tension in her relations with the Great Power on the Adriatic by statements upon the Tirana Pact and everything connected with it; and perhaps also, because he hoped that the position would presently improve. For it must be admitted and emphasised that the Yugoslav Government has not shown truculence, either before or since. That everybody must allow who is in any way well-informed.

Attacks on the Government.

Budget discussions have taken up most of the Skupshtina's time during the last month or two. The old financial year expires on March 31, and by April 1 the new Budget will have been passed. As the Local (Departmental) Diet Elections in January revealed no particular change in the feeling of the electorate since the last general election, there is no prospect of an immediate dissolution of the Skupshtina, and work will have to be carried on with the parties as they stand. This explains why the Coalition of the Radical and Slovene People's Parties (Radical Coalition) which came into power in the beginning of February has been able to maintain itself in spite of an insignificant majority. The Government is being fiercely attacked by the Opposition, which now consists of the Davidovitch Democrats allied to the Bosnian Moslems, the Agrarian Party and Pribitchevitch Democrats, and reinforced by the Raditchists who went over to the Opposition after the last crisis. The chief subject of these attacks is the Minister for Internal Affairs, M. Maksimovitch, who is looked upon as being the chief person responsible for terroristic methods exercised by the police, and laid to the charge of the Government. But in spite of its virulence—it led to several exceptionally stormy scenes in Parliament—the campaign against M. Maksimovitch failed, and the Minister is still in office.

When it came to the turn of the estimates for the Ministry for Foreign Affairs, Dr. Peritch was to have made his statement regarding the country's foreign policy, which statement, truth to tell, was eagerly expected. But just then the tension between Italy and Yugoslavia reached a critical stage owing to Italy's Note to the Great Powers, in which she accused Yugoslavia of preparing for warlike action on the Albanian frontier. As it was, Dr. Peritch's statement followed hard upon the Italian charges, and so it is obvious that his speech on the Italian Note was the event of the moment.

Skupshtina and the Italian Note.

The one thing noticed throughout the country was that the National Skupshtina, which is generally the scene of acrimonious party and personal strife, displayed unusual harmony and agreement in face of the Italian Note. However great the differences between the parties over questions of internal affairs, they are all on the side of the Government on foreign politics, so that they show a united front abroad. And we must point out that this applies to Slovene and Croatian parties no less than to Serbia. It is above all significant that the Raditch Peasant Party—which has lately been joined by the Montenegrin Federalists—made a point of voting for the War Minister's estimates, in order to place on record its respect for the national forces. Whoever would count on internal dissensions in the Kingdom of Serbs, Croats, and Slovenes, when faced with foreign complications, would find himself woefully disappointed. Where foreign relations are concerned, be they friendly or unfriendly, Yugoslavia is one and undivided.

Dr. Peritch's appeal for an inquiry into the truth of the Italian charges was approved by Yugoslav public opinion, for was it not a proof of Yugoslavia's sincerely pacific attitude? Considered on its merits, however, the suggestion met with some criticism, especially on the part of the Opposition, viz., that it was derogatory to the sovereign status of the Kingdom; who was going to carry it out, and where? and so forth. The attitude ultimately taken up by the Government has the approval of the whole country.

A Yugoslav-Bulgarian *Rapprochement*?

Touching Yugoslavia's relations with the rest of her neighbours, the chief thing to note is a considerable improvement as regards Bulgaria. There are signs of an evident desire to eliminate the sources of ill-will existing between Belgrade and Sofia, and to establish a genuine understanding between the two neighbour States. Of course, it is impossible to say anything definite as yet, but it seems as though an optimistic view of these attempts at *rapprochement* were justified.

Hungary and Russia.

Rélatons with Hungary are also somewhat improved—which is partly due to the negotiations regarding Hungary's access to the sea. This access could be effected either at Split, which is a Yugoslav harbour, or at Fiume, which is next-door to Yugoslavia and must be reached through her territory. Final decisions in this matter may be expected in the near future.

There is no material change in Yugoslavia's relations with Greece or Roumania.

GREECE.

Athens, March 25.

The Power and Traction Concession.

Among the modifications introduced into the terms of the contract with the Power and Traction Finance Company, are the following:—The Company agrees that private buses now running shall continue to run till December 31, 1930, except on the tram routes, from which they will be withdrawn after January 1, 1929, the question of indemnity of bus-owners remaining under consideration. On the Athens-Kephissia route, private buses will be allowed to run freely, but on condition that they do not accept passengers for intermediate stations, served by the trams.

The Company also agrees to pay the cost of any accessory works which may be rendered necessary by the construction of the tunnel from Omonia Square to the station of the Attica Railway, which is at present the terminus of the Athens-Kephissia line. The conciliatory attitude of the Company has created an excellent impression.

Army Problems.

The Coalition Government is now weathering the storm which was destined to arise on the publication of the lists of Army officers to be re-instated. Though the original plan was that the decisions of the Army Council should be final, it has been found necessary to come to a compromise with regard to list "B" (which is concerned with the raising of pensions), while the much more thorny questions of List "A" (officers to be re-instated), has been adjourned. That a compromise will be effected here too is almost certain, but though peace will be preserved among the members of the Government, it is another question whether the Army itself will be able to assimilate all the re-instated officers. A good deal depends on whether it can do so or not.

Theft of Antiquities.

Thefts of antiquities from the museums are becoming more numerous. A short time ago three heads were stolen from the Acropolis Museum, and three Germans,

in whose possession they were found, are now in prison. Now, two gold necklaces of Mycenaean workmanship, found during the recent American excavation of tombs at the Argire Heraeum have been stolen from their case in the National Museum in broad daylight. The thieves inserted a wire beneath the lid, without forcing the lock, and so drew out the necklaces. Perhaps the people who suffer most from these incidents are foreign students, who wish to work in the Museums. Hitherto, the Greek authorities have always afforded the most liberal facilities to such students, and the absence of annoying regulations and supervision has been much appreciated by them. The consequence of a series of thefts will almost inevitably be an increase of supervision, regulations, and red-tape.

British School of Archæology.

The British School of Archæology held its annual Open Meeting on March 21. The Director, Mr. A. M. Woodward described last year's excavations by the School of Sparta, and Mr. W. A. Heurtley, Assistant Director, spoke on the results of excavations on the pre-historic *Toumbas* of Macedonia during the last ten years. The British Minister and Lady Loraine were present, the American Minister, representatives of the Greek and foreign Archæological Institutes, and many others.

Visitors to Greece.

There has been published in the *Eleftheron Vema*, a drawing of the building or buildings, with which it is proposed to disfigure the slopes of Mt. Lycabettus. Though this building is not likely to become a reality, the proposal itself is disquieting—and as its purpose would presumably be to make Athens more attractive to foreigners as well as to the inhabitants, it raises the question "What sort of tourists is it desired to attract?" Visitors to Greece may be divided roughly into three classes:—

"A" Educated people, who are attracted either by the remains, whether classical or mediæval, and by the associations that cling to them, or by the natural beauty of their setting. These people are not usually rich, and are on the whole less concerned with comfort than with finding their places of pilgrimage unspoilt. They also realise that a certain amount of effort and discomfort, merely add to the final pleasure of reaching their goal and give a touch of adventure to the journey. The last

thing they want is to have this particular joy taken from them, to have all difficulties smoothed away, to be followed about by swarms of "English" speaking touts, not be allowed to practise the modest Greek they have been studying at home, or to come in contact with the people.

"B" Less well-educated people, generally richer, but with the same tastes as "A," but less inclined to put up with discomfort. To both "A" and "B" the proposed Casino on Lycabettus would be a desecration.

"C" The mob of vulgar cosmopolitan globe-trotters, mostly uneducated, who have heard that Greece is famous for something, they do not quite know what, and think that they ought to see it*; who tick off in their note-books every evening the things they have seen, and only remember places by what they have had to eat in them. To these people a casino in Lycabettus would be something by which they could remember Athens.

It should be obvious even to speculators and exploiters of tourists in general, that by catering for the tastes of "C," they will end by driving away "A" and "B." And, since "C" follow sheepishly in the footsteps of "A" and "B" "C" too will eventually seek pastures new. But the persons who exploit tourists, and even delude themselves that they are "developing" the country for its own good, do not understand this. If they had their way, they would compel every English tourist to eat eggs-and-bacon for breakfast, to listen to nothing but bad English, they would not allow him to go a yard on his own legs, or to admire a view without a guide to point out its beauties, or to eat the dishes of the country, but they would force him to eat cosmopolitan food in cosmopolitan restaurants, to the strains of cosmopolitan music; in short, they would remove everything that makes foreign travel amusing.

One wonders why, in order to please a class of person to whom one place is much the same as another, and for whom, in any case, there are plenty of places organised and equipped with the things they like, the charm and distinction of Greece should be destroyed; and why in order to spare effort to people who, owing to over-eating and want of exercise, have practically lost the use of their legs, an unsightly lift should be allowed to disfigure the hill which is the pride of Athens.

The reason is that the Greeks are not yet awake to the fact that their country is being slowly but surely vulgarised in the interests of an undesirable class of tourist. One of the most striking qualities which Greeks possess is "philoxenia" which renders them peculiarly defenceless against the dangers of "development" on the wrong lines, as they are naturally anxious to please and impress the foreigner. The thing has not gone far as yet, but the danger is there, and the Lycabettus proposal is a warning of what may happen. It is not too late, and the evil may be stopped, but certain measures will have to be taken. On the assumption that it is desired to attract only tourists of class "A" and "B" the following are suggested.

(1) The activities of speculators and exploiters of tourists should be carefully scrutinised by the State authorities, who should frame a definite policy with regard to tourist development.

(2) Touting should be made illegal.

* To this class must have belonged the lady who, on being shown the Acropolis, asked, "But where are the Four Horsemen?"

(3) No hotel should be built on, or in the immediate vicinity of an ancient site. One of the principal charms of Sunium, of Aegina, of Bassæ, and of Dodona has been their splendid isolation. (Sunium, alas, is rapidly losing it, and there is real talk of a hotel close to the temple. Olympia is a gloomy example of the harm that can be done in this way).

(4) A society of Greeks might be formed to draw the attention of the Government to any intended outrage on the part of speculators.

The writer, who has travelled in every part of Greece, and learned to admire the country and its people, may be forgiven for feeling strongly, and expressing himself strongly, on a subject which every true lover of Greece must have at heart.

GREAT BRITAIN AND KING IBN SAOUD.

Sir Gilbert Clayton, who at the end of 1925 successfully concluded with King Ibn Saoud the Treaties of Bahra and Hadda, is shortly leaving for the Hijaz. He will resume the negotiations which were begun last November upon the initiative of King Ibn Saoud, for the remodelling of the Treaty of 1915 which Great Britain has with this monarch. That Treaty of Friendship was concluded, it will be recalled, when he was merely Sultan of Najd.

Our Jidda Correspondent writes (March 11):—

The Mecca newspaper, *Umm al Qura*, publishes in its issue of March 11 a categorical denial of the statement published in certain English newspapers (not THE NEAR EAST AND INDIA) that at the recent negotiations in the neighbourhood of Madina King Ibn Saoud had asked for a renewal of the subsidy paid to him by the British Government until March, 1924, in consideration of his placing himself and his country under British protection. It does not seem to be realised in all quarters that with his conquest of the Hijaz the Wahhabi King has secured an accession of revenue which makes him independent of all outside help, and rumours of this kind are easily recognisable as the inventions of enemies who wish to discredit a régime which for the first time in the history of the Hijaz has secured for that once unhappy country a substantial measure of peace, good government and prosperity. It may, however, not be out of place to state the reasons which did in fact impel King Ibn Saoud to invite the British Government to enter into negotiations with him. In 1915, when the situation was very different, he entered into a treaty with Great Britain which he holds to be a dead letter as the result of subsequent developments. Instead of merely denouncing that treaty, as he would be within his rights in doing, he has asked the British Government to discuss matters with him with a view to arriving at an arrangement more in accord with the facts of the existing situation. He has no intention of placing himself under obligation to Great Britain or any other Power by accepting their financial assistance. He merely wishes to secure British recognition of the complete independence of his kingdom, in respect of which all the old capitulatory rights were supposed to be renounced by Great Britain herself in the "Macmahon" promises made to ex-King Husain in 1915.

The death is reported of Rai Bahadur Sir Gopal Das Bhandari, C.I.E., M.B.E., president of the Amritsar Municipal Council.

The death occurred last week in Cheltenham of Mr. Alexander Courtenay Bryson, a retired Indian Civil servant, aged 76. He was in Lucknow as a child during the siege, and was taken from that city to Alum Bagh after the relief by Sir Colin Campbell.

On April 2 a Moth aeroplane, with Lady Hailey, wife of the Governor of the Punjab as passenger, struck a telegraph wire in alighting and turned over. The machine crashed, but fortunately both Lady Hailey and the pilot escaped injury.

THE PROBLEM OF PERSIA.—II.

The article which Mirza Ishak Khodadad wrote on "La Verité sur la Perse" for the March *Phoenix* is one long lament on the present condition of his country. At the outset he describes as a profound error the supposition that Persia is enjoying a period of awakening and regeneration: his country is, in fact, the greatest centre of reaction in the East.

Since H.M. Reza Shah Pahlavi assumed power as Prime Minister and so long as he was only Reza Khan, the social and political affairs of Persia clearly led in the direction of reform. Every patriot saw in him the man of the hour, the long-awaited hero that should regenerate his people, who had for generations been in profound slumber. At one stroke he beat down the reactionary classes, depriving them of all privileges, forcing them all to submit to the one supreme force of law, making them pay all their arrears of taxes, stifling all the troublesome elements, and, above all—centralising the authority of the Government, so that the feudalism of the centuries was—at least provisionally—abolished. Moreover, Reza Khan, Prime Minister, had formed a strong army, modelled on the latest European pattern. Everyone in Persia was enchanted and enthusiastic for the man who was to guide this unhappy people on the path of progress.

But alas! The reforming Prime Minister has become King and upholder of the reactionaries. The new Shah's *entourage*, according to this article, is exactly the same as the Qajars'; in other words, the Qajars are not fallen, but reign to-day more sovereignly than ever. The present monarchy has done nothing for the country. Corruption is rife; the highest situations in Government service are filled by those who pay the most: ability and education count for nothing. In law, complete anarchy reigns: the conflict between the *fatwas* of the ulema and the civil legislation always trammels Persian affairs. The Foreign Minister knows nothing of what passes in the Legations and the Embassies, and does not trouble to supervise these diplomatic centres, "which have often become the refuge of the unlettered and of the intriguers, and where the archives are in a deplorable state." Public instruction, largely owing to the clerical class who insist on the religious dogmas being taught, not in Persian, but in Arabic, lags miles behind the times. The political life of Persia is but a mass of intrigues and of concessions to the clerical and reactionary classes. Of the freedom of the Press there is none. Such enterprises as concern railways, communications, and so on are not worth mentioning: Persia talks much of these things, but does nothing.

Mirza Ishak Khodadad concludes his gloomy picture with this:—

It is in the interest of certain European Powers that the reactionary classes remain in power. The nobility, the rich men and the clergy are pawns on the political chess-board. Great Britain on the one hand and Russia on the other are playing their pre-War rôle. The English in particular use the whole governmental machinery of our country, the majority of our statesmen, all the clergy, all the intriguers, and, in short, all the reactionary elements in order to dominate the country, economically, militarily, and politically.

The truth about Persia of to-day is that there is no progress in the country and that there is no hope of progress so long as the reactionary forces remain in power. Only when the Shah changes his attitude and surrounds himself with liberal, honest, and intelligent men (will there be hope). Otherwise, I doubt whether the present régime can last long.

Apart from the tendency of this Persian to attribute ills in Persia to external influence—and with that we will deal in a minute—it is possible in the main to agree with this representation of hodiernal Persia. Too often and too easily it is assumed by those who know that in Persia an effete dynasty was destroyed and a new one substituted that a real renaissance is to be witnessed in this historic land; the apparent fact that the erstwhile British and Russian interlopers are now extruded from the country has induced such observers to asseverate the inevitable progress of Persia. But he is no true friend of Persia and of the Persian people who refuses to look deeper than this. The truth about Persia is indeed that the main obstacles to progress are in Persia itself.

One side of this truth may be found in the always optimistic Quarterly Reports of the American Financial Mission. In his last report, Dr. Millspaugh wrote, concerning "Spheres of Special Interest":—It is surprising

that the idea of regions where certain foreign countries have *special interests* is sometimes used as an excuse by Persians who find it more comfortable to truckle to the interests of a foreign power than to maintain vigorously and courageously the interests of their own country." Another side of it is to be found in an obviously authoritative article on "Persian Affairs" which appeared in the *Asiatic Review* for last October, and from which this is extracted:—"Internal rather than external complications are likely, in the future as in the past, to be the most serious obstacle in the path of those reformers, both Persian and foreign, who seek to remodel the most ancient of 'Bible Lands' on 'constitutional' lines." This is demonstrably accurate. Plead they as they will that insurrection or protestation against the Shah is the work of foreign agents, Persians cannot dispel the fact that the Army's pay is so irregular as to jar on the nerves of the most fervid supporter of the Pahlavi. Even the Bolshevik pamphlet referred to in our first article recognised this "stickiness" in the transference of pay from military chief to trooper as a symbol of evil things. Whether a remedy will be found for this corruption with the establishment of conscription remains to be seen.

Nor are the chances rosy of a decline in the hold of the reactionary and fanatical ulema over the Persian people. This year's Muharram will be a particularly good time to estimate whether the "clerical" party of Persia are becoming imbued with the spirit of tolerance and progress which the Shah's régime is supposed to irradiate, or whether the party which inhibited the proclamation of a Republic will further impose their desires upon the people.

There is no sense in blinking at these facts. If the regeneration of Persia is ever to be brought about, it must be achieved by her young men, who may be inured neither to hatred of nor to subservience to any particular foreign Power.

The Persians are a great and lovable race, but it is only folly to suppose that they can at one leap emerge from, say, the condition in which England was under the Heptarchy to that in which she enjoyed her full constitutional system. The very unity of Persia still seems to be largely a political expression, and may remain so as long as no communications exist between North and South; and, of course, the individualism that is at the base of every Persian's soul makes unification and common progress the more difficult. Probably the main fault of foreign observers and of some Persian observers is to build too high hopes on establishing the façade of progress; they are misled by the enthusiasm of the architect and forget that, unless all the masons are worthy, the structure may not be too safe. Certainly Persians will do well to look for danger beyond their borders, but the more concentrated gaze should be upon their own people. In every country there is the type of mind—it exists even in England—which blames the foreigner for all its failures and troubles; but the apparent stagnation into which Persian affairs have fallen of late may reasonably be expected to turn the thoughts at least of educated Persians to the possible short-comings of some of their own countrymen. Little reflection is needed, for instance, to prove that it is neither British nor Russian influence which causes so large a part of the Persian Budget to be devoted to the Army; still less is it possible to attribute to foreigners the withholding of this section of the Budget from the control of the American Financial Advisers. Was it foreigners who invented the Persian proverb to the effect that saddles may change, but it's always the same old donkey?

The Mecca Pilgrimage: The Health of the Hajjis.

The two quarantine stations which the Wahhabis have set up in the interests of the pilgrims were described in a letter from our Jidda Correspondent contained in our issue of March 17. He then explained that these stations had

with ample cubic dimensions for the 250 pilgrims which each is calculated to accommodate—clean, single-storeyed buildings, each enclosed within a wire-fenced compound of white coral-sand to facilitate the segregation of sick pilgrims when needed. At the quayside entrance to this

The Quarantine Island at Jidda showing landing stage for pilgrims, one of the barracks for their accommodation, and the engine house for the sea-water condenser and fumigation apparatus.

been established in two islands, Abu Sad and Wasita, which lie about seven miles south of Jidda. The two photographs which we reproduce both refer to the first island. Our Correspondent described this as "a circular coral

group of buildings stand two large engine-rooms—one with the disinfecting apparatus designed to kill any microbe the pilgrims may bring in on their persons, their clothes, or their baggage, and the other containing a sea-

Sanbuks (sailing boats) going out from Jidda to fetch pilgrims from the steamers arrived from the East.

atoll fenced round against the lapping waves by a low masonry wall from which project, star-fish wise, a central landing wharf and the many latrines of the various dormitories or barracks. The latter are four in number,

water condenser capable of producing an average of five-tons of distilled water daily—this supply being reinforced when necessary by a water barge capable of taking 100 tons of water from the two condensers in the town."

ID-UL-FITR.

The Id-ul-Fitr was celebrated by Mussulmans in England on the morning of April 4 in the mosque at Woking.

The King of Bulgaria gave a luncheon at Sofia on April 1 in honour of Mr. Bartholomew Payne, President of the American Red Cross, who arrived from Constantinople in the morning. In the evening he was the guest of the Foreign Minister. Mr. Payne and his companions left the following day for Greece.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE ALBANIAN SCARE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I have received by to-day's post copies of the two weekly journals to which I subscribe, namely, THE NEAR EAST AND INDIA and *The Nation*, and I am very much surprised to see that you, with your specialist knowledge of Near Eastern affairs, should appear on this occasion to be less perfectly informed about the facts underlying the recent Albanian scare than your contemporary. I notice that you yourselves appear to think that instead of forewarning the Powers, Italy should have waited until Ahmed Bey Zogu applied for Italian help—in other words, until it would have been difficult for the Italian Government, in view of its obligations under the Tirana Treaty, not to dispatch post-haste troops to Albania. Surely the fat would then have been in the fire!

The notion that Italy has any territorial aims in Albania is ridiculous. The policy of acquiring Valona is one that has been explicitly abandoned by Italy. This was a foolish policy which the present régime in Italy has wholeheartedly recognised, and it has been endorsed unanimously by Italian public opinion. On the other hand we know as a fact that Serbian public opinion has never ceased to hanker after the acquisition of Scutari. Moreover we know that the organisation known as the "White Hand," whose members occupy prominent positions in the Yugoslav Government and General Staff, avowedly aspires to obtaining for Serbia an outlet to the sea by the easy routes of the Drin and Vardar valleys. We also know that this "clique" as it is called in Belgrade, has successfully contrived to maintain a hold on the Yugoslav Government and to maintain Serbian domination in Yugoslavia. It is, therefore, difficult to exculpate altogether the Yugoslav Government from connivance in the various activities of this clandestine organisation.

It should also be emphasised that it was unquestionably the "White Hand" that assisted Ahmed Bey Zogu on the former occasion alluded to. Also that, given the meagre forces and armament at the disposal of Albania, no hope could be entertained of preserving Ahmed Bey Zogu's régime in the face of an attack by well-organised and well-armed bands from over the frontier without Italian help, although his own forces are sufficient for the purpose of repressing any rebellion organised within the country. And this, of course, is the reason for the Tirana Treaty. Italy's policy is quite plain. She regards the independence and integrity of Albania as a matter of vital interest to herself, in every way as vital as Britain regards the independence and integrity of Belgium. On the other hand, Ahmed Bey Zogu knows, and his own experience places him in an exceptionally qualified position to know, that without Italian support the "White Hand" has the power to prevent any stable Government from being formed in Albania and that consequently the country would be doomed to anarchy, which would be the prelude to partition.

Italy's circular to the Powers contains documentary evidence of the existence of a plot; and her allegations are fully supported, not only by the British representative in Belgrade, but by the British officers in command of the Albanian Gendarmerie.

If ever there was a case of Italy being in the right and Yugoslavia being in the wrong, this is a case in point. Signor Mussolini has taken no hot-headed action. He has merely given publicity to a condition of affairs, which publicity more than any other method is likely to render innocuous.

I understand that it may be difficult for THE NEAR EAST AND INDIA to state on its own responsibility the crude

facts in consequence of a natural desire not to offend one of the countries within its peculiar survey. But I think it is dangerous, in view of the importance of properly instructing British public opinion, to indulge in exaggerated deference to Balkan Governments, when everybody acquainted with conditions in the Near East is very well aware that the connexions between these Governments and the various subversive secret societies is intimate; and that these Governments invariably use these secret societies as catpaws for their policies, while they themselves consistently clothe themselves in white sheets. The activities of these secret societies, if events do not turn out as contemplated, can always be repudiated. In the wild, roadless countryside of Macedonia, it is also always possible to render inconclusive any inquiries on the spot by foreign commissions. The Balkan Governments in such circumstances have nothing to fear. But if on the contrary all goes well according to plan, a situation arises which can be easily exploited to the advantage of their various and dangerous aspirations.—I am, etc.,

Florence, March 30.

J. S. BARNES.

[Our correspondent overlooks the fact that all the assertions that he makes regarding Yugoslavia have their counterpart, *mutatis mutandis*, in the assertions made in Yugoslavia regarding Italy. The situation, as we see it, is that Italy and Yugoslavia are each genuinely convinced that the other has designs on Albania. In these circumstances mere assertion proves nothing. For instance, our correspondent states that members of the "White Hand" "occupy prominent positions in the Yugoslav Government." It would surely be better, instead of a general assertion, for him to state by name the members of the present Ouzounovitch Cabinet who are also members of the "White Hand," and if none can be named, with proof, the statement ought not to be made. Italy's circular to the Powers has not been published in this country, as far as we are aware, and consequently nothing is known of the "documentary evidence of the existence of a plot." That there has been *komitaji* activity is not disputed, but we refused to believe, without further evidence than was supplied by mere assertion, that Yugoslavia was deliberately mobilising for an *unprovoked* war on Italy or Albania (which was the imputation, if not the actual wording, of the Italian Note to the Powers). On the other hand, nobody doubts that if Italy lands troops in Albania, she will be attacked by Yugoslavia, or that, if a Yugoslav army invades Albania, the Italians will land troops there. The Balkan States are five in number. The fact that they have certain shortcomings is no reason why Europe should have to put up with a sixth.—ED.]

NEAR AND MIDDLE EAST ASSOCIATION.

The Near and Middle East Association will meet to-morrow (April 8) at 5 p.m., at 21, Addison Road, Kensington (by kind permission of Mrs. Menteith Ogilvie) to hear Mrs. Margaret Hasluck lecture upon "Witchcraft and Weather-lore from the Balkans." Miss Sylvia Townsend Warner will preside, and exhibits—charms, amulets, and so on—collected by Mrs. Hasluck in the Balkans will be shown.

It is announced that King Fuad will leave for England in the latter half of June for a visit lasting about a fortnight, at the end of which he will proceed to Paris and Rome.

Among the representatives of the Colonies, Protectorates, and Mandated Territories attending the Colonial Office Conference in May will be the following:—

Cyprus.—Mr. R. Popham Lobb, C.M.G., Colonial Secretary.

Palestine.—Mr. E. Mills, O.B.E., First Assistant Secretary.

Ceylon.—Mr. E. B. Alexander, C.M.G., Controller of Revenue.

According to the *Morning Post* Athens correspondent the Greek Minister of Education has appointed a Commission to take measures against Communist propaganda in schools. During a debate in the Chamber the ultra-Royalist leader, M. Vozikes, said that George II. and the President of the Republic were both Greek patriots, but the Communists were not. Special attention was drawn to Communist speeches advocating Macedonian autonomy.

Book Reviews

LAWRENCE'S PILGRIMAGE.

"REVOLT IN THE DESERT." By T. E. Lawrence. (London: Jonathan Cape, 30s. net.)

At last we have it, the masterpiece: we, the public from whom came the thousands upon thousands of golden coins which were the cement of the Arabs' revolt against the Turks—that revolt the flames of which Lawrence certainly did not kindle, but which he fanned and re-fanned into triumphant blaze. Some of us may have been irked by the noisy advertising which this unapproachable archaeologist and soldier and author has enjoyed or regarded; but let us be gratefully forgetting of that, for here is an indubitable treasure, a book that will vibrate down the ages, when all his heroes and Lawrence himself are dead.

It happens that the "Revolt in the Desert" was sent late for review to THE NEAR EAST AND INDIA, so that it is desirable in this to avoid quoting the purple patches which have already appeared in so many reviews. One refers, of course, to the description of Jidda from its outer harbour, of Faisal ("very tall and pillar-like,"), of the fighting of the Germans around Tafas, of the freedom of Damascus. In any case, these are not the capital things in the book, which convinces largely because of its close-knitness. The example of Doughty, indeed, shines constantly and worthily in Lawrence.

The outlines of the revolt which for Lawrence began at Jidda in 1916, and, two years later, ended at Damascus, are sufficiently well-known. Military historians will long dispute the precise value of this revolt to the Allies; and political observers will long dispute the precise value to civilisation of the forces which Lawrence helped to unloose when he discovered Arab nationalism. The value of this book, however, lies in its being a record of a personality, boundlessly courageous, endlessly calculating, torn between the occasionally different ideals of winning the Great War and of establishing the Arab cause—in short, of a personality so many-sided as to be presently incomprehensible.

This, from Chapter II, in which he describes his visit to Faisal, gives an indication alike of Lawrence's style and of his dreams:—

Tafas led on without speaking, and the camels went silently over the soft flat sand. My thoughts as we went were how this was the Pilgrim Road, down which, for uncounted generations, the people of the north had come to visit the Holy City, bearing with them gifts of faith for the shrine; and it seemed that the Arab Revolt might be in a sense a return pilgrimage, to take back to the north, to Syria, an ideal for an ideal, a belief in liberty for their past belief in a revelation.

High praise can be given to the description of the Hijaz war over the mountainous, barren country, but the tale begins really to move only when the Arabs set out for Syria. Hereupon Lawrence discovers in unforgettable words the beauty and the inhospitality, the kindness and the oblivion, the terrible heat and the terrible cold of the desert. He makes full the great emptiness of his subject. Hear him on the Sirhan:—

We were very weary of the Sirhan. The landscape was of a hopelessness and sadness deeper than all the open deserts we had crossed. Sand, or flint, or a desert of bare rocks was exciting sometimes, and in certain lights had the monstrous beauty of sterile desolation; but there was something sinister, something actively evil in the snake-devoted Sirhan, proliferant of salt water, barren palms, and bushes which served neither for grazing nor for firewood.

One would like to quote, so grand, so vividly compelling is the scene in Lawrence's words, his description of the heat of the day when he and his men from between Batra and Aba al Lissan overlooked the green Guwaira plain; one would like to quote his description of the Valley of Rumm, and of the north wind at Maan. But space forbids. It seems to us that the author is at his most excellent when pitted against elemental things; the sun and the wind, poetry and humour, daring and cowardice, solitude and the crowd—these are the subjects of his finest passages.

From the pathological point of view the last section of this book becomes particularly interesting in its manifestation of the conflict that was going on in its author's mind. Should he, or should he not, bend the Arab movement to the one purpose of winning the War? Would he, or would he not, betray the Arabs were he to treat them merely as a complement to Allenby's Army? It is a question that he somehow answered; but its repercussions still affect the world.

Possibly, in fact, it is the pathological distinction of the book that makes one leave it a little melancholy. In the Middle Ages this knight-errant would have been doing penance for what he considered the ruin of his cause; just as, during the War, he unnecessarily, but very purposefully, underwent extraordinary physical hardship. On torn and bleeding feet he achieved his pilgrimage to Damascus: the transient paragon of Henley's poem. Is it, then, an eternal, though very rare, type which can endure these things, and yet, when the job is ended, confess, as Lawrence confesses, that he has no longer an "interest in the subject which was exhausted long ago in the actual experience of it"? The Lawrence legend, they say, is out. For our part, we think it likely to increase with the repetition of its telling.

But for Lawrence himself, whether remotely dreaming in India, or whatever he may be doing, it is probably sufficient that, through even this abridged edition of his *magnum opus*, he stands, in the ranks of Literature, next to his beloved Doughty.

A USEFUL BIBLIOGRAPHY.

The Royal Colonial Institute is performing a very useful service in compiling a series of bibliographies on particular subjects of Imperial interest. Bibliography No. 4, which has been compiled by Mr. Evans Lewin, Librarian of the Institute, is devoted to the communications of the overseas British Empire, with special reference to Africa generally and the Baghdad railway. It is classified under the headings: Steamship Routes and Mercantile Marine, Internal Waterways, Railways (including, among others, the Baghdad Railway, the Euphrates Valley Route, the Syrian and Arabian Railways, and Indian Railways), Air Routes, Cables and Telegraphs, Postal Service, and Roads and Motor Transport. The references are by no means confined to books, but comprehend review and magazine articles. Under the heading "Baghdad Railway," for instance, the student is given the choice of over sixty publications. This admirable work of cataloguing will certainly render easier the task alike of the publicist and of the student. We should mention that this bibliography is published by the Royal Colonial Institute at two shillings and sixpence.

No. 61. April. 96 pp.

PERSONAL AND GENERAL

TO-DAY

April 7, 1927. (New Style).

March 25, 1927 (Old Style).

Shawwal 4, 1345, A.H., of the Muslim Calendar.

Nisan 5, 5687, of the Jewish Calendar.

Sir Edwin Savill has returned to London from Egypt and Palestine.

Mrs. Cecil Rowntree has returned to 9, Upper Brook Street from Egypt.

Lord and Lady Montagu of Beaulieu have returned to England from Persia.

Sir Cecil Harcourt-Smith, who has been on a visit to Egypt for six weeks, returned last week to Coldharbour House, Wallingford.

M. D. Burillianu, Governor of the National Bank of Roumania, arrived in London last week, and is staying at the Ritz Hotel.

The Marchioness of Linlithgow is expected to arrive at her residence in Chesham Place about April 12, on her return from India.

Viscount Inchcape left London on April 2 for Paris, to attend the monthly meeting of the Suez Canal Company, and returned on April 4.

General Sir John Du Cane, the newly-appointed Governor of Malta, and Lady Du Cane left Claridge's Hotel last week for Wiesbaden.

General Sir Charles Harington, General Officer Commanding in Chief, Northern Command, will receive the honorary Freedom of York on May 3.

Sir John Shuckburgh has left Baghdad, and is due in London next week. He has visited Palestine, Syria, Transjordan and Iraq.

The Library Syndicate of Cambridge University have appointed Mr. H. M. J. Loeme, M.A. (Queen's), to be Curator in Oriental Literature from January 1 to June 30, 1927.

The Right Hon. Sir George Clerk (His Majesty's Ambassador Extraordinary and Plenipotentiary in Turkey) had an audience of the King at Buckingham Palace on March 29.

Sir Stanley Jackson, the new Governor of Bengal, and Lady Jackson arrived in Calcutta on March 28, and Lord Lytton, the out-going Governor, and Lady Lytton left for Bombay, on their way home.

Field-Marshal Viscount Allenby left London on March 29 to join Viscountess Allenby at the Hôtel Kensington, La Croix, Var. They will return to 24, Wetherby Gardens on April 14.

Prince Ghazi, son of King Faisal of Iraq, who is being educated at Harrow, is now staying at the Iraq Diplomatic Agency with the Acting Agent, Atta Beg Amin. He is shortly going to spend a few weeks in Spain accompanied by his tutor.

Lord Lloyd, the British High Commissioner, accompanied by Lady Lloyd, who has recovered from her recent illness, Sir William Tyrrell, Mr. More, the Sudan Agent, and party left Cairo on March 28 by special train for Shellal. They proceeded up the Nile to Wady Halfa, where they met Sir John Maffey, Governor-General of the Sudan, who came down from Khartoum, on March 31. Lord Lloyd and his party were expected to return to Cairo yesterday (April 6).

Atta Beg Amin, Acting Diplomatic Agent for Iraq, was "At Home" last Sunday, on the occasion of the feast of Ramadhan, to the Iraqi colony in England. Prince Ghazi and Prince Talal were among those present.

Lady Stavridi was at home to the members of the Greek community in London at 33, Lenox Gardens, on April 4, to meet the new Greek Archimandrite, who was installed the previous day at the Greek Cathedral of St. Sophia, Moscow Road, W.

It is announced by the India Office that the King has approved the appointment of Mr. James David Sifton, C.I.E., I.C.S., to be a member of the Executive Council of the Governor of Bihar and Orissa, in succession to Mr. Egbert Laurie Lucas Hammond, C.S.I., C.B.E., I.C.S., the Governor-designate of Assam.

Muzahim Beg Pachachi Zada has been appointed Iraq Diplomatic Agent in London, in succession to Jaafar Pasha, now Prime Minister of Iraq. Muzahim Beg, who was Minister of Communications and Works and Justice in the Cabinet of Yasin Pasha (1924-5), left Baghdad on March 28, and is travelling via Syria, Palestine, Egypt, Italy, and France. He is expected in London in the third week of April.

THE Y.M.C.A. IN YUGOSLAVIA.

A Correspondent writes (March 30):—

The Bishop of Cashel and Waterford, who has been visiting Yugoslavia under the auspices of the Y.M.C.A., has given a most successful series of lectures in Belgrade University, Nish, and Liubliana University. His Lordship's visit created a great deal of interest among the students. The Bishop also addressed the members of the Anglo-American Luncheon Club and gave a lecture in the Anglo-Yugoslav Club, Belgrade. Not only the Serbs but also the English and American Ministers have co-operated in making the Bishop's visit a success. A Reception was given by the British Minister and Mrs. Kennard and a luncheon by the American Minister and Mrs. Prince. The Patriarch entertained the Bishop to lunch at Belgrade and at Karlovtzi. The meetings in the Y.M.C.A., which were overcrowded, were supported by the Bishops and Priests of the Orthodox Church. Everywhere the Bishop's visit was characterised by scenes of great enthusiasm.

Mr. P. H. Sitters, National Director of the Y.M.C.A. in Yugoslavia, and Mrs. Sitters were recently received in audience by Her Majesty the Queen of Yugoslavia. This honour of a private audience was granted to Mr. and Mrs. Sitters by the Queen as a recognition of their work among the Serbian young men and to mark the third anniversary of their coming to the country.

The Patriarch of Jerusalem has conferred upon Mr. and Mrs. P. H. Sitters, of the Y.M.C.A., Belgrade, the insignia of Commander of the Order of the Holy Sepulchre, for their "services on behalf of Christianity."

The death is announced from Aden of the Fadli Sultan Abdul Qadir of Shuqra, in the Aden Protectorate. He has been succeeded by his uncle, Salih bin Husain al Fadli.

The leader of the Wahhabis, Abdul Aziz ibn Abdur Rahman ibn Faisal as Saoud, has been proclaimed King of the Hijaz and of Najd and its Dependencies.

Major-General A. E. Wardrop, C.B., C.M.G., late Royal Artillery, vacated command of the Lahore District on April 2, and will be succeeded by Major-General H. F. Cooke, C.B., C.S.I., C.B.E., D.S.O., who is now commanding in Sind-Rajputana. The close of Major-General Wardrop's tenure as a General Officer Commanding has been marked, says *The Times*, by the recognition of his Indian service by his appointment as Colonel of the Mooltan Bn., which, under its reorganisation title, is the 2nd Bn. 9th Jat. Regiment. Major-General A. B. E. Cator, C.B., D.S.O., will get the Sind command which will be rendered vacant by the transference of Major-General Cooke.

THE SECRETARY OF STATE ON INDIA.

Lord Birkenhead's speech on March 30 in the House of Lords contained several points of quite unusual interest. Foremost among these were his remarks on the political future of India, wherein he gave indications, as to the intentions of the Government, that will certainly arouse keen discussion in India. He said that he thought he had seen of late signs on the part of the leaders of Indian opinion of a certain reluctance to rush the matter; as to which it may be suggested that no Indian leader—or follower—ever desires to rush any matter—not even the complete independence that many of them profess their readiness to assume immediately: and the nearer that the necessity approaches, for the taking of any decision, the more distasteful is the aspect that it assumes. If of late reluctance to rush the matter of the reformed constitution of the future has been specially apparent, this has almost certainly been due to the conviction that the time is getting alarmingly short—a conviction that will certainly be deepened by Lord Birkenhead's words, cautiously phrased as they were. For he said that he "saw no reason to anticipate that His Majesty's Government and Parliament, if so advised by the Governor-General, would be found over-anxious to insist upon waiting until the ten-year period had run its full course": and, later, that "the next few critical months would determine the decision." It is quite safe to prophesy that these words will be taken in India to mean that the British Government has definitely made up its mind to announce the personnel of the Statutory Commission in the course of the coming summer, with a view to the commencement of its labours in the autumn: a decision which, while certainly most distasteful to the "leaders of Indian opinion," would, with equal certainty, be welcomed by all persons less inveterately wedded to the policy of putting off till to-morrow anything that it is possible to avoid doing to-day.

The next most important point in the speech was that in which Lord Birkenhead informed the House that a special report, by the Committee of Imperial Defence, on the problem of India, would be made public very shortly. It was, he said, a document of first-rate importance, in which would be found the answer to those critics of army administration in India who appeared to hold that the matter was primarily one of concern to India alone, instead of one that it was necessary to examine from the broadest Imperial standpoint. In dealing with the cost of the Army in India, he stressed the point that the hope expressed by the Inchcape Committee, that it might be possible to reduce the military budget to a maximum of 50 crores of rupees, so far from being a recommendation, was nothing more than "a very guarded expression of opinion": the actual wording was "should a further fall in prices take place, we consider that it might be possible, after a few years" to reduce India's military expenditure to the sum mentioned. No doubt the "leaders of Indian opinion" will add the failure to do so to the sum of their indictment of the eighteen-penny rupee, in which they are likely to discern the chief reason why a further fall in

prices has not taken place. Behind the complaint against India's military budget, said Lord Birkenhead, lay the suspicion that the Army, on its present footing, far exceeded the country's actual requirements, and included a potential reserve, maintained at India's expense, that could and was intended to be used for Imperial purposes alone. This suspicion he characterised as absolutely without foundation and, indeed, almost the reverse of the truth: in certain easily imaginable contingencies, the Army in India would be unequal to carrying out its only true function—defence against external aggression and the maintenance of internal order—without large reinforcements from Home. He referred to the dispatch of troops from India to Shanghai—which has naturally been used to bolster up the suspicion that he condemned—as a temporary diversion designed to meet a very special emergency, only made possible when "for the moment, conditions in India were peaceful" and even then only at a certain risk, though he believed it to be a reasonable one. This does not, somehow, strike one as a very convincing statement; but even less so, perhaps, was his remark that neither the Government nor he himself would ever forget the lesson taught us in Mesopotamia, however short might, on occasion, be the memory of the Legislative Assembly. This, though a good debating point, is nothing more; for the Mesopotamia expedition was one quite outside "the only true function" of the post-War Army in India. If, however, it may be thought that Lord Birkenhead was unfortunate in his detailed arguments, his main thesis certainly stands unshaken: that the Army in India, as at present constituted, is at a bare minimum of strength to meet reasonable contingencies, and considerably below it if it had to meet others by no means improbable.

On the burning question of the Bengal *détenus*, Lord Birkenhead spoke firmly. He claimed that he was not easily deterred from a course otherwise proper because that course was attended by risks. From this one may certainly infer that he is convinced that the risk that would be run by releasing the *détenus* is more than a political one: and that it would mean exposing to personal danger the lives of servants and supporters of the Indian Government. Lord Birkenhead is willing to accept political risk—such as that involved in the dispatch of troops to Shanghai—when the consequences of failure would fall on his own head: he is not prepared to take risks that are personal to others but not to himself. Evidence of this is to be found in the offer recently made to the most prominent of the Bengal *détenus*, whose release has been urged on the special ground that he is seriously ill. Medical opinion advises a stay in a Swiss health resort: and he has been offered his release on condition of giving his word of honour to sail direct from Rangoon to Europe, in a vessel selected by the Government and not stopping at any intermediate port, and to reside in Switzerland until the expiry of the Criminal Law Amendment Act under which he was interned. It is almost a foregone conclusion that the offer will be rejected; but that is, of course, beside the point. So long as the Secretary of

State and the Government of India have reason to fear that the unconditional release of any particular *détenu* may endanger loyal lives, they resolutely decline to run any such vicarious risk. The handsome tribute to Sir Basil Blackett is most welcome: to the "courageous skill" with which he has administered India's finances, and the eminence of his services to the country, which is to be warmly congratulated on retaining them for the extra three months that will enable Sir Basil to present next year's Budget himself instead of through the mouth of a successor. Lord Birkenhead specially eulogised the Finance Member's great achievement of the remission of the Provincial contributions; which had, he said, been so chilling, depressing and injurious a burden, rendering almost impossible the adequate discharge of those social services that might have done so much to recommend a novel and difficult constitution. Now that this lack of one of the elements necessary for the success of the Reforms had been removed, he had distinct hopes for the future, without being unduly optimistic. The two chief difficulties that presented themselves to his mind were the communal division, and the insistence of the Congress Party on their policy of obstruction. As to the former, he declared that, "until those who contended that India was at the moment the rightful and competent arbiter of her own destiny could lay the spectre of sectarian violence, their contention must fail to appeal with conviction to unprejudiced minds." This is a hard saying, for there are few who see any chance of a real composition of Hindu-Moslem differences even in the remotest future. The same thing has been said before, but it is so important a point that it cannot be said too often: it entails the continuance of an impartial third party, with powers that, however reduced, must still be very real, for a period the length of which no one can calculate. As to the latter, he confessed to doubts engendered by "the difficulty that the past session of the Legislative Assembly had presented, of distinguishing, by the test of speech and vote, between the hide-bound adherents to the Congress creed and those late professors of it who claimed to have been returned to the present Assembly as followers of their own individual consciences." This, though for the moment an obstacle to progress that is real enough, is one that is already lessening, and that will pass: unlike the communal obstacle, which most assuredly will not. Altogether, the speech is a most notable one: it will put heart into the loyal and reasonable and, in spite of contemptuous epithets which it is easy to foresee, it will provide food for much serious thought by those in India to whom, at the most, only one of these epithets can be applied; even more, perhaps, to those who can lay claim to neither.

CURRENT TOPICS.

The "Indian Sandhurst" Report.

The chief point of interest in the Report of the Committee, appointed about eighteen months ago, for the purpose of considering means for improving the supply of Indian candidates for the King's Commission, is to be found in the recommendations which were not generally supposed to come within its province. These amount to a proposal to set about the organisation of a separate "Dominion Army" for India, complete in all its parts and including the Artillery, Engineer, Signal, Tank and Air arms of the Army in India, as distinct from the present Indian Army. The recommendations that the existing number of vacancies allotted to Indians at Sandhurst should, from next year, be doubled, and that, five years later, an "Indian Sandhurst" should be started, with an establishment of 100 cadets, are intended to hasten the Indianisation of the Indian Army. According to the view of the authors of the Report, they should result, after 25 years, in the filling of half of the cadre of commissioned officers by Indians. As to the other half, the Committee significantly remarks that "steps should be

taken to maintain the proportion of British recruitment required"; but, probably wisely, gives no indication of what it thinks that those steps should, or indeed can, be. If, by 1952, the cadre is half Indian, the division will roughly be into a senior British half and a junior Indian half: and, as the present generation of British officers reaches the age of retirement it is safe to say that complete Indianisation will come with a rush. Sandhurst recruitment for the Indian Army is poor enough as it is: if the Committee's recommendations are accepted, it is likely soon to reach vanishing point.

At their face value, the suggestions for reserved Indian vacancies at Woolwich and Cranwell would mean the partial Indianisation of the British Army as a whole; but, of course, they do not mean this. They mean that Indians should now begin to take their places in the arms not represented at present in the Indian Army, as a first step towards its expansion into a complete Army of India of a new type, self-supporting and self-contained in all respects, when the quota of British troops, whose employment in India the Committee "for the present assumes generally," will no longer be needed. This is a considerably larger departure than the other: and presupposes the eventual starting of an Indian Woolwich and an Indian Cranwell, as well as of an Indian Sandhurst: a development that, though it will doubtless take a good deal longer to achieve than the other, is yet one obviously necessary to the formation of a real Dominion Army for India: one that she has every right to envisage, and that it may well be hoped will be successfully achieved in the end. For the present, it is comforting to read that the British and Indian Governments have not yet formed their conclusions on the Report. Its special interest lies in the fact that it represents the ideas of a Committee whose majority consisted of Indians, mostly of Indian politicians: and it is safe to assume that its conclusions are theirs, and that the two British members did not interfere with their free expression. In theory, indeed, it is quite a good and sensible report; though, if any part of its recommendations is put into practice, it will certainly only be after considerable modification on the practical side.

Civil Aviation.

The cabled news that the opening of the Basrah-Karachi section of the air service to India has been held up, owing to refusal by Persia to ratify the provisional agreement of 1925, is disconcerting, even if not unexpected. One has all along felt that it would be a long time before the last section of the service would be really in working order: and one can almost hear the sigh of relief with which the Government of India must have greeted the news. The delay in making any attempt to start civil aviation in India has been so pronounced, and the excuses for inaction so flimsy, that this further excuse, for its continuance, will almost certainly be welcome. At the beginning of March, the Legislative Assembly passed a Government demand for ten lakhs of rupees (£75,000), mainly for what is quaintly described in the mail papers as the "erection of aerodromes" at Bombay, Calcutta and Rangoon: and, what is more, did so without a division—the "Congress Party," which had intended to oppose the grant, changing its mind at the last moment. Perhaps the striking aerial display at Delhi, in which 80 aeroplanes took part, and the joy-rides given to legislators by the "City of Delhi" and the Moths, contributed to this result; but the deciding factor seems to have been a successful Government attempt to explain to the Assembly the distinction between military and civil aviation. Confusion in the minds of the Indian legislators on this point was evident from an objection taken to the Government's refusal to promise the establishment of an Indian Cranwell: and in the suggestion that the idea behind the move in favour of civil aviation was the assistance of "England's military adventures in the Far East." This last is an argument similar to that which is said to have prevailed with the

Persians—that a British aeroplane service, starting in “dependent” Egypt and passing through mandated Iraq into British India, must necessarily entail the desire to subjugate the independent gap. Perhaps when the London-Egypt stage starts, and it can be demonstrated to Persia that this has not made France feel nervous about her independence, this objection will be surmounted. The assurance that finally disarmed the Swarajist opposition was that Government’s first object was to enable a private Indian company to be established, with a subsidy from Government, with Indian capital and a majority of Indian directors, and that the first duty of the new Director of Civil Aviation would be to prepare a scheme for training Indians in aviation; so that all that will then be required will be the Indian capital, the Indian directors and the Indian candidates—in the materialisation of which one will believe when one sees it. Meantime, it is interesting to learn that an English aviator, who has recently been doing air survey work at Chittagong, is reported as trying to persuade “half a dozen Rangoon merchants”—presumably none of the Indians—to float a small company for the purpose of operating two three-seater sea-planes between Calcutta, Rangoon and Penang.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 17.

Exchange Ratio Battle.

A report from New Delhi states that the divisions and controversies on the subject of the rupee ratio occupied the best part of a day. Sir Basil Blackett won his victory for 1s. 6d., playing the card that the House having rejected the 1s. 4d. proposal on Tuesday, it must either vote for 1s. 6d. or for instability. Sir Basil said this would be ridiculous and nonsensical, as the House had already accepted the principle of the bill by agreeing to its consideration, namely that the time has come for stabilizing the exchange. The non-official element in the House was annoyed at Sir Basil’s harsh terms, but had no remedy to offer, and Sir Basil was sure of his majority. The President, seeing no chance of their concluding at once, adjourned the House. So the bill will come up again next week, and another close division may be expected on its third reading.

Comrade Saklatvala and Gandhi.

The Communist M.P., after a “triumphant” tour through the Provinces, has published in the Indian Press an open letter to the Mahatma. It is doubtful whether his severe criticism of India’s most revered leader will make him more popular. Some of his contentions are worth repeating. He writes (among other things, the letter covers six columns) that *khaddar* is a protest against artistic development on up-to-date lines, irrespective of geographical or national considerations; that the *charka* movement is an attack upon machinery, physical science and material progress; that hand-spinning in competition against machinery has the lowest economic value; that other handicrafts, say carpentry or shoemaking, have a much higher value; that the poverty of the rural population can easily be remedied by bravely fighting the unjustifiable rights of the landowners and the low wages of the labourers; that the first task of the leaders is to express boldly and fearlessly the unexpressed voice of the people; that Ireland had produced a Valera, Russia a Lenin, Turkey a Kemal Pasha, China a Sun Yat-sen, and Italy a Mussolini; that Gandhi was at the moment the recognized leader of India; that Gandhi should stop allowing people to address him as “Mahatma”; that a good plan would be for him to refuse all letters thus addressed, and refuse to appear at functions where this appellation would be advertised; that Gandhi should rigorously stop crowds and processions of human beings passing him with folded hands; that he should not allow Indians either to

touch his feet or put their fingers in their eyes, as such touchability appears to be more damnable than untouchability; that dear old Gandhi should put on a coat and a pair of *khaddar* trousers, and come out and work with Comrade Sak, and the rest, and, awaking as from a dream, set about organizing the workers, peasants, and youths of India, to put an end to the deplorable conditions of life in the country.

Bengal Budget Discussion.

The Agenda of the Bengal Council contained no fewer than 427 motions for cuts and reductions of grants, ranging over a great variety of items. The demand of Rs. 70,000 on account of the band establishment of H.E. the Governor of Bengal was refused, Mr. B. K. Chatterjee dramatically remarking that “the music he and his friends would like the Governor to hear was the cry of agony and despair from thousands of Bengal villages.” The determined attempt to reject the Rs. 1,15,000 for the Bodyguard establishment was, however, defeated by 65 to 60 votes. The Council refused the demand of Rs. 3000, the subscription to the Indian News Agency, as the information supplied by that agency is exactly the same as that supplied by the Associated Press of India to all newspapers. The amendment to reduce the demand of Rs. 39,000 on account of the office of His Excellency’s Private Secretary by Rs. 24,000 was lost. The same happened to the motion to refuse Rs. 7,000 for the travelling expenses of the Military Secretary to H.E. the Governor of Bengal. A contemporary remarks that the rejection of the grant of Rs. 70,000 for the Governor’s band will not affect Lord Lytton but Sir Stanley Jackson. His taste for music is not proved yet, it says, and Sir Stanley will probably ask for a team of cricketers to replace the band of musicians. Mr. Sen Gupta, who failed to qualify for the Cambridge Eleven, will oppose that demand also, it concludes.

A Central Statistical Bureau.

The opinions of the Provincial Governments, now published, are generally adverse to the views of the majority report as to the proposed Statistical Bureau, and partially in favour of the minority report of Professor Burnett Hurst. The objection to a general economic survey for compilation of detailed statistics of production is based on the cost of such work. Some of the Provinces could ill afford it. The compilations of the Central and Provincial Governments might be expected to develop in time into a Central Statistical Bureau. The opinion of the Madras Government, however, is that it would be better to undertake that Central Bureau first, local bureaux being impracticable financially. The Bombay Chamber of Commerce, whilst opposing the creation of a provincial office, recommends the inauguration of the Central Bureau. The Bengal Government think no statistics are required to help in solving the main problems and in providing remedies; but they are ready to assist the Central Government in the improvement of existing statistics.

The Y.M.C.A. Controversy.

“Qui sème le vent, récolte la tempête” says a French proverb. This some will say is what has happened to the “loquacious music dealer with little music in his soul,” as the *Bengalee* unkindly calls Mr. Hobbs, but he, one doubts not, has a great deal of solid support behind him still, and will be of soul unperturbed. Dr. S. K. Datta has published a refutation of the charges brought against the Association and its leaders, and Lord Sinha, speaking at the annual meeting of the ex-members of the Indian Students’ Union, has borne testimony to the good work done by the Y.M.C.A. But nobody doubted it. Mr. Justice C. C. Ghose presided over a company that included the Bishop of Calcutta, the Hon. Rajah of Santosh, Mr. J. N. Sarkar, Lt. Col. Denham White, Sir P. C. Mitter, Mr. K. C. De, and Mr. Oaten. They all paid tribute to the Institution, the Lord Bishop’s words being agreed upon, “that the onus had been shifted, and that it was

for those who had made the charge to justify it or withdraw it." It is all to the good that the matter should be discussed in the open. The developments are awaited with interest. If he has done nothing more, Mr. Hobbs has enlivened the town.

Rotary Clubs.

The Rotary Club of Calcutta is a most cosmopolitan gathering. Its members include Englishmen, Scotsmen, Welshmen, and Irishmen; but there are Indians (Mahomedan and Hindu), also Americans and Japanese. The President, Colonel Barnardo, who was recently elected, said the other day that friendliness to all men is an essential Rotary ideal, and that a cosmopolitan membership would do a good deal towards breaking down the barriers of suspicion which separate the various communities in India. It is a pity the efforts to start a Bombay Rotary Club have so far failed, but there is a definite project of starting one in Lahore. Sir Malcolm Hailey has consented to become the first Honorary member of the Club. The Calcutta Rotary Club has been heretofore the sole though worthy representative of a remarkable international movement, and it is time that it should be showing the way in other centres.

Calcutta Amusements.

The fare is rather meagre this week. Apart from the usual round of "incomparable" and "most enjoyable" cinema shows, the best being always the last, and the last being always the most stupendous or the most gripping of all the cinema productions, there is the short return visit to the Empire Theatre of Mr. Reginald Selleck's company of entertainers. They style themselves "The Peep Show," and interlard vaudeville programmes with performances of a pleasant, light and witty comedy, "The Eternal Spring," a play in three acts that has scored a great success, it is said, at the Royalty Theatre, London. The public have been disappointed at having to wait another week for the famous De Forest Phonofilms. They have been so popular in Burma, explains Madan, that they had to be shown for another week there before coming here.

Markets.

Assuming there is no change in the present working time during the season 1927-28, the Indian Jute consumption will probably amount to 5,800,000 bales, and the exports to 3,959,000 bales. But the calculation of probabilities makes it definite that the Indian Mills' consumption could be raised to 6,254,000 bales without unduly disturbing the balance of prices for either raw jute or finished products. There was a sharp set-back for tin which touched £304 per ton after £311 paid earlier in the week. Shellac is slightly steadier; sales are reported at Rs.84 for spots standard I. Of salted cowhides 16,200 pieces have remained unsold this week, the price being Rs. 60 to 80. Burma Oils range from Rs. 6 1-6 to 10 1-9. Ready parcels of gross quality cotton (kapok) are selling at Rs. 15s. to 16s. per B. maund. Castor oil supplies are limited, but 5 gallon iron drums are quoted Rs.12-12 No. 2 f.o.b. Demand rates for maize are Rs. 4s. 4d. to 4s. 8d. per B. maund. White Patna rice, from the sellers' go down ranges from Rs. 7s. 14d. to 9s. according to quality. Old hard rice reached Rs. 9s. 10d. p.m. Myrobolams, whole nuts, from sellers' go-downs are sold at Rs.2/6 up to Rs. 3/6 per maund. Tamarinds, 10 per cent. refraction, black kinds for Europe fetched Rs.5/8 per Bengal maund.

REFUNDS OF INDIAN INCOME-TAX.

A change of procedure in connexion with refunds of Indian income-tax to claimants not residing in India is announced by the office of the High Commissioner in London. Since October last claims have had to be forwarded to Bombay, and any refund was paid to an agent in India appointed by the claimants. In order to facilitate matters for claimants residing outside the country it has now been arranged for refunds to be remitted to them direct by money order or draft, at their cost, should they so desire. The new procedure was foreshadowed by Earl Winterton in his reply to a question in the House of Common last month.

BOMBAY NOTES.

The people whose business it is to attack the British Administration of India have evolved one particular grievance, which they describe as the "drain"; and according to them England is exploiting India, first, by making India pay interest on her loans, secondly by making India buy her goods, and lastly by making India provide salaries for her sons altogether out of proportion to their merits.

Sir Robert McLean is retiring this week, after serving his term as Agent of the G.I.P. Railway. This is in itself one of the best salaried appointments in India, and it is an open secret that Sir Robert could have had the very highest position at Simla for the asking; and yet it suits him better to leave India to take up employment in one of the great firms of the North of England.

The fact is that the Indian Government services, whether administrative or technical, no longer hold out any financial inducements to the highest class of English graduates. There are about a dozen men in India—the Viceroy's Council and the Chief Justices—who draw about £4,500 per annum. There are about fifty—puisne judges and members of the provincial councils—who draw £3,600: but apart from these, there are, as far as I know, no salaries of more than £3,000.

To say that such salaries are, in these days, more than a man of the ability needed to earn them in the Civil Service can reasonably hope to earn in another sphere of life is ridiculous: and Sir Robert's retirement at an early age is sufficient to point the moral. In days when so many University men are being attracted to commerce, it is necessary to point out that while the Indian services offer no financial prizes they still offer a wonderful career of administration in the most interesting country in the world.

Mr. Gandhi Again.

Mr. Gandhi, in discussing Mr. Saklatvala, has made a very interesting elucidation of his position. He points out that while Mr. Saklatvala proposes to regenerate the world by communistic industrialism (compare Mr. H. G. Wells and his writing, *passim*) his own object is to ameliorate the condition of the agriculturist: and he seems to consider these two aims to have nothing in common. He comes back again to his invariable goal, the importance of Khaddar, or, as we should put it, the importance of encouraging village industries for the enormous agricultural population of India.

As I have pointed out in many previous letters, this particular dogma of Mr. Gandhi is absolutely sound. Whether or not the weaving of cloth on hand looms is practicable is rather beside the point. The point is that he considers that something ought to be done to improve, first, the financial condition and, secondly, the general standard of living of the agricultural classes: and he proposes as a serious constructive measure the encouragement of hand weaving.

It is a great pity that Mr. Gandhi has made this serious contribution to the political economy of India subordinate to all sorts of attacks on the British administration of India, and to his own peculiar brand of mysticism. Mr. Gandhi is a very remarkable man, and if only he would devote his powers and his influence to assisting the Government, as he finds it, to help the interests of Indian agriculture he might yet do valuable constructive work for the country that he loves.

I have previously compared Mr. Saklatvala to Mr. H. G. Wells: but there is a curious parallel in one respect between Mr. Gandhi himself and Mr. H. G. Wells: and it is all the more curious because Mr. Rudyard Kipling, of all people, seems to have hit on the same solution of the world's problems. Mr. Gandhi on one occasion called upon the men and women of India to show their hatred of British rule by bringing no more children into the world: and both Mr. Wells and Mr. Kipling, in their studies of a highly mechanicalised futurism, appear to contemplate a

very much reduced population. None of these authorities has, however, attempted to show how this result is to be attained without a good deal of self-sacrifice—not to say inconvenience—on the part of the existing population.

Indian Hospitality.

It seems to me a great pity that Mr. Arthur Gilligan, captain of the M.C.C. team in India, should have thought fit in his farewell remarks to the Press, to accuse certain clubs of India of snobbishness in refusing to entertain the professional members of his eleven. I am writing with no bias whatever. I do not know what clubs Mr. Gilligan means, and I myself belong to so many that it is probable that I have offended him in one capacity and satisfied him in several others. But if, on one occasion, I have offended Mr. Gilligan, I am quite sure that I have had good reason for so doing, and I submit that I have done no more than to enforce, for my own protection, the general practice of society.

The first-class cricket professional is an absolutely excellent fellow: he ranks with (but, as I am sure Mr. Gilligan will admit, not higher than) the first-class jockey and the first-class gamekeeper and the first-class non-commissioned officer. All these people are better than I on their own ground and I am proud to meet them on almost every occasion. But I entirely decline to be classed as a snob, because I agree with my Sergeant-Major that he is more comfortable in the sergeants' mess, and I am happier with the officers. Many clubs in India have been able to invite Mr. Gilligan's professional friends to share their hospitality: I think that those clubs which did not are entitled to expect him to believe that they had good reasons for their unwillingness to create a precedent. The M.C.C. itself, no doubt for good and not undemocratic reasons, finds it convenient to provide a separate pavilion with a separate entrance for the professionals: and Indian social clubs have after all quite as nice points of etiquette to consider as can possibly be presented to the M.C.C.

Mr. Gilligan has at any rate expressed his gratitude to those English communities in India which have met his views as to hospitality to the full: and that is at least something to be thankful for: because there is no doubt that a good many Englishmen in India are beginning to get tired of the casual way in which their hospitality is exploited by globe-trotters who appear to remain for ever under the impression that they have done nothing but confer a favour by accepting Indian hospitality.

THE SUKKUR BARRAGE.

The recent debate in the Bombay Legislative Council has shown the existence of considerable, if somewhat vague, distrust as to the efficient execution and ultimate success of this great scheme. The vastness of the project is doubtless in itself a cause of suspicion. It is somewhat beyond the mental grasp of the ordinary legislative Councillor, who is either a townsman or is accustomed to the rainfed agriculture of the Presidency. The representatives from Sind, though most of them are pledged to support it in principle, are inclined to fear the effect of the project on lands outside the Barrage Area, or on the rates levied on the land within it. For the most part, however, the uneasiness which the debate has shown to exist, is due to a repercussion from the unfortunate disclosures and results of the Back Bay Scheme. Not only the financial loss which that scheme at present involves, but the failure at an earlier stage to put the facts fully before the public, has led to a suspicion that there may be a similar tale to unfold about the Sukkur Barrage. This suspicion has probably not been lessened by the project being under the control of the same Member and Department of Government as were responsible for the supervision over the Back Bay scheme. Even the connection of the name of the late Governor of Bombay with the 'Sukkur Scheme, for which, however, he was in no way responsible, has been used in a section of the Bombay

Press as an argument against it. We believe the suspicion to which we have referred to be entirely ill-founded, in respect either of the execution or of the results of the project.

It may be well briefly to indicate the vastness of the scheme which is, as we have suggested, somewhat difficult for the ordinary intellect to grasp. It is, indeed, the largest irrigation scheme in the world. Its cost is estimated at nearly 18½ crores, or 13½ millions sterling. The barrage itself will be the largest existing, and will be five times the length of London Bridge. The total length of the canals dependent on the Barrage will be 7,000 miles. These canals will irrigate six millions of acres, or twice the cultivated area of the whole of Egypt. It has been calculated by Dr. Mann, the Director of Agriculture in Bombay, that the agricultural production of Sind will be quadrupled. These figures will give some idea of the extent of the work, and of the results that may be expected to follow it.

The criticism and distrust that have been expressed about the scheme, both inside the Council Chamber and outside of it, though to a great extent indefinite, may perhaps be summarised and examined in the following form. Doubts are in the first place expressed as to the engineering problem of the Barrage itself. For these it may safely be said that no reasonable foundation exists. The work differs in degree, but not in principle, from similar works successfully carried out in the Punjab and elsewhere. A margin of safety has been allowed for far larger than in those works, and there is every reason for confidence in the technical skill and knowledge of the officer in charge of this branch of the scheme. It is next suggested that there has been extravagance and undue departure from the estimates in the execution of the work. A superficial view of the figures given by the Member in charge might seem to afford ground for this suggestion: but closer examination will show its unsoundness. The Member in charge explained that the excesses over the estimates had so far amounted to 259½ lakhs. Of this amount, however, 55 lakhs were due to increased Customs duties levied on materials, mostly steel, imported for the work. This increase was imposed long after the project was framed. The Central Government might well be asked to return this windfall to the taxpayers of Bombay, out of whose pockets it has come; but its payment can hardly be brought as a reproach against the project. Of the remaining excess, 19½ lakhs is due to rectangulation of the land, a measure which will fully repay itself, and to the inclusion within the scheme of a further area of 114,000 acres of excellent and remunerative land. The amount estimated to be paid for acquisition of land required for the canals and other works has been exceeded by 49½ lakhs. This has been due to the liberal policy of paying the owner of such land its full value, without any charge for the betterment of the remainder of his land by the supply of perennial water, and at least indicates how valuable the new land will be. A sum of 135½ lakhs has been due to an excess over the cost estimated for the construction of the canals. It must, however, be remembered that it was impossible for the officer who drew up a project covering so large an area to estimate exactly the cost of either acquisition or construction. Against this excess of 259½ lakhs, however, must be placed savings amounting to 200 lakhs. In other words the net excess is practically equal to the amount of increased Customs duty placed in the pockets of the Central Government. By the judicious execution of works, moreover, according to the order of their necessity, it is expected that there will be considerable ultimate saving in the payment of interest in capital. The only specific item of extravagance alleged in the debate was the undue provision of bungalows for the staff. Those acquainted with the conditions of Upper Sind will probably think that such provision was a wise economy.

As regards the financial results of the scheme, it has been calculated that if less than half of the new land to which water will be brought is sold at rates far less than those freely given in the Punjab, and considerably below

even those obtained in Indian States, with a presumably somewhat lesser security of tenure, the cost of the work will be fully recouped. This calculation takes no account of the increased rates which will fairly be leviable on land already in cultivation that will receive an assured, in place of a precarious, water supply. Nor does it include any estimate of the indirect advantages to the trade of Sind. It is no doubt the case that much pressure will be put on the Government to give out large areas of fresh land at nominal rates to existing landholders, instead of encouraging the influx of new capital and fresh population by selling most of the land by auction. But if the Government of Bombay has the moral courage to resist this pressure, and in this it should have the support of the taxpayers' representatives, there can be no reasonable doubt of the financial soundness of the scheme.

In the circumstances, and particularly in view of the atmosphere of distrust already referred to, it was doubtless wise of the Government of Bombay to agree to the appointment of the Committee of Inquiry desired by the Legislative Council. Such a Committee, if unlikely perhaps to grasp the technical details of so great a scheme, should at least be able to realise the effective manner in which it is being executed. The further believed intention of the Bombay Government to appoint or ask for an engineer to report on the work must be open to more doubt. The work has already been fully examined, and it is difficult to see how its scheme can at this stage be altered. It may, at least, be hoped that if an engineer is appointed, he will be of the highest standing, and one free from any suspicion of being likely to raise unnecessary doubts and difficulties. The whole future of Sind depends on the project. There seems no reason to doubt that it has been well considered and is being well executed.

INDIAN MAIL.

Political Autonomy.

It would appear that the Swaraj Party has given up the Central Legislature as hopeless, and has decided to approach the question of the future government of India from below, instead of from above. The first step in this campaign has been taken in Bengal, where a Swarajist member has submitted a resolution for the next session of the Legislative Council, setting forth the Indian "National" demand for Provincial Autonomy. The resolution recommends the Government of Bengal to move the Government of India to take the necessary steps to change the structure and policy of the Government of India Act so as to ensure the following fundamental reforms for the establishment of responsible Government in the Bengal Presidency: (1) Abolition of what is known as the system of Dyarchy in the Government of Bengal, and its replacement by a unitary Government responsible to and removable by a legislature consisting of members wholly elected by a wide electorate, due and adequate provision being made for the representation of all important minorities.

(2) The status of the Governor should be that of a constitutional Governor acting on the advice of the Ministers responsible to the legislature.

(3) The Provincial Government should have acknowledged authority over all provincial subjects, subject to the general control and residuary powers of the Central Government in all inter-provincial and all-India matters.

(4) The revenue allotted to the province should form a separate provincial fund vested in the Provincial Government, and the Provincial Government should have full power and control over its finances.

(5) The re-adjustment of the sources of revenue and taxation between the Central and Provincial Governments should be effected so as to ensure to the latter adequate sources of revenue for the efficient discharge of their responsibilities.

(6) The Provincial Government should have full power over its officials as regards appointment, dismissal, pay,

pension and all other conditions of service with due provisions for the safeguarding of the claims of the covenanted officers already in the service, or in receipt of pension.

This resolution, which, its supporters declare, furnishes a reply to the official complaint that no scheme has so far been suggested by responsible Indians for the consideration of Government, constitutes a new departure which is not unlikely to be followed by some of the other Provinces, though probably not by all. In Madras, for instance, several attempts have been made to induce the Government to consider sub-division; proposals having, at one time or another, been put forward for the constitution of separate Provinces on a linguistic basis, following the four chief languages spoken in the Presidency. Of all the Provinces of India, Bengal is the one that is most insistent on its own unity; and in fact, though sharply divided in religion, between the Hindu west and the Muhammadan east, it is, to a very great extent, linguistically one; for, though many of the Muhammadans of Eastern Bengal speak Urdu, a large number of them habitually speak Bengali. It is worth remarking that the financial independence of the Provinces has lately been greatly furthered by the remission of the provincial contributions to the Central revenue; which, though not permanent on paper, is yet practically certain to prove permanent in fact. Incidentally, this remission is of small moment to Bengal, whose contribution has, for several years past, been remitted by the Central Government as a special case, in view of her peculiar financial difficulties.

THE LATE LORD CABLE.

By the death of Lord Cable, India is deprived of the services of one who had made a notable contribution to the country's industrial development and played a useful part in her public life. A wide measure of sympathy will be extended to Lady Cable and her daughters in their bereavement. The East India commercial community in this country will be the poorer for the loss of one of its most forceful and outstanding personalities, whose influence extended far beyond the limits of the Province of Bengal in which his firm's multifarious activities are mainly centred. While many hard things have been said about the managing agency system in India, there is no doubt that, on the lines on which it has been developed on the Calcutta side, it has been attended in practice with remarkably successful results. A very considerable part of the credit for that success is due to Lord Cable who, as senior partner of Bird and Company, a pioneer of the movement and one of its most conspicuous examples, set a high standard of efficiency and commercial probity in all his dealings. The memorial service, which was held on Friday at St. Michael's, Cornhill, was conducted by the Rev. J. H. Ellison and attended by a large number of representatives of insurance societies, Anglo-Indian interests and City friends, in addition to members of Lord Cable's own firm.

The King has approved the extension by three months of the term of office of Sir Basil Phillott Blackett, K.C.B., K.C.S.I., as a Member of the Executive Council of the Governor-General of India, which would normally expire in January, 1928.

On behalf of Rangoon University and the Government of Burma, the Governor, Sir Harcourt Butler, has telegraphed to Sir John Cargill and Mr. David Cargill cordially thanking them for the donation of one lakh of rupees (£7,500) each to the university endowment fund.

Colonel A. R. B. Shuttleworth, of the Indian Army Service Corps, has been appointed, says *The Times*, Deputy-Director of Supplies and Transport for the Western Command at Quetta, and is thus transferred from the staff of the Quartermaster-General at Delhi to serve on the staff of the incoming Western Commander, General Sir Charles H. Harrington.

Major C. A. Boyce, D.S.O., now at Army Headquarters, India, is to officiate as Secretary and Adviser in Languages to the Board of Examiners.

Major-General W. H. Ogilvie, C.B., C.M.G., Director of Medical Services, will be on leave from India during this summer.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Cotton Growing in Cyprus.

With conditions so favourable for cotton growing as they are in Cyprus, it would have been surprising if considerable attention had not been paid to this important crop, and it is interesting to note that the acreage devoted to cotton in 1925-26 was 10,500 acres as compared with 6,600 for 1921-22. The production for the past five years has been approximately 2,290 bales in 1921-22, 1,500 bales in 1922-23, 2,230 bales in 1923-24, 3,390 bales in 1924-25, and 3,320 bales in 1925-26. Mr. C. Noble, the Director of Agriculture in Cyprus, in an interesting article in the current issue of the *Empire Cotton Growing Review*, states that the area really suitable for the crop is about 50,000 acres, and if we take the production for that area at roughly the present rate that would mean a maximum possible output of 15,000 to 20,000 bales, which would be a most useful contribution for Lancashire. The interesting fact is pointed out by Mr. Noble that between 1489 and 1570 Cyprus exported considerably more cotton than she does now, and it is surprising that in recent years Cyprus has not concentrated to a greater extent on this very important crop.

Palestine's Trade in 1926.

The trade statistics for Palestine for the past twelve months, which are now available, reflect the economic depression which set in in the country at the end of 1925. The value of the imports was £E6,445,770 as compared with £E7,227,960 for the previous year, while that of the exports was £E1,288,596 as against £E1,396,911. As I have already pointed out, Palestine's trade was seriously affected during the year by the restricted market in Egypt resulting from the fall in the price of cotton. It is a common failing of statistics that they never tell the whole story, and in the last quarter of the year there was actually a marked improvement in the position in Palestine. Stocks were being cleared more easily, promising a revival of imports in the near future, while exports were satisfactory owing to the good orange season. For December the value of the exports was £E172,508 as against £E84,532 for December, 1925. The great need of Palestine now is a larger market for its produce, and the solution of that problem must go hand in hand with economic developments if the country is to maintain an increasingly large population in the future.

Budget Prospects.

In four days' time we shall know the best or the worst of this year's Budget. Admittedly Mr. Churchill has an unenviable task in front of him, for the deficit on the past year at thirty-six millions odd is considerably more than was anticipated, while in the current year company returns will reflect the effects of last year's industrial troubles. Any increase in direct taxation is unthinkable, and there ought to be no increases in taxation and no new taxation of any kind. But it is impossible to avoid it in the circumstances, though the necessity would not have arisen if the Government had pursued a policy of unswerving economy. It seems now that events are likely

to force their hand, for the prospects of a really universal trade revival are jeopardised by the unfortunate developments in China, the outcome of which it is impossible to foresee. Unfortunately there is no guarantee that when economy is the keynote of policy it will be on the right lines. Thus I notice that the Department of Overseas Trade figures in a motion asking for the abolition or absorption by other Ministries of three Departments. This would be an economy of a ridiculous order. The development of our trade is an imperative necessity, and the work the Department is doing in this respect merits for it the fullest support. In the extravagant estimates of the Ministry of Education and certain other Departments these is ample scope for economy without interfering with a Department which in the conditions of to-day must be considered an essential part of the Government.

The Egyptian Season.

From all accounts the Egyptian season has fully come up to expectations. It says much for the attraction of the Valley of the Nile that even in a period when trade is at a low ebb the Egyptian hotels should be filled with an ever-changing throng of tourists. For Egypt a good season will mean some compensation for the disappointment over cotton, and the country will have cause to congratulate itself on the fact that once again one of the two great factors on which Egypt depends has not proved wanting.

Trade in the East.

The effect of labour unrest on trade with the East was emphasised by Sir Montagu Turner at the meeting of the Chartered Bank of India, Australia, and China. It would seem to be evident as he suggested in outlining the places where strikes occurred during the past year, that some influence is at work to damage the interests of this country. Naturally, a large part of his speech was devoted to conditions in China, and this does not fall within the scope of these columns. His review of the trade of India in 1926 calls for brief comment. It was on the whole an inactive period, but the export trade continued to be fairly satisfactory owing to the exports of tea and jute. As regards the outlook there has of late been a satisfactory development of the demand for Manchester goods pointing to improved conditions in India—a demand which has no doubt been contributed to by the effect on the prices of cotton goods of the fall in cotton.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 30:—

Egyptian Futures.—Sakel Contract.—The general tendency of this market shows little change since we last wrote; during the majority of sessions only minor operations have been recorded, and fluctuations have been confined to movements of a few points either way. The tone, however, remains comparatively steady, a rather surprising feature, as at the present juncture there is almost a complete absence of trade demand for Sakel cotton. The only explanation we can offer for this tendency is the relative firmness shown by the Alexandria market, and also no doubt the slight hardening recently witnessed in American values has contributed to exercise a restraining effect on those who otherwise might have entered into short commitments. The bulk of the fresh buying coming into the market appears to be concentrated on new crop months, and as contracts in these are somewhat scarce they have again hardened in comparison with the current positions; the movement may extend further, but it must be borne in mind that from now onwards it is likely to meet with increasing opposition, as holders of actual are not very likely to seize the opportunity of transferring their hedges on any further widening. We must confess that we are rather at a loss to account for the comparatively strength shown by the Alexandria market during the past few days; certainly, we cannot trace from reports received that this is due to any activity on the part of outside consumers; however, with our market showing a comparatively lukewarm response the result is that the two markets have again come very close together. It may be that the recent large imports of Sudans are affecting the local option. Trade reports still fail to reveal any near approach of a resumption of the activity witnessed during the early months of the year. Spinners' complaints of the working qualities of this season's crop continue to be rife, and with the offerings of new crop Sudans confirming the previous optimistic reports of their good quality and staple, we cannot foresee a sufficient measure of improvement in the demand for the Egyptian variety to absorb the present surplus. Spinners' takings this week amount to over 1,000 bales, a quite satisfactory total, but against this we notice that the local stock is being gradually augmented and now amounts to about 73,000 bales. At the present juncture, there does not seem any particular feature in the outlook to warrant the anticipation of a decided change from the present level; taking a statistical and trade point of view, the position appears to be rather "bearish"; however, with sentiment generally against short commitments at the present basis, we do not think that the market will come under pressure unless American values commence to show a reactionary tendency.

Upper Contract.—During the greater part of the week, this contract has been neglected, and although at one time prices showed a decline of a few points, the recent appreciation in American values has caused prices to react sympathetically, with the result that the alteration on the week only shows a nominal loss of 2 to 8 points, distant months exceptionally being 6 points advance. Trade support throughout has been on a rather disappointing scale, but against this we would draw attention to our remarks of last week regarding the present scarcity of the competitive outsiders, a fact perhaps which will have a more decided influence at a little later date in the season.

Egyptian Spot.—Quiet conditions, similar to those ruling last week, have again prevailed, although some slight improvement in the off-take for Egyptian proper has been seen. Prices have remained very steady, particularly for Sakel cotton, a fact which is difficult to account for unless more of this cotton is being purchased by spinners for forward delivery than is generally understood, and reports from up-country do not appear to favour this explanation. In fact, spinners all round seem to have once more come up against one of those slack

periods which occur all too frequently in the cotton trade, when output increases and sales of yarn dwindle, and the effort to maintain prices on anything like a profitable basis becomes daily more difficult.

The local spot inquiry has shown little change. There has, however, been a better demand for Sakel cotton at from 14d. to 15d., but competition is very keen and spinners generally are anything but enthusiastic buyers at the moment. The lower grades of Sakel have been rather neglected this week. Uppers have been sought after to only a moderate extent, and here again there has been a tendency for the inquiry to move upwards, and cotton at from 11d. to 11½d. has figured more largely on the board. Prices are slightly easier. Other Egyptian growths have received but little attention.

Sudan cotton has continued in fair request, the American seed variety in particular being eagerly sought after on several occasions, owing to the comparative scarcity this season of East African cotton and other outside growths. Several parcels of this year's Sudan Sakel have been placed on the market this week and have proved to be of very fine quality, surpassing anything yet produced from the Sudan. Only the first qualities have yet been offered, and these, of course, are not likely to appeal to other than those connected with the Fine trade. It is understood that sales have taken place at from 18½d. to 19d.

Reports from Manchester have made dismal reading, and c.i.f. business has been very quiet. Forwardings to spinners for the week ending the 25th inst. were returned as 10,415 bales Egyptian and 1,565 bales Sudan. Estimated sales, 1,300 bales Egyptian and 1,700 Sudan. Quotations of Sakel are unchanged on the week, whilst those of Upper show a reduction of 10 points. F.G.F. Sakel to-day, 13.35d. F.G.F. Upper to-day, 10.50d.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, April 26). (For passenger sailing and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Port Said, Colombo, Madras and Calcutta (Birkenhead, April 14); s.s. Masirah for Port Said, Colombo, Madras and Calcutta (Birkenhead, April 30).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, April 20).

British India Line.—S.s. Dalgoma for Bombay and Karachi (London, April 9); s.s. Malda for Colombo, Madras, and Calcutta (London, April 9).

Cunard Line.—S.s. Tyria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Swansea April 8, Liverpool and Glasgow April 9); s.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool May 14, Swansea May 17).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 9).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, April 8); s.s. Tregenna for Colombo, Madras, and Calcutta (London, April 30).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 23).

Ellerman and Papayanni Lines.—S.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Swansea, April 8); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 13); s.s. Lesbian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 16); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool April 23, Swansea April 28); a steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 27); s.s. Maronian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 7).

* Subject to sufficient inducement. Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Mr. W. O. Grazebrook having elected to retire, as on March 31, from the firms of Ogilvy Gillanders and Co., of London and Liverpool, and of Gillanders Arbuthnot and Co., of Calcutta, and its branches in India and Burma, the business will in future be carried on by the remaining partners, H. N. Gladstone, H. Bateson, A. C. Gladstone and Arthur d'Anvers Willis.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 4.

The approach of the Budget, developments in China and the proximity of the carry over, have combined to produce an irregular tendency in the Stock Markets, where business remains very quiet. Gilt-edged stocks have remained steady and French Government stocks were firm, but Home Rails drooped and Chinese bonds were weak, the last-named having recorded a heavy fall towards the end of the week. At the same time it is satisfactory to find that the coupon on the 5 per cent. Loan of 1912 due this week has been duly paid and that the payment due next week on the Gold Loan of 1908 is to be met. An irregular tendency has characterised the industrial market. The Dunlop dividend of 20 per cent., though higher than a year ago, was followed by a drop in the price of the shares. The tobacco group is still the sport of rumour as to increased duties in the coming Budget, and brewery shares have also been slightly depressed for the same reason. An interesting feature of the week was the announcement that preliminary arrangements have been made for the acquisition of Whiteleys, Ltd., by Selfridges. The shares of the former have risen sharply, during the past few weeks, but there was a slight reaction on the announcement of the terms which give Selfridges the control in the management. Rubber shares have remained dull and the oil group is still suffering from the reaction from the boom and fears of a continuation of the oil war.

The National Accounts.

The statement of public income and expenditure for the financial year 1926-27, which was published with the usual commendable promptitude, on the evening of March 31, shows as was generally anticipated, a substantial deficit, expenditure exceeding revenue by £36½ millions. It may be recalled that the estimates of revenue and expenditure, the latter being revised to include supplementary estimates, allowed for a deficit of £7½ millions, expenditure being put at £832 millions and revenue at £824½ millions. The actual figures prove to be £842 millions and £805 millions respectively, so that estimates of both revenue and expenditure have proved to be wide of the mark. For this the industrial troubles of 1926 are

chiefly responsible, for receipts have fallen short of the estimate principally under the headings of income and super-tax and customs and excise. The fact that there is a deficit for so abnormal a year as 1926-27 will cause no surprise, and we must wait until Budget day before we know how the Chancellor proposes to deal with it. But the more vital and interesting problem is the outlook for the current year. Mr. Churchill, if he is to balance his Budget for 1927-28, must find a revenue of over £820 millions, of which the Supply Services will require £420 millions. It is not generally anticipated that he will make any additions to the major imposts, but will rather rely on a greater revenue arising from trade revival, with a few revenue-producing changes in some of the minor duties.

A Quarter's New Capital.

The new capital market has been active during the past three months and it is not surprising to find that the amount of new capital raised in London, apart from British Government borrowing, was larger than in the corresponding period of 1926. The total, according to figures compiled by the *Economist*, was £76½ millions, which compared with £69½ millions in the first quarter of 1926. Of this total £47½ millions was for use in the United Kingdom, £20½ millions for overseas dominions, and £8½ millions for foreign countries. A feature of the figures is that no loans were raised during the quarter by foreign governments, whereas in the same period of 1926 loans raised by foreign States amounted to nearly £9 millions. Even so the fact that £29 millions of new capital was subscribed in this country destined for use overseas indicates clearly that the investing public at the moment has a keener appetite for foreign and colonial issues at attractive rates of interest than for either sound investments or speculative issues made by home concerns.

New Methods in Rand Mining.

Those in control of the gold mining industry of the Witwatersrand are ever in search of methods of securing improved results. The latest departure takes the shape of the narrowing of what is known as "Stopping width"—that is the width of the material actually broken down in the mine. In some cases the thickness of the reef is such that men can work in the space rendered vacant. In other cases a contrary condition of affairs prevails, and it is consequently necessary for a greater or lesser amount of the unpayable rock to be taken out along with the gold-bearing ore. Obviously the less of the first-named material which is handled, the better for those holding shares. The use of an improved light drill permits a narrow reef to be broken down with a smaller proportion of barren material than heretofore. Hence there is an immense increase in the quantity of gold recovered per ton of ore treated. Several well-known Rand companies have benefited in an appreciable degree from the employment of the new method, the use of which is likely to be extended.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.) EGYPT.

Linen, Etc.—The Director of Stores, Ministry of Education, Sharia, Kasr el Aini, Cairo, invites tenders for the supply of linen, table service, needle work materials, schools materials, and material for cleaning required for the school year 1927-28. April 18.

ROUMANIA.

Wire Nails.—The Roumanian State Monopoly Administration invites tenders for approximately 103,000 kgs. wire nails of various sizes ranging from 13 x 1 mm. to 200 x 7 mm. April 14. (D.O.T.)

THE SUDAN.

Evaporation Tank.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of an evaporation tank for the Upper White Nile Division, Malakal. April 21.

DIRECTORS' REPORT.

(Presented at the Seventy-third Ordinary General Meeting, 30th March, 1927.)

The Directors have now to submit to the Shareholders the Balance-sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £987,854 5s. 3d. inclusive of £209,278 4s. 6d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £777,854 5s. 3d. and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum together with a Bonus of Six shillings and threepence per share, making Twenty-and-a-quarter per cent. per annum for the whole year, free of Income Tax; to add £25,000 to the Officers' Pension Fund; to write off Premises Account £40,000; to set aside £100,000 on account of Contingencies and to carry forward the balance of £215,354 5s. 3d.

Mr. Henry Bateson, Mr. Colin Frederick Campbell and Sir William Henry Neville Goschen, K.B.E., the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A. and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Wednesday, the 6th of April.

By order of the Court, **ARTHUR SCOTT** } Secretaries.

Company Meetings.

CHARTERED BANK OF INDIA, AUSTRALIA,
AND CHINA.

Conditions in India and China.

Sir Montagu Turner's Speech.

The seventy-third ordinary general meeting of the shareholders of the Chartered Bank of India, Australia, and China was held on March 30 on the bank's premises, 38, Bishopsgate, E.C.

Sir Montagu Cornish Turner (the chairman) presided.

The Chief Manager (Mr. W. E. Preston) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—I propose that the directors' report and balance-sheet and profit and loss account be taken as read. (Agreed.)

Before I begin my remarks I have to apologise for the absence of three directors. Mr. Archibald Ross is at the present moment, I think, in China. We hope he is all right. (Hear, hear.) Mr. Foot Mitchell is unable to be present on account of ill-health. I am sorry to say that he has to undergo an operation. Mr. Henry Bateson is also absent to-day, being on a tour for the benefit of his health.

I have now the pleasure to present the report and statement of accounts for the year 1926.

Labour Unrest.

In attempting a review of the circumstances affecting the operations of this bank one realises the presence of one particular condition which has prejudicially affected the trade both of the East and of the West, and has caused a set-back in that improvement in business which had been so confidently expected and reasonably anticipated early in the year. That condition has been "labour unrest," resulting in strikes either for economic or political reasons, or for both. The result has been in many cases a temporary paralysis of trade, involving immense losses to all concerned. These strikes have occurred not only in Great Britain, but also in India, Ceylon, Hong-kong, Canton, Hankow, and Shanghai, mainly directed against British interests. Some malign influence is at work specially designed to damage the interests of this country. Labour is forgetful of the fact that the strike is a twofold weapon, which hits the striker as well as the employer, for it means, among other things, when carried to excess, as it was in this country last year, a loss of markets, which cannot easily be recovered, and this loss of markets means more unemployment and lower wages. In fact, strikes at home are simply an encouragement and help to our competitors in foreign markets.

We notice in India, for example, when our iron and steel factories were closed down, a considerable decline in the imports of British iron and steel, while imports from Belgium and Germany show a very large increase, especially at the close of 1926.

Conditions in India.

As regards India, certain conditions have arisen which have tended to make the past season less active than we expected. In the early part of the year wheat and seed shipments were most disappointing. This was in a measure due to poorness of winter rains and failure of crops in certain districts, so that exports early in the year were about one-tenth of the previous season's. In anticipation of further scarcity, imports of Australian wheat have been arranged. Then the uncertainty as to the fixed ratio of the rupee resulted in trade bills being held back, and this caused unemployment of funds laid down by banks to meet ordinary trade requirements. Another disturbing cause has been the fluctuation in the price of raw material. Jute has shown a drop of nearly £20 per ton between the early part and the close of last year, the price varying from £50 to £30 per ton.

The Fall in Cotton.

Cotton, both American and Indian, has also shown an appreciable

drop—in the case of American cotton at least 3d. per lb.—and as long as the uncertainty of price existed, importers of Manchester goods had to work warily. Dealers in the bazaars refused to give orders until stocks had been worked off and the drop in price was practically played out. I am glad to hear that quite recently satisfactory orders have been placed by India in the Manchester market. Of course, Manchester still has to compete, in certain classes of goods, with Northern Italy and the Continent, and also, in the case of cheap goods, with Japan. But in the case of Japan it is the Bombay mills which suffer most from Japanese competition.

Exports of cotton from India were affected by the record American crop and consequent drop in value. It is interesting to note that India has imported quite a fair amount of low-grade American cotton, which was used for local mill consumption, and took the place of certain Indian descriptions, of which supplies were insufficient and too expensive to meet requirements. About 200,000 bales of American cotton may be imported this season. It is hoped that with the fall in the price of cotton the Bombay mills may show a distinct revival.

But, on the whole, India has continued to enjoy prosperity, thanks in a great measure to her exports of jute and tea, and she can show a balance of trade in her favour amounting to £32,279,000. The prosperity of the country is shown by that remarkably satisfactory Budget recently produced by the Finance Minister, Sir Basil Blackett. We heartily congratulate him on the success of his strenuous labours, resulting in the placing of Indian finance on a very high level and vastly improving the credit of the country.

Rice, Tea, and Rubber.

Burma has been quiet, but the shipments of rice promise to be good this year. Ceylon continues to enjoy a period of prosperity with its active markets of tea and rubber. For some weeks the export and import trade of Ceylon was blocked by a strike of warehouse coolies. I cannot help thinking that this strike was partly political, for it coincided with the expected arrival of the troopships en route to China. It so happened that the troopships did not call at Colombo.

The Situation in China.

As regards China, it is extremely difficult to hazard any opinion as to what may happen in the future, or even from day to day. Presumably there will be North and South Republics, or even a third Central Republic, but this can only be decided when the contending forces of North and South have exhausted themselves, or, as we may hope, have come to a settlement, which may provide a really good, efficient Civil Government or Governments for the country. All that the British merchant asks for is the existence of a real settled and effective Government, with security for life and property, that peace and good will should prevail, that trade should be possible not only at the seaports but up country, and that transport should be feasible by rail or river without fear of interference by bandits. At present this is not the case. Railways and the railway plant are in the hands of the military. Water carriage is almost impossible owing to piracy, and producers have to make recourse to the pack and the barrow to get their goods to the purchasing markets. It is well to remember that it is estimated that the value of property held by British subjects in China reaches £350,000,000 sterling. Further, we have to bear in mind that the value of exports from Great Britain and India to Hong-kong totalled £5,639,000 and to China £27,578,000 sterling, while the imports from Hong-kong to Great Britain and India represented £1,300,000, and from China £14,000,000. In other words, Great Britain and British India alone were interested in trade with Hong-kong and China last year to the extent of £48,500,000 sterling.

We must also recognise what has led up to the present situation. The spirit of nationalism, which was the outcome of education and residence in the West, was quite understandable and could not be legitimately objected to. It has been in existence for a considerable time, has grown rapidly, and has permeated both North and South China. The danger arose when the Communistic element—the spirit

THEO. LEVI, Chief Accountant. B. HORNSBY, President. R. G. WESTROPP, Managing Director.

of hatred—from Moscow pervaded the councils of Canton. From this Communistic spirit has grown the intense anti-British feeling and the so-called spirit of anti-Imperialism.

Strikes and Boycotts.

Although a certain amount of trade has been possible in North China, at Hankow, Shanghai, and Tientsin, troubles have been unceasing owing to strikes and boycotts. In most cases the strikes have been engineered by agitators and students, the workmen, though willing and keen to work, being compelled to leave their employment. At Hankow business, as you are aware, was suspended entirely owing to the action of the Cantonese in January last, when the British banks were closed down for several days. I regret to say that it has been found necessary to close down again owing to a strike of Chinese employees in the banks, who have made preposterous and ridiculous demands.

It is fortunate, indeed, that the British Government decided to send a protective force to Shanghai—(hear, hear)—or we should have seen similar scenes to that of Hankow and Nanking repeated at Shanghai, and the position of foreigners would have been unendurable. Our fellow-countrymen in China owe much to the British Army and Navy. (Hear, hear.) No impartial observer could possibly criticise the action of the home Government in thus taking what was really absolutely necessary action to protect the lives of our fellow-countrymen. Our only regret might be that, with the knowledge of what was happening in Canton for the past two or three years, serious diplomatic steps were not taken to counteract the insidious action of the envoys from Moscow.

In China the future is at present rather dark and obscure, but we must not take too gloomy a view. The Cantonese free of Moscow influence would, I believe, be capable of governing their sphere of China wisely and well. At any rate, it is a question of patience, of hope and endurance, and we must remember that the Chinese are a wonderful race with a vast amount of common sense.

The Balance-sheet.

Turning to the figures of our balance-sheet, it will be seen that our total amounts to £66,645,955 13s. 7d., a decrease of £4,220,492 10s. 5d. on the corresponding figures of the previous year, which is not surprising when regard is paid to the unsatisfactory conditions which prevailed both in India and in China during the period covered by the accounts.

Our current accounts and fixed deposits total £50,067,105 2s., against £51,134,281 12s. 5d. for the same period in 1925.

Bills payable, standing at £2,730,403 10s. 9d., show a reduction of £228,731 0s. 5d., whilst acceptances on account of customers—£2,175,807 1s. 1d.—are less by £851,763 2s. 10d. than the corresponding figures at 1925. Loans payable stand at £797,334 12s., against £2,565,171 10s. 10d., a natural reflection of the slackness in general trade.

Our cash in hand and at bankers assumed the respectable total of £10,013,953 10s. 8d., against £5,648,448 8s. 9d. as at December 31, 1925; whilst our bullion on hand and in transit amounts to £621,120 5s. 2d., against £1,858,861 4s. 2d. at December 31, 1925. Our Government and other securities showed an increase at £12,149,644 8s. 6d., against £8,334,666 17s. 2d. The above items all point to the stagnation in business towards the end of the year, and for a similar reason our bills of exchange and bills discounted and loans are down to £17,392,620 0s. 10d. and £20,172,751 11s. 8d. respectively.

As regards the report, we have been able to give the same return to the shareholders as in previous years, to add £25,000 to Pensions Fund and £40,000 to Premises Account, and to place £100,000 to a fund for contingencies.

In view of the many handicaps to trade to which I have referred, I consider the report quite satisfactory. Mr. Preston, his co-managers at Head Office, and, indeed, all the staff, both abroad and at home, deserve our grateful thanks for their hard work and close attention to the interests of the bank. (Hear, hear.) Especially must we remember our staff at Hong-kong, Canton, and N. China in the great and serious ordeal through which they are now passing. (Cheers.)

I beg to move:—"That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted."

Mr. Lewis A. Wallace seconded the resolution, which was carried unanimously.

The Chairman next moved:—"That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31 last,

together with a bonus of 6s. 3d. per share, free of income tax, be now declared payable on and after the 16th proximo."

Sir William Henry Neville Goschen, K.B.E., seconded the resolution, and it was unanimously adopted.

The Chairman also proposed:—"That Mr. Henry Bateson, Mr. Colin Frederick Campbell, and Sir William Henry Neville Goschen, K.B.E., the directors who now retire by rotation, be re-elected directors."

The motion was seconded by Mr. Archibald Auldjo Jamieson and unanimously agreed to.

Mr. Oliver C. Denny moved:—"That Mr. David Charles Wilson and Mr. Henry Croughton Knight Stileman be re-elected auditors for the ensuing year."

Mr. P. Brandon seconded the motion, which was passed unanimously.

The Chairman said that the shareholders generally proposed a vote of thanks to the staff, and he hoped it would be done on the present occasion, because the thought they deserved it even more than usual. (Hear, hear.)

Thanks to Directors and Staff.

Mr. Frederick Tomkinson proposed:—"That the best thanks of the shareholders be given to the directors and staff for their successful management of the bank." He felt that they were deeply indebted, first, to the directors for the able way in which they had conducted the affairs of the bank during a most trying year—and he supposed they had never had a more trying one—and also to the staff. No matter how good and farseeing the directors might be, without an able staff such as they had, with Mr. Preston at their head, the shareholders would not have the pleasure of receiving the 20 per cent. dividend which they were about to get. (Hear, hear.) The chairman had pointed out the various difficulties which had been experienced, and which were well known to people trading with India, and the shareholders were all the more indebted to those who had so worked the bank as to be able to present the brilliant report which had been before the shareholders on the present occasion. He described it as brilliant because the results had been achieved in face of bad times.

It was easy enough to make money when things went swimmingly, but it was not so easy to do so when they had to contend with strikes, and with political propaganda of a most insidious and powerful character directed from Moscow. He believed that that propaganda was one of the principal causes of the discontent which began in Canton and was now working up to what they saw at present. Having regard to all these things, he thought the shareholders were very deeply indebted to the directors and the staff for the way in which they had managed the bank during the past year. (Hear, hear.)

Tribute to the Chairman.

Mr. R. F. Banks, in seconding the motion, said he felt sure that all the shareholders fully endorsed the words which had fallen from the last speaker with reference to the chairman and directors, as well as the managers and staff. As a shareholder, he personally felt very much indebted—and he thought everyone else present had the same feeling—to the chairman for the enlightenment that he had given them with reference to the condition of things in India and China—China more particularly—and he hoped that the chairman's words would be read far beyond the confines of that room. The first portion of his address, with reference to the interests of both workmen and employers, and how injurious strikes were in the conduct of trade, and also the latter part of his address, with regard to China, would act as an encouragement to many commercial concerns, not only in this country but also in lands beyond the seas. (Hear, hear.)

The resolution was cordially approved.

The Chairman said that, speaking on behalf of the directors, it was exceedingly encouraging to them to know that the shareholders really appreciated their work. He could certainly say that they devoted a great deal of time, thought, and attention to the business of the bank. He would not say much about Mr. Preston. The shareholders all knew him, the splendid work he did, and the tremendous attention he gave to their interests—in fact, his (the chairman's) only complaint was that at times Mr. Preston worked a bit too hard and he had to make him "go easy"—a rather difficult matter. (Laughter and cheers.)

The Chief Manager (Mr. W. E. Preston) said that on behalf of the foreign staff, the home staff, and himself he wished to thank the shareholders once again most sincerely for their exceedingly kind vote of thanks.

The proceedings then terminated.

Chartered Accountants,

London, 17th March, 1927.

NATIONAL BANK OF INDIA.

Sir Charles McLeod's Speech.

The ordinary general meeting of the National Bank of India, Ltd., was held at the Wesleyan Hall, Bishopsgate, London, E.C., on April 5, Sir Charles C. McLeod, Bart. (the Chairman) presiding.

The general manager (Mr. Nicoll) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—The report of the directors and the accounts to December 31, 1926, have been in your hands for some days and I presume you will allow me as usual to take them as read. (Agreed.)

There has been no change in the directorate since our last meeting, but as you will see from the report Mr. J. Y. Munro has retired from the City Management after serving the Bank loyally and well for a period of forty-one years. He is succeeded in that appointment by Mr. W. J. K. Hegarty.

I think you will agree that we have again been able to put before you results which must be considered satisfactory, the figure of £534,315 19s. 7d. net profit comparing with £536,104 13s. 4d. for the previous year, and the available total for this year being £775,400 17s. 8d., compared with £761,084 18s. 1d. for 1925. You will observe that we propose to place £50,000 to reserve fund, which will then amount to £2,900,000, to write down premises account £30,000, to place to credit of the officers' pension fund £40,000, and to pay a further dividend at the rate of 20 per cent. per annum free of income tax, which with the similar interim dividend disposes of £400,000, and leaves us with a balance of £255,400 17s. 8d. to carry forward, or £14,316 more than the amount brought in.

The Balance-Sheet.

Turning to the balance-sheet figures, these reflect the condition of business during the past year, and I venture to submit that they are not unsatisfactory although there is a slight falling off in some of the items.

On the Liabilities side there is some contraction—not a large one—in current, fixed deposit and other accounts. This has to be looked for from time to time. On the assets side we have a considerable increase in our holdings of securities, and a falling off in bills of exchange, discounts, and loans receivable. On the whole, I think it can be claimed that our figures have been well maintained taking into account existing conditions, and that a total of nearly £40,000,000 is a satisfactory one. (Hear, hear.)

There can be no question as to the strength of the balance-sheet figures. The cash amounted to £4,767,586, securities £15,317,570, and bills of exchange £6,220,790, a total of £26,305,946 against deposits of £31,973,703. We are still looking for the increase of business to which I have referred on a previous occasion and which, with the more settled conditions under which India is now working, we all hope will in due course eventuate, and in the meantime, as you have seen, we have again had recourse to Government securities for investment of our surplus funds. These securities, I need scarcely add, are all gilt-edged and stand in our books at under market value. You will have observed that in the figures submitted to you our rupee assets and liabilities are still converted at a rate of 1s. 4d. per rupee. In due course we shall have to conform to what is now the standard ratio of 1s. 6d. and the balance-sheet figures thereafter submitted to you will show a considerable increase. I do not think that I can usefully add anything to my remarks on the figures beyond stating that as usual all bad and doubtful debts have been fully provided for.

During the period covered by these accounts the foreign trade of India has been less active than in the preceding year. Exports of merchandise amounted to £253 millions as compared with £313 millions in 1925, showing a reduction of about 20 per cent. On the other hand, imports showed some slight expansion, being valued at £180 millions against £172 millions in the previous year, an increase of approximately 5 per cent. As might be expected from these figures there was a considerable falling off in the absorption by India of the precious metals, the net imports of gold amounting to £17,400,000 only against the record figure of £43,000,000 in the previous year. Net imports of silver amounted to £14,100,000, which is only about £1,000,000 less than in 1925, the difference between the highest and lowest point having been as much as 7 11/16th pence per ounce standard, the widest range in rates since the year 1921.

Factors in Contraction of Exports.

Several factors have contributed to the contraction in the value of exports which I have referred to, chief amongst them being the heavy fall in the prices of cotton and jute. At the beginning of the year, middling Americans were quoted 11d. per lb. A more or less steady decline set in until prices touched about 6½d., since when there has been some slight recovery and the quotation is now about 7½d.

As regards jute, the year opened with prices in the neighbourhood of £60 per ton. Before the new jute season opened the quotation was down to about £27 and now stands about £30 per ton. These two commodities alone account for a very large part of the reduction in the value of Indian exports, but there are other factors which also contribute to the falling off. Ordinarily, India is a very considerable exporter of wheat. During the past year, however, exports have been comparatively trivial, due partly to a smaller crop, and to a considerable extent to a greater internal consumption, for it would appear that a section of the population which formerly was content to exist on cheaper foodstuffs has now developed a taste for the more expensive and more nutritious grain, and presumably they can afford it. In this connexion, a feature of the year has been the import of several cargoes of Australian wheat, due no doubt to external prices being lower than internal prices.

What I have said about wheat may also be said of most oil seeds of which India is usually a large exporter. Exports have been on a reduced scale, due largely to an increased consumption in the country itself. Shipments of rice, of which Burma is the large exporter, were normal and prices steady throughout the year. Shipments of tea from India and Ceylon were heavier owing to larger crops, and prices in consequence were at a lower level.

As regards imports the lower level of prices of raw cotton should help to stimulate imports of piece-goods, and it is satisfactory to note that since the beginning of the year considerable orders have been placed in Lancashire which must be welcomed by all those engaged in the textile industry in this country.

As I have said, the foreign trade of India all round has been on smaller lines. As regards our branches in East Africa, trade in these territories also shows some contraction, due principally to a smaller crop of cotton in Uganda and the much lower prices ruling for that commodity. Total exports from Kenya and Uganda were valued at £6,000,000 in 1926 as compared with £7,800,000 in 1925. The value of imports was also lower, being £6,300,000 against £6,873,000 in the previous year.

The Exchange.

Indian exchange throughout the year kept in the neighbourhood of 1s. 6d., but at times there was some uncertainty as to the future and on one occasion the Indian Government had to resort to selling sterling on London to keep rates on the 1s. 6d. basis. Such uncertainty made profitable working difficult and encouraged an element of speculation which did not contribute to easy working.

Money market conditions throughout the whole year were easy and for the six months from June to December the Imperial Bank rate remained at 4 per cent. In the open market for several months during that period money was practically unobtainable at any rate.

As most of you are no doubt aware, a Royal Commission on Indian Currency and Finance was appointed in August, 1925, "to examine

EASTERN DEPARTMENT:

14, KING WILLIAM STREET, LONDON, E.C. 4.

LLOYDS BANK now has the following Offices in INDIA and BURMAH, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

and report on the Indian Exchange and Currency system and practice; to consider whether any modifications are desirable in the interests of India, and to make recommendations."

This Royal Commission issued a highly interesting and instructive report in August last. Recommendations of the majority were—amongst others—that the rupee should be stabilised at one-and-sixpence and that a Reserve Bank should be established for the management and control of the Currency and other matters. Since the issue of the report legislation has been introduced to give effect to the recommendations of the Commission, and after much discussion in the Legislative Assembly and the Council of State a Bill has been passed establishing the one-and-sixpenny rate. A further Bill is now before the Legislative Assembly designed to give effect to the recommendations of the Commission regarding a Reserve Bank for the management and control of the currency. This Bill will come up for discussion later on in the year and will merit the attention of all banking institutions established in India. Should this Bill reach the Statute Book in its present form the Imperial Bank would be freed from restriction as to the nature of the business which it may transact. It would also cease to be Government Banker and as compensation for the loss of such business would receive special consideration from the Reserve Bank. An agreement setting forth the terms to be offered forms part of the Bill and this agreement will call for very careful consideration by all those interested in Indian finance and banking, in order to ensure that justice is fairly meted out both to the Imperial Bank and to others who have financed the trade of India for many years.

Consideration will also have to be given to the nature of the business to be transacted by the proposed Reserve Bank itself. It is, as I understand it, intended to be a "banker's bank." It should be nothing more and should therefore do no outside business.

As regards local industries, jute mills, due to a bumper crop and a sustained demand for gunny bags and cloth, are now doing fairly well. Last year the slump in prices of raw material and the necessity for writing down stocks to market value affected adversely the results of some of the mills, but prices are now at a safer level and the industry should do well.

The great cotton mill industry in Western India is still depressed but probably not so badly as it was a year ago. Lower prices should stimulate consumption and it is to be hoped the industry has seen its worst days.

Tea Companies although not making the large profits of recent years are still doing well.

In regard to Indian affairs I would like to associate myself with the tribute paid to Mr. Lindsay, the Indian Trade Commissioner, by the Chairman of the Mercantile Bank of India. Mr. Lindsay's whole-hearted zeal and energy in the interests of all who trade with India are most valuable. We would very much like to see his office back at Winchester House again.

Once again I desire to place on record on behalf of myself and colleagues on the Board our very keen appreciation of the strenuous and good work put in by our managers and staff. It is to them more than anyone else we owe our present very satisfactory position. (Hear, hear.)

The Dividend.

I beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1926, be received and adopted, and that a dividend for the six months to December 31, 1926, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after April 6, 1927."

After this resolution has been seconded by Mr. Stuart, and before I put it to the meeting, an opportunity will be given to anyone who wishes to make any remarks or to ask any questions. (Applause.)

Mr. J. N. Stuart: I have much pleasure in seconding the resolution which has just been proposed.

The Chairman: If there are no other remarks I will put to the

meeting the resolution which I have just read and which has been seconded by Mr. Stuart.

The resolution was carried unanimously.

The Chairman: Gentlemen, I have much pleasure in proposing:—"That Sir John P. Hewett, Mr. R. Langford James, and Mr. J. A. Toomey be re-elected directors of the Bank."

Mr. Robert Miller: I have much pleasure in seconding that.

The motion was passed unanimously.

Mr. Alderman Percy W. Greenaway: Mr. Chairman and gentlemen, I have pleasure in proposing:—"That Messrs. Cooper Brothers and Company and Messrs. W. A. Browne and Company, be re-elected auditors of the Bank for the ensuing year at the remuneration of 400 guineas per annum each, free of income tax."

Mr. Alderman W. Martin: I beg to second that motion.

The resolution was passed unanimously.

Mr. J. Irwin Davis: It is my privilege to propose to you a very cordial vote of thanks to the Chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and also to the general manager and staff for their valuable services. Having regard to the adverse conditions which continued throughout the year, the balance-sheet is as usual a most satisfactory document. It reveals again the efficient manner which has always characterised the administration of the affairs of the bank. We have listened with much pleasure and profit to the lucid and interesting address of the Chairman and I am sure we shall all leave this hall fortified in the comfortable feeling of better times ahead. At any rate we feel assured that our interests could not be in better hands than in those of our esteemed Chairman Sir Charles McLeod and his co-directors. Our best thanks are also due to our general manager, Mr. Nicoll, to the London manager, and to the managers and staff at home and abroad. They have all done their duty and done their best, devoting their best energies to the promotion of our common aims and our common interests—the advancement and prosperity of the Bank. After an experience of these annual meetings of over a quarter of a century I can say that the staff has always worked in full harmony and in full co-operation with the Board. We on our side have placed the fullest confidence in both, and in doing that we have been more than justified. The bank has kept on forging ahead, in good times and in bad times consistently earning handsome profits and paying substantial dividends to its shareholders. I am sure you will all unite with me in conveying to all concerned our warmest appreciation and thanks.

Mr. Frederick Tomkinson: I have pleasure, gentlemen, in seconding the resolution which has just been proposed.

The resolution was carried with acclamation.

The Chairman briefly acknowledged the compliment on behalf of the directors and staff and the meeting terminated with a vote of thanks to the Chairman for presiding.

At a meeting of the Board of the Suez Canal Company on April 4, M. Jonnart made known his desire to resign the Presidency. The Board thereupon elected him Honorary President and the Marquis de Vogue (manager) was unanimously chosen to be President of the Board.

Roumania's autumn sowings are stated to have been as follows:—Wheat, 2,578,364 hectares, against 2,077,991 hectares in 1925; rye, 239,507 hectares, against 272,472 hectares in 1925; winter barley, 103,634 hectares, against 108,037 hectares in 1925; autumn rape, 15,168 hectares.

In accordance with the Greco-Roumanian commercial convention, signed on March 29 in Athens, both parties will enjoy most-favoured-nation privileges, Greek shipping in Roumanian ports on the Danube will be given the same facilities as Roumanian, and the duty on Greek currants in Roumania will be abated.

The Puzzle of Turkey.

The East of to-day is studded with problems such as never before, in their variety and many-sidedness, puzzled mankind. No matter where you look, whether it be China, Russia, Persia, Arabia, or Turkey, the condition of affairs in each country is open to many different interpretations, and, in fact, is being interpreted in many different ways. So you will hear some observers speak of "Nationalism" in China and others deny its existence; of freedom in Bolshevik Russia and its description as a mockery; of efficiency in the Hijaz and the assertion that the interests of Islam are incapable of being protected and realised by the Wahhabis; and so on. There is in the Western world nothing approaching unanimity in the estimates of the East; the Oriental problem (or problems) is infinitely more elusive than it was before the Great War.

But if the West cannot make up its mind about the East, equally the East cannot make up its mind about itself. Let us take Turkey as a test case. Here is a country ruled by a Dictator, Mustapha Kemal, who for a time was the cynosure of Muslim eyes. He, the Ghazi, had stood firm for Islam against the all-powerful West; there was hardly a Muslim soul in non-Turk countries who did not look up to him in awe and pride. But now? Who would say what the Muslim East thinks of Kemalist Turkey? Manifestly his strength and iron determination are still the source of infinite admiration; in Iraq and Persia, for example, the example of the Turkish President inspires some not insignificant men. The fact that Turkey is governed under the thinnest veil of constitutionalism matters little to Muslims, who are fortunate enough to be able to appreciate good governance without

any theoretical moralisings upon its methods. But is Kemalist Turkey universally admired among Mussalmans?

Obviously the answer is, No! Kemalist Turkey has been a considerable disappointment to a section of Islam. That section which longed for a more zealous practice of the doctrines of its religion and which hoped that renaissance Turkey would take the lead in such a movement has been gravely disappointed. It has seen Turkey apparently rushing blindly in an uncheckable desire to be superficially like the West; it has watched Turkey march to the beat of men who seem (to this section of Islam) to have imbibed the vices of the West rather than to be exhaling the virtues of the East; it has been dismayed at the strange attempt on the part of the Kemalists to have banished for ever the charge of being Oriental.

When will this perplexity end? Time alone can tell. But there are signs—very small, perhaps, as yet—that the old Islamic Turk is reasserting himself. At the religious festival of Qadr recently in Constantinople, crowds are said to have filled the mosques. Of course, Stamboul is not Angora, where it may be that the Charleston is among the select a more popular indulgence than is a religious observance. But it is difficult to believe that the present tendency in Turkey to account other things more important than the religion which it so long and gloriously defended will endure indefinitely.

In time, one is forced to think, the rulers of Turkey will come to see that not all the immemorial habits of their subjects need be broken in the worthy and painful struggle to establish a new order. But until they see that, they will remain a puzzle to the world; and when they see it, they will willy-nilly find all Islam upon their side.

THE ALBANIAN PROBLEM.

Three weeks have sufficed to dissipate effectually the scare created by the Italian communication to the British, French and German Governments regarding Yugoslavia's alleged preparations for war. Apart from the chronic strain to which the relations between Yugoslavia and Italy are subjected, which became intensified by the conclusion of the Tirana Treaty, the sequence of events leading up to the crisis begins with a test mobilisation ordered by the Yugoslav Government at the beginning of the year, to determine the efficiency of the country's military organisation. Although no military movements were involved, an alarmist interpretation was placed on these activities by the Albanian Government, which proceeded as a precautionary measure to strengthen its forces on the northern and north-eastern frontiers. Alarmed in turn by this concentration, the Yugoslav Government is reported to have instructed its frontier commands to mobilise sufficient reserves to bring their units up to adequate strength in case of emergencies on the Albanian frontiers. It was at this stage that Italy intervened. In the interests of both Albania and Yugoslavia it was time that the mutual misunderstandings—if such they were—should be cleared up, and it is evident that any outside Government, actuated by the right motives, could easily have brought about this end by asking for simultaneous explanations in Belgrade and Tirana. The Italian Government preferred to launch an unqualified denunciation against Yugoslavia and at the same time unmasked its own designs by landing—so it is stated—troops on the island of Saseno in the Bay of Valona. This latter movement, if it actually took place, does not seem to have received the attention that it deserves. The Italian note to the Powers threatened that support would be accorded to Albania in the event of a Yugoslav attack; it did not, as far as is known, mention that the Albanian Government had invited Italy to send troops to its aid, and, if this invitation had been received, it is difficult to understand why Saseno should have been selected as a landing place in the face of a threatened invasion from the North of Albania. Possibly, in omitting to mention the dispatch of troops to Albania, Italy may have adopted the attitude that Saseno is still an Italian island, in spite of the fact that the Tirana Treaty and the subsequent letter of the Italian Minister will have led the Albanian Government to suppose that the territorial *status quo* which Italy has undertaken to maintain is that of the official boundaries of Albania, and not as modified by Italy's seizure of Saseno prior to Albania's admission to the League of Nations. Even so, the landing on Saseno must have given the Albanians, with their whole attention fixed on the north, furiously to think.

Not the least satisfactory aspect of the situation is the readiness with which the countries immediately concerned have endeavoured to atone for the mistakes made by each of them. The appointment by the Albanian

Government of Major-General Sir Jocelyn Percy to command all the forces of the Republic in the Scutari zone is an eminently tactful measure, calculated not only to reassure Yugoslavia, but also to impress the tribesmen of Northern Albania with the good intentions of the Tirana authorities towards them. The Yugoslav Government for its part has placed no obstacles in the way of any course suggested for the liquidation of the crisis. It was prepared to accept an investigation of frontier conditions by military experts, and has equally acquiesced in the proposal for direct negotiations between itself and the Italian Government. If Italy's contribution to the general improvement of the situation has been of a more negative character, it has been none the less useful. Signor Mussolini's abrupt abandonment of his first provocative attitude has done more than anything else to convince other Governments that Italy's action was not altogether disingenuous and has caused them to modify the judgment that they were inclined to pass on Yugoslavia immediately on the receipt of the Italian note. It is difficult, however, to see what advantages are to be gained by direct negotiations between Italy and Yugoslavia. Nothing could improve upon the cordiality of the treaties already signed by the two countries; but this circumstance has not ameliorated the relations between them one whit, nor did it prevent Italy from denouncing Yugoslavia to the Great Powers instead of making friendly representations to Belgrade with a view to easing the tension with Albania. Under the pressure of public opinion in Europe it is possible that Italy and Yugoslavia may sign yet another treaty of friendship and cordiality; but until there is a complete change of attitude towards Albania on Italy's part, there is likely to be little real improvement in the relations between the two States.

The crux of the situation, therefore, lies in the position of Albania. It is an axiom of Italy's Adriatic policy that any modification in the frontiers of Albania or any violation of her independence constitutes a danger for the strategic safety of Italy, and the validity of this point of view was endorsed by the Governments of Great Britain, France, Italy and Japan in the decision taken in Paris on November 9, 1921, when they recognised Albania as a sovereign and independent State. The four Governments then agreed, however, that appeal must first be made to the Council of the League of Nations for the safety of Albanian territory, and that, only in the event of the Council's deciding that intervention was not expedient, would they take the matter in their own hands and entrust the protection of Albania to Italy. By the Tirana Treaty the Italian Government has gone behind the four-Power agreement and has constituted herself the special protector of Albania without reference to the other Powers or to the League of Nations. It is clear, therefore, that the Governments of Great Britain, France and Japan are no longer bound by the Paris Pact of November 9, 1921, which Italy herself has "scrapped." In these circumstances what is required now is that the League of Nations in the interest of European peace should examine the question of Albania's status. An Italian protectorate over Albania is entirely opposed to the principle of the Balkans for the Balkan peoples, and so long as it exists or is claimed by Italy it must be challenged by Yugoslavia and, sooner or later, by the other Balkan States. On the other hand Italy's fear of having the Adriatic closed against her is genuine and legitimate, and a solution of the Albanian problem, to be complete, must safeguard Italy's naval position. As far as Yugoslavia is concerned, a resolve, however fiercely expressed, not to tolerate Italian designs on Albania is in no way incompatible with the most conscientious respect for Albanian integrity and independence. Convinced as we are that a final settlement of the Near Eastern Question can be found only in a Balkan Federation, which must include Albania, we can but hope that Italy will be great-minded enough to realise that she stands to gain much more from a united and prosperous Balkan Peninsula, which she will have helped to create by a voluntary surrender of her past claims on Albania, than by seeking petty advantages at the cost of constant friction with all her neighbours.

Notes of the Week.

Balkan Nerves.

It is inevitable that the scare recently raised by Italy should have reacted on the nerves of the Balkan peoples, and the situation has not been improved by the conclusion of a Treaty of Friendship between Italy and Hungary. The epidemic of treaty-making which has swept over Eastern Europe is, however, so innocuous that there is no need to invest the Italian outbreak with any sinister import. Signor Mussolini has found yet another Government willing to give and accept promises of good behaviour in keeping with an age that has seen the creation of the League of Nations, and, as there still remain some two score countries belonging to the League which have not yet signed an undertaking to behave in the same way, Italian diplomacy may yet be kept busy multiplying treaties for some time to come. The only significance attaching to the Italo-Hungarian Treaty lies in the fact that its conclusion follows hard on the early steps of an attempted *rapprochement* between Hungary and Yugoslavia. For the moment it is likely to check the progress of the negotiations between Belgrade and Budapest; but it is to be hoped that the Yugoslav Government will quickly decide that the best way to counter Italian activity in the realm of academic agreements is to conclude treaties which can lead to practical and beneficial results in the economic sphere. Hungary is not to be blamed for taking the hand of friendship held out by Italy. She has still to smart under the affront and anachronism of the Little Entente, which in its origin bound Czechoslovakia, Yugoslavia and Roumania together in the joint purpose of jumping with their forty-three million inhabitants on eight million Magyars in the event of the latter attempting to commit political suicide. It is true that the Hungarian "menace," in view of its relative insignificance, has been allowed to sink into the background, and the Little Entente serves little further purpose than to irritate Italy and to spur her on to undermine it. Each of the three countries, however, hesitates to propose its dissolution. So long as it exists, both Roumania and Yugoslavia remain catspaws of Czechoslovakia's Central European ambitions, and are prevented from promoting their own interests by a Balkan federation.

Greece's Political Troubles.

It would have been a serious misfortune for Greece if the Coalition—or Oecumenical—Government had been dissolved at this early stage of its existence. In four months there has not been time for the Cabinet to achieve more than a modicum of its programme. It has indeed inaugurated a policy of reconciliation between Venizelists and anti-Venizelists in its own composition and by appointing representatives of the latter to diplomatic posts; and now it has to its credit the settlement of the Greek War Debt to Great Britain. Trouble, however, arose as soon as it tried to get to grips with the all-important domestic problem of military reform. For many years now the Greek nation has been at the mercy of military revolutions, and it could expect no permanent relief from this danger so long as the Army was officered on the in-and-out system in regard to the two main political divisions of the country. The task that the Government set itself was, first, to restore the anti-Venizelist officers who had been retired on political grounds, and then to pass an impartial non-political comb through the Officers' Corps with a view to re-establishing the efficiency of the Army. No real progress had been made in the matter before the resignation of M. Tsaldaris, Minister of the Interior one of the Anti-Venizelist leaders was announced. The step followed a Gendarmerie appointment and was not directly linked up with Army reform, but it reflected the strained relations that have been brought about in the Ministry by the attempt to settle the military problem. The incident has now been closed by a compromise and M. Tsaldaris retains his portfolio. Any

radical change of Government at this moment would be doubly unfortunate in view of the fact that the general Balkan situation holds out prospects of a possible solution of the questions outstanding between Greece and Yugoslavia.

The Labour Party and Bulgaria.

The British Labour Party is evidently exercised in mind over Bulgaria, for in recent years many of its members have undertaken missions of investigation to find out "at first hand" just what the situation in the country is. The latest visitors are Mr. R. C. Wallhead and Mr. D. Grenfell, who seem to have made up their minds that a "white terror" exists in Bulgaria and to have tried to gauge its intensity. Now, of the earnestness and conscientiousness of both these investigators we have not the least doubt; but it requires only a slight knowledge of the Balkans to realize of what little practical value their inquiries must be. To begin with, they can learn only what is told them, and, having no profound knowledge of the country and its people, they will be unable to gauge the value of the evidence that they collect. Members of the Government or at least some of its followers will tell them, presumably, that all the political prisoners still in gaol are criminals; members of the Opposition will maintain that they are one and all saints, victims of such a terrorist Government as was never before. Unless the inquirer is well acquainted with the language of political opponents in the Balkans, who the day after may be members with the party in power of a Coalition Government, is it likely that he can profitably gauge where the line of probable accuracy is to be drawn between the two contradictory statements? Mr. Wallhead has unburdened himself to the *Daily Herald* and appropriately rings the changes on the word "terror" and all its derivatives. Mr. Grenfell, we gather, is more circumspect, and sees some point in the contention that if a man who is generally believed to have been responsible, directly or indirectly, for the death of one or more of his neighbours but cannot be convicted for lack of evidence, is let out of gaol he may not be received exactly with open arms by those neighbours. Now it is unnecessary in the Balkans to introduce the political terms of "Fascist" and "Labour" to explain this phenomenon. Quarrels there are settled in the more elementary way of "an eye for an eye and a tooth for a tooth," and it is much better for the inexperienced Englishman to realize that the adoption of Western drawing-room methods in the settlement of political differences in the Balkans is likely to be a slow progress, however earnestly Labour Members of Parliament, who know it not, may tour the Peninsula.

Depression in Palestine.

The continuance of the depression among the Jewish immigrants in Palestine is not, we think, adequately realised in this country, for the fact that the Palestine Government's finances are in a quite satisfactory condition has led many people to suppose that the general situation also must be good. But it is patent that the depression which set in several months ago still continues. In January and February of this year emigrants from Palestine once more outnumbered immigrants into it; and it has been stated by the *Dayar* of Tel Aviv—which town, by the way, has on its at present impotent shoulders a debt of over a quarter of a million sterling—that of the 23,460 members belonging to Labour Organisations, no fewer than 8,150 are unemployed. It has been suggested, of course, that the Government should alter this state of things by the institution of large relief measures. What can be done in this direction, however, is already being done; there is obviously a limit to this kind of thing. It looks very much as if Zionists in Palestine would have to bear their souls in patience until the report of the non-partisan body of Jews, who are expected soon to be in Palestine, is published, and the financial support that is.

thereafter expected from American Jewry comes to the rescue of those who at present are in so anxious a plight.

The Turco-Iraqi Commission.

The second meeting of the Commission which was provided for in the Turco-Iraqi Treaty is to be held on April 20 at Jazirat ibn Omar. The first of these meetings, which, it will be recalled, are to take place at six monthly intervals for two years and alternately on Iraq and Turkish soil, took place last autumn at Zakho. Then the Turkish representative was the Vali of Julamerk, and the meeting was the happiest possible augury for Iraqi-Turkish relations. For this next meeting Tewfik Hadi Bey, Vali of Mardin, has been chosen to represent the Turks. It appears that the forthcoming meeting may be complicated by the request, made from Baghdad, for the Iraqi frontier tribes to migrate into Turkey during the summer—as, of course, has been their custom. The difficulty that arises from drawing an arbitrary line through territory over both sides of which tribes have for generations been wont to roam is not peculiar to the Turco-Iraqi frontier; and it is to be hoped that the comprehensiveness and elasticity which in other parts of the world have marked the arranging of international and tribal borders will also be in evidence here. There is some talk of a refusal by the Turkish Government to accede to what is manifestly a reasonable request; but it is possible that the Turkish representative, on closer examination of the problem, will see that what may appear from Angora to be a dangerous precedent is in fact nothing of the kind. In the meantime the Frontier Commission set up by the League of Nations is at work finally delimiting the northern frontier of Iraq.

The Iraq Diplomatic Agency.

To follow, in whatever capacity, in the footsteps of Jaafar Pasha, the present Prime Minister of Iraq, is no easy task for any Iraqi, but the young Arab State is certainly to be congratulated on having secured the services of so able a man as Muzahim Beg for the post of Iraq Diplomatic Agent in London. This Agency has sometimes been condemned in Iraq as a needless extravagance: if the advice of London be needed, said some of those who opposed the formation of the Agency, it can be sought across the Tigris (meaning the Residency). But a wider view of the purpose and of the accomplishment of the Iraq Agency is, we believe, now being entertained. Iraqis are realising that it is no bad thing for Iraq to be differentiated, in the diplomatic sense, from

such countries as Palestine or Syria. At all the diplomatic functions here the independence of Iraq is duly recognised: that fact in itself is a useful reminder to Iraqis of how their country is essentially different from those bearing a more nearly "colonial" status. At the forthcoming Colonial Conference, for instance, there is provision for Palestine, but not for Iraq. For ourselves, we should certainly consider well spent the small sum that has to be devoted by Baghdad to the upkeep of the Iraq Diplomatic Agency in London. And we feel confident that, in Muzahim Beg's hands, its usefulness will become more and more manifest, not only to his own countrymen, but also to the British people. The next few years must, as they affect Great Britain and Iraq, be years of cementing friendship and establishing prosperity: the days of danger and uncertainty being over, it is the task of both countries to build up the Arab State. Already much has been accomplished, but much remains. It is well therefore, that a man should have been chosen to represent Iraq in England who not only has had practical experience of Iraq's needs but who is also an enthusiastic admirer of British ways and of the British people.

THE POWERS AND ALBANIA.

In view of the interest attaching at this time to the Declaration signed by the British, French, Italian, and Japanese Governments in Paris on November 9, 1921, in which they recognised Albania as a sovereign and independent State, we give below the text of the Declaration:—

1. If Albania should at any time find it impossible to maintain intact her territorial integrity, she shall be free to address a request to the Council of the League of Nations for foreign assistance.
2. The Governments of Great Britain, France, Italy and Japan decide that, in the above-mentioned event, they will instruct their representatives on the Council of the League of Nations to recommend that the restoration of the territorial frontiers of Albania should be entrusted to Italy.
3. In case of a threat to Albania's integrity or independence, whether territorial or economic, owing to foreign aggression or to any other event, and in case Albania has not availed herself within a reasonable time of the right provided for in Article 1, the above-mentioned Governments will bring the situation before the Council of the League of Nations.
4. If the Council considers intervention necessary, the above-mentioned Governments will give their representatives the instructions stipulated in Article 2.
5. If the Council of the League of Nations decides, by a majority, that intervention is not expedient, the above-mentioned Governments shall reconsider the question in conformity with the principle enunciated in the preamble to this Declaration, namely, that any modification in the frontiers of Albania constitutes a danger for the strategic safety of Italy.

ARCHÆOLOGICAL DISCOVERIES IN ARMENIA.

In the course of a scientific expedition carried out last autumn in the region of Lake Sevan and the slopes of Mount Alagaz, the Antiquities Commission of Armenia brought to light some hieroglyphic writings and works of art which may prove to be of great importance.

Mr. A. Kalentar, the leader of the expedition, discovered various specimens of a new form of cuneiform writing, believed to be of the earliest type, inscribed on rocks east of Mount Alagaz. On another part of the slope he found other slabs of rocks covered with hieroglyphs and artistic designs of a very primitive type. Higher up the slope Mr. Kalentar discovered a cave, the walls of which are covered with cuneiforms.

A preliminary examination of these discoveries appears to show that the ideograms used at various spots are different from each other. One set of cuneiforms bears all the characteristics of hieroglyphs; the others more resemble linear letters.

The works of art, roughly representing wild beasts and possibly deities, often occupy the whole surface of large slabs of rocks, occasionally interspersed with writing of a linear type.

The Armenian archæologist is convinced that these cuneiforms have no likeness whatever with the Khaldian (or Urartian) form of writing, of which that region contains several specimens.

In a statement which he made recently before the Antiquities Commission, Mr. Kalentar implied that these hieroglyphs may be the earliest type of Sumerian writing hitherto unknown to the archæological world.

All the cuneiforms and the works of art have been carefully photographed and copies taken. The Commission intends to publish them shortly.

A. S.

The Near and Middle East*

From Our Own Correspondents.

Constantinople, April 6.

Alleged Excavations.

The excavations on the site of the old Hippodrome have, as yet, brought to light nothing of importance, but Mr. Casson states that he does not anticipate the finding of anything of interest for some four or five days. The public of Constantinople were, however, led to believe on April 1 that discoveries rivalling those at Luxor had already been made. The mere fact of the excavations being in progress was, to the *Vakit*, too fine a chance to be missed; so it immediately proceeded to make fools of hundreds of its readers. On the morning of April 1 great headlines and two columns of matter—complete with photographs—described how, on the previous day, the representatives of the British Academy had unearthed a perfectly preserved mummy which was even so accommodating as to have its complete history sheet in its possession, an astounding pyramid, and a large vase overflowing with golden coins, and so forth. The account of the find, the description of the objects (which were alleged to be on view to the public) and the detailed explanations which Mr. Casson had given to this paper's enterprising reporter were so well done that before noon an excited crowd had gathered round the wooden enclosure where the excavations are taking place. It was some time before it was realised that the paper was having its little joke and the fact that its circulation has not fallen off speaks well for its readers. One or two of the afternoon papers were also badly spoofed, as they gave a prominent reproduction of the morning's interesting news. It is fortunate for these papers whose custom it is to subject their readers, once a year, to different inconveniences that Constantinople possesses a long-suffering population.

Reconstructing Constantinople.

The Prefecture of Constantinople is now engaged upon a scheme for the reconstruction of the town which will take 50 years to realise. Plans have been prepared by a German architect named Lorhel which provide for numerous new bridges across the Golden Horn, theatres, parks, play-grounds and 20-metre wide streets. The project as imagined by the above architect is reported to have been approved by the local authorities, and all that

now remains is to find the money for its execution. Idea as this metamorphosis would undoubtedly be, the Prefecture would appear to be well advised to come down from the clouds and examine the earth in this particular part, as any money going spare would be admirably spent in making the existing streets of the town negotiable to pedestrians.

Votes for Women.

The activity of the Union of Turkish Women of which Nézihâ Mouhiédine Hanem is president, is occupying the serious attention of the Press. "Votes for Women" is the cry which this union has now taken up, and Nézihâ Hanem, in view of their being no discrimination between the two sexes under republican principles, believes that they will get their desires. She contends that the Turkish woman has already achieved sufficient to justify her claim to a say in the government of the country, and goes so far as to say that her right to a vote cannot be contested on the pretext that she is intellectually undeveloped. The word is now with the men; and they will doubtless have much to say on the matter.

Papa Eftim.

Papa Eftim's name is again before the public. This time the Greek newspaper *Metarythmisis* charges him—in concert with a certain Papa Tranta—with illegally disposing to an antique dealer in the Grand Bazaar of valuable religious objects belonging to the churches "Christo" and "Panaghia." It is alleged that had not the Bairam holidays interposed, thereby preventing the booty—which was found in the Customs House—being removed the antique dealer would have already shipped his treasures abroad. The above-mentioned paper is now demanding the expulsion of the two priests from these churches which, since his excommunication, Papa Eftim has administered under a denomination of his own invention. Furthermore, the *Metarythmisis* appeals to the local authorities for the restitution of the objects in question and their handing over either to the Greek Orthodox community or to the Turkish National Museum. Consequently it is not unlikely that the notorious Papa will find himself constrained to change his usual rôle of plaintiff in the Turkish Courts to that of defendant.

Refugees for Turkey.

Before the end of 1927 seventy thousand refugees—50,000 from the neighbourhood of Tiflis and Erivan, 10,000 from Cyprus and 10,000 from Bulgaria and Yugoslavia—are to be removed to Turkey. Those from the Caucasus will be installed in the eastern vilayets, but the disposal of the remainder has yet to be decided upon.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

IRAQ.*Baghdad, March 31.***The Northern Frontier.**

The Commission appointed by the League of Nations to demarcate the boundaries between Iraq and Turkey is now at work, the Swiss President—M. Baischlin—and Colonel Nalder, the British representative, having reached Baghdad on March 12. The work of demarcation, which is being assisted by a party of surveyors provided by the Iraq Government, is expected to take three or four months.

The Syrian Frontier.

A special tribal conference is shortly to be held on the Iraq-Syrian border, to discuss the best measures for the prevention of raids across the frontier. The paramount shaiikh of the Dulaim tribe, Ali Sulaiman, has been authorised by the Chamber of Deputies to absent himself from the Majlis for the rest of the session, to enable him to attend this conference.

Income Tax.

The Government of Iraq having decided to levy an income tax, a law to put it into effect has been prepared by the Ministry of Finance, but has not yet come before the Majlis for discussion. It is understood that the tax will be one of seven pies per rupee on all incomes over Rs.4,000 per annum. The tax will apply to companies as well as individuals.

Baghdad Municipality.

Very great strides have been made during the past months in improving the streets of Baghdad. The two experimental stretches—one macadam, one reinforced concrete, are nearing completion, and the rest of the long street, which is the city's main thoroughfare, will be paved according to the results observed. A considerable

stretch of road between Baghdad and Hinaidi has also been very successfully tarred.

Another innovation is the introduction by the Posts and Telegraphs Department of electrically synchronised clocks, which may be hired for offices or private houses at a yearly rental. They will be checked by an official chronometer, and by daily wireless notifications of Greenwich time. Baghdad residents will now have no further excuse for the uncertainty about "the right time" which has prevailed hitherto.

General News.

Just ten years from the unostentatious entry made by General Maude's troops on March 11, 1917, the last British regiment has left Baghdad. The 2nd Battalion of the King's Regiment, who have served two years in Iraq, marched through Baghdad to the railway station with bayonets fixed, colours flying, and bands playing. A very smart guard of honour was provided by the Iraq Army, whose band played "Auld Lang Syne" as the train left the station. A large gathering of officers and officials and many civilians, both Iraqi and British, had assembled to say goodbye to the King's.

A serious accident occurred near Rutbah—the half-way desert post between Baghdad and Damascus—last week, when a car belonging to a local transport company overturned. Two passengers, an Iraqi and a Persian, were badly injured, and a doctor from another convoy sent in a wireless message to Baghdad, suggesting that they should be removed by air. The R.A.F. authorities at once sent out a hospital aeroplane, with a doctor, and the injured men were brought in to Baghdad in the quickest and most comfortable way possible. Thus were the most modern discoveries of civilisation employed to save the lives of two obscure Orientals.

*Cairo, April 3.***Great Britain and Egypt.**

The visit of Sir William Tyrrell and his departure with Lord and Lady Lloyd to Wady Halfa, where Sir John Maffey is being met, could hardly fail to stir the imagination of local political circles. The usual crop of rumours, of which the most interesting, however, does not originate in Cairo, but in London, has resulted. The Diplomatic Correspondent of the *Daily Telegraph* produced a quite large ripple of excitement in the so long placid political waters with his summary of the conditions supposed to have been set out as essentials to an agreement between Great Britain and Egypt, by Zaghoul Pasha, during his recent visit to the Residency. The excitement has been quickly dissipated, however, by the unqualified denial given by Zaghoul Pasha to the suggestion that he had thought of or discussed with anybody any such conditions, and the political prophets of the vernacular Press are again left with no other material than their own imaginations can provide for building up elaborate hypotheses regarding the outcome, if any, of the southward journey of the High Commissioner and the Permanent Under-Secretary of State for Foreign Affairs.

Marriage Laws.

The reforms in the marriage laws proposed by the commission set up by the Ministry of Justice to make recommendations on the subject are at the moment the principal

subject of journalistic discussion. The suggested changes are numerous and cover many aspects of the legal side of matrimony. From the lay point of view the most important proposed changes would have the effect of hedging polygamy about with such restrictions as practically to secure its abolition and would also give wives some rights—not nearly so extensive as their husbands possess—in the matter of divorce. Publication of the commission's report has provoked protests from the ulema, who are shocked at the intended practical abolition of polygamy. Plurality of wives, say the Al Azhar authorities, is permitted by the Quran and was conspicuously practised by the Prophet. Therefore it cannot be abolished by a State's calling itself Moslem. Social conditions, notably the fact that there are even now many unmarried Moslem women, are also advanced as reasons for the maintenance of polygamy, the abolition of which, say the ulema, would result in a large increase in prostitution. The latter evil is consistently regarded by Egyptians, against all the evidence, as a peculiarly Western product. It is, therefore, not surprising that shaikhs who have never been to Europe and probably never will go there should instance what they imagine to be conditions in Paris and London as proofs of what happens where the evil and anti-social custom of monogamy prevails. Another argument against the abolition of polygamy is that such a step would reduce the number of children born. Seeing that the bulk of the Arabic Press, inspired by the recent Census results, has lately been speculating regarding what will happen in thirty years if the present rapid rate of population increase continues, this particular objection of the ulema to the proposed reforms awakes little enthusiasm.

It is, indeed, remarkable to note with what unanimity the Arabic newspapers applaud the recommendation of the commission. Not less striking is the avidity with which the attitude of the ulema is seized upon as an occasion for showering abuse on the Rector of Al Azhar, the Grand Mufti, and all the Moslem hierarchy. I lately wrote, in connexion with the new Egyptian attitude towards the Moslem religion and its local pillars, that there were frequent new proofs that Egypt, in regard to religion, was following in the path marked out by Kemalist Turkey. The *Kowab el Shark* newspaper seized upon this remark, declaring that it proved that the correspondent who made it was a fool and knew nothing whatever about what was happening in Egypt. Despite this gentle rebuke, it must be reasserted that Egypt is rapidly imitating Turkey in many ways and in no manner more conspicuously than her progress towards secularisation. Anyone who had been absent from Egypt for a decade and had not followed the march of events here would hardly believe his eyes if, returning, he picked up a copy of the *Syassa* newspaper, or even the *Kowab el Shark* itself and read the criticism of the ulema and their methods. Young Egypt cordially detests Al Azhar and all it stands for. From being an institution exercising an incalculable influence throughout the country, so powerful as to be courted and propitiated by every aspirant to power, Al Azhar has sunk now to a position of impotence. It is continually criticised with the utmost vehemence, in Parliament and Press alike, and many of the younger politicians make no secret of their hope that, if they cannot reform the venerable university in accordance with their ideas, they will secure its abolition, or at least its reduction to a status of no great importance than any other religious school attached to a mosque.

A Leisurely Period.

Ramadhan has ended and Egyptian Government officials are enjoying a four days' holiday in celebration of the happy event. As Friday immediately preceded the first day of Bairam, the public servants get a clear five days' respite from their labours. The leisure is spent in ways varying in accordance with circumstances, nationality and temperament. Thousands of families make of the holiday a long picnic in the public gardens which, just now, are lovely with flowers. The main roads out of

the city carry a continuous stream of motor-cars some, nowadays, driven by *hanoums* who dispense with any male companion and who doubtless anticipate—and with reason—that, should a puncture necessitate the fitting of a spare wheel, or a choked carburettor demand messy fiddling with the car's "innards," there will be no lack of amateur mechanics to offer assistance. The trains to Alexandria are filled with week-enders, among whom are the representatives of Cairo in the annual Bally Cup lawn tennis contest with Alexandria. With them this year has gone a second team, to strive for a newly-presented cup for the forty-five years and upwards veterans of the two cities. Lawn tennis continues to gain popularity in Egypt, though it is noticeable that not very many Egyptians take to the game. Association football remains easily the most popular field game in this country, cricket and hockey having made no headway whatever.

Drama and Music.

On Monday evening the Cairo Amateur Dramatic and Musical Society opens a week's run of "Iolanthe." This represents the second part of the season's activities of the society, which recently produced "Dear Brutus," with astounding financial, and creditable artistic results. Nothing is more surprising to the average non-Briton in Egypt than the manner in which the British community each year assembles, almost to the last woman and child, to see its dramatically and musically inclined members give proof of the faith and talent that is in them. Sometimes, watching the productions, one has felt something of the same sentiment of surprise. But the C.A.D.M.S. has now, by successive stages, reached a very creditable level, and its productions are usually well worth paying to see for their intrinsic merits, uncoloured by any patriotic feelings. The Society will be very hard hit this year, for the departing officials and their wives include some of the oldest and most devoted members. The present performances of "Iolanthe" will doubtless live long in the memory of some of the cast, for whom, in the near future, the footlights of the Royal Opera House will be nothing but a memory.

CYPRUS.

Nicosia, March 28.

The Governor's Energy.

The Governor is indefatigable in making himself acquainted with all districts of the island, their various institutions, and leading personages. Good results should follow from an innovation now in force, viz., that of

CUNARD TO MEDITERRANEAN LEVANT and BLACK SEA PORTS

Regular Freight Sailings from
LIVERPOOL
GLASGOW
SWANSEA
MANCHESTER

For full particulars of sailings, rates, etc. apply CUNARD LINE, Cunard Building, Liverpool, 98, Mosley Street, Manchester, or Local Offices and Agencies.

periodical meetings of the Commissioners of the six administrative districts. Officers can learn much from consultations with one another, regarding the application of laws, and many local subjects, concerning which differences of practice arise, and much correspondence with headquarters can thus be avoided. A meeting took place recently in the anti-chamber of the Legislative Council, at Nicosia. Villagers are now encouraged to send complaints respecting local grievances direct to the heads of Government departments concerned.

Decoration for the Governor.

The Greek Government has bestowed on Sir Ronald Storrs the Order of the Saviour, first-class. The Hellenic Consul, M. Sakellariades, presented the insignia at Government House, Nicosia. Sir Ronald expressed his warm thanks and appreciation of the honour conferred.

Cypriot as Solicitor-General.

Mr. Neoptolemos Pascáli, a Greek barrister of great ability, who holds a distinguished place in the bar at Nicosia, and who is much esteemed in all circles, has been appointed to the new office of Solicitor-General. Acceptance of the post involves considerable pecuniary loss, and for various reasons Mr. Pascáli, not unnaturally, felt some hesitation in accepting the honour. The appointment causes the greatest satisfaction in the Greek community.

Mr. Amery's Despatch.

Meetings of elected members of the Legislative Council have been held to consider and draft a communication to the Colonial Secretary of State with reference to his recent despatch to the Governor. The note is regarded generally by Cypriots as lukewarm and feeble, and a leading Greek paper of Nicosia considers that it would have been wiser to pass the matter over in silence.

General News.

The Greek National Fête, in honour of Greek Independence Day was duly observed in the town and many parts of the island on March 25.

The Mining Company at Skouriotissa, in the north of the island, recently celebrated the inauguration of important new installations near the village of Karavostási. The Governor spoke at some length in reply to the managing director.

It appears that Athletes from Greece will take part in the next Pan-Cypriot Athletic Sports. They will no doubt receive an enthusiastic welcome.

Mr. Popham Lobb, Colonial Secretary, has left, in order to represent Cyprus at the forthcoming conference of Colonial representatives in London. Major Bolton will act during his absence.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE STATUS OF SASENO.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the editorial note appended to Mr. J. S. Barnes's letter in your last issue you observe that "if Italy lands troops in Albania, she will be attacked by Yugoslavia." You cannot, of course, be unaware that, technically at least, Italy has within the last few weeks again "landed troops in Albania"; for, although the

political status of Saseno is almost ludicrously intricate, there can be no doubt that geographically it is as much part of Albania as St. Michael's Mount is of England, Procida of Italy or the Chateau d'If of France, whilst it would be difficult to establish on ethnological or linguistic grounds a claim to a barren rock, the normal population of which consists of a lighthouse-keeper, two goats and a few gulls. The material insignificance of Saseno of course renders its military occupation by a foreign Power only the more significant and one is consequently inclined to ask whether it might not be in the interests of the general peace that the juridical status of this rock should be investigated and definitely established by the Council of the League of Nations. The lighthouse-keeper at least would then "know where he is" and so, perhaps, in a slightly different sense, should we.—I am, etc.,

HARRY H. LAMB.

Sidmouth, May 8.

GREAT BRITAIN AND H.M. IBN SAOUD.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The remark of *Umm ul Qura* (a Mecca weekly) published in your issue of April 7 ought to command more than a passing interest, especially in view of the fact that Sir Gilbert Clayton is to reopen Anglo-Arab negotiations. In the beginning, however, I cannot conceive that any reputable English journal or responsible person in this country has either published or even suggested the view that Jalalatul Malik Sultan Ibn Saoud may be placed under British tutelage. I do not speak of the "dross," who do not count in any country.

From the highest to the lowest, students of Arabian affairs with whom I have had an opportunity of speaking on the subject are agreed that the present peacefulness of the Hijaz is undoubtedly due to that great warrior of the desert, Sultan Ibn Saoud; but when during my expositions of the greatness of the Wahhabi King as the "necessity of the age" the report was published that the Ali Brothers and their kind in India had actually persuaded the Maharaja of Mahmudabad to send a telegram to His Majesty King George here requesting the British Government to have the Wahhabi hands stayed from the alleged dismantling of the Holy Shrines of Islam, it took a great deal of explaining to prove that the anti-Wahhabi agitation in India was not a true index of the Islamic attitude towards the Jalalatul Malik's régime at Mecca.

Still more awkward was the point that England, despite possessing the greatest Muslim Empire, was yet a Christian State, and theologians are perplexed to find the justification of Mahmudabad protest when a Muslim could appeal to non-Muslims in matters of pure religious nature. The whole scheme is but part and parcel of a disgraceful form of propaganda with its headquarters in India which has endeavoured to throw the odium of bad faith upon the Wahhabis for making a treaty with Great Britain, and which desires a different form of government established in the Hijaz from that which exists there to-day. They might as well ask Russia to go back to the Tsarist régime or the United States to elect a King.

But the tragedy of this wasted endeavour is that the Indian Khilafatists are not doing anything to bring the Hindu-Muslim tension even an inch nearer its close, and continue to meddle with the international high policy to which their mentality does not rise. My personal view is that the Ali Brothers and their victims in India can do greater service to Islam if they ameliorate the lot of their co-religionists in India: but it may not be in the programme of professional agitation.—I am, etc.,

IKBAL ALI SHAH.

THE ARMENIANS IN SYRIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—We wish to commend very heartily the appeal being made by the United Committee of British Societies working for Armenians.

Arising out of the last Assembly of the League of Nations, a scheme has been worked out for relieving the appalling congestion in the refugee camps of Syria by placing 20,000 Armenian refugees on the land in productive employment. The work has already begun under the auspices of the League and has the full goodwill of the

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

French mandated authority, who has made a generous contribution. Not less than £120,000 is needed and only half that sum is at present in sight.

The responsibility for these unfortunates who have suffered for the Allied cause does not lie with the Syrian mandatarly alone but with all the Allies who made them frequent promises that still remain undischarged. The opportunity of making these promises good is here, and it is a matter of national honour to make this scheme a success.

Each family placed permanently in independence costs about £30 for four or five persons. Settlers repay the cost over a period of years into a revolving fund that is available for further settlement, so that the money will be continuously useful.

The Archbishop of Canterbury permits us to add that he is in favour of this appeal, which also has the sympathy of His Majesty's Government, the Prime Minister having expressed the hope that it will meet with the fullest success.

The societies constituting the United Committee are:—

Armenian (Lord Mayor's) Fund,

96, Victoria Street, London, S.W.1.

Friends of Armenia, 47, Victoria Street, London, S.W.1.

Save the Children Fund (Armenian Section),

26, Gordon Street, London, W.C.1.

Society of Friends (Armenian Committee),

Friends House, Euston Road, N.W.1.

Any of these societies will gladly receive contributions earmarked for Syrian Settlement, or they can be sent direct to the United Committee.—We are, etc.,

CHARLES GORE (Chairman of the United Committee).

THOMAS NIGHTINGALE (Secretary of the Free Church Council).

GILBERT MURRAY (Chairman of the League of Nations Union).

The United Committee, 96, Victoria Street, S.W.1. April 6.

GREAT BRITAIN AND YUGOSLAVIA.

BY A SLOVENE.

There is nothing during the recent period of tension with Italy, now happily overpast, which affected Yugoslav public opinion more painfully than Great Britain's sympathy for Italy. As this sympathy seemed necessarily to entail an anti-Yugoslav attitude, the Yugoslav public could not but ask when and how it had come to deserve this unkind disposition? Even the most searching self-criticism failed to show us any guilt in the matter, for in all Yugoslavia there is surely not one person who feels even the slightest cause for dislike towards England. So Yugoslavia was driven to the conclusion that the reason for the coolness between Great Britain and Yugoslavia must be sought in some deplorable misunderstanding. The main object of this article is to dispel such misunderstanding, in so far as it may exist, and to pave the way back to the old-established friendly terms between the two States. And we venture to hope that British public opinion, which above all knows how to appreciate frankness in word and deed, will not refuse them its attention.

For generations past, the Southern Slavs have been accustomed to look upon England—i.e., Great Britain—as the country of all where parliamentary government is most highly developed and democracy most securely established. On these grounds alone Great Britain was always regarded by them as the land of order, as the best-governed country in the world. It is obvious that such opinions can give rise to sympathies only, never to antipathy. History records no clash of British and Yugoslav interests, and to this day there is not even the most trivial conflict, economic or political, between Great Britain and Yugoslavia. The struggle with the Central Powers compelled the Yugoslavs to range themselves on the side of the Allies; and Yugoslavia has always realised that Great Britain occupied a leading position in the Entente. To Great Britain the Yugoslavs looked for their emancipation, and in the searching ordeal of the World War, their consciousness of the might of Britain upheld their faith in the ultimate victory of the Allied cause. These hopes were fulfilled, and therefore the conclusion of the World War found Yugoslavia all anglophile and anxious to remain so for good. For this reason it has always been an axiom in Yugoslav politics to maintain friendly relations with Great Britain in all circumstances. And from this axiom Yugoslavia has never swerved.

Now it is altogether obvious that Yugoslavia is far too small for even the slightest interference in the differences of the Great Powers among themselves; Yugoslavia

cannot afford to take sides with one group or the other, since such action on her part might end by endangering her own existence.

But Yugoslavia has every reason to be anxious about her existence; because Italy, which is a Great Power, has shown on repeated occasions that it has aspired to Yugoslav territory and is hostile to Yugoslavia. Yugoslavia has made many sacrifices and behaved with the greatest self-denial in order to achieve cordial and neighbourly relations with Italy. In the Treaty of Rapallo, 1920, she relinquished the whole of the Littoral, parts of Carniola and Carinthia, and the Istrian islands in favour of Italy—whereby 600,000 Yugoslavs became Italian subjects. The greatness of this sacrifice—especially where the Slovenes are concerned—can be measured by the fact that one-third of the Slovene people was made over to alien masters thereby. And these masters proclaim quite openly that their one aim in regard to these Yugoslavs is their complete denationalisation. All means conceivable are employed to accomplish this aim, and not a day passes, but well-authenticated news reaches Slovenia of the intolerable oppression of the Slovenes under this process. All the same Yugoslavia made yet more sacrifices, only to make sure of peace.

She resigned all her claim to Fiume, her one property-equipped seaport. By special conventions she granted the Italians of Dalmatia—who do not, numerically, constitute even one-thousandth part of the population of the province—extensive national privileges; she permitted the Italian fishing fleets to fish off the eastern coast of the Adriatic, the only area where the fishing is good; she concluded the Treaty of Rome; she was consistently considerate to Italy—and yet all these concessions have been in vain.

The Yugoslavs in Italy continue to be as brutally oppressed as before. Italy initiated diplomatic action on a large scale in order to isolate Yugoslavia, its effect can be felt in Sofia, Budapest, Bucharest, Athens and Tirana. Albania was given an Italian navy manned by Italian officers and crews. Italy has begun to build strategic roads in Albania, every one of them leading to the Yugoslav frontier. Finally, Italy acquired a kind of protectorate over Albania. Simultaneously there was an outburst of *komitaji* activity on the Albanian and Bulgarian frontiers. The moment for the blow seemed imminent, and in this moment of extreme tension Italy ushered in her campaign against Yugoslav armaments.

It is not possible to conceive of a more groundless accusation than this of Yugoslav war aims.

1. The Yugoslavs are a peasant nation, and never in history has a peasant nation shown itself in favour of aggressive warfare. The peasant will fight in defence of his land and country, but he has no desire to gain foreign land by war.

2. Yugoslavia is scarcely yet consolidated. In order to carry out her own consolidation, she needs and desires peace. No sane and responsible person in Yugoslavia wants war to-day.

3. Italy is a Great Power with a population of forty million or more. It has a well-developed armaments industry, a powerful navy, and is in every way technically superior to Yugoslavia. And Yugoslavia with her thirteen million population stands accused of seeking cause for attack upon Italy. Is it not rather absurd?

4. In case things were to become serious, Yugoslavia has no ally among her immediate neighbours. In fact, she would have to reckon with the contingency that Hungary, Bulgaria, Albania, and, possibly, even Greece,

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

74, Grosvenor Street, W.1.

would move against her on the word from Rome. And in these circumstances Yugoslavia is said to be anxious for war.

5. Most certainly Yugoslavia's internal administration is not ideal. But life and liberty are safer here than in any of the neighbouring States, excepting Austria. A dictatorship is out of the question in Yugoslavia, because the Skupshtina possesses real power and because government by parliament is a fact in the country.

6. Yugoslavia is closely allied in friendship to France; and this friendship is already traditional. Yugoslavia desires to remain true to this friendship, because the Yugoslav does not change his friendship as one would one's shirt. But how could this friendship stand the strain, were Yugoslavia, without the knowledge or approval of her powerful friend, to embark upon warlike adventure? The Franco-Yugoslav friendship is a sure guarantee for Yugoslavia's pacific intentions.

Yugoslavia desires no war and would fain live on good terms with all her neighbours, and, above all, with her friends. M. Voya Marinkovitch, the late Minister for Internal Affairs, spoke to the point when, incidentally to the last great debate on the country's foreign policy, he remarked that Yugoslavia is faithful to her friends, and that she cannot form new friendships unless she is sure that these will not do harm to the old. She is bound to France by old ties, and when she concluded a pact of friendship with Rome, this did not mean a turning away from France. In fact, the new friendship was possible in so far only as it would make no difference to the old friendship with France.

The same considerations apply to Yugoslavia's relations with Great Britain and Russia. Most certainly, Belgrade will seek to be on good terms with Russia, but not at the expense of her friendship with Britain. In other words, Yugoslavia cannot enter into close alliance with Russia, unless her old ties with Britain do not stand to suffer thereby.

It is true, that Russia, as the only Slavonic Great Power—and a Power which has in the past shown itself materially helpful to the Yugoslavs in their fight for freedom—enjoys great sympathy in Yugoslavia. But this is Russia—not the Communist Soviet State—for communism does not appeal to agrarian Yugoslavia.

Moreover, we must bear in mind the clash of Russian and Yugoslav economic interests. Yugoslavia's most formidable competitor in the grain market is Russia, and agrarian Yugoslavia cannot expect economic help from agrarian Russia.

Yugoslavia believes herself to be in danger of Italy, and she has cause to do so. It stands to reason, therefore, that she should welcome any support that offered. Bulgaria and Albania side with Italy, Roumania inclines that way; and if the Great Powers should permit Yugoslavia's existence to be placed in jeopardy, she will have to seek protection and accept it wherever she can find it, though it come from Soviet Russia. But in this case the fault will not lie with Yugoslavia, but with the Great Powers who have left her no other alternative.

CYPRUS.

A lecture entitled "Cyprus: Our Newest Colony" was given before the Royal Colonial Institute at Victoria Hotel on April 5 by Mr. William Bevan, Colonial Commissioner for Cyprus. Mr. Bevan dealt very comprehensively with his subject and showed a large number of excellent lantern slides illustrating the life, the scenery, and the industries of the island. In the course of his remarks he said:—

"Cyprus is a country rich in history, and though in recent times comparatively neglected, it was of great importance in the ancient world.

"In ancient times Cyprus was under the rule of Egypt, Phœnicia, Assyria, Persia, Greece and Rome: and coming down to the Middle Ages, from the 12th century to the 19th century, she was in turn governed by Lusignans (a French dynasty), Venetians and Turks. The latter seized

the Island in 1572, and retained it for 300 years until in 1878 it came into British occupation when Great Britain agreed to defend the Asiatic possession of the Sultan of Turkey against further aggressions from Russia on condition that the Sultan introduced reforms for the protection of his Christian subjects in his Dominions, and that Cyprus should be administered by Great Britain, subject to the payment of an annual tribute of £92,000.

"In 1191 for a few months Cyprus was actually English territory, for it was seized by Richard I., Cœur de Lion, King of England, when on his way to the Crusades: and he became King of Cyprus. But he soon sold his new possession to a French Crusader, Guy de Lusignan. Under the Lusignan Dynasty Cyprus attained the very summit of her glory; and during that period—1192-1489—it came under the influence of the Roman or Latin Church. The Lusignan Kings of Cyprus, especially in the 14th century, amazed all Western visitors. The rich merchants of Famagusta were wont, we are told, to give their daughters, on their marriage, dowries more precious than all the jewels of the Queen of France.

"The Lusignans were succeeded by the Genoese and through them by the Republic of Venice. We can still see the 'Lion of Venice' and the old inscriptions on the fortifications of the citadel of Famagusta: also a fragment of the palace of the Lusignans, now greatly fallen from its former pomp and converted into a police station.

"In 1572 the Island, after a long siege, was conquered by the Turks and remained in their hands for 300 years, as already mentioned. There is little of importance to relate during this period, during which the country was farmed out to Turkish Pashas, and its glory gradually disappeared. Some credit, however, must be given to the Turks that under their rule serfdom was abolished. The Greek Orthodox Archbishopric was also restored after having been suppressed since 1275; and the Christian population was given a large measure of independence.

"Having for a time been forgotten, she is now—since she became a full British Colony in 1925, and since our position in Egypt has become less prominent—emerging once more into prominence; and is, we hope, on the way to become of greater and more definite value in the Empire.

"The origin of the first inhabitants of the Island is doubtful, but within historical times Cyprus came under Greek influence, although never actually under Greek government.

"The population to-day consists mainly of Muslims or Turks, and non-Muslims who are Greek Christians; but they are neither Turks nor Greeks in race, but only in religion. When the Turks took the Island they married native wives; and in each generation the blood has been thinned away. Only the fez, the turban, the mosque, the religion remain. As to the Greek-Cypriots, we should remember that in old times many traders were called Greeks, and spoke the Greek language, when most of the Near and Middle East was under the general influence of Greece. In Cyprus they became Cypriots with a language which, though not pure Greek, is a dialect of that language. All the local newspapers are printed either in Greek or Turkish.

"Christianity was first known in Cyprus through 'those that were scattered abroad upon the tribulation that arose about Stephen.' They travelled as far as Cyprus, 'speaking the Word to none save only to Jews,' as we read in the Acts of the Apostles. But in A.D. 45 Saint Paul and Saint Barnabas, bringing with them John, Mark, landed at Salamis and crossed the Island to Paphos, where they converted the Roman pro-consul, Sergius Paulus; and a stone has been found in Paphos district engraved 'Sergius Paulus, Pro-consul.' St. Barnabas returned to Salamis, his native city and there suffered martyrdom.

"The Church in Cyprus claims to be the successor of St. Barnabas. The Archbishopric of Cyprus is one of the very oldest in all Christendom; equal in Apostolic foundation to the churches of Antioch, Jerusalem and Rome. Its independence was recognised by the Council of Ephesus in A.D. 431. Tradition says that this church appealed in

A.D. 485 against the Bishop of Antioch to the Emperor Zeno, and that the Bishop of Salamis went in person, taking with him the newly recovered body of St. Barnabas, and a M.S. copy of St. Matthew's Gospel found in St. Barnabas' tomb, and said to have been in the latter's handwriting. The appeal was granted and the Bishop of Antioch was forbidden to interfere with the Church of Cyprus.

"The Greek Orthodox Church of Cyprus thus became independent and autocephalus, recognising no head but its own Archbishop. This spiritual ruler, whose title is His Beatitude, is a prince in his own world, and is very jealous of his right to wear a purple robe, to carry an imperial wand, and to sign his name in red ink!

"There are also three Bishops or Metropolitans, and the Abbot of Kykkou, whose monastery is one of the principal of 82 monasteries in Cyprus.

"In the Orthodox Church the village priest, who must be married and is therefore not eligible for the ranks of the clergy, properly so called, unless he becomes a widower, is generally an uneducated, unpretentious person, who ploughs and reads prayers in church indiscriminately. A priest may frequently be seen even road-mending with his cassock tucked inside his baggy blue breeches. The house servant of a former Chief Justice was pressed by his co-villagers to become a priest, and when he saw him some time after he had left domestic service, he was letting his hair grow long—it is twisted up in a sort of bun—had grown a beard, and was trying hard to learn his Bible, and the office by heart."

After describing the educational system of the Island and the progress made under British Administration, the lecturer continued:—

"The principal cereals are wheat, barley, and oats, and the Island is a veritable garden of fruits. Raisins, pomegranates, oranges, lemons and grapes are those principally exported, but large quantities of apricots, caishas (the famous Cyprus white apricot), melons, figs, cherries, peaches, quinces, dates and loquats are grown. In the hills, apples, pears and plums are produced but are inferior to the English varieties. Walnuts, almonds, hazelnuts, chestnuts, and pistaci are grown in increasing quantities.

"After the cereals one product of Cyprus more than any other deserves special mention. That is the carob or locust bean which for long ages has been indigenous in certain parts of the Levant. It is an evergreen hardy tree, growing to a height of about 40 ft. and thrives in most soils. The ripe fruit is a dark brown pod about six inches in length, containing 6 to 10 hard seeds, surrounded by a sweet viscous substances possessing the characteristic flavour and smell which are so acceptable to animals. The greater portion of the annual crop is exported to England, Spain, France, Egypt, and elsewhere, for manufacture into cattle food, and a small quantity is used locally in the preparation of confectionery.

"Next in importance to the carob comes the olive tree. Like the former, it needs to be grafted before its fruit reaches perfection. Olive oil enters very largely into the dietary of the Cypriot, but as the unrefined, more strongly flavoured oil appeals mostly to his palate, the Cypriot has been slow to improve his methods of preparation. It is hoped that he is now becoming alive to the advantage of producing a more delicate, refined oil that will compete with others in European markets. As the cultivation of this tree has been extending for many years, Cyprus should, ere long, be able to create a very profitable export trade in this commodity.

"Cotton, which in the Middle Ages was a very important crop, has fallen very far behind its former position. The uncertainty of shipping opportunities, the fluctuation in prices have, no doubt, contributed to this; but there seems no reason why Cyprus should not regain her place among cotton-producing countries, if these difficulties can be overcome and sufficient water for irrigation can be relied on.

"The Jaffa orange export reaches some 18 millions, and is capable of much extension. Lemons also flourish and a

scheme is now under consideration for developing that industry, combining with it the production of lemon oil, candied peel and citrate of lime, which at present is almost exclusively obtained from Sicily.

"Tobacco growing is on the increase, and the Latakia variety is well regarded and, if carefully prepared, has good possibilities. It is now being used in the various Empire blends of tobacco which are so much in demand.

"Flax is also likely to be more widely grown, as it can now be scrutched by machinery. There are now three scrutching mills in the Island.

"A sumac factory, established in 1925 by two Englishmen, is making good progress and is producing a first-class tanning substance which it is believed will be able successfully to compete with the Cilician sumac, which has hitherto been the main source of supply.

"Forests are a great feature of the country. Cyprus was at one time famous for its forests, but during Turkish times it was practically denuded of forest trees. Since the British occupation artificial reforestation has been carried out, and a considerable improvement has taken place. The State Forests extend to 415,000 acres, with a boundary of over 1,800 miles.

"Pines, juniper, plane, dwarf oaks, alder, cedar, acacias, eucalyptus are among the principal species growing in the forests. The forests supply the local needs for fuel and in part for timber, but the export of timber on a commercial scale is questionable since it is recognised that the principal value of the forests is indirect, by increasing the rainfall, by preserving the sources of water supply, and by reason of their climatic effect.

"During the Great War Cyprus provided the bulk of the fuel and timber for our expeditionary forces in Egypt and Palestine. There is, of course, the perennial conflict between the shepherds (who graze their goats in or near the forests) and the Forest Department: and a scheme is now being tried for effecting voluntarily the wholesale transfer of certain villages situated in or on the edge of the forests, to sites elsewhere to be prepared for occupation, at the expense of the Department, in such a way as to enable the villagers to earn more money as agriculturists than they do as graziers. It will be interesting to see how the scheme will attain its object."

Turning to the subject of Cyprus as a place for tourists, the lecturer said:—

"During the summer months many people come from Egypt, Syria, Palestine, and Mesopotamia, and the attractions of the hill station are becoming more widely known. In 1926 a new hotel, under English management, was opened at Platres, four miles below Troodos, and is being kept open all the year round. Other hotels have been either opened or improved, but much yet remains to be desired to make them really attractive for tourists who wish for Home or Continental comforts.

"A tourist ship with several hundred Knights of St. John visited the Island last year, as did other tourist ships carrying French and other passengers. These tourists were much impressed with what they saw and will, it is hoped, be the forerunners of many more. Last month the Cunard liner Samaria visited the Island with 450 American tourists, and next year another Cunard liner will bring several hundred Canadian students: and other similar excursions will be organised in the near future.

THE AHMADIYYA MOVEMENT.

During the month of April lectures are being held in the Lecture Hall of the Mosque, 63, Melrose Road, S.W.18, on each Sunday at 3.30 p.m. On April 17 and 24 the subjects of examination are "The Growth and Propagation of Islam" and "The Importance of Religion in this Life" respectively

Egypt has in preparation a new set of stamps to celebrate the forthcoming International Statistical Congress.

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

LONDON	ABADAN	FREMANTLE
Royal Albert Docks	ADEN	HAMBURG
and Purfleet	ALGIERS	HAVRE
AVONMOUTH	ANTWERP	KARACHI
GRANGEMOUTH	BOMBAY	MADRAS
HULL	BORDEAUX	MARSEILLES
JARROW (Tyne)	CALCUTTA	MELBOURNE
LEITH	CAPE TOWN	MOMBASA
LIVERPOOL	COLOMBO	ORAN
MANCHESTER	COPENHAGEN	OSLO
SOUTHAMPTON	DONGES(Loire)	PORT SAID
SUNDERLAND	DUNKIRK	RANGOON
SWANSEA	DURBAN	SYDNEY

Other Stations are in course of erection.

ANGLO-PERSIAN OIL Co., Ltd.
Britannic House, Finsbury Circus, London, E.C.2.

PERSONAL AND GENERAL

TO-DAY

April 14, 1927 (New Style).

April 1, 1927 (Old Style).

Shawall 11, 1345, A.H., of the Muslim Calendar.

Nisan 12, 5687, of the Jewish Calendar.

Sir Henry and Lady Bax-Ironside have returned to 23, Grosvenor Place from the Continent.

Field-Marshal Viscount Allenby and Viscountess Allenby are spending Easter at the Hotel de Paris, Monte Carlo.

Prince Antoine Bibesco left London on April 7 *en route* for Madrid, to take up his duties as Roumanian Minister to Spain.

Lieutenant-General Sir Aylmer and Lady Hunter-Weston left London on April 7 by the P. and O. special train to join the s.s. Rawalpindi at Marseilles for Port Said.

Lady Warren, with her daughter and younger son, and Miss Wyndham last week arrived at the Golf Hotel, Valescure, from Bombay, where Sir Norcot Warren is remaining for the present.

M. Pavle Karovitch, the newly appointed Counsellor of the Legation of the Kingdom of the Serbs, Croats and Slovenes, has arrived in London and has taken up his duties.

Lady Stavridi left London for Venice on April 9, and will be abroad for a month.

Sir Francis Humphrys, who has recently arrived in England from Kabul, and Lady Humphrys, are staying at the Wadhurst Castle Country Club, Sussex.

The Marchioness of Linlithgow was expected to arrive at 29, Chesham Place on April 12, on her return from India.

Sir Arthur du Cros, Bart., who has been in Egypt for some months for his health, will return to London next week.

Among those present at the reception held by Sir John and Lady Stavridi at 33, Lennox Gardens on April 4, for members of the Greek Community in London to meet the new Greek Archimandrite, M. Constantinides, were Archbishop Germanos, the Greek Minister, M. D. Sophianis, Sir Lucas Ralli, M. and Madame Fiffo, M. and Madame Vasschiadi, M. and Madame Lambrinudi, M. and Madame Collas, and M. and Madame Romanos.

The marriage arranged between Charles Alexander MacKenzie Van Millingen, M.C. (late the Rifle Brigade), elder son of the late Rev. Professor Alexander Van Millingen, M.A., D.D., of Constantinople, and Marjorie Elizabeth, daughter of Mr. and Mrs. Joseph Boardman, of Wallasey, Cheshire, will take place on Tuesday, April 19, in Alexandria, Egypt.

Madame Ferid Bey, the wife of the Turkish Ambassador in London, on April 5 entertained at luncheon at the Embassy the Countess of Birkenhead, Lady Hamar Greenwood, Mrs. Stanley Baldwin, Mrs. Amery, and Mrs. J. C. C. Davidson. In the evening the Ambassador and Madame Ferid Bey entertained at dinner the Japanese Ambassador and Baroness Matsui, the Persian Minister, the Siamese Minister, Lady Churston, Lady Gibbons, Sir George Clerk, Mr. and Mrs. Godfrey Locker-Lampson, Mr. and Mrs. J. B. Gregory, Herr and Frau Dieckhoff, and Jevad Bey.

EGYPT EXPLORATION SOCIETY.

A lantern lecture on Memphis will be given by Mr. S. R. K. Granville, M.A., on April 28 at 8.30 p.m., in the Meeting Room of the Royal Society, Burlington House (by kind permission of the Council). The lecture is the fifth of a series arranged by the Egypt Exploration Society, and a few free tickets are available for non-members upon application to the Secretary, 13, Tavistock Square, W.C.1.

29TH DIVISION GALLIPOLI MEMORIAL SERVICE.

The annual Gallipoli memorial service for the 29th Division will be held in Holy Trinity Parish Church, Eltham, at 11 a.m. on Monday, April 25. General Sir Walter Braithwaite, who was Chief of Staff to Sir Ian Hamilton during the Gallipoli campaign, will deliver an address, and a sermon will be preached by the Rev. C. L. H. Beardmore, C.F., Tower of London, who also served with the Mediterranean Expeditionary Force. The R.A. Band and Trumpeters will attend. The vicar, the Rev. H. A. Hall, will send tickets for reserved seats to any who apply to him before April 20 enclosing a stamped addressed envelope.

The Bulgarian Sobranje last week passed the Budget for 1927-28.

Mr. and Mrs. Rudyard Kipling have arrived at Biarritz for a few weeks' stay.

The death took place at Calcutta on April 14 of Mr. Cecil Frank Beadel, C.I.E., of Hartley Court, near Reading, in his 56th year.

Field-Marshal Sir William Birdwood presented new Colours to the 2nd Battalion, The Sherwood Foresters, at Karachi on April 8.

President Masaryk and his daughter, with the Czechoslovak Chargé d'Affaires from Cairo, arrived in Jerusalem recently for a week's visit to Palestine.

The death occurred at his home, 13, Endsleigh Gardens, Ilford, of Mr. Ardeshir Kapadia, aged 62, the barrister-at-law who defended Mrs. Dyer, the notorious baby farmer, in 1896 at the Old Bailey.

The death is announced of Colonel J. Kellie (late Royal Engineers). He entered the Service in December, 1871, and served for thirty years in India. He took part in the Afghan War, 1879-80, and retired in 1904.

The Postmaster-General announces that henceforward until further notice, the Egypt-Iraq (Cairo-Baghdad-Basra) air mail service will operate every week. Letters may now be posted every Thursday at the same times as for the Indian Mail.

It is stated that a Swedish archaeological expedition under Professor Gjerstad, of Upsala, will go to Cyprus in the autumn to make a survey of the Stone and Bronze Age antiquities of the Island and excavate at Lapithos and elsewhere.

King Fuad is expected to arrive in London on July 4, and will be the guest of the King at Buckingham Palace for three days. He will afterwards stay at Bute House for two or three weeks, and will visit Bolton for the Crompton Centenary celebrations. King Fuad will subsequently officially visit Paris and Rome, and perhaps Brussels.

The Wahhabi King of the Hijaz and Najd, says *The Times*, has sent an autograph letter to King Fuad of Egypt and four Arab horses for his son, Prince Faruk, who is now seven. Some ostriches were also sent as a present, but half-way from Najd the birds became so wild that it was possible to bring them to the coast.

Lord Lloyd, High Commissioner for Egypt, accompanied by Lady Lloyd and Sir William Tyrrell (Permanent Under-Secretary at the Foreign Office) and Miss Tyrrell, returned to Cairo on April 6 from a trip to Wadi Halfa, where they were met by Sir John Maffey, Governor-General of the Sudan, and Sir George Schuster, Financial Secretary to the Sudan Government, and spent two days.

NEAR EASTERN PRESS.

Turkey's Westernism.

It is interesting to note the awakening of a more forward movement in certain States in the Near East. The introduction of more Western methods has for some time been considered; and with the greater facilities for inter-communication now available, together with a better political understanding, the seed so long sown is beginning to bear fruit. Foreign alarms and excursions, nevertheless, still seem to disturb the insecure foundations and to prevent a fuller and more speedy realisation.

Turkey has been turning her attention to setting her house in order, and has to dig deep to the most primitive foundations. The Government has at last realised the necessity of expert advice, and *L'Echo de Turquie* tells us that an economic Council is in process of formation and will advise the Government on the subject on internal development. By this means the effort will be made and much be done to obviate the waste of Turkey's mineral resources, and so to place her in a better economic position. Again, in her municipal reform, a remarkable thing has occurred, in that women will in future be eligible as members of the prefectorial Council. Such a clause is significant of Turkey's attempt to emulate the West.

Education in Roumania and Turkey.

The question of education has been occupying the minds of more than one State. The people of Roumania, according to *L'Indépendance Roumaine* are helping themselves to education with very little assistance from the Government. Large territories have come within her boundaries since the War, and as in most countries, the vote was granted to their inhabitants before the necessary qualifying education was thought of.

"All these newcomers," the article continues, "to our national life are hungry for instruction. Never before has such a desire to learn been seen in so young a people. In the towns, the lecture rooms are crammed, and even compete with the cinemas. In the villages, not only are schools demanded, but the peasants are collecting money among themselves for their construction.

"And this is easily explained. The artisans, the small shop-keepers, the workmen, have attained to a state of well-being which they did not have before the War. They have greater interests to defend, and realise that they can only do this by educating themselves. The new middle class is strong and full of energy to rise and organise."

And yet, to help to carry out this purpose plans and organisation are lacking and the Government seem slow to undertake an additional burden.

Nejati Bey's Tour.

In Turkey, on the contrary, Nejati Bey has returned from his European tour, his mind full of ideas for reconstruction. Instructional courses for teachers have been started, and a programme to include work in all faculties and trades is in course of preparation. It is interesting to note the stress laid on the necessity for physical culture, for which both Turkey and Roumania are trying to cultivate a taste.

The following is the comment in *La République* on the Turkish Minister's visit over the name of Yunus Nady Bey:—

"After so many centuries of ignorance, prejudice and error, all those who are gifted with a grain of intelligence have finished by realising that the West represents, without discussion, the ardent hearth of civilisation, the hearth which belongs to all humanity and can be the individual possession of no one. . . . From the declaration of our Minister for Education we gather that Nejati Bey has returned from his tour convinced that we must appeal to European specialists and that we must send the largest number of students possible to Europe.

"The Minister is equally convinced of the necessity to ameliorate the conditions of those of our young people who are studying in Europe at this time.

"We have had occasion, moreover, to mention here several times the precarious position of our young students, as much from the point of view of their daily life as of their method of work.

"Another idea which Nejati Bey brings us, a completely new idea and one which seems to be dear to him, is to start among us schools for all sorts of trades, a measure which practical daily life urges, and to multiply these establishments as far as our means allow. . . .

"Thus we have learned with the greatest pleasure that our active Minister for Education, whose promptitude we all know, has already

engaged an eminent Belgian specialist to develop as quickly as possible this very important work.

"All mothers and fathers must certainly be glad to hear Nejati Bey speak with such great ardour of physical training, such as is understood and carried out (to-day) (in Europe).

"The day is not far off when we shall have the great joy of at last seeing the end of the lamentable state into which the distussion of education has fallen.

"While pointing out how backward we are in the matter of fine arts, our Minister shows us a good and noble example of the way in which one must consider things as they do in Europe. . . .

"Convinced of the enormous advantages which our country can draw from the precious notes of our Minister, we can but wish with all our hearts that the work of Nejati Bey may be as successful in practice."

Minorities.

The vexed question of minorities has given cause for the usual amount of sparring in the press. An article appeared in the *Messenger d'Athènes* describing the excellent conditions of the Turks inhabiting Western Thrace, and, needless to say, comparing the state of their brothers in Turkey in a very unfavourable light. The matter was investigated, and the following appeared in *La République*.

The *Messenger d'Athènes* affirmed to those who wished to hear, that our co-religionists inhabiting this country were living in a state of happiness and prosperity, enjoying all the rights of minorities; that their situation both social and economic was developing day by day, and that the Greek Government administered to them each year every kind of help. . . .

Whereas we knew perfectly well how much to believe of these lofty speeches. The lamentable and tragic situation of this unfortunate Turkish minority, spoiled of their houses, vineyards and fields, of their religious schools and even of their cemeteries . . . was spread before our eyes. . . .

Again in Roumania the Government has been troubled by the reverse aspect of the same question.

According to *L'Indépendance Roumaine* promises have been extracted by the minorities from candidates at election time, which afterwards the Government have been unable or unwilling to fulfill. The simple method of a fixed party programme has been suggested for the first time by M. Tataresco, and may remedy injustices on both sides.

Balkan Troubles and the Little Entente.

The Italo-Yugoslav trouble so recently allayed gave rise for much concern in neighbouring countries. In the midst of all the discord Roumania called attention to the existence of the Little Entente; and the determination of the members to support their Ally was shown in an article in *L'Indépendance Roumaine*.

In terms, of which we cannot but approve, for they represent the firm opinions of our paper, M. Nintchitch, the former Minister for Foreign Affairs, spoke in the Parliament of Belgrade, analysing the present situation of the Little Entente.

"It is not true," said he, "that the relations between the three Powers have in any way changed owing to recent events. The friendly relations between Roumania and Italy cannot nullify the Little Entente, just as a better understanding between Yugoslavia and Hungary could not alarm Roumania. On the contrary, new friendships consolidate the peace of Central Europe, which is the aim of the Little Entente.

It is astonishing that certain organs of the Yugoslav Press should not understand this. As long as the treaties between Yugoslavia, Czechoslovakia and Roumania remain in force, one cannot reasonably talk of the isolation of one of these countries, and all fears of complications in that part of Europe should be dismissed. . . .

But the Little Entente is too efficacious an instrument of guarantee for there to arise no counter-action on the part of the enemies of peace. The Soviets keep themselves perpetually ready in wait to throw the poison of doubt and to sow the seeds of mistrust. Especially now that their diplomatic defeats incite them to retaliate wherever they can find a weak point in the enemies' armour.

It is true that their intrigues are not foreign to the state of mind which shows itself in certain circles in Belgrade. We regret that they should have found a footing in an allied country, which is passing through a difficult period, and needs precisely to strengthen her ties of friendship.

The remaining members of the Indian Agricultural Commission sailed for Bombay on April 9 for England.

The Greek Cabinet has decided to appoint General Petsas to succeed Colonel Katsonas as Chief of the Gendarmerie instead of Colonel Karambelas.

Book Reviews

TOUCH AND GO IN TURKEY.

"**THE MOSQUE OF THE ROSES.**" By Harold Armstrong. (London John Lane. 7s. 6d.)

Secret dispatches there must needs be, and they are intended to reach their destinations. What an evil day it will be for the writer of fiction when it occurs to some one in authority that it would be much safer to send that secret dispatch in the charge of four men instead of in the charge of one! Fortunately for Captain Armstrong's readers such a simple precaution was not likely to occur to any member of the British Government at the time of the Chanak crisis, and so we have his thrilling story of those days, or of what might have been, if an imaginative intelligence officer's fancies had become realities. Here is adventure, however, with a very solid foundation of experience. The author has put his detailed knowledge of Constantinople and its immediate surroundings to telling effect; but it is to be hoped that the future historian will not feel compelled by the obvious accuracy of topographical details, to place the same amount of reliance on the historical picture. The difficulty of a novel that selects recent events for its background is that the sheer delight of the story is apt to be clouded by personal opinion of the author's reading of contemporary history. "The Mosque of the Roses" is like a hand trolley on a railway line—an exhilarating mode of progress, but not the one for which the line was built; and if a good look-out is not kept and the trolley occasionally lifted off the rails to allow a train to pass, there is apt to be trouble. Captain Armstrong takes his reader along with him so breathlessly, arrestingly and plausibly that there is danger of the latter's losing sight of the fact that this a picturesque delineation of those Chanak days. Some of the pictures that the author paints so luridly are bound to strike the imagination, and one is left to wonder whether in Anglo-Turkish relations a whole generation may not have to suffer for the shortcomings of those who did not recognise their individual responsibility in the days of the Allied occupation of Constantinople. These reflexions, however, are, perhaps, wide of the purpose of the book, and need not disturb the pleasure given by a novel cinematographically full of adventure, intrigue and the boldest handling of world forces. Captain Armstrong has already established a reputation as a writer by his "Turkey in Travail." In this novel he is still autobiographical, but his mastery of plot and effect bids fair to carry him a long way.

WESTERN ART AND ORIENTAL LIFE.

"**THE APOLOGY OF ARTHUR RIMBAUD.**" By Edward Sackville West. (London: The Hogarth Press. 2s. 6d. net.)

Of recent years there has been a considerable increase in the interest shown in the amazing career of Arthur Rimbaud, the strange poet-genius who was the friend, or at least the companion of Verlaine, and who before he was twenty renounced Literature and resolved to seek life in the untarnished and illusionless East. And, indeed, it is impossible to lose interest in a man who, having staggered Europe with the originality and force of his verse, turned his back upon Western civilisation and sought the reality of the Orient.

In 1878, it may be remembered, he went as a recruit in a Dutch regiment to Java. After that he was in Egypt. And between 1880 and 1891 he was wholly in the East, unconcerned with the life of the West which he had so startlingly and—as it appeared to some—so inhumanly relinquished. He found odd jobs in places like Cyprus, Aden (which he loathed), Harrar (which he loved) Choa, Cairo, and so on. While travelling in primitive fashion in Abyssinia he set up the physical ailment that was to necessitate his return to France. It was with longing to go back to Africa that, on November 10, 1891, this peripatetic genius died.

Obviously such a psychology as was Rimbaud's needs much study for its comprehension. In this little book Mr. Edward Sackville West attempts to set out, in the form of a dialogue between himself and the poet-trader, the fundamental ideas of Rimbaud. In a fascinating way he shows how Rimbaud, determined that Literature for him was ousting life, fled the West to throw himself upon the "facts" of the East. He chose Africa because it was "a synthetic land, where life could be realised on its intensest plane." Here it was possible for him to find freedom, he who hitherto had been a "slave" either to his mother, or to Art, or to Verlaine. Of Verlaine in particular he says: "Arguing with Menelik at Ankober was better than arguing with Verlaine. We wrestled on a basis of fact, instead of on a quicksand of emotion." And Rimbaud is made to say: "However great the ecstasy to be enjoyed from the evasion of life that is Art, and however great tranquillity attained by such a synthetic appreciation, it must in the final analysis of value be the fountain-head—life itself—which takes the most important place."

Mr. Sackville West has written a stimulating and convincing book, and one that those who admire Rimbaud's verse and life, or even only one of these two separate things, will certainly be glad to have. Since the death of Rimbaud, the East has harboured many such lonely souls as his, and it may be that we of this generation are the more easily enabled to understand the processes of the French poet's mind by this fact, that since the War the East has been unloosed to certain of those who found comfortless the conventions and beliefs of the West.

The first day of the Anglo-Hellenic sports opened in Athens on April 10 in the Stadium in magnificent weather. After the march-past of the athletes to the sounds of the Greek and British National Anthems the events began.

It is stated that the number of Jewish immigrants into Palestine during January and February was 181 and 220 respectively. The number of Jews who emigrated from Palestine during these two months was 536 and 280.

At a Convocation held at Oxford on April 9 a decree was approved making a grant of £25 out of the Craven Fund to E. J. Forsdyke, assistant-keeper of Greek and Roman antiquities at the British Museum, in aid of the Knossian Tombs Fund of the British School at Athens.

THE INDIAN NAVY BILL.

To the vast majority of the people of this country India has always been an enigma—vast, mysterious and romantic. To know a country, even slightly, one must visit it, and although the exigencies of the War period, which saw so many erstwhile civilians on garrison duty in India, and the increasing popularity of the globe-trotting habit, have undoubtedly brought about a considerable change in that respect, it has recently been estimated that only about 2 per cent. of the population of these islands have had the advantage of visiting in person the most interesting country in the world. Vast as are the responsibilities of Parliament in the matter of India's destiny, even under the reformed Constitution, its many other pre-occupations only enable it to devote ordinarily a few hours each year to the consideration of Indian affairs in general and for India to figure prominently on the order papers of both Houses twice in one week is a very rare event. With Lord Birkenhead's statement in the House of Lords, we are not at the moment concerned, except to remark that, as we anticipated, its reception in India has been on the whole favourable, although the *Times of India* pertinently points out that the real issue is not whether the Statutory Commission is ready for India, but whether India is ready for the Commission.

The Indian Navy Bill, having emerged from the Committee stage with a few alterations in detail but without any radical change in its provisions, came up for third reading in the House of Commons on April 5, and in spite of renewed opposition from the Labour benches, was finally passed by a substantial majority. The assent of the Upper House is assured, but the Act does not come into operation until certain consequential legislation is adopted by the Indian Legislature. Although the debates were on the whole not unworthy of the occasion, several speakers displayed such obvious ignorance of the origin of the measure that a short account of its history will not, perhaps, be out of place at the present juncture. The attitude of the educated classes towards the problems of India's defence has undergone a considerable change of recent years. They have for long admitted, at least in theory, that their political aspirations ultimately depend for fulfilment upon the capacity of the country to defend itself, but there was until recently little demand on the part of those classes for a military career. Latterly, in addition to the many signs of awakening interest in the strictly military aspect of the question, there have also been indications that the importance of the corresponding naval problems is gradually being appreciated in the same quarter. The report of the Mercantile Marine Committee of 1923-24 stated:—"It is the almost unanimous desire of all Indian witnesses that the creation of an Indian Navy capable of defending the coasts, harbours and commerce of India should proceed hand in hand with the development of an Indian Mercantile Marine, and we strongly recommend to Government that the re-organisation of the Royal Indian Marine into such a service should be undertaken with the least possible delay."

The Government of India's acceptance of the policy was

formally announced by Lord Reading at the opening of the Delhi Session of the Council of State last year. The beginnings of the force, in accordance with the recommendations of the departmental Committee presided over by the late Lord Rawlinson, which drew up the present scheme, will be comparatively humble—a squadron of four sloops, two patrol craft vessels, four trawlers, two survey ships and one depot ship, while the suggested *personnel* consists of one flag officer commanding, nine captains, 19 commanders, 42 lieutenant-commanders and lieutenants, eight sub-lieutenants, four midshipmen, 14 boatswains, 44 engineer officers and six assistant surgeons. The two primary duties of the new force will be the training of *personnel* for service in war and the policing of the Indian Ocean and the Persian Gulf, other functions being the organisation of naval defence at ports under the control of the Indian Government, survey work in the Indian Ocean and marine transport work for the Government of India.

British and Indian boys will alike be eligible for appointment to commissions and will enter at the age of eighteen, Indian cadets being mainly recruited through the Prince of Wales College, Dehra Dun. One-third of the commissioned ranks are to be reserved in the first instance for Indians, provided qualified candidates are forthcoming. The estimated annual cost of the Royal Indian Navy, in the initial stages, will be nearly sixty-three lakhs, but this only involves an additional net expenditure of ten lakhs, as the work of the Royal Indian Marine will practically be confined in future to the marine survey. "Ten lakhs," as an Indian contemporary observes, "does not seem an excessive sum to pay in return for the benefits of a definitely Indian fighting force at sea, which will be privileged to fly the White Ensign." To quote Lord Reading:—"India by this privilege is directly admitted at the outset of her naval career to share in the record of the centuries of proud and gallant traditions for which that Ensign stands."

One could hardly have imagined it possible to regard such a measure as of a controversial nature; and yet that is the character which it assumed at an early stage in its progress through the House of Commons. In a speech which has been hailed with applause by the same extremist Press in India as two years ago was indulging in an orgy of abuse of the Government for its delay in adopting the Mercantile Marine Committee's recommendations, one Labour member moved the rejection of the Bill on the ground that it was simply an endeavour to foist a part of the burden of the Royal Navy on to India's shoulders. The main object of the opposition during the debate on the second reading was, however, to hedge round with additional safeguards the provision enabling the Indian Government to place the Indian Navy at the disposal of the Admiralty in the event of an emergency arising which, in the opinion of the Governor-General, is sufficiently grave to justify its diversion to other areas. Having failed to carry the necessary amendments in Committee the Opposition spokesmen endeavoured, fortunately without success, on the third reading "to confine the use of the force to the protection of the shores

of India and to preclude its use for any other purpose." A more reasonable amendment moved by Lieutenant-Commander Kenworthy to provide that in no circumstances should India be required to defray the cost of the fleet, or of any individual unit, when employed outside Indian territorial waters shared a similar fate, but it must be admitted that Lord Winterton's defence of the somewhat archaic procedure proposed in the Bill, borrowed from the corresponding Army legislation, was not very convincing.

Meanwhile, reports from India indicate that a great deal of preparatory work has already been done in that country and that the training of boys as deck and engine-room ratings has started on the depot ship at Bombay. A gunnery instructor has been appointed and took up his duties several months ago. Provision has been made in the Budget Estimates for 1927-28 for an initial grant of Rs.5 lakhs towards the cost of the scheme. Neither in the House of Commons nor in Indian political circles however, has the real problem, which successive Committees have failed to solve, been squarely faced. All the lower ratings in the Indian Navy will eventually be composed of Indians and we understand, and can readily believe, that the material secured for training so far is eminently satisfactory. It is the supply of candidates for commissions that is likely to constitute the real difficulty. The weakness of the Skeen Committee's proposals in a similar connexion is laid bare in a cogent article which an informed correspondent contributes to this issue. Will it be any easier to find Indian cadets to enter the Naval Service and to undergo the requisite training? We wish we could answer in the affirmative.

CURRENT TOPICS.

Demands for Grants.

Although the Budget speech is widely reported at the time of its presentation, even in organs which do not ordinarily devote much space to the consideration of Indian affairs, the subsequent fate of the Finance Member's proposals is not always known in this country until some time after the end of the session. Particularly is that the case with measures which are not embodied in the Finance Bill and criticism of which, if it is to be effective, must be deferred until the motion for the appropriation of funds for the department concerned is submitted to the vote of the lower House. With the exception of certain charges of a special or recurring nature, e.g., the cost of defence, the debt payments and certain fixed salaries, the Assembly is free to refuse its assent to, or reduce, any demand, and the fact that at an early stage of the last session over 200 notices for reduction of grants had been received shows that the privilege is widely exercised. Unfortunately the legislators, while quick to appreciate the possibilities of the concession, have yet to realise that without co-ordination and economy of effect such zeal merely defeats its own ends. The inevitable result is that progress is retarded to such an extent that many important votes have never been reached since the inauguration of the reformed Constitution.

So far as can be ascertained the debates on the railway and general budgets this year have been conducted on the whole with a commendable regard for parliamentary conventions. A tribute is undoubtedly due in this connexion to the President, Mr. V. J. Patel, whose duties have been rendered more than ordinarily onerous by the unusually large number of highly controversial questions which have come up for discussion. By the firmness, tact and discretion with which the proceedings have been conducted he has proved himself a worthy successor to his distinguished predecessor in the Chair. It is a matter for regret that his former colleagues in the Congress party

have not seen fit to profit by his experience and example. If the powers of the Assembly are increased in 1929 it will certainly not be due to the action of those members of the party who are still unable to realise the folly of pressing for the virtual elimination of the whole Budget when a point can be emphasised, or a grievance ventilated, by a token cut of a single rupee. The session which has just concluded provided three examples of that particularly futile form of "non-co-operation," indulgence in which, as the division lists show, is unfortunately not confined to the one party. As the grants for the Railway Board, the Army, and the travelling expenses of the Executive Council are clearly essential "to the discharge of the Governor-General's responsibilities," their restoration may be regarded as a foregone conclusion, but to compel Lord Irwin to use his emergency powers in such circumstances is a grave error of tactics. Not only does such irresponsible action alienate the sympathies of the moderate elements in all parties, but every exercise of the powers of veto vested in the Governor-General, whether by the above means or by certification, strengthens the right and causes it to be regarded as an essential part of the Constitution. On the other hand, if no occasion should arise for its exercise over an extended period, its use at the end of that time would evoke such unfavourable criticism that the utility of the provision would be largely destroyed.

India in London.

It is now a good many months since the question of the accommodation in London of the High Commissioner for India was brought prominently to notice, and it is satisfactory to learn that the construction of the new India House will be begun this summer. Plans for the building, which, as previously announced, is to be erected on an L.C.C. site in Aldwych, next to Bush House, are, we understand, nearing completion, and Sir Herbert Baker, who was associated with Sir Edwin Lutyens in the planning of New Delhi, and Sir Atul Chatterjee, the High Commissioner, are engaged in settling the final details of the design. So far as can at present be ascertained, the new building, which will be of six or eight storeys, will not be dissimilar to Bush House itself and we are assured that "any jarring break in architecture will be avoided." Accommodation will be provided for more than three hundred people and the probable cost is estimated at about £300,000. A preliminary grant of £60,000, it will be recalled, was recently approved by the Standing Finance Committee of the Legislative Assembly, although only by a small majority, and the recent announcement indicates that the proposal has been endorsed by the Assembly, though whether the assent was conveyed by the direct vote of the House or indirectly, through the operation of the "guillotine," has not as yet been made clear. The point is of some importance as the form or temper of the Congress Party's opposition to the grant would have provided a useful indication of whether the party's attitude towards the larger issues involved have really changed to the extent that is sometimes suggested. When one considers that the trade that Great Britain does with India is larger than that which she does with any of the Dominions and capable of almost indefinite expansion, the inadequacy of the present arrangements needs no emphasis. It is, however, only fair to remember that the Swarajists view the question from a totally different standpoint. They do not desire the expansion of India's trade with Great Britain, at any rate while it retains its present general characteristics, of the exchange of India's raw materials for Britain's manufactured goods. They desire to see India self-supporting in her manufactures and making use of her own raw materials in order to become so; and they do in fact specially resent the large exports of India's raw materials and produce on substantial as well as economic grounds—that the exporter of raw materials is in the position of a "hewer of wood and drawer of water" to the manufacturing nations that make use of them.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta March 24.

The Currency Bill.

The Legislative Assembly having voted for the rs. 6d. rupee, two questions remained to be discussed: the establishment of a gold standard and a gold currency in India. Mr. Kelkar's proposal urging that, if the sovereign were demonetized, a gold mohur should take its place, being issued only in return for gold, though it was a modest proposal, was repulsed by 60 against 49. Sir Basil raised the bogey that the proposal to put the sovereign value at the rate of his own ratio would wreck the bill. This was evidently an appeal to those who had previously stood by him for the rs. 6d. ratio. A short study of the division list shows how admirably he succeeded in this, too, for none of his supporters left him. It was disclosed that a recommendation for a gold standard and a gold currency had been made a quarter of a century ago, and that the Secretary of State and the Government of India had accepted them, but that nothing had been done in that direction. There is certainly a great and useful lesson in the numerous attempts made during the last one hundred and twenty years to get a gold standard and a gold currency. They were all thwarted. A member proceeding to read an extract of the Chamberlain Commission of 1914 on the subject of Indian sentiment regarding currency. Sir Basil interrupted him, saying that the extract had been read before. To this Pandit Malaviya quoted Mr. Fielding's opinion that if one tells an Englishman a thing once, he ignores it; if he is told again, he begins to notice it; and if he is reminded of it a third time, he starts thinking about it. "This is why I am reading it for the third time," added the Hon. Member. Sir Basil opposed the amendments, but offered a compromise:—to omit the clause relating to the demonetization of the sovereign, which would leave it at Rs. 10 for the time being. Government business is very congested, and it looks as if the House will have to sit daily next week.

Sir Francis Stanley Jackson, P.C., G.C.I.E.

A programme has been arranged for the official and public arrival of the new Governor of Bengal, who will be in Calcutta on March 28. Sir Stanley will be received at Howrah Station by the Chief Secretary to the Government of Bengal. At that moment, seventeen guns will be fired from the ramparts of Fort William. Presentations will be made, including the staff of the Governor, the Commissioner of Police and other officials. At Government House the Ruling Chiefs of Bengal, the Consuls, the Members of the Legislative Assembly and the Bengal Legislative Council will assemble. At the top of the grand staircase Sir Stanley Jackson will be received by His Excellency Lord Lytton, who will then present the Chief Justice of Bengal, the Lord Bishop, the Ruling Princes, Ministers, etc. When all are in the Throne Room to hear the reading of the Warrant of Appointment, they will remain standing until the new Governor takes his seat on the dais. The Chief Justice will then administer the Oaths of Allegiance. After the function Lord Lytton will leave for Howrah. His departure will also be public.

The Fellowship Organization.

An appeal has been issued by a large and representative body of citizens to fight the ever increasing racial conflict. The signatories, who include Rabindranath Tagore, Lord Sinha, Dr. George Howells, Rt. Rev. Bishop Pakenham-Walsh, Sir J. C. Bose, Sir R. N. Mukerjee, Mr. W. C. Wordsworth, Dr. S. K. Datta, Bipin Chandra Pal, the Maharajah of Mayurbhanj, and many other prominent persons, say that communal hatred has become a great menace to Indian national unity and peaceful progress.

They appeal to all leaders to join this Fellowship, and strive to fight the conflicts of races, cultures and religions that have been tearing up the ideal of universal human brotherhood, towards which the world has been aspiring for the last one hundred years and more.

The Army Estimates.

By refusing to sanction any expenditure on the Army, the Legislative Assembly did not mean to voice its faith in pacifism, says the *Bengalee*. The Indian legislators do not dare to do without an army. They have not yet been so far converted to Mr. Gandhi's creed of non-violence as to think of attempting to run a State without an army. Their wholesale rejection of the army grants has more meanings than were made clear to the Assembly. A *New Empire* editorial explains that there is great dissatisfaction at the Government's military policy. The heavy expenditure incurred on the Frontier militia has been strenuously opposed by Indian legislators and publicists. They ascribe the peaceful penetration method to Great Britain's Imperialistic ambitions. There is another grievance added to the list, that is the dispatch of Indian troops to China without a discussion of the matter in the Assembly.

Mrs. Besant's "New India."

The official organ of the Home Rulers has ceased publication as a Madras daily. The paper will, however, reappear very shortly as a weekly from Bombay, under the joint editorship of Dr. Annie Besant and Mr. Jannadas Dwarkadas. The last issue of the daily contained an editorial in which Mrs. Besant recalls the forfeiture of securities and the internment she had to suffer through the emergency laws. "The task of *New India* as a daily fighting paper is over," says Mrs. Besant, "and it has been carried on at a loss, from the beginning, nearly thirteen years ago. But good friends have been helping all along. The end will be a great triumph. Take care it is not stained by excess." In concluding her article Dr. Besant pays a feeling tribute to the loyal co-operation of Messrs Wadia, Arundale and others, and declares that "the weekly *New India* will take its share in fighting the dragon of communalism, and in building up the nation."

Comrade Saklatvala and Gandhi.

In support of the communist M.P.'s criticisms of Gandhi's methods, Mr. Chamanlal, speaking at Delhi, declared that Gandhi had failed. He doubted whether there was a single Indian leader who had ever investigated the conditions of the factory workers and of the peasants. The country was suffering from idolatry and hero worship, and it was time India rose to a sense of reality. Another speaker, Mr. Srinivasa Iyengar, said it was idle to talk of internationalism in a country in which the peoples were divided into so many creeds and parties. The first step was for India to become national, and the different religious and political parties had to be brought under one flag. The success of that task was still far off. In reply to Mr. Saklatvala's open letter Mr. Gandhi has written in his paper, *Young India*, an article entitled "No and Yes." He does not doubt Comrade Sak's earnestness and sincerity; neither does he question his love for the poor; but in spite of his desire to say "yes" to the appeal, he, Gandhi, has to say "no." He finds himself against a blind wall. They stand at opposite poles. Yet there is one thing in common between them: the claim to have the good of the country and humanity as the only goal. Mr. Saklatvala swears by the modern rush, while Gandhi detests the modern desire to destroy distance and time, to increase animal appetites, and go to the ends of the world to satisfy them. If civilization stands for all this, Gandhi distrusts its schemes for the amelioration of the lot of the poor; he distrusts everything—the Currency reform, the Army, the Navy. He would destroy the existing system to-day, if he could, because it has enslaved and bribed powerful men with distinctions, and crushed down patriots who could not be won over by

flattery or riches. But the weapons that would have to be used would perpetuate the system, even if it destroyed a few of its present administrators. Then Gandhi goes on defending *khaddar* on account of its great organizing power and valuable discipline. He adds that he is not opposed to the organization of labour, especially when employers are humane and considerate, and when agreements are honourably kept. He is ready to subscribe to a bill making it criminal to call him "Mahatma" and touch his feet. "I impose the law, myself, where I can," he concludes, "and in my *ashram*, the practice is considered as a crime." The two poles will probably never meet.

The Frontier Policy.

In a concluding address at the Calcutta Rotary Club on the problems of the North-West Frontier Mr. Wentworth Lewis said that he was of opinion that the policy of penetration by peaceful advance, such as was adopted in 1922, was the only method of solving problems that had confronted successive Empires and rulers in India. About half of the tribespeople over whom the British Raj exercises control are males; out of those one and a half million males, 750,000 are of fighting age and eager for conflict. Such numbers make the problem a formidable one. Yet the policy of peaceful penetration had so far proved successful, since the number of raids in administered territory had considerably decreased. That policy represented a great cultural and civilizing mission, teaching trade and giving the people an economic chance in life, beside relieving the peaceful dwellers of the plains of an ever-present menace. Mr. Lewis also said that tribesmen were becoming reconciled to the continuance of the British Raj, and that it had to be proved that British administration was sufficiently strong and beneficent to be worth backing.

Here and There.

Last week a Fairey aeroplane crashed near Peshawar. Three lives were lost: Flying-Officer R. O. Rigg and two passengers, leading aircraftmen G. T. J. Sexton and C. W. J. Meaden.

A secret society is said to have been formed by a section of the students of the Pudukottah College. The name of the Society is "Shanmuga Raising Society." Members are recruited among dissatisfied students. The subscription is Rs.5. The meetings are held in the forest. The penalty for betrayal is death. The authorities are taking action.

Abdul Rashid, the murderer of Swami Shradanand, has been sentenced to death. The insanity plea could not be entertained, and there were no extenuating circumstances. Communal hatred impelled the accused to seek the Swami and to murder him deliberately, without provocation or cause. The accused did not act while of unsound mind. He was and is perfectly sane and responsible.

Thefts of the more easily detachable parts of a motor car are becoming quite common in Calcutta. It is almost impossible to leave a car unattended in a busy thoroughfare. On returning one finds the horn-bulb or the driving mirror, or the spare wheel gone; in fact anything may be gone. A Calcutta doctor, who had his horn-bulb stolen two or three times within a month, has camouflaged (I really ought to say camouflaged, to be correct) the new bulb by sticking odd pieces of rubber on it to make believe it is an old one. But it is hardly a solution of the problem.

There was a serious accident to the Madras Mail last week. The train collided in Bhadrak Station, 180 lines from Calcutta, with an engine and goods wagons. There were 14 killed and 43 injured. Among the latter there were three Europeans.

During the *holi* festival a serious communal disturbance was averted, thanks to the tact of the Assistant Superintendent of Police of Barrackpore. Police arrangements were elaborate, strong pickets having been detailed at all important crossings. Armoured cars were seen patrolling the streets, especially Burrabazar and Chitpore. The *holi* festival passed off peacefully in Calcutta.

BOMBAY NOTES.

The weak spot of Sir Basil Blackett's fifth successful Budget is becoming more and more apparent as the financial year comes to an end. He has financed a very large proportion of his home requirements not by selling exchange in the Indian markets, but by book transfers in London. His resources of this kind cannot be unlimited, and it is permissible to inquire whether, when they have come to an end, it is likely that the present ratio will, in all circumstances, be able to stand up to the sale of, say, £25 million more Council Bills than was necessary this year.

The visible balance of trade has during the past year been unusually unfavourable to India, and it is not necessary to be a confirmed optimist to look for some improvement in this respect. But the strongest argument in support of the 1s. 6d. rupee lies in the invisible movement of the exchange. It is certain that to some extent, as long as there was any doubt as to the fixation of the rupee, there has been a strong tendency to remit to England. There will probably be a considerably reduced volume of normal remittance in the future, and possibly a good deal of remittance on speculation account will return to India now that the rupee is stabilised. But the computation of these figures is of course a matter of guess work: the amount of abnormal remittance may be equal to the book transfers of the Indian Government in London or it may fall very much short: and it is on this very uncertain factor that our judgment of the extent to which the 1s. 6d. rupee has stood up to the difficulties of a very indifferent export season must depend.

The Trade Outlook.

As I have pointed out before, the past year, and especially the past six months, have, as far as Bombay is concerned, proved almost uniquely unfavourable to exchange. A very large and cheap American cotton crop has effectively checked Indian exports of cotton and at the same time stimulated Indian imports of piece-goods. In previous years there has generally been a reaction about the middle of the hot weather. Indian cotton prices fell before the monsoon, and the prospects of exporters and millers alike became brighter. There is no reason why this should not happen this year. But if it does not happen, and if, for instance there should be another large American cotton crop and another comparative failure in India, it is obvious that Bombay will not be able to do much towards the stability of the rupee.

It has been some times objected in Bombay that the disparity between Indian and American prices has been brought about by the too easy financial arrangements which have enabled cotton to be held back from the market. It does not, however, appear how it is possible for bankers to discriminate between the commodities that demand their assistance, and if, by their aid, cotton growers and dealers are enabled to carry their stocks through a period of temporary depression, it seems to me that it needs a good deal of bias to find anything unsatisfactory about the business.

The Railways.

The battle between Bombay's two railways as to the future of the railway traffic in Bombay seems to have finally come to an end in the decision to build a terminus for the B.B. and C.I. in the Byculla area. The alternative was to bring all long distance traffic at any rate into the present G.I.P. Railway terminus at Bori Bunder, giving it the necessary room for expansion by acquiring the site of the European General Hospital. The discussion between the two railways is alleged to have been long and acrimonious, and it has spread into divisions by paths in which most of the European population has been involved. Five years ago a violent attack was made on the inconvenience of the site of the European Hospital, and on the assumption that the railway was prepared to pay very large sums for it, a mass meeting was invited to consider

the advantages of its removal to Malabar Hill, or to the reclaimed area of Back Bay. As far as I can remember, the meeting voted *nem. con.* for the Malabar Hill proposal and the European community having thus as a whole approved of the scheme, proceeded, in their individual capacity, to write to the Press condemning it. In any event, no funds were forthcoming for the project, and the only tangible result was the appointment of a committee to deal with the subject. The committee for some time used to address the Director of Development on the prospects of obtaining a site on the reclamation, and eventually it is understood to have handed over its duties to the European Association—to remain in abeyance until there is some prospect of a move.

As, however, the G.I.P. will now have to be content with comparatively little expansion of its present site, it is not likely that there will be any purchaser of the hospital at a price which will help on a move. I am not at all sure that this is a pity. The hospital's present site has some disadvantages, but they can be put right, or very nearly right, at a comparatively small cost. But it has the very great asset of being about the most central and accessible place in Bombay; and I am inclined to think this a final argument in favour of it.

THE ARMY IN INDIA.

[The following contribution has been received from a correspondent who in the course of a distinguished journalistic career in India has made a close study of the many important issues raised in the Skeen Committee's Report.]

In June, 1925, the Government of India appointed a committee "to examine the means of attracting the best qualified Indian youths to a military career and of giving them a suitable military education." This committee which was presided over by Lieut.-General Sir Andrew Skeen, Chief of the General Staff in India, included thirteen other members, only one of whom was an official. It has become known as the "Indian Sandhurst Committee," as the main question on which it was asked to report was the desirability and feasibility of establishing a military college in the country.

The report of the committee has just been published. In a foreword the Government of India explains that it has formed no conclusions upon the report, which will be used "as a starting point for discussion" with his Majesty's Government, whose approval to any scheme of Indianisation is indispensable.

The Indianisation of the Indian Army is a grave and very complex problem, and it is very extraordinary that the Skeen Committee should not have thought it necessary to produce more evidence in support of its bold recommendations than could be condensed into barely fifty octavo pages. To the intricate and vital question of caste, for example, the committee has given only a very brief paragraph, which embodies a hope that the problem will solve itself.

The report gives one the impression, that, at the outset, the members of the committee took it for granted that they had to produce an ambitious scheme of Indianisation and forthwith proceeded to devise ways and means by which that goal could, in some way, be attained. That is the only explanation of the far-reaching character of the recommendations contained in the report. The committee has certainly succeeded in showing that the present rate of Indianisation is inadequate and that the present system is full of defects. But it has committed a capital blunder in concluding that the shortage of recruits is due, except in a small degree, to the shortcomings of the "eight units" scheme.

The causes lie deeper, and the failure of the committee to recognise them in proper perspective is all the more remarkable in view of the fact that they are fairly stated in more than one part of the report. The committee proposes that the present system be replaced by one

under which, according to its calculations, in 1952, more than 50 per cent. of the total officer cadre of the Indian Army would consist of Indians. That is not, as a programme, an extravagant one, and the only ground on which the recommendation of the committee can be criticised is that even such a programme is unpracticable.

The total number of officers in the Indian army is 3,200. Under the present scheme of Indianisation 10 Indians represent annually for training to Sandhurst. The committee proposes that the number be doubled immediately and that the number of cadets admitted be increased by four in each year until 1933. In that year a similar institution with provision for 100 cadets should be established in India and from that time the number of cadets admitted at Sandhurst should be limited to 20 per year. Regarding an Indian Sandhurst the committee has no illusions, for it has proposed that cadets passing out of that institution and commissioned "should be attached to a cavalry or an infantry unit in the United Kingdom for a period of one year." If this was the only condition to be fulfilled, the cost and difficulty of training Indians as officers would be sufficiently great.

But what is really baffling is not the discovery of means of converting suitable human material into capable military officers. The problem is to find the human material.

The committee has frankly faced the fact, that young men of the right type do not exist, but, curiously it has failed to draw the only obvious conclusion.

The committee quotes with approval the verdict of the Commandant of Sandhurst on the Indian cadets admitted to Sandhurst, that the cadets coming from the Dehra Dun college are an easy first, and the others nowhere. The committee has, therefore, decided that, the ordinary educational institutions being quite incapable of reproducing the right type of youth, the prospective military officers must be raised, like hot house plants, in a special institution or institutions.

It is open to very grave doubt whether even this part of the committee's anticipations can be fulfilled. It may seem incredible to many that among a population of 320 million people, three or four thousand young men who have received an English education and possess good physique and character cannot be found to be trained as officers. It is essential to remember, however, that the military classes in India lack education, that English education has spread among those sections of the population who conspicuously lack the requisites of physical strength and character and that there are in the whole country less than two million persons over five years of age who are literate in English.

Granting that the proposals of the committee will result in the placing of 1699 capable Indian officers in the Indian Army by 1952, there remains a vital question, which one is amazed to find the committee has not at all considered. That is a reserve. On the committee's own showing, the young men trained as officers will be the only men in the country capable of being officers at all.

The committee has found that the annual wastage is 160. But that is in times of peace. The committee has entirely omitted to consider the effects of a war on its scheme. In any big war ten, fifteen or twenty years hence, seventy-five per cent. of the carefully and most expensively-trained Indian officers may be wiped out. There would be absolutely no reserve to fall back upon for the replacement of casualties. English youths will have to be recruited, but young and inexperienced British officers will not be able successfully to lead into battle soldiers, whose language, customs and character they have had no opportunity of studying. In such a situation the Indian army will go to pieces.

It is pertinent to recall here that the absence of an adequate reserve of non-commissioned officers and men in the Indian army proved a great source of weakness when reinforcements had to be found for the Expeditionary Force in France. But the absence of suitable officers would be disastrous, because the officers are the backbone of an army.

The fact must be faced that the Indianisation of the

Indian army is not a practicable proposition until there is in the country a large reservoir of human material, from which the requisite number of military officers can be easily drawn. To build such a reservoir not only must the whole educational system of the country be revolutionised but a vast advance in civilisation must also be achieved by the people. A corps of officers without a reserve is unthinkable. The problems of Indian self-government and Indian defence will not be solved until the Indians apply themselves to the great and laborious task of national reconstruction.

To the recommendation of the Skeen committee that commissions should be given to Indians in the Air Force and the technical branches of the Army, there can be no objection.

THE DELHI EXODUS.

(From a Correspondent.)

As I write, the sun is pouring down on to the baked earth outside and the white buildings of New Delhi are flashing like the facets of a great diamond, for the hot weather is at its beginning and from day to day will grow in strength. At this moment the members of the Indian Legislature are sitting comatose and somnolent, listening to speeches by various disgruntled gentlemen who would like to see the annual Finance Bill entirely rejected. Pandit Madan Mohan Malaviya has just made what he said will probably be his last speech in the Legislative Assembly and it is rumoured that he means to resign his seat in the Central Legislature and devote the remainder of his time probably to Hindu communal affairs. With the Pandit will disappear almost the very last of the Old Guard of Indian politicians. The men who made their reputations in the early days of the Indian National Congress and were proud to call themselves disciples of the famous veteran Dadabhoj Naoroji. The Pandit has given and taken many hard knocks in the course of his political life, but there was nothing bitter in this final speech of his and, indeed, during its course he said much that both Englishmen and Indians would do well to ponder.

This is the time of year when Englishmen in India "lift up their eyes unto the hills" and the exodus from the plains has already begun. Many fortunate ones there are who are going to England and in Delhi we count among these the President of the Legislative Assembly, Mr. Patel; Mr. Graham, Secretary of the Legislative Department; and last but not least Sir Charles Innes, Commerce Member of the Viceroy's Executive Council. Sir Charles is retiring from the service of the Government of India after nearly 30 years of hard and highly successful work. As Commerce Member he has made history, for he has had much to do with the fostering of the steel industry in this country and with the epoch-making change which separated the railway budget of this country from the general budget. For two years past this change has been in operation and has already worked wonders. And now those responsible for railway development in India can plan out their work for years ahead, knowing that they will have the resources available to carry their plans to completion. Sir Charles is also one of the original as well as one of the most popular members of the Reformed Legislative Assembly. The young lions of the Swaraj Party, not to mention the older lions also, will take a castigation from him without as much resentment as they would show at a far milder wiggling from some other occupants of the Government benches. During the past few weeks Sir Charles and Lady Innes have been the chief guests at numerous farewell ceremonies and the good wishes of all who know them go with them in their retirement. Sir Charles, of course, is a Scot, as also is his successor, Sir George Rainy.

There has been a great to-do lately over certain proposals put forward by a number of Muhammadans for replacing the system of separate communal electorates by joint electorates, and a certain section of the Indian Press sees in these proposals the beginning of a solution of the old Hindu-Muslim conflict in India. The proposals, however, are guarded by such stringent conditions that there is no likelihood of any responsible Hindu spokesmen accepting them; indeed, they have already been rejected tacitly by a representative Hindu gathering presided over by Pandit Madan Mohan Malaviya. It is not likely, therefore, that this particular movement will lead to any notable improvement in the communal situation in this country.

INDIAN MAIL.

The Salt Tax.

By its decision to restore the budget rate of the salt tax, which it had originally cut down by a half, the Legislative Assembly has fulfilled expectations. The original cut must have been made in the usual vein of light-hearted irresponsibility that characterises the Assembly in such matters: in the assurance that the budget rate would be certified by the Viceroy. But the announcement that, if the Assembly persisted in a refusal to agree in the restoration, made by the Council of State, of the budget rate, the Viceroy would not exercise his special powers, evidently induced a number of Indian members, not belonging to the Congress Party, to take a more serious view of their responsibilities: those who, as the cabled report put it, had cast their votes against the existing rate in the belief that to do so would be "useful for electioneering purposes." The Congress Party persisted in their support of the cut; but were unable, even in a thin house—only two-thirds of the members voted on the question—to carry their point. The extremist Press, which has all along violently protested against the existence of provincial contributions to the central exchequer, on the ground that these diverted money that would otherwise be available for "nation-building" purposes, has yet protested even more violently against the "disgraceful bribe" of their remission, offered—as it asserts—by the Finance Member in order to ensure acceptance of the eighteen penny rupee, without which it could not be carried out. It will doubtless use a similar phrase in the matter of the salt tax; since Sir Basil Blackett explained that the halving of the tax would reduce the budget surplus by approximately the amount of the remissions, which he would therefore be unable to provide for.

The salt tax has always been, and will certainly always remain, an unpopular one: it is just forty years ago that Rudyard Kipling put into the mouth of the out-going Viceroy, Lord Dufferin, the advice to his successor to "lift" it. And Lord Reading's action in certifying its increase, though necessary in order to balance the budget after a long succession of deficits, perhaps did more than any other Government action to strengthen the non-cooperation movement: a result which its reduction, in the following year, to the original figure, did nothing to minimise. But in fact, though any tax on the necessities of life is admittedly objectionable, the salt tax makes only the most infinitesimal difference to even the poorest: it amounts to one rupee four annas per maund of 80 lb., or the merest trifle more than a farthing a pound. More objectionable than the tax, which is a valuable source of revenue in spite of its small proportions, is the fact that the production of salt in India is a Government monopoly, and that persons are prosecuted and punished for producing it privately. Not until the tax is removed altogether will it be possible to avoid this unpleasant necessity: and in this, much more than in its incidence on the consumer—though it is on the latter ground that it is always attacked—lies the real objection to the continued existence of a tax that will certainly be among the first to be abolished when financial considerations admit.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2.

Tuesday Morning.

The Greek Debt Settlement.

After negotiations which, with intermissions, have lasted since 1925 a settlement has been arrived at in respect of the Greek War Debt to Great Britain and on April 9 the agreement was signed by the Chancellor of the Exchequer and M. Caclamanos, the Greek Minister in London. The total of the debt is fixed at £21,440,000 after deducting the interest due and a sum for damage caused by the British Army in Macedonia during the War. It will be repaid in sixty-two annual instalments rising from £200,000 for 1927-28 to £250,000 for 1929, to £300,000 for 1930, to £350,000 for 1931 to 1935, and to £400,000 from the latter year to 1987. It will be noted that the agreement contains what is known as the Balfour clause, which is to the effect that this country will not ask from her Allies more than will suffice with the reparation payments to meet the payments that have to be made yearly to the United States. For Greece the settlement should mean much, for so long as the country's external debts remained unsettled it was impossible to achieve the financial stabilisation which is being sought. By the agreement Greece has taken one of the preliminary steps that are essential if she is to place her financial house in order, and her action will have done much to prepare the way for the assistance that she will need to further her economic recovery. In this connexion in a letter handed to M. Caclamanos by Mr. Churchill, in which reference was made to Britain's satisfaction at the settlement, it was stated that the fullest support will be given to bring about Greece's financial restoration as well as the stabilisation of the drachma.

The Budget.

For obvious reasons the Budget has been awaited with an unusual degree of anxiety, for it was not difficult for the plain citizen to conjure up a variety of unpleasant expedients that might be adopted by the Chancellor to meet the needs of the financial situation. For once, however, the unexpected did not happen, and Mr. Churchill's proposals were in the main in accordance with expectations. The duty on tobacco is to be increased, while foreign

tyres, wines, films, and matches come in for attention. The new taxes did not constitute the most striking part of the Budget proposals, and first place from the point of view both of importance and interest must be given to the programme of economy outlined by the Chancellor. It is proposed to abolish three Ministries during the year—the Transport Ministry, the Mines Department, and the Department of Overseas Trade—while recruitment for the Civil Service is to be curtailed. As I indicated last week in referring to the possibility, in my opinion the abolition of the Overseas Trade Department will be a serious mistake, but, that apart, there is nothing to take exception to in the proposals, which will doubtless meet with a generous measure of approval from those who have been insistent in their demands for economy. There is one point, however, which cannot but occur to anyone in regard to these changes. If these Ministries are not indispensable how is it that the economy was not effected in 1925 so that by this time the country would have felt some real benefit from it? If it is possible to recruit on a smaller scale, why has there been no change hitherto? The fact is that under modern conditions it needs little short of a crisis to bring about heroic measures. That is the fatal weakness of democracy to-day. The Chancellor's remark regarding the impossibility of reducing Exchequer contributions for Education, Health, and Local Government—three departments (in particular the first) where there is really scope for economy—aptly illustrates the position. There is unlikely to be a clamour for a reprieve for the three Ministries sentenced to the guillotine, but in the case of Education, for instance, there would be a widespread agitation.

A Bad Decision.

The irony of the decision with regard to the Department of Overseas Trade lies in the fact that it is the only Ministry whose duty it is to further the development of the country's commerce, and it is only by the expansion of trade that Great Britain can recover the ground lost during the past few years. The actual cost of the Department is very small when compared with the huge expenditure on social services—an expenditure which is only made possible and can only be maintained by the growth of the country's overseas commerce. In the circumstances the expenditure on the Department is nothing more nor less than an insurance policy. If there were no other means of economising, then there would be nothing more to be said, but that is not the case. The Chambers of Commerce have paid abundant tribute to the value of the work of the Ministry, and it is very evident that British trade endeavour will be handicapped by its abolition. In writing this I am not overlooking the fact that the Department is presumably to be absorbed by the Foreign Office and the Board of Trade. With its functions divided in that way it is out of the question that it can give the guidance and assistance to British commerce that it does at the present time.

Yugoslavia and American Capital.

It is perhaps not without significance that Yugoslavia should have found it somewhat easier to obtain loans in America than in this country. The United States is at the moment in the fortunate position of having a plethora of wealth, and the natural sequel is the development of overseas loans. Last week the issue was made in New York, by a group which includes Messrs. Blair and Co., Inc., and the Chase National Bank, of 30,000,000 dollars Seven per Cent. Yugoslavia Gold Bonds at a price of 92½ per cent., and it speaks volumes for the growing interest of the American public in foreign investments

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
LORD ORANMORE AND BROWNE, K.P., P.C.
Lieut.-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

that the lists had to be closely very quickly as the loan had been heavily over-subscribed. This loan is, of course, part of the Blair Loan which was arranged some years ago for the construction of the Adriatic railway, but at the time it was found possible to float only a small loan. The proceeds of the present loan are to be devoted mainly to general railway construction, whereas, as I have pointed out, the original purpose of the loan was for the construction of one line to the coast. In addition to this loan one, if not two, other Yugoslav loans are being issued in America.

Egyptian Cotton.

The cotton position from Egypt's point of view promises to be further complicated by the prospect that the 1926 crop will considerably exceed the estimates. The arrivals at Alexandria so far are only a quarter of a million kantars in excess of those of the previous year, but it is believed that the ultimate result of the crop will be about 750,000 kantars over the estimates. If this proves to be the case a new factor will be introduced in regard to the all-important question of the price. Already Egypt is beginning to feel the competition of the Sudan, and for a good many weeks past our Liverpool report has shown that the sales of Sudan Sakel have been in excess of Egyptian, and if Egypt's crop is particularly large it follows that the prospects of any considerable improvement in price in the near future must be in considerable doubt.

Sudan Commerce.

The figures for the trade of the Sudan for January show a decrease of £E66,851 on the figures for the corresponding month of 1926. This decrease is entirely in the imports, Government imports at £E195,622 being £E65,381 lower, while public imports show a trifling decrease of £E1,728 at £E254,160. On the other hand, the value of the exports showed an increase of £E6,390 at £E232,606, while re-exports improved by £E2,572 to £E15,393. There are several features in the trade of this month which call for reference. The decline in Government imports was largely due to the decrease in the imports of sugar, the value of which was £E37,041 as against £E88,111. In public imports the most interesting feature was the increase in the imports of machinery, the value of which was £E11,976 as against £E7,768. A comparison of the exports of the two months shows some striking changes. In January, 1926, the exports of cotton totalled 4,615 kantars of the value of £E28,201, but for the month under review they amounted to 22,738 kantars of the value of £E112,677. Counterbalancing this there were substantial decreases in the exports of ground nuts, hashab gum, and sesame.

Sudan Plantations.

At the recent general meeting of the Sudan Plantations Syndicate a further issue of shares was foreshadowed to provide the additional capital required for the development of the company's operations. The issue is now announced of 750,000 shares of £1 each at a price of £2 10s. per share, which will be offered to shareholders registered on April 19 in the proportion of one new share for every two shares then held.

COMMENTATOR.

Yarns of linen, flax, hemp and jute have been added to the list of goods exempted from Customs duty on importation into Palestine.

Provisional trade agreements between Greece and Bulgaria include the most-favoured-nation clause, and an agreement is arrived at in regard to the payment of export taxes.

Spies Petroleum Company announces that cabled advice has been received by Hamilton's Oil Concessions from Bucharest as follows:—"Production for week ended April 8, 350 tons. Well No. 8 now producing 40 tons daily. Well No. 7 trial baling. New well No. 9 depth drilled to date, 623 metres. Romano Belgiana participation well producing 100 tons daily."

ROAD DEVELOPMENT IN PERSIA.

In a recent report the American Consul at Teheran, Mr. Orsen N. Nielson, states that while the new Director General of Roads has not formulated a definite programme of road construction for 1927, he has found it possible to indicate several features of the probable developments.

The most urgent need is for a road capable of supporting motor traffic between Teheran, the capital, and Mohammerah. At present motor lorries may operate over this route between Teheran and Khurramabad (in Luristan) and between Dizful (in Kuhzistan) and Ahwaz on the Karun River, but with some little difficulty. The stretch between Dizful and Ahwaz will require a comparatively small expenditure to make it suitable for trucks. From Ahwaz merchandise may be dispatched to Mohammerah by road, or it may be sent down the Karun River by shallow-draft steamer.

Between Khurramabad and Dizful, a distance of 240 kilometres, only caravan tracks wind over the mountains of Luristan. The route followed is unsuited to modern traffic, and the road which is now being opened between the two cities will follow the valley of the Kahgan River, avoiding the heavy mountain grades. For the present the Government will open a road only good enough to meet the minimum requirements of trucks. Surfacing will be done only where absolutely necessary.

The Director General has at his disposal for this road approximately £38,000. Since the average cost in Persia of a road of sound construction, capable of supporting lorry traffic, varies between £800 and £1,000 per kilometre in mountainous districts and between £700 and £900 per kilometre over level stretches, it is apparent that a considerable increase in the appropriation will be necessary if the 240 kilometres are to be completed.

The road from Teheran to Mohammerah will be of considerable strategic importance, since it will give Persian merchandise that is capable of standing the cost of transport an opportunity to leave the country freely through territory exclusively Persian and from a Persian port.

The 248 kilometres of road between Teheran and Sari (in Mazanderan), completed only last summer, have been inspected by the Director General. Although the road in general is satisfactory, it is believed that it will be necessary to rectify some of the heavier grades, which run to approximately 17 per cent.

The great difficulty in drafting a road programme for Persia is the lack of funds. Under existing legislation the sole source of revenue for building and maintaining roads is the road tax, which returns an average annual yield of about £300,000. There are now in Persia between 7,000 and 7,500 kilometres of roads to be kept in repair. Maintenance costs are high, and when these are met there remains a relatively small sum to be applied to new construction. The exploring of possibilities for additional funds is one of the most absorbing of the Director General's present tasks.

Because of the high cost of transport in Persia and because there is an abundance of native stone, rubble, and clay, it is very probable that local materials will be used for culverts and bridges to the exclusion of foreign material. It has been calculated that circular brick culverts can be built at approximately one-third the expense that would be incurred if iron were used.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

PROGRESS IN AFGHANISTAN.

The Government of Afghanistan recently appointed Bashir Ahmed as its Consul at Karachi. In the current issue of the American "Commerce Reports" there is an extensive review of conditions in Afghanistan based on a report from Mr. E. Verne Richardson, the United States Consul at Karachi, in the course of which quotation is made of some interesting views expressed by Bashir Ahmed regarding commerce and finance in Afghanistan. We give the following extracts from the article:—

The highways of Afghanistan have been considerably improved during the past two years, and more roads will be built in 1927 (says a recent American Consular report). A reasonably good road is now open from the railhead at Landi Khan, via Jalalabad, to Kabul, and another from Kandahar to Herat is under development and already open part of the way for motor traffic. From Kabul to Kandahar and from Kandahar to the Indian frontier, road travel is safe and not difficult. The connexion between Kabul and Herat is not yet available for vehicular traffic, but it is anticipated that it will be soon. In this highway programme the Afghan Government has been aided by German surveyors and engineers.

As Afghanistan has no railways, development of motor roads there is of prime importance. The Government's energy in attacking the problem indicates that it is preparing for more active intercourse with other countries. Inquiries regarding railway equipment coming from Afghanistan during the past two years, furthermore, would seem to show that the Government is seriously considering the building of railroads in the interior.

At present several foreign companies in Afghanistan enjoy a sort of preferred status in Afghan commerce, but the Consul stressed the point that agreements existing between them and his Government were in no sense to be considered as concessions, nor did they confer any exclusive rights in buying and selling upon either side. Afghans, he asserted, were entirely free to buy in whatever market they choose and to sell where they can.

Afghanistan is deeply concerned with the exploitation of its national resources. It feels, moreover, that money for development purposes will be more easily attracted from the United States than from Europe, according to the Consul. Although no complete survey of the country's resources has been made, it is known to be rich in coal, iron, and precious stones, and has large agricultural and pastoral areas.

Referring to the financial rehabilitation of Persia now in progress under American guidance, Bashir Ahmad indicated that like measures would materially benefit his country. He emphasised the fact that Afghanistan has no financial institutions and, therefore, all commercial transactions are conducted through the medium of currency,

principally rupees. In actual practice the exports of Afghanistan and its purchases of foreign goods are transacted largely by agents in Karachi, where banking facilities are available. This lack of banking facilities will be one of the most serious handicaps to trade, as roads to and from the border are watched by brigands who make the transport of cash very dangerous.

Notwithstanding the primitive methods of doing business in Afghanistan the country's foreign commerce amounts to £2,000,000 annually, equally divided between imports and exports. The country's fruits, melons, raw wool, shawls, and rugs are exchanged for cotton piece-goods, yarn, manufactured leather goods, tea, metal manufactures, wearing apparel, dyes, automobiles, and lac.

The best method of approaching this market at present is probably through Indian firms in Karachi, who already have the confidence of Afghan merchants. Karachi is the logical point for these negotiations. It has direct railway communication with Peshawar and is the nearest city in India to Khyber Pass, the gateway to Afghanistan, from which motor and camel trains make their way across the sands to the little known cities of the interior.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, April 26). (For passenger sailing and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Port Said, Colombo, Madras and Calcutta (Birkenhead, April 30); s.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (Birkenhead, May 14).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, April 20).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, April 23); s.s. Hatkhola for Bombay and Karachi (London, April 27).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, May 14); s.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool May 14, and Swansea May 17).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 23).

P. and O. Line.—S.s. Ranpura for Bombay (London, April 22); s.s. Tregenna for Colombo, Madras, and Calcutta (London, April 30).

Prince Line.—S.s. Highland Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, April 23); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, May 4).

Ellerman and Papayanni Lines.—S.s. Assyrian for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 16); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool April 23, Swansea April 28); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 27, Liverpool April 29); A steamer for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 7, Swansea May 7). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The Madras and Southern Mahratta Railway Company has declared a dividend for the half-year ending June 30, 1927, payable July 1, of 5 per cent., namely:—Guaranteed interest £1 15s., stockholder's revenue account £3 5s.

The Corporation of the Royal Exchange Assurance announces that it has been decided to recommend its General Court, to be held on April 27, to declare a further dividend of 17 per cent., making 27 per cent., less tax, for the year 1926.

The Indo-European Telegraph Company recommend a final dividend of £1 2s. 6d. per share, free of tax, making 7 per cent. for the year, plus a bonus of 15s. per share (actual), free of tax, making a total distribution for 1926 of 10 per cent., free of tax.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA ...	May 3	*CIRCASSIA ...	June 1
*SCINDIA ...	May 13	*BRITANNIA ...	June 10

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. California, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool Oct. 26; Marseilles Nov. 1.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 12.

Mr. Churchill's third Budget has been well received in City circles. His decision to strengthen the Sinking Fund to £65 millions and thus pay off nearly half the arrears resulting from the industrial disasters of 1926 is recognised as the only way in which British financial prestige can be maintained in the markets of the world. The methods by which he secures sufficient revenue to do this are ingenious and perhaps questionable on certain grounds, but the fact that the direct burden on the taxpayer has not been increased means that trade revival will not be nipped in the bud by an addition to the heavy loan which British industry is already bearing. So far as individual items are concerned, the duty imposed on foreign tyres has, of course, proved a bull point for the market in Dunlops, while the small addition to the tobacco duty had already been discounted in advance and a slight rally in the tobacco share market resulted.

The news from China, though unwelcome and disturbing, has not apparently had much effect on security prices during the past week. Gilt-edged stocks keep steady with a slightly hardening tendency, thanks to the easier visible conditions in the money market, and Home Rails have shown a slight disposition to improve.

The "Introduction" of Shares.

The practice of introducing shares on to a Stock Exchange market, which has more than once been criticised in this column in the past, shows no signs of dying out, and its continuance is spreading the feeling of uneasiness aroused in financial circles. Briefly the method followed is for a firm or small group to take a block of shares, place them round, in advance, at a higher price among a slightly wider circle in the market where dealings will take place when the Stock Exchange Committee's sanction to deal has been obtained. The news begins to leak out, and the public gradually learns that the expected introduction is to take place. Then, in order to comply with Stock Exchange requirements, a few meagre details are published in the Press "For public information only," and the necessary permission to deal in the shares granted and a market starts in the Stock Exchange at a price which

is governed by the degree of public interest aroused. It must be admitted that many excellent shares, which now stand at good prices, have been introduced in this way, and there may be good reasons which amply justify the process. But the latter undoubtedly facilitates the entry of shares in companies which, from the ordinary investor's point of view, are best left alone. The issue of a full-fledged prospectus, of course, by no means ensures the soundness of the shares offered. But a prospectus is at least open to the full light of publicity and criticism, whereas the latter is entirely avoided by the "introduction" method.

Dunlops and Levers—A Contrast.

Two of our largest industrial undertakings have this week issued reports which, partly by reason of the contrast they form, are exceptionally interesting. The report of the Dunlop Rubber Company is further proof of the merits of sound finance. The net profit, it is true, is some £380,000 lower at £2,401,801, but the ordinary dividend is increased from 15 per cent. to 20 per cent. Nor is this achieved at the expense of the financial position as a whole, which shows a notable improvement. Cash and bills disclose the remarkable expansion of £2,000,000, while it has been wisely decided to add to the reserve by the allocation of £500,000. Thus the reorganisation of the capital is bearing good fruit and the directors, and particularly Sir Eric Geddes and Sir J. George Beharrell, are justified in taking pride in the results. The company's strong financial position should enable it to take full advantage of the apparently favourable outlook.

The other company to which we refer is Lever Brothers, whose position is much less satisfactory than that of the Dunlop Company. In this case also profits show a reduction, but here there is no compensating gain in a strengthening of the financial position. The reserves, for example, are of conspicuously modest proportions, the figure being only £27,000, against liabilities totalling nearly £68 millions. Again, cash is not, in the circumstances, excessive, the total being £1,250,000, as compared with £1,053,000 a year ago. The top-heavy character of the capital is obviously a handicap, the ordinary capital again receiving no distribution. The report is not informative regarding current business prospects, so that the meeting will be awaited with more than usual interest.

Investments in Cable Companies.

The ordinary shares of the larger cable companies are standing at prices at which they offer attractions for the investor. It may be objected, however, that the development of wireless has gravely threatened the earning capacity of the cable companies. Admittedly wireless must be regarded as a serious competitor. But evidently the cable companies realise this to the full, for development and research are proceeding apace. Qualified observers are of the opinion that, given a continuance of this enterprise, the cable companies should be able to make satisfactory profits in the future. The position, indeed, is not dissimilar from the gas and electricity companies, which, as experience proves, are developing side by side.

The companies, moreover, occupy a strong financial position, two of the three companies to be referred to having reserves and carry-forward exceeding the issued ordinary capital. One of these two undertakings is the Western Telegraph Company, which has paid an ordinary dividend of 10 per cent. for some years past. The ordinary shares, in denominations of £10 each, return £5 19s. per cent. free of income-tax. The other undertaking is the Eastern Extension Company, which has also distributed 10 per cent. to the ordinary shareholders during recent years. The shares—again in denominations of £10—yield £5 14s. per cent. free of income-tax. The Eastern Company is likewise accustomed to pay 10 per cent. to its ordinary stockholders, the return on the stock being £5 15s. per cent. free of income-tax.

NEAR EAST MARKET REPORTS.

The monthly review of Barclays Bank contains the following reports covering the past month.

Egypt.

Alexandria.—Cotton.—At the beginning of the month, there was a burst of activity, during which considerable sales were effected, but this was followed by a complete calm, and for a fortnight practically no new business was transacted, spot cotton, in consequence, being neglected. Owing to lack of sellers, the futures market was firm. Stocks are large, but desirable cotton is scarce. The planting of the new crop is proceeding and in some areas germination is good.

Cotton Goods.—There is a firmer demand, owing to the native holidays, but prices are low and buyers are operating with caution. The statistical position is better, stocks totalling 10,500 packages, weighing 3,100 tons, of which 3,700 packages, weighing 1,850 tons, are Manchester goods.

General.—The flour spot market is steady, as a result of decreasing stocks, and the demand is moderate, while flour afloat is weak, owing to the large quantity expected to arrive shortly. The general opinion is that the demand for export will improve. Australian spot is quoted at £18½ afloat £15½, March shipment £14½. The stock consists of 36,000 bags, of which 10,000 are Australian and 21,000 American. With the exception of maize, stocks of cereals are decreasing, and prices of wheat and barley are 15 per cent. and of maize 5 per cent. higher. Lentils are unchanged, but beans have fallen by 30 per cent. Rice is steady and the market active, with a good export demand, the stock amounting to 89,000 bags. The quotations are Burma spot £14½, Siam £16½. Sugar is weak, in sympathy with American markets, and the demand is quiet. Java spot is quoted at £19½, Trieste £18½, Russian £17¾, stocks totalling 114,000 bags, of which 6,000 are Java. There is a sustained demand for coffee, of which the stock is 11,000 bags.

Sudan.

Khartoum.—The general situation is practically unchanged since last month. Market arrivals of gum are regular, but the demand is not keen, although exports continue steadily. The price of Kordofan Natural is 38s. per cwt., c.i.f. United Kingdom. Sesame and groundnuts are very scarce, the price for White Sesame being £E27, Red Sesame £E26, and groundnuts Piastres 1,680 per ton, delivery Port Sudan. The market for cotton piece-goods is slack and prices have fallen to 11s. 6d. per piece, c.i.f. Port Sudan. Other imports are dull.

Palestine.

Jerusalem.—Business conditions during March were slightly more favourable, owing to the approach of the Easter festivals.

The sugar market exhibited little activity, probably owing to existing large stocks, and prices showed a declining tendency, quotations being Cuba £18, Czechoslovakia £18, Java 18½, Russian £17¾, c.i.f. Alexandria. Stocks total 600 tons. The general tone of the coffee market has been weak and there is only a moderate demand for available stocks, buyers apparently believing that present prices will not be maintained. Present quotations are Santos £90, Minas £77, c.i.f. Alexandria. Stocks amount to 90 tons. Business in flour has been restricted, spot Australian being quoted at £17. The rice market is quiet and prices are weaker. Rangoon is quoted at £14½, Siam £17½, Egyptian £15, and Italian £19. Stocks amount to 200 tons. The market for cotton and woollen goods is quiet and at times has been almost featureless.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended March 20 amounted to £E7,064, making the total from April 1 £E324,016. For the corresponding periods of the previous year the totals were £E8,803 and £E350,727.

CHESS.

By "CARO-KANN."

The above position occurred in a London League match last week. Black actually won despite the Bishops of opposite colour. Ought he to have done so?

The following game was played between R. Spielmann and A. Niemzowitsch in the recent American tournament:—White, Spielmann; Black, Niemzowitsch.

1, P—K4, Kt—QB3; 2, Kt—KB3, P—K3; 3, P—Q4, P—Q4; 4, P—K5, P—QKt3; 5, P—QB3, QKt—K2; 6, B—Q3, P—QR4; 7, Q—K2, Kt—B4 (1); 8, P—KR4, P—KR4; 9, Kt—Kt5, P—Kt3; 10, Kt—Q2, QKt—K2; 11, Kt—B, P—B4; 12, P—B3, P—B5; 13, B—B2, P—Kt4; 14, P—KKt4, Kt—Kt2; 15, Kt—Kt3, Kt—B3; 16, Q—Kt2 (2), B—K2; 17, PxP, PxP; 17, R—KKt, R—QR2 (3); 19, KtxBP, KxKt; 20, KtxRP, BxP (ch); 21, K—K2, KtxKt; 22, B—Kt6 (ch), K—K2; 23, BxKt, K—Q2; 24, Q—Kt7 (ch), B—K2; 25, B—B7, R—R7 (ch); 26, K—Q, K—B2; 27, B—B4, RxP; 28, Q—R7, K—Kt3; 29, R—Kt8, Q—B2; 30, Q—R8, Kt—Q; 31, B—Kt6, R—Kt7; 32, Q—R, RxB; 33, RxR, P—Kt5; 34, R—Kt7, Q—B3; 35, Q—R8, Q—R5 (ch); 36, K—K, Kt—B3; 37, QxB, B—R5 (ch); 38, B—Kt3, RxR; 39, BxB, Q—B7; 40, B—Q8 (ch), KtxB; 41, Q—Kt8 (ch), Kt—Kt2; 42, resigns.

(1) The opening moves are interesting as showing the development of modern strategy. I must admit that Black's QKt would have been to me an irresistible object of attack, while in reply to the text move 8BxKt followed by Kt—Kt5 has a great deal in its favour.

(2) The position after White's 16th move deserves study. Superficially the first player would seem to have the better game, but actually the pending counter-attack of Black is the important factor.

(3) The all-important move of Black. The QR was the pivot of the defence scheme, and ultimately, as it happened, the chief factor in the attack. It is interesting to note how Black has only just the requisite moves available in which to place his King in the safety of Kt3.

The British Consul at Mersina has informed the Department of Overseas Trade that the President of the Adana Chamber of Commerce has expressed a wish to have British Trade Catalogues for reference in the Chamber, which he is organising on modern lines. The Consul also suggests that, in addition, catalogues should be posted to Mersina Chamber of Commerce. Both Chambers have members who have a very good knowledge of English.

Sir Frank Forbes Adam, Bt., of Sackville Street, Manchester, President of the Manchester Chamber of Commerce on five occasions, chairman of the Manchester and County Bank, vice-president of the British Cotton-Growing Association and the Empire Cotton-Growing Corporation, and a Governor of the Imperial Institute, who died on December 21, left estate of the gross value of £20,365, with net personality nil.

TURKISH-ARMENIA AND ITS RESOURCES.

(From a Correspondent.)

Surrounded by the Black Sea, Anatolia, Mesopotamia, and Persian and Russian Armenia, Turkish-Armenia is a highly mountainous, elevated plateau. Sloping gradually down in the West to the Anatolian, and in the East to the Iranian highlands, it is bounded on the North and South by the high mountain ranges of the Pontus and Taurus, which reach an altitude of 13,200 feet, whereas the average elevation of the valleys of the highland is about 6,000 feet. The climate is consequently very trying. The snow frequently covers the whole country to one to two yards deep and remains there for about six months, viz., from the end of October till May. Spring commences at the end of April and is very short, as is the autumn; for three or four months there is a really hot summer, and as the soil is exceedingly fertile, all the crops, vegetables and fruits ripen in that space of time. Except on the coast of the Black Sea and on the hills which adjoin it, there are no forests, but the highland has excellent pasture land.

Formerly, Turkish-Armenia was populated by a considerable number of Armenians, but, as they revolted against their Government in the War and made common cause with the Russians who invaded the country, they were compelled, as soon as the Russians retreated, to emigrate to Russian and Persian Armenia. At present the population consists of Kurds, Turks, some Georgian clans and a few Assyrians.

Geologically the country is very interesting, being cross-cut by mountains of archæic, palæozoic, mesozoic and tertiary deposits, as well as older and younger igneous and volcanic rocks. There are frequent occurrences of mines of different ores and useful minerals, which form the principal resources of the country and might, if properly developed, be one day of considerable importance.

Copper is found at seventeen places, most of them situated in the Pontus mountains. The most promising mines in this region are those of Fol, Kalanema and Elew, and some of them are now being exploited. One of the most famous copper mines worked is that at Arghana-Mâdan, situated on the Southern slope of the Taurus mountains not far from the sources of the Tigris river, in a north-western direction from Diarbekir; it has suffered from lack of fuel. The ore which contains 28 per cent. of copper, appears at the contact between serpentine rocks and eocene limestones and consists of lodes and accumulations of copper-bearing pyrite and copper glance. It produces yearly about 1,000 tons of black copper with 75 per cent. of pure metal.

A very important copper mine is that at Tillek, on the south-western slope of the Dudjik-dagh at Dersim; here the copper ore is accompanied by tin ore.

The most notable silver and lead mine is that of Gumush-Khana at the Kharshut river in the Pontus mountains. The ore consists of highly silver-bearing galena, which in lodes and veins pierces through granite and cretaceous limestones. The extracted silver contains 4 per cent. of gold. Work at this mine had to be stopped as the forest which surrounded it was used up and other fuel was not at hand. The Heban-Mâdan mine, on the Euphrates river, is also of considerable importance. It also had to be given up owing to the lack of fuel, though it is very rich and highly silver-bearing. Other mines of silver and lead ores exist at Gumush-Mâdan, Dorona, Kabon, Ortakol and Ispir.

Iron-ore is found at many places, as for instance, at Sokman near the sources of the Kalkid river, Arghana-mâdan, Sivan, Diarbekir, Tashkesan, and Djemil in the Pontus mountains; Mervanen, Mukus, Mardin, and Talari in the Taurus. The richest iron mines are the Talari ones where the ore is extracted and worked.

Gold is found at Kulvanak and Khutel on the Euphrates river, near Kharput in the Taurus mountains. Old gold mines are found at the Shivan-dagh, south of the Lake of Van.

Platinum is found in serpentine rocks in the district of Sasun. Iridium and osmium in small quantities frequently accompany the gold in the gold mines mentioned. Zinc-ores occur frequently with copper and lead ores. Manganese-ores are largely distributed in the Pontus mountains.

Rocksalt is found in many places; the best mines are at Flaso, to the south of the Taurus, where the salt is very pure. Palæozoic or Mesozoic coals are unknown in Turkish-Armenia, but a tertiary lignite of very satisfactory quality is largely distributed over the country and at some places the mines are worked. About fourteen mines of lignite are known, and it is more than probable that with the development of communications these coals will be of great importance for industrial enterprises.

As in Persia and Mesopotamia oil occurs here in the miocene formation, which is largely distributed over the plains and valleys of Turkish-Armenia. Surface indications of oil are found at Pulk, Erzeroum, Erzingan, Van, Kordsot and several other places, and even at Trebizond, the regions have not yet been properly prospected and there are no detailed reports about the commercial value of the oilfields of this country. Should these oilfields prove to be promising they would contribute one of the most important resources of the country.

The new Jerusalem Municipal Council is composed of three Muslim and three Christian Nashashibists, four Jews, and two Muslim Husseinists.

Mgr. Agathangelos, Metropolitan of the Isles, has been translated by the Phanar to the metropolitanical see of Chalcedon (Kadikeuy, opposite Constantinople), vacant since the death of the late Metropolitan, Mgr. Joachim, on February 5.

Company Meetings.

TRADE INDEMNITY COMPANY.

Satisfactory Progress.

Mr. C. E. Heath's Speech.

The ninth ordinary general meeting of the Trade Indemnity Company, Limited, was held on April 8 at the Institute of Chartered Accountants, Moorgate Place, E.C.

Mr. C. E. Heath, O.B.E. (chairman of the company), presided.

The Secretary (Lord Francis Hill) having read the notice concerning the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—We are presenting you with a report which, considering the shocking state of trade during 1926, we hope you will think satisfactory. During last year, if the business has not increased in the same ratio as formerly, we have not been standing still. In a comparatively new industry such as this, organisation for the future must at first take a large place in our activities.

Credit Insurance Conference.

Not only are we planning methods by which our business and, incidentally, the trade of the country may be improved, but, as some of you may have noticed, we have been cultivating our foreign relationships. In December was held a meeting in London of the representatives of no fewer than 18 nationalities to discuss the ins and outs of International Credit Insurance. The conference lasted over two days and finally resulted in the proposal to form a committee for investigating and giving advice on those questions which must continually crop up. That committee has now been formed and has already had put before it several questions for consideration.

But, apart from the work actually done, the conference certainly was beneficial in another respect. It brought together many able men who then and there made each other's acquaintance and who undoubtedly separated satisfied with the knowledge of what manner of men they would be dealing with in the future.

I have explained before to the shareholders our hopes of eventually being intimately in touch with foreign associations in all countries, with whose aid alone a satisfactory foreign business can be carried on. Certainly we have made a great stride forward in that connexion. At home, too, there are certain proposals being put forward which may materially help us. But, for a good many reasons, I should prefer to be allowed not to discuss them on this occasion.

The Accounts.

Now may be turn to the accounts? I want you to bear in mind that, though we are now dealing with the results of 1925 underwriting, the greater part of the liabilities of that year matured in the very disastrous commercial year of 1926.

There is an item in the accounts which is very significant as showing the bad times trade has been going through. If you had last year's accounts before you you would have seen that we received in 1925, on account of the transactions in 1924, a sum of £3,500 for additional premiums. In the accounts now before us, so far from perceiving additional premiums, we have had to return £241, a difference of nearly £4,000 on the wrong side. There is only one redeeming point in this difference; it is that our liabilities should be less, and this should be reflected in next year's accounts.

The net results of our operations for 1925 has been that we pay the same dividend as last year, put the same amount to reserve and carry forward £1,500 more. The slightly better result has not been due to fewer losses—they have indeed been greater, as was I think to be expected in such a year as 1926—but to an increase in dividends from investments. Like all insurance companies we depend largely on the interest on invested premiums. This you will see has increased considerably, amounting to about £3,000 more than the previous year.

But in stating that the losses have increased I am far from saying we have not made a profit on the underwriting. On the contrary, the year 1925, with which we are now dealing, shows an underwriting profit after paying expenses of about 17 per cent. on the premium. This does not include interest received on invested premiums or otherwise. I think every credit is due to Mr. Spain for that result.

So far as 1926 is concerned, although our gross premiums have increased by a small amount, about £5,000, our retained premium is smaller. Our underwriter has thought it prudent to reinsure a

larger proportion of the risks. In view of the circumstances of last year I feel sure you will approve of his caution. The losses to date are about normal and I hope we may meet you next year with a fair report.

You would like to know something of the results of accepting risks from foreign companies. There was very little premium from this source in 1925, but during 1926 the receipts increased considerably and so far the results have been quite satisfactory and show a rather better loss ratio than our own business.

For 1927 there is little to say; the premiums are up and we hope will continue to increase. There is no doubt that interest in credit insurance is increasing. The overseas department is I believe doing a good deal of business, but I believe we can hold our own against even the very friendly competition of the Government, and I would wish again to emphasise how courteous and straightforward have been all the dealings with us of Sir W. Clark's department.

Tribute to Mr. Spain.

Gentlemen, from my point of view the interest of this credit insurance scheme grows from day to day. Hardly a week passes in which suggestions and ideas are not put forward in connexion with it, which show how far-reaching may be our scope and how immensely beneficial the proper working of the scheme can be.

When, as I confidently believe will be the case, the business has reached the proportions which it merits, you, gentlemen, will be able to congratulate yourself that you had the courage and the faith to constitute yourselves the pioneers—a title which no one will ever be able to deprive you of.

But if so far we have been successful the credit must be given where credit is due. Mr. Spain, as usual, has not spared himself—sometimes I think he should give himself more rest. The staff, too, has shown an enthusiasm which deserves all praise. We have young blood in the management, and its keenness and efficiency give every promise that the business, so far as the staff is concerned, will be prosecuted with entire satisfaction to the shareholders.

Before I put the resolution for the adoption of the report perhaps any shareholder who has remarks to make or questions to ask will now do so.

There being no questions, the Chairman then moved, "That the

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

directors' report and the statement of accounts for the year ended December 31, 1926, be and they are hereby adopted."

Mr. James Hamilton, in seconding the resolution, said:—Gentlemen, there is very little I have to add to what the chairman has said in connexion with the report of the company. I have great pleasure in seconding the proposal he has made that it be adopted, especially because I think it shows that the care necessary in the conduct of this business and its evolution and development is being given by our underwriter and his staff, to proceed, it may be slowly, but with one eye always on safety. I should like to say personally that I think it was little short of a brilliant thought of our chairman and the underwriter to call together that conference, held in London recently, of men of countries interested in credit insurance throughout the world. That conference was excellently conducted by our chairman, who devoted a great deal of attention to it, and his idea and conception of gathering together men who were likely to conduct this business of credit insurance—though non-committal as to contract—all in the way of advising each other and helping each other to develop details of it—was a most excellent idea, because each country must largely depend on wise and good advice from other countries for its own insurance of this nature. I congratulate Mr. Heath, our chairman, that not only was the idea his, but the carrying of it out was also his, and I am quite satisfied that it will be greatly to the benefit of the Trade Indemnity Company. (Hear, hear.)

The motion was then put to the meeting and carried unanimously.

The Chairman proposed, "That a dividend of 5 per cent., subject to income-tax, on the issued capital of the company as recommended by the directors in their report submitted to this meeting be and is hereby declared payable to the shareholders standing on the register at this date."

Mr. Henry Mann seconded the motion, and it was carried unanimously.

On the motion of the Chairman, seconded by Mr. Charles Hendry, the retiring directors (Sir Philip Dawson, M.P., Mr. A. P. Duhamel, and Mr. C. H. Falloon) were unanimously re-elected.

Mr. de Rougemont proposed and Mr. Rendtorff seconded the resolution reappointing the retiring auditors (Messrs. Deloitte, Plender, Griffiths, and Co.) for the ensuing year. This was carried unanimously.

Vote of Thanks to Chairman.

The Right Hon. Lord Glenconner said:—Gentlemen,—In rising to perform the pleasant office of proposing a vote of thanks to the chairman, I would like to take the opportunity of thanking him also for the interesting speech to which we have just listened. International credit insurance—though in time destined to become, as we believe, an instrument of far-reaching importance and a most valuable facility to trade—is still, comparatively speaking, in an early stage of its development, and it is most satisfactory to hear of steps that have been taken in the past year to promote those foreign relationships that are so necessary for its growth.

There is one other matter which it may not be out of place for a shareholder to mention, and that is the co-operation between this company and the banks. Greater freedom of action on their part in accepting and discounting the insurance policies of this company would, of course, not only be of the greatest advantage to us, but would also, in my view, constitute one of the most practical means within their power of helping to bring about that improvement in our trade which they, as much as all of us, desire to see. We shareholders should approve the conservative and wise policy of our chairman and directors in the allocation of our resources, and we look forward with confidence to the future. We have, I think, in view of the exceptional year through which we have just passed and its immediate effect on the business of this company, every reason to be grateful to the management for the results they have been able to show, and I would now like, therefore, to propose a vote of thanks

to the chairman, directors, underwriter, and staff for the work that has been done on our behalf during the past year.

The motion was unanimously carried, and the Chairman having briefly replied to the compliment, the proceedings terminated.

COMMERCIAL BANK OF THE NEAR EAST.

Currencies and Trade Conditions.

The fifth annual general meeting of the Commercial Bank of the Near East, Ltd., was held on April 6 at the offices of the company, 4, London Wall Buildings, E.C., Mr. C. H. D. Moberly, the Managing Director, presiding.

The Chairman said: Gentlemen, on behalf of the Board, I have to regret and apologise for the absence of our co-directors, Messrs. Empedocles, Petrocochino and Merlin, who are detained in Greece by their duties. As the report of the directors and the accounts for the year ended December 31, 1926, have been in your possession for some days, I propose, with your permission, to take them as read.

I am sorry to say that business conditions in the Near East generally have not improved, but there are signs that some of the countries are likely to take steps before long to stabilise their currencies, and this should improve trade conditions to some extent. Business in Alexandria has been affected by the crisis caused by the fall in the prices of cotton. Considering the circumstances, however, our branch there has made satisfactory progress. Our profits for the year 1926 amount to £10,728 4s. 6d., as against £9,889 11s. 8d. in 1925, and may be considered satisfactory. You will observe from the balance-sheet that our authorised capital of £200,000 has been fully subscribed during the past year, and that we have acquired a holding in our associated bank, the Commercial Bank of Greece.

Before putting the resolution, I shall be glad to hear if any shareholders desire to ask any questions.

I now beg to propose: "That the report of the directors and the statement of accounts for the year ended December 31, 1926, be received and adopted, and that a final dividend for the year 1926 at the rate of 6 per cent. per annum, less income-tax, be paid on the shares of the company on and after April 7, 1927," and I will ask Mr. Lambrinudi to second that motion.

Mr. E. L. Lambrinudi seconded the motion, which was carried without question or comment.

On the motion of the Chairman, seconded by Mr. D. J. Cassavetti, the retiring directors, Mr. G. Empedocles and Mr. D. S. Petrocochino, were re-elected.

The auditors, Messrs. Price Waterhouse and Co., having been re-appointed, on the motion of Mr. A. A. Sevastopulo, seconded by Mr. S. G. Empedocles, the proceedings terminated.

COMPANY NOTES AND REPORTS.

SINAI MINING COMPANY.

The net profit of the Sinai Mining Company for 1926, subject to depreciation, was £31,961, plus £3,477 brought in. Deducting the 7 per cent. preference dividend paid on June 30, 1926, £1,750, and the 7 per cent. preference dividend paid on December 31, 1926, £1,750, the interim dividend of 2½ per cent. (free of tax) on the ordinary shares, £6,250, and the interim dividend of 2½ per cent. (free of tax) paid on December 30, 1926, on the preference shares, £1,250, leaves £24,438. The directors recommend placing to reserve for depreciation, etc., amount transferred, £6,000, paying on June 30, 1927, a final dividend of 5 per cent., making 7½ per cent. (free of tax), carrying forward £4,438. The directors have deducted the amount of the reserve for depreciation, etc. (£150,000), plus the amount transferred from profit and loss account as at December 31, 1926 (£5,000), making £155,000, from mining property, ropeway, railway, buildings, etc., and in the opinion of the directors the value of these assets is now placed upon a more satisfactory basis. A fair amount of business has been booked for delivery over 1927, and, given reasonable rates of freight, should prove remunerative.

Cables have been received to the effect that the Roumanian Chambers have unanimously ratified the agreement of February 18 last with the Skoda Works and Messrs. Ringhoffer, under which the latter firms accept Roumanian long dated Government Bonds in lieu of cash payments spread over the next four years. The Roumanian Budget is thereby relieved, for the next four years, of very heavy payments amounting to about £500,000 per annum. At the same sitting, the Convention signed on July 9, 1926, between the Alliance of Rural Co-operatives of Bucharest (with the Roumanian Government as an intervening party) and the Wholesale Co-operative Society, Limited, of Manchester, was ratified. Under the said agreement, the Roumanian Government guarantees the due payment to the Manchester Co-operative Society of the sum of £565,000 in fifty half-yearly instalments with interest at 5½ per cent. per annum.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 6:—

Egyptian Futures.—Sakel Contract.—We have again to remark a series of somewhat dull and uninteresting sessions since our last report; fluctuations continue to be restricted to a comparatively narrow range, and, as a result of this, price movements show practically no alteration from the level ruling on the date of our last circular. The most prominent feature shown by the market at the moment, to our minds, is the stability that has been recently displayed, prices being confined to within a few points of present quotations since the early days of last month. During this period, trade has been distinctly slack, and, apart from a moderate amount of speculative purchases of new crop months, very little outside support has been manifested. No doubt the recent action of the Alexandria market, which continues to show strength, is mainly responsible for the tendency at this side, and with a further appreciation taking place there during the week, without invoking an inadequate response locally, practically all positions on our board are, without taking into account the usual shipping charges, at a discount. This, no doubt, is mainly responsible for the rather poor supply of contracts on offer here.

There is little to report on the trade situation, spinners and manufacturers reporting a dearth of fresh business; fortunately, both parties have sufficient orders on their books to enable them to view the present lack of business without becoming unduly depressed; certainly there is nothing to be pessimistic about in the recent trade takings, as during the past fortnight nearly 20,000 bales have gone forward to the mills. This cotton has to be digested, and we are rather inclined to look upon the present absence of trade support as quite a logical sequel to the activity witnessed during the first six or eight weeks of the year. There has been a slight tendency for new crop positions to close in with the nearer months, due mainly to spot houses taking advantage of the present differences to put forward their hedges. It must be borne in mind that the greatest part of the speculative "long" account is concentrated on November, and on this account it is quite probable that at a later date this position will lose some of its present premium over July. We must confess that we are still unable to discern any feature in the outlook likely to cause a material effect on values for the immediate future. As far as the local market is concerned, the present apathetic state of consumers is neutralised as a "Bear" point by the fact that we now stand at a discount with Alexandria, and on this account short commitments are hardly in favour; on the other hand, the statistical position is distinctly heavy and it is difficult to foresee any advance without decided improvement in the matter of trade support.

Upper Contract.—Rather more activity has been witnessed in this market during the past week, and with some covering operations against "on call" sales prices have hardened slightly. In addition to this, a small appreciation in American values has further strengthened the undertone. Trade reports continue to show a moderate tone and spinners' activities in both spot and forward cotton have been curtailed to very limited operations.

Egyptian Spot.—Local conditions have shown but a slight improvement during the past week. Spinners for the most part appear to be well supplied with cotton bought during the first two months of the year, and there is nothing in the condition of the foreign markets at the moment to induce them to indulge in further commitments at the moment. As a result, purchases of both spot and forward cotton have continued to be on a hand-to-mouth scale only. In Egyptian proper, as distinct from Sudan, the only bright spot has been a line of some 400 bales Good Upper cotton, which were sold for export early in the week. Apart from this, there has been nothing of interest to report. With regard to Sudan cotton, the recent steady demand for American seed variety has been maintained, but the turnover has been more restricted than has been the case during the past two or three weeks.

New Crop Sudan Sakel has been rather neglected on account of

the comparatively high prices asked. The old crop cotton moved off slowly during the first few days, but to-day, following on the firmer market in Alexandria, the demand suddenly improved and larger sales were reported. It is interesting to note that new buyers of this cotton appear almost every week. One or two early arrivals of Tokar Sakel have now appeared on the market. The staple is attractive, but the grade rather disappointing.

Forwardings to spinners for the week ending the 1st inst. were returned as 9,658 bales Egyptian and 1,972 bales Sudan. These are fairly large figures, and explain to a certain extent why the spot business has recently been so poor. C.i.f. business has been officially reported as "quiet." Estimated sales 1,100 bales Egypt and 2,000 Sudan. Quotations of Sakel have been advanced 15 points and those of Upper 5 points. F.G.F. Sakel to-day, 13.50d. F.G.F. Upper to-day, 10.55d.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Weighing Machinery.—The Ministry of Public Works, Cairo, invites tenders covering the cost of delivery for the following weighing machinery required during 1927-28:—2 cattle weighbridges, capacity 1,500 kilos; 78 platform weighing machines, assorted; 143 counter scales, assorted; 120 Beranger balances, assorted. May 4. (D.O.T.)

Rails.—Tenders are invited by the Survey of Egypt, Giza, Mudiriya, for the supply of about 6,200 tons of rails. April 20. (D.O.T.)

Map Printing Paper.—The Surveyor-General of Egypt invites tenders for the supply of approximately 3,000 reams of map printing paper. May 3. (D.O.T.)

Tents, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of tents and shamsias for same, April 29; document and map printing paper, May 3; calico and Shash, May 9.

Liquid Asphalt.—The Tanzim Department of the Egyptian Ministry of Public Works invites tenders for the supply of 1,275 tons of liquid asphalt (Bitumen). May 14. (D.O.T.)

Plant and Material for Water Installation.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply only of plant and material required for a pure water installation at Malakal for a daily capacity of 20,000 gallons. The contract will be in the following five sections, and any contractor may submit tenders for one or more of the sections: (a) water tower and tank; (b) pump and prime mover; (c) Paterson's Filter, etc.; (d) settling and clear water storage tank; (e) piping and fittings. May 26.

Railway Carriages.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of bogie III class steel carriages, 10 with brake compartments and 10 or 20 without brake compartments. April 28.

Weighing Machines and Balances.—The Physical Department, P. W. M., Cairo, invites tenders for the supply of heavy platform weighing machines and balances. May 4.

The production of the Dacia Romano Petroleum Company for March was 1,702 tons. Fifteen wells are in production, nine wells are in drilling and one is being fitted up.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for March amounted to 44,995 barrels.

SUDAN COTTON REPORT.

The report of the Central Economic Board of the Sudan Government gives the following particulars:—

Nuba Mountains Province.—The total crop will not much exceed 9,524 kantars. Work has now been commenced on the foundations of the ginneries to be erected at Talodi and Kadugli. Much of the machinery and material for the Talodi ginnery has been delivered in Talodi.

Red Sea Province, February.—A report from Tokar states that the yield up to date has been good. The quality of the first class cotton is excellent, but there is an unusually high percentage of second class cotton at present owing to much of the early picked cotton being damaged by rain and damp. There should be a great improvement in this respect when early pickings are sold off.

Dongola Province, February.—Ghaba.—Picking is now general all over the scheme and 450 kantars were brought into store during the month. Sagia cotton, which is of very good quality, has started to come into store. On the experimental farm the early sown cotton yielded 6.3 kantars per feddan and the late sown 3.4 kantars. Nuri.—The cotton yield fell off during the last half of the month, probably largely due to the very cold weather

experienced from February 11 onwards. Cotton received into store to date amounts to 1,365 kantrs. Gureir.—Pump cotton received into store up to the end of the month amounted to 1,058 kantars, representing a yield over the whole area of 2.46 kantars per feddan. In addition 196 kantars of sagia cotton have been received. The opening of bolls was somewhat retarded by a very cold spell experienced during the middle of the month, but they are now opening well and a further yield of one kantar per feddan may be expected.

The address of the Bank of Roumania is now 123, Old Broad Street, E.C.2.

The British Museum acquired on April 9 a large Dipylon vase, one of the finest specimens known. Its date is about 800 B.C.

The Egyptian Markets announces a final dividend of 5 per cent. and a bonus of 1 per cent., making 11 per cent. on the ordinary shares, subject to confirmation at the meeting to be held on May 18.

The directors of the Burma Railways Company have declared, in addition to the guaranteed interest of £1 5s. per cent., an interim dividend of £2 15s. per cent. in respect of surplus profits, payable July 1, both less tax.

The value of Roumania's imports in January was 2,686,929,929 lei, that of the exports being 2,522,406,183 lei. For February the figures were:—Imports 2,588,271,169 lei, exports 2,798,413,623 lei.

Notes of the Week.

Yugoslav Ministerial Crisis.

After a troubled experience as Prime Minister of Yugoslavia extending over a year and one week, during which period he reformed the Government five times, M. Ouzounovitch handed in the resignation of his sixth Ministry last week, and has been succeeded in office by M. Voukitchevitch. The new Prime Minister belongs to the Dissident Group of the Radical Party, led by M. Liuba Yovanovitch; the other Radicals of the Ministry belong to the main group of the Party, and it remains to be seen whether the Pashitchist section, which had a representative in the last Cabinet, is going to maintain a separate entity or, with the withdrawal from power of M. Ouzounovitch, will be content to become merged again in a united party. It is symptomatic of the fluid condition of Yugoslav politics that the new Government, which was formed with unusual dispatch, almost within twenty-four hours of the resignation of its predecessor, should represent a coalition between Radicals and Democrats, to the exclusion of the Raditchists and Slovene Clericals. The participation of the latter in M. Ouzounovitch's last Ministry—their first appearance in the Yugoslav Government—was welcomed as an earnest of more effective co-operation among the component elements of the Triune Kingdom. As for the Croat Peasant Party, it will have been generally recognized throughout Yugoslavia that all that was possible to make co-operation with it workable had been done by M. Ouzounovitch, and that, so long as the Party allows itself to be the sport of M. Raditch's idiosyncracies, its accession to power can come about only through dire necessity, and never in response to popular conviction.

Political Respite.

As the Skupshtina has been prorogued until August, the new Ministry should have sufficient time to consolidate itself, if such a thing is possible in the present state of

Yugoslav politics. The coalition probably claims to be nothing more than an attempt to secure a working majority in the Skupshtina; for if the Radical Party were united, M. Voukitchevitch could count upon a majority of over thirty, with the fifteen Bosnian Moslems under Dr. Spaho, who becomes Minister of Commerce, and thirty-seven Davidovitch Democrats. There can have been little time to formulate a programme for the new Ministry, and it will be this task that will test the solidarity of the component elements. It is noticeable that while M. Peritch, Minister for Foreign Affairs in the last Cabinet, retains a seat in the Government, a new Minister for Foreign Affairs has been appointed in the person of M. Marinkovitch, who held the post for a few months in 1924. Public opinion in Yugoslavia has been profoundly stirred on the subject of the country's foreign relations by the recent course of events, and there is an unmistakable demand for a more active foreign policy which will free Yugoslavia from its sense of isolation. Speaking at a recent meeting in Zagreb, Dr. Trumbitch pointed out that Yugoslavia was surrounded by seven neighbouring States, all of which had aspirations on Yugoslav territory. It was clearly Yugoslavia's duty, therefore, to maintain the best possible relations with her neighbours; but the policy of Belgrade in the past, he declared, had not brought about a friendly feeling with a single one. He believed that Belgrade was now alive to the fact that the bad handling of foreign policy had prejudiced the Serbs, and he looked for an improvement in this direction.

Italy and Yugoslavia.

It is a matter for regret that Italy's withdrawal from an untenable position has not been more dignified and more worthy of a Great Power. When she launched her charges against Yugoslavia, in hardly any quarters was it believed that she would take such a step without having unchallengeable proof of the correctness of her allegations. The evidence on which the Rome Government relied, however,

was of such a nature that it hesitated to give it officially, and contented itself by issuing it by instalments in the *Giornale d'Italia*. It required only the presence of one or more unprejudiced foreign correspondents in Yugoslavia for the hollowness of the Italian case to be revealed; all the military preparations that were magnified into a mobilisation for the immediate invasion of Albania were found to have at least a reasonable explanation, whatever the misunderstandings on either side of the Albanian frontier. If the Italian Government had been equally misled, it could easily have cleared its own position by accepting the explanations. The news of the landing of Italian troops on the island of Saseno, however, coming on the top of the failure to accept the Yugoslav offer of an immediate investigation of frontier conditions, showed the Italian scare as something in the nature of a smoke-screen behind which Italy apparently hoped to read into the Tirana Treaty more definite claims to a protectorate over Albania than she had dared openly to avow. Since then the Italian Government has been at pains to avoid any impartial investigation of Italo-Yugoslav relations in their bearing on Albania.

"Censored" Negotiations.

The scope of any international mission of investigation of the Yugoslav-Albanian frontier will be restricted to future conditions and now the Italian Government announces that it will not allow the question of the Tirana Treaty to be raised in the joint negotiations with Yugoslavia. This veto renders the negotiations useless, as the interpretation of the Tirana Treaty is the crux of the whole situation. Italy has only to satisfy Yugoslavia that the Treaty is as innocuous as it appears on paper—in other words that it carries with it nothing remotely resembling any justification for Italian intervention in Albania unless and until such help is formally invited by the Albanian Government or Parliament—and the ground is at once removed from under Yugoslav fears. The Italian Government, it would seem, realizes that it could not face any cross-examination either on the Tirana Treaty or on the landing of troops on Saseno, and, therefore, declares that the subject must not be raised. Yugoslavia in the circumstances would be justified in refusing to enter upon the negotiations in the certainty that they cannot lead to any satisfactory conclusion; but the meeting may possibly be turned to good account if it causes Italy to reveal more clearly her hand in regard to the Balkan question. On this point Yugoslavia will have all Balkan States with her, as soon as she can convince them of her own reasonableness on purely Balkan matters.

Macedonian Agitation in Bulgaria.

A most unfortunate *contretemps* has arisen in Bulgaria between the Government and the Macedonian organizations. It is obvious that the spirit of the undertaking which provides for the evacuation of Greek Macedonia by Bulgarians and the liquidation of the property left behind calls for the liquidation of schools and churches, and the Bulgarian Government is loyally prepared to carry through this arrangement. To the Macedonian emigrants, however, there is, not unnaturally, a sanctity attaching to churches and schools which in their opinion should exempt them from the liquidation to which private property is being subjected, and they are up in arms against the Government's proposal to acquiesce in the proposed interpretation of the agreement. Feeling runs very high on the subject, and, according to Macedonian wont, the emigrants are ready to declare war on the whole world rather than admit that there can possibly be any other side of the question than their own. They have started by ordering demonstrations throughout Bulgaria, and the Government has dispersed these. In view of the strength of the Macedonian organisations and of their tendency to stick at nothing, the situation may well become grave. It is probably impossible to appeal to the emigrants to reflect on the position. The Refugee Loan has been granted on the condition that the recipients

undertake to sever their connexion with Macedonia and accept Bulgarian citizenship. Whatever the sentimental attachment to their old churches and schools—and no one denies that it does them credit or would withhold sympathy from them in the sacrifice which they are obliged to make—it is idle to pretend that it is better that these should remain deserted and derelict than that they should be disposed of and the proceeds used for the benefit of the emigrants. The peace of the Balkans, their own welfare and the prosperity of Bulgaria require that they should honourably make the sacrifice and turn resolutely to achieving success in their new surroundings.

Turkey's Progress.

It is impossible to read the Turkish Press without being struck by the earnestness with which the task of building up the new State is being approached. Every question, whether in the realm of foreign affairs or any other, is approached solely from the point of view of its bearing on Turkey or her problems. Owing, however, to the strict censorship on the Press there is a one-sidedness, not to say a shortsightedness, in all the comments that must impair their efficacy as a medium of education for the country as a whole. Special stress is being laid by the Angora Government on education; but one purpose of education should be to make people think for themselves, and there is no better way to encourage this than to let them have different points of view in order that they may think out for themselves which they prefer to adopt. If, for instance, there were greater liberty for the Turkish Press, in all probability views would be expressed on foreign affairs showing greater breadth of vision than those which now monotonously twist everything to support the official creed that Turkey must keep herself at arm's length from the West that she is so sedulously imitating. Now and then a writer will betray the fact that he knows the official policy to be wrong, but he is forced to endorse it. In various directions Turkey is buying experience that she could gain more economically by other means. She has had difficulty with her alcohol monopoly, she entertains doubts as to the capacity of a certain group to carry out a railway construction programme, she is discovering that something more than good intentions and a concession is required for the successful running of sugar refineries. Progress will be more consistent and more rapid, if, instead of trying to do everything by herself—which is a different thing from doing it for herself—she accepts advice and guidance from others, even in respect of her advisers and guides.

The Trans-Persian Railway.

The Teheran Correspondent of *The Times* has announced definitely that the railway from the Persian Gulf to the Caspian is to be begun simultaneously from both ends. As is known, this particular scheme is one of the projects most favoured by the American Financial Advisers of the Shah, and in 1925 the Majlis gave the Government a monopoly over sugar and tea, the revenue from which (estimated to have an annual value of about £1,000,000) is to be devoted wholly to railway construction. But there still remain a good many doubting Thomases in regard to this particular line, which, it would seem, neither can be built from what can be raised from the revenue of the Persian State, nor can be made self-supporting. It has been suggested that it would cost £15,000,000 to build; but we would not take that estimate as necessarily accurate. The problem is, therefore, how to build, out of a revenue of the annual value of one million, a railway costing several millions? Obviously the answer lies in a foreign loan, and almost equally obviously the money will be asked for in America. It will, however, be time to discuss this particular aspect when the loan has actually been announced. In the meantime it is interesting to recall the line of the projected road. Apparently, it will begin from the Khur Musa district on the Gulf, and go northwards, serving the towns of Ahwaz and Dizful, to Khorummabad. Thence it is to

proceed to Burujird, Hamadan, and, by the Nuberan route, to Teheran. From the capital it is supposed that the line will go to Bandar Gaz, on the Caspian. Now the advantages that such a line might give to Persia, in freeing the country of the necessity of using the Northern market are fairly obvious; how would it affect the entrepôt of Persia, which is Baghdad?

Persia and Baghdad.

The High Commissioner for Iraq, Sir Henry Dobbs, said last week that the air had given back to Baghdad its supremacy as a centre on the highways of the world; and his words were just. Mr. Winston Churchill, however inhospitably Englishmen may be thinking of him at the present time, was not speaking in the void when he called Baghdad "the Clapham Junction of the Air." We cannot think, therefore, that any trans-Persian Railway, if ever it be constructed, will permanently injure the unique position of the capital of Iraq. In this connexion may be mentioned the eagerness with which the report is awaited of General Hammond on the railways of Iraq, (which he recently inspected). For if Persia does eventually enjoy a railroad from North to South, which by itself alone would admittedly considerably harm Iraq's transit trade, other lines must also be built. For instance, there is the projected line which shall join Iraq with the Mediterranean—that in itself would, of course, increase the importance of Baghdad very much. Nor should one overlook the possibility of the Persian railways linking up with the Iraq railway system. It has been proposed, for example, that a line be constructed from Charbar by the mouth of the Persian Gulf, by way of Kerman, Yazd, Isfahan, Hamadan and Kermanshah to Qasrshirin, whence, naturally, it would be joined up with Khaniqin. This system, moreover, would probably be connected with Duzdap, the railhead of the Quetta to Nushki line. In that event, therefore, Baghdad would have her way open to India. But all these suggestions are not things of the immediate future—they may, indeed, be quite impracticable—and it seems hardly probable that Baghdad is justified as yet in quaking in her shoes over the future. We have no doubt that the authorities in Iraq have studied all the potentialities of the situation, and probably they are well satisfied with the ability of Baghdad to hold her own with the march of material civilisation in the Middle East.

The Mecca Pilgrimage.

Quite patently those anti-Wahhabi Indian Mussulmans who have during the last few months been spending their energies in trying to convince their brethren that the highest duty of a Muslim at the present time is to forgo the pleasure of performing a sacred obligation, that is, making the pilgrimage to Mecca, have ignominiously failed in their endeavours. As our Jidda Correspondent has been pointing out, overseas pilgrims have been arriving in the Hijaz in large and constant numbers; and the Bombay correspondent of *The Times* last week recorded an unusual increase in the number of *hajjis* sailing from Bombay and Karachi. From Bombay alone the number is expected to exceed 20,000. It would seem, therefore, as if the Indian Mussulman is really, as it is claimed for him, one of the most religious of the elements of Islam. The propaganda against swelling the numbers of this year's *hajjis*, and, incidentally, of helping the revenues of the Hijaz, has totally collapsed; in other words, religion has come before politics. All this is excellent, and it is to be hoped that the Wahhabis will show themselves worthy of the confidence that a great part of Islam has reposed in them. It is wholly to the good that politics should be barred in the Holy Land of Islam. And yet it is, perhaps, a matter for regret that the second Mecca Congress is, in all probability, not to be held. The great assembly of last year, which, by the by, was supposed to eschew politics, admittedly did not achieve all that was hoped for it; but after such elaborate preparations for holding the Congress annually it seems unfortunate that the decision has been taken not to hold it this year—if

indeed, it has been so decided—and to advertise in this fashion the internal dissensions of Islam. Article 3 of the Statutes of the Congress of the Muslim World as published last year provided that the Congress would meet annually at Mecca (or elsewhere) during the season of the pilgrimage. For the sake of Islam as a whole, and of the Wahhabi reputation in particular, it is to be hoped, therefore, that this report of the non-holding of the Congress this year is untrue.

The Palestine Government and American Jewry.

In writing last February of the wider participation of American Jewry in the affairs of Palestine, as manifested in the extended Jewish Agency, we hinted at the possibility of added difficulties for and increased criticism of the British Government. It was not a very astute prophecy, perhaps; at all events, its accuracy was quickly exemplified in the conduct of some of our own British Zionists, particularly those in the House of Commons. The people of this country, however, is less likely to be troubled by the criticisms of men such as Colonel Wedgwood or Commander Kenworthy than by the statements of such a man as Mr. Louis Lipsky, who is President of the Zionist Organisation of America. This critic of the British Government is just reported to have said: "It was obvious to every visitor that the Palestine Government was not doing all that it could for the up-building of Palestine." And he is stated to have added: "It was an intolerable position that the Zionist Executive must go on spending much of its energy and activity for the purpose of removing the obstacles in the way of Palestine's up-building, which an enlightened, far-visioned Government on its own initiative could so easily remove." We cannot help thinking that this sort of talk does the Zionist cause more harm than good; would it not, in any case, have been wiser of Mr. Lipsky to wait until the body of non-partisan Jews has reported on the whole position in Palestine? Quite conceivably the British Government will not sleep less soundly o' nights because some American Jews choose to call it, by implication, both benighted and short-sighted, and to suppose that American Jews can, either by positive or by negative action, dictate the policy of the British Government in the Holy Land, is, in our view at any rate, to manifest the possession of a curious sense of values. To blame the Palestine Administration for the prospect of difficulty in maintaining the interest of American Jewry in Palestine affairs, as Mr. Lipsky proceeded to do, may be the first thought of a certain type of mind; but those Jews who know most intimately the intricacies of the Palestine question are, we prefer to think, less inclined to belittle the efforts of the Power,

which, in caring, in accordance with its promises, for the whole of Palestine—its majority no less than its minority—is giving protection and freedom to the hitherto persecuted Zionist.

The Palestine Crisis.

It should not be supposed that the Zionists are not deserving of sympathy in the present crisis in Palestine, but, as we wrote last autumn, when the depression was perhaps at its most gloomy period, their great need is steadiness. The permission given to non-Zionists to participate in the Palestine effort was, in one sense, an indication of the plight of the promoters and supporters of the Palestine experiment; and possibly all this criticism of the Jerusalem Administration is another. There is, indeed, nothing to be gained from shirking the fact that Palestine is, from the Jewish point of view, still a problem. In this connexion, we would quote the views of Mr. Jacob De Haas, a Jewish Nationalist who, in a letter published in the last issue of the *Jewish Chronicle*, thus summed up the results of six years of the attempt to set up in Palestine a Jewish National Home:—

1. Beginning of serious emigration from Palestine, owing to economic failure of settlement.
2. Accumulation of large indebtedness by all Zionist Palestinian organisations. Behind the euphemism used with reference to the Palestine Securities Company, the American Zion Commonwealth, etc., is not a record of success.
3. Typical recurring crises in Palestine.
4. Compromise with those who may be philo-Palestinians, but who have thrown their strength and resources into philanthropic "amelioration from within" in Eastern Europe.

Now in the main these four points cannot be gainsaid, but is it seriously supposed that the British Government is responsible for the facts contained in them? The wisest Zionist leaders, naturally, know that it is not, but there is danger in the possibility that a large body of incompletely informed American Jews should attribute to the Administration in Palestine the delayed success of the scheme in promotion of which they are spending their moneys. There are indeed wheels within wheels in this question of Palestine, and it is devoutly to be hoped that, just as the Arab side of it shows signs of solving itself, additional complexity should not ensue from the Zionist side. We make no apology for dwelling on the serious nature of this problem, for it is fraught with considerable potentialities.

A Cabinet Crisis in Egypt.

Although criticism of the Government has become a permanent article on the parliamentary bill of fare in Egypt, and it was recognised that the situation, as far as the members of the Cabinet were concerned, must be uncomfortable, if not actually bordering on the intolerable, it was not expected that at this advanced stage of the session, with the prospect of the summer vacation approaching, the limit of the Government's endurance would be passed. On April 18, however, Adly Pasha Yeghen decided to hand in the resignation of his Ministry on the strength of a vote in the Chamber which, while unimportant in itself, seemed to bring to a head a series of carping criticisms on the Government. The proposal before the Legislature was that the Government should be asked—as it has been before—to transfer money on deposit in the National Bank of Egypt to the Bank of Misr, which is conducted entirely by Egyptians, and the request was coupled with a motion of thanks to the Government. When a deputy had pointed out that there was nothing for which the Government was entitled to be thanked, the proposal was rejected. It will be surprising if the Chamber, on reflection, considers that Egyptian interests will be served by a change of Government at this stage. The solution of the crisis is linked up with the attitude of Zaghoul Pasha and the patience of the long-suffering Prime Minister, whose inclinations, it is to be feared, are ever against the holding of office.

ALBANIA AND ITALY.

Under the heading of "Albania and Her Protectress," Mr. William Miller has a trenchant article in the current issue of *Foreign Affairs*. He first of all examines the text of the Tirana Pact, observing that "peace" has not usually been "strengthened" by the intervention of a Great Power in the affairs of a Balkan State; and that no one, neither Greece nor Yugoslavia, was threatening the "juridical and territorial status quo." Having sketched the recent relations of Italy with Albania, he roundly attacks Sir Austen Chamberlain for having failed to support a British Minister in Albania, Mr. O'Reilly. This Minister, according to Mr. Miller, warned the British Government of what was coming in Albania. But, says this writer:

"The fact that he had done so leaked out and reached Rome, whereupon Sig. Mussolini is said to have complained to the British Minister for Foreign Affairs. Palmerston or Curzon would have supported his subordinate. Sir Austen Chamberlain removed him from Durazzo and transferred him to Venezuela. It is, indeed, a novel experience for an Italian, or any foreign, statesman to secure the removal of a British Minister for having done his duty to the best of his ability. . . . The British Minister has now simultaneously sacrificed British prestige alike in Albania and Yugoslavia, because of his regard for Sig. Mussolini."

The work of certain British officers in Albania, including Sir Harry Eyres, and Colonel Stirling and General Sir Jocelyn Percy (who are still there) is then praised; a warning is given that Britain herself may suffer from the Italian hegemony in Albania; the opportunity is indicated of the formation of a fresh Græco-Yugoslav alliance; and the article concludes:—

"It therefore behoves statesmen to follow carefully what is happening in Albania, and foreign Ministers to believe what their conscientious representatives on the spot communicate to them, all the more because there are usually no Press correspondents at Tirana and news from there is either sensational or official. The truth usually lies between the two."

A MISSIONARY REVIEW.

The April issue of the *International Review of Missions* contains at least two articles which are likely to interest readers of THE NEAR EAST AND INDIA. These are "New Tendencies in Islamic Religious Thought," by S. A. Morrison, and "The Persian Shi'as," by J. Davidson Frame. Mr. Morrison, who surveys his field from Cairo, begins by stating that a new type of Islam has appeared, but it has assumed "many different and often mutually contradictory forms." First, he explains the tendency visible in some parts of Islam to reject the old religion. Such a rejection is not, however, indulged in only by advocates of extreme nationalism, for "there are signs of a popular reversion to the old faiths" (e.g., in Persia). Another tendency is to restrict the sphere in which Islam works, and yet another to reform Islam. In this last tendency can be seen the endeavour to find a *rapprochement* with other religions, through the line, for example, of mysticism or of Bahaism. But, probably most important, is the tendency to revive Islam, which is manifested by conservative Islam. This last party is represented by such institutions as the Al Azhar University, by the Wahhabis, by the *Ahl al Quran* movement in India. And finally there are the eschatologicalists, hoping for the appearance of a saviour who shall arise to "re-establish the fading glory of Islam." Mr. Morrison's moral is that the Muslim world must be reviewed from time to time in order that the method of approach by Christian missionaries may be adjusted in accordance with new indications of Islamic thought, and that the same methods must not ubiquitously be employed.

NORTHERN ARABIA.

The April number of the *Geographical Review* contains an article on "Northern Arabia," by John Kirtland Wright, which is a description of the explorations of Alois Musil, now Professor of Oriental Studies at Charles University, Prague. The American Geographical Society is, through the generosity of Mr. Charles R. Crane, who has lately been in Arabia, publishing the results of Professor Musil's expeditions of 1907-1915. These works will consist of six volumes. The first, which has already been published, is entitled "The Northern Hegaz," and other volumes will be published upon "Arabia Deserta," "The Middle Euphrates," "Palmyrena," "Northern Negd," and "The Manners and Customs of the Rwala Bedouins." The article in question gives a general background to a series of works that will certainly be eagerly awaited by all students of Arabian affairs.

NEAR AND MIDDLE EAST ASSOCIATION.

Under the auspices of the Near and Middle East Association, a lecture will be given on "The Outlook in Abyssinia," by Mr. F. C. Rey, who has just returned from Abyssinia. The lecture which, by kind permission of Mrs. James Conchie, will be delivered at 27, Great Cumberland Place, W.1, is to be given on April 29, at 8.30 p.m.

THE MACEDONIAN PROBLEM.

For a variety of reasons the Macedonian question had recently lost much of its acuteness. A vendetta among the leaders of the Macedonian Revolutionary Organization seemed to have checked the activities of the *komitaji* bands that it controlled, and it was hoped that improved methods of administration in the disaffected regions had undermined the efficacy of revolutionary propaganda. As a reminder, however, that the problem, though dormant, has not ceased to exist, a congress of the Organization of Macedonian Emigrants in Bulgaria, which was held in Sofia in the latter part of February has now issued in pamphlet form the many resolutions which the gathering passed on that occasion. Its purview was a wide one. The resolutions address themselves to the Great Powers, to the League of Nations, to Public Opinion in Bulgaria and the Bulgarian Government, to the "oppressed peoples in Yugoslavia," to the defenders of the Macedonian cause and those who work for world peace, as well as to the people in Macedonia and the various Macedonian Organizations and Institutions. The Congress appeals to the Great Powers to obtain for Macedonia a form of self-government; it supplies the League of Nations with its own version of what is happening in the parts of Macedonia subjected respectively to Greek and Serbian sovereignty, and calls upon it "to put an end to the physical and moral terrorization" of the Minorities and to appoint an international committee to ascertain the validity of the Macedonian complaints and the justice of the Macedonian demands. The appeal to Bulgarian public opinion and to the Bulgarian Government is by no means the least interesting part of the numerous resolutions. The Emigrant Organization complains of certain persons and circles in Bulgaria, pessimistically disposed, whom it accuses of disseminating the false report that the Macedonians are a hindrance to the Bulgarian State in its efforts to get on its feet by means of a series of international agreements; it considers that the Bulgarian Government fails "to take advantage of the most favourable opportunities, from the technical point of view, to raise its voice justly and legally in defence of the oppressed Bulgarians in Macedonia; and, having recapitulated the faith that is in it regarding the rights of the Macedonians, it appeals to all in Bulgaria "not to succumb to the claims of party politics" in growing lukewarm on the subject of Macedonia.

If the resolutions had ended here, the Congress might have flattered itself that it had faithfully discharged a patriotic duty in an unexceptional academic way. It proceeds, however, to fan the flame of Macedonian unrest by a reference to the oppressive conditions, in view of which "the struggle for national self-preservation and for national liberty requires much patience, many victims

and supreme sacrifices on the part of every Macedonian, and calls upon all young Macedonians who still remain outside the ranks of their organized brothers to hasten to join their comrades in the name of the highest ideal which can inspire their life and activity to-day—namely, the liberation of Macedonia." Let it be said at once that it is common ground among those foreign observers who know the Balkans best that the soundest solution of the Balkan problem would include an autonomous Macedonia. None, however, believes to-day, or is in the least likely to be convinced, that armed violence, of the nature of which alone the Macedonians are capable, is the best, or even a possible, way of achieving that end. If the attitude of the Emigrant Organization reflects the views of the Macedonians under Serbian and Greek jurisdiction, then it has to be inferred that their present quiescence is the result of exhaustion and does not represent an accession of wisdom and changed tactics. In these circumstances is it likely that the position, if it changes at all, will do otherwise than change in favour of those in authority? If the campaign of violence at its height has availed the Macedonians nothing, according to their own statements, there can be still less chance that on an attenuated scale it will either impress the League of Nations more favourably or extract better terms from those whom the Macedonians regard as their oppressors.

Macedonians are not the only people in the Balkans who are handicapped by an inability to take a long-sighted view of their own interests. One of the reasons why their appeals fall on deaf ears to-day is that no country, still less the League of Nations, can take the responsibility of recommending autonomy for a people who have not shown the least capacity for ordered government. It is not necessary to subscribe to this view, in order to realise that the average European, on the strength of the past record of the people, would expect to find an autonomous Macedonia many degrees worse than an independent Albania and consequently still a cause of trouble in the Balkans. On the other hand, he will argue—in ignorance, no doubt, of Macedonian tenacity—that, given decent treatment, the Macedonians will ultimately find on which side their bread is buttered, and will accept the inevitable. Such, at least, is the line of argument that seems to be used to justify the attitude of Europe to the Macedonian question, an attitude that the Macedonian people find it so hard to understand. Unfortunately they make no effort to study the psychology of others, still less to understand it. The preamble to the Congress' resolutions speaks of the Macedonian population as "deprived of every opportunity of using legal means in its struggles for justice, and so compelled to resort to revolutionary practices to secure its self-preservation." Yet it would be impossible to convince any Western Government that, even if "legal means" had ever been employed, they had been given a reasonable trial. The impression abroad is that revolutionary practices were resorted to long before a thought was given to legal means. A very different state of affairs might have been recorded to-day in the Balkans, if the Macedonians, recognising their limitations, had made a whole-hearted effort to accept loyally temporary dismemberment, until such time as, having established themselves as influential factors in each State, they could work peacefully and constitutionally for an autonomous Macedonia in a Balkan federation. Their tactics have earned them the suspicion and distrust of their neighbours and they still appeal for interference that becomes less and less likely as the days pass. If now they will change their methods, set their faces resolutely against violence, and give some signs of being able to conform with ordered government, the cause of autonomy may begin to look up. There must be no more resolutions on the lines of the Sofia Congress of February.

The Near and Middle East*

From Our Own Correspondents.

Sofia, April 5.

Bulgaro-Roumanian Relations.

Examination of the present state of Bulgaro-Roumanian relations shows complete stagnation. This stagnation is all the more remarkable in that it follows upon a sincere endeavour to regulate the questions outstanding between the two countries. These questions are of two kinds. There is, first, the problem of the Bulgarian minority, more particularly the Bulgarians in the Dobruja. And, secondly, there is the problem of the sequestered property of Bulgarian subjects in Roumania. The first is a political question, the second a financial one. Both, however, are of the greatest importance from the point of view of the development of Bulgaro-Roumanian relations.

The situation of the Bulgarians in the Dobruja is conditioned by a series of measures, taken by the Roumanians, which all tend to force the Bulgarian population of the country to expatriate itself in order to make room for Roumanian colonists. The most important of these measures are, on the one hand, the verification of the rights of Roumanian nationality of those who, in conformity with the prescriptions of the Treaty of Neuilly, have opted for this nationality, and, on the other hand, the verification of the titles of landed property, the land being considered as national which under the Bulgarian régime the Bulgarians had possessed only in a usufructuary qualification. The two verifications, without speaking of churches and schools, are being made in a scandalous fashion.

All these measures being applied in virtue of a special law passed by the Roumanian Parliament, the Bulgarian Government could not intervene; but it made known to Bucharest the deplorable effect which they produced in Bulgaria. The Roumanian Government promised to introduce modifications, and the Averescu Cabinet even gave a solemn undertaking in this sense to the population of the Dobruja on the eve of the legislative elections last year. But nothing happened. A new attempt was made last October at the meeting at Strassburg of the Council of the Union of Associations for the League of Nations, where the Bulgarian and Roumanian delegations signed a declaration by which they undertook to inform their respective Governments of the urgency of the appointment of a mixed commission, to meet before the end of the year to examine all the questions concerned with the treatment of minorities. It was intended to obtain:—(1) the restitution to the Bulgarian population of the Dobruja of schools and churches; (2) the prolongation of the delay of verification of the titles of rural property, this verification having to be made in a spirit of equity and justice and in such manner that acquired rights be respected; (3) the granting of a general amnesty, political and military, as being necessary to the appeasement and return of the refugees from the Dobruja; (4) the search and punishment of those responsible for the assassination of a Roumanian sergeant and of eight Bulgarian peasants in May 1926, and of a

sergeant, of a Roumanian guard, and of 47 Bulgarian peasants in July of the same year.

This endeavour, having no practical result, the Bulgarians are thinking of taking the matter to Genève, next June: such at any rate, is the decision of the Bulgarian section of the Union of Associations for the League of Nations.

As regards the question of the sequestration of Bulgarian property in Roumania, it has not advanced any farther than the other question, but at least it holds out prospects of possible arrangement. It is known that the Governments came to an understanding two years ago, on the basis of the payment by Roumania to Bulgaria of a total indemnity of 250 million lei. But disagreement arose at the last moment, when it came to settling how this sum should be deducted from the Reparations debt. Roumania insisted on its inclusion in section "B" of this debt, which is only demandable in thirty years, that is to say, never; the Bulgarian Cabinet insisted, on the other hand, upon the section "A," of which the instalments are to be made now.

This disagreement has lasted two years, but there is a chance of its ending shortly owing to Italian intervention. This intervention would involve a compromise, consisting of a distribution of the indemnity in a series of annuities of section "A" of the Bulgarian reparations, so that Roumania, after having received 250 millions, will continue to receive also a large part of her annual share of Bulgarian reparations.

It is stated here that accord on such a basis is perfectly feasible.

Cairo, April 9.

Sir William Tyrrell's Visit.

The High Commissioner returned this week from his trip to Wadi Halfa, which, like the visit to this country of Sir William Tyrrell, who accompanied Lord Lloyd when he went to the Second Cataract, has aroused all manner of rumours and surmises in the clubs and the cafés. I am in a position to state that no political significance attaches to the visit of the Permanent Under-Secretary of State for Foreign Affairs to Egypt at the present juncture, and that there is no more ground for reading any special importance into Lord Lloyd's meeting with Sir John Maffey at Wadi Halfa than there has been in his predecessor's visits to the Sudan.

Most people overlook the fact that the Sudan comes within the jurisdiction of the High Commissioner—his title is in fact High Commissioner for Egypt and the Sudan—and that he ought, unless special circumstances prevent him, make at least one visit every year to that country. This spring, owing to pressure of work in Cairo, Lord Lloyd was unable to afford the time for this annual trip, and it was decided to arrange a meeting with the Governor-General half-way, so to speak, at Wadi Halfa; there to discuss the more urgent current matters which normally would be dealt with at the Palace at Khartoum.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

That is the simple explanation of this hurried visit to the Sudan frontier—which had the advantage of enabling the High Commissioner to combine the transaction of normal business with a much required respite from Cairo affairs. But no *démenti*, however, circumstantial or well-founded, will satisfy the quidnuncs out here, who persist in basing on Sir William Tyrrell's presence assertions that important political developments, most probably negotiations with regard not only to Great Britain's relations with Egypt, but also the latter's relations with the Sudan, are impending. As a matter of fact, there are indications of a development in the situation, which should conclusively prove the impossibility of negotiations for some time yet.

The special services report telegrams from here announcing the almost immediate departure for London of the High Commissioner. This is not correct, but it is expected that His Excellency will leave somewhat earlier than he did last year. Lady Lloyd, whose recovery I am glad to be able to report, will go to England in about a month's time accompanied by her son, the Hon. David Lloyd, who is spending the Easter Holidays in Cairo.

Two Presidents Ill.

For many Egyptians the Bairam holidays were somewhat spoiled by the news of the sudden illness of Zaghloul Pasha, who had to take to his bed on the eve of the feast. At one moment his condition gave rise to much anxiety, but he rallied in a wonderful manner, and is now entirely out of danger. Almost simultaneously Rushdi Pasha was taken seriously ill. His illness is undoubtedly due to the excitement of the controversy over the facts surrounding the deposition of the ex-Khedive, in which he has been engaged. But he also is now making a good recovery. It is a curious coincidence, which has brought about the simultaneous illness of the Presidents of the two Chambers, which will in all probability have to complete the session under the direction of their deputies.

The Note Issue.

The discussions between the Ministry of Finance and the National Bank of Egypt on the subject of the participation of the Government in the profits on the note issue still continue. The present arrangement in regard to the sharing of profits dates back of course to the foundation of the Bank 28 years ago. Until the War compelled the Government to relieve the Bank of the obligation to retain half the cover of the note issue in gold, and particularly as the issue up to that time had not been much more than two million pounds, the profit was very small. But since 1914 the note issue has become forced currency—it stands at present at about twenty-eight millions—and the profit consequently having become fairly considerable the Government is pressing for a larger share than is provided in the original agreement. In this connexion it is interesting to note that during the past ten years the Egyptian Exchequer has received on average one million per annum as its share of the profit.

The Department of Commerce and Industry.

It is announced that the Egyptian director of the Bureau of Commerce and Industry will retire this summer

on the conclusion of his leave, which has just been granted him. It is to be hoped that the opportunity will be seized to reorganize this Department on more up-to-date and practical lines. So far it has by no means realised the expectations reposed in it when it was founded—there are on all sides lively complaints at its failure to respond to the needs of the community—and the nomination of a new head should provide the occasion for reorganizing this Department so that it may henceforward render to both the public and the State the services which one is justified in expecting from it.

"Iolanthe."

This week the Cairo Amateur Dramatic and Musical Society held the stage at the Royal Opera House with Gilbert and Sullivan's "Iolanthe." It has proved a very successful production and all concerned are to be congratulated on the manner in which, in every respect—acting, singing, (solos and chorus) staging and orchestra—the Savoy traditions were maintained. The High Commissioner attended on two nights, and there was a remarkable proportion of foreigners in the audience each night. The English school should benefit very considerably from the efforts of this talented Company.

THE HIJAZ.

Jidda, March 20.

The Abundant Pilgrimage.

The arrival of the Armenistan a few days ago from Singapore with 1,163 pilgrims brought the total number of arrivals up to date above the 50,000 line (50,642 to be exact, and increased by subsequent arrivals to 51,530) and, judged solely by the economic standard, the pilgrimage of this year is already an established success. The final number of overseas visitors to Mecca can scarcely now fall below 100,000, and everybody is happy. Trade is brisk, and the Government coffers are full. The Islamic world has given its answer to the efforts of certain sections to create schism and disunion in its ranks. It has placed its confidence in the ruler of Arabia, and that confidence will not be abused. The pilgrimage of 1927 will be a memorable milestone on the historic path of Islam. Politics, so actively mooted at last year's Muslim Congress, are apparently to be eschewed on this occasion; for there is but little likelihood of a second Congress this year. The King, when he gets back from Riyadh about the middle of next month will, therefore, be able to devote his whole attention to the administrative consolidation of the pilgrimage on lines that will ensure full attendances in future years.

Anglo-Wahhabi Negotiations.

For this reason it would seem unlikely that the "Madina" negotiations will be renewed before next autumn or winter at the earliest. The delay may be advantageous to all parties. The new British Consul, who is expected here towards the end of April, will have time to study the Arabian situation in the light of his Moroccan experience and will thus be in a position to

advise and assist the envoy whom the British Government will send to resume the negotiations.

A Departure.

The British flock at Jidda has been shorn of another lamb, tempted away by the (presumably) green greens of Canadian golf courses after six years of undisputed supremacy as an exponent of the royal and ancient game in the desert. Mr. Lambie is deserting the British Agency for the easier life of the professional golfer, and, when the new Consul arrives, he will find a *tabula rasa* to write upon and no one to hinder him with advice.

March 8.

The "Kanisa."

The European community here has lost one of its oldest members by the death of Mr. Pericles G. Voutziovar, a Greek subject, which occurred on March 25. He was buried the following day in the *Kanisa*, or European cemetery, outside the south wall of the town, whose most distinguished occupant is Charles Huber, the French explorer, who was murdered near Rabigh in 1884 on his way into the interior to procure the famous Taima stone.

The Id.

Ramadhan drags on slowly to its appointed end, and active preparations are already in progress for the suitable celebration of the Id, which falls on April 3. Every household is making ready festival garments for the occasion, and the piece-goods shops in the Suq present a gay and animated appearance every night.

Russia, Italy and the Hijaz.

A slight rise in the mean temperature warns us that summer is approaching with its annual leave season. The first to go this year are two members of the Soviet Legation staff booked to sail on April 2 with most of the ladies and children of the Russian community, mention of which compels in justice the admission and recognition of the fact that in the placid atmosphere of the modern Hijaz it neither has, nor pretends to have, nor acts as if it had, any grievance against the world in general. Indeed if there be any ground for suspicion of restiveness on the part of any of the foreign Powers represented here it falls not on Russia but on Italy, whose nationals here resident are somewhat ostentatious in the sporting of Fascist emblems and recently foregathered for a "black-shirt" banquet on the eve of the sudden departure of the Italian Consul at short notice for Massawa. Naturally speculation is rife here on the subject of this sudden summoning of the Consul for consultation with the authorities in Erithrea. Developments in the Yaman situation are thought to be at the bottom of it and, as the Italian Government has not yet accorded formal recognition to the Government of Ibn Saoud, speculation is inclined to be of a pessimistic nature.

Turks and Egyptians in Mecca.

The Turkish representative, Sulaiman Bey Shaukat, and the Egyptian Consul have both recently visited Mecca simultaneously with the Governor and Mayor of Jidda to perform the *Umra* or lesser pilgrimage. So far as appears no political importance attaches to the visit, and it is not improbable that the main subject under discussion was the manner in which Ibn Saoud's approaching return to the Hijaz should be celebrated. The King will be back about the middle of next month.

M. Venizelos left Nice on April 13 for Greece.

The 2nd Bn. Liverpool Regiment, which arrived at Southampton in the transport *Neuralia* on April 12, was the last British infantry unit in Iraq, leaving Baghdad on March 10.

King Alexander of Yugoslavia and his Prime Minister, M. Ouzounovitch, were present at the opening of the second International Congress on Byzantinology in Belgrade on April 11. Professor Iorga is at the head of the Roumanian delegation and M. Ivanoff of the Bulgarian, which also includes M. Gueshoff and Professor Bobtcheff.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ITALY AND YUGOSLAVIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to your comments on my letter kindly inserted in your issue dated April 7 last, I will gladly mention a few names of members of the "White Hand" occupying prominent positions in the Yugoslav Government and Army. I can mention without any qualms whatever the names of those who, I know as a fact, do not attempt to deny in private conversation their membership of this "clique," to wit:—

[Our Correspondent here mentions the names of two Generals and two Cabinet Ministers as among those "who pass quite openly for being members of the 'White Hand' in Belgrade Society."]

In fact there is very little secrecy about this patriotic Society in so far as its more prominent members are concerned or about its aims. Its secrecy lies in the means which it employs, its tactics and its secret agents.

You say I overlook the fact that the assertions I make regarding Yugoslavia have their counterpart in the assertions made by Yugoslavia regarding Italy. This is a point which I am quite willing to recognise; but there are various ways of assessing the probability as to which set of assertions is the right one. One way is the moral reputation of each side, the relative degree of civilisation, the political atmosphere of the respective countries. My comment in this connexion is this: Whatever may be alleged against the Fascist Government, Signor Mussolini's foreign policy has been at least conspicuous for its frankness, for absence of intrigue; and Italy is a great and civilised Power, of a totally different category of civilisation from that of Serbia, however much we may admire the latter's heroic qualities. And this is all the more evident if we consider the transition from Italy to Serbia *via* Greece; for Greece, though Balkan, is European, but Serbia is already another world from ours.

Secondly we can use one of Napoleon's maxims; rule out moral motives, but credit the other side at least with brains if you want to divine their aims. What do we find? Surely that the possession of Salonika or Skutari would be to the very great advantage of Serbia and that, once acquired, these places could be easily retained. On the other hand, it is difficult to imagine what particular advantage, or balance of advantages, Italy could gain by any territorial acquisition in the Balkans. Valona would have a strategical value for Italy only did Yugoslavia embark on the building of a formidable navy. Valona was taken by Italy when Austria was still in being. Its abandonment is regretted by nobody in Italy, although the manner of its abandonment is universally deplored. Moreover territorial acquisitions in the Balkans by Italy would weaken Italy greatly as a Mediterranean Power, they would be difficult and costly to maintain and, owing to the hostility that would be aroused, the result would be a fatal blow to Italian commerce, which it is Italy's paramount interest to extend in the Balkans. If Italy pursued such a policy, every far-seeing person would have to regard her as a fool.

Thirdly, I recommend the plan of talking to well-informed persons in both countries, posing as a friend and referring sympathetically to the policy of which the country of your interlocutor is accused by its enemies. I have done this myself on many occasions and recently. Result: the Italian bites my head off for suggesting anything so foolish as even hoping to acquire territorial gains for Italy in the Balkans; the Serb on the other hand glows with pleasure that an Englishman should sympathise with what "every Serb aspires to see," namely, Skutari and Salonika one day belonging to Serbia. On one occasion I was even embraced by the Yugoslav First Secretary of a certain Legation for expressing such sentiments.

It is all very well advocating the Balkans for the Balkan peoples. But there are really only four Balkan peoples, excluding Roumania and Turkey, who are not characteristically Balkan; and there is a great danger that this formula, were it not for the interests of non-Balkan Powers, would be speedily translated into "the Balkans for Yugoslavia," (who is more than equal in strength to the other three Balkan States combined), so long as Serbia dominates Yugoslav politics. That is Serbia's dream, and it is a very natural one.

May I conclude, with reference to certain other comments of yours on the situation, that Italy accepted immediately the suggestion of an inquiry, provided it was a full inquiry (your own suggestion too), whereas Yugoslavia has, after various hesitations, refused? This is a still further reinforcement of Italy's case.—I am, etc.,

J. S. BARNES.

[We have no wish to be drawn into a general discussion of Italy's foreign policy, as the point at issue is whether the Italian Government was justified in raising a scare over Yugoslavia's alleged preparations for an invasion of Albania—and immediately landing troops at Saseno—when friendly inquiry in Belgrade (a treaty of "Friendship and Cordial Co-operation" exists between the two countries) would have explained the inwardness of the military measures admittedly being taken by Yugoslavia.

Our correspondent's "interlocutors," we note, have this in common that they are "agin the Government."

With regard to Salonika and Skutari, it may perhaps be pointed out that the first has nothing to do with Albania, and that when the question of the incorporation of Skutari in Yugoslavia came up for discussion it was refused by the then Yugoslav Government on the ground that the town was Albanian. For the rest, the conflicting reports on the subject of an inquiry, as they reach this country, do not quite bear out our correspondent's reading of the situation. There would, however, seem to be no doubt as to Italy's refusal to allow any discussion on the Tirana Treaty, which is the root of all the trouble. It is an axiom that the idea of the Balkans for the Balkan peoples is anathema in Italy.—Ed.]

POLITICS AND RELIGION IN THE ORIENT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Numerous writers who have studied the condition of the Orient, and of the Near East in particular, have published articles explaining why it is that the Orient lags behind in the West. Each of these, of course, has his own diagnosis. But I sincerely believe that no other rapid method exists by which the goal of civilisation and the secret Holy Rights which the Almighty Creator bestowed on every human being can be attained than by education, and by the cultivation of moral character. Above all, we should begin to educate the girls—the mothers of the future—because no hope can exist for the nation which neglects and enslaves its mothers. The suggestion of unity and religious enthusiasm may bring temporary results, as when the sun of the Arabs first rose. We ought to stop to think, to let a part of the world philosophy occupy our minds, and remember that religious fanaticism is the chief cause of our chronic troubles.

If you show me one like Jesus Christ, or like the Prophet Muhammad, I may believe in progress, and success by means of religious enthusiasm. But religious fanaticism of to-day permits the intrusion of politics, especially in poor Syria!

If the fundamental law of Nature leads us to conceive the doctrine of the Survival of the Fittest, then there are most mysterious things which I do not understand. But so long as we control three things in the Great Life, our Times, our Thoughts, and our Actions, we can finally understand religious fanaticism, moral and financial poverty, differences in nationality, language, customs, and so on—as in the Near East, where matters are complicated by the mandatory system.

I have treated this subject many times in my books on

Oppressed Women and the Superstitions of the Shaikhs and Gods in the Orient, and also in many articles, in the leading newspapers. In particular, I have favoured the idea of a universal language. Of course the English language will be the most useful and valuable language in the future. The spirit of this language, however, lies in Queen Victoria's advice to her people: to rule by means of wise administration, and not to interfere with religion. This advice provides the highest example, worthy of the utmost love and respect by those desirous of serving humanity.—I am, etc.,

SHAFIK EL KATHEY.

Member of the High Committee of the Syrian Destrute.

Amman, March 17.

[Our correspondent is a Druse, but is essentially a man of peace.—Ed.]

CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The lecture given on April 5 at the Victoria Hotel by Mr. W. Bevan, Colonial Commissioner for Cyprus, was presumably intended to disseminate information regarding the island, the "new British colony." We regret, however, to remark that the lecture, although prolonged to the unusual length of nearly two and a half hours, was in many respects not only crudely unfair to the population and lacking in historical veracity, but also politically biased and misleading.

When Mr. Bevan tries to cast a mist of obscurity over the ethnological origin of the Greek population of the Island and speaks with uninformed reserve about their dialect, we are inclined to think, at least, that his data do not keep pace with historical evidence as pronounced by the most authoritative exponents of scientific history, and that he happens to overlook the fact that the Cypriot dialect is considered by those competent to judge to be as it is, one of the purest and most interesting treasures of the Greek language.

Nearly fifty years ago, when Turkey assigned Cyprus to be occupied and administered by Great Britain, the population of the Island was classified by the Turkish officials into Moslems or the privileged race, and the non-Moslems or rayahs (cattle), who paid the Kharaj, or the tax entitling them to wear their heads over their shoulders for the current year.

It was a painful revelation to us Cypriots to hear Mr. Bevan use in his lecture the same Turkish distinction in reference to the historical section of the people of Cyprus,

constituting the four-fifths of the whole population, even after Turkey has been ousted from the Island and the latter has become the "new British colony." Shall we suppose that the ends justify the means?

The Greek Cypriots will, of course, never cease to be, and feel proud of, what they are, whether Mr. Bevan or anybody else thinks in the Turkish way or not. The case is however, indicative of the mentality which has so far frustrated any real co-operation between the Cypriot people and the authorities in the Island. We are, etc.,

London, April 9.

MOTS FRANCAIS D'ORIGINE ARABE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—L'Académie Française refuse de reconnaître le mot "Madinettes," et les Madinettes en sont furieuses!

Le fait est que l'Académie non sachant d'où vient cette expression, et n'étant pas satisfaite de sa dérivation populaire de "Midi" a préféré de l'ignorer entièrement!

Cependant les Arabissants français ne manquent pas, et je m'étonne qu'ils n'aient pas, après tant de siècles de l'emploi de ce terme, découvert et avisé l'Académie de son origine purement arabe, attendu que les Arabes appellent la jeune ouvrière, Madinat, ou en langue vulgaire "Médinett."

C'est donc non Madinettes, mais Médinettes, dont il s'agit, et par là le sens en devient claire!

Pareillement, l'Académie se tourment à ne pouvoir s'expliquer l'usage avili du corne, qui est dans tout autre sens le symbole de force et de gloire!

C'est cependant la chose la plus simple du monde. Le mot corne est dérivé de l'arabe "carne," qui signifie "compagnon" tout simplement, de sorte que le mari est un carne, et le corne de bœuf est un "carne" par le fait qu'il est compagnon d'un autre!

Le poète arabe nous explique la chose par le jeu de mots suivant, dont est dérivée l'expression avilissante que nous connaissons:

Elle dit à sa voisine, quelle honte, Mégère,

Tu as fait un carne à ton mari!

Mais oui, répondit-elle, que veux-tu ma chère,

De crainte, parbleu,

Que ton mari, qui en a deux,

Ne l'attaque, et le laisse meurtri!

—I am etc.,

A. SEFI.

THE ZAIDI STATE.

Imam Yahya and his Enemies.

By DR. WOLFGANG VON WEISL.

[The boundaries, the number of inhabitants, etc., of Arab States are to all intents and purposes unknown. Existing maps are more than inadequate, other information is unreliable. The following article attempts to fill in some of the lacunae in our knowledge of the Yaman.—*Author's Note.*]

The Yaman extends, at most, 350 kilometres from north to south, and 400 kilometres from west to east; it comprises, accordingly, between 100,000 and 140,000 sq. kilometres. Of this area at least one third is desert and entirely uninhabited; a large portion of the remainder consists of mountain ranges of an altitude reaching to 10,000 feet and for this reason is also unsuited to close settlement. In spite of these conditions the Yaman is the richest of the Arabian States; its abundant rainfall, in a peninsula otherwise almost rainless, offers at least some compensation for the complete lack of rivers or streams and renders possible in the valleys gardens of bright

flowers and the cultivation of fruit. To this circumstance may be attributed the fact that the Arabs and even a number of Europeans have formed almost fantastic estimates of the wealth and power of the Yaman. Yamanite Jews in Palestine have assured me that the population of the Yaman numbers five million, of whom a hundred thousand are Jews; the French Consul in Jidda (a Muslim), who a year ago undertook a political mission in the west of the Yaman, estimated the population at six million, and compared the Yaman with Belgium. Turkish officers put the population at between two and four million; the Egyptian scholar, Zaki Pasha, who visited Sana a few months ago, at two million; the Prime Minister of Asir, Jamal Pasha Al Ghazzali—an enemy, of course, of the Yamanites—at only one and a half million.

Between these figures everyone may choose according to his fancy.

As the result of careful comparisons, based on personal enumeration on the coast, I would estimate, under all reserve, the population of the Yaman as follows (*pace* the French Consul, Sharif Ibrahim, for whose judgment I have the highest respect):—The Yaman falls into three spheres:—

(1) The mountain ranges between the northern frontiers of Aden and the southern frontiers of the mountain rampart of Asir, including the towns of Sana (with from 40,000 to 50,000 inhabitants) and Saada (*circ.* 20,000). This fertile region comprises, at the most, 50,000 sq. kilometres and may have a million inhabitants—the real Yamanites, the *Ziyud*, who constitute the main strength of the Imam of the Yaman.

(2) The coastal plain, the Tihama, some 200 or 220 kilometres in length from fifty to sixty kilometres wide stretching from Hodaïda in the north to Maidi. This new province, of some 13,000 sq. kilometres, has at the most 250,000 inhabitants, who belong to the Sunni sect of the Shafis (or, more correctly, *Sha'afa*) and are anything but trustworthy subjects. South from Hodaïda the rule of the Imam reaches nominally as far as a point south of Mokha, almost at the junction of the Red Sea with the Indian Ocean. (The actual mouth of the Red Sea is controlled by the British through the possession of the small island of Perim, while the French occupy the tongue of land known as Shaikh Said, which makes them immediate neighbours of the Imam of the Yaman. This French colony, however, is not garrisoned and for the moment has no practical significance). This whole region from Hodaïda to Shaikh Said is also about 200 kilometres in length and fifty broad; it should have 150,000 inhabitants, of whom, however, more than half are energetically hostile to Yamanite rule. Between Hodaïda and Mokha, for instance, there is the warlike tribe of the Zaraniq, from 60,000 to 70,000 strong, who make war with some success on the Imam. In the interior they are allied to the Marauwa and Bait al Faqih, who live to the north of the rich town of Taizz and have hitherto asserted their independence. The Zaraniq jointly with these smaller allies bar the way from Hodaïda to Mokha—where their harbour Taif is to be found—and the way from Hodaïda to Taizz. When I wanted to travel there the Amir of Hodaïda refused my request, on the ground that there was war between the Imam Yahya and the Zaraniq and the land route to Mokha as well as to Taizz was impassable. I had to go by boat to Mokha.

(3) The third component part of the Yaman is the frontier zone in the north, east and south-east. In the north the tribes of the semi-pagan Yam folk, as well as

Hon. Sec.

the great oasis of Najran, are subject to the Imam. But the eighty thousand inhabitants of this region, as well as those of the neighbouring territory of Jof and of the district, still farther south, of Al Baida (a hundred thousand in all at the most), are fairly hostile to the Imam. He rules over these lands, but he cannot count on their help in a war against his enemy Ibn Saoud, nor even against the Imam of Asir.

To sum up. The Imam Yahya, according to my estimate, rules over one million Zaidis and, thanks to their loyalty, has brought under subjection another half a million adherents of another faith. That is the whole extent of the forces of which he disposes, and, although the numbers are moderate, they are a tolerable match for those of Ibn Saoud, the ruler of the Wahhabis. For King Ibn Saoud also has among his subjects approximately a million faithful—the Wahhabis (if we may regard the Shammar as already converted to Wahhabism), and half a million others, unwarlike or more than indifferent, who have been brought into subjection in the Hijaz, the Hasa, and so forth.

In view of the numerical equality of the two adversaries the attitude of the Sunni subjects of the Yaman plays a decisive part; for if the Tihama and Hadramaut, Jof, Al Baida, the Zaraniq and various other tribes were to make common cause with Ibn Saoud and his ally, Asir, the King of the Hijaz and Najd would have a decisive preponderance of strength and would, moreover, have the advantage of being able to make a simultaneous attack on the Yaman from all sides. That all these countries and tribes are waiting only for Ibn Saoud's signal in order to overthrow Imam Yahya I had adequate evidence during my Arabian tour.

It is entirely out of the question that the Imam Yahya should wage a war of offence against Ibn Saoud or any of his vassals. The Wahhabis would demolish without any effort the Yamanite army, if it ventured into the climate of the plains, even though it were led by officers of a European General Staff. In 1925 the forces of Imam Yahya remained for six whole weeks in front of Maidi before they could take the port, which, according to rumour, was defended by fifty Masariyah Bedouin of Asir under the command of Shaikh Ahmad Yahar; and there they had no Wahhabis and no Ibn Saoud against them. It is not difficult to foresee the fate of a Yamanite invasion of Ibn Saoud's territory.

On the other hand the Yamanites are extremely dangerous enemies, if they are attacked in their own land. The Turks in 1904-5 lost nearly thirty thousand killed in the Yaman, and even then had to recognize the supremacy of the Imam Yahya. The British in the Aden Protectorate during the Great War had unhappy experience of the Imam's Turkish officers. The mountainous character of the Yaman, the lack of roads, the relatively dense settlement and the really good military organisation of the country simplify its defence.

Thus it happens that the scales as between Ibn Saoud and the Imam are fairly evenly balanced; both are strong in their own country, both are weak in attack. Ibn Saoud is allied with all the neighbours of the Yaman, but the Imam has the advantage of the strategical inner line. Every single one of the Imam's neighbours is much weaker than he is, and consequently he could dispose of them one after the other, before any one of them could penetrate into the interior of his mountain ranges.

King Ibn Saoud is, of course, the ally of Great Britain; but the Imam Yahya enjoys the support of Italy, which can prove more overt and more decisive than that which the British give to Ibn Saoud, for the ruler of Mecca is afraid of being too seriously compromised by Christian help. Ibn Saoud is the commander of sixty thousand Wahhabi warriors, whose greatest joy is war, and for whom a campaign against the Shiah would be absolute rapture; but the military virtues of the Bedouin cease with the desert. Imam Yahya commands not Bedouin, but sixty battalions of regular infantry, with artillery regiments, General Staff and commissariat. He also has a

considerable amount of money; while the Bedouin are poor. Ibn Saoud is the religious head of the fanatics of a purified Islam; for his soldiers war would be a Jihad. The Imam Yahya, however, is also the religious head of his country and he is a descendant of the Prophet, scion of Ali, a holy Lawgiver. He is not far removed from Allah . . . for his own followers.

"*Allah rabbana wal imami imamana*," (God is our Lord and the Imam is our Imam) say the Yamanites as their prayer before battle. They then lay their *Imama* (turban-cloth) on their knee, and say the formula: "On my word of honour, I die here for the Imam." And they fight like tigers.

The fight for Arabia, which is now beginning, resolves itself into a struggle between Wahhabis and Sunnis in the interior of Islam, but the conqueror will not be the commander of the stronger battalions, but the better diplomatist, the greater statesman. For the decision over the future of the Yaman lies between Rome and London.

Professor Sorabji, of Allahabad University, gave an address at All Hallows Barking-by-the-Tower on April 14.

Lt.-Col. Alexander Pringle (late 2nd Bombay Lancers, Indian Staff Corps), of Pembroke Square, left £23,152.

The Viceroy of India and Lady Irwin on April 12 inspected the missionary school and hospital at Srinagar (Kashmir) in the morning, and went to Masabel Lake in the afternoon.

A research party working in the Fayyum Oasis has reported the discovery of a cave near Lake Karun containing human remains, fossilised fish, and some long sickle-shaped flint fish-scrappers.

Mr. Charles Redman, Bey (late Egyptian State Railways), of Albert Road, Ashford, who died on March 7, aged 91, left estate of the gross value of £21,013, with net personalty £20,704.

According to Reuter's Bombay correspondent it is understood that Mr. Srinivasa Sastri, the Indian statesman, has been appointed Agent of the Government of India to South Africa. Mr. Sastri has accepted the appointment.

A special courier left Belgrade on April 11 with instructions for M. Rakitch, Yugoslav Minister in Italy, in connexion with his coming negotiations with Signor Mussolini about the Albanian question.

M. Michalakopoulos, Greek Minister for Foreign Affairs, withdrew his resignation on condition that confidential diplomatic negotiations should be communicated only to party leaders and not to the entire Cabinet.

The Roumanian Parliamentary Session closed on April 15, but Parliament will meet again next month in special Session in order to celebrate the 50th anniversary of independence, and it is intended to concentrate on a single date, May 10, for the various national celebrations.

The Anglo-Hellenic sports held in the Stadium at Athens were concluded on April 17. After the end of the sports the British team, headed by the British Minister, marched through the Stadium and laid a laurel wreath on the statue of Averoff, its founder, and M. Tsaldaris, Minister of the Interior, then distributed the prizes.

An agreement between the Sudan Government and the Hijaz Government, making the cable between Port Sudan and Jidda the joint property of the two Governments named, was signed on December 18 last, and the text is now issued in the Treaty Series [Cmd. 2845]. To this agreement the British Government, "in view of their friendly relations with the Hijaz Government and their position in the Sudan," are a third and assenting party.

Book Reviews

FLYING TO THE ANTIPODES AND BACK.

"AUSTRALIA AND BACK." By Sir Alan Cobham. (London: A. and C. Black. 2s. 6d.)

After the triumphant conclusion of his wonderful flight to Melbourne and back, Sir Alan Cobham "went to bed convinced that at last the public realised the importance of aviation to every Briton, and—what is more—felt that its imagination was aroused in support of this good cause." There can be no doubt that he was right. And this book, written so simply that it thrills the reader the more for its entire lack of "purple passages," well printed, well illustrated, and produced in good style for the remarkably low price of half-a-crown, will do much to maintain this attitude.

The journey was one of many dangers, though they are made little of. But the conclusion at which the reader arrives is that they were incidental to a pioneer trip and that they are all capable of easy elimination when a regular service is inaugurated. The landing and taking off will be properly organised for and adequate meteorological arrangements will do away with the dangers of the monsoon in regard to which the Bay of Bengal is clearly the worst part. While we cannot hope for an entirely regular service through that area in the monsoon months, at least safe flying can be ensured. And Australia itself seems to be the paradise of aviation, with flying days put down as 365 in the year, while the larger part of the area of the continent is available for safe landings.

Sir Alan has blazed the trail for human flight all over the world and will always be remembered for his services in this matter. Another of his services has been the writing of the two unassuming books recounting his great trips to the Cape and back and the one under review. They should be bought and read by every one who feels that the British Empire means more than a name.

C. S-W.

INDIAN MUNICIPALITIES.

"CONSTITUTION, FUNCTIONS AND FINANCE OF INDIAN MUNICIPALITIES." By K. T. Shah and G. J. Bhanurji. (London: P. S. King and Son. 25s.)

This monumental work is mainly addressed to the intelligentsia of India, and is not likely to command general attention in England; though, no doubt, municipal authorities in this country would find a good deal in it of interest—even if mostly academic. It is divided into three "Books," each of which deals with one of the three main heads indicated in its title: and each Book contains a number of chapters varying from ten to fifteen; so that it will readily be realised that it is comprehensive enough. The authors explain that what educated Indians want is Democracy combined with Nationalism (the former to save them from the horrors of the exploitation of the many for the sole benefit of the few: the latter as an instrument to achieve the brotherhood of man): and they believe that Municipal development is necessary for the reconciling of these two seemingly irreconcilable forces. They look to the cultivation of interest in civic matters to lead to the taking of an intelligent interest in national affairs: and to the widening of the civil franchise—which they think ought to aim at the ideal of manhood suffrage—in order to lead people along the right democratic lines. Until the latter ideal can be achieved, they recommend the system of proportional representation, and set their faces sternly against any form of communal representation: and they would altogether abolish the power, at present existing in the hands of the Provincial Governments, of nominating official members or superseding an inefficient municipal

aplicity. "Administrative efficiency," they say, "is unquestionably desirable, though opinions vary on the question whether popular responsibility should be sacrificed to administrative efficiency or vice versa": and they think that the powers of Government, just mentioned, are less used in the interests of true efficiency than in a spirit of distrust. "It is only by developing to the uttermost the local governing institutions that the truest and fullest self-government can be developed. The rôle of Provincial Governments truly lies in fostering and encouraging the growth and development of these institutions rather than in endeavouring to keep them under." These quotations give a fair sample of the views of the writers, and it is unnecessary to multiply them; though it may be suggested that, in what is intended as a serious inquiry into an important subject, six pages describing an imaginary meeting of the Bombay Municipality are rather out of place, even if they provide the authors with an easy means of presenting thinly veiled individualities in an unpleasant light. One of the most interesting suggestions made in the book is that which advocates an open competitive examination, to be held at the same time as that for India's contribution to the Indian Civil Service, for the recruitment of the municipal service, which will become a "consolidated municipal service of the whole of India," for entry into which merit shall be the only guide. The authors say that, even if the result should be that the municipal services throughout the country will be manned by members of one community only, this will not matter: "with the progress of education this disadvantage ought to diminish and eventually disappear." It would seem to follow—though this is a point that the authors do not make—that, in the meantime, the more meritorious community will get a good start on the road to control of the national government for which municipal government is to train them. The less meritorious communities in India would have a good deal to say about this, if they should read the book: a contingency that, one must confess, is not a likely one.

FAITHFUL UNTO DEATH.

"THE LADY OF THE LOTUS." By L. M. Crump (Oxford University Press, 18s.)

Mr. Crump's time spent in service in the States of Central India has, as is still happily common among Indian Civil Servants, led him into the minds and hearts of those among whom he lived. The beautiful ruins of Mandu in the Vindhya Mountains, and its romantic legends led him into researches which resulted in the discovery of an ancient copy of the manuscript, written 328 years ago, of the tale of the love of Bazid Khan, or Baz Bahadur, Viceroy of Malwa, and Rup Mati, a Hindu lady. The story tells of the love of this lady for her unworthy nobleman, of her faithfulness to him after his utter disgrace and of her escape by suicide from the attempt made by his conqueror to take his victim's place. The tale is remarkable mainly for the beautiful and curious essay on woman that ends it. It is marred by the manner its translation. Phrases, for instance, like "that dainty fair" for the heroine are out of tune with the text. It is a pity that Mr. Crump has not more stoutly resisted the temptation to use English of what used to be called the "Wardour Street" kind. Nevertheless he has certainly given us a book to be grateful for. Its interest is enhanced by the reproductions of several of the original illustrations of the manuscript and of others added at a later date, while the pictures of Mandu and its old palaces and pleasaunces are delightful.

Mr. Crump includes a collection of poems by, or ascribed to, the heroine, which have a charm of their own which they do not altogether lose in their Western guise.

The book (paper, type and illustrations) is beautifully produced.

PERSONAL AND GENERAL

TO-DAY

April 21, 1927 (New Style).

April 8, 1927 (Old Style).

Shawall 18, 1345, A.H., of the Muslim Calendar.

Nisan 19, 5687, of the Jewish Calendar.

Lady Stavridi is spending a few weeks in Venice.

The Maharani of Kapurthala and Lady Birdwood left Karachi on April 10 for Europe.

The Hon. Kenneth and Mrs. Mackay left London on April 14 for Tangier.

Sir Charles and Lady Low left London on April 14 in the Ranpura for Tangier.

Lord and Lady Rathcreedan have returned to Bellehatch Park, Henley-on-Thames, from Egypt and the Nile.

Mr. Reginald and Lady Margaret Loder have returned to Maidwell Hall, Northampton, from the Sudan.

The Marquis of Linlithgow reached London from India on April 16, and proceeded immediately for Scotland.

Field-Marshal Viscount Allenby and Viscountess Allenby have returned to Wetherby Gardens from La Croix, Var.

Miss Elizabeth Gathorne-Hardy is expected to arrive at 49, Cumberland Mansions, Seymour Place, from India on April 23.

Aziz Izzet Pasha, Egyptian Minister to the Court of St. James's, is returning to London from Cairo at the end of April.

Sir William Tyrrell, Permanent Under-Secretary of State for Foreign Affairs, left Egypt for England on April 12.

Lady Sheila Jackson, who has arrived from India, is staying with her mother, the Countess of Clonmell, at 28, Gloucester Place.

The Hon. Mrs. Spencer Boyle left London on April 14 by the P. and O. special train to join the Naldera at Marseilles for Port Said.

The Turkish Ambassador and Madame Ferid and Mlle. Ferid left London last week for Brighton, where they spent the Easter holiday.

The Gaekwar of Baroda, the Maharajah of Cooch Behar, and Sir Henry Wheeler, the retiring Governor of Bihar and Orissa, left Bombay on April 9 for England.

The marriage arranged between Mr. Stoyan Petroff Tchomakoff and Miss Lily de Poorter will be celebrated on May 11 at St. Philip's, Buckingham Palace Road.

Lady Sempill has returned from Sicily and the Hon. Margaret Forbes-Sempill from India. They are spending some weeks at Fintray, Aberdeenshire, before leaving for London.

General Sir John Du Cane and Lady Du Cane, who had been spending a few days in Paris, left the Hotel Maurice on April 11 for Malta, where Sir John takes up his new appointment as Commander-in-Chief.

Major-General Lord Edward Gleichen has accepted the Presidency of the British Merchants' Morocco Association in succession to the Earl of Onslow, who resigned on his appointment as Under Secretary for War.

Princess Antoine Bibesco left London last week to join Prince Antoine Bibesco in Paris, where they made a brief stay before leaving for Madrid, where the Prince will take up his duties as Roumanian Minister.

NEWS IN BRIEF.

M. Masaryk, President of Czechoslovakia, has arrived in Athens on a short stay. He is travelling as Thomas Marsden, University professor.

The Bulgarian Chamber last week adopted the Government's Electoral Reform Bill, which institutes a system of proportional representation.

Colonel Foster Lionel Cunliffe, whose death is announced, served in the Afghan War in 1878-9, gaining the medal, and on the North-West Frontier of India in 1897-18, obtaining the medal and clasp.

Colonel Robert Charles Graeme (K.O.Y.L.I., retired), of Brackenhurst, Camberley, who saw service in the first Afghan War and on the North-West Frontier of India, and who died on January 21, aged 83, has left unsettled property of the gross value of £69,984, with net personalty £63,472.

It is expected that when King Fuad arrives in London early in July he will be accompanied by the Under-Secretary for Public Health, Mohammed Shabin Pasha, as well as Hassanein Bey, First Chamberlain, and other Court officials.

M. Mitilineu, Roumanian Foreign Minister, replying in Parliament to a question about the new Italo-Hungarian Treaty, protested against any suspicion of the loyalty of the Italian nation or Prime Minister, and stated that Roumania welcomed any new Treaty tending to maintain the *status quo* and to bring about general agreement in Central and South-Eastern Europe.

King Faisal presided at Baghdad at the formal ceremony, on April 13, of naming the new Cairo-Karachi air-liner "City of Baghdad." There was a large muster of Iraqi notables, a hundred of whom were given demonstration flights. The High Commissioner, Sir Henry Dobbs, in a speech, said that the conquest of the air gave back to Iraq "her ancient geographical primacy as the central region of the earth."

The will of Mr. Herbert Edward Nichols, Woking, and Britannic House, Finsbury Circus, E.C., a director of the Anglo-Persian Oil Co., the Turkish Petroleum Co., the British Petroleum Co., the British Tanker Co., Scottish Oils, and a number of other oil and industrial concerns, has proved at £33,030.

The death is announced from Kenya of Lieutenant-Colonel Richard Harold St. Maur, of Stower, Newton Abbot, Devon, who served in the Great War, 1914-19, first at Gallipoli, then in the campaign against the Senussi, and, lastly, as *liaison* officer between Lord Allenby and the French forces.

SHELL

A DELPHIC FESTIVAL.

On May 9 and 10 Delphi is to witness a festival organised by the Greek poet, M. Angelos Sikelianos, in the hope, as he has explained, of bringing together from all parts of the world men and women who have striven in the various branches of science, art and religion for noble ends. The aim of the festival is to contribute towards a betterment of human understanding. To this end Delphi has been chosen as symbolical of a higher understanding between nations, inasmuch as it is—or was—a great religious centre, now freed from inter-racial dissensions. Whatever the associations of Delphi, there can be little doubt that the appeal which it made originally to the ancient Greeks, to cause it to be selected as the site of the famous oracle, is equally strong to-day. Here is the description which Sir James Frazer has given of it:—

The site of Delphi . . . is in the highest degree striking and impressive. The city lay at the southern foot of the tremendous cliffs of Parnassus, which form a sheer wall of rock, about eight hundred feet high. . . . Just at the angle where this vast wall of rock bends round from the south it is rent from top to bottom by a deep and gloomy gorge. Facing each other across this narrow chasm rise two stupendous cliffs, whose peaked summits tower considerably above the rest of the line of cliffs. They are nearly perpendicular in front, and perfectly so where they fall sheer down into the gorge. . . .

Thus, enclosed by a rocky ridge on the west, by tremendous precipices on the north and east, and faced on the south, across the valley of the Plistus, by the lower but still precipitous sides of Mount Cirphis, Delphi lay in a secluded mountain valley; and, rising on terraces in a semi-circular shape, it resembled an immense theatre, to which it has justly been compared by ancient and modern writers. The whole scene is one of stern and awful majesty, well fitted to be the seat of a great religious capital. In respect of natural scenery no contrast could well be more striking than that between the two great religious capitals of ancient Greece, Delphi and Olympia—Delphi clinging to the rugged side of barren mountains, with frowning precipices above and a profound glen below; Olympia stretched out on the level margin of a river that winds in stately curves among the cornfields and vineyards of a smiling valley set between soft wooded hills.

M. Sikelianos, therefore, has chosen his site well for an occasion which it is perhaps best to describe in his own words (recorded in five languages):—

"Wishing," he writes, "to place a spiritual action on a pure dynamometric level, we have followed, in order to elucidate it esoterically and historically, the integral method which the Aryan or Orphic tradition has bequeathed to us in its three forms—the retrospective, the foreseeing, and the loving. . . .

"The esoteric fulness of the Orphic method seemed to coincide intimately with the highest and keenest needs of all spirits which are sincerely and profoundly exercised by the problems of our age. As for the arena of Delphi, we chose it because, absolutely released by time from every cause of dissension and arhythm, and guarding in itself only the reflexion of a central spiritual heritage, which seems, as it were, perpendicular to the whole earth, it lent itself to the clearness and universality of our purpose.

"Certainly, a spiritual action presupposes many outlets on the surrounding reality, but precisely in consideration of the ultimate symmetrical development of its fundamental dynamics, as we originally conceived them, we chose to inaugurate it by the august teaching of a world festival, bringing together the purest elements for this sacred purpose."

There is, however, also a practical strain in the Poet, or in Madame Sikelianos, who has devoted three years to the preparation of the costumes and embroidery work to be worn by the actors and actresses, or in the various committees formed to organise and supervise the Festival. Delphi is neither notably accessible, nor in ordinary circumstances adapted to accommodating large numbers of people. To overcome these obstacles the official arrangements provide for the transport of visitors by sea from the Piræus to Itea, the port on the north side of the Gulf of Corinth, half an hour by car from Delphi. The steamers will remain at Itea, and visitors will return in the evening to sleep on board, as the Festival lasts two days.

The central event of the open-air Festival is the performance on the afternoon of May 9 in the Theatre at Delphi of "Prometheus Bound," Æschylus's great masterpiece, or, as M. Sikelianos describes it, "the universal and Titanic Æschylean hieroglyph, which seems still to dominate in its spiritual significance not only the suffering

race of Japhet, but all human races, those of the East and those of the West, which are all struggling, some blindly, some consciously, to know themselves at last on this earth in full creative effort and concord." The play will be given in Modern Greek, as translated by M. Gryparis, the Greek poet.

For the rest, the programme includes, on May 9, visits to the ruins and the Museum, lunch to the accompaniment of peasant choirs, dinner by torchlight; on May 10, an exhibition of popular art, athletic sports and national dances in the Old Stadium, and in the evening a concert of sacred music in the Theatre.

A ticket for the Festival costs 25 dollars; the charge for transport between Itea and Delphi during the two days is 10 dollars, and the cost of the passage from the Piræus to Itea and back (three nights on board) by Greek steamer will be £2 10s.

THE BALKAN COMMITTEE.

The following resolutions were passed at the meeting of the Balkan Committee held on April 7, 1927:—

1.—This Committee reaffirms its opinion that the absolute independence of Albania is a matter of international concern, and that while the other Powers may properly offer, and Albania may properly accept assistance which will promote her social and economic development, no interference in her internal affairs from any quarter can be justified which would involve any derogation from her status as a sovereign State, member of the League of Nations.

2.—This Committee is further of opinion that the recent diplomatic incident following the Treaty between Italy and Albania and the Agreement of 1921, between the British, French, Italian, and Japanese Government, makes it advisable to obtain some unqualified recognition of the unimpaired independence of Albania. In the opinion of the Committee the best assertion of such independence can only be obtained by full submission of any differences to the arbitrament of the League.

THE YUGOSLAV CABINET.

The new Yugoslav Cabinet was on April 17 re-constituted as follows:—

Premier and Minister of the Interior and Education, *ad interim*—M. Velia Voukitchevitch.
Foreign Affairs—M. Voya Marinkovitch.
Finance—M. Bogdan Markovitch.
War and Navy—General Radjitch.
Commerce and Industry—Dr. Mehmed Spaho.
Justice and Public Worship, *ad interim*—M. Rikitch.
Communications—General Milosayevitch.
Forests and Mines—M. Kosta Koumanoudi.
Agrarian Reform and Public Health, *ad interim*—M. Vlada Andritch.
Agriculture—M. Svetozar Stankovitch.
Social Welfare—M. Atza Mijevitch.
Public Works—M. Ilia Choumenkovitch.
Without Portfolio—M. Peritch.

The King of Yugoslavia has prorogued the Skupshтина until August.

The Greek Chamber was prorogued on April 16 for the Easter vacation until May 2 without having voted the new Constitution.

King Boris closed the Bulgarian Parliamentary Session of the Sobranie on April 15.

Queen Marie of the S.H.S. Kingdom, daughter of King Ferdinand, who went to Bucharest recently in consequence of her father's ill-health, returned to Belgrade on April 17.

L'Echo de Turquie announces that on and after April 14 it ceases to exist, and will appear under the title of the *Milliet*, a French edition of the Turkish paper of that name. The *Milliet* is edited by Mahmoud Bey, deputy for Seirt.

Mr. Israel Davis (Chairman of the *Jewish Chronicle, Ltd.*), left estate of the gross value of £301,198. In bequeathing a moiety of the remainder to the English Zionist Federation he requested the Federation "to encourage as much as possible the speaking, writing, and learning of the English language among the inhabitants of Palestine, as I deem that language more suitable than Hebrew or Arabic for the advance of civilisation."

A CENTRAL ROAD BOARD.

In reply to a question by Mr. George Pilcher, Lord Winterton stated in the House of Commons on April 11, that no request for expert advice and assistance in connexion with the improvement of the Indian road system had been received from the Government of India. One of the most pressing problems of the day in India is, admittedly, the extension of cheap and efficient transport facilities, and for some time past there has been a movement on foot to bring about a more general appreciation of the increasingly important part which mechanical transport is destined to play in that connexion. This reached a concrete form at the end of January, when an Association was formed at Bombay with the declared purpose of "propagating the development and improvement of roads in India and consequently facilitating transport." The headquarters of the Indian Road and Transport Development Association will be in Bombay, and committees have also been formed at Calcutta, Karachi and Madras, while the establishment of others is proposed at Delhi, Lahore and in other large centres. The aims that the Association has set before itself are the opening up of parts of the country at present inadequately served in the matter of communications, the promotion of commercial, agricultural and industrial enterprise by means of the development of roads and of road transport, the securing of such enterprise from the consequences of injurious legislation or undue executive interference, the adjustment of taxation, customs duty and excise affecting motor vehicles and motor accessories, as well as other means of road transport, and employment of the money thus gained or saved in such a manner as would best assist the development of road transport. The association recognised the very considerable efforts now being made by Provincial Governments for the improvement of their road systems; but thought it necessary that these should be co-ordinated, so that all sums spent by local Governments on any road constructed by them should be part of a well thought out all-India scheme. For this purpose, arrangements were made to bring the matter up in the Central Legislature, with a view to persuading the Government of India to form a Central Road Board that shall supervise and co-ordinate the road-making activities of the Provincial Governments.

The state of the roads in and round many of India's most important centres has long been a crying scandal—one on which even Mr. Gandhi himself has pronounced a severe condemnation. Away from the main centres, matters are, in many cases, much worse. A correspondent of the *Statesman* recently referred to the state of affairs on an important district road in Southern India where at one point "for more than four months a wide and deep ditch, caused by heavy rain, in the centre of the road, was allowed to continue," and, at another, "a rickety bridge was suffered to remain for two years, under official instructions that loaded carts and motor buses should unload before crossing it and reload after having done so." Apart from such deplorable conditions, there are, in

many places in India, gaps in the road system which prevent continuous traffic, at any rate by motor car, between some of India's most popular places of call. To take only one instance, the port of Karachi has no road connexion whatever with the rest of India outside a limited part of the "Province" of Sind. Roads are a "provincial" subject, and a few of the Provinces have Road Boards of their own, though these at present exist only in the Punjab and Assam, while there is an Advisory Board in Madras. What is wanted is a Central co-ordinating Board: and the formation of the Bombay Association, only a month after the passing of a resolution in favour of a Central Board by the Associated Chambers of Commerce at Cawnpore, shows that the non-official European community do not intend to let the grass grow under their feet. There has as yet been no report of the moving of a resolution in the Assembly, but one was moved in the Council of State, early in February, which recommended that the proceeds of taxation on motor transport should be placed in a separate account for road development, and that, from the fund so formed, the Central Government should make yearly grants to the Provincial Governments for the upkeep and development of their road systems. This resolution was withdrawn in favour of an amendment under which a Committee of both Houses of the Central Legislature will "examine the desirability of developing a scheme, inquire whether it could be financed, and consider the formation of a Central Road Board for the purpose of advising in regard to and co-ordinating a policy in respect of road development." This somewhat cumbrously worded amendment was accepted by the Government, with some reservations. The Government spokesman explained that, as roads were a provincial "transferred" subject, it was necessary to walk warily in order to avoid any appearance of interference by the Central Government; which, moreover, being committed to the policy of abolishing the provincial contributions to the central revenues, had no money to spare for grants to further a new scheme, however beneficial. The Government view was that public opinion should be educated to realise the importance of transport in India, particularly in agriculturist India; and it would welcome a careful survey of the main lines of road communications with a view to finding where improvements and extensions were needed. On this understanding, and with the proviso that Provincial Governments also agreed to the proposal, the Government of India would accept—or, at any rate, would not oppose—the amendment; but the speaker added—perhaps unnecessarily—that the matter itself was one in which the Government of India was not prepared to rush.

The main difficulty is evidently that of finance. At the Associated Chambers meeting in December, Sir Joseph Kay, the Bombay delegate, suggested that the work of the proposed Road Board should be financed by road bonds, the interest on which might be met from the proceeds of the excise duty on petrol. The excise at present yields over 82 lakhs of rupees per annum and the receipts are likely to show a steady expansion. The

same speaker also advocated the reduction of the import duty on motor vehicles, which would allow of the levy of a special vehicle tax, the proceeds of which would be exclusively devoted to the improvement, maintenance and construction of roads and bridges. This latter suggestion has already been adopted in the new Budget: and it may certainly be hoped that, though the reduction of the import duty will not lighten the burden on the purse of the motorist, the taxation that he will pay in future will be returned to him through improved road facilities—which is emphatically not the case at present. The rampant profiteering in petrol which has been for so long in existence in India would, also, be less objectionable if motorists could feel that the Government revenue from petrol, which provides one of the profiteer's stock excuses, would also return to him in kind. This is, perhaps, too much to hope for: it is pretty obvious that the Central Government does not intend to pay out any of its own money on roads, and that the Central Government relies upon the Provincial Governments to enable him to face with equanimity the pressure of public opinion and the co-ordinated efforts of various public bodies which, as the *Statesman* puts it, are rapidly attaining a momentum too powerful to be further resisted by the Government of India. In principle, the Government certainly recognises the vital importance to India of good roads, not only as feeders to the railways from which it draws a large revenue, but also as one of the firmest bases on which to build the increased agricultural prosperity that is India's hope for the future. And it is certainly reasonable to suggest that, in the very large remission that it is making to Provincial Governments by extinguishing their contributions to its own funds, it may expect the latter to find the money for the expansion of road-transport that is as necessary to them as well as to itself. The Bombay Government has already given a lead in this direction by providing the sum of Rs. 5 lakhs in the current year's Budget for that purpose, in spite of the severe financial stringency. The demand for a Central Board, which should have control over a central fund, shows the growing realisation of the need for a central co-ordinating authority that would restrain the natural tendency of each Province to work out its own ideas independently of its neighbours. There are many aspects in which India has to be considered as a whole, and this is certainly one of them. It may be admitted that the money would have to be found by the Provinces; but authority without power is but a pretence: and if the Central Board is to exercise any real authority, it can only do so by being invested with the power of regranting their own money to the Provinces on the condition that they are prepared to spend it on properly co-ordinated schemes.

CURRENT TOPICS.

The Calcutta Mayoralty.

The reported defeat of the Swarajist candidates at the recent election of aldermen by the Calcutta Corporation will be welcomed by all, both Indians and Europeans, who have viewed with grave misgivings the progressive deterioration of municipal administration in Bengal under the influence of Congress politics. According to *The Times* correspondent, Mr. Sen Gupta, the former Mayor, was the only member of the party who secured election, the combination of the other parties capturing the remaining four seats. Although the solidarity of the Swarajist bloc was weakened by the secession of Mr. Sasmal, whose followers gained eight seats at the polls, it was generally assumed that in spite of their quarrel the two sections would work together in the Corporation and the political complexion of the new Council remained an uncertain factor until the balance of voting strength was determined by the election of the Aldermen. The result has an especial significance in that the issue depended largely upon the attitude of the 15 Muslim Councillors. The Congress organisation claimed nine Mohammedans as supporters of the Congress programme, but the estimate was generally regarded as

unduly optimistic in view of the expressed desire of the Mohammedan electors that their representatives should make the interests of the community their first consideration.

In the event it appears that the Muslim group has wisely decided to retain its own individuality, although no doubt its influence will be thrown on the side of the Congress party on the rare occasions when the latter's interests coincide with those of the Muslim community. Anyhow the immediate outcome of the aldermanic election is that the non-Swarajists—a loose combination composed of the Muslim, Independent Hindus, Europeans and nominated Councillors—now number 48, as against the 42 adherents of the Congress creed. The victory is a decisive one and according to *The Times* correspondent there is a probability that Mr. Sen Gupta will be defeated for the Mayoralty. The result of the next trial of strength will be awaited with interest, but it is clear that the rate-payers are at last rebelling against the domination of party politics in the civic affairs of the "second city of the Empire."

Separation of Sind.

The proposal of the Muslim Conference that Sind should be constituted a separate Province, as the principal condition on which the Muslims would agree to a joint electorate in place of the existing communal system, has given rise to some discussion. As any such redistribution of provincial boundaries must involve prolonged consideration of many interests, the proposal might be taken as a polite method of indefinitely delaying the advances of the Hindu politicians without subjecting them to the pain of rejection. The suggestion, however, for the separation of Sind from Bombay is not new, and could be supported on grounds other than those of electoral bargaining. Sind is markedly distinct in racial, climatic, and geographical features from the rest of India, and certainly from the Presidency Proper, as it is locally described, of Bombay. Its connexion with the latter was originally due to temporary circumstances rather than to any natural link. Sind was conquered by troops from Bombay, and when the Military Government established by Sir Charles Napier had to be replaced by a Civil system, Bombay was at the time the obvious source from which to obtain the necessary men. We believe that on two occasions the decision to offer Sind to the Punjab was actually arrived at. The decision was not carried into effect for various reasons: but this would at first sight seem the natural solution, especially as it would bring the whole of the river Indus, and the irrigation systems depending on it, under one control. Any such solution, however, would be so generally unwelcome as to be impossible. The Sindhis, as a whole, dislike the Punjabis, and would fear to be swallowed up by them: the Hindus and Sikhs of the Punjab would be alarmed at so large an accession to the Muslim majority: while the official classes of the Northern Province would probably fear that the necessity for residing at least occasionally at Karachi would serve as an excuse for curtailing their stay at Simla, if not for ejecting them altogether from that delectable spot. On the other hand, Sind cannot be properly administered from Bombay, at the ultimate discretion of a Legislative Council the majority of whom are entirely alien to the smaller Province, especially when so much of the administration is in the hands of Indian Members and Ministers with no personal knowledge of its peculiar features. The commercial bodies of Karachi constantly feel, whether with or without adequate reason, that the interests of that city are subordinated to those of Bombay and that they are not given adequate support in the redress of grievances, such as the inadequacy of railway communication. Sind, as a whole, has always believed that it does not receive a proper share of the Bombay Government's expenditure. Some years ago a very able statement was put forward by the Bombay Secretariat to show that this was entirely incorrect: but this statement was never perhaps fully tested. The Sukkur Barrage is doubtless being built on the credit of the Bombay Government. As the project, however, is

ex hypothesi financially sound and indeed remunerative, it could clearly have been undertaken by Sind itself, or by the Government of India on its behalf. If Sind could be united with Baluchistan, a Province would be formed of sufficient size, with a homogeneous population, and a charming variety of climate. There would, however, be serious political questions to be faced. Whether Sind could stand alone is a matter for consideration. There is much to be said for the division of India into smaller units, and Sind would be at least larger than Assam, while the drawbacks of a small cadre could be overcome by occasional assistance from Bombay and the Punjab. The question, however, deserves discussion on its merits, and not as an item of electoral contention between two political parties.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 31.

Lord Lytton's Departure.

Lord Lytton's five years tenure of office as Governor of Bengal came to a close on Monday, March 28. His Excellency's career in India could hardly be surpassed for interesting problems and unfortunate events. It has been Lord Lytton's misfortune to fail in establishing the Montagu-Chelmsford Reforms, of which he was an ardent supporter. It was not his fault to have the thankless task of crushing a revolutionary conspiracy, in which he thought his own life was threatened as well as those of his chief officers. He certainly was not wholly and solely responsible for the device of arresting, and for years detaining in prison, educated young men, to whom no fair public trial could be granted. Lord Lytton vainly endeavoured to educate the Indian leaders to understand constitutional conventions from the British point of view. What can be said is that the departing Governor did what he thought was his duty; that he has experienced dark hours, and that he leaves a clearer coast to his successor. Lady Lytton never spared her efforts when a generous cause was at stake. Her Excellency has done much for the welfare of the women and children of Bengal. May Lord and Lady Lytton leave this tumultuous country without bitterness in their hearts.

Currency Bill Debate.

Though, after a lengthy discussion, the Council of State adopted the 1s. 6d. ratio by 31 to 10 votes, many members still object to it, in spite of the Commission's assurance that it is the most reasonable exchange in the very interests of the masses (c.q.f.d.). It is supposed to better considerably the lot of the agriculturist. To watch the progress of the scheme for five years is all that has to be done to become convinced of the excellence of the currency reform. So they say. Some find the decision comical; others take it tragically. The best is perhaps to wait and see.

The Salt Duty.

The Finance Bill included the reduction of the Salt Duty. From 1s. 4d. per maund it had been reduced to 10 annas. The salt tax has often been opposed on hygienic grounds, but a reduction which meant a sacrifice of not less than three crores of revenue was not one lightly to accept, and the Council reversed the Assembly's decision, and restored the tax to 1s. 4d. The motion was carried by 25 votes against 8. The Assembly has acquiesced.

Bengal Detenus.

The Indian Press is full of infuriated, ironical or disappointed comments on the announcement made in the Assembly by Sir Alexander Muddiman regarding Government's decision on the political *détenus*. *Forward* says: "They are ready to release Subhas Bose without demanding any admission as regards his part, or any promise as regards his future conduct, but on the condition that he will be stowed away to Europe, in some air-tight con-

veyance. If he may be considered safe in Clydeside, Berlin or Moscow, what is there to think he will not be as safe in his own home? The prison doors will be flung open only to the magnetic touch of strength of the country. It is we who hold the master-key." The *Indian National Herald*, Mr. Horniman's paper, says that the Government's offer "is a challenge to the country's leaders to be up and doing," and the *Bombay Chronicle* speaks of "the presumption of the Bengal Government in asking Mr. Bose to banish himself out of India. It will be far better for Mr. Bose to give a chance to his countrymen to get the Black Ordinance abolished." The offer made to the Swarajist leader, that he would be released on condition that he should proceed immediately to Europe, and undertake not to return to India, Burma or Ceylon so long as the Bengal Ordinance is in force, may be accepted yet. That is what the other papers call "a free choice, indicating the readiness on the part of Government to respond to the public demand, as far as circumstances allow." The offer is made publicly, before it is communicated to the prisoner, so that it may not be suspected that he has been forced into acceptance. "If Mr. Bose remains in prison," says the *Statesman*, "he does so by his own will. If he remains, he ceases to have any of the attributes of the martyr. Government alone possesses the evidence upon which these men are detained." Such is the situation.

Saklatvala and Gandhi.

Mr. Saklatvala, the Communist M.P., addressed the students of the Aligarh University a few days ago. The hall and gallery were packed to their utmost capacity. The enthusiastic speaker declared, amid cheers, that the real aim of education should not be to equip young men for earning fat salaries or growing rich in business. Education meant more social service; it helped in the study of human life and, thus, to leading a new life. The new generation had to play a new part of responsibilities and true patriotism. University education was considered a luxury. The educated ones had the advantage over the illiterate of being able to use libraries, laboratories and museums. In Europe many children left school at the age of fourteen, and went to earn a living straight away. They were self-supporting at sixteen, and responsible for others at twenty. Mr. Saklatvala, in his speech at the National Congress held at Delhi, has urged the Congress leaders "to organize the peasants and the working classes, to enable them to take their proper place in the struggle for national freedom." *Forward*, while admiring Mr. Saklatvala's zeal for organization, condemns his attack on "those who, for their saintly character and services to the country, deserve to occupy a high place in popular estimation." Mr. Gandhi, who is touring, has also delivered stirring addresses, and his appeal for educational funds was heard and responded to with two lakhs of rupees. Women's ornaments were simply poured at his feet. He urged all those present to remember that the murdered Swami was a great lover of the untouchables. Professor Indra, the Swami's son, has received a telegram from Mr. Saklatvala asking him to apply for mercy, and appeal against the execution of his father's murderer. It is hoped that Professor Indra's magnanimity (he has agreed to forgive the murderer) will lead to a restoration of good feeling between the two communities. It is high time. India cannot stand any more divisions.

Here and There.

Miss Slade, the Admiral's daughter and follower of Mr. Gandhi, performed a few days ago the flag-hoisting ceremony organised by the All-India Spinners Association. Mirabai (Miss Slade's new Indian name) clad in pure *khadi* delivered an impressive speech in Hindi. She said that the Indian National Flag had a greater significance than all the flags of the world, since it represented Hinduism, Islam, Christianity and the many other religions, all of which were respectable. The flag was not only the symbol of the nation, but of our duty to it, she added.

Miss Violette Cordery, the long-distance motorist,

arrived in Calcutta last week. The western Indian Automobile Association of Bombay has made all preliminary arrangements for the Indian part of the tour. Miss Cordery proposes to make for Ceylon, whence she will sail for Australia. She is accompanied by a lady friend, the observer of the R.A.C. and a mechanic. From Australia she intends to cross Canada and the States before returning to England.

The plea for prohibition found no favour with the Bengal Legislative Council. Mr. F. E. James said that one could not expect any Government to be deeply imbued with temperance ideas (sic). Mr. James thinks it is not a matter for Government, but for social reformers. Dr. B. C. Roy then said that statistics showed that more licences had been granted for liquor shops, thus inducing the people to go for more drink. Government considers total prohibition as an unjustifiable interference with the liberty of individuals! The motion suggesting the reduction of the Ministers' salaries to make up for the loss in excise duties, if prohibition were voted, was lost, 45 voting for the motion and 61 against it.

Col. Gidney, who has for so long fought to get the Anglo-Indians enlisted in the Army, has accepted on behalf of all the provincial branches of the A.I. and D.E. Association that the pay of Anglo-Indian soldiers should be from 60 to 72 per cent. of the British soldiers' wages. Col. Gidney strongly advises the Anglo-Indians to be content with those terms.

The Members of the Central Legislature who are interested in civil aviation held a meeting recently at New Delhi, Sir B. N. Mintra presiding. It was resolved to form an Aero Club of India. The foundation committee includes Sir Victor Sassoon as President and Dr. Moonjee as Secretary. The Viceroy will be approached as its patron, and the King asked to allow the Club to be called the Royal Aero Club.

The distress of the famine-stricken areas in Orissa is getting worse day by day. The Government of Behar and Orissa are said to be "watching the situation carefully." The Indian papers suggest that watching alone will not do. Suffering is the ordinary lot of the Oriya, but when the country is flooded it is starvation, pure and simple. No reports appear in the Press, though in some areas people are living on roots and green leaves not generally used as food. Drinking water is becoming scarce.

Calcutta Amusements.

The delayed arrival of the de Forest Phonofilms has resulted in a heavy booking at the Opera House (Globe) this week. The invention is certainly worth witnessing; its results are amazing. To see dancers performing, with the Hungarian Rhapsody played by an orchestra whose performance is registered at the same time, instead of having people moving anyhow to unsuited rhythm is undoubtedly an improvement worth mentioning. Let us hope that the marvellous discovery of synchronization will not be put to the service of vulgarity.

Another great attraction has been Irving's Imperial Midgets. If the object of the company was to raise laughter, they have achieved that object. There are born comedians, clever acrobats, good singers and dancers, even musicians among them; but there is always something tragic in the exploitation of physical imperfections or peculiarities. I must hasten to say that the Calcutta public did not seem to make the slightest sacrifice of principle, and enjoyed the visit thoroughly. Sir Benjamin Fuller, the Australian theatrical magnate, is supposed to have said that "watching the Midgets on the stage was like looking through a telescope backwards." I hope it was meant as a compliment.

The "Eternal Spring" about which I wrote last week has been repeated at the Empire. The Peep Show company provided great amusement to the Calcutta audiences. One item called "Memories" is a sketch of anticipations. The scene takes place in 1980, and old soldiers speak of the Great War. Someone in the audience wittily re-

marked: "Perhaps we are going to hear how the Howrah Bridge has been reconstructed." And everybody laughed; but who knows, it was perhaps arranged that someone should say that. The "little scandal in the audience," as the French call that sort of premeditated interruption, is still fresh for Calcutta.

BOMBAY NOTES.

At the beginning of April the old man's fancy is heavily turning to two thoughts—to thoughts of retirement from India, and of the new Budget at Home. And these two thoughts are very closely connected: because there is no doubt that a great many Indian pensioners become of necessity Income Tax dodgers: or as an English judge more elegantly put it, they avoid the obligation of attracting the incidence of Income Tax upon themselves.

Some years ago I stayed in a small Swiss village, where I was informed that there were over seventy resident English families, a very large proportion of which were dependent on Indian pensions. Possibly living is cheaper in Switzerland than in England, though I should have thought that there was very little in it: but I have no doubt whatever that you can live better in Switzerland on £1,000 a year than you can in England on £800: which is £1,000 a year, less Income Tax.

A Moot Point.

So you have the natural and entirely legitimate consequence that a very large number of pensioners—probably a quite overwhelming percentage of those who are wholly dependent on their pension—are driven abroad where they can spend the whole of their income on their maintenance, instead of having to contribute 20 per cent. of it to the Income Tax collector: and the question must present itself, whether the law that leads to this sort of thing is altogether wise and advantageous.

The most advantageous thing for the country is no doubt that a man with a pension of £1,000 a year should spend £800 in England and pay £200 in Income Tax. But, if he has no intention whatever of paying Income Tax at all, it seems to me much more advantageous that he should spend his £1,000 in England than abroad: and I make a present to the Chancellor of the Exchequer of the suggestion that it is worth his while to investigate the possibility of paying pensions free of Income Tax under certain conditions. I should not be surprised to find that the Income Tax now paid on the pensions which I should propose to exempt represents a very few pence in the pound: and my own views of economics makes me believe that the most important thing in England to-day is to attract all possible spending power into the country. However, my scheme is not in the least likely ever to be adopted: but it does seem to me to be a pity that so many retired servants of India should be still left to live in exile from England. Their pension is not, nowadays, such a splendid one as to attract the attacks of jealousy.

The Cotton Mills.

The reports that are now being issued seem to emphasise the difference between the prosperity of the up-country mills, at Ahmedabad, Sholapur, and elsewhere, and the very sad plight of the industry in Bombay itself. The greatness of the difference is not very easy to understand. Up-country mills are naturally established in good cotton country, and they therefore have the protection of the difference in freights both ways—on the raw cotton down to Bombay and on the finished material back again: but this hardly seems sufficient to account for the difference between a profit of many lakhs and a loss of the same amount. Possibly the explanation is that the up-country mills manufacture for the known requirements of their own markets, while the rank and file of Bombay mills are far too much content to make standard lines, which may—or may not—be taken by the thousand bales at a

time for the China market. But in any event the difference is very remarkable, even in the case of mills which may reasonably be considered to be managed with quite equal skill and care, and the careful investigation of this phenomenon might throw light on quite a lot of things.

AGRICULTURE IN INDIA.

The recent arrival in England of Lord Linlithgow, the chairman, and the members of the Royal Commission on Agriculture and the expectation that the Commission will draft a great deal of its report before returning in the autumn, to complete their tour of India and Burma, make it opportune to recall the main reason for its appointment, which followed closely upon the heels of an announcement by the Government of India that it was intended to co-ordinate work for the development of Indian agriculture.

This announcement was capable of more than one interpretation and it is felt amongst those who have studied India's agricultural problems impartially that co-ordination should not mean central direction, but that the independence of the various provinces and their right to develop their Agricultural Departments along lines most suited to their own needs and resources should not be challenged or be a subject for discussion. Proper appreciation of the many questions involved is impossible without a survey, however brief, of the relation of agriculture in India to her general well-being and of some of the more important factors that arise.

Agriculture in India is by far the most important of her industries, and apart from the wealth it brings to the State, it provides three out of every four people in India with a means of livelihood. It is axiomatic therefore that the prosperity of India cannot be increased materially except by the development of agricultural productivity and taking the matter a step further, that unless the purchasing power of the people of India, which to an overwhelming degree means the agricultural population, is substantially increased, modern methods of manufacture in that country, with or without the artificial stimulus of tariffs, may rapidly reach their limit of expansion. Members of the community, whether their primary interest is to sell goods to India or to sell India's crops or to manufacture goods in India, must be vitally concerned with the progress and development of agriculture in that country and cannot afford to leave any stone unturned to attract brains, enterprise and capital to it.

If brains and enterprise and capital are to be attracted it follows that the State must take steps to co-ordinate the various activities of agricultural development and must realise its responsibilities for the provision of means for agricultural research, for the agriculturist cannot be expected to work out his own salvation on empirical lines. India is an illiterate country and agriculture presents a large number of highly specialised problems which can only be solved by highly trained specialists, research being the foundation of all progress in this as in other industries.

Much, of course, has already been accomplished by the small staff of research workers of the Imperial and Provincial Departments of Agriculture and India owes much to this small and loyal band of men. But the future of agriculture in the light of the Reforms must be examined and consideration must be given to the problem of obtaining under the present system the full driving and organising power of the State, which is so necessary to agriculture.

It must be remembered that agricultural problems do not coincide with administrative boundaries, many of them being common to large tracts, and their proper solution may be necessary to the welfare of the country as a whole. The need therefore for co-ordination will at once be obvious.

Co-ordination is frequently associated with centralised control but clearly this is not the form of co-ordination which is necessary. What is needed is some organisation

promoting free co-operation between those engaged on identical or allied work.

So far as cotton is concerned there is such an organisation in the Indian Central Cotton Committee on which all connected with cotton, whether from the commercial, industrial, agricultural, or scientific point of view, are represented and this Committee is in the unique position of possessing funds of its own for the promotion of research. But it is at once apparent that there are comparatively few crops to which this particular form of organisation is applicable. Cotton is unique in that there are no fewer than seven cotton growing provinces and several very important cotton growing Indian States while the cotton mill industry is of the first magnitude as is the export trade in cotton. Jute is to some extent a parallel except that it is largely the monopoly of two provinces. Sugarcane is manufactured in the country but factory methods only apply to a relatively small portion of the whole, while there is no export trade.

But, though it is probably not possible to provide parallels to the Central Cotton Committee to deal with other crops to the extent of possessing independent funds for the promotion of research, one side of that organisation might be copied with advantage in connexion with general agricultural problems, for the outstanding success of the Central Cotton Committee has been due to the sustained effort in which the commercial community, the grower and the Agricultural Departments have all taken part and to the mutual trust that has accompanied that effort. Consequently the problems which they have tackled have been properly examined from every point of view and, when a recommendation has been put forward to Government, it has included a practical and generally acceptable working scheme.

India is an important exporter of wheat, oil seeds, fibres, etc., and when the improvement of an export crop is being dealt with there would seem to be every advantage in enabling the Agricultural Department and the commercial community to discuss matters together. Whatever organisation may be decided on for the co-ordination of agricultural effort, this is a point which should be kept constantly in view.

Another very important function which such an organisation as has been foreshadowed could perform, is the spreading of agricultural knowledge amongst the educated classes as to what agricultural improvements have been introduced and what they mean to the country, and in particular the Agricultural Departments want the backing of the Legislatures. The burden of this duty cannot be placed entirely on Provincial Agricultural Departments, for when it is realised that they not only have to undertake research, experimental and development work but also act as seedsmen and occasionally as dealers in implements and manures and have moreover to organise village demonstrations and publish simple vernacular pamphlets, it will be realised that they have little time for general propaganda, and yet such propaganda is always necessary, for without it the strong public opinion which is so necessary, if adequate funds are to be provided for Agricultural Departments, is likely to be lacking.

The problem which faces the agricultural investigator is not so much how agricultural research can assist Indian agriculture as which of a number of pressing problems should be taken up first, for the amount spent in India up to date on agricultural research and experiment is quite insignificant compared with the enormous value of the interests involved, and the amount of work waiting to be done is out of all proportion to the funds provided or the number of workers, and it must be remembered that this statement applies not only to local problems but to a number of fundamental problems.

It is well to remember in this connexion that only a small percentage of the scientific agricultural work carried out in other countries is directly applicable to India, a point best illustrated by remembering that in temperate countries the bulk of the rainfall occurs during the growing period of the crop, whereas as far as the cold weather

crops of Northern India are concerned the rainfall occurs almost entirely outside the growing period, thus establishing a fundamentally different set of conditions.

It follows that with so much work waiting to be done the most rigid economy of funds and effort is called for and, as agricultural crops do not observe provincial boundaries, there is good reason to think that more rapid results might be attained if the basis of our organisation were the crop rather than the province.

If agriculture in India is to develop then as the needs of the country require, it is imperative that the Government of India should realise its responsibilities for the provision of means for agricultural research. Central research is specifically one of its responsibilities under the Government of India Act and the tendency shown till recently has been to treat such matters as agriculture and irrigation as purely provincial subjects. India is moving, in all probability, towards some form of federal government and it so happens that the country with the most highly developed form of federal government, to wit the United States of America, is also the country which has devoted most money to, and achieved the biggest results in, the improvement of agriculture by scientific means. It is most significant that despite the independence of the various States, each of which possesses its own Agricultural Department, the Federal Government in America has found it necessary to maintain the strongest Department of Agriculture in the world.

In India, there have been several marked instances of work at central stations producing results applicable to a large area, such as Mr. Howard's work on wheat at Pusa, that of the Central sugar cane station at Coimbatore and the building up of a valuable pedigree herd at Pusa, while it is satisfactory to be able to record that the Government of India has recently adopted a definite policy in connexion with cattle and dairying in connexion with the all-India Institute at Bangalore. This work shows what can be done by central effort but it must be borne in mind that much of it was done before the era of the Reforms and that the Central Government has not at present an Agricultural Department either large enough of sufficiently endowed with funds to function as it should do. Research work in connexion with fundamental problems, propaganda, educational work, the co-ordination of provincial effort and the promotion of schemes for the general advancement of agriculture in India would appear to be the special responsibility of the Central Government and it must be borne in mind that a system which makes it difficult for the various agricultural departments to keep in touch with each other's effort and to benefit from their failures and successes, and which tends to make each province follow its own policy and go its own way, is fraught with danger.

Another direction in which the help of the Government of India is required is in the initiation of measures to introduce improved and standardised designs of agricultural machinery. The development of agriculture in India must depend to a large extent on efficient machinery and the cultivators who are numerous, and poor and have no natural leaders rely on Government for guidance in this matter. Moreover, mechanical engineering and its application to agriculture, as Sir Alfred Chatterton rightly pointed out in an able article in the *Asiatic Review* in 1925, presents a field open to immediate exploitation; this is a matter which will not be without interest to the commercial world, but it should also attract the serious attention of young Indians of a mechanical turn of mind; for India is not rich in the number of her indigenous engineers and here surely is full scope for those who wish to earn a living and the gratitude of their country.

The remedy would appear to be a strong Central Organisation backed by the Central Government with funds and workers, which would supply the organisation and the driving power necessary to co-ordinate and develop the working of the industry as a whole. Such an organisation could be introduced by the Government of India without any breach of either the spirit or the letter of the Devolution Rules.

INDIAN MAIL.

Speculation by Astrology.

Certainly India is a country of curious habits. Her politicians are second to none in vigour of oratory, and their acceptance of Western methods, as well as of Western conveniences and amenities—even while they profess to hate the accursed thing—has been whole-hearted. But one feels oneself "brought up all standing" when one finds, prominently displayed in the pages of one of the leading Anglo-vernacular newspapers, with which few Indian papers can dispute the palm of up-to-date political controversy, a long "commercial" article in which its readers are given a set of serious forecasts on the movements of the markets in February, as determined by astrology. Speculators were warned that February 7 would be the day of the top-rate for cotton, after which it would drop till the 18th, and then rise again till March 7. Similar prognostications are made in the matter of steel and mill shares; while "wild fluctuations mostly showing an upward trend" are expected to occur in the silver market—in spite, be it noted, of the dispatch of troops to Shanghai—though the public are specially cautioned to watch its course from February 21 onwards. The following is an example of the calculations offered to the paper's readers:—

"Changing of Mercury on the 10th and its conjunction and transitory passing over the month's new moon and conjunction with Jupiter on the 13th—Very Good. If there are any planets in the above period producing disastrous effects, I come across only one, and that is Mars, in square with Neptune on the 13th, and when the real bad time commences. They, however, do last till 17th and again from 20th to 26th. By this period if anyone is ranged in business he must not be frightened over the next month's Mars and Saturn opposition, but he could get a relief on March 7, on which date he must beware and take note that, if he further indulges in heavy speculation, he would be done up as we find no planets coming to his rescue and producing good results."

The prophet winds up by promising a regular monthly forecast and offers his services as a private adviser "if I am satisfied first with the man's horoscope that luck favours him, as I do not like to ruin the public by false predictions published so as to draw a regular client"

According to a notification in the *Gazette of India*, Sir Ganen Roy, Director-General of Posts and Telegraphs, has been permitted to retire from the service of Government from April 10, 1927. Mr. H. A. Sams, C.I.E., I.C.S., Deputy Director-General of the Post Office, has been appointed permanently as Director-General of Posts and Telegraphs from the same date.

Mr. Hugh C. Sampson, C.I.E., formerly Director of Agriculture, Madras, has been appointed economic botanist at the Royal Botanic Gardens, Kew, in connexion with the grant of £4,000 for five years, from the Empire Marketing Board towards the promotion of closer co-operation between the Kew staff and those engaged in agricultural work in the Dominions and Colonies. Since his retirement from India Mr. Sampson has been conducting research work in Nyasaland under the Empire Cotton Growing Corporation.

In reply to a question in the House of Commons on April 11, Earl Winterton, Under-Secretary of State for India, said that the India Office had not yet received the Government of India's views on the Indian Sandhurst Committee's report. "As soon as the Secretary of State," he added, "has received and examined them, he proposes to remit them, with the report, for consideration by the Committee of Imperial Defence, who will advise His Majesty's Government as to the action to be taken with regard to the Committee's recommendations."

In reply to a question in the Council of State on March 21, the Hon. Mr. A. C. McWatters, Secretary to the Government of India, Department of Industries and Labour, said it was expected that the official tests of the beam wireless station at Poona would take place in May next, and if these were satisfactory the service would be opened to the public in June. The charges per word between India and the United Kingdom would be: ordinary rate, 13 annas, deferred, 6½ annas and daily letter telegrams 3½ annas. The minimum charge for a message would be Rs.4-6. The charges for Press telegrams were still under consideration.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Bulgarian Refugee Settlement.

Some idea of the vast and pressing nature of the problem presented by refugee settlement in Bulgaria can be gathered from the particulars given this week by our Sofia Correspondent with regard to the work of the various relief missions among the refugees. The work these missions have accomplished has evidently been of the greatest value, and it is clear that but for the ready assistance forthcoming from abroad the plight of the refugees would have been deplorable. The latest official report with regard to the settlement of the refugees, covering the period down to February 15, shows that the number of families that then remained to be settled was 31,271. So much work has to be done with regard to drainage and clearing the land that the effect of the refugee settlement on Bulgarian agricultural production will only be felt slowly, but ultimately the country should benefit greatly through the development of large areas of hitherto uncultivated lands.

Greece's Financial Problem.

The serious nature of the financial difficulties with which Greece is confronted was emphasised by M. Kaphandaris, the Finance Minister, in a long statement on the financial situation in the Chamber last week. The burden of his discourse was that when the Government took office it was found that the economic resources of the country were exhausted, while all financial questions were in a state of chaos, including even the Budget estimates. The Budget for 1926-27 was expected to show a balance on a total of 8,821,619,843 drachmæ of 350,000,000 drachmæ, but M. Kaphandaris now estimates that there will be a deficit on the year of not less than 2,700 to 2,800 million drachmæ, even after allowing for the yield of the Swedish Match Loan. There is no doubt that the problem with which Greece is faced is partly a legacy from the ill-fated Pangalos régime, but it is also due to the fact that during the past five years there has been no possibility of a fixed financial policy owing to the fact that during that period there have been some seventeen Finance Ministers. Continuity of policy is out of the question in such circumstances. Naturally the outlook for the current Budget is most unpromising, and few in Greece will be inclined to envy M. Kaphandaris his task. His recognition that the deficit must be met by economies and not by further taxation is to be welcomed as a recognition of the principle that sound administration and retrenchment are synonymous terms. The figures given by M. Kaphandaris make it very evident the country needs a loan in order to enable it to recover, and the settlement of the War Debt to Great Britain has fortunately placed the country in a position to obtain the needed financial support.

Trade Depression in Egypt.

The figures of Egypt's trade so far available for this year show no improvement, the value of the exports being considerably below the corresponding totals for 1926, while that of the imports is also lower though not to the same extent. The country is now suffering, as it has done in the past, from being in the main dependent on one crop. It is ironical that two very good Egyptian crops should coincide with record outputs in America and

with the rapid increase in the output of Sakellarides elsewhere. It is becoming quite clear now that Lancashire has a very pronounced preference for Sudan 'Sakel' as compared with the Egyptian product, and if Egypt is to hold her own in the future there must be an improvement in the quality of the cotton. The moral of the present situation is, however, that Egypt must lose no time in taking whatever steps are possible to transpose her present economic basis into one that is more stable and one that will provide against the changes inevitable in regard to any given crop.

British Firms and Turkey.

In a report from the F. B. I. Correspondent at Constantinople in the current issue of *British Industries*, reference is made to the Turkish demand for aeroplanes, and it is pointed out that while most of the machines for the Air Force have still to be obtained, "reliable information from Angora describes an ever-growing preference for machines of British manufacture." That is excellent hearing, and it may be hoped that the outcome will be substantial orders for this country, but that is a matter which depends very largely on the enterprise shown by our firms. The writer in question emphasises the point that if orders are to be obtained by British aeroplane constructors and armament makers they must do as their competitors do, and send out products on "purchase if up to specification" conditions. The Turkish Government, it appears, insists that a sample of whatever the article required must be sent out at the maker's expense to be tested, and this is surely not a matter over which any difficulty need arise. Indeed, it is not easy to understand a firm taking any exception to this condition when compliance with it may be the means of obtaining a large contract, but British firms are very conservative in their methods and to that fact must be attributed to some extent our failure to hold our own in the Near East markets.

A Suggestion to Traders.

The interesting point is made by the correspondent in question that while it is generally understood that official purchases should be by public tender, a large amount of business is done otherwise, and in this connexion it is mentioned that recently the Director of Posts, Telegraphs, and Telephones bought a number of motor cycles by private treaty. This is a matter that our traders might well bear in mind, for a judicious suggestion on their

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

part, coupled, of course, with the demonstration of the commodity in question, might well lead to good business. All that is required is a little enterprise in anticipating possible requirements. While on this subject it may not be out of place to point out that in regard to more than one Near Eastern country it is not a bad thing when competing for a tender besides quoting in accordance with the exact specifications to give terms also for similar articles of slightly inferior quality. It is always possible that the alternative offer will appeal.

The Rubber Position.

A little more than a week now will see the end of the current restriction quarter, and short of a miracle the percentage will be reduced to 60. At the present time, as a matter of fact, the average price of rubber for the quarter is not much more than 1s. 7½d., the lack of a development of American buying being one of several factors which have helped to keep the price down. Still the quarter has the unique distinction that in one week there was actually a fall in the London stocks of rubber. These stocks are now well over 63,000 tons, so that it goes without saying that it will take a good many weeks before they can be reduced to reasonable dimensions. It would be well, therefore, not to count on immediate developments because the percentage is down to 60. Naturally the price must rise, but it will not do so rapidly until for two or three weeks in succession substantial inroads have been made in the existing stocks. Unless the situation develops more favourably than at present seems likely an average price of not more than 2s. may be looked for in the coming quarter—in other words, just enough to give back the 10 per cent. which is going to be taken off. In the unthinkable event of the price not averaging 2s. we should have 60 per cent. for the succeeding quarter, and that would bring within sight the possibility of a very serious shortage.

COMMENTATOR.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

General Stores.—The Prisons Administration, Cairo, invites tenders for the supply of various articles required for the year 1927-28. The schedule of requirements is divided into the following sections:—(1) Cotton yarn, cloth, clothing, sacks, etc.; (2) buttons, eyelets, needles, threads, etc.; (3) tents, cordage, twines, bedsteads, enamelled articles, cardboard, etc.; (4) metal polish, blacking boot, heel balls, chalk marking, etc.; (5) paints, oils, grease, acids, etc.; (6) leathers, native and English; (7) fibres (Indian and Mexican), rattan, horse-hair, bristles, etc.; (8) electrical lamps and articles, etc.; (9) copper hardware; (10) tools (carpenters', saddlers', shoemakers', and smiths'), machines, files, etc.; (11) buckles, nails, ironmongery, fire hose, belting, mild steel, galvanised plates and steel, etc.; (12) timber, sindian wood, sanaa wood, handles shoum, etc.; (13) dyeing of clothing, cloth, etc. May 24. (D.O.T.)

Tender for Photostat Paper and Chemicals.—The Surveyor-General of Egypt invites tenders for the supply of the following:—4,030 rolls of photostat paper, 14,490 tins of developing powder, 18,090 tins of acid fixing powder. May 11. (D.O.T.)

Metal Cabinets and Safes.—The Department of the Survey of Egypt invites tenders for the supply of 120 metal filing cabinets and 12 safes. May 18. (D.O.T.)

Weighing Machinery.—The Ministry of Public Works, Cairo, invites tenders covering the cost of delivery for the following weighing machinery required during 1927-28:—2 cattle weighbridges, capacity 1,500 kilos; 78 platform weighing machines, assorted; 143 counter scales, assorted; 120 Beranger balances, assorted. May 4. (D.O.T.)

Railway Carriages.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of bogie III class steel carriages, 10 with brake compartments and 10 or 20 without brake compartments. April 28.

Map Printing Paper.—The Surveyor-General of Egypt invites tenders for the supply of approximately 3,000 reams of map printing paper. May 3. (D.O.T.)

Tents, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of tents and shamsias for same, April 29; document and map printing paper, May 3; calico and Shash, May 9.

RELIEF MISSIONS FOR BULGARIAN REFUGEES.

*(From Our Own Correspondent.)**Sofia, April 5.*

The recent arrival at Sofia of M. Barthou Payne, President of the American Red Cross and of the Executive Committee of the International League of the Red Cross, has given rise to a warm demonstration—the more appealing since it was entirely spontaneous—of the deep gratitude of the Bulgarian people for the assistance given by the foreign Red Crosses to the unfortunate refugees, whose future establishment has been assured by the recently concluded loan, but who, pending their settlement have been in a deplorable plight, a prey to famine and sickness.

The winter which has just ended would have been disastrous for the poor refugees and would have killed a great number of them but for the relief missions sent by the Red Crosses in response to the appeal made last year by the League of the Red Cross Societies. These missions, furnished with the necessary resources and material, and assisted by a very intelligent and hard-working Bulgarian personnel, have accomplished miracles, and have earned the gratitude of the whole of a much tried population which will not soon forget this work. In fact, conquerors and conquered, the enemies of yesterday, have united to relieve the sufferings of the victims of the War, and especially to save the children.

Relief missions have come from Germany, Belgium, France, Hungary, Great Britain, Italy and Sweden. The German mission has been installed at Stanimaka near Philippopolis; the Belgian mission, divided into two parts, at Haskovo and Kavakli in the district of Bourgas, the British mission at Biela near Varna, the Hungarian mission at Pétritch and Névrokop on the Greek frontier, the Italian mission at Yambol in the district of Bourgas, and the Swedish mission at Messemvria, in the same district, which includes most of the refugees. America has not sent a relief mission, but has contributed large funds and considerable supplies of clothing.

The work of the relief missions has consisted in the following:—

The establishment of kitchens for feeding the poor and especially the children.

The distribution of food to the poor in the villages in the neighbourhood of the stations where it was not found possible to establish kitchens.

The opening of nursing consultation centres in conjunction with the local doctors for mothers with children. The mothers are taught there how to look after their babies, and medicine, milk and clothing are distributed. The mothers frequent these centres in great numbers.

The visiting of poor families to supervise the use of prescriptions given at the nursing centres and to discover those who are really in need of medical help or food.

The efforts of the foreign missions have been co-ordinated and directed by the Executive Committee of the Bulgarian Red Cross, presided over by the Archbishop of Sofia, M. Stéphane. The work of co-ordination has consisted in the selection of the places for the establishment of relief missions according to the state of poverty of the regions in question, and further in influencing the central authorities to establish for each of the foreign missions the best conditions of work.

A delegate of the League attached to the Bulgarian Red Cross, who was at first Captain Knudsen, of the Danish Army, and who is now Captain Petersen, of the Swedish Army, acts as liaison officer between the foreign missions and the Executive Committee and also all the Bulgarian central authorities.

At the present time the following kitchens are in operation (the figures in brackets indicating the number of persons who can be fed daily):—

Pétritch (Hungarian, 650); Névrokop (Hungarian, 450); Stanimaka (German, 400); Haskovo (Belgian, 350); Harmanli, Svilengrad Lubimetz and Ortakeuy (French, 220, 200, 100, and 100 respectively); Kavakli (German, 400); Yambol (Italian, 300 and will shortly provide for 400); Messemvria (Swedish, 450); and Varna (British, kitchen at Biela, 250). Provision is thus made for feeding 4,000 persons.

Besides the food given in the kitchens of the relief missions there is the distribution of food to the poor of the villages. The total number of families helped so far in this manner stands at 3,300, and allowing for four to five persons to each family the number of those helped totals about 14,850.

This distribution has taken place after visits made to the villages by the sisters, who have ascertained the families to be helped and have taken all the necessary care to assure a just distribution. Each family receives in fact food for a month, haricots, flour, rice, and other commodities. This distribution represents a very remarkable effort on the part of the sisters and their assistants.

It is necessary to mention here the exceptionally fruitful work accomplished by the Society of Friends, who have shown themselves to be actuated by remarkable humanitarian zeal. The Society has established kitchens in a great number of villages, the majority of them being in the region of Kavakli. The sisters of the German mission in that town visit and control these kitchens, in collaboration with the Society. It is necessary to mention also the "Near East Relief" which has given very considerable sums for relief work among the refugees.

By the decision of the Executive Committee and in conformity with the desires of the donors of the money available, the feeding of the poor and especially the children is regarded as the most important duty. The greater part of the disposable funds are allocated to this purpose.

FROM THE WEEK'S MEETINGS.

Handicaps of Tariffs.

"I travelled back the other day from Palestine overland through Constantinople and Vienna to Dover. In the old days one was always put to considerable trouble by the Custom House authorities when entering into a country, but since the War we have equal delays and annoyances from the Custom Houses when leaving a country. They wish to see your passports, to discover whether you are taking money out of the country, or whether you are exporting anything they do not wish you to export, and really there is as much delay and annoyance in leaving a country as in entering it. Passing through Palestine, Syria, on to Turkey, then into Greece, then into Bulgaria, Germany and France to Dover, I had to pass through 20 Custom Houses, and at all hours of the day and night. What hope can there be for an increase in trade in such circumstances if all these tariff difficulties are placed in one's way even for one's personal luggage?"—Sir Laurence Philipps, Bart., at the meeting of the Court Line.

A PLEA FOR THE D.O.T.

(From a Correspondent.)

It seems probable that the main fight with regard to the three Departments that the British Government from motives of economy has sentenced to abolition will centre round the Department of Overseas Trade, and very naturally so. Economies we know there must be, and economies compared with which those now proposed will be as nothing, but they must be on the right lines, and it cannot be held to be true economy to terminate the one Department which is concerned with the development of trade. To speak plainly the proposal is nothing more nor less than Gilbertian; that is if the Department really carries out important functions and is in actual fact a valuable asset to British trade. It is on this point that the economists at any price take their stand. They say in effect that British trade managed to get on very well before the Department was created, and that it will continue to do so without its assistance. It is said further that leading British firms have their own sources of information abroad—which, of course, is very true—and that whatever happens to the Department the Consuls will still be at their posts to look after British interests. Finally, the very full service of commercial intelligence issued by one of our principal rivals is cited and the question is asked why our own reports are not of a similar character and do not cover the same ground.

There is no substance in the argument as to conditions before the Department was established. In the shadowy pre-War days overseas commerce was pursued in circumstances of a very different character from those that obtain to-day. Conditions were, broadly speaking, static; in the decades that had elapsed since stabilisation was achieved after the Napoleonic wars the even course of trade had only suffered minor interruptions. Since 1918, however, commerce has largely been carried on in an uncharted sea, and it has been a question of building up trade connexions again in vast regions where commerce is now hampered by a host of limitations and by frequent changes of tariffs. In these circumstances the need for a specialised Department for the development of trade seems obvious, and it may not be out of place to mention here that long before the Department of Overseas Trade came into existence the business community had been asking for a Ministry of Commerce.

Before the War the commercial services, and by that is meant the Consular Service, the Trade Commissioner Service and the Commercial Attachés, were on a quite inadequate scale, but they received little attention largely because trade conditions of the period were not unfavourable. An important part of the work accomplished by the Department of Overseas Trade since its foundation in 1919 has been the development of these services. There are now thirteen Trade Commissioners as compared with four, and there are in addition Imperial Trade Correspondents in the important centres and in

regions where there is no Trade Commissioner. Then the Commercial Diplomatic Service has displaced the Commercial Attachés, and in place of eight Attachés there are twenty-eight Commercial Counsellors or Commercial Secretaries. Finally, the Consular Service, which formerly was under-staffed, with the consequence that the necessary attention was not given to commercial affairs, is in process of complete reorganisation.

So much for the overseas side of the Department. At the headquarters everything that organisation can achieve is done to promote co-ordination, and co-operation with a view to speedy and useful assistance to British firms. The Department is divided into geographical and trade sections for the collection and distribution of commercial intelligence. Each geographical section is concerned with the correspondence from its particular region while the trade sections deal with the firms in this country. While the Department makes a considerable use of the Press for publicity purposes a great deal of the information which it receives from its officers abroad is of a confidential character or of a nature which makes it undesirable to give it general circulation, and this information is issued to firms on two special lists. It is the fact that there has been a rigid concentration on essentials to the detriment of matters which, however interesting, in themselves do not contribute to the advancement of trade that has probably given rise to the mistaken impression that our overseas commercial services are behind those of our rivals. After all articles on road communications in the Caucasus or the difficulties of the terrain in Abyssinia may make good reading, but their utility from the British trader's point of view is nil. He wants facts with regard to his special commodities. "Is there a market?" and "what are the special local conditions?" are the things he desires to know, and this is the service that the Department endeavours to provide, besides encouraging firms to enter markets which they have hitherto left alone.

The Department, it must be emphasised, is the one place to which the trader can come and be sure of obtaining the particulars he requires. It may be a question regarding the status of an importer, and in all probability the details will be furnished offhand. Obviously, it is an impossibility for any but the largest concerns to maintain their own intelligence service, and for those who do the official services constitute a useful addition. This is particularly the case with regard to tenders which are the object of special attention. Firms without other sources of information would be at a marked disadvantage in entering a new market without the services the Department can place at their disposal.

A not unimportant branch of the Department's activities is concerned with fairs and exhibitions. There is a special division of the Department to deal with these things and, in addition to arranging British exhibits at foreign fairs, it organises the British Industries Fairs and the exhibits of foreign samples and catalogues. It may be mentioned here that the Government is committed to participate in the Paris Exhibition of 1929 and in the Antwerp Exhibition of 1930, so that if the Department is not in existence the duty of organising the British Exhibits will have to

ets of the Near and
Middle East. You will
find it a paying
proposition.

be undertaken by some other Government Department. Then there is the Exports Credits Department which by Act of Parliament must run for three more years, so that it will be seen that if this ill-advised intention to terminate the Department of Overseas Trade is persisted in its abolition is not going to be the easy matter that seems to be imagined. Actually the term abolition in this connexion is a misnomer, for it simply means that the functions of the Department will again be divided between the Foreign Office and the Board of Trade—an arrangement which proved unworkable in the past and to which it might be thought no one would wish to revert. It must be hoped that even at the eleventh hour some better means of economising will be found, but if the Department does go it seems a safe prophesy that it will only be a temporary step, for it is unthinkable that this country, whose prosperity is now more than ever dependent on the development of the export trade, should long be without a Department whose sole duty it is to look after the affairs of commerce.

THE GREEK DEBT SETTLEMENT.

A White Paper has been published giving the "Agreement for the Settlement of the War Debt of Greece to Great Britain with an exchange of letters between the Chancellor of the Exchequer and the Greek Minister in London." As already stated in these columns the British Government has agreed to accept the sum of £21,441,450 in full settlement of the total debt, representing a present value of approximately £6,950,000, the payments being as follows:— For 1926, £50,000; 1927, £200,000; 1928, £200,000; 1929, £250,000; 1930, £300,000; for the years 1931 to 1935 inclusive £350,000 a year; for the years 1936 to 1987 inclusive £400,000 a year.

The payment for the year 1926 shall be regarded as having been discharged and satisfied by the payments made by Greece since January 1, 1926; the payments for subsequent years shall be made in sterling at the Bank of England, London, in equal half-yearly instalments on June 1 and December 1 of each year, so that the first payment shall be made on June 1, 1927, and the final payment on December 1, 1987.

If at any time during the making of the payments Great Britain receives aggregate payments under Allied War Debt Funding Agreements and on account of Reparations or of Liberation Bonds which exceeds the payments made to the United States on account of War debts Greece will be credited with a proportion of such excess. On the other hand, any deficit will be made good by an increase in the payments next due from Greece up to a similar proportion of such deficit within the limit of the total amount of the credits already allowed to Greece.

The following is the text of the letter sent by Mr.

Churchill to the Greek Minister in London:—"On the occasion of the signature of the Agreement for the funding of the Greek War Debts to Great Britain, I desire to emphasize to your Excellency the friendly attention with which his Majesty's Government are following the efforts of the Greek Government to restore the financial situation of Greece and to stabilize Greek currency. I am convinced that the settlement of the Greek War Debt to Great Britain will contribute to this end; and I wish to assure you that his Majesty's Government would view with the utmost sympathy any well-considered plan of financial reconstruction framed on adequate lines, and will gladly give such a plan the fullest support that may be in their power. His Majesty's Government are the more ready to give this support in view of, and in return for, the waiver by the Greek Government, as part of the debt funding agreement, of their claim to the balance of the credits arising from the agreement of February 10, 1918."

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, April 26). (For passenger sailing and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Port Said, Colombo, Madras and Calcutta (Birkenhead, April 30); s.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (Birkenhead, May 14).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, May 4).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, April 23); s.s. Hatkhola for Bombay and Karachi (London, April 27).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, May 14); s.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool May 14, and Swansea May 17).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 23).

P. and O. Line.—S.s. Razmak for Bombay (London, April 29); s.s. Tregenna for Colombo, Madras, and Calcutta (London, April 30).

Prince Line.—S.s. Highland Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, April 23); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, May 4).

Ellerman and Papayanni Lines.—S.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool April 23, Swansea April 28); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, April 27, Liverpool April 29); A steamer for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 7, Swansea May 7). * Subject to sufficient inducement.

Transshipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The tonnage of Turkish merchant vessels in 1926 was 114,346.

Merchant vessels entering Port Sudan harbour in February totalled 76 of a net tonnage of 276,122. For the same month last year the figures were 54 vessels of 209,734 tons.

The Turkish cotton crop of 1926 is estimated at 118,000 bales as compared with 153,000 bales in 1925. The figures by districts are:— Smyrna, 40,000 bales as against 27,000; Adana, 55,000 bales as against 80,000 bales; Djihan, 6,500 bales as against 26,000; and Tarsus, 12,000 bales as against 20,000.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 19.

The reception of Mr. Churchill's proposals has been definitely favourable in the City. Before the Budget Speech it was generally thought that the Chancellor was impaled on the horns of a dilemma, and that of two evils he would have to do one.

Either, it appeared, he would have to raid the Sinking Fund, or else he would have to impose new taxation of a kind burdensome to trade and industry. With amazing ingenuity he has avoided both evils. The strictest of financial purists is fully satisfied with the allocation of £65 millions to the Sinking Fund; and the champions of trade and industry cannot find in the new taxation proposals anything of a nature to hinder a nascent trade revival. This dual achievement of the Budget is generally applauded. Of the means adopted to provide the funds that made the achievement possible there are of course many criticisms. Property owners have been made the object of unfair discrimination; the Road Fund raid has its strong opponents; the new Customs proposals raise the ire of all free-traders. There is a more or less general belief that Mr. Churchill has practically exhausted the list of possible windfalls, which might have helped in a future emergency, and regret that Mr. Churchill has built no foundation for the future, but leaves 1928-29 to look after itself. But when all is said and done the Chancellor is generally considered to have rounded a dangerous corner with a remarkable agility.

The Budget and the Markets.

So far as the Stock Exchange markets are concerned the Budget is wholly and entirely a favourable influence. The gilt-edged section received a strong stimulus from the stern Sinking Fund policy followed by the Chancellor. General sections were greatly relieved at the absence of any increase in the income tax, and this relief was reflected in brisker business and, in most cases, a hardening in quotations. Dunlops in particular were naturally in

demand at higher prices on the introduction of the import duty on foreign motor tyres. Market have been under the shadow of the Budget for some time. Now that shadow has been dissipated, and optimism once more has its chance. Easter, so it happens, has broken the full force of the effect of the Budget. But the Stock Exchange may be expected to be in a cheerful frame of mind after the holidays; and unless the Chinese situation, or some unforeseen contingency, obtrudes itself unpleasantly, there would appear to be every chance of a period of active and cheerful dealing in the weeks that lie ahead.

Company Law Amendment.

The terms of the Government's Bill to amend existing Company Law have been made known this week. The Bill follows with commendable promptitude upon the recommendations of the Special Committee. It provides, *inter alia*, that the balance sheet to be filed with the Registrar of joint stock companies must be "the last balance sheet which has been audited by the Company's auditor. This will prevent such companies as have hitherto kept to the letter of the law by filing the same balance sheet year after year from evading its intentions. But to the ordinary investor perhaps the most important provisions are those relating to "Share-hawking." The latter is made unlawful and subject to a heavy fine, or on a second offence to imprisonment. As regards written offers the Bill makes it compulsory to furnish a certain minimum of information under the same penalties. Other proposals are directed against the practice of issuing abridged prospectuses. If the Bill is successful in curbing the activities of the "share-hawkers," who have been so amazingly successful in recent years in filching the savings of the small capitalist, the country at large will have much to be thankful for.

Japanese Securities.

In recent weeks there have been several unfavourable financial news items from Japan. A few days ago it was announced that a large Japanese merchanting firm was in difficulties, while a little earlier several small banks were compelled to close their doors. It will be recalled that we have previously recommended Japanese Government Securities, and we do not see any reason to qualify this recommendation. There will probably be minor troubles of various kinds, but in essentials Japan undoubtedly justifies the confidence of the investor. The Legislature has taken action with a view to strengthening the banking system, while there are expectations of an early restoration of the gold standard. These developments are calculated to increase the stability of Japan's economic organisation.

As for Japanese securities, the largest issue quoted in London is the 6 per cent. sterling loan of 1924, of which there are £25,000,000 outstanding. At the present price the stock gives a return of approximately £6 8s., the final redemption date being 1959. The 4 per cent. sterling loan of 1899, finally redeemable 1954, yields £5 10s. per cent. The 4 per cent. loan of 1910, finally redeemable 1970, gives a return of £6 5s. per cent. It will be noted that these are sterling securities, so that the investor is spared any anxiety due to exchange movements.

The death is reported of Mr. George Deuchars, C.I.E., late Government Director of Indian Railways.

It is reported that negotiations are proceeding in Czechoslovak wholesale trade circles for the erection of a new trade organisation which will devote itself to the discovery of possible markets for Czechoslovak goods in the Balkans, and on such experience gained arrangements will be made for the erection of collective sales offices and warehouses in the trade centres of the Balkans.

The exports of gum from the Sudan in February were 14 tons of bleached of the value of £823, 2,733 tons of hashab of the value of £90,572, and 173 tons of talk of the value of £3,194. For the first two months of this year the exports totalled 3,956 tons of the value of £136,423, which compares with 4,088 tons of the value of £167,330 for the corresponding period of 1926.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 13:—

Egyptian Futures.—Sakel Contract.—This market continues to suffer from what might be termed an absence of outside interest, the fact being that at the present juncture there appears little in the outlook to sway values to any extent, either towards a higher or lower level. Trading, generally, throughout the week has been of a professional character, but small speculative orders, mainly for new crops and a moderate amount of covering against trade fixings, have not found contracts in a too plentiful supply, with the result that some slight hardening in values has to be reported. The recent steadiness of the market is rather inexplicable in view of the heaviness of the statistical position and the recent disappointing character of the trade demand; the latter, however, is a customary pre-holiday feature. Perhaps the explanation of the present tendency is to be found in the reluctance of the majority to enter into short commitments at a level so far below the average of previous seasons, and from which the reaction to "bullish" influences would probably be more marked than to those inclining values to a lower level. A further point that may conceivably ease to some extent pressure on the contract is the recent raising of the question by the Appeal Committee as to whether the contract implies "fair" or "average" staple; a decision of the Directors was requested, and their verdict was that tenders must have the latter qualification; as the present is a notoriously poor crop, this bars quite a fair percentage from being placed on docket; also, had it been otherwise, it is not inconceivable that cotton rejected as outside the contract in Alexandria, on account of its short staple, might have been allowed to go through here. Trade reports have not been particularly illuminative, and evidently recent activities in yarns have been confined to the placings of unimportant orders; however, as mentioned previously, the present period is generally marked by all-round quietness, and, in some quarters, an improvement is expected after the recess. Whilst the Egyptian takings are about 15,000 bales down in comparison for the same period last season, it is to be noted that Sudans have gained 41,000 bales; this emphasises the point we have raised for some time regarding the serious inroads made into the consumption of Egyptians through the strong competition of the Sudan growths. The Alexandria market continues to send steady reports, and the Liverpool/Alexandria straddle difference shows our market as far and away the cheaper proposition. To conclude, we must state that we still fail to discern any features looming up of sufficient importance to move values from the existing level.

Upper Contract.—This option has commanded little attention since we last wrote, but prices have remained at a steady level throughout the week. The trade demand still inclines to the poor side, but with supply figures moderately "bullish" the basis in Alexandria continues firm.

Egyptian Spot.—Only a moderate inquiry for Egyptian cotton has been in evidence, but, in spite of this, sales show a slight increase over last week's total and prices have hardened slightly. Sakel has met with a poor off-take, even for these days, but a fair business has again taken place in Uppers at about 10½d., and the lower qualities of Pilon have also attracted more attention, the most popular range being one of 10½d. to 10¾d. It is doubtful if there is much of a selection at this price. At anything over 11.00d. both Uppers and Pilon move off very slowly. Many competent judges consider that the current price of Upper Egyptian is reasonable, bearing in mind the comparative scarcity this season of its chief competitor, East African. Doubtless, when a resumption of trade activity occurs, this aspect of the case will not be lost sight of.

Interest in Sudan cotton of all varieties has been well maintained, and the basis for both the White and Sakel has remained firm. A steady business has been transacted, although this week the bulk of it has been in the Sakel qualities, at prices ranging from 150 to 575 on May contracts (Sakel). The Continent has recently shown signs of becoming more interested in this cotton. It is instructive to note that the consumption of Sudan cotton in Lancashire for the past nine months is already more than double the total consumption of the season of 1925-26.

Reports from Manchester show no indication of any likelihood of an immediate improvement in that quarter, and selling for forward delivery continues to be on a very moderate scale. Forwardings to spinners for the week ending April 8 were returned as 4,084 bales Egyptians and 1,109 Sudan. Estimated sales 1,400 bales Egyptians and 2,250 Sudan. Quotations of Sakel have improved by 15 points, whilst those of Upper have hardened 5 points for the better grades only. The lower qualities are unchanged. F.G.F. Sakel to-day 13.65d. F.G.F. Upper to-day 10.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Co., in its report dated April 7, states:—

The week opened with a very dull market but the tone has since improved slightly. The week's summary of price movements is as follows:—Sakellaridis: May, 26.12 dollars, 0.28 dollars up; July, 26.27 dollars, 0.23 dollars up; November, 26.95 dollars, 0.12 dollars up; January, 26.90 dollars, 0.17 dollars up. Ashmouni: April, 18.61 dollars, 0.07 dollars up; June, 18.88 dollars, 0.10 dollars up.

up; August, 19.08 dollars, 0.10 dollars up; October, 19.56 dollars, 0.12 dollars up.

Sakel.—There was little business during the early part of the week and things were very dull; yesterday, however, saw some speculative buying of May and the tone of the market is accordingly slightly better.

The demand from abroad shows no sign of improvement and the position in China is such as to inspire but little hope for a revival of business in the near future. It is now more than a month since the demand fell off so badly, and the daily purchases on the spot market at Minet el Bassal are mostly in cover of old commitments.

We do not look for any great change in prices for the time being, unless, of course, American new crop reports become unsatisfactory and induce a rise in New York, in which case our market would, naturally, follow suit.

Uppers.—Fluctuations have been small, reflecting the lack of activity in the New York market. Spinners' demand has been on the poor side, although somewhat better than for Sakel.

At the first April tender, dockets for 28.50 kantars were issued.

The week's receipts amount to 116,706 kantars, against exports 175,499 kantars; the stock in Alexandria stands at 3,227,095 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to March 31, 1927, are as follows:—Arrivals: Lower Egypt, 4,323,000 kantars; Upper Egypt, 2,657,000 kantars; total, 6,980,000 kantars. Exports: Sakel, 2,173,013 kantars; Ashmouni, 2,548,942 kantars; Various, 330,969 kantars; total, 5,052,824 kantars.

Spot: This has been a short week owing to the Bairam holidays and we have had very quiet markets at Minet el Bassal. Demand from abroad continues rather poor and the turnover for the four business days amounts to about 8,550 bales, of which we estimate 2,500 bales Sakellaridis, 5,600 bales Ashmouni and Zagora, 300 bales Pilon, and 150 bales other varieties. The selection of Sakel offering continues large and of poor quality generally, whilst Uppers, though the quality offered gives little cause for complaint, have not been very freely offered during the past week.

Sakellaridis: A very moderate business has been put through, covering all grades. Spot differences are without much change but are generally well maintained, particularly the higher grades.

Ashmouni and Zagora: Have met with a very fair demand and a fairly good business has been done at last week's spot differences.

Pilon: A fair business has been done without any change in spot differences.

Brown, Etc.: A retail business has been done in Brown at last week's rates. A few bales of Maarad have also changed hands.

White: Has been in moderate request. Spot differences are on the easier side.

Up-Country: Owing to the native holiday Bairam, business in the villages has been, this week, practically nil. The ginning factories have not been working and the arrivals in Alexandria during the next few days will probably show some falling off.

Crop, 1927: Weather conditions during the past week have been somewhat less favourable, especially in the Northern districts of the Delta. These less favourable conditions may necessitate some re-sowing in the recently sown areas. It is to be hoped that the weather will quickly improve and become settled; re-sowing on a large scale would be exceptionally unfavourable in view of the poor quality of the remaining planting seed. Water is in full supply everywhere.

The report of the Ministry of Agriculture for March reads: "Improved climatic conditions have encouraged the preparation and sowing of the crop, thus making a good recovery from the effects of last month's bad weather. Germination is quite satisfactory as re-sowings do not exceed 5 per cent. in most of the districts. This is due to the favourable weather and the good seeds strictly super-

vised by the Ministry according to the law. Up to date the Ministry did not receive any complaint concerning this subject. Plants are growing satisfactorily in early-sown fields. Hoeing and watering are being carried out. Slight attacks of cutworm and aphids were reported from Girga and soreshin from Qena, but have caused practically no damage."

CHESS.

By "CARO-KANN."

This week I give another game of the irregular type from the New York Tournament, between A. Nemzowitsch (White) and M. Vidmar (Black).

1, P—K3, P—Q4; 2, Kt—KB3, Kt—KB3; 3, P—QKt3, B—Kt5; 4, B—Kt2, QKt—Q2; 5, P—KR3, B—R4; 6, B—K2, P—K3; 7, Kt—K5, BxB; 8, QxB, B—Q3; 9, KtxKt (1), QxKt; 10, P—QB4, P—QB3; 11, O—O, O—O—O (2); 12, Kt—B3, B—B2; 13, P—Q4, P—KR4; 14, P—B5, P—KKt4; 15, P—QKt4, P—R5; 16, P—Kt5, Kt—R4; 17, PxB, PxB; 18, P—B3, QR—Kt.

Position after Black's 19th move, P—B4.

19, P—K4, P—B4; 20, PxQP (3), KPxB; 21, QR—K, P—Kt5; 22, RPxB, PxB; 23, PxB, RxP; 24, KtxP, P—R6; 25, Kt—K7 (ch) K—Kt2; 26, R—B3, RxKtP (ch); 27, QxR, PxQ; 28, P—Q5, Q—Kt5; 29, R—QKt3 (ch), K—R; 30, BxR, Q—KR5; 31, P—Q6, QxR (ch); 32, KxB, B—Q; 33, B—Q4, BxKt (4); 34, PxB, QxP; 35, B—B2, Q—K5 (ch); 36, Resigns.

(1) With the Kt well posted at K5 it seems a pity to exchange it unnecessarily. P—KB4 could be played, and then if 9, . . . BxKt; 10, PxB, Kt—K5; 11, Q—Kt4, ultimately driving the Kt away by P—Q3.

(2) Now Black has the better game, for he is fully developed and his pieces are in a position to attack while White is not developed and his Bishop is aiming at nothing.

(3) In view of the general situation P—K5 was better, shutting out the hostile B for a time, followed by Q—R6 (ch) and QR—Kt.

(4) Not Q—K5 (ch) followed by QxB for then KtxP and White would save the game.

In the position given last week Black played 1, . . . P—R6 (ch), and then followed 2, K—B; P—K6; 3, PxB, KxB; 4, B—K6, K—B6; 5, K—Kt (otherwise P—R7 wins), P—R7 (ch); 6, K—R, P—Kt6; 7, B—R6, K—B7; 8, B—Kt2 (forced), K—K5; 9, B—B, K—Q7; 10, P—R4, K—B6 and wins. If 10, K—R then K—B6; 11, B—K2, K—Kt7 and wins.

Company Meeting.

AGRICULTURAL BANK OF EGYPT.

Increased Net Profits.

The report of the directors on the working of the bank for 1926-27, submitted to the shareholders at the twenty-fourth ordinary general meeting, held at the offices of the bank in Cairo, on April 13, states:

The directors have to report that the net profits of the bank for the financial year 1926-27, established in accordance with Article 40 of the Statutes, amount to £E464,284.174. From this amount there have to be deducted: (I.) Interest on debentures, £E142,471.876; (II.) provision for the reserve fund, £E9,845.605; (III.) provision for the special reserve fund, £E17,411.081—£E169,728.562; leaving £E294,555.612. And there have further to be deducted: (IV.) Dividend on £1,250,000 preferred shares, £E48,750; (V.) commission to the National Bank of Egypt, £E11,020.140—£E59,770.140; leaving £E234,785.472; which is available for distribution as dividend on ordinary and deferred shares.

The ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent. per annum, £E120,900; balance, £E113,885.472. The balance of £E113,885.472 is available for the ordinary shares to the extent of one-half, or £E56,942.736, and for the deferred shares to the extent of one-half, or £E56,942.736.

Ordinary Shares.

The amounts therefore available for dividend on these shares are as follows:—Balance from the year ending January 31, 1926, £E154,427.252; interest for the year, accrued on the above balance, £E7,721.362—£E162,148.614; dividend at the rate of 5 per cent. per annum, as stated, £E120,900; further amount available £E56,942.736; total, £E339,991.350. The directors propose to pay a dividend at the rate of 10 per cent. per annum, requiring £E241,800, and to carry forward the balance of £E98,191.350.

Deferred Shares.

The amounts available for dividend on these shares are as follows: Balance from the year ending January 31, 1926, £E81,584.529; interest for the year, accrued on the above balance, £E4,079.226; total, £E85,663.755; further amount available, £E56,942.736; total, £E142,606.491. The directors propose to pay a dividend of £55 per share, requiring £E107,250, and to carry forward the balance of £E35,356.491.

The amount of outstanding loans having considerably decreased, the annual instalment in 1926-27 was much smaller than that of the previous year and, although the actual percentage collected was less, the amount of arrears to be deducted from profits also decreased. It is partly due to this fact, and partly to a decrease of the general expenses, that the profits available for distribution are about £E28,000 more than last year.

The board recommends the payment of the same dividend as last year, but would point out to the shareholders that the amounts carried forward to the credit of the ordinary and deferred shares for the

purpose of equalising dividends are now greatly diminished, more particularly in the case of the deferred shares.

Mortgage Company of Egypt, Ltd.

A dividend on the ordinary shares of 13 per cent. with a bonus of 2 per cent., making 15 per cent. in all, was paid for the year ended March 31, 1926.

Collections in the current year have been affected by the fall in cotton prices which occurred at the beginning of the selling season and some increase in the amount of instalments in arrear is inevitable. Demands for the new loans continue to be made on a moderate scale.

It is expected that the case relating to the claim by the British Government for income tax will shortly come before the High Court of Justice for hearing.

Arrears.

Out of the instalments in arrear on January 31, 1926, amounting to £E205,006, a sum of £E177,456 has been either collected or written off during the year: the amounts collected are included as profit in the profit and loss account for £E111,654 as capital and £E63,285 as interest.

The instalments due in 1926-27 which have not been collected in the year amount to £E178,330 of which £E58,239 are for interest; no credit has been taken for this latter sum in the profit and loss account as, in accordance with the Statutes, only interest actually encashed can be included in the profits. The balance, £E120,091, representing capital due and not received in the course of the year has, as required by the Statutes, been deducted from the receipts before arriving at the net profits for the year.

Any encashments on the total outstanding arrears—£E205,880—will be included in the profits of the year in which they are effected.

Output and Collections.

We have made during the year 198 A Loans for a total of £E6,288 and 81 B Loans for a total of £E27,760.

The total of loans exceeding £E1,000 each was £E94,009 on January 31, 1927. The arrears on these loans were £E6,620.

A sum of £E278,964 was collected out of the annual instalment of £E457,294 and a sum of £E174,939 was collected from the arrears, making a total collection of £E453,903.

The percentage of the annual instalment collected is 61 per cent. as compared with 64.6 per cent. in the previous year; this is the lowest percentage ever collected except that in 1914, on the outbreak of the Great War. The percentage of arrears collected by the bank was 85.3 per cent., a diminution of about 7 per cent. as compared with either of the two previous years. The decrease in the annual collections was no doubt chiefly due to the low price at which cotton could be sold during the greater part of the collection period.

Expropriations.

The number of expropriations made by the bank during the year are as follows: Number of cases in hand on 1/2/26, 187; number of cases begun during 1926-27, 675; total, 862; cases settled, 381; balance, 481; cases brought to expropriation, 18; balance pending, 463. In 5 of these cases of expropriation 27 feddans were bought in by the bank, and in 13 remaining cases 81 feddans were bought in by third parties.

COMPANY NOTES AND REPORTS.

ROYAL EXCHANGE ASSURANCE.

The report of the Royal Exchange Assurance for the year ended December 31 last states that in the life department 3,025 proposals were completed and paid for, assuring £2,472,989 at single and full annual premiums of £152,931. Re-assurances for £475,593 were effected at single and annual premiums amounting to £43,569. The total premium income (after deducting re-assurance premiums) was £726,364, being an increase of £9,252 over 1925. The interest earned was £346,447, being £5 13s. 9d. per cent. on the life fund. The total claims paid and outstanding amounted to £355,426. Of this sum claims arising from the death of the life assured accounted for £226,489, which was below the amount expected on the basis of the mortality tables used. The sum disbursed for surrenders, including bonus, was £72,170. The expenses of management and commission were £119,901. The rate of interim bonus has been increased from 35s. per cent. to 37s. 6d. per cent. for every full year's premium paid on or after January 1, 1927. The life assurance fund amounts to £6,470,713.

One hundred immediate and deferred annuities, securing £10,908 per annum, were issued in consideration of purchase money and

premiums amounting to £105,059. Re-assurances of £1,237 per annum were effected, representing a total purchase money of £13,104. Seventy-one annuities terminated by death and four by lapse and surrender, representing a total net payment of £5,524 per annum. The annuity fund amounts to £908,005. In the fire department net premiums for the year amounted to £1,659,258; with interest the total income was £1,687,292. The losses amounted to £719,362. The commission was £332,460; and the expenses of management including colonial and foreign taxes were £374,623. The profit of £208,221 has been transferred to the profit and loss account. The fire fund amounts to £1,163,703, a further sum of £250,000 having been transferred to the additional reserve from profit and loss account.

In the marine department the net premiums amounted to £734,720; with interest the total income was £751,198. The losses paid in respect of 1926 and previous years amounted to £686,099. The expenses of management were £87,174. The marine fund now stands at £1,015,949, a sum of £250,000 having been transferred from profit and loss account. In the general accident department the net premiums for the year amounted to £940,482; with interest the total income was £962,329. The losses paid amounted to £471,075; the commission was £161,987; and the expenses of management were £220,911. The profit of £75,657 has been transferred to the profit and loss account. The general accident fund amounts to £758,789, a further sum of £100,000 having been transferred to the additional reserve from profit and loss account.

The profit and loss account (general reserve fund) shows that the profits from the fire, accident, and trustee and executor departments, together with the share for 1926 of the proprietors' allocation account of the quinquennial valuation, 1921-1925, amounting in all to £319,379, have been carried to this account. The special reserve funds have now been closed by a transfer to this account of the free

balance of £145,000, and, after transferring £250,000 to the fire fund, £250,000 to the marine fund, and £100,000 to the general accident fund, the balance of the account is £1,021,665. The assets amount to £13,932,154. The total dividend for the year is 27 per cent. against 25 per cent. for 1925.

NATIONAL BANK OF EGYPT.

Position at January 31, 1927, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £2,925,000; reserve fund: statutory reserve, £1,462,500; special reserve, £1,145,625; current, deposit and other accounts, £15,614,097; Egyptian Government, £18,686,197; Sudan Government, £230,753; mixed tribunals, £1,580,151; bankers accounts, £225,012; cheques and bills payable, £271,889; sundry other accounts, £1,355,113—£43,496,337. The Albanian Scare and its Motive.

Far too much ink is being spilt over the Italian attempt to raise a scare in connexion with alleged Yugoslav preparations for an invasion of Albania. The dispatch by Italy to the British, French and German Governments of Notes making these allegations and threatening war in the event of a Yugoslav attack on Albania did create a serious situation, because it was taken for granted by the three Governments addressed that Italy was sure of her information, was acting with a sense of responsibility and meant business. It has now been definitely established that, if the Italian Government was sure of anything, it could have been sure only of the inaccuracy of its allegations regarding Yugoslavia; and, further, that its sense of the responsibility of a Great Power when dealing with a Balkan question is not the same as that of any other Great Power. What particular business the Italian Government had in view is still a matter for speculation. It seized the opportunity to land some troops again on the island of Saseno in Valona harbour—action which constitutes more of a menace to the independence of Albania than a protection of her territorial integrity against invasion from the north—but, as soon as the Italian statements regarding Yugoslavia were challenged, no attempt to substantiate them was made, and the Government's efforts have been directed to thwarting any inquiry into the dispute between itself and Yugoslavia, which a few weeks ago was held to be serious enough to warrant an excited communication to the Great Powers.

As soon as the Italian Note was received the three Governments addressed, and in particular the British Government, very rightly took steps to adjust the matter at issue between Italy and Yugoslavia. The latter was warned to discountenance all *komitaji* activity against Albania, and the former was urged to suspend action while an international commission investigated the situation on the Yugoslav-Albanian frontier. Weeks have now passed; no commission has yet started any investigation, and there

has been no examination of the Albanian question, either jointly by Italy and Yugoslavia or by any other group of States. A variety of reasons can be given for this state of affairs; but the fact remains that it was Italy's own "scare" and, if she had been in any way anxious to speed up either the inquiry or the negotiations, she could without difficulty have done so. As the only anxiety that the Italian Government has displayed is to avoid all further reference to the subject, no further action is called for on the part of the British, French and German Governments.

No inquiry, however exalted, could produce more damning evidence of the Italian Government's attitude in this matter of the Albanian question than has been supplied by Italy's own action. The inwardness of the military measures in Yugoslavia, of the counter-measures to which they gave rise in Albania and the Yugoslav reaction to these, everything has been shown to have been simple of explanation and the truth could have been easily learned by Italy, if she had wished. The only point of uncertainty to-day is the Italian motive. What very cogent reason impelled the Italian Government suddenly to launch against Yugoslavia a denunciation that must inevitably be shown to be false and to risk the consequent lowering of Italian prestige? If, as has been suggested, the hope was entertained that in the general confusion an opportunity might offer for consolidating the Italian hold on Albania, it has to be admitted that Italy set about her task in a curiously half-hearted way. A more subtle explanation is confidently given in Germany to the effect that the Italian Government took alarm at the prospect of Yugoslavia's being allowed to satisfy all her loan requirements in the United States, and risked the denunciation in the hope of scaring American capital. If such were the sinister plot, it has signally failed. Yugoslavia's prestige has come well out of the ordeal, the American loans have been arranged, and the Balkan States as a result of a fuller appreciation of the danger of a lack of cohesion, have taken one more step on the path leading to a Balkan federation.

SUSPICION IN ARABIA.

It may have been true of any period in the history of the Arabian Peninsula to say that its future was unsettled: it is certainly true at the present time. For, despite the wide and merited sweep of King Ibn Saoud's victories, it so happens that, partly owing to European intervention, the situation in the Peninsula has become more rather than less obscure. In the mandated territories to the north of Najd and the Hijaz speculation is rife and constant upon the possibility of war between the Wahhabis and the Yamanis—a possibility which, curiously enough, is not decreased by the improbability of arriving at a final decision—and in Mecca and Jidda and Sana and Hodaida are to be heard "ancestral voices prophesying war." Now to Great Britain this prospect of "civil" war would have been of considerably less interest but for the successful intervention last year of the Italians in the affairs of the Yaman. The fact that the British Government has adopted a rigid attitude upon the problem of the Aden Protectorate, thus rendering at least temporarily impossible the agreement which Sir Gilbert Clayton a year or so ago attempted to make with the Imam Yahya, would seem to be the real season for the present general uncertainty. Admittedly an easing in the situation has been visible since the "conversations" occurred at Rome between Sir Gilbert Clayton and Commendatore Gasparini, but in Arabia itself there is still, apparently, lively apprehension upon what the future may really hold. As is usual in Arabian affairs, the difficulty of gauging the real trend of events arises from the irritating non-continuity of development therein. A crisis, an unusual happening, looms big and ominously for a few days on the horizon; and as suddenly disappears. The secrecy with which Italians are said to have been landed on the shores of the Yaman surpasses even that which more recently characterised their movements in or off Albania; the source of the Farsan Islands deal, after spouting very high in the air, in a twinkling runs underground, and is heard of no more. Naturally, therefore, perplexity succeeds perplexity. Even so close an observer as Dr. Wolfgang von Weisl, from whose pen we have just published two informative articles on the Yaman, seems really at a loss to prophesy upon the future of the Peninsula. One thing alone is certain: that the Wahhabis, with or without a fresh understanding with the British, suspect the Yamanis, with or without Italian support; and *vice versa*. Continental curiosity significantly expresses itself in the concentration of interest upon events in Massawa, which has been thought in some quarters to be the eventual usurper of Aden's position and of the Yaman's trade.

Without question it has come as a shock to some observers to discover that there are other Europeans than the British who can benefit both Arabia and themselves.

Until the last year or two British public opinion was comparatively indifferent to the future of the Arabian Peninsula: for even if things did not go well therein, there was no one standing by to profit by untoward circumstances. The French, it is true, had their Shaikh Said, but they have done little there of late, and appear to have made no attempt at all to influence affairs in the Peninsula. The place is even said now to be ungarrisoned. When Frenchmen do interest themselves at all in this matter, it is merely to counsel cynically the shaping of events in the interests, not of the Arabs, but of the French—as when a French writer recently suggested that the Yaman should receive the support of France against King Ibn Saoud, in order that the Wahhabis might have their attention distracted from the possibility of intervening in Syrian affairs! The Italians, however, have taken time very smartly by the forelock, and although all fair-minded Englishmen must wish them well for their enterprise in going to the Yaman, this new intervention undoubtedly introduces an incalculable factor into the situation. There are those (their feelings have from time to time been mirrored in the letters from our Jidda Correspondent) who believe that the Fascist Government has "imperialistic" designs in the Yaman. By such observers the recent Italian record in regard to Abyssinia, the non-recognition of King Ibn Saoud, and so on, are pointed out as being sure indications that Italy is but playing energetically the old, dishonoured game of "creating interests." There are, on the other hand, others who assert that the burst of enterprise which is now characterising the Government of Rome is but an evanescent phenomenon, and particularly, that the Imam will soon tire of his present European collaborators and be only too thankful to turn again in hope to the British who have had such long experience of the Peninsula's needs and peculiarities. And, perhaps midway between these two sets of observers, stand those who hope that successful Italian enterprise in the Yaman will be the ultimate means, not of separating still further the Wahhabi and the Zaidi, but of providing a working agreement between them. This view needs considerable optimism to support it, but it is certain that, if trade and prosperity cannot induce Arab to work with Arab, nothing else, short of conquest and submission and conversion, will ever bring about that consummation.

Continental opinion on the whole seems to regard the colonisation of "Arabia Felix" by the Fascisti as almost as good as accomplished; the possibility of the Imam's retaking of Aden is seriously put forward; and the alleged dream, on the part of Great Britain, to assume after the War the rôle which Turkey enjoyed (or endured!) before the War is now thought to have been for ever dissipated. In all this talk there is, of course, an unhealthy amount of ignorance. British policy in Arabia is not the sinister, inexorable theory which Continental critics flatteringly suppose it to be. In fact it has been changed several times—which is in itself a proof that Great Britain seeks not to mould events in the Peninsula but merely to conserve a few vital interests. In the main these interests are connected, directly or indirectly, with India. Italy, on the other hand, has no large interests East of the Red Sea, and it is possible that the dovetailing of her increasing interests in places like the Yaman and Eritrea into the greater British interests in the Red Sea area might occasionally be a matter of delicacy. But there would seem no real reason to suppose that any outburst of Fascist energy in these lands will be allowed to upset countries outside them. If the Italians make good in the Yaman none will be happier than the Imam's followers for the Fascisti to stay there: if they do not make good, none will be happier than the Fascisti to leave. The rest of Arabia may remain assured, however, that the definition of "making good" does not depend only on an Arabic or an Italian version. It might, in fine, be well for the peace of Arabia and the allaying of suspicion therein if some report of the Clayton-Gasparini conversation could be published.

Notes of the Week.

Steadiness in Egypt.

An eminently satisfactory solution of the Ministerial crisis in Egypt has been reached. If Adly Pasha Yeghen could not be persuaded to take office again, it is well that he should be succeeded by Sarwat Pasha. Without doubt, the crisis ought not to have arisen; but its incidence is instructive and may, perhaps, constitute a useful object lesson for some of the unsteadier heads in the Egyptian Legislature. The relaxation, through ill-health, of Saad Pasha Zaghoul's restraining influence on the Chamber had given the small body of extremists an opportunity to get out of hand, and they proceeded to make the most of it. No real question of principle appears to have been at issue. The extremists claim to belong to the Wafd and to be loyal followers of Zaghoul Pasha, who has accorded his cordial support to a Ministry largely of his own appointing. They seem to resent, however, the smooth working of constitutional government; Egypt, in their opinion, ought to be for ever asserting herself aggressively or kicking against the pricks. In all probability they have never reflected where this policy might lead the country, and they have been surprised to find that, when they turned their aggressiveness on to their own fellow-countrymen, in the persons of Ministers who are members of their own political party, these not only resented the injustice of the attacks, but also took steps to protect themselves. The smooth solution of the crisis and the apparent recognition by the malcontents that they had gone too far is evidence of an increasing steadiness in Egyptian politics. One of the hardest lessons to be learnt in countries where constitutional government is still a novelty is that statesmanship is constructive, not destructive. It is easy to win a bubble reputation by slashing attacks on all and sundry, and no one seems to think it worth while to serve an apprenticeship in the science of state-building, which should be the goal of every politician whether permanently of the rank and file or a candidate for Ministerial honours. Clearly there are difficult days ahead for Egypt, possibly even in the present session, but excess of zeal on the part of the first few Parliaments is no reason for despairing of the future.

Greek Coalition Difficulties.

Admiral Kondouriotis refuses to subscribe to the doctrine that it is only the provisional which lasts. He took office as Regent of Greece in December, 1923, and became Provisional President of the Republic in April, 1924. After the interlude of the Dictatorship of General Pangalos he resumed the office and title on the general understanding that one of the first acts of the Coalition Government would be to pass the Constitution and to make provision for a regular Presidency of the Greek Republic. Nearly five months have passed, however, since the Government of M. Zaimis took office, and, whatever else may have happened, comparatively little real progress has been made towards the promulgation of the new or revised Constitution. The trouble turns not so much on the Chamber's time-table as on differences of opinion in the Cabinet. Some of the Republican parties would like to see the Constitution submitted to a referendum, in order that there should be no question subsequently of its validity and of the obligation of the country as a whole to accept it as a final solution of the constitutional question. The Anti-Venizelists, on the other hand, suggest that a vote should not be taken on the Constitution as a whole, but on the "essential" points, such as the form of the régime, the question of a Senate, and so forth. As the essence of the Coalition is that the form of government should not be raised at this time, the Republicans cannot accept the proposal of the Anti-Venizelists, and some of them are opposed to a referendum on the Constitution in its entirety. In view of these differences Admiral Kondouriotis may have decided that the prospect of the Constitution's becoming

law was fading into a dim distance, and that a sharp reminder was needed to bring the Government to a sense of its responsibilities. The problem emphasises the relatively short distance that Greece has travelled towards a real spirit of co-operation among the political leaders, and one of the difficulties of the republican régime—a shortage of candidates for the Presidency. There was something pathetic in the hope raised in certain quarters by the return of M. Venizelos to Greek territory; but the political Achilles shut himself up in his cabin, refused to set foot on the mainland and will trust himself only among his Cretan compatriots. In this he has acted wisely; for his presence in Athens would cause fresh exacerbation of party passions. Admiral Kondouriotis has agreed to retain office for the time being. If, as is indicated, there is no suitable successor apart from M. Zaimis, there is good reason why the latter should remain at the head of the Government, in order to hold the uncoalescing coalition together long enough to place the Constitution on the Statute Book.

A Greek Exile.

Not the least strange of the many strange phases that have characterised recent Greek history has been the complete oblivion that seemed to have overtaken M. Sterghiadis, Greek High Commissioner in Smyrna at the time of the Asia Minor débâcle. He was the special nominee of M. Venizelos for the post, as the one man likely to repair the loss of prestige suffered by Greece owing to the regrettable incident at the time of the Greek landing, but by remaining there he became identified with the régime that expiated its unpopularity with the banishment of King Constantine and the execution of five Ministers and the Commander-in-Chief. It was generally understood, however, that he was essentially the capable administrator rather than a scheming politician, and his sincerity and ability had impressed themselves on all foreigners who had come in contact with him. M. Sterghiadis, however, quitted Smyrna and to all intents and purposes nothing more has been heard of him by the outside world until an Athens newspaper a few weeks ago reported some remarks which he was stated to have made to a friend in France, where he is a political refugee. He is held responsible for the disaster that overtook the unfortunate Greek refugees who poured into Smyrna and fell victims to Turkish revenge; but in the reported conversation he states that when the truth is known regarding those days, it will be found that he did his duty and is entitled to retain a clear conscience. He had, he points out, two duties to perform—to see the Greek army evacuated and to allay the panic that had seized the people. He succeeded in the first task, and to accomplish the second he declared that Smyrna itself ran no immediate risk of capture. He could state this, not of his own knowledge, but only on the authority of the military commanders. They were emphatic in their assurances that the Turks could not reach Smyrna for a month. M. Sterghiadis conveyed their assurances to the population of Smyrna, but at the same time he repeatedly pressed the Athens Government to send an adequate number of vessels to evacuate the inhabitants. This, as is known, was not done, and M. Sterghiadis was made the scapegoat on the spot for the Smyrna disaster. If Greece feels the lack of able administrators, it is to be hoped that it will occur to someone to examine the case of M. Sterghiadis, to see whether he has been the victim of a not unnatural mistake, but nevertheless an injustice. The policy of trying to let bygones be bygones has been accepted in theory by all parties, and, unless his experience has impaired his faculties and his judgment, we believe that in no single instance could that policy be put into practice with greater advantage to Greece than in the rehabilitation of M. Sterghiadis.

The Political Change in Yugoslavia.

With five or six portfolios still to fill (Yugoslavia indulges in the luxury of seventeen or eighteen Ministries) the new Yugoslav Cabinet is necessarily of a provisional character. The intention of M. Voukitchevitch is to enlarge the basis of his Government, if he possibly can, by the inclusion of other elements of the Triune Kingdom. For the moment he is without the support of the Slovenes, who were included in the last Cabinet, and there is no Croat Minister. Not the least of the Prime Minister's troubles is the split in his own party. The Radical Club is now divided into a Pashitch and an Ouzounovitch section; the issue between the two groups is partly personal, but also turns on the attitude to be adopted towards the Croat Peasant Party or Raditchists. The Ouzounovitch group, to which M. Voukitchevitch belongs, still aims at co-operation with the Raditchists, although it is presumably anxious to protect itself against the embarrassing vagaries of M. Raditch, who has hitherto contrived to be almost a bigger thorn in the flesh of his political allies than in that of his opponents. The Club is to hold its annual meeting this summer, and will then have to elect a successor to M. Pashitch. The candidate most favoured at present is M. Trifkovitch, President of the Skupshtina; but before the meeting takes place the leaders of the two sections will be anxious to heal the breach between them, if only because the split threatens the commanding position which the Radical Party holds in the country. In the meantime M. Voukitchevitch has given an earnest of the policy that he would like to adopt, by collecting as many experts as he can round him, even to the extent of going outside the ranks of the Skupshtina for some of his Ministers.

Persia and the "Haji."

The announcement that this year the Persian Government has again refused officially to countenance the pilgrimage to Mecca by Persian subjects will surprise no one who has followed the developments of relations between the Wahhabis and the Shiah section of Islam. Last year, it will be remembered, the Persians reported unfavourably upon the conditions prevailing in the Hijaz, and, of course, they were not represented at the Grand Muslim Conference. Whether this hostility to the present possessors, or occupiers, of the Hijaz is in the main religious or political it is probably best for Mussulmans themselves to determine and state, but it may at least be remarked that the mutual distaste of Wahhabi for Shiah and Shiah for Wahhabi is no new phenomenon in Islamic history. Hitherto the Shiahs may be said to have had the better of the argument, for Wahhabi sway in the Hijaz has been but transient. Possibly they will so score again. But if King Ibn Saoud's régime endures, most interesting developments may be looked for in the world of Islam. For instance, the Shiah Holy Cities in Iraq—Karbala, Najaf, and the rest—will even more than hitherto become the spiritual home of the Shiahs, and this tendency, not, indeed, created by the Wahhabi conquest of the Hijaz, but certainly stimulated by it, to substitute a pilgrimage to Iraq for the pilgrimage to the Hijaz, will in all probability have a political reaction. To mention but one way in which such a movement might be reflected—the Shiah sections of India and of Iraq could be more closely bound to Persia, so that Teheran might come to be regarded as their common working centre.

A Charge against Palestine.

Whatever the inhabitants of Palestine may be thinking of the way in which the British are administering the Holy Land, there is never any lack of critics outside the country who, first on one count and then on another, choose to upbraid the Mandatary. Many of these critics die a natural death, either of inanition or of inanity. The latest in the field, and quite the most original, are the Good Templars. Last month in the House of Commons a certain Labour Member elicited from the Colonial Secretary the not very surprising statement that there

had been an increase, since the occupation of Palestine by Britain, in the number of places licensed to sell alcoholic liquors in the Holy Land. For the critics whom we have referred to this admission was sufficient. The Good Templars last week at Bristol immediately linked up this statement with one to the effect that there had been a rapid increase of crime in Palestine during the last five years. Where the Good Templars, who forwarded a resolution of protest to the League of Nations, to the Prime Minister, and to the Colonial Secretary, obtained this second piece of information from, their own consciences alone know. Possibly they think, in their ignorance, that the East is so like the West that all crime therein is caused by strong drink. To anyone who knows Palestine the suggestion that crime was less under the Turkish Administration than it is under the British is, of course, just as fantastic as to suppose that the Turkish police were more efficient in the handling of crime than the present police in Palestine. But it may be helpful to the doctrinaire or fanatical mind to repeat the statistics for crime which our Jerusalem Correspondent gave in our issue of March 24: "Crimes committed during 1926 numbered 19,061 (as compared with 19,701 in 1925); the total number of arrests were 32,068 (as compared with 36,642 in 1925; roughly five per cent. of the whole population); of these 14,690 were convicted." Upon the general question of the increased consumption of drink in a thirsty land we make no comment; but we present the Good Templars with the suggestion that it is precisely that class in Palestine which is responsible for this increased consumption that is the most law-abiding. And at the same time as they investigate this problem they might inquire whether there are in fact any countries in Western Asia in which the consumption of drink has an undoubted effect on the State. For ourselves, we can at the moment think of only one.

An Affair at Henjam.

The peace which Great Britain so splendidly imposed upon the Persian Gulf has been so seldom disturbed as to make the recent affair on Henjam Island, which is just inside the Gulf (and, incidentally, is Persian territory), a notable event. On April 12 or 13 the Persian Custom-house and Post Office were attacked and looted by Arabs under the aged Shaikh of the Island, and the Customs Mudir and the Postmaster received fatal injuries in defending their charge. The Shaikh and his Arab followers are said to have escaped to the Trucial Coast. At present the origin of the dispute is obscure, but in consideration of the fact that for the last two or three generations the Arabs have lived happily one must suppose that some quite new and intolerable grievance, felt by both the Shaikh and his followers, had sprung up. Such measures as have been indulged in by the Arabs could have derived only from a spirit of despair. Whatever the reason be of this disturbance, the affair provides another item in the history of Henjam, of which we publish a fascinating account elsewhere in this issue.

—♦♦♦— "THE MOSLEM WORLD."

The April number of the *Moslem World* contains, among other things, a notable article by Professor Arnold Toynbee on "Islam and the League of Nations," "The Moslem Mind in Turkey To-day," by W. S. Woolworth, Jr., "Islam and Moslem," by Worthington Jukes, and "Is Afghanistan Closed?" by A Danish Student. In his article Professor Toynbee leans to the view that the five important Islamic States—Turkey, Afghanistan, Najd and Hijaz, the Yaman, and Egypt—now outside the League of Nations, will, rather than gravitate towards the orbit of the U.S.S.R. or of the United States, or towards the formation of a separate group of their own, eventually turn to Geneva. He bases his opinion on the alleged desire of these Oriental States, not to exchange one Oriental civilisation for another, but to acquire the civilisation of the West.

—♦♦♦—
The Raja of Mandi arrived in Sofia from Constantinople on April 18 and left the following evening for Bucharest to rejoin his father-in-law, the Maharaja of Kapurthala, who is making a European tour. The Raja was received by King Boris.

The Near and Middle East*

From Our Own Correspondents.

Cairo, April 16.

The Brighter Alexandria Movement.

The movement to attract tourists to Alexandria, which has for some little time now been in progress, received a great impetus last Sunday, when a meeting was held at Claridge's Hotel of the provisional committee, which comprises representatives of all portions of the community. There is, of course, much interest in and around Egypt's second capital, which merits the attention of visitors, and it is to be hoped that the movement will meet with all the success it deserves. The difficulty is that most visitors on landing nowadays want to rush, as soon as possible, to Upper Egypt to see the antiquities, and, as was pointed out in this correspondence recently, Cairo is itself becoming less and less a centre for a stay of much more than a day either way. The steamship and tourist agencies, which in catering for the traffic have to take into account the requirements of their clients, have so far been compelled by this demand for quick transport to Upper Egypt, to supply special trains to convey them from the landing stage to Cairo and back, and so long as this demand lasts it will be difficult, if not impossible, to get them, as is now suggested, to withhold this extra facility. A far better plan than trying, by suppressing these special trains, to force visitors to spend some time in Alexandria would be to carry out an extensive campaign of advertisement of the attractions of Alexandria and its environs which visitors hitherto have missed. The modern rush to Upper Egypt is entirely the result of propaganda, and there is no reason why Alexandria should not try by the same means to attract attention to herself. It is indeed by persuasion rather than by compulsion that tourists will be induced to pause, either on their way into, or on their way out of, the country and enjoy the undoubted attractions which that city can offer.

The Budget.

The Chamber has now embarked on the consideration of the 1927 Budget, and for the rest of the session, until this business is completed, two days a week will be entirely devoted to it. The Budget should be promulgated not later than the 30th instant in order to be in time for the opening of the new financial year which starts now on May 1. But, if one may judge by the rate at which the discussions are going, it does not look as if Parliament will have completed its labours by then. Since the committees examine it exhaustively it should not be necessary for the Budget to be discussed in detail by the two Houses, which really need deal only with the report itself. To prevent the waste of time which every one admits takes place now owing to the non-limiting of speeches, the very practical suggestion has been made that the Chamber should first agree on the time allowed to each section, the members who wish to speak on each section should then register their names, and the order of speaking should be determined by ballot. In that event when the pre-

scribed time allotted to any particular section has been exhausted the debate thereon would be automatically closed, the Government would reply, the Chamber would vote and the next section would be taken. By these means the budget could be promulgated in time for the financial year, and incidentally members would be induced to curtail their speeches.

An Egyptian Income Tax.

The Finance Committee of the Chamber in its report on revenue points out that, whilst the recent economic crisis, due to the fall in cotton prices, has not affected the financial situation of the State, nevertheless the future gives rise to a certain amount of anxiety by reason of the great projects for social and economic development to which the country is committed. It very rightly recommends that fresh sources of revenue should be sought, and among these it suggests the imposition of an income tax. That some direct contribution to the upkeep of the State should be made by the private individual is only reasonable, but it is very doubtful whether an income tax, even if it could be introduced, would produce results justifying its imposition or covering the cost of collection and—what is more—of detection of evasions. Egypt, it must be admitted, is not temperamentally fitted for a system of income-recording, wherein personal confession plays such a great part, and it is very doubtful whether more than a small percentage of returns would approach accuracy. It is true that it has taken years to reconcile even the law-abiding, disciplined British public to this inroad on its income, but there the authorities had not to cope with the temperament and facility at evasion which exist in this country among practically all classes of the community. It is indeed to be feared that for years the receipts from an income tax would scarcely cover the cost of its collection.

IRAQ.

Baghdad, April 15.

Imperial Airways.

A very interesting ceremony took place at Baghdad West aerodrome on April 12, when King Faisal ceremoniously named the new liner of Imperial Airways, "City of Baghdad." After the rendering of the Iraq and British National Anthems by the band of the Iraq Army, the proceedings opened with a speech by the High Commissioner. Commenting on the extraordinary significance to Iraq of the day's ceremony, which "consecrated and emphasized the dependence of her modern civilisation upon the navigation of the air," he said that in ancient

times all the caravans of the world brought wealth to Iraq, until the conquest of the sea diverted the world's trade to ocean routes. Now the conquest of the air had given back to Iraq her ancient geographical primacy as the central region of the earth. She had already become accustomed to seeing the aeroplanes of all nations pass over her on their voyages between the East and the West; but this great enterprise of the British Imperial Airways was the first to undertake a regular commercial air service for passengers and mails across the deserts of the Middle East. His Excellency was confident that the world's passenger traffic between Europe, and Persia and India would in future pour through and over Baghdad, and it was therefore fitting that one of the first of the magnificent aeroplanes built for this new service should be named City of Baghdad, and that King Faisal should preside over its naming.

Colonel Burchall (Assistant General Manager of Imperial Airways) then addressed the King, thanking him for his kindness in consenting to name the new aeroplane, and asking him to accept, as a souvenir of the occasion, a silver model of the "City of Baghdad." It was the Company's hope and belief that the Imperial Airways service would promote and facilitate that rapid development of Iraq which, as everybody knew, was His Majesty's chief preoccupation.

The King then pulled a silken tassel, which moved a panel in the side of the machine, revealing the name "City of Baghdad" inscribed in colours in English and Arabic. At the same moment the cockpit opened, and a flight of pure white pigeons rose into the air, returning to settle on the wings of the aeroplane—a pretty sight which appealed greatly to the crowds of spectators.

King Faisal then expressed his pleasure in performing the ceremony, and his thanks to the British Imperial Airways for inaugurating the first commercial air route. God had willed, he said, that science should avenge Iraq for the isolation which science had caused; after a long stupor, life had sprung up again in the wastes of Iraq, which with her clear skies and flat surface, had afforded the best attraction for those scientific novelties which he hoped would assist Iraq considerably in the recovery of her former supremacy as a central region of the East and West.

After the ceremony a series of exhibition flights were performed, the passengers on the first flight including King Faisal and his brother, ex-King Ali, the High Commissioner, the Prime Minister, and the Minister for Communications and Works. In order to demonstrate the safety of the aeroplane, the pilot shut off each of the three engines in turn, finally flying a considerable distance with only the centre engine at work. In the subsequent flights nearly a hundred passengers were taken up, a very notable feature being the extreme eagerness of the Iraqis present, and their complete confidence in the safety of aviation. Several members of the Cabinet, the chief Rabbi and other religious dignitaries, and several prominent merchants were among the passengers, all of whom were delighted with the experience.

The formation of a private aeroplane club in Baghdad has been mooted.

New Ministry.

The formation of the new Ministry of Irrigation and Agriculture was passed in the Chamber of Deputies by a large majority, though not without a heated debate and considerable opposition on the score of economy. The Prime Minister said that the new Ministry would include the existing department in charge of irrigation, and the extra cost would be only half a lakh of rupees a year, which would include the Minister's salary and that of his Secretary. The new Ministry is to incorporate the directorates of Irrigation, Agriculture, State Domains, Surveys, and the Veterinary Department.

The Turkish Petroleum Company.

On Tuesday, April 5, the drilling operations of the Turkish Petroleum Company at Palkhana were inaugurated with impressive ceremony by King Faisal. A special train had been arranged, the guests reaching Sulaiman Beg at 9.30 a.m., after a night journey from Baghdad. A guard of honour was drawn up at the station, where the King was received by Mr. Bull, General Manager in Iraq for the Turkish Petroleum Company, and members of his staff. The guests then went by the Company's newly-made road over the hilly country to Palkhana, where some time was spent in examining the buildings and plant. Two drilling rigs are already completed, with the winding machines and pumps for rotary drilling at their base.

After being shown round the various points of interest, the King mounted a staging inside one of the rigs, where a memorial was read by Mr. Bull, who handed to His Majesty a copy in a silver casket. In welcoming the King, the Company said that to his interest in and keen appreciation of the importance of the oil industry to Iraq was due in no small measure the progress that had already been made. The developing of a great oilfield was a task of the greatest complexity; much of the preliminary work had now been done, and the first well was about to begin its progress to the oil-bearing strata below, and, as they hoped, to its concealed treasure of petroleum. Other wells would be begun as soon as possible. The success of their operations would benefit Iraq not only financially, but socially, by giving employment to large numbers of Iraqis, and by providing every opportunity of advancement to young men of the educated classes. The address ended with thanks and good wishes to the King.

His Majesty, replying in Arabic, thanked the Company for their welcome; he shared their optimism as to the future of the enterprise. In view of the very close association of their mutual interests, it was incumbent on them to co-operate as closely as possible. Success could be attained only by earnest goodwill and concentrated work in the exploitation of Iraq's hidden treasures, to their mutual advantage.

The King was then asked to pull the lever which caused the great drill to begin to rotate. After the ceremony the party returned to Sulaiman Beg, reaching Baghdad the same night by train.

The influence of the new industry on Iraq will certainly be far-reaching. Not only will the burden of the taxpayers be lightened when the Government begins to

receive royalties, but so vast an undertaking, with its many branches apart from the actual drilling for oil, must also open up a great field of employment. Moreover, the provision of cheap oil as fuel will be of the greatest benefit in furthering the irrigation and agricultural development of Iraq, and in improving her means of communication. It is fortunate that the management of the Central Cinema, by securing a film of the ceremony at Palkhana, will enable hundreds of Baghdadis to realise the significance and importance of this new industrial enterprise.

Income Tax.

The proposal to levy income tax in Iraq is causing a good deal of controversy in commercial circles. The members of the Baghdad Chamber of Commerce held a conference with the Prime Minister and the Minister of Finance, to whom they explained their objections to the Government proposals. A memorandum has since been submitted to the Government by the Vice-Chairman of the Chamber, who maintains that the proposed law is incompatible with the present state of trade in this country. In the opinion of the Chamber of Commerce, the adoption of a percentage basis is unworkable, because the great majority of Iraqi tradesmen keep no books of any kind by which their taxable capacity could be assessed. The danger of illegal exactions by corrupt officials is thought to be very great. The Chamber recommends the adoption of a system of fixed taxes, except in the case of Government officials and limited liability companies, whose incomes and profits are easily ascertained by Government.

Treaty Rumours.

The arrival in Baghdad of Sir James Shuckburgh, the Director of the Middle East Department of the Foreign Office, has convinced local opinion that negotiations are beginning for a new Anglo-Iraq Treaty. This has been so freely stated in the vernacular Press that the High Commissioner issued an official *démenti*, in which he stated that Sir John's visit had no official connexion with any treaty negotiations. Hearing that Sir John Shuckburgh was visiting Palestine for a holiday, Sir Henry Dobbs telegraphed to Mr. Amery suggesting that Sir John should take advantage of being so close to Iraq, and should be deputed to come to Baghdad for a few days on duty for the purpose of personal discussion with the High Commissioner on various outstanding matters. His conversations with the High Commissioner had naturally ranged over many subjects, including that of the Treaty relations between Great Britain and Iraq; but there has been no question of any negotiations.

General News.

The High Commissioner visited Mosul by road on April 6, returning to Baghdad after a stay of four days.

On the Muslim festival of Id al Fitr the King of Iraq went in procession to the Sarai Mosque, escorted by the Royal Bodyguard and a squadron of mounted police. He afterwards received Id congratulations at the Palace, some hundreds of officials and notables paying their respects. The Queen of Iraq and the ex-Queen of the Hijaz also received visitors.

Colonel P. C. Joyce, C.B.E., D.S.O., left Baghdad for England on April 2. Many tributes have been paid to the valuable work done by Colonel Joyce in laying the foundations of the Iraq Army, and to his earlier work in the Hijaz during the Arab revolt.

THE HIJAZ.

Jidda, April 9.

The Pilgrims.

Up to March 31 inclusive a total of 55,854 pilgrims had arrived at Jidda, of whom the following is an official analysis published in the *Umm al Qura* (the Mecca weekly newspaper) of April 1:

Java 49,893, India 2,610, Bukhara 1,667, Arabia (by sea) 1,017, Afghanistan 432, South Africa 58, Malabar 53,

Syria 46, Turkey 44, Egypt 12, Senegal 10, and Other Countries 12.

The enormous preponderance of pilgrims from the Dutch East Indies (practically 90 per cent. of the total) is very striking, but it has to be remembered that Indian and Egyptian pilgrims come in force only during the last few weeks before the actual pilgrimage ceremonies. The same applies to Turkey and Syria, whose contingents are in any case never very large. The Javanese total will probably reach 60,000, and the Egyptian and Indian between them perhaps 30,000. The total absence of Persians is as remarkable as it is regrettable, the Persian Government having apparently placed an official embargo on their pilgrims and, it is said, even issued orders to the Vice-Consul here to refuse return visas to pilgrims who do come. This is in itself an indication that Persians would not refrain from coming, if left to themselves. Islam must, of course, be left to settle its doctrinal controversies for itself; but it is scarcely probable that King Ibn Saoud, who has conquered practically the whole of Arabia in the name of an ideal without any help or encouragement from the neighbouring Islamic States, will bow to dictation in matters vitally affecting the ideal which has inspired him throughout. To do so would be to invite the disruption of the State which he has created, and an immediate return to the anarchy and insecurity of the old régimes. A few years of pilgrimages conducted under conditions of complete security of life and property and with modern amenities of travel will suffice to remove the doubts of hesitant communities about the advantages of Wahhabi rule. The total of pilgrims up to April 8 is 62,471.

The Yaman and Asir.

The recent arrival here by *sanbuk* (sailing-boat) from Jizan of Saiyid Muhammad al Marghani and the Shaikh Shauqiti once more focuses attention on the southern situation, where it is clear that something untoward is brewing. It may be stated as a fact that King Ibn Saoud has no intention whatever of adopting an aggressive attitude towards the Yaman, but he will not lightly brook acts of aggression on the frontier of his Asir protectorate. The responsibility for any outbreak of hostilities in that direction will lie on the Imam and on Italy, for it is quite obvious that the former is incapable of any serious action without the support of the Italian Government. The fate of the Hashimite dynasty in the Hijaz should be a warning to those who have eyes to see. The Italian Consul returned to Jidda from Eritrea on April 2.

The Wahhabi Leader's Title.

Advantage was taken of the religious festival of the *Id al Fitr* to announce an event which, although it occurred more than two months earlier, had not been made public—it is astonishing how well secrets are kept in this country. The event was the formal and perfectly natural conversion of the Sultanate of Najd and its dependencies into a kingdom and the consequent assumption by Ibn Saoud of the title of "King of the Hijaz and Najd and its dependencies." At Jidda the occasion was duly celebrated by a salute of 101 guns and a reception by the Governor, which was attended by the whole Consular Corps and other European residents. The Turkish representative, Sulaiman Bey Shaukat, in a felicitous speech asked the Governor in the name of the assembled diplomatic representatives of foreign Powers to convey to the King the best wishes of those Powers together with an assurance that they had no desire but to see him completely successful in the great task to which he has put his hand. It is announced that the creation of the Kingdom of Najd and its dependencies is to be further marked by the issue of a series of stamps (the present issue) bearing the overprint: "Commemoration of the Kingdom of Najd, Rajab 25, 1345 A.H."

Najd and Transjordan.

It is announced that the Conference, which has been sitting for some time at Jericho under the presidency of a British judicial official for the settlement of raiding accounts between Najd and Transjordan, has resumed its deliberations at Jerusalem after a hitch of considerable duration. This hitch is thought here to have been due to the presentation of numerous false claims by the Transjordan representatives, who also desired to go further back into the history of the past than was contemplated by King Ibn Saoud when agreeing to send representatives. Ramadhan (March) of last year is apparently the date to be taken for the assessment of claims and counter-claims, events prior to that being written off on both sides.

General News.

Another item of frontier news of interest is that Shaikh Ahmad ibn Jabir of Kuwait, who recently sent representatives to meet King Ibn Saoud at Riyadh, intends to visit Mecca for this year's pilgrimage. Recent indications also point to an unusually large Egyptian pilgrimage this year, and the dispatch of four horses by King Ibn Saoud as a gift to the King of Egypt suggests that some progress has been made towards a complete and satisfactory understanding between the two countries. This is all to the good, and it is to be hoped that the Egyptian Government will take the obviously desirable step of communicating its formal recognition of the established régime of the Hijaz and Najd. The rumour that a diplomatic representative of Najd has proceeded to Turkey is denied by the *Umm al Qura* of April 8.

The new British Consul (Mr. Stonehewer Bird) is expected to arrive here on April 25 to succeed Mr. Mayers, who goes eventually to the Oriental Secretary's department at Cairo. The latter, at first as Vice-Consul and latterly as Acting Consul and Agent, has, in spite of constant expectation of transfer, established himself firmly in the good graces of the authorities and people of the Hijaz, and the experience he has gained here should mark him out for return to Jidda when his times come for promotion to Consul. The Jidda post is no sinecure, and requires the highest qualities of tact and common-sense. Mr. Mayers in a difficult position has shown that he has both.

Sofia, April 18.

Parliament Prorogued.

The Sobranye, which has legislated for four years and which was elected after the *coup d'état* of 1923 and after the sanguinary Communist riots of September of that year, has just been terminated by the extinction of its mandate. This is the third, or at most the fourth, Bulgarian Sobranye that has disappeared in this way, without dissolution. This fact is worthy of notice, as the King remarked in his Speech at the close of Parliament. "At the end of its fourth ordinary session—the Bulgarian Legislature has four sessions annually"—the King said in his Speech from the Throne, "the twenty-first National Ordinary Assembly terminates its legislative mandate, and I am happy to note this rare and joyful fact in the history of our Parliaments. It is an expression of the high conscience actuating our politicians in the constitutional direction. At the same time it is a proof of the consolidation of our country and of the stabilisation of Parliamentary life among us." Then, turning to the deputies, the Head of the State gave this personal testimony to their Parliamentary endeavours:—"I note with particular satisfaction that during this last session you have made every effort to justify the confidence of the nation and to create as far as possible conditions which shall assure to Bulgaria a peaceful and happy future. The laws voted by you are a proof of the ardour and the patriotism which have guided you in the accomplishment of your high mission."

This royal appreciation is well merited. The activity of this last Parliament was of the most varied kind, and had most fertile results. First, should be mentioned the revision of the agrarian legislation, which, even in its sound parts, was vitiated by passion and party prejudice, and which, re-drafted and corrected, has been of useful application in the life of the country. A long series of reforms has been effected which resulted in the stabilisation of the national currency, in encouraging public works in the country districts, in introducing a new division of the fiscal charges to the benefit of the needy classes, in making public instruction conform to the national traditions of the people, in improving the position of officials, of invalids and of all War-victims, of building the foundations of a sound Budget, of lessening dues by extremely useful concessions, such as that of the exploitation of the great forests of Deuvlen and of Vassilikko and that of the monopolistic manufacture and the export of bacon, and in concluding the loan for the refugees.

The campaign for the new elections has begun already. The elections have been fixed for May 29. The new Sobranye has to be in extraordinary session in June to deliberate upon certain urgent questions.

Bulgaria and Greek Macedonia.

A most important dispute has suddenly sprung up which concerns the liquidation of the property of Bulgarians emigrated from Greek Macedonia and of Greeks emigrated from Bulgaria. This liquidation is made through a mixed Commission composed of one Bulgarian and one Greek, and presided over by two League of Nations delegates, of whom each in turn exercises the presidency. A special Convention was annexed to the Treaty of Neuilly for the regulation of voluntary—or so-called voluntary—emigration between the two countries. Moreover, the Bulgarians in Greece and the Greeks in

Bulgaria form communities which are religious and administrative bodies and which in this quality possess ecclesiastical and scholastic property. By an omission the aforesaid Convention contained no provision for the settlement of this property. The Commission, interpreting silence as tacit agreement, thought that it was in the order of things that the property of the communities, that is to say, the schools, the churches, the monasteries, the cemeteries, and so forth, should be liquidated at the same time as individual property. If (they argued) a community is driven to dissolution it is only natural that its property be liquidated. On this point the Commission is running strongly counter to the feelings of the Macedonian *émigrés*, who, although obliged to abandon their native hearths, have not abandoned all hope of returning. In any case, these unhappy victims of the War are still sufficiently attached to their country to wish to maintain there—even if it were only as a fiction—their schools and above all their churches and cemeteries, which symbolise for them their struggles in the past. Consequently they oppose the dissolution of their communities, of which the whole population is far from having emigrated.

That is the moral aspect. There is also the material side. A reciprocal obligation is involved, by which the liquidation would concern the property of Greek *émigrés* in Bulgaria no less than that of Bulgarian communities in Greece. An exchange might be affected. It is true that the Greek Churches in Bulgaria which might be liquidated number only some 70 or 75, while the number of Bulgarian Churches in Greece is about 300. The difference between the two might be used for the construction of new Churches for the use of Macedonian *émigrés* in Bulgaria. This circumstance has impelled the Foreign Minister, M. Bourroff, to approve the decision of the Mixed Commission concerning the liquidation, and not only to approve it, but also to do something more—and this has provoked a grave conflict between the Government and the Macedonians. The Convention stipulated that declarations had to be made, within a fixed date, by those interested in the liquidation of their individual property—after which the Commission alone could proceed to liquidation. This the Bulgarian *émigrés* refused to do, although the time limit was several times extended in their favour, and although the old Greek communities in Bulgaria had done so. M. Bourroff took it upon his own shoulders, in the name of the Bulgarian State, to make the necessary declarations. This act raised a hue and cry among the emigrants.

Questioned by the Macedonian group in the Sobranye, M. Bourroff explained his conduct by saying that he had decided on the expedient at the last moment, so as not to lose the benefits of the liquidation of the Bulgarian Churches in Greece. The Minister's words infuriated the Macedonians, who immediately protested to the President of the Council, M. Liaptcheff. Seeing that he sided with M. Bourroff, they set themselves to organise meetings, which the Government has unequivocally banned.

Thus has arisen a very serious conflict. Probably it would have been better to allow the League of Nations Commission to make the liquidation, rather than the Bulgarian Government.

The Macedonians have decided to carry the matter to the Council of the League. They are preparing a long Memorandum which they are going to present to Geneva.

Sir Muhammad Rafique has returned from his visit to India and has resumed his work on the Council of India.

Sir George Clerk, British Ambassador to Turkey, who recently returned to Constantinople from leave, went to Angora at the end of last week for a short visit.

Colonel Frank Joseph Agabeg, C.B.E., V.D. (66), of Peers Court, Aspley Guise, Beds., and of Bara-Church House, Burdwar, Bengal, an hon. A.D.C. to the Viceroy of India in 1912 and a Fellow of the Zoological Society, left (property in this country) £2,235 (net personality nil).

NEAR AND MIDDLE EAST ASSOCIATION.

On April 8, an afternoon lecture was given by Mrs. Margaret Hasluck to the members of the Near and Middle East Association at 21, Addison Road, W., by kind permission of Mrs. Menteith Ogilvie. Miss Sylvia Townsend Warner was in the Chair.

Mrs. Hasluck took for her subject the "Witchcraft and Weather Lore of the Western Balkans." She began by stating that, though the Western Balkans can be reached in three days from London, witchcraft is as rife there as in Central Africa. This she attributed to the ignorance in which the inhabitants have remained owing to the difficult nature of the country and its consequent lack of communications, to the inadequacy of schools, and to the poor education of the clergy of the three prevailing religions.

The lecturer then defined magic, or witchcraft, as the possession and exercise of unusual knowledge or power by any one, young or old, married or single, man or woman, who acquired the requisite knowledge. Magic might, therefore, be white or black, beneficent or maleficent, good or bad. Given the abysmal ignorance of the peoples of the Western Balkans, almost everything seemed beyond their own capabilities and had magical significance for them.

Black magic was hard to learn, but Mrs. Hasluck taught the audience how to bring the moon down to earth, how to kill a man by taking earth from his shoulder, and how to league oneself with the Powers of Evil for magic purposes. On the white side she recited spells that catered for almost every human need from capturing a wife to ensuring a good complexion and a bountiful harvest. She next cited incantations for curing various diseases, notably over-looking.

She also exhibited specimens, including crumbs of *manogalo* (the most potent love-charm known to the Balkans) a *monokero* (a Christian crucifix used even by Mussulmans to cure over-looking), blue beads, an amulet from the Quran, a miniature scarecrow placed on bee-hives by the Turks of Kinali near Monastir, and her own diploma as a witch which she secured by buying the goodwill of a witch's business.

She concluded by saying, though the spells rested on her authority alone, they were not likely to have been specially manufactured to deceive her, for she repeatedly found the same spell in villages too remote from each other for collusion to have been possible between the witches.

HENJAM.

BY SIR ARNOLD WILSON, K.C.I.E.

Henjam, which has recently leapt into prominence owing to an attack on the Persian Customs House and Post Office by the local Arab Shaikh, has been not inaptly described as "the Perim of the Persian Gulf." It is an island of dismal appearance, a mass of barren, broken and almost black rocks, relieved only by the fine buildings which contain the staff of the Indo-European Telegraph Department which controls on behalf of the British Government all cables in the Persian Gulf. To British navigators of a former generation it was known as Angaum or Angar. It must always have been a port of some importance, for it has the advantage of a double anchorage, lying on both sides of a sandy spit at the northern-most point of the island, giving shelter either from the north-west or the south-east wind.

The relics of past history to be found on the island include three blocks of granite, or diorite, the largest weighing several tons, which must at some unknown date have been imported, possibly in Sumerian times. Great blocks of similar stones are to be seen near Ur and Abu Shahrain, and the importation of such stone from "Magan" in the days of Gudea, King of Lagash, B.C. 2600, is referred to in contemporary inscriptions. Vessels must have called at Henjam on their way up the Gulf from the earliest times for water, of which the island has a good supply from wells at the hamlet of Ghail, close to which the granite blocks lie, and salt, which is obtained from caves, one of which towards the centre of the island is entered by a long low narrow passage and contains a grotto of rare beauty. Sulphur, red ochre and blocks of specular iron ore are also found. Of not less interest are a series of nine reservoirs hewn out of the solid rock and lined with locally made cement, which is in as good condition to-day as when it was first laid down. Other ruins are attributed to the Portuguese.

Henjam was sighted by Nearchus, the Cretan admiral of Alexander, in his journey up the Gulf in B.C. 326. He describes it as sacred to Neptune.

During the gun-running days in the Persian Gulf Henjam was temporarily used as a coaling station by British vessels, but the Navy has no use for coal nowadays, and the local inhabitants have to look elsewhere for their surreptitious supplies of fuel in the winter. There is a wireless station on the island which, thanks to its position at the head of the Gulf, can maintain touch with ships both in the Persian Gulf and the Gulf of Oman. The Indo-European Telegraph Department was re-established in 1904 on the island after having been in abeyance for thirteen years. The cable from Karachi via Jask is here landed and messages relayed to Bushire, whilst communication is maintained with Bundar Abbas by a cable from Henjam to the adjacent island of Qishm, and thence by another cable to the mainland.

The inhabitants are practically exclusively Arabs, who are said to have emigrated about three generations ago from the Arabian coast, with whom they maintain close relations. They depend upon the pearling industry for their livelihood, and the island is almost deserted from June to October, the male population betaking themselves to the foul banks of the Gulf, whilst the women seek employment at Minab and other places as date pickers. In winter the men devote themselves to shark fishing and are noted for their dexterity with the harpoon. In the hills are some wild goats, probably domestic goats which have escaped from the village and their descendants, and the island is now over-run by hares which were introduced here, and on Tanb Island, in 1882 by a former Telegraph official. It is a bleak, desolate spot, but it has its compensations, and when its sleepless nights are forgotten the vision of Qishm Island with its rainbow-hued cliffs at dawn, and at sunset of Musandam Peninsula, looming as black and mysterious as it did to Alexander's admiral, lingers in the memory.

All honour to the Telegraph officials, British and Indian, worthy representatives of England, who labour there keeping Persia and the Persian Gulf in touch with the great world, and ships in touch with their ports. When the history of the Persian Gulf comes to be written their labours, and those of their colleagues for the past seventy years, will not be forgotten.

"REVOLT IN THE DESERT."

An Arabic Version.

An Arabic version of Colonel T. E. Lawrence's book, "The Revolt in the Desert," has been prepared by Abdul Masih Wazir, an Iraq Government Civil Servant working in the Ministry of Defence, Baghdad. This translator was, we understand, educated at the American University at Beyrout. The volume has been printed at the Al Hilal Press, Cairo, and is shortly to be published. For this version, which is likely to be read with very considerable interest in all Arab countries, Nouri Pasha al Said, C.M.G., D.S.O., who is now Commander-in-Chief of the Iraq Army and Minister of Defence, has written a most interesting Introduction. The immense part which Nouri Pasha played both during the Arabs' revolt in the War and in the subsequent building up of an Arab polity will be remembered by all our readers. Owing to the courtesy of the Iraq Diplomatic Agency in London, we are enabled to reproduce an English version of Nouri Pasha's Introduction:—

I have been requested by my friend, Abdul Masih Wazir, to introduce Lawrence's remarkable book to Arab readers. It is, indeed, a difficult task for me to say a word about Lawrence without first marshalling in my memory the whole chain of events of the Arab Revolt with all its secrets. Some of those events and secrets are unknown even to Lawrence himself, and they are still jealously guarded in the inner recesses of the hearts of those who had unique opportunities of knowing them. Some may be inclined to believe that Lawrence's ignorance of these happenings may tend to lessen the importance of his book. On the contrary, this lack of knowledge will, in my opinion, rather enhance the value of the book, especially in the present period of transition in Iraq, where we feel the greatest need for a man like Lawrence, who would help us to solve the problems with which our country is desperately grappling and which are due mainly to lack of full confidence in the Arab.

In order to make myself clear, I have to refer to some of the events and memories of those days. In doing so, I may be able to make the reader understand this remarkable, even unique, personality and the mysteries of his achievements, which were crowned with success during the last stages of the World War. This success might well have been a valuable lesson and an opportune warning to all who were actually interested in the affairs of the Arab Countries.

In this introduction I have restricted my appreciation to Lawrence's achievements. Yet I must, on this occasion, just cast a glance at the marvellous deeds which were achieved by the rest of the British Officers, such as Joyce, Newcombe, Maynard, Young, Earl Winterton, Lord Lloyd, and others. Their brilliant achievements have indeed written for them immortal chapters in the history of the Arab Revolt.

Some have tried to stigmatise the Arab Movement and Lawrence's achievements as deeds which were simply prompted by gold. I would be very glad if anyone could point out to me any enterprise, with no matter how sublime an ideal involved, which has ever been carried out in this wide world without the dynamic force of that precious metal.

Did not the Powers which fought together in the Great War lend one another enormous sums of money? Some of them have been so generous as to cancel their pecuniary claims against their Allies after the War, while others are still endeavouring to shake off the burden of the war debts on the ground that such money was spent for attaining a common end. Certain of the smaller nations, such as Yugoslavia and Czechoslovakia, were granted subsidies many times the grant received by the Hijaz.

War is an expensive pastime and the money given to the Hijaz was spent on war. There is not one of the leaders of the Arab Revolt, from King Husain's four sons to the military leaders, who is not far poorer now than before the War.

Now let us go back to the events.

In the autumn of 1915 I was transferred from my place of internment in India to Egypt, where I used to frequent the Arab Bureau at the Savoy Hotel for the purpose of paying visits to my friend Cornwallis, who then was only a new acquaintance. There, at the Arab Bureau, I met Lieutenant Lawrence for the first time. I only met Lawrence there on one other occasion, yet I was neither interested in the young man, nor did I notice in him any distinguishing trait which might have enabled me to foresee the important part he was destined to play in the future.

Days passed, and in 1916 I sailed for the Hijaz with some officers, the late Saiyid Hilmi, Said al Madfai, Saiyid Ibrahim ar-Rawi, and Dr. Amin Maluf and about 100 Iraqi soldiers. Our mission was to organise the Arab Army. We were the first officers who went to the Hijaz for that purpose.

Our task was by no means an easy one. But the most difficult problem that I met on my arrival there was the suspicion with which we were regarded by the Allies, on the one hand, and by the Head of the Country, on the other hand. Such suspicion was natural owing to the delicacy of the situation and on account of the lack of previous mutual understanding. It was this suspicion itself which curtailed the activities of the Arab Revolt and limited its results. In other Arab countries it made the revolt fruitless; while in some other places it curtailed, and is still curtailing, the activities of the Arabs. Aziz Ali was, afterwards, the first victim of this suspicion.

These pioneer officers had no end in view other than promoting the prestige of the Arabs and restoring their independence. They went to the Hijaz with burning enthusiasm and undaunted spirit. They had sufficient cause for complaint in the difficulties they encountered then in carrying out their mission in a country like the Hijaz. Those difficulties were due to the local climate and environment, as well as to the chaotic conditions of the country and its obscure future. Their hardships were augmented by that suspicion and the endless difficulties behind it.

I need not, therefore, describe the difficulties which I encountered in encouraging the officers, on the one hand, and fighting that suspicion, on the other hand.

In the last days of September we were at Rabigh in the service of my lord Prince Ali, who, I was told, was the Commander-in-Chief of all the Arab Forces. At this juncture we received from India another draft composed of about thirty officers and eight hundred men, all Arab Volunteers.

Prince Faisal was now fighting the Turks midway between Yanbu and Madina, when I received an order to dispatch to His Highness a detachment from the force which I had already organised during that short period in order to co-operate with his force. Whereupon I detailed a Machine Gun Company under Abdullah ad-Dulami and two guns under Rasim Sardast. I also detailed Maulud Mukhlis as an Aide-de-camp to His Highness, and Rashid Angurli as Officer Commanding for the Battalion, which I was told was under Prince Faisal's command, with a Syrian doctor whose name I do not remember now. At the head of this detachment I placed Hasan Fahmi, one of our Syrian comrades.

In October, Lieutenant Lawrence visited us with an *Iqal* and *Kufiyah* as his head-dress. He was granted the honour of an audience with the Prince, and I understood from him that he was coming to study the situation of our Army, as well as that of Prince Faisal, and subsequently to report the case to the authorities concerned on his return. Therefore I seized that opportunity and explained to him the difficulties which I mentioned above with all the other problems and obstacles which were obstructing our way. I also explained to him how little we were helped by the British, especially as regards guns.

I never hoped that my words would have the effect which they had afterwards. I quite remember now Lawrence's words when we parted: "I shall do my best to help you, and, *inshallah*, it will be all right. Don't worry."

These words gave me a faint ray of hope and dissipated my doubts as to the successful end of the Arab Revolt and the future of the Arab Countries. My view of Lawrence was now quite different from that I had formed when he was introduced to me in Egypt, although I still did not think that he had either sufficiently high rank or enough influence to enable him to fulfil his promise.

Lawrence departed and I saw no more of him until we met again at Aqaba in 1917.

During this interval our difficulties and hopes were as strong as they were at the start. We were visited by Admiral Weymss with a staff of Senior British Officers, among whom was Storrs—the present Governor of Cyprus. I seized this opportunity and repeated to the Admiral and his Staff what I had said to Lawrence a few months before, going into the details of the difficulties which we were encountering on account of lack of British help in the way of guns and facility for bringing Arab prisoners from their places of internment to join the Arab Army. The only reply I had to my pleading was a proverb, uttered in correct Arabic by Storrs, which means "Slow and sure wins the race."

The importance of the book which is being translated by Abdul Masih Wazir is due mainly to the fact that it makes the reader think of the dogged struggle and great effort on the part of Lawrence to help the Arabs in their Cause. I do not hesitate for a moment in stating that had Lawrence had at that time enough power and influence both the Arabs and their Allies would have obtained from the Arab Revolt results far greater than what they did attain despite the costly sacrifices and efforts which were made.

It was possible for Lawrence to understand at the first instance the Arabs better than any other Briton who worked for the Arab Cause; and perhaps even now he surpasses all others in this knowledge. Without exception, I remember Lawrence whenever we now encounter any difficulty and ask myself whether we shall be again so fortunate as to have another friend of Lawrence's type.

In this book Lawrence mentions the mobile force which operated from Abul-Lasan to Daraa and demolished the Turkish lines of communications in September, 1918. The originator of the idea of this force was Aziz Ali, who suggested it in 1916. How often we discussed the formation of a force to be detailed for that purpose. Who can

tell what great results the activity of such force would have had? Damn suspicion—even when the suspicious are in the right.

Lawrence is thoroughly candid in his book, which is throughout accurate. If the book is lacking in any way, it is in information to which the Author had had no opportunity of access. The facts which are unknown to Lawrence are many and very important from the view point of the Arab History. The lack of this information by no means lessens the value of the book, as I have already said, but it will rather enhance it, when the Arab princes and military leaders, such as His Majesty King Faisal and Jaafar Pasha al Askari write their memoirs for the public.

With Lawrence's book and achievements in the mind, there is nothing to be said that can add to one's appreciation. If I were to refer to any of his remarkable qualities—and many as they are—I would mention his foresight, his quick grasping of the truth and his steadiness throughout all his work whether in tent or under fire.

The other sides of Lawrence's character will, I hope, be elucidated when opportunity enables me to publish my own reminiscences.

NOURI AL SAID.

Baghdad, March 17, 1927.

A YUGOSLAV FLIGHT TO INDIA.

The flight of two Yugoslav airmen, Captain Tadija Sondermayer and Lieutenant Leonidas Baydak, to India and back is a testimony not only to the enterprise of the two officers, but also to the progress of aviation in Yugoslavia. Quietly, but none the less effectively, Yugoslavia is building up a useful Air Force, and it is an earnest of its capacities that it can detach two of its pilots for this long-distance flight. They left Paris on April 20, flew in eight-and-a-half hours to Novi Sad, the chief aerodrome and headquarters of the First Air Command, and proceeded the next day to Constantinople, thence to Aleppo, and were last reported on the stage from Aleppo to Basrah. Bombay is their destination. The machine in which they are flying is described as a Potez 25, with a Lorraine-Dietrich engine of 450 h.p.

Pending the settlement of the question the Persian Government has agreed to permit eight flights over its airways.

The Maharaja of Gaekwar of Baroda and the members of the Royal Commission on Indian Agriculture were among the passengers by the P. and O. special which arrived in London on Saturday afternoon.

The Angora Government have decided to transfer their Minister at Sofia, Ridvanbezoglu Husrev Bey, who is a close friend of the President of the Republic and General Ismet Pasha, the Turkish Prime Minister, to Washington.

The first consignment of the discoveries made at Ur by the joint expedition, under the leadership of Professor Leonard Woolley, of the British Museum, and the Museum of the University of Pennsylvania, arrived at Southampton on April 24 in the Strick Line steamer *Avristan*.

BURTON'S "KASIDAH."

"THE KASIDAH OF HAJI ABDU EL-YEZDI." (London: Elkin Matthews and Marrot. 7s. 6d.)

The world apparently never grows tired of saying that the "Kasidah," which, according to Lady Burton, was written in 1883-4, is not a great poem; and yet it continues to read it. It is true that the philosophy adumbrated in these Eastern verses or distichs is not encouched in such beauty, as, say, that which makes Fitzgerald's "Omar Khayyam" for ever, and for its outward sake alone, a delight to read. But curiously enough, it seems to be rather the rhythm and the drive of Burton's verse than its content or inner sake which have rendered it, since its publication in 1880, one of the poems prized by connoisseurs. On the present, or recently passed generation of English poets, the "Kasidah" has had a notable influence: one could, for instance, trace reflections of it in poets so far removed as are Housman and Belloc. But in the more popular imagination it has now become permanently linked up with Flecker's "Hassan," whose lines:—

Sweet to ride forth at evening from the wells,
When shadows pass gigantic on the sand,
And softly through the silence beat the bells
Along the Golden Road to Samarkand.

and the whole picture that is contained in that context, inevitably remind one of Burton's:—

The Golden Gates swing right and left;
Up springs the Sun with flamy brow;
The dew-cloud melts in gush of light;
Brown earth is bathed in morning-glow.

Slowly they wind athwart the wild,
And while young Day his anthem swells,
Sad falls upon my yearning ear
The tinkling of the Camel-bells.

One would imagine, indeed, that Flecker performed a considerable service in bringing public attention, which, to judge by the reprinting of the "Kasidah," was generally thin, if always enthusiastic, back to Burton. Possibly America has been more appreciative than England in this matter of Burton's verse. In any case, we have nothing but gratitude for the publishers of this edition, which is included in Messrs. Elkin Matthews' "Bodoni Series." It is both well bound and well printed, and will certainly be cherished by all lovers of Burton, whether they think the religion of the great explorer was that of a Catholic, or of an agnostic, or of an impostor, or of the curious individualism outlined in this "Kasidah."

TEACHING THE YOUNG MALAYAN IDEA.

"IN BRITISH MALAYA TO-DAY." By R. J. M. Sidney. (London: Hutchinson, 21s. net.)

We gather that Mr. Sidney has written this book after three years' of hard and enthusiastic work as Head Master of the Victoria Institute at Kuala Lumpur, one of the leading schools in Malay. The book is somewhat wronged by its title, and it takes a little time to get over this and to realise what it really is about. It is a successful effort to portray the work done in the school to adapt the youth of Malaya to the work awaiting them of developing the fine country they have. The chapters on "Malaya to-day" are really a sketchy background indicating the purpose of the education given. The whole

is a little egocentric, a schoolmaster's view from his classroom, but none the worse for that. If the various chapters are a little out of scale in relation to one another, this really arises from the purpose of the book and from the fact that observations on happenings beyond the school grounds are based on "outings" taken with the boys for the purpose of instruction, on what was seen on brief holiday trips and on conclusions arrived at from reading. There are numerous illustrations, many of which are of interest.

If one cannot help feeling that considerable compression would have produced a book of more interest, it cannot be denied that the narrative is instructive and interesting, specially in its indication of the enthusiasm and zeal with which Mr. Sidney and his colleagues in the Civil administration are working for the good of the country. But when shall we English learn more sense in our educational methods in the East? The English Public School and the English University are eminently fitted to our English civilisation. But the civilisations of these islands and of the East are totally different, and it is heart-breaking to read of the laborious imitation of Western educational methods in the East and of the dreary "mugging up" of the hopelessly unsuitable subjects set for the Cambridge Local Examinations. It reminds us of a nightmare experience we once had in our younger days when, on a visit to Ceylon, we were asked to correct and name the "classical" papers of an examination held in the principal school there. On expressing our total ignorance of either Sanskrit or Pali, we were horrified to hear that for the word "classical" we were expected to substitute Latin and Greek. And the unfortunate pupils were mostly Cingalese and Tamils, with centuries of civilisation behind them and libraries of classical literature! All of this was to go by the board in order to make a vain attempt to fit them for the procrustean bed on which lies the English manhood of the better classes. It is only fair to add that the author appears to have at least some glimmering of the folly of this attempt. And, in spite of all, much really permanently valuable work has been achieved, and that mainly in the all-important direction of creating and building up of moral fibre.

C. S-W.

THE BRITISH INDIAN UNION.

The British Indian Union, which is non-political and aims at promoting friendship and understanding between the peoples of Great Britain and India, announces a long programme of social functions for the summer season, when the usual large influx of Indian visitors is expected. The earlier fixtures include:—

April 29: Luncheon at the Hotel Cecil to Sir Samuel and Lady Maud Hoare (Lord Reading presiding).

May 11: Mrs. Wardlaw Milne at Home to meet Lord and Lady Winterton.

May 23: Exhibition of Pictures of Indian subjects by Mr. Bagdatopoulos, at 10, Grosvenor Gardens.

Lord Lloyd on April 19 presented his son, the Hon. David Lloyd, to King Fuad. The King gave Mr. Lloyd a handsome gold watch bearing the King's initial and a Royal Crown.

The death of Captain Edward Victor Francis Seymour, late 9th Hodson's Horse, occurred at Rawal Pindi, India, on April 16. Captain Seymour was the youngest son of the late Colonel Lord Albert Seymour.

The War Memorial Cemeteries at Ramleh and Jerusalem will be inaugurated on May 6 and May 7. Field-Marshal Lord Plumer, High Commissioner in Palestine, Field-Marshal Lord Allenby, and Sir James Parr, High Commissioner for New Zealand in London, will be present at both ceremonies. The Commonwealth of Australia will be represented by Brigadier-General T. H. Dodds.

The King's Indian Orderly Officers for this year are Subadar-Major and Honorary Lieutenant Chandra Singh, 1st/12th Frontier Force Regiment (Prince of Wales's Own) (Sikhs); Subadar-Major and Honorary Lieutenant Kishen Singh, Royal Artillery, Survey Section (India); Risaldar-Major Udham Singh, 7th Light Cavalry; Subadar-Major Sant Singh, 2/3rd Sikh Pioneers. They arrived at 40, St. George's Road, Piccadilly, S.W.1, on April 22. The British Officer-in-Charge is Major C. A. L. Howard, 13th Duke of Connaught's Own Bombay Lancers.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of

74, Grosvenor Street, W.1.

E. H. Keeling,
Hon. Sec.

PERSONAL AND GENERAL

TO-DAY

April 28, 1927 (New Style).

April 15, 1927 (Old Style).

Shawall 25, 1345, A.H., of the Muslim Calendar.

Nisan 26, 5687, of the Jewish Calendar.

Lady Broughton has returned to London from India.

The Maharanee of Cooch Behar last week arrived at the Savoy Hotel.

The Bishop of Bradford sailed on April 19 for Palestine, and will be away about a month.

The Turkish Ambassador and Mme. Ferid last week returned to London from Brighton.

Mr. and Mrs. Jacomb-Hood have returned to 26, Tite Street, Chelsea, from Calcutta.

Sir Mancherjee Bhownagree returned to London on April 22 from his stay at Mentone.

The Earl and Countess of Lytton, with their daughters, arrived in London on April 25 from India.

The Marquis and Marchioness of Reading returned to London on April 25 from Kingsgate-on-Sea.

Lord Treowen has left 9, Great Stanhope Street for Palestine, and will be away till the end of May.

Sir Muhammad Rafique has returned to London from his visit to India and has resumed his work on the Council of India.

Lady Lloyd, the wife of the High Commissioner for Egypt and the Sudan, and her son, the Hon. David Lloyd, left Cairo at the end of last week for England.

Mr. Henry Lamb, who served during the War as a Battalion Medical officer in Macedonia and Palestine, is now exhibiting paintings and drawings at the Leicester Gallery, Leicester Square.

General Sir Philip and Lady Chetwode left London on April 24 *en route* for Jerusalem. They intend to visit Palestine, and afterwards Yugoslavia, and it is improbable that they will be back until August.

It is announced in the *London Gazette* that the King has conferred the dignity of Knighthood on Mr. Joseph Augustus Maung Gyi, Member of the Executive Council of the Governor of Burma, whose name appear in the New Year Honours List.

Field-Marshal Viscount Allenby left on April 27 for Palestine. He will be the guest of Field-Marshal Lord Plumer, High Commissioner for Palestine. The evening before his departure he presided at the E.E.F. dinner at the Trocadero Restaurant.

Sir Alexander James Anderson, C.S.I., has been elected a director of the Rio Tinto Company.

Sir William Barton has temporarily postponed his leave to England and remains at his post as Resident at Hyderabad.

The Greek Legation and the Greek Consulate in London were closed on April 24 and 25 for the Orthodox Easter holiday.

Switzerland has concluded a Treaty of Commerce with Turkey based on the most-favoured-nation principle.

M. Venizelos arrived at Crete on April 20. During the steamer's stop at the Piræus he remained in his cabin, seeing no one.

On the occasion of the Orthodox Easter, the King of Bulgaria has pardoned 300 prisoners, most of whom were serving sentences for political offences.

The funeral took place on April 20 of Dr. Caroline Matthews, at the village of Downe, near Farnborough, Kent. Dr. Matthews performed notable service during the retreat of the Serbians in the Great War. For some time she was imprisoned by the Austrians in Belgrade.

Australians in London commemorated the landing of the Australian troops on Gallipoli on Anzac Day, April 25. Sir Joseph Cook, the High Commissioner, and Dame Mary Cook, accompanied by the Official Secretary, and attended by the Australian Naval, Military, and Air Force representatives, placed a memorial wreath on the Cenotaph. Sir Joseph then addressed ex-members of the A.I.F. assembled in the hall at Australia House, and afterwards proceeded with them to St. Clement Danes Church, where a Memorial Service, conducted by the rector, was held.

The flag appointment is announced by the Admiralty of Rear-Admiral William A. H. Kelly, C.B., C.M.G., M.V.O., to President, additional, as Admiralty representative on the League of Nations Commission, in succession to Vice-Admiral (retired) Aubrey C. H. Smith, C.B., M.V.O., to date September 30.

In 1917-18 Admiral Kelly was Commodore of the Allied Naval Forces in the Adriatic. Promoted to flag rank in May, 1922, while serving as head of the British Naval Mission to Greece, he was Rear-Admiral in the First Battle Squadron in 1923-24, and took command of the Second Cruiser Squadron in May, 1925. Rear-Admiral Kelly is an interpreter in French and was Naval Attaché at Paris in 1911-14.

The following promotions and transfers in the Colonial Service have been made by the Secretary of State for the Colonies:—

Sir S. C. K. F. Nettleton, Chief Justice of Cyprus, to be Chief Justice of Gibraltar.

Mr. C. F. Belcher, O.B.E., Judge of the High Court, Nyasaland, to be Chief Justice, Cyprus.

Mr. F. Pudsey, Director of Public Works, British Guiana, to be Director of Public Works, Palestine.

Mr. G. E. Hooper, Deputy Engineer, Ways and Works, Ceylon, to be Engineer, Ways and Works, Ceylon.

Mr. A. G. Cooper, Assistant Engineer, Ways and Works, Ceylon, to be Deputy Engineer, Ways and Works, Ceylon.

Mr. H. T. Cartwright, District Engineer, Ways and Works, Ceylon, to be Assistant Engineer, Ways and Works, Ceylon.

Mr. J. L. Sanders, Assistant District Engineer, Ways and Works, Ceylon, to be District Engineer, Ways and Works, Ceylon.

The War Office announces that the under-mentioned promotions have been approved, and will be carried out during the next few months:—

Lieut.-General Sir William E. Peyton, K.C.B., K.C.V.O., D.S.O., to be General.

Lieut.-General Sir George M. Kirkpatrick, K.C.B., K.C.S.I., to be General.

Lieut.-General Sir William Eliot Peyton served in the Dongola Expeditionary Force in 1896; was wounded in the Sudan in 1897; and was awarded the D.S.O. for his Sudan services in 1898. He also served in the South African War and again in the Great War with great distinction. He commanded the 2nd Mounted Division at Gallipoli, and took part in the evacuation. He was in command of the Western Frontier Force in Egypt and in the expedition against the Senussi, and received the special thanks of the Admiralty for rescuing the shipwrecked British prisoners of H.M.S. Tara. From 1920 to 1922 he was in command of the United Provinces District and the 3rd Indian Division, Meerut. He acted as Military Secretary to the Commander-in-Chief in India, and was Delhi Herald of Arms Extraordinary for the Coronation Durbar in 1911.

Lieut.-General Sir George Macaulay Kirkpatrick was promoted Major-General in the European War, and has been Chief of General Staff in India for four years, G.O.C. in China for two years, and G.O.C.-in-C. the Western Command since 1923.

THE CENTRAL ASIAN SOCIETY.

The *Journal* of the Central Asian Society (Vol. XIV., Part II.) contains, in addition to the reports of lectures given to the Society, two very informative articles upon "Persian Affairs" and "The Motor Route to India." There are, further, a few instructive "Reviews" and "Notes."

The Iron Circle.

The expansion of Italian influence in the Balkans, of which the Pact of Tirana was a sequel, has created a growing uneasiness in the relations of the Balkan States. A better understanding with Germany started the encroaching circle, which led to negotiations with Albania and the Yugoslav trouble; and ultimately to the signature of the treaty between Italy and Hungary. Yugoslavia, the centre of the circle, must look round for further support, and indeed, there has already been talk of *rapprochement* between here and Bulgaria. Since, however, Italy has also aimed at a similar agreement, it is doubtful which line Bulgaria will take. Roumania, bound by all her interests to France and the maintenance of the *status quo*, nevertheless has no desire to quarrel at this moment with Italy. *L'Indépendance Roumaine* explains away her advances to Italy as follows:—

"In certain diplomatic circles in Bucharest the token of friendship to Italy, on the occasion of certain recent events, was interpreted as the proof of a change of policy. Roumanian interests, it was said, were drifting from those of the Little Entente and of France, and were following other routes. In connexion with the Italo-Yugoslav tension, this opinion was certainly disturbing to those who judge affairs from the surface. But the truth is otherwise. Roumania cannot change her foreign policy, for the latter cannot be swayed by passing events, frequently contradictory, but on the contrary, follows a straight line, drawn by national interests, such as are permanent and well defined.

"These interests coincide with those of a general peace and this peace is to no one more necessary than to our country. Having attained her ethnical boundaries and having realised the reunion of her sons, Roumania must be dependent on the actual *status quo* in Europe, which assures her normal development and allows her to maintain the position of great power in the Near East.

"With this idea in view, she is naturally allied to France, who promises the same course of defence of the *status quo*. Nothing can separate these two countries, not even international vicissitudes, and intrigues still less. This fundamental theme we consider as unshakable. . . ."

The Little Entente.

And yet doubt and uncertainty have shaken the Roumanian policy and the strength which she would wish to see is yet to fade under pressure. The Italy-Yugoslav trouble tested the power of the Roumanian treaty, and *L'Indépendance Roumaine* calls attention to the weakness.

"From a Roumanian point of view, there is a lesson to be drawn from this affair: it has shown how insufficiently consolidated are still on one side the ties, so strong elsewhere, of the countries composing the Little Entente. During the whole development of the trouble there has been no serious deviation from good official relations, between Government and Government, in Bucharest and Belgrade and indeed there could be none.

"But public opinion is, as one has seen, less well informed of the fundamental truth, that the Little Entente will remain unshakable as long as it carries out the purpose for which it was created: to safeguard the *status quo* established by the treaties of Central and Eastern Europe. The fact that the people of Yugoslavia could believe that Roumania was capable of taking part against Yugoslavia, either actively or passively, shows how much there remains to be done to enlighten public opinion in the countries of the Little Entente on the subject of their common interests. . . . It was even seen how the Belgrade Press, even the official Press, lost its head and saw a hostile spirit there where Roumania stood faithful to her alliance and her friendship.

"The excitement in Yugoslav circles was such that they managed to communicate it to the East amongst those where one least expected to find it. These sudden surprises must be made impossible in the future. Serbia, Roumania, Czechoslovakia and Poland must have absolute confidence in each other; they must be convinced of the impossibility of any hostility between each other, for in certain serious events it can degenerate to a national suicide. As long as this work of propaganda is left unrealised, the Little Entente will remain an unfinished production, and therefore vulnerable. . . ."

Italy and Hungary.

Yet Italian penetration continues. Unaffected by the events since the Pact of Tirana, the encircling process has been continued and strengthened by the conclusion of a treaty between Italy and Hungary. Unfortunately the eternal question of Transylvania and minorities has prevented the complete and better understanding between Hungary and Roumania and the latter shows her uneasiness

once more. *L'Indépendance Roumaine* sets forth the situation as follows:—

"The toasts exchanged the day before yesterday between M. Mussolini and Count Bethlen assume, at this hour when the Italian policy has entered resolutely on a phase of expansion, an exceedingly significant character. The language overflowing with enthusiasm of both Presidents of the Council is not that in ordinary use in official speeches. If such language has been used it is because it corresponds with the state of facts created by the signature of the Treaty of friendship between Italy and Hungary. . . .

"Concerning Hungary the situation is clear. Fatally discontented with the liquidation of the War, the Budapest Government looks with anxiety for support, preferably from one or other of the Great Powers, so as to realise their policy, the aim of which is none other than the revision of the Treaties. The whole activity of Hungarian diplomacy has been directed to attempts in various large capitals to obtain this result. . . .

"The policy of Budapest is, therefore, quite clear, but that of Italy is certainly not.

"The leader of the Italian Government had indeed started a policy of ententes, treaties and alliances with several members of the Little Entente, a policy which has unquestionably had a good effect in consolidating the peace. Suddenly the introduction of the Treaty of Tirana seems to render useless all the fruits of the constructive policy of Italy in Eastern Europe. We are now listening to sentimental effusions as unexpected as superfluous between the Hungarian and Italian Presidents of the Council."

The Turkish Budget.

L'Echo de Turquie calls attention to the need for greater Turkish economic expansion and facilities of customs in the sea ports. The financial situation has improved and the Turkish Budget is pointed out as being the first one in this country to have been balanced. *L'Echo* continues:—

"The Budget Commission underlines in its report that the Budget which they have examined is the first, among all those hitherto—before and during the republican régime—to be on firm ground. The new Budget offers this peculiarity that all entries on the sides of revenue or expenditure are based on truth. This is evidence of very great merit and deserves to be observed with joy.

"The report of the Commission contains this phrase: Our Commission has undertaken not to enter as expenditure any sum which is not entirely necessary and has been equally scrupulous in valuing the revenue with much care, so as not to show a deficit. . . ."

La République gives a fuller account and remarks upon the currency:—

"The Budget Commission of the Grand National Assembly has accomplished its work for 1927. From detailed information furnished by our special correspondent in Angora it appears that the State Budget for 1927 shows, actually balancing revenue and expenditure, 194 millions 444 thousand 400 pounds Turkish. Valuable past experience, chiefly that of 1926, has helped much in establishing this balance. According to the statement, the Government was wise enough to economise 20 million pounds on the expenditure of the Budget of 1926, and has thus been able to restore order to her debts which at one time had assumed an embarrassing appearance. . . .

"We know well that the Budget is above all a matter of finance. Nevertheless, every financial system which loses sight of the general state of economics in the country is far from being a perfect financial success.

"The only lack which we see in the Budget of 1927 consists, as we have said elsewhere about preceding Budgets, in the absence of all study of the state of our currency, which moreover touches the country's Budget. It would seem that this important point should have been foreseen in the Budget or should have been treated at least, in interpreting the scheme."

The Maharaja of Kapurthala arrived at Budapest on April 12 on a two days' visit.

Sir William Tyrrell, Permanent Under-Secretary for Foreign Affairs, with his daughter, arrived at Naples on April 20 from Egypt and proceeded to Rome the following day.

Admiral Koundouritis has withdrawn his resignation of the Presidency of the Greek Republic, as the Government has undertaken to expedite the ratification of the new Constitution by the Chamber.

The King has approved of the award of the Military Cross to Lieutenant Hugh Maxwell Curteis, The Highland Light Infantry (City of Glasgow Regiment), attached Iraq Levies, in recognition of valuable and distinguished services rendered in connexion with operations in the Penjwin area, Iraq, during the period between June 10 and July 11, 1926. His Majesty has also approved of the award of the Military Medal to No. 55494 Lance-Corporal Mishu Miru, 3rd Battalion Iraq Levies, for bravery in the field in connexion with the same operations.

THE MESTON SETTLEMENT.

In his farewell speech at Calcutta last month Lord Lytton gave as one of the principal reasons for the failure of the Reforms to attain the success which he, at least, had anticipated for them, the contributions of the Provinces to the Central Government. These, he affirmed, had hung like a millstone round the neck of the Provincial Governments, or, at least, round the neck of Bengal. Nor had the remission of the cash contribution, whether such remission was partial or complete, temporary or permanent, removed the grievance, since the inequity complained of was the inadequacy of the resources left to the Provinces.

There can be no doubt that this is the view generally held in Bengal and Bombay, the leading industrial Provinces of India, in which the two great centres of commerce and external trade are situated. It seems worth while to consider whether a re-examination of the problem involved is not desirable, if only to remove, if possible, the unsettling results of the existing sense of grievance.

The authors of the Montagu-Chelmsford Reforms had rightly urged the necessity of complete separation between the finances of the Central and Provincial Governments; they had recommended that no head of revenue should be divided between the Governments, and had suggested that land revenue, excise, and certain minor items should remain with the Provincial Governments, while Income Tax, Customs duties, and the receipts from railways should go wholly to the Central Government. The Committee which proposed what is known, and generally execrated, as the Meston Settlement, bears the odium of these proposals: but, speaking generally, all that Committee did was to accept the proposals of the Reforms Report and to allocate between the Provinces the shares of the cash contribution necessary to restore equilibrium to the finances of the Central Government, over and above the taxation and revenues reserved to it. It can be readily understood that any such general arrangement was bound to take more from certain Provinces, while leaving them less. Obviously the chief contributors to the Income Tax and the other items of Central Revenue were Bengal and Bombay, while these were the very two Provinces whose Land Revenue was proportionately small and incapable of much expansion. Bengal is, indeed, a large and fertile Province; but it lies under the burden of the Permanent Settlement, whereby the increased value of the land is divided among absentee landlords, and is not shared either by the tenant or by Government. Bombay, on the other hand, has much the smallest area of state-owned land of any of the Major Provinces, and a great portion of that land is so poor in quality that neither the cultivated area nor the productivity of the soil is capable of much expansion. On the other hand, for the reasons already indicated, these Provinces are the largest contributors to the Central Revenue. Perhaps some idea of the situation might be gathered if we could imagine a United States of Europe, which collected Income Tax from all the component States, and

left them only their receipts from land and minor local taxes. It is obvious that in such a case England would be much worse off, for local expenditure, than, for example, France. The analogy would not, of course, be complete, since Calcutta and Bombay draw much of their income from other parts of India: but it would bear at least a general resemblance to the Indian situation.

The Meston Settlement did, indeed, involve the payment of larger cash contributions from the other Provinces, and this did not fail to arouse protests, among which those of Madras were especially vociferous. But it can hardly be doubted that more was left to these Provinces, while their contribution in the form of taxation was less than that of Bengal and Bombay. It is, however, right to point out that Bengal has had little to complain of as regards cash contributions. Its payments for the first three years were wholly remitted, and this was admittedly due in part to political considerations. The Provinces which were better politically behaved obtained no such favour.

It naturally followed that when, in March, 1926, Sir Basil Blackett suggested a reduction of 125 lakhs in the amount of the Provincial cash contributions, no part of the reduction to go to Bengal and Bombay, the proposal failed to rouse any enthusiasm in these Provinces. Bombay, indeed, expressed its disappointment, and again demanded a reopening of the whole question of the Meston Settlement. In the present year Sir Basil Blackett has remitted, at least temporarily, the whole of the cash contributions. The contention of Bengal and Bombay is, however, that these contributions had been graduated in amount so as at least to reduce the inequity of the larger amounts indirectly taken from them, and the smaller resources left to them. When the whole of the graduated contributions were swept away, the inequity was obviously enhanced.

When we suggest that a further consideration of the question is desirable, we are far from holding that the position of either Bengal or Bombay is not open to attack. In the case of the former, the greatest obstacle to a legitimate share of the receipts from land reaching the Public Treasury is the Permanent Settlement. Other Provinces in India may well complain that, while elsewhere a fair percentage of such receipts yields an increasing number of rupees to public funds, in Bengal alone all increments over an originally low fixed cash assessment go to those who do little or nothing either for the land or for the public weal. In Bombay, although large enhancements of the assessment are in many parts not possible, the Legislative Council has postponed the introduction of the revision of existing settlements. The result is that in many sub-divisions the landholder pays an assessment fixed thirty or forty years before, though the cash value of the produce has enormously increased. Nor is the Legislative Council of either Province willing to utilise its powers of imposing fresh taxation.

Even if, however, we make full allowance for local deficiencies, it cannot be doubted that the existing financial unrest and discontent are harmful. They afford an excuse

for bad financial work by the Provincial Governments and Legislatures. While the Councils decline to pass additional taxation, the Governments live on their fast disappearing balances, and refuse to face the situation. It may well be doubted whether the recommendation of the authors of the Montagu-Chelmsford Report that no head of revenue should be divided must necessarily be accepted as an axiom. The question in any case seems ripe for re-examination.

CURRENT TOPICS.

The Bengal *Detenus*.

Neither the debate in the Bengal Legislative Council nor Sir Alexander Muddiman's clear exposition of the Government's position in the Central Legislature appear to have brought the very difficult question of the continued internment of the *détenus* any nearer a solution. As we anticipated, Mr. Subhas Chandra Bose, the former chief executive officer of the Calcutta Corporation and undoubtedly the "brains" of the anarchical conspiracy of 1924, has rejected the local Government's offer of conditional release. The terms on which the Government, in view of the unfavourable reports which had been received regarding his health, were prepared to release Mr. Bose were, it will be recalled, that he should proceed direct to Switzerland and remain there until the expiry of the Criminal Law Amendment Act in 1930. No admission was required from Mr. Bose as regards the past and no promise was sought regarding his future conduct. Moreover the offer was made publicly before it was communicated to the prisoner, in order that there might be no suspicion that Mr. Bose had been forced by the Government to go to Europe.

The nature of Mr. Bose's objections to a proposal that in the circumstances was generally regarded as particularly generous is not readily apparent. In a letter to his brother announcing his decision he is reported to have observed that there would have been "something human" about the offer, if the Government had agreed to meet all his expenses in Europe and permitted him to return without let or hindrance on his recovery. It is a little difficult to understand precisely wherein the charge of "inhumanity" lies, but even if the Government were disposed to consider the possibilities of reaching a reasonable compromise on the first point, the second stipulation is such a deliberate evasion of the real issue that it effectually closes the door upon further negotiations. Meanwhile, in his recent statement on Indian affairs in the House of Lords, which the extremist Press in India describes as characteristically hypocritical, insolent and patronising, Lord Birkenhead has made it clear that the Government's policy, which has his considered and unequivocal support, remains one of discriminating release or internment. So long as important members of the revolutionary movement are still at large, and recent events suggest that their number is not inconsiderable, a general amnesty is out of the question. Of the time and manner of the release the Government must be the judge, for it alone possesses the evidence upon which the men are detained and it holds, rightly or wrongly, that that evidence cannot be made public without grave danger to individuals. Whether the prisoners are rightly detained must, of course, be a matter of opinion, but it can be safely said that even in quarters which have made the most political capital out of an unfortunate situation the inevitability of the decision is recognised.

Two Popular Appointments.

When Sir Charles Innes relinquished, only a few weeks ago, the onerous office which he had discharged with such distinction and conspicuous success in the Executive Council of two Governors-General, an Indian contemporary observed: "It is generally assured that he goes on leave preparatory to retirement, but there are many who hope that, re-invigorated by the air of his native country, he may yet be able to return to serve India in the higher administration. A man of his gifts and experience cannot

easily be spared until the last possible moment." It was therefore with particular pleasure, which will be shared by a wide circle of friends in both countries, that we learn of Sir Charles' appointment, announced only a few days after his arrival in England, as Governor of Burma, in succession to Sir Harcourt Butler. To succeed so popular an individual as the present incumbent of that office will be a task of more than ordinary difficulty, but throughout his long and distinguished service Sir Charles Innes has enjoyed the confidence and affection of all, civilians and non-officials alike, who have been associated with him, and Burma is indeed fortunate in its second Governor. Although no doubt regarded by the opposition parties in the Assembly as a pleasing but uncompromising representative of the bureaucracy the greatest achievements of the late Commerce Member's career—the nationalisation of the railways, and the initiation of the policy of discriminating protection—showed that, underlying a somewhat dour and forceful personality, was a generous recognition of, and practical sympathy with, legitimate Indian aspirations.

If Sir Charles Innes' debating skill lay mainly in the ease with which he marshalled facts, figures and arguments relating to a multiplicity of different and very often highly technical subjects, Sir Alexander Muddiman was, by common consent, the best speaker in either House of the Indian Legislature, judged by more Parliamentary standards. Like the distinguished scholar whom he now succeeds as Governor of the United Provinces, Sir Alexander played a prominent part in the framing and early operation of the reforms and as the first President of the Council of State and, afterwards, Home Member, and Leader of the Lower House, has probably been more closely identified with the subsequent working of the reformed Constitution than any other individual member of the Government. In his task of coping with the obstructive tactics of the Swarajist opposition in the Central Legislature he has been helped no doubt by his manifest sympathy with the policy underlying the reforms, but the personal regard with which he is held by all parties and his dialectic skill have undoubtedly contributed materially to the success which has brought such well-merited promotion in its train. Sir Alexander's debating power will in particular be sorely missed by a Front Bench, already weakened by the retirement of Sir Charles Innes, but the Assembly's loss is the United Provinces' gain.

Indians in South Africa.

It is understood, according to a Reuter message from Bombay, that Mr. Srinivasa Sastri has been appointed the first Agent-General of the Government of India to South Africa. The report, which still lacks official confirmation but has, on the other hand, not been contradicted, adds that Mr. Sastri has accepted the appointment. The decision will be welcomed by all section of responsible public opinion in both countries, regardless of their political colours. From the administrative standpoint, as *The Times'* Durban Correspondent recently pointed out, both parties to the recent agreement on the position of Indians in the Union have made great concessions; from the popular point of view, as the course of subsequent events has shown, concessions count for little. India has secured the withdrawal of the Class Areas Reservation Bill and all that it implied; South Africa, on the other hand, has secured the co-operation of the Indian Government in an improved scheme of assisted emigration to India or other countries where Western standards are not required. The agreement, in the words of Dr. Malan, who is so largely responsible for bringing about the improved relations, is "more in the nature of an honourable and friendly understanding than that of a rigid binding treaty."

The real gain, in other words, is that in future the Union of the Indian Government will endeavour to work in unison and eliminate so far as possible causes of friction with a view to the ultimate solution, in the same spirit, of the many other problems which must sooner or later be faced in connexion with the position of Indians overseas. The appointment by the Government of India of an agent in the Union "in order to secure continuous co-operation

between the two Governments" is an essential step in the right direction, but what is far more important is that the individual entrusted with the by no means easy task of representing Indian interests, should possess in a marked degree the confidence of both parties to the agreement. As soon as the terms of the pact were made known, the responsible section of the Indian Press of all shades of political opinion impressed upon the Government the desirability of ensuring that the appointment was only given to an Indian statesman of undoubted eminence. Mr Sastri's name, although the choice was an obvious one, was, the writer believes, first mentioned by Mr. Gandhi, and the choice was enthusiastically endorsed by the South African Indian Congress. As Mr. Sastri, who has been not inaptly described as "India's greatest ambassador," was one of the members of the Habibullah deputation and by his powerful advocacy has done much to influence Indian opinion on both sides in favour of the acceptance of the agreement, he will thus have a further opportunity to bring about the fruition of an agreement in the framing of which he played such an important part.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 7.

The New Governor of Bengal.

Lord Lytton has left to his successor a testament of absorbing interest, says the *Englishman*. *Forward* invites Sir Stanley Jackson's attention to that testament, in which the late Governor put his finger on the sorest of India's grievances. It points out that it is the Constitution itself which stands in the way of the people's hearty and loyal co-operation with Government. It is because the people are firmly convinced that Government of the people by the people is the chief and sufficient remedy for all evils, that they resent the infliction of a fraudulent Constitution which stands in the way of their self-expression, adds *Forward*. Sir Stanley Jackson, when performing his first public engagements, replied to several addresses in a most hopeful and cordial manner, saying among other things that he hoped his administration might be so conducted as to create that feeling of good fellowship between India and all the partners of the Empire, which was of vital necessity, if the best interests of all were to be served. But *Forward* thinks that the first essential conditions for success in Bengal are to repeal the Bengal Criminal Amendment Act, and to release the *détenus* imprisoned under it, as well as under Regulation III. These measures would alone indicate that the angle of vision of the rulers had changed. It has also been suggested that Sir Stanley's first executive act should be to pardon Kharag Singh, the young Nepali student, who deliberately attempted to kill a man who was the head of a gang of people trafficking in minor girls. Memorials and deputations are being sent to H.E. the Viceroy, and to the Hon. Mr. Moberly in the hope that he will advise the Governor of Bengal to make use of his prerogative of pardon in favour of the young "hero." He is a graduate of the Calcutta University, a law student, and the Secretary of the Gurkha League. He heard the sad story of Rajkumari, a girl of 15, from her own lips, and took the law into his own hands. The infamous man having ultimately died of the wounds inflicted by Kharag Bahadur Singh, it will be legally difficult to get a release, but there may be a substantial remission of the sentence of eight years imprisonment. An Indian contributor to the *Statesman* says it is a pity that the new Governor has to leave the centre of opinion very soon to go to Darjeeling. The heat makes it imperative no doubt, but it will take another two or three months for His Excellency to acquaint himself with men and things of Bengal. He reminds him that the present undesirable relationship between the rulers and the ruled is not due only to the unwillingness of the authorities to know the real opinion of the people but to their way of dealing

with the affairs of Government without taking notice of that opinion. Will Sir Stanley Jackson contrive to please everyone? That is the question. It seems an arduous task. He said he would play the game with the people in his charge, if they would.

The Maharajahdiraja of Burdwan.

The Maharaja of Burdwan has announced his decision to retire from political life. In a speech to the members of the British-Indian Association held a few days ago, he said he had to thank them for electing him as their President, and for sending him to represent India at the Imperial Conference, but that he had definitely decided to give up political life in India, mostly on account of the condition of his health, and for domestic reasons, but also because he had no sympathy with present-day politicians. His loyalty is shocked to see how British rule is distrusted, and how the Government's honesty of purpose has been misunderstood. This is the foremost reason that has made him step aside from Indian politics. The Maharaja's health demands a prolonged stay in Europe. He will not be found wanting, he adds, if Government should at any time want his services temporarily, his health permitting. In less parliamentary language, the Maharaja is absolutely disgusted with Indian affairs, and washes his hands of the whole business.

The Political Detenus.

Lord Birkenhead, in his reply in the debate on Indian affairs, touched the subject of the Bengal *détenus*. While "not contemplating a policy of indefinite detention," the Secretary of State thinks that the release of the political prisoners at the present moment would involve the risk of outrages "for which he would not assume responsibility." After all, the Bengal Ordinance hold good for only five years, and two and a half years have already elapsed, and, wisely, Lord Birkenhead prefers to be on the safe side. The Swarajist leader, Subhas Bose, is not pulling well with the Superintendent of the Rangoon jail, and has requested the Inspector-General of Prisons to transfer him to Insein or Mandalay, pending final orders. His health is worse. He does not say, or is not allowed to write, anything about the offer made by Government to release him on condition that he should go straight to England, not attempting to return to India as long as the Ordinance is in force.

The Y.M.C.A. Controversy.

The European Association, says *Forward*, has found a veritable Tartar in the Y.M.C.A. The controversy that sprung out of the resolution passed at the last annual meeting of the European Association is growing steadily in volume. As a result of Dr. S. K. Datta's spirited reply refuting all the charges levelled against the Y.M.C.A. by Mr. Hobbs, the mover of the now famous resolution, European as well as Indian responsible opinion has been expressed in favour of the Y.M.C.A., whose latest supporter is the Governor of Bombay. What is asked of the Association is that its activities should be confined to physical, religious, educational and recreational work. But up to the present there has been no reason to declare that the allegations and invective were justified. *Qui vivra verra*.

Here and There.

The Afghan Government, without commissions or committees, is getting men trained in aviation at Moscow, and in artillery by a German expert at Kabul. Afghanistan is progressing at a rate that will make it pass into the front rank of modern nations. "An Indian may become a Finance Minister at Kabul, but not in Simla or Delhi," remarks *Forward*, "and it is against Afghanistan that Indians are asked to maintain a huge army at an exorbitant annual expenditure."

Mr. Gandhi recently fell ill and narrowly escaped apoplexy. He had left Bombay *en route* to Kolhapur. As he and his party were approaching Poona, he felt he was losing all power of locomotion. A night of rest, however, seems to have done him much good. He has

been advised to give up his heavy touring programme, and to take complete rest. He is now slightly better. In spite of high blood pressure, he has insisted on doing his daily spinning.

The Eastern Bengal Railway Traffic Manager has conceived the idea of inviting the Public Health, Agricultural, Industrial, Co-operative and Veterinary Departments of Bengal, also the Indian Tea Cess Committee, to join in fitting up an educational train as a moving exhibition, with lecturers and demonstrators. The Railway undertook the organization and the advance publicity. The plan has been a success. Hundreds of thousands go to the stations to see the train and hear the lectures. It is the first educational effort of the kind in India. Train exhibitions are an old and current feature in America. A month's tour has done a lot of good, especially as regards the care of cattle.

Calcutta has a new Radio Chief, Mr. Wallich. He has been appointed Director of the Calcutta Station of the Indian Broadcasting Company. Mr. Wallich thinks wireless ought to become very popular in India; it ought to link the villages with the cities. He advocates the use of vernaculars for news and lectures. It is the perfect educational medium, he thinks.

Twelve hundred square miles of hilly ranges near Chittagong were topographically surveyed from an aeroplane by the Air Survey Company. The pilot then went to Penang in the Malay Archipelago to start on other survey work secured by the same company. The party will halt at Akyab and Rangoon.

The *Cape Times* strongly urges that Mr. Sastri may be chosen as India's representative in South Africa. Not only is Mr. Sastri a *protégé* of Mr. Gandhi, but he made a most favourable impression on the South African public, when he was sent there as a member of the Indian Delegation. The paper also states that the South African Indians do not want a European to represent them. That should settle the matter, it argues.

Calcutta Amusements.

I believe I said in last week's letter that I feared the wonderful discovery of perfect synchronization would be put to the service of vulgar programmes. My fears were justified. One of the most extraordinary inventions of the century has been utilised to reproduce most unworthy "turns." While the De Forest Phonofilms could help in the dissemination of otherwise costly and imperfect performances, they have been used for the reproduction of low comics and inferior music. Dances with the original music show what the new invention can do. Gwen Farrar and her cello is decidedly an improvement on the best gramophone record. A second week is announced, and a third is probable.

The Midgets Company with its "twenty smallest men and women" are on the programme of "the Premier theatre in Asia" (the Empire), and the thin cinema audiences are once more being treated to "The Last Days of Pompei," and some old Harold Lloyd comedy. The Grand Café already boasts of two orchestras. They give morning concerts, afternoon concerts, and evening concerts. There is a dance orchestra playing till 1 a.m., yet with all these attractions, they have thought it necessary to engage another hit. It is a dwarf, Bill Rolle, supposed to be the smallest man in the world. His height is 24 inches, and he will direct a few numbers of the programme played in the evening before dinner.

Calcutta Rotary Club.

In order to avoid any misleading view regarding the objects of the Club, the President and Directors desire the public to know that, while welcoming speakers of every nationality and of every school of thought, the Rotary Club is not responsible for the views expressed by the visitors who may be asked to address its members. It is a fundamental principle of the Club that no politics are to be introduced into its movement. Another of the Rotary International Principles is to endeavour to maintain as

its ideal a world-fellowship of business and professional men united in the ideal of service. No matter how far short the institution falls of this ideal, the Calcutta Rotary Club will ever strive to maintain its principles without any consideration whatever of political or other interests.

A BOMBAY LETTER.

Bombay, April 8.

Our Parliament !

An interesting suggestion has received publicity in the Press, but its author, who is evidently an optimist of optimists, is concealed behind the safe designation of "a correspondent." Anyhow, he suggests that the Bombay Presidency is politically more advanced than any other part of India, and that therefore it should leave no stone unturned to stress its case before the forthcoming Royal Commission on Reforms for a larger amount of autonomy than other districts that are more backward. The communal feeling, he says, is virtually absent in Bombay, and the people of the Presidency have a considerable political genius as is indicated by the predominance of responsive co-operation. The British Parliament granted autonomy to Victoria and the Free State, so there is thus ample constitutional precedent for this step. Unfortunately, "a correspondent" has lost sight of the arguments that can be brought forward against this wonderful suggestion—and they are many. To mention only one, which will suffice, such a scheme is unworkable in India, where there is far too much likelihood of an incident in one part having very great repercussions in another.

Separation of Sind.

That periodic question, the separation of Sind from Bombay, has been brought forward once again as a result of the joint electorates idea, and the result has been a series of pronouncements from all sides. Generally, the suggestion is none too well received, but now and then we find a considered statement made in favour of it. Such a statement is the one made by Mr. Jamshed W. R. Mehta, President of the Karachi Municipal Corporation, who advances nine very strong reasons in favour, which summarised amount to the contention that Sind is really absolutely distinct from Bombay in every respect, that Bombay as it stands is far too large an administrative area to be efficiently administered, and that the Sindhis should be given an opportunity to fight out their own salvation in their own way. The onus of settling the fears of the minorities he places on the Reforms Commission, to whom the difficulty should present no terrors.

National Week.

We are now in the very midst of the "National Week," and the manner of its celebration now and when the national movement was set going in 1920 provide an instructive comparison. Then "Remember Amritsar" found expression in every exhortation of every leader, and the programme was the securing of justice to the Khilafat, reparation for Jalionwalla Bag and the attainment of Swaraj. The present celebrations have lost all that martial tone, and the only aim left is the then apparently insignificant one of attaining Swaraj. Mild, honeyed words have replaced the raucous "war cry," the Khilafat and reparations have given way to the needs of removing untouchability, cementing national unity and introducing prohibition. Generally, it seems that Indians are beginning to see the light, and are striving in directions that cannot but be to the advantage of their country as a whole.

University Scholarships.

The Senate of the Bombay University came to a very wise decision on Saturday last in rejecting a resolution affirming that in future no offers of endowments for scholarships, etc., with sectarian or territorial limitations should be accepted by the University. Unfortunately for

them, the critics of the present policy put forward fundamentally irrelevant objections and totally ignored some vital facts of Indian social and communal life—such as the effects of such a policy on the backward classes, to help whom would be nationalism and not sectarianism. So long as the respective communities do not have their own institutions to look after their interests, it is not undesirable that the University should come to their rescue in the manner that it has been doing hitherto. And so long as it is good money that is forthcoming, it is immaterial with what limitations and restrictions as to its use it is poured out. In the distant future, perhaps, the idea may be practical politics; at the moment it cannot be.

Municipal President.

That it would have been a much more dignified proceeding for only one candidate to be left in for the presidential election of the Bombay Municipal Corporation is proved by the fact that the matter is now before the High Court. Two candidates tied in the final ballot, and the President's casting vote appears to have been given, following the casting of lots. The unsuccessful candidate has appealed against the validity of the election in court, and the Corporation itself has expressed its disapproval of the method of arriving at a decision, by what amounts to a vote of censure, in passing a resolution to the effect that the minutes, which indicate that the President gave his casting vote for Dr. Batliwalla against Mr. J. B. Petit, are not a true indication of what was actually the case. A settlement out of court would be the most dignified way of ending the business, which merely shows up the City Fathers in a light that does them little honour.

A Reply to Gilligan.

The *Calcutta Statesman* has been at great pains to collect all kinds of details to refute the accusation of snobbishness brought against some clubs in India by A. E. Gilligan, skipper of the M.C.C. team which visited India. The paper makes out quite a passable case, but it ignores the quite incontrovertible fact that snobbishness is the bane of club life in this country, and also admits by taking up the challenge that Mr. Gilligan's thrust has got home where it was intended to go! So far as is ascertainable, the accusation does not apply very largely to Bombay, but one means whereby unconscious snobbishness was imparted into the relations of the M.C.C. players with the public in Bombay was the manner of their billeting. They had no say in the matter themselves, and the most influential members of the clubs secured them as prizes or curios, when probably they would have been vastly happier had they been tacked on to either friends, if they had any, or on to young fellows of a similar temperament to themselves. Unfortunately, this was seldom the case; and it is to be hoped that if and when another team visits this country, some such method of entertaining our guests will be adopted, so that they can be happy instead of just bored, as many of them must have been.

Textile Crisis.

By the time this letter reaches you the Bombay textile crisis will either have materialised or blown over. At present the outlook is none too rosy. Stocks are accumulating, there is no demand, and combining cloth and yarn it is believed that about five crores of rupees are locked up in what at present appear to be useless stocks. The mill-owners are looking forward anxiously for the publication of the Tariff Board report, thinking that this may result in easing the situation—but it has arisen principally owing to the falling away of China and Japan as purchasers, and the most suitable solution of the problem would be to find foreign markets to replace them. It is no easy task, it must be admitted, but "need's must."

Commercial Situation.

The general commercial situation has been far from good during the week, for on every side a complete lack of

interest is reported. About the only activity has taken place in Government securities, which have at least maintained their former level or improved just slightly. Shares of other descriptions have recorded a slump as a result of an orgy of profit-taking, cotton prices are on the decrease—although this is expected to enable competition with American on more even terms—and gold and silver are terribly uncertain and liable to sharp fluctuations. Exchange, sterling and foreign, remains steady with little doing.

THE LATE MR. DADABHAI NAOROJI.

A series of remarkable public tributes was paid to the memory of the "first Indian Member of Parliament" on the occasion of the unveiling of a fine bronze statue of the late Mr Dadabhai Naoroji by the Governor of Bombay last month. The statue, which is erected on a central and commanding site presented by the Municipal Corporation, and bears an admirable likeness to the distinguished Indian patriot, is the work of a local sculptor, Mr. Talim. On the front panel of the pedestal is an inscription, reading:—"Dadabhai Naoroji, first Indian Member of Parliament, 1892-95. Revered and Beloved of the country, the Grand Old Man of India, born 4th September, 1825, died 30th June, 1917." One of the side panels depicts a scene of the House of Commons in session with Gladstone addressing the House, and the other side panel is emblematic of the great social reformer's work on behalf of female education.

Both the Governor and Sir Dinshaw Wacha, the Chairman of the Memorial Committee, spoke in terms of the highest respect and admiration of one "who was truly a great man, who took no thought of aught save right and truth," and whose life might be said to be "an epitome of the history of Indian Constitutional reform during the second half of the nineteenth century." The times have changed since Dadabhai Naoroji first placed before his countrymen the ideal of a self-governing India under the British Crown, but all Indians, of every political creed, remember him with the deepest affection as one who lived and worked for their moral, social and political advance. By Englishmen, also, his memory will always be held in respect and regard, for while he was often a strong and fearless critic of the admiration he maintained a firm conviction and belief in the fairness and justice of British rule.

In private life Mr. Dadabhai Naoroji's distinguishing characteristic was undoubtedly his great force of character which led him, when once convinced of the rightness of a cause, to strive unceasingly after the ideal he had set before himself, regardless of any opposition such a course of action might encounter, but he is never known to have spoken an angry word, even in the heat of controversy or to his bitterest enemy. His success in gaining election at an advanced age to the House of Commons, after two successive failures, is a remarkable proof of the same determination and strength of character which are everywhere apparent throughout his career.

As Sir Leslie Wilson appropriately observed in the address, to which reference has already been made, there are several salient features of Mr. Dadabhai Naoroji's character, as shown by his public work, which may with advantage be recalled by the present generation of Indian politicians. The first is that in his life work he was not bound by any narrow territorial or communal distinctions or differences. He did not work for the Parsi community only, or even for Bombay alone, but for the benefit of all classes and creeds in India, and for the welfare of the country as a whole. "Indeed, I think I may go further," His Excellency added, "and say that his work will prove, in the end, to have been for the lasting benefit of the British Empire; for while he was prepared to criticise severely those features of the administration which he believed to be faulty, and to express his disapproval of those factors in the relations between Great Britain and India which he regarded as unsatisfactory, his object was

at all times not merely to criticise or to disapprove, but to improve."

Secondly, Mr. Dadabhai Naoroji shares with the late Sir Pherozeshah Mehta and the late Mr. Gokhale, among other distinguished politicians of the older school, the credit of having been a real worker, with a desire to follow out a constructive policy and a pertinacity that succeeded in securing its fulfilment. Success, indeed, did not come easily to him, for he was well over sixty when, after residing in this country for the best part of his life, he made his first appearance in the House of Commons, and his last and greatest achievement—the simultaneous examination for the Indian Civil Service in India—found him not far from seventy.

Perhaps the outstanding feature of his character was that he was a diligent and conscientious seeker after truth, and that he relied more on facts than on feelings or sentiment in his treatment of public affairs. In the words, again, of Sir Leslie Wilson: "No one can suggest that the figures put forward in his writings by Mr. Dadabhai Naoroji were entirely adequate, or that they were by any means the last word on the subject; he deserves the fullest credit for being one of the first explorers in a field the importance of which is only now being recognised. The only basis of sound argument and clear thinking is accurate facts, and, while we may now hope by modern methods to attain a clearer idea of the true economic conditions of the country, we must all remember with admiration and respect the pioneer who explored a part of this way, and pointed out a line of valuable enquiry to those who have come after him."

INDIAN MAIL.

The February Trade Returns.

The returns of India's sea-borne trade for February, contrary to general expectation, show a marked decline in both imports and exports of private merchandise, as compared with the figures of the previous month, which had encouraged the belief that the long awaited improvement in the trade situation was imminent. The value of imported merchandise fell from 2,081 to 1,750 lakhs of rupees, and that of exports of Indian produce and manufactures from 2,729 to 2,536, re-exports of foreign goods being also upon a very much smaller scale. India's net imports of treasure, on the other hand, rose from 265 to 389 lakhs, mainly on account of the larger off-take of gold, which was the highest recorded since June of the previous year. Measured by the statistics of merchandise and treasure, the total visible balance of trade in India's favour was 471 lakhs of rupees, or slightly more than in the previous month, but only a quarter of the total of the corresponding month of 1926.

The share of the United Kingdom in the trade of India during the period was unaltered in imports and fell from 20 in 19 per cent. in exports. As compared with the return for February, 1926, however, it represented a decline of 4 per cent. in imports which was more than offset by a gain of 5 per cent. in exports. The proportions of Germany, Japan and the United States, her principal competitors, were also relatively little changed, as compared with the previous month, being 9, 6 and 8 per cent. respectively under imports, and 7, 19 and 10 per cent. under exports.

Under the major heads of imports, the value of food, drink and tobacco rose from 282 lakhs in January to 333 lakhs in February; that of raw materials also increased from 158 to 164 lakhs, principally on account of the unusually large imports of raw cotton. Manufactured articles, on the other hand, declined in value by nearly 111 lakhs, due mainly to the smaller importation of railway plant, cotton manufactures (although white cotton piecegoods and goods made of cotton and artificial silk continued to make steady progress) and iron and steel. It is especially interesting to note that, of the first of these heads, more than half the total value is still represented by sugar importations, and this in a country which, if this industry could be established on a sound basis, is capable

of producing more than all its requirements in this respect.

Under the major heads of exports the value of food, drink and tobacco (rice and tea being the most important items in the first of these) fell, from January's figure of 620 lakhs, to 443 lakhs. The decline was due to a decrease in the shipments of foodgrains, especially rice, which was only partly offset by increases in coffee and tea. In this connection it is pertinent to recall the extent to which the market for Indian goods in the United Kingdom has been encouraged by the preferences extended by the British Government to Empire produce. These preferences have been of particular value to the trade in Indian teas and tobaccos. Imports of the latter into this country during the past three calendar years have grown from 4½ to nearly 11 million lbs., and account for roughly one-third of the total exports from India of that commodity. By raising the duty on imported unmanufactured tobacco in the last Budget Mr. Winston Churchill has increased proportionately the money value of the concession, which is three-fourths of the full rate, with a result that the returns for the current year are likely to show an even greater advance.

Raw materials and produce showed a substantial decline from 2,044 to 1,453 lakhs, due to smaller exports of raw cotton and oilseeds. Of the total shipments of 71,000 tons of raw cotton, against 80,000 tons in the previous month, Japan took about 46,000 tons, or 65 per cent, China 10,000 tons and Italy 6,000, and the balance went chiefly to Germany and Spain. The exports of raw jute increased in quantity from 44,000 to 86,000 tons and, in value, from 296 to 298 lakhs—the latter figure reflecting the further fall in prices. Exports of manufactured goods decreased in value from 762 in January to 621 lakhs in February, approximately 60 per cent. of both totals being represented by jute manufactures. The February shipments of gunny bags declined from 37 to 30 millions and in value by 82 lakhs to 147 lakhs. The yardage of gunny cloth also showed a marked falling off, as compared with the previous month.

Mr. R. P. Paranjpye, late Minister in the Bombay Government, has arrived in London with Mrs. Paranjpye and has taken his seat as a Member of the Council of the Secretary of State for India.

It is announced in the *London Gazette* that the King has conferred the dignity of Knighthood on Mr. Joseph Augustus Maung Gyl, Member of the Executive Council of the Governor of Burma, whose name appeared in the New Year Honours List.

Mr. P. G. Rogers, C.I.E., I.C.S., Postmaster-General, Bombay, has been transferred to Delhi as Deputy Director-General of Post Offices, in succession to Mr. H. A. Sams, whose promotion to Director-General of Posts and Telegraphs was recently gazetted.

Mr. T. E. T. Upton, late of Messrs. Orr Dignam and Co., the well-known Calcutta firm of solicitors, has returned to India to assume the duties of Solicitor to the Government of India, vice Lieut.-Colonel Sir Robert Dunlop, C.I.E., D.S.O., whose retirement has already been announced.

The liquidators of the Alliance Bank of Simla, in a letter to the *Pioneer*, state that they hope to pay a dividend of one anna in the rupee next June, this making the third dividend, the previous being eight annas and one anna respectively. The liquidators add that they consider their original estimate of the ultimate total payment of 12 annas still stands. The task of liquidation is considerable, the number of creditors being approximately 40,000. A dividend of one anna a rupee involves a sum of 50 lakhs of rupees.

Mr. V. J. Patel, M.L.A., President of the Legislative Assembly, India, and Joint President of the Branch of the Empire Parliamentary Association in the Legislature of India, has arrived in London and is staying at the National Liberal Club. Mr. Patel, who expects to remain in this country about two months, is anxious to study the procedure of the House of Commons and he also proposes to attend sittings of the Parliament of Northern Ireland and the Dail Eireann.

The India Office announces that the King has been pleased to approve the following appointments:—

Sir Charles Alexander Innes, K.C.S.I., C.I.E., I.C.S., to be Governor of the Province of Burma in succession to Sir Spencer Harcourt Butler, G.C.I.E., K.C.S.I., I.C.S.

Sir Alexander Phillips Muddiman, K.C.S.I., C.I.E., I.C.S., to be Governor of the United Provinces of Agra and Oudh in succession to Sir William Sinclair Marris, K.C.S.I., K.C.I.E., I.C.S.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Palestine's New Currency.

It is anticipated that the new Palestine currency will be introduced in the course of the second half of this year, and it may be of interest now to give a few details regarding the values of the notes and coins which will be issued. The notes will be of six denominations—£P100 (the Palestine pound will be the equivalent of the pound sterling), £P50, £P10, £P5, £P1, and 500 mils (1,000 mils are equal to £P1). No gold coins are to be issued at present, but there will be silver coins of 100 and 50 mils, nickel bronze coins (perforated) of 20, 10, and 5 mils, and bronze coins of 2 mils and one mil. In English equivalents these coins range down from 2s. (100 mils) to .24d. (i.e., roughly a farthing).

Yugoslavia's Trade Position.

The year 1926 saw a marked falling off in the value of Yugoslavia's imports and exports. The value of the imports was 7,631,800,000 dinars as compared with 8,752,900,000 dinars, while that of the exports was 7,818,200,000 dinars against 8,094,500,000 dinars. The reason for the decline in the imports is to be found partly in the fact that in 1925 imports were on a particularly large scale with the result that the market was temporarily overstocked and partly in the decreased consumption which has been in evidence during the past year. The actual tonnage of imports was 1,241,054 as against 1,513,862 in 1925. On the export side on the other hand the decline in the value of the trade was accompanied by a further substantial expansion in the tonnage of the exports. The figures for the last four years show very clearly the steady development of the country's export trade. In 1923 the tonnage was 3,023,914, in 1924 3,915,700, in 1925 3,398,466, and in 1926 4,884,718. The value of the trade reached its peak in 1924, and since then the export trade has suffered from the steady fall in prices which was accentuated during the past year. Yugoslavia it may be pointed out, has now had a favourable balance of trade for three years in succession, which is a self-evident tribute to the efforts the country has been making to re-establish her economic position.

Roumania's Exchange Fluctuations.

The fluctuation in the Roumanian exchange in recent months has created considerable difficulties for Roumania's merchants and traders, for it naturally presents marked obstacles to business if, as has been the case, the leu moves 40 points or more in a week. Thus while a week ago it stood at 795 for the pound sterling, at the time of writing it has improved to 752½. While the country's general position undoubtedly justifies a better exchange the recent movements cannot be attributed to the economic recovery that is taking place. What the country emphatically needs is a stabilised exchange, and that problem is now occupying the attention of the Government. At the recent meeting of the National Bank of Roumania, M. Demetre M. Burilliano, the Governor of the Bank, gave some interesting details of the progress achieved in 1926. He naturally emphasised the important point that once again there was a balanced Budget, while all the internal and external debt has been funded. Then, during the year (the first year in which the convention concluded by the Government with the National Bank came into force) the Government paid into the liquidation fund

in reduction of its debt to the Bank 797,143,579 lei, a sum which is 15 per cent. in excess of the estimates. Finally, as indicating the development of the country's economic life the Governor pointed out that in 1926 the capital of public limited liability companies showed an increase of 5½ milliards of lei (about £7,000,000).

Roumanian Agriculture.

M. Burilliano referred in detail to the greatly improved results of Roumania's agriculture in 1926. Thus the yield of wheat was 3,017,761 metric tons as against 2,850,604 in 1925, of maize 5,724,916 metric tons as against 4,159,146, of barley 1,684,947 metric tons as against 1,019,327, of oats 1,159,028 metric tons as against 740,062 and of rye 285,581 metric tons as against 203,147. When to this progress is added the substantial increase in the production of petroleum it will be realised that Roumania has solid foundations which should enable her ultimately to achieve much greater prosperity than before the War. In 1926 the production of petroleum was 3,230,000 tons as compared with 2,316,504 tons in 1925 and 2,000,000 tons in 1913, so that there has been an increase on the pre-War production of more than 65 per cent. It is true that the increase in production does not mean quite what it did as we happen to be in a period of falling prices, but the present utilisation of Roumania's resources should be adequate to ensure the country's well-being. That it has not done so is, of course, due to the transport difficulties, which impose a grave handicap on the commercial activities of the country, and it is unfortunately the case that so far little real progress has been made in solving this chief problem of reconstruction. Once that is dealt with the way will be clear for steady progress.

The Turkish Debt Question.

Negotiations over the Turkish Debt have taken place so many times without any result that the news of the continuation of negotiations will not arouse the interest that would otherwise have been the case. As a matter of fact, however, there seems much more reason for hope, if not for optimism, on the present occasion, for there are grounds for believing that Turkey is now very anxious to have this long outstanding question settled. Unfortunately, the difficulty has been all through to reconcile the opposing views of the Turks and the bondholders, and it is apparent that if Turkey is to be in a position to meet her obligations a foreign loan is an essential outcome. Given

BANK OF ROUMANIA LIMITED

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

LONDON	ABADAN	FREMANTLE
Royal Albert Docks	ADEN	HAMBURG
and Purfleet	ALGIERS	HAVRE
AVONMOUTH	ANTWERP	KARACHI
GRANGEMOUTH	BOMBAY	MADRAS
HULL	BORDEAUX	MARSEILLES
JARROW (Tyne)	CALCUTTA	MELBOURNE
LEITH	CAPE TOWN	MOMBASA
LIVERPOOL	COLOMBO	ORAN
MANCHESTER	COPENHAGEN	OSLO
SOUTHAMPTON	DONGES(Loire)	PORT SAID
SUNDERLAND	DUNKIRK	RANGOON
SWANSEA	DURBAN	SYDNEY

Other Stations are in course of erection.

ANGLO-PERSIAN OIL Co., Ltd.
Britannic House, Finsbury Circus, London, E.C.2.

a settlement satisfactory to the bondholders Turkish credit abroad would be so improved that financial assistance would not be a difficult matter to obtain, the more so as Turkey's commercial position is now steadily tending to improve.

Turkey's Economic Progress.

A few figures may be quoted to show the nature of the advance that Turkey is making. For the first quarter of 1926 the value of the exports was £T54,929,325 as compared with £T46,410,925 for the corresponding period of the previous year, while that of the imports was £T57,932,805 as against £T53,380,835. For the first quarter of 1925 there was an adverse trade balance of £T6,969,910, but for the same period of 1926 it was no more than £T3,003,480, and for the first five months of the year the adverse balance was £T9,267,081 as against £E25,152,338 for the same months in the previous year. These figures, if they can be taken as representative of the general position (and there is no reason for thinking that they are not) indicate a decided measure of improvement in the economic position. The agricultural situation in 1926 was fair, and would have been distinctly good if inclement weather conditions had not damaged the cereal crops, with the result that imports of cereals to the extent of 173,000 tons were required. A feature of the year was the yield of figs and sultanas, which was substantially in advance of the 1925 figures. Except in the Smyrna region the production of cotton was below the previous year's figures. The boll weevil is now an unpleasant factor to be reckoned with in Turkey. The production of tobacco was fairly good, being about 40,000 tons, but the progress of this branch of agriculture depends on the market situation. The Government is taking measures to encourage agricultural production generally, particularly in regard to figs, sultanas and raisins and cotton.

An Excellent Showing.

As was the case last year the report of the London and Lancashire Insurance Company shows a further large expansion of business—a result which, it may be pointed out, has been achieved during a year in which conditions were anything but favourable for commerce. The total premium revenue amounted to £6,558,389 as compared with £6,324,785, or an increase of almost a quarter of a million, while the surplus on operations was £734,279. The dividend is maintained at 15s. per share, or 75 per cent., but it is proposed to increase the interim dividend payable in November by 1s. per share, so that twelve months hence a larger total distribution may be anticipated. The reserve funds of the company, exclusive of paid-up capital, now amount to almost eight and three-quarter millions.

Great Britain and the Film Trade.

The extremely unsatisfactory position of Great Britain in the film trade has been the subject of comment in these columns on more than one occasion. The experience of this country up to the present in fact has been that so far from being able to offer any sort of competition in foreign markets it has been found impossible to withstand foreign competition in the home market. The official German figures for film imports in 1926 are very illuminating. 302 "feature" films were imported, and of these this country supplied the lowest possible number, 216 coming from America, while even Russia with eight films was seven in front of Great Britain. The same story could be told, of course, of the Near East markets for films. The duty now placed on imported films will not directly serve to improve the position, but by safeguarding the home market and thus rendering possible the development of a strong British film industry it should help to place this country in a position to compete effectively in foreign markets. How necessary it is that British films should play their proper part abroad, and particularly within the Empire, will be obvious to all who have seen some films

which pass muster outside this country, especially those productions which profess to give a picture of life in this country, but really only succeed in a hopeless travesty of it—a travesty which would be farcical were it not for the deplorable effect that these very erroneous portrayals are bound to have on those who are unable to appraise them at their true value. It is evident from some of the notable British productions that have recently made their appearance that this country has nothing to learn in regard to films, and that it can produce films which are the equal (and in my opinion the superior) of the best that other countries can supply. If they are produced in sufficient numbers they should drive the inferior foreign films out of the markets and force our competitors to aim at a higher standard of accuracy and good taste. Apart from that a strong British film industry may come to mean almost as much to this country as the rubber industry does, by lightening the strain on the exchange, and from this point of view alone the effort to develop it is well worth while.

COMMENTATOR.

THE JAFFA ORANGE TRADE.

The Empire Marketing Board in its report dated April 20, states that the Jaffa season is almost over. Shipments from Jaffa during the week ended April 8 were as follows:—s.s. Skotland, for Glasgow, with 29,651 cases and s.s. Syrian Prince for Manchester with 19,280 cases. Further sailings to complete the season are:—s.s. Gitano with about 10,000 cases, and the s.s. Marga with about 20,000 cases.

Up to April 8 shipments aggregated 1,767,530 cases, an increase of 410,083 cases over shipments to the corresponding date last year.

Roumania's total revenues for the first quarter of 1927 totalled 724 million, lei, an amount which exceeded the expenditure.

The directors of the Anglo-Egyptian Oilfields recommend a dividend of 12½ per cent., less income-tax, on the "B" shares for the year 1926.

Roumania's exports of petroleum and its products in 1926 shows an increase of 90 per cent. over 1925. This is largely due to the fact that in 1926 the export of mazout was freed, and nearly 300,000 tons of the total is thus accounted for.

The premises of Barclays Bank (Dominion, Colonial and Overseas) at 28, 29, and 30, Gracechurch Street, E.C., formerly the head office of the Colonial Bank, are to be rebuilt, and pending completion of the new building the business hitherto conducted at that address will be carried on at 37/39, King William Street, E.C.4, the former head office of the Anglo-Egyptian Bank, Ltd. This temporary transfer took effect on April 25.

PALESTINE'S TRADE IN 1926.

The past year was, broadly speaking, an unfortunate one for Palestine from the economic point of view. Towards the end of 1925 a pronounced trade depression set in, and this continued throughout the whole of 1926, one result being the development of emigration from Palestine (as was the case a few years ago in a similar period of economic depression), a tendency which was still in evidence in the early months of this year. As might be expected the figures for the import trade of the year reflect the prevailing position. The value of the imports was £E6,429,245 as against £E7,338,491 for 1925, or if imports in transit and imports of specie are also included £E6,513,331 as against £E7,603,823. The value of the exports was £E1,275,625 as against £E1,297,559, or, including exports in transit, re-exports, and exports of specie £E1,497,921 as against £E1,588,157.

There are a number of features of interest in the import trade. The principal decreases in value are in animals, £E301,640; cement, £E159,223 (figures which while reflecting the trade depression also illustrate the development of the cement industry in Palestine); cotton piece-goods, £E145,814; wood and timber, £E117,560; wheat, £E117,214; and barley, £E45,769. Of the other decreases mention may be made of machinery, £E28,068; iron bars, girders, and sheets, £E21,406; and cigarettes, £E12,467. As regards the consigning countries it is somewhat depressing to find that the United Kingdom's percentage is no more than 11.4, this representing a total of £E730,462. Egypt is first with £E1,723,893, or 26.8 per cent.; Syria is second with £E999,853, or 15.5 per cent.; while Germany, who has been paying special attention to this market, ranks fourth with £E715,948, or 11.2 per cent. America and Italy are fifth and sixth respectively with percentages of 5.2 and 4.7.

Palestine's export trade was seriously affected by the economic depression in Egypt due to the fall in the price of cotton, and to this is due the principal decrease in the list of £E77,246 in respect of laundry soap. Other important decreases are in water melons (the third of Palestine's chief exports), £E25,728; almonds, £E14,058; wines, £E13,981; and hides and skins, £E11,710. Reference must also be made to the decrease of £E3,158 in the export of grapes. The tendency is now in evidence to expand the area under vines with a view to the development of an extensive trade in grapes, but the present decrease only emphasises the need for finding markets further afield. The chief increases in exports were in respect of barley, £E37,613; uncut tobacco, £E30,440; durrah, £E23,815; and oranges, £E14,731. In the export trade the United Kingdom is easily first with 39.9 per cent., representing £E508,361. Egypt is second with £E414,797, or 32.5 per cent., and Syria is third with £E160,335, or 12.6 per cent., while the fourth place is occupied by Germany with no more than £E52,701, or 4.2 per cent. The place of the United Kingdom as the

principal purchaser of Palestine's products is due, of course, to the large imports of oranges. Of Palestine's exports of this fruit during the year amounting to 1,887,581 cases of the value of £E566,199, or nearly half the total value of the export trade, the bulk of them came to this country.

TURKISH MERCHANT MARINE.

Since the War the Turkish merchant marine has made remarkable progress (says the *Monthly Journal of the British Chamber of Commerce of Turkey*). Both companies and private enterprise have contributed to this increase to the national tonnage by the purchase of a number of units, aided in a large measure by the Republican Government in reserving the coastal service to the Turkish flag. According to figures published by the Chamber of Commerce and Industry, we give below the number and tonnage of all craft flying the Turkish flag during 1926:—

Passenger ships	61	...	39,856
Barges	41	...	23,439
Sailing vessels	1,892	...	29,929
Small craft	2,450	...	4,477
Auxiliary motors	235	...	4,323
Coastal service around			
Constantinople	50	...	8,961
Tugs in Constantinople ...	109	...	1,809
Motors	149	...	601
Steam launches	60	...	321
Water tanks	9	...	538
Salvage vessels	1	...	92

114,346

During 1926 ten ships of a total tonnage of 8,839 were bought by Turkish owners. Three of these were of 2,952, 1,408, and 1,258 tons respectively. During the year five small vessels of a total tonnage of 1,407 were totally lost.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, May 25). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Masirah for Port Said, Colombo, Madras and Calcutta (Birkenhead, April 30); s.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (Birkenhead, May 14).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, May 4).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, May 7); s.s. Dumana for Bombay and Karachi (London, May 14).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers if inducement offers (Liverpool, Glasgow, and Swansea, May 14); s.s. Phrygia for Cetta, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool May 14, and Swansea May 17).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21).

P. and O. Line.—S.s. Razmak for Bombay (London, April 29); s.s. Tregenna for Colombo, Madras, and Calcutta (London, April 30).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, May 4); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, May 7).

Ellerman and Papayanni Lines.—S.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow April 17, Liverpool April 29); s.s. City of Lancaster for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 6); s.s. Bavarian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (Liverpool May 7, Swansea May 7); A steamer for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza (Liverpool, May 28); A steamer for Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool, May 28). * Subject to sufficient inducements. Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek ports via Piræus or other convenient port; Fiume via Trieste.

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 26.

The reduction in Bank Rate from 5 to $4\frac{1}{2}$ per cent. which was made last week, did not come altogether as a surprise, for there has been a rapid improvement in the Bank of England's gold position during the past fortnight. It was, nevertheless, expected in many quarters that the change would not be made until next week because of the dislocation of the money market which might be involved by the repayment by the Bank of France of its loan from the Bank of England. The directors of the Bank of England, however, evidently felt assured that there was no reason for postponing any longer a change for which the industry of the country has been waiting for so long, and in all quarters the reduction has been received with a sigh of relief. Several times during 1926 the technical position would have justified a reduction in Bank Rate, which has been at 5 per cent. since December 3, 1925, had it not been for the uncertainty of the outlook, and after the settlement of the coal dispute the prospects of cheaper money again became brighter.

It was generally anticipated during December, indeed, that early in January a $4\frac{1}{2}$ per cent. Bank Rate would be announced. Such hopes, however, were doomed to disappointment by the seriousness of developments in China and the change was once more postponed. During the past fortnight, however, the Bank of England has been accumulating gold, the total gold stock being now only £2 millions less than at the end of April, 1925, when the gold standard was restored. Moreover, the effectiveness of Bank Rate as a defence of the exchanges has been weakened by the widening of the margin between it and the market rate of discount, which before the Bank Rate change had dropped to only a shade over 4 per cent. The reduction should almost immediately result in Bank Rate becoming effective in its control over markets.

Markets and Bank Rate.

The Consol market, which always closely watches the monetary situation, had been marking up the prices of gilt-edged securities during the past week in anticipation of a lower Bank Rate, and on this occasion proved to

have been right in its surmise. Owing to a short supply of stock, especially of $3\frac{1}{2}$ per cent. Conversion Loan, the rise has continued. The actual volume of business, however, remains on a rather small scale, and although the Budget is out of the way and the troubles in China do not weigh heavily on investment markets, the general revival in stock market business, which it was hoped would come after Easter, has not yet materialised. There are, it is true, a few bright features, but up to the present there is still some hesitancy to be seen in most departments. The position of markets as a whole appears to be sound, and while nothing in the shape of a boom can be expected, the stage seems to be set for a general improvement in the majority of markets.

Industrial Company Profits.

The effects of the industrial upheaval of 1926 are now beginning to show themselves in the shape of declining profits and lower dividends, and for the first time since 1922 the quarter figures of industrial profits compiled by the *Economist* show a decline. During the past three months the reports of 520 joint-stock industrial undertakings were analysed and these show aggregate net profits of £52½ millions, representing a decline of £2,189,000, or 4 per cent. in comparison with the net profits earned by the same companies in their preceding financial year. But while heavy decreases in profits were recorded by the iron, coal and steel, textile, electricity, gas and hotel groups, motor, shipping, brewery and retail shop and store companies recorded increases. Of the total profits, 62.3 per cent. was paid in ordinary dividends, 18.9 per cent. in preference dividends and 18.8 per cent. was reserved. The ratio of profits to total ordinary and preference capital works out at 10.3 per cent. for the past quarter as against 11.4 per cent. in the corresponding three months of last year and an average of 11.3 per cent. for the year 1926. The average rate of dividend paid on ordinary capital has fallen to 10.4 per cent., which is the lowest since the third quarter of 1925. Seven out of sixteen groups show a higher average rate of ordinary dividend, the most conspicuous increase being recorded by the rubber companies, namely, from 20.8 to 23.2 per cent. The iron and steel group shows a drop from 5.2 to 2.6 per cent.

Two Excellent Foreign Investments.

It is evident that a large measure of success has attended Belgium's effort to stabilise her currency and repair her economic organisation generally. "Financially," says the recently-issued report of the Department of Overseas Trade on Belgium, "the position is good. Public finance has been placed on a sound basis. The Budget shows a surplus of revenue over expenditure even after full provision is made for the resources of the newly-created Sinking Fund, for which a definite programme has been drawn up." Moreover, the reforms have been carried out with remarkably little disturbance to trade and industry. But even so Belgium is not content with things as they are and is making strenuous efforts further to consolidate her position.

Thus Belgium merits the attention of the investor seeking foreign securities. Two popular securities are available. First there is the 7 per cent. Stabilisation Loan; the final redemption date is 1956 and the yield is £6 7s. per cent. Secondly, there is the famous 3 per cent. sterling loan of 1914, which is redeemable not later than 1940 by annual drawings or purchases. The flat yield, at £3 15s. per cent., is somewhat modest, but the investor is assured of steady capital appreciation, which is an important point if a sale become necessary. The redemption yield is £5 8s. per cent. Both stocks provide excellent foreign investments.

The Turkish Budget for the financial year from June 1, 1927, to June 1, 1928, has been voted. The expenditure will amount to £190,000,000 [£19,500,000], and the revenue is estimated at £194,000,000.

PERSIAN TRADE AND AGRICULTURE.

So far as known, there is in Persia no central organization for the exchange of information concerning crops (says the American Consul at Teheran, Mr. Orsen N. Nielson, in a review of Persia's trade and agriculture). At a rough estimate, however, the 1926 almond yield is placed at about 327 tons, as against 529 tons in 1925 and something over 1,500 tons in a "normal," or presumably frostless, year. Walnut production also was hampered by late frosts in 1926, but the 13 Provinces for which figures are available (statistics from 8 Provinces are missing) produced a total of 2,350 short tons, as compared with a normal yield for the same area of 2,750 tons. Grain production was adequate to meet the needs of the market and to obviate the necessity of continuing the complicated motor transport alimentation service organized last year when starvation conditions were feared.

It is hoped that the proposed organization of a national bank, authorized to make loans secured by first mortgages on real estate, will contribute to develop and stabilize Persian agricultural conditions, but of course no immediate results can be expected.

As a result of an investigation made last summer by the Director of Internal Revenues, it is probable that the Persian Government will take some action leading to the extension of foreign markets. It is reported that European interest has been successfully stimulated in Persian cotton, wool, camel hair, cigarette tobacco, saffron, and attar of roses.

To promote export trade, the following recommendations have been made. The substitution of new and more profitable crops for such overproduced crops as wheat and rice; Government assistance in financing exports; revision of the tariff; improvement of transport facilities. So far, however, steps have been taken to carry out only the last-named of these.

Persian export trade naturally will be greatly helped if an agreement can be reached with Soviet Russia regarding the lifting of the present Russian embargo on Persian exports, or if the proposed new route for north Persian exportation, from Tabriz to Mosul via Rowanduz, can be completed.

Exports declared from Persia to the United States through American consulates in 1926 showed only a slight increase in value as compared with 1925, but there were several marked differences in the quantities shipped of various specific commodities.

The year's shipments of Persia's artistic products, such as Persian miniatures of illuminated manuscripts, embroideries and rugs, showed large increases, that in rugs amounting to over half a million dollars. The 25,000 dollars item "Works of art for exhibition," refers no doubt to the carefully chosen and beautiful collection sent under the auspices of the Persian Government to the Sesquicentennial exhibition at Philadelphia. The next most marked export increase, that of gum tragacanth, was probably due to decreased production in Turkey.

Shipments to the United States of other agricultural and pastoral products, particularly nuts, tobacco, opium, and sheep casings, showed marked decreases as compared with 1925. This, no doubt was, due to the fact that, as mentioned above, many crops were injured by frost during 1926 and the tax on sheep casings has proved a burden on that industry. Tobacco exports to the United States are more of an experiment than a steady annual business.

CHESS.

By "CARO-KANN."

Here is an end-game of the type that frequently occurs in actual play. White has to move. What is the result?

The British Empire team for the International Tournament at the Central Hall, Westminster, was selected last week. H. E. Atkins, many times holder of the British Championship, is captain, and the other members of the team are Sir G. A. Thomas, Bart., R. P. Michell, and F. D. Yates. There are fourteen other countries competing, and the strongest teams seem to me to be Germany, with C. Carls, J. Mieses, Dr. S. Tarrasch, and H. Wagner; Czechoslovakia, with K. Gilg, K. Hromadha, R. Reti, and Dr. K. Treybal; and Yugoslavia, with Dr. L. Aztales, B. Kostich, Dr. M. Vidmar, and V. Vukovics. The British team seems to be quite as strong as any of these I have mentioned. It ought to hold its own with any of them, and I shall not be surprised if the tournament ends with a British victory.

The Merton Cup tournament at the City of London Chess Club commences this evening with the first round of the first section. The other two sections will begin in about two weeks' time.

COMPANY NOTES AND REPORTS.

INDO-EUROPEAN TELEGRAPH.

The report for the year ended December 31 states that the company's lines have worked in a highly efficient manner. There have been two cases only of serious total interruption (due to weather of exceptional severity), apart from a stoppage due to a strike of the company's Russian employees. The revenue from all sources amounts to £314,007, as compared with £310,345 for 1925, showing an increase of £3,662. The expenses are on the commercial and general account £123,588 and on the maintenance account £72,822, making a total of £196,410, as against £187,374 for 1925. The revenue account shows a balance of £117,597, which sum is carried to the profit and loss account, and after deduction of income-tax is reduced to £103,124. To this is added the net balance of the profit for 1925, £16,288, making a total of £119,413. The directors have provided £45,000 in writing down expenditure on reconstruction of the line in Russia and Poland, and £5,244 in writing down the cost of the Persian section of the line, leaving a balance of £58,544. They now propose to declare a dividend for the year ended December 31 of £1 2s. 6d. per share (making, with the interim dividend, already paid, 7 per cent. for the year) and a bonus of 15s. per share, both free of income-tax.

and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

THE BRITISH COTTON GROWING ASSOCIATION.

The report of the British Cotton Growing Association for the year ended December 31 last, refers to the remarkable progress which has taken place in the development of cotton growing in many parts of the Empire.

The year under review again proved an unremunerative period to the Lancashire cotton industry, and the mills using American types of cotton have continued on short time owing to the limited demand for yarn and cloth. Notwithstanding this, there has been a fair demand for raw cotton of outside growths, and the total sales of these in Liverpool during the season ended July 31, 1926, were 595,390 bales (an increase of 46,610 bales on the previous season) made up as follows:—South African 14,280, East African 120,270, West African 36,360, Brazilian 120,070, Peruvian 203,880, Sudan 39,820, West Indian 3,210, Sea Island 2,720, East Indian 37,390, Australian 9,800, Sundries 7,590; total 595,390 bales.

The quantity of cotton of Empire growth included in the foregoing figures was again much greater, there being an increase in East African of 50,000 bales and in West African of over 10,000 bales, but there was a decline in East Indian, etc., of over 50,000 bales.

The quantity of cotton marketed by the Association showed a substantial increase on the previous year, and the value also established a record. The number of bales and the value of the cotton which has been dealt with by the Association during the last six years is as follows:—

Year	Bales	Value £.
1921	63,966	1,597,702
1922	67,386	1,628,778
1923	54,606	1,588,480
1924	59,583	1,922,097
1925	84,320	2,502,967
1926	135,522	3,368,740

The marketing of the cotton crops in different parts of the Empire is now assuming considerable proportions, and the figures quoted above represent the quantities which the Association have actually purchased from the cultivators and cotton which has been consigned for sale by cotton growing companies, merchants and planters.

The Association's engineering department has been fully occupied during the year on the provision of further ginning facilities for various parts of the Empire where the Association have interests. This Department, which was originally established for the maintenance of the Association's ginneries, has developed into an engineering supply department in an advisory and practical capacity appertaining to every class of machinery, buildings and spares, used by cotton ginning companies, associations, planters, etc., and required in ginning and baling processes, oil extraction, plants, etc. The experience which the Association have had during the past twenty years in regard to ginning and baling machinery is probably unique, owing to the fact that so many grades and types of cotton have at one time or another been submitted for their advice as to treatment. Advantage of this experience is taken by British and Foreign Colonial Governments as well as by private concerns throughout the cotton growing areas of the world. The exceptional position which the Association holds enables them to give an independent and unbiassed opinion as to the most suitable type of machinery to be installed for the various projects submitted. Experience has proved to the Association that British machinery is the best from every point of view, and the output now being obtained from gins of the latest construction is highly satisfactory. Special settings are necessary for each distinct staple and grade of lint, and these adjustments must of necessity be made at the ginnery and cannot be accomplished before despatch. At the present time the Association is taking an active interest in experimenting with the latest improvements offered in the different types of machinery applicable to the industry. Two batteries of the new air

blast gins, as adapted to standard British manufacturing practice, are on test in widely separated areas, and improvements to Macarthy gins, both as regards feed and elimination of continual stoppages, are under trial. Wherever the Association has ginneries, cotton stores not less than twelve in number are erected for a full plant, together with bale and general stores and bungalows.

The value of buildings, machinery, stores, etc., supplied during the year to ginneries, planters and others engaged in the cultivation of cotton amounted to £143,108, as compared with £170,783 in 1925, and £134,855 in 1924.

The commission earned during 1926 on sales of cotton, cottonseed, etc., and on supplies of stores, was £19,179, compared with £19,786 in 1925, and £17,405 in 1924. Bank and other interest, including interest on money advanced for financing cotton, etc., amounted to £11,434 19s. 8d., against £16,421 5s. 8d. for 1925. Receipts for dividends from shares in cotton growing companies were £13,551 11s. 6d. against £9,450 15s. 7d. in 1925.

The accounts show a surplus on the year's working of £40,063 6s. 9d., which brings the excess of income over expenditure to £387,739 7s. 6d. Full provision has been made for depreciation and for income tax, and a further sum of £5,000 has been reserved for bad and doubtful debts. Under the difficult conditions prevailing this is a satisfactory result, as the highest possible prices were paid for seed cotton during the year.

The following extracts are taken from reports dealing with progress in various cotton growing regions:—

India.

The work on the demonstration farm of the B.C.G.A. (Punjab) Ltd. at Khanewal has proceeded satisfactorily under the supervision of Professor W. Roberts. Previous to 1921 only the level portions of the property had been

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

LIMITED

Head Office: 41 Lothbury, London, E.C.2

cultivated for two or three years by temporary cultivators, but subsequently the land was systematically levelled and laid out and brought to its present high state of fertility, as shown in the following record of cotton yields:—

		Area (acres).		Yield per acre (Maund*).
1921-22	...	1,683	...	7.35
1922-23	...	1,869	...	12.5
1923-24	...	1,989	...	14.70
1924-25	...	2,404	...	14.72
1925-26	...	2,424	...	15.9

*(1 maund = 82 2/7 lb.)

The yield 15.9 in 1925-26 on a total area sown of 2,424 acres is the highest yet attained, and is at least 30 per cent. above that of any other estate in the Punjab. Many individual squares with seven and a half acres of cotton have averaged 23 to 24 maunds per acre.

"Line sowing" and "interculture," which is universally practised at the farm, are becoming standard methods in the district. The theoretical teaching at Lyallpur is being put into practice on a large scale, and proved to be sound practical teaching. The area of the Khanewal Irrigation Division is 471,664 acres, and that of the farm 7,300 acres, that is one and a half per cent. of the area of the division. If the benefits were confined to this one area alone the farm has more than justified its existence.

The cotton type 289F has been thoroughly tested and brought into prominence entirely by the Association. This cotton is one of Professor Milne's selection from Lyallpur, of which a few ounces were given to Professor Roberts in 1921. It has been valued in Liverpool at 150 points over "Middling American," and appears to be a very promising cotton which has, up to date, given a higher yield than any other American cotton grown at Khanewal.

From the latest reports received from Khanewal the ginning and baling plant sent out by the Association is working most satisfactorily, and is giving an output of 200 bales per day of 16 hours.

The Association has been developing the Shahpur area by pumping from the river Ravi, and is now controlling 2,500 acres. The magnitude of the work may be gathered from the fact that nearly 10,000 tons of wood had to be cleared from the land before the cultivation could proceed.

Professor W. Roberts has been co-opted a Member of the Royal Commission of Agriculture for the Punjab, and has submitted to the Commission some suggestions on the possibilities of agricultural development in the Province.

The Association, through the B.C.G.A. (Punjab) Ltd., have taken an interest in Nili Factories Ltd. (Nili Bar), and two ginnery sites have been secured, one at Burewale and one at Vihare. These are in the new Sutlej Valley project area where cotton will be grown during the coming season. The principal object of this undertaking is to obtain control of the seed supply, and it is proposed to cultivate 4F and other varieties of cross American, and the scheme will be beneficial in improving the quality of Indian cotton. The proposition is situated in the Punjab, about 150 miles from Khanewal, and will be supervised by Prof. Roberts. During the year, Nili Factories Ltd., Punjab, decided to lay down a plant at Burewale, and placed with the Association an order for the necessary machinery, consisting of an air blast pneumatic battery of 4-80 saw gins, 40 D.A. roller gins, and seed cotton openers, hydraulic baling press of the revolving box type, and usual Indian finisher press, all of which are driven by a 4-cylinder oil engine of 325 h.p.

Another proposition in which the B.C.G.A. (Punjab) Ltd., have taken a controlling interest during the year is the Bundi Agricultural Syndicate, where it is proposed

to cultivate about 15,000 acres, which may be extended later to 25,000 acres.

The Sudan.

During the year ended June 30, 1926, the Sudan Plantations Syndicate had under cotton in the Gezira, 80,031 feddans, as against 21,616 in the previous season, and the total crop amounted to 90,309 bales. Therefore, the crop from four times the area was eight times that of the previous season, and in addition to the high yield, the cotton was of very good quality. For the 1926-27 season, 100,057 feddans have been planted with cotton, and there is every prospect of another good crop being realised.

In the Kassala area the average Gash flood will not enable the Kassala Cotton Company to bring very large areas under cotton, such as were originally anticipated, and in practice the expectations of the irrigable acreage upon which the concession negotiations proceeded have not been fulfilled. The effective cotton areas for the 1925-26 season totalled 11,400 feddans, and the resulting crop was about 5,435 bales of 400 lb. each, and the quality was very satisfactory. The Gash flood was much better in 1925, and for the coming season 26,100 feddans are under cotton cultivation. The crop generally looks strong and healthy and a yield of some 10,500 bales of 400 lb. each may be anticipated.

The cotton crop in the Tokar area on the Red Sea was a failure, and the total was only 10,035 kantars, which with the exception of the year 1919, is the lowest crop recorded since 1903.

Negotiations have been entered into generally to undertake the commercial and financial operations required in regard to the development of cotton growing in the Southern Provinces of the Sudan. This development, while rapidly reaching the stage when the handling and financing of the crop requires organisation that cannot be suitably provided by a Government department, has not progressed sufficiently to allow of this being efficiently done by independent private enterprise, taking into account the difficulties of the region and the backward condition of the population. It is understood that the Sudan Government will undertake the responsibility of providing the agricultural staff required for the purpose of educating and assisting cultivators in regard to cotton growing, to effect control of cottonseed and its distribution, and to take such measures as are practicable in preventing and controlling insect pests and plant diseases, and generally to carry out the necessary experimental and demonstration work in connection with the extension of cotton growing in these specific districts. The operations of the proposed organisation would commence with the taking over and payment for the cotton from the cultivators at the ginneries or buying centres, and it would be their duty to grade all cotton, and to pay cash for it, also to gin and bale and market the produce. The special operations of the organisation would be carried out in the Mongalla, Bahr el Ghazal, Upper Nile and Nuba Mountain Provinces. It is considered that such an organisation would give a great stimulus to the rain-grown cotton industry in the southern parts of the Sudan which has already attained considerable proportions.

Iraq.

The steady development of cotton cultivation was maintained during the year, and the total crop amounted to approximately 3,500 bales, being an increase of 1,000 bales on the previous year. The cotton is of excellent quality, and the best grade commands a premium of 4d. to 5d. per pound on Middling American.

With regard to seed distribution, arrangements were made with the Iraq Railways that forty station masters should act as agents for the Association to register applications for seed and supply the same. This was done free of expense to the Association, and about twenty tons of seed were supplied by this means to farmers. The railway gave very valuable assistance in distributing the seed, and in this way it is hoped to get into touch with cultivators in the vicinity of every railway station in Iraq.

The cotton area is gradually extending down the Tigris below Ctesiphon, and the cotton is transported in barges which are propelled by small motor boats.

The existing railway system of Iraq is inadequate for the proper development of the commercial and agricultural possibilities of the country, but owing to lack of capital even the existing system cannot be operated to the best advantage. Much of the rolling stock is due for replacement, and necessary developments in the permanent way. An extension of the railway to Mosul is desirable, also the building of a bridge across the Tigris at Baghdad by which to make a permanent connexion between the two sections of the railways. The Mosul and Arbil areas already produce large quantities of grain, and although, owing to lack of transport, little cotton development has taken place, the quality is exceptionally good. What is required is an outlet for the grain of the North and for cotton development by the extension of the line from Kirkuk. Col. Hammond paid a visit to the country during the latter half of 1926, on the invitation of the Iraq Government, and made an independent examination of everything connected with existing railways and future development, and of the financial aspect.

The Irrigation Department have been busy making investigations, and have decided on a few small schemes which will eventually form part of the greater ones. The Dajarah Barrage on the Hillah Canal is one of the biggest of those to be taken in hand at present, and will prove useful in extending and improving areas of cultivation in the Diwanayah Liwa. A cotton conference was held at Hillah which was followed by the visit of a large party of Sheikhs and notables to the Association's ginnery at Baghdad. The party was greatly interested in what was shown them at the ginnery.

Every year the Tigris is in flood in March and April owing to the melting snow in the mountains, and the level of the water then rises above that of the plain through which the river flows and is only prevented from flooding it by a bund or embankment on each side of the river. In April last the flood broke through the bund causing considerable damage and loss at Baghdad. A flood relief fund was raised for the benefit of poor people and cultivators who were actually living in the flooded areas, and in view of their considerable interests in the country the Association made a donation of £500 to the fund.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 14, state:—

Since our last report the futures market has been quiet but the tone has been decidedly more firm. The week's summary of price movements is as follows:—Sakellaridis: May, 26.37 dollars, 0.25 dollars up; July, 26.60 dollars, 0.33 dollars up; November, 27.24 dollars, 0.29 dollars up; January, 27.14 dollars, 0.24 dollars up. Ashmouni: April, 18.99 dollars, 0.38 dollars up; June, 19.19 dollars, 0.31 dollars up; August, 19.35 dollars, 0.27 dollars up; October, 19.78 dollars, 0.22 dollars up.

Sakel.—In spite of the large stocks and the poor demand from abroad, the Sakel market has been quite firm, with very few sellers. Up-country merchants, especially the natives, are all bullish of Sakel and very little, if any, of the cotton they hold is hedged.

Uppers.—The week has seen a series of quiet markets but, as for Sakel, the tone has been firm. The demand from abroad has been slightly better than last week. It seems that spinners now look upon Uppers prices as comparing favourably with competing growths, and the prospects are that this variety will obtain its full share of any improvement in the demand in the near future.

At the second April tender, 9,750 kantars dockets were issued.

The week's receipts amount to 66,378 kantars against exports 165,820 kantars; the stock in Alexandria amounts to 3,127,553 kantars.

The official figures of arrivals and exports for the period September 1, 1926, to April 7, 1927, are as follows:—Arrivals: Lower Egypt, 4,377,000 kantars; Upper Egypt, 2,682,000 kantars; total, 7,059,000 kantars. Exports: Sakel, 2,195,474 kantars; Ashmouni, 2,609,392 kantars; Various, 336,808 kantars; total, 5,141,674 kantars.

Spot: We have had dull markets at Minet el Bassal during the past week and the demand continues poor, spinners not showing much interest in our cottons. Sales amount to about 12,500 bales, of which we estimate 4,400 bales Sakellaridis, 7,600 bales Ashmouni and Zagora, 250 bales Pilon, 200 bales White, and 50 bales Brown. The spot situation shows little change from last week as regards quantity and quality of offerings.

Sakellaridis: A very mediocre business has been put through. All grades have been dealt in. Spot differences are unchanged.

Ashmouni and Zagora: Have been in moderate request and a fairly good business has been done covering all grades, with the medium qualities preponderating. Spot differences show no change from last week but are very steady and cotton at the moment is well held.

Pilon: A fair business has been done at last week's differences.

Brown: Has been in retail request and a small business has been done without change from last week's differences.

White: A very fair business has been done. Spot differences are unchanged.

Up-Country: Business has been very quiet up-country during the past week. There is still a fair quantity of cotton held in the villages, of which a good proportion is pledged against Government advances. A little new crop business has been concluded but, generally speaking, growers are not disposed to sell next season's crop on the basis of present premiums.

Crop, 1927: Weather conditions during the week have been favourable and the crop is progressing normally in every respect. Re-sowing has not, so far, been necessary to any great extent and this is all in favour of the grade of the cotton which will be picked. On the basis of our present private reports, we estimate a reduction in the acreage of from 20 to 25 per cent. Water supply is everywhere abundant.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 20:—

Egyptian Futures.—Sakel Contract.—Owing to the intervention of the holidays, trading this week has been restricted to three sessions. During these, although operations have been confined to rather minor transactions, the tone has continued to show a somewhat remarkable steadiness, so that prices have registered a gain generally of 6 to 7 points for near and 12 to 14 points for distant positions since we last wrote. As customary at this period, the offtake for actual has been curtailed and Manchester reports have indicated only a moderate turnover in yarns; however, as we are of the opinion that mills are not carrying stocks of any weight, it would appear likely that a resumption of increased activity should be witnessed in the demand for both c.i.f. and spot cotton during the course of the next two or three weeks. In view of the recent comparative absence of both trade and speculative support, we can only attribute the very steady tendency of our market to the action of Alexandria. Reports from the other side throughout the week have been consistently good; however, in spite of our option being by far and away the cheaper proposition, we continue to show a very tardy response, although it must be confessed that at the present difference it is impossible to anticipate any selling of weight being attracted here. Near positions still show a certain amount of heaviness, and apparently the idea is entertained in some quarters that the undesirable March tenders will come out again in May.

We notice in reports from Alexandria a statement to the effect that whilst the stock there is very heavy, a large part of it is comprised of poor style cotton, and on account of this it is doubtful whether more than a small portion is up to contract standard. In a lesser degree, the same situation exists at this side, and probably this outweighs at the present juncture the "bearishness" of the statistical situation and the moderate trade support experienced.

We remain of the opinion that any material movement from the present level is unlikely for the immediate future; however, taking into account the present level of prices and the almost certainty of a reduction in the Sakel production for the coming season, it would appear that any improvement in the trade outlook would be rapidly reflected in values.

Upper Contract.—Rather more attention has been paid to this option during the past week, and, under the influence of hardening American values and also a moderate amount of trade support, prices have hardened 14 to 16 points for near and 14 to 18 points for

distant positions since our last report. This tendency has not been confined only to this market, as both spot and future values in Alexandria have appreciated. It must be conceded that the Upper varieties stand at a fair premium over American, but this difference appears to be fully warranted by the fact that competitive outsiders are this season scarce and dear. On this account, we are inclined to anticipate a further hardening in prices as the season advances.

Egyptian Spot.—Conditions show no change since our last report and, if Egyptian cotton alone is considered, these conditions can only be described as quiet. Nowadays, however, so many mills which formerly used Egyptian cotton are spinning Sudan, that in regarding the situation as a whole one must include the latter growth. Coupling these two growths, we find that during the three business days which we have to review the equivalent of approximately 2,133 Egyptian bales have been purchased by the trade, an average of over 700 bales per diem. Evidently, from this, we may infer that there is more business doing in the Egyptian section of the trade than is generally believed.

The total inquiry has displayed no new features. Sakel, at from 13d. to 14d. and Upper at from 10d. to 10½d., still continue to claim the most attention, apart from Sudan growths. In the latter, a good business has been done, more particularly in the Sakel variety, both old and new crop cotton attracting a considerable amount of interest. The White variety has continued in marked request, but with rather disappointing results. C.i.f. business has shown a slight improvement, and forwardings to spinners for the week ending the 14th inst. were returned as 7,551 bales Egyptian and 1,135 Sudan. Estimated sales, 500 bales Egyptians and 2,450 bales Sudan.

Quotations of Sakel have suffered no change, but those of Upper have been advanced 15 points. F.G.F. Sakel to-day, 13.65d. F.G.F. Upper to-day, 10.70d.

NEWS FROM ALL SOURCES.

The production of the Minerva (Roumania) Oil Company for March, including oil received from royalty wells, amounted to 1,006 tons.

It is reported that Abyssinia is to negotiate a commercial treaty with Czechoslovakia.

The directors of the Calcutta Electric Supply Corporation, Ltd., recommend a final dividend of 7 per cent. on the ordinary shares, making 12 per cent. for the year. They also propose the distribution of a scrip bonus of one share for every ten held.

The report of the Punjab National Bank for the half-year ended December 31 last states that the profit, after all ordinary expenses, amounts to Rs.3,02,843, plus Rs.42,869 brought in. The directors recommend a final dividend at 15 per cent. per annum, to place to reserve (No. 2) Rs.73,893, raising it to Rs.3,20,000, carrying forward Rs.43,137.

At the annual meeting of the Association of British Chambers of Commerce in London this week a resolution is to be moved expressing dismay at the proposal to abolish the Department of Overseas Trade. The resolution states: "The Association is of opinion that the Department has proved itself to be of great value to the overseas trade of the country, and that such a change will tend to retard the extension of our commerce overseas, and the loss to the Treasury will cancel any saving in expenditure. The Association therefore urges the Government to allow the work of the Department in the furtherance of British trade to continue separately on its present lines, and to be extended."

The Abolition of Capitulations.

During the past few months there has been observable in several countries in the East a renewed tendency to demand the abolition of Capitulations. In part this demand may be due to events now occurring in China, and in part it may be due to Bolshevik instigation. Possibly the greatest influence of all may be the example of Nationalist Turkey, which at Lausanne swept the capitulatory régime away. But whatever the cause, profound or immediate, this demand on the part of Eastern nations for such independence as would include the modification of special rights for foreigners is not an unnatural one, and deserves to be seriously and comprehensively considered.

This demand for the ending of the capitulatory régime is at the moment most noticeable in Persia, Egypt, and the Hijaz. Now there is little sense in merely giving to these countries the old answer that conditions therein are not fit for the abolition of the Capitulations: that answer may have been perfectly correct in the past, and it may be perfectly correct at the moment, but it cannot for ever be correct. Turkey is not so far advanced from Egypt and Persia that a demand granted to the one must uncompromisingly be refused to the other two.

In Persia, it will be remembered, Said Zia-ed-din, the Prime Minister whose régime was as short as his ideas were advanced, included the abolition of the Capitulations in his scheme of national reforms. That was in 1921. During the subsequent years Persia was too busy with others matters to worry overmuch about her exiled Premier's reforms. But early this year there was a recrudescence of the idea. Our Teheran Correspondent has described the Press campaign which followed the scheme for reorganising the Ministry of Justice in Persia; and the Shah, in his speech at the inauguration of the new buildings of the Ministry of Justice on April 26, intimated that the Persian Prime Minister was to approach the foreign Governments represented in Persia upon this question of the abolition of Capitulations. This is, as we say, a natural trend of events, and there is no need to get excited over it.

In Egypt the demand has been even more urgently

made. For many weeks past the Egyptian Press has been urging, now the ending, now the modification, of the capitulatory régime, and we notice that Abdul Rahman Bey Fikri, in the Memorandum which he has sent to the League of Nations, emphasises the inequality of taxation in Egypt owing to the Capitulations—a reminder that there is another side than that of justice to the capitulatory régime. The question in Egypt seems to have been somewhat complicated by the careless, or reckless, attitude of a section of the Egyptian Press; certainly the feeling appears to be dominant among the more considerable body of foreigners in Egypt that native justice is insufficient for Western standards.

In the Hijaz the matter is naturally one mainly of *amour propre*. Our Jidda Correspondent has stated that there was in the McMahon correspondence with ex-King Husain some talk of the possibility of modifying the capitulatory régime in the Hijaz, a régime which the Hashimite's successor, King Ibn Saoud, is by no means disposed to recognise. Here again, it would seem that a compromise may be reached, and possibly an opportunity occur for Britain, all of whose rights at Jidda do not, we believe, derive from capitulations, at once to assert her rights, and to give a lead, in the Arab world. The fame which Bolshevik Russia achieved by her alleged renunciation of certain treaties with Muslim States is in itself sufficient indication that Great Britain will not be the loser if she is in the vanguard of those European Powers who honestly and not in mere words wish the independence of Persia, Egypt, and the Hijaz eventually to be more real than it now may be. In short, although we are far from asserting that the abolition of Capitulations in the countries mentioned is an immediate desirability,—there have been in the last few years events both in Persia and in Egypt which must arouse anxiety for the security of foreigners—we do urge a sympathetic and comprehensive consideration of the problem, for we realise that the present régime in Islamic countries is but a stage of transition, and that it is better for us of the West to attempt to inform the future in the East than to have it informed for us by the East.

PALESTINE AND JEWRY.

Elsewhere in this issue is published an interesting letter from the President of the American Zionist Organisation, who in seeking to justify his contention that the Palestine Government is responsible for the present crisis in that country has raised afresh the whole question of the inwardness of the Jewish National Home. Mr. Lipsky's remarks betray such a fundamental misconception of the real position in regard to the National Home that it seems necessary to recapitulate the interpretation that has already been given officially to those words and which is the only one that they can possibly bear. In so doing we have no desire to probe a wound which, we recognise, is still sore. It is a well-known fact that the Balfour Declaration, given in perfect good faith by the British Government at a time when there was neither the opportunity nor the inclination to examine far ahead all the possible ramifications of any policy, conjured up for Zionists prospects that the Government made no attempt to dissipate. The Zionists were allowed—and no blame can be attached to them—to build on that Declaration the most extravagant hopes of a wholly Jewish Palestine. The country in those days was Turkish territory; if a thought was given to the native population, it was not in terms of vested rights and self-determination. When the time arrived for the Zionists to carry, as they hoped, all their dreams and aspirations into practice, the British Government awoke to the unpleasant realisation of the impossible lengths to which it had allowed Zionist hopes to travel. For both parties the situation has been full of embarrassment. The Zionists could not draw back; the British Government could not ignore the rights of the Arab population six or seven times as numerous as the Jews. Jewish energy and Jewish enthusiasm promised to be the making of Palestine; and the problem was to secure their continuation while the more extravagant of the political hopes were being abandoned. We confess to having believed that the difficulty was in fair process of being overcome. Zionist reasonableness and the Government's tact seemed to be working wonders. The economic crisis from which the world is suffering, which has laid a heavy hand on Palestine as well, has, however, introduced a serious strain on the situation, and now the restiveness of American Jewry is being used for the purposes of a fresh attack on the Mandatory Power through the Palestine Government.

The points raised by Mr. Lipsky strike at the root of the Palestine question. The Zionist Organisation depends to a large extent on the financial support of American Jewry; but for the moment the forward movement of Zionism in Palestine is held in check, and American Jews,

the President of the American Zionist Organisation contends, will withhold their support or will not give it so freely, if Zionism is not to be a success. He contends that the Palestine Government is to blame for the fact that conditions in Palestine are not favourable to Zionism, and in support of this thesis puts forward certain arguments and enumerates certain definite grievances. Mr. Lipsky declares that it is not sufficient to give the Jews a free hand to build a National Home in Palestine. It is, however, legitimate to ask, Why not? The British Government has never undertaken to do more than "to facilitate the achievement" of a Jewish National Home. The Jewish community in Palestine, to use the words of the Government's statement in 1922, has "with its political, religious and social organisation, its own language, its own customs and its own life, in fact 'national' characteristics," and it was with a view to the development of that National Home that the British Government made it known that the Jewish people "is in Palestine as of right and not on sufferance." Mr. Lipsky continues: "They (the Jews) must be convinced that their effort encounters the willing and active support of the Mandatory Power." If by this is meant that every Jewish enterprise in Palestine must have Government backing until it can stand on its own feet, the contention is manifestly absurd; if it means that American Jews expect the Mandatory Power to give preferential treatment to Jews to the prejudice of "existing non-Jewish communities in Palestine," then it runs counter to the Balfour Declaration. In Mr. Lipsky's concrete grievance we see a family likeness to complaints that may be made against any Government by one section or another of the population. Revenue has to be provided, and in a country largely agricultural, it is usual to place a tax on land. A State that is in urgent need of settlers may remit taxation on new settlements for a number of years; but it is not difficult to understand the Government's hesitation to introduce this system in Palestine. In the matter of education, again, the question is not wholly one of statistics. The Zionist Organisation, we imagine, would not be content that the Jews should share with Arabs in a uniform system of education throughout the country. The Government is obliged to take note of the existence of Jewish schools, and to spend the money that it can spare for education with some regard to the needs of the country as a whole. The incidence of Customs taxes must necessarily fall on imports, and in the nature of Palestine conditions, these are mainly Jewish. A Government which adopts an easy method of raising revenue is not necessarily a sinner above all other Governments; if it listens to protests and actually removes objectionable taxes, it would seem to possess virtues often denied to others of its kind.

Much sympathy is felt in Great Britain with the difficulties that Palestine is now encountering. National pride requires that a success should be made of the Palestine Mandate; but between the Jewish Scylla and the Arab Charybdis the course is a difficult one. The British Government is not likely at this stage to be deflected from its path of strict impartiality. It cannot but be favourably disposed towards the Jews, whose splendid help has been invaluable in the building-up of Palestine; but its obligations to the Arabs are just as definite. It can, therefore, only persevere on its middle way, keeping steadily before it the goal of a Palestine in which Jews and Arabs will be content to work in harmony for their common interests in a country to the advancement of which each section will contribute according to its capacity.

Notes of the Week.

The Albanian Dispute.

The past week would seem to have brought about no definite developments in the Albanian question. Italy and Yugoslavia are nominally preparing for negotiations, or at least discussions, on the subject; but on top of the delay caused by the Easter holidays came the official Italian announcement that no reference to the Tirana Treaty could be allowed at the conference. The Yugoslav Government had in consequence to reconsider its position, and it may be inferred that both the British and French Governments took note of this all-important limitation on the proposed discussions. Public opinion in Europe is clearly opposed to the Italian attempt to prevent light from being thrown on the real inwardness of the Tirana Treaty; but it remains to be seen whether this unanimity will be allowed to influence Italian policy. In the meantime Italian activities in Albania are causing anxiety to many Albanians, and affect the position of Ahmed Bey Zogu. Each act of "penetration" may be quite legitimate in itself, but in their cumulative effect they serve to alarm the Nationalist section of the community. In her own interests it would be thought that Italy would be anxious to disarm suspicion in the country; but at present there is no sign of moderating the forward policy. The result must almost inevitably be an explosion in Albania, the permanent estrangement of Yugoslavia and Italy, and increasing misgiving in the rest of the Balkan Peninsula in regard to the cuckoo-like propensities of Italian penetration.

Britain and the Tirana Treaty.

Sir Austen Chamberlain's statement in the House of Commons on May 2 should go a long way towards clearing up misconceptions regarding the British Government's attitude towards the Albanian controversy. It has been taken for granted in many quarters on the Continent that in the matter of Italy's relations with Albania the British Foreign Secretary was altogether "in the pocket of" Signor Mussolini, and in Yugoslavia in particular it has constituted a standing grievance that Great Britain was necessarily ranged on the Italian side of the dispute. Sir Austen Chamberlain stated that the terms of the Tirana Treaty were not communicated to him before the Treaty was published and that the British Government "had nothing to do with its inception, its negotiation or its terms." He made it clear that he had done his best to facilitate direct conversations between the parties, because he could not advise in this or any other cause that recourse should be had to League intervention before the parties had met and discussed their differences. Sir Austen Chamberlain declared that the British Government had no other interest in the question than the preservation of peace and had no intention of taking sides in the controversy for or against either party. Finally, he explained that the resolution of the Ambassadors' Conference of November 9, 1921, although binding on the British Government, merely pledged the signatory Powers to recommend that the Italian Government should be entrusted with the restoration of Albanian independence, in the event of the Council of the League of Nations having to intervene to restore the independence and integrity of Albania. Unfortunately, as in the case of other undertakings, innocuous in themselves, to which she has been a party, Great Britain, although carefully holding herself aloof from interference in the affairs of a third State, be it Persia, Abyssinia or Albania, is held to be implicated, by the existence of the undertaking, in any excesses attributable to the other signatory. In the present instance Albania may have no misgivings regarding British policy; but it is clear that Yugoslavia has not been able to appreciate before the studied impartiality of the British Government in the Albanian incident.

Yugoslavia and Turkey.

No surprise can be felt if Yugoslavia, who finds Italy a very restless neighbour, and Turkey, who realises that the relative emptiness of Asia Minor must be a constant source of envy to a country whose surplus population presents a more and more formidable problem every year, take steps to exchange views on a subject of some concern to both of them. It can hardly be a coincidence that a mission of two high military officers from Yugoslavia as well as a more numerous body of Yugoslav "intellectuals," including newspaper editors, should be paying visits simultaneously to Turkey. The details already published of the terms of the treaty to be concluded between the two countries are, without doubt, sheer guess-work; but it is clear that Italy has only herself to thank for the situation which will have given rise to a desire in Yugoslavia for anything in the nature of a defensive alliance with Turkey.

Mosques in Western Capitals.

There are two mosques in England, one at Woking, and another at Southfields. For a certain section of Mussulmans who reside permanently or occasionally in England, these places of worship appear, however, to be insufficient; and we notice that in *The Times* of April 26 Mr. Ameer Ali, who was, we believe, one of the originators of the conception of a mosque for London who projected their scheme here in 1910, renews his appeal for a building in the heart of what is largely a Mussulman Empire. Curiously enough, a day or two after reading this appeal, we saw a message from the Paris correspondent of the *Morning Post* in which the present condition of the famous new mosque in Paris was depicted. According to this report, the Paris mosque, which was officially thought by France to be the means of gaining the good-will of Islam, has become the home rather of feasting and of bargaining, than of worship, and its main purpose has been subordinated to making it a sensation for tourists. The mosque is apparently being used as a restaurant, in which instead of plain Oriental fare, elaborate menus are provided. If these things are really so, the contempt which good Mussulmans will feel for this official institution will be intensified. Whatever be the merits, therefore, of the scheme for a new London mosque, it is well not to point to France (and possibly also to Germany) as

caring more for the interests of Muslims than Great Britain. Official support of and sympathy with a scheme for aiding the spiritual welfare of Mussulmans are worse than useless unless they are constant and watchful, and it is at least to be doubted whether the word "statesmanship" is justified in the letter of Mr. Ameer Ali which contains this sentence:—"French statesmanship has anticipated the inauguration of the mosque in London." Who would care to assert that the position of France in Islam is stronger since the erection of a mosque in Paris? The probability on the whole is that the more unofficial and spontaneous is the move towards the establishment of a comprehensive new mosque in London, the more effectively will its purpose be served.

The Druse Rebellion.

News from Syria is uncommonly difficult to come by at the present time. If one is to believe the French officials, who appear to be more than usually reticent, almost complete calm reigns in Syria, even in the Jabal Druse; the Arab Committee in Cairo, on the other hand, never seem at a loss for news of fresh conflict and of "rebel" success in the French mandated territory. It is patent, however, that for the time being, at any rate, and, we hope, permanently, the revolt in any general sense has subsided. This observation is really reinforced by the activity which the supporters of Sultan Pasha al Atrash have indulged in at Qasr al Azraq. These men apparently wish to use this base in Transjordan for operations across the border, a course which the Amman authorities must inhibit. About a fortnight ago martial law was declared in Qasr al Azraq, and although this need not be interpreted as a sign that the situation between Druse refugees and the Transjordan Government has been getting out of hand, it certainly is an additional reminder of the sincere co-operation actuating the British and French Mandatories. What is much more important, however, than the local position on the Transjordan-Syrian border, is the programme that M. Ponsot, French High Commissioner, has taken from France to Syria. The Syrians and Druses alike are now, we believe, more disposed to listen to wise and generous proposals; and it will be a bitter disappointment, not only to the inhabitants of Syria and to the French, but also to the outside world, if the Syrian problem is not put this year on the right lines of settlement.

Conscription in the East.

The best authorities are, we believe, by no means disposed to belittle the military prowess of the Persian, but it is not yet true to say that the Persians are a military nation in the Western sense. The gulf that bridges Persia and Turkey, for example, in the matter of national military service is an immense one. The law of conscription that was recently passed at Teheran would not appear so far to have produced very satisfactory results, but the details of the new Turkish law on military service which the Supreme War Council has drafted show the varying outlook and degree of unity which the Persians and Turks respectively enjoy. The Turkish citizen's military duties, according to this draft law, begin on January 1 of his twentieth year and end on December 31 of his forty-sixth year. Nine years' active service are required, of which one and a half years are spent in the infantry, two in an Army band, two and a half in the gendarmerie, and three in the marine. This draft law is certainly instructive, for it would appear to provide as effectively as possible, not only for defence of the country's land boundaries, and for the maintaining of internal order, but also—what is in the main a new idea for Turkey—for the defence of the country's shores. Indubitably there are shrewd heads among the Kemalist War Council, for not many foreign observers would care to assert that the Turkish Army will be the deciding factor in Turkey's next war. One wonders whether the Yugoslav officers now at Angora will not warmly applaud the wisdom of the Kemalists' latest proposal. But how different from this is the "national" feeling on the score of conscription in such countries as Iraq or Persia!

Turkey and Her Indebtedness.

The prospect of having to meet payments long since due on foreign debts and to carry through the purchase of the Anatolian Railways is exercising the minds of Turkish deputies and others, as it is foreseen that any considerable payments abroad are likely to depreciate Turkish currency, quite apart from the adverse effect on budgetary equilibrium. Stress is being laid on the absolute necessity of Turkey's restricting her payments to her capacity, and it is implied that this capacity must be determined solely by the stability of the Turkish exchange. The assurance is expressed that the Government can be relied upon to bear this point carefully in mind—this represents the limit to which press criticism trusts itself at the present time in Turkey—but there is no indication that the realities of the economic situation are understood. The Government must be given credit for its efforts to balance the Budget, as recognition of this necessity is an indispensable preliminary to any sound financial policy; but there has been a tendency, it is to be feared, to disguise the fact that equilibrium has been attained so far only by the omission to meet the country's foreign indebtedness. If at last the principle of repayment of loans is recognised, it is not very helpful to suggest that repayment must be so restricted as not to affect Turkish exchange adversely. The first thing to settle is the amount that Turkey will have to provide in the current year as interest on her debt, and then to decide how that money is to be obtained in order that the exchange may not fall. This will provide the real test of the soundness of Turkey's financial policy, far more than paper equilibrium with an important item on the expenditure side simply omitted to secure that nominal equilibrium. In other words the Turkish Government will have to produce a much larger revenue than it has obtained hitherto, and this can be achieved not by *ad hoc* raids on chance sources, but by an expert overhauling of the whole economic fabric of the country. For this purpose it can hardly be doubted that foreign advice will be required.

The Population of Turkey.

In various quarters the question of the population of Turkey has been raised, and in the absence of accurate statistics it is inevitable that estimates should show wide discrepancies. The Turkish authorities are now preparing for a census, and the point at issue should, therefore, be settled before long. It is a mistake on the part of the Turks to imagine that foreigners, in trying to arrive at an estimate, have any other object in view than to achieve, as far as possible, accuracy. If the population of Turkey is thirteen million, there is no point in anyone's pretending that it is only seven million; the converse is equally true. The smaller figure would explain the difficulties of the Government in balancing its Budget; the larger figure will emphasize the backwardness of the country and its people. The subject would not call for comment here, if THE NEAR EAST AND INDIA had not been singled out by Motalib Bey, Director-General of Civil Affairs, for a special reprimand. "The suggestion of THE NEAR EAST AND INDIA," he is reported to have said, "that the population of Turkey is less than thirteen-and-a-half million is false and sheer invention." The suggestion, if made in these columns, will have been put forward on the strength of available estimates; but we shall be the first to welcome the accuracy of Motalib Bey's assertions. He quotes the recent census of Sivas town as giving a population of 30,746. The figure given, if we are not mistaken, in the official return of the Ministry of the Interior of 1924 was 45,000 for the town, the total for Turkey being 12,426,597. A reduction in the population of one town does not rule out a large increase in the total population of the country. It is to be hoped that there will be no undue delay in the holding of the complete census of Turkey—trial censuses only in a few places have been held so far—and in making the accurate figures known.

Cairo, April 23.

The Ministerial Crisis.

Your readers will have learned already from the cables how the ministerial crisis arose and of the very serious situation it created in view of the difficulty of finding a man competent to be head of the Government and having the support of both the British Government and the majority in the Parliament. The latter have been pressing Zaghoul Pasha himself to put forward his candidature, but he has hesitated, and very wisely too, in view of the attitude taken up by the British Government on that question last June and the certainty that it has not changed its mind in that respect. Indeed, if anything, the events of the past year have tended to harden the opposition of the British authorities towards the idea of the Wafdist leader's becoming Prime Minister. For, although he has periodically restrained the debates in the Chamber, he has by no means shown himself strong enough to keep in place the extreme Left, which has come into existence since parliamentary life was resumed. Indeed, the very fact of his now putting forward his candidature would be proof of his inability to resist the extremists of his party, for such an action on his part would be entirely due to their pressure.

As regards the crisis itself the Cabinet is deserving of every sympathy in the position in which it found itself. It took office because it was assured of the support of the majority in the House, and since six out of its nine members belonged to that majority it had every right to expect whole-hearted co-operation from that body in the difficult task it had to carry out. Although the first session passed off smoothly, the present one quickly showed that a carping, almost hostile, spirit had taken possession of the Chamber.

Almost daily the Cabinet was harassed by criticisms on the most trivial matters. Proposals were brought forward, which it very rightly considered against the interests of good government and in regard to which it

found that it could obtain no proper hearing for its arguments against them. The Budget debate was the culminating point. Nothing the Government had done seemed to be to the liking of the Chamber, and the Cabinet seized with an alacrity, with which one can entirely sympathise, the opportunity presented by the rejection of the motion of thanks to extricate themselves from a position which was as incompatible with the dignity of the Government as it was distasteful even to the Zaghoulouist members of the Cabinet.

Zaghoulouists' Responsibility.

The Zaghoulouists have tried to throw the blame for the crisis on to the Cabinet in the first place and the British in the second place. As regards the Cabinet what I have written above makes it perfectly clear that it had no other course than to withdraw, and the wonder is that its patience has lasted so long. As regards the British the suggestion is in the highest degree ridiculous. Even the Zaghoulouist Ministers, who might have been expected to seize at an excuse, which would raise their prestige and at the same time avoid any blame attaching to their partisans in the House, have not breathed a whisper of British policy or British actions or demands having been even an underlying cause of their resignation. The whole blame for the trouble lies with the Zaghoulouist majority, particularly with its leading members, as also with the absence of discipline within the party. Unless a marked change takes place in this respect, we are likely after a short interval to have a repetition of the history of the past session, and the lot of whoever agrees to form the Cabinet will be just as unenviable as has been that of Adly Pasha since at great personal sacrifice he consented to step into the breach last June.

Museum of Hygiene.

Although the Cabinet resigned on Monday evening Adly Pasha was not able to present the letter of resignation to the King until about noon next day because of the inauguration of the Museum of Hygiene, which His Majesty was to perform. This museum owes its creation to the generosity of the King and the initiative of that very able and enlightened man, Dr. Mohamed Chahine Pasha, Under-Secretary of State for Public Health. It is housed in an old Government school next door to the Abdin Mosque on the Madbouli Square, and is undoubtedly a most ingenious contribution to the efforts that are being made to educate the people in regard to the adoption of more hygienic methods and the means of preventing or curing the diseases to which the general public is so prone. The Museum is divided into two sections: on the ground floor the various organs and their functions are shown in most graphic manner together with models displaying their appearance when attacked by particular diseases. On the floor above are remarkable large scale models of the insects, which are such a pest in Egypt, as also of those

which cause the most prevalent diseases, while there is a chamber of horrors where venereal disease in all its stages is shown. The staircase leading from the ground to the upper floor is placarded with pictures graphically showing how disease is spread and how to prevent its propagation. These pictures are of a nature to convey their lesson to the most uneducated Egyptian, and should prove most helpful in the campaign of hygiene and disease-prevention which is at present being carried on.

CYPRUS.

Nicosia, April 18.

Complaints of Wine Makers.

There is some trouble in the large wine-producing districts, in connexion with recent taxation, which is considered excessive, now that the prices of grapes are very much higher than they were a few years ago. A deputation from villages, with their representative in the Legislative Council, has been received by the Governor, and has laid their grievances before him. Sir Ronald Storrs replied sympathetically, and said that he would submit their complaints to the Commission which is now investigating the whole system of taxation, and would do what he could. He also stated that he would himself shortly visit the vine-growing areas, and inquire further into complaints on the spot.

A New Trade Commissioner.

Major W. H. Flinn has been appointed to succeed Mr. W. Bevan as Trade Commissioner in London, at £1,000 a year. He has been for some years first Assistant to the Colonial Secretary, and has done good work in the Island. He prepared a good "Brief Survey of Cyprus," its history, resources, and development for sale at the British Exhibition at Wembley. The Greek Press, while regarding Major Flinn personally as well qualified for the post, has not taken kindly to its establishment, but considers it quite uncalled for, especially at a time when the greatest economy is needed, as merchants have their own representatives in London, who can fully deal with Cyprus products—now well known—and mutual trade matters.

Visitors from Greece.

Besides the athletes from Athens, ten in number, who are to take part in the approaching Pan-Cypriot contests

at Nicosia, several other visitors from Greece should arrive this week, including the Mayor of Athens, M. Patsé, and his wife. Great preparations are being made in the three chief towns, in elaborating programmes of receptions, banquets, etc. The Governor has expressed his sympathy and good wishes on the occasion.

The Island Mail Service.

Continued complaints have been made by the commercial community respecting this service, which does not meet local requirements. The Governor has taken the matter up, and it is confidently expected that fresh arrangements will be soon inaugurated by the Khedivial S.S. Company, in consequence.

The Governor's Summer Plans.

The Greek Nicosia paper *Phone tes Kyprou* ("Voice of Cyprus") has published a translation of a recent letter of the Governor to a friend in England, which appeared in the *Daily Sketch*, entitled, "A day in the life of a Governor." According to this, Sir Ronald should proceed to summer quarters on Mt. Troodos about the end of June. During August he contemplates visiting Rhodes, and after a further sojourn in the hills, will return to Nicosia in November.

General News.

Favourable weather has continued. The barley harvest should be a good one; and prospects generally are promising.

The growth and export of oranges will be encouraged by a Government grant of 4½ piastres (6d.) per case of 114 oranges, or more, to the U.K., or any other parts of the British Empire. Cyprus oranges, including bitter (also lemons), are of excellent quality. Those of Famagusta in the east of the Island rival those of Jaffa, the soil being light and sandy, and eminently suited for the fruit.

A lowering of the increased duty on caroubs (locust beans) in Spain will also be a welcome aid to merchants and growers of these important staple produce.

Progress in connexion with the Odeum, or School of Music, which should be opened on May 2, hangs fire, as pupils are not coming forward, and it would seem that there will be more teachers than scholars, at the outset.

The Cyprus Library, another scheme of the Governor, should, however, do well. There will be a Greek Librarian at about £150 a year; and a Turkish assistant.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association was held on April 29, at 27, Great Cumberland Place, by kind permission of Mrs. James Conchie. A lecture entitled "The Outlook in Abyssinia," was delivered by Mr. C. F. Rey, and a report of it is given on another page. Sir Henry Penson, K.B.E., presided and the following were among those present:—The Countess of Clancarty, the Dowager Lady Cozens-Hardy, Lady Kitty Ritson, Sir Edward and Lady Boyle, Sir Griffith Boynton, the Hon. Katharine Thring, Sir Denison and Lady Ross, Sir Frederick and Lady Graham, Lady Hewitt, Lady Penson, Lady Tighe, Archdeacon Beresford Potter, Mr. Roland Michell, Professor Louise McIlroy, Mr. James Conchie, Mr. Montague Bell, Mrs. L. Cobham, Mrs. William Paget, Mrs. Eckstein, Mrs. A. Holland, Mr. A. Holland, Mr. Alex Devine, Miss Finn, Mrs. Henryson Caird, Mrs. Charles Hancock, Commander Williams, Captain A. H. Alban, and Mrs. Charlotte Mansfield.

At the invitation of the local notables, Lord Lloyd, British High-Commissioner in Egypt, on April 30 visited Minia, the most important cotton centre in Upper Egypt. After luncheon with Mr. F. W. Shirley, the British Consular Agent, Lord Lloyd, says *The Times*, visited the principal establishments, laid a wreath in the War cemetery, and returned to Cairo the same evening.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

PALESTINE AND AMERICAN JEWRY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—My recent interview with the Jewish Telegraphic Agency on American Zionist opinion of the policy of the Mandatory Power has elicited in your columns some editorial comment which—may I be permitted to say?—is not an entirely fair contribution to the discussion. You seem to ascribe the American view to a desire to evade responsibility or to shift a possible blame for conditions prevailing in Palestine to the Mandatory Power. That, I submit, is begging the question.

During the past six years American Jews have contributed about 65 per cent. of the total Jewish capital put into Palestine. Their interest is not on the wane, but grows from year to year. This year we shall exceed our last year's collections by over thirty per cent. Recently a large and influential group hitherto not co-operating in Zionist work has entered into an arrangement with the Zionist Organisation to share in the responsibility of the Jewish Agency. More and more American Jews come to Palestine to invest their individual capital.

The growth of this support depends, naturally, upon the creation of favourable conditions in Palestine; and an important factor is Government. It is not sufficient to say, The way is open; let the Jews build the Jewish National Home in Palestine if they can. They must be convinced that their effort encounters the willing and active support of the Mandatory Power. Many American Jews now visit Palestine and see things for themselves. If the impression is made that the Government is reluctant to aid in ways clearly prescribed by the terms of the Mandate, or meets suggestions for active co-operation with delays, the task of the Zionist Organisation becomes almost impossible, for in addition to its regular propaganda work, it is called upon to dissolve the growing distrust of the whole situation in Palestine, which begins to influence many Jews.

It is needless to say that we American Zionists have faith in the British Government. That was indicated when an overwhelming majority of American Jews assembled in 1918 at the American Jewish Congress expressed their hope that the Mandate would be offered to, and accepted by Great Britain. That faith was again revealed when both Houses of the American Congress unanimously adopted a joint resolution, which was signed by President Harding, favouring the Balfour Declaration. The confidence of American Zionists in the British Government's intentions has been expressed again and again in resolutions adopted by the American Zionist Organisation. But all that good will is gradually being destroyed by methods of administration that seem to take undue advantage of the Jewish desire to make sacrifices for Palestine by resisting reasonable requests for effective co-operation, and leaving Jewish endeavour without the support of adequate Government action.

1. We are aiming to establish the Jewish National Home upon a basis of self-supporting Jewish agriculture. The land, we know, has to be purchased, but as Jewish immigration increases, the price of land goes up. I disregard the argument that in the circumstances—the reclamation and settlement of waste land—facilities should have been provided at least for the purchase of land under reasonable conditions, or that the Government should have enacted effective laws to protect us against speculative increases in land prices. But in view of the fact that every inch of land intended for Jewish agricultural settlement has to be purchased, every tenant equitably compensated, and every dunam of land irrigated and improved, American Jewish public opinion asks: *Is it fair for the Government, notwithstanding all these handicaps, in addition to impose a tax upon such agricultural land which comes into effect the day the settler takes possession of it?*

2. The Zionist Organisation expends on education in Palestine £83,500 a year. Instruction is given to 18,593 children. The Budget of the Government provides £121,378 for education. Although the Jews number over 17 per cent. of the population of Palestine, only after many memoranda had been submitted was an appropriation of £10,664 given this year to Jewish education—about 8 per cent. of the total.

3. During the last few years customs duties amounting to many millions of dollars have been collected on the importation of building materials, food-stuffs, clothing and other European necessities of life, in addition to the various other direct and indirect taxes collected on account of a multitude of Jewish agricultural, building, manufacturing and commercial enterprises. During the past few years the Jews have made numerous attempts to introduce various industries into Palestine. The experiments were costly. When it was found that the tax on raw materials made it difficult for promising industries to live, representations were made to the Government, and only after numerous protests had been lodged and the difficulties became apparent, did the Government agree, in detail, to remove the tax on such raw materials as those industries required.

I give these few instances of the many that have combined to produce an unfavourable impression in American Jewish circles with regard to the Government's policy in Palestine. We seriously regret that this impression should have been created, but it does not help to retort that the feeling is animated by unfriendliness, or that it is not based on facts.

We American Zionists are staunch supporters of the policy of the Zionist Executive, which is directed by its President, Dr. Weizmann, and of its endeavours through the regular official channels to ameliorate conditions without friction or controversy, but the statement is clearly in order that the task of holding our constituents in support of the Jewish National Home is made unnecessarily hard by the administrative conditions that still prevail in Palestine.—I am, etc.,

LOUIS LIPSKY.

President, Zionist Organisation of America.

London, April 26.

AMERICANS IN THE YAMAN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The issue for March 17, of THE NEAR EAST AND INDIA contains a statement, made by your Jidda Correspondent, under the heading, "Affairs in the Yaman," as follows:—

The German Minister at Addis Ababa, Herr F. Weiss, has recently been on a short visit to Jidda, having previously with his wife visited Sana, his sojourn at which place coincided with that of Mr. Charles Crane and the American Consul at Aden, who, having travelled up from Hudaïda, continued their journey to Aden by the land route.

I feel that it is necessary to inform you that I did not accompany the Honourable Charles R. Crane on his trip to Sanaa. The misunderstanding upon the part of your Jidda Correspondent probably arose from the fact that I had detailed the Indian Clerk of this Consulate to accompany Mr. Crane, for the purpose of facilitating his journey. The statement quoted above, I have pleasure in adding, is otherwise correct.—I am, etc.,

J. LODER PARK (American Vice-Consul).

THE OUTLOOK IN ABYSSINIA.*

By C. F. REY.

An administrator of a considerable African territory was recently invited to lecture on the outlook in the district over which he presided. He replied by telegram: "Lecture unnecessary, outlook bright." I wish I could say the same for Abyssinia. But the position in that remarkable country cannot be summed up in a single word; it is complex and most difficult to understand, unless one has some knowledge of the historical events which have gone to mould it, of the mentality of the people, of the governmental and social organisation of the country, and of its language; and unless one has had some dealings with the people, and has trekked about the country.

A casual visit to Addis Ababa, the capital, is not only useless, but is apt to be very misleading, as was found by a distinguished individual who wrote a book on Abyssinia after a nine-days' visit to Addis Ababa.

The history of Abyssinia is an ancient story of fact, legend, and tradition, ranging over thousands of years. The Regent, H.I.H. Tafari Makonnen, had prepared for me a list of 312 sovereigns, extending back over 6,300 years to B.C. 4530, or the 97th year of the creation of the world, according to Abyssinian computation. And included in this list were Solomon and the Queen of Sheba, from whose son, Menelik, the ruling house claim direct descent, which would give them a pedigree of the somewhat unusual length of 3,000 years.

They have been nurtured on foreign and civil war for very many centuries, and although they have experienced vicissitudes of success and defeat through the ages, victory has hitherto always rested with them ultimately. In olden times their Empire extended to both sides of the Red Sea, and on the African coast stretched at least from Suakin to Cape Guardafui. Their fleets traded to India and Persia, and possibly further, and their caravans carried and brought back merchandise for many hundred miles beyond the confines of their country.

They were Christians before we were, and the story of their conversion by two shipwrecked youths to the monophysite form of Christianity (a doctrine which they still profess) is romantic reading. Their aid was sought by a Roman Emperor 1,600 years ago, and his letter addressed to the "Christian Princes of Abyssinia" is an interesting commentary on the then state of the old Empire. They gave asylum to the persecuted relatives of Mahomet before the Higira, and some 500 years ago were allied with the Portuguese against the invading hordes of Turks, Arabs and Somals who nearly subjugated their country.

To come to more modern times, they lost all their coastline and were shut off from the world by foreign territory; their country was devastated by civil war, and overrun by an invasion of Galla tribes from the south. The Empire was split up into separate kingdoms, and it so remained until the advent of that remarkable man Theodore, who re-united much of the distracted realm, whose madness destroyed what his genius created, and who fell before Lord Napier's army and a general revolt of his own subjects.

It was left for that most striking figure, the Emperor Menzhir II., to re-establish on a more solid basis the ancient Ethiopian Empire; he greatly extended its borders, defeated all rival kings, conquered vast tracts of Galla territory, and actually defeated in battle the army of a great European Power.

His grandson, Lej Yasu, who succeeded him, re-introduced chaos, disorder and misrule, but before Menzhir's work could be undone Lej Yasu was deposed and the present Empress Zauditu (Menelik's daughter) and the Regent, Ras Tafari (Menzhir's great-nephew) were installed in power in 1916.

And finally, in the last few years, we have the picture of Abyssinia admitted to the League of Nations, the Regent visiting the principal Crowned Heads and Rulers

of Europe, and in the present month receiving the return visit of the Duke of Abruzzi in Addis Ababa.

Such are a few of the salient facts which it is necessary to bear in mind if one is to appreciate the present position of the country.

It is a vast territory, as large as Great Britain, France, Holland and Belgium combined, consisting of two immense plateaux enjoying a delightful climate, separated from each other by the Great Rift Valley, and surrounded on the frontiers by low-lying hot desert lands. The population has been variously estimated at from 8 to 13 millions; it consists of a large number of different races—Abyssinians, Galla, Shankalla, Somali, Gurague, Danakil and others—speaking 70 different tongues, of which the principal and official language is Amharic, a somewhat difficult one to learn, inasmuch as there are 251 letters in the alphabet.

They are quite uneducated and illiterate; the Abyssinians, who form less than a third of the population, wear an almost universal dress of white cotton shirt, trousers and "chamma" (a sort of toga) and all except the wealthier Abyssinians live in "tukuls," stone or mud-walled huts thatched with grass.

There may be said to be three "estates of the Realm," the ruling class, the church, and the people; and the last-named may be divided into Abyssinian and other, for descriptive purposes. The ruling class consists of the Regent, the Empress, the great chiefs, governors of provinces and Ministers. Of these the most important is the Regent, a most remarkable man of about 35, who, earnestly desiring the welfare and advancement of his people, works from 7 a.m. to 10 p.m. daily, in the almost hopeless task of trying to introduce administrative reform, decent government, and modern institutions, against the opposition of the vast bulk of his reactionary fellows.

In this he is unfortunately not helped by the Empress, who, swayed by the upholders of the *ancien régime*, and notably the church, cannot be regarded as sharing his views.

The great chiefs are wealthy and powerful, and as any change must in their view be to their disadvantage, they are entirely reactionary, and opposed to all innovation. The governors of the provinces are, many of them, practically semi-independent; they receive no salaries, and remit to the Central Government a mere fraction of the taxes in cash and kind which they extract from the people under their control. Indeed, it may be said that the writ of the Central Government does not run far from Addis Ababa.

Of the ministers who are supposed to assist the Regent and Empress little that is good can be said, so far as the majority are concerned. There is a council of 22, most of whom are politically opposed to the Regent, and recent appointments to that body indicate that merit is a bar to advancement, and that none but wiling tools of one faction or another need apply.

The Church is another strange mediaeval survival; it is a powerful and wealthy body, owning (since the XIII. century) about a quarter of the country, and consisting of enormous numbers of uneducated, idle and useless persons, who do little but exist in sloth on the large revenues they draw. The head of the Church, the Abouna, is a Copt appointed by Alexandria; and the death of the last incumbent in December has given rise to a tremendous controversy as to whether this old practice shall be followed in choosing a new Abouna or whether an Abyssinian shall be appointed. As in most other things in Abyssinia, the upholders of the old custom will probably triumph.

The people are on the whole a pleasant race, and the further they are from the capital the more pleasant they are. We have always met with the greatest kindness and courtesy when trekking about the country, and last year when my wife broke her arm on trek and had to be carried for several days in a hammock, passers by continually stopped to inquire what the trouble was, and then insisted on taking their turn in helping to carry the hammock for a quarter of a mile or so; a mark of practical courtesy and sympathy which would be difficult to surpass.

In different parts of the country different conditions

* In this article Mr. C. F. Rey embodies the substance of his address to the Near and Middle East Association on April 29.

obtain; thus for example in Gojam the population is almost entirely Abyssinian and Christian, whereas in Aruni it is almost entirely Galla, pagan or Muslim, and the only Abyssinians are the officials and soldiers.

The peasants, farmers, and nagadis (merchants) are, on the whole, an industrious and worthy population; but the soldiers, of whom there are large numbers, are the very reverse, and a more worthless crowd it would be hard to find.

There are immense numbers of slaves and "gabars" or serfs among the conquered populations, and with this aspect of the social organisation of the people I will deal later.

As to the state of development reached by the country it is necessary to draw a sharp dividing line between Addis Ababa and the country outside.

Addis Ababa is in a transitional stage, and is suffering from a veneer of civilisation, very lamentable from the point of view of those who knew it and liked it better some years ago. The town has been invaded by about 200 motor cars within the last two years; roads have been made on which they can run (within limits); stone houses roofed with tin have multiplied; and members of the more wealthy class have commenced to wear boots. But much of the old remains. Murderers are executed in a little hut in the town wherein they are tied to a post, rifles are trained on them through tubes in the wall, and the triggers are pulled by the relatives of the murdered man. Banquets at which many thousands of soldiers and followers are fed on raw meat are held regularly at the Palace. Sufferers from leprosy, smallpox, and other filthy diseases parade the town and beg for alms, exhibiting revolting sores, and stumps of legs and arms. There is no sanitation, and hyenas and jackals come into the town at night to help the pariah-dogs to do the scavenging work.

The contrasts met with at every town between the old and the new are amongst the most interesting and instructive features of the place. Outside the capital, however, nothing has changed, and it is probable that the people live and have their being much as they did a couple of thousand years ago. There is no more delightful experience than trekking day after day through this beautiful country, among people unspoilt by contact with civilisation, amid gorgeous scenery and in the brilliant sunshine of a temperate altitude.

As might be imagined, the volume of trade is, for so large and potentially wealthy a country, almost negligible, amounting probably to about a couple of million pounds a year in all. The rich soil on which two or three crops a year can be raised, might be infinitely more widely cultivated; there are no communications other than a single line of railway from Djibouti, the port of French Somaliland to Addis Ababa, and a few roads in Addis Ababa; all trade and travel is carried on by mules, ponies, or camels, over tracks which in the rainy season are often impassable.

Another difficulty which hinders development is the currency; the only one accepted is the Maria Theresa dollar, and large stacks of these have to be bought by merchants to pay for produce, and sent on mule-back to remote districts in order to carry on trading operations. Thus every transaction involves two operations, the purchase of dollars and the purchase of produce; and if a gain is made on one, the chances are that a loss will be made on the other.

The rapacity of some of the provincial Governors is a further hindrance to production by the peasants, while the difficulties of dealing with many of the officials and authorities is a further bar to development by European interests.

I have studied the problems of the country for nearly eight years, and have trekked about it, and learned something of the language; and I have often been accused of being too sympathetic and of taking too lenient a view of the Abyssinians in my writings.

But in order to understand the position of a country it is essential to understand the mentality of its people, and to appreciate, even if one does not agree with, their point of view.

One of their main characteristics is intense pride; pride in their country, its history, religion, and military successes. This to one familiar only with the attitude of a conquered negro race, is incomprehensible, and somewhat trying. Especially is this so when to it is added dislike and intense suspicion of the foreigner and his ways.

But one can hardly wonder at this when one considers the low type of so-called "European" who has preyed on the Abyssinian for years, setting him a standard of morals and life in no way better than his own, cringing to the great and bullying the small. Those who know the East will appreciate this.

It is, moreover, only fair to say that the Abyssinians are almost as suspicious of each other, and that the Regent, for example, feels compelled to do himself a vast amount of detailed work which ought to be left to subordinates, but which he cannot so delegate owing to the absence of capable honest men, who would follow his example and work straightforwardly *pro bono publico*.

These and other difficulties make the task of the Regent a difficult and unenviable one, and his abilities will be taxed to the uttermost in dealing with the important problems with which his country is faced. Among the more important are the development of its resources, the organisation of administration on sound lines, frontier troubles, the question of Lake Tana, Italian interests, and the League of Nations and slavery.

Space will not permit more than a very brief reference to some of these questions. As to the first it is obvious that Abyssinia, having joined the League of Nations and claiming equal rights and privileges with the Great Powers of the world, cannot refuse herself to develop or to allow others to help her to develop resources which would be of great value to herself and the world in general. In other words she must advance on modern lines if she is to remain an independent entity in a modern world on equal terms with other parts of it.

I have indicated how necessary is administrative reform if serious internal difficulties are to be avoided.

It is surely time that Abyssinia undertook on an adequate scale the policing and guarding of her frontiers; the Government of Kenya is obliged to spend no less than £40,000 a year to secure the frontier population against raids for ivory, cattle, and more rarely slaves; whilst in every report of the Sudan Government reference is made to these raiding troubles somewhere along the 2,000 miles of British territory which marches with Abyssinia.

The question of Lake Tana too, and the irrigation of the Sudan and Egypt by means of the water which flows down the Blue Nile, has been pending for over a quarter of a century, and a problem so simple and straightforward as this is clamant for settlement.

Last but not least, the slavery question will have to be further dealt with. Abyssinia was admitted to the League of Nations on certain conditions in this connexion which, being impossible of fulfilment, have not been fulfilled; no one knowing the country expected that they could.

The problem is an extraordinarily difficult one, and in a country where the whole social system is based on domestic slavery, any idea of a wholesale freeing of slaves is, of course, sheer lunacy, even if it were practicable, which it is certainly not.

Moreover, it is quite true to say that domestic slaves in Abyssinia are on the whole happy and well-treated as members of the family, and that they would probably be much worse off if freed than they are now. Experiments by individuals in freeing their personal slaves have not proved conspicuously successful.

The Regent has issued decrees providing that the chil-

dren of slaves are born free, and re-enacting the death-penalty for slave raiding and trading; he is also trying to establish a school or home for freed slaves. But this must be made effective, and such slave trading and raiding as exists, small in extent though it may be, must be completely stamped out.

The question of the "gabar" or serfdom system (which in my view is far worse than slavery as it exists in Abyssinia) will also have to be dealt with, and it is clear that the League of Nations will expect action to be taken to treat these questions more adequately.

In this as in all other matters affecting progress and reform in his country, Ras Tafari is undoubtedly sincere and genuinely desirous of proceeding on right lines. Unfortunately the majority of those wielding power and influence in Abyssinia are opposed to his ideas, and instead of helping him, do all in their power to thwart him. This must inevitably give rise, sooner or later, to a position of much danger to the country, whether from internal or external factors.

To all those, who like myself, have the interest and welfare of Abyssinia at heart, it is a grievous thing that so sincere a patriot should not be supported by strong and honest men who would help him to steer his country through the difficult times that are coming, and are indeed at hand.

Given such a state of things, given that the Regent, loyally supported from within and without is able to carry out his well-known ideas, then there seems no reason why Abyssinia should not retain her position as the last independent African Empire, and give the lie to those who say that a Hamitic race, strongly diluted by Semitic blood as it is, cannot govern itself.

HEBREW IN LATIN CHARACTERS.

By DR. H. DANBY.

A new phenomenon has just appeared in the Palestinian literary world, with the title-page:

Abi. Me'et Ittamar Ben-Avi. Hotza'at "Hassolel" (Mahadôrah çeniyah). Yeruçalaym 5687-1927. X lehatzharat Balfur.

[*My Father.* By Ittamar Ben Avi. "Hassolel" publication (Second edition). Jerusalem, 1927—the 10th year of the era of the Balfour Declaration.]

The author, Mr. Ben Avi, is the son of the late Eliezer Ben Yehudah, who was so largely responsible for the revival of Hebrew as a spoken language in Palestine. The son is minded to go a step further. The father did pioneer work in lifting Hebrew out of its condition of a dead language—or, at the best, a pedantic literary medium—and making it satisfy the requirements of ordinary conversation. To do this he had to break down heavy barricades of prejudice. He did not attempt to take the next step towards "secularizing" the "Sacred Language"—reducing it to the script of the rest of the enlightened world and writing it in the ordinary Latin character. Ben Yehudah, according to his son's account, felt himself strong enough to fight against most of his fellow Jews' prejudices and to advocate all manner of heresies; but he shrank from advocating the abolition of circumcision and the Hebrew script. But the son has now dared to argue in favour of getting rid of, at least, the Hebrew alphabet. And he has produced a book to show how it can be done and to show that he has the courage of his convictions. Whether or not it remains the only example of its kind remains to be seen; but it has, at any rate, the distinction of being the first Hebrew book published in Latin characters. (Incidentally, and a matter of quite secondary importance, the book is made up of a few short reminiscences about the writer's father.)

Mr. Ben Avi is convinced that the greatest stumbling block in the way of Jews—or Gentiles—wishing to acquire the Hebrew language is the Hebrew alphabet; it serves to terrorise those minded to begin it; even if a person

learns to speak the language, the Hebrew script effectively stands in the way of his reading it; to the very end Hebrew writings can be read accurately only by a well-educated Hebrew reader; and the Hebrew script fails utterly to indicate easily and accurately foreign words and names.

It is perfectly true that there is an increasing number of people who speak Hebrew but who stop short of the ability to read it. Arabs pick up the language with the greatest ease; and owing to the wholesale use of the "direct method" in teaching Hebrew adopted in the local classes for adult learners, there is an appreciable number of Jews and Gentiles whose energy takes them just far enough to make them able to converse freely, but fails to carry them through the initial difficulties of reading. Mr. Ben Avi thinks both to benefit them and, at the same time, remove an aged incubus and a useless national burden. The present book is only a first instalment. He promises to publish soon a weekly illustrated paper with Hebrew in Latin characters, and even to begin an edition of the Hebrew Bible itself in Latin characters. Mr. Ben Avi is a person of great energy and will probably do what he promises. But one is doubtful how far others will take his efforts seriously, or even how far he is justified merely from the opportunist standpoint—whether his possible public is not really too small to justify so radical a venture. It remains to be seen how large this public really is, and how far the experiment will be imitated by others—for such imitation alone will justify the experiment.

The result of the transcription hardly looks appetising: it makes Hebrew look very much like Magyar. But possibly a similar remark was made when somebody, somewhere about Moses' time, first wrote Hebrew in Phœnician instead of cuneiform characters, or when Ezra or the Maccabees or Barkokhba played tricks with the script—as, apparently, they did.

It is easy to pick holes in the transliteration adopted by Mr. Ben Avi. He wholly ignores, even if he is not ignorant of, the standard and more or less uniform methods of transliteration from oriental languages adopted by European scholars. His only standard is the possibilities of the various founts of European type at his disposal. He uses a fount no more elaborate than is necessary for printing French. The various accents serve to differentiate the numerous peculiarities of the Hebrew vowels; and the peculiar Semitic consonants, which are usually represented by a dot under the approximate Indo-Germanic consonant—these are represented in Mr. Ben Avi's transliteration by the simple device of turning the consonant upside down. Furthermore Mr. Ben Avi is no grammarian. He makes no attempt consistently to allow the transliteration to reflect the niceties of the Hebrew grammatical forms; they are sacrificed to short cuts at reproducing ordinary Palestinian Jewish pronunciation—a pronunciation not always very pretty, and very often grammatically inaccurate.

It is to be hoped that if Mr. Ben Avi fulfils his intention of producing further transliterated Hebrew works (and assuming that his experiment is accepted as of use and not only as a curiosity), he will revise his methods—acquire a more suitable fount of type and take into consultation both a grammarian and phonetician. There is the possibility of doing good work for the Hebrew language in its present unfixed phonetic state. Hebrew can be made to sound quite as elegant and musical as Arabic at its best; but the Hebrew pronunciation now most generally current has lost (or, rather, it ignores) the beauties of diction which it has in common with Arabic, and has accumulated the nasty intonations and the cruder gutturals of Yiddish. It is just possible that a careful transliteration might restore to Hebrew all the niceties of a Semitic pronunciation (which belong to it by rightful inheritance), and free it from a whole range of miscellaneous faults acquired from the Jews' overmuch contact with the uncircumcised languages of Europe—from the bodiless Russian vowels and the monotonous German-Yiddish guttural, to the fat "L" and the slurred "R" of the American language.

Book Reviews

JERUSALEM BEFORE THE WAR.

"WHEN WE LIVED IN JERUSALEM." By Estelle Blythe. (London: John Murray, 12s.)

Many an eye will kindle and many a voice exclaim with pleasure at sight of this title and of the writer's name; and that wherever English is spoken or understood. Such is the welcome awaiting this book by those in five Continents who, even as birds of passage through Palestine, have known and loved St. George's; for after the long suspense comes this voice from that past—so near yet already so far, with the War between—to quicken pious memories and call up gracious presences that haunted its precincts.

Of these were the late Bishop's daughters, who are, with the writer, virtual authors also of the book, which ranks as something of an informal document, having the Anglican See in Jerusalem and its visible embodiment in our own day for the central theme; but this is so unobtrusive amid the absorbing setting of vivid tableaux, full of Oriental movement and colour, that those who have no concern with the *motif* but are only in quest of the freshest of novel entertainment will read without stopping or skipping. History recent and ancient, sacred and secular, with folklore, manners and customs, gossip and what-not compose the arras, and make up the appropriate environment and atmosphere of such a book.

While here and there it may be at fault in its facts or in the interpretation thereof, such slips are few and trivial; and for reliability, sanity, charity, its information, opinions and judgments are in welcome contrast with anything I know extant on work-a-day Jerusalem and Palestine as these were in 1914; that is, still in a sort of Middle Ages, reluctantly under "peaceful penetration" by Western enlightenment; but not, as now, "suffering violence."

Not a few things will sound crude, unlikely, impossible; but the naïveté is in the facts, not the narration, as many could testify. Thus:—to be a grandmother before thirty sounds preposterous and more so for a grannie to have a grandmother living, i.e., the first and fifth generation alive at once; yet it is an Arabic saying, "Grannie, speak to your grannie"—a distinction just missed by Queen Victoria, though at a great age. Midway of the record a modern mock Crusader, with an eye to business, struts across the stage, a brilliant pageant of Knights-Templars of the nations in his train, to wit the ex-Kaiser; and at the close of it the real one in Allenby who, though conqueror, entered the Holy City as her devotee.

Much, very much, is here that none else could have given us. But what many will miss are revealing glimpses behind the scenes, especially in the day of small things, of the collegiate life of St. George's as it took shape and grew; more autobiography of the family achievement in creating Church and School, Home and Hospital; the quiet hidden romance of labour and sorrow, patience and prayer, trial and triumph that lay behind the foundation, in the Home of Christianity, of this English Cathedral Close; to say nothing of the nucleus of another in Cairo and ancillary establishments elsewhere—all in that epoch-making phase of the Bishopric, the Blyth episode.

The sisters' self-effacement is characteristic. But what of the tireless labours in class and workroom and choir; of endless duties, social, domestic, secretarial of this unpaid filial staff of accomplished women who, amid rivalries, jealousies, animosities which of old are Jerusalem's second nature, functioned as foils, fences, shock-absorbers to this new and unwelcome departure in the English ecclesiastical life of the city; which, among other "offences," resented the Bishop's official civilities to the Greek and other Eastern communions! But he could also be courteous to a communion which, to some, is less obviously within the pale, and once offered the use of a chapel in St. George's to Professor Nicol and Kay of the Church of Scotland wherein to celebrate the

Sacrament after their own ritual. But for their inveterate humour, a family virtue, they must often have been hard put to it. Thus, a lady called with word of the impending end of the Bishopric, but went away "greatly wondering" with this from her favourite Apocalypse in her ears—from the sister who received her—"I had not heard that there was to be no more see (sea) in Jerusalem!"

It seems inconceivable that when Bishop Blyth came to Jerusalem forty years ago the Bishopric might, to all intents and purposes, hardly have ever existed. During his first decade the see was domiciled in a hired house, with a room for a chapel. In little over ten years more, all the buildings now in use were erected, equipped and occupied at a phenomenally low cost by voluntary subscriptions got by himself. But for his foresight, toil and tenacity Britain to-day as Mandatory had cut a sorry figure ecclesiastically, as she must have done administratively but for the native staffs in all departments largely furnished by mission schools and colleges, including St. George's of course.

ALEX PATERSON.

THE SWAN SONG OF THE INDIAN EDUCATIONAL SERVICE.

"THE EDUCATION OF INDIA," By Arthur Mayhew. (London: Faber and Gwyer. 10s. 6d.)

The decision to stop the recruitment of Europeans to the Indian Educational Service, and to transfer the control of education to the people of India, marks an epoch at which the appearance of this book is most opportune. Mr. Mayhew welcomes that decision; for, he says, it is quite wrong to lament the passing away of the conditions under which England, through its educational missionaries, can really assist the moral progress of India: it would be more appropriate to rejoice over their final establishment. English educational work in India has suffered from two great handicaps: that it has been officially associated with an alien Government, and that it has been debarred from taking religion into account. Macaulay believed that the introduction of Western learning into India would automatically lead to the overthrow of caste distinctions and to the disappearance of the Hindu religion; and it never seems to have occurred to him or his followers, who suffered from "the incurable optimism that characterises all who sow without the prospect of having to eat the fruits," that the antagonism between Hindu and Muhammadan required any distinction of educational treatment. On its material side, English education has appealed to both: on its sentimental side to neither. As Mr. Mayhew puts it, it is not enough for education to open up a road: it must also "sow flowers by the wayside." But he considers that we have done something to contribute to "India's scheme of values"—we have introduced the Indian Student to European games and sports, to the works of Shakespeare and to the life of Christ—the latter in its moral rather than in its religious aspect.

On the relation of education to politics, Mr. Mayhew says that a village teacher who tried conscientiously to adapt his school to the present "political" education of the masses would begin the day's work with a hymn of

hate and end it by variations of "Ask and ye shall receive." As to the possibility of the introduction of universal compulsory education, he is frankly sceptical. Dictatorship, he says, has been from time immemorial the recognised and approved form of government in India; and it might have been possible, during the autocratic stage of our rule, to make the education of boys (though never of girls) compulsory; but this is now no longer possible. When announcing the Reforms in 1918, the Government of India said that the extension of the franchise "would furnish in itself a special incentive to an early expansion of elementary education"—an optimistic prophecy that now, eight years later, shows not the slightest sign of fulfilment. India does not believe in education as an investment, except as an avenue to a clerical appointment under Government: so that technical education is practically non-existent because, as Mr. Mayhew says, industrial development depends on industrial research, but the latter must, in India, be paid for from the proceeds of the former.

The author evidently thinks that England has done as much for Indian education as it was possible for her to do, as an alien and religiously impartial instructor; and he hopes that India, suffering from neither of these disabilities, will be able to carry on the work to better purpose, though with smaller technical efficiency. The danger that he foresees is refusal to relax bureaucratic control, with unfortunate results, both political and communal. If this danger can be avoided, he thinks that the best hope for the future lies in the cultivation of higher education, in and near the centres of which a sound system of primary feeder schools is possible: rather than in any attempt to introduce a wide extension of primary education which, under present conditions, could only result in the acquirement of the rudiments of literacy by a number of children the vast majority of whom would relapse into illiteracy a few months after leaving school.

THE ARAB HORSE SOCIETY.

A Council Meeting of the Arab Horse Society was held on April 20 at the Grosvenor Hotel, London, Brig.-Gen. F. F. Lance (President) being in the Chair.

There were also present Mr. T. C. Armitage, Lt.-Col. T. R. Badger, Messrs. H. V. M. Clark, C. W. Hough, Edward Hurtley, C. W. Laird, Major S. A. Medcalf, Major G. B. Ollivant, Mr. R. S. Summerhays, Brig.-Gen. C. Templer, C.M.G., C.I.E., and the Secretary, the Rev. D. B. Montefiore.

The following new members were elected:—Miss M. A. Bright, Greystones, Chipping Norton, Oxon; Brig.-Gen. Angus J. McNeill, C.B., C.B.E., D.S.O., T.D., Nashashibi, Jerusalem; Capt. Gerard von Schmidt, Roeblingen, near Sangerhausen, Saxony, Germany; and E. W. Sheffield, Sharia el Manakh, Cairo.

THE PALESTINE MEMORIAL.

The War Memorial at Jerusalem will be unveiled by Field-Marshal Viscount Allenby on May 7. According to the *Daily Telegraph*, the cemetery at Jerusalem, which was designed by Sir John Burnett, R.A., and is near the Mount of Olives, covers five acres, and the Imperial coat of arms and the badges of every regiment represented have been cut into the stone of the entrance gateway. Facing the entrance, in the centre of the long wall forming the north-east enclosure, is the record room and memorial to the missing. The record room, designed to give a culminating motif to the cemetery as a whole, rises from a raised stone platform in the form of hemicycle, flanked on either side by curved walls, on which are placed stone panels bearing the names of the missing. These walls are terminated by stone pylons, one bearing the arms of New Zealand and one the arms of Australia.

The chapel, with a dome rising to 36 ft. above floor level, has a recessed altar end lined in marble up to the height of the dado, beyond which the walls, pendentive, and dome are in mosaic. At the top of the stone steps leading to the record room is the Stone of Remembrance. A bronze figure of St. George is in a niche over a flat arched opening which gives a direct view to the bronze entrance doors to the chapel. Over the entrance door are the Imperial arms, beneath which is inscribed:

This Memorial Chapel was erected by the Officers, Non-Commissioned Officers, and Men of the Egyptian Expeditionary Force to the Honoured Memory of their Comrades who fell in the Palestine Campaign.

1914. 1918.
The interior of the Chapel has been decorated by New Zealand in Honour of the Members of the New Zealand Expeditionary Force, who took part in the operations in Sinai and Palestine.

1916. 1918.
We therefore remember you in our prayers as it becometh us to think upon our Brethren.—Macc. i, xii., xi.

The mosaic, which is from the design of Dr. R. Anning Bell, R.A., has been contributed by the New Zealand Government, and is a tribute to the New Zealand Expeditionary Force as a whole, to those who live as well as to those who died. At the altar end winged figures in mosaic carry the laurel and the olive—the spirit of Victory and the spirit of Peace—and beside them are other winged kneeling figures representing Aspiration and Hope. On the entrance door wall are figures of Patriotism and Faith, hand in hand, and Humanity with Hope. Between the groups are inscriptions in mosaic, which read as follows:

From the uttermost ends of the earth.

In honour of the members of the New Zealand Expeditionary Force who took part in the operations in Sinai and Palestine, 1916-1918.

Between these inscriptions is a frond of the tree fern, the emblem of New Zealand. There is a border of characteristic Maori pattern round each lunette.

The cemetery is enclosed on three sides by a stone wall, and outside the wall is a belt of timber 30 ft. in width. A dry stone moat forms the boundary of the side abutting on the road from Jerusalem to Government House.

SIR WALTER BECKER.

We much regret to record the death, at his villa in Val Salice, Turin, on May 1, of Sir Walter Frederick Becker, at the age of 72 years. Sir Walter Becker belonged to a Cornish family, and was educated at Falmouth. His shipping interests took him abroad, and for the last forty years he has been associated with the Italian shipping world. During the Great War he founded and maintained at his own expense a hospital for the British Expeditionary Force in Italy, and his charming Turin villa became a home centre for many members of that Force who were fortunate enough to share the hospitality and to enjoy the old-world courtesy of Sir Walter and Lady Becker. His devotion to art and literature prompted him to many good works in the cause of education. It is due to his generosity that the British Institute in Florence has been brought to its present sound position, and several educational institutions in England have had his support. He was a profound admirer of Signor Mussolini and of his achievements in the building up of Fascist Italy. It was as a tribute to that work that two years ago he made a munificent gift to the Italian State. No one who came into personal touch with Sir Walter Becker could fail to be impressed with his charm of manner and personality. Both at Turin and at his villa in Roquebrune, Cap Martin, he and Lady Becker dispensed open hospitality, and there will be many to sympathise with Lady Becker in her sad loss.

THE OUTLOOK IN CYPRUS.

The next meeting of the Near and Middle East Association will take place on May 11, at 8.30 p.m. The meeting, which will take place, by kind permission of Miss Spalding and Mlle. Griboval, at 133 Queen's Gate, will discuss "The Outlook in Cyprus." The speakers include Mr. Roland L. N. Michell, C.M.G., and Mr. H. Pirie Gordon: the discussion will be led by the Ven. Archdeacon Beresford Potter; and Sir E. Denison Ross will preside.

PERSONAL AND GENERAL

TO-DAY

May 5, 1927 (New Style).
 April 22, 1927 (Old Style).
 Julkaada 3, A.H., of the Muslim Calendar.
 Iyar 3, 5687, of the Jewish Calendar.

Lord Treowen embarked in the s.s. Razmak at Marseilles on April 30 for Egypt.

Colonel Sir Charles and Lady Yate have taken 10, Cadogan Place for the season.

Viscount and Viscountess Elveden are expected to arrive in London on May 9.

Lady (Montagu) Butler has returned from India for the summer to 14, Vicarage Gate, W.8.

Mrs. Eckstein and Miss Eckstein have returned to 18, Park Lane from visiting the West Indies.

The Secretary of State for the Colonies has appointed Mr. B. J. O'Brien to be Assistant Secretary, Cyprus.

Lord Leconfield has sailed on a visit to Lord Lloyd at Cairo, and will be absent from England until May 26.

The Earl and Countess of Lytton, who arrived home from India on April 25, left last week for Knebworth House, Knebworth.

Mr. Rudyard Kipling arrived home at Batemans, Burwash, Sussex, on April 28, after a visit to South America, Spain, and France.

Sir Montague Barlow has returned to London from Cairo after a prolonged tour through Eastern and Central Africa.

Muzahim Beg Pachachi, the newly appointed Iraq Diplomatic Agent in London, arrived at 51, Queen's Gate Gardens this week.

Mr. and Mrs. John Buchan arrived on May 2 on a visit to General the Hon. Sir Neville and Lady Lyttelton, at the Governor's House, Royal Hospital, Chelsea.

Lieut.-Colonel Sir Francis Humphrys (his Majesty's Envoy-Extraordinary and Minister Plenipotentiary at Kabul) arrived at Windsor Castle on April 29 and left the following day.

Sir Maneckji and Lady Dadabhoy and their daughters have arrived in London and are staying at the Hotel Metropole, preparatory to going into residence at their house, Kingsnympton Hall, Kingston Hill, Surrey.

Field-Marshal Viscount Allenby left London on April 27 for Palestine, where he will unveil the Memorial in Jerusalem War Cemetery on May 7. During his stay he will be the guest of Field-Marshal Lord Plumer, High Commissioner for Palestine.

Mr. J. R. Pearson, C.I.E., late I.C.S., is leaving England for Fiji to take up his appointment as Adviser to the Governor of Fiji on Indian Affairs. He sailed from Southampton on April 30 in the s.s. Aquitania, accompanied by Mrs. J. R. Pearson and Miss Pitcher, of Jersey.

On behalf of the Government, the Secretary of State for the Colonies and Mrs. Amery will hold a reception on May 10 at Lancaster House, St. James's, to meet the representatives of the Colonies, Protectorates, and Mandated Territories at the Colonial Office Conference, 1927.

NEWS IN BRIEF.

Lord and Lady Irwin returned to Simla on April 30.

Mr. J. M. Sen Gupta has been re-elected Mayor of Calcutta by 45 votes to 40.

M. Avenol, Deputy Secretary-General of the League of Nations, who had been on a visit to Greece, arrived in Sofia on April 29.

Mr. B. S. Kamat and Sir Ganga Ram, the only two members of the Royal Commission on Indian Agriculture who have not yet arrived in London, will not reach England until the end of May.

In virtue of a convention between the Turkish Government and the Eastern Telegraph Company the latter's offices in Constantinople and Smyrna will be reopened for business after being closed for more than three years.

About 200 relatives and friends of British soldiers who were killed in Palestine and Egypt during the War arrived at Marseilles on April 28, on their way to visit the graves of the fallen, sailing the following day for Alexandria in the Stella d'Italia.

There was a festival on April 29 in the Royal Opera House in Cairo, under the patronage of the King of Egypt, in honour of Shawki Bey, who was hailed as the "Prince of Arab Poets" and greeted by deputations from Egypt, Palestine, Syria, Morocco, Arabia, and Iraq.

Owing to the increase in the population of Bulgaria, the number of deputies to be elected to the Sobranie at the general election at the end of May is to be augmented from 246 to 273. Of these 31 will be returned from the department of Sofia, 28 from that of Plovdiv (Phillipopolis), and 26 from that of Bourgas.

Field-Marshal Lord Plumer, High Commissioner for Palestine, on April 28 unveiled, on the Gaza battlefield, a memorial to the 5th East Anglian Division. The memorial, which is situated outside the entrance to the War cemetery, was designed by Sir John Burnett. The dedication service was performed by the Right Rev. Rennie MacInnes, Bishop of Jerusalem.

The new Egyptian Cabinet includes: Abdel Khelek Pasha Sarwat, Prime Minister and Interior; Fathallah Pasha Barakat, Agriculture; Morcos Pasha Hanna, Foreign Affairs; Osman Pasha Moharram, Public Works; Negib Pasha Gharably, Wakfs; Ali Pasha Shamsy, Education; Zaki Pasha Abul Seud, Justice; Mohamed Pasha Mahmud, Finance; Ahmed Pasha Khashaba, Communications; Gaafar Pasha Wali, War.

Switzerland has concluded with Turkey a Trade Agreement containing the most-favoured-nation clause, and has agreed to conclude a treaty to regulate the legal status, conditions of residence and commercial activities of Swiss citizens in Turkey. The Swiss Government is contemplating the establishment of a legation at Angora. Mr. Henri Martin, who negotiated the Trade Agreement with the Turkish Government, will probably be the Swiss Minister to Turkey, says *The Times*.

It is reported from New York that the General Secretary of the Near East Relief Fund states that the sums raised in Great Britain on behalf of the fund amount to 250,000,000 dollar (over £50,000,000). The sums raised in Great Britain cover the period of the last twelve years, and include large grants from the British Government during the Armistice period. It is worthy of note that during the same twelve years American contributions amounted to only 100,000,000 dollars (£20,000,000), although it is true that most of these were made in voluntary contributions.

The Rev. C. L. Richards, C.M.S. missionary at Narowal, in the Punjab, North India, with his Indian colleague, the Rev. Barakat Ullah, has launched a new scheme to supplement with voluntary work the service of paid agents, says the *Daily Telegraph*. A new office of *madadgars* (helpers) has been created. Candidates must be communicants, must be able to conduct simple services (therefore, if illiterate, must know by heart some Gospel stories, psalms, and portions of the Prayer Book), must be regular contributors to church funds, and must send their children of school age to school or at least to receive regular religious teaching. Seventy men have already enrolled themselves for training for this work.

Trade in the Near East.

Trade in the Balkans has been slow to reawaken. The countries defeated in the War have had difficulties unequalled even by those whose boundaries now enclose greater territories than before. For this state of affairs the lack of capital to re-establish industries, the condition of the exchange, and the absence or unreliability of communications and transport are still largely responsible.

Foreign investors fight shy of hostile and unsettled relations, and mineral wealth lies idle for lack of foreign support.

The recent alarming events, though disturbing in appearance, have had one good effect, in that they have urged the Balkan States to look for solidity at home and support from abroad.

An article in *L'Echo de Turquie* calls attention to the necessity to remodel the Commercial Code and thereby to give trade facilities; and to encourage small traders to join together to form greater capital. Turkey cries out for the help of the capitalist.

Turkish Sugar Refineries.

Agriculture has necessarily received the greatest support by the Government in most countries, but industries dependent on individual effort are still low. The attempt at sugar growing and refining in Turkey is, therefore, significant; the cultivation of beet by the peasants is encouraged and the two factories so far are financed by the Government. *La République* says:

It was no secret to us that our sugar refineries would have to surmount certain difficulties at the beginning of their work, for this is an industry which entails the greatest care and special knowledge, not only for beginners like ourselves, but almost everywhere all over the world. The sugar industry demands, first of all, a large capital. It is then necessary to obtain the best quality sugar and to reduce the cost price to the lowest possible figure so as to be able to enter into world competition, still bearing in mind the encouragement of the development of other industries inherent to that of sugar at the risk of a breakdown at the very beginning of the enterprise. This is the truth and we must not comfort ourselves with any illusions in this matter. . . .

It is reported that the factory of Oushak has not been able to secure a sufficient water supply, and that the culture of beetroot is insufficiently developed to assure the future of the factory. We do not know, either, the conditions of work in the factory of Alpoulla, but we suppose that the society which is exploiting this refinery is showing signs of comparatively greater activity. We know well that these two factories newly installed in the country must prove successful, and everything leads us to believe that success is certain if only we know how to set ourselves seriously to work with all our minds. Also, we cannot refrain from setting forth one point of view and certain considerations which the study of the question suggests. Simple as they may seem at first sight, we believe that the points which we give below form the essential foundations of the enterprise of which we are talking.

As we have been saying there are some countries where the Government allow help and protection to the sugar industry; this is exactly what our leaders are doing with regard to the two factories when decreasing the law *ad hoc* which demands significant sacrifices of the State Budget. We understand that the Government of Ismet Pasha has not limited its encouragement to decreasing the aforesaid law of protection, but has furnished nearly all the funds for the first installations of both factories at the same time, since it is thanks to the Government guarantee that it has been possible to raise the necessary capital for this enterprise. This refers chiefly to the factory at Oushak, whose capital chiefly consists of a million pounds from the Bank of Industry and Mining, that is to say from the State itself. Therefore the whole country is interested in the progress of the enterprise, for the latter represents material sacrifices which would be changed to dead loss were the new industry to fail. We attach an even greater importance, moreover, to the moral side of the work, than to the pecuniary. The Turk absolutely must succeed in an enterprise which he has undertaken, however hard may be the task. Let us say, by the way, that the sugar industry is a very difficult one, and that it might perhaps have been better had we left it unattempted as yet; nevertheless, since we have had confidence in our capacity to set to work, it is essential that we should resort to every means in our power to attain the end in view. . . .

The article ends by calling attention to the great importance of the technical side of organisation; to the necessity of encouraging the cultivation of beetroot in all districts by the peasants themselves; and points out that no expense

should be spared in obtaining foreign experts' knowledge and technique to advise them in their endeavour.

Commercial Expansion in Roumania.

Roumania has awakened to a greater need for trade expansion. Her new commercial policy is destined to open up new ways of intercommunication, and she has wisely started by settling her customs tariffs, thus forming a better basis for future negotiations.

Possible commercial treaties are foretold in *L'Indépendance Roumaine*, as follows:—

The Government has decided to put into force, a little prematurely perhaps, the new customs tariff, made necessary by the great change brought about since the War in general economic conditions, in the exchange and in the needs of an enlarged country.

This haste to bring new tariffs into force can be explained by the Government's intention to revise our commercial relations with foreign countries and to conclude with them commercial treaties. . . .

The proposed treaty with Italy will probably be the first, if we read the intentions of the Government correctly. We do not know which will be the second, but we think it must be borne in mind that, in consideration of the general European policy, it will be necessary to conclude one with Austria.

Austria's existence is indispensable to the balance of power in Europe. But Austria can exist only if her people are allowed to work, that is to say, if she is permitted to export the products of her work. This work of solidifying Europe deserves to be accomplished, the more so since all post-War discussions with Austria have been settled, and our relations with her are now excellent.

Such is not the case with our two former adversaries, Germany and Hungary.

It is known that we have many controversial points with Germany which are far from being settled, as for example the question of the notes of the Banque Générale. We consider it impossible to start negotiations for a commercial treaty, or any other agreement, economic or financial, before all accounts surviving from the War should have been cleared up. Otherwise we shall risk doing useless work, and cause practical difficulties easy to foresee.

The case of Hungary is very similar. The conference which was to settle the last questions resulting from the Treaty of Trianon met lately at Budapest.

Our delegates have returned anxious to go, we are told, for their Easter holidays. Here again are questions which must first be decided.

Much work remains, therefore, to be done. A uniform policy and a clear line of action are needed to direct this work in such a way that it may assure us the maximum of advantages instead of imposing on us sacrifices, created by other motives than those of facilitating our trade.

New Loan to Yugoslavia.

Economic interests and the building of a new railway in Yugoslavia are the objects of the new Blair Loan. The *Morgenblatt* states:—

To-day's official report of the conclusion and subscription of the new 30 million loan in New York has aroused great interest in all circles. The conclusion of this loan will be considered as a success for the Minister for Finance. The stipulation under which the loan would be concluded will be marked down in economic circles as very favourable, both in relation to the proviso of the first Blair Loan, as well as in comparison with the proviso of the American Loan, which the neighbouring States have recently concluded.

As to the point of view in political circles, nothing is yet known, as the greater part of the members are away from Belgrade. The Official Communiqué declares: "The Minister for Finance announces, that the second issue of the foreign gold loan was carried through yesterday by the Blair-Chase group."

This issue amounts to 30 million dollars at a rate of interest of 7 per cent., payable within a period of 35 years. Fifteen million dollars are to provide for economical requirements and 15 million are to start the work on the railway from Belgrade to the Adriatic Sea. The loan is issued at 92½ . . . and was much over subscribed.

M. J. A.

It is reported from Constantinople that negotiations for the repurchase of the Baghdad Railway have been broken off, and that the German delegates have returned to Berlin.

The Finance Ministry of Iraq has issued a circular to all Government Departments stating that no Indian except Indian experts are to be employed in the Government service.

The *Times* states that as the result of a conference called by the Resident of Aden a truce until October has been arranged by the chief Wazir, the Sayyid Husain ben Hamid al Mehdar of the Kaiti Sultan of Mokalla in the Hadramaut and the brothers Shaikh Salih and Omar Ubaid Ba Abdat, who decline to recognise that ruler's authority.

SEPARATE ELECTORATES.

It was an evil day for India when communal representation found official sanction in the Morley-Minto reforms. From that point it was extended from one sphere to another and ultimately became one of the basic principles of the Government of India Act of 1919. What the late Mr. Montagu and Lord Chelmsford wrote in their joint report on the evils of electorates based on communal considerations is as true to-day as it was in 1918 but unfortunately the authors of the reformed Constitution had to face facts as they found them and they had abundant evidence that the Muslim Community regarded separate representation and communal electorates as its only safeguard. Communal electorates based on the Lucknow pact accordingly came to stay, the authorities in question no doubt trusting that in time the Muslims themselves would realise their mistake. Meanwhile communal tension as between the Hindus and Muslims has been steadily increasing ever since the disappearance of the distractions of active non-co-operation allowed men's minds to concentrate on the actual working of the reforms, and such outbreaks as those at Calcutta last year, and at Karachi and other parts of Northern India more recently, can no longer be regarded as isolated or merely associated events, but rather as evidence of the universality of the politico-religious animosity.

Its recrudescence is not due to the system of communal electorates but, as was particularly evident during the last session of the Legislative Assembly, that system has certainly tended to promote the development of a factor which now overshadows every aspect of Indian public life. "Another difficulty in the forming of the Constitution," said the majority-report of the Muddiman Reforms Enquiry Committee, "is the existence of communal differences. It is more than possible that the view indicated in some of the evidence produced before us that the introduction of the reforms scheme contributed to the growth of such friction is not without foundation." Apart, however, from the undoubted fact that "the militant organisations created by Hindus and Muslims are the outcome of the determination of the respective parties to strengthen their position and to obtain political power and offices under the new Constitution," to quote the words of an impartial eye-witness who has enjoyed exceptional opportunities for an impassioned study of the problem, the latest developments may be ascribed to two special causes.

The first is the belief of the Muslims that the incorporation of the Lucknow Hindu-Muslim pact of 1926 into the electoral arrangements proposed by the Southborough Franchise Committee has proved to be to their disadvantage, but unfortunately not in the sense in which the authors of the scheme possibly contemplated, or hoped. By that arrangement the Muslim Community, in provinces in which it is in a minority, was allowed more seats in the

Legislatures than was numerically justifiable. But in the Punjab and Bengal, where it forms a majority of the population, it was given respectively 50 and 40 per cent. of the seats. The contention, therefore, of the Muslim leaders is that in Bengal, the Hindu minority has been converted into a majority, and in the Punjab, where the Muslim majority has been reduced to an equality, the Hindus have endeavoured to impose upon the Muslims every disability that an uneducated minority can be made to suffer by a more advanced and unscrupulous majority. That was the reason why the Muslims at first were opposed to any further development of constitutional reform on the existing lines. Latterly, however, they have changed their front and have decided to join in the demand for the early appointment of the Statutory Commission, their view being that any fair investigation would recognise the injustice under which they are labouring.

A second cause is what they regard as the hollowness of the Hindu pretensions to Nationalism as revealed in the debates in the second Assembly on the Muslim resolution for the extension of the reforms to the North-West Frontier Province. The Hindus, it is argued, being in a large majority in most of the provinces, can pretend that when they demand the abolition of communal electoral representation it is only because separate electorates are incompatible with national unity. The moment, however, the reforms are introduced for the frontier province, and the separation of Sind becomes an accomplished fact, they would clamour, it is maintained, as loudly as the most nervous Muslims elsewhere for special safeguards. The Muslims conclude that this is the reason why the Hindus refuse Muslims their just rights in the Frontier Province and in Sind, and why prominent Hindus of Madras are more opposed to both proposals than those in Northern India.

The position of both sides was clearly and concisely stated during the course of the debate on Sir Sankaran Nair's resolution in the Council of State in March last. Sir Sankaran Nair, it will be recalled, moved a recommendation that no further step towards responsible Government be taken until the separate communal electorates be abolished. He declared that until the communities agreed to that step the Hindus would not willingly co-operate with the Muslims. He acknowledged that Muslim insistence on separate electorates arose from their distrust of the Hindus and that it was not in the circumstances reasonable for Hindus to complain of the steps taken by the Muslims to protect their own interests but, meanwhile, he contended, the former were entitled to say that such steps did not conduce to further political progress and therefore that there should be no such progress.

The Muslim viewpoint, voiced by Mr. Mahomed Suhrawardy, was that, in the contrary, any further constitutional development must include as its basic principle adequate representation of minorities through separate electorates and the speaker frankly admitted that by adequate representation he meant more seats for Muslims in the Legislature and other elected bodies. Subject to that condition his community were in favour of the

admitted defects of the present Constitution being remedied at an early date; but, being educationally and economically less advanced than the Hindus, their interests would be swamped in any system of common electorates.

No one who has the real interests of India at heart and who desires to see the country progress quickly towards its ideal of full responsible Government can support separate electorates as a permanent feature of the Constitution, but just as the Government in 1919 could not possibly have refused to give communal representation, so its successors, in the face of the unanimous opinion of the Muddiman Committee, is equally unable to change its attitude of strict impartiality. Unfortunately communal representation is only a manifestation of the larger problem of sectarian distrust and unless the new Conference which will, we hope, result from the negotiations now proceeding is preceded by an adequate change of feeling on that still more vital point, of which there are as yet few signs, the removal of the distinction between Hindus and Muslims is the matter of electorate rights, on no matter what terms, can only have one effect, namely, to provoke still more violent political and religious friction between the two communities.

CURRENT TOPICS.

Disease in India.

Having just passed through a mild small-pox scare, Bombay is now threatened with an epidemic of cholera, which has been especially virulent recently in the Bengal Presidency. The last really serious outbreak in Bombay was in January 1919; it came very soon after the influenza wave of the previous November, and it synchronised with the first of the protracted strikes in the cotton mill industry. Those whose duty it was to sit in Jacob's Circle, guarding the strategic centre of Bombay against attacks by rioters which never materialised, are never likely to forget the ceaseless stream of funerals that passed before their eyes during their long vigil. Twenty-five years ago the plague was a regular annual visitor to Bombay. The city had by that time got over the panic created by the original outbreak which drove the terrified inhabitants away into the country and General Gatacre's measure to enforce sanitation led to riots and to a general strike of the Municipal scavengers. Although even in 1903 the death rate still rose to 300 a day during the height of the periodic visitation, the outbreaks were by that time received with remarkable resignation, not to say apathy, by the Indian community. Thereafter, however, the force of the outbreaks appeared to show a steady decline for which enough credit has never been given to the municipal authorities in general, and, perhaps, to Dr. Turner in particular; and by the time the War broke out the Bombay death rate exhibited no abnormal features.

At the end of 1918, the influenza epidemic, which had already spread throughout Europe, struck India with devastating force. In Bombay alone, in spite of all the measures taken by the health authorities and the attempt made to deal with the worst cases in the hospitals, the death rate rose to very nearly 1,000 a day. What the situation was like in the mofussil regions has probably never yet been realized in the Presidency towns in India, much less in this country. The official estimates of the death roll, the writer believes, are somewhere in the neighbourhood of six million souls. It would not seem at all improbable to him if in actuality they did not fall far short of ten per cent. of the total population, or say, 30 millions. Whole villages were certainly swept away and hardly a single family was left unharmed. India is now immune against the ordinary diseases of the soil, so far as that is possible by human agency, through the latest discoveries of medical science; but whenever a new disease finds its way through Bombay or the other ports

it will inevitably result, it is feared, in a no less heavy death roll.

The First Indian Bishop.

The Bishop of Dornakal, who preached at Westminster Abbey last week on the occasion of the anniversary service of the Society for the Propagation of the Gospel, is an outstanding figure in the social and religious life of India. The first and in fact the only Indian to be raised to the Episcopate, Dr. Vedanayakan Samuel Azariah, who exercises ecclesiastical jurisdiction over eight millions of people in Southern India, has visited this country on two previous occasions, his first visit being to Edinburgh as a delegate to the World's Missionary Conference over sixteen years ago and, since his preferment, he also came over to attend the Lambeth Conference in 1920. Originally confined to the Eastern portion of H.E.H. the Nizam of Hyderabad's extensive State, the Bishop's diocese has been progressively enlarged during the last fifteen years to include the administration of the Telegu Missions of the Society for Propagation of the Gospel and the Church Missionary Society in the Madras diocese. Although Hyderabad is a Muslim State, only about one-twelfth of the population belong to that faith and the Bishop is able to claim that over 600,000 only of the total population are Christians and 150,000, or about a third of the whole of the Anglican community in India, are connected with the Anglican church. Dr. Azariah who is a staunch believer in the adaptation of Indian methods, confirms the general opinion that the phenomenal growth in recent years is mainly accounted for by the increasing number of converts from the outcasts and the poorer classes of the community. A more significant development, perhaps, is the change which, in Dr. Azariah's view, is also coming over the attitude of the educated classes towards Christianity in spite of the growth of nationalism in India.

Lord Sinha has arrived from India for the sittings of the Judicial Committee of the Privy Council, and is staying at Queen Anne's Mansions.

The *Englishman* understands that it has been decided to offer the appointment of Secretary to the Government of India in the Finance Department to Mr. E. Burdon. The choice, it is stated, has been one of some difficulty on account of the premature retirement of Mr. G. G. Sim, who is now Secretary to Vickers, Ltd., and the comparatively junior status of Mr. E. F. L. Brayne, who has been officiating temporarily in the post since the transfer of Mr. A. C. McWaters, the last permanent incumbent, to the Department of Industries and Labour. Mr. Burdon, who was formerly Military Financial Adviser, and a member of the Sken Committee, is at present on leave in this country.

Fleet Orders announce that the annual Indian Empire garden party for all officers and civilians who have resided in India, Ceylon, Iraq, Palestine, Singapore, and Hong-kong, and their wives and daughters, will be held at the Ranelagh Club, Barnes, on Wednesday, June 22, from 2.30 to 6.30 p.m. A polo match, India v. The World, will take place at 3 p.m., and a military display by the 1st Royal Dragoons at 4.30 p.m. The band of the 1st Royal Dragoons and the Kneller Hall String Orchestra will play during the afternoon. Tickets, 5s. each, can be obtained on application to Lieutenant-Colonel C. C. Anderson, 10, Gilston Road, S.W.10, not later than June 15, the name, initials, rank and present or former branch of service, if any, being stated. Remittances must accompany all applications. The proceeds, after paying all expenses, will be given to the British Legion Fund for disabled officers and men.

The President and the majority of the members of the Royal Commission on Indian Agriculture, which has completed its cold-weather tour in India, have arrived in London, and the headquarters of the Commission are at the Board of Works Office, Charles Street, Whitehall. The Raja of Parlakimedi is unable to visit England this summer, and the Commission will be completed for its work in London by the arrival at the end of May of Mr. B. S. Kamat and Sir Ganga Ram.

The Commission will sit for public business on June 6, and it is expected that the taking of evidence will continue for two months. As in the Indian tour, the Commission will sit in public. The witnesses will include experts in agricultural research and administration and authorities on the question of marketing Indian produce. The Commission will visit Rothamsted Experimental Station and other research centres. Possibly some members of the Commission may be deputed to visit the Continent and Egypt.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 14.

The New Governor of Bengal.

Before his departure for Darjeeling, Sir Stanley Jackson had a busy time. Apart from the numerous replies to the addresses of welcome, His Excellency had to give a fitting answer to each deputation, the most striking being the one in which the landowners were reminded of their duties and responsibilities towards their tenants. The landlord and the tenant are interdependent, and increased prosperity for one should mean increased prosperity for the other (a view seldom shared by the Indian landlords, who regard the tenants merely from the rent-paying point of view). The new Governor wishes to teach the landowners how to become good landlords: that is by showing their tenants how to improve their condition! An Arcadian programme, that. Sir Stanley has to solve many problems. One of them is the aspiration of the people to attain the status of a self-governing dominion. To this there is a ready-made answer: "An Act of the British Parliament opens the way to such a possibility; but the British Parliament will expect that a sincere endeavour to help India to attain her desires shall receive an equally sincere and honest response from India." Another problem is that of agriculture and industry. The most immediate question, however, is that of the Bengal *détenus*. The delegation of the Indian Association explained to the new Governor the widespread feeling in this country that the *détenus* ought to be either released or put on trial. The delegates recognised that Sir Stanley had had too limited an opportunity of acquainting himself with the question to give any definite reply.

The Y.M.C.A. Again.

At the general meeting of the Cawnpore Branch of the European Association reference was made to the situation arising out of the controversy between the Calcutta Branch of the European Association and the Y.M.C.A. It will be remembered that Mr. Hobbs was instrumental in the passing of a resolution by the European Association criticising the political activities of the Y.M.C.A. "Either too much or too little has been said," was the opinion expressed by Mr. Ryan at Cawnpore, who urged that the matter should not be allowed to rest there, adding that the European Association must either prove its case or make amends. Such is the opinion of the public generally. Mr. Hobbs has raised a storm, the violence and consequence of which he probably little dreamt of.

The National Week.

What *Forward* describes as "a flaming passion of patriotic ardour" has led the Bengal Provincial Congress Committee to start the celebration of the National Week with the unfurling of the National Flag. "It waves aloft," says the Swarajist organ. "We hope and live. We live to hope." The Bengalis seem to live on words. They hypnotise themselves with such phrases as "The ideal will be realised to-morrow." Indeed India is the land of "kal," (tomorrow). Then the useless wailing goes on: "The National Flag will be a reality. That is the hope of suffering. That is the pride of sorrow. That is the mute song of the enchanted spirit. The flag waves proudly—the prophet of to-morrow" (again why not to-day?) "the herald of the ages, the free soul of India that was and that is to be." When reading such empty stuff, one wonders whether Bengalis will always be satisfied with words. One says: "Let each Indian on this first day of the National Week lay his hand on his heart and ask himself what he has done during the last eight years to prevent a repetition of the 1919 tragedy!" Mr. J. M. Sen Gupta (Calcutta's Mayor) has declined the offer of the Presidential chair at the Bengal Provincial Conference. His reasons for declining to accept the high honour have been given by him in a letter to the General Secretaries to the Reception Committee of the Bengal Provincial Conference to be

held at Howrah. In the letter Mr. Sen-Gupta wisely says, *inter alia*, that, considering the disputes arising, he feels constrained to express the opinion "that the Provincial Conference should be postponed to a future date, until a better atmosphere is secured for it. Two sets of delegates and two sets of office-bearers of the B.P.C.C., each claiming admission and control of proceedings in the Conference and in the Subjects Committee, can only lead to confusion."

About the New Mayor.

The Indian Press bitterly complains of the intense—and premature too, they add—jubilation, in what they call the enemy camp, at the prospect of the Congress Councillors in the Corporation receiving a rebuff in connexion with the election of Aldermen and the Mayor. The *Statesman* and the *Englishman* have not concealed their satisfaction at the decision that the *Central Avenue* should no more be called *Chittaranjan Avenue* (a momentous question!), and this is much resented by *Forward*. There is still possibility of Mr. Sen Gupta being re-elected as Mayor, but now another name is whispered, that of Mr. J. N. Bose. Sir Rajendranath Mukherjee, having found it impossible on personal grounds to accept nomination as an alderman, the question of his becoming Mayor is set at rest. As regards the Deputy-Mayor, the tradition of having a Muhammadan in the chair will be maintained. No definite choice has yet been made.

Here and There.

Memorials and petitions are still pouring in, praying for the release of the young Nepalese. Meetings are held to pay public homage to the heroism and chivalry of the young student, and to ask H.E. the Governor of Bengal to grant him a pardon. The Nepali girl who is the cause of the scandal is also an object of great sympathy. It is typical of the Bengalis that, while engaged in trying to save the Ghurka hero, they forget the sad plight of their imprisoned leaders, who are becoming a secondary, more or less remote, grievance.

The Secretary, Indian Journalists' Association, has written to the Proprietors and Editors of newspapers and periodicals in India to suggest their sending a correspondent to China, in order to ascertain the true facts. The writer argues that, if Great Britain finds herself at war with China, it may be expected that India will not only furnish part of the troops, but will also have to bear part of the expenditure. Indians therefore are fully justified in asking for unbiased details and strictly accurate reports about China. All the countries of Europe and America have their own correspondents on the spot, and the real events that are taking place in China are of great significance to the Indian peoples.

Press and public criticism has been roused in India by a speech in which the Right Honourable Mr. Hilton Young was alleged to have described India as an uncivilised country. Punctuation was faulty and the report read: "There must be special legal conditions for our traders or trade is impossible. Look back at India, Africa and every other civilised country." Here the epithet "uncivilised" appears as if applied to India as well as to Africa. The original was: "Look back at our trade with India. Look at our trade with Africa and every other uncivilised country." The Right Honourable Mr. Hilton Young, whose speech in Parliament dealt with the Chinese situation, meant that there was need for a settled government in China to make trade possible. He offered the example of India in opposition to the uncivilised condition of Africa. His admiration of Indian culture is well known, and an unfortunate compression of the text of his speech has alone caused the misunderstanding.

Mr. Saklatvala, the Communist M.P., has left India. The Parsis have presented their countryman with an address and a purse, in recognition of his activities in India. They greeted him as "torch-bearer of a new life." Comrade "Sak." replied to the farewell address, and gave his friends sound advice. "Never be afraid of making mistakes," he said, "but be afraid of standing aloof like

cowards. Don't think that neutrality is a virtue. Always keep your intentions and objects selfless," and other truisms. During his Indian tour the Communist lecturer has collected enough money to pay for the cost of his tour, and to repay a loan granted to him in time of political trouble. Mr. Saklatvala has done all he could for India. "I do not feel like leaving," he said. "From love I am going to love, from one public service I am going to another." Mr. Saklatvala hopes that Mr. Gandhi will put forward some new and vital programme. The surging crowd cheered the Communist M.P., who was carried on shoulders to his car.

Forward deplores that the number of the unemployed is steadily on the increase. Heartrending stories are told of suicides brought about by the impossibility for many educated and respectable Indians of finding work. Yet the Commander-in-Chief of the Army in India said the other day in the Legislative Assembly that the prosperity of the country was increasing, quotes *Forward*.

The Swarajist leaders, including Mr. J. M. Sen Gupta, are in trouble. It is alleged that they have utilised for the last Council election and the recent municipal election funds collected by the late Mr. C. R. Das for the purpose of village reconstruction. The plaintiff, a rich *zamindar* or landowner, was induced by the late Mr. Das to pay Rs.10,000 to the fund, and by Mr. Sen Gupta to pay another Rs.5,000 for the Congress cause, but all parties concerned refused to give account of the way in which the fund had been administered. The plaint was admitted.

In his speech as Chairman of the University Teachers' Conference Prof. N. C. Banerjee made the following remarks: "The present University education has had its origin in the exigencies of the administrative system imported by the Britisher, but it has outlived its usefulness. The problem of to-day is to breed men of light, culture, character, initiative and courage in all departments of activity. The country demands youthful minds with a practical outlook, with freshness of idea, bent upon social service and pushing on national progress." Mr. Banerjee wants a new generation of ideal men.

The Indian Bishop of Dornakal, Dr. V. S. Azariah, has arrived in London and is staying at Lambeth as the guest of the Archbishop of Canterbury. Dr. Azariah, who preached the annual sermon of the Society for the Propagation of the Gospel at Westminster Abbey last week, will be the chief speaker at the annual meeting of the British and Foreign Bible Society on May 4, at which the Marquess of Salisbury will preside, in the absence of the Prime Minister.

Mr. J. M. Sen Gupta has been re-elected Mayor of Calcutta by 45 votes to 40. The decision has caused some surprise in Calcutta in view of the fact that at the recent election of Aldermen Mr. Sen Gupta, who succeeded the late Mr. C. R. Das, was the only Swarajist returned, the remaining four seats being captured by a combination of the other parties in the Corporation.

Mr. Arthur Hill, C.I.E., A.M.I.C.E., late Chief Engineer for Irrigation in the Bombay Presidency, has died at Torquay, at the age of 69. Joining the Public Works Department, Bombay, in 1880 from Coopers Hill as an assistant irrigation engineer, he reached the executive grade 12 years later, and that of superintending engineer in 1906. He was Chief Engineer and Joint Secretary to Government from the close of 1906 until his retirement early in 1913.

The War Office announces that the Queen Alexandra's Imperial Nursing Service and the Queen Alexandra's Military Nursing Service for India have been amalgamated with effect from November 1, 1926.

The normal tour of duty in India for members of the amalgamated service below the rank of principal matron will be five years, and the rates of pay and allowances and conditions of service of members on the Indian Establishment will be as laid down in Indian Army Regulations.

The military authorities in India are giving special attention to facilities for enabling a team of riflemen to compete at the Bisley meeting in July. Hitherto such teams have been scratch sides formed from leave men at home. This year some better organisation will be provided, and the provisional arrangements are in the hands of Lieutenant-Colonel Faunthorpe, of the United Provinces Horse.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, April 15.

Experiments in Self-Government.

Kholhapur State, the premier Indian State in direct relations with the Government of Bombay, has recently inaugurated the Ilakha Panchayet system, and has thereby immediately placed itself in the first rank of progressive Indian States in the country. It fell to Sir Leslie Wilson, the Governor, to perform the inaugural ceremony during his recent visit to this enlightened ruler, and in doing so he sounded a note of warning against the danger of inefficiency and advised the members of this central body, whose main object will be to direct the activities of the Taluka Panchayets, who in their turn will direct the village panchayets, to secure behind them the force of public opinion. It has been a rather serious step that has now been taken, especially as earlier experiments in self-government in the State have not been quite the success that they might have been, but the Maharaja is to be congratulated on his decision to march forward instead of going back.

Cholera.

Far from abating, the cholera epidemic during the past week has become more virulent. We are now informed that it is moving from Belgaum and threatening to engulf Miraj and Kolhapur. This indicates a general tendency towards the Deccan, where several large fairs are shortly to be held. It appears as though something drastic will have to be done to put a stop to the advance of the scourge, something more drastic than the measures so far employed by the Public Health officers, who seem to be satisfied with their policy of policing the various fair grounds and localities and endeavouring to make things as comfortable as possible for the pilgrims. It is not comfort that is wanted but sanitation, and to achieve this object means the expenditure of much more energy than is being displayed at the moment. Indeed, it would even be justified if the Government were to insist on the postponement of these fairs until such time as the scourge has been conquered.

Beggars.

Will Bombay ever be free from the pest of every street and every by-lane—the pest of the beggar? No matter where one goes, one is bound to meet him, cringing, leprous, stinking; until one is obliged to give him something to get his plaintive cries out of one's ears. That something ought to be done in the matter has long been recognised by both the local Government and the Municipality, and with this end in view Mr. Starte, a Criminal Settlements Officer, was appointed to survey the position and submit a report. This he did, and a very comprehensive report it is too. Unfortunately for us, the Municipality finds itself unable to put up the necessary funds to carry out his numerous suggestions, and to avoid doing so has started on a debate with Government as to who is actually responsible for the finding of the money. When this decision is arrived at we can hope for some relief. Oh, let it be soon!

Communism a Failure.

Mr. Shapurji Saklatvala has departed for England, and his tour of this country may be considered as a significant event, for he was officially permitted to preach Communist doctrines wherever he went. In Bombay he failed to rouse any enthusiasm whatsoever, but in other cities he was much more fortunate in his reception, even though it must be realised that as a whole his tour—if it was hoped by this means to raise the Communist flag in India—has been a dismal failure. Communism and its implications are actually foreign to the Indian in general,

so that all Mr. Saklatvala's seeds have been falling on barren ground. The only means of "pushing" these principles is by recourse to violence, and that as in the case of the non-co-operation movement, has proved of no avail. And so Mr. Saklatvala returns to Battersea, one trusts with his "private affairs" more successfully settled than his public ones have been.

A New Golf Course.

A hundred and twenty-two acres of the Sewri Mazagon Reclamation, towards the head of the harbour, has been acquired by the New Golf Club as its course, and will fill a very badly needed gap in Bombay, which has hitherto had to go 120 miles to Nasik or Poona to find anything that can be called a golf course by the widest stretch of the imagination. The land, being surplus to the present needs of the port, can quite legitimately be applied to this use, pending further developments, and it is to be hoped that the new club, with two Parsi gentlemen on the committee, will meet all the requirements of the Scottish, and other communities of Bombay.

As the expenditure on the construction of the course has so far been well within the estimates, it has been decided to erect a small club house for the convenience of the members and it is hoped that the course will be opened for play before the commencement of the coming monsoon.

Financial Conditions.

There has been little change in the various markets during the week, and the textile crisis is still with us, even if it is not attracting quite as much attention. The Tariff Board's report is not to be made public until next month, and, knowing that, perhaps the local interests will rouse themselves and endeavour to do something off their own bat to deplete the dangerously increasing stocks of cloth and yarn. Markets are generally quiet, though the revaluation of the gold and sterling holdings of the Paper Currency Department on the new basis of 1s. 6d., as compared with the old basis of 2s. to the rupee, has occasioned some interest. The value of both holdings have consequently been increased. It is believed the Government proposes gradually converting securities in the Gold Standard Reserve into gold in view of the proposed transfer of this Reserve to the Reserve Bank of India.

WESTERN INFLUENCE IN BENGAL.

An interesting and instructive paper on the effect of Western influence and teaching on the social and economic life of the Bengal Presidency was read by Mr. Surendra Nath Mallik, a member of the Council of the Secretary of State for India, at a meeting of the East India Association at the Caxton Hall, Westminster last week. Sir William Vincent, formerly Home Member of the Government of India and a colleague in the India Council, presided.

Mr. Mallik emphasised the "gigantic uplift" which had followed the confusion, misrule and evil social customs which were such outstanding features of the period immediately preceding the establishment of British rule in India. The three main forces in the great changes wrought by Western influence were, in the lecturer's opinion, British Administration, Westernized education, and Christian missions, respectively—and on the whole he was disposed to regard the latter as the most potent of the three. While Bengal in particular had gained much through the transition brought about in the last 150 years, she had also been called upon to make some sacrifices as well. Taking the wider view, however, he thought that she had cause for gratitude in the fact that her fortunes had been linked with those of Great Britain. The desire for self-government had its rise in Bengal which had always been the home of the leaders of the political movement. At the same time much further progress was

required, particularly in educational and social matters. He was firmly convinced that it would be a most serious mistake to introduce a system of complete self-government without giving the people the benefit, for at least a quarter of a century beforehand, of free and effective primary education, and of an adequate training in real local self-government.

During the course of the ensuing discussion Lord Sinha, who has recently resumed his seat on the Judicial Committee of the Privy Council, said that it was refreshing to listen to Mr. Mallik's view after a visit to India where the tone of the Indian-owned Press led one to conclude that India had lost and not gained from contact with the West. The Bengalis were, he pointed out, the first to take to Western education, and the result was that in all fields of work throughout India the Bengali was the faithful assistant of the English ruler. He made himself indispensable, and the educational system was designed to provide such material for the administration of the country. Though the Bengali was no longer needed in other provinces (owing to their own later adoption of Western teaching) his education continued to be of the same type; and it might now almost be said that, even in Bengal itself, the man least able to make a living was the Bengali. The system was ill adapted to present-day requirements. He by no means said that the Indian administration was perfect; but he agreed with the lecturer that it would do Bengal no good to show ingratitude. He deprecated the impatience which wanted to jump before learning to walk, and which refused to recognise the inevitability of gradual progress if there was to be any progress at all. He thought this undue absorption in politics was a passing phase and hoped that the British people would show patience in regard to it.

INDIA IN PARLIAMENT.

By Sir FRANK NELSON, M.P.

[The impending appointment of the Statutory Commission under the Government of India Act invests with particular interests the acceptance by Sir Frank Nelson of the Editor's invitation to discuss in these columns from time to time the consideration given to Indian affairs in the Lobby of the House of Commons.]

I have agreed—with some diffidence—to comment briefly, from time to time, on events in Parliament having a direct or indirect bearing on India. At the outset I should like to point out quite frankly that in the few years during which I have been a Member of the House of Commons, the main channel through which Indian events are reached is that of Question and Answer, that short period of an hour preceding the business of the day when Ministers are exposed to the fire of all Parties on matters pertaining to their departments.

The fact is that, at the moment, interest in Indian affairs is conspicuously lacking at Westminster; there are several perfectly good reasons for this, the chief one being that the Party in power is abundantly satisfied with the administration of the Indian Empire, and has abundant faith and trust in Edward Wood that was, who for so many years held a peculiarly high place in the esteem and affections of all Parties in the House, and who seems to be on the high road to achieving a similar niche in the estimation of the peoples over whom he is now ruling.

Again, Indian affairs, just now, present an obviously poor target for the darts of either the Oppositions and an interesting fact in this connection is that the more frequently members of the Socialist Party journey to India, the less do we hear in the House of Commons of that type of oratory which some years ago was so prevalent, *vide* the "down-trodden, exploited native of India," the "harsh Prussian methods of the Government of India," etc., etc.

I do not, however, wish to be taken as implying that

the House of Commons is not very sensible of the fact that in the not far distant future the fateful decision must be taken as to whether the degree of self-government at present enjoyed by Indians is to be "extended, modified or restricted." The ultimate authority in this respect is of course the House of Commons, and all Members realise quite fully the responsibility that will be theirs in due course.

Our only Indian Member, Mr. Saklatvala, has just returned from India, where he is reported to have assured an Indian audience that the "West is waiting for the East to rise," and that "all the preparations have been made." I do not imagine that even the worst sufferers from political myopia are likely to attach much importance to statements like this, but however fantastically untrue such utterances may be they are none the less mischievous, and it will be interesting to see in a year or two how many of such are remembered by Mr. Saklatvala's constituents in Battersea and if they are prepared to endorse them by voting for him at the General Election.

Commander Kenworthy (one of the latest recruits to the Socialist Party) is evincing keen interest in the average weekly rate of wages (expressed in sterling) of men, women and children employed in the Bombay Cotton Mills, and the latest figures that Lord Winterton could supply him with were those in force in August, 1923. I could have wished that later figures had been available but in any case we shall almost certainly have presented to us in due course a comparison of the weekly wage of a textile worker in Lancashire with that received by a worker in Bombay (Lord Winterton gave the average weekly earnings for a week of six days by a man in the Bombay Cotton Mills as 12s. 2½d.).

This is a very prevalent topic of discussion on the Socialist Benches, the endeavour to compare standards of living throughout the world by means of measuring such a standard in terms of a common currency; costs of living, climate, caste customs and religions, all are conveniently ignored by the speakers—the age-long prejudice ceaselessly combating new ideas in housing, feeding and working receives no comment—and I sincerely hope that Mr. V. J. Patel, the President of the Legislative Assembly, who is at present a daily visitor to the Distinguished Strangers Gallery, may have an opportunity of hearing a discussion on these lines.

Lobby gossip is very busy selecting a successor to the Governor of Bombay; my experience of Lobby gossip is that there is a distinct foundation for three-quarters of what one hears, but I hope rumours of Sir Leslie Wilson's retirement are untrue, for I gather they are based on Lady Wilson's health. If, indeed, a successor has to be found, Colonel Ashley (the axed Minister of Transport) is generally spoken of as a likely choice.

INDIAN MAIL.

Factories in India.

The official report on the working of the Factories Act in India for 1925 has lately been issued: and, though rather belated, it contains a large amount of interesting information. At the end of the year under review, the number of factories was 6,926 employing 1,495,000 hands: an increase, from the previous year, of rather more than 500 factories and rather less than 40,000 workers. The number of women employed in 1925 was 242,500, and of children 68,725: an increase of about 7000 in the former, and a decrease of about 4000 in the latter, from the figures for 1924. The report suggests that the growing demand for female labour is partly due to the restrictions on the employment of children which have recently been made effective. The improvement noted, in the previous year's report, in the matter of hours of work has not been maintained; for the number of factories in which the employees worked for the maximum number of hours allowed under the Act shows a tendency to increase. The percentage of factories maintaining a 48 hours' week

for men was 27, a 54 hours' week 12, and a week longer than 54 hours 61. In the case of women, the percentages were 31, 11 and 57 respectively. The total number of accidents recorded, which before 1924 had averaged about 7000 annually rose to over 10,000 in that year, and to 12,645 in 1925. This is considered to be partly due to the introduction, in 1924, of the Workmen's Compensation Act: which had led to the recording of accidents of a type previously regarded as too trivial to be worth reporting. Another, and much more serious, reason is held to be the faulty construction of factories under the law. Under its existing provisions, buildings not intended as factories might be so used without previous sanction from any authority: in consequence of which, work is frequently commenced in buildings which had been constructed in entire ignorance of the requirements of factory law. This question has been examined by the Government of India, who have asked local Governments to consider the possibility of provincial legislation with a view to bringing it under control.

Perhaps the most interesting point, to the ordinary observer, brought out in the report, is the small extent to which industries in India have so far been developed. It has been calculated that something over 70 per cent. of the entire population of India is wholly dependent on agriculture for a living: that is to say, in British India alone, without counting the Native States—with which the report does not deal—about 175 million persons live by husbandry, against rather less than 1½ million by factory industry. These facts give point to the late Viceroy's description of agriculture as "India's greatest industry": and, incidentally, suggests that, in the millennium to which some of India's extreme politicians look forward, when the country will be ruled by Councils of workers and peasants, their composition is likely to remain a very lop-sided one for a long time to come.

The net profit of the Bombay Gas Company for 1926 was £21,700, the available balance being £67,759. The directors recommend a dividend of 4 per cent., less tax, making 8 per cent. for the year, carrying forward £40,805.

The death is reported from Nice, at the age of 72, of Mr. R. G. P. P. McDonell, C.I.E., who joined the Burma Police at the time of the annexation in 1886/87 and afterwards officiated for ten years as Commissioner of Police in Rangoon. Mr. McDonell, who received his C.I.E. in 1905, became a steward of the Rangoon Turf Club in 1908 and took an active interest in the administration of that body until his final departure from Burma in 1917.

A *communiqué* issued by the Government of India announces that the Indian delegation to the Tenth International Labour Conference, which will commence at Geneva on May 25, will consist of the following:—Sir Atul Chatterjee, High Commissioner for India, and Sir Louis J. Kershaw of the India Office, London, will be delegates on behalf of the Government of India, and Mr. J. C. Walton, India Office, London, and Mr. S. Lall, Under-Secretary to the Government of India, Department of Industries and Labour, will be advisers on behalf of the Government of India. Mr. G. D. Birla, M.L.A., will be the employers' delegate. Mr. V. V. Giri, Bar-at-Law, Berhampur, will be the workers' delegate, and Mr. G. Sethi, General Secretary of the Jamshedpur Labour Association, the workers' adviser. Mr. Lall will act as secretary to the delegation.

Mr. J. T. D. Savary has been appointed Editor of *The Englishman* on the retirement of Mr. A. C. Wentworth Lewis, who prior to his service on the Calcutta paper was Paris Correspondent of *The Times*. Mr. Savary was formerly on the staff of *The Pioneer* at Allahabad.

The following appointments on the staff of the Army in India are announced:—

Lieutenant-Colonel T. P. Melvill as Deputy Military Secretary, Army Headquarters, vice Colonel B. Nicolay, Indian Army, vacated.

Lieutenant-Colonel W. H. Ralston, officiates as Brigade Commander, 9th Indian Infantry Brigade, vice Colonel (Temporary Colonel Commandant), E. C. Kensington, Indian Army, who officiates in command of the 7th Indian Infantry Brigade.

Major E. Preedy as Staff Officer, R.E., 1st Grade (Works), Western Command, vice Major A. G. Rainsford-Hannay, vacated.

Captain A. L. Elsworth, as General Staff Officer, 3rd Grade, General Staff Branch, Army Headquarters.

Lieutenant F. H. M. Nicholas, as Tank Engineer, General Staff Branch, Army Headquarters.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

The Changing Cotton Position.

Another of those far-reaching changes that from time to time affect the cotton position seems likely to take place as a result of the Mississippi flood disaster. But a week ago cheap cotton seemed a certainty for some time to come but for a development in the demand for cotton goods—an unlikely contingency in present circumstances—and cheap cotton presents a very difficult obstacle to the progress of Empire cotton-growing, of the American type that is, for the price is so low that it is not easy to make it a remunerative crop for the grower. This view was voiced as late as Tuesday last at the meeting of the British Cotton Growing Association at Manchester by Mr. J. A. Hutton, who pointed out that the Association would do all in their power to see that the native grower was not discouraged, and emphasised the point that it was essential that a great deal should be done to provide efficient transport. In the week that has elapsed since Tuesday the price of cotton has reacted sharply, and while, in default of more certain information, it would be very unwise to be dogmatic on the matter, it would certainly appear that the next American crop must be seriously affected by the floods in the Mississippi valley—a region where the best staple American cotton is grown. The production from the flooded district is normally in the region of a million bales, so that it can be well understood why the report of the floods should have been followed by a hardening in the price of American.

Sudan Cotton Position.

In the Sudan as in other parts of the Empire a sustained rise in the price of cotton would mean a great deal. The position as regards Sakellarides is, of course, assured, and the fine reputation gained by Sudan Sakel has resulted in its receiving special attention in the Liverpool market. While definite figures are not yet available it appears probable that the output of this variety for the 1926-27 season will be in the neighbourhood of 134,500 bales which would mark an appreciable advance on the previous year's figures, and would at the same time justly emphasise the enormous advance in the production of this region in the past few years. It is, however, the development of American cotton in the Sudan with which we are now chiefly concerned, and for a variety of reasons, as I have had occasion to point out before, progress with this crop is not an easy matter. It is encouraging to know, however, that while in the 1926-27 season four provinces where American is grown the crop fell considerably below that of the previous year owing to an inadequate rainfall in four provinces there was a substantial advance, and these four provinces are responsible for a production of about 5,600 bales as compared with one of 3,350 bales for the previous season. A few thousand bales is, of course, a very small addition to the world's production of American, and in the most favourable circumstances progress is bound to be slow, but the more remunerative the crop proves to be for the grower the greater will be the enthusiasm for it and the rate of increase will be proportionately greater.

National Bank of Albania.

The annual general meeting of the Bank of Albania, which was held in Rome on April 27, was attended by the Albanian Minister in Rome, M. Gemildino, on behalf of the Ministry of Foreign Affairs. According to the official Agencia Stefani the President of the Bank, Signor Mario Alberti, in his speech dwelt upon the services rendered by Ahmed Bey Zogu to the cause of progress and development in Albania, and was followed by M. Gemildino, who expressed the gratitude of his Government to Signor Mussolini for what he had done to further good relations between Italy and Albania. A 5 per cent. dividend for the year was declared. At a general meeting of the Society for the Economic Development of Albania, held the same day, stress was laid on the successful activities of the Society during the past year; bridges and roads had been constructed, numerous houses in Tirana and elsewhere had been built, and a scheme for the provision of a harbour at Durazzo had been prepared.

The Late Lord Cowdray.

The news of the death last week of Lord Cowdray, the head of the famous firm of contractors, S. Pearson and Co., has occasioned very widespread regret. In the course of an unusually full and active life, during which he was concerned in a large number of leading commercial developments, Lord Cowdray had achieved for himself a position as one of the leaders of industry in this country. The firm which bears his name (he was Weetman Dickinson Pearson before being raised to the peerage in 1910) has, of course, been engaged in public contracting work in almost all parts of the globe. To mention one sphere of activity, a recent operation with which Lord Cowdray and his companies were concerned was the development, in conjunction with Dorman Long and Co., of the Kentish coalfields. Of the activities of the firm in the Near East mention may be made of docks at Malta and the Makwar Dam, that prodigious undertaking which has made possible the development of cotton growing in the Gezira on a large scale, and must rank as one of if not the greatest of the many achievements of a famous firm.

Motorships and the Suez Canal.

The figures for the Suez Canal traffic in 1926 show very plainly the great increase that is taking place in the use of motorships. The number of transits of the Canal of motor-

SHELL

ships was 455 representing a net tonnage of 2,522,000, while in 1925 the transits were 324 representing a net tonnage of 1,720,000. As recently as 1921 the transits were only 110, the tonnage being 496,000. The number of individual motorships concerned in these transits was 148 in 1926, 118 in 1925, and 44 in 1921. But the figures for 1926 scarcely bring out the full development of the motor vessel. In that year there was a reduction in the total tonnage using the Canal of 702,000 tons, so that the relative proportions of motorships and steamships underwent a much greater change than would be apparent merely from the increase in the net tonnage of the transits of motorships. Equally striking are the figures for the nationality of the motorships: 65 out of 148 in 1926 flew the British flag as against 52 in 1925 and 38 in 1924, and the only other countries with double figures were Norway with 21 ships as against 10 in 1925, Germany with 18 as against 13, and Denmark with 14 as against 18. From this it will be apparent that Great Britain is leading the way in the transition from coal to oil. A further point of interest is the tendency for the tonnage of the motorships to increase. The average net tonnage in 1926 was 5,543 tons as compared with 4,505 net tons in 1919.

Stabilisation of Exchanges.

Signs have been growing of late that the world is gradually settling down to more or less fixed conditions. One indication of this is provided by the increasing stabilisation of the exchanges. In the table we give this week some nine of the twenty quotations are the same as they were a week ago, a large number have undergone minor alterations only, while in a very few cases—the lire and the leu among them—have there been marked fluctuations. Like the Roumanian leu the Italian lire has rapidly improved in recent weeks, though the foundation for the advance was scarcely more substantial (relatively speaking) than for that of the leu whose rise was followed by rapid fluctuations. This week the lire has had a setback, but the efforts made in both countries to achieve stabilisation will no doubt before long have the desired effect.

The New Rubber Restriction.

The reduction in the exportable quota of rubber to 60 per cent. has duly taken place, and at no time in April indeed did there appear to be any prospect that this would be avoided. In the last week, indeed, the market for the commodity developed extreme weakness, at one time a price of 1s. 7½d. being touched, and I believe I am right in saying that the average price for April was below that for March. The outlook is still uncertain, though perhaps less so than it was. The London stocks now amount to over 57,000 tons, and they are likely to be increased for a few more weeks, but within the quarter the reduction to 60 per cent. will begin to have an effect, and when that happens the commodity market will undergo a rapid change. The immediate point of interest is the course of the commodity in the present quarter. If it attains an average price of 2s. it will mean the restoration of the 10 per cent. which is now taken off. The possibility of a price below 1s. 3d., which would mean a further restriction, is unthinkable.

Were it to happen it would mean famine prices for rubber in the very near future.

Indo-European Telegraph Company.

At the meeting of the Indo-European Telegraph Company (a report of which will be found elsewhere in this issue) the Chairman, Mr. H. L. M. Tritton, commented on the great advantage offered to the telegraphing public by direct working with Karachi. This has been in operation for many years, but he pointed out that it does not appear to be generally realised that the actual transmission only takes a fraction of a section. Mr. Tritton touched on the question of wireless telegraphy, and said that he was convinced that in the future there will be room for both wired and wireless telegraphy and that those companies with land lines or cable systems will continue to hold their own.

COMMENTATOR.

NATIONAL BANK OF ALBANIA.

The National Bank of Albania has issued an illustrated brochure giving types of notes and coins in circulation in Albania. The bank was constituted in Rome at the end of 1925, among the banks which participated in its establishment being the Credito Italiano, the Banca Commerciale Italiana, the Banco di Roma, and the Banque Belge pour L'Etranger. The bank, which has the right of issuing notes and coins, carries on the usual banking operations.

The Egyptian Delta Land and Investment Company announces a dividend of 1s. per share, payable May 16.

The Bulgarian Budget for 1927-28 totals 6,993 million leva, as against 6,924 millions in 1926-27 and 6,875 millions in 1925-26. The Budget of 1925-26 closed with a deficit of 741.3 millions.

Bulgaria's trade returns for the first two months of this year were as follows:—January, imports 420 million leva, exports 430.3 million leva; February, imports 402.7 million leva, exports 358.9 million leva.

The Bulgarian census made on December 31 last shows the population to be 5,583,125, composed of 2,748,060 men and 2,735,065 women, or 996 women to 1,000 men.

By a decision of the Council of Ministers of the Serb-Croat-Slovene Kingdom the import duty on copper sulphate has been suspended, and the import duty on refined sulphur and flowers of sulphur has been reduced from 1.50 to 0.75 gold dinars per 100 kilograms.

The following report has been received by Hamilton's Oil Concessions from Bucharest:—"Production for fortnight ended April 29, 350 tons. New Well No. 9 934 metres deep. New Well No. 10 setting up boilers. New Well No. 11 erecting rig." (Office note: Production is given for a fortnight owing to the intervention of Easter holidays.)

In the House of Commons on May 2 Sir J. Power asked the Secretary for the Colonies whether he could state if the lower price of raw cotton had any adverse effect on the acreage devoted to cotton growing within the Empire. Mr. Amery said: It is too early to estimate the effect of the heavy fall in the price of American cotton at the end of 1926, but the matter will be carefully watched. As regards earlier movements in prices, the effect on acreage has not been marked. In Uganda, for example, the area planted in 1926 was 5 per cent. less than in 1925.

THE INTERNATIONAL TOBACCO EXHIBITION.

The International Tobacco Trade Exhibition, which is now being held at Olympia, has as its outstanding feature a wonderful display of the various machines used in the cigarette, tobacco, and cigar industries. Apart from the machinery the exhibition is in a sense disappointing, for the tobacco industry is so important and so universal, and, it may be added, lends itself so well to display, that it is natural to expect a much more comprehensive range of exhibits.

Of the exhibits of machinery, those of the United Cigarette Machine Company are by far the most imposing. Actually the exhibits of this famous company occupy three large stands. On the principal stand amongst other machines two of the new pattern Triumph II cigarette-making machines are to be seen at work turning out popular brands of cigarettes at a rate of 1,000 per minute. This speed is by no means the maximum rate for these machines, but for average factory work it is a speed at which most manufacturers are content to work. A feature of the machines is the cut-off—a straight blade which obviates the use of belts, chains, and the increased cost of circular blades—which is an important factor in the high speed that the machines can maintain. The other exhibits of the company include the "H.M." Tube making Machine, the "St" Tube Filling Machine, and their famous Tobacco Cutting and Tobacco Sieving Mixing and Cooling Machines which are shown working in conjunction with their well-known Filter. By the use in combination of these machines the cut tobacco is automatically transported from the Tobacco Cutting Machine by means of a pneumatic conveyer to the Sieving Machine and then on to the Filter where dust and sand are removed.

One of the most attractive exhibits of the commodity itself is that of the Board for the Protection of Greek Tobaccos, an organisation whose funds are provided by growers, exporters and all interested in the cultivation of Greek tobacco. At the stand is to be seen a most pleasing display of the finest brands of Macedonian, Thracian and other leaf tobaccos. Visitors were particularly numerous at this stand, and it may be that "Turkish" tobacco is again coming into popularity. It may be mentioned here that on Saturday a provisional order was given by a representative of a well-known London store for the whole of the tobacco on exhibition at the front of the stand. There is little doubt that an advertising campaign on behalf of Turkish cigarettes would result in a great development in their consumption once their special attractiveness became widely appreciated. Greece has adopted this method of popularising the currant, and she has equal reason to try the same expedient in regard to tobacco.

Of the other exhibits Cyprus is showing cigarettes and cut cigarette tobacco. Cyprus cigarettes were introduced to a large and appreciative public during the British

Empire Exhibition, and in this case too only adequate advertising is needed to ensure a ready market. Then the Balkan Cigarette Company show their well-known Turkish cigarettes. Finally the Government of India has a stand showing raw tobacco and the manufactured article in the shape of Burma cheroots, and Bahadur and a number of other varieties of Indian cigars.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Electric Lamps, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of electric lamps and accessories, timber and hardware required for the period from May 1, 1927, to April 30, 1928. May 11.

Oils, Etc.—The Director, Equipment and Finance Department, Ministry of the Interior, Cairo, invites tenders for the supply of oils, paints, etc. May 15.

Calico.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 11,700 metres calico for map mounting. May 14.

General Stores.—The Prisons Administration, Cairo, invites tenders for the supply of various articles required for the year 1927-28. The schedule of requirements is divided into the following sections:—(1) Cotton yarn, cloth, clothing, sacks, etc.; (2) buttons, eyelets, needles, threads, etc.; (3) tents, cordage, twines, bedsteads, enamelled articles, cardboard, etc.; (4) metal polish, blacking boot, heel balls, chalk marking, etc.; (5) paints, oils, grease, acids, etc.; (6) leathers, native and English; (7) fibres (Indian and Mexican), rattan, horsehair, bristles, etc.; (8) electrical lamps and articles, etc.; (9) copper hardware; (10) tools (carpenters', saddlers', shoemakers', and smiths'), machines, files, etc.; (11) buckles, nails, ironmongery, fire hose, belting, mild steel, galvanised plates and steel, etc.; (12) timber, sindian wood, sanaa wood, handles shoum, etc.; (13) dyeing of clothing, cloth, etc. May 24. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, May 23). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (Birkenhead, May 14); s.s. Holywell for Port Said, Colombo, Madras, and Calcutta (Birkenhead, May 28).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, May 18).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, May 7); s.s. Dumana for Bombay and Karachi (London, May 14).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers if inducement offers (Liverpool, Glasgow, and Swansea, May 14); s.s. Phrygia for Cette, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool May 14, and Swansea May 17).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 21).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, May 6); s.s. China for Bombay (London, May 20).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 7); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 21).

Ellerman and Papayanni Lines.—S.s. City of Lancaster for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 6); s.s. Bavarian for Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 7, Swansea May 7); s.s. Assyrian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 20); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, May 21); s.s. Dido for Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 28); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Swansea, May 28). * Subject to sufficient inducement. Cargo taken on through B/Loading to:—Algerian ports via Algiers; Moroccan Ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 3.

This week memories instinctively go back to this time a year ago when we stood on the brink of the troubles from which we have been so painfully struggling to recover. It will be a long time, perhaps, before the last of the effects of those troubles wears itself out. But the financial world may find justification for regarding the recent lowering of Bank Rate as marking the end of a deplorable economic chapter, and the beginning of brighter times. Already the markets are talking confidently of a further reduction in the official rate to 4 per cent. and at the moment this seems a decided probability for the early summer, always provided some untoward development does not turn up in the Far East, or elsewhere. Meanwhile, there is reason for thankful recognition of the favourable factors which the month of April has provided, in the shape of a Budget which observed the proper claims of the Sinking Fund without adding seriously to the tax burden, and of a cheapening of money. It is a little disappointing that markets in general have not responded more actively to the combination of these two factors; for after a brighter interlude most sections of the Stock Exchange relapsed into uninteresting dullness. This may be partly due to the amount of attention paid in the City to two disquieting events—the financial crisis in Japan and the floods in the United States—neither of which ought to produce any serious repercussions over here.

The Markets.

Last week in the Stock Markets opened under fairly cheerful conditions, but this state of affairs has gradually given place to irregularity and quietude. The principal cause, it would appear, has been a considerable volume of profit-taking following the recent rise in prices, but the unsettled political and financial conditions in the Far East still exercise a restraining influence, while the floods in the Mississippi Valley appear to have caused an unusual amount of anxiety in London markets. In the gilt-edged market prices have reacted. Home Rails, though inclined to improve, are still hesitant, while foreign bonds have moved irregularly. In the industrial section the feature has been the strength of the Celanese group, other leaders

in this department being heavy in tendency. The forthcoming cut in the exportable quota of rubber, to which we refer below, has failed to stimulate the share market, while oils are dull on the continuance of the price war and evidence of over production in the American fields. Meanwhile new capital issues of good class continue to attract heavy over-subscription.

The Rubber Outlook.

The anticipated "cut" to 60 per cent. of standard production in the exportable allowance of Rubber from the restricted areas for the quarter beginning May 1 has been made, the average price of the commodity during the past three months having been well below 1s. 9d. per lb. In some quarters it is expected that the 60 per cent. quota will remain in force for some time; at any rate, a further "cut" is not likely, for the average price will have to fall below 1s. 3d. before this is possible. The balance of supply and demand will almost certainly not permit this. London stocks, it is true, stand at over 65,000 tons. But it is considered, to quote the circular of a well-known firm of rubber brokers, "that the March shipments were the peak of supply and from now onwards we shall feel the February 1 "cut" to 70 per cent. The "cut" on May 1 to 60 per cent. is now assured, but shipments will not be affected for at least a month afterwards." It is thus clear that sooner or later supplies will be on a less generous scale. As for the demand side, the key to the position is, of course, America. Sir Eric Geddes, at the meeting of the Dunlop Rubber Company, was optimistic in this connection. Confirmation of this view is forthcoming from the report that the present season appears to be a good one for tyre manufacturers and all factories both at home and in U.S.A. are reported to be working full time. America this year will, it is believed, witness "replacements" on a very large scale. No observer, however, is bold enough to predict the course of prices very far ahead.

In the meantime the share market remains very quiet and rather dull in tone. The supply of stock, however, appears to be small and any material revival of demand is likely to be quickly reflected in an advance in prices. Dividend declarations continue to be on a satisfactory scale and yields at present prices are in many cases very generous.

Popular Investment Trusts.

This week yet another new investment trust has met with satisfactory support from the investor, thus testifying to the continued popularity of these undertakings. Certainly the investment trust offers distinct attractions to the investor, and especially to the less wealthy and less experienced investor. The investment trust, owing to its large resources, applies the principle of diversification in a high degree, while it is able to employ experts in investment. Thus the investment trust may be truly described as an investment specialist. It should be remembered, moreover, that, mainly as a result of the companies' skilful choice of stocks, the ordinary shares of trust companies can generally be bought for capital appreciation.

But, thanks to this expectation of higher capital value or a scrip bonus, the yields given by many of the ordinary shares are somewhat modest. The following are among the more attractive of the moderately priced stocks. The ordinary shares of the Industrial and General Trust yield £4 15s. per cent and those of the Mercantile Investment and General Trust £4 19s. The deferred shares of the Investment Trust Corporation return £4 18s. per cent. The ordinary shares of Traction and Power Securities yield £5 4s. per cent. It should be added that discrimination is necessary when investing in trust companies' stocks.

At the Trocadero Restaurant on April 26 Field-Marshal Lord Allenby presided at the annual dinner of the Egyptian Expeditionary Force, of which he was Commander-in-Chief from 1917 to 1919.

CHESS.

By "CARO-KANN."

The chess world will naturally be greatly interested by the news that the match between Senor Capablanca and Dr. Alekhine for the championship of the world will commence on September 1 at Buenos Aires. It is understood that the match will be six games up and that the games will be limited to 20. The chief point of interest about the match will be its influence on opening strategy. It may be taken almost for granted that there will be some new developments.

I give this week a game from the opening round of the Murton Cup handicap at the City of London Chess Club. The game, in which Black concedes the odds of Queen's Knight and move, is more or less the type of contest that one expects in this competition. The interest of it lies in Black's manoeuvres to avoid exchanges while obtaining an attacking position.

Remove Black's Queen's Knight. 1, P—Q4, P—QKt3; 2, B—B4, B—Kt2; 3, P—K3, P—Q3; 4, Kt—QB3, P—QR3 (1); 5, Kt—B3, P—Kt3; 6, P—K4, Q—Q2; 7, P—Q5, B—Kt2; 8, Q—Q2, P—R3; 9, B—K2, P—K4; 10, B—K3 (2), Kt—K2; 11, O—O, P—B4 (3); 12, PxP, PxP; 13, Q—Q, B—B3 (4); 14, Kt—Kt, O—O—O; 15, P—QR3, QR—Kt;

Position after Black's 15th move, QR—Kt.

16, P—QKt3, P—B5; 17, B—B, P—K5 (!); 18, B—Kt2, Q—B4 (5); 19, R—Kt, P—B6 (!); 20, KtxP, PxKt; 21, BxP, P—R4; 22, Kt—K4, BxB; 23, RxB, Kt—Kt3; 24, Kt—Kt3, Q—B3; 25, R—Kt, P—R5; 26, Kt—R4, Q—Kt4; 27, P—B4, Kt—K4; 28, K—R, RxKt and wins.

(1) This move and P—KR3 at Black's eighth move are essential features in the scheme of development. In a level game these moves would simply represent loss of time which shows plainly how the game has to be modified to meet handicap conditions.

(2) Of course the pawn should have been taken *en passant*.

(3) Now Black has just the type of game he was aiming to get.

(4) To prevent Kt—R4 and at the same time to open the file for the Rooks.

(5) A promising alternative was B—K4. Then if 19, P—B3, P—K6 followed by R—Kt4, KR—Kt., etc.

The solution to last week's end game is as follows:—1, K—B3, K—Q4; 2, K—Kt3, P—R5; 3, PxP, P—B5; 4, Kt—B2, P—B6; 5, P—K4 (ch), K—K4; 6, Kt—K3, K—Q5; 7, Kt—B, B—R6; 8, Kt—R2, P—B7; 9, KxP, KxP; 10, P—R5, KxP; 11, P—R6, B—B5; 12, K—Kt2, K—B5; 13, K—B2, K—Kt6; 14, Kt—B (ch) and draws.

COMPANY NOTES AND REPORTS.

EGYPTIAN MARKETS.

The report of the Egyptian Markets, Ltd., for the year ended December 31 last states that the number of cattle market days lost during the year in consequence of cattle plague was 85 as compared with 134 during the year 1925. The gross receipts from the cattle markets, etc., exclusive of slaughter houses, show a decrease of £13,737 as compared with the year 1925, the total being £60,523 against £74,260. The decrease in cattle market receipts is due to the serious economic situation in Egypt which developed during 1926, and which was caused by a severe fall in cotton prices. This resulted in a shortage of money in the hands of the fellahen, and adversely affected business generally throughout the country particularly during the year under review. The gross receipts from the general markets for the year under review were £34,414 as compared with £35,931 for the year 1925, a decrease of £1,517. The net receipts from the slaughter houses worked during the year were £1,056 against £1,086 during 1925, a decrease of £30. Forty slaughter houses were worked by the company during 11 months of the year. The Government took over two slaughter houses in November, 1926, reducing the number worked by the company at the close of the year under review to thirty-eight. The expenses in the trading account show a decrease of £1,141 under rents, salaries and wages, and maintenance and repairs of markets. The net profit derived from the sale of miscellaneous articles and sundries was £8,840 as compared with £6,603 for the previous year, an increase of £2,237. This increase is due to improved trading in the earlier part of the year under review before business was seriously affected by the economic situation.

The net revenue from all sources for the year 1926 amounted to £57,775 3s. 9d. as compared with £71,320 17s. 7d. during the previous year, a decrease of £13,545 13s. 10d. After deduction of the amount of £22,783 7s. 10d. which it is estimated will be required to meet payment of the Government's share of profits, for 1926, a balance of £34,991 15s. 11d. remains, which, with the amount of £11,954 os. 9d. brought forward from 1925, makes a total of £46,945 16s. 8d. to be dealt with. The fixed charges comprising the annual premia for the amortisation of the share capital and debentures and debenture interest amounted to £6,538 1s. 6d. The sum of £4,685 9s. 2d. has been transferred to general reserve (which includes provision for certain contingent liabilities) and a balance of £35,722 6s. remains available for distribution. The directors recommend the payment of a final dividend (No. 45) on the ordinary shares for the year ended December 31, 1926, of 5 per cent., and a bonus of 1 per cent., making with the interim dividend of 5 per cent. paid in November, 1926, a total of 11 per cent. for the year, absorbing in all £19,217, and in accordance with the terms of the memorandum of association of the company, and subject to the settlement of the proportion of profits due to the Government the payment of a dividend (No. 17) on the deferred shares at the rate of £10 17s. 7 27-100d. per share for the year 1926, which will absorb £3,264 1s. 9d., and leave a balance of £13,241 4s. 3d. to be carried forward, which balance is also subject to the settlement above referred to.

CALCUTTA ELECTRIC SUPPLY

The profit of the Calcutta Electric Supply Corporation for 1926, after making full allowance for depreciation and renewals was £330,240, plus £33,047 brought in. Debenture interest (First Mortgage) takes £3,447, Second Mortgage £27,500 and Preference dividend £48,888. The sinking fund on the First Mortgage Debentures £12,500, and reserves for taxes £15,000. The directors recommend transferring to reserve £50,000, to insurance fund £3,000, to retiring gratuity fund £1,000, dividend on Ordinary shares of 7 per cent. (actual), making 12 per cent., less tax, leaving a carry forward of £31,599. The directors recommend that part of the reserve be capitalised to enable them to issue 126,671 new Ordinary shares for distribution among the holders of 1,366,710 existing Ordinary shares in a ratio of one-tenth of the Ordinary shares standing in the names of such holders respectively, cash at par, however, being paid in lieu of the distribution of fractions of a share. It is proposed to grant to the staff in India a bonus equivalent to 2 per cent. of the Indian net profit in respect of approved service actually rendered in the year 1926.

It is announced that Mr. J. H. Batty has resigned the chairmanship and his seat on the board of the African and Eastern Trade Corporation, Limited, and also of the subsidiary companies. Mr. Robert B. Miller, the vice-chairman, has been elected chairman of the Corporation and Colonel William Nicholl vice-chairman.

Near East Markets

PALESTINE FRUIT.

The Empire Marketing Board in their report dated April 27 state that the Jaffa orange season closed with the sailing of the Marga on April 11 for Liverpool with 24,245 cases, and the Gitano on April 12 for Hull with 11,593½ cases. Total shipments during the season have amounted to 1,803,368 cases, an increase of about 446,000 over the previous season. Total shipments to the various ports have been as follows:—

	1926-27 cases	1925-26 cases
Liverpool	620,447	485,436
Glasgow	423,804	250,859
Hull	313,432	211,422
Manchester	306,186	291,215
London	54,443	56,860
Other United Kingdom Ports ...	76,056	61,655
Continent	9,000	—
	<u>1,803,368</u>	<u>1,357,447</u>

Shipments to all northern ports have increased, with the exception of Belfast, but shipments to London have decreased, although the proportion going to that port was already small.

Official reports state that gales and hail storms during March caused appreciable damage to citrus groves and fruit trees of all kinds (including bananas, apricots and peaches). The Board's Jaffa correspondents report that in districts around Jaffa, the orange blossom is much inferior to that of last year but that in out-lying districts conditions are satisfactory. An early estimate of next year's crop is given as 1,600,000 to 1,750,000 cases available for export to Europe, but this estimate is, of course, subject to very substantial alteration between now and the beginning of next season.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated April 30, state:—

Currants.—The active trading period since our last report was considerably curtailed by the interruption caused by the Easter Holidays, and business has been unimportant. The prevailing fine weather should stimulate consumption, and an improved demand is looked for in the near future. The Greek market continues to advance, which explains the underlying steadiness in evidence. Stocks are light for the time of the year, and this is a contributory factor which is not to be overlooked in reviewing the firmness displayed by holders. Further supplies per Gerano were dealt with, lower qualities being mostly in request at slightly higher rates, and some business was reported in cleaned Pyrgos afloat at 42s. Other sales were, cleaned Amalias and Patras, 42s. 6d., 43s.; Gulf, 43s., 44s.; Panariti, 48s. Vostizza has been difficult to move, and where sales have been effected, values were slightly easier, 46s. to 54s., smalls 42s. 6d. to 46s. Phrygia is now discharging with a good assortment of the medium grades, and when samples are available they should meet with a good reception. Quotations: Pyrgos, 42s.; Amalias and Patras, 42s. 6d. to 43s.; Zante, 42s. 6d. to 44s.; Gulf and Panariti, 44s. to 48s.; Vostizza, 46s. to 54s.; Vostizza, small, 42s. 6d. to 46s. The closing days witnessed a spell of active trading, and there was more interest displayed than we have experienced for some considerable time. Cleaned varieties at 42s. 6d. participated principally in the activity, and a fair amount of business was put through.

Sultanas.—Holders of this fruit have for some time past been displaying signs of dissatisfaction owing to the long period of inactivity which has been experienced, and consequently much disappointment was felt when no sign of

renewed life was noticeable on the resumption of trade after Easter, hopes having been entertained that the bright weather throughout the holiday would have proved beneficial. Prices naturally show a downward trend, and with quiet pressure to make sales, reductions of 4s. to 8s. are recorded, buyers, however, remaining cautious in their reduced values.

Sales of Smyrna and Cretans were made at 60s. to 75s., and of Greeks at 67s. to 78s. Australians have also come into line to make progress, and business has been done at 58s. to 64s.

Figs continue to be pressed for sale, and, with buyers quite indifferent, Genuine were sold at 27s. to 27s. 6d.

IVORY IN FAIR DEMAND.

Messrs. Hale and Son report that the quarterly ivory sales, held on April 26 and 27, comprised 41½ tons (against 28½ tons same time last year), viz.: 20½ tons Zanzibar, Bombay, Mozambique, East African and Siam, 4 tons Abyssinian, 6½ tons Egyptian (5½ tons Alexandrian and 1 ton Malta description), 7¾ tons West Coast African and Congo, ¼ ton Lisbon, and 2½ tons land carriage; also 1 ton mammoth tusks, ¼ ton sea horse teeth and boars' tusks, and ¼ ton walrus tusks, rhinoceros horns, etc., total, 43 tons.

The following was the assortment of the East Indian description: 14 tons soft tusks, ¼ ton hard and Siam, 1½ tons billiard ball pieces, ¼ ton bagatelle points; ¼ ton billiard ball scrivellos, ¼ ton bagatelle scrivellos, ¼ ton cut points for balls, ½ ton cut points off large tusks, ¼ ton under-size and defective points, etc., 1¼ tons cut hollows, 1¼ tons scrivellos, and ¼ ton cores and mixed defective pieces. Of the above quantities 6½ tons consisted of lots previously offered or indirect import, viz.: ¾ ton East Indian and Abyssinian, 1¼ tons Egyptian, 1 ton West Coast African or Congo, 2½ tons land carriage, and ¼ ton boars' tusks. During the progress of the sales 6½ tons were bought in or withdrawn, viz.: ¾ ton East Indian, 2½ tons Abyssinian, ¾ ton Egyptian, ¾ ton West Coast African and 1¼ tons land carriage.

There was the usual attendance of buyers and generally good competition. The quantity of all descriptions was moderate. The Zanzibar and East African consisted principally of the soft description, there being a good selection of large and medium tusks. That from the Congo was mostly hard grain. America and the Continent bought freely and the home trade took about their usual quantity. The demand was rather irregular. Soft tusks were steady to £2 to £3 per cwt. lower, whilst hard was firm to £2 to £4 per cwt. dearer.

Company Meeting.

INDO-EUROPEAN TELEGRAPH COMPANY.

Dividend and Bonus Maintained.

Mr. H. L. M. Tritton's Speech.

The sixtieth ordinary general meeting of the Indo-European Telegraph Company, Limited, was held on April 28 at the offices, 28, Old Broad Street, London, E.C. Mr. H. L. M. Tritton (chairman of the company) presided.

The Secretary (Mr. John I. Bethell) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—I presume it to be your pleasure to take as read the report and accounts for 1926 which are in your hands. (Agreed.)

I am glad to say our relationship with all the Governments through whose territories our line passes continues to be on a satisfactory basis. The close co-operation between ourselves and our friends and partners, the Indo-European Telegraph Department of the India Office, as well as the Government of India, completes the chain which enables us to transmit messages to all parts of India and beyond.

The company's lines have fully maintained their reputation for accuracy and speed, and on the basis of existing traffic show a considerable margin of carrying capacity.

You will expect me to make mention of a subject much to the fore at the present time—namely, wireless telegraphy. The use to which the discoveries in radio transmission have been put are indeed remarkable, but I am convinced that as the telegraphic habit grows, as grow it does, there will still be room for both systems, wired and wireless telegraphy, and in my opinion those companies with land-line or cable systems will continue to hold their own. Accuracy and reliability, combined with speed, are our mottoes, and efforts are continuously being made to effect further improvements. By reliability of service, I mean that we work from morning to night and from night to morning, in fact, our lines, like our offices, are always open and dealing with traffic.

Direct Working with Karachi.

I feel that I cannot remind shareholders and others too often of the advantage which our direct working with Karachi in India offers to the telegraphing public. Although in operation for many years, it does not appear to be generally realised that, owing to the fact that there is no intermediate retransmission, the actual time of transit of telegrams between here and Karachi is practically nil, by which I mean merely the fraction of a second. Thus the total time of transmission from sender to addressee consists of a certain irreducible delay in the booking office, plus time of transmission within India over Indian lines and delivery.

Towards the end of the year we introduced *via* Indo a service with India and beyond of daily letter telegrams in plain language at cheap rates, as well as Christmas greeting facilities. These two classes of

traffic are, we find, much appreciated by the public. We have also introduced a week-end telegram service with Australasia.

The Black Sea Cable.

When I addressed you a year ago I expressed the hope that the difficulties attending the reopening of the Black Sea cable would be overcome. I regret to say, however, that, in spite of every effort on our part, factors over which we have no control have again intervened to prevent the consummation of that much to be desired object.

I can only say that no stone has been, or is being, left unturned to give effect to our earnest desire to restore direct communication between Odessa and Constantinople. With this end in view, one of my colleagues on the Board, Mr. F. J. Brown, took the opportunity which a conference in Berlin last autumn offered of meeting delegates from Russia and Turkey, when the terms of an agreement were drafted. Since that time we have had a representative continuously in Constantinople, for the negotiations have not yet reached finality. I fear also that the efficient repair of a fault known to exist in the cable will not be without difficulty, owing to the paucity of facilities available locally.

It is also with regret that I have to refer to a strike on the part of the company's Russian employees, which took place in the early autumn. I do not propose to discuss the reasons which led up to this unaccountable action by a body of men many of whom have served the company over a long period of years; it is sufficient to say that an agreement was come to, which it is hoped will prevent the recurrence of such an eventuality.

Chairman's Visit to Russia.

In December last I paid a visit to Moscow, and there, accompanied by Mr. Martin Cunningham, the company's representative, whose unflinching tact and unremitting attention to the company's affairs are worthy of special mention, I had the opportunity of meeting the heads of the Russian Government telegraph and telephone services, as well as the chiefs of the Professional Telegraph Union. I take this opportunity of placing on record my appreciation of the courtesy that was shown me by all those whom I met during my short visit, and I should like to express the hope and belief that the opportunity I had of making the personal acquaintance of those who control the Russian telegraph system may prove to be to our mutual benefit.

I also visited the company's headquarters in Russia, at Odessa, and was particularly glad to have the opportunity of meeting on the spot members of the British and Russian staff on both the commercial and maintenance sides, and of making myself acquainted at first hand with prevailing conditions.

There is one matter to which I should like to refer before passing to the accounts.

The provisions of our retirement trust fund, which were drafted in 1904, are not quite in accordance with modern requirements, and are at present in the hands of counsel for redrafting. When this is

HOBBS & Co.

Agents in Calcutta—W. LESLIE & CO., 2 Chowringhee Road.

HOBBS, HART & CO., LTD., LONDON, E.C.2

concluded the directors will lay before you certain proposals and ask your consent to the alterations.

The Accounts.

Passing now to the accounts for 1926, the receipts on revenue account show an increase of £3,662, and the expenses an increase of £9,035. The latter is wholly under the heading of maintenance account, and is due to the fact that as reconstruction of the line nears completion more of the expenditure falls under the heading of maintenance. The expenditure on reconstruction of the line for 1926 was £9,549, or £12,740 less than in 1925. The directors have this year set aside a further sum of £45,000 under this heading, which now stands at £122,375. They have also provided £5,244 in reduction of the Persian section of line.

Income-tax shows an increase of £6,561; this is due to the incidence of the three years' average. During the current year this will again be augmented.

The company's interest in the Radio Communication Company, which stood in the balance-sheet at £25,000, has been disposed of on satisfactory terms. This sale has also enabled us to delete from the balance-sheet the item of £5,860 in respect of Galletti's Wireless Telegraph and Telephone Company, Limited, now in liquidation.

Sundry debtors and debit accounts call for no special comment; sundry creditors and credit accounts are normal. The provision for investment fluctuations shows a surplus over the amount required.

Dividend and Bonus.

While the directors recommend the maintenance of the dividend at 7 per cent., they also feel justified in again recommending the payment of the same bonus as last year of 15s. per share actual, free of tax, equal to 3 per cent., making a total distribution for the year from all sources of 10 per cent., free of tax, the same as last year.

A payment to the retirement trust fund of £15,000 is proposed, and will, I am sure, have your approval. This fund requires important additions to enable it ultimately to meet the corresponding increases of salaries and wages obtaining as a result of the War.

The directors' recommendations as above leave a balance of £11,669 to be carried forward to the credit of the year 1927.

I now beg to move: "That the directors' report and accounts for the year 1926, duly audited, as presented to the meeting, be and are hereby received and adopted; that a dividend for the year ended December 31, 1926, be and is hereby declared of £1 2s. 6d. per share (making, with the interim dividend already paid, 7 per cent. for the year), and a bonus of 15s. per share, both dividend and bonus free of income-tax, and payable on May 2, 1927, to shareholders registered on April 7, 1927; also that £15,000 be handed to the trustees of the retirement trust fund."

Sir Rayner C. Barker, C.I.E., seconded the resolution, and there being no questions or comments it was put to the meeting and carried unanimously.

The retiring directors, Mr. F. J. Brown, C.B., C.B.E., and Mr. H. L. M. Tritton, were re-elected on the motion of Sir Rayner C. Barker, seconded by Mr. Claude H. Tritton, O.B.E., and the auditors, Messrs. Kemp, Chatteris, Nichols, Sendell and Co., were reappointed on the proposition of Mr. Bryan Phelan, seconded by Mr. E. J. Waldron.

Mr. Phelan proposed a vote of thanks to the chairman and directors for their able conduct of the company's business during the past year and also to the staff for their services.

Mr. Waldron seconded the vote, which was unanimously accorded. The Chairman briefly acknowledged the compliment and the proceedings terminated.

The value of Roumania's exports in 1926 was 38,011,269,388 lei, that of the imports being 34,100,778,859 lei.

The directors of the Peninsular and Oriental Steam Navigation Company announce a dividend at the rate of 5 per cent. per annum on the preferred stock (less income tax), and an interim dividend at the rate of 10 per cent. per annum on the deferred stock of the company (free of income tax) for the half-year ended March 31 last. Warrants will be payable on May 12.

NEWS FROM ALL SOURCES.

Bankruptcies in Bulgaria in 1926 numbered 113 as compared with 59 in 1925 and 60 in 1924.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 10 amounted to £E7,093.

The issue is to be made in New York shortly of a three-year 6½ per cent. loan of the Municipality of Belgrade for an amount of £800,000.

The lowest tender for the construction of the Nag Hamadi barrage was that of Sir John Jackson, Ltd., London, at £E1,976,621 (£2,026,036).

Roumania's receipts and expenditure for the first quarter of this year were as follows:—Receipts, 6,218,939,627 lei; expenditure, 5,494,540,641 lei.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for the month of March was 40,240 tons.

The directors of the British India Steam Navigation Company, Ltd., announce interim dividends at 2½ per cent. on the 5 per cent. preference stock (less income tax) and 4 per cent. (free of tax) on the ordinary shares, for the half-year ended March 31 last. Warrants will be payable on May 12.

State Mortgage Bank of Yugoslavia 30-year 7 per cent. Sinking Fund Bonds to the amount of 12,000,000 dollars have been sold in New York at 92. A substantial amount of the issue has been reserved for sale in Europe.

The Federation of British Industries has passed a resolution declaring that the maintenance of many of the functions at present undertaken by the Department of Overseas Trade is essential, as their abolition would seriously prejudice industrial and commercial interests, and in particular that it is essential that adequate arrangements should be made for the collection and recording by the Government of information regarding such subjects as foreign tariffs, customs regulations, etc. Furthermore, they express the strongest hope that the services of Commercial Diplomatic Officers and Trade Commissioners abroad should be retained. They realise, however, the need for the strictest economy in Government expenditure, and will do their utmost to co-operate with and to help the Government to secure such economy with the least possible injury to national interests.

The total value of the imports and exports of Cyprus during 1926 was £1,572,682 and £1,052,786, while re-exports amounted to £50,785. In the import list the United Kingdom occupied the first place with £421,786. Australia was second with £168,184, while other totals were: France £121,622, Italy £107,150, the United States £106,750, British India £74,970, Greece £90,502, and Egypt £58,105. As regard exports, the principal countries were:—Egypt £269,938, Italy £154,066, the United Kingdom £94,151, Palestine £57,223, Belgium £65,406, France £70,909, Germany £90,850, Greece £66,042, and Spain £76,417.

As a result of recent modifications of the Turkish Customs Law imported goods cannot be retained in Customs sheds for more than one year, and travellers' effects cannot be retained therein for more than three months. On the other hand, goods in transit depot may remain for three years. Proprietors of goods which remain in Customs sheds or transit stores for longer periods than those qualified lose all rights on the goods in question. On the expiration of the specified periods the Customs authorities sell the goods, and the proceeds of such sale, less the amount claimed by the Customs in respect of storage and other expenses, together with any claims in respect of freight, quay dues, landing charges, insurance, etc., will be held at the disposal of the owner of the goods for one month only, and if no claim is presented within that month will be passed into Treasury receipts.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 21, state:—

Since our last report the futures market has been rather more active and the tone is firm, especially for Uppers. The week's summary of price movements is as follows: Sakellaridis: May, 26.77 dollars, 0.40 dollars up; July, 27 dollars, 0.40 dollars up; November, 27.71 dollars, 0.47 dollars up; January, 27.56 dollars, 0.42 dollars up. Ashmouni: April, 19.47 dollars, 0.48 dollars up; June, 19.67 dollars, 0.48 dollars up; August, 19.91 dollars, 0.56 up; October, 20.30 dollars, 0.52 dollars up.

Sakel.—The market has been firm during the whole week but the turnover has not been large. No new factors are apparent and the firmness must again be put down to the absence of sellers.

The demand from abroad has not shown any signs of improvement; on the other hand, reports from the consuming centres are unanimous in complaining of the poor quality of the present crop and anticipating the employment, as far as possible, of other growths in place of Egyptian Sakel.

New crop Sudan Sakel has now been available for about a month on the Liverpool market and the quality of the cotton has been found quite up to last season's standard. The last Sudan crop has now practically all gone into consumption, which means that the mills have taken about 500,000 kantars of Sudan Sakel and the Egyptian cotton now has to face the competition of a new crop possibly slightly larger than that of last year.

Uppers.—This market has been active and the tone is firm. Prices show a considerable improvement on the week; the better tone of New York is, in some measure, responsible for the rise but the principal factor is the revival in the demand by American spinners, who have taken quite a fair amount of cotton during the last few days. Spinners, generally, have shown considerably more interest in Ashmouni than in Sakel during the present season and all indications are for a continuation of this state of things during the remaining months.

The week's receipts amount to 105,662 krs. against exports 217,921 krs; the stock in Alexandria stands at 3,015,294 krs.

The official figures of arrivals and exports for the period September 1, 1926, to April 14, 1927 are as follows:—Arrivals: Lower Egypt, 4,418,000 krs, Upper Egypt 2,707,000 krs. Total 7,125,000 krs. Exports: Sakel 2,263,653 krs. Ashmouni 2,727,140 krs. Various 349,942 krs. Total 5,340,735 krs.

Spot.—Minet el Bassal has only been open three days during the past week, owing to the Easter holidays. A moderate business has been done, with a slight improvement in the demand from abroad, and sales for the three business days amount to about 8,500 bales, of which we estimate 4,000 bales Sakellaridis, 4,100 bales Ashmouni and Zagora, 250 bales Pilon and 150 bales other varieties. The spot situation is about as last week in respect of cotton offered.

Sakellaridis: has been in rather more demand than last week and a fair business has taken place. All styles except the best have changed hands. Spot differences are without much change from last week but with a tendency to harden.

Ashmouni and Zagora.—A fair business has been done covering all grades; the medium qualities once more have attracted most attention. Spot differences are generally a little dearer than last week and holders are firm and difficult to deal with.

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester. (Established 1887).

Pilon.—A somewhat improved business has taken place. Spot differences are rather dearer than last week.

Brown, etc.—A small business has been done in Brown and spot differences are rather higher than last week. A few bales of Fouadi have also changed hands.

White: has been in fair demand at about last week's differences.

Up-country.—Business up-country is dwindling daily. Contrary to the reports current last month, the newspapers now announce that the Government will not permit the ginning factories to work after the end of this month. We are very sceptical whether any such decision will be taken in view of the quantity of unginned cotton still remaining in the villages. New crop business is slow.

Crop 1927.—Weather conditions have been, generally, favourable during the week and the crop is progressing normally. Re-sowing has, so far, only been necessary on a small scale. Water is in ample supply and complaints are few.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 27:—

Egyptian Futures.—Sakel Contract.—For some time past this contract, on account of the narrow fluctuations ruling and absence of any decisive feature, has failed to attract outside interest; however, during the current week, the rather serious position that has arisen in America through the floods in the Mississippi Valley and the sharp advance in the New York market have revived to some extent speculative activities, with the result that values have appreciated 61 to 90 points for near and 85 to 91 points for distant positions since our last report. In the earlier days of the week, the Alexandria market showed a firmer tendency, but during the more recent sessions a further sharp advance has taken place. Apart from the inherent "bullish" sentiment always in evidence on these occasions on the other side, we believe that quite a considerable measure of support has been received in the shape of buying orders from America, probably on the assumption that the future prospects of a normal supply of extra staple cotton in the States has been seriously jeopardised by recent events there. So far as our own market is concerned, prices have moved up to the existing level without meeting much opposition, and at times buyers have experienced difficulty in getting hold of contracts; as we pointed out in our recent report, there is little or no inducement for fresh selling to be attracted here owing to the abnormal parity at which we have been running recently with

Alexandria, so that offerings have been practically restricted to those who have been taking their profits on earlier purchases. New crop positions continue to be favoured by operators, and with a consistent demand for these from both Continental and local speculative sources they have again appreciated in comparison with the nearer months. Owing to fears of re-tenders of undesirable cotton, Mays have depreciated to 32 points under July; this tendency to run away from actual cotton can hardly be construed as a "Bull" point, but on the first signs of any active trade support, we think that the ruling difference would quickly show a radical change. So far, trade interests do not appear to have adjusted themselves to the level now obtaining; there has been some slight increase in the offtake, but not to the extent sufficient to hold the market should the American values commence to reveal a reactionary tendency.

"Bullish" sentiment, at the moment, appears to be growing in intensity, and this being the case we would hardly like to oppose the market at the present juncture; however, those purchasing to-day must realise that the substantial appreciation that has latterly taken place is mainly the result of speculative enterprise, and only in the event of more serious news from America coming to hand, or a definite buying movement by the trade, would we recommend purchases with any degree of confidence.

Upper Contract.—This option has displayed considerable strength during the past week, and under the influence of strong American markets prices have advanced 79 to 84 points for near and 84 to 90 points for distant positions from the level ruling at the time of our last report. A steady trade demand for the Upper varieties has been in evidence, and reports from Alexandria indicate that American buyers have been operating on a fairly heavy scale, especially in the medium and lower qualities.

Egyptian Spot.—The past week has been marked by a substantial all-round advance in the price of the raw material. The origin of the advance has been the serious floods which have occurred in the

Mississippi Valley, and which are threatening the world's supply of staple cotton for the ensuing season. Up to date, the spinning trade have acted very cautiously in face of the new situation created, but signs are now beginning to appear that a keener interest has been aroused and, unless the situation shows an immediate and marked improvement, it is highly probable that the effect of increased trade support will soon be felt by markets which hitherto have been swayed very largely by sentiment.

Until to-day, when a considerable broadening in the inquiry took place, the local demand for Egyptian cotton has ruled on very moderate lines. Sakel has continued to move off very slowly, and the lower grades have been asked for rather than the better ones. In Uppers, a brisk inquiry has been witnessed for cotton at from 10d. to 10.75d., and bargains within this range have now become exceptional, the market having been well swept. Some revival in the Pilon inquiry has been observed, but we doubt if much business has resulted from it. The popular range appeared to be 10.50d. to 11.50d. For Sudans, a good inquiry has been evidence, although the White cotton has attracted rather less attention than has recently been the case. Sudan Sakel has met with a very fair offtake, both for old crop and the new. The latter, when first put on the market a few weeks ago, was at first regarded as being somewhat overvalued by spinners. However, the recent advance in all markets has altered the complexion of affairs considerably, and the new crop now bids fair to become as popular with the trade as was its predecessor.

C.i.f. business for Egyptian cotton has remained very quiet. Forwardings to spinners for the week ending the 22nd inst. were returned as 4,116 bales Egyptian and 1,803 bales Sudan; low figures accounted for by the Easter holidays. Estimated sales, 1,300 bales Egyptian and 2,850 bales Sudan. Quotations of Sakel have been advanced 65 points and those of Upper 90 points on the week. F.G.F. Sakel, 14.30d. F.G.F. Upper, 11.60d.

The British Empire: Servant of Palestine.

To those who were profoundly stirred, both in their admiration and in their hopes, by the magnificent performances of the mixed troops under the command of General Allenby during the Palestine campaign, the subsequent indifference which the British people has appeared to show in the ordering of the Holy Land has sometimes been a disappointment. There is no sense in burking the fact: the present generation of Englishmen does not interest itself as it should in the land which was freed of the Turk by so mighty and so memorable an Imperial effort. Not that the War has been forgotten; not that the long campaign of suffering and loss and ultimate triumph which began in Egypt and ended in Syria can ever slip into oblivion; but there has unquestionably been a tendency to regard post-War Palestine as being no very intimate concern of the British Empire, as being, rather, one of those queer remote places whose future belongs to a foreign people whom the average Briton never meets.

This unimaginative attitude is more than deplorable, and it is because of the chances of its being quickened into vitality by the ceremonies, on May 6 and 7, at Ramleh and Jerusalem, that we would here refer to Lord Allenby's return to Palestine in order to unveil the Stone of Remembrance in the War Cemetery at Ramleh and the War Memorial which has been erected on the west side of Mount Scopus. The men whose memory Field-Marshal Lord Allenby and Field-Marshal Lord Plumer, together with some hundreds present with them and some millions absent yet also with them, saluted at Ramleh and Jerusalem, died, indeed for the British Empire. Simply that this Empire might conquer the Turk and his German collaborators they endured to their end. We, at any rate, do not care to repeat the cant phrase that British soldiers died for any political end other than that the Empire of their birth should be preserved inviolate.

But, unless their duties ended completely with them, it is

for those of their kin who survived the Great War to carry on in the land of their sacrifice the British ideal. We choose here to speak not of any materialising of the Allied victory in Palestine, but rather of the necessity of spiritualising the British ideal in the Holy Land. Blake has written of building Jerusalem in England: may not we, who, through the ardours of Allenby's men, have the opportunity, also take England to Palestine? The Holy Land is not, in the ordinary sense of possession, possessed by the British Empire—it can never be possessed by one people—but there exists the opportunity of imprinting for ever on this historic land the stamp of British conceptions. Can it be said that Britain is making the fullest use of her chance? This is not a religious matter, though it has some of the force and significance of religious emotion; nor is it a material matter, though to some extent it may express itself in material things. Rather, we should say, it is a moral opportunity. And, seeing the divided counsels from which the Empire has suffered and upon which it has acted in the Near East since the War, we say it is a moral responsibility. Finally, harking once more to the Palestine War Memorials, we say it is a moral obligation.

The time is fitting for a revision of Britain's task in Palestine, by which we mean not a new vision, but rather a return to the vision in which Lord Allenby, and, we believe, the whole Empire which he represented, was steeped in when he entered on foot "the mystic city many gated." Too much we have heard of the visible, material side of the Holy Land, too much of "political" rights, too much of local squabbles. Cannot the peoples of the Empire for a moment concentrate, and turn from the local, the transient, the partial, re-glimpse the eternal which lies behind and continually suffuses from Palestine, and then, in greater humility and perhaps in greater pride, re-assume the task, which British soldiers made possible and inevitable, of sweetening, with British reverence, the Land of the Three Faiths?

THE PROBLEM OF ABYSSINIA.

The visit of the Duke of the Abruzzi to Abyssinia may be regarded as an indication that some at least of the soreness created in Addis Ababa last year by the publication of the economic agreement between Italy and Great Britain in regard to Abyssinia has passed. The Abyssinians, with their long record of independence, are a proud people, and there may be something in the visit of the near relative of the Sovereign of a Great European Power that appeals to their national pride and prompts them to take a more philosophical view of the action of the British and Italian Governments, which at first evoked genuine resentment. They are, indeed, so constituted that they are more likely to think of the Italians in connexion with events of thirty-one years ago than with the Anglo-Italian Agreement of December, 1925. It will flatter their *amour propre* that the Italian Duke should have come all the way to Addis Ababa to return the visit of their own Regent, and Italian prestige will during the Duke's stay stand high outwardly in Addis Ababa. If it serves at the same time to strengthen the position of Ras Tafari, Italy will have done good service not only to Abyssinia, but also to those European Powers whose interest in the country is confined to its moral and material advancement. The sight of a nation seeking to keep itself shut off from the world and living its own life, undisturbed by the feverish activities of modern civilisation, necessarily commands some sympathy; but it is an anachronism that must contrive its own undoing, even if the world at large stands resolutely aside. Abyssinia, indeed, would resent the suggestion that she is not moving with the times. The Abyssinian Note to the League of Nations protesting against the Anglo-Italian Agreement declared that, although they had only recently been "introduced to modern civilisation," the people of Abyssinia "are anxious to do right, and we have every intention of guiding them along the path of improvement and progress." In other words, the Abyssinians have put their hand to the plough and must not look back. They are right in claiming that their rate of progress should be determined by their own free will; but the problem which really confronts them has not to do with any thrust from without, but with the attempt of a section of the community to hold back the wheels of progress from within.

In the interesting article which we published last week on the outlook in Abyssinia, the writer, Mr. C. F. Rey, who has taken full advantage of his opportunities for studying the country and for the sympathetic understanding of its people, drew a striking picture of the difficulties besetting the enlightened Regent, who stands almost alone among the ruling class in the self-imposed task "of trying to introduce administrative reform, decent government and modern institutions." On the one hand are

those with whom rest to-day power and influence, for the most part hopelessly reactionary, uneducated themselves and refusing to give their children a modern education for fear the latter's eyes should be opened to the deficiencies of their parents; on the other hand there is an increasing number of Abyssinians of humbler station who, by hook or by crook, some by sojourn abroad, others by the limited educational resources available in Abyssinia itself, are beginning to appreciate the disabilities under which the country labours with its incubus of ecclesiasticism and a reactionary aristocracy. Under such conditions, it would be thought, one of two alternatives must happen; either a serious social upheaval will take place with the attendant risk to Abyssinian independence of civil war, or reaction will so assert itself that a collision with the outside world becomes inevitable. The best that can happen to Abyssinia to-day is that Ras Tafari Makonnen, who has the great advantage of being still young, should be spared to direct the gradual progress of the nation. If ever there was a one-man country it is Abyssinia at the present time. The outlook for this reason must remain obscure, until there are more general signs that a definite section of Abyssinian opinion supports the Regent.

In these circumstances it is unfortunate that Great Britain should have chosen this stage of Abyssinian development to testify in an unmistakable way to the exhaustion of her patience, so sorely tried for a generation or longer by the Abyssinians. The conclusion of the agreement with Italy was liable to be regarded as an admission that the British Government despaired of making headway in Addis Ababa, and preferred to stake out claims beforehand for preferential treatment in the event of Western Abyssinia's falling under Italian control. We are far from saying that this was the motive behind the Agreement, or that it can legitimately carry this interpretation. It is admitted that the construction of a dam at Lake Tana is overdue; but reliance on any change in the status of Western Abyssinia offers no short cut to its authorisation. The immediate effect of the Anglo-Italian Agreement was to neutralise Italian intrigue against Great Britain at the expense of strengthening Abyssinian recalcitrancy through the suspicion and alarm engendered by the Agreement. That consent for the construction of the Tana works is thereby brought any nearer must appear very doubtful. Experience has shown that in all international relations, particularly in the East, Great Britain fares much better when she relies exclusively on her own diplomacy and does not identify herself in any way with the interests of another Power. It is the moral of the story of British relations with Persia and of those with Greece in the early stages of the War, and it bids fair to hold good in the case of Abyssinia also. The only peaceful short cut to any goal in the East lies in personality. The problem of British relations with the Abyssinians presents peculiarities that, possibly, are not to be met with in any other country. Its solution, therefore, is not likely to be prescribed for in any diplomatic text-book; but must be sought at first hand by means of complete understanding of and sympathy with the people and full appreciation of their difficulties. If the Regent constitutes for the time being the only hope for the country, it is clearly unsound to weaken his position *vis-à-vis* the reactionaries by enabling them to suggest that his policy must entail the final surrender of Abyssinia to foreign control. From the point of view of any ultimate bearing on the principle of Abyssinia for the Abyssinians the Lake Tana project has nothing in common with an Italian railway across the whole length of the country, linking Italian possessions on the north and south. The former is immediately feasible, the latter futurist, if not fantastic. For the Abyssinians, however, the two schemes now stand linked together, conjuring up identical alarms. If the visit of the Duke of the Abruzzi causes the Abyssinians to moderate their anxiety regarding Italian designs, it is to be hoped that advantage will be taken of the circumstance to represent once again the Lake Tana project in its true light.

Notes of the Week.

The Albanian Dispute.

Negotiations between Italy and Yugoslavia are expected to begin this week in Rome. In spite of Signor Mussolini's veto on any discussion of the Tirana Treaty, it is supposed that opportunity will be found by the Italian Government to lay stress on the harmless character of its relations with Ahmed Beg Zogu. Whether these declarations will entirely reassure the Yugoslav nation remains to be seen; but it is evident that for any definite and lasting improvement in the relations between all three parties to the dispute Yugoslavia must rely on direct negotiations with Albania. Further information regarding the genesis of the recent scare testifies to the genuineness of the alarm felt in Albania over the alleged activities on the Yugoslav side of the frontier. The reports that reached the Tirana Government satisfied it that the Yugoslav authorities were carrying out an elaborate scheme for setting *komitajis* in motion. The frontier zone, so the reports ran, had been divided into sections under committees and sub-committees, and each unit was in close touch with officers of the regular army. The Albanians knew of no actual military movements, and the statements regarding the latter were an Italian amplification of the Albanian reports, which, as the event proved, could not be substantiated. Italy, indeed, made no attempt to do so, nor did she show the least readiness to have any unbiased inquiry into her allegations, which must have revealed the discrepancy between the Albanian Intelligence reports and the Italian version on which the Italian Government based its scare Note to the Great Powers.

Yugoslavia and Albania.

There are two obvious weaknesses in the Albanian case. In the first place, in spite of the Yugoslav and Albanian Governments being represented respectively at Tirana and Belgrade, no steps were taken by Ahmed Beg Zogu to protest to the Yugoslav Government against the alleged activities across the frontier; secondly, he submitted to the grave indignity to Albanian independence entailed by allowing an outside Power to act as spokesman for Albania with the Great Powers. Ahmed Beg Zogu went even further in his subservience, by thanking Italy subsequently for having usurped the functions of his own Government. It is unnecessary to-day, so long after the event, to inquire into the accuracy or even plausibility of the secret service intelligence that reached the Tirana authorities. Without doubt, the reports alarmed the Albanians; they seem to have made no attempt to consider what ultimate object Yugoslavia could have in view in stirring up trouble in Albania, and in his inexperience Ahmed Beg Zogu simply placed himself in Italy's hands. A wiser Government would have tried to look farther ahead. Even if it be granted that Yugoslavia is disappointed with the pro-Italian attitude of the Albanian President, the fact remains that the latter has made some attempt to discharge his obligations by handing over Sveti Naoum, and it is not very clear what the Yugoslavs would hope to gain by risking a collision with Italy at a time when the economic situation in their country is unsatisfactory and money is scarce. To provoke a war with Albania without the shadow of justification is a very different matter from declaring war on Italy in defence of the principle of the Balkans for the Balkan peoples. The moral of the whole incident is that the Yugoslav and Albanian Governments should lose no time in coming to an understanding. Albania is nervous regarding Yugoslav designs, and Yugoslavia is afraid of Italy's policy in regard to Albania. If the Belgrade Government can reassure the Albanians, the latter will have less reason to place themselves in Italian hands. It is generally believed by those who have first-hand knowledge of Albania that Ahmed Beg Zogu is the only Albanian who has shown himself able to protect the country from chaos; there is no need to doubt his patriotism, even if force of circumstances or inexperience has made him appear

subservient to Italy. The remedy rests largely in the hands of the Yugoslav Government, and should be one of the first tasks to be taken up by the new Minister for Foreign Affairs in Belgrade.

Greek Political Parties.

The appearance of another political party in Greece would be less significant, if it did not happen to be the National-Republican party of General Kondylis. It was General Kondylis who overthrew the Dictatorship of General Pangalos and then, when he had re-established the constitutional republic with Admiral Koundouriotis as President and had held a general election, withdrew from politics, after having disbanded the political group that accepted him as its leader. That within six months of this dramatic act of self-abnegation General Kondylis should reappear on the political stage and join the ranks of the Opposition is somewhat ominous. During his tenure of office from August to December, 1926, he created the impression that he was actuated entirely by patriotic motives in all that he did, and that he was singularly devoid of self-seeking propensities. His present action suggests that either he is excessively impatient or that he finds the situation in Greece worse than it is represented abroad to be. The President of the Republic has already shown that he is dissatisfied with the dilatory methods of the Coalition Government in regard to the passing of the Constitution and has been with difficulty persuaded to remain for the present in his office. General Kondylis appears to be less exercised over the Constitution than he is over the Government's attitude towards General Pangalos and towards the financial situation. The former matter is at best a negative one, although it were better to have the fate of the ex-Dictator removed from the country's agenda. The financial situation, on the other hand, is a serious matter. It was hardly to be expected that the Cabinet of M. Zaimis would put Greece's finances on a sound footing in six months; but others besides General Kondylis will have wished that more headway could have been made in this direction.

Capitulations in Persia.

The fact, which we noted last week, that the Shah of Persia has just drawn attention to the so-called capitulatory régime in Persia, refers one to the history of special privileges for foreigners in Persia. It is worthy of note that these date, and derive solely, from the Treaty of Turkomanchai, which was signed between Russia and Persia in 1828. The circumstances of this origin deserve attention. At that time Persia, under the avaricious Fath Ali Shah, had been decisively beaten in war by Russia, and the demands that the Tsar's representatives made, on the attainment of victory, were not light. In Article VII. of the Treaty of Commerce which is annexed to the main Treaty of Turkomanchai, it is provided that differences between Russian and Persian subjects shall be examined or judged only in the presence of a dragoman of the Russian Legation or Consulate. Now the insertion of this Article may be alternatively construed as implying the existence at that time in Persia of maladministration of justice or of the complete untrustworthiness of Persian judges, or merely as a piece of Tsarist vindictiveness and dictatorial temper. Its bearing on the present position in Persia is, however, profound.

Europeans and Persia.

Actually, this Article is the only legal basis of Capitulations in Persia, although it is the ground on which all Western nations have subsequently conducted their intercourse with Persia. The extra-territorial privileges introduced by this Treaty of Turkomanchai have been extended to other Europeans, and are largely in force to-day. Russia, of course, made at least nominal renunciation, in 1921, of her special privileges in Persia; but the majority

of other nations have continued to enjoy "most favoured nation" treatment. It is, therefore, fairly obvious that Persia is making no very monstrous claim in seeking the abolition of a régime which was introduced by Tsarist Russia, followed by other nations, and then renounced by Bolshevik Russia. Recently, she wholly reorganised her Ministry of Justice, under Davar, and if the good results that are hoped for from this reform are realised, it is possible that the present Shah may see the special privileges of foreigners renounced in Persia. Persians themselves, however, will not be unwilling that the new Ministry of Justice should be given an extensive trial, before foreigners are asked to yield, to what is admittedly one of the most hospitable if still backward peoples, privileges that have been naturally if not very formally conceded. To have the Western model of Justice is much; but it is the Western interpretation and execution of law that will give confidence to Europeans in Persia. The progress of the demand for the abolition of the present régime should be watched by foreigners in Persia at once with vigilance and with sympathy.

Brigands in Palestine.

The hold-up by brigands, on May 5, of a motor-car containing, among others, the Anglican Bishop in Jerusalem and Mrs. MacInnes, is one of those regrettable and happily decreasing incidents that remind one that the Holy Land is still a primitive and picturesque country. The ambush took place about twenty miles north of Jerusalem on the Jerusalem-Nablus Road. One man, an Arab chauffeur, was fatally wounded. For the rest, all the money and valuables of the passengers were confiscated. This sort of thing does not happen often in Palestine, and, while every sympathy may be extended to all of the ambushed, it need not be supposed that the incident was due to laziness on the part of the police. Brigandage, despite what the Good Templars may think, is not necessarily the result of prolonged drinking; it is, in fact, a habit of the East which possibly antedates the discovery of spirituous liquor. Nor, of course, is it a monopoly of the British mandated State of Palestine. The very word "hold-up," in fact, suggests that the crime is not unknown in the more civilised West.

The Voice of the Croaker.

The pertinacity of the campaign which is indulged by a certain section of the English Press for the evacuation of the Middle East by Great Britain is really remarkable, and is an interesting sidelight upon the methods of modern journalism. "Clear out of Iraq and Palestine," once

said these croakers of the *Daily Mail* type. That was in the days when both the internal and external condition of British mandated territories in the Middle East gave rise to considerable anxiety. But this slogan is still, when the situation is wholly altered, on the lips of these unthinking choralists. What matters it to them that peace has been made with the Turkish Nationalists and with the Nejdian Wahhabis; or that the Arabs of Iraq and Palestine would be the first to cry out were these countries to be abandoned, by the hand which delivered them from the Turk, in favour of another European Power? And yet the *Daily Mail*, in its leading article of May 2, cynically suggests that the mandate for Palestine and Mesopotamia be handed over by Britain to Italy! Does this journal really imagine that the scorpions of Italy would be less hurtful than the whips of Britain? Has it ever given one single thought to the wishes or the welfare of the Arab inhabitants of the Middle East? Of course it cares not two straws for the Arabs and Arabia: so that Britain escapes from lands which it persists in regarding as useless desert (and presumably it would have used the same arguments years ago about the retention by the British of influence in Egypt), and that the "strong man of Europe," Signor Mussolini, be afforded lands wherein to plant his surplus population, all sorts of twisted arguments may be used. Surely no worse form of heartless *Realpolitik* has been suggested since the War than this proposal to hand over the destinies of a people whose institutions were destroyed during the War, and for which, since the Armistice, the British have been endeavouring to find substitutes acceptable to that people. It is fortunate indeed that our country is ruled by men whose conceptions extend a little more widely than the mere consideration of immediate profit. With the problems and progress of Italy Great Britain may have every sympathy; but to suppose that such progress must be achieved at the expense of Great Britain is indeed a curious form of vicariousness. The Mesopotamia and Palestine campaigns were not fought in order to solve the subsequent problems of the Fascisti.

The Crisis in Palestine.

The Executive of the Zionist World Organisation has issued an important statement upon the general position of the Jews in Palestine. It points out how strained the financial resources of the Zionists have lately become, owing to the collapse of the boom period in Palestine. As is known, things were so bad for the colonists that weekly doles had to be granted. The statement continues: "The Executive are pleased to refer to the readiness of the Mandatory Government to aid in connexion with the emergency. . . . It will be our duty, as always, to negotiate for a greater degree of direct support of the development of the Jewish National Home on the part of the Mandatory Power, but we reject as pernicious doctrine the suggested policy of a persistent formulation of illusory political demands when the larger burden of responsibility obviously rests upon us." This declaration is particularly interesting in view of the fact that Mr. Louis Lipsky, who, incidentally, is one of the signatories to this statement, recently took exception to some remarks which we made on this subject. We note, too, that the *Palestine Weekly* rallies to the side of Mr. Lipsky in this matter. But, surely, if the truth had been that it was the Mandatory Power which was chiefly to blame for the "crisis" in Palestine, some mention or hint of it would have been made in this statement of the Zionist Organisation? Can it be that Zionists in council are not prepared to go as far as Zionists in an individual capacity?

Under the auspices of the Anglo-Hellenic League a meeting took place at 5, Queen's Gate Gardens, on May 3, at which Mr. C. M. Sleeman, of Queen's College, Cambridge, described his experiences in ascending Mount Olympus. The Greek Minister was present.

Mirza Hussein Khan Alai, who became Persian Minister in Washington in November, 1921, has been appointed Minister of Public Works in the Persian Cabinet, in succession to Nahdigirli Khan Hedayat, the Mokhber-es-Sultaneh, who has been promoted Lord Chief Justice of Persia.

EGYPT

Cairo, April 30.

The New Cabinet and the Chamber.

The crisis is over, not, however, without a last-minute hitch, which threatened to wreck the whole combination. The Sarwat Cabinet is now in the saddle, but it is by no means certain that all trouble is passed. The Chamber, if its humour on the day when the new Cabinet made its bow is any criterion, is far from contrite, and there are distinct signs that it is not satisfied with the manner in which the crisis has been resolved. There is, it is plainly evident, great disappointment that a purely Wafd Cabinet was not formed, and this feeling of disappointment extends to those deputies who aspired to portfolios and have had to return empty to their seats in the Chamber. These dissatisfied candidates do not intend to remain quiet, and may be expected to heckle the Cabinet at every opportunity. On the other hand, Sarwat Pasha means to stand no nonsense, as his replies on the first day of his appearance as Premier to certain deputies plainly showed, and it is quite possible that the bulk of the Chamber, having had a fright, will not be inclined to resume in a hurry the tactics which led to the crisis. Many shrewd observers believe that there will not be any incident until after the vacation, when a recrudescence of the trouble is confidently expected. At the same time there are not a few who confidently anticipate fireworks before Parliament rises. The Chamber is indeed such a sensitive and impulsive body that it is impossible to say what it will do in any given circumstances, and I doubt whether Lloyd's, if it were asked, would find it easy to quote a rate for the life of the present Cabinet.

Increase in Crime.
