ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.*

SAM FAY, *General Manager.*

BOOKS on the NEAR EAST

DOMESTIC LIFE IN RUMANIA.

By DOROTHEA KIRKE. Illustrated. **5s.** net.

The book gives an account of an English lady's experiences in a well-to-do middle-class house in Rumania. Interesting sidelights are thrown on other sections of Rumanian society.

THE ASPIRATIONS OF BULGARIA.

Translated from the Serbian of "Balkanicus." **2s. 6d.** net.

"Balkanicus" has cast a flood of light on the tangled politics of the Balkans.

EGYPT OF THE EGYPTIANS.

By W. LAWRENCE BALLS. **6s.** net.

Contains the most comprehensive survey of Egypt of the Egyptians that we have ever read.

THE BALKAN PENINSULA.

By FRANK FOX. **7s. 6d.** net.

During the Turco-Balkan War of 1912 Mr. Fox was War Correspondent for the "Morning Post," and afterwards, when the victorious allies fell out and took to fighting one another, he stayed on in the troubled area. The volume under review gives the impressions he gathered at that time.

ENGLISH-SERBIAN PHRASE BOOK. With Easy Grammar.

By LOUIS CAHEN and NEVILLE FORBES, M.A., Oxford, B.M. **1s.** net.

We warmly recommend this useful and cheap book to every one who is anxious to learn Serbian.

THE FOUNDATION OF THE OTTOMAN EMPIRE: A History of the Osmanlis up to the Death of Bayezid I. (1300-1403).

By HERBERT ADAMS GIBBONS, Ph.D. **10s. 6d.** net.

The above-mentioned books, or any other publications, may be obtained at the published price, post free in the United Kingdom, or on remitting 6d. for postage abroad, from

The Near East, Ltd. (Book Dept.), **16-17, Devonshire Sq., London, E.C**

NOTES OF THE WEEK.

After a siege of nearly five calendar months Kut has fallen. For some weeks it has been known that the prospects of relief were becoming fainter and fainter, and General Townshend's capitulation was expected at any moment. On the night of April 24 a last desperate effort to revictual the garrison was made by the dispatch of a ship laden with supplies. The attempt to run the gauntlet of a series of Turkish lines was carried out with the utmost gallantry; but it failed. Aeroplanes discovered the vessel aground some four miles short of Kut. The same day General Townshend's force, having come to an end of their provisions, surrendered unconditionally. They numbered a little over 9,000 of all ranks, of whom 2,970 were British and the remainder Indian troops.

The full story of the defence of Kut has yet to be told; but enough is known to justify the wording of the official report, which spoke of the resistance being conducted with a gallantry and fortitude that will ever be memorable. General Townshend's force reached Kut on December 3. It had already suffered from an arduous campaign when it started from the same point in the first half of November in the attempt to reach Baghdad. On November 22 it fought the battle of Ctesiphon, defeating a large force of Turks. The arrival of reinforcements for the enemy rendered the position of General Townshend, whose force had suffered considerably, untenable, and he was compelled to withdraw down the Tigris. Throughout the retreat the Turks pressed hard upon the column, which had been considerably weakened by casualties amounting to a quarter of its effectives. More than one rearguard action had to be fought; but Kut was reached four days before the enemy arrived in sufficient strength to attack it, although they had been able to dispatch a force lower down the river to cut General Townshend's communications. A series of assaults of the British position were launched in the earlier days of the siege and again on Christmas Day; but the losses suffered by the Turks made them abandon the attempt to take Kut by storm, and they settled down to starve out the garrison, with such assistance as an occasional bombardment and, latterly, air raids afforded them.

Before a relief column could be sent forward, the Turks, under German instruction, had been able to construct a number of positions below Kut, which have proved too formidable for any British force that could be collected and equipped on the spot to penetrate. By the time reinforcements reached General Lake, who had succeeded General Nixon early in January, floods and weather conditions were fighting on the Turkish side. General Townshend's critical position compelled the relief expedition to follow the shortest route; there was no time to organise any turning movement on a scale that could promise success. As the event proved, the Kut garrison was able to hold out much longer than had been anticipated; but before this fact was recognised the time for attempting any line of advance except that along the Tigris had gone by. General Aylmer attacked the Turkish lines on January 21 and again on March 8, in each case unsuccessfully. He was succeeded by General Gorringe, and operations on a larger scale, owing to the arrival of reinforcements, had by this time become possible. A great effort to reach Kut was begun in April, but such was the strength of the Turkish positions, continually narrowed down as the area of attack was by the encroachment of floods, that the relief column was only able to register an advance of nine miles in three weeks before General Townshend was forced to surrender.

Public sympathy with the garrison in Kut has very naturally been stirred by the thought that their gallant defence should have proved of no avail in the long run. But King George has reminded us that another force has to be remembered as well at this time. For three months the Tigris Corps, as the relief column has come to be termed, has been endeavouring to force impossible positions held by a brave and stubborn enemy. During part of this time it had to endure not only the effects of well-directed fire, but also a shortage of supplies and a complete breakdown of hospital arrangements. The story is too fresh in the public memory to need recapitulation here. If General Townshend's force has suffered, the Tigris Corps, too, has been sorely tried. The felicitous wording of the King's message to them, therefore, will meet with ready endorsement throughout the British Empire. "Although your brave troops," runs the telegram to the General Officer Commanding, "have not had the satisfaction of relieving their beleaguered comrades in Kut, they have, under the able leadership of yourself and subordinate commanders, fought with great gallantry and determination under most trying conditions. The achievement of relief was denied you by flood and bad weather, and not by the enemy whom you have resolutely pressed back. I have watched your efforts with admiration, and am satisfied that you have done

Digitized by Google

all that was humanly possible, and will continue to do so in future encounters with the enemy."

Although Kut has fallen, Great Britain's task in Mesopotamia is not at an end. The question whether it was wise to attempt the original dash on Baghdad with the force at General Townshend's disposal is at least open to discussion; but in the face of all that has happened there can be no argument in favour of a withdrawal of the British forces at this stage. We shall hope that the wish is not father to the thought, if we read into the concluding words of the King's message to the Tigris Corps an assurance that a fresh advance is to be made on Baghdad, but this time with an adequate force properly equipped. A Turkish message speaks of the British relief column using old aeroplanes, which were easily shot down by the superior machines on the enemy's side. The description may not be strictly accurate; but it suggests that the Turks have formed their own idea of the equipment of the force that was launched against them with such inadequate preparation.

Bucharest is the medium of transmission for a circumstantial report regarding the death of von der Goltz Pasha. The first announcement of his death gave the cause as spotted fever. It is now stated that the Field Marshal was shot by three revolver bullets fired by one Ali Abdullah, an officer in the 17th Anatolian infantry regiment, in the evening of April 14. All that is established is that von der Goltz died very suddenly. Murder is at least as probable a cause as spotted fever, for we should expect to hear of a serious epidemic raging before the generalissimo of the army is attacked. On the other hand, it is not the first time that reports of friction and worse between German and Turkish officers have reached the outside world. According to one account Turkish officers, before leaving Trebizond, shot several of their German colleagues stationed in the town. The statement may not be true; but few who know both Turks and Germans will regard the incident as impossible. The only room for doubt is whether from the Turkish point of view things have already come to such a pass that the time is ripe for the Turks to turn on their German task-masters.

The refusal of the Greek Government to allow the passage of the Serbian army across Greece to Salonika has created an atmosphere exceedingly favourable to the circulation of rumours. It has been found necessary to deny the report that the Entente Powers intend to proclaim a blockade of Greece with a view to bringing her into a better frame of mind. But there can be no question that the situation is strained. The Greek Government is in a stronger position than it has been hitherto in its intermittent protests, because it controls the railway over which the Serbians would have to be transported. There can be no mere ignoring of the refusal, for before the Serbians can be entrained Greek rolling stock will have to be collected, and this cannot be done in Greece's despite without what would in effect amount to the occupation of the whole of Greece. The occasion is one for a final decision on the part of the Allied Powers in regard to Greece. If it be true that the Government threatens in the last resort to blow up the railway bridge over the Corinth Canal, the Allies must be prepared for Greek obstinacy being maintained to the point of an ultimatum.

All efforts at trying to persuade Greece will fail, and may, therefore, be omitted entirely. The Allies must make up their minds whether they will themselves withdraw their request and meekly transport the Serbians round by sea, or whether they will regulate once and for all Greece's position towards the Grand Alliance. As on each previous occasion when controversy has arisen between the Greek Government and the Allies, a large section of Greek public opinion supports the latter. The dispute is not with the Greek nation, but with a junta which has elected to accept the German point of view of Greek interests. In all probability the whole matter is not worth the quarrel; but the quarrel had to come sooner or later, and, unless we are mistaken, it is to Greece's advantage that it should come without further delay. We may hope, therefore, that the Allies will not indulge in such a foolish course as a blockade or any other method of exercising pressure, so-called, upon the Greek Government; but that they will merely offer M. Skouloudis' Cabinet the choice of declaring itself "for us" or "against us" and standing by the consequences. There is some danger in delaying the issue, for the recent experience of the Venizelists at a party meeting shows that the art of public demonstration has not been lost by the Greek Government. Its Press is trying to stir up public opinion by declaring that the whole proposition is a mere pretext for putting King Constantine and the Government under the absolute control of the Entente. If the Press had the power of clear thinking, it would realise that that is the present position of the Greek Government, for it has forfeited its right to make suggestions to the Entente. On the other hand, if the Government boldly accepts Greece's responsibility, there can no longer be any question of the control of Greece by the Entente, but it will be a partnership, with an equal voice for each member.

A single Russian *communiqué* during the past week refers to operations "in the direction of Baghdad." An important enemy detachment, it is stated, was thrown back towards the west, and a portion of his artillery and a number of ammunition wagons were captured. The locality of the engagement is not specified. Some time has now elapsed since the Russians were reported to be on the Turco-Persian frontier, on the road leading from Kermanshah to Baghdad, and in the absence of further information it was concluded that they had found it necessary to consolidate their position in Persia before undertaking any further advance westwards. The latest engagement, therefore, may not have taken place in Turkish territory. In view, however, of the studied self-restraint which characterizes the Russian official statements the reference to Baghdad is significant.

In view of the references that have been made in Parliament to the treatment of British prisoners of war in Bulgaria, we may call attention to the interesting communication published on another page in connection with the efforts made in Roumania to send comforts to these unfortunate men. The reply of the Under-Secretary for Foreign Affairs was to the effect that the reports of unsatisfactory treatment were only too well founded. The conduct of the Bulgarian authorities in this respect, it was stated, has been deplorable, and "they have been far from realizing their obligations towards the prisoners of war in their hands." Mr. Einstein, the American Minister at Sofia, has, however, taken the matter up, and has remonstrated with the Bulgarian Government. To judge by the correspondence that has passed between him and Mme. Jonesco, he has already succeeded in bringing about some amelioration in the lot of the prisoners, and the arrangements made for the safe delivery of parcels will prove a great boon to the men.

The impression gained in England that the veto on the landing of ladies in Egypt was about to be relaxed has not yet reached Egypt, where a chorus of complaint goes up that it should still be persisted in by the military authorities, in spite of its manifest injustice and the hardships it imposes on individuals. That newcomers should be debarred from flocking to Egypt during the war is a legitimate and natural precaution; but very definite military reasons ought to be given for refusing to allow the wives and near relatives of civilian residents to conform with the practice, imposed from considerations of health, of leaving the country during the hot summer months and returning to their homes in the autumn or winter.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 19.

H.R.H. the Prince of Wales.

Private reports of the Prince of Wales's visit to the Sudan show that his Royal Highness made just as excellent an impression there as he had already done in Egypt. It was undoubtedly a very sound stroke of policy that prompted his appointment to a staff post in this country, for it brought the colonials and the Egyptians in closer touch with the British Crown, and afforded them an outward and visible sign of the interest which the King-Emperor takes in their welfare. It is, however, an incontestable fact that, wise as that move was, its success would not have been half so great had it not been for the Prince's personality, which has won for him strong sympathy and golden opinions from all those, Egyptians as well as Europeans, with whom he has come into contact. Although no references have appeared in the local Press, I know from conversations with Egyptians that they have been much struck by his tact and his intelligent outlook on things in general.

Lord Hardinge's Short Visit.

Lord Hardinge spent a day in Cairo on his way home from India. The High Commissioner met him at Suez, came up with him to Cairo, where he spent the night at the Residency, and accompanied him to Port Said, where he rejoined the P. and O. s.s. Arabia. Lord Hardinge was to have been entertained at dinner by the Sultan, but his ship was delayed by bad weather in the Red Sea. He, however, had an audience of his Highness during the very short time he stayed in Cairo.

The Law School.

H.H. the Sultan paid a visit to the Law School this week. It may be recollected that when his Highness visited that institution shortly after his accession the students of the fourth year, who had undoubtedly been egged on by political agitators, adopted a disloyal and disrespectful attitude and absented themselves from the lectures at the very hour fixed for the visit of the Sovereign. Recently the Sultan pardoned the offenders, and this is his first visit to the school since the incident. The vernacular Press has hailed this as a sign that his Highness has overlooked the delinquencies of this section of Government students, which has in the past always been foremost in all political agitations that from time to time have taken place in the country. The students on this occasion gave the Sultan a most enthusiastic reception, and it is to be hoped that the fate suffered by the participants in last year's uncalled-for demonstration will serve as a lesson to their comrades, and will convince the law students of the future of the folly of attempting to maintain the unfortunate traditions that have become associated with this institution.

The Financial Adviser.

Lord Edward Cecil, who has completely recovered from the operation that he recently underwent in England, returned to Cairo this week. He is now busy putting the finishing touches to his annual report, which will shortly be published. Its publication is anxiously awaited, as it is hoped that, apart from other interesting and important statements of policy, it will contain some indication as to the manner in which the very large surplus yielded by the last financial year will be used. In his last report, it may be remembered, the Financial Adviser very rightly insisted on the necessity for building up again the reserve fund, which on April 1, 1915, had become reduced to £E3,700,000. At the same time he pointed out that the value of the securities in which it was invested had depreciated by £E800,000. It is understood that the 1915-1916 surplus, which is variously estimated now at about £E2,000,000, will be placed to reserve, the entire depreciation to date being written off, and the fund being increased by the balance. This would mean that the reserve fund would be restored to almost the figure at which it stood prior to the outbreak of war, not taking into account the depreciation in the value of the securities—2 per cent., or, roughly, £E100,000—registered at that date. This would be an excellent step, for it would considerably consolidate the State's financial position, and would prove to the world that Egypt, alone of all the countries at war or drawn into the vortex of the war, had been able to pay her way during eighteen months of extreme financial and commercial stress. Whilst, however, this decision would meet with general approval, it is, nevertheless, hoped that some means will be found to resume before the cessation of hostilities the great public works which have been almost entirely suspended since August, 1914. Sir Murdoch Macdonald's recent report plainly showed the serious effects that the continuation of the suspension of, for example, the Delta drainage works is having, and also drew attention to the urgent necessity for meeting the requirements of the country in the very near future.

THE PRINCE IN THE SUDAN.

Further details of the visit of his Royal Highness the Prince of Wales to the Sudan are contained in the last numbers of the *Sudan Times* which have arrived in England. In addition to the events described in our last issue it appears that the Prince paid a visit to the historic field of Kerreri and also obtained some idea of the White Nile scenery by a short trip up that river. A pleasing incident in his welcome to Omdurman occurred when, passing near Beit-el-Amarrah, his Royal Highness was received by a group of boys in charge of a sheikh with loud cries of "Long live his Royal Highness the Prince, and long live his Excellency the Governor-General." The visit terminated on April 6, when the Prince left Khartoum by special train for Halfa. The following is the text of a farewell message received by the Governor-General from his Royal Highness after his departure:—

"I cannot leave the Sudan without taking the opportunity of asking you to convey to all the officers and officials, as well as to Ulema, Nazirs, Omdas, Sheikhs, notables and inhabitants of the Sudan, my deep appreciation of the loyal and warm reception accorded to me on every occasion during my visit. It has been the greatest satisfaction to me to have had this opportunity of meeting many of those to whose untiring energy and labour the peace and prosperity of the country is so largely due, and to have personally heard from many of the leading inhabitants their grateful expression of thanks for the benefits they now enjoy. I shall always look back with the greatest pleasure to my visit to the Sudan. I would ask you to convey to all officers and officials concerned my great appreciation of the excellent arrangements made both on the journeys to and from Khartoum, and also during my stay there."

The following special Army Order was issued from Headquarters on April 7:—

"On his departure from Khartoum, his Royal Highness the Prince of Wales wishes an expression of his appreciation conveyed to all ranks of the Egyptian Army in garrison at Khartoum of the part taken by them in the military arrangements made for his reception.

"His Royal Highness was much struck by the smart and soldierly bearing of the Egyptian Army troops."

In connection with the Prince's visit, the Governor-General wrote a letter to Sir Seyid Ali Mirghani, in which he said: "It delights me to inform you that H.R.H. the Prince of Wales has been greatly pleased that he has been able to meet you last evening and to have a talk with you. . . . H.R.H. has graciously expressed to me his full satisfaction and pleasure with all that he saw, with his own eyes, of the great development that the Sudan has reached in these few years, and of his being assured of the sincerity and loyalty of the natives to their Government. H.R.H. is going to inform his Majesty of all this, and before his departure wishes all the notables and the natives of the Sudan to be informed that they are protected and watched over by the Government, who is anxious to secure their comfort and the welfare of their country, with all its might."

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, April 21.

The Russian Sack Incident.

The question of the sacks bought by Russia for transport to Bessarabia has been handled by the Greek Government with the same lack of tact as other incidents, and has led to a further lowering of the country's prestige. After taking up an attitude which further estranged the Entente Powers, M. Skouloudis has had to retract, by his declarations in the Chamber. He took care not to repeat what he had said in his official *communiqué*, in which he had invoked the declaration of the Bulgarian Minister, M. Passaroff, who maintained that the telegram which was discovered by the Entente in the Bulgarian Consulate at Salonika, and which incriminated M. Gounaris, was apocryphal, thus accusing the Entente Powers of a forgery. In point of fact, regarding a telegram which passed through the Athens Telegraph Office, the Government should have had no need to resort to the evidence of M. Passaroff, in whom nobody places any confidence to-day; it would have sufficed to make a search in the archives of the office mentioned, and if nothing had been found M. Skouloudis could then have declared that such a telegram had never been sent. Not having followed that course, he has shown that he is aware that the telegram was sent, in spite of the *dementi* which he had published in Paris, based upon M. Passaroff's evidence. Now, as—according to M. Skouloudis' declarations—neither M. Gounaris nor any other Minister ever promised to hand over any sacks to Bulgaria for military purposes, it is asked why M. Skouloudis, instead of making common cause with M. Passaroff and rendering himself a party to the charge against the Entente Powers, did not protest indignantly against the calumny upon his colleague, M. Gounaris, and demand his recall. M. Skouloudis preferred to entangle himself in a network of contradictory statements, and finished up by declaring in the Chamber that the Russian Government persisted in affirming that, according to its information, from a trustworthy source, the sacks referred to were, after being requisitioned by the Greek military authorities, sent through the agency of the National Bank to Bulgaria to be used for forwarding grain, but were detained to be used for military purposes. M. Skouloudis sought to counter these allegations by an assurance that the sacks had been employed in the (Greek?) military service.

As for M. Passaroff, his position has become extremely difficult in Athens as a result of the declarations of M. Skouloudis, who, having avoided an assurance that such a telegram had not passed through the Athens office—and having thus indirectly confirmed its existence—has, on the other hand, denied all that M. Passaroff affirmed. It is stated that the latter will very soon be recalled.

The Transport of Serbian Troops.

Now, after the incident of the sacks, public attention is focussed on the question of the probable passage of Serbian troops through Greek territory. The Ministerial journals daily draw harrowing pictures of the population of the Peloponnesus dying of starvation if the Allies insist on taking possession of the railway for the passage of these troops; but the fact is that official circles, thanks to their vivid imagination, believe that the proposed passage of Serbian troops through the Greek capital hides some dark design of the Allies, who, with the connivance of M. Venizelos, would thus seek to stir up trouble in the country, in the hope of forcing Greece to side with them! It has even been suggested, though, doubtless, not in good faith, that the ulterior object of these designs is to stir up a revolution and depose the King.

Statement by Sir Francis Elliot.

An interview which the British Minister has accorded to the *Nea Hellas* in connection with this subject has unpleasantly disillusionized those members of official circles who had proclaimed through their Press that the Government had given a categorical refusal to the Entente's request regarding this transport of Serbian troops, and who had always declared that it was a calumny to suggest that German submarines found shelter in Greek waters. Sir Francis Elliot, with his customary frankness, said that the Entente has been forced by imperative necessity to demand leave for the Serbian troops to pass over Greek territory and to use the Greek railways, because the watch over enemy submarines in Greek waters and along the Greek coast is not what it should be. His Excellency, naturally, ridiculed the fears expressed regarding an occupation of the Greek capital in order to restore M. Venizelos to power.

No decision has yet been reached in this matter, but it is not unlikely that in view of the shortage of rolling stock on the Greek railways and the urgent need of transport only a part of the Serbian troops will be sent overland and that the rest will go round by sea.

Venizelist Activities.

Besides the publication of a weekly journal, the *Kyrix*, and a monthly review expounding the party's ideas in authoritative fashion, the Liberals have inaugurated a series of meetings in the theatres (failing other places) in order to enlighten the people regarding the political situation. The second of these meetings, which was to have been held last Sunday at the Théatre Athénée, was broken up by the opposition party. A number of roughs, having obtained entrance without tickets, started a disturbance and fired pistol shots, with the result that a panic ensued and everybody fled. The leaders of the Venizelists have complained against the police, accusing the four officers who were deputed to keep order of having allowed the agitators to enter in order to break up the meeting. A friend who was present informs me that on leaving the building he saw a detachment of soldiers in readiness to attack the crowd, which, fortunately, offered no pretext for the execution of that plan. Mounted gendarmes also appeared on the scene a little later. The Venizelist Press, righteously indignant, remarks that this employment of armed force only dishonours the Government, which doubtless ordered it, and has thus restored the days of terror which the Venizelist *régime* had banished.

In spite of all opposition, M. Venizelos is firmly resolved to go on with the meetings. Indeed, he would merit the title of traitor—which his adversaries make no scruple of applying to this creator of Greater Greece—if, being so convinced that the policy of the present Government is disastrous that he openly predicts war with Bulgaria, he allowed the catastrophe to come about without using every means in his power to avert it.

On the other hand, the decision of M. Venizelos and of some of his partizans to contest seven vacant seats in Parliament, with the sole aim of showing the party's strength, but without any intention of entering the Chamber, has disconcerted official circles. The Ministerial *Nea Himera* professes to know from an authoritative source that immediately after the proclamation of the end of the demobilization the Liberal party will, in the name of the Constitution, demand a general election. Such a course—represented by the *Nea Himera* as Satanic—would, if followed, be the best way of returning to constitutionalism. The same journal further reproaches M. Venizelos with entertaining the hope that the demobilization, through which he hopes to reach the elections, will not be long delayed. This must undoubtedly be so if the Entente Powers stop supplying money to the present Government, which would then be compelled either to demobilize or to resign.

ARCHÆOLOGY IN CYPRUS.

(From a Correspondent.)

Cyprus, April 17.

Sir John Clauson, presiding at a meeting of the Cyprus Museum Committee on April 13, stated that the sum of £200 towards enlarging the Museum had been sanctioned by telegram from London. A sum of £25, supplemented by a similar amount from other sources, was voted for excavations at Polis Tes Chrysochou, in the Papao district. This site has been already tapped since the British occupation, and has yielded many objects of antiquity—some of great value—but the burial ground, as in many other ancient sites, is so extensive that there is a prospect of fresh and interesting discoveries.

An Athens telegram reports that in a by-election at Chios the Venizelist candidate was returned unopposed.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, April 22.

Lack of Communications.

Constantinople seems to be entirely cut off from this part of the world, and it has become impossible to ascertain what is really happening in Turkey. The mails to and from Greece are most irregular, and even the Greek diplomatic courier is apparently not allowed to cross Bulgarian territory. Travellers from Turkey to Greece have to take the circuitous route viâ Switzerland, for all passenger traffic through Bulgaria to Greece and *vice versâ* is stopped. Some belated newspapers have recently arrived from Constantinople, but they, of course, give no indication of the state of affairs in Turkey.

Enver is mentioned as being present at the Selamlik and at other functions, so that the persistent reports of his death have been incorrect. General Mackensen arrived in Constantinople on March 24, to present the Sultan with the bâton of a field-marshal from the Kaiser, and left on the 28th.

Commodities Less Scarce.

Commodities in small quantities seem to be reaching Constantinople. Some flour has evidently arrived from Roumania; there does not seem to be the previous scarcity of sugar, and the *Hilal*, which had to reduce the size of its edition owing to want of paper, again appears in its full form.

There is a report of a large fire having occurred in one of the suburbs of Constantinople, but no further information is available.

The newspapers publish a warning to the public with regard to aeroplane attacks, and state that when an enemy aeroplane appears a yellow flag will be hoisted at the Stamboul and Galata Towers, on the appearance of which the public must retire underground and extinguish any lights!

A Rival to Hindenburg?

Oriental ingenuity has devised a novel form of amusement and of collecting funds. An announcement appears in the Press to the effect that a cannon made of wood is to be placed on the Bayazid Square, with the view of commemorating the Turkish victories at the Dardanelles. The public will be invited to visit this work of art, and a contribution to the National Defence Fund will entitle them to drive a nail into the cannon. The papers do not give any interpretation of this performance, but possibly it is the Oriental way of singing the "Hymn of Hate."

No Change at Smyrna.

The news from Smyrna, meagre as it is, indicates no change in the situation, excepting that tea and coffee and many other commodities are unobtainable, and that flour is about 20 piastres the oke.

FOR PRISONERS IN TURKEY.

On behalf of the British Red Cross and Order of St. John the Hon. Arthur Stanley, M.P., has written to the Press as follows:—

"In response to a request from the Ottoman Red Crescent that special postcards should be printed for the use of persons having relations who are prisoners of war in Turkish hands, we beg you to make known the fact that these postcards may be had on application to the Prisoners of War Department, 18, Carlton House Terrace, W. We are informed by the Ottoman Red Crescent Society that the delay in the censoring of letters will be avoided by the use of these postcards."

A GOOD WORD FOR THE TURK.

The Turk is not, in some respects, at all events, as bad as he is sometimes painted, says the *Westminster Gazette*. Writing to the New Zealand Defence Minister just prior to the Gallipoli evacuation, General Godley said: "I have written to the Turkish Commander, who will come in when we leave, asking him to take steps to preserve the graves of our men. I feel sure this will be effected, as the Turks have been most honourable during the eight months we have been fighting them, and will not do anything to desecrate our resting places." "Most honourable" is high praise.

THE LEBANON AND SYRIA.

(From a Correspondent.)

Cairo, April 10.

From recent accounts given by a person who arrived a few days ago from Syria, and was interviewed by the editors of the *Mokattam*, it appears that the new Governor of the Lebanon, Ali Munif Bey, is letting it be understood both by word and deed that the Lebanon is now only an Ottoman Province, with nothing to distinguish it from the other vilayets of the Empire. For instance, when someone threw out a veiled hint as to the appropriateness of a visit to the Maronite Patriarch, in accordance with the traditional usage, he arrogantly replied: "I wish to abolish this custom." Meantime the aged Patriarch is keeping aloof, and it is said that, contrary to established custom, he did not move down this year to his winter residence in Bkerké, but preferred to remain in his summer residence of Diman, an old convent nestling amidst the snowy hills of Northern Lebanon.

Rumours are being circulated that it is the intention of the Government to divide the Mountain into three sections: the first, from Batroun northward, to be included in the district of Tripoli; the second, from Batroun southward, to be included in the vilayet of Beyrout; the third, comprising Jebel Hermel and adjoining parts, to be included in the district of Baalbek.

But the breach of faith on the part of the Turks that the Lebanese are dreading most is the abolition of their privileges in regard to military service. It is said that already Lebanese of military age who happen to cross into a neighbouring vilayet are arrested for the purpose of enrolment, and, in spite of their protestations, are released only on payment of the exoneration tax. The Lebanese have reason to dread military service, because for Christians it is tantamount to condemnation to hard labour. Building of military roads and other auxiliary work of an onerous nature are allotted to non-Moslems, who are not even given a soldier's uniform.

A first step towards the absorption of the Lebanon is the so-called election recently of five Lebanese delegates to sit in the Ottoman Parliament. I say "so-called" advisedly, because it has been intimated to the Lebanese that, if they do not elect members who are after the heart of the Unionists, the latter will simply appoint three of these from among the committee's own nominees. About thirty schools have already been founded by the Government in the principal villages of the Lebanon, and it is required that at least two of the instructors in each school shall know Turkish and another European language, which—naturally—must be German!

It is further reported by the informant quoted that Jemal Pasha and his coterie transmit their orders for exile, imprisonment, or hanging, based mostly on personal rancour, to the Court-Martial at Aleih, whose members obediently execute them. These dastardly acts have led to revolt even among some of the Unionists themselves, such as Azmy Bey, Vali of Syria, and Khouloussi Bey, his predecessor, who preferred to return to his former post in the Hejaz Railway, with a monthly loss of £Tq50, rather than lend his hand to such ignoble deeds. It is said that the latter once declared that, as he regarded his vilayet as belonging to a civilised Government, he could not permit the hanging of anybody without an order from the Sultan, the head of this Government; and that when Jemal Pasha replied, "My will is above Sultanian irades, and may be enforced on you as well as your Government," the Vali had no other alternative but to resign. This autocratic impudence is not confined to the leaders, but runs through the whole body of Unionists. A curious fact is that those enjoying the highest favour, and wielding the greatest influence in inner Unionist circles, are not genuine Ottomans—apart, of course, from the Germans. For instance, the Musteshar of the Minister of War, for the Arabic Department, is Sheikh Saleh, the Tunisian who had been exiled by the French for seditious and subversive conduct; while the Musteshar of the Minister of Marine, for Syria, is a Mahmoud Zaki well known to Egyptians.

Further particulars about the distressing economic situation in Syria are given by the same informant. Taking advantage of the extreme need of the people, German agents were active in buying up copper utensils. At the same time rapacious jewellers, subsidised by unscrupulous usurers, have been scouring the country to buy up from the famished population their jewels at half, sometimes even at one-third, of their proper value. A veil of mourning enshrouds the land, all festive ceremonies are suppressed, and the only fêtes were those lately given in honour of Enver Pasha's visit to Syria. In addition to these honours the municipality of Beyrout is said to have offered the distinguished visitor a jewelled sword, worth about £Tq300. But the man of blood and iron, who has madly brought untold miseries on the population of a vast Empire, could not but be moved to a passing compassion, and he ordered £Tq500, in the shape of bread tickets, to be distributed among the poor. The penniless ex-lieutenant of a few years ago, who amassed millions by selling his country, as well as himself, body and soul, to the Germans, could well afford to make this theatrical display of "generosity," in imitation of his Imperial master of Berlin.

Subscriptions fixed at £Tq2 per head for persons stopping at the three principal hotels of Beyrout, and at proportionately lesser amounts for persons stopping at the other, cheaper hotels of the town, were being collected lately, and it was thought that these amounts were destined for the alleviation of the misery of the poor, but it was at last discovered that these were destined for the War Fund!

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, April 9.

The Situation.

The situation still remains stagnant, although the Allies are now in daily touch with the enemy. The operations have hitherto been confined to artillery duels at various points and a few skirmishes between patrols. In the Ghevgheli sector the Germans have been using some heavy guns, up to 21 centimetres calibre, within the last few days; but the damage caused to the French trenches has been insignificant. A few German prisoners have been taken during the last week, including an officer. These were put on board a warship and afterwards transferred to France.

Although we have suffered no more aeroplane attacks since the serious raid of March 27, and although it is reported that the German Minister at Athens has assured the Greek Government that no more bombs will be dropped on Salonika, even the Germanophiles here attach little value to German promises, and as a consequence many families have left for Athens and parts of the interior, where they imagine they will be safer. A curious instance of the nervous condition of the inhabitants was afforded the other day when, about 5 a.m., several cannon shots were heard in the town. Many people jumped up and rushed into the streets. It was not, however, an aerial attack, but a salute fired by the Greek artillery to herald the anniversary of the establishment of Greek independence.

Independence Day.

It is now about a hundred years since this country gained its independence, and last Friday the anniversary was celebrated all over Greece. At Salonika the religious ceremony at the cathedral of St. Sophia was rendered specially memorable on this occasion by the presence of General Sarrail and General Mahon with their staffs in full-dress uniforms. Greek soldiers lined the streets and presented arms as the Allied generals passed, while the immense crowds cheered with the greatest enthusiasm. All the local newspapers call attention to the splendid reception given to these officers, and take the fact as one indication of the increased friendliness of all classes of the people towards the Allies as their only saviours.

Greek Officers as Spies.

While it is manifest that the people are becoming more friendly to the Allies every day, it is quite as obvious that there are many officers and men in the army who are not only friendly towards our enemies the Germans, but are actually spying on the Allies in Macedonia, presumably with the intention of passing on to their Boche friends the information they secretly secure.

A painful instance in point is that of Sub-Lieutenant Avdis. When the French occupied Karasouli they allowed Avdis and a few Greek soldiers to remain. He improved his opportunity by going about and spying on the French operations in the neighbourhood. Not content with that, he tapped the French military telephone line from headquarters, secretly leading the wires to his room, where he established a soldier, who knew French, to listen to all the French official messages to the troops. He was caught red-handed, and under ordinary circumstances would have been shot as a spy. However, as he was a Greek officer, General Sarrail contented himself with ordering him out of the place along with his men. This case is admittedly exceptional, and I am assured by a high Greek officer that the army is really becoming more and more convinced that they should throw in their lot with the Allies.

Salonika, April 17.

Strained Relations with Greece.

Just when everyone was convinced that the relations between the Allies and Greece were rapidly improving, certain events have occurred to make those relations more strained than ever. One of these unfortunate events, to which I referred in my last letter, was the case of the Greek officer Avdis, who was caught tapping French military telephone messages at Karasouli. To add insult to injury it is now confirmed in the Athens Government organ, the *Neon Asty*, that this spy has been decorated with the Cross of the Order of the Saviour, because, forsooth, as the newspaper puts it, "he, at the risk of his life, collected useful information under circumstances of great difficulty"! On the top of this we have the question of the sacks sold by Greece to Bulgaria at a time when such goods were contraband of war. The Allies happened to discover at the Bulgarian Consulate the text of the telegram addressed by the Bulgarian Minister at Athens to his Government, in which he quoted certain words used to him by M. Gounaris, Greek Minister of the Interior, in reference to England, which clearly indicate the underhand nature of the deal and this Minister's hostility towards the Allies. The Government now pretend that M. Gounaris' words were incorrectly reported by the Bulgarian Minister; but nobody here believe this, since M. Gounaris is well known to be the keenest pro-German in the present pro-German Greek Cabinet.

Another cause of friction is the refusal of Greece to permit the Serbian troops to be brought here by land instead of by sea, where they would, of course, run the risk of being attacked by German submarines. It really looks as if the Skouloudis Government would only be too glad to see the whole Serbian army at the bottom of the sea. Are they troubled with a guilty conscience?

Still another painful matter is the way in which, according to the French authorities, the Greek military within the Allied lines are spying on all the French and British military operations, and, presumably, communicating what they observe to our enemies. Ample confirmation of this is given in General Sarrail's official statement to the Press a few days ago, in which he declared that the Greek gendarmes within the zone of French operations were in continual communication with the Germans and Bulgarians, and that if, as the Athenian newspapers alleged, these gendarmes were to be withdrawn the Allies could not be otherwise than satisfied.

THE DEUNMEHS OF SALONIKA.

(From Our Salonika Correspondent.)

Who or what are the "Deunmehs"? The name comes from the Turkish word *deunmé*, signifying one who has "turned" or been converted, and is applied to a peculiar sect of Mohammedans living in Salonika, who number about 16,000 persons. Their origin is peculiar and interesting. It was about the year 1655 that a mystic rabbi from Smyrna, who believed himself to be the Messiah expected by the Jewish people about that time, came to Salonika after visiting various places in the Levant and attracting a large number of disciples and followers. Here he was received with enthusiasm by the Jews who had settled in the town after escaping the terrors of the Spanish Inquisition. This new Messiah arrogated to himself unlimited power, declaring himself to be "King of Kings," and even proposed the dethronement of the Sultan. The Turkish authorities promptly arrested him, and he only saved his life by adopting the turban and pretending to turn Mohammedan. His followers adopted the same course. These people gradually gave up their own language, and all now speak Turkish. They practise the Mohammedan religious observances, but only as a matter of form; while in their own homes they secretly follow the mystic practices of their founder.

At the present time these people are bitter enemies of the Allies, and are engaged in spying and endeavouring to find out their plans with an almost fanatical ardour. They stop at nothing. Even their women freely mix with French and British officers, and are ready to accord any favour in the hope of gaining useful information. Most of them know French. Then these officers are freely invited to the houses of the Deunmehs and treated with a show of the keenest friendship. The truth, however, is that they are nearly all dangerous spies against whom the Allies have been warned; but, of course, it is not easy for a foreigner to distinguish between the numerous sects in this town.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, April 11.

Parliamentary Activity.

During the last fortnight the Chambers have been kept moderately busy with a number of legal projects tending to regulate outstanding economic questions. A most praiseworthy Bill, purposing to prevent the rise of rents, has been presented in the Senate, on the proposal of a Commission specially appointed to inquire into the means of provisioning the communes and controlling prices. According to this project, the rent of houses, flats, shops, etc., is fixed at that which was current on October 26, 1915, all subsequent contracts by which the rent is raised being annulled. The law is to remain in force during the whole duration of the war and for a year following upon its termination. Another law which was voted in the Chamber of Deputies with a bare majority, imposes a tax upon all articles of luxury, such as jewels, furs, motors, expensive hats, and other articles of wear, etc. The tax is to be of a temporary character, the proceeds being devoted to the families of the men under arms. The project showed signs of hasty preparation, and was worded in terms so little precise that many members, who in reality sympathized with the idea, found themselves unable to support the Bill in the form in which it was presented.

On April 5 the Minister of Finance laid before the Chamber a Bill authorizing a tax of 50 per cent. on the total proceeds of the casinos and other gaming establishments, including those of Constantza and Sinaia. One-half of the proceeds of this tax is to be devoted to the improvement of these watering-places. This project is a deadly blow aimed at establishments which not only ruin thousands of lives, but, being in foreign hands, also serve to drain the country of its resources. It is much to be hoped that the measure will receive the support of the majority.

In order to supply the public with an adequate quantity of fish at a reasonable price, a series of measures have been taken with the object of encouraging private fisheries. Fish has been declared an article of first necessity, and its cost will have to conform to the maximum prices that have been laid down, whether the fish be the product of the State or of private fisheries.

The Debate on the Budget.

The debate on the Budget has also occupied much of the members' time. M. Arion made a declaration in the name of the Conservative party—by which we must understand the Marghiloman group—the bent of which was somewhat obscure, and M. Cuza floundered through devious by-ways in the course of a very long speech extending over several sittings. M. Take Jonesco, in the name of the Conservative party, of which M. Nico Filipesco is the leader, and of the Conservative-Democrat party, of which he himself is the founder and leader, read a statement to the effect that this year there could be no real discussion on the Budget, and that in any case the two parties in the name of which he spoke would take no part in the debate. Any debate would provoke the discussion of the financial and political situation, and the latter being entirely dominated by the question of foreign policy, it would be superfluous to repeat their opinions on the subject—opinions which found full expression on the occasion of the debate on the response to the Message from the Throne. Their opinions had undergone no change since then. M. Take Jonesco ended by declaring that the parties composing the opposition would without a doubt vote against the Budget.

An Aerial Feat.

On April 7 an aeroplane carrying the Roumanian tricolour made its appearance at Sinaia, performing a number of evolutions over the Royal residence, and finally disappearing along the valley of the Prahova. This is the first time that an aeroplane has succeeded in negotiating this dangerous part of the Carpathians.

Russian Prisoners in Serbia.

A number of Russian prisoners from Austria-Hungary are reported to have made good their escape into Roumanian territory. Some of these travelled over the mountains; others crossed the Danube on a wooden beam propelled by planks in the place of oars. Landing at the village of Shimian, they were well received by the soldiers of the 17th Regiment of Infantry. They brought the news that more than 7,000 Russian prisoners have been recently conveyed to Serbia for the purpose of digging trenches and building military roads.

THE ARREST OF M. GHENADIEFF.

(From Our Own Correspondent.)

Bucharest, April 10.

Nicolas Ghenadieff, the Bulgarian statesman, who is of Macedonian origin, was a *Komitaji* in his youth, and has up to the present retained much influence over these bands, to which he always gave his support when in office. His revolutionary temperament, his position in the forefront of all movements of a national character, and his gifts as an orator, have brought him a very large measure of popularity. Strongly supporting a rapprochement with the Central Powers, he naturally enjoyed the protection of his sovereign, and this continued until early in 1915, when, on the occasion of a diplomatic mission to Rome, he gave unmistakable signs that his sympathies were veering round towards the Quadruple Entente. This led to a break in the good relations existing between the King and M. Ghenadieff, and had as a sequel his implication in the bomb outrage. Subsequently he abstained from any political activity, but it seems that the King, who needed the support of so popular a spirit, did not abandon the hope of winning him over as a partisan to his policy. Elected a member of the commission chosen to present the Sobranje's reply to the Message from the Throne, he refused to betake himself to the Palace. This was irrefragable evidence of the steadfastness of his opposition to the King's policy, and led to the decision to remove a man so obviously capable of proving dangerous, in view especially of the present state of discontent in Bulgaria, which has shown itself in frequent acts of insubordination on the part of populace and soldiery. Indeed, the state of enervation seems to be great, and it is only the *fait accompli* of having realised (however temporarily) their national ideal with the occupation of the coveted territory and of having wreaked vengeance upon their neighbours that holds the population back from open revolt.

The arrest of the chief of the Stambulovist party, on the ground that he had been concerned in a sale of cereals to England before Bulgaria's participation in the war, but thinly veils an arbitrary act of tyranny which is, after all, but one link in a chain of similar events. That M. Radoslavoff did not dare to order the arrest of M. Ghenadieff until the Sobranje had been closed is on his part a concession to public opinion, and may be interpreted as evidence that "Tsar" Ferdinand and M. Radoslavoff are more isolated in regard to public opinion than might be inferred.

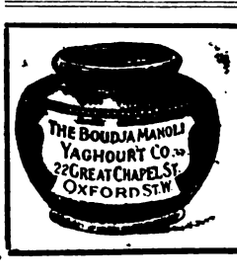
Governmental organs are meanwhile carrying on a violent campaign against the parties forming the parliamentary opposition, who are accused of treason. Invectives against M. Malinoff are particularly acrid, and the general belief is that his day is not far distant, and that we may at any time expect to hear of his arrest.

Meanwhile, M. Ghenadieff and his friends are said to be interned in the monastery of Branowski, some dozen miles from Sofia. A Roumanian paper relates that the Macedonian *komitaji* Torefotzkief had accepted the mission of assassinating M. Ghenadieff, but that he was himself murdered before he had the opportunity of carrying out his plan. It was then that Ferdinand of Coburg and Radoslavoff hatched the plot which has resulted in M. Ghenadieff's arrest.

STREET OF THE ALLIED VICTORIES.

The *Journal des Balkans* draws attention to the changes which the names of many of the Sofia streets have undergone, writes our Roumanian Correspondent. Thus the Rue de Paris has become the Rue de Berlin, and others have acquired the names of various German and Austrian cities. But what are we to think of one of the new creations, the Rue des Victoires Alliées? Whatever the issue of the war, it is little probable that the name of this street will suffer any subsequent alteration.

M. Tontcheff, the Bulgarian Minister of Finance, announced recently in the Sofia newspaper, the *Outro*, that Roumania had made advances towards Bulgaria for the conclusion of an economic entente. A Bucharest telegram, however, denies that any such advances have been made by Roumania.



THE WORLD-FAMOUS
YAGHOURT
may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.
Also LEVANT PRODUCE:
Tomato Paste, Black Olives, Lecoums, Samiss, &c.

BULGARIA AND THE ENTENTE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—While appreciating the tone and object of your leading article in last week's issue on Greece, Bulgaria, and the Entente, I may, perhaps, be permitted to express my dissent from one or two of the propositions set forward in it. You point out truly that Europe desires permanent peace in the Balkans, and ask whether it is to be achieved by "confining Bulgaria for ever in the prison house of unrealized national aspirations . . . or by settling once and for all differences which estrange the Balkan States? . . . Only these territorial concessions by Greece and Serbia could secure permanent peace in the Balkans."

I do not see that Bulgarian claims can be held to have been made good merely by reason of the ceaseless reiteration with which they are advanced or by the persistence with which she says that she will never be satisfied until they are conceded. To admit that, if a State insists on a certain claim and threatens trouble if it be not granted, she should have her way is to permit a system of international blackmail. The method has, in fact, been Germany's stock-in-trade for some years.

It cannot be admitted, I think, that the underlying assumption that, if Bulgaria can obtain the greater part of Macedonia, she will be satisfied and peace secured has any foundation in political reality. Bulgaria is fighting not for national rights, but for the hegemony of the Balkans. M. Rizot has stated that a governing motive was to prevent Serbo-Croat unity and the establishment of a Southern Slav State stronger than Bulgaria. Dr. Radoslavoff admits it, and Dr. Gueshoff, the "moderate," the "pro-Ententist," has advocated the Bulgarization of Nish and the Morava valley. Were Bulgaria to obtain all that was conceded by the 1912 treaty she would be still dissatisfied if Southern Slav unity became an actual fact. If it were otherwise, why did she not close with Serbia's offer of September 1, 1915?

I fear that I cannot understand why it should be thought that the Entente can summarily settle these differences once for all, as is so often said. We do not imagine that French and Germans will soon fall on each other's necks, and I do not think that the majority of Englishmen imagine that in two or three years' time the Germans and ourselves will be the best of friends—nor do they desire it. Why should we imagine it to be otherwise with Serb and Bulgar, or Greek and Bulgar? They came into conflict over a thousand years ago, and have been in conflict ever since, and the injuries suffered by Serbia at the hands of Bulgaria lately have been as great proportionately as those which French or English have undergone at the hands of the Germans. Everyone must desire a Balkan accord (as also a general European accord), but unless we take our desires for facts and our hopes for accomplishments (as unfortunately is our habit), it seems to me to be impossible in the near future. I deplore it, but the facts are there, and it is folly not to recognize them, or to build up a policy on reasoning which is removed from actuality. Bulgarian ambition and Balkan race hatred are stubborn things.

Finally, there is the point of honour. I do not understand the plea of your article to be for the bribing of Bulgaria—a disgraceful plea frequently made—but for a lasting settlement. The difficulty is that the condition laid down does come, not in intention, but in effect, to a bribe—that is, Bulgaria is to receive Serb territory. How can we ask that of Serbia? Should we, after all that passed, deliver up her interests to her foe, I do not see what answer we could give to those who say that England is a disloyal and untrustworthy ally; that she uses her weaker allies as pawns in her game; that she abandons them when it suits her interests; in short, that Albion is perfidious. It is Serbia's interests that have to be considered by us, and if we sacrifice them to our own idea of what is best for all, she might justly say that she is the best judge of her own good, and that it is her view as our ally, and not the Bulgarian view, which should prevail in matters of dispute. What an encouragement, too, would such a course be to Roumania to throw in her lot with those who look so well after their friends! Is the Serb army to help to reconquer Macedonia for Bulgaria? That seems rather superfluous, not to put too fine a point upon it.

With your object, Sir, everyone must be in agreement, but I fear that I for one read the facts differently. It is not a matter of sentiment or prejudice, but of judgment. I do not think that Bulgaria would give up her ambition of Balkan hegemony even if she had all Macedonia, nor that race hatred will die quickly, and consequently I see no reason to "go back upon" our ally, apart from other considerations.—I am, etc.,

A. H. E. TAYLOR.

LIFE IN BUCHAREST.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, April 11.

"An Englishwoman's" article to the *Daily Mail*, quoted in THE NEAR EAST's issue of March 3, under the heading "Life in Bucharest," gives an interesting snapshot of those superficial manifestations of life which strike the eye of the casual observer. Much that "An Englishwoman" says is true, but there are one or two minor inexactitudes and insufficiencies calculated to convey an erroneous impression.

I have already mentioned that luxury and extravagance are not general by any means, but are the appanage rather of a particular class which has become especially numerous since the war has been in progress. No doubt the country has been enriched to some degree by the war, but it is very difficult to gauge the increase of wealth. My own impression is that the net gain which the country enjoys must be very small indeed. To imagine that the general public has been greatly, or even generally, enriched is a mistake. Indeed, the middle and lower classes have suffered much from the increased cost of living, and they have worse sufferings before them. People in easy circumstances have been inconvenienced by this state of affairs, and they may be satisfied if it remains at that.

Nor has the State derived so very great a benefit from the importation of gold, for the expenditure has suffered a fabulous rise. It is enough to mention the cost of reorganising and augmenting the military and auxiliary forces, of bringing their state of efficiency up to the standard demanded by present-day warfare, not to say anything of the cost of keeping several hundred thousand men quasi-mobilized over a period which is not unlikely to run into years.

Another statement in the article, to the effect that the windows of the German and Austrian Legations have been smashed by the mob on two separate occasions, and, again, that the two Ministers seldom appear in public, calls for correction; for, as they stand, they convey the impression that the public is in a state of hostile excitement directed against the two Ministers. The truth is that some irresponsibles drove past the German Legation on one occasion, when few people were about, and threw stones through the window panes. The two Ministers are far from popular; the majority of people have a marked aversion for the German representative, and avoid his Austrian colleague. None the less, there are a number of leading families by whom they are well received, and certainly they have no hesitation about showing themselves in public. The Austrian Minister seems to be sensitive to the unsympathetic atmosphere, and adopts a correct attitude and a retired manner of life which is fitting in a Minister whose country is so sorely tried by the state of war. His German colleague, on the other hand, seems to have commenced his Bucharest career with the fixed intention of braving public opinion, and has found it good to persist in this attitude in spite of the resentment it has called forth.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Necamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

NEAR EAST BOOKSHELF.

"CARMEN SYLVA"*.

The sad death recently of the gifted Queen of Roumania has brought again vividly before the public eye the paths, by-paths, and stepping-stones of a long life, sincere and pure as are those of the mystics, sweetly fragrant as those of idealistic dreamers, yet humble in spirit because untouched by exalted vanity. It is fitting, therefore, that the mood of the moment inspired by the knowledge that Royalty has lost one of its most distinguished scions in the person of the late Queen Elizabeth should coincide with a new and more popular edition of her child and girlhood's impressions, as written by herself when age had mellowed her vision and drawn a fine-spun veil over her memories, rounding off sharp contours as though smoothed over by a mountain mist, and leaving only the most prominent landmarks to stand forth, boldly or not, as the case may be.

It is not our intention here to review this self-study of an aged princess looking back to the years of her girlhood at a German Court. The work is already too well known in its more costly garb. The cheaper edition now issued is a handsome volume, illustrated by many photographs of the author; it should succeed in making the book, which is ably translated in its way (though doubtless the many homely touches of style have been lost which have made Carmen Sylva a writer of merit), more generally known.

We have here the picture of a venerable lady whose life had been well spent with a full measure of charity for the suffering and destitute, turning back more than three-score years to the days when a tiny girl learnt to toddle, and, later, a maiden left her old home for a new one of her own making. Here the picture vanishes, as though a slide had been gradually drawn across the misty landscape. But before doing so the landmarks of those early days are imprinted on the mind of the elderly seer, and, as should be the case, they are persons rather than things, and more humble in state the more remote in years. In a child's mind at three "the advent of a new nurse is an event of no small importance," and so we have the picture of Carmen Sylva and her brother "firmly ensconced in the broad window-sill to have a better view of the newcomer"—an English nurse, Mary Barnes by name.

"I see her still, in her plain black dress, coming towards the Castle from the landing-stage of the steamer, and crossing the quadrangle with soft, noiseless tread, as gentle and calm as the breath of the evening breeze, bringing with her an atmosphere of comfort and peace, of which we became conscious even before she had crossed the threshold. . . . The quick, unerring instinct of childhood told us that many happy days were in store for us in the care of this good, kind soul, who came along as noiselessly as a leaf wafted hither by the wind."

The child grows into a girl, the nurse's sway is usurped by the governess, and the latter's rule comes to an end when the tutor is called in. No longer are people the only landmarks: impressions now come to add to the store of knowledge gradually being acquired, and prominent are the family tragedies of these girlhood's years—a long-suffering mother, the loss of dearest friends, the death of a favourite brother; events, these, that left a lasting impression on the fine-strung imagination of a sensitive girl. They are recorded without that cheap pathos which is affected melodrama; they are tender pictures of sorrow buoyed up by faith and hope, in which there is and can be no place for what is not good. The series culminates, we think, in the magic cures of a faith-healer. It is a remarkable chapter which Carmen Sylva has devoted to this man who cured her mother, and there can be no doubt that the mesmeric influence of the healer on the receptive mind of the mystic maiden was a lasting one—stronger, perhaps, than the influence of music, at the tremendous strength of which we have many peeps in the pages of the autobiography.

The crowning event in a girl's life is her wooing, of which we have the following old-fashioned picture. It was at Cologne, and Carmen and her mother were at a concert at which Brahms played. "I could not help noticing, however, that my mother's thoughts were entirely elsewhere." They drove off to the flower-gardens, and lunched there. "I noticed that we seemed to attract the attention of a little group of gentlemen, strangers, as I thought them, who were walking up and down, and one of whom at last seated himself at a little table quite close to ours, looking at me so hard that I slightly turned away from him. But when we rose to leave, they all three came up to us, and we recognised Herr von Weiner . . . whilst his two companions were none other than the young Prince of Roumania and the latter's representative in Paris, the last-mentioned being the gentleman who had just been observing me so closely."

But I was sincerely glad to meet the young Prince again, for I had seen much of him in Berlin some years before, and was full of admiration for the adventurous spirit and strong sense of duty in which he had entered on his task in his new country. So I welcomed with pleasure the opportunity of talking to him again, and walked on ahead with him, discussing all sorts of things. . . . When we left there was only just time to dress for the concert. But whilst I was hurriedly dressing the Prince of Roumania had been announced, and stayed, and stayed, and I could hardly control my impatience, until at last I heard him leave, and rushed to my mother to hurry her. But the serious look with which she met me checked the impatient exclamation on my lips. Taking my arm in hers, she began to pace the room with me, saying, "The Prince of Roumania was here just now to ask you to be his wife." She stopped and looked at me, half expecting the decided refusal with which all such proposals had hitherto been met. But instead—"Already?" was the only word I brought out. I said to myself, "He hardly knows me; he cannot love me. He only happens to have heard how well and carefully I have been brought up, and thinks I may prove the suitable companion, the fittest helpmate for him in the work he has set himself. And a thousand similar thoughts flashed like lightning through my brain. But through it all I heard my mother telling me of the high and noble mission awaiting me should I accept the Prince's hand, of the wide field in which my energies might find scope, and the honour she accounted it that his choice should have fallen on me. As she went on talking my hesitation seemed to fade away, and it was not long before I said to her, "Let him come! He is the right one!"

And so verily it proved, but of this life we do not catch a glimpse. The child, the girl, has ceased to exist, and the woman, the Queen, is born. Perhaps it is better that the veil should be drawn, because, frankly, we prefer the dim, humble pictures of early impressions. For has not the poet aptly said that "the thoughts of youth are long, long thoughts"?

* From Memory's Shrine. The Reminiscences of Carmen Sylva." By Edith Hopkirk. (Sampson Low and Co. 4s. 6d. net.)

BOOK NOTES.

Those who have read Mr. H. G. Dwight's delightful book, "Constantinople, Old and New," will be glad to know of a new volume from his pen, which is published in the United States by Messrs. Page. It is entitled "Stamboul Nights," and contains a number of short stories and studies, some of which have appeared before in magazines and reviews.

The Hakluyt Society has published Fryer's "A New Account of East India and Persia," which gives a most interesting, and frequently lively, description of travels in that part of the world in the last quarter of the seventeenth century.

Mr. Milford has recently published in London (for the Yale University Press) "Miscellaneous Inscriptions in the Yale Babylonian Collection," by Dr. A. T. Clay. The book, which contains many plates, is priced at one guinea.

Mr. Eveleigh announces "The Stricken Land: Serbia as We Saw It," by Alice and Claude Askew.

BOOKS RECEIVED.

From Moscow to the Persian Gulf: Being the Journal of a Disenchanted Traveller in Turkestan and Persia. By Benjamin Burges Moore. Illustrations and Map. (Putnam. $3.00 net.)

Les Tribes du Louristan. Medailles des Qadjars. By H. L. Rabino. Illustrated. (Paris, Ernest Leroux.)

The Influence of Ancient Egyptian Civilization in the East and in America. By G. Elliot Smith, M.A., etc. Illustrated. (Longmans, Green. 1s. net.)

Landmarks of Polish History. By August Zaleski, with an introduction by R. W. Seton-Watson, D.Litt. (George Allen and Unwin. 6d. net.)

Egyptian Agricultural Products: Arachis Hypogœa. Lin., the Ground Nut, or Earth Pea (Fûl Sudani in Egypt). (Cairo, Government Press. P.T. 2.)

ARMENIAN RED CROSS & REFUGEE FUND

FOUNDED DECEMBER, 1914.

President, VISCOUNTESS BRYCE.

Donations are earnestly entreated for the relief of sickness and distress among 250,000 destitute Armenian refugees in the Caucasus, whose condition is "pitiable in the extreme." Relief pay is less than 4d. per head a day. Food and all necessaries of life are very dear. A copy of the Report for last year will be sent to inquirers. All work in connection with this Fund is voluntary. Contributions will be thankfully received and acknowledged by the Hon. Secretary and Treasurer, Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W. Cheques may be made payable to the Armenian Red Cross and Refugee Fund; they should be crossed "London and South Western Bank, Holland Park Branch."

7	24	Sunday	4	4
8	25	Monday	5	5
9	26	Tuesday	6	6
10	27	Wednesday	7	7
11	28	Thursday	8	8

To-day is the birthday of Queen Milena of Montenegro, who was born in 1847, and was married on October 27, 1860 (O.S.).

To-morrow is the anniversary of King George's accession to the throne.

H.H. the Zil-es-Sultan, the eldest son of Nasr-ed-Din Shah, and great uncle of the present Shah of Persia, is expected to arrive in London this week from Paris.

Earl Kitchener had an audience of the King, at Buckingham Palace, last Friday.

It is expected that the High Commissioner of Egypt and Lady McMahon will remain in Cairo until the end of May, when the Residency will be transferred to Alexandria, and will be established in the same house as last year.

The Marquess of Crewe, on behalf of Sir E. Grey, received the Greek Minister at the Foreign Office on Tuesday afternoon.

Lieutenant-Colonel J. W. Watson, A.D.C. to the High Commissioner of Egypt, has been awarded the Legion d'Honneur by the French Government.

Lady Maxwell underwent a second operation on Saturday, after which she was reported to be progressing slowly.

M. Pashitch, the Serbian Premier, arrived in Petrograd on Monday.

Sir Reginald Wingate and Lady Wingate, who left Khartoum for Erkowit on April 6, accompanied H.R.H. the Prince of Wales as far as Atbara.

Major Rees-Mogg (Military Secretary), Major Edwards (A.D.C.), Shaheen Bey George (Arabic Secretary), and Mr. Patterson left for Erkowit with the Governor-General.

Major G. S Symes, D.S.O., and Mrs. Symes arrived at Atbara on April 7 from Cairo, and proceeded direct to Erkowit with H.E. the Governor-General and Lady Wingate.

Colonel Jackson Pasha, the Governor of Dongola Province, made a brief visit to Khartoum in order to meet H.R.H. the Prince of Wales. This, says the *Sudan Times*, was Colonel Jackson's first visit to Khartoum during the last sixteen years.

Mr. K. P. Struvé, the Governor of the White Nile Province, and Mrs. Struvé were at Khartoum to meet H.R.H. the Prince of Wales

El Miralai R. V. Savile Bey, the Governor of Kordofan Province, who was also at Khartoum to meet the Prince, left for the North on April 11.

The King has granted authority to Sir Ralph Spencer Paget, K.C.M.G., C.V.O., Assistant Under-Secretary of State for Foreign Affairs, to wear the Insignia of First Class of the Order of the White Eagle, conferred upon him by his Majesty the King of Serbia in recognition of valuable services rendered by him.

Under date of April 22, our Special Correspondent in Athens, in forwarding us news of Constantinople, writes:—"It is said that Dr. McClean and his staff have left the British Hospital, but the reason is not known. Mr. Scudamore, it is satisfactory to state, was released some time ago."

Mr. Harold G. Mountain, son of the late Alfred Mountain, of Constantinople, has obtained a commission in the Royal Engineers. Mr. Mountain is a mining engineer, and recently came home from South Africa to offer his services.

An Aden correspondent writes:—Amongst those on board H.M.S. ——— when she arrived here recently with Admiral ——— was Mr. Ronald Storrs, the Oriental Secretary of the Residency at Cairo. Mr. Storrs, who had come here on a special mission, stayed at the Residency for a few days, and after visiting our lines left by H.M.S. ——— for Port Sudan. Later advices state that he proceeded to Atbara, where he joined H.R.H. the Prince of Wales, who was on his way back from Khartoum, and with whom he had the honour of returning to Cairo.

The Crown Prince of Serbia has conferred upon Miss Gosse, of the Scottish Women's Hospital, the Order of St. Sava (fourth class) and upon Miss Palliser and Miss K. Burke the Order of St. Sava (fifth class) in recognition of the services rendered by them to the Serbian sick and wounded.

Lord Cromer contributes to the current *Nineteenth Century* an interesting article on Rousseau.

The *Berlingske Tidende*, of Copenhagen, states that Slatin Pasha arrived in that city on Tuesday, and subsequently left for Stockholm, where he will represent Austria at the International Mixed Commission for the Care of Prisoners of War.

Dr. Christopherson, Director of Khartoum and Omdurman Civil Hospitals, and Mrs. Christopherson have now returned to Khartoum. Dr. Christopherson, it will be remembered, had volunteered last summer to help with one of the British Red Cross Missions to Serbia, but was captured by the enemy, and remained in captivity for several months. Lately, however, the members of this philanthropic mission were released, and Dr. Christopherson was thus able to return.

H.E. El Lewa Carroll Pasha, P.M.O., Egyptian Army, who accompanied H.R.H. the Prince of Wales on his return to Egypt, left Cairo for the Sudan on April 14.

Last Friday, at Dodington Cottage, Nantwich, the wife of Captain Adam Block, R.F.A., gave birth to a daughter.

A marriage has been arranged, and will take place shortly at Ulverston, between Flight-Commander James William Ogilvy Dalgleish, R.N.A.S., Lieutenant R.N., only son of Captain James Ogilvy Dalgleish and of Mrs. Dalgleish, of Glebelands, Wokingham, and grandson of the late Captain James Ogilvy Dalgleish, R.N., of Woodburne, Fife, and Sybil Guinevere Butler, younger daughter of Myles Kennedy and of Mrs. Myles Kennedy, of Stone Cross, Ulverston.

The engagement is announced of Captain R. O. Hilton Jones, R.A.M.C., youngest son of Dr. R. T. Jones, High Sheriff of Merionethshire, and Mrs. Jones, of Harlech, North Wales, to Olwen, only daughter of Mr. and Mrs. E. Davies Bryan, of Cairo.

On April 29, at Holy Trinity Church, Sloane Street, the marriage was solemnized of Miss Gwen Schreiber, elder daughter of Colonel Schreiber, late Royal Irish Regiment, and Mrs. Schreiber, of Bognor, Sussex, and Mr. Alan E. Leudhars, R.F.A. The bridegroom was formerly a civil engineer in Egypt, but served with the London Scottish early in the war, and is now a lieutenant in the R.F.A.

The death is announced at Jassy, at the age of seventy-eight, of M. Nicolas Gane, an ex-Minister and Academician, and one of the most eminent of Roumanian authors, especially as a novelist.

A cable message was received last week at Croome Court, Worcester, stating that Lieutenant-Colonel the Hon. Charles J. Coventry, second son of the Earl and Countess of Coventry, is a prisoner. Lieutenant-Colonel Coventry was in command of the Worcestershire Yeomanry in Egypt.

It is now officially announced that Lieutenant and Adjutant Viscount Quenington, Yeomanry, has died of wounds. He was the only son of Lord St. Aldwyn, whose death, after a brief illness, took place in London on Sunday. Viscountess Quenington, it will be remembered, died in Egypt early in March last. Lord Quenington had represented the Tewkesbury Division of Gloucestershire in Parliament since 1906. His only son now becomes Earl St. Aldwyn.

Lord Elcho, another officer who was in the same line of Yeomanry as Lord Quenington, is reported "missing, believed wounded."

A correspondent writes:—Your notice of the death of Captain J. E. Ross, which appeared in last week's issue, conveys the impression that this young and brilliant officer joined the Army as a private. As a matter of fact, young Ross obtained a commission on August 15, 1914, when he joined the Special Reserve of the King's Liverpool Regiment. He finished his probation on February 15, 1915, and was gazetted full lieutenant on March 4 following. Although quite young, he showed remarkable aptitude for his new career, and soon gained the confidence of his superiors. As a result, he was in command of a company in the field, without being struck off battalion strength, from May to November of last year, when he came home on sick leave, returning to France in February. He was more than once selected for undertakings demanding dauntless courage, and met his death in the sap at one of the craters in front of the trenches. His death is a great blow to his brother officers, and none the less to his men, who all had a huge regard for him as a good comrade and a gallant soldier.

Captain Herbert Christian Holland, who died at Buxton on Wednesday at the age of fifty-seven years, served with the Hussars in the Afghan War of 1879-80, in the Boer War of 1881, and in the Egyptian War of 1882, being wounded in the last-named campaign.

A Cairo correspondent writes to the *Egyptian Gazette* of April 15:—"The statement which appeared in your issue of Thursday last that Captain W. Henderson, of the West Yorkshire Regiment, was among the 'unofficially prisoners' was erroneous. Captain Henderson, who belonged to the Ministry of Education before the war, was wounded slightly at the beginning of March and seriously on April 3. He was not made a prisoner."

A hundred Serbian youths and children arrived at Southampton last Friday morning under the care of a representative of the Serbian Relief Fund, in order to pursue their studies in this country. They remained at Southampton for the week-end, and on Monday went on to Oxford, where Wyclif Hall has been placed at the disposal of the Committee by the Trustees for the newcomers' temporary accommodation.

Before proceeding to Oxford the Serbian students were on Saturday entertained to luncheon by the Southampton Municipality.

A Lebanese correspondent writes from Egypt, under date of April 4:—The well-known Moutran family of Baalbek is said to have been exiled, including the women and children. It was to one of the members of the leading branch of this family—a lady of exceptional intelligence, who played a prominent political rôle in the early part of the Young Turks' career—that Talaat and Javid owed their lives when, under the short-lived Kamel régime, they and their clique were hunted down by the Liberals."

News has been received in England this week that Mr. J. L. Battey, who was shut up in Kut and was taken prisoner when the town fell, is quite well.

The Duchess of Westminster will appear in the Victorian romance with M. Morton, of the Ambassadors Theatre, at the *matinée* in aid of the Serbian Relief Fund which will take place at Drury Lane Theatre on Tuesday, the 9th inst. Among other items on the programme will be a sketch played by Miss Elizabeth Asquith and Mr. Nelson Keys, an extract from "Kitty Grey" played by Lady Rothermere and Mr. G. P. Huntley, and a dance by Miss Lily Elsie and Mr. Joseph Coyne.

The Rev. J. H. Ritson, speaking at the annual meeting of the British and Foreign Bible Society on Wednesday, said that the depot of the society was still open in Constantinople.

Lady Church, who gave to the Red Cross Sale held at Messrs. Christie's in the month of April a selection of thirteen embroideries from the Greek Islands and the Near East, forming part of the collection of the late Sir Arthur Church, F.R.S., and re-acquired them at the sale, has since generously presented them to the Victoria and Albert Museum. The gift includes several pieces which were shown in the exhibition of embroideries of the Greek Islands and Turkey held at the Burlington Fine Arts Club in 1914.

A very interesting work of art was carried out in London recently to the order of the first party of New Zealand soldiers convoyed to Egypt. This is a silver replica of an old Maori war canoe, with the tail and head pieces and full Maori decoration. The canoe stands on two blocks of greenstone, the base being formed of a fine piece of New Zealand black maire wood. It is a present to the Japanese captain in command of our Ally's warship Ibuki, which helped to convoy the first party of New Zealanders to Egypt. So pleased were they with the courtesy and kindness of the captain that they decided to give him and his officers and men a memento of the occasion, and a considerable sum of money was collected in small amounts, every man of the expedition contributing. By request of his Majesty the King this model was sent to Buckingham Palace for his inspection, and he has expressed great appreciation of, and interest in, the model canoe.

"Conversions to the Islamic faith in this country are not numerous, and the adoption of the religion by the Hon. Mrs. Gifford and her two sons is therefore all the more interesting," says the writer of "A Londoner's Diary" in the *Evening Standard*. "There have for long been a few society people interested in Islam, if not actually its adherents, but some have gone the whole hog and embraced the faith fully and enthusiastically. One of these was the late Lord Stanley of Alderley—the predecessor in the title of the present Lord Sheffield—who was a devout Mohammedan, practising his creed for many years, and being buried according to the rites of his religion in a sequestered portion of the beautiful Alderley Park. He was a man of great originality of character, and gained his first insight of Islam when in the diplomatic service of the East."

Colonel Charles Owen Hore, C.M.G., aged fifty-five, of South Eaton Place, late of the 2nd Royal Garrison Regiment, who saw service with the Egyptian Expedition in 1882. in the Sudan and Nile Expeditions, and in the South African War, left property valued at £2,440.

Sir Charles Rivers Wilson, of 9, Berkeley Street, W., who died on February 9, left £10,091.

Five members of the Aboukir Company's staff in Egypt have joined his Majesty's Forces since the outbreak of the war. They are Messrs Keable, McKinstry, David, Des Clayes, and Lowden. The first-named has since been killed in action.

A course in spoken Greek, to be conducted by Mrs. Ernest Gardner at University College, will begin on the 8th inst.

APPOINTMENTS, PROMOTIONS, Etc.

Our Bucharest Correspondent announces that Captain Pichon, the French Military Attaché in Bucharest, has been promoted to the rank of Major.

The *Egyptian Gazette* of April 17 says :—It is stated that Hunter Pasha, the Director-General of the Coast Guards Administration, has declined to accept the post of Governor of the new Western Gouvernorat owing to his age and because he wishes for rest. According to the native newspapers this post is, in consequence, to be offered to Morice Bey, of the Coast Guards Administration. Nothing official, however, has as yet transpired on this matter.

Lieut.-Commander A. J. Larking, R.N.R., and Lieutenant E. Tibbits have been appointed to the President for service on the Staff of the Principal Naval Transport Officer, Egypt. Both appointments are dated April 28.

A Washington telegram dated April 27 reports :—"It is stated that Mr. Morgenthau, the retiring United States Ambassador in Constantinople, will probably be succeeded by Mr. Abraham I. Elkans." Mr. Elkans is a prominent New York lawyer.

Mr. A. W. Keown Boyd, Assistant Private Secretary of the Governor-General of the Sudan, left Khartoum on April 7 on leave.

Sir Reginald Wingate, Governor-General of the Sudan, has appointed Colonel the Hon. M. G. Talbot, C.M.G., to act temporarily as an additional member of the Governor-General's Council.

The Governor-General of the Sudan has appointed Mr. F. P. Osborne Province Judge under the Courts Ordinance 1915. Mr. Osborne is posted to Berber Province.

Egyptian papers received by this week's mail report that it is expected that Judge Bond will leave Egypt in July on three months' leave of absence, and will not return. Some newspapers state that he will be succeeded on the bench of the Native Court of Appeal by Judge Percival.

Major Kelly, Officer Commanding the Egyptian Cavalry and Mounted Infantry, and now in command of the expedition against Ali Dinar of Darfour, has been granted the temporary rank of Lieutenant-Colonel.

The following promotions are announced in the Egyptian War Office *Gazette:*

To be Lewas :—

El Miralai (temporary Lewa) W. H. Drake Bey, C.M.G., Adjutant-General.

El Miralai (temporary Lewa) E. S. Herbert Bey, O.C. Cairo District, and Commandant Military School, Cairo.

El Miralai (temporary Lewa) L. O. F. Stack Bey, C.M.G., Civil Secretary, Sudan Government.

W. P. Archdale and Mr. R. C. Maxwell have been granted the temporary rank of Bimbashi while employed with the Transport.

FRIDAY, MAY 5, 1916.

THE FALL OF KUT.

Something of the spirit of David, who mourned and fasted so long as his son was sick, but resumed the normal tenour of his life as soon as he learned of his death, will actuate the feelings of the British public towards the fall of Kut. In spite of the cheerfulness which the garrison has maintained throughout the siege, and which it has been careful to emphasise in all communications with the outside world, it was well known that General Townshend's force has for many weeks been in a parlous state. The grim determination of the commanding officer and his troops enabled them to hold out long beyond the time when the conditions of the beleaguered town might have justified surrender. Now that the inevitable capitulation has taken place, we may hope that the sufferings of this sorely tried and gallant band are at an end. The fortunes of war have placed them in the hands of an enemy who has fought cleanly. There has been nothing in the record of the Turkish army on the field of battle in this campaign to cause anxiety for the lot of General Townshend and his troops as prisoners of war. The only grounds for misgiving are to be found in the possibility that the necessarily straitened circumstances in which the Turks are carrying on the struggle may not be equal to adequate provision for an additional ten thousand men, and in the interference of the civilian or the German element in the disposition of the prisoners. The outrages which have disgraced the enemy's conduct of this war—the Belgian and other atrocities in Europe and the Armenian massacres—are the handiwork of the Turks' Allies, or have been directly instigated by the Germanised clique in German pay which now rules Turkey. Where the fighting Turk has been left to his own devices he has refrained from firing on the Red Cross flag, he has rendered first aid or supplied water to British wounded whom he has been unable to take away. It is his German Ally who torpedoed a hospital ship in the Black Sea, and the Constantinople Government which sends foreign civilians into the firing zone or imitates the Germans in the harsh treatment of those who are in its power. Fortunately, the British garrison of Kut falls into Turkish hands late in the day. The glamour of the German alliance has become dimmed, and with German prestige has passed, we may hope, the tendency to imitate German methods of frightfulness. For the Turks, moreover, the surrender of Kut is merely an incident—gratifying enough, it must be admitted; for they have not only repulsed the first effort to reach Baghdad, but have followed up and accounted for the whole of the force that made the attempt. The main features of the campaign, however, remain unaltered. The Russian menace in the North is still there; the Russian force in Persia has carried through its task with a thoroughness which argues ill for the Turks, if progress in the direction of Baghdad is maintained; in the south the British expedition has been reinforced, and will not always be hampered by floods. While, therefore, the Turks may feel justifiably proud of their achievement, they know that its military significance is not great, and in the face of dangers pressing from three directions will be the more likely to safeguard themselves for the future by treating their prisoners well.

For the British Empire, now that the chance of relieving Kut has gone, there can be but one thought—to avenge the loss it has suffered. For, let there be no mistake, the fall of Kut constitutes, until it is retrieved, a grave blow to British prestige in the Middle East. It will have no effect on the main course of the war, and we need have no anxiety regarding the way in which our Allies will take the incident. But the Mesopotamian Expedition was and is a purely British affair, and the British alone are concerned with the effects of the campaign. We may rest assured that in the Middle East there will be no nice balancing of the relative importance of the different theatres of war. The only theatre that counts for the people in this part of the world is Mesopotamia. There they have seen a British force checked at Ctesiphon, driven back to Kut, and then, after a four months' siege, forced to capitulate. During those four months, they will argue, the great might of the British Empire failed to rescue it. Although the people of that Empire will know that it was unable to exert its real strength on account of its commitments elsewhere, the Middle East will not stop to reason on these lines. Undoubtedly the first business of Great Britain is to win the war; but she has also a responsibility in the Middle East which cannot be ignored. It is to reverse with all possible speed the decision of Kut, and to reverse it by the clear exercise of British power. The Russians may be achieving wonders in the North, and they may eventually threaten Baghdad by way of Persia; but Great Britain will not be able to rehabilitate her prestige in Asia by means of Russian successes. She must recover her lost position in the minds of the Asiatic world by an exhibition of her own strength, for all that the pundits may say against the subordination of military strategy to political exigencies. Among the people who dwell between the Mediterranean and the Himalayas the final verdict of the war will not entirely supersede what they or others of their kinsfolk have seen with their own eyes. However complete the defeat of Germany and the discomfiture of Turkey may eventually be, these people must not be left to say that wherever the British met the Turks they were worsted, and were only able to win the war by the help of their Allies. The future of Persia, the peace of Afghanistan, and the British position in India require a definite achievement to be associated with British arms in the Middle East.

It is symptomatic of the anxiety to which the policy responsible for the fiasco of Gallipoli and the mismanagement in Mesopotamia has given rise that there should be the least question of the course of action to be adopted after the surrender of Kut. The political aspect admits of no alternative; the need for co-operation with our Allies north of Baghdad is insistent. At the same time the military position has become much more favourable. The Mesopotamian Expedition is no longer tied down to a frontal attack on formidable entrenchments under the necessity of trying to cut its way through to a besieged force in the shortest possible time. It has now an opportunity to reconsider its whole strategy; it can wait until the floods have subsided. All that is required of the British Government and of the military authorities is that the determination to counteract the reverse suffered at Kut should be registered and acted upon without undue delay. In no other way can the whole sorry business which has culminated in the fall of Kut be atoned for. Details in the story of mismanagement may call for investigation at a later date; but unless an attempt to make individual officers scapegoats has to be frustrated, we are of opinion that little purpose will be served by an inquiry into the origin of the campaign. The British Government has already distributed the responsibility for it among as many authorities as could conveniently be cited, and let it be known that what at the time represented the military genius of the nation discovered nothing unwise in the despatch of a small imperfectly equipped force several hundreds of miles from its base to capture the chief city of Asiatic Turkey in the face of well-established facts regarding the military strength of Turkey in this region. No formal indictment can strengthen the condemnation which such an admission carries with it. Since that date there have been a change in the higher command in Mesopotamia, a transfer of the direction of the campaign from the Indian Government to the War Office, and changes of still greater importance in Whitehall. It is to be hoped that this combination of new driving forces will avail to bring about in Mesopotamia the victory with which British prestige in the Middle East requires that the expedition should at long last be crowned.

BRITISH PRISONERS IN BULGARIA.

(From Our Bucharest Correspondent.)

In a previous communication I had the pleasure of informing you that Mrs. Take Jonesco had had the happy idea of collecting funds, provisions, clothes, books, etc., for our prisoners in Bulgaria. The idea soon took a practical form, and to-day Mrs. Take Jonesco and the ladies who have so strenuously helped to realize her project have had the satisfaction of receiving two letters announcing the reception of the different articles.

The first is a letter signed by a number of British officers at Philippopolis. The second is one addressed by Mr. Einstein, United States Minister at Sofia, to Mrs. Take Jonesco, a copy of which I am sending you, without having had the opportunity of first obtaining Mr. Einstein's consent to its publication. I will, however, risk this gentleman's displeasure at what he may consider an indiscretion, for it will in any case not survive the universal gratitude which his unostentatious kindness and painstaking solicitude for our prisoners will have evoked. I should also like to draw attention to the passage concerning M. Derussi, the Roumanian Minister at Sofia, who is deserving of all our thanks for the trouble he has taken.

It may not be out of place to mention here that the tea of which the men stand in need is difficult to obtain in Roumania, where its price has gone up tremendously. No doubt many people in England would be willing to help remedy this difficulty, but the parcels service through Russia is, I hear, interrupted. The only thing to do would be to despatch a consignment of tea representing individual contributions. The tea could be bought in Bucharest, I think, if funds were forthcoming. Should prisoners' friends care to send cheques payable to Mrs. Take Jonesco (Strada Atena, Bucharest), crossed Bank of Roumania, and marked "Prisoners' Fund," Mrs. Take Jonesco would give her personal attention to the matter.

Following is the text of the letters referred to:—

I.

Depôt des Prisonniers,
Philippople,
March 22, 1916.

To the Ladies of the British Committee at Bucharest,—

We, the English officers here in Philippople, wish to thank you very much indeed for the generous parcels you have sent us.

We are all glad to know you are thinking of us, and we appreciate very deeply the kindly feelings which prompted your gifts.

On behalf of the men, we would also offer you our grateful thanks. Their needs have indeed been great, but now, thanks to your gracious thought, and to the strenuous endeavours of the American Minister at Sofia and certain sympathisers here and in the capital, their wants have for the moment been amply met.—Yours very sincerely,

(Signed) Samuel Spira, Captain
(9th Batt. The King's Own Royal Lancaster Regt.).
L. W. Harries, Captain
(9th Batt. The King's Own Regt.).
Second Lieut. A. A. Townsend
(7th R.M.T.).
Michael Moloney, Second Lieut.
(6th Royal Dublin Fusiliers).
W. E. Gilliland, Lieut.
(2nd Norfolk Regt., attached 6th Royal Dublin Fusiliers).
R. G. Howe, Second Lieut.
(6th Dublin Fusiliers).
—J. Cowan, Second Lieut.
(8th Batt. The Connaught Rangers).

II.

American Legation,
Sofia,
March 26, 1916.

Dear Madame Take Jonesco,—

I have delayed a bit in replying to your letters in order that I might be able to tell you that I had personally distributed the articles which you and your committee have been kind enough to prepare.

Mr. Derussi* handed them over to me, and insisted on himself paying the transport to Sofia. I merely mention this as an illustration of the sympathetic interest he has taken in the prisoners. On Monday night I left for Philippopolis with your trunks and nine other cases of stuff I had prepared here. How I wish I had your assistance. . . . The parcels from Bucharest were all so beautifully prepared, and the letters which accompanied them were, I think, immensely appreciated.

If you will forgive my saying so, the real trouble with the parcels for the men is that they are too dainty. Although there are only 150 English at Philippopolis there are probably between 420 and 430 prisoners in all (18 have died!). I hope to succeed in having them all concentrated at one point, when relief will be much easier to distribute. But for the present, as it seemed unfair that certain men should have the parcels and the great majority remain without them, their officers will probably sort the effects and distribute them accordingly.

Meanwhile, I am trying to have each man provided with two kit bags and a complete change of underwear, towel, razor, soap, and tooth-brush, also with such articles of apparel which they require, and which are almost invariably boots and trousers, for few have either whole. I would, therefore, suggest, if I may, that should you be able to send more articles, the following would be most useful:—

For the men:

(1) Tea.—They miss their morning breakfast, and tea costs here 36 levas a kilo. I fear that jam is out of the question. Any food delicacies for the officers or men you might like to send (spirits not advisable).

(2) Blankets.—None, unfortunately, have them, and though we are running into the fine weather, they will require them again.

(3) A Gramophone, with Records and Needles.—I have tried to buy them one here, but none are to be had. They need to be put in better spirits.

(4) Cricket Wickets, Bat and Balls (also interior rubber for footballs; they have the footballs).

(5) Golf Clubs and Balls for the officers, including, if possible, one for a left-handed player.

In case you cannot get (3) (4) (5) at Bucharest, pray let me know, and I will try Vienna.

I am enclosing a list of prisoners which I have made up myself from different sources. It is not complete, but I doubt if more than twenty or thirty names are missing. From the Prisoners' Bureau it is impossible to obtain any information.

I think I can promise the safe delivery of the articles to the prisoners, if I once receive them here. It is always possible for me to send some on to Philippopolis, even though I do not myself receive permission.—Very sincerely yours,

James Einstein.

FOREIGN OFFICE STATEMENT.

Lord Newton, the Under-Secretary for Foreign Affairs, has addressed the following communication to Mr. Walsh, M.P., who drew the attention of the Foreign Office to the reported deplorable plight and treatment of British prisoners of war in Bulgaria, at the request of Councillor Edwin Yates, of Wigan, whose son, Sergeant James Yates, was taken prisoner by the Bulgars during the operations in December last year:—

"Foreign Office.

"Dear Mr. Walsh,—With reference to your letter to Sir Edward Grey, I regret to say that the statements to which you allude in regard to the treatment received by British prisoners of war in Bulgaria are unfortunately only too well founded. A letter from the United States representative at Sofia (Mr. Einstein) to the Ambassador in London, of which his Excellency has just sent me a copy, leaves no doubt as to the treatment, that the conduct of the Bulgarian authorities in this respect has been deplorable, and that the latter have been far from realizing their obligations towards the prisoners of war in their hands. Mr. Einstein is, however, keenly alive to the urgent necessity of bringing about an immediate and material improvement, and has already addressed to the Bulgarian Government a vigorous remonstrance, which will be followed by further representations, which he has been requested to make on behalf of his Majesty's Government. You may be well assured that no effort will be spared either on the part of his Majesty's Government or of the United States Legation at Sofia to put an end to a state of things which is as distressing to us as it is discreditable to the Bulgarians.—Yours truly,

"Newton."

*Roumanian Minister at Sofia.—[Ed.]

TANGIER TO TEHERAN.

The fall of Kut can hardly have come as a surprise to anybody, and to those of us who had friends shut up in the place it must have been almost a relief. The reports of the superhuman efforts made by General Gorringe's force to break through—at any cost—on that fatally narrowed front told their own tale only too eloquently, and it was well known to quite a number of people in this country that the beleaguered garrison had already endured longer than even their dauntless leader had thought they could. Both inside and outside Kut the Turks had allies far more formidable than the Germans: in the dreary little town hunger and disease did their part, and outside, the Tigris seems to have fought for the Turks with an almost fiendish appreciation of just how best to hamper the relief force. I shall never be able to think kindly of the muddy stream again, I fear, though I have spent many happy days on its banks. The combination of circumstances was too powerful for mere flesh and blood to overcome, and so—we have to start over again. In the meantime we may take comfort in the thought that our friends are in the hands of the Turks, and not of the Dogeaters. Khalil Pasha's chivalrous conduct towards General Townshend and his prompt agreement to the exchange of sick and wounded are sufficient proof that the Huns are not able to influence the course of events on the Tigris to any great extent; and we may therefore confidently expect that the prisoners will be far better treated than they would be in Germany. Indeed, I apologise to the Turks for instituting even a momentary comparison between them and their "allies." Personally I had three friends shut up in Kut, and to-day I am not in the least uneasy concerning them.

***

Look at it as we may, the surrender is a bad business, of course, but it is for us to make the best of it; and we shall not do that by stopping just now to endeavour to apportion the blame for it amongst the paltry politicians, as some people and a certain section of the Press seem disposed to do. We are promised a full inquiry into it all in due time, and if, as a result of such inquiry, one or two people get their deserts, many of us will feel much happier. But that is for the future. Let us remember the promise, by all means, and, when the time comes, let us press for its fulfilment. But what we have to do just now is to "make good." That is what General Townshend, General Gorringe, and every one of their brave men would tell us, I feel sure; and there can be no possible doubt that it is the only thing that matters—so far as concerns Mesopotamia—just at present. I know nothing about High Policy, but I do know something about Mesopotamia and its people, and I am convinced that, unless we undo the harm that has been done to our prestige there by the bungling and overlapping of the past twelve months, we may as well bid good-bye to our carefully built-up reputation in that part of the world. Unless we carry the Union Jack forward to Baghdad before we make peace, we must be prepared to see it disappear from the Tigris for good and all, our trade with Irak and with Western Persia will receive its death-blow, and our reputation throughout the Moslem world will suffer irreparable damage.

***

The Arab and his neighbours do not understand brilliant withdrawals or masterly retreats; and though it may be perfectly true that the fall of Kut is merely "a deplorable incident," and "not one of serious military significance"—as Mr. Asquith informs us is the case, and as our generous Russian and French Allies also tell us, with the best intentions—I fear that is not quite the view that will be taken in Mesopotamia, Arabia, Persia, and possibly in other parts of the East. So let us, with the tenacity of purpose that characterized our forefathers, and that still characterizes the true Briton to-day, set about the job once more. This is no time to "wait and see." We may have to "wait" long enough to make sure that our next move will be in sufficient force to avoid errors of the past. But that is all. The British public has been badly upset by this fall of Kut, and what it wants now is to "see" our flag over Baghdad, and to see it soon. It knows our soldiers can get there if they are given a fair chance. If they are not given that chance, Kut may prove the grave of certain reputations of which the owners, at least, appear to hold a high opinion at present.

***

The name of Professor Mahaffy is well known in Egypt and the Near East, and the account of his recent activities in Dublin, where he seems to have played quite a useful part in helping to make the Sinn Feiners unhappy, will afford much satisfaction to his admirers. He was formerly a crack shot; and now it transpires that amongst his other accomplishments—he is a great Greek scholar and papyrologist, besides being an historian and a wit—he has a good eye for a likely gun position. For it was he who suggested that a field gun should be mounted on the roof of Trinity College; and his suggestion, being acted upon, proved so successful that it was largely instrumental in saving the Bank of Ireland, to say nothing of clearing the adjoining streets of the Casement riff-raff.

***

Bishop Stileman has again been telling an English audience of some of the lies the Germans have been circulating among Moslems. Speaking at a C.M.S. meeting on the 2nd inst., he told his hearers that one of these lies was that Germany "sought, above everything else, to bring Islam up to the position of supremacy which to some extent it occupied a thousand years ago." This, after the pig breeding circular, will hardly wash! No doubt the Germans have tried to spread the impression, but educated Moslems are not likely to be taken in by the attempt. Nor will they readily believe the other falsehood to which the Bishop referred, about the desire of the British to capture Mecca and Medina and rifle the Prophet's tomb. Great Britain has repeatedly stated that she will not interfere with the sacred places of Islam; and "the word of an Englishman," we may still say proudly, is a phrase as well known in the East as is that other phrase "a scrap of paper," which was more recently coined in Germany as a synonym for "a solemn promise," and which has now, the world over, a reputation quite its own. The Germans hardly pay a compliment to the intelligence of Moslems by the circulation of such utterly foolish falsehoods.

***

A correspondent has been kind enough to send me another story illustrating the beautifully simple and direct methods of the German propagandist in Persia. It concerns that noble specimen of a Prussian gentleman, *sans peur et sans reproche*, Herr Wassmuss; and my correspondent, who is in a position to do so, vouches for its truth:—"The Tangistani chiefs were getting impatient. Wassmuss assured them that the German Emperor was anxious to speak to the chiefs, so he arranged a 'wireless' by fixing up a pole and some wires. He then summoned the chiefs to his tent, telling them the Emperor wanted to speak to them. They duly arrived, dressed in their best. Wassmuss took hold of the 'receiver,' placed it on his ear, and, after a pause, said: 'Ala Hazrat Kazar, salaam mifrested, ahvalporsi mikunad.' Then, after a pause and still listening with the receiver on his ear, added: 'His Majesty confirms the everlasting alliance between the German Empire and the chiefs of Tangistan. He inquires after the health of Sheikh Sadegh, Haji Mir Ali,' etc. (naming each chief); and wound up by saying: 'Ala Hazrat Aksee Khode Mobarek Ca Kassid makhsoos ferestadeh barai ishan.' The week after Wassmuss presented each chief with a photo of Wilhelm, which he had 'just received from Berlin'!"

***

I am told by a friend that the "Persian" in the above paragraph is very poor indeed. An expert to whom it has been submitted reports as follows:—"The first sentence reads (Ala Hazrat) His Majesty the Kaiser (Kazar), Salaam mifrested (sends greetings of peace). It *should* read: Salàm mirasanand (greetings, they *cause to arrive*): ahwalporsi milkunad (enquires after your health). The second sentence is: Ala Hazrat (His Exalted Majesty) akée (the (or a) portrait) Khode Mobarek (of his august person) (self) Ca (? Bà) (with or by) Kassid makhsoos (special messenger) frestadah (has sent) barai ishan (for them). A'lau-e-Hazrat-e-qaisar (His exalted Majesty the Kaiser) salam miferested (sends greetings of peace)—the third person plural is always used in speaking of royalty, and they don't 'send,' but 'cause to arrive'; hence it should read: Salam mirasanand. Ahwal-porsi mikunad *should* read: Ahwal-pursi mikunand—Ahwal is the plural of Hal: condition or state otherwise—health. Pursi from verb pursidan—to ask or inquire. Mikunand, third person present, from the verb kardan—to do. Ahwal-pursi mikunand They ask after (your) health."

***

A Greek friend has kindly forwarded me a cutting from the *Patris* of April 13, which I find very interesting. For it contains a photograph of the famous telegram of M. Passaroff, the Bulgarian Minister in Athens, regarding

FOR INSURANCES OF ALL KINDS.
F. W. CUMING & CO., LTD.,
THE GENERAL INSURANCE OFFICE OF EGYPT.
ALEXANDRIA: 5, RUE AVEROFF. CAIRO: 23, SOLIMAN PACHA.

Digitized by Google

those sacks which have so greatly worried the unsophisticated M. Skouloudis and the unfortunate M. Gounaris. Unhappily I cannot read Bulgarian, but the *Patris* obligingly supplies a French translation of the original, and for the benefit of my readers I make bold to pass it on, merely adding that the message is addressed to that eminent statesman M. Radoslavoff, the Bulgarian Prime Minister and Minister for Foreign Affairs, and dated November 8, 1915:—

R. N. 927.—Nedkoff me communique qu'à Salonique il y a des sacs en toile. J'ai entretenu le ministre Gounaris de cette question qui me dit ce qui suit: Je verifierai et si réellement il y a des sacs à Salonique. je recommanderai à la Banque Nationale de Grèce de les acheter et de les euvoyer à la Banque de Bulgarie sous le prétexte qu'elle les expédie pour la farine. Il fera cela pour éviter l'attention des espions anglais à Salonique. Si vos négociants achetaient les sacs et que les Anglais en étaient informés nous aurions un grand désagrément. Après s'en être servi pendant les opérations militaires la Banque Nationale de Bulgarie, nous les rendra avec la farine. Tout cela sera fait dans le but de justifier l'envoi devant les Anglais.

Le ministre de l'intérieur me commun qu ra après quelques jours combien de sacs on nous donnera. Je communique cette dépêche à Nedkoff. 950. PASSAROFF.

Observe how the good Passaroff—who really seems to be aptly named—is scandalized by the presence of the "espions anglais" at Salonika, and the pains he was at to avoid any "grand désagrément." And, after all, it was a case of "Love's Labour Lost" to a certain extent. But I should not be a bit surprised if somebody, or several somebodies, get the sack over the business yet. Even a Bulgarian diplomatist cannot be found out with impunity.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Kut Surrender. May 2.

Viscount MORLEY asked whether the Government were prepared to present papers respecting the unfortunate and lamentable affair at Kut-el-Amara.

The Marquess of CREWE replied that some papers would be laid before the House as soon as possible.

Viscount MORLEY expressed a hope that the papers would deal with the extension of the expedition to Baghdad, the mode in which the advance was carried out, the supplies, means of transport, and so on.

The Marquess of CREWE agreed that the public were entitled to the fullest information that could be given consistently with the necessity of safeguarding military operations, but he could not say precisely when the papers would be ready.

HOUSE OF COMMONS.

Suspicions in the Balkans. April 27.

Mr. R. M'NEILL asked whether the British Legation at Athens had issued an official statement to the effect that General Howell, Chief of the Staff in Salonika, had asked permission from the Government to take proceedings for libel against the editor of a paper called *Britannia* for falsely attributing to him the publication of an article displaying pro-Bulgarian sympathies; and whether, in view of the importance of removing the suspicion alleged to exist in the Balkans that Great Britain was favourably disposed towards Bulgaria, the Government would grant the permission requested by General Howell in order to enable him publicly to disavow the pro-Bulgarian views attributed to him.

Lord R. CECIL: At the request of the British Minister the semi-official Press Bureau at Athens issued a statement on General Howell's authority that a memorandum alleged to be by him and published by the newspaper *Britannia* was a forgery, and that he had asked permission to prosecute. The second part of the question should be addressed to the War Office, as General Howell is an officer on active service.

Mr. PRINGLE: Will any action be taken against persons responsible for circulating forgeries relating to public policy?

Lord R. CECIL: Certainly action can be taken, if it is worth while. The only question in these matters is whether it is really worth prosecuting people whose obscurity is their best defence.

Mr. PRINGLE: They have been subsidised by a Department of the Government.

Serbia and Peace Negotiations. May 2.

Mr. R. M'NEILL asked the Foreign Secretary whether Serbia was a party to the declaration of September 5, 1914, against the making of a separate peace by any of the Entente Powers; if not, whether his statement that his Majesty's Government were precluded by that declaration from entertaining any peace negotiations with Bulgaria without the knowledge and consent of the other parties to the declaration applied to Serbia.

Sir E. GREY: The answer to both parts of the question is in the negative, but in a matter so intimately affecting the interests of Serbia the Serbian Government would naturally be consulted in common with the other Allies.

The Suvla Bay Landing. May 3.

Mr. TENNANT, answering Mr. Hohler, who asked whether Sir F. Stopford's report on Suvla Bay would be published, said: As I stated on April 15, it is customary to publish only the dispatches of the Commander-in-Chief or senior officer in command. The reports of Sir Frederick Stopford were addressed in the usual manner to the Commander-in-Chief, who made the customary use of them in compiling his dispatch.

Sir E. CARSON: Has there been any report on these dispatches by the General Staff?

Mr. TENNANT: I am not aware at the moment whether that is so or not. I understand that Sir Frederick Stopford has agreed that no further action shall be taken on this matter at present.

Mr. HOHLER: Are we not entitled to see the materials upon which Sir Ian Hamilton based his report?

Mr. TENNANT: It would be quite unusual for the materials upon which a Commander-in-Chief based his reports to be given to the public.

THE PRESS ON THE NEAR EAST.

Kut.

In its leading article on the fall of Kut, the *Times* (May 1) does not spare those whose criminal ineptitude was responsible for placing General Townshend in the unfortunate position which has culminated in his surrender. We quote from portions of this article:—

The news has been received by the nation with the deepest regret, but with a strong determination that such irresolute and unjustifiable adventures as the attempt to take Baghdad with an entirely inadequate force shall be finished once for all. There is universal admiration for the long and brilliant stand which the beleaguered force had made against desperate odds. General Townshend is not only a brave and skilful commander, but he is the soul of cheerfulness. . . . Honour impelled us to persist in our attempts to raise the siege so long as General Townshend was able to hold out, but it may now be acknowledged that the chances were always small. We were beaten, not by the Turks, but by the Tigris, the desert, and the swamps. It is hardly necessary to say that the capitulation of the garrison of Kut has very limited military importance. The numbers involved are comparatively small, and Kut itself is merely a squalid little Arab town set in a loop of the river. Such interest as attaches to the siege and its unfortunate termination is almost exclusively political. The enemy will doubtless exploit the episode to the utmost, but their efforts are already heavily discounted. . . .

All this, however, does not in the least excuse the authors of this wretched and quite unnecessary chapter of the war. . . . It has phases more damning than either the tragedy of Gallipoli or the folly of the last six months' neglect of Dublin. . . .

The *Morning Post* (May 1), in the course of a leading article, says:—

By prolonging his resistance to the last possible moment General Townshend and his gallant officers and men have turned what might have been a reverse, not, indeed, into a victory, for they were compelled to capitulate, but into an achievement from which the enemy can gain little. The Turks have reduced General Townshend's force; but in so doing they have placed their own army in considerable jeopardy, and they may yet find their communications cut behind them by the advancing Russians. . . . We can also reflect that, grievous as the news from Kut must be, it imports this much—that British strategy has once again recovered the freedom which it could not possess as long as General Townshend's brave little army stood in jeopardy. The price paid for that freedom has been as heavy as it has been unnecessary; but now that it has been paid, is it too much to hope that the recovered freedom will not be once more wasted and frittered away? . . . .

The defenders of Kut, beleaguered for one hundred and forty-three days in the desert, will go down to history with the most famous among the many British soldiers who endured to the end against hopeless odds, not knowing whether their fortitude would avail, but simply doing their duty.

The *Daily Telegraph* avoids discussion for the moment, but in a leading article reviews the course of operations from the inception to the fall of Kut, and considers that, great though the sacrifice has been, it is abundantly clear that it has not been made in vain. It concludes:—

It is not too much to say that by means of the Mesopotamian campaign Egypt has been saved from all possibility of an effective invasion. German intrigues have been banished from Persia; our Indian Empire is relieved of all serious menace from Teutonic ambition. Moreover, as matters stand, the Turkish dominions in Asia are as much beleaguered by hostile forces as they ever were. The army of Sir Percy Lake, even though it did not succeed in relieving General Townshend, still holds the lower reaches of the Tigris, and our great Russian Ally in the North carries on his victorious advance. And the defence of Kut remains a glorious memory—one of the brightest pages in the heroic annals of the British Army.

The *Daily Chronicle* devotes considerable space to the task of placing all responsibility upon the shoulders of generals in field, although it admits that "nothing but credit attaches to General Townshend and his gallant troops, who had done all that men could do."

The following paragraphs are quoted from a leading article in the *Manchester Guardian*, of which they are the beginning and the end:—

One of the German papers calls the fall of Kut the heaviest blow ever struck at Great Britain. So gross an exaggeration

Digitized by Google

is helpful, because it forces us even against our natural inclination to try to see the event in its just perspective. We are moved with deep sympathy for General Townshend and his brave army, compelled by sheer hunger to capitulate to an enemy whom they had defeated over and over again, and who could never have conquered them by arms. We might have been inclined to enlarge the disaster and cast about for scapegoats. The comments of the German press will serve as a warning that it is our first duty at such a time not to give way to personal feeling but to look at what has happened coolly and dispassionately. . . . The loss of General Townshend and his army is a bitter disappointment and wounding to our pride, which revolts at the idea of surrender to the Turks; but except for the loss of 10,000 troops it is not a serious military defeat. It does not better the Turkish position; it does not weaken ours. There have been gross mismanagement of these operations and gross improvidence in their design, and the time will come when the responsibility will have to be fixed. But for the present we shall do well to recognise that we are no worse off for the business in hand—namely, the capture of Baghdad—and to find in the tragedy of Kut the stimulus of victory.

The *Evening Standard* (May 1) comments upon the "two broad streams of Soudang" visible in the criticism evolved by the fall of Kut.

On the one side the Government is violently attacked for its alleged miscalculations and ineptitude, and even roundly charged with arranging the whole affair as a theatrical set-off to the evacuation of Gallipoli. On the other side, there is a disposition to spare the Government at the expense of its military advisers, who are saddled with the responsibility for Townshend's adventurous advance on Baghdad with a force now clearly seen to be inadequate.

We think both criticisms ill-timed, and both may be unjust. This is not a convenient moment for full investigation of the facts, and without all the facts judgment is impossible. Doubtless the Government has, here as elsewhere, been guilty of many sins of commission and omission. We have already proof of the gravest defects of organisation as regards matters of detail, and it may well be that when the matter is probed to the bottom there will be as heavy an indictment as against the moving spirits in the Gallipoli adventure.

Still, we cannot go the length of treating the whole Mesopotamian expedition as a sort of exhibition of fireworks. . . . In the absence of full information, there can only be a suspension of judgment as to policy dictating the Mesopotamian campaign. But when investigation is made it should, we think, be complete, if only in fairness to Sir John Nixon and the other military advisers.

The Dardanelles Anniversary.

Mr. Henry W. Nevinson contributes, under the above heading, a most interesting article to the *Nation* (April 29). The writer knows his subject thoroughly from experience gained at first hand, and we quote from his concluding passages, in which he deals with the evacuating of the peninsula:—

This astonishing success was due chiefly to superb organization, partly to good luck in weather, partly perhaps to a certain dulness in the enemy's brains. Since my return I have constantly heard sneering critics maintain that the Turks were bribed to let us go quietly. It is a foul libel, not only upon our own officers, but upon the Turks themselves. The skill of our departure was worthy of the courage of our landing, and the only cause for regret is that all the courage and skill displayed throughout the campaign should have ended only in failure to attain its objects, and in the loss of nearly 118,000 killed, wounded, and missing, not to mention about 100,000 sick. The campaign was an extreme disaster, but all who were actively engaged in it may remember it with pride, for the chief causes of the disaster were never near the peninsula at all.

Ireland and Egypt.

In a leading article on the Irish insurrection the *Times* (May 3) concludes with the following tribute to Sir John Maxwell, and reference to the recent conflict near the Suez Canal:—

One man, at any rate, seems to have handled the insurrection with firmness and discretion. From the moment Sir John Maxwell reached Dublin the nerveless attitude of the authorities was replaced by strong and successful measures. He appears to have performed a most difficult task with great thoroughness and restraint, and with a minimum of friction. His work during the last few days confirms the admirable reputation he gained in Cairo, where he was stationed until recently. We note, by the way, that since he left Egypt an unpleasant conflict has occurred east of the Suez Canal, which must be regarded with some misgiving. A force of Turks was able to attack the post of Duweidar, only fifteen miles from the Canal, and it was beaten back with some difficulty. Simultaneously a strong force, including a battalion of Austro-Germans, attacked the village of Katia, thirty miles from the Canal. The bulk of a Yeomanry brigade seems to have been eventually involved in the Katia action, but the village passed from our possession. As the responsibility was evidently purely local, we shall not be suspected of embarrassing the Government if we ask for further information. So many glowing statements have been made regarding our preparations on the eastern side of the Canal, that it has astonished the public to find that a brigade of cavalry, or portions thereof, can come to grief and be badly outnumbered within thirty miles of Port Said.

Mesopotamia.

The *Nation* (April 29), in an article written before the news of the fall of Kut reached England, published a long article under the heading of "Turkey, Trebizond, and Townshend." The first portion of the article is devoted to an examination of the various achievements of Russian arms. The writer continues:—

It will be interesting to see what the next step of the Russians will be. It seems hardly possible that it can redeem our own plight in Mesopotamia; but it is not improbable it may take vengeance for us. For unless the Turks can keep the Baghdad railway open, their chances of escape do not appear very bright, and no doubt the Grand Duke has before him the possibilities of cutting off the whole Mesopotamian force. We cannot estimate the immediacy of that issue until we know more of the strength of his armies in this area. But the chance is there, and the present Russian achievement would have been thought impossible at the beginning of the year.

Our own operations in Mesopotamia throw into stronger relief the Russian successes. There is no need to depreciate the gallantry and skill with which the earlier part of the campaign was conducted. Up to the capture of Kut it had been uniformly successful, a pageant in little of the resources of our Empire.

The writer urges the necessity of a thorough inquiry into the whole question of the expedition:—

When Lord Crewe said that "the plan had been carefully thought out by the Commander-in-Chief in Mesopotamia, Sir John Nixon, and the force which was set apart for it was by universal military opinion considered to be sufficient," he was plainly using ambiguous language. Does "the force" include reinforcements, and when were these supposed to arrive? It is clear that the British expected reinforcements, and unless these were included in the plans we can only regard the decision to advance as summer madness. Let it be granted that General Townshend only missed taking Baghdad by the few days required for re-watering after Ctesiphon. With little over a division of troops he could only have exchanged a siege in Baghdad for his present plight at Kut. We can only conclude that the plans must have included reinforcements; but as these came up so belatedly, what must have happened to General Townshend if he had been so much nearer the Turkish bases and so much farther from ours?

As it is, we certainly contributed to the Russian successes. We bewildered the Turkish command, and the readjusted dispositions must have helped the Grand Duke considerably.

The Death of Von der Goltz.

"A Student of War," writing on the war in the *Manchester Guardian* (April 29), makes the following assertion in regard to the death of General Von der Goltz:—

Von der Goltz did not die a natural death, but was probably assassinated by a Turk who was indignant over the defeats in Armenia, and thought that the Germans, in order to save their own interests in Mesopotamia and the Baghdad Railway, had sacrificed what the Turks with justice regard as their own far more important interests in Armenia.

Articles to Note.

"Westward of Erzeroum," by "W. J. C.," in *Blackwood* (May).

"King Constantine of Greece at Home," Illustrated Interview, by Crawfurd Price, in the *Sphere* (April 29).

"Egyptian Christianity," a Review of E. A. Wallis Bridge's "Miscellaneous Coptic Texts in the Dialect of Upper Egypt," in the *Athenæum* (April).

PARCELS FOR PRISONERS IN BULGARIA.

The Foreign Office forwards the following for publication:—

The United States Chargé d'Affaires at Sofia has recommended that all parcels and remittances intended for British prisoners of war in Bulgaria should be addressed to them "C/o Lieutenant W. E. Gilliland, Prisoner of War, Philippopolis, Bulgaria," by whom arrangements will be made for their distribution.

Parcels and letters for prisoners of war may be handed in at any post office and are forwarded free of charge. It is recommended that parcels should be very substantially and securely packed.

Roumanian resentment against the arbitrary conduct of Austro-Hungarian frontier officials has been increased by the arrest of M. Busso Siriano, a Roumanian subject, who was travelling from Paris to Mircea. M. Siriano is a well-known Roumanian publicist, and the editor of the *Revue Franco Roumaine* in Paris.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

An exceptionally interesting speech was that delivered by the chairman of the Ionian Bank last Tuesday, copious extracts from which are reproduced elsewhere. The position of the bank is a very fair one, its assets and liabilities having reached the highest level in its history, and deposits having increased by £915,300—rightly interpreted as a sign of confidence in the bank. The salient feature of the year was, of course, the opening of a branch in Salonika, which has not only been of utility to the British military authorities, but has also been of service to the French authorities, operating through the Bank of France and the London offices of the company.

***

Apart from the bank's own position, the chairman's speech calls for some comment. Noteworthy was his denunciation of our currency system—which is antiquated—and his championship of the Greek Valaoritis system, which, he argued, "was applicable to all progressive States." It will be impossible to summarise here the chairman's lengthy dissertation on this subject, covering as it does the banking and financial systems of Great Britain and the United States, but the following features in the Valaoritis system may be given:—(1) The division of the home exchanges from the foreign exchanges, the instruments of the former being legal tender notes, and of the latter bills of exchange against products, cheques and the various forms of liquid wealth, including coined gold, and gold as a commodity; (2) the provision of a fund of gold or of its equivalent liquid wealth of about five millions sterling by adding an equal sum in local currency to the existing paper circulation of the country to meet any adverse balance of trade; and (3) fixing the exchange by law at or moving about par.

***

It will be seen, therefore, that liquid wealth, including gold, or not, is taken as the standard of the Greek currency system, whereby gold becomes merely a commodity instead of being the standard, as in our system. The subject is an interesting one, and will have to be dealt with at greater length when the occasion arises. Incidentally it may be mentioned, as pointed out by the chairman, that this system of national credit, taking the place of a nominal gold-coin reserve, is at present the basis of the large issue of British Government legal tender notes and Treasury bills.

***

Not less interesting were the chairman's remarks on Greece's position as regards the war. That this position is difficult no one will deny. "To join the Entente, with whom her sympathies sided, meant, in the case even of only temporary failure, dismemberment, if not destruction; and to join the Central Powers meant submission to Austro-German interests and the loss of Salonika, and, having regard to the increase of Bulgarian power, the probable loss of Kavalla; also liability to bombardment by the Allied fleets and capture or destruction of the mercantile marine." He added, however, that it was "unthinkable that Greece should ever assume an active opposition to the aims and interests of the Allies," but deplored the fact that she had not thrown herself, at whatever cost, into the scale on the side of humanity and civilisation, and "assumed her proper rôle of responsibility with the truly great nations of the world for the well-being of mankind. For there is a day which is 'my day' for nations as well as for individuals, and a 'night' when the opportunity has passed."

***

Lord Edward Cecil's Report on the Egyptian Budget, telegraphic reference to which has reached this country, is a ray of optimism in what has, on the whole, been a clouded week. The conclusion arrived at by the Financial Adviser is particularly optimistic. "If Egypt," he asserts, according to a Reuter's message, "follows the present prudent policy, she will emerge from the war not merely without any additional burdens, but with her financial resources greatly strengthened." Incidentally it may be pointed out that in the *Times'* summary of the Report, reproduced elsewhere, an obvious error has crept into the reading of the message. It is impossible that the Financial Adviser should have pointed to "the cessation of exports" as a factor illustrating the country's remarkable recovery. I shall, however, withhold further comment until the full report reaches this country.

***

Coming back again to the question of Egyptian exports, it would seem that, in reality, the Government is keenly interested in increasing them, judging by the announcement published on this page. The method of thus bringing the products of Egypt to the notice of merchants abroad is a wise one, and will, I feel sure, greatly contribute to the desired increase. Not only is information as to the nature of these products to be obtained at the Bureau of Commercial Intelligence, Cairo, but samples of produce are likewise prepared for submission to inquirers in all parts of the world. It is only by such fostering care that Egypt's export articles will become more generally known.

***

The total receipts of the Egyptian Delta Light Railways for the year ended March 31, 1916, amount to £E187,735. These figures are, when everything is considered, really excellent. In the previous year—that is to say, from April 1, 1914, to March 31, 1915—the receipts were £E188,992, but then the first four months of that year belonged to the pre-war period. Nevertheless, the difference between the two years is only a matter of a thousand odd pounds. Nothing could illustrate better the recuperative powers of the country, because, after all, the Delta railways benefit less from the transport of troops than the State Railways. The relative increase, therefore, is due more to the economic *essor* of the country, properly speaking, than to any extraneous circumstances, and the company is to be congratulated on its returns. Prospects for the future, moreover, are decidedly brighter, as is pointed out by the Cairo correspondent of *Railway News*. "This is more especially so," he says, "as it is reported that, owing to the strong demand for the staple, the acreage put under cotton is higher than ever this season, promising a heavy cotton traffic when the crop is gathered towards the end of the year." Incidentally, an Exchange message from Cairo on Wednesday stated that an optimistic view is taken of the coming cotton crop, an unofficial estimate placing it at eight million cantars.

***

According to a correspondent, so piteous is the situation in Syria that many Syrians who have friends or relatives in America have been appealing to them for funds. It is said that in this way over a million dollars has been sent to the afflicted country. I wonder how much of this has found its way into the hands of the Turkish authorities? Perhaps, we have here a repetition of Austro-Hungarian methods in Serbia, where the peasants are forced by the authorities to write begging letters to their relations in the United States, the replies to which are, *of course*, opened by the proper—what shall we call them—censors?

***

The success of the Five per Cent. Internal Loan, which has been authorised by the Roumanian Parliament, is—as predicted in these columns last week—already assured. Two hundred million lei have been earmarked for the repurchase of Roumanian rentes placed in Berlin, which is all the more astonishing, considering that Berlin, having no available gold, has been forced to pay for the grain purchased in that country by means of these self-same rentes.

***

The British Buyers' Syndicate in Roumania, acting through the Chrisoveloni Bank, has scored a signal triumph in Bucharest by persuading a meeting of the Millers' Syndicate on Saturday last to accept its offer for the purchase of flour available for export, estimated at approximately 10,000 wagons. This is a smart piece of work, firstly, because it overrides a German bid, and, secondly, because it will seriously affect Turkey, which is in dire need of flour. The Syndicate is to be congratulated on its success. The results of the arrangement are approximately as follows:—The millers abstain from grinding cereals for export for a period of five months on consideration of the payment of a sum of £535,714. and we purchase all the flour in the country which is available for export.

COMMENTATOR.

MINISTRY OF AGRICULTURE, CAIRO.

With reference to the communication originally made to the Press in September, 1914, the MINISTRY OF AGRICULTURE, Cairo, continues to FURNISH INFORMATION connected with EGYPTIAN AGRICULTURAL PRODUCTS for EXPORT, and with reference to markets for imported products, acting as an intermediary between the producer and consumer. Samples of produce are prepared for submission to inquirers in all parts of the world, and information is supplied to producers, to enable them to prepare their produce in a manner suitable for foreign markets. All correspondence should be addressed to The BUREAU OF COMMERCIAL INTELLIGENCE, Ministry of Agriculture, Cairo.

Anglo-Serbian Economic Relations.

Lecture by Dr. Svetosar Grgich.

Last Tuesday, at the London Chamber of Commerce, Dr. Svetosar Grgich read a paper on Anglo-Serbian Economic and Political Relations. The Right Hon. Lord Southwark presided during the earlier part of the proceedings and introduced the lecturer to his audience in a short speech. Later the chair was taken by Mr. C. F. Town.

Dr. Grgich said that British and Serbian interests in the Near East were absolutely identical, and it had been a great disadvantage to both parties that this fact had not always been recognised. This circumstance had been due to certain political considerations which had now been swept away by the part Bulgaria and Turkey were playing in the present war. It was now only logical to expect that England's commercial influence in Serbia should be made as strong as possible. The Serbians were very desirous of a closer economic and political co-operation with England, and a recent visit of the Crown Prince, Monsieur Pashich, and the Metropolitan of Belgrade to London was evidence of this fact. Freeing herself from the present economic control of the Central Powers would give Serbia a very difficult problem to solve, for she was a rich country, which, for the exploitation of her natural wealth needed only friendly foreign capital and assistance. Of her population 84 per cent. were engaged in agriculture, but this was not carried on according to modern methods; this backwardness being due to the unsettled political condition of the country which compelled the people to concentrate their energies on the national defence.

Pre-War Conditions.

Hitherto, England had not played the important part she ought to do in Serbian commerce, for Serbian imports from this country had never reached a higher value than 11,425,000 fr., while the corresponding figure was 16,148,000 fr. from Austria-Hungary, and 34,975,000 fr. from Germany. Austria's trade to Serbia had declined. From 1900 to 1904 she did 55 per cent., from 1905 to 1909 42 per cent., but in 1910 only 19 per cent. During the same period the proportion of the same trade done by Germany had continually grown, the figures being 5 per cent., 20 per cent., and 24 per cent. England's trade with Serbia had been in 1906 4,000,000 fr., in 1907 10,000,000 fr., in 1908 8,500,000 fr., in 1909 7,500,000 fr., and in 1910 11,000,000 fr. Among Serbia's chief articles of export were maize 21,000,000 fr., cattle, pigs, and preserved meat 16,000,000 fr., wheat 12,000,000 fr., plums 10,000,000 fr., and copper 8,000,000 fr. The good quality of Serbian plums and Serbian hams was well known. Serbia was rich in forests, though this industry had been but little exploited, and she had deposits of gold, silver, aluminium, lead, coal, and especially copper. The remarkable success of the copper mines was a guarantee of a great future for the mining industry of the country, provided it was helped by scientific prospecting, skilled labour and foreign capital. Manufacturing industries were but very little developed, though there had been considerable progress in the last fifteen years; but when Serbia's natural wealth, coal, plentiful water supply and her abundance of labour were considered, it would be seen that the conditions were favourable for the development of manufacturing industry on a great scale and in a very short time.

British Assistance Required.

In the development of her resources Serbia looked to England for assistance more than to any other power, and this co-operation would not only exercise a beneficial influence on the economic life of Serbia, but would strengthen in the highest degree England's political and commercial influence in the Balkans, while British labour and capital could be introduced into Serbia under the most advantageous conditions. Hitherto, Anglo-Serbian commercial relations had been retarded by the fact that Serbia had no outlet to the sea, but she looked forward now to having a long and well developed seaboard on the Adriatic. This, more than anything else, would enable her to have direct commercial relations with Western Europe, and to emancipate herself from Austria-Hungary and Germany. After the war England should play a very important part in Serbia's renaissance. Serbia would have a very great economic task before her. She would have to modernise her agriculture, to place her timber industry on a sound basis, to establish factories, to build roads, railways, and a mercantile fleet. To encourage Anglo-Serbian trade, commercial and industrial syndicates should be organised to work concessions which the Serbian Government would grant, and an Anglo-Serbian bank should be established.

The Chairman said the paper suggested a close co-operation between the chambers of commerce in this country and those in Serbia. He was quite sure that when the time came the London Chamber would welcome such co-operation, and would establish a Serbian section if that did not already exist. As to concessions, his experience had been that the Governments who gave them, made them as onerous as possible and put every possible difficulty in the way of the country that needed capital getting it. He hoped the Serbian Government, when the time came, would be more liberal.

Mr. C. E. Town, who moved a vote of thanks to the lecturer, said that England having come too late to the assistance of Serbia, that country had practically endured a martyrdom; he was quite sure that when the war was over that fact would be remembered by England, and her influence would be used so that the legitimate aspirations of the Serbian nation might be achieved. With regard to the outlet to the sea, he had been very pleased to learn that a present of two naval units had been made by England to Serbia, and that each of the Allied nations was going to present Serbia with units, so that she might become a naval as well as a land power. For a mercantile development an opening on the Adriatic was absolutely essential. After the war, Serbia might rely on every assistance from the British Government and the British commercial community in forwarding her commercial interests. Of course, we were a nation of shopkeepers, and expected to benefit ourselves while benefiting others. Trade between Serbia and Great Britain would be to the mutual advantage of both countries.

Mr. Chapman seconded the vote of thanks, which was unanimously agreed to and briefly acknowledged by Dr. Grgich. Subsequently, in moving a vote of thanks to the chairman,

Mr. C. E. Town said that what was wanted was a Chamber of Commerce or some other semi-Governmental body, which would introduce capital into Serbia through banks or otherwise, and with that capital bring out the country's resources. As far back as 1907 he had formulated a scheme whereby that could be done; and had that scheme been adopted, Serbia would now have been turning over five millions a year with this country. Serbians must not rely too much on what other people could do for them, they must tuck up their sleeves and wire in for themselves.

The vote of thanks to the chairman was unanimously given, and this terminated the proceedings.

TRADING WITH THE ENEMY.

Reuter's Agency reported from Cairo yesterday that the most important prosecution on a charge of trading with the enemy that has yet taken place in Egypt has just been dealt with. The firm of Schneider and Rothacker, which has been long established here, has been sentenced to pay a fine of £5,000 for trading in coffee with the enemy. One of the members of the firm, who is now in Switzerland, was sentenced to nine months' imprisonment.

THE LOCUST PLAGUE IN CYPRUS.

(From a Correspondent.)

Cyprus, April 17.

The Greek Archbishop Kysikos, with M. Theodoton, a prominent member of the Legislative Council, and representatives from various villages of the central "Messoria" district, in a recent interview with the High Commissioner, made an earnest request that in the locust war, now being actively waged, the system of purchase might be adopted instead of the poison spray. His Excellency, after giving careful attention to their representations, promised that the two systems should be applied concurrently. It must be hoped that the conditions under which the two trials will be carried out will make it possible that some really useful and conclusive comparisons may be made between the two rival systems.

Thousands of okes of locusts are being collected in many places, and brought in for weighing and purchase by Government officials appointed for the purpose. In some cases village individual labourers bring in as many as forty to fifty okes. The price so far paid is 1½ piastres for the first five okes, and one piastre per oke for quantities above that figure. So that an active villager can thus earn up to nearly 5s. a day.

The discovery of a new preparation for poisoning the pest is claimed by M. Z. Solomides, entomologist of the Agricultural Department, who states that, while its effects are deadly against the locust, no injurious results can follow from vegetation which has been sprayed, when used as fodder. Experiments have been made in the garden of the Archbishop's palace at Nicosia, before his Eminence, the Bishop of Paplo and Kyrenia, the Abbot of Kykkou, some members of Council, and agriculturists, which are said to have been completely successful, the locusts dying within ten minutes after spraying. In the Agricultural Department experiments have been carried out to test the effect on plants—a lamb which had been fed for a considerable time on sprayed herbage having suffered no injurious effects. The preparation, which the inventor states is of very simple ingredients, has the merit of cheapness; as about thirty gallons of the mixture can be prepared for less than two shillings.

CYPRUS DISTRESS.

(From a Correspondent.)

Cyprus, April 17.

In the reply of the High Commissioner to a petition, praying for relief measures on account of the distressed state of the peasantry, it is stated that, while the collection of taxes cannot be suspended, as proposed by the petitioners, wheat will be issued at very moderate prices, as far as circumstances may permit, from the Government tithe stores, to needy applicants.

Abundant rain has fallen most opportunely, and beyond the most sanguine hopes. The Pedias "river," which runs through the central plain, and past Nicosia, brought a full torrent, overflowing its banks in places, while other streams brought down sufficient water not only to swell the cereal crops, but also to irrigate much land for summer produce. The downpour, more like winter than spring rains, seems to have been general throughout the island between April 11 and 13. An abundant harvest is now assured. Unfortunately, in a few places hail has caused damage, and again in parts there is anxiety lest the locusts should work some havoc.

The Agricultural Department announces that a show of horses, donkeys, and cattle will be held on May 12 at Nicosia.

Coal in Egypt?

Government Investigations Near Edfu.

(From Our Own Correspondent.)

Cairo, April 19.

It is announced that the Egyptian Government is carrying out investigations with a view to ascertaining whether there exist any workable deposits of coal in Upper Egypt. This is not the first time that such investigations have been carried out in this country; the region in which the present work is about to be carried out has always been regarded as one in which coal might quite possibly exist. It may, therefore, not be without interest if a summary of the previous attempts made to locate these mineral deposits were given.

Historical Survey.

The earliest recorded search for coal took place in 1840, when that great man, Mehemet Ali, ever keen to promote the interests of his adopted country and keep her abreast of the times, decided to prospect for coal to the east of Cairo, near what is to-day known as the Petrified Forest. He met with no success, but, nothing daunted, four years later he commissioned Figari Bey, at that time Inspector-General of the Pharmaceutical Administration, to carry out researches in the Eastern Desert.

Figari Bey worked between 1844 and 1848 at Rhodesia (Edfu East), Wadi El Araba—between the northern and southern Sellala plateau to the east of Beni-Suef—and Wadi Dakhl to the north of Gebel Um Tenasseb. The *Official Journal* of October, 1846, contains a short account of the results of the search made in the Wadi Araba, but, although in places borings were conducted to a depth of 700 feet, no carbonaceous material was found in any quantity, the substances encountered being merely in process of formation, or with but very thin veins of lignite.

At Rhodesia, Figari Bey made a bore to the depth of 865 feet, and found at 165 feet, after several alternating beds of sandstone and shale, often bituminous, a layer two feet thick of silicious limestone containing fossil oyster shells. He considered that this layer indicated that coal could not possibly exist in the region. However, later on, other operations were carried out in the district, and a Mr. Neutinger, who prospected there between 1844 and 1854, recorded his discoveries as follows:—"From surface to 47 metres, succession of alluvials, clays, and sandstones; from 47 to 92 metres, schists and sandstones in which fine coal seams were met with, and of which the lowest was 2.25 metres of good coal." The scene of these operations was Gebel Zebara, about five miles east of Edfu Station.

Ismail Pasha followed in the footsteps of his grandfather, and caused work to be continued at Rhodesia. In 1872 he sank a shaft at 600 metres distance from the old borings, and three years later Dr. Gaillardot presented to the Egyptian Institute some samples taken from this shaft and containing combustible mineral which it is thought was coal.

Nothing further seems to have been done, and the subsequent political upheaval to which the country was subjected appears to have driven the search for coal into oblivion, for the next record of any serious prospecting work is in the year 1903, when the Société Générale des Sucreries et de la Raffinerie d'Egypte got together a syndicate, which was afterwards known as the Keneh Company, for the purpose of carrying out borings in the region of Rhodesia.

The Keneh Company.

The company secured the services of eminent Belgian engineers; one of the latter gave it as his opinion that coal measures existed in the subsoil of the region, that calamites, one of the characteristics of coal flora, had been found there, and that boring, but to a great depth, ought to be undertaken. Work was started on both banks of the Nile, but at 409 metres it was suspended, as no trace of coal measures could be found, and the company was not prepared to spend any more money on the venture.

It is interesting to note that the company's report of the borings carried out states, that after 31 metres, vegetable substance was found in the sandstone, followed by blackish material and black schistous clay, which led one to expect coal schists; from 58 to 59 metres, and from 68 to 69 metres, there were small filaments of black carbonaceous matter impregnated with iron pyrite, probably a kind of lignite; between 135 and 143 metres there was blackish schistous clay with carbonaceous pieces and lignite filaments, followed by greyish sandy clay slightly micaceous; after 181 metres greyish clay, very firm and compact, was met with; between 300 and 366 metres grey clay containing several silicious, ochraceous and quartz beds was found, and at 409 metres the soil was of slight vegetable composition. It did not look as if the coal schist was very near, and operations were suspended. The depth to which boring was made was, perhaps, insufficient to give conclusive evidence of the non-existence of coal. The engineer referred to is understood to have advised going as far as 600 metres, and it is a pity that the company could not stand the additional expense of going to the full depth advised.

Recent Discoveries.

Since then there have been various discoveries which are considered to corroborate the assertions of the engineers that coal exists. The Egyptian Coal Syndicate put down a bore 100 metres deep near the above workings at Zabbara (Edfu East), and encountered the same succession of sandstones and bituminous shales. At Abu Rahel, forty-five miles to the east, the Department of Mines sank a well 247 ft. deep, and encountered three seams of bituminous shales, 17 and 27 centimetres and two metres thick respectively; all three seams contained appreciable quantities of bituminous coal in narrow seams and veins, burning brightly with a long luminous flame, but the laboratory tests showed that they did not yield sufficient oil or tar to make them of any commercial value. In the Kharga Oasis the Corporation of Western Egypt met with beds of lignite (coal) at various depths, and these beds are believed to be of the same age as those found at Edfu and Abu Rahel. In the Sinai, the Cairo Syndicate has found seams of bituminous shale, with veins of coal up to 2 ins. in thickness; the shale was similar to that found at Edfu and Abu Rahel. At Tor samples of coal-bearing shale, similar to that found at Edfu, have been encountered.

The Report of the Department of Mines, from which most of the above information is culled—additional data has been kindly furnished to me by the Société des Sucreries and by H.E. Ahmed Zaki Pasha—admitted that whilst formations carrying considerable bituminous matter do exist over a wide area in Egypt, there is nothing to prove the existence of commercially valuable beds and seams. One can only reason on somewhat meagre data.

Firstly, the Upper Cretaceous period has yielded large coalfields of both inferior and better-class lignites and coal in a great many countries; secondly, there is a very wide distribution of bituminous shales, probably of fluiro-marine age, when a great part of Egypt was low swamp lands, with conditions more or less favourable to plant growth; thirdly, nothing is known of the intervals of time that elapsed between the elevation and depression of the earth's surface in Egypt during the creation of these formations, or as to whether they were of sufficient duration to permit of any great accumulation of plant life; and fourthly, since the days of those formations, Egypt's crust has been little disturbed, so much so that rarely do formations immediately recur than Nubian sandstone (Upper Cretaceous) appear or outcrop at surface.

The great question is as to what were the conditions existing in Egypt prior to the Upper Cretaceous age, for on that hinges the possibility of the existence of coal to any commercially valuable extent.

The report pointed out that "in the Red Sea ranges the Nubian sandstone lies conformably upon the older plutonic and crystalline rocks with a basal conglomerate including many pieces of the older rocks on which they lie," and it assumes that as no violent movements supervened, these ranges existed as islands surrounded by shallow seas or swamps, which received the Central African rivers. The entrance to the valleys and the inlets amongst these islands would constitute points for the accumulation of plant life, and given subsequent favourable conditions, these accumulations would to-day exist as coal seams below the Nubian sandstone, above which no bituminous shale has as yet been noted.

The report concluded by saying that it may be argued "that the data available warrants the assumption that there is a fair prospect of discovering basins wherein accumulations of ancient plant life have been sufficient to form coal, but owing to the extraordinary evenness of the recent geological horizons their discovery can only be effected by systematically following up with the drill such data as is already available."

Appointment of Expert.

It is with the intention of systematically investigating this theory in the region that is generally agreed to be the one most fulfilling the requisite geological conditions, that the Egyptian Government has now decided itself to carry out borings and tests under the direction of Mr. J. T. Wells, formerly Inspector-General of Mines in this country. Previous prospecting ventures have failed simply because they have not been carried out on a sufficiently extensive scale, or have not had behind them sufficient capital to permit of the sacrifice of time and material involved. It is, as far as I can gather, not claimed that the present search for coal will prove successful, or that if coal seams are located they will prove commercially workable, but the data available is considered such as to warrant the theory being thoroughly put to the test and the question of the existence or not of commercially-valuable coal being settled once and for all.

BLOCKADE RUNNING IN BLACK SEA

The correspondent of the *Times* in the Balkan Peninsula, cabling from Constantza, describes how starved Constantinople obtains some food supplies (supplies from Asia Minor having practically come to an end (from Roumania viâ the port of Constantza. A fleet (he writes) of many hundred sailing vessels and some steamers is kept continually employed in accomplishing the journey of about twenty-four to thirty hours. "The cargoes, as a rule, consist of cereals, flour, groceries, and petroleum. The risks of the voyage are great, owing to the vigilance of the Russian Fleet, especially in the case of steamers, which are compelled to traverse the open sea. The small sailing vessels, which hug the coast, more frequently succeed in reaching the mouth of the Bosphorus.

"Great profits are made by Turkish captains and skippers engaged in this hazardous occupation; the crews are for the most part engaged in Constantinople at low wages, which they sometimes supplement by small trading on their own account.

"As all exportation from Roumanian ports has been prohibited for more than a year, special permits for export must be obtained from the Government by vendors of foodstuffs before they negotiate a sale to shippers. The vendors recoup themselves for the expenditure incurred in securing permits from officials by charging high prices to shippers, who willingly pay them in consideration of the immense profits made on sales in Constantinople. The shippers, further, pay large sums to the captains of ships, but after all deductions their net profits often exceed 100 per cent.

"Constantinople is thus saved from starvation.

"The departure of the little fleets is a picturesque spectacle. In fine weather some twenty to fifty vessels of all sizes may be seen putting out from the port, making their way southward. Some never return, but the shippers can afford considerable losses. Constantinople must be fed, and Germany, not bankrupt Turkey, pays the bill in the end."

The death is announced of Mr. Oswald Darke, senior partner in the firm of Temperleys, Carter, and Darke, of London, and chairman of Contomichalos, Darke, and Co., Limited, of Khartoum.

War Hardships in Syria.

FROM A TRAVELLER.

CAIRO, April 17.

The tales of misery and distress in Syria which reach this country are unfortunately receiving confirmation from various quarters. The writer has just received a letter from a missionary in America, saying that, according to reports received, articles of food in Syria have risen 200 per cent. A few days ago a small boat arrived at Port Said from Syria with six men and two children, who tell the same tale of misery and persecution.

The oppressors themselves are, however, nearing the time when they will be in a serious plight, through the breaking down of their railway communications, because the fuel problem is getting more serious every day. Through the exhaustion of the stock of coal that was requisitioned at the outbreak of the war, the Turks have lately had to resort to firewood. But this is a poor substitute. The engine of a train making the trip from Rayak to Hama is said to consume forty tons of firewood, against five tons of coal, and even so, the engine-driver has often to stop on the way and gather up some brushwood and dry sticks to get up steam. Again, the speed on firewood seems to be considerably slackened, and trains take twenty instead of the normal nine hours for the journey from Beyrout to Damascus. Indeed, a traveller relates from personal experience that he was once fully two days on the train from Beyrout to Damascus. Of course, the sharp gradients of this cogwheel line render the problem of fuel still more serious.

The quantities of wood taken by the authorities for the railways have naturally produced an enormous rise in the price of timber, which has tripled. Owing to the prevailing poverty, many among the peasant class have even been cutting down and selling fruit trees in order to get money, thus to avoid starvation. It is feared that if this state of things is allowed to continue much longer the country will be seriously denuded of one of its principal agricultural resources.

In connection with the serious fuel problem, the Turks, under German guidance, have been exercising their ingenuity to exploit the natural resources of Syria, but so far the coal deposits susceptible of exploitation—viz., in Saleema, Mount Lebanon, and Erna, near Mount Hermon—have furnished a quality containing such a large proportion of sulphur that its trial use on the railway has led to the damaging of the locomotives, apart from the fact that the sulphurous fumes constituted a danger to the drivers and firemen. However, according to reliable information, German engineers have lately discovered in the village of Cartaba, in Northern Lebanon, coal of good calorific power, but the question of transport, which is so vital in enterprises of this kind, constitutes a serious stumbling-block, since this village lies on the heights surrounding the Cedars. At all events, the practical solution of this transport problem is not to be expected during the war, owing to the extreme difficulty, not to say impossibility, of obtaining the necessary material.

*** The *Sudan Times* of April 5 publishes the following extracts from a private letter sent from a trustworthy source in Syria, viâ America, to a gentleman in the Sudan :—

"Prices of all necessities are rising from one day to another. The Government, which had commandeered a good part of the crops, is now selling these at very high prices; notwithstanding the rise in prices the different coins in circulation have fallen in value. Gold and silver alike have shared this fall. The value of the pound sterling, which was at 136 piastres before the war, is now at 118 piastres. The Turkish pound, which was at 124, is now at 108 piastres; and the French Napoleon, which was at 109, is now at 95 piastres. The silver Mejidie, which was at 23, is now at 20, and so on."

To a sane man (comments the *Sudan Times*) who reasons about the "why" and "how" of things, this appears incomprehensible; but to those who know the Turkish Government and the ways of its men in dealing with the people, this seems to be an ordinary procedure.

GERMAN METHODS IN MOROCCO.

The Acting British Consul at Casablanca has forwarded an extract from the local Press relative to German trade methods in Morocco prior to the outbreak of the war, from which the following translation has been made :—In trading with Morocco it is of first importance to advertise those articles of which the natives have the greatest need. Exporters who wish to do business must give an exact description of the goods they wish to sell, and this can be done only by effective advertisement. The one really effective means of publicity is by catalogues, which should, as far as possible, fulfil the following conditions, viz. :—They should be clearly illustrated, and should show precisely the terms of sale, delivery, and credit; they should contain an Arabic translation; and each kind of article should be catalogued separately. Bulky catalogues, showing thousands of articles, in which it is sometimes necessary to make laborious researches, tire the natives and discourage them. In this respect German catalogues were much to be preferred to the French; except for the Arabic translation, they fulfilled perfectly the above conditions, and it should not be difficult to imitate and even to surpass them.

But advertising by means of catalogues only is not sufficient. The catalogues should be supplemented by circulars printed in French and Arabic, by typewritten letters, and by free samples, carefully marked with the precise name and characteristics of the goods.

It is usual in the German trade in piece-goods to paste on to each piece of stuff delivered an illuminated tab, bearing in Arabic or Hebrew the name and address of the customer. Occasionally this tab is replaced by the name of the customer, worked in white thread in the selvedge of the material. Often, again, in the folds of a piece of material German firms insert a long band of paper marked off in yards and inches in such a manner that in unfolding and cutting up the material a salesman always knows the length of what is left.

The profuse inscription of the name and address of the native importer, whether on the articles themselves (dials of watches and clocks, knives, razors and scissors, perfume bottles, soaps, ironmongery, fancy goods and piece-goods) or on the packing, all please and help to retain the goodwill of customers.

TRADE NOTES.

Egypt.

The Superintendent of Stores, Ministry of Education, invites tenders for the supply of clothing for the pupils of the Elementary Training Colleges for women teachers for the school year 1917. Date, May 27.

H.M. Consul at Cairo has forwarded conditions of contract in connection with a call for tenders by the Egyptian Ministry of Finance for the supply of stationery articles required for the use of the various Government Administrations during the year 1916-17, including pencils, penholders, pen wipers, pins, gum, paper clips, sealing wax, ink, etc. Copies of the conditions and form of tender may be obtained from the "Economat Central, Ministère des Finances," Cairo, at which address also sealed tenders, made out on the proper form and accompanied by samples (in duplicate) of the goods it is proposed to supply, will be received up to noon on June 1.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Tenders are invited by the Ministry of War for the supply of (1) forty tons of coco-nut oil and (2) 100 tons arachis oil into the War Department Stores, Tura. Date, May 16.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on May 10, 1916, for the supply of stores and material required by the above Department during the current year. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, the Agent, Sudan Government Railways, Alexandria, or to Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, London, S.W.

Roumania.

H.M. Minister at Bucharest telegraphs that the moratorium in respect of debts due abroad has been extended for a further period of four months, as from April 23.

Morocco.

H.M. Agent and Consul-General at Tangier has forwarded a recent issue of the Cherifian *Bulletin Officiel* containing the text of a speech by the Director-General of Public Works, in which he explained the programme of the Government :—

The port works to be undertaken at Casablanca will be constructed with funds provided by France, while the works at Rabat, Kenitra, Mazagan, Saffi, and Mogador will be dependent on the funds of the "Caisse Spéciale," assisted by local contributions. The works to be undertaken at these latter places will be on a modest scale. The plans for Mazagan and Mogador were completed some time ago and the adjudication of the contracts duly took place, but owing to the war the works have not been commenced. Saffi, the natural port for Marrakesh, so far as its geographical position is concerned, presents considerable difficulties owing to the heavy sea and strong currents prevailing there. An iron pier is all that can be provided for at present, and the construction must be postponed until after the war owing to the present prohibitive price of metal. At Rabat and Kenitra, both of them ports with bars, dredging operations are to be carried out to deepen the channel and facilitate the passage of steamers.

As to roads, it is proposed to construct the following main arteries : (1) Kenitra to Mogador, *vid* Rabat, Casablanca, Mazagan,

Digitized by Google

and Saffi; (2) Kenitra to Fez, (*a*) *vid* Zegota and the Sebou Valley and (*b*) *vid* Mequinez; (3) Kenitra to the Spanish Zone (*a*) following the railway and (*b*) by the coast; (4) Marrakesh to (*a*) Casablanca, (*b*) Mazagan, and (*c*) Mogador; and (5) Fez to Oujda, to be constructed as the district becomes pacified.

With regard to railways, the Director-General of Public Works stated that the Government were abiding by its agreement to build the Tangier-Fez line, and the contract for its construction was already signed. Other lines contemplated are: (1) Oujda to Fez; (2) Petit-Jean to Kenitra, which will thus be connected by rail with Mequinez and Fez; (3) Kenitra to Rabat and Casablanca; and (4) Casablanca to Marrakesh. Other lines will have to be laid eventually connecting the ports with each other and with the interior, but for the present the four main lines above-mentioned and the Tangier-Mequinez-Fez line afford a sufficiently ample programme.

Greece.

The French Consul-General at Athens gives the following particulars regarding the commercial situation in Greece as far as concerns imports. Price, owing to the competition of German and Austro-Hungarian products, is an essential factor, and should be fixed at the lowest level practicable, and should embrace freight, insurance, and packing. The Greek merchant only rarely opens direct negotiations with oversea producers, and foreign exporters have more often to treat with commission agents whose standing in consequence becomes of first importance. The French Consul also advises a more extensive employment of travellers, if only to counterbalance the local activities of the numberless German travellers in Greece. Particular attention must likewise be given to the drafting of the terms of the agreements come to. The bills of lading drawn in duplicate and sent by two different routes, should be as much as possible made out in a way to lessen the risks of the misappropriation of this deed and the diversion of the goods to improper third parties. Packing should be light, but strong. Settlement is made through a bank, which hands the documents to the purchaser against payment forthwith or against an accepted bill. The French exporter is dissuaded from drawing directly on the purchaser. Credit varies from two to three and from six to twelve months, and as the renewal of bills is common throughout the Levant, exporters would commit a great error in showing themselves too strict on this head. The French Consul advises the making out and forwarding of invoices in the fullest detail, and with gross and net weights of each article; to pack goods in solid cases, banded if possible; to insure against theft and other risks, and to indicate on the invoice the name of the representative in Greece of their insurance company to whom the goods-receiver should prefer his claim for damage or loss. It is to be observed that all commercial travellers are subject to special regulations, whereby among other things they must be furnished with a letter of recommendation subscribed by a competent authority in their own country; samples which they bear are allowed duty free only on condition that they are re-exported unmutilated within from six to twelve months, and subject to fulfilling certain Customs formalities. Commercial travellers are likewise exempt from the patent tax, if Greek commercial travellers are granted a like exemption.

ENEMY FIRMS IN EGYPT.

The *Official Journal* contains the following notice :—

The following firms have been granted a licence to trade without special restrictions, in place of the restricted licence granted to them in Section B. :—

N. Huri and Co., 8, Rue de l'Eglise Debbane, Alexandria.

Ismalum, René, 73, Rue Rosette, Alexandria.

Lancaster, Sasson and Co., 16, Rue El Caied Gohar, Alexandria.

Mr. G. Brey, St. James Hotel, Assouan, has been granted a licence to trade in Egypt, with the British Empire and with Allies of Great Britain, in accordance with the terms stated in Section B.

Engineering Notes.

Cultivation in Egypt and India.

A paper by Mr. James MacKenna, on "Scientific Agriculture in India," which was read before the Royal Society of Arts last Thursday, was the occasion of an interesting comparison between Egypt and India made by Mr. J. S. Beresford, who has had experience of irrigation in both countries. He said he found conditions very much the same, but the results very different as regards the production of the soil and the rentals that were charged. Both these in Egypt were very much in excess of what they were in India. The reason was that the Egyptian peasant was a man of some capital, who would think nothing of spending two pounds an acre on manure—mainly imported artificial manure. In 1909 Egypt imported 21,000 tons of artificial manure, value £178,000, and that went on increasing until in 1912 the import was 770,000 tons and the value £667,000. The peasant doubly recouped his expenditure in the greater value of the crop, and it was due to the use of these manures that the value of the crops could be maintained and high rents be paid. In India, with irrigation, where there was rich land, very heavy crops were secured for a number of years. In the early days of the Chenab colony the crops were quite as heavy as anything he had ever seen in Egypt, but in time the land became exhausted because the people were not able to add manure. Even in the Sudan people could not get on without manure, and in all the estimates he made for the reclamation of land there he never allowed less than £1 an acre for artificial manures in addition to what could be had locally. It was due to the use of manure that the crops of Egypt were so much heavier than they were in India under otherwise similar conditions.

Why We Lose Trade Abroad.

In previous notes on the above subject we have pointed out that, apart from other more important reasons, want of alertness on the part of British salesmen in meeting foreign buyers was often the cause of loss of trade. Sometimes good orders are lost to the British market simply because the foreign buyer, in attempting to apply for or describe an article in English, does not make himself intelligible; in such cases the puzzled salesman, instead of grasping the opportunity to secure the buyer, neglects or discards the opportunity. The result is obvious: The buyer goes elsewhere. In a trades journal the following paragraph appeared last week: "The joys of salesmanship were increased recently by the receipt in London of the following inquiry from Greece :—'One Camion automobile for cleaning a street—to be of four cylinders and of a magnetic spark, type Bosch, of automatic greasing. To have four speeds (three front and one back) and a stopper moved by hands and feet. The wheels to be fitted with self indiarubber. The benzine deposit to contain at least 100 litres. The iron tank must be placed on it for getting the dirties, which to be of a capacity at least 3 cubic metres. To be fitted in such a way as to turn down and be empty easily. To have three lanterns and a trumpet. The necessary accessories to be given with.' "We trust," says the journal, "that if more than one maker had the same enigma to peruse all the replies would be based on common ground." The wording may be amusing to an unconcerned reader, but not enigmatic to an alert business man with the ordinary technical knowledge, who would understand that the inquirer wants an automobile road-sweeping machine with four cylinders, Bosch magneto, three speeds forward and one reverse, and a brake operated by hand or foot. By self indiarubber, he probably means solid tyres. The iron tank for the "dirties" is the body for carrying refuse, with an easily operated tipping arrangement, and the machine to be fitted with three lamps and a horn. We hope that if any manufacturers other than the gentleman who gave the above amusing item to the Press as an "enigma" received the inquiry, they were wise enough to communicate with the applicant or applicants. For we are in a position to know that two or three municipal districts in Greece are contemplating the purchase of such sweeping machines.

Great Salvage Scheme.

It is reported from New York that the Inter-Ocean Submarine Engineering Company has made all the necessary arrangements and will soon begin the work of salving the bullion and other valuable cargoes from steamers sunk during the present European war. It is estimated that over £60,000,000 worth of goods can be recovered from vessels lying at a depth of not more than 400 ft., and among the various vessels that are receiving the special attention of the company is the Lusitania, which is supposed to contain the most valuable cargo. Rear-Admiral Chester, of the United States Navy, is president of the enterprise, whilst many prominent American bankers are providing the necessary funds. The leader of the enterprise is Chief Gunner Stillson, who devised the plans for raising the American submarine F4 from Honolulu waters, and is considered quite an expert in deep-sea salvage and diving operations. It would undoubtedly be of great interest to the company, as well as to historians, if the plant of the former could be employed in the port of Navarino, at the bottom of which have lain since 1827 114 Turko-Egyptian warships, all sunk by the allied fleets of Great Britain, France, and Russia. There are "3 ships of the line, 1 Pontoon, 16 Frigates, 27 Corvettes, 27 Brigs, and 40 Transports, all armed with guns the number of which has been ascertained to be 2,158." Besides these guns and other very valuable materials, there was a great amount of money, plate, etc., of which nothing has ever been salved. The ships lie at the bottom of the sea at a depth of 15 to 25 fathoms, and in the same position as when they were at anchor. A company was once formed for salving these ships, but want of funds prevented any progress, and the concession obtained from the Government expired. Beside Navarino, one or two ships were sunk between Cape Malea and the island of Cerigo. They were carrying some of the Elgin marbles, which were allowed to be taken away by the Turks from the Acropolis of Athens in 1812. In a severe storm they sunk, while the others escaped, going through the Straits and bringing safely to England what we now see in the British Museum.

ROUMANIAN REFINING INDUSTRY.

The war affected the production of crude oil in Roumania during 1915, but the refineries did not fare badly, all things considered, says the *Financier*. The quantity of petroleum entered into the refineries for treatment during 1915 amounted to 1,580,981 tons, as against 1,680.894 tons in 1914, thus showing a decrease of 100,000 tons, with the result that 1,553,803 tons of products were obtained in 1915, as against 1,656,870 tons in 1914, showing a decrease of 103,000 tons. The stocks of various petroleum products in the refineries at the end of the year amounted to about 800,000 tons, as against 500,000 tons at the end of 1914.

Near East Markets.

PRODUCE REPORT.

LONDON, May 4.

Currants.

The market is quiet, and only small transactions are taking place at late firm rates. There have been no new arrivals, and it is reported from Greece that great anxiety prevails there as to the prospects of the new crop, for, apart from the fear of peronosporos, there will be a great scarcity of boxes and bags for the export of the fruit. Neither wood nor bags are allowed to be imported, and none of these articles can be obtained in the country. The approaching new season seems, therefore, very problematical, and this may explain the present firmness of the market, for, in spite of the continuous slowness, there seems to be no possibility of any decline of prices at present.

Sultanas.

The market is steady, with a very moderate demand resulting in small business, generally in Afghanistan fruit.

Figs and Dates.

Both these articles have been slow of sale this past week, but prices remained very firm.

Seeds.

Linseed is quiet but steady. London-Calcutta, spot, is quoted to-day at 75s. 6d.; afloat, 75s.; May-June, 73s. Bombay, ordinary, May-June, 75s.; small grain, ditto, 74s. Hull-La Plata, May-June, 71s. Cottonseed is quiet. London-Egyptian, loading, is quoted at £14 15s., and Sakelarides, May, £13 10s. per ton. Rapeseed is firm. Toria-Hull, April-May, offered at 67s. Canaryseed, 85s. to 110s. per 464 lb. Hemp, 100s. to 110s. per 336 lb. Mustard, 28s. to 36s. cwt. Lentils, 23s.-28s. per 100 lb. Split peas, 98s. to 110s. per 504 lb.

Oils.

Linseed, spot pipes, landed, are offered at £38 5s.; barrels, ditto, £39 5s. Rape oil is dull. Ordinary brown, naked, spot, £49; English refined, barrels, £54 to £55. Cotton oil is well maintained. Crude, spot, in pipes, quoted £46; refined, pipes, pale, £49 10s., and barrels, sweet, £54 to £55, as to make.

Oil Cakes.

Cottoncakes.—Egyptian only are offered in very limited quantites on spot, holders asking £9 10s. per ton, with sellers for April-May shipments at £9 5s., ex ship terms. English makes are at £9 15s. for Egyptian seed, and £9 10s. for Bombay seed. Linseed cakes.—Only a small quantity of foreign origin is available, whilst English manufacturers have almost retired from the market, which made values to rise 5s. to 7s. 6d. per ton. London-made is now quoted £11 17s. 6d., and £12 to £12 5s. for fine seedy Calcutta.

GREEK CURRANT CROP.

Under date of February 7, the U.S. Consul at Patras reported that the estimated total currant crop of 1915 in Greece is 132,000 tons, including about 12,000 tons carried over from the previous season. The total shipped up to January 31 was 85,430 gross tons, which, with the quantity in kind which exporters are required to turn over to the privileged company on exported fruit, accounts for some 102,000 net tons of currants removed from the local market. This left about 30,000 tons for February 1. Since that date there have been under actual shipment to world markets some 10,000 tons of fruit, including corresponding retention. This leaves in sight on the local market, according to conservative local estimates, about 20,000 tons of currants. Of this about 15,000 tons are available for actual exportation. There is no reason to believe that the vineyards will be neglected or that they will receive less attention than in other years. The crop of 1915 was far short of normal, which is about 160,000 tons of dried fruit.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

COMPANY MEETING.

ONIAN BANK.

The ordinary general meeting of the Ionian Bank, Ltd., was held on Tuesday at the offices, 25, Abchurch Lane, E.C., Mr. Falconer Larkworthy (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said, *inter alia*, that although competing abroad with foreign banks whose ideas of banking, owing to their large paid-up capitals and their relatively small deposits, induced them to become sponsors for, and often to be largely interested in, commercial and industrial enterprises, this bank for many years had refused absolutely all such business as being incompatible with safeguarding the interests of their depositors. As results of this policy the directors were pleased to point out that, in the midst of very disturbing circumstances, the bank had encountered no distrust of any kind on the part of its depositors during the year under consideration, and had to record a considerable growth in its resources, and in its business generally. This was evidenced by the fact that its assets and liabilities had reached the highest level in its history, and the Court were pleased to state that the bank's strength in reserves against its liabilities on demand continued ample for every probable requirement.

The Chairman then made an interesting survey of the general situation as far as the war was concerned. He urged a reconstruction and union of economic interests, which, in his opinion, if carried out on lines he indicated, would revolutionize the existing financial and currency systems which failed to answer their purpose during the crisis which overtook the economic world on the declaration of war. The currency system which he thought promised complete success was that of Greece, which had now worked for six years and had maintained the parity of exchange between that country and England and France respectively, notwithstanding serious adverse political and financial conditions. He argued that this system was applicable to all progressive States, and, after having developed his thesis, he directed the attention of the meeting to the countries in which the bank's sphere of operation lies. To Greece, its principal sphere, the consequences of the war had been in general very serious indeed. Exhausted by two wars and burdened by debt arising out of these, her armies depleted of their experienced officers and men by death and wastage, and with additions of devastated territory, ruined populations and despoiled refugees, time was required to recuperate and to develop her latent powers, which without doubt would have been equal to the occasion, but time was not allowed her. Nevertheless, in his opinion, it was regrettable that at whatever cost, Greece did not throw herself into the scale on the side of the Entente Powers, "on the side of humanity and civilization." It was quite clear that Greece was not in a position as far as her own resources were concerned to undertake another war, but the sinews might have been found. In Greece the ordinary soldier's pay is equal to one halfpenny per day and his food, with no shelter and practically no allowance for wife or family. If she could keep free from military complications with her neighbours, her growth in the past is a guarantee of a successful future. The Customs have suffered greatly; the support of about 600,000 refugees and mobilization have imposed upon the country great expenses, for which the assistance they have received from the Allies is but small compensation; so her ordinary revenue under existing conditions does not meet her ordinary expenses. The Chairman proceeded to refer to the opening of a branch bank at Salonika, and said: "Salonika was being rapidly converted into a great military base for a probable offensive and future Balkan campaign for the re-establishment of Serbia and Montenegro. It had arrived at a complete state of defence on the landward side and was open to the sea and, therefore, capable of being defended by the Allied fleet, but its civil population, numbering about 230,000, was in great straits owing to lack of the necessaries of life. At this juncture, being urged thereto by the British authorities, and the bank's connection with Egypt facilitating the process of obtaining some kinds of provisions, your directors felt bound to respond by establishing a branch, and taking measures to meet actual and further probable requirements. It is at Salonika that the British Army has its headquarters and departmental offices, and your branch has entered into regular relations with them. You will be pleased to hear also that the French Government have opened relations, through the Bank of France, with your head office in London and the branches in Greece, including Salonika. Although there are special currency difficulties to encounter, your directors, without any immediate prospect of profit, look forward to be able to lay the foundations of a successful business at this branch. This is the first of several branches of the bank that we expect to establish in the new territories acquired by Greece as soon as the passing of war conditions enables us to take the necessary steps."

Regarding Egypt, the Chairman stated that the economic position had greatly improved and had shown an unexpected rebound, aided by the great expenditure of the British Government on their troops held there in reserve, and on the wounded in the vast depots which have been established in Alexandria. The revenue receipts on December 15 had recovered so as to exceed expenditure. The same, if not greater, prosperity has been enjoyed by the Sudan, where the exports now exceed the imports. "The transactions of the bank during the year have been on a satisfactory basis, and the position secured by the bank with the Government is shown by the fact that it was appointed by the Government in the interests of the cultivators at Fayoum and Wasta to buy their cotton at fixed prices, when the state of the market should warrant interference, with the view of maintaining prices at a remunerative level. The cotton market in the earlier part of the year was dominated day by day in this country by the politics of the moment, and in America by the fears that the United States might be involved in the general war. The movements there, especially in regard to cotton for forward delivery during the earlier part of the year, were frequent and wide. The trend was to depression not only on war considerations, but on account of larger production and more limited exports, and difficulties of transport; but the position to-day is one of confidence in the future of the article, and prices have risen recently very considerably. Egyptian early spring deliveries were quoted lately in Liverpool 421 points over American. The crop is estimated at 4,800,000 cantars only, but in money it has realised about the same figure as the crop of 1914." Proceeding, the Chairman referred to the general position of the bank. Deposits had increased during the year in London, Egypt, and Greece by £915,293. Provision has been made for all depreciation below bank value on all securities, other than the War Loan, held by the bank in its books on January 13, 1916. The question of reserves has been dealt with as follows:—

Our deposits since we last met have increased in London, Egypt and Greece by £915,293. I cannot say that this increase is a permanent one or in any way represents the savings of our customers, as we know that many of them have limited their operations and are using the bank simply as a temporary receptacle of their capital while the political conditions remain unfavourable; still, gentlemen, we accept the increase as a sign of confidence in the bank. The other items are of usual character and require no comment. The outcome of opinion has been that the depreciation below book value of ordinary interest bearing securities should be reserved for, but that the securities connected with war finance should be taken at their book value. This bank, in pursuance of this course, has made provision for all depreciations below book value on all securities, other than the War Loan, held by it in its books on January 13, 1916. The Court has dealt with the question of reserves as follows:—All known losses have been written off and a sufficient sum has been provided to cover any loss that might arise on the surplus assets of the bank which are subject to exchange. The duty on excess profits is 60 per cent. of the net profits in excess of the average of any two of the three pre-war years, or in excess of the standard rate of 6 per cent. on the employed capital of the bank. The bank's liability to this tax is being considered by legal advisers. There is, perhaps, no emergency financial legislation that has excited so much adverse criticism as this. As it is necessary under existing conditions to make ample provision for "contingencies," the Court propose that the dividend should be confined to the accustomed rate of 5 per cent.

The Chairman, in conclusion, announced the appointment of M. S. de Bilinski and M. S. Moscovic to be joint managers of the bank in Athens. M. N. P. Calogeropoulos, of the Athens Board Committee having resigned, the Board, as such, has been abolished and is replaced by an Advisory Committee with powers of the usual character. Professor A. Andreadis, member of the Athens University, well known in London and Paris as an economist and banking expert, has accepted a seat on the Advisory Committee, which includes likewise, in the capacity of a non-resident member, M. Nicolo Marchetti, a full director of the bank, and a member of the local Board in Corfu.

The dividend recommended was declared, and resolutions were passed re-electing the retiring directors, Mr. Warrington Laing, Mr. Falconer Larkworthy, and Mr. John E. Hubbard.

Notes have been exchanged between the Persian Government and the Russian and British Legations in Teheran, constituting a Mixed Financial Commission which will examine the pecuniary resources which Persia needs, will control their employ, and will draft the first real Persian Budget.

COMPANY REPORTS.

Egyptian Delta Land and Investment.

The report of the Egyptian Delta Land and Investment for 1915 states that no purchase of land has been made since the last general meeting. The sales consist of a small property of about 2½ feddans at Deirouth. On the other hand, a few plots of land at Meadi have reverted back to the company. The loss on taking back these plots has been written off the reserve account created for this purpose. No development of the Meadi properties was possible on account of the continuation of the war. All possible economies in working have been made, and all capital expenditure has been stopped, the most essential expenses of upkeep only being maintained. The electric lighting plant continues to work satisfactorily. The supply of current to the Australian camp and also to the camps for Turkish prisoners of war at Tourah has considerably increased. To meet this demand, and in order to have a set of machinery in reserve, a new Diesel engine plant has been contracted for, and should be working soon. This extra power will enable the irrigation and filter plants to be driven by electric current and avoid the costly use of the steam engine and coal. Every economy has been effected in the staff. The directors continue to renounce a large proportion of their fees. A net profit of £E5,467 is shown on the year's working, full provision having been made for depreciation, etc. The directors, as last year, recommend to distribute the entire profits of the year to the shareholders. They, therefore, propose to pay a dividend of 4d. per share on 324,250 shares, which will absorb £5,404.

Sun Life Assurance.

The Sun Life Assurance announces that, in view of the fact that the society's dividends are paid free of income tax and of the effect of the increased rate of tax on the income of the proprietors' fund, it has been found necessary to reduce the half-yearly dividend payable on July 1 next from 4s. 9d. to 3s. 9d. per share. The half-yearly dividend (3s. 9d.) and bonus (5s. 3d.) will thus together amount to 9s. per share, free of tax, as compared with 10s. per share half-yearly for the first four years of the current quinquennium.

EGYPTIAN TRANSPORT SHARES.

For some unknown reason (says the Cairo correspondent of *Railway News*, writing on April 13), the local share market in transport receipt has become extraordinarily depressed.

"The £10 preference shares of the Egyptian Delta Light Railways Co., Limited, for instance, are quoted as low as 5⅛, a figure which there is nothing in the financial position of the company, or the political situation generally, to justify. Last year, when the Ottoman attack on the Canal at least gave cause for uneasiness, even if there was never any real danger, the shares stood at 7. This year, when the situation is appreciably ameliorated in every way, the figure is, as stated, a much lower one. Probably the true reason is that shortage of money is bringing the script on a market which is not too ready to absorb anything, and nothing but an absolute bargain will find a buyer. This very probably accounts also for the 100-franc shares of the Alexandria Tramways standing at 87. The £1 script of the Alexandria-Ramleh Railway, a concern which paid a 25 per cent. dividend last year, has fallen from 4½ to 3½. It may be mentioned *en passant*, however, that the enemy's submarine warfare in the Mediterranean does not seem to have affected market quotations for the script of local steamship companies. Thus, the ordinary £1 shares of the Levant Steamship Company are above par at 25s. 9d., and the founders' shares of the same concern stand at face value."

GREEK FINANCES.

So serious has the financial position of Greece become that radical retrenchment in various forms is of vital necessity. Unfortunately, the most serious cause of expenditure, army mobilisation, cannot in present circumstances be much diminished, though the Government is doing its utmost to lessen the daily cost by granting extended and frequent leave of absence to large numbers of officers and men with the colours. The present deficit in the National Budget is £15,200,000, and it is now increasing at the rate of £36,000 per day. According to the *Financial Times*, M. Rallis, the recently appointed Finance Minister, has proposed various methods of retrenchment which, in his opinion, would, if put into practice, bring some sort of stability into the 1916 Budget. M. Rallis does not favour the tax on war profits, and thinks that the estimates for the 1916 Budget must be entirely revised, so as to reduce the estimated deficit to practically nil. This can only be effected by increased taxation, which at present is comparatively light per head of population, and by a radical cutting down of expenditure hitherto considered as absolutely essential.

COMPANY RESULTS, Etc.

ANGLO EGYPTIAN BANK.—The directors have declared an interim dividend of 5s. per share, less tax, being at the rate of 10 per cent. per annum, for the half-year ended February 29, payable June 1.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 1,032 tons (last week 387 tons); Hurgada production for week 557 tons (last week 517 tons).

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for ten days ended April 10 amount to £E4,739, as against £E3,935 for the corresponding period of last year.

IMPERIAL GOVERNMENT OF PERSIA FIVE PER CENT. STERLING LOAN OF 1911.—The coupons due May 15 instant will be paid on and after that date, at the Imperial Bank of Persia, 25, Abchurch Lane, E.C., or at their bankers, Messrs. Glyn, Mills, Currie, and Co., 67, Lombard Street, E.C.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for the week ended April 22, 588 tons.

THE GHARBIEH LAND COMPANY CAIRO.

The ORDINARY GENERAL MEETING of the above Company will be HELD in CAIRO on the 31st May next. Shareholders wishing to be represented at that Meeting should lodge their Share Warrants with the Anglo-Egyptian Bank, Limited, 27, Clements Lane, E.C., not later than the 16th May.

NOTES OF THE WEEK.

In due course, we may hope, Lord Kitchener's well-deserved tribute to General Townshend and his force will reach them in their captivity. Before Kut surrendered they knew, in General Townshend's simple words, that they had done their duty, and that their situation was one of the fortunes of war. The nation is not likely to forget what Lord Kitchener termed the dogged determination and splendid courage which have earned for them so honourable a record, and will unanimously support the verdict that "they did all that was humanly possible to resist to the last, and that their surrender reflects no discredit on themselves or on the record of the British and Indian Armies." To this encomium may be added the passage in which General Nixon refers in his dispatches to General Townshend: "He was tried very highly, not only at the Battle of Ctesiphon, but more especially during the retirement that ensued. Untiring, resourceful, and even more cheerful as the outlook grew darker, he possesses, in my opinion, very special qualifications as a commander. He is imperturbable under the heaviest fire, and his judgment is undisturbed."

A message from the representative of the British Press with the Expeditionary Force in Mesopotamia gives some interesting particulars of the siege of Kut. The statement previously made in these columns that the dispatch of the relief expedition was unduly hastened in the belief that General Townshend was near the end of his resources is confirmed. But the mere advance of General Aylmer's column sufficed to relieve the pressure on Kut, and the garrison, finding that they were to be allowed to husband their ammunition resources, entertained little doubt of their ability to hold out until relief came. At that time the troops were on full rations. It was only when the difficulties of the Tigris Corps were realised that anxiety arose over the question of supplies. Shut up with the garrison in Kut was a civil population of about 6,000 inhabitants. During the first few days of the investment some of these had left the town; they were at once taken by the Turks and shot, and the remainder were given to understand that any who tried to escape would be executed. They had perforce to remain, and their presence, as the Turks intended it should be, was a serious embarrassment to the garrison. On January 24 the discovery of considerable grain stores hidden away in the houses, mostly underground, gave Kut a fresh lease of life. Supplied as he then was with provisions for some two months, General Townshend may well have felt confident of being able to hold out. But the time was not long enough to allow the relief column to overcome the adverse elements, and, in spite of provisions dropped by aeroplane, the garrison was brought to the very verge of starvation.

The Turks, it is satisfactory to be able to record, behaved with exemplary forbearance and chivalry. Khalil Pasha, the Turkish commander, displayed a genuine anxiety to have the garrison supplied with food as soon as possible, and placed no obstacles in the way of an exchange of the wounded. The request for immunity for the native population in Kut, who, General Townshend explained, had been retained there by *force majeure*, he was not prepared to grant unconditionally. He disclaimed, however, any intention of reprisals or persecution, but their future treatment would depend on their future conduct. With this assurance the British commander had to be content. He received himself every possible courtesy from his captors, and had the satisfaction of seeing supplies for the town arrive up the river in a very few days. A further point raised during the negotiations regarding prisoners was the exchange of British women and children, former residents in Baghdad, whom the Turks have kept interned at Mosul or elsewhere, for the wife and daughter of the Commissioner of Amarah and twenty-five Turkish officials. Khalil Pasha was favourable to the idea, but the question does not appear to have been finally settled. The British subjects concerned are the wives and families who were detained by the Turks in Baghdad, when the male British residents were transferred to Syria. The latter were subsequently allowed to leave the country by Jemal Pasha.

A tardy statement elicited from the Under-Secretary for War by a question in the House of Commons justifies the doubt thrown in these columns last week on the accuracy of the Turkish allegation that the aeroplanes used by the Tigris Corps were so inferior that they were easily shot down by superior machines on the enemy's side. The facts are that one British seaplane was driven down into the Turkish lines, the observer being killed and the pilot wounded; in another case the pilot was wounded, but succeeded in landing safely behind the British lines. These were the only air casualties during the operations; but between April 11 and April 29 (four days, it will be noted, after the capitulation of Kut) British aeroplanes dropped at

Digitized by Google

Kut 18,000 lb. of food, in addition to quantities of medicines and stores and materials.

Constantinople *communiqués*, never very reliable, are now indulging, not only in exaggeration, but also in wholesale fabrications. This feature coincides with reports of significant happenings in the Turkish capital. There seems no reason to doubt the accuracy of the statement that Hairi Bey, Sheikh-ul-Islam, has now resigned. His resignation was reported as long ago as last September, and was then connected with differences of opinion between him and the Committee on the subject of the German control of Turkish affairs. As his successor is now named in a Constantinople message, it may be inferred that he has persisted in his resignation. By itself the incident may be of little moment, but it may possibly be the herald of interesting developments.

To what extent the surrender of Kut can be used by the Turkish Government to off-set the Russian successes in Armenia must remain an open question. The violence of the enemy's counter-attacks along the Russian front in this theatre betray an anxiety to forestall any further attempt on the part of the Russians to advance. But the latest reports indicate that our Allies are once more moving forward along the whole front. They are clearly near enough to Erzinjan to have given rise to a rumour in Turkey that the town had fallen, for a Turkish official statement denies its accuracy. Again, the Russians claim to have driven the Turks from the range of mountains which runs south of the region of Mush. If the ejection is complete, it will leave the further advance on Diarbekr a comparatively easy task, for the country south of this range becomes much more open. The locality of the fighting on the Persian frontier is somewhat obscure, and we cannot be sure that, with the turn which events have taken on the Tigris, our Allies will feel called upon to press on hurriedly towards Baghdad. But they must now be within twenty miles of Khanikin, from which point the road falls gradually towards Baghdad, and are still pressing on, driving the Turks before them.

A certain liveliness is reported from the "Salonika front." French troops have taken possession of Florina, some twenty-three miles south of Monastir, the Allies have bombarded the enemy's positions west of the Vardar, and the enemy have replied with a bombardment of extreme violence for several hours along the whole front. The purpose of the latter will be to discourage any attempt on the part of the Franco-British forces to advance, or to cover movements of troops behind the Bulgar-German line. A more positive achievement than these artillery duels is the destruction of a Zeppelin which passed over Salonika in the early morning of May 5. It was hit by a shell from the Fleet, and fell towards the marshes at the mouth of the Vardar, fifteen miles from the town, where a British destroyer sealed its fate. The destruction of this Zeppelin coincided with the loss on the Schleswig coast of another, which the British Navy could also claim as its victim. Three days previously a third Zeppelin, L20, had been wrecked on the Norwegian coast after a raid on England. That the Salonika force should have contributed to the destruction of three of these pests in as many days is at least a satisfactory interlude in what must be regarded as a period of lull in the Near East.

Somewhat late in the day the disadvantage of allowing the Central Powers to draw upon the large supplies of grain which Roumania has for export, and must, as a national necessity, sell, was appreciated by the Allied Governments. The first Anglo-Roumanian wheat contract was signed on January 20. An Austro-German syndicate, however, had already arranged for the delivery of half a million tons of wheat, and the British contract for 800,000 tons still left the Roumanians with a large supply on their hands. The Central Powers replied, it is understood, with an offer to purchase a million tons of various kinds of cereals, and the export of about one-third of this amount has been sanctioned in Roumania. Now the British Buyers' Syndicate has stepped in and secured a contract for the purchase of all flour available for export, a penalty of an indemnity of £60,000 attaching to the sale of any flour to any other foreign buyer for four months. Previous contracts for flour, of course, hold good, and by this means no less than 4,000 wagons go to Turkey, Austria, and Germany. Roumania has to adopt the principle that a country must live. Until the time comes for her participation in the war she requires to realise on her products. Her sales to Germany enable her to secure certain German goods of which she stands in need. Before the end of the four months specified in the last British contract, it is to be hoped that the danger of flour being exported to non-Allied countries will have been eliminated by other means.

The unique position which M. Venizelos occupies in the Hellenic nation is well exemplified by the Parliamentary situation in Greece. At the last general election he held that the Government was acting *ultra vires*, and refused to be a party to the unconstitutional proceedings. The elections took place, but much less than half the electorate went to the polls. As the Government persists in its contention that it is acting in accordance with the Constitution, and shows no disposition to mend or end itself, M. Venizelos has shifted his ground, and intends to challenge its action in the Chamber. The embargo on its members standing for Parliament has been withdrawn by the Liberal party, with the result that Venizelists are now being returned at each by-election. M. Venizelos himself has been returned unopposed for Mytilene. His reappearance in the Chamber will add interest to its debates; but the Government still controls the situation, and as M. Venizelos will have the support of only a few deputies, he cannot hope to secure an adverse vote against M. Skouloudis' Cabinet. On the other hand, the course of events in Greece generally seems likely to play into his hands, and it will make it easier for King Constantine to adjust Greek policy to the wishes of his subjects, if M. Venizelos is at the time one of the Parliamentary representatives of the people.

The visit of the Zil-es-Sultan to England has a somewhat melancholy aspect in view of the loss he has recently suffered in the death of his son, Prince Bahram, who was drowned when the Sussex was torpedoed in the English Channel. But the interests of his country, it may be presumed, have brought him to London at this time, and his presence here can hardly fail to have a bearing on the future of Persia. The Zil-es-Sultan has proved himself in the past a strong and capable administrator. The course of events in Persia has of late years curtailed his powers of usefulness, but the time would seem to have come when his services can again be utilised in the interests of Persia. One of his sons is now acting as Governor of Ispahan, and, as a correspondent reminds us, the appointment has raised the hopes of the people that the province will once more be ruled as well as it was in his father's days.

In a letter published in our last issue a correspondent challenges the contention advanced in THE NEAR EAST that the Allied Powers, as trustees of the future peace of Europe, are responsible for the settlement of the Near Eastern question. If Europe were not in the melting-pot, if Serbia's struggle had been with Bulgaria alone, and if there were no prospect of the formation of a great Southern Slav State, it would be impossible to expect Serbia to surrender even a small strip of territory to Bulgaria. But Serbia stands for Southern Slav unity on the basis of the principle of nationality, and in 1912 she recognised certain territory as legitimately Bulgarian and other territory as debatable ground. Bulgaria also accepted the arrangement, and, if the Allied Powers are satisfied that the basis was equitable, they are in a position to ignore Bulgarian "dissatisfaction," if justice has been done.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 25.

Shem-El-Nessim.

Yesterday was Shem-el-Nessim, literally "the day of the smelling of the breezes," which is always treated as a national holiday, and on which there is a general cessation of business throughout the country. This year the holiday and the feast of Easter were more universally observed than usual, owing to a coincidence in religious calendars. The Easter of the Western and Eastern Church both fell on the same day, whilst Easter Monday and Shem-el-Nessim coincided with the last day of the Jewish feast of the Passover. This falling together of these fixtures must be a distinct relief to those doing business in this part of the world, for one of the great drawbacks under which commercial men suffer in this country is the multiplicity of religious calendars, which, owing to the cosmopolitan nature of their staff and their chief clients, the financial and other establishments are forced to observe, and which at times seriously upsets and delays business arrangements and negotiations. The feasts have passed off without any untoward incidents throughout the country, which has now settled down to an unusually long period unmarked by any religious or other holiday, the next *dies non* not occurring until June 11.

The Eastern Frontier.

Whether those in command of the few scattered Turkish forces in the Sinai, being aware of the abovementioned coincidence of feasts, thought to catch our eastern frontier force napping, cannot be said, but the Easter holidays were certainly marked by unwonted activity on the part of the enemy. The most noteworthy feature was the appearance of hostile aircraft over the Canal. Fortunately, no damage was done, but this development clearly indicates the need for clearing the Peninsula of all hostile bodies, for re-establishing ourselves at the old frontier, and for driving the enemy back into Syria to such a distance as will render it impossible for him to make air raids on the Canal. It is understood that our Higher Command has decided on this course of action, and that the recent "reconnaissances" are a prelude to a more general forward movement. We may, therefore, hear interesting news from the Sinai in the very near future.

The Sultan's Household.

The new Budget provides for an assistant to the French Secretary to H.H. the Sultan—the post at present filled with dignity and success by Arekel Bey Nubar, the grandson of Egypt's great statesman and the son of the champion of Armenia at the Courts of Europe—but at the same time the post of English Secretary to his Highness has been suppressed. The English Secretaryship at the Palace of Abdin was created as a counterblast to the French Secretary, who was appointed by Abbas II. at a time when the political antagonism between our present allies and ourselves was still very acute, and when it was imperative for us that a closer watch should be kept on the ex-Khedive's movements and actions. To-day, of course, that necessity no longer exists. We are on the best of terms with our one-time rivals of Gaul, whose interests coincide now with our own, and we have on the throne of the illustrious Mohammed Ali a Prince who has shown himself in every way worthy of the high position to which he has been called, and who in thought, word, and deed is well disposed towards the Protecting Power. Whilst the disappearance of the English Secretaryship is perhaps to be regretted, no doubt the authorities had their own very good reasons for permitting it.

Egyptian Opinion on the War.

The news of the fall of Trebizond, whilst it was hailed with delight by the foreign communities, was on the whole received with little comment by the Egyptians. As I said on the occasion of the taking of Erzeroum, the names of towns, etc., in Asia Minor convey absolutely nothing to the local Moslem population, no matter how great the strategic importance of those towns may be. The only event in the campaigns in Asiatic Turkey that would impress them would be the fall of Baghdad, and even then it is doubtful whether certain sections of the "Egyptian" community would believe the news. Indeed, there are many who maintain that the Russian capture of Erzeroum and Trebizond is a pure invention on our part, and who are firmly convinced that the Germans have captured Verdun. Likewise there are many who refuse to believe the recent revelations made as to anti-Islamic propaganda on the part of the Germans in Deutsch-Ost-Afrika, and see in the publication of the details merely a natural desire on our part to discredit by every possible means the Teuton amongst the Moslems.

Anzac Day in Egypt.

Anzac Day, the anniversary of the glorious Gallipoli landing, was most fittingly celebrated wherever Australasians were gathered together to-day. At Tel-el-Kebir there were sports and other celebrations to mark the day, but the chief ceremonies took place in Cairo. A memorial service was held at the new Anzac Hostel, where the officiating clergymen included the Bishop in Jerusalem, and where a crowded congregation of officers, soldiers, and civilians was assembled. Sir Henry and Lady McMahon were represented respectively by Lieutenant-Colonel J. K. Watson and Lady Cheetham. At the service cablegrams were read from General Godley, Mr. W. M. Hughes, Mr. James Allen, and Senator G. F. Pearce, and at the conclusion thereof a procession was formed which proceeded to the British cemetery, where wreaths were placed on the graves of the "Anzacs" buried there, and the customary military honours were accorded the illustrious dead. In the afternoon a tea and concert was arranged in the Esbekia Gardens for the men by the High Commissioner, and the day closed with a grand concert in the Anzac Hostel. Nor were the men in the hospitals forgotten, every effort being made to enable them fittingly to commemorate one of the most glorious days in their country's history.

THE CAIRO BOMB OUTRAGE.

The Cairo correspondent of the *Morning Post* reports (May 8):—The trial, before a military court, of the two men charged with complicity in the bomb outrage against the Sultan last year commenced this morning, the court and its environs being crowded. The morning was taken up with the speech of Sir William Brunyate on behalf of the prosecution. A later telegram states that Sir William concluded his speech on Tuesday, and that the taking of evidence then began.

With reference to the proposal for the erection of an Anglican Cathedral in Cairo, to which our Cairo Correspondent referred some weeks ago, it is now announced that no general appeal for public funds will be issued for the present, but any subscriptions received before the end of the war will be invested in War Loan Stock. Already £400 yearly for five years has been promised locally.

Under date May 8, Reuter's Paris correspondent reports that Italian troops have occupied Bardia, about twenty miles north of Sollum, on the Tripoli-Egyptian frontier.

In a review of events since February, 1915, and Greece's relations with the Entente Powers, the Venizelist *Kyrix* contends that M. Skouloudis, the Greek Premier, is to blame for the present sinister outlook in Greece. The Government, adds the *Kyrix*, instead of seeking to improve its relations with the Entente, made matters worse by a categorical refusal to allow the passage of Serbian troops through Greek territory.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, April 17.

Salonika Journal Suspended.

In a previous letter I made reference to the Press of Salonika, and remarked that one of our *boche* publications called *Nea Alithia* (*New Truth*) disseminated a decidedly new kind of "truth" largely concocted in Germany. It is a widely circulated evening paper (in Greek), an ardent purveyor of false news, and a bitter enemy of the Allies. Its last exploit was to announce the sinking by German submarines of two transports carrying Serbian troops from Corfu, which news was, of course, absolutely false. But the curious thing now is that it has been suspended not so much for telling its clumsy falsehoods, but for telling what is believed to be the truth about certain movements of French troops. All the local newspapers have been warned by General Sarrail that they must not make any mention whatever of the movements of the Allies within the field of operations here. The reason is obvious. Yet the *Nea Alithia* took upon itself to disregard these instructions and to print particulars of manifest use to our enemies. Retribution was swift and severe. Next morning General Sarrail sent along a dozen gendarmes, who occupied the offices, and the paper has been stopped for an indefinite period. One significant fact about this incident is that the General did not worry about the Greek authorities. With his usual decision he carried out his own sentence, and merely intimated the fact to the Prefect, who has since been telephoning and telegraphing urgent messages to Athens for instructions. But in the face of the *fait accompli* he can do nothing but protest. This seems to be the main occupation of the Greek Government at present, and they must by this time have accumulated a very complete collection of these useless documents.

Spies, Spies Everywhere.

On more than one occasion I have referred to the spy danger here; but no really effective measures have yet been taken to cope with this danger. As will be seen from what I have said above, there are spies not only among the civil population, but even among the Greek military themselves. This very day General Sarrail informed us that at a place called Cernareka, near Verria, the French had arrested a civilian and a Greek soldier, who were carrying letters to the Bulgarians, in one of which information was given to the enemy about the French camps and telephone lines. They were both tried by court-martial and condemned to death. The civilian was at once shot, but, out of respect to the Greek army, with which his relations are quite friendly, General Sarrail placed the soldier at the disposition of General Moschopoulos, in supreme command of the Greek troops here. Will this soldier be punished or will he, like the other spy, Avdis, be decorated as a reward for his treachery? What most people realise is that so long as Greek troops remain within the zone of military operations and thousands of enemy subjects are allowed to roam about here as they please, there will be no security for the Allies.

A few arrests are being made from time to time. One of these was that of a Greek who had written an objectionable postcard to a friend in Germany. The mails leaving Salonika had been examined by the Allies on board a Greek ship as she left the harbour, and this card, as well as other compromising correspondence, came to light.

"Revue Franco-Macedonienne."

Under the above title the French have just issued the first number of a new magazine, edited and written entirely by officers and men of the French army here. This number runs to sixty-four pages, and contains articles on "African Troops in the Near East," "Tiflis, the Russian Army Base," "The Deunmés," and others of interest.

Official Moving Pictures.

Another example of the thoroughness with which the French are attending to every useful detail here is the way in which they provide for the entertainment as well as the feeding and clothing of their officers and men. There is an expert cinematograph operator attached to Headquarters, who has produced some excellent official films. From time to time the French issue invitations to view these pictures at one of the cinematograph theatres here, and the privilege is greatly appreciated. Here we see views of life in the trenches and in various French and British camps, the work of the aviators, General Sarrail at Athens, a military review, and other interesting subjects. Perhaps the most entertaining were one showing a regular circus dug out at a French camp, with numerous "turns" representing trained horses, acrobats, and the inevitable clowns; and another film of a camp of Highlanders in the kilt with their reels, Highland fling, sword dances, and other interesting items.

"Out of Bounds."

As is well known, the sale of absinthe to the French troops is prohibited, yet some places of business here secretly supply it. In such cases General Sarrail promptly declares such places "out of bounds," either for a time or indefinitely. The other day the great business house of Orosdi Back (a French concern) was found to have offended, and was at once "consigné," or declared out of bounds, so that no soldier is permitted to buy anything at the establishment in question on pain of severe punishment. The general is determined to protect his men from the evil effects of this drink.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, April 22.

The Cyprus Library.

The papers publish a reply from Athens, dated March 26, from Prince Nicholas of Greece, through the Controller of the Household, M. E. Romanos, stating that the Prince warmly congratulates the Committee on the admirable idea which inspired the founding of the "Cyprus Library," and consents to take under his patronage an institution which will be of such benefit to the community.

The Greek Easter.

This festival was celebrated yesterday (April 23). The church bells were rung at 2 a.m. by order of the Archbishop, and the solemn service held at 3 a.m. Collections for the poor are made annually in advance, and the churches do what they can to relieve the poor, who this year thronged the distributing centre in much larger numbers than last year. Much regret has been expressed that the amount of the alms available has been quite inadequate to the needs of the poor people.

At the English Club at Nicosia an entertainment will be given on April 29 and May 1 on behalf of soldiers blinded during the war.

The Greek newspapers reproduce from the *Hestia*, of Athens, the long letter of Prince Nicholas of Greece to Lord Burnham of the *Daily Telegraph*.

The Holy Synod has concluded its sittings, having dealt with various matters relating to the Church and Education.

ANOTHER GERMAN LIE.

The Press Bureau announces:—The following wireless message has been addressed to the German Embassy at Washington:—

"Athens reports British and French, violating Geneva flag, exclusively effected transport of Serbs in hospital ships in order to avoid torpedoing by submarines."

The Secretary of the Admiralty states that "this is an absolute fabrication."

By order of the French Minister for Foreign Affairs the German Consul at Salonika and the *personnel* of the Consulate who were brought to Toulon and interned in a fort have been conducted to the Swiss frontier.

In order to avoid friction between Greek frontier posts in Northern Epirus and Italian patrols in territory claimed by Italy, the Greek Government has proposed that a mixed Commission shall delimit the frontier.

The *Journal des Balkans* relates that for some time past the Germans have been buying up dogs in Roumania and exporting them into Germany. They pick out the biggest animals they can find, and pay for them 50 to 60 francs a-piece. They are used in the German Army for drawing Maxims.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, April 15.

German "Thoroughness."

Persons arriving from Bulgaria and Transylvania confirm the report that German emissaries are taking advantage of the present poverty-stricken state of the population in order to purchase ground wherever possible in both countries referred to, and in the more fertile regions of Macedonia. They pay with either German, Austrian, or Bulgarian paper, which is not worth much more there than elsewhere, but the unfortunate sellers, forced by hunger to dispose of their property, are obliged to receive it at its face value. The German authorities in these districts do all in their power to introduce this Teuton influence, and are offering ground free, or nearly so, to disabled German soldiers and their families, or to the relations of those killed in the war, on condition that they go immediately to their new homes, in order to help maintain German influence in the newly acquired regions. The Bulgarians do not at all relish these signs and others equally significant of the Hun having come to stay, but they are now practically helpless to oppose the arrangement.

For Prisoners of War.

The following Bill regarding the provision to be made for prisoners of war has been submitted to the Chamber:—

The law for the fixing of subsidies for the maintenance of prisoners is modified as follows:—

The sum to be granted for board and lodging to prisoners of war being doctors, sanitary officers, or army officers, is per month for generals, 120 frs.; for colonels, 100 frs.; for lieutenant-colonels, 90 frs.; for captains, 80 frs.; for doctors who are chiefs of section and of military institutions, 70 frs.; for lieutenants and sub-lieutenants, 60 frs.

The above is to be considered as dating from October 1, 1915, the day when war was declared.

In connection with this law it is interesting to note the prices which some foodstuffs, etc., are now fetching in Bulgaria. These are, for example:—Veal, 2 frs. 60 c. per kilo; pork, 3 frs.; butter, 7 frs.; lard, 5 frs.; olive oil, 7 frs.; milk, 60 centimes; rice, 1-10; white beans, 80 centimes; lentils, 1 fr.; sugar, 1 fr. 55 c.; common coffee, 8 frs.; common cheese, 4-20; potatoes, 48 centimes; petroleum, 65 centimes per litre. These are "official" prices. Those who know the actual circumstances will read not double but treble these prices; and it will thus be seen that the allowances for officers of every grade are utterly insufficient. There is little doubt that the reduction is due to Teuton influence.

The Occupied Territories.

Referring to the organisation of law courts in the occupied territories, the *Balkanska Tribuna* says:—

The reports current as to the opening of law courts in the new territories are premature. The Ministry of Justice asked for a credit with this object, hoping to see the war finished in the first quarter of the financial year, when it could have begun to organize law courts immediately the troops were liberated. However, the war goes on, and the execution of the plan is impossible, for the reason that the greater part of the judges are with the Colours, and likely to remain so.

The Bulgarian prefects appointed to the districts occupied in Old Serbia have reported to the Ministry of the Interior at Sofia that the "greater part" of the Serbian refugees from the respective districts have returned to their homes and have resumed their ordinary occupations. As to the state in which the returned refugees have found their property the reports are silent.

According to news from Monastir, signs of insubordination show themselves frequently in the Bulgarian army, and a few days ago a large body of soldiers refused to obey orders, demanding to be dismissed to their homes.

"First-class" Prisons.

The questions of prisons has been one which has troubled the authorities in Bulgaria since the comencement of the war. All the existing prisons are being improved and enlarged, whilst many new ones have been constructed. There is no need to say that they are quickly filled to repletion with the enemies of the present Government and the notables of the towns and villages of Serbia. An order of the Ministry of Justice now classifies them in a manner that would be comic if the whole business were not so terribly tragic. The prisons of Nish, Pojarevatz, Skoplje, and Monastir are "first-class" prisons; others are "second class"; whilst there is also a "third class" for the more humble boarders.

Jobbery.

Long before mobilization actually took place in Bulgaria the Bulgarian Government did everything possible to encourage immigration from Macedonia, and as soon as any Macedonians arrived they were enrolled in the special Strumnitza Corps. This corps has made a name for itself, always being where danger was thickest, and suffering enormous losses. As a result thousands of their women and children are in mourning and in poverty. Having learned that there are funds in Bulgaria for the assistance of the families of those who have fallen in battle, these poor people applied to the authorities; but though thirty million francs have been distributed to Bulgarians in want, a deaf ear has been turned to the petition of these Macedonians. It has been announced that help can only be given when committees have been formed and official lists have been submitted to the Government. But, according to persons coming from Sofia, most of the funds never reach those for whom they are intended, finding their way instead into the pockets of members of the Government and their satellites, and every possible difficulty is thrown in the way of the formation of such committees as those referred to.

BRITISH PRISONERS IN BULGARIA.

(From Our Bucharest Correspondent.)

As already announced, the American Diplomatic Agent in Sofia has visited the depot of British prisoners at Philippopolis, where about 160 are now concentrated, and we are glad to hear that he was able to distribute relief to them. Of the other British prisoners in Bulgaria about sixty are in hospital at Sofia, where, it is said, they can be freely seen; thirty are in quarantine at the railway station at Sofia, and about twenty are at hospitals at Vratza and Tatar Bazardjik. Forty are quite inaccessible at Alexandrova in the military zone, and perhaps eighty or ninety are likewise so in the mountains at Tlidéré.

Mr. Einstein has received a statement in writing from the Ministry of War that all British prisoners will be concentrated at the depot at Philippopolis, but this has not yet been done. As soon as they are there it will be quite easy to distribute relief.

It is stated (says *The Times* Athens correspondent) that the Bulgarian Minister here has requested the Greek Government to reopen the frontier at Oxilar, on the Salonika-Constantinople line, which had been closed in consequence of the exclusion of neutral travellers from Bulgarian territory. M. Skouloudis suggested a settlement on the basis of reciprocal facilities.

Mr. Alex Devine, Commissioner of the Montenegrin Red Cross and Relief Committee of London, will, on his return, present his report as to the condition of the Montenegrin refugees in Europe, which has been the object of his investigation on the Continent during the last six weeks. Whilst he was at the island of Lipari, near Sicily, he met a large contingent of refugees of various Slavonic nationalities who are at present residing there, under the protection of the Italian Government, and at the suggestion of the Préfet of Messina, Mr. Devine addressed them at an open-air meeting in front of the British Consulate. He assured the refugees of the warm sympathy of England towards all who, having been loyal to Montenegro, had been loyal to Serbia, and the aspiration of the whole of the Jugo-Slavonic people, and, therefore, loyal to their Allies, England, Italy, France, and Russia.

ARMENIAN RED CROSS & REFUGEE FUND

FOUNDED DECEMBER, 1914.

President, VISCOUNTESS BRYCE.

Donations are earnestly entreated for the relief of sickness and distress among 250,000 destitute Armenian refugees in the Caucasus, whose condition is "pitiable in the extreme." Relief pay is less than 4d. per head a day. Food and all necessaries of life are very dear. A copy of the Report for last year will be sent to inquirers. All work in connection with this Fund is voluntary. Contributions will be thankfully received and acknowledged by the Hon. Secretary and Treasurer, Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W. Cheques may be made payable to the Armenian Red Cross and Refugee Fund; they should be crossed "London and South Western Bank, Holland Park Branch."

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, April 18.

Closure of Parliament.

The Roumanian Parliament was closed on April 17, a day before the date previously fixed, so that many deputies and senators who had returned to their homes for the Sunday only heard the news on arriving in the capital. An interpellation had been announced on the subject of Bulgarian machinations and espionage in the Dobruja, and, according to one version, it was with the object of avoiding this that the Government decided to anticipate by twenty-four hours the closure of the Parliamentary session.

A large number of legal measures were hurried through during the last days of the session, measures which, according to general opinion, are in many cases right in principle but calculated to prove unsatisfactory in their application because of their immaturity, which in turn is due to hasty preparation. One of these which, it is interesting to note, was voted by a considerable majority, imposes a tax of 50 per cent. on the total incomes of gaming institutions, like the casinos of Sinaia and Constantza. This is the equivalent of their closure, and the Minister of Finance admitted that he had framed the project with this end in view. M. Take Jonesco, who, of course, entirely sympathises with the principle involved, attacked the project on the ground of its being hypocritical, and urged that more direct legislation should be resorted to if the real purpose of the measure was the closure of these institutions. No one doubts that the measure will prove eminently salutary in the long run, but it is said that many shareholders meanwhile stand on the verge of ruin.

Roumanian Help for British Prisoners.

In spite of the little publicity given to the matter, the Roumanian subscription organised on behalf of the British prisoners in Bulgaria by Mrs. Take Jonesco, seconded by a few devoted helpers, has met with a warm-hearted support which has exceeded all expectations. The committee now dispose of a sum exceeding 20,000 fr., which has been collected in an extraordinarily short time. The success is due not only to the general sympathy which the lot of all prisoners in Bulgaria evokes among Roumanians, but to the quiet, business-like attitude adopted by the committee. Its members have been guided by a practical spirit which has been productive of the best results; for the most pressing needs of our prisoners, who seem to have been mostly barefoot and in rags, have already been in part relieved. The difficulties of transport are unfortunately great, and this prevents the things from reaching our men as quickly as could be desired.

More Espionage.

The espionage which is carried on in Roumania has been referred to more than once before in these letters. Another case has now become public property, and this one would seem to be of unusual gravity. It occurred at Moreni, in the Department of Prahova, where in the barn of an engineer, a German by origin, were discovered no less than seventeen staff maps relating to the frontier regions of Predeal, Bushteni, Breaza, Bratocea, and so on. The engineer was arrested without delay. The public, which was all agog to hear sensational news regarding the affair, has not been informed regarding its details.

But it is getting used to this sort of thing. At the time of the bomb affair, when Hungarian agents had plotted to blow up the houses of several public men, exactly the same thing occurred. What you hear is just sufficient to arouse your curiosity thoroughly, and then —the Prefect draws the veil of silence, and the affair is as though it had never been, except perhaps to some Teuton or Magyar gentleman who becomes the permanent guest of a certain State institution. Such cases provide food for reflection. The prompt manner, however, in which they are dealt with by the police leads one to suspect that there must be a branch of the service possessed of greater vigilance and authority than the policeman who embroils the traffic in the Calea Victoriei, or reproachfully shakes his head in contemplation of some speed-limit-exceeding car, would lead one to believe. And this were well indeed, for if every Austro-German in the country is not ticketed beforehand, the authorities may be outwitted when the critical moment comes, and the country may suffer irreparable disaster. Meanwhile it may be established as a maxim that every German, Austrian, Hungarian, and Bulgarian in the country is a potential spy and a danger to the State.

Echoes of the War.

The Commission sent to Russia for the purpose of acquiring remounts for the Roumanian artillery has now returned. Five thousand five hundred remounts have arrived in Roumania.

The Headquarters Staff have decided to exclude Bushteni from what is known as the military zone, so that this summer resort will become accessible to the public. Visitors will not be allowed in Azuga and Predeal.

It has been decided to allow the slaughter of not more than 200 head of cattle in Bucharest on five days in the week, apart from pigs and lambs. The slaughter of cattle on Tuesdays and Thursdays, and the sale of meat on Wednesdays and Fridays, will be strictly prohibited. On these last-mentioned days restaurants will not be allowed to supply meat to customers.

Cattle Contraband.

M. E. Costinesco, Minister of Finance, has introduced a Bill aimed at the suppression of contraband. In expounding his motives he stated that he had estimated the number of head of cattle exported in contravention of the law at 120,000. All the cattle in the districts adjacent to the frontier will be requisitioned. The requisition will take the form of an inscription of the cattle in special registers, so that the owners, when called upon, will have to put the cattle at the disposal of the authorities.

ROUMANIA AND THE CENTRAL POWERS.

(From Our Own Correspondent.)
Bucharest, April 17.

The recent commercial arrangement into which Roumania has entered with the Central Powers has given rise to some unfriendly criticism in the Allied Press, and inexplicable joy (in large part feigned, we are sure) in that of the Central Powers. Neither attitude seems justified, and both are subject of surprise to the Roumanian public.

In order to correct any false impression which the British public may have on the matter, I have asked M. Greceanu to let The Near East have the benefit of his views. M. Greceanu, late Minister of Justice in the Conservative Government, is himself an agriculturist as well as a leading member of both Commissions for Export and Import, and therefore one of the persons who are most competent to deal with the question. The following is the outcome of the interview he has been good enough to grant me:—

We Roumanians have been painfully surprised by the false interpretation which has been given to a commercial arrangement concluded between Roumania and the Central Powers for the purpose of facilitating the importation of goods necessary to the economic life of the country. We know that this interpretation is chiefly due to the bad faith of these Powers, who, by means of numerous articles and paragraphs in the Press, have striven to invest with a political significance an arrangement which is in reality nothing more than an expedient dictated by present circumstances.

People who are capable of impartial judgment will have no difficulty in grasping the motives which led to this "arrangement," which is the outcome of our own economic needs.

Roumania is suffering greatly from the want of certain articles and wares, such as iron, steel, coal, agricultural implements and machines, locomotives, railway trucks, woollen goods, pharmaceutical products, etc., etc.; and, Roumanian commerce being cut off from all possible relations with the Quadruple Entente, these

Digitized by Google

different goods and materials of first necessity were until recently imported into Roumania in accordance with a system of "compensations." In other words, a certain number of merchants and industrials were authorized to import these materials in exchange for cereals of equal value.

This system of importations gave rise to so much abuse and speculation on the part of importers that the Government resolved to put an end to the same by the creation of a so-called Commission of Imports, in which, as you know, I figure as representative of the Commission of Exports. This Commission has been appointed for the purpose of determining the quantity and variety of goods which are indispensable to the economic life of the country. In forming the list every branch of national commerce and industry has been consulted. In order to bring about a more ready execution of this plan, the Roumanian Government requested the Governments of the Central Powers to appoint on their part a delegation whose duty it should be to indicate the nature of the goods which they can send into Roumania, and of the articles which they ask for in exchange.

This system represents a means of bringing about a speedy importation of the goods required, and, what is perhaps no less important, assures their delivery at a price which precludes all speculation.

The Austro-Germans accordingly nominated a delegation, which arrived in Bucharest some weeks ago, and the Roumanian Commission of Imports has now sent to Berlin and Vienna a similar delegation, composed of engineers, industrials, and merchants, whose business it is to pay for and receive the goods contracted for. In this way the trucks sent by the Austro-Germans into Roumania for the export of Roumanian produce, instead of coming empty, as before, arrive laden with German and Austrian wares bought by Roumania.

As you see, this exchange is at least as much to the advantage of Roumania as of the Central Powers, *and implies no shadow of a political rapprochement with those States.*

In order to face the circumstances which she desires, and on which indeed she counts for the realization of her national ideal, Roumania must place herself in the strongest possible position. This she can do only by systematic preparation and due attention to the weak points of her internal organization. Only thus will she be able to face with sanguine confidence events which will put the utmost strain upon her resources. "Besides, we know," added M. Greceanu, in conclusion, "that a nationalist movement will shortly force the Government to adopt a firmer attitude and one in closer conformity with the country's aspirations."

THE STATE OF ISPAHAN.

(From a Correspondent.)

Ispahan, April 10.

I have nothing of importance to report since my last letter. Amin-es-Saltaneh (son of the Zil-es-Sultan) is the Governor of Ispahan, and there is every hope that he will rule the province with the same ability that his father displayed.

The British Vice-Consul arrived on the 8th inst. Russian troops patrol the town, and everything is as quiet as, if not quieter than, before the war.

News of the fall of Shiraz was received with great enthusiasm here, as it opens the road to Bushire and to India, and it is anticipated that trade will soon resume its normal state. The Governor of Shiraz, who has been obliged to stay here since December last, and has been unable to proceed to Shiraz to take charge of the province, is now preparing to leave for that town in a day or two. The telegraph line, which had been in possession of the so-called "Democrats," is now open, and the Governor of Shiraz had a long conversation with Shiraz and has appointed a Deputy-Governor pending his arrival there.

Sonorous.

FOR PRISONERS IN TURKEY.

The Postmaster-General reminds the public that the only method officially recognised by which remittances can be sent to prisoners of war in Turkey is by means of Post Office money orders, which are forwarded free of postage or commission. Persons who make use of any other method of sending money do so at their own risk.

THE ZIL-ES-SULTAN'S VISIT.

H.R.H. the Zil-es-Sultan, the great-uncle of the Shah of Persia, arrived in London from Nice on Thursday night of last week. The Prince, who is accompanied by one of his younger sons, Ismail Mirza Amir Akram, Ghulam Hussein, Mirza Mubassar-ul-Mulk, and Abbas Khan, was met at Folkestone by H.E. the Persian Minister in London, Mirza Mehdi Khan, who travelled with him to London. It is understood that he is shortly going to Ispahan as Governor-General, and the appointment is certainly one of the wisest that could be made.

The Prince, who was born in 1850, is the eldest son of Nasir-ed-Din Shah. His mother was the Iffet-ed-Dowleh, an Afshar lady, and the fact that she was not a royal princess always stood in the way of his being declared heir to the throne. He received the title of Yamin-ed-Dowleh in 1860, and his present title in 1869. At one time, when Nasir-ed-Din Shah still reigned, he held the joint governorships of Ispahan, Fars, Irak, Yezd, and Arabistan, and maintained order and discipline in a way that was almost phenomenal in Persia at that time. Unfortunately, in course of time the Shah became jealous of his son's position and reputation, and the Zil-es-Sultan was gradually deprived of his governorships, until only Ispahan remained to him. After the accession of Muzaffer-ed-Din Shah (1896) his power was still further curtailed, although he behaved in the most perfectly correct and loyal way up to the death of his father, hastening to express his allegiance to his younger brother, and maintaining good order in his province. He never identified himself with the Nationalists, and in 1909 he opposed their *coup d'état*, with the result that his residence was sacked and burned. Thereafter he withdrew from Persia, and he has since spent most of his time in Europe, at Nice and other health resorts.

His family is a large one. It will be remembered that his favourite son, Prince Bahram, was drowned in the dastardly sinking of the cross-Channel s.s. Sussex a few weeks ago. Another son, Akbar Mirza, is now Minister for Foreign Affairs in Persia; and Prince Ismail, on whom the King on Tuesday conferred the K.C.S.I., will accompany his father to Ispahan.

The Prince's time in England has thus far been fully occupied. On Friday afternoon he visited the Foreign Office; and amongst his callers the same day were Sir Edward Grey, Mr. Austen Chamberlain, Lord Kitchener, Lieutenant-Colonel O. A. G. Fitzgerald, Sir George Arthur, the staff of the Persian Legation, and many members of the Diplomatic Corps. On Monday he called upon Mr. Asquith and Lord Kitchener, and was entertained at luncheon by the Persian Minister at the Legation. Among the guests were Sir Edward Grey, Mr. Austen Chamberlain, the Marquess of Crewe, Sir Arthur Nicolson, M. Nabokoff, M. Sablin, Ismail Mirza Amir Akram, Ghulam Hussein, Mirza Abdul Ghaffar Khan, Mohammed Ali Khan Ehtesham, and Fathullah Khan Nuri Muntazim-es-Saltaneh.

On Tuesday H.R.H., accompanied by Prince Ismail and attended by the Persian Minister, Mirza Mehdi Khan, Mushir-ul-Mulk, visited the King at Buckingham Palace. The same day he was present at a luncheon given in his honour by the chairman and directors of the Anglo-Persian Oil Company, at the Ritz Hotel. It had been hoped to entertain H.R.H. at a dinner, but the recent sad loss of Prince Bahram rendered him indisposed to attend such an entertainment. At the luncheon there were present:—

H.H. Prince Ismail; H.E. Mirza Mehdi Khan Mushir-ul-Mulk, the Persian Minister; Mirza Abdul Ghaffar Khan, Councillor of the Legation; the Right Hon. Syed Ameer-Ali, P.C., C.I.E.; M. Sabline (of the Russian Embassy); Lieut.-General Sir Arthur Barrett, K.C.B., K.C.V.O.; Sir Thomas W. Holderness, K.C.S.I., K.C.B.; Sir Arthur Hirtzel, K.C.B.; Sir J. D. Rees, K.C.I.E., M.P.; Mr. Launcelot Oliphant; Lieut.-Colonel B. T. Buckley; Colonel Charles E. Yate, C.S.I., C.M.G., M.P.; Sir Hugh Barnes, K.C.S.I., K.C.V.O.; Sir John Biles, LL.D.; Colonel Sir Trevredyn R. Wynne, K.C.S.I., K.C.I.E.; Vice-Admiral Sir E. J. W. Slade, K.C.I.E., K.C.V.O.; Mr. Albino; Mr. Ashton; Mr. R. C. Barker, C.I.E.; Colonel E. B. Burton, C.B.; Mr. William A. Buchanan, Mr. E. A. Cheatle, Mr. W. K. D'Arcy, Mr. D. Garrow, Mr. Charles Greenway, Mr. V. Ceasar Hawkins, Mr. H. W. Maclean, Mr. H. E. Nichol, Mr. John R. Preece, C.M.G., and Mr. Stainton

Digitized by Google

Mr. Charles Greenway, chairman of the company, presided, and proposed the toasts of his Majesty the King-Emperor, H.I.M. the Tsar of All the Russias, and H.I.M. the Shah-in-Shah of Persia.

Sir Hugh S. Barnes then proposed the health of the guest of honour. He said:—

"It falls to my lot to propose the next toast, and it is one which I am sure you will welcome with the utmost cordiality, for I am about to ask you to drink the health of our very distinguished guest, his Royal Highness the Zil-es-Sultan.

"I could wish that the task had fallen on worthier shoulders than mine, for, unlike many of those who are gathered round this table, I have never been in Persia, nor can I claim the privilege of old acquaintance and friendship with our guest. But though my personal acquaintance and friendship with his Royal Highness is of the briefest description, my official knowledge gained as an old frontier officer and former Foreign Secretary in India is much more extensive. As far back as my official memory extends, some thirty-five or forty years, Persia and the Zil-es-Sultan are names which have seemed always to be indissolubly connected; one rarely heard of the one without hearing of the other also. The truth is, the name and reputation, the career and achievements, of the Zil-es-Sultan have won recognition far beyond the limits of his own country, and to all Englishmen with any knowledge of the East his Royal Highness is known not only as a strong and capable Governor, a great administrator—and, I may add, as a mighty sportsman—but also as a sincere and consistent well-wisher of our country, and a staunch believer in the continuance of the historic and hereditary friendship which exists between the British and Persian Governments. It is this which constitutes his chief claim on our esteem and admiration.

"There is one thing I feel I must say at this stage: it is probably in the minds of you all, and it has certainly been in my mind all the time I have been speaking. I feel you will wish me to make a respectful and sympathetic allusion to the great bereavement which his Royal Highness has suffered through the death of his son, Prince Bahram, in consequence of that appalling crime, the torpedoing of the Sussex. I had the honour of Prince Bahram's acquaintance, and it is grievous that one so young and so gifted, at the beginning of a most promising career, should have lost his life through no fault of his own, but owing to Germany's barbarous methods of warfare. I am sure you will all wish me to assure his Royal Highness of our deep sympathy with him in his sorrow

"Now one word about Persia. I am one of those who entertain high hopes of the future of that country. I do not say this merely because, as chairman of the Imperial Bank of Persia and a director of the Anglo-Persian Oil Company, it is in a sense my duty to be sanguine; I say it from strong personal conviction as a student of Persian history, and because, having spent my life among the Mohammedans of the Perso-Baluch frontier, I have a sincere sympathy with the Persian people, and believe in their national spirit. Politics are, of course, out of place in a gathering of this kind, especially any reference to the internal politics of Persia; but I think I may say this—I do not believe there is any living Englishman who does not entertain feelings of the liveliest friendship for Persia, and who does not sincerely desire the maintenance of her independence and integrity and the revival of her former prosperity. I do not think I shall be far wrong if I hazard the conjecture that this desire also animates the policy of our gallant and chivalrous ally, the great Russian people; and as this war, in which we are Allies, is being fought, among other objects, to uphold the rights of the smaller nations to exist, we may reasonably hope that after the war, and with the help of her two great neighbours, Persia may set her feet once more on the path of progress, and so attain the tranquillity and prosperity we all desire for her.

"It only remains to tell his Royal Highness how gladly we welcome his visit to England, and to offer our best wishes in connection with his proposed return to his own country. I have also just heard that his Most Gracious Majesty the King has been pleased to-day to confer on Prince Ismail the honour of K.C.S.I., and you will wish to offer your felicitations both to the Prince and to his Royal Highness."

Prince Ismail, who returned thanks on behalf of his father, said:—

"My father thanks you for your kind words. It is a source of great gratification to him to be present here to-day, to see so many old acquaintances, and to meet so many distinguished gentlemen closely interested in Persia. The days that have passed since his arrival in this country are amongst the happiest of his life. The hospitality of his Majesty's Government and the kindness shown him on all sides have touched him deeply. The remembrance of these days he will treasure all his life. He sees with much gratification that his efforts in the past to co-operate with the Imperial Persian Government to maintain the closest, the most cordial relations with your country have been appreciated here. This encourages him—though encouragement is hardly necessary—to do what is within his power in future. His Royal Highness is particularly happy to have the opportunity of saying these words on this occasion, when he is the guest of the Anglo-Persian Oil Company, which has been so largely instrumental in increasing the commercial relations between our two countries, and whose enterprise has been of such great benefit to both countries. He wishes to thank you, Mr. Greenway, and the directors, for your warm hospitality."

On Wednesday the Zil-es-Sultan visited Aldershot, and had an opportunity of seeing something of the British Army, made and in the making.

NEAR EAST BOOKSHELF.

THE REGENERATION OF FRANCE.*

Mr. Herbert Adams Gibbons is Professor of History at the Roberts College, Constantinople; but the outbreak of war found him enjoying a holiday on the Breton coast. The first alarms sent him to Paris, where he remained during the fateful months of August and September, 1914. His impressions, recorded day by day, constitute a fascinating study in the infant science of national psychology. They enable us to follow every change that swept over the soul of France; its quiet exultation when news came of Belgian staunchness, of British help, of the Russians' advance on Berlin, of the theatrical dash into Alsace and Lorraine; and the bitter disillusion bred by repeated disasters. We see the Government and banks fleeing to Bordeaux, and taking all their gold with them; over 400,000 of the wealthier residents escaping like rats from a ship which apparently was about to founder; theatres and places of public resort closing down, and the country's economic life paralysed by mobilization. But throughout the vicissitudes of that awful time Paris never despaired of the Republic; not even when, "spreading through France as gangrene spreads," the German hordes advanced to a point within twenty miles of the capital.

According to a Sanskrit proverb, "The test of gold is fire; the test of human nature is adversity." When things looked blackest, the innate chivalry of the French character shone with a pure light. Mr. Gibbons contrasts its generous appreciation of foreign help with "the self-conceit and jealousy which prevented Bulgarians, Greeks and Serbians in 1912 from seeing the importance of what other armies than their own had accomplished."

The present reviewer, too, happened to be in Paris during the earlier stages of the Franco-Prussian War of 1870, and is able to bear testimony to the change in national temperament which has come within a lifetime. He is amazed to learn that initial successes in 1914 did not send processions into the streets howling "*A Berlin!*" and that news of crushing defeat did not evoke the old battle-cry, "*Nous sommes trahis!*" nor yet lead up to a suicidal change of government. Paris after Charleroi kept a heart as brave as that of Rome after Cannæ; she offers an example which Britons may well follow at the present crisis. On September 6 our author wrote:—

The soul of Paris presents a most interesting study to the psychologists. On the surface there is all the effervescence, the excitability, the fickleness, and the mad rush after pleasure. The tourist sees, and the general reader hears only of this side of Paris. But the longer one lives among Parisians the more one sees that, underneath this exterior, there is a solid substructure of purity, of industry, and of devotion to higher ideals.

It rests on foundations well and truly laid by the much-misunderstood women of France who, instead of grieving and repining, have shouldered their men-folks' work in addition to their own.

And they are doing it with a smile on their faces. If the tears were not shed at the moment of parting, they are saved for the night watches. There is no more important factor in keeping up a soldier's spirit than to have the precious knowledge that the little woman back home is attending to the business, and has brains and ability enough, not only to keep herself and the children from starving, but to protect the family's financial interests.

We are often exasperated by the Censor's vagaries, but Frenchmen have far greater reason to complain of official reticence. On August 29, public anxiety being at fever-heat, our author foregathered with a Turkish Pasha, a cavalry officer, and a lawyer. Of the first he writes:—

The mystery of a parasitical and lazy stock, like that of the landowning Turks, is that it has given to the world keen, alert men, who fail to become giants in the domain of mind only by the hopeless lack of opportunity afforded by their governmental and social system. Some pashas may be fools, but not this one.

Of course, the censorship came up for discussion, and the Turk reminded Mr. Gibbons of the *Agence Ottomane's* cryptic announcements, adding:—

Now here we are up against the same old problem in Paris. The *communiqués* do not communicate, hence rumours are breeding fast. . . . Into these long blank spaces in our journals we read far more fantastic and disquieting things than what was actually there, but was struck out by the pencil of a foolish censor, who was afraid that the truth might have "a bad effect on the public."

Mr. Gibbons and the cavalry officer agreed with him; but the lawyer countered them fiercely:—

All three of you are wrong; you assume that everybody has your brains, your training, your mental poise; you think of how you feel, and say, "I am the Public!" But you belong to an exotic one per cent., and have no more right to speak for the Public than you have to speak for the Germans. The Public is a little child, a baby in arms, and if it has developed any instincts at all, they are feminine. You protect and shield a baby from shock; anything pleasant you let the child see and share with it; if you possibly can, and to the last minute you keep evil from the infant. The Censor thinks more logically than you three; he knows full well that harm is wrought not by evil alone, but by the anticipation

* "Paris Reborn." By Herbert Adams Gibbons. (New York: The Century Co. Price $2 net.)

Digitized by Google

of evil. As for *canards*, half the people who hear them say, "Well, they may not be true after all"; the other half would get excited no matter what happened or didn't happen. But the facts, if unfavourable, work on the Public's nerves, and when the blow falls the Public is less able to bear up than if it came unexpectedly.

This is a fair sample of the sterling common sense that pervades Mr. Gibbons' book. He has produced a most valuable human document, and its charm is enhanced by Mr. Lester G. Hornby's illustrations.

F. H. S.

TANGIER TO TEHERAN.

The Prince of Wales's visit to the Sudan was a happy inspiration, upon which everybody concerned deserves congratulations. It enabled H.R.H. to see for himself one of the most interesting portions of the Empire; it afforded the people, natives and Europeans alike, an opportunity of manifesting their loyalty, of which they were not slow to avail themselves; and it disposed in most effective fashion of those wonderful fairy tales—made in Germany, of coursre!—about Khartoum being surrounded by vast hordes of Arabs thirsting for the end of British rule and an opportunity to welcome Hajji Wilhelm Mohammed. But I suppose we need never be surprised to learn that Teutonic emissaries have been telling those whom they would like to mislead that H.R.H. was never in Khartoum at all, being in fact a prisoner in Berlin at the time of his "reported" visit. For was not the Moslem world a year ago informed by the veracious Wolff that King George, the Tsar, and the President of the French Republic had been carried off to captivity in Berlin by a wonderful (German) aeroplane? Truly the German propagandist is not the person to be baulked by such trifles as facts.

***

The Prince's visit must have afforded particular satisfaction to the British civilians in the Sudan, who make up in loyalty for their smallness in point of numbers. Ever since the war broke out—and, for that matter, before it—they have been doing their full share of work for the Empire; and it is good to think that the Prince's visit has served to some extent to make the fact more widely recognized than it was before. When the war burst upon the world the number of British civilians in the country was very small indeed, and nearly all of them held positions of responsibility, which they could not possibly have vacated without dislocating the business and trade of the Sudan entirely. That fact rendered, and still renders, their continued presence in the country essential, and though they would have preferred to join the fighting forces, they have undoubtedly been doing better service to the cause that we all have at heart by "carrying on" than they would have done by giving up their billets and joining the Colours.

***

As regards civilians in Government service, owing to the nature of the work in the outlying districts most civil departments contained at the outbreak of the war—and probably still contain—a proportion of military men. From a well-informed correspondent I understand that wherever reductions in the staff have been possible the soldiers have been sent back to military duty; and that, save in very special cases, no civilian has had a chance of being permitted to offer his services, although a considerable number have been attached temporarily to the British and Allied forces in Egypt, Gallipoli, and elsewhere. That is hard luck on the civilians, no doubt; but by keeping indispensable businesses going and by helping to keep the administrative machine running smoothly and well, under extremely arduous conditions, they are doing their duty as certainly as any man can do it. Thereby they are earning the gratitude and respect of all who can appreciate what that means. And I believe the war is teaching many of us to understand better than we did formerly what it does mean.

***

Apropos of doing one's duty, could anything be finer, more inspiriting, or more generous than the last message sent out of Kut by General Townshend before the place fell?—"We are pleased to know that we have done our duty, and recognize that our situation is one of the fortunes of war." That seems to me worthy of standing side by side with Nelson's famous signal before the Battle of Trafalgar. Nothing could be more simple or more stirring. And if anything could console General Gorringe and the men of the Tigris force it would be the generous thanks "for the great efforts you have made to save us." That and the King's gracious message must have robbed failure of its bitterness. Whatever happens, General Townshend is sure of his place in the affections of his countrymen. What a welcome will be his when he returns home!

The Turk is a pathetic figure, surely. He often has such excellent intentions, and yet contrives to make himself so excruciatingly funny to the West when he tries to give effect to them. The latest case in point is the story told by Mr. Morgenthau, the United States Ambassador in Constantinople, who is now on leave in America. (I hope, by the way, that the rumour about his resignation is not true!) Mr. Morgenthau told the New York Merchants' Association that just after the war broke out he was invited to join the Turkish Cabinet as Minister of Commerce and Agriculture; and that upon his replying that he thought the Ambassadorship of the United States was more important, the Turks answered: "You can keep that, too; we should not object." They were, said Mr. Morgenthau, absolutely sincere in this proposal. No wonder, he added, that they were "a remarkable people," though it must be admitted that in wishing to secure Mr. Morgenthau they were only showing very good judgment and sound sense. It seems to be the fate of Turkey to desire—and sincerely desire, as I believe—good advisers, and to be denied them; which, as I began this note by observing, makes the Turk a truly pathetic figure. And to-day, in the remorseless grip of the Teuton, he is certainly to be pitied.

***

A Roumanian correspondent informs me of a piece of slimness on the part of the Bulgarians which is worth putting on record. There was held recently in Berlin (according to my correspondent) an exhibition of pictures by Bulgarian artists. Now, wherever the strength of Bulgaria may lie, it certainly does not lie in the direction of art; consequently Brother Bulgar, who, we may safely conclude, was anxious to impress his "cultured" ally, was rather puzzled to get together a good collection. Then some genius hit on a brilliant plan. Many fine pictures by Serbian artists had lately found their way into Bulgaria, thanks to the looters. What more easy than to deface the signatures and replace them by sound Bulgarian names? And so it was done, and Berlin was, perhaps, duly impressed. Unfortunately, my correspondent does not inform me whether the pictures exhibited were offered for sale.

***

In a recent number of the *Egyptian Gazette* I see that an Arabic paper, in commenting upon the tercentenary of Shakespeare, laments the fact that at least until quite lately the English have made no attempt to interest the Egyptian people in British classics. Recently, it appears, a half-hearted scheme was introduced into the literary side of the secondary schools, when it was arranged that students should study some English dramatic work. But this is not enough. The move is a good one as far as it goes, but it is too vague. The Egyptian people are keenly susceptible to dramatic effect, they are usually appreciative of comedy. An extended knowledge of Shakespeare would lead them easily into knowledge of a side of the British character of which they know very little at present.

***

I do not like the news that enemy aeroplanes have dropped bombs on Port Said. No special importance, military or otherwise, attaches to the event, I suppose, but it is an impertinence which should be speedily "strafed" for all that. The very unattractiveness of Port Said is an alluring memory when one writes of it from beneath a clouded London sky. That is the worst of the East. You may suffer from every malignant ill that it holds; you may curse it daily and hourly from leave to leave, but when at last the long leave comes, its dust is hardly off your feet before your sun-drenched mind remembers nothing but its wonder and its colour and its light. And now the Huns or their satellites have dropped bombs on Port Said, where I have spent long and pleasant afternoons in being cheated out of wealth that seems fabulous in these hard days. Whom did they kill, I wonder; what did they damage? Actually, I suppose, the town has long been unrecognisable, as legions of soldiers have arrived, made it their headquarters for a time, and passed on to other theatres. But when I think of it I refuse to let my imagination run riot as a rule, for I like to picture the place as I last saw it, a peaceful blot in the distance, with the long arm of its guardian, de Lesseps, stretching out across the waters. "Strafe" the Huns; they have disturbed my memories most rudely.

CORSAIR.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. May.	1916. April.		1334. Rejeb.	5676. Iyar.
12	29	Friday	9	9
13	30	Saturday.....	10	10
	May.			
14	1	Sunday	11	11
15	2	Monday	12	12
16	3	Tuesday	13	13
17	4	Wednesday	14	14
18	5	Thursday	15	15

Monday is the birthday of the ex-Queen Natalie of Serbia, widow of King Milan.

Wednesday is the birthday of King Alphonso of Spain.

Wednesday is also the birthday of Princess Arthur of Connaught.

H.R.H. the Zil-es-Sultan, great-uncle of the Shah of Persia, is now on a visit to this country, accompanied by his son, Prince Ismail, and other distinguished Persians. An account of his reception, and of the luncheon given in his honour by Mr. Greenway and the directors of the Anglo-Persian Oil Company, on Tuesday, at the Ritz Hotel, will be found on another page. The King, who received Prince Zil-es-Sultan at Buckingham Palace on Tuesday, has conferred the K.C.S.I. upon Prince Ismail.

Prince and Princess Danilo of Montenegro and suite have arrived at Salzo Maggiore.

Prince Cantacuzene of Roumania arrived in London from Paris last week. It is understood that during his stay he will meet several members of the Government, but he declines to speak on Roumanian affairs at the moment.

Prince Cantacuzene is by no means with strangers in London, says the *Daily Graphic*. Although he has not been here in an official capacity, he is a frequent visitor to London, and is always warmly welcomed by a wide circle. The Prince is not, of course, a member of the House ruling at Bucharest. He is the son of the Governor of one of the provinces into which Roumania used to be divided. A soldier, and on the sunny side of forty, Prince Cantacuzene is a striking personality, impressing all who meet him. It would be indiscreet to canvass the length of his present visit, whether it will extend to other Allied capitals, and what its object is, but it is public property that the Prince is in Roumanian politics a warm admirer and a close friend of M. Take Jonesco, the ardent advocate of prompt intervention on the side of the Allies.

A Cyprus correspondent writes: The King of the Hellenes consented last year to become godfather to a certain number of infants in the case of families which exceeded seven children. The King has now been pleased, in response to another petition, to consent to become "Spiritual father" to another batch of Cypriot children, in most cases the ninth, and in one case the eleventh child of the family. The Greek Consul, M. Pareskevopoulos, who has been spending Easter at the Kykkou Monastery, in the heights of the forest, goes to Papho to represent his Majesty at the baptism of one child. The other seven will be baptised at the *Metochy* of Kykkou, at Nicosia. Male infants receive the name of Constantine, except in one case—where the father bears that name—in which the name Andreas will be given. Girls will be named Sophia. The names of the families are published and they are warmly congratulated on the honour conferred.

The *Politiken* (Copenhagen) reports that Prince George of Greece has suddenly decided to return to Greece owing to the threatening situation there. The Prince, with his family, has been staying at St. Cloud, near Paris, and had intended spending the summer at his Danish country seat at Gurrehaus, which had been prepared for his reception. H.R.H. is an Admiral in the Greek Navy.

Lord and Lady Oranmore and Browne have returned to town from Castle Macgarrett, Claremorris, Ireland.

M. Pashitch, the Serbian Prime Minister, was received in private audience by the Emperor Nicholas at Tsarskoe Selo on Thursday of last week. The following day he was entertained at luncheon by M. Sazonoff, the Russian Minister for Foreign Affairs, when M. Stürmer, the Premier, and the Presidents of the Duma and of the Council of the Empire were also present. M. Pashitch left Petrograd on Wednesday for Moscow, whence he will go to Kieff and Odessa. It is understood that he will subsequently visit Bucharest.

The Countess of Ronaldshay gave birth to a daughter on Thursday of last week at 38, Grosvenor Street.

Lady Maxwell's condition continues to improve slowly. On Tuesday she was reported to be out of danger.

Mr. Robert L. Naville, formerly of the Imperial Ottoman Bank, Beyrout, and now Director-General in Serbia of the Banque Franco-Serbe, is staying at 17, Villa Said, Avenue du Bois de Boulogne, Paris.

General Sir Charles Monro had the honour of being received by the King at Buckingham Palace on Wednesday, when his Majesty invested him with the Insignia of a Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George.

In his despatch, published yesterday, on the operations in Mesopotamia in October, November, and December of last year, General Sir John Nixon expresses his gratitude to Lieutenant-Colonel Sir P. L. Cox "for his able co-operation and willing assistance." He adds: "The force has largely profited by his deep knowledge of local conditions and peoples, and by the tact and bold resource which he has displayed in all he has undertaken."

Amongst others mentioned in the same despatch for good services we are pleased to see the name of Captain George E. Whittall. This is the second time that Captain Whittall has been mentioned in Sir John Nixon's despatches.

Mrs. A. Van Millingen has arrived in England from Alexandria, and has taken a house at Byfleet for the summer.

A marriage has been arranged, and will shortly take place at Alexandria, between Major Brian Maitland Fuller, Dorset Regiment, youngest son of the late George Fuller, of 71, Lexham Gardens, Kensington, and Olive Phyllis, only daughter of the late Colonel and Mrs. Claude M. Haggard.

A telegram from Tabriz, received in Petrograd, states that General Yanushkevitch, who attended the opening of the Tabriz-Julfa Railway, visited the Governor-General and the Consuls at Tabriz and inspected the Persian Cossack Brigade in the presence of Mohammed Hassan Mirza, the Valiahd (heir presumptive). The Governor-General gave a lunch in honour of General Yanushkevitch.

Captain H. Crichton, M.D., of South Shields, has been gazetted to the camp at Alexandria, Egypt, says the *North Star*. His brother, Crichton Bey, of Alexandria, is one of the principal engineer inspectors of the Egyptian State Railways, while another brother is engineer and district superintendent of the Egyptian State Railways, Cairo.

Queen Alexandra, accompanied by the Princess Royal, Princess Maud, and Princess Victoria, was present at Drury Lane Theatre on Tuesday at the *matinée* organised by Lady Greville and Lady Oranmore and Browne in aid of the Serbian Relief Fund. The theatre was crowded, and the *matinée* was a great success.

Mr. Bertram Christian, chairman of the Serbian Relief Fund, writes to *The Times*:—"May I beg leave to make a brief public acknowledgment, on behalf of the Serbian Relief Fund, of our warm thanks to Lady Greville and to all those who, in so many different ways, contributed to the magnificent result of the Drury Lane *matinée* on Tuesday? I should like, if I may, to take the same opportunity of expressing our gratitude to the many thousands of your readers who, by their sympathy and generosity, have come to the aid of Serbia, and the hope that they may continue to find our work not unworthy of their support."

To-morrow afternoon at Lord's an international cricket match will be played between convalescent Anzacs and the Royal Horse Guards' Club.

The Commissioner of the Scottish Women's Hospitals makes an appeal for all kinds of games to be sent to Serbian boys in Corsica. There are between five and six hundred of these boys, who were brought away from Serbia by the Serbian Government to save them from internment in Germany. The request is made especially for footballs, hockey sticks and balls, chess, draughts, dominoes, and Indian clubs. Parcels of games should be sent to Lady Grogan, the Serbian Relief Committee, 5, Cromwell Road, S.W.

From the list issued by University College, London, of public lectures during May and June we take the following:—"Europe and the Ottoman Heritage," by Rachel R. Reid, Thursdays, May 11, 25, June 8, 22, at 5.30 p.m.; "The Historical Significance of Constantinople," by N. H. Baynes, Wednesday, May 24. The lectures are open to the public without fee.

Yesterday afternoon at a meeting of the Society of Biblical Archæology, Mr. W. L. Nash read a paper on "The Totemic Origin of the Egyptian Gods." We hope to give a report of the lecture next week.

The directors of the Agricultural Bank of Egypt, in their annual report, refer to the death of the Rt. Hon. Arnold Morley, who had been a member of the London Committee since the foundation of the bank. His place on the Board has been temporarily filled by Captain R. S. Westropp, the general manager of the bank.

Mr. Charles Lionel Sandars, of the Union Club, Trafalgar Square, Queen Anne's Mansions, S.W., and Ramleh, Egypt, late a Judge in Egypt, left property of the gross value of £25,104.

The members of the Bulgarian Sobranje, including the Vice-President Momtshiloff and General Popoff, have arrived in Berlin. On Monday they were received by the Imperial Chancellor.

The trustees of St. Mark's Church, Alexandria, Egypt, are requesting applications for the post of chaplain, in succession to the Ven. Archdeacon Ward. Applicant must be "a good Churchman of moderate views, preferably a married man. Some private income desirable."

At His Majesty's Theatre, on Sunday afternoon, Mrs. St. Clair Stobart will speak on "My Experiences with the Serbian Army in the Great Retreat."

An official decree has been published at Corfu conferring the Order of the White Eagle on the officers of the military mission which assisted in the reorganisation of the Serbian Army.

M. Hebard, an Inspector of the Egyptian Ministry of Education, who is now serving with the King's Royal Rifles, has been wounded, but is progressing favourably.

The collection of ancient Greek coins formed by the Rev. Arthur C. Headlam, D.D., of Whorlton Hall, Barnard Castle, realized £1,756 at Messrs. Sotheby's during the three days' sale this week, excellent prices being realized. A Syracuse tetradrachm of the Geomori oligarchy, which cost £4, now produced £15 10s.; a Himera didrachm of the Tyranny of Theron, 482-472 B.C., cost £8, and sold for £26 10s.; a Messana tetradrachm, 476-422 B.C., cost £3 12s. 6d., and now brought £18 10s.; and a Metapontum didrachm, 400-350 B.C., sold for £40, as compared with the previous "record" of £22. All these were purchased by Messrs. Spink.

Musa Kaizim, the new Sheikh-ul-Islam, is a Kurd, from the Kharput district, says the *Morning Post*. He is well known to be ready to play the game of the strong Germanophil elements in Turkey, and this accounts for, as it lends significance to, his selection for the office, which he occupied once before, during a short period in 1913. It gives authority to him as their mouthpiece. The position of the Sheikh-ul-Islam, who is head of the State on the ecclesiastical side, as the Grand Vizier is on the secular, is such as can be adroitly used by the unscrupulous in playing off against each other the temporal and the spiritual powers. Unlike his predecessor, Hairi Bey, a man of repute and moderation, Musa Kaizim has only the record of having advanced himself on pretensions to religious and ecclesiastical fervour that are less well substantiated than his readiness to be a political tool.

The first annual meeting of the newly-formed Egyptian Society of East Anglia took place last week at the Castle Museum, Norwich, with the president, Mr. A. M. Blackman, in the chair. The officers were all re-elected, in accordance with the following list:—The Lord Mayor of Norwich (ex-officio), the Lord Bishop of Norwich (ex-officio), and the Dean of Norwich; president, Mr. A. M. Blackman; vice-presidents, Archdeacon Pelham, Canon F. J. Meyrick, and Sir H. Rider Haggard; hon. treasurer and lanternist, Mr. H. Brittain; hon. secretary, Miss A. M. Geldart. Miss A. M. Geldart was elected a vice-president. Miss G. V. Barnard was elected hon. librarian, and the following members were elected to serve on the committee:—Mr. F. Leney, the Rev. T. E. Plattn, Mr. W. Thouless, Dr. Margaret Boileau, Mrs. C. E. O. Griffith, and Mrs. Wheeler. The report of the hon. secretary set forth that the society, founded on March 26 last year, started with 30 members, who had now been increased to 58. At a meeting of the committee held on April 12 the suggested library of the society took shape. Hitherto books had only been lent, but now several had been given. By the invitation of Mr. Leney, this nucleus of a library would be kept at the Castle, with Miss G. V. Barnard as hon. librarian. The president said the growth of the society would have been a noteworthy event anywhere, but that it should have happened in what was practically the war zone was almost incredible.

APPOINTMENTS, PROMOTIONS, Etc.

A Cyprus correspondent writes: Mr. Clarence Wodehouse, Commissioner of Larnaca, is to be retired at his own request, on account of age. Mr. Wodehouse came to Cyprus originally as a Commandant of Police. He was then for many years Commissioner of Papho; and was subsequently appointed to be Commissioner of Larnaca.

According to a Constantinople telegram, Musa Kiazim Bey, a member of the Turkish Senate, has been appointed Sheikh-ul-Islam in place of Hairi Bey. The latter, it will be remembered, resigned last September, ostensibly for reasons of health, but in all probability because he disapproved of the ultra pro-German policy of the Enver-Talaat clique.

Brahim Bey, former Turkish Minister of Justice, has been appointed President of the Council of State. The Minister for Foreign Affairs, Halil Bey, will take charge provisionally of the Ministry of Justice.

OBITUARY.

ADMIRAL LORD JOHN HAY.

We regret to announce that Admiral of the Fleet Lord John Hay died on Thursday of last week, the 4th inst., at his residence, Fulmer, Bucks, at the age of eighty-eight. The fourth son of the eighth Marquis of Tweeddale, he entered the Navy in 1840, and had seen service in most parts of the world. In the intervals of service afloat he served his country in Parliament, and in 1866 he became Junior Naval Lord at the Admiralty. From 1868 to 1871 he was Third Naval Lord and Controller, and in 1880 he became Second Naval Lord. He received the K.C.B. in 1881, and remained in civil employment till March, 1883, when he hoisted his flag as Commander-in-Chief in the Mediterranean. He held this command for three years, during which he was much occupied in the organisation of the naval forces engaged in co-operating with our troops in Egypt. He received the thanks of Parliament for the support he afforded to the troops in the Sudan, was decorated in 1883 by the Sultan with the Grand Cordon of the Mejidieh, and was awarded the Egyptian Medal and the Khedive's Bronze Star. In 1884 he was advanced to the rank of Admiral, and returned home early in 1886 to take up the duties of Senior Naval Lord in the Marquis of Ripon's Administration. This, however, lasted only from February till August, and in May, 1887, Lord John Hay was appointed to be Commander-in-Chief at Devonport, where he remained until his active service was brought to an end by his promotion to be Admiral of the Fleet in December, 1888. In 1886 he was awarded the G.C.B., and in 1897, having reached the age limit, was placed on the retired list of his rank. At the funeral, which took place on Monday, at Fulmer, the King was represented by Admiral Hedworth Meux.

We regret to announce the death of Colonel Philip Edward Pope, which occurred on Wednesday at his residence, Churchmead House, Datchet, at the age of seventy-three years. He entered the Army in 1863, and served in the Egyptian Expedition in 1882, receiving the medal and bronze star. Colonel Pope was a Magistrate for the Slough Division of Bucks, a Deputy-Lieutenant of the county, and was High Sheriff in 1906. When war broke out he undertook the position of staff officer of the Special Constabulary in the district in which he lived, and was also an officer in the Bucks Volunteer Defence Corps.

We regret to learn that Captain W. L. Henderson, of the West Yorkshire Regiment, who, as already mentioned in these columns, was slightly wounded in the winter and wounded again, severely, a short time ago, died of his wounds on Tuesday of last week. Captain Henderson was one of the members of the staff of the Egyptian Ministry of Education, and volunteered for military service in August, 1914.

The Paris newspapers announce that Captain Raymound Aynard, Minister Plenipotentiary and ex-Commissioner of the Egyptian Debt, has been killed at Verdun at the head of his company.

The Rev. Dr. Allan Menzies, Professor of Divinity and Biblical Criticism, St. Mary's College, St. Andrews, died on Monday at St. Mary's, Innellan, Argyllshire, in his seventy-second year. He was a son of Professor Allan Menzies, Edinburgh University, and was a distinguished writer on Biblical criticism.

Major Percival Havelock Acheson, Army Service Corps, who is officially reported killed in the fighting in Dublin, had retired in July, 1895, but on the outbreak of war he volunteered for further service, and was gazetted to his old unit, with the rank of Major, in August, 1914. He was born in May, 1858, and entered the A.S.C. in 1878, rising to the rank of Major in 1894. Major Acheson took part in the Sudan Expeditions of 1885 and 1885-6, and was present at the action of Giniss. For his services he received the Sudan Medal and the Egyptian Bronze Star.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

PERSIA AND THE WAR.

Persia, it may be thought, has little claim on the world's attention at the present time. One of the lessons, however, which the war has brought home to certain Governments is the danger of allowing the major questions of the day to obscure entirely what may seem to be minor matters. Compared with the great stream of war which compels attention in other parts of the world, Persia is altogether a backwater; but it deserves more than passing notice, both for its own sake and on account of its relationship to the British Empire. Whether in the past Great Britain has lived up to her responsibilities in regard to the Persians we need not now stop to inquire. The war has created a new situation. It has added to those responsibilities, because German intrigue has led to greater interference with Persian affairs, and it has brought out, we may hope, into stronger relief the necessity of giving more heed to British interests, actual and potential, in the country. Constant reference is made to German agents in Persia and their activities since the outbreak of the European war. The popular conception of these men as emissaries dispatched on special missions from Germany or Turkey in Europe, well supplied with gold and consignments of arms and ammunition, may have some truth in it; but it is probable that the majority of them were already on the spot when war broke out, as in the case of the notorious Wassmuss, and had been for years engaged in pushing German trade and in ingratiating themselves with the Persians. Their success in stirring up the tribesmen has called attention to the extent to which the trade of Persia was in their hands, and must prompt the consideration whether in the future it will not be worth the while of the British Government to take more active steps to promote British trade in a country which has a vital interest for the Empire. For Persia virtually marches with India, and recent events have shown that it is difficult to prevent unrest within the borders of the former from affecting the tribesmen in Afghanistan and on the North-West Frontier. The British merchant is not likely to be called upon to carry out the political propaganda which seems to come naturally to the German; but there can be no harm in his realising that in promoting his own business he is promoting the interests of the Empire. There can be no surer way of fostering this spirit among British merchants in Persia and in other countries of a similar character than by allowing them to feel that they are objects of the Government's goodwill and solicitude.

The policy which these considerations foreshadow belongs to the future. For the moment other matters are more pressing. The war has been the means of bringing considerable trouble to Persia. An impartial review of the situation does not allow the Teheran Government to be greatly blamed for halting for some time between two opinions in regard to the ultimate issue of the struggle. So long as it was in that frame of mind there could be no effective check to German propaganda and intrigue up and down the country. The Government has now thrown in its lot unreservedly with the protecting Powers, Russia and Great Britain, and will give its support to the measures taken to deal with the Turco-German menace. Up to the present the work has been left almost entirely to Russia, whose troops have practically cleared north-western Persia of insurrectionary bands. Some of the agents of the Central Powers have been arrested, others will have retired into Turkish territory, but some, it is now reported, have made their way into the neutral zone or the British sphere in Persia. They will have been encouraged by the absence hitherto of any sustained military efforts on Great Britain's part in the belief that they will here be free from molestation. The problem, therefore, at once arises whether they are to be confirmed in this opinion or, if not, whether the task of dealing with them is to be left to the Russians or to be undertaken by a British force. Southern Persia has continually been the scene of disorders since the outbreak of the European war. Last July a British patrol operating from Bushire was ambushed and two British officers were killed. In November the British Consul and other British subjects at Shiraz were arrested, and have since been held prisoners by Persian insurrectionaries under German leadership. So far the only reply made by the British Government to these outrages has been the dispatch in August last of a British force to Bushire as a protest against the failure of the Persian Government to punish the tribal chiefs and against other breaches of neutrality. In due course, when the Persian Government claimed to be in a position to cope with the situation in the South, this force was withdrawn; but no effort has been made to secure the release of the Shiraz prisoners.

The arrival of prominent enemy agents upon the scene can hardly fail to bring matters to a head. Given a free hand, they will not only wage war more thoroughly upon British interests, but, with the help of the tribesmen who have become masters of Shiraz and other towns, will offer a counterblast to Russia's pacification of the north-western section. The Russians cannot wish to leave their work half undone and expose themselves to possibly organised attacks when they are directing their attention towards Baghdad. The task of restoring order in southern Persia, therefore, devolves in whole or in part upon the British or it must be entrusted entirely to the Russians, who have already penetrated south of Ispahan. There are limits to the forces which Great Britain can dispatch overseas, and there can be no question of weakening any portion of our battle front in order to restore order in Persia. But British interests in the Middle East call for a more vigorous championing than they have received in the past. The report that a small British force moved out of Bushire on April 29 and successfully attacked a hostile force, which was strongly entrenched in the vicinity, suggests that steps are now being taken to secure this end. Even if it were not possible to send out a large force to accomplish in the South what the Russians have done in the North-west, Great Britain might co-operate with her Ally in other ways. At the time of the formation of the Gendarmerie under Swedish officers it was urged in THE NEAR EAST that a wiser course to adopt in the interests of all concerned would be to employ the services of British officers of the Indian Army. If this suggestion had been acted upon, the recent history of Persia would have followed a different course. If the whole of the neglected and unpaid Gendarmerie is not now to be found among the insurrectionaries, it should still be possible to bring together the nucleus of a new force. Under the direction of British officers, with the help of civilians who have practical knowledge of the country and its inhabitants, the new Gendarmerie might soon be in a position to offer useful co-operation to the Russians. Such a course would be preferable to the *laissez faire* policy hitherto adopted. It would counteract to some extent the bad impression caused by the failure to secure the release of the British Consul at Shiraz; it would reassure the Persian Government, which, with a necessarily restricted outlook on the war, must have been puzzled by the apparent contradiction between Great Britain's position in regard to Persia and the steps taken to give effect to it. In this respect the visit of the Zil-es-Sultan to England may prove opportune. Although not a member of the Government, his rank and qualifications give him a position of mark in Persian affairs, and no one is better qualified, after acquainting himself at first hand with the real state of affairs, to interpret to the Persians the policy which Great Britain is resolved to adopt in the future.

THE SERBIAN MISSION IN LONDON.

THE SERBIAN POINT OF VIEW.

By Professor Pavlé Popovitch.

On leaving Paris for London, the Serbian Mission—headed by the Crown Prince Alexander and supported by M. Pashitch, the Prime Minister, M. Jonovitch, Minister Plenipotentiary, and others—may have had some doubts about the welcome they might receive in England. The Mission was satisfied with its reception in Italy; in France it had been received magnificently, the indescribable enthusiasm of the people and the most cordial welcome on the part of the Government proving that the French had completely realised the importance of Serbia's rôle in this war, and the greatness of her sacrifice for the cause of the Allies. The question was, what reception the Mission would have in England. At the beginning of the war the public of this country knew only that Serbia was the cause of the world war, and the British Government only declared that direct British interests in Serbia were nil. It was, therefore, possible that the reception might not be satisfactory. If that should be so, what a misfortune for Serbia at the time when she was overrun by the enemy! It would be especially unfortunate should the reception not be favourable just where Serbia looked for the greatest support. The Serbian Crown Prince—the gallant and martyred representative of a gallant and martyred nation, the young man whom Fate condemned to pass his best years on battlefields and among the most anxious cares for his country—had had many hardships to bear already. Would his arrival in England be one more of those hardships, or would it be a consolation for past sufferings? What anxiety must he have felt when he looked on the English coast which he was approaching!

But the welcome in England was magnificent. It was as enthusiastic as in France—beyond all expectation. The Crown Prince entered a completely changed England. The twenty months of war had taught the British public that Serbia was wrongfully accused of being the cause of the trouble, and had convinced the British Government that direct British interests in Serbia are very important. English people had acquired in the meantime sincere sympathy for Serbian people, on whom they had looked before with indifference. And this change was quite manifest. Wherever they went the Crown Prince and his suite were welcomed with respect and sympathy, and they received moving proofs of an unexpected popularity of the Serbian people in England. They found them at the Court, in the Government, in the Press, in the highest circles of society, and amongst all classes of English people. And they were delighted by the discovery.

This sympathy was the first thing that delighted the Serbian Mission. The second was England's acquaintance with the Serbian cause. Serbia's aspirations and those of the Southern Slavs, whose representative she is, for which one might have been afraid before—they were *terra incognita* to the British public opinion—proved to have been justly appraised by it. Only a year ago the first representatives of the undelivered Southern Slav people, when they arrived in England with the purpose of acquainting public opinion with their keen anxiety to be united in one state with Serbia, where their brothers are living, saw that the English were scarcely familiar with the Southern Slav people. "Who are Southern Slavs?" "Is it possible that Serbs, Croats, and Slovenes are the same people?" "Is it true that the languages of Serbians and of Croatians are absolutely identical?" Such were the questions the English put to their Southern Slav visitors. They induced the latter to set down certain Serbian words and to write the same words in Croatian; and they were exceedingly astonished to find that these words were always the same in Serbian as in Croatian. Such was the English knowledge of the Southern Slavs a short time ago. To-day, however, it is very much improved. On the arrival of the Crown Prince many prominent London and provincial papers and reviews dealt with the Southern Slav question with full and almost amazing competence, and it was a very great pleasure for the Serbian Mission and for all Serbians to witness this change.

Still more important and more comforting to the Serbian Mission was it to see that England realises Serbia's rôle in the future. England is convinced of the need of the creation of a strong Southern Slav State as a bulwark against German Imperialism. Serbia, alone of all the Balkan States, was faithful to the Allies, without counting the cost. She was the gateway to the East, and she fell in defending not herself alone, but also British interests in the East. What then is the conclusion, if not that Serbia is necessary to England? She is necessary, not only as she used to be, but stronger, more fit to withstand any German aggression in the future. Nobody can twit Serbia with failing to do her utmost for the cause of the Allies; but she was obviously too weak to resist successfully the combined onslaught of three strong enemies. If, in the future, the same danger should threaten Serbia, she must undergo the same ordeal, but England herself would also feel the blow that struck Serbia. Will England allow it? No: England realises that her interest is in enlarging Serbia, in allowing the ardently desired union of the whole Serbian and Southern Slav people, in creating in the Balkans a united Southern Slav State. She realises that this State will be defending liberty and justice in Europe, at that point where late events have shown that they are vulnerable. England realises also that just as Serbia is her faithful friend, so is Bulgaria her inveterate enemy; and as her paramount interest is to strengthen Serbia, it is also to weaken Bulgaria. These are the ideas that the Serbian Mission found prevalent in England, and they were also expressed in many of the foremost London and provincial journals and periodicals. This fact was to the Serbian Mission a very welcome consolation for the severe trials their country went through during the last war.

A further pleasure—and the greatest one—was reserved to the Serbian Mission. It saw that England was determined to carry this war to a victorious finish. I will not allude to many declarations to this effect made by those best qualified to speak in this country. I content myself with mentioning only one fact. After his visit to Woolwich Arsenal the Crown Prince said to one prominent member of his suite, who had been prevented from accompanying him on the visit: "You made a mistake, you made a big mistake in not coming. I never in my life saw better technical war preparations than I saw in Woolwich. I might at one time have had doubts as to the final victory, but after seeing the splendid Woolwich Arsenal, and after witnessing the excellent valour of British troops, I have full confidence in the victory of the Allies."

HEROIC WORK BY BRITISH WOMEN IN SERBIA.

A number of British women doctors who have done excellent to the Serbian Mission. It saw that England was determined May 8, when a welcome was given to Dr. Berry and her husband on their safe return after a year of hospital work in Serbia, which included being taken prisoners because they remained at their hospital after the Serbian retreat. Mrs. Berry, in her interesting speech on the work of the hospital, laid stress on the great debt which the Allies owe to Serbia. In the struggle with the typhus epidemic from which the country suffered so grievously, the doctors insisted upon cleanliness—hot springs in the neighbourhood were invaluable—and fresh air. Mr. Berry was regarded as the apostle of hygiene, whose zeal was so great that he was given the name of "the window-smasher." Dr. Elsie Inglis, who organised the Scottish Women's Hospital units, and consequently came into close touch with many women in their work, said that she was impressed by their extraordinary cheeriness, which matched that of the British Tommy. Speaking of the fight with typhus at Krushevatz, in a hospital of 400 beds which had to accommodate 1,200 patients, she said that every five days every man, blanket, and uniform was disinfected. When a large batch of prisoners arrived the disinfected men said: "We shall all get typhus if you let these dirty men in!" A Serbian officer, she added, soon learnt to say in English: "Please, sister, shut the door." The British women soon learnt to say in Serbian: "Open the window!" Dr. Inglis was also taken prisoner with her party. They were well treated, but, she said, she could not forget the harsh treatment suffered by the Serbian prisoners; the Serbians, on the other hand, when they rolled back the tide of the Austrian invasion three times, treated their Austrian prisoners as they treated their own soldiers.

Dr. Alice Hutchison, Dr. Soltau, and other women doctors were among the guests.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Fall of Kut. May 4.

Lord BERESFORD asked for information respecting the number of British prisoners taken by the Turks at Kut-el-Amarah, and whether it was true that the Turkish Commander-in-Chief, impressed by the heroic defence of General Townshend, had allowed that officer to keep his sword.

Earl KITCHENER: I am glad that the noble and gallant Lord has afforded me this opportunity of paying a tribute to General Townshend and his troops, whose dogged determination and splendid courage have earned for them so honourable a record. It is well known how, after a series of brilliantly fought engagements, General Townshend decided to hold the strategically important position at Kut-el-Amarah, and it will not be forgotten that his dispositions for the defences of that place were so excellent and so complete that the enemy, notwithstanding large numerical superiority, was wholly unable to penetrate his lines. Noble Lords will not fail to realise how tense was the strain borne by those troops who for more than twenty weeks held to their posts under conditions of abnormal climatic difficulty, and on rations calculated for protraction to the furthest possible period until, as it proved, imminent starvation itself compelled the capitulation of this gallant garrison, which consisted of 2,970 British and some 6,000 Indian troops, including followers. General Townshend and his troops in their honourable captivity will have the satisfaction of knowing that, in the opinion of their comrades, which I think I may say this House and the country fully share, they did all that was humanly possible to resist to the last, and that their surrender reflects no discredit on themselves or on the record of the British and Indian Armies. Every effort was, of course, made to relieve the beleaguered force, and I am not travelling beyond the actual facts in saying that to the adverse elements alone was due the denial of success; the constant rain and consequent floods not only impeding the advance, but compelling—in lieu of turning movements—direct attacks on an always narrowing front. No praise would seem extravagant for the troops under Sir Percy Lake and Sir George Gorringe, and that they did not reap the fruit of their courage and devotion is solely due to the circumstances which fought against them. The last message sent by General Townshend from Kut was addressed in these terms:—

> We are pleased to know that we have done our duty, and recognise that our situation is one of the fortunes of war. We thank you and General Gorringe and all ranks of the Tigris force for the great efforts you have made to save us.

I think the House, no less than the country at large, will endorse these words, and I am sure that those who held, and those who strained every nerve to relieve, Kut have alike earned our admiration and our gratitude. I am glad to endorse Lord Beresford's words about General Townshend and the Turkish Commander-in-Chief. It is quite true that General Townshend's sword was returned to him.

Lord GRENFELL: The House will have heard with satisfaction the words of Earl Kitchener concerning General Townshend, and that satisfaction will be shared by the Army both here and in Mesopotamia. In spite of casualties and sickness in many forms, including want of food and even medical comforts, General Townshend and the Anglo-Indian Force under him held Kut in the most admirable manner—held it until their food was exhausted. Then only, in order to save the lives of his men, did General Townshend capitulate. I feel sure that the Army and the country will look back with great admiration on the defence of Kut.

HOUSE OF COMMONS.

Prisoners in Bulgaria and Turkey. May 5.

In the course of a written reply to a question put by Mr. G. LAMBERT regarding British and Colonial prisoners in the hands of the enemy, Mr. TENNANT stated that there were 449 such prisoners with the Bulgarians and 9,796 in the hands of the Turks, according to the latest information in possession of the War Office.

Pay of Officer Prisoners. May 9.

Mr. MALCOLM asked for information regarding the daily pay granted to British officer prisoners of war by the Bulgarian and Turkish Governments.

Sir E. GREY said: We have again pressed the Bulgarian Government, through the United States Ambassador, for a reply on this subject. With regard to the pay of British officer prisoners of war in Turkey, we addressed a Note to the United States Ambassador on July 7 last proposing the issue to them by the Ottoman Government of pay equivalent to 4s. and 4s. 6d. a day, according to rank. We renewed these proposals on December 28, adding that should they prove inadequate we were willing that the United States Ambassador at Constantinople should remit to the officers in question such sums in excess of the above rates as might be found necessary to meet their actual necessities. We have reason to believe that the British officer prisoners of war in Turkey are being paid at the above rates, and the United States Embassy at Constantinople has discretion to supplement these payments.

Visits of Inspection.

Lord R. CECIL, replying to Mr. MALCOLM, who inquired whether Mr. Justice Younger's Committee on the British Red Cross Society had asked the International Red Cross Society at Geneva to pay visits of inspection to British prisoner camps in Bulgaria and Turkey, said:—It is no part of the duty of the Committee over which Mr. Justice Younger presides to suggest visits by the International Committee of the Red Cross. I am not aware whether the British Red Cross Society, which is independent of the Government, have taken any action such as he suggests. The Society will, however, notice the proposal which he has now made.

Aircraft at Kut. May 10.

Mr. JOYNSON-HICKS called attention to the German reports as to the shooting down by the Turks of old British aeroplanes endeavouring to get food into Kut, and asked whether these aeroplanes were some which did reconnaissance work in the Sinai district, but were so bad that they were transferred from there to Mesopotamia more than a month ago.

Mr. TENNANT said that a recent Turkish *communiqué* stated that the dropping of food by aeroplanes at Kut had ceased. The General Officer Commanding in Mesopotamia reported that between April 11 and 29 British aeroplanes of the Royal Flying Corps and the Royal Naval Service had dropped at Kut 18,000 lb. of food, besides quantities of medicines, stores, and materials. No aeroplanes in Egypt or the Sinai district were sent to Mesopotamia, though some of the *personnel* were. During these operations there were numerous aerial combats, in one of which a British seaplane was driven down into the enemy's lines, the observer being killed and the pilot wounded. In another case the pilot was wounded, but succeeded in landing safely behind the British lines. These were the only casualties during the operations. The House would see that the reports to which attention had been drawn were characteristic German reports.

Mr. JOYNSON-HICKS: In view of these "characteristic German reports," would it not be for the benefit of the entire nation if the right hon. gentleman would make on occasion some such satisfactory statement as he has just made?

Mr. TENNANT: I will take the suggestion into consideration.

CONDITIONS IN SERBIA.

Last Friday afternoon, at the Foreign Office, Lord Robert Cecil, Under Secretary for Foreign Affairs, received a large and influential deputation on behalf of the Serbian Relief Fund, which laid before him evidence of the absolute destitution now existing in Serbia, and advocated the application to Serbia of principles of relief for the civil population similar to those which are now in operation in Belgium and Northern France. Lord Robert Cecil desired to have put before him a definite and adequately guaranteed scheme with a view to submitting it to the consideration of the Government.

Further instances of the reign of terror inaugurated by Germans and Bulgars in Serbia are quoted by the Serbian Press Bureau in Corfu. Murder and robbery are of daily occurrence, and the country is a prey to famine owing to the merciless requisitions which are made. The same Bureau has issued a further statement on the subject of Bulgarian terrorism in Serbian Macedonia, the latest arbitrary act being the expulsion of Serbians from Ochrida and Resna.

The Austrian military authorities in Belgrade are offering rewards for the recovery of hidden guns and munitions of war, or for information which shall lead to such discovery.

The *Frankfurter Zeitung* announces that Dr. Rifaat, "the leader of the Young Egyptians," is travelling in Germany "for purposes of study," and that he will visit Berlin.

The May Day celebrations in Bucharest this year took the form of a Socialist demonstration in favour of peace and a protest against the dearness of food. There were no disturbances.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

THE PRESS ON THE NEAR EAST.

Russia and Britain.

In a leading article on the visit of members of the Russian Duma to England, the *Daily Telegraph* (May 8) says that the Grand Duke's success in Armenia has transformed the whole aspect of the campaign, and has palpably weakened the Central Powers, "especially in reference to their Balkan policy."

For the Teutonic "drag towards the East" depends for its proper execution on the co-operation of Constantinople quite as much as, if not more than, on the help of Tsar Ferdinand and Bulgaria. Bulgaria is of importance as a check on Greece and as a means of safeguarding the railway communications on the great Orient line to Stamboul. But unless Turkey remains an efficient ally of Berlin, what becomes of the Pan-Germanic ambition towards the Red Sea and the Persian Gulf—what, above all, becomes of the dream of a conquest of Egypt? And here the value of a close co-operation between Russian and British operations in Asia Minor comes into evidence. There are many ways in which, with the aid of our sea power acting along the coast line, we could assail the Ottoman forces from the south and the east. Sir Percy Lake's force, although it failed to relieve Kut, holds, it must be remembered, all the lower reaches of the Tigris. Meanwhile, the Russian army which captured Erzeroum, as well as that which won the fortress of Trebizond, is pressing southward; and a smaller body, which has been operating from Persia, is becoming a deadly menace to Baghdad and the Turkish communications. Thus Germany's ally is threatened on all sides, and Liman von Sanders, who succeeded Der Goltz, must be considering with no little anxiety the risks of his position. It looks as if an important battle may be fought at Erzingan, and if, as we have every reason to suppose, Russia wins, the Mesopotamian plain will be thrown open to the conqueror. In view of considerations like these, the Russian guests who are at present visiting our shores may be quite sure that we understand and appreciate all that their great country has done to forward the interests of the Entente.

A Balkan Thrust?

The special correspondent of the *Daily Chronicle* in Paris, Mr. G. H. Perris, has contributed to his paper some interesting excerpts from the French Press, from which we quote below. The *Temps*, after a reference to the French occupation of Florina, on the Græco-Serbian frontier, says:—

General Sarrail's army is gradually reinforced. The moment is not far distant when the colours of nearly all the Allies will float around Salonika, and will give the signal for operations against the Bulgarians. The Balkan army does not rest idle, and the work it is doing will bear fruit. The Serbian share, to speak only of this, exceeds expectations. The army, whose chief will be Prince Alexander, is homogeneous, keen, and numerous. The soldiers are rested, and form a vigorous and well-equipped army corps.

Another article quoted by Mr. Perris is by General Malleterre in the *Revue des Deux Mondes*. Mr. Perris writes:—

General Malleterre holds that the attack on the Dardanelles was logical before Bulgaria came into the war, this being the nearest way to Constantinople.

It is now necessary to enter Sofia, but the offensive from Salonika will evidently be powerfully helped by Allied advances in Asia Minor, and, ultimately, "victory in the Balkans by opening the road to Vienna for the Allied armies, the Italians included, will be as fruitful as the forcing of the German lines in France and Russia."

General Malleterre discusses at length how the Russian forces in Asia Minor and the British forces in Mesopotamia and Egypt can combine for a march upon Constantinople. He indicates Aleppo and Alexandretta as their natural meeting-points.

The consequences of a Russo-British front, from Trebizond through Sivas to Alexandretta, would be the severance from the Ottoman Empire of Mesopotamia, Syria, and Arabia, and the drawing away of the Turks from the Balkans.

The Turkish army, General Malleterre believes, does not exceed 500,000 men, and its best elements, and most of its officers, are lost. The great mass is already in Asia Minor.

"Germany will only stop the frightful slaughter when the East is definitely torn from her. We persist in our conviction that this first defeat will be the prelude to a retreat upon the Rhine and the Oder."

The Balkan Policy.

Mr. L. March Phillipps, writing in a recent number of the *New Witness*, under the heading of "The Clue to Balkan Politics," said that—

Hatred of oppression, hatred of the stationary and passive attitude of a ruled people, a determination, be the time long or short, to number themselves among the free nations of Europe—such are the unshakeable resolves of the Balkan races. A love of liberty which so prolonged a Turkish dominion could not quench may be called unquenchable, and may be specified as the essential attribute of that people. Such attributes change never. They are so much the pith of the national life that, though obscured by temporary aberrations, they never can be permanently superseded.

This is the determining factor to be borne in mind in judging of Balkan affairs. The dominant, or, if not always the dominant, the deepest and most abiding motive—deepest in historical life and deepest in the hearts of the people—is the Balkan resolve to be of the West, to enter the community of free and progressive nations.

The writer ascribes the vacillation of policy which we have witnessed in the Balkans solely to the working of Prussianism as imposed by the Hohenzollern Court influence.

Greece, least virile but cleverest of the group, inclines easily to the tyrannic on a small scale, while its army produces a diminutive breed of Prussians in considerable numbers. These only require centralising to become effective, and the work is done by the usual agent—a Court in touch with German ideas. Yet these, after all, are superficial influences, which aim at defying rather than expressing the national instinct; nor can they, whatever be their success, alter the fact that not Constantine, but Venizelos, is the real representative of the Greek people.

In regard to Roumania, Mr. Phillipps thinks that, although the Hohenzollern poison is at work in the nation, the mission of Filipescu and Take Jonescu will survive. Of Bulgaria he writes:—

Her hate of Serbia, dexterously fomented by Austria in pursuance of her usual design of Balkan disintegration, no doubt had a good deal to do with her decision. But the determining factor was the Court. The Prussianism of King Ferdinand, German prince and Austrian officer, was of the active kind which aspires to shape a policy. What he saw in the Balkan situation was an opportunity, not for a union of free states, but for the exercise of an individual ambition; nor were the affairs of a petty state beyond the handling of a spirit of intrigue which he easily mistook for genius. Yet, in spite of all this, we are not to suppose that the national instinct is extinguished even in Bulgaria. We all remember the deputations which waited on the King in the days when the issue hung in the balance, and how fiercely the representatives of the popular party protested against the contemplated decision, and even denounced the King as a traitor to the national cause. Revolts, mutinies, and stifled murmurs still suggest that, hoodwinked as they have been, the Bulgarian people are in their hearts not quite unconscious of the Balkan tradition. Even here, if we knew all, we should probably see that it is superficial and extraneous influences that have triumphed, while beneath, stifled and inarticulate, the instinct of liberty still survives.

The Serbians alone have been free of Prussian influence:—

They only have escaped that infection, and they only have acted up to the level of a common aspiration. By so doing, despite appearances, they have safeguarded their future; for they have allied themselves with what is permanent in Balkan history and character, and the end, when the end comes, will justify not only their courage but their wisdom.

The Near East.

The *Globe* (May 6) considers that the position in the Balkans is full of possibilities, and thinks it not unlikely that all the States may soon be engaged in war.

It would seem that the only encouragement wanted by the two neutral States is a manifestation that the Entente Powers are surely if slowly on the path to victory. If the Allies at Salonika are able to show that they are not to be driven out, but that they are, with the Serbian Army, powerful for the offensive; if, at the same time, the fortune of war in the West favours the Allies, it is possible that Bulgaria may see the danger of her position. At present, with the blood-lust running riot among her people, she is apparently about to challenge Roumania for the possession of Dobruja, the territory that was taken from her after the last war. Should hostilities break out between Bulgaria, who is really getting out of hand, and Roumania, a short, sharp, and decisive contest may be anticipated, for Russia has 150,000 troops ready on the frontier to help. From the south, too, the Allies would also attack. It would be the beginning of the end of Germany in the Balkans, for Turkey has not her heart in the war.

The Inhabitants of Armenia.

Mr. George Lamley contributes an interesting article under the above head to *Country Life* (May 6). He regards the suggestion that Armenia should become an autonomous State after the present war as impracticable for two reasons, the first being that Russia will hardly abandon the province of Erivan, which she has now occupied for nearly ninety years, and the second being that the population is not wholly Armenian, and all the inhabitants of the strip of territory lying between the northern edge of the Armenian plateau and the sea are mostly Lazes, a people of Georgian stock and Mohammedan, who would be hardly likely to submit to Armenian authority. In reference to the Kurds, the writer says:—

Various travellers who have visited Kurdistan and been the guests of some of the chiefs have given them a good character for hospitality, and have spoken well of them in other respects, but the more one studies their history the more one feels that they are one of the most cruel and treacherous races in existence. Before any permanent peace can be established in that part of the world they will have to be thoroughly crushed, and then ruled for many years with a rod of iron. Those in Russian territory have mostly settled down into peaceful farmers.

The position of an independent Armenian State with such neighbours would be worse than in the past.

Mr. Lamley regards the Armenians generally as a kindly, hospitable, and intelligent race, although he admits that there is a tendency towards deceit and cowardice, but thinks that, considering all the trials through which they have passed, it speaks well for the character of the race that they have not deteriorated to a much greater extent. He continues:—

With local self-government, under the suzerainty of a Power capable of protecting them from their neighbours, they would probably outgrow any such defects of character in a generation or two, and attain that standing in the world to which their intellectual gifts entitle them. It is only fair to the Armenians to mention that Mr. Lynch, who visited every part of Russian and Turkish Armenia, and is one of the greatest authorities on the subject, formed a very high opinion of them, and on the subject of cowardice, which is commonly attributed to them, expresses his firm conviction that it is quite unjustified, and the reasons adduced by him in support of his contention must go far to convince those who bring an impartial mind to the study of this question.

The writer concludes with praise for the genuine lower-class Turk and blame for the Turkish official. Never again, in his opinion, should Armenia fall under Turkish rule.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I am pleased to see that M. Greceanu, the able Roumanian economist, has granted an interview to our Correspondent (see page ???), in which he explains the true nature of the economic compromise between his country and the Central Powers, and emphatically asserts that it "implies no shadow of a political rapprochement with those States." This is a direct confirmation of the attitude I have always taken on this subject in these columns. Never for a moment have I judged the arrangement from any but an economic standpoint. The enemy Press has certainly attempted to make capital out of the new modus vivendi, but they will be no more successful in this, their latest enterprise, than they were when predicting the disrupture of the British Empire. By all means let them think that they have bound Roumania hand and foot to their blood-smeared chariot. We know better, and predict a rude "day" for them when the time comes. The German ploughshares now bought by the Roumanians in Austria and Germany—because they cannot be bought elsewhere—will not be turned towards the rising sun; they will point in the direction of tyrannised, persecuted Transylvania.

***

As it is, Germany's joy has been short-lived and, after having patted Roumania on the back for what they chose to look upon as her subservience to Berlin, the Huns are upbraiding her for having sold all her flour available now and during the next four months for export to the British Syndicate—as referred to in these columns last week. This is certainly a more important operation than the commercial exchange arrangement concluded between Roumania and the Central Powers, and I can quite well understand the *furor teutonicus*. For they cannot obtain in Roumania—at least not for the next four months—the flour so essential to the very life of their Turkish ally. It is estimated that the mills in Roumania are now producing daily a total of 3,500 tons of flour, and that the millers who have signed the agreement with the British Syndicate represent a daily output of 2,800 tons. Consequently only 20 per cent. of the total output remains outside the convention. Naturally, the Germanophile newspapers published in Roumania are furiously attacking the Government for not intervening; but the Government, replying to these unworthy attacks, points out that the British contracts were concluded before the establishment of the Central Export Committee, and must be considered as of a purely private character.

***

The Turks, also, are incensed at the British Syndicate's smart piece of work. According to Reuter's Bucharest correspondent, Ottoman agents who arrived in the hope of obtaining flour are blaming the German consortium for not having taken measures to prevent the British deal! They even go so far as to declare that the Germans have assumed the monopoly of revictualling Turkey, and that the Turks cannot obtain the smallest amount of goods. In other words, they have been left in the lurch by their dear friends and protectors. The German consortium alluded to established, it will be remembered, an office in Constantinople, which monopolises the sale of the city food supplies, thus preventing Ottoman tradesmen from doing any business. From all accounts, its principal *raison d'être* consists in commandeering all available foodstuffs for the Germans and letting the native population starve.

***

The German papers are devoting considerable space, I understand, to the new Turkish import tariff. According to the *Norddeutsche Allgemeine Zeitung*, two-thirds of Turkey's import articles will be unaffected by the new tariff, considering that the duty has been raised on an average from between 10 to 15 per cent. all round. There are exceptions, however, and it is curious to note that these exceptions are divided helter-skelter into thirty chapters, embracing no fewer than 772 classes. No general information is available as to the composition of these classes, except in some cases. Thus we read that ten classes are admitted duty free: they include, among other things, school books and artificial manure. As the school books are likely to come from Leipzig, I can understand that the Turks, being naïve in their ways, should class them with "artificial manure." Again, I see that jewellery is to pay only a nominal import tariff, because, as the Turks point out, jewellery is so easily smuggled into the country that there is no use in trying to tax it. Surely a wise procedure to follow.

***

Speaking to an Armenian yesterday on the subject of the Turko-German combine, I was surprised at the shrewdness of his views. "Germany," he said, "having a sublime disregard for Turkish arms, never looked to Turkey to help her in her battles. What the Kaiser wanted was that Turkey should be drawn into the war on Germany's side in order that, afterwards, she might foot the bill. Germany and Austria, if beaten, as they no doubt will be, will do anything in their power to prevent losing any of their own territory; they will ask the Allies to indemnify themselves in Turkey by breaking up the Ottoman Empire and taking slices of her territory by way of indemnity. For this, and for no other reasons, have the Huns bought the Young Turk leaders." I do not pretend to know the inner mechanism of German intrigue, but my friend's argument, in view of Germany's proverbial treachery and duplicity, is extremely plausible, and it behoves us to take care, when peace terms come to be discussed, that Turkey, the dupe, does *not* "foot the bill." I am sure that all my readers will agree with me in saying that Germany and not Turkey must pay the indemnity which the Huns expect the Turks to pay.

***

Considerable importance is attached to the resolution adopted by the board of the Manchester Chamber of Commerce and the subsequent circular sent out to the members of the Chamber for confirmation. The resolution, reported elsewhere, clearly defines what, in the opinion of the board, should be the war and after-the-war policy of the Chamber. It does not mince words nor subjects, but plainly and concisely expresses what trade reforms are necessary in this country if we are to emerge triumphant from the ensuing trade war. The suggestions put forward are those which I have insisted on again and again in these columns, and include: the reform of the consular service; improvements of transport and greater banking facilities; more adequate technical education; organisation of individual industries; the appointment of a Minister of Commerce; and, above all, the introduction of a trade tariff in order to prevent the dumping of enemy goods in this country, and to offer reciprocal preference to our Dominions, colonies, and Allies. In the circumstances I cannot but hope that the members of the Chamber will approve of the board's circular, and that all other chambers of commerce in the United Kingdom will adopt a similar platform, thus convincing the Government that the time has come for the introduction of reforms vital to our trade interests. It is only by bringing a tremendous pressure to bear on the Government that it can be expected to move in the matter.

***

The subscription lists for the Roumanian internal loan of 150,000,000 lei were opened on May 4, and, as was foreseen, met with great success, being "fully covered in the course of the day." The lists, however, remained open. It is of interest to note that a report is current in Roumanian financial circles to the effect that the National Bank of Roumania will shortly reduce its rate of discount to 5½ per cent., and place its rate of interest on deposits at 6 per cent.

***

In the report of the Director of the Imperial Institute, published on Tuesday, mention is made of the successful efforts which have been made by the Institute to create a market in the United Kingdom for a number of important Egypto-Sudanese drugs, the trade of which had been allowed to drift into the hands of German merchants before the war. Among these are senna and Egyptian henbane; from the latter the alkaloids atropine and hyoscyamine are prepared. I am pleased to see that the immediate result of the Institute's efforts is that British chemical manufacturerers have now been placed in touch with Egyptian exporters of henbane, and it is anticipated that the manufacture of these alkaloids, hitherto mostly carried on in Germany, will be extended in the United Kingdom.

COMMENTATOR.

MINISTRY OF AGRICULTURE, CAIRO.

With reference to the communication originally made to the Press in September, 1914, the MINISTRY OF AGRICULTURE, Cairo, continues to FURNISH INFORMATION connected with EGYPTIAN AGRICULTURAL PRODUCTS for EXPORT, and with reference to markets for imported products, acting as an intermediary between the producer and consumer. Samples of produce are prepared for submission to inquirers in all parts of the world, and information is supplied to producers, to enable them to prepare their produce in a manner suitable for foreign markets. All correspondence should be addressed to The BUREAU OF COMMERCIAL INTELLIGENCE, Ministry of Agriculture, Cairo.

Egypt's Economic Recovery.

The Financial Adviser's Report.

(From Our Own Correspondent.)

Cairo, April 27.

The report of the Financial Adviser to the Egyptian Government on the Budget of 1916-17, which had been delayed owing to his illness, has now been published. This year Lord Edward Cecil has a very different situation to deal with, and, as a result, his present report is much more optimistic than was that of last year.

After pointing out that Egypt has been subjected to the vicissitudes arising out of the war, and must continue so to be subjected even after the cessation of hostilities, he puts on record the fact that "the accidents of war, which at the outset had such an adverse influence on the welfare of the country by rendering its staple product almost unmarketable, have since taken an unexpected turn in its favour." The world's demand for cotton, stimulated by war requirements, is fast absorbing the supply, and has produced a rise in price above that at which it stood previous to the war, while the presence of British troops in large numbers and the undertaking of military works necessitated by the geographical position of Egypt have benefited the whole country—and even the Sudan. So that "the recovery from the initial depression is marked in every department of economic activity," as is indicated by the steady increase, to the levels at which they stood previous to the war, of imports and of the postal and railway traffic, the great expansion in the circulation of paper and silver currency, the large addition to the banks' deposits, the drop to an insignificant figure of the export of hoarded gold in the shape of bullion, the increase in the receipts of the Assay Office, and, more satisfactory still, "the substantial improvement which has taken place in the recovery of debts." Whilst the collections of the mortgage institutions have been effected on a scale far offsetting the arrears of the previous season, outstanding commercial debts have been largely liquidated, and "the restriction of credit has had the result of enforcing punctuality in payment and of placing the import trade on a sounder and healthier basis than has been the case for many years past."

The Balance of Trade.

The improvement in the situation of the country is also reflected in the balance of trade, which during the agricultural year (September to August) swung over in its favour to the tune of nearly three millions if one takes merchandise alone, or to over 4½ millions if one takes specie also into account. There was a decline of ten millions in exports, due almost entirely to the fall in the price of cotton, and one of thirteen millions in imports, due partly to the diminution in the country's purchasing power, partly to the closing of sources of supply, partly to the existence of local stocks (which have been drawn upon), and partly to the excellent cereal crops, which have met the requirements of the country in this respect. The specie imports declined from £E1,729,000 to practically nil owing to the introduction of forced paper currency.

In reckoning the true balance of trade in favour of the country, however, certain important undisclosed factors have to be taken into account. There are the drafts of the British military authorities, which have exceeded those of the previous year by about 5½ millions, to which must be added the considerable sums received by individual members of the forces from abroad. There would, moreover, have been further gold imports to meet the demand for extra currency, which has been satisfied by an expansion of the paper circulation. Again, whilst the country may not have benefited by the usual tourist traffic, the Egyptian population has economised on its annual visits to Europe. The Financial Adviser reckons, on the whole, that the balance available for the payment of foreign obligations should be set at between eleven and twelve millions, which would leave a considerable margin over and above interest charges, etc., for the repayment of capital borrowed abroad. There is direct evidence available to bear out this conclusion, and "for the first time, therefore, in recent history Egypt has found herself able not only to meet her foreign charges in full, but to repay—or, at least, lend back—to Europe a portion of the capital which she has borrowed so lavishly in the past."

A Note of Warning.

Whilst there is no doubt that this achievement has only been rendered possible by the accidental aids created by the war, Lord Edward regards the fact that the reduction in imports has been one of the chief contributory factors as "of the most hopeful augury in view of the renewed dislocation of conditions which must take place on the termination of the war, when adventitious aids will be removed," and as "affording evidence of the power of the country to diminish its consumption considerably in the face of adverse conditions without catastrophic effects on its internal economy." Even the recent substantial increase in the imports does not disquieten him, for he considers it by no means inconsistent with the improved situation generally, with the need for the replenishment of stocks, and with the additional requirements of the large British forces now in the country. He points to the continuation of the repayment of indebtedness as proof that the present rate of consumption is not unwarranted, and that the country is not living beyond its income. Nevertheless, he breathes a warning lest the improved conditions may tempt a return to previous practices, and considers that "it is earnestly to be desired that the present exceptional circumstances should operate on all sides as an incentive to continued economics and liquidation of debt."

Turning to the agricultural situation, Lord Edward, after drawing attention to the success achieved by the Irrigation Service, despite low and late flood tides, endorses Sir Murdoch Macdonald's opinion that there is "necessity for a further control of the river." He adds that successful efforts have been made to place Egyptian products abroad, wheat, maize, beans and lentils having been exported for a value of about a million pounds to Great Britain, France, and Italy, whilst new outlets for sugar have been found in Morocco, Tunis, and Italy.

As regards supplies, the machinery set up by the Government on the outbreak of war to safeguard the provision of foodstuffs and articles of first necessity and to prevent illegitimate inflation of prices, although still in existence, is now almost unnecessary owing to the resumption of trade and the satisfactory harvests. At no time has there been any scarcity of foodstuffs. The high price of imported flour has led, on the part of a considerable portion of the population, to the substitution of maize, of which there was a record crop; the cessation of the large meat imports from Syria has been counterbalanced by diminished consumption and by imports from the Sudan. As for prices, the general level is not more than ten to twenty per cent. higher than that ruling prior to the war, whilst in several instances, notably sugar, the prices are sensibly lower than those in other countries.

Imported articles have suffered from the enormous rise in freights against which the country is powerless to contend. The greatest offender in this respect has been coal. The Adviser admits that the present price of £E7 per ton is a prohibitive one to many cultivators and that there is a fear that the cultivation of large areas may be neglected or temporarily abandoned unless relief is afforded; but whilst the Government is making every effort to assist, "it must be recognised that the requirements of shipping by the Allied Governments for military purposes are of paramount importance," and he expresses the hope that Egypt will therefore bear with patience and fortitude whatever sacrifice may hereby be imposed upon her. As regards petroleum, Lord Edward replies to recent criticisms, and states that although the Government has taken measures to prevent undue inflation of prices, nevertheless, in view of the fact that the "Egyptian" supply is far from adequate to meet local demands, these prices "cannot be reduced below the level at which it pays the merchants to import without discouraging, if not cutting off, supplies from outside sources."

Turning to the question of forced currency, which was introduced at the outbreak of war, and which has been maintained, the Adviser says that it has proved adequate to meet the considerable demand for currency without the import of gold. The note circulation, which stood at two millions in July, 1914, rose last winter to eleven and a-half millions, as compared with the rise to eight millions in the previous winter, and, as it did not fall below five and a-half millions in the summer of 1915, there is every reason to expect that, when the usual contraction takes place in the course of the next few months, a substantial amount will again be retained by the public. The issue is amply secured. Sixty-two per cent. of the actual circulation is covered by gold, about half of which is deposited in London. The balance is secured by first-class securities at market value, including some Egyptian Government Treasury bonds, whose redemption in gold is provided for by credits in London. Thanks to this solid backing and to the care taken to expand the issue only in response to legitimate trade demands, the notes have been maintained on a parity with gold, whilst the absence of gold shipments has caused the rate of exchange to fluctuate within much closer limits than formerly—the margin above or below par has never exceeded three sixteenths per cent. "By the substitution of notes for gold the country has thus effected a saving of the whole cost of transmission of gold to and fro, for purposes of temporary circulation and of the interest on so much of the additional circulation as is not represented by gold." In view of this one wonders whether, when a return to normal takes place, some arrangement cannot be made whereby at the time when more currency is required to move the cotton crop, instead of bringing gold out from home, as has been done hitherto, the note issue can be expanded and gold be placed as security for the extra issue in London.

State Finances.

The finances of the State have benefited appreciably from the general improvement in the economic condition of the country. Many of the heads of revenue will exceed the estimates whilst the expenditure has been kept down to such good purpose that it will show a large margin of economy. In this connection the Adviser pays a warm tribute to the Government officials. "The efforts made by the custodians of the public purse . . . . would indeed have met with far less success but for the cordial co-operation which has been rendered to them in a greater or less degree throughout the Services." Officials of all ranks have recognised "cheerfully that such sacrifices as they are called upon to make are general in all countries involved in this great struggle."

As a result of the increase in revenue and the decrease in expenditure the deficit of £E1,144,000 estimated for 1915-16 will be replaced by a surplus. But the Adviser gives a warning that "the additional stability, which recent events have thus conferred on Egyptian finances, must by no means be considered as an indication that the period of strain is finally terminated, that the future is assured, and that the efforts made to improve the financial position may now be relaxed," and he proceeds to indicate why those efforts are hardly less necessary to-day and in the immediate future. To begin with, "the revenue for 1915 has benefited by several additions of a more or less transitory character," such as the sale of the Domains crop of 1914 and the profit on the cotton purchased from cultivators by the Government in the early days of the war; the profit on the excess note issue, which depends on the maintenance of forced currency; the seigniorage on silver coinage, which has increased owing to the expansion of the local demand, but which will become a dead loss in the event of a

Digitized by Google

great contraction of the circulation. Secondly, much of the economy in expenditure must be regarded as exceptional, as it has been effected not merely by the suspension of works of development and extension, but also "by a sacrifice of efficiency and a restriction of necessary outlay on maintenance, repairs, and replacements of public works and railways." All this economy is really merely a postponement of expenditure, which will some day or other have to be shouldered and which will become heavier in proportion as it is put off, and Lord Edward is of opinion that "the present equilibrium of the Budget must then be looked upon as rather apparent than real."

Reserve Fund.

Further, although the drain on the Reserve Fund has been arrested, the deficit of 1914-15, which reduced that fund to 3½ millions, has not been made good. The securities, in which the Reserve is invested, have undergone considerable depreciation, which to-day amounts to £E1,200,000. It is proposed to write off this depreciation by means of the surplus from 1915-16, which is expected to attain about two millions, and to pass the balance to the Reserve. As the deficit of 1914-15 was £E1,468,659, it follows that the fund will not, after all, be re-established at its pre-war figure, which itself was not considered sufficiently large. The Adviser is of the opinion—and everyone will be in agreement with him—that "it is of the highest importance that the Fund should be built up again as soon as possible to its former figure or more in order that it may not only help to meet the charges, which will fall on the Government after the war, but may adequately fulfil its vital function as a reserve against unforeseen emergencies." Recent events have abundantly shown its utility in this respect. But this utility has not been limited to guaranteeing deficits. The securities, in which it is invested, have served to create credits abroad whenever a crisis arose and ordinary methods for meeting obligations or providing money failed. "A strong Reserve Fund has, in fact, been proved to be an indispensable part under existing conditions of the financial machinery of the country."

Expenditure and Revenue.

Under expenditure only new works of urgent public necessity have been undertaken, vacant posts have been left unfilled, and only the lowest grades of employees have received increases of pay. Under revenue much consideration has been given to new taxation. The import dues on tobacco and timber and alcohol have been raised. The former will bring in an estimated additional annual revenue of £E360,000, whilst the other two items will, as soon as trade resumes its normal course, return as much as £E50,000 extra. The quay dues at Alexandria have been increased by 1 per cent., and Port Said, which has hitherto been free, has now been brought into line with the former port. The extra revenue is expected to come to £E250,000, but the higher rate will lapse at the end of the war. Various other measures have been introduced to obtain increased revenue, and a small tax on cotton futures is about to be enacted. Other measures, designed either to augment the revenue or to improve the present fiscal system, are under consideration, but the Government has "found itself hampered at many points by the existing restrictions with regard to foreigners in its endeavours to adjust the burden of taxation more fairly between the different classes of the population." In addition to a more equal adjustment of this burden, the scheme of reform would, *inter alia*, involve a system of local taxation for local benefits and a reform of Customs duties and of judicial fees. "The delay imposed by the present political conditions on the adoption of desirable changes may have its compensations if with fuller powers the Government is eventually able to contemplate a more thorough revision of the system than would now be possible."

The concluding portion of the Note deals more particularly with the Budget for 1916-17. The Financial Adviser points out, with regard to the revenue, which is fixed at £E1,774,000 more than in the preceding estimate, that, although the greatest care has been taken in the framing of the estimate, the figures "are naturally subject to vitiation, according to possible changes in the present unstable situation." The expenditure, which is fixed at £E730,000 more than in 1915-16, shows an expansion in administrative expenditure of £E696,030, the balance being on new works, which are consequently very little higher than in the previous year. This expansion in administrative expenditure is due to a great extent to the rise in the cost of stores, principally coal, and is partly entailed by the same causes which produce an increase in revenue.

CYPRUS TRADE IN 1915.

The following trade returns for Cyprus imports and exports for the year ended December 31, 1915, are published in the *Cyprus Gazette* of April 7:—

Imports.

Total imports for the year amounted to £611,918 (including specie to the value of £23,899), as against £569,216 (specie £72,472) in 1914. Principal articles of import were:—

MANCHESTER CHAMBER OF COMMERCE.

At a meeting of the Board of Directors of the Manchester Chamber of Commerce, held on Wednesday, it was resolved that the following statement should be printed and circulated to each member of the Chamber, a reply being requested as to whether the member assented to it or otherwise:—

"That this Chamber is convinced of the need for improved scientific education, especially in its highest branches, better organization of individual industries, general amendments of the patent laws, improvements of transport and banking facilities, the appointment of a Minister of Commerce, the extension of the system of trade commissioners, and a thorough reorganization of Consular service.

"But exceeding in urgency any of these desirable reforms, the Chamber considers it to be essential that after the war the same facilities for trading with the British Empire shall not be allowed to our enemies as those granted to our Allies and to neutral nations, and, particularly, that steps shall be taken not only to render dumping and a return to pre-war conditions impossible, but also effectually to eliminate enemy influences so actively in operation prior to the war."

The Chamber also urged that immediate consideration should be given by the Government to the desirability of preferential reciprocal trading relations between all parts of the British Empire, and, so far as possible, with our Allies.

Marcos Semeika Pasha, member of the Egyptian Legislative Assembly, has had an interview with Lord Edward Cecil, the Financial Adviser, and communicated to him the unanimous complaints of cultivators whom he had met in his recent trip in Upper Egypt with regard to the high prices of coal ruling in the country and the disastrous effects it will have on the economic situation of Egypt. According to the *Egyptian Gazette*, Lord Edward Cecil informed him that during his recent visit to England, he discussed the question with the authorities there, and they agreed to treat Egypt with regard to coal as one of the colonies.

Trade Notes.

Egypt.

H.M. Consul at Cairo has forwarded a copy of the *cahier des charges* in connection with a call for tenders by the Egyptian Ministry of Education, for the supply and delivery of clothing for the pupils of the Bulac Elementary Training College for Women Teachers, viz.:—4,060 metres of flannelette, 6,090 metres of printed calico, 3,480 metres of coloured zephyr, 2,320 metres of veil muslin, 1,740 dozens of white press buttons, and 870 pairs of girls' shoes. Samples may be inspected, and specifications and forms of tender obtained, at the Central Stores, Ministry of Education, Darb el Gamamiz, Cairo. Sealed tenders, accompanied by a deposit of 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer, will be received at the Central Stores of the Ministry of Education, as above, up to May 27.

The *Official Journal* for April 3 contains certain tariff valuations for hides, skins, sesame, flax, wool, ivory, wax, onions, eggs, cotton seed oil, caustic soda, and various other products exported from Egypt, which are to remain in operation from April 1 to June 30, 1916. The list of valuations may be seen by British traders interested on application at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The Superintendent of Stores, Ministry of Education, invites tenders for the supply of clothing for the pupils of the Elementary Training Colleges for women teachers for the school year 1917. Date, May 27.

H.M. Consul at Cairo has forwarded conditions of contract in connection with a call for tenders by the Egyptian Ministry of Finance for the supply of stationery articles required for the use of the various Government Administrations during the year 1916-17, including pencils, penholders, pen wipers, pins, gum, paper clips, sealing wax, ink, etc. Copies of the conditions and form of tender may be obtained from the "Economat Central, Ministère des Finances," Cairo, at which address also sealed tenders, made out on the proper form and accompanied by samples (in duplicate) of the goods it is proposed to supply, will be received up to noon on June 1.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Tenders are invited by the Ministry of War for the supply of (1) forty tons of cocoanut oil and (2) 100 tons arachis oil into the War Department Stores, Tura. Date, May 16.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

With reference to the communication originally made to the Press in September, 1914, the Ministry of Agriculture, Cairo, continues to furnish information connected with Egyptian agricultural products for export, and, with reference to markets for imported products, acts as an intermediary between the producer and consumer. Samples of produce are prepared for submission to inquirers in all parts of the world, and information is supplied to producers, to enable them to prepare their produce in a manner suitable for foreign markets. All correspondence should be addressed to the Bureau of Commercial Intelligence, Ministry of Agriculture, Cairo.

Morocco.

H.M. Vice-Consul at Saffi reports that the total foreign trade of the port during 1915 amounted in value to £767,285, as compared with £537,823 in 1914. The increase was chiefly due to a welcome improvement in the export trade resulting from a good average harvest, which would probably have been very large, and would have compensated for the two bad seasons of 1913 and 1914 had it not been damaged by locusts. The value of the imports declined from £469,796 in 1914 to £441,105 in 1915. Practically all articles showed a considerable falling-off, and it was only increased prices which made the value of the total imports almost equal to that of 1914.

The United Kingdom, whilst slightly increasing her share in the import trade of Saffi from 31 per cent. to 32 per cent., ceded the first place amongst importing countries to France, whose percentage rose from 24 per cent. to 43 per cent., this latter figure exactly representing the combined shares of France and Germany in 1914.

A slight decline in the amount of sugar imported, namely, 6,685 tons, as compared with 6,858 tons in 1914, was accompanied by a very heavy rise in price, the imports in 1915 and 1914 being valued at 5,340,463 fr. and 2,885,264 fr., respectively. The deficit in the sugar supply occasioned by the absence of German and Austrian sugar was more than made up by imports from France and Egypt. The imports from the Netherlands dropped from 1,294 to 874 tons. The present stocks of sugar are heavy, and, taking into account the diminished imports, there can be no doubt that a decrease in consumption has taken place.

The amount of tea imported during 1915 was 253 tons, as compared with 286 tons in 1914, whilst a rise in price took place. In view of the fact that the tea imports in 1914 were only about half of those of 1913, it is obvious that a marked falling-off in consumption has occurred.

Imports of all building materials with one exception fell to almost negligible quantities, the depression in private building enterprise which followed the outbreak of war having continued. Imports of cement, however, increased from 902 tons in 1914 to 2,370 tons in 1915, due to the activities of the Public Works Department of the Protectorate, the department being engaged upon port improvements and the construction of a lighthouse at Cape Cantin. Public works at Marrakesh were also partly responsible for the increase in the amount of cement imported into Saffi. Hardware and machinery imports also declined.

The importation of petroleum and petrol more than doubled in 1915 as a consequence of increased motor traffic resulting from the rapid construction or improvement of roads by the Protectorate authorities.

Imports of candles increased from 476 to 681 tons in 1915, due to the normal 1914 stock not having been brought in before the close of the year, owing to disorganisation of trade, shipping facilities, etc., and a rise in prices of these goods of about 14 per cent. has taken place. The United Kingdom's share in the increased imports of candles rose from 190 tons to 330 tons. It should be noted, however, that French imports rose from forty-four to 342 tons. This large rise in the French figures is partly due to lack of shipping facilities between the United Kingdom and Morocco.

A considerable drop in the imports of cotton goods occurred, namely, from 868 to 696 tons in 1915. Prices, however, showed only a slight rise. Decreasing consumption accounts for the falling-off in the imports of these goods.

The Board of Trade are in receipt, through the Foreign Office, of copies of Orders of the General Commanding-in-Chief in the French Zone in Morocco, dated April 1, laying down the following provisions (with effect as from April 5) respecting the exportation of maize and goat skins from the French Zone in Morocco:—

Maize.—Quantities of maize which have not been retained by the "Service l'Intendance" may be exported, under licence to be issued by the Director of the Service, to French, Allied or neutral ports, under the conditions laid down by Article 5 of the Decree of October 18, 1915 (see the notice at pages 705-706 of the *Board of Trade Journal* for December 9, 1915).

Goat Skins.—The exportation and re-exportation from the French Zone of goat skins in the hair is prohibited, but quantities of such skins which are not required by the "Service de l'Intendance" may be exported, under licence to be issued by the Director of the Service, to French, Allied or neutral ports, under the conditions laid down by Article 5 of the Decree of October 18, 1915.

Abyssinia.

Our local agent informs us (says *Kelly's Monthly Trade Review*) that with the completion of the Adis-Abeba railway there will be an enormous increase in the demand for many articles of trade such as soap, hardware, cutlery, hollow-ware, cooking utensils, matches, sewing machines, stationery, cotton prints for women, etc. Without the slightest doubt Abyssinia may soon be reckoned with as the important place for many articles such as the above and kindred goods, and manufacturers could do worse than establish agents at two or three of the more important points through which the new railway will run. It must not be overlooked, however, that all goods must be such as to retail cheaply, the question of price being of greater importance than the question of quality.

Persia.

The Acting British Vice-Consul at Resht reports that a local merchant wishes to import boots, shoes, cotton goods, and cloth by parcel post, and would be glad to receive catalogues from United Kingdom manufacturers of those goods.

United Kingdom manufacturers of the goods mentioned, and exporters of U.K. goods desirous of doing business in Persia, may obtain the name and address of the inquirer on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. In making application the reference number (156) should be quoted.

The importance of Ispahan as a commercial centre is emphasised by *Kelly's Monthly Trade Review*, which says that although it has not the commercial importance to-day it had some one hundred years ago, it is an important point in the trade-route towards the Far East, and British merchants should do well by establishing depôts or commercial representatives here, when the war is over.

The same journal adds that there appears to be a demand in Teheran for boots and shoes. The "American style" seems to meet with favour.

Greece.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that a Greek Ministerial Order, published in the *Official Gazette* of April 6, prohibited the exportation from Greece of: Capsicums and peppers; emery, corundum, natural and artificial, alundum and carborundum of all kinds; rattans; and searchlights and parts thereof.

EGYPT'S TRADE DURING MARCH.

CAIRO, April 24.

The Customs returns for March show a continuation in the trade revival already recorded during the preceding months. Imports amounted to £E2,469,781, as against £E1,332,390 in March, 1915, and exports to £E3,249,688, as against £E2,703,708 in the same month. For comparisons' sake it is interesting to note that this year's figures are better than those of March, 1914 and 1913, and that the total imports for this year so far are only half a-million below the figure at the end of March, 1914, whilst the total exports are one and three-quarter millions better.

The chief increases in imports during the month were, salted fish, £E33,787; flour, £E12,718; jams and preserves, £E41,075, mostly from Great Britain and British Possessions in the East; beer, £E33,319; petroleum, £E89,858; stationery, £E26,654; furniture, £E148,330, practically all of which came from England; coal, £E223,736, the quantity was 16,045 tons less; natural indigo, £E16,983, all from India; chemical manures, £E99,351, all from Chili; textiles, £E223,762, one half of the total came from England, and all the sacks, amounting to £E70,060, from India, which supplied 60 per cent. of the cotton threads. The only items which showed any falling off were frozen meat by £E68,433, rice by £E17,661, and coffee by £E44,892.

Under exports, cereals jumped from £E84,775 to £E202,058. and sugar doubled to £E170,931. Onions increased by £E28,413 to £E121,470, almost all of which went to England, and cotton by £E461,758 to £E2,312,823; the rise in price is noticeable from the fact that the quantity was 290,762 cantars less. Wool also doubled, the entire export being taken by England. On the other hand, eggs fell off by £E38,676, or one-third, the quantity also being reduced owing to the drop in prices, cotton seed by £E48,240—the rise in price compensating for the large shrinkage in quantity—and gold and silver bullion by £E79,930 per 90 per cent. The cigarette trade remained to all intents and purposes stationary. Specie movements were very slight. There was practically no export, and under imports appeared £E29,300, new Egyptian silver and nickel, and £E97,535, part of the rupees put recently into local circulation.

As regards the share taken by the various countries trading with Egypt, Great Britain's was just about half the imports and one-third of the exports, whilst the other parts of the Empire progressed very well under imports from £E173,513 to £E230,123, India taking the lion's share. America improved her sales to Egypt by 200 per cent.—she again provided all the petroleum; Spain hers to £E50,909 from £E3,252; Italy hers by 45 per cent. to £E145,255—she sent 35 per cent. of the stationery; Holland hers by £E22,938; Japan hers to £E23,006 from £E3,382, and Switzerland hers by 50 per cent. to £E21,841. Under exports the United States progressed to £E603,396, Spain to £E85,141, Japan to £E95,566, Russia to £E164,091—all of these were cotton, which also represented the whole of the purchases of Switzerland, whose imports from this country fell off by £E57,046 to £E240,873. France made a welcome improvement in her purchases, which rose from £E183,886 to £E536,680; of this, 60 per cent. was cotton, 30 per cent. cereals, and 10 per cent. sugar. Exports to Italy fell off slightly, but that country took 40 per cent. of the sugar exports.

Trade between Egypt and the Sudan improved during March, exports to the former rising from £E39,776 to £E112,081, and traffic the other way by £E3,819 to £E74,896. The chief imports into Egypt from the Sudan were, livestock, £E29,049, of which £E25,960 was camels; maize, £E12,258; sesame, £E33,297; charcoal, £E3,744; and cotton, £E3,699. Exports from Egypt to the Sudan were, skins, £E2,159; refined sugar, £12,305; coffee, £E8,328; and cotton tissues, £E17,718.

Engineering Notes.

Public Works in Morocco.

H.M. Vice-Consul at Saffi reports that considerable activity has been shown by the Protectorate authorities in carrying out improvements at the port of Saffi during 1915. A large new stone warehouse, now almost completed, will double the storage accommodation. In front of the warehouses a large "terre-plein" is being constructed, which will do away with the necessity, when the warehouses are full, of having to dump goods on the sand, thus exposing them to damage by water. A small stone jetty is also being built alongside of which lighters can lie; it will carry two electric cranes for the purpose of lifting from the lighters heavy articles which under present conditions have to be carried by hand through the surf. A lighthouse has also been in course of construction at Cape Cantin, and is now rapidly nearing completion. The light is a first-class one and its beam will be visible at a distance of some forty-five miles; this addition to the lights of the West African coast should be of great benefit to South American shipping, which frequently makes landfall at Cape Cantin.

Farm Implements for Greece.

Supplementary to our previous notes on the above subject, *Kelly's Monthly Trade Review* says that the Royal Agricultural Society has established extensive offices at the Zappion—Official Exposition Buildings—Athens, and modern agricultural machinery can here be seen and studied by interested parties. An interesting point in connection with the activity of the society is its system, not only to advise a farmer in regard to purchases, but to examine his farm, crops, soil, etc., to be able to issue really practical advice. British firms interested in promoting their sales in Greece should write to the society with their catalogues and further information of interest. Letters to be addressed to La Société Royale d'Agriculture, Maison Zappion, Athènes, Greece.

The Baghdad Railway.

According to the *Hamburger Nachrichten* the Baghdad railway is now completed, except for the stretch of 633 kilometres (393 miles) which will not be completed till after the war. The stretch from Islahie to Mamure has been completed in spite of the war, and was opened to traffic in February last. Of the 2,435 kilometres (1,512 miles) from the Haida Pasha station in Constantinople to Baghdad, 1,802 kilometres (1,119 miles) are completed; the portions to be completed are 42 kilometres (26 miles) from Darak to Karabuna (between Haida Pasha and Aleppo) and 591 kilometres (367 miles) on the Aleppo-Baghdad stretch, of which only the Ras-el-tin-Samar portion is completed. These gaps, it is stated, do not cause great difficulty, as their place is taken by unusually good roads.

An Exhaust Silencer.

A new and much-needed device has been patented which will be of much interest to owners who require an efficient (yet simple) exhaust silencer. The object of the invention is to provide a compact and effective exhaust silencer which will cause the stream of exhaust gases to be split up and then diffused and filtered. The silencer consists of a perforated tubular chamber, subdivided by longitudinal and transverse gauze partitions into compartments, which are filled with diffusing material, such as asbestos-fibre or wire-wool. This may be enclosed in an outer casing perforated at each end, and, if desired, it can be used along the sides of the silencer.

Constructing a Submarine in Two Weeks.

At a Congress meeting held recently at Washington, Mr. Edison stated that with the standardization of parts and the co-operation of private industry he believed that a submarine could be constructed in two weeks! The famous inventor is apparently becoming very bold in his belief, and it is said that some of his ideas, reported as wonderful in recent years, were not supported by the scientific and technical experts whom he employs. It is not known how the latter regard the possibility of building and completing a modern and efficient submarine in a fortnight, even if the standardization of parts was on the principle of the American cheap clocks or cheap motor cars. However, Mr. Edison's remarks at the same meeting with reference to the laboratory contained sound good advice. He expressed the opinion that the laboratory's functions should be to bring to the final stages of perfection various ideas and machines suggested to it; and he suggested a State grant of 1,500,000 dollars for a Government laboratory, where the mysteries of making new weapons for warfare could be looked into and the inventive genius of the country mobilized, as it were, in the interest of national defence.

Protection of Propeller Shaft.

One of the most important, as well as the most troublesome, duties of marine engineers lies in the attention that must be paid to the propeller shaft. The majority of steamships depend on water for the lubrication and cooling of their stern bushes and propeller shaft. Many serious accidents have been caused by breakdowns consequent upon faulty lubrication, or inattention on the part of the engineers. It is, therefore, interesting to hear that the new Vickers patent tail-shaft appliance is giving every satisfaction. This appliance consists of two or more glands fixed at the after end of the stern bush, the glands containing one or more specially-made floating packing rings, which are so fitted to the shaft that they prevent any leakage of oil, and also prevent any water from entering the tube. In the after gland are fitted two elastic washers which act as brushes, and brush away all sand and grit which might otherwise enter into the stern bush and score the shaft. This appliance is extremely simple, and can be fitted to almost any vessel, providing there are 2 ins. between the propeller boss and the end of the stern bush.

SULZER BROTHERS, WINTERTHUR, SWITZERLAND

Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 20 to 6,000 B.H.P. Pumps of various systems, particularly Sulzer's high and low lift Centrifugal Pumps. Fans of all kinds. Steam and hot water heating. Ice and Refrigerating Machinery (Linde system)

ALEXANDRIA OFFICE: 26, CHERIF PASHA STREET.
O. B. 117. Telg.: "Sulzer, Alexandria." Tel. No. 738.
CAIRO OFFICE: 28, SHARIA EL MAGHRABY.
P. O. B. 1095. Telg.: "Sulzer, Cairo." Tel. No. 2066.

GRANT & CHINN,
The British Sanitary Engineers of Egypt and the Sudan.
CAIRO and ALEXANDRIA.
Telegraphic Address: "TUBULAR."
Agents for SHANKS, OF BARRHEAD; and THE BERKEFELD FILTER CO.

LAW & CO., LTD., KHARTOUM, SUDAN.
Commission Agents,
Importers and Exporters,
Gum Arabic and Sudan Products.
Telegrams: "Reedlaw."
Codes: A.B.C., 5th Edition, Western Union.

FREDC. OTT & Co.,
ALEXANDRIA. CAIRO. KHARTOUM.
(AN ANGLO-SWISS FIRM.)
GENERAL COMMISSION & INSURANCE AGENTS.
EXPORTERS OF SUDAN PRODUCE.
Telegrams: Ottfried.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.
Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.
Attwater and Sons (Manufacturers of Metallic Flax, Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.
Geo. Thomas and Co., Manchester. Tel. and Cable Address: "Samoht, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc, Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances, &c.

NEAR EAST MARKETS.

CYPRUS NOTES.

(From a Correspondent.)

The barley harvest began by April 20 in parts of the "Mesaoria," including the neighbourhood of Nicosia and the more forward districts. Generally speaking, the hopes of a plentiful yield will be realised. Prospects for wheat are also good. Hail-storms have caused considerable damage in several places to vines and fruit trees. The former almost invariably suffer from hail in the spring. Fresh, dense swarms of locusts have appeared at many points. In some parts crops stand in the way of poison spraying. It is reported that the supply of the chemical used for spraying will give out in about a week, and, if so, collection of the pest by hand will consequently become general. In the vine lands sulphuring against *oïdium* is being carried out; but the application of the remedy by cultivators is far less systematic and general than it should be. Of carob and vine prospects it is too early to speak.

PRODUCE REPORT.

London, May 11.

Currants.

There has been a very good demand this past week for medium qualities with business done at hardening prices. The reports from Greece as to the condition and prospects of the new crop are unfavourable, and holders are very firm in their quotations, being certain of a further advance. The stock of currants in London at the end of April was 8,192 tons, against 4,491 tons the same period last year. But it is asserted that a considerable part of this stock is fruit unsuitable for grocery purposes and may be used only for manufacturing. Provincial is quoted 41s. to 43s. 6d.; Amalias, 44s. to 46s.; Patras, 46s. to 52s.; Gulf, 48s. to 54s.; Vostizza, 48s. to 56s.; Smalls, 44s. to 55s.; and Island, 45s. to 49s.

Sultanas.

The market for all kinds has been very quiet, with only small sales taking place at late rates. The stock of sultanas in London at the end of April was 2,173 tons, against 2,811 tons the same period last year.

Figs.

There has been a fair demand, resulting in only small sales at unchanged prices.

Dates.

There was no demand this past week, but prices continue very firm.

Seeds.

Linseed declined during the week, but improved again. London-Calcutta, spot, offered at 74s.; afloat, 73s.; May-June and June-July, 72s. 6d. Bombay ordinary, May-June, 74s. 9d.; small ditto, 73s. 9d. Rapeseed is firmer:—Toria, April-May, 69s. 6d. is asked for Hull. Cottonseed is quiet:—London-Egyptian loading is quoted £13 17s. 6d., and Sakelarides, May, £13 7s. 6d. per ton. Canary, hemp, and mustard seeds are quiet and unchanged.

Oils.

Linseed oil is easier this week. Spot pipes quoted £37, and barrels £38, landed terms. Rape oil is slow: ordinary brown, naked spot, remains at £49; and English refined, barrels, £54 to £55. Cotton oil is firm. Crude, spot, pipes, £46; refined pipes, pale, £49 10s.; and barrels, sweet, £54 to £55, as to make.

Oil Cakes.

Cotton cakes are scarce and dearer; Egyptian, of what is available on spot, command £9 17s. 6d., whilst for May shipment there are sellers at £9 12s. 6d. ex ship. English cake is offered, sparingly, at £9 17s. 6d. to £10 per ton. Linseed cake is somewhat quieter after the recent activity, and prices are hardly firm. Best London sells at £12 5s. to £12 10s.; and East Indian pures at about the same figure.

Egyptian Onions.

Larger quantities are now available, and the improved condition of recent arrivals is responsible for the good sales that have taken place during the week.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, April 28.

Practically the whole of the 50,000 wagons of cereals, constituting Roumania's first sale to Germany, have now been exported, and the Central Commission of Exports, in its meeting on April 12, discussed the proportions of the different varieties of grains which it is advisable to export in connection with the second Roumano-German contract of 100,000 wagons.

The meeting was presided over by M. Constantinesen, Minister of Agriculture. M. Manissalian, President of the Association of Grain Merchants, presented the list of offers of grain.

The following are the quantities offered for sale:—

Maize (old)	28,462	wagons
Maize (new)	10,067	,,
Barley	20,898	,,
Rye	13,150	,,
Peas	70	,,

After a lengthy debate, it was decided to authorise the export of rye and peas offered, plus one-third of the quantity of barley. No immediate decision was taken regarding the maize.

The question arose as to what was to be done with the wheat considered inacceptable by the British Bureau. Farmers whose lease expires in 1916, and whose wheat has been refused by the British Bureau, will be authorised to export their wheat. It will, without a doubt, find its way into Germany and Austria.

The Shopkeepers' Lot.

Commercially speaking, Roumania is largely dependent on the foreign industrial market, her home manufactures being very limited. Many materials of first importance have to be extensively imported. In the majority of cases they can only be obtained in Germany at the present moment, and where there is only one market, prices are apt to be high. In other words, what Germany gives with one hand she takes away with the other. Only to-day I asked a shop owner who sells surgical instruments, apparatus, and rubber wares how he had fared since the war began. He replied that the goods which he had in stock he had been able to sell at satisfactory prices, but that he had ordered (and paid for) goods to the value of £4,000 in Berlin some eighteen months ago, and that leave for their exportation had not as yet been obtained. He will eventually get his goods, I suppose, but not before the war is over. Meanwhile the Germans have his money, and his present stock is so deplorably meagre that he can scarcely carry on his business.

It may be argued that this case is not typical, because surgical instruments are articles which cannot be exported from a belligerent state; but, as a matter of fact, there is an infinity of articles which the Roumanian merchant has to do without. As long as the stock of which he disposes holds out, the shopkeeper realises very high prices, and then he has to put up his shutters. Needless to say, more and more shutters will be put up as time passes.

ROUMANIAN WHEAT EXPORTS.

According to the *Curierul Financiar*, the export of cereal from Roumania in January, 1916, was higher than at any time since the war began. In January, 1916, 13,154 wagons (of 10 metric tons) of cereals were exported as compared with 13,246 wagons in January, 1914, and 4,918 wagons in the corresponding month last year. In November and December, 1915, 9,579 wagons and 8,394 wagons of cereals respectively were exported. The month of January, 1916, also exceeded the previous record for exports from Roumania of wheat-flour, being 2,459 wagons, as against 1,335 in the previous month.

ANGLO-ROUMANIAN TRANSPORT.

The Germanophile newspapers in Bucharest announced recently that goods purchased by Roumania from England would not reach their destination, because of a decision taken at the Allies' Conference in Paris that England should exercise economic and financial pressure on neutrals. The British Legation immediately published a communiqué categorically denying this statement, and showing that England, on the contrary, is doing everything possible to facilitate the transport of goods to Roumania by the route which is open. The communiqué points out that if the despatch of all the goods destined for Roumania viâ Archangel and Norway has not been able to be expedited, the reason is that England desires to avoid obstructing these routes in order to be able to send her Russian Allies materials which are absolutely necessary.

GREEK FINANCES.

To ameliorate the financial situation in Greece an internal loan of £2,800,000 is proposed to be issued (says an Athens telegram) through the National Bank with the participation of other banks.

Reuter's agent adds that it is proposed to issue the loan at 87½ with 5½ per cent. interest. Half and, perhaps more, of the entire loan will be taken up by the National Bank and the remainder by other banks and companies. Nothing positive is known regarding the details of the agreement and what arrangements it is proposed to make to prevent a financial combination from influencing the rate of exchange. The International Financial Commission has unanimously agreed to make no concession.

The Government is also considering the conclusion of another loan abroad, but for the time being, at least, the chances of success seem very remote. According to an Athens newspaper, Greece is negotiating this latter loan in Paris through the Greek Minister, and naively suggests that "the solution of the passage of the Serbian Army will depend on the result of the negotiations."

News received in London yesterday from Athens in connection with the above loan continues contradictory. Reuter's agent reported (May 10) that negotiations with the National Bank for an internal loan had apparently been concluded, but that nothing definite was known as to the rate of issue or interest. It was, moreover, stated on good authority that the Government had again approached the international financial control with a view to obtaining assistance, but without success.

The *Times* reports, on the other hand, that Greek Government journals state that the loan of 100,000,000 fr. (£4,000,000) has already been concluded. The bonds will be for 500 fr., bearing interest at 6 per cent., and the issue will be made at 87.

FINANCIER'S FAILURE.

At the London Bankruptcy Court, on Wednesday, Herbert Ernest Crabbe, who will be remembered in connection with several flotations during the Egyptian land "boom," attended before Mr. Registrar Hope for public examination upon a statement of affairs showing liabilities £26,336, of which £13,376 were expected to rank, and assets £5,585.

The debtor stated that he was formerly engaged in financial business in Egypt, London, and elsewhere, but has had no occupation since Christmas, 1910, except for three months, when he was engaged by a firm of London stockbrokers at a remuneration of £100 a month. He attributes his failure to the loss of £2,500 owing to the default of certain brokers.

Mr. Hansell, on behalf of the debtor, said that, as a result of interpleader proceedings, Mrs. Crabbe had handed over to the trustee bonds, and there was a reasonable prospect of paying everybody in full.

POOHOOMUL BROS. VERSUS MENA HOUSE HOTEL.

The Mixed Court of Appeal at Alexandria delivered judgment on April 11 in the appeal brought by the George Nungovitch Egyptian Hotels Company against the decision of the Cairo Mixed Court in the action brought against the company by Messrs. Poohoomul Brothers for damages in respect of the Mena House Hotel, which the firm rented from the company, and were unable to occupy owing to the premises being taken over by the military authorities.

The Appeal Court reversed the decision of the lower Court in favour of the company on the ground that if Poohoomul Brothers were entitled to an indemnity their claim should be brought against the Australian military authorities, who took over their premises, and that the firm could not sue the hotel company unless the statement of accounts which will probably be made between the company and the military authorities included also an allowance to the tenants for the wrong they may have suffered in fact.

COMPANY REPORT.

Agricultural Bank of Egypt.

The directors have to report that the net profits of the Bank for the financial year 1915-16 in accordance with Articles 40 and 41 of the Statutes, amount to £E701,943.110. From this amount there has to be deducted: (I.) the repayment, under Article 41 of the Statutes, of liabilities incurred in 1914 as explained on the following page (£E182,056.178); (II.) the service of the debentures (£E234,202.891); (III.) the provision for the reserve fund (£E37,150.464); (IV.) the provision for the special reserve fund as per Article 40 of the Statutes (£E6,777.808), or a total of £E460,187.341, leaving £E241,755.769. There has to be further deducted: (V.) dividend on £E1,250,000 stg., preferred shares (£E48,750); (VI.) commission to the National Bank of Egypt (£E9,700.144), or £E58,450.144, leaving £E183,305,625 available for distribution as dividend on ordinary and deferred shares.

The ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent. per annum, £E120,900. The balance of £E62,405.625 is available to the extent of one-half, or £E31,202.813 for the ordinary shares and to the extent of one-half, or £31,202.812 for the deferred shares.

The amounts therefore available for dividend on the ordinary shares are as follows:—Balance from the period ending January 31, 1915, £E5,241.521; for dividend at the rate of 5 per cent. per annum, £E120,900; further amount available, £E31,202.813; or a total of £E157,344.334. The directors propose to pay a dividend at the rate of 6s. per annum for the financial year 1915-16 amounting to £E145,080, and to carry forward the balance of £E12,264.334.

The amounts available for dividend on the deferred shares are as follows:—Balance from the period ending January 31, 1915, £E492.057; further amount available, £E31,202.812, or a total of £E31,694.869. The directors propose to pay a dividend of £15 per share, amounting to £E29,250, and to carry forward the balance of £E2,444.869.

It will be remembered that in the profit and loss account of January 31, 1915, £E484,352 were charged as to £E472,700 to the general reserve fund and as to £E11,652 to the Egyptian Government, to complete the 3 per cent. guarantee. We are glad to be able to report that out of the encashment of capital in arrears due in 1914 we have been able, in accordance with the statutes to recredit the Egyptian Government and to repass £E170,404 to the general reserve fund. That fund now amounts to £E211,657, and has been reinvested to the extent of £E160,822 in securities at cost price taken from the £E461,769 of securities which were transferred on January 31, 1915, to the ordinary investment account from the general reserve investment account. The Egyptian Government has renewed its undertaking to pay to the Bank—subject to the terms of their guarantee as defined by the Statutes—any difference between the cost price and the proceeds of realisation of the above securities still remaining in the ordinary investment account, should they be realised during the current year. Such a realisation actually took place during the past year when the Bank converted its holding of Consols into War Loan, and resulted in a diminution of the reserve fund by £E10,340. Similarly any further loss on realisation of those securities which were originally in the general reserve investment account would be borne by the general reserve fund. Such loss if the securities were sold at mean market price on January 31, 1916, would amount to £E42,000. In the event of our having to realise our other investments the loss would have to be borne by the profit and loss account. The loss on ordinary investments in Government securities if they were sold at mean market price on January 31, 1916, would amount to £E54,000. We have therefore thought it advisable to set aside out of this year's profit £E20,000 as provision for depreciation on investments. The depreciation of £E44,000 on securities now forming the investment of the general reserve fund account would fall on the general reserve fund.

On January 31, 1916, the total arrears outstanding were £E1,209,186, against £E1,394,546 on January 31, 1915, as shown by the following table:—

	Capital. £E.	Interest. £E.	Total. £E
Accrued during 1914-1915 ..	876,003	518,543	1,394,546
Of which collected from Feb. 1, 1915, to Jan. 31, 1916.....	268,067	176,211	444,278
Leaving	607,936	342,332	950,268
To which have to be added the arrears of 1915-16	164,163	94,755	258,918
Making a total on Jan. 31, 1916, of	£E772,099	£E437,087	£E1,209,186

Of the sum of £E1,209,186 in arrears shown above, £E437,087 represent interest, and have been entirely set aside, since, in accordance with the Statutes, only interest actually encashed can be included in the profits. The remainder, viz., £E772,099 representing capital overdue, has, as required by the Statutes, been entirely deducted from the profit and loss account before arriving at the balance available for distribution. Consequently any encashments made on account of the sum of £E1,209,186 will go entirely to the profit of the year in which they are effected, except in so far as—in accordance with Article 41 of the Statutes—the sums still due to the general reserve fund must be repaid. Up to March 31 the encashments since February 1, 1915, on account of the arrears of £E1,209,186 amount to £E44,000.

The following tables give details of annual collections, of arrears and of output, as regards "A" and "B" loans:—

ARREARS ON ANNUAL INSTALMENTS.

Year.	Annuity Due. £E.	Amount of Annuity in Arrears at end of Year. £E.	Percentage of Arrears to Annuity.
1904	917,942	27,718	3·0
1905	1,415,547	94,633	6·7
1906	1,740,117	54,332	3·1
1907	1,855,751	113,128	6·1
1908	1,886,046	263,758	14·0
1909/10	1,804,141	319,408	17·7
1910/11	1,750,616	329,805	18·8
1911/12	1,587,634	247,558	15·6
1912/13	1,507,841	337,356	22·3
1913/14	1,392,255	367,756	26·4
1914/15	1,212,087	902,138	74·4
1915/16	1,001,304	258,918	25·8
1916/17	816,691	—	—

COLLECTION OF ARREARS.

Year.	Arrears brought forward at beginning of year. £E.	Sums recovered during year. £E.	Percentage
1904	6,676	5,333	76·5
1905	29,352	26,236	89·4
1906	97,729	89,395	91·4
1907	62,666	50,118	79·9
1908	125,676	93,293	74·2
1909/10	296,141	198,663	67·0
1910/11	416,887	244,110	58·5
1911/12	502,582	234,420	46·6
1912/13	515,720	199,742	38·7
1913/14	653,334	316,263	48·4
1914/15	701,977	212,569	30·1
1915/16	1,394,546	444,278	31·9
1916/17	1,209,186	—	—

Seeing that we are passing through a time of war, and consequently with a restriction of agricultural credit, the sums collected during the year may be considered as satisfactory. £E742,386 were collected out of the annual instalment of £E1,001,304, and £E444,278 from arrears of past years, giving a total collection of £E1,186,664. The clients of the Bank therefore repaid, in addition to a full instalment, a sum of £E185,360, the majority of them thus showing their willingness and ability to settle their debts to the Bank. There seems good grounds to hope that the crops during this year will enable them to decrease further the total of outstanding arrears. We also hope that it may be possible, if the Egyptian Government extends the limits of time imposed by the 5 feddan law for the settlement of debts, to renew in many cases loans to clients in arrears in such a manner that they will be relieved from the burden of being in arrears and will not be liable to pay, from the crops of one year, both the annual instalment and a portion of overdue instalments. The details of the loans made are as follows:—

"A" LOANS: SECURED BY SIGNATURE ONLY.

	No.	Amount. £E.	
500mm. to £E1....	—	—	
£E1.500mm. to £E5..	—	—	
£E5.500mm. to £E20	131	2,165	
£E20.500mm. to £E100	18	841	
£E100 to £E200.....	5	850	
Total	154	3,856	Average, £E25

"B" LOANS: SECURED BY MORTGAGE.

£E	No.	Amount. £E	
10 to 50	3	140	
51 to 100	8	705	
101 to 150	22	3,010	
151 to 300	98	22,060	
301 to 500	34	14,380	
501 to 1000	32	28,200	
Total.....	197	68,495	Average. £E347.7

Making a total of 351 loans for £E72,351 compared with 1,432 loans for £E250,605 last year. It will be recognised that it was advisable to restrict the output of loans in the country during the last twelve months, without at the same time depriving good clients of all credit in cases where it appeared the money would be wisely employed. This policy accounts for the small output of "A" and "B" loans. During the year the Bank has made five loans on mortgage in sums exceeding £E1,000 each for a total of £E19,700 bringing, with some supplements made to existing loans, the total of these loans to £E61,563 on January 31, 1916.

AGRICULTURAL SYNDICATES AND COLLECTIVE LOANS.

	Falling due in 1915-16. No.	Amount. £E.	Balance Remaining Overdue at 31/1/16. No.	Amount. £E.
Agricultural Syndicate Loans	5	3,171	2	1,028
Collective Loans	32	3,249	15	1,087

Of the above the following sums have since been paid:—

Agricultural Syndicate Loans	£E200
Collective Loans	£E444

These loans can be considered as merely in the experimental stage, and their development in the future will chiefly depend upon whether the Egyptian Government decide to encourage this form of credit and under what regulations.

LOANS OUTSTANDING ON JANUARY 31ST, 1916.

	Number.	Amount. £E.	Average. £E.
"A" Loans	67	1,721	25.6
"B" Loans	122,632	4,933,297	40.2
Total.....	122,699	4,935,018	
Compared with previous year	159,342	5,491,941	

NATIONAL BANK OF GREECE.

LOANS REPAID BEFORE DUE DATE BY CASH.

Year.	£E10 to 300		£E301 to 500.		Total.	
	No.	Amt. £E.	No.	Amt. £E.	No.	Amt. £E.
1909/10	1,462	88,572	294	104,756	1,756	193,328
1910 11	2,491	163,884	199	76,221	2,690	240,105
1911/12	1,968	83,876	226	60,588	2,194	144,464
1912/13	1,510	75,249	198	52,390	1,708	127,639
1913/14	1,059	53,524	148	43,579	1,207	97,103
1914/15	449	23,899	75	21,241	524	45,140
1915/16	349	12,792	19	4,966	368	17,758

The still further decrease of repayments before maturity is due, as in last year, to the restriction of agricultural credit in the country.

The following table shows the position of land acquired by foreclosure:—

	Feddan.	Kirat.	Sahm.	Cost. £E.	Sale Price. £E.
Land in hand on 31/1/15	2,992	1	4	84,934	
Acquired during 1915-16	3,125	22	4	83,563	
Total	6,117	23	8	168,497	
Less sales during 1915-16	1,078	16	17	30,077	30,955
Balance in hand 31/1/16	5,039	6	15	138,420	

It will be seen, therefore, that we have sold land costing us £E30,077 for £E30,955; of which sum £E16,644 was paid in cash, the balance being payable by instalments guaranteed by a privileged charge on the land. The large increase in the land acquired by the Bank is due to various causes: firstly, the increased number of expropriation cases begun by the Bank in 1913 and 1914 which reached their final stage during the past year; secondly, a similar increase of expropriations by third parties, in which cases the Bank as first mortgagee had to buy in the land to protect itself; and lastly, owing to the general financial situation, the considerable diminution in the proportion of cases where third parties bought the land, when put up for sale at the Tribunals. The cost of the remaining feddan 5,039 kirat 6 sahm 15, viz.. £E138,420, includes the debt and the many legal expenses of expropriation. This land has been carefully valued in detail for a sum approximately equal to the cost, and we hope to sell it gradually at some such prices. But the stagnation in land sales foreseen in our last report still remains, and we do not consider it advisable to press forward sales except when a reasonable price can be obtained. The number of expropriations made by the Bank during the year are as follows:—Number of cases in hand February 1, 1915, 2,466; number of new cases begun during 1915-16, 1,945; or a total of 4,411; of which cases settled, 727, leaving a balance of 3,684. Cases brought to expropriation number 655, or a balance pending of 3,029. In 497 of these cases of expropriation 2,576 feddans were bought in by the Bank, and in 158 remaining cases 984 feddans were bought in by third parties.

The total amount advanced to the Mortgage Company of Egypt on January 31, 1916, was £E1,009,125 secured by the deposit of registered scrip of their 4½ per cent. first mortgage debentures, to an amount of £stg.1,250,000. During the last year we have not encashed a dividend on our holding of shares in the Mortgage Company of Egypt; like other similar institutions the present circumstances have led to a considerable falling off in the amount of annuities encashed. The loans outstanding on the London Stock Exchange at January 31, 1916, amounted to £stg.20,165 (£E19,660), against £E63,850 on January 31, 1915.

The directors have to announce with deep regret the death of one of their colleagues, the Right Hon. Arnold Morley, who has been a member of the London Committee since the foundation of the Bank. In accordance with the Statutes, the Board has temporarily elected as a director Captain R. G. Westropp, the General Manager of the Bank, and this nomination is submitted to the shareholders at this general meeting.

The newly-elected officers of the Sudan Chamber of Commerce for the ensuing year are the following:—President, Mr. Law; Vice-President, Mr. Norton; Secretary, Mr. G. Dello Strologo; Treasurer, Mr. G. A. Contomichalos.

COMPANY RESULTS, Etc.

ALEXANDRIA WATER COMPANY.—The thirty-eighth ordinary general meeting will be held at Alexandria on 5th proximo at 4 p.m.

ANGLO-EGYPTIAN.—Gemsah, week, 637 tons (previous week 1,032 tons); Hurgada, 577 tons, against 557 tons.

BANK OF ABYSSINIA.—The ordinary general meeting of the shareholders will be held on Wednesday, May 31, at 4 p.m., at the offices of the National Bank of Egypt, Cairo.

BANK OF ROUMANIA.—The Board recommends a dividend of 8s. per share, free of British income-tax, for 1915.

EGYPTIAN MARKETS.—Week ended May 4, £866; decrease, £196. Aggregate, £22,559; increase, £1,698.

EGYPTIAN MARKETS.—The Board recommends a final dividend of 6 per cent. for 1915 on the ordinary shares, making 10 per cent. for the year, and a dividend at the rate of £6 2s. 5d. per share on the deferred shares.

EUROPEAN OILFIELDS.—Week ended 7th instant, 110,300 poods.

LAND AND MORTGAGE COMPANY OF EGYPT.—Debenture interest coupons and debenture bonds (drawn for redemption) due 15th inst., will be paid by Messrs. Barclay and Co., Limited, 54, Lombard Street, E.C., on and after that date.

ROUMANIAN CONSOLIDATED.—Week ended April 29, 562 tons.

ROUMANIAN CONSOLIDATED.—Week ended May 6, 562 tons. Month of April, 2,770 tons.

ROYAL INSURANCE.—The Board recommends a final dividend of 14s. per share, less tax, payable 23rd instant, making 28s. per share, less tax, for 1915.

SUEZ CANAL.—Traffic receipts on May 8 were 280,000 fr., as against 120,000 fr. last year.

NEWS FROM ALL SOURCES.

Crude opium was exported from Salonika during 1915 in very large quantities.

Twenty-eight varieties of Australian wheat have been cultivated in Egypt at the Government's Nursery at Gizeh.

The s.s. Figa, one of the steamers recently reported to have been torpedoed, was bound for Alexandria with 9,500 sacks of coffee and a large cargo of provisions for Egypt.

A telegram received in Petrograd from Tabriz states that the formal opening of the railway line between Tabriz and Julfa took place to-day. There will be a regular passenger and goods service on the line.

ALEXANDRIA WATER COMPANY, LIMITED.

Notice is Hereby Given that the thirty-eighth Ordinary General Meeting of the Shareholders will be held at the Company's offices, Alexandria, on Monday, the 5th June, 1916, at 4 o'clock in the afternoon, for the transaction of the ordinary business of the Company, also to confirm the nomination of Mr. A. G. M. Dickson as a Director of the Company, and further to elect Mr. H. R. C. Blagden, the Manager of the Company, as a director of the Company, and for that purpose to declare Article 106 (a) of the Articles of Association suspended in his favour in accordance with the terms of the said Article.

Holders of share warrants to bearer desiring to attend or to be represented at the Meeting must deposit their share warrants in London before the 22nd May, 1916, or in Alexandria before the 2nd June, 1916, until after the Meeting, at Messrs. Barclay and Co., Limited, 1, Pall Mall East, London, S.W., or at the Anglo-Egyptian Bank, Limited, Alexandria, or at some other approved bank in London or Alexandria.

Dated, Alexandria, the 3rd April, 1916.

By order of the Board,
H. R. C. BLAGDEN,
Manager.

NOTES OF THE WEEK.

The Russian advance in the direction of Mosul is an important development in the situation in the Middle East. For reasons that are set forth elsewhere in this issue, the thrust at this point does not bring the Russians nearer to Baghdad, because it is hardly conceivable that, with other forces within approximately a hundred miles of the latter city, the Russians near Khanikin, and the British below Kut, our Allies should wish to bring up another column which has still two or three hundred miles to traverse. But the Russians at Mosul would effectively cut the lines of communication of the Baghdad command, and ought to enable the latter to be disposed of before further reinforcements can reach it. This result will depend on the strength of the Russian force which has been operating on the western borders of Persia, and on the intentions of the British General Staff in regard to the Mesopotamian Expedition. In view of all that has happened, the attempt to capture Baghdad, its failure, the investment and capitulation of Kut, it is difficult to believe that the Allies will not take advantage of the success of Russia's middle army in Asiatic Turkey to reverse what has hitherto been the verdict of the struggle between Turkey and Great Britain.

The unexpected appearance of the Russians so far south as Rowandiz and the fact that they are still advancing justify the hope that the Turks have been entirely taken by surprise. From the course of the recent fighting, it is safe to infer that the enemy's main effort has been directed towards stopping the Russian advance at its centre west of Erzeroum. The left of the Russian line, based on Mush and Bitlis, had developed a south-westerly line of advance, and will have forced the Turks to concentrate at Diarbekr and to the north-east for the protection of that town and of the railway running to the south of it, with railhead at Nisibin or beyond. If, as is probable, all the troops that could be spared from Baghdad and Mosul were sent northwards to Diarbekr when the seriousness of the menace in Armenia was appreciated in Constantinople, then the Russians have a good chance of reaching Mosul before many of those troops can return to it. Navigation on the Tigris between Diarbekr and Mosul has hitherto been restricted to rafts of inflated goatskins, a not very suitable method of transporting bodies of troops and artillery. The distance, however, can be covered by this means in four or five days, and the importance of holding Mosul may prompt the Turks, under German supervision, to make a determined effort to arrest the Russian advance, if they can arrive in time.

The concentration of their main forces in the neighbourhood of Erzinjan has enabled the Turks to deliver a series of counter-attacks on the Russians west of Erzeroum. The accounts of the fighting are not explicit, but it is to be inferred that the Russians have been forced back in the region between Mamakhatun and Ashkala. As the main purpose of our Allies at this stage of the operations in Armenia must be to occupy the attention of as many Turks as possible, the set-back is not serious. The enemy's success appears to have been achieved at the cost of heavy casualties, and, by the admission of the Turkish *communiqué*, the Russian "retreat" was stopped. Further to the south, the Russian force operating in Western Persia reached Kasr-i-Shirin, and has crossed the frontier into Turkey. Khanikin is immediately in front of it; but between that town and Baghdad there will be little to stop a Russian advance. We shall do well, however, not to build too extravagant hopes on the rate of progress recently maintained by this Russian column. It has not been called upon to meet any force that can be compared with the strength of the Turks in Baghdad, and it would be courting a repetition of General Townshend's mishap to advance without adequate preparations. An attempt will also be made, we may hope, to co-ordinate the operations of General Lake to the south and General Baratoff to the north-east of Baghdad before an advance by either is undertaken alone.

If straws are a trustworthy indication of the way the wind blows, we are glad to find the well-informed military correspondent of *The Times* abandoning the attitude towards military operations in the East which he has maintained for so long. He does not abjure his original belief that it was wrong to disseminate our resources in distant fields; "but," he continues, "there is this difference between last year and the present date—namely, that, in view of the policy of some of our Allies and our failure to change this policy, try as we might, we have reluctantly come to the conclusion that

Digitized by Google

we must make the best of a bad job, and no longer press for the return of certain of our errant armies to the principal theatre. It therefore only remains for us to urge that, the policy being what it is, and the dispositions being what they are, all our troops east of Malta should be actively and usefully employed, and not condemned to unfruitful inactivity any longer." This is the policy which has long been urged in these pages, and we welcome the tardy conversion of the *Times'* Military Correspondent, not for the satisfaction of having our own point of view shared in a distinguished quarter, but as an indication that there is at last a likelihood of something happening in the East. The passivity and uneconomical use of force of which the correspondent complains have undoubtedly been due to divided counsels among the Allies. Now that the views which he has so aggressively championed in the past have been given their quietus, we may look to a new plan of campaign based, as he expresses it, upon the elementary consideration that war is an act of violence and nothing else.

It is satisfactory to learn that the full statement of the attitude and aims of the Allies given by Sir Edward Grey to an American correspondent is being published in neutral countries. Both in Roumania and Greece there are many people who still accept unquestioningly the garbled accounts for which German shrewdness secured so long a start. The course of events is beginning to shake their early beliefs, and their minds may have acquired by now sufficient receptivity to make such a statement particularly useful at this juncture. What we and our Allies are fighting for, said Sir Edward Grey, is a free Europe. We want a Europe free, not only from the domination of one nationality by another, but from hectoring diplomacy and the peril of war, free from the constant rattling of the sword in the scabbard, from perpetual talk of shining armour and warlords. In fact, he added, we feel we are fighting for equal rights; for law, justice, peace; for civilization throughout the world, as against brute force, which knows no restraint and no mercy. We are not only fighting Prussia's attempt to do, in this instance, to all of Europe what she did to non-Prussian Germany, but fighting the German idea of the wholesomeness, almost the desirability, of ever recurrent war. For British readers the whole statement has a special interest, as it shows how far the Secretary of State for Foreign Affairs has moved from the time when, four days before the outbreak of the war, he could assure the British Ambassador in Berlin that, if the then crisis were to be safely passed, he was hopeful that the relief and reaction which would follow might make possible "some more definite *rapprochement* between the Powers" than had been possible up till then.

Speaking last week to the members of the Russian Duma and Council of the Empire who are on a visit to England, Mr. Asquith said: "One of the most gratifying results of our alliance is the complete agreement which has been established between the British and Russian Governments in regard to Eastern affairs. I remember, as do many here, the days when in that quarter, whether in Europe or in Asia, the interests of the two Empires were supposed in both countries to be irreconcilably antagonistic. . . . Those days of misunderstandings are happily over, and whether it be in Turkey or in Persia, or wherever British and Russian interests come into contact with one another, we have arrived at a common policy, which we are both determined loyally and in concert to pursue." The special reference to Persia justifies the hope that, as soon as the war is over, the affairs of that unfortunate country will enter upon a happier phase. The war has revealed the selfish nature of German propaganda, which would merely exploit the Persians in Germany's interests and leave them to their fate. Its failure has at least disillusioned those Persians who relied on playing off the Germans against Russia and Great Britain, and should encourage the country as a whole to make the best of the opportunities given them. The new "common policy" to be pursued loyally and in concert by the two Powers will, we trust, do more for Persia's interests than the perfunctory and one-sided arrangement reached in 1907.

The landing of Italian troops at Musa Moresa and the occupation by them the next day of the port of Bardia, both in the Bay of Sollum, mark a further stage in the Allies' attempts to deal with the submarine menace in the Mediterranean. For some time now shipping has escaped the attentions of these pirates, but its immunity, it is understood, has been due rather to the careful policing of the Mediterranean route than to the total elimination of submarines. Whether their use of the African coast as a supply base was due to Greek waters having become unsafe or less hospitable is a matter for conjecture; but their connection with the Bay of Sollum served the double purpose of replenishing the submarines and supplying war munitions to the Arabs. The Italian landing was effected without incident. The fact that a brother of the Chief of the Senussi and some of the principal chiefs of Marmarica voluntarily joined the expedition suggests that the recent chastisement of the rebels within the Egyptian border has had a salutary effect on native opinion in these regions. Germany's promise to America in regard to submarine warfare, if faithfully carried out, must rob a number of these craft of their occupation; but shipping will doubtless feel safer, if they continue to be harried from pillar to post and deprived of their bases, until they are either accounted for or are unable to leave their ports of origin.

The public controversy between the two most popular men in Greece continues. King Constantine has fallen back on Greek newspaper representatives as his medium of publicity; M. Venizelos replies in the columns of his own organ, the *Herald*. It was for occasions such as these that Cleisthenes introduced the principle of ostracism, and if the controversy continues much longer, not only his shade, but a number of living Greek patriots as well, will regret that Greece's modern Constitution does not contain a similar provision. The system, it will be remembered, carried no stigma with it. Some of the most distinguished men at Athens were removed by ostracism, and were recalled when their services were judged to be indispensable. So subtly does the spirit of ancient Greece survive in part in the country to-day that King Constantine himself as Crown Prince has had experience of banishment, when the Military League recorded its adverse verdict against him. He was brought back by the instrumentality of M. Venizelos, and the old goddess of Fate must have been in a particularly malevolent mood to drive these two strong men into collision. Time is in all probability working for M. Venizelos, but not, in his opinion, for Greece; and to this latter fact we must attribute the persistency with which this shrewd statesman prejudices his own position in the endeavour to win back his King and country to the only policy consonant with Greece's interests.

The order which prohibited all women, except those engaged in military service, from landing in Egypt, it will be seen from regulations printed on another page, has at last been modified in favour of bona-fide residents. Reference has been made more than once in these columns to the arbitrary nature of a regulation which compelled the wives and daughters of civil servants and others domiciled in Egypt either to remain there the whole year round or, if they had left the country on the usual and necessary holiday, to remain indefinitely away from their homes. But the prohibition was persisted in long enough to cause the maximum resentment and inconvenience among a section of the population who had done yeoman service as emergency nurses and in other voluntary work at a time when the military authorities had failed to make adequate provision for wounded soldiers in Egypt. The new regulations make departure from and entry into Egypt a matter of permits, to which no exception can be taken, provided the movements of desirable residents are not interfered with unduly by red-tape delays.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 2.

The Katia Affair.

The recent affair on the Canal has come as an unpleasant surprise to everyone out here, and it has made a very bad impression in local Egyptian circles. It seems incredible that at this late date in the campaign such a large hostile body as that which attacked Katia should have been able to get so near to our front posts without being detected in time to permit of reinforcements being brought up, or that 500 of the enemy should have succeeded in getting through to Bir Duweidar, which is, after all, west of Kati and therefore on our lines of communication. Fortunately the gallantry of our men, as usual, eventually saved the situation, but it is a thousand pities that the heroic defenders of Katia should not have been succoured in time.

Every arm of the Service engaged in the fight or present in the area behaved admirably. The Camel Corps is said to have done fine work in bringing in wounded, and even the Redifs (Egyptian reservists) came up to the scratch. In connection with the latter, one instance in particular has come to my notice, though I am told that it was typical of their conduct at other points. The officer in charge of a detachment of Redifs who were doing "labour work" right forward got wind that something was up, and sent to ask what he was to do. The reply was that he was to carry on, and that if a retirement had to be made by the troops he would be warned in time. So he sat tight. Later on he saw camels, mules, etc., streaming across the desert; but he had his orders, and remained at his post with his Redifs. Next morning he sent again to ascertain how things were going on, and to his horror his messenger returned to say that the post had been evacuated. He heard firing all round and decided that, as he and his party were unarmed, the best thing to do was to beat a retreat. So he ordered his men to trek towards the Canal. All day long they marched without water; it was not until late that evening that they struck the railway, and only after they had followed it for some distance did they come upon an engine and manage to get some water out of the tank. The officer in charge reported that the Redifs maintained perfect discipline and behaved splendidly throughout, notwithstanding the strain they were put to by the lack of water and by the fact that they were for some time in the firing zone and had no arms wherewith to defend themselves. As a matter of fact, the only murmur he heard was at their being unable to stick to and, if necessary, defend their post, owing to the lack of weapons of any description.

H.R.H. the Prince of Wales.

H.R.H. the Prince of Wales took a brief holiday from his duties on the Canal this week, and spent a day in Cairo. He arrived early in the morning, and, accompanied by Lieut.-Colonel J. K. Watson, Military Secretary to the High Commissioner, and Mr. R. Storrs, Oriental Secretary to the Residency, paid a long visit to the bazaars. His Royal Highness lunched at the Residency and visited the Sultan, afterwards going for a walk through Gezira, and returning the same evening to Ismailia.

The Mystery of Mohammed Bey Zaki.

Recent reports from Constantinople have contained references to the activities of a certain Mohammed Bey Zaki, who is said to be deep in the counsels of the Committee of Union and Progress. *Al Mokattam* has now discovered that this person is an old Cairo acquaintance—none other than "Captain" Jorge Neykon Waldberg, who came to this country in 1905 and disappeared again in 1908. Prior to his arrival in Egypt "Captain" Waldberg had had a chequered career in South America and Southern Europe. He engaged in white slave traffic in the Argentine, whence he was expelled by the Austrian Consulate. At that time he claimed Austrian nationality; but when he next came before the public—in Athens—he had become an American citizen. In the Greek capital he married the daughter of a rich officer, but after various "financial" operations had to retire precipitately across the border. In Stambul he became one of the secret service agents of Fahim Pasha, the then Prefect of Police; but he made things too hot for himself, and once more had to retire—this time to Egypt, where the financial boom was then at its height.

In Cairo his activities were carried on under the cloak of journalism. He founded first of all *La Verité Orientale*, then *La Bourse* (no connection with the dignified *Bourse Egyptienne*), and finally *Le Petit Journal*. These organs were remarkable for the violent attacks made in them on prominent persons, and for the gross caricatures that periodically appeared in them. Waldberg used them to extort money from those he attacked, or from interested parties, and also resorted to all manner of other expedients for raising the wind. His operations at last became such a public scandal that the American Agency disowned him—strange to relate he had up to then succeeded in claiming American protection—and he had to stand his trial for swindling and blackmail. Sentenced to a period of imprisonment, he made good his escape to Constantinople, where he was received with open arms.

In the Turkish capital he became a member of the "Black Band," consisting of long-firm swindlers of the first water, and at the same time received an appointment as official spy to the Union and Progress Committee. To ingratiate himself with the latter he embraced Islam, taking the name of Mohammed Bey Zaki, and married the daughter of a rich Anatolian notable, having in the meantime divorced his Greek wife. He founded the *Mohafaza Millet*, an anti-Entente and pro-German organ, and on behalf of the Young Turks violently attacked the Arabs and the Armenians. After the assassination of Nazim Pasha, Waldberg pretended to espouse the Arab cause, and on more than one occasion he betrayed the Arab officers into the Committee's hands. Throughout, he was in close touch with the German Embassy, and was at the bottom of all the intrigues and dirty work that have been carried on in Stambul during the past few years. To-day "Captain" Waldberg, alias Mohammed Bey Zaki, arch swindler, blackmailer, white slave trader, is in receipt of an annual retaining fee of £T2,000 from Berlin, and is one of the mainstays of Enver and Co., who find him a man after their own heart. When one reads that the Young Turks have such a person as their boon companion and their most cherished assistant, one can credit all the stories of infamy that are attributed to them, though one cannot help feeling sorry for the people whose fate is in the hands of such villains.

Shakespeare's Tercentenary.

The British colony in Egypt did not organize any celebration of Shakespeare's Tercentenary, but the event did not pass entirely unnoticed; for in the churches most of the preachers made reference to our greatest poet, the masters in the Government schools gave addresses on the subject, whilst in Alexandria part of the programme at No. 15 General Hospital was given up to the performance of the Clown's Play, from

"A Midsummer Night's Dream," a performance which, executed in true Shakespearean style, without properties or scenery, was a complete success.

In Egyptian circles somewhat more prominence was given to the event. Excellent leading articles explaining the position that the poet holds not only amongst the English-speaking peoples, but amongst all the civilized nations of the world, were published by *Al Mokattem* and *Al Ahram*, and a special meeting was held at the Egyptian University, under the presidency of H.E. Ismail Pasha Hassanein, Under-Secretary of State for Education. The principal speakers were Mr. Percy White and M. Clèment, Professors of English and French Literature respectively at the University, and the meeting was concluded by a recitation of Mark Antony's famous speech, given in excellent style by a young Egyptian, Tewfik Eff. Diàb.

The "great poet of humanity," as Mr. Percy White called him in his eloquent address, is by no means unknown to—though he is as yet far from being appreciated by—the Egyptians. The younger generation who attend the State schools study certain of his plays in the literature course, and until quite recently one of the secondary schools acted a play at the close of or in the course of every scholastic year. "Romeo and Juliet" and "Hamlet" used to be given in the Arab theatres, notably by the celebrated veteran Egyptian actor and singer, Sheikh Salama; and a number of other Shakespearean works have been published in Arabic. But those who periodically attended these performances bear testimony to the fact that the representation was in almost every detail a travesty of the great poet's masterpieces, whilst a perusal of the translations reveals glaring omissions of important passages and a gross misrendering of others. Educated Egyptians themselves admit that these translations leave a good deal to be desired. These shortcomings are due to the fact that in practically every case the translation has been made, not from the original, but from a French version by men who, albeit they knew the language well enough to speak and read it, had not an adequate literary knowledge of French even to catch the meaning of the translator, and facilitated their own task by calmly leaving out passages that presented any difficulties to them. Considering that our occupation of Egypt has extended over thirty-four years, during which the English language has steadily made its way in the country, until to-day it is, in obedience to the demands of the Egyptians themselves, to all intents and purposes the only foreign linguistic medium of instruction in the Government schools, there must be something wrong somewhere if the younger generation cannot tackle the task of translating Shakespeare direct from English into Arabic. In justice to the system which they have introduced and fostered, our education authorities should encourage as much as possible the study of the master poet and the idea of direct translation: and at the same time it is for Young Egypt to show by its practical appreciation of the world-acclaimed poet some more tangible evidence than is forthcoming at present of the intellectual development which it claims to have undergone. Until Young Egypt can demonstrate by translation and dramatic representation that it has entered into the grand thoughts inspired and perpetuated by the "great poet of humanity" it will never realize its aspirations to be counted amongst the cultured peoples of the universe.

BRITISH SUBJECTS IN EGYPT.

The *Egyptian Gazette* of May 3 announces: The General Officer Commanding in Chief in Egypt has just published a notice which seems to indicate that Great Britain is seriously considering the question of a military census of all its subjects.

In accordance with the terms of this notice, all British subjects from the age of eighteen to forty-one years are obliged to answer certain questions which will have to be sent to Headquarters before the 15th inst.

This notice must be considered as a military order. Persons concerned must give their name, their postal address, the place of their birth, with the date of their birth, whether married or single and their occupation, with the name and address of their employer if necessary.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, May 2.

Pancypriot Sports.

Athletic meetings have been held at Larnaca, Limassol, and Papho, to be followed by one at the capital. Greeks have recognised the value of athletic and gymnastic exercises, and have even recently established football clubs, which have kept the game going with commendable zeal. In ordinary times Pancypriot Athletic Gatherings are held every third year in the chief towns in turn. They have been made a meeting-ground, not only for athletic contests, but also for the advancement of political ideas and aspirations, for "patriotic" speeches, and the strengthening of local ethnic societies. At Limassol and Larnaca small regattas are also held, prizes being given for sailing, rowing, and swimming.

A Turkish Florist.

The first and only florist's shop in Cyprus has been opened in Nicosia by a Turk, named Said Bey. The flowers are cultivated in the garden of his own house from seeds imported from England. The shop is near the Ottoman Bank. Said Bey, whose enterprise meets a real need, receives visitors to his garden and greenhouses daily, including Sundays. The establishment deserves, and will no doubt receive, encouragement.

The Island and the War.

The need of the Censor's vigilance is recalled by frequent gaps in the Greek newspapers, which follow closely the war and the fortunes of Greece. A gloomy view is taken of the situation at Athens; but trust is expressed that, happen what may, events will end happily for the future of Hellenism.

Greeks arriving at Famagusta on April 25 brought rumours of disorder and bloodshed in Athens and the Piræus, in connection with quarrels between Venizelist and anti-Venizelist factions. Great anxiety is felt on account of the political divisions and animosities.

Quiet reigns throughout the island, but it is felt that at any moment it might, owing to its geographical position, become a scene of activity and usefulness.

NEW EGYPTIAN PASSPORT REGULATIONS.

The following is a translation (taken from the *Egyptian Gazette*) of a Press Bureau communication on the subject of the entry and departure of persons to and from Egypt:—

Everybody desirous of obtaining a permit to quit Egypt with or without the intention of returning must send his request to the Permit Bureau at the Cairo, Alexandria, or Port Said Governorate, according to the place of residence. These requests must be presented at least fourteen days before the proposed date of embarkation. As regards entry to Egypt, the request must be as follows:—

If the petitioner resides in Great Britain the request must be sent to the Military Permit Office, 19, Bedford Square, London.

As regards other parts of the Empire or possessions of the Allies, the requests must be addressed to the nearest Passport Office. If the petitioner is outside the British Empire the request must be addressed to the British Consulate which is the nearest to the place where he resides at the moment of presenting his request.

In all cases the request must be presented to the above-mentioned authorities after taking into account the time necessary for them to arrive in Egypt at least before the proposed date of embarkation. In urgent cases requests can be made by cable in the way mentioned above at the expense of the petitioner.

As one can see by the foregoing, the principle to be followed is most rigorous. At the same time, it has been decided to lighten these measures to a certain limit for persons of British or Allied nationality who have actually their residence in Egypt.

As regards these, the permit to return to Egypt or to leave it and to a return there later cannot naturally be considered as a definite engagement on the part of the Egyptian authorities. If, meantime, the situation changes in consequence of unforeseen circumstances, and although it is to be hoped that there will be no need to annul permits already granted, it is the duty of the petitioners to take careful note of the above-mentioned conditions.

Such persons can now know that the permit to leave Egypt includes, as regards the Egyptian authorities, the authorisation to return to Egypt on condition, first, that no unforeseen circumstances of a character to change the situation have taken place in Egypt, and, secondly, that during their residence in Egypt or elsewhere these persons have not given grounds to the authorities of the countries where they have sojourned for doubts and suspicions. In order to conform to this last condition, such persons must fulfil the aforementioned formalities.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, May 2.

The Liberals and the Government.

The increasing activity of the Venizelist party—which is constantly getting into closer touch with the people, as recorded in my last letter, by means of its official publications, by public meetings in the principal towns, and by participating in the by-elections at Chios and Mytilene—is causing more and more anxiety to the Government and in high military circles. Realising that it is losing ground, the Government has been doing everything in its power to put a stop to this state of affairs.

It is the public meetings, by means of which the Liberal party is seeking to enlighten public opinion regarding the dangers of the country's present foreign policy, that have chiefly alarmed the Government, which fears the light as a certain unmentionable person is said to fear the Cross. But these meetings, which are all held behind closed doors, are expressly allowed by the Constitution as a public right, and nothing could be done to put an end to them. Therefore, other means had to be devised to undermine the popularity of the Liberal party; thus we have had invented the danger of allowing Serbian troops to pass through Greek territory, referred to in my previous letter, and M. Venizelos has been represented by the Governmental Press as plotting with the Entente Powers, who would restore him to power so soon as they—with the help of the Serbian army—had swept away the present Government and deposed the King! Every morning the Government's journals sounded the alarm about the "grave internal dangers threatening the country," which "the leader of the Liberals wishes to hand over to the enemies of Greece." Such was the language of the journals that published daily telegrams from supporters of the Gounarist party living in villages along the railway, who threatened to oppose the passage of Serbian troops.

The Military Agitation.

This "internal danger" having been created, and the enemy having been denounced, it was necessary to bring about a rising against him—a rising that should make it necessary for the Government to take vigorous action, by which it might rid itself of any danger from the Liberals. Accordingly two Ministerial evening papers—one of which, the *Neon*, is regarded as the organ of M. Gounaris, the Minister of the Interior—threw the country into a state of ferment by announcing that a fresh military revolution was imminent. According to these journals, the army officers, unable to remain inactive in face of the dangers threatening the country and the dynasty, had been taking counsel together, and had determined to mark openly their disapproval of the attitude of certain people, who, by their intrigues, favoured the passage of the Serbian troops across Greece. It was even stated that the officers considered that the incident of the bomb being thrown at the Bulgarian Legation was not unconnected with the Liberals' agitation, and that proofs of the resolution arrived at would be forthcoming, probably on that day (April 14/27). The second paper referred to—the *Hesperini*—had also been publishing a series of articles, attributed to an officer of the league that was supposed to be in course of formation, who represented that the whole army, for which he claimed to speak, was on the point of rising against those who threatened the country's independence.

The impression caused by these alarmist statements was all the more marked, and the uneasiness all the greater, because no official denial of them was forthcoming the next day either from the Press Bureau or from the Ministry of War. This led to the belief that the agitation, if not actually engineered by the Government, was at least tolerated by it. Be that as it may, it appears that it was got up by a number of infantry and cavalry officers, but that their initiative met with no encouragement from the other officers, who failed to see any necessity to reaffirm their loyalty to the dynasty and the country, or to embark upon counterplots against dangers and enemies that existed only in the morbid imaginations of certain interested parties. Thus, the movement has been disapproved by the great majority of the officers. Moreover, the Greek Army, which fraternizes with the people, has never embarked upon any movement without the co-operation and approval of the people, who, far from regarding M. Venizelos as a traitor and an enemy to his country, entertain for him the same devotion as for the King. So the *coup* has fallen through; and there was no public manifestation, no procession of officers through the streets of Athens, either on the day mentioned or the next.

Two days later the commander of the First Army Corps issued a somewhat enigmatical *communiqué*, stating merely that the rumours regarding the formation of military leagues and other manifestations had no *raison d'être*, since the officers are faithful to their oath, and fully conscious of their duty towards their King and country. So the curtain is rung down on the little comedy.

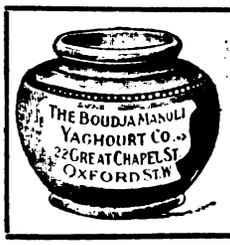
M. Venizelos on the Transport Question.

In last Sunday's *Kyrix* M. Venizelos published an important article on the passage of Serbian troops through Greek territory. In this article—which the Censor has strictly forbidden to be telegraphed abroad—the leader of the Liberals sets out to prove that the Government's intransigent attitude on this question may cause serious danger to the country in the future by alienating Serbia, her only ally in the Balkans. He also makes an important revelation; stating that in the treaty between the two countries, which, having never been denounced, is still in operation, there is a condition that if one of the contracting parties is at war with another State, and the other contracting party is not bound to participate in such war, the latter must nevertheless maintain an attitude of benevolent neutrality towards its ally, and must mobilize a force of fifty thousand men to assist its ally's operations.

This revelation has greatly exercised official circles, for it reveals the fact that in refusing to allow passage to the Serbian troops Greece is practically violating the treaty. M. Venizelos also remarks that since Greece, without having any treaty with Germany, Austria, and Bulgaria, has allowed their troops to invade Macedonia in order to attack the Franco-British forces, she can hardly refuse the latter permission to bring up reinforcements through southern Greece without being charged with partiality towards the Bulgaro-Germans at the expense of the Serbians. Finally, to avoid all difficulties, the *Kyrix* suggests that the Serbians should be asked to pass through without their arms, which should be sent round to them by sea.

The Cabinet and the Entente.

Rumours of the fall or of the reconstitution of the Cabinet crop up each week. However, it still survives. In order to avoid any appearance of exaggerating, I will confine myself to quoting the following description of the state of the Cabinet from the *Embros*, one of the principal organs of the Gounarists:—"It is certain that the Government is not equal to grappling with the events which it is called upon to face. The difficulties increase every day, and the King will soon have to consider—if he has not already considered—that he requires a Government. The policy of the present Government is a mass of weaknesses, vacillations, hesitations, contradictions. Certainly from the moment it was called to power this Government was not destined to be agreeable to the Quadruple Entente. Nevertheless, it might have avoided giving such an impression of opposition and personal pique in regard to the questions which have brought it into conflict with the Entente."



THE WORLD-FAMOUS

YAGHOURT

may be obtained, in 6d. and 1s. jars, of

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, April 23.

Greek Easter.

In consequence of the Greek Easter the people of Salonika have had more holidays than working days during the past week. As I pointed out in a previous letter, Saturday is the Salonika Sabbath, when all Jews close their places of business, while on the Christian Sunday they usually do a larger trade than on any other day; but on this Easter Sunday they have followed the example of their Christian friends and made it another day of rest. All shops are shut, but, of course, the cafés and restaurants continue open. As regards the observance of our Sunday, Athens forms a complete contrast to Salonika. In the capital the shops are always closed on that day, and things are almost as dull as in the streets of London.

Fighting on the Frontier.

Although the Allies are in touch with the enemy almost daily, the fighting has hitherto been confined to artillery duels, or skirmishes between patrols. On the other hand, the aviators on both sides have been exceptionally active during the past week. The Germans have repeatedly bombed Karasouli and other positions held by the French, without, however, causing appreciable damage; while the French airmen have made frequent visits to Doiran, Ghevgeli, Strumnitza, and other enemy positions near the frontier. But the finest feat of the week was a flight to Sofia by one of our daring aviators, who dropped several bombs in the Bulgarian capital. We all heard some months ago that King Ferdinand was so much afraid of hostile aircraft that he had a double roof constructed over his palace to protect himself from their possible attentions. It is said that on this occasion the efficacy of this extra roof was put to the test, but, of course, the French aviator was not able to observe the damage he had caused. He himself returned safely to his base here.

Several attempts have been made by enemy airmen to re-visit Salonika. Twice during the past week alarms were given, and the electric light was suddenly switched off, but so far no bombs have fallen here since the great raid of March 27. We may, however, be "strafed" any night by our savage foes; and we must just take our chance. As I have already recorded, there has been a considerable exodus of Greeks from Salonika, but not many persons of other nationalities have followed their example.

Russian Troops for Salonika.

The unexpected arrival of Russian troops at Marseilles has aroused much interest here, and everyone is hoping that they will come to Salonika. The Serbians would be only too glad to fight side by side with their Slav brethren; while the Bulgarian soldiers, it is believed, would be most averse from fighting against their liberators. If the Russians come they will certainly be sent against the Bulgarians, who will probably desert in large numbers, for from all accounts they are at present very discontented with their lot.

I had a conversation with General Sarrail a few nights ago on the subject of the Russian troops and their ultimate destination. Whilst confirming the news that a large body of our Russian friends had arrived in France, he would not say definitely whether or not they were intended for Salonika. All he said was that their presence here would have an excellent effect, and that if it was decided to use them at Salonika he would be delighted to have them. From the General's manner, however, it seemed to me that he had no doubt on the subject, and that we may very soon expect to welcome our brave Allies from the East.

Suspended Newspaper Reappears.

The *Nea Alithia* (*New Truth*), which had been suspended by General Sarrail, as recorded in my last letter, has now been allowed to reappear. Although a *Boche* production, its tone is gradually becoming milder.

A telegram received from Athens last Saturday reported that a squadron of Allied aeroplanes from Mytilene had raided the environs of Smyrna. The German official *communiqué* issued on Sunday reported that Allied aviators had dropped bombs on Mitrovitza and Doiran, but had been driven off by anti-aircraft guns.

STATE OF CONSTANTINOPLE.

By the kindness of a correspondent, we are able to reproduce the following extracts from letters written from Constantinople. The news they give is somewhat belated, but it may be regarded as quite trustworthy, and is of value for checking previous reports:—

March 13.

Things are getting warmer here every day. Many Austrians are here and are quartered in Stambul and also in Taxim Barracks. They are the men who manned the heavy guns at the Dardanelles, and are soon to go to the Caucasus. . . . . Bread is sold now to the people, one loaf to five people. The price is kept down, but at a great loss to the Government, who are losing money by selling at the price, 5 piastres. Coffee cannot be bought, the supply is finished. Sugar, when you get it, costs a medjedie a pound; fish, five piastres per pound; beef, and mighty tough at that, 8 piastres the pound; pork, 12 piastres the pound. Coal (very poor Black Sea stuff) is 40 medjedies per ton. Electric light is double what it was before the war—the trams stop running at 10 p.m., and some of the lines are out of use entirely. The "morale," as they term the spirit of the fighting men, is poor here. The Germans are getting sore at the Kaiser; the Austrians hate the Germans; and the Turks also hate the Germans—and the hate is reciprocated. Some of the Austrians are very good fellows and mostly express their opinion openly in regard to the Kaiser and the Germans.

In regard to our old friend (the Heir Apparent). His baggage was at the Sirkeji station, and he was to leave the same day as the American Ambassador and on the same train, and was supposed to be going either to Germany or Switzerland for his health. His father met his death in similar manner. . . . Other reports claim that he shot at Enver Bey some time ago and then Enver arranged to finish him off. The story here is that the Prince's throat was cut. You can suit yourself and believe what you like about it. My idea is that anything can happen and nothing ever is out of reason in this city.

You probably heard of an explosion at one of the powder magazines and factories some time ago. According to the local papers there were a "few casualties," but the number of killed and wounded was over 2,000.

There was a fire here last Thursday afternoon—a hospital at Chichli, near Bomontis—it burned also three buildings. Fifty wounded soldiers were burnt (Turks). There was no water available. The rumour or report is that the Germans wanted the Turkish doctors to let the Austrians have charge and management of the hospital, *so the fire* prevented the change in management.

A German professor is here who is to work out an economical plan for the distribution of food. I hear that the butchers' shops are closing to-day, that the supply of wheat from Roumania is stopped, and that the bread will now run out.

March 18.

Things look very serious over here now; yesterday I saw several horses, such as they are, drop in the street from hunger. One was lying dead, and you could see that it was a case of starvation. There are about 1,200 (twelve hundred) soldiers here who were taken prisoners by the Germans. They are the Morrocans, and . . . come from the French colonies in North Africa. . . .

There is an expert here on economy. He is a German professor, and has a whole lot of land under cultivation in the interior, and claims that if it rains he will have plenty of food for Constantinople and some to sell! . . . . All foodstuff is still up high, and although the papers say sugar is at 10 piastres the pound, or about 40 piastres the oke, it costs 50 or, say, 75 piastres the oke *when* you are fortunate enough to find it.

What is going on in Asiatic Turkey we don't know. All the hospitals that were American Red Cross are now taken over by the Turks. The reason for this was that the American Red Cross said they could not stay and nurse sick people, but wanted wounded ones, so the Turks said they would attend to it themselves. About 12,000, it is said, cavalry (Turkish) leave the Scutari barracks this week for Baghdad or that vicinity.

ARMENIAN RED CROSS & REFUGEE FUND

FOUNDED DECEMBER, 1914.

President, VISCOUNTESS BRYCE.

Donations are earnestly entreated for the relief of sickness and distress among 250,000 destitute Armenian refugees in the Caucasus, whose condition is "pitiable in the extreme." Relief pay is less than 4d. per head a day. Food and all necessaries of life are very dear. A copy of the Report for last year will be sent to inquirers. All work in connection with this Fund is voluntary. Contributions will be thankfully received and acknowledged by the Hon. Secretary and Treasurer, Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W. Cheques may be made payable to the Armenian Red Cross and Refugee Fund; they should be crossed "London and South Western Bank, Holland Park Branch."

THE AUSTRIANS IN BELGRADE.

(From a Correspondent.)

The truth about the conditions now prevailing in Belgrade may easily be gathered even from the Austrian papers or those papers in neutral countries whose reports are framed in accordance with the news provided by the Austrian Press. From stray items of news, from the official notifications and orders, and from isolated phrases, anyone reading what these papers have to say will readily understand the miserable state of things in that unfortunate city. The harsh and absurd behaviour of the enemy is affecting every branch of public life.

Austria's notorious partiality in matters religious is abundantly illustrated by the following instance. The Swiss papers of April 3 contain the following information, transmitted by the Vienna Press Bureau:—

The War Press Bureau reports as follows: Although there were about 8,000 Roman Catholics in Belgrade before the war, Belgrade possessed only one small Roman Catholic church, i.e., the small Chapel of the Legation. It has been one of the first cares of our administration to find suitable temporary premises, so that the numerous Roman Catholics in the Army and the civil population might be able to attend divine service. After making the necessary alterations, the Throne Room of the ruined Royal Palace was chosen for this purpose. The chaplain to the forces, Bishop Bjelik (who arrived in Belgrade in March) held the first service there on April 2, in the presence of the Military Governor, the garrison and a devout congregation numbering many thousands.

It is obvious from this piece of news that Catholicism is enjoying special protection, in spite of the fact that Græco-Orthodoxy is the State religion in Serbia. For the sake of accuracy, it may be added that the number of Roman Catholics mentioned as being in Belgrade (8,000) is greatly exaggerated. It is also very significant that it is the Throne Room of the Royal palace which has been turned into the Roman Catholic chapel, and not some other hall in another building.

From the financial point of view the enemy is squeezing the country in every possible way. We have a plain proof of this in the Vienna papers, which report the following notification of the Austro-Hungarian High Command:—

The Serbian provinces occupied by the Austro-Hungarians must bear the cost of all their requirements. Consequently all taxes levied must be handed over to the administrative authorities. If the military command should be compelled to defray expenses owing to a deficit in the revenue, then such financial assistance on the part of the authorities will constitute the "debt of the occupied provinces."

We are also furnished with further news of what Austrian banks and financial institutions are doing in Serbia. The *Pesti Hirlap* of April 8 writes as follows:—

The latest ambition of the Austro-Hungarian banks is to open branches in occupied Belgrade, where there are already seven branches. Before the war only the Commercial Bank and the Magyar Bank had branches in Belgrade; to-day every bank is endeavouring to establish a branch in Belgrade. We understand that three banks have newly established themselves there: the Anglo-Austrian Bank, the Union Bank, and the Czech Industrial Bank. In Belgrade there is already keen competition between these banks.

The eagerness of commercial agents, etc., to fill their pockets with Serbian money may be seen from the following extract from the *Neue Freie Presse* of April 8:—

During the last few days Belgrade has been *simply overrun* with all sorts of agents and commercial travellers from Austria Hungary, whose business *is often out of keeping* with the prevailing conditions.

Positive news enables us to gain an insight into the civil administration. The *Beogradske Novine* of March 21 announces that in virtue of an order by the Chief of Police citizens are permitted to go out of their houses during the morning. The inference is obvious: up to that date the unfortunate citizens of Belgrade had not been allowed to leave the house during the morning! On March 22 the same paper points out to the inhabitants of Belgrade the necessity of providing themselves with permits and always carrying these, because the police have been frequently compelled to arrest persons who could not identify themselves. In issue No. 45 of the *Beogradske Novine* we find the following:—"For the spreading of false and unfounded reports, calculated to cause uneasiness among the population, the police have arrested a lady." Similar items of news are of frequent occurrence in the papers.

It is also worth while to mention the absurd prohibition of the use of the "Cyrillic," or Serbian, alphabet. As your readers are probably aware, there is only one Serbian paper—the *Beogradske Novine*—at present published in Belgrade, and this is printed in Latin type, and not in the Cyrillic. But to what extent the repression of the Cyrillic alphabet is being carried may be gathered from the *Beogradske Novine*, No. 52, which reports as follows:—"A few days ago began the removal of all *inscriptions on public buildings*, and of the names of streets in Cyrillic lettering. All inscriptions on electric trams in Cyrillic lettering will be replaced by others in Latin characters."

Such are the conditions in Belgrade only according to the reports of the Austrian Press. Austrians themselves, therefore—as is obvious from the above items—admit that the national Serbian Church is intentionally neglected; that the Serbian alphabet is publicly suppressed; that the enemy is squeezing the country in every possible way, and filling his own pockets with the money of the poor people of Serbia; that the citizens of Belgrade were not allowed to leave their houses in the morning; that they are molested in every manner by the police when going out; that ladies themselves are arrested for (as we may suppose) their quite innocent talk; and so on.

What evils, then, are the Austrians perpetrating in Serbia to which no reference is made in their papers? The worst evils, no doubt. The latest information from a most trustworthy source as to the state of the unfortunate people of Serbia is the following:—

The population is simply starving. After the many epidemics that the Serbian population has endured up to date, a new illness has broken out. In consequence of starvation and other exceedingly bad conditions, consumption has become the prevailing disease in the country. Thousands are suffering from it, and almost every house in Belgrade and other towns in Serbia has one or more consumptive inmates.

SAITE TOMBS DISCOVERED.

In a letter to the *Morning Post* Mr. George Fraser announces that an ancient tomb was discovered lately in the private grounds of the ostrich farm at Mataria, a suburb of Cairo. The clearing of this tomb led to the discovery of another adjacent tomb in Government land. The tombs are of the Saite period, or XXVIth Dynasty, dating about 600 B.C. The chief one was constructed for a high priest of Heliopolis, the ancient On of the Bible. The tombs had been robbed in ancient times, but the Museum authorities have recovered some sculptured blocks, the scenes on which are imitations of Old Kingdom work. It is hoped to find more tombs and to recover more sculptured blocks when the water level falls in the low Nile season in June. There are many Saite tombs in this district which were built in ashlar in a great pit or excavation, and were then filled in and over with sand. Fine examples of Saite tombs exist at Sakhara and near the Pyramid of Hawara.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia." Flat Iron Building.

TANGIER TO TEHERAN.

Under the effectively simple heading "Balkan Verses," the usually staid *Oxford Magazine* publishes some rhymes which I have read with admiration. One of them runs:

A Bulgar of Dedeagátch
Got a sitting of hens' eggs to hatch.
These he put on a chair,
But forgot they were there;
And so parts of his trousers don't match.

A second, which is provided with a footnote, explaining that "han" is Balkanesque for "inn," is as follows:

There was an old lady of Yánina,
Who looked on the wine in a *han* in a
Town where, 'tis said,
The wine's very red,
So the local police promptly ran in her.

This effort lacks the tragic note of No. 1, perhaps, but as a courageous attempt to grapple with difficulties in the way of finding rhymes it is not without merit. I had always understood, however, that Yanina was pronounced another way. If I am right I would suggest as a substitute:

An old lady who dwelt in Yanina
(A town some way south of Florina)
Never washed. Any way,
It is quite safe to say,
She could easily, quite, have been cleaner.

That gives, I venture to think, the high moral tone which is so desirable in poems of this class, combined, be it observed, with geographical information of some value in these days.

***

The desirability of thus combining instruction with mere beauty of wording was clearly not entirely absent from the mind of my brother bard. For a third of his lyrical gems contains a graphic touch, which will, I trust, prove sufficient warrant for its inclusion in this collection:

A quiet old person of Trikkala
Disliked locomotion vehicular;
For going the pace
Is quite out of place
In a land in the main perpendicular.

That last line certainly describes a good deal of South-Eastern Europe.

***

The late Sir Eldon Gorst, after a tour of inspection to the Sudan, declared in his report of 1909: "I do not suppose there is any part of the world in which the mass of the population have fewer unsatisfied wants." That was seven years ago. I wonder what, in this respect, are the conditions of the country to-day. It is not seven years since I was in the Sudan, and on the occasion of my last visit I found the people happy, strong, and contented, but wanting perhaps a trifle more than when I had previously known them. "The little more—how much it is!" and human nature is human nature in the Sudan, as in other parts of the world. How very desirable is the "little more" that lies just beyond our reach. In the matter of mere contentment the savage is probably easily first among the human race. He takes what he can and the rest does not trouble him; for one thing, he knows so very little of the things that might, in other circumstances, be his. But when we take a people out of savagery and place them firmly on the road to knowledge, we give them, among other things, ambition, and we all know how thorny is the road by which it leads to success. If the conditions described by Sir Eldon in 1909 had held good in the Sudan we should not see the country in its high state of prosperity now. When all desire is satisfied there remains no incentive to strive, and progress ceases. It is not thus in the Sudan; the grip of education is tightening upon its people, and they must go on and on, alternately developing new wants and the methods of satisfying them.

***

I know that it is well that this should be so, and yet sometimes it is not easy to look upon progress with a sympathetic eye. Especially is this the case now, when the Eastern world is busy gathering the fruits of a hardly won civilisation. But I only think these things when depression has, for some reason, gripped me and I crave for the sun-swathed peace of the Sudan as I first knew it. In my heart I know that the old Adam is at work in all climes and among all peoples. It is but in the magnitude of the struggle that there is any difference between this European War and the tribal squabbles of Central Africa. We shall come to lasting peace only when ambition is dead; and from that day heaven defend us!

***

I read the little paragraph in last week's NEAR EAST (p. 28), about the Germans buying up dogs in Roumania, with much interest—as was natural. For did I not in these columns, a few weeks ago, reproduce some remarks from a correspondent who suggested that the name "Dogeaters" was suitable in every way as a substitute for "Huns," and in no respect more so than in being true? Well, I have my suspicions about the dogs referred to by the *Journal des Balkans* as being "used in the German Army for drawing Maxims." "Sausage dogs"—dachshunds, I mean, of course—have always been popular in Deutschland, and, having regard to the shortage of meat in that country just now, I should not be surprised if "dog sausages" were quite esteemed; though in all likelihood they are served under some other name. Yes: I am very sorry for those exported Roumanian bow-wows. It looks like a case of dogs going to the dogs, in more senses than one.

***

So, after all, it seems that Serbia is not to have a navy of her own just yet. I am not surprised; for until they have a port of their own it is rather hard to see what our brave Allies would do with warships, which would, in fact, be likely to turn out a kind of maritime white elephants. Moreover, when first they get back their own country—with a tidy slice of the enemy's territory added on, I hope—the Serbs are sure to find their hands quite full enough without taking on any naval problems. That they will set to work to acquire a mercantile marine of their own is possible, and even probable, for we all hope that they will develop the natural resources of their land as rapidly and as fully as possible; and to do that they will have to build up an export trade. But their Allies will be quite willing and able to look after their interests if any "naval demonstrations" should be required in the near future. The friendships formed by this war are surely not going to be forgotten or allowed to cool in a hurry; and Serbia will have plenty of time to think about buying, or building, her Navy. I hope, however, that it will not be very long before a British squadron will be paying a friendly call at Serbian ports. Perhaps the advocates of a Serbian Navy are thinking about return visits?

***

Recent events in Armenia have had a rather astonishing effect upon some non-resident Armenians and their sympathisers. The mid-April number of a paper called *The New Armenia*, which is published in New York, gives evidence of this. The greater part of the number referred to is devoted in the usual manner to subjects likely to enlist sympathy for the downtrodden country, and to articles by which renewed hope and courage may be imparted to her people. I was quite unprepared for humour when, in glancing over the paper the other day, I came upon a dialogue entitled "The Stalker and the Oracle." It began:

Stalker: I say! Can you tell me why the newspapers publish Armenian victories in Armenia as "Russian Victories"

Oracle: Because big bees fly high; and little bees make the honey.

Stalker: I say! Can you tell me how Great Britain has won her victories in this war?

Oracle: Utilising printer's ink in the British Press; and invoking the shades of Nelson and Wellington.

Further down the page is a picture representing the lion and the bear securely netted and in charge of a German eagle, while in the foreground an Armenian mouse is coming to the rescue, with the words: "You are both in a bad fix now. But I have come to bite your cords." This may be rollicking, if sarcastic, humour, but sarcasm, however humorous, at the expense of the Armenian mouse, is surely a little out of place just now in view of all that has happened during the past year or so.

***

A correspondent has sent me quite a batch of old newspapers from Salonika, and I have found a good many items of interest in them. Some of these items I should much like to reproduce; but I fancy I had better not do so, as they contain "information" that *might* be "of use to the enemy." There are others, however, to which no such objections attach; and it may interest some readers to see how news is—or was; for the papers are all some weeks' old—served up to our friends in Salonika. The task of selecting is thoughtfully made easy for me by my correspondent, who has pencilled observations, which seem to indicate that he finds the "English" a little trying. Thus, in a "Russian Communique," I read: "In the region of North Strypa, our lighters took an enemy trench," etc. My correspondent has marked the word "lighters," and inquires pathetically: "Were the trenches *full* of water?" And a few lines further on I find: "In pursuing the Turks towards Mamahattoun we have taken two *canons*"—the italicising being the work of my correspondent, of course. I am sorry for the clerics. Then, in one Italian communiqué, we are told: "The enemy has succeeded *to establish* himself in the advanced positions of our defence . . . the duel of artillery is still *sursuing*"; and in another: "We have put to rout two enemy calumns . . . and *spoilt* the station of Ploasch." And the summary of a speech by M. Skouloudis, winds up by saying that that eminent politician "ended in declaring that the Northern Epirus is an integral *party* of the mother country." Evidently our language has it difficulties for a foreigner, however excellent his intentions.

CORSAIR.

NEAR EAST BOOKSHELF.

NABOTH'S VINEYARD.*

Sir Mark Sykes has a knowledge of Turkey and its inhabitants that is based upon much travel and keen observation; he likes them well, upon the whole—for he has his dislikes, too; and his manner of describing them is vigorous and original. The appearance of a book by him is, therefore, by way of being an event to those who share his tastes, if not his opportunities of gratifying them, and for such readers the present volume affords a rare treat. If they have any fault to find with the book it will assuredly be that the author has crowded too much material into his six hundred pages. We would not, it is true, be without one of those pages. Indeed, we would gladly see both Part I., which is historical, and Part II., which is a record of journeys made between the years 1906 and 1913, expanded; but we should have preferred to have them in two distinct volumes; and certainly we should have been glad to have the numerous maps that are scattered through Part I. so placed as to make reference to them, and comparison between them, more easy. For the purposes of this review we propose to treat the book as if it had been published in two volumes.

The historical section covers ground with which many readers are more or less familiar, and for this reason it is, perhaps, less notable than Part II. That is not, however, to say that it is not of considerable value. Sir Mark does not attempt to give us "a detailed account of the history of Armenia, Asia Minor, Syria, Mesopotamia, and Arabia," which would, indeed, be impossible in any one volume; but aims at selecting "those developments whose results have a direct bearing on the present composition of the region." We detect no signs of original research, but there is no lack of originality in the presentation of facts or in the occasional criticisms to which we are treated; and both the letterpress and the maps indicate that the author has exercised much pains and discretion in selecting his sources of information. The result is a sketch which, though rather meagre in parts, is trustworthy in the main, and one which is always interesting, and in parts brilliant.

The story of the swift Arab conquest and the growth of Arab culture, of the coming of the Seljuks and the Ottomans, is one that could hardly be dull even in the hands of the prosiest and most pedantic of writers. And Sir Mark, whatever his weaknesses may be, is certainly neither prosy nor pedantic. Of the spread of Arab power he gives a vivid description; and sums up the effect produced on our minds by the phenomenon as follows:—

> We stand amazed at these conquests; words fail one when the magnitude of the achievements is realized. Where is Medina? Where is Badr? And where is Kashgar? What is this unknown force that has burst upon the world? What manner of men are these Moslems? There is nothing in history to equal their tale—this is not the conquest of Alexander with the culture of Greece, the valour of Macedonia, and his own unfettered genius to aid him. Nor is it the dull impact of a barbarian horde thrusting blindly in search of victual and pasture; nor yet is it the slow and deliberate annexation of various small States by an overwhelming organization, as in the case of Rome—it is the Arab of the desert, into whose head an idea has come, and he is giving that idea to the world.

The description of the early days of Islam, and especially of the conquests in Syria and Mesopotamia, seem to us by far the best things in this historical part of the book; though the account of the rise and fall of Palmyra, in chapter six, with the shrewd comments upon Odenathus and Zenobia, is an admirable piece of work. We like especially the terse summing-up of the result of the victories at Antioch and Emessa:—

> The glittering bubble of Palmyrene ascendancy had been pricked; all Syria welcomed Aurelian as it had welcomed Romans, Parthians, Persians; as it had welcomed Alexander; and as it would welcome England, France, or Germany to-day. The Syrian Arab has long had the knack of falling in with the plans of a successful conqueror.

At the present time the description (page 283) of Bayazid's lightning campaign in eastern Asia Minor will inevitably suggest to the reader a comparison with the recent Russian successes in the same region; and in just the same way the accounts of the recurrent treachery of the Arabs of Kufa and Lower Mesopotamia will remind him of the tales of treachery on the part of the modern descendants of those people, of which we have heard only too many of late. Hussein, the son, and Zaid, the great-grandson, of Ali, both fell victims to the spirit of intrigue and the sheer cowardice that seems always to have characterised the men of Kufa and its district; and the descriptions of their deaths given by Sir Mark are amongst the most moving things in his book. The portrait of Ali himself is, by the way, hardly a flattering one, perhaps hardly a just one; but, on the other hand, Abu Bekr—"the simplest and most lovable man Arabia has ever put forth"—and Abu Talib receive full justice; so, too, does the Khalif Omar; and when Sir Mark is dealing with a man of action, such as Khalid ibn Walid or Moawiya, or a real statesman, such as the great Harun-al-Rashid, he handles his subject with skill and affection. The sombre story of the Barmecides and of Harun's efforts to stave off the end that, as he realized, was inevitable is particularly well told; and the description of Baghdad in the days of Mansur and his successor will be read with unusual interest at the present time.

The account of the Turks' appearance on the scene and of their irruption into Europe is not so satisfactory as that of the early days of Islamic growth. It gives one the impression, indeed, that the author was pressed either for time or for space when he wrote it, for certain events of first-class importance, such as the capture of Constantinople, are dealt with very briefly. Our author makes it clear, however, that the conquest of Constantinople, so far from being an unmixed gain to the victors, actually carried with it the seeds of that decay which has ever since been spreading steadily. We are shown clearly how, even while the Byzantine capital still held the Turks at bay, the latter were already beginning to be "corrupted by the alien atmosphere of intrigue and treachery which crept into their domestic life" as a result of their contact with the decadent empire. And the capture of Constantinople is described as "a crowning mercy and yet a fatal blow" to the Turks:—

> So long as the Ottomans could draw science, learning, philosophy, art, and tolerance from a living fountain of civilization in the heart of their dominions, so long had the Ottomans not only brute force, but intellectual power. So long as the Ottoman Empire had in Constantinople a free port, a market, a centre of world finance, a pool of gold, an exchange, so long did the Ottomans never lack for money and financial support . . . but Constantinople as the city of the Sultans was Constantinople no more; the markets died away, the culture and civilization fled, the complex finance faded from sight; and the Turks had lost their governors and their support. On the other hand, the corruptions of Byzantium remained, the bureaucracy, the eunuchs, the palace guards, the spies, the bribers, go-betweens—all these the Ottomans took over, and all these survived in luxuriant life. The Turks in taking Stambul let slip a treasure and gained a pestilence. The wisdom, learning, art, and philosophy fled to Europe to hasten the Renaissance and elucidate the problems of the new learning, the villainous cruelty and falseness remained to distort and divert the development of the Ottoman Empire.

Frequently Sir Mark allows himself a certain flippancy of style that will probably horrify the conventional historian. On page 163, for instance, we read:—

> Merwan, at this juncture, appears to have shown signs of having some intention of playing his adopted son Khalid false. At any rate, Yazid's widow's suspicions of her second husband's honesty were so great that she decided to resume her former state, and one night dropped a cushion across Merwan's face and sat upon it until life was extinct.

If history were always written like that it would be a more popular subject with the average schoolboy than it is! The method has its advantages. It very often puts life into incidents that, owing to their Oriental character, are difficult for the Englishman to picture truly. Thus the spirit working at the back of the intrigue to overthrow the Ommeyads in favour of the Abbasids is well brought out in chapter xviii., where we have a lively description of the arrest of Sheikh Jodair-al-Kerman, his imprisonment and escape, his quarrel with the Governor, Nasr, and the sudden outbreak of riot—all typical of the East. And we are grateful to the author for many such vivid passages.

It is regrettable that such good work is spoilt, to some extent, by numerous misprints. The author's absence on active service doubtless accounts for many of these; but others—such as "initiated" for "imitated" (p. 224), "rights" for "rites" (p. 281), "must have have" for "must have had" (p. 25), etc., etc.—might surely have been avoided.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. May.	1916. May.		1334. Rejeb.	5676. Iyar.
19	6	Friday	16	16
20	7	Saturday.....	17	17
21	8	Sunday	18	18
22	9	Monday	19	19
23	10	Tuesday	20	20
24	11	Wednesday	21	21
25	12	Thursday	22	22

To-day is the birthday of H.I.M. Nicholas II., Emperor and Autocrat of all the Russias.

Wednesday is the birthday of Princess Elizabeth of Greece, second daughter of Prince Nicholas, King Constantine's second brother, who was born at Tatoi, May 11, 1904 (O.S.).

The Zil-es-Sultan left London on Saturday for Paris.

Lady Hamilton Lang and her daughter have left Campden Hill Court, W., and have taken a country house, Hillersdon, Lower Bourne, Farnham, Surrey.

Lady McIlwraith, wife of the Judicial Adviser to the Egyptian Government, is spending the summer in this country.

On April 28 Sir Henry and Lady McMahon gave a dinner at the Cairo Residency, when the High Commissioner took the opportunity of investing Sir William Brunyate with the Insignia of a Knight Commander of the Order of St. Michael and St. George.

General Townshend and the other British officers who surrendered at Kut have arrived in Constantinople.

Mr. Einstein, the United States Minister Plenipotentiary to Bulgaria, who was in charge of British interests in Sofia, and who has actively exerted himself on behalf of British prisoners of war in Bulgaria (as described recently by our Bucharest Correspondent), arrived in London last Friday.

The Archbishop of Belgrade, who has been visiting London, has left for Petrograd, and will afterwards proceed to Salonika.

M. Chedo Miyatovitch, formerly Serbian Minister in London, who has been lecturing in America on behalf of his compatriots, has returned to London.

M. Nicolas Misu, son of the Roumanian Minister in London, arrived at the Legation on Monday from Bucharest.

Lewa Carroll Pasha, P.M.O., Egyptian Army, who accompanied the Prince of Wales on his way to Egypt, has now returned to the Sudan.

We are glad to see that Lieutenant H. C. Whittall, R.N.V.R., has been promoted to the rank of Lieutenant Commander, with seniority May 16.

Mr. C. R. Cooke Taylor, the Liberal candidate for Dulwich, who was a member of Lady Paget's unit for fourteen months in Serbia, is going to Corsica to look after the Serbian refugees.

A Constantinople report states that an attempt has been made upon the life of General Liman von Sanders.

Many of our readers in Alexandria will learn with satisfaction that Mr. A. W. C. Roll, of the staff of the Imperial Ottoman Bank in that city, who has lately been Acting Sergeant in the H.A.C., has been promoted to be temporary 2nd Lieutenant, and graded for purposes of pay as a Staff Lieutenant.

Mr. R. E. Blunt, son of Mr. G. Stratford Blunt, British Postmaster at Salonika, has recently come to this country and joined the Army "for the duration of the war."

Mr. Blunt's father, it is interesting to note, has had a very long experience of consular work in the Near East. In 1864 he was Acting Vice-Consul at Adrianople, and he has done good work at Erzeroum, Trebizond, Monastir, Salonika, Constantza and elsewhere. While at Erzeroum (1869-70) he received the thanks of the American Minister at Constantinople for assistance rendered to an American missionary who had been attacked and robbed by Kurdish brigands; and at Trebizond he was active in investigating an outrage committed on an Italian ship that was lying in the roadstead. He was appointed British postmaster at Salonika in 1899, and he is now also Danish Consul and Swedish Vice-Consul in that port.

Mr. E. A. Harrison, general manager for Messrs. Thos. Cook and Son (Egypt), Ltd., has returned to London from Cairo.

Mr. Richard Abdy, President of the British Chamber of Commerce, Alexandria, writes to the *Egyptian Gazette* to announce that it is proposed to collect funds for a memorial to the late Judge Lionel Sandars, President of the Court of Appeal. The memorial proposed is a tablet in Saint Mark's Church, Alexandria, and, should there be any surplus available, it is proposed to utilise it in founding a prize for scholars of Victoria College. Mr. P. W. Carver is acting as honorary treasurer, and subscriptions may be sent to him at his office, c.o. Carver Brothers and Co., Alexandria.

An engagement is announced between W. D. C. L. Purves, of the Sudan Civil Service, second son of William Laidlaw Purves, M.D., of Stratford Place, W., and Wimbledon Common, Surrey, and Mabel, younger daughter of Captain Arthur Maude, R.A.M.C., of Forest Row, Sussex.

On April 29, at the British Consulate, Alexandria, and afterwards at St. Mark's Church, the marriage took place of Captain Francis Eldon Daunt, R.A.M.C., 19th General Hospital, Alexandria, eldest son of Dr. F. E. H. Daunt, of Clapham, to Winifred Doggett, younger daughter of Sidney H. Wells, of Gezira, Cairo.

On April 25, at the British Consulate and at St. Joseph Church, Cairo, the marriage took place of Arthur Bevor Steele, eldest son of Mr. and Mrs. Thomas Bevor Steele, of Brisbane, Australia, and Ellen Mary Kathleen, only daughter of Mr. and Mrs. Littlewood, Gezira, Cairo.

As announced in THE NEAR EAST some weeks ago there were shut up in Kut with General Townshend and his force three British civilians—Mr. T. D. Cree, of Messrs. Blockey, Cree, and Co.'s Baghdad house, and Mr. A. W. M. Tod and Mr. J. L. Battey, of Messrs. Lynch's Baghdad and Busreh branches. We are glad to learn that information has reached London that all three of these gentlemen are well, and though they are, of course, prisoners in the hands of the Turks, no anxiety need be felt on their account.

It is interesting to note that Mr. Cree and Mr Tod were both made prisoners by the Turks at the outbreak of the war, when they were in Baghdad, and that they owed their release to Jemal Pasha, who treated all the British prisoners sent from Baghdad to Syria with much consideration and courtesy. Mr. Cree, we understand, had returned to Busreh in the hope of being able to arrange for the release of his wife and children, who, with other English ladies and children in Baghdad, had been retained by the Turks when the men were allowed to depart. Mr. Tod was engaged in looking after the interests of his firm in Mesopotamia; and Mr. Battey, who had only recently gone out to the East, and had been in Busreh, Baghdad, and Ahwaz, was assisting him at Kut.

The anniversary of the Sultan's accession was celebrated at Nicosia by the Moslem community, writes a Cyprus correspondent. Services were held in the mosques, the Ottoman flag being flown, and the minarets were brilliantly illuminated at night. The principal mosque is that of Ayia Sophia, a namesake of the Great Jami at Stamboul, and formerly the Latin cathedral: one of the finest monuments of French architecture in Cyprus. Another mosque held in great veneration by the Turks is that of Bairakdar, the first Turk who gained, and fell on, the ramparts during the siege of Nicosia in 1570. It was built on the spot where he fell. The day was celebrated by Turks throughout the island.

The Russian Ambassador and Countess Benckendorff gave a reception at the Embassy, Chesham House, last Friday evening, to meet the members of the Russian Council of the Empire and of the Duma. Among those invited were:—Earl Kitchener, Earl Curzon, the Earl of Bessborough, Viscount Mersey, Lord Robert Cecil, Lord Beresford, Lord Newton, Sir Edward Grey, Colonel Sir Mark Sykes, Sir Edward Cook, Sir Valentine Chirol, Sir Ralph Paget, Mr. H. J. O'Beirne, and Mr. L. Oliphant.

Count Tisza, the Hungarian Prime Minister, arrived at Shabatz in Serbia on Sunday, and later journeyed to Valievo.

Sir Francis Gore has resigned his position as honorary treasurer of the Serbian Relief Fund, and the Earl of Desart has resigned from the committee.

On Wednesday, at Gray's Inn, Mr. Stelios Demosthenes Pavlides was called to the Bar.

The funeral of Colonel Philip Edward Pope, late commanding 4th Dragoon Guards, whose death was reported in these columns last week, took place on Friday at Datchet Cemetery. Canon Edgar Sheppard, D.D., Sub-Dean of the Chapels Royal, officiated, assisted by the Rev. J. H. Harvey and the Rev. R. T. de M. Nixon.

APPOINTMENTS, PROMOTIONS, Etc.

It is officially announced that Sir Arthur Nicolson, who had desired in the ordinary course of events to leave the Foreign Office towards the end of 1914, consented at the request of the Secretary of State for Foreign Affairs after the outbreak of war to continue to fulfil the duties of Permanent Under-Secretary for Foreign Affairs for a further period. The strain of the work at the Foreign Office has, however, recently been very great, and on Lord Hardinge's return from India Sir A. Nicolson expressed his wish to retire, suggesting that Lord Hardinge might be willing to take on again the appointment which he held previously to his becoming Viceroy of India. The Secretary of State, with the consent of the Prime Minister, has asked Lord Hardinge whether he would be willing to resume work temporarily at the Foreign Office, and Lord Hardinge has consented to do so, but the time when the change will take place is not yet definitely settled.

A Teheran telegram announces the appointment of Prince Firman Firma as Governor of the province of Fars.

The *London Gazette* announces, under date of March 20:—The King has been graciously pleased to appoint Albert Charles Wratislaw, Esq., C.B., C.M.G., to be his Majesty's Consul-General for the Greek Territories administered by the Governor-General of Macedonia, to reside at Salonika; and Edwyn Cecil Hole, Esq., to be his Majesty's Vice-Consul for the Greek Territories administered by the Governor-General of Epirus, to reside at Jannina.

A telegram from Bordeaux reports that General Milo Matnovitch has been appointed Montenegrin Minister of War.

The Governor-General of the Sudan has appointed Mr. H. P. Hewins, Director of Commercial Intelligence, to be Custodian of Enemy Property under the Trading with the Enemy (Custodian of Property) Ordinance, 1916.

Captain A. H. Betterton, of the Derbyshire Yeomanry, and Captain C. H. Gore, of the Army Service Corps, have been attached to the Egyptian Army with the temporary rank of Bimbashi. The former officer has been attached for duty to the Camel Corps and the latter to the Department of Supplies.

Abdul Ali Khan Sadiq-es-Sultanah has been appointed Honorary Attaché to the Persian Legation.

The King has granted permission to Mr. Charles Henry Colson, of the British Naval Mission to Greece, to wear the Insignia of the Third Class of the Order of the Redeemer, conferred upon him by the King of the Hellenes in recognition of valuable services rendered.

The King has granted permission to Mr. Richard Francis Malachy Pearson, of the British Naval Mission to Greece, to wear the Insignia of the Fourth Class of the Order of the Redeemer, conferred upon him by the King of the Hellenes in recognition of valuable services rendered.

The *London Gazette* of Tuesday contained the official notification that the King has been pleased to grant permission to General Sir John Grenfell Maxwell, K.C.B., K.C.M.G., etc., to wear the decoration of a Grand Officier of the Legion of Honour conferred upon him by the President of the French Republic.

It is similarly notified that Major (temporary Lieut.-Colonel) Stewart Francis Newcombe, D.S.O., R.E., is granted permission to wear the Croix de Chevalier of the same Order.

The *London Gazette* announces that the King has been pleased to grant the undermentioned members of the R.A.M.C. leave to wear the decorations, as stated against their names, conferred upon them by the King of Serbia in recognition of their distinguished services:—

Capt. Norman Cameron, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. John Matthewson Clements, M.D., Order of St. Sava, Fifth Class.

Temp. Capt. Bernard Creasy Ewens, Order of St. Sava, Fifth Class.

Temp. Capt. Alexander Keith Forbes, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. Charles Michael Forster, Order of St. Sava, Fifth Class.

Temp. Capt. John McAdam Hill, M.B., Order of St Sava, Fifth Class.

Temp. Col. William Hunter, C.B., M.D., F.R.C.P., Order of St. Sava, Second Class.

Capt. Sydney Walker Lund, M.B., Order of St. Sava, Fourth Class.

Temp. Capt. Samuel Edward McClatchey, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. Charles Rowley Nicholson, Order of St. Sava, Fifth Class.

Temp. Capt. Thomas Holmes Ravenhill, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. Hugh Young Riddell, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. John Henry Victor Scott, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. Philip John Ambrose Seccombe, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. Bryce McCall Smith, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. Charles Edgar Holton Smith, Order of St. Sava, Fifth Class.

Temp. Capt. Robert Haig Spittal, M.B., Order of St. Sava, Fifth Class.

Lieut.-Col. George Elliott Frank Stammers, Order of St. Sava, Third Class.

Temp. Capt. Lewis Augustus Walker, M.D., Order of St. Sava, Fifth Class.

Capt. Edward Sancton Walls, Order of St Sava, Fifth Class.

Temp. Capt. Gerald Whittington, M.B., Order of St. Sava, Fifth Class.

Temp. Capt. John Samuel Williamson, Order of St. Sava, Fifth Class.

Temp. Capt. William Miller Will, M.B., Order of St. Sava, Fifth Class.

Francis Frederick Brown, Esq. (late Lt., R.A.M.C.), Order of St. Sava, Fifth Class.

William Whiteman Carlton Topley, Esq. (late Capt., R.A.M.C.), Order of St. Sava, Fourth Class.

A Cyprus correspondent writes (May 2): Captain Gallagher, D.S.O., Chief Commandant of Police, who has been on service, has returned to the island on the sick list, and is at Nicosia.

The Sultan of Egypt has conferred the decoration of a Grand Officer of the Order of the Nile upon M. Demetrius Verenikis, former Greek Consul at Cairo.

M. Radeff, the Bulgarian Minister at Bucharest, has left for Sofia, having obtained leave for several weeks.

OBITUARY.

MR. EDWARD KEYSER.

Another highly esteemed member of the British colony of Smyrna has passed away in the person of Mr. Edward Keyser, who departed this life on the 10th inst. at Bexhill-on-Sea, in his 63rd year. He was for many years director of the Smyrna branch of the Bank of Salonika, and managed the bank's business with conspicuous ability. In financial circles in the Near East he was acknowledged as a man of wide experience, and bore a high reputation for business capacity and acumen. He leaves behind him a numerous family of sons and daughters. Of five sons, four, holding the King's commission, are serving at Salonika and in Flanders. The fifth and eldest son, Mr. Lionel Keyser, H.M.'s Vice-Consul at Constantza, is now doing duty at the British Legation, Athens. The funeral service took place on the 15th inst., at St. Luke's, Redcliffe Square, Earl's Court, and was attended by his cousins, Messrs. C. and A. Keyser, of London, and a number of friends.

Brigadier-General Frederic James Heyworth, C.B., D.S.O., is reported killed in action. Born in March, 1863, he entered the Scots Guards in December, 1883. He became captain in 1896, major in 1900, lieutenant-colonel in 1908, and colonel in 1911. His command of a brigade was gazetted in November, 1914. Before the present war he saw service in the Sudan (the 1885 expedition from Suakin), and had the Sudan medal and the bronze star; and served right through the South African War. He was made a Companion of the Distinguished Service Order, was mentioned in despatches, and had the Queen's medal with six clasps and the King's medal with two clasps. The war with Germany had brought to him more honours and promotion, and last year he was made a Companion of the Order of the Bath. General Heyworth, who was son of Mr. George Frederick Heyworth, married in 1913 Violet M. C., eldest daughter of the late Captain Douglas Loftus, Grenadier Guards.

We regret to learn that Captain Guye Wellesley Lushington, Royal Marine Artillery, died on service on May 8. Born in November, 1880, he was gazetted to the R.M.A. in January, 1898, was promoted in January, 1899, and had his captaincy in March, 1908. Between November, 1908, and February, 1912, Captain Lushington had employment with the Egyptian Army.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

BYAM.—On May 5, in Cairo, the wife of Major Wm. Byam, R.A.M.C. (née Stiven), of a daughter. Only survived five days.

DEATHS.

KEYSER.—At Bexhill, on May 10, Edward Keyser, of Smyrna, Turkey. Funeral service at St. Luke's Church, Redcliffe Square, S.W., on Monday, May 15, at 2 p.m., then West Brompton Cemetery at 2.20 p.m. Friends, accept this, the only intimation.

PETTIGREW.—On April 27, in captivity at Ahram, Persia, W. A. T. Pettigrew, Inspector, Indo-European Telegraph Department, of Shiraz, Persia.

WHERE TO STAY.

Cairo's Hotels de Luxe.

FRIDAY, MAY 19, 1916.

THE RUSSIAN ADVANCE IN ASIATIC TURKEY.

The steady pressure of the Russians in the Middle East and the employment in official *communiqués* of only those geographical terms which are likely to be found on small maps have aroused popular expectation in Great Britain to a degree that renders it very liable to disappointment. Three months ago a leading London journal, writing of the fall of Erzeroum, spoke of the salvation of General Townshend's force at Kut as depending upon Russia, and added: "If we are saved there, we shall be saved by Russia." Kut unfortunately has fallen, not because Russia failed to save it, for there was never any question of the Russians being able to influence directly the fortunes of the beleaguered garrison, but because the British relief expedition failed to cover the twenty odd miles that separated it from the town. During this time there has been no relaxation of Russia's efforts, but the force which captured Erzeroum has itself advanced barely fifty miles to the west, and there is no disposition now to connect its movements with the course of events south of Baghdad. On the other hand, the appearance of a Russian force at Rowandiz, a little short of halfway between Lake Urmiah and the Tigris, has revived the hopes originally raised by the fall of Erzeroum. In order to follow the operations in this part of the world, however, it is necessary from time to time to glance at a large-scale map, with a view to correcting the optimistic impressions that the study of small maps is apt to beget. It is true that the Russians are operating on a front which extends, with interruptions, from the Black Sea to the Turco-Persian frontier between Baghdad and Kermanshah; but their line is divided into three very distinct spheres. The main object of the Grand Duke Nicholas's advance from the Caucasus has been to throw back the Turks as far as he can from the Russian frontier and to occupy as much of Armenia as possible with a view to ameliorating the lot of the Christian inhabitants. In accordance with this policy the main stroke was delivered against Erzeroum, while parallel columns advanced in the coastal region and in the neighbourhood of Lake Van. The direction of this northern force, with a front stretching from the Black Sea to Bitlis, is of necessity due west, owing to the configuration of the country in which it is operating. It will have accomplished a notable achievement when its line rests on Trebizond, Erzinjan, and Diarbekr. Columns on its left wing may sweep south of Bitlis; but the line as a whole will remain primarily a rampart against Turkish efforts to regain Armenia, and will not be able to direct its attention towards Mesopotamia.

The region between Lake Van and Lake Urmiah and to the south of the former is inhabited by lawless tribes over whom the Turks have exercised little real control in the past. These people offered excellent material for marauding bands, and would require little persuasion beyond a supply of arms and ammunition to undertake any expedition that promised an opportunity of plunder. At an earlier stage in the war, under Turkish direction, they raided Persian territory south of Lake Urmiah and, turning north, occupied Maragha and threatened Tabriz. In due course the invaders were routed by the Russians and driven out of Persia. A Russian force was despatched to the region of the Lake, and would seem to have served as a screen for another body of troops despatched from Tabriz on a different errand. Little has been heard from this sphere of operations until it was announced on May 15 that Rowandiz had been captured. This town is eighty miles from Mosul, and if the Russians are able to reach the Tigris at this spot they will have driven a very formidable wedge into the Turkish position in Asia, and will have gone far to isolate the Baghdad command. But just as it was a mistake to imagine that the Russian success at Erzeroum could have anything but an indirect influence on the course of events in Mesopotamia, so we must not expect at present any Russian force that may reach Mosul to be intended to continue its advance in the direction of Baghdad. At Mosul it would effectively close the usual channel of communication between Constantinople and Baghdad, and would facilitate further operations against the latter; but nothing has been revealed of the composition of this force to lead us to suppose that it is strong enough itself to take over the task of attacking Baghdad. Its success will have been due largely to the inability of the Turks, amid their preoccupations to the north and south, to offer any real opposition to its advance. South of Mosul there are no physical features to be overcome, but this column will require to be considerably strengthened to be able to add with impunity an additional two hundred miles or more to its lines of communication. There remains the third Russian force, which, after defeating the Turks and the Persian insurrectionaries in Persia, has pursued the former to the frontier, and is now within reach of Khanikin, a hundred miles from Baghdad. If Baghdad is to fall to the Russians, it will be to this column. The main Russian force in Armenia, a thousand miles away, will have kept the bulk of the Turkish troops in that region; the middle column may have compelled the Baghdad command to detach other troops for the defence of Mosul. Neither of these, however, can be expected to annihilate distance by playing a direct part in any attempt upon Baghdad.

Instead of leaving the capture of Baghdad to the Russians, the more natural course for the Allies to adopt will be to co-ordinate the operations now taking place a hundred miles away to the north-east and to the south, and to make sure that the city is threatened simultaneously on both sides. To what extent the two forces —General Baratoff's near Khanikin and General Lake's on the Tigris—are in a position to take up the task so lightly committed to General Townshend's small column will be known to the military authorities. There is no reason why the British advance should be restricted to the banks of the Tigris and to frontal attacks on the formidable positions constructed by the enemy to the east of Kut. If it is possible for the Russians to reach Mosul, the work of dealing with the Baghdad troops can be carried out in a more deliberate manner. Reinforcements can only reach the enemy down the Euphrates by way of Aleppo, and before they can hope to cover the distance the British will be able to develop a new line of attack with better chance of success than the route followed by General Gorringe. Now that the Allies are committed to a distribution of their forces in several theatres, the only problem to present itself should be in regard to the manner in which they can be utilized to the best advantage. It is slowly being realized that so many men ought not to be kept indefinitely in comparative idleness, as they have been at Salonika, without making an attempt to inflict the greatest possible injury upon the enemy. The British in Mesopotamia are in a far more advantageous position than the Russians at Khanikin for an advance on Baghdad. It is no longer a fight against time with the object of relieving a beleaguered garrison. The strategical problem is altered, and calls for deliberate, but not dilatory, preparations. If Baghdad falls to a British force, the success will in the circumstances have been rendered possible by the Russian advance in the north, and due credit must be given to Russia's conception of her duty to the Grand Alliance, which has prompted her to undertake her self-imposed task in Armenia and Persia. The Allies, however, are fighting, not for their own hand, but for a common cause. It is to their interests that Baghdad should be occupied as soon as possible, and the main consideration should be to effect its capture with a minimum loss of life within a reasonable time.

JOURNEYINGS IN ASIA MINOR.

By MARY A. POYNTER.

V.—Konia.*

"See all the world, but see Konia." This old Seljukian proverb or saying is one that holds good for those interested in Near Eastern history, traditions, and art to-day. But before the Seljuks were, before hardly any cities existed that have come down and are recognised as goodly towns at the present time, Konia, or Iconium, was a city in good and regular standing—her record as such going back, with name practically unchanged, into the dawn of history and even beyond that into the vague realm of legend. One great authority says that Damascus and Iconium "were necessarily and inevitably of immemorial antiquity." However far back history or legend goes the importance of these two cities stands out clearly in that early dawn, Iconium perhaps less important than her southern sister city more favourably placed as to climate and location in the then populated world.

According to Sir William Ramsay there is an Iconium tradition relating "the fame of King Nannakos, who reigned before the Flood, and lived to the age of three hundred years. Learning from an oracle that when he died all men should perish, he convoked all people to the temple, and 'made supplication with tears,' and his Phrygian subjects mourned so vehemently that 'the weeping in the time of Nannakos' became a proverb even among the Greeks. Soon after 'the weeping of Nannakos' came the Flood, in which all men perished. When the earth dried up again after the Flood, Jupiter bade Prometheus and Athena make images (eikones) of mud, and he caused the winds to breathe on the images, and they became living. Thus Iconium was re-peopled immediately after the Flood, and derived its name from the eikones. The last is a Greek addition; in the Phrygian legend, evidently, the city bore the same name before the Flood as after."

Tradition, always busy with places and peoples in fertile Eastern minds, and loving to gather the incredible as well as the credible, further relates that Iconium was inhabited by Perseus and the Gorgons. More plausible and exact history says that Xenophon and his Ten Thousand halted here in 401 B.C., and that some years later Alexander the Great honoured the city with a visit. In Roman times the place had many different masters; Cicero is reported to have stayed here for ten days and to have held a review during the time he was pro-Consul of Cilicia. Under Tiberius the town formed part of the Province of Pisidia. In Hadrian's time Iconium was elevated to the rank of a Colonia, the highest dignity that could be conferred on a provincial city. It must also be said that Iconium suffered considerably in its turn at the hands of the Parthians.

But long before the West became acquainted with Iconium it was a Phrygian town of importance, wholly Eastern in character, and, perhaps, if the Trojans were of Phrygian descent or affiliation, as Homer says they were, some of Iconium's early warriors may have taken heroic part in that memorable defence of Troy. With the conquests of Alexander came gradually the Hellenic occupation, and a Phrygian-Hellenic city it became, as the coins of that time would indicate. Later, when it became a Græco-Roman town, Rome, with characteristic foresight, made no effort at first to introduce the Latin language, but "accepted the Hellenism of the Græco-Asiatic cities as a friendly power." Thus, when Paul and Barnabas came bringing the Christian message to Iconium, they preached to the Hellénes, though Rome was in control. "Long time therefore abode they speaking boldly" to the Gentiles and Jews of Iconium, and it became one of the first Christian cities; this, in spite of the fact that gradually the population of the city was divided and "part held with the Jews and part with the Apostles." Sir William Ramsay says that there can be little doubt that the uneducated mob held with the Jews, and that this is shown both by the example of Lystra and by the issue of Iconium. Later history showed that "Iconium was one of the most influential seats of the new religion in Asia Minor."

A great and abrupt turning-point came in Iconium's history with the arrival of the Seljuks in the beginning of the eleventh century. These Moslem and semi-nomadic people came from Central Asia and made Iconium the capital of the Seljuk Kingdom which eventually included the greater part of Asia Minor. In order to have gained such an extent of territory the Seljuks must have battled fiercely with the Byzantines, but later became friendly with their neighbours, and it is recorded that Byzantine princesses not infrequently married Seljuk chiefs or rulers. The Crusaders during the first three Crusades found the Seljuks stern antagonists; during the third Crusade Frederic Barbarossa fought a fierce battle and won a victory under the very walls of the city itself. Later, during a period of comparative peace, the Seljuks prospered, and they reached the height of their prosperity under Ala-ed-Din Kai Khobad the First, who reigned from 1219 to 1236. (Was he, as some say, the Ala-ed-Din of the Wonderful Lamp?) He lived for eleven years in banishment in Byzantium, so that in this way he came in touch with the foreign art and thought of his age, with the result that these nomadic tribes in an amazingly brief space of time became civilised, so to speak, and developed arts, which they may have borrowed in the first instance, but which they adapted to their own purposes with most pleasing results.

In 1221 Ala-ed-Din fortified Konia (when the name was shortened from Iconium to Konia there is no very definite date given) from materials from ancient fortifications already at hand and built one hundred and eight towers, each tower 33 feet broad and 26 feet high and ornamented with high reliefs and verses from the Koran. Some of this picturesque defence work was seen as late as the year 1838, but little of it now remains, the stones having been used in the erection of other buildings. On the citadel stood Ala-ed-Din's palace—an Eastern jewel of architecture, though showing Byzantine influence in many of its lines as well as Persian technique in the perfection of its tiles—and the town owed many of its artistic buildings, such as mosques, *medressehs*, tombs, and baths, to that ruler's taste and initiative.

In the 13th century Konia must have been a city glowing with colour—not so much that of nature as that of art. It must have been in this century that the Seljuk saying, "See all the world, but see Konia," came into being; and with justifiable excuse. Trade relationships with the far outer world were then established, as, for example, with Venice and Genoa. But with the coming into power of Ala-ed-Din's son the prosperity of the Seljuks began to wane; there were internal dissensions, and there was the oncoming Mongol to be met and reckoned with. In 1392 Bayazid the First besieged Konia, and in 1466 it was finally taken by the Ottomans, men of their own faith, under Mohammed II., the conqueror of Constantinople. This was an illustration in the Mohammedan world, only in a lesser degree, of what took place in the Christian world only two centuries before, when the leaders of the Fourth Crusade turned aside from their original undertaking to take and sack the Christian city of Constantinople, thus weakening that defence of Christendom against the East and opening the way for its later conquest by the Osmanli.

What the traveller sees of special interest in Konia to-day are mostly the remains of the Seljukian occupation—a few impressive ruins, but more often only fragments of beautiful buildings, of carved portals, and interiors ornamented with tiles of exquisite hue and design. Of Konia's still earlier golden ages one may say that practically nothing remains.

Konia lies in the centre almost of a great fertile plain, is situated 3,425 ft. above sea level, and 473 miles from Constantinople, and has a population approaching 60,000 inhabitants. It is the capital of the Vilayet of Konia, and is important as being the centre of a rich agricultural region, and one of the chief towns on the railway line to Baghdad. It might properly be called the commercial metropolis of the interior of Asia Minor. It is important also in the Mohammedan religious world as being the headquarters of the Mevlevi Order of Dervishes. It has some modern improvements, such as electric lighting, and a closed aqueduct brings water into the town from a lake a hundred miles or so distant among the mountains. The railway station is quite a little distance from the town, and there is a hotel at the station where the traveller may abide, if not in luxury, at least in comparative comfort. We were received fortunately by friends, who not only made us comfortable, but, knowing the town, the country and its peoples, introduced us to the treasures of the past, and gave us glimpses into the life of the present. A rather primitive tram line runs from the station to the town proper, but it was an *araba*, that Turkish carriage that seems to withstand in a marvellous way the wear and tear of time and the roughest roads, that took us to the door of our friends.

Our first wanderings naturally included a visit to the citadel, a mound—though not a high one—that commands the town, and where one sees the remains of a Byzantine church and the ruins of Ala-ed-Din's palace, some of its walls still standing, and with a marble gateway bearing an inscription and the date of its erection, 1221. Near this palace on the citadel is the mosque of Ala-ed-Din, built on the Arabian plan with an octagonal dome. I may say here that there are many domes of this interesting character in the city. The roof of this particular mosque is supported by fifty antique columns (their origin unknown) that help to make an impressive interior—one that we should have lingered long over but for the fact that the building had

* *Previous articles of this series appeared in* THE NEAR EAST *of February 25, March 24, March 31, and April 21.*

Digitized by Google

only just been vacated by hundreds of soldiers billeted there for a time on their way home from the Balkan wars. They had left the interior inhabited by a large army of fleas that were ready and delighted to attack all fresh comers. In connection with this mosque, which is in a good state of preservation, there is a *turbeh* containing the tombs of the Sultans of Konia, and from the minaret of this mosque we had a view of the town on all sides—a town consisting mostly of low buildings set amid green trees, with fairly broad streets for the most part, the whole having a white, dusty look, although the summer had but just begun. Beyond the confines of the town lay the plain, far-reaching on all sides and bounded by distant high mountains. On these plains are dotted numerous villages, mostly Mohammedan, and there are also many small towns on the slopes of the mountains.

Most of the finest buildings of Konia's Seljukian days are situated in the town surrounding the citadel. One can but enumerate them briefly, since it is a hopeless task for the casual traveller to attempt to describe without illustration—and preferably by coloured illustration—the arrangement and beauty of the tiles or the grace of the ornamentation of such buildings as remain from that period. This tile-making was a craft in which the Saracenic peoples, the Seljuks among them, excelled; and there are happily many samples still extant throughout the Near Eastern world, and even so far West as Southern Spain, to keep the tradition alive, and to serve as models for modern workers in faience to base their experiments upon. The Arabic characters lend themselves readily to the scheme of decorative outline, whether brought out in relief by the chisel on marble or in raised work on tiles. Thus inscriptions from the Koran, often with old Kufic lettering, require no fresh originality of design, but make and leave a pleasing impression, whether used in the ornamentation of doorways (ornamental doorways being a happy architectural feature much favoured by the Seljuks) or on tiles of varied hue in the domes and inner walls of mosques, in medressehs and palaces, and even in the building of *hans*

Among the buildings in Konia that impressed us most were the Indje mosque, whose minaret, from which it takes its name, is covered with tiles, and though mosque and minaret are largely in ruin, its fine carved sandstone door remains in quite perfect condition. The Energe or Laranda mosque, built by the same architect as the Indje mosque, and both dating from 1269, is also freely ornamented with tiles. The Karatai mosque has a marble doorway so ornate and charming with inscriptions and carvings that one is tempted to linger before it instead of passing on into the mosque itself, whose interior is entirely blue-tiled, even the cupola being illuminated with light blue stars on a dark blue background. The mosque of Sirtsheli, built in 1242 as a school of law, has another incomparable Saracenic gateway, which leads into a ruined courtyard, though the tiles with which its walls were decorated have lost none of their brightness and beauty with the passing of years. The Mihrab here (the niche which the Moslems face when praying toward Mecca) has tiles and texts whose colouring holds the eye just as do the variegated coloured tiles that ornament the dome of this mosque. All the work of the Seljuk architects and artists of that time in the building of mosques is very much alike, and though much in ruin demands wider appreciation and admiration than the Western world seems to have time or opportunity to give to it now. As has been said, one can only hint at the beauty, the delicacy and variety of colouring of the tiles used in the ornamentation of these mosques, the intricate patterns of the carved marble inscriptions, and the elaborately designed doorways, those gems of Saracenic art that are still in many instances intact and ought to be guarded if not by an angel with a flaming sword, by some capable mortal at least to keep them from being carried away whole to some museum with whose other exhibits they might be quite out of keeping. In spite of the foregoing statement I have to confess that we have a few specimens of these tiles, brought for our inspection rather privily by one of the Faithful; and as they consisted only of broken bits, yet at the same time being admirable examples of colouring (one of them an iridescent fragment of blues and greens blending), our conscience permitted us to bring the sample away, since we could not restore it to its original place in the scheme of decoration.

No sojourn in Konia is complete without a visit to the *tekkeh* of the Mevlevi, or Whirling Dervishes. Their performance is to them a devoutly religious ceremony, the idea being that they lose themselves in a fervour of ecstasy that brings them into closer communion with God. Singularly enough they have been called the Protestants of Islam; they try to ignore much that is formal and seek after the spiritual in their faith. The founder of this order, Djelal-ed-Din, born in Afghanistan in 1207, came to the Court of Ala-ed-Din Kai Khobad in Konia in the year 1233 as a teacher of philosophy. His teachings were collected and written down, and in 1273 the Mevlevi Order was founded. The head of the Order, or Grand Chelebi as he is called today, has the right of girding the sword of Othman on each new Sultan at the time of his accession. The Grand Chelebi comes down to Constantinople to perform this ceremony, and a very fine, picturesque coronation function it is.

On entering the enclosure of this *tekkeh*, one comes first into a garden where fountains, tombs, and trees abound. On three sides are the dwelling-places of the dervishes, and adjoining is the mosque-like building, the *tekkeh* itself, with a ribbed conical dome covered with light blue tiles, these latter replacing a dome of green tiles, of which we were fortunate in getting a sample. Friends tell us the former dome was more remarkable from an artistic standpoint than the one that now replaces it. Within is the large "dancing room," or, rather, whirling room, where the religious ceremonies take place, and further on is the mausoleum, a room to which strangers are not usually admitted. In this *turbeh* chamber are the tomb of Djelal-ed-Din and the tombs of the Sheikhs of the Order. These tombs are covered with choice rugs and other rich Eastern stuffs, and the walls and ceiling are decorated with tiles and hanging-lamps that lend much colour and great picturesqueness to this chamber, which we were permitted to inspect through the courtesy of a friend.

Until at least quite recently it has been the pride of the people of Konia that no massacres of Christians have taken place there in modern times. As the great centre of the Mevlevi dervishes, the influence of this religious body has tended for peace. At least it has never threatened or been openly fanatical. One of the most trustworthy of modern authorities says: "Iconium, with its neighbourhood, is the one place in Asia Minor where the pre-Turkish (Byzantine) ecclesiastical system remains in force to the present day with little change. The Christian population remained in continuous possession of its own shrines, free to practise its own religious ceremonial with little restriction. In the Seljuk realm there was no tendency to oppress or ill-treat the Christian population, on which the industry and trade of the Mohammedan State largely depended." And, again, this same authority says: "Considering the character of the Mevlevi dervish establishment, which is in many respects non-Mohammedan . . . it is probable that their sacred centre with its splendid pile of buildings has taken the place of a Christian foundation."

I think I am betraying no trust when I say that in the house of our friends, which is a charitable and Christian institution, a sweet place for the refreshment of soul as well as body, we heard turbaned hodjas singing at a Christian gathering "Onward, Christian Soldiers"—the words in the Turkish language—with the guns of the Balkan war only just finished echoing within Turkish borders. We can never understand—with so much kindly feeling and preference as the Turk, religious and otherwise, has shown toward Anglo-Saxon peoples—how he could have thrown in his fortunes with, or, rather, thrown them away, to the Huns. He, as a race, did not. His fortunes were thrown away for him by a few hot-heads educated in the military schools, and catching the military fever, of Germany.

The market-place of any Eastern town is a centre of varied interests, and Konia's market-place is not alone unique in this respect. It has the usual fountain in its centre, the usual number of people picturesquely idle for the most part; and to us the arrival and the loading and unloading of caravans of camels furnished valid excuse for many loiterings by the way. The camel has so much individuality and has become so domestic, though not always docile, through his long association with man, that one is not at all surprised to hear him hold grumbling parleys with his master; we were even tempted to "take sides" with the camel on one or two occasions, but never came to the point of having courage to pat him our approval, as we might have done had the protestor been an Arab horse instead of a camel.

There are some rather good modern business buildings near the market-place, and a modern mosque, built by Sultan Aziz, has minarets with enclosed galleries—quite a fresh feature in minarets to us and quite pleasing in effect. The *tcharshi*, called the Bit bazaar, had many choice rugs and other attractive Eastern wares to offer. Its variety of saddle-bags, great (for camels) and small, all ornate, all hand-woven or hand-embroidered, was impelling, and kept us bargaining for what we did *not* want as well as for what we wanted until our own terms were met, and what we *did* want was hung over our arm with many grateful and congratulatory salaams and "mashallahs."

The peasant woman, the woman one sees in the streets of Konia and all that district, conceals her face with the exception of a peep-hole for one eye, through which to observe the interesting out-of-door world. This beady eye turned upon one through the narrow white opening of the head garment leaves a weird impression upon the person who is the subject of observation. The Christian women do not go veiled as closely as they do in Damascus, but the humbler class wears a discreet head-covering, and is not

Digitized by Google

much influenced in her dress by the fashions of Paris or Vienna. The West comes and goes, but the Eastern look both of people and of things remains.

Our memory of Konia is picturesque and characteristic even to the early morning hour of our leaving. We had just taken our seats in the train when we noticed some sort of Moslem service taking place outside on the station platform. It seems the Vali, or Governor of the town, was leaving, another having been appointed in his place. The departing Vali stood in the centre of a circle of his friends, among whom were many hodjas, and the train waited while an impromptu service was held by this grave and dignified circle that stood with palms extended asking for Allah's blessing with as little self-consciousness as the East is wont to show while at prayer or during its meditations. We wondered if the new Governor would be greeted with an equally impressive welcome. The ceremony over, there were no farewells, no *au revoirs*, no waving of handkerchiefs and last words from the little gathering on the platform, only deep obeisance and many profound salaams (showing they were "as the dust at his feet") as the train, after long waiting, bore the ex-Vali away northward toward that city of strong appeal and varying fortunes—Constantinople.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Kut Wounded. May 16.

Lord DESART asked for information as to the wounded and sick officers and men of the Kut force who had been handed over to the British authorities and the prisoners now in the hands of the Turks.

Lord SANDHURST replied that four British officers had been exchanged—Lieutenant F. G. S. Maclean, Lieutenant W. A. G. Hinds, Lieutenant F. W. Portsmouth, and Lieutenant G. H. Bulloch. The two former belonged to the Indian Army, the two latter to the Norfolk Regiment. There were also exchanged one conductor, one chief petty officer, and one petty officer of the Royal Navy, 97 British rank and file, and about 970 native officers and other ranks. No lists of those taken prisoners had yet been received from the Turkish Government, but the United States Embassy had been asked by the Foreign Office to try to get lists.

Gallipoli Honours.

Lord BERESFORD asked the Government if it was a fact that certain British and Australian military officers attached to the Royal Naval Air Service during the Gallipoli campaign were mentioned in despatches by their Commanding Officer and by the Vice-Admiral Commanding the Eastern Mediterranean Naval Forces, and that their names were omitted when those of the naval officers belonging to the same service and mentioned in the same despatches were published in March last; if so, what was the reason for such omission, and if a supplementary list of awards will be published relative to these military officers, and giving effect to the Vice-Admiral's recommendations; and, if not, what is the reason for differentiating in the matter of rewards between naval and military officers of the same service mentioned in the same despatches.

The Duke of DEVONSHIRE said he was only able to answer the question in the broadest terms. Some men were included in the first list but not in the final list, but in all cases their services had been noted. This applied to both military and naval officers, and there was no differentiation between them. He would make inquiry as to whether further despatches relating to Gallipoli were to be published.

HOUSE OF COMMONS.

The Advance on Baghdad. May 11.

Mr. ASQUITH, replying to Mr. PEMBERTON BILLING, who asked whether there existed in the records of the War Office any protest from General Townshend against the futility of the advance upon Baghdad with less than an army corps of two divisions; and whether the papers promised in connection with the Mesopotamian campaign would include all letters or memoranda from General Townshend dealing specifically with this matter, said: As some time must elapse before the papers dealing with the expedition as a whole can be laid, it is proposed to lay papers dealing with this special point separately, and, I hope, very soon.

Mr. BILLING: Has the right hon. gentleman seen a copy of a certain weekly paper which publishes what purports to be the text of a letter from General Townshend?

The SPEAKER: The hon. member should give notice of that.

Starving Serbians.

Mr. ANNAN BRYCE asked the Foreign Secretary if any arrangement had been made for providing relief for the starving population in Serbia.

Sir E. GREY: The answer, I regret to say, is in the negative.

British Prisoners in Bulgaria. May 15.

In a written reply to a question of Mr. MALCOLM, Lord R. CECIL states: According to our latest information, the Bulgarian Government have issued no pay to British officer prisoners. The United States Ambassador was requested on the 6th instant to ask the United States representative at Sofia to make further representations on the subject; I am glad to say that the last report from the United States representative at Sofia shows considerable improvement in the condition of the British prisoners of war at Philippopolis, and I hope that this improvement may continue.

Balkan Rivalries. May 16.

Mr. KING asked the Under-Secretary for War whether he was aware that a memorandum dealing with the situation in the Balkans, published as having been written by General Howell, but since repudiated by him, had been attributed to General Howell in a circular letter sent to all members of both Houses of Parliament by Professor Burrows and Dr. Seton-Watson; and, seeing that the publication of alleged confidential documents of this kind was calculated to injure national interests and inflict damage on the departments and public servants concerned, what action it was proposed to take in the matter.

Mr. TENNANT replied that the memorandum referred to had no official authority. No obstacle would be placed in the way of General Howell seeking any remedy he desired subject to the exigencies of the military situation.

Mr. KING asked was it not the case that eminent men quoted a document which they admitted subsequently to be a forgery, and yet they took no steps, and the War Office took no step, to bring these facts fully to light.

Mr. TENNANT: I do not think it is the business of the War Office to bring the facts to light if the document is not a public one. If General Howell repudiates it any remedy can be found as soon as the opportunity occurs.

Mr. KING: May I take it that the repudiation of this document is accepted by all persons at the War Office and in General Howell's command?

Mr. TENNANT: Yes; I understand that is the position.

LETTERS TO THE EDITOR.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

JEMAL PASHA AND SYRIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I suggest to the Government that there are urgent reasons why they should take notice of what is going on in Syria under the orders of Jemal Pasha, who was—erroneously—supposed to retain some vestiges of his French education?

My own opinion has been, so far, that Syria should not be left a day longer in the hands of the Turks, and from my knowledge of the country and of its inhabitants I firmly hold that, considering the accessibility of its coast and the responsive disposition of the mass of its people to any effort made on their behalf, neither we, France, nor Egypt has any good excuse for neglecting its immediate conquest.

The delay in our action is only weakening that element in the country which we desire to save, and on which we might rely to hasten the final ejection of the incorrigible Turks from power. The disheartened people are crying aloud for peace, but as in their heart they cherish the hope of the Allies' success, Jemal Pasha accounts this a crime, and if he hears of anyone praying for the confusion of Enver and his German confederates he forthwith proceeds to hang him! In this way he has already disposed of some hundred notables whose sole crime was, perhaps, either a repugnant feeling toward the Young Turks' policy, or a reluctance to put up with spoliations of all kinds!

We and France are called upon to secure immediate redress for the people because their greater misery arises from their goodwill towards us. I hope we shall soon complete our arrangements for an advance in Syria; and meanwhile I trust our Government will make it clear to Jemal and his principal tools there that they will have to pay for these murders.—I am, etc.,

THE PRESS ON THE NEAR EAST.

The Crisis in Greece.

The following quotations are taken from an article on the crisis in Greece, contributed to the *Morning Post* (May 13) by a special correspondent. The writer affirms that it is the dream of all "the Palace flunkeys and General Staff officers at Athens," with the exception of the Minister of Marine, to see the introduction of Prussianism into all departments of the State, with the King accountable to God alone:—

In the Press controlled by this party (which by a curious coincidence is the Press subsidised by the German propaganda!) the doctrine is not infrequently preached that, while the people are free to regulate the country's internal affairs, only the Crown is in a position of sufficient enlightenment to decide upon the country's foreign policy!

Meanwhile, what renders these intrigues a danger both to Greece and the Greek dynasty, is the fact that they are complacently regarded (inasmuch as they are not sternly discountenanced and suppressed) by the Royal Family, including the King himself. Leaving the Queen out of the question (though there can be little doubt in which direction her Hohenzollern ideas and prejudices lie), it is a matter for blank wonder to see how the Greek Royal Princes (including those who have married English or Russian Princesses) hate Venizelos with a perfect hatred, and applaud any excess or unconstitutional proceeding that helps to keep him out of office.

An examination of the services rendered by M. Venizelos to his country follows, and the writer concludes:—

King Constantine is doubtless actuated by the best of patriotic motives in the present line he has taken. And, aside from his military prestige, it is this belief in the purity of his motives that has kept (and is still keeping) the great mass of the Greek people from rising against his policy. Many outsiders wonder why the Greeks sit down so tamely under the brutality of the police, the Hamidian spy-system of the Palace, the incompetence and misgovernment of the present Ministry, and the absurd foreign policy, which is throwing all Greece's future to the winds, when they should assert the sovereignty of the people over all other factors in the State. The reason is solely that people see that this would mean civil war, at a moment when Greece needs to stand as a united nation in the tempest which is now raging over Europe; and they still cherish the fond hope that the two glories of the nation—Venizelos and King Constantine—will soon be reconciled and work together once more for the country's greatness.

Unexploited Resources.

The military correspondent of *The Times* (May 15) goes fully into the question of the belligerent forces of to-day. In regard to the western theatre, "we have our own ideas of what we shall do and when we shall do it, and do not intend to allow the Germans to choose our hour for us. Similarly," writes this correspondent, "on the Russian front this is the season when much of this theatre is roadless . . . and it would really be impatience run mad to expect the great armies of Russia to march without roads." The writer continues:—

It is not only in the West that our General Staff have much to do. What is to be said for the strategy which disposes of four important armies on the frontiers or within the confines of Turkey and provides no co-ordination for the action of the four? Taking Armenia, Mesopotamia, Egypt, and Salonika together, we are superior to the fifty-two Turkish divisions, but no common strategy regulates the proceedings of our four armies; no single commander directs them; and consequently the Turk, who is the only gentleman and clean fighter that we have met in this war, is having much too good a time. There is nothing to prevent him from concentrating in due course, and this is a contingency to which Sir William Robertson is not likely to remain indifferent.

Germany and Turkey.

We take the following quotation from the *Westminster Gazette* (May 15). The *Gazette* looks upon the position of Erzinjan as being in the last degree precarious, and thinks that Germany will be forced to go to the assistance of her allies without delay:—

If the Germans are to send effective help to Turkey in Asia then two things follow as a matter of course. Any concentration with a view to breaking the Russian lines by another phalanx becomes impossible, and the gigantic effort against Verdun must be abandoned. Germany must be content to hold both the Eastern and Western fronts with as few men as can maintain a successful defence. She has not reserves which will enable her to undertake an offensive in more than one direction. Even Bernhardi never analysed the difficulties and dangers of a war on three fronts, and that is what Germany has now to maintain. To abandon Turkey would probably be the safer course, but to do so would be to shatter the great Imperial dream of Germanic influence stretching from the frontiers of France to the confines of Persia. It would be an admission of defeat which even now Germany is not prepared to make.

The *Evening Standard* (May 15), in an article by its military correspondent on the position of Turkey, estimates the present strength of the Turkish army at 500,000 men, without any reserves to make good future waste. The article concludes:—

We have yet to learn the explanation of the large Allied force in Greek Macedonia and in Egypt. The latter are a reserve which can reinforce the Allies in Greece, if the intention be to proceed against the Bulgarians when the coming Italian and Russian offensives shall cause the withdrawal of Austro-Hungarian troops from the Balkans; or the Allies in Egypt and Greece may be drawn upon for a new effort against Turkey. Meanwhile, the Turks are running short of men, material, and money, and Germany cannot continue to supply her with these commodities much longer.

"La Serbie."

We have received copies of the first and second numbers of a new weekly journal, *La Serbie*, which is published in Geneva (69, rue XXXI. Décembre), and edited by Dr. Lazare Marcovitch, of Belgrade University. It is in every respect a remarkably good production, inspired by a spirit of confidence and courage; and we welcome it as a fresh sign of the vitality of our Serbian Allies, who, temporarily driven from their country, still display in exile the fine spirit they showed in face of the enemy on the field. Amongst the articles in the first number (May 7) are: "La Serbie et les Alliés," by the Editor; "Les Deux Bulgaries," and "Les Propositions de Paix et la Nation Yougoslave." There is also a tribute to Shakespeare by "P. T.," entitled "William Shakespeare sur la Scène Nationale Serbe." From this we quote the first and last paragraphs, selecting them—from an article which shows a sound critical knowledge of the subject—because of their touching references to Serbia's present misfortunes:—

Tous les peuples du monde, les plus civilisés, les plus avancés comme les plus arriérés, se sont rappelé l'anniversaire trois fois séculaire du plus grand génie que la Providence ait envoyé sur notre pauvre terre. Les Serbes ont été condamnés, par leurs ennemis, à le commémorer loin de leur patrie.

* * * *

Dans la représentation des drames de Shakspeare. il faut voir la preuve que l'art dramatique serbe s'est acheminé dans sa vraie voie. Les récents revers serbes ont suspendu, pour peu de temps heureusement, le développement de notre art théâtral et nous espérons qu'après la guerre notre théâtre national à Belgrade célébrera dignement le tricentenaire du grand poète anglais.

The Outlook.

The Petrograd correspondent of the *Morning Post* (May 15) thinks that all appearances point to the conclusion that the principal war-work of the immediate future will be on the Asiatic front. He points out that, tricked into war by Germany, there has been nothing in the Asiatic campaign to give Turkey any faith in the "divine mission of the German champion of Islam." He concludes:—

Beyond the wholly contemptible and only very partially useful adherence of Bulgaria, Germany has found no Allies for her schemes of world conquest anywhere. She is now threatened with something infinitely more disastrous to her cause than the non-adherence of those minor nationalities whom she hoped—and has perhaps conditionally pledged—to join her flag. Unless Germany makes good some small part of her lavish promises to Islam, she is threatened with the loss of the effective support of her one Ally. This ominous possibility now compels her to redouble her care for her Asiatic and Balkan fronts. As was the case two years ago, this war can still only be won by Germany on the French front, but it may be lost by Germany now that the Allies are working closely together at other points of her vastly over-extended area of responsibilities. If Germany has decided to make an extreme effort to patch the leak in the dykes on her Asiatic front, such a move can only be welcomed by the Allies. At the same time it shows that the fighting spirit of the Germans is far from broken yet.

Suvla Bay.

"Juvenis," writing in the *English Review* (May), continues his narrative of service at Suvla Bay. He has things to tell that are full of the real grim horror of war; it is, indeed, questionable whether such details as he gives serve to do more than add to the load of suffering already borne by soldiers' relatives at home. Our quotations are from the portion of the narrative which describes his own sensations when wounded.

Suddenly I was hit on the right shoulder and knocked over; the blood poured like a fountain down my sleeve. One of the men rushed up and helped me off with my equipment and jacket. I thought the brachial artery was hit, and felt exhausted. As a matter of fact, it cannot have been; but my arm was broken. I sent the man on to join the firing line, and looked at my wrist

watch—the time was a quarter to two. We had been three-quarters of an hour in action. . . . I did not notice much more until I felt a wallop on the side of the head, and my helmet rolled off. "A piece of shell," I thought, "and probably in my brain." Blood ran over my face, and I began to wonder how on earth a man could tell whether he had been killed or not. At length I decided that I was alive, and, picking up my helmet, made an examination. There were two neat little holes in it, such as are made by rifle bullets. At this point I realised that I was lying upon a little eminence, from which, in view of the ceaseless sighing and caterwauling of bullets past my head, I judged it prudent to descend. . . .

Hardly had I gone ten yards down when I felt a terrific crash on the left hip. "That," I thought, "must be an entire shell," as I was knocked down into a clump of blue teasle. I put my left hand down to examine the damage, and pulled out a bundle of letters, now covered with blood, from my trousers pocket. A neat hole pierced them, of exactly the shape and size of a rifle bullet travelling sideways.

The writer adds, "It may interest those whose relations are wounded that broken limbs and a cracked head do not hurt till hospital."

Russia and Britain.

The *Observer* (May 14) reads encouragement in the fact that it is already the middle of May and the expected offensive against the Russian front has not yet begun. Week by week the Russian armies are increasing in strength:—

As we have shown before, if this goes on for a few months all other circumstances which have hitherto retarded or thwarted the Entente Powers will be redressed and the complete victory of the Grand Alliance will be certain. Russian reserves even in the West will help to defeat the plan for exhausting France. Russia and her Allies, in spite of all delay, will finish together the work in Asia Minor, and by one means or another will dominate the Balkans and then reduce Austria as certainly as Turkey. All this would require another year or more, no doubt, but the Allies' goal would be in sight before many more weeks had passed. Germany's conception of making a draw of the struggle will be hopeless unless she can break the Russian front again by summer. It is the only way, and there is not much time.

In referring to the Russian advance on Khanikin the writer says:—

From Khanikin it is less than a hundred miles to Baghdad, with no difficulties anything like so stiff as those which General Baratoff's troops have already surmounted. We must bide the sequel of this excellent adventure, but it is cheering to think that though General Lake's army could not relieve Kut, its effect as a holding force very greatly facilitates the Russian operations in the direction of Baghdad. We see no reason to alter our view that light in this war breaks from the East and will spread to the West.

A Russian View.

The *Sunday Times* (May 14) publishes an interesting article by a "high Russian military official at present in London." The article deals with the whole Russian campaign; we extract a portion which refers to the part that Britain has played and is likely to play in these operations:—

What is most remarkable is the close co-operation now existing between the Russian and Anglo-Indian forces; and not only between them but also between the fleet at Cyprus and the Russian fleet in the Black Sea.

A Russian general who has just returned from the front tells me that this co-operation works wonders, and is pursued with almost mathematical exactitude. The Anglo-Indian forces operating on the Tigris are daily becoming a more and more important asset.

It is chiefly due to their co-operation that General Baratoff was able to scale the Iman Hassan Pass, which is due north-west of Kerind and more than 5,000 feet high. This operation was risky, and its success depended largely on whether the Turks would be able to get sufficient reinforcements from Khanikin.

The commander of the Anglo-Indian Expeditionary Force was communicated with, and a diversion decided upon and carried out with splendid dash, vigour and exactitude. Thus the Turkish reinforcements did not arrive in time, being kept busy on the Upper Tigris by the Anglo-Indian diversion and the Turks defending the pass were routed, thus making the Russian advance as far as Kasri-Shirin possible.

The Way of Roumania.

Mr. Stuart Cumberland, writing under the above heading in a recent issue of the *Financial Mail*, says that there is no Pro-German feeling or policy in Roumanian Government circles. He thinks, however, that distrust of Russia is still the prevailing feeling in the matter of foreign relations. The Roumanians have found it hard to forget Plevna and its sequel. He concludes:—

I will not attempt to prophesy when and how Roumania will take a direct hand in the war. Roumania's policy is a waiting one. Not of the wait and see order dear to our own Prime Minister, but waiting for the right moment—the moment when she can strike hardest and with the greatest effect. And when she does come in one may safely assume—unless a miracle happens—it will not be on the side of our enemies. For, in addition to knowing which side her bread is best buttered, Roumania is decidedly pro-English, and our policy should be to strengthen the ties that exist between us, not only for present advantages in common, but for future possibilities. The entry of Roumania, with her geographical position and well-trained and well-equipped army, into the conflict at the psychological moment, would be a decisive factor, and the future financial and commercial relations with her form a factor that should receive our earnest and unremitting attention.

Townshend and the Truth.

Mr. A. G. Hales, writing in *John Bull* (May 13), makes a very grave and definite charge against the Government in regard to the Baghdad venture. Mr. Hales claims to have special information regarding General Townshend's personal views on the expedition. He writes:—

I know . . . . that General Townshend *did* make a strong protest against the suicidal adventure. This is what Townshend wrote: "*It is absolutely unsound from a military point of view to attempt to take Baghdad with less than an army* corps of two divisions.' Townshend is a prisoner of war until peace comes, and he cannot protect his reputation; but it is the duty of a public journal to protect the soldier from the machinations of unscrupulous politicians. Townshend's renown shall not be smirched whilst he is languishing in a Turkish stronghold, in order that the face of this Government may be saved.

His concluding paragraphs include the following:—

What I want is punishment for the guilty, and I believe that is what the nation wants. Well, I have quoted one warning of poor Townshend's. Listen to this—never mind how I get it: "*I send you a line after the battle of Ctesiphon, where I won a Pyrrhic victory—having* 4,500 *killed and wounded out of* 14,000 *men. . . . . The enemy had from four to six divisions against my one—and I am amazed our Politicals did not know of these heavy reinforcements having reached the Turks*—HAD I GOT INTO BAGHDAD I SHOULD NEVER HAVE GOT OUT AGAIN. . . . ALL THIS HAS COME ABOUT THROUGH THEIR NOT HEEDING MY PROTEST WHEN ORDERED TO TAKE BAGHDAD."

Armenia.

Our attention has been called to an interesting article, entitled "The Truth About Armenia," by Miss Emily J. Robinson, which appeared in a recent issue of *Khaki*. Miss Robinson, who was the founder of the Armenian Red Cross and Refugee Fund, has collected a large amount of reliable information relating to the massacre of Armenians, and her article, based upon this knowledge, is worthy of close attention. Our quotation is from its concluding passages:—

Indifferent as the world has been to the five-century-long martydom of Christian Armenia, this indifference has been greatly the result of ignorance; signs are manifest that things have changed. . . . The people of the United States are waking to the truth, and well they may, for many of the men, women and children who have been slaughtered by order of the Turkish Government were scholars in their mission schools. Having heard the cry for help, the American people are already answering it in a practical way.

By the courage shown by Armenian men and women in making a last stand to save the lives and honour of their dear ones—by the faith for which millions of them have died, when by accepting Islam they might have saved themselves—by the endurance which has enabled them, after massacres so often repeated, still to remain a nation, even though a scattered one—Armenia is working out her own deliverance.

ARMENIA'S TRIBUTE TO SHAKESPEARE.

An extremely interesting meeting in connection with the Tercentenary celebration of Shakespeare was held last Tuesday, at the Queen's Hall, when the Armenian Literary Society of London assembled to hear a paper read by his Excellency Hovhanes Khan Massehian, ex-Persian Minister, who has translated Shakespeare into modern Armenian. The Right Hon. Viscount Bryce occupied the chair, and among others who spoke were his Grace Archbishop Utudjian (Archbishop of the Armenians of Western Europe), Sir Sidney Lee and Professor Freeman. Letters were read from Sir Harry Johnston, Lord Morley and others regretting their inability to be present.

The chairman, in opening the proceedings, said that the Armenians were a nation of poets, and during centuries when there was no literature here except for a short time (that of the Roman conquerors) there was a literature in vigorous youth among the Armenian mountains. Unfortunately there was no country whose history presented for poetry a greater number of tragic themes. He did not think there were any episodes in history illustrating gallant and unconquerable patriotism more moving and striking than those which recorded the defence of Armenian liberty by scattered tribes and villages like those which had given imperishable renown to the name of Zeytun.

The lecturer, in the course of his address, said that the renaissance of the Armenian language began in the middle of the Nineteenth Century. The old classical Armenian of the Fourth and Fifth Centuries, into which the Bible had been translated, had then ceased to be a living language—it was found impossible to revive it—while the dialect spoken by the peasants was not polished enough to be used as a literary language. But a novel by Raffi was published and then translations of writers of Western Europe. The first renderings of Shakespeare were "Hamlet," translated from the French, and "The Merchant of Venice," from the German. Reading these had inspired him (the lecturer) with the determination to learn English, so that he might read Shakespeare in the original. He had learned English accordingly, and had made the first translations direct from Shakespeare's original tongue into Armenian. Previous translations, too, had been in prose, his were in verse, sometimes blank verse, sometimes rhymed.

Professor G. Hagopian, in moving a vote of thanks to the chairman, said that the interest of Lord Bryce in Armenia was not of recent growth, it dated from 1876. When in those days he (Professor Hagopian) had made representations to the great committee of the Eastern Question Association, its chairman (Mr. Mundella) had replied: "We want facts, facts, facts about Armenia. We know nothing about Armenia." He (Professor Hagopian) had marshalled those facts together, and when the paper was ready had been referred for advice to the Regius Professor of Civil Laws at Oxford—Mr. Bryce, now Lord Bryce.

Armenian songs were sung in the course of the evening by Miss Hropsime Gulbenk Mair Arax and Miss O'Mally Dzidzer Nery.

The British Consul-General and the British colony re-entered Ispahan on Tuesday (says a telegram from Teheran), and received a splendid welcome from the Russian military and the Persians.

Travellers from Constantinople declare, says the *Morning Post's* Salonika correspondent, that Marshal von der Goltz was assassinated by Captain Ali Abdullah, a Turk. They state that he fired three times with a revolver at the Marshal, who died instantaneously.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds,
Broadcloths, Coatings, Hosiery, Rugs,
Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT.

COOPER, ALLEN & Co., Ltd.,

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I have frequently drawn attention to the important rôle allotted to the Danube in the future economic development of the Central Powers. Together with its navigable tributaries, such as the Save, the Tiza, etc., it has become the great waterway of Central Europe, and is eventually to become the great trade artery from the mouth of the Rhine to the Black Sea across Germany, Austria, and Bulgaria. The matter is not a dormant one, and I am, therefore, not at all surprised to see that, according to the *Morning Post's* Budapest correspondent, an international conference is to be held in Vienna on this subject. All the Allied States of Germany will be represented, and also Roumania—which is not surprising considering that the mouths of the Danube are in Roumanian territory, though controlled by an international commission. As a matter of fact, the position of Roumania on the Danube is a very peculiar one, and of tremendous significance to the Pan-German dream of a German Danube. Hence, I trust that Roumania will not sell its heritage for a mess of pottage.

***

There are many who, when the future map of Europe is drawn up, would like to see the Bulgar driven away from the southern bank of the Danube, and, as far as future peace in the Peninsula is concerned, I must agree with them for this, if for no other reason: the southern bank of the Danube between the Iron Gates and Rustchuk is higher than the northern bank, and consequently the Roumanian shore is perpetually menaced by attack, and dependent on the treacherous, double-faced goodwill of the Bulgars. In these circumstances Roumania's advantageous position on the mouths of the Danube is neutralised by her exposed position along the Roumano-Bulgarian frontier. Nor is it likely that the Central Powers, who wish to create an exclusively German Danube, will do anything to strengthen Roumania's hold on the river; on the contrary, they will do everything to weaken it, and, therefore, it seems to me that Roumania's best plan at the coming conference is to "sit still and hold tight," to accept temporarily any crumbs that may fall in her way, but in no way to bind herself to a policy which in the long run is bound to be antagonistic to her own interests. It is not in Budapest, Vienna, or Berlin that she will find protection for that long stretch of the Danube exposed to Bulgarian perfidy.

***

It will be remembered that at the recent lecture on Serbia at the London Chamber of Commerce (see THE NEAR EAST, May 5, page 18) Mr. C. E. Town, who moved a vote of thanks, said that with regard to Serbia's future outlet on the sea, "he had been very pleased to learn that a present of two naval units had been made by Great Britain to Serbia, and that each of the Allied nations was going to present Serbia with units, so that she might become a naval as well as a military Power." I did not draw special attention to the matter at the time, considering the moment inopportune. But this week there has been published in Corfu a denial to a statement that has appeared in the Press to the effect that Serbia "has bought her first warship." As a matter of fact, the Serbian Government has purchased a merchant vessel, not a warship. This seems to me much more natural and practical. Even when the war is over, I doubt the wisdom of any development of Serbia along the lines of a "naval Power," as suggested by Mr. Town. The nucleus of a Serbian mercantile marine will be a necessity to New Serbia; its growth and development will depend entirely on the economic development of the country itself and on the seatrading abilities of the people—as yet unproved. To bolster up this small nucleus by naval units might not only prove a source of extreme danger, but would also deprive the mercantile shipping of useful hands, and thereby hamper its normal development. Therefore, while pleased to see that Serbia has bought her first merchant vessel—which I sincerely hope will in due course be followed by many similar purchases (or gifts from the Allies, as the case may be)—I trust that all dreams of "naval units" and "naval power" will remain dreams for some time to come.

***

We reproduce elsewhere two extracts from the Egyptian papers which are deserving of some reference in these columns. The first of these is from the *Gurfa el Tugarieh el Misrieh* ("Review of the Egyptian Chamber of Commerce"), and deals with the shipping problem, urging the creation of an Egyptian mercantile marine. Thus is revived the old dream of the great Mehmet Ali. Circumstances have altered since those days, and the opposition rife then need hardly be resurrected to-day. Personally, I see no reason why the Egyptian people should not create a marine of their own. In its inception it would be mainly coastal, the routes extending along both shores of the Red Sea, and as far north as Cyprus and west to Malta. Of the more ambitious scheme—namely, the regular plying of vessels between Great Britain and Egypt—much can be written, both favourable and otherwise. In the first place, and in view of home "vested interests" and forced competition, any such scheme would be a costly and difficult one to realise, and would most likely come to grief unless supported and backed by the Egyptian Government. It will be remembered that when Lord Kitchener was in Egypt, before the war broke out, there was some rumour of a Government scheme for the acquisition of a State mercantile marine, the object, it was stated, being to compel shippers to bring down the Mediterranean freight rates. This sounds feasible in theory, but in practice I doubt whether the desired results would have been obtained. However that may be, nothing further has been heard of the pre-war suggestion, and it is not likely that the Egyptian Government will put it forward for some long time to come. Eventually, whether it be by the reconstruction and strengthening of the Khedivial Mail (this is the more likely procedure), or whether it be by the formation of a new company, native or otherwise, under State control, Egypt will doubtless acquire a mercantile marine of her own; but, unless the first-named procedure is followed, it will have to be built up gradually, slowly evolving from an Egyptian coastal shipping service which, practically speaking, is as yet unborn.

***

The second question to which I wish to allude concerns Egypt's position as regards the new income tax. The *Egyptian Gazette* of April 27 published a leading article on the subject which fully covers the matter, and is reported elsewhere. It only remains for me to draw the attention of the Chancellor of the Exchequer to an anomaly that requires rectification. Under the existing arrangement a limited liability company, which has its registered office in London, "is mulcted to the tune of 80 per cent. excess war tax on its war profits, and in addition is forced to pay a quarter of its income as income tax." On the other hand, an English company, having its registered office in Egypt and not in England, "escapes any taxation under the income tax or the excess war profits tax." This, obviously, is unfair; besides, it must inevitably lead to the removal from England to Egypt of the registered offices of many English companies if they are to compete with their untaxed competitors. The matter is one deserving of rectification, and I think that it could be best brought about by the Egyptian Government acting on advice tendered to it by the Imperial Government.

***

Berlin, aspiring to be the empire city of a Central European State, has brought forth a ridiculous mouse in the form of a propaganda organ called the *Wirtschaftszeitung der Zentral Mächte* (Economic Journal of the Central Powers). It has been founded as the official organ of the movement whose aim is the establishment of a German-Austro-Hungarian Economic Union. As Turkey and Bulgaria are—whether they will or not—to belong to this Central European Union, the *Gazette* is published weekly at Constantinople and Sofia, as well as at Berlin, Vienna and Budapest (says a Berne correspondent of the *Morning Post*). The editorial offices are in Berlin and Vienna; the editor for Germany is Professor Paasche, the editor for Austria is Dr. W. Exner, the editor for Bulgaria his Excellency Constantine H. Kaltschoff, while the editor for Turkey is Hadji Adil Bey, President of the Turkish Chamber of Deputies. In the current issue of the paper it is suggested that all the States belonging to the proposed Union should enjoy a common postal service and a uniform coinage system. In other words, I take it that the mejideh is to be turned into pfennigs, to the greater glory of Kultur. The correspondent alluded to says that the articles in the current issue of the *Gazette* deal with details of the proposed economic *rapprochement*. In the Turkish section there is an article on the fertility and produce of the Turkish soil; there is another on "The Mesopotamia-Persian Petroleum Question," and a third on "Islam and the Economic Question." The articles in the Bulgarian section treat of mining, agricultural, banking, and commercial affairs in Bulgaria.

***

So considerable has been the number of subscriptions to the Roumanian Five per Cent. National Loan that the Government closed the list on Saturday, six days earlier than the appointed date. On May 10 subscriptions reached a total of 300,000,000 lei, which was double the amount asked for; by Saturday they had attained, in round numbers, 400,000,000 lei. It will be seen, therefore, that I was right when I predicted that the loan would be a great success. Incidentally it may be mentioned that the National Bank has, as foreseen last week, reduced its rate of discount to 5 per cent. as from Tuesday last.

Alexandria Prize Court.

S.S. Derfflinger (ex Cargo).

His Honour Judge Grain has delivered judgment in the Supreme Court for Egypt sitting in Prize in a case relating to cargo ex the s.s. Derfflinger, the facts being set forth in the judgment as follows :—

The Société Anonyme Italienne "Il Truciolo" bought goods at Manila through an enemy firm named Germann and Co., of Hamburg, the goods consisting of forty-three bales of knotted hemp fibre.

The goods were despatched by Germann and Co., of Manila, to Genoa, and were invoiced by Germann and Co., of Hamburg, on July 30, 1914, to La Société "Il Truciolo."

The bills of lading were forwarded by Germann and Co., of Manila, to Germann and Co., of Hamburg, and were endorsed "Germann and Co., Limited."

Germann and Co., of Hamburg, forwarded them to the Credito Italiano at Florence, who were to forward them to La Société "Il Truciolo" on the acceptance of a draft for 375 frs. drawn by Germann and Co., of Hamburg.

The Credito Italiano on December 2, 1914, on the instructions of La Société "Il Truciolo" accepted on behalf of La Société the draft for 55,375 frs. of Germann and Co., of Hamburg, and the bills of lading were duly forwarded to La Société "Il Truciolo."

Mr. Halford, who appears on behalf of La Société "Il Truciolo," urges that in coming to a decision as to the ownership of these goods the Court must be guided by the Italian law as to the passing of property in goods between seller and buyer, and he places before the Court a very interesting and carefully drawn up dissertation on the law of the sales of goods which has been drawn up by the legal authorities at the Italian Consulate.

It is argued on behalf of La Société that by the Italian law goods put on board c.i.f. by the consignor pass to the consignee as soon as they are put on board, and that the fact that the goods on the voyage are at the risk and peril of the consignee is conclusive evidence that the property in the goods has passed to the buyers.

Speaking generally, Courts of Prize sit for the purpose of administrating the law of nations and the law of nations only.

As it is stated by Wheaton, p. 457, par. 392, 2nd ed., "There is evidently a wide distinction . . . between the ordinary tribunals of the State, proceeding under the municipal law as their rule of decision, and prize tribunals appointed by its authority and professing to administer the law of nations."

But there is no doubt that in some cases the municipal law must be applied, as there is no rule of law under the law of nations to assist the court in coming to a conclusion. It then becomes a question which is the municipal law to be applied.

Is it that of the captors in whose courts the matter is being determined? or is it to be that of the claimants to the captured property? Sir William Scott, The Santa Cruz 1 Ch. Rob. 60, states: "If I am asked under the known diversity of practice on this subject, 'What is the proper rule for a State to apply to the recaptured property of its Allies?' I should answer that the liberal and natural proceeding would be to apply in the first instance the rule of that country to which the recaptured property belongs. I admit that the practice of nations is not so; but I think such a rule would be both liberal and just."

And he does, in arriving at his decision, apply the Portuguese rule of law, which was not on all fours with the British, and winds up his judgment as follows (page 79) :— "Perhaps a rule more closely concurring with our own might have been more convenient; but the difference is not sufficient to justify this country in refusing to Portuguese subjects the benefit of their alteration. In professing to act on the law of our Ally we must do it for better or worse."

The judgment of Dr. Lushington in The Otto and Olef, E.P.C. Vol. II. p. 510, supports the contention of Wheaton, that primarily it is the law of nations which the Prize Court has to administer, but also states that there may be occasions when foreign municipal law can be applied. He states : "Now, in a simple case depending on the law of nations, and not depending upon the peculiar construction of any treaty between Denmark and England, I am of opinion that it is no part of my duty to examine minutely into the municipal law of Denmark. I have no right to look and see whether Denmark has been fraudulently treated by the parties who procured these instruments. The only purpose for which I can look into the question is to see whether the property bona fide belongs to Danish subjects."

In municipal courts there is no doubt that a contract made in a foreign country and foreign language must be interpreted according to the laws of the country in which it is made. Lord Craworth, in Di Sora v. Phillips, 1863, 10 H. of L., p. 633 : "When a written contract is made in a foreign country and in a foreign language, the Court, in order to interpret it, must first obtain a translation of the instrument; secondly, an explanation of the terms of Art, if it contains any; thirdly, evidence of any foreign law applicable to the case; and, fourthly, evidence of any peculiar rules of construction, if any such rules exist by the foreign law. With this assistance the Court must interpret the contract itself on ordinary principles of construction."

This statement of Lord Craworth was merely made with reference to the rule of law in the municipal courts, but directly it is admitted that under certain circumstances the municipal law has to be called in in aid of the law of nations, this rule as laid down by Lord Craworth becomes applicable.

Recently in s.s. Erymanthos (cargo ex) II., Judge Sarnis, sitting in Prize at Malta, decided that contracts made in Belgium must be interpreted by the law of the country, viz., Belgium, in which they were made.

And I have come to the conclusion that in certain cases the municipal law must come in to the assistance of the law of nations, and under certain circumstances it may be that one has to resort to foreign municipal law.

Wheaton goes as far as to say that there may be occasions when the municipal law upsets the law of nations in the Prize Court. On p. 465 he says, "It is a question of great nicety how far a Prize Court is bound to enforce municipal law against foreigners when that municipal law is contrary to the law of nations, and he cites The Recovery 6 Ch. Rob 348, The Snipe Edw. Ad. 381, The Maria I. Ch. Rob. 350, The Ostree 9 Moo. P.C. 150. In the case which is now before me I am inclined to think that I might be driven back on to the British law of sales of goods because of the difficulty in ascertaining under what particular foreign law the contract was made. It was a contract in the first place made between Germann and Co., of Manila (which is probably a German firm), and Germann and Co., of Hamburg, and in the second place between Germann and Co., of Hamburg, and La Société "Il Truciolo," of Genoa. And in the confusion of nationalities of the parties engaged in the contract the only course open would be to decide the matter on the law of the court before which it had been brought for decision.

But I do not think it is necessary to pursue this point, nor perhaps was it absolutely necessary for me to have gone into the question of the application of the foreign municipal law, but it formed the basis of the arguments brought before me, and in the event of the case going to a higher tribunal I thought it was desirable that it should be shown that this aspect of the case had been considered.

My reason for stating that perhaps there was no necessity to enter upon the argument of the application of the foreign municipal law is that after careful study of the Treaties on the Italian law of sales of goods, which the courtesy of the Italian Consulate supplied me with, and after listening to the arguments of Mr. Halford on the same point, I cannot find any material difference between the Italian and British law, as regards the sales of goods.

In the arguments before me in this case great stress has been laid on the fact that the goods had been put on board c.i.f., that they were at the buyers' risk and peril.

And it was urged that it having been proved to the satisfaction of the Court that the goods were at the buyers' risk, the Court, according to Italian law, must come to the conclusion that the property had passed from the sellers to the buyers.

There is no doubt that the question, At whose risks are the goods? is an important factor in arriving at a conclusion as to the passing of property in a contract for sale of goods, and might perhaps be the determining factor—not only in Italian law, but in British law also.

But under both laws other elements may arise which will reduce the question of peril and risk on the voyage to a question of minor consideration.

And I have come to the conclusion that that is what has occurred in this case, and that we must look further than the question of peril and risk.

We must consider the point which arises in Italian law of sales of goods as well as in the British law—namely, what was the intention of the parties to the contract?

Was it the intention of the sellers that on these goods being put on board the buyers became absolute possessors of these goods, and that the sellers relinquished all control of the goods whatsoever, reserving to themselves no right of disposal?

The form of the contract was obviously documents against acceptance, because until La Société "Il Truciolo" accepted Germann and Co.'s draft for 55,375 frs., La Société would have been unable to obtain the goods because the bills of lading were being held by the bank on behalf of Germann and Co. until the draft was accepted.

It is clear that the sellers intended to reserve to themselves some right of disposal, because until the sellers had obtained some security for payment for the goods from the buyers they rendered it impossible for the buyers to obtain them.

Therefore, I hold that both in Italian and British law it was the intention of the parties to the contract that these goods should not pass to the buyers on being put c.i.f. on board the vessel, but that the sellers reserved the right of disposal of the goods until a further act had been carried out by the buyers—namely, the acceptance of the draft.

The goods came into the hands of the Crown in October, 1914, while the bills of lading, and consequently the goods, were still at the disposal of the enemy firm, Germann and Co., of Hamburg, the sellers. The draft of Germann and Co. was not accepted until December, 1914. I, therefore, must hold that at the time the goods were seized they were the property of Germann and Co., of Hamburg, an enemy firm, and must, therefore, be confiscated as good prize.

Order made for sale.

According to a letter to the *Ahram* (Cairo) from Edfon, Mr. Wells, Chief Inspector of the Mines Department, arrived at that town on April 28, and began work at the coal mine recently discovered in that district. Mr. Wells is having diggings made at a distance of about 300 metres from the place where the deposit has been discovered.

TRADE NOTES.

Egypt.

H.M. Consul at Cairo has forwarded a copy of the *cahier des charges* in connection with a call for tenders by the Egyptian Ministry of Education, for the supply and delivery of clothing for the pupils of the Bulac Elementary Training College for Women Teachers, viz.:—4,060 metres of flannelette, 6,090 metres of printed calico, 3,480 metres of coloured zephyr, 2,320 metres of veil muslin, 1,740 dozens of white press buttons, and 870 pairs of girls' shoes. Samples may be inspected, and specifications and forms of tender obtained, at the Central Stores, Ministry of Education, Darb el Gamamiz, Cairo. Sealed tenders, accompanied by a deposit of 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer, will be received at the Central Stores of the Ministry of Education, a above, up to May 27.

H.M. Consul at Cairo has forwarded conditions of a contract in connection with a call for tenders by the Egyptian Ministry of Finance for the supply of stationery articles required for the use of the various Government Administrations during the year 1916-17, including pencils, penholders, pen wipers, pins, gum, paper clips, sealing wax, ink, etc. Copies of the conditions and form of tender may be obtained from the "Economat Central, Ministère des Finances," Cairo, at which address also sealed tenders, made out on the proper form and accompanied by samples (in duplicate) of the goods it is proposed to supply, will be received up to noon on June 1.

The Secretary of State Dominions, Ministry of Finance, Cairo, invites tenders for the construction of fine "steel roofing" for warehouses in the province of Gharbieh. Date, May 23.

The Superintendent of Stores, Ministry of Education, Cairo, invites tenders for the supply of linen and table requisites for the school year 1916-17. Date, June 10.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

The Superintendent of Stores, Ministry of Education, Cairo, invites tenders for the supply of 10,000 dozens of Arabic reed pens required for the school year 1916-17. Persons unable to tender for the supply of the total quantity required may submit tenders for any substantial portion thereof. Date, May 31.

ENEMY FIRMS.

The following addition to the statutory list of firms in foreign countries with which trading is prohibited has been published:—

Greece.

Barouh, Solomon and Levi, Volo.
Brazzafoli, Domenico, Syra.
Constantacopoulos and Co., Patras.
Dimitrelias, John, Vathy, Samos.
Fels and Co., Corfu.
Frandzis, P., and Fiorentino, G., Vathy, Samos.
Galanis and Goldstein and Hadjiandreou, Samos.
Muller, Karl, Patras.
Lochner, Max, Patras.
Lucas and Co., Patras.
Spiliotopoulos, C., Patras.
Stoltenhof and Lucas, Patras.

The following are among the removals from the list:—

Persia.

Shobet, Selim David and Co.
Sofer, D. J. and S., Hamadan.
Zarour, Sion, Hamadan.

FAMINE IN CONSTANTINOPLE

Constantinople is threatened with famine, writes the *Times* correspondent in the Balkan Peninsula from Constantza (undated), and now depends mainly on precarious supplies. Not only bread but almost all other foodstuffs are now distributed on the ticket system. Owing to the continued arrival of refugees from Asia Minor, in consequence of the Russian advance, the stock of provisions available for distribution is greatly diminished. Business is practically at a standstill, and prices have increased enormously. Sugar, petroleum, rice, coffee, potatoes, and beans, fetch from 15 to 20 times their normal cost. A cup of tea now costs about 1s. 6d. in the restaurants. The only bread procurable is black and unpalatable; this is sold at about 6d. per lb. to those who can obtain tickets. In the provinces provisions are still fairly abundant, but sugar, coffee, and petroleum are no longer obtainable. In the city many small restaurants and cafés are closed, but the larger establishments patronized by the Germans remain open. The Germans, who receive their pay regularly, can afford to live in good style, and this circumstance alone is enough to render them obnoxious to the unhappy Turkish officials, whose salaries are in most cases many months in arrear. In former times the officials were in the habit of making over their arrears of pay at a reduction of 20 to 30 per cent. to certain bankers, who contrived to obtain payment from the Treasury by bribery, influence, or other means. But transactions of this kind are now impossible, owing to the depreciation of paper money, and dire distress prevails among the official classes.

The monetary situation is practically hopeless. No more gold is to be found in the market; silver is also disappearing; and even nickel coins have become so scarce that it is difficult to obtain small change in the shops, which, instead of change, commonly issue I.O.U.'s to their customers, on account for further purchases. The old £T5 notes of the Ottoman Bank have vanished. Their place has been taken by the recently issued £T1 notes (frequently cut into two 50-piastre notes) and 25-piastre notes. The new issue of paper money "made in Germany" consists of 5 and 10 piastre notes also. The notes are expected to arrive from Berlin in a few days. They enjoy a shadowy German guarantee, being convertible into German bonds. All denominations of the fiduciary currency have a forced circulation. Refusal to accept the paper money entails arrest and imprisonment. It is accepted with many misgivings, especially by those who are old enough to remember how, after the last war with Russia, the £T1 note fell in value to one piastre.

The energy latterly shown by the Russian Fleet, which has sunk a considerable number of the coasting vessels which brought provisions and petroleum from this port, has caused a further rise in prices; while the *coup de grâce* has apparently been delivered by the Roumanian Government, which has prohibited the departure of all vessels.

ENEMY TRADE IN EGYPT.

A supplement to the latest issue of the *Official Journal* sets forth the terms of a Proclamation by General A. J. Murray, Commanding in Chief in Egypt, as to an extension of the decisions of the Council of Ministers of August 5 and 13, 1914, and of the Proclamations under Martial Law of November 7, 1914, and January 25 and October 15, 1915, relating to trading with the enemy. The New Proclamation declares that any British, Allied, or neutral territory which is in the effective military occupation of the enemy shall, during the whole period of such occupation, be deemed to be enemy territory for the purposes of the above-mentioned Decisions and Proclamations. Similarly, enemy territory in the effective military occupation of his Britannic Majesty, his Allies, or of a neutral State, shall be deemed not to be of enemy territory for the above purposes.

In case of doubt as to the date at which any such British, Allied, neutral, or enemy occupation began or ended, such date shall be conclusively determined by a certificate delivered under the authority of the General Officer Commanding in Chief.

NEAR EAST MARKETS.

SYRIAN CROP OUTLOOK.

(From a Correspondent.)

Cairo, May 8.

A person who left Palestine only six weeks ago confirms the reports of the extraordinary dearness and dearth of wheat and other grain, to which the failure of last year's crops is said to have contributed in a great measure. It is comforting, on the other hand, to learn from the same source that the forthcoming crops promise a fairly good yield, which, if not indiscriminately requisitioned by the military authorities, and if judiciously distributed, may relieve the present distress and avert the impending famine.

Food Prices.

A letter from Beyrout gives some interesting figures as to the prices of some foodstuffs. Melted butter is worth 30 piastres the oke (the pound sterling=137 piastres); olive oil, 23 piastres; meat, 24 piastres per oke. These, after all, are not unusually exorbitant prices, but petroleum, on the other hand, is selling at 700 piastres the case, of two tins!

CYPRUS NOTES.

(From a Correspondent.)

Harvesting work proceeds in general satisfactorily. Inquiry shows that the damage caused in several districts by recent hailstorms has been far more serious than was anticipated. The Commissioner of Nicosia, who directed the Mudir, Husni Effendi, to investigate the results locally, has ascertained that the losses sustained in some of his villages run to £20,000, amounting in one village alone to £6,000. Similar local inquiries are being made by the Commissioners of other districts for the information of the Government.

The locust war is being actively waged. In some parts it has not been possible to cope with the increasing swarms, which have invaded standing crops, especially of wheat. In these nothing can be done except by destruction of the crop, which is seldom carried out.

PRODUCE REPORT.

London, May 18.

Currants.

The market has been fairly active this past week, with business done at full prices, and in some instances slightly advanced. The s.s. Erato is shortly expected, but with only a small quantity of currants, which in any case will not affect the market. Prices quoted for Pyrgos, 41s. to 43s.; Amalias, 44s. to 46s.; Patras, 46s. to 51s.; Gulf, 48s. to 52s.; Vostizza, 48s. to 54s.; Island, 45s. to 48s.; and smalls, 44s. to 56s.

Sultanas.

A fair amount of business was done during the week in Greek fruit at full prices, whilst other kinds were somewhat quiet. Prices quoted for Greek sultanas, 88s. to 110s.; Afghan and other kinds, 84s. to 102s.

Dates.

There is a good demand, especially for Persian, but evidently the prices asked discourage business worth mentioning; thus only small transactions are taking place at steady rates.

Seeds.

Linseed is firmer, but rather quiet. London-Calcutta spot is offered at 73s. 6d., afloat was sold at 72s., while May-June and June-July buyers offered 72s. Bombay ordinary May-June is quoted 74s., and small-grain ditto 73s. Rapeseed is firm: Toria, May-June, Hull, 67s. 6d. Cottonseed is firmer: Egyptian-London, May, is quoted £14 7s. 6d., and Sakelarides £13 17s. 6d. Canaryseed is dull and values somewhat easier. Mustard is scarce, and higher prices are demanded. Rangoon beans have also advanced both for spot and to arrive.

Oils.

Linseed oil is firmer: Spot pipes, landed, £35 10s.; barrels, £36 10s. Rape oil is dull: Ordinary brown, naked, spot, £49; English refined, barrels, £52 to £53. Cotton oil is firm. Crude spot, pipes, £45 10s. is asked; refined pale, pipes, £49 10s.; and barrels, sweet, £54 to £55, as to make.

Engineering Notes.

Harnessing the Assouan Dam.

The *Egyptian Gazette* recently published an article on "Paper Mills in Egypt," in which it was suggested to utilise the water power from the Barrage. A correspondent now writes to the paper in question on this subject, and points out that the Barrage scheme would be impossible, for "in order to have water power you must have (1) continuous flow, (2) a fall of water or head. These two conditions are not fulfilled in the Barrage because its sole object is to store water for the land of Lower Egypt and to allow as little as possible to pass to the sea. Besides, the Barrage structure, as it stands, would be useless for such a purpose, and several additions and modifications would have to be made before it would be used in this way. There are other drawbacks, but those just mentioned render discussion of them unnecessary. What should be considered as wasted power is the falls at the Assouan Dam. The fall is about 26 metres, and the flow at flood is about 14,000 cubic metres a second. This would develop as much horse-power as is now obtained from the whole of the oil and steam engines in Egypt and the Sudan combined. The power produced would be useful for driving trains from Assouan, north and south, and for cloth as well as paper factories; and should the existing quarries there be developed, hydraulic and electric machinery could be used for cutting and planing the granite. Engineering shops could be started there, which would serve as training schools for engineers. Another place where power could be obtained is the Fayoum. This province has big natural differences of land levels, causing suitable falls of water for the development of horse-power. Turbines (water motors) already exist in the Fayoum, and are used in the cotton mills of Nubar Pasha. Other turbines could be erected with equal success to give power in other than flour and cotton mills. It is strange that lighting by electricity produced by water power has not yet been effected in the Fayoum."

New Radiographic Service.

It is announced that a radiographic service between Spain and the United States will soon be established by means of a new radio-signal receiver of a design that does away with the usual earpieces. The new instrument after having been examined by the Centro Tecnico de Aeronauticos, and favourably commended by the latter, was approved by the Spanish Minister of Public Works, with the result that a scheme is being formed for the establishment of the above service. It is stated that the radius of the new apparatus is over 5,000 kilometres (3,000 miles).

The Union of the Greek and Macedonian Railways.

It is reported that on the new railway line, Gida-Papapouli, which will link the Athens-Larissa railways with the Salonika-Monastir, and European lines, rails have been laid down as far as the river Touzla. Thus only seventeen kilometres (ten and a-half miles) remain to be constructed in which to complete the line to reach Libunovon, where it will link up with Salonika-Monastir Line. It is expected that this will be accomplished towards the end of the month.

Danube Navigation.

During the present month (says the *Morning Post's* Budapest correspondent) there will be an international conference in Vienna concerning the Danube navigation, which is one of the most important schemes of the Germans in connection with the Central European Commercial Union. On the conference all the Allied States of Germany, and also Roumania, will be represented. The Bulgarian Government is showing keen sympathy with the scheme. The trouble in connection with the Danube question arises out of the differences between Hungary and Austria, for both intend to secure the so-called "Central Stelle," the central position on the line of navigation. It was originally planned that the conference should be held at Budapest, but the Austrians were up to the game, and before the Hungarians moved in the matter they forestalled them. The plan is that the Danube should be utilised for the German trade to the sea, beginning from the German town of Regensburg, where the Danube becomes navigable, and touching all the German, Austrian, and Hungarian towns connecting the Tisza and other navigable rivers with the Danube, and thus getting a convenient water route to the Balkans and the Black Sea, and so to Turkey. The Burgomaster of Vienna, Herr Weisskirchner, is doing his utmost to have Vienna accepted as the central port for the Danube navigation, and in consequence there is considerable discontent in the Hungarian papers.

Egyptian Shipping.

The *Gurfa el Tugarieh el Misrieh* (Review of the Egyptian Chamber of Commerce) publishes an article, quoted by the *Egyptian Gazette*, on a subject of interest to us now, considering the new status of the country as a British Protectorate. We, therefore, reproduce the following extract :—

"There is one industry which has no particular home and which requires energy and perseverance—that is, navigation. The Egyptians have absolutely no share in this highly-remunerative business, in spite of the fact that Egypt's position, geographically speaking, is most suitable for seafaring, and encourages commercial navigation owing to the country's relations with foreign lands. We cannot understand why the Egyptians have hitherto abstained from embarking upon such business. Besides the steamers which pass through the Suez Canal, no fewer than 2,400 ships enter Egyptian ports every year conveying about 5,074,836 tons of goods from foreign countries, while the steamers which pass through the Canal number about 4,000, with a total tonnage of 16,200,000. The ships which ply between Egypt and other countries are all foreign, not a single one of them being Egyptian. It can thus be easily imagined what an enormous freight bill Egypt has to pay to foreign navigation companies on both imports and exports. Had Egypt been possessed of some steamers she would obviously have derived some portion of the profit which now goes to foreigners. The navigation companies which we now suggest that Egyptians should organize would not require a very large amount of capital. We could at first content ourselves with a small company, utilising a limited number of ships to undertake the shipping of Egypt's cotton to England and importing coal from Britain. We also need some steamers to ply between Egypt and the ports of Turkey, Arabia, and the Hejaz. The present time might be the most suitable for organizing such companies."

GREEK FINANCES.

The session of the Greek Chamber was resumed on Monday. It is believed that the Chamber will vote the 1915 and 1916 Budgets and other fiscal measures, including the new internal loan, the contract for which, however, has not yet been signed with the National Bank, and that the session will then be closed.

It will be remembered that, in connection with Greece's financial difficulties, an attempt was made to raise a loan abroad. The scheme, however, was vetoed by the International Commission of Financial Control. This notwithstanding. Reuter's Athens correspondent cabled on the 11th as under:—"The Austrian delegate on the International Commission of Financial Control has received instructions to support the Greek Government's scheme for raising the funds necessary to meet pressing needs. As, however, a majority of the Commission is necessary to sanction the scheme, the position remains unchanged."

Reuter's correspondent reported from Athens on May 16 as follows:—"The agreement with the National Bank for a loan of a hundred million francs will be signed to-day or to-morrow, and will be submitted to Parliament on Thursday. Replying to a deputy who put questions on the financial situation, the Minister of Finance said the Government had done everything possible to meet the needs of the country. The measures to be laid before Parliament included the taxation of everybody, from the highest to the lowest, and, alluding to the deputy's remark to the effect that the inadequate provision made for soldiers' families might lead to discontent and that serious consequences might ensue, the Minister declared emphatically that the possibility of trouble was excluded, adding 'Let anybody try to disturb order.' The Minister's firm attitude created a favourable impression. No Greek contends that pecuniary sacrifices at this juncture are not a national necessity, but, with the exception of shipowners and a few others who are realising big war profits, the new taxation is a hard trial for a population struggling for existence when living is most difficult owing to the world war and the control exercised over neutrals by belligerents."

ROUMANIAN LOAN.

Reuter reported from Bucharest on May 17 that the National Loan was closed on that day—that is to say, six days before the date originally fixed. Subscriptions amount to 375 million lei (£15,000,000), which is 2½ times the sum asked for.

Although official negotiations of an economic nature between Roumania and Bulgaria continue, Bulgaria is continually quibbling about transit, and accordingly Roumania, by way of reprisals, is refusing the export of all provisions.

Large quantities of purified petrol and a little benzine continue to be exported to Switzerland. The transport is being organised by a colonel in the Swiss Army. No train is despatched until official notice has been received that the trains previously sent have reached their destination.

COMPANY MEETING.

ANGLO-PORTUGUESE TELEPHONE COMPANY.

Mr. Herbert Allen, presiding at the annual general meeting on Tuesday last, stated that in 1915 the company earned £81,923, against £71,339 in the previous year; they expended £54,037, as against £44,675; and they made a gross profit of £27,886. The expenses included £2,459 paid to the Portuguese Government by way of royalty, and a loss on exchange of £10,659. In the previous year royalties amounted to £2,024, and loss on exchange to £4,683. Against the gross profit there was a set-off of £1,349 for income tax and £3,600 for the debenture service, which left a net profit of £22,937. They had set aside £2,000 of this to exchange fluctuation account, as against £2,500 in the previous year, and this account now amounted to £8,500; to the renewals fund they had again placed a sum of £10,000, bringing the total up to £2,000; the general reserve fund remained unaltered at £25,000. Six months ago they paid an interim dividend of 3 per cent. on the share capital, and the board now recommended a final dividend of 5 per cent., making 8 per cent. for the year, the two payments together accounting for £12,000. The effect of this would be to deplete the balance of £5,472 brought forward from the previous year by a sum of £1,063, leaving £4,409 to be carried forward on the present occasion. The number of subscribers increased during the year by 10½ per cent. and the gross revenue by 14 per cent. Unfortunately, however, the net profit showed little advance on that of the previous year, owing partly to the increased cost of labour and material, and in greater measure to the loss on exchange. At the present time the company held sufficient bills to cover the probable remittances until the end of the current year, and the average rate of exchange for 1916 should work out at something like 36d. per escudo. The company's business was expanding at an unprecedented rate, and scarcely had they got their new exchange at Lisbon into working order than they were confronted with the possible necessity of further extensions. How much longer they could defer the opening of a new exchange at Oporto he did not know. For the time being the policy of the board was to restrict new work as far as possible to the actual bringing in of subscribers, but the present rate of progress could not be maintained without an adequate increase in the capacity of the exchange and of the cable routes. The present financial position of the company, owing to the conservative policy followed by the board in the past, was quite satisfactory, and, subject to the absence of any turn for the worse in the military situation—which, of course, would be speedily reflected in the country's finances—they could see their way ahead for well over a year. Peace at present seemed far enough off, and it would be idle to speculate upon the possibilities of the situation twelve months hence. Personally, he was not one of the "ardent optimists."

On the motion of the Chairman, seconded by the managing director, Mr. Fredk. Kerr, the report and accounts were adopted, and a final dividend of 5 per cent., making 8 per cent. for the year, was declared.

Mr. Charles Woodley was re-elected a member of the London Board of Directors, and Senhor Jorge O'Neill O'Neill was re-elected a member of the Lisbon Board.

Messrs. Futcher Head and Co. were also reappointed auditors for the current year.

Mr. Stevens, in moving a vote of thanks to the Chairman, said he thought the shareholders could congratulate the directors and the staff generally on the very satisfactory report they had submitted, especially having regard to the difficulties associated with Portugal, the exchange, and, not least of all, the European war.

The Chairman acknowledged the compliment on behalf of the Board and the staff in London and in Lisbon.

EGYPTIAN FINANCES FOR FEBRUARY.

(From Our Own Correspondent.)

Cairo, May 1.

This evening the State accounts for the month of February were published. During that month the revenue amounted to £E1,275,088 and the expenditure to £E1,025,615, bringing the totals at the end of February to £E15,815,106 and £E13,693,841 respectively.

The chief increases in revenue during the month were:—Customs, £E138,876; tobacco dues, £E42,706; legal fees, £E10,160; railways, £E106,500; telegraphs, £E11,232; domains, £E43,723. Direct taxes decreased by £E117,130 (this was to be expected, in view of the large amounts paid in advance during the preceding months by the cultivators). The chief items of expenditure were:—Irrigation, £E130,427; railways, £E196,936; War Office, £E76,001; and public debt, £E116,393.

The accounts show a surplus at the end of February of £E2,121,265, as compared with a deficit of £E1,229,235 at the same date last year, and, with another month to go to the end of the financial year, it looks as if all estimates will be falsified, and a record balance will result to the credit of the Reserve Fund. The way in which the revenue, especially Customs, railways, and legal fees, has come in is remarkable, and was certainly not foreseen by any of the experts. Also expenditure has been kept down in a most extensive manner, and this has, of course, helped to make the large surplus now available.

It is interesting to note that several items of revenue already exceed the estimates. Thus, direct taxes are £E135,620, Customs £E376,607, tobacco dues £E90,238, railways £E416,235, domains receipts £E105,619, and rent of Government land £E54,578 above the figures fixed in the Budget. On the other hand, expenditure on irrigation is £E450,558 below the estimate, and that on railways and the army £E404,990 and £E201,131 respectively under that allotted to them, whilst nearly every other item shows an economy on the estimates. Finally, the total revenue collected up to the end of February is only £E84,894 below the estimate for the whole year, whilst the expenditure is as much as £E2,482,530 off the full figure allotted to the services for the twelve months. It seems scarcely likely that anything near that figure has been expended during April, and, on the other hand, the revenue must have exceeded a million, judging by the preceding months and the fact that the Customs returns and the railway traffic showed no falling off, so there may be a slight addition to the present surplus of £E2,121,265, unless some heavy bills come in for payment at the last moment.

EGYPT AND THE INCOME TAX.

Under the above heading the *Egyptian Gazette* of April 27 published a well-argued leading article on how the only too apparent injustices of the new income-tax affect different companies in Egypt. We quote the following passages:—

"A limited liability company, which has its registered office in London, is mulcted to the tune of 60 per cent. excess war tax on its war profits and in addition is forced to pay a quarter of its income as income-tax. On the other hand, an English company, which has not registered in England escapes entirely any taxation under the income-tax or the excess war profits tax. As it is solely owing to the power of the British Navy and Army that anyone is able to exist here, it is most unfair that English companies should benefit by this protection and pay nothing for it. Take, for instance, English steamship and cotton companies in Egypt. Why should one company which happens to have registered itself pay these very heavy taxes, while their competitors pay absolutely nothing. The consequences of this glaring anomaly in taxation is obvious. The companies will simply remove their head offices to this country. We fully recognise the temptations to take such a step, although its patriotism is dubious. Yet the motives are very strong to induce such proceedings, and we shall not be surprised to see that some companies avail themselves of Egypt's immunity from war taxation. It is well known that enormous sums have been made both by English shipping and English cotton companies here in Egypt, not to mention firms who deal in other commodities, whose market is England. Yet such companies are allowed to retain all their war profits and go free from income-tax, thus being able to cut prices with other companies, whose head offices are in England, merely because of this glaring injustice. We suggest to the Chancellor of the Exchequer that this is a question that should receive his immediate attention, and that any Bill brought in to meet such cases should also be retrospective in its effects.

"It will be remembered that the leading case as regards English companies in Egypt is that of 'Mitchell v. Egyptian Hotels, Limited.' In that case, it may be usefully recalled, the profits of the company were exclusively derived from hotels in Egypt, and the articles provided that the control and management of the company's business should be vested in the local directors. As the London Board did not participate in or further the business operations in Egypt, the House of Lords held that the business was carried on entirely abroad, and accordingly only those profits remitted to England were assessable to English tax. But in the cases we refer to the companies are making their profits in England, but escape because of their domicile in Egypt. We are of opinion that if any Englishman cannot assist his country in the trenches, he can help out of his pocket, and as it is well known that many Englishmen here are making huge profits out of the war, we see no reason why they should not be made to pay their share."

During March, 1,253,857 kilos of gum, valued at £54,566, were exported from the Sudan via Port Sudan.

COMPANY RESULTS, Etc.

AGRICULTURAL BANK OF EGYPT.—The directors have declared a dividend of 6s. per share on the ordinary shares and £15 per share on the deferred shares, payable on and after to-day, at the National Bank of Egypt, in Cairo, Alexandria, and London.

ANGLO-EGYPTIAN OILFIELDS. — Gemsah, week, 89 tons; previous week, 637 tons. Hurgada, 555 tons, against 577 tons.

CAIRO ELECTRIC RAILWAYS AND HELIOPOLIS OASES COMPANY.—The annual general meeting of shareholders was announced to be held last Tuesday in Cairo.

CAISSE DE LA DETTE PUBLIQUE (EGYPTIAN).—The *Official Journal* (April 20) announces that the coupon of the Unified Debt, which fell due on May 1 last, will be paid in London at the Bank of England; in Paris, at the Credit Lyonnais; in Alexandria, at the Credit Lyonnais; and in Cairo at the Caisse de la Dette.

COMPAGNIE UNIVERSELLE DU CANAL MARITIME DE SUEZ.—The ordinary general meeting of the shareholders will be held on Monday, June 5, at 8, Rue d'Athènes, Paris.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended April 30 amount to £E4,571, or an increase of £E558 over the corresponding period of last year.

GHARBIEH LAND COMPANY.—The ordinary general meeting of shareholders will be held in Cairo on May 31, at 11 a.m.

IMPERIAL BANK OF PERSIA.—The directors announce an interim dividend for the half-year to March 20 of 3s. per share, free of tax, payable June 12.

PIRÆUS, ATHENS, AND PELOPONNESUS RAILWAY.—The directors have declared a dividend at the rate of Drs.3 per share, payable in London forthwith at the Bank of Athens, 22, Fenchurch Street, E.C., against surrender of coupons Nos. 54 and 55.

SUEZ CANAL.—Traffic receipts for the 12th, 13th, and 14th inst. amounted to 870,000 fr., as compared with 690,000 fr. for the corresponding days last year.

BANK OF ABYSSINIA.

Notice is hereby given that in conformity with Article 30 of the Statutes an ORDINARY GENERAL MEETING of the Shareholders of the Bank of Abyssinia will be held on Wednesday, the 31st May, 1916, at 4 p.m., at the offices of the National Bank of Egypt, Cairo, Egypt, for the purpose of:—

Presenting the Directors' Report.
Presenting the Auditors' Report.
Submitting the Accounts to the 31st December, 1915.
Electing Directors.
Electing the Auditors for the year 1916 and fixing their remuneration.

Any Shareholder holding a minimum of 5 shares is entitled to take part in this meeting, provided the Shares be deposited at one of the following places, where a card of admission or form of proxy will be given:—

In Egypt (at Cairo and Alexandria) at least five days before the date of the meeting:—
At the National Bank of Egypt, Anglo-Egyptian Bank, Ltd., Banque d'Athenes, Banque Belge pour l'Etranger, Imperial Ottoman Bank, Banque d'Orient, Banco di Roma, Cassa di Sconto e di Risparmio, Comptoir National d'Escompte de Paris, Crédit Lyonnais, and Deutsche Orientbank.
In Abyssinia, at least five days before the date of the meeting:—
At the Bank of Abyssinia, Adis-Abeba, Dire-Dawa and Harrar.
In New York, at least five days before the date of the meeting:—
At Messrs. Kidder, Peabody, and Co., Bankers.
In Europe, at least five days before the date of the meeting:—
In Paris, at the Société Générale de Crédit Industriel et Commerciale, 66, Rue de la Victoire.
In Rome, at the Banca d'Italia.
In London, at National Bank of Egypt, 6-7, King William Street, E.C.

F. T. ROWLATT, President.

Cairo, 11th May, 1916.

ALEXANDRIA WATER COMPANY, LIMITED.

Notice is Hereby Given that the thirty-eighth Ordinary General Meeting of the Shareholders will be held at the Company's Offices, Alexandria, on Monday, the 5th June, 1916, at 4 o'clock in the afternoon, for the transaction of the ordinary business of the Company, also to confirm the nomination of Mr. A. S. M. Dickson as a Director of the Company, and further to elect Mr. H. R. C. Blagden, the Manager of the Company, as a Director of the Company, and for that purpose to declare Article 106 (a) of the Articles of Association suspended in his favour in accordance with the terms of the said Article.

Holders of Share Warrants to Bearer desiring to attend or to be represented at the Meeting must deposit their Share Warrants in London before the 22nd May, 1916, or in Alexandria before the 2nd June, 1916, until after the Meeting, at Messrs. Barclay and Co., Limited, 1, Pall Mall East, London, S.W., or at the Anglo-Egyptian Bank, Limited, Alexandria, or at some other approved bank in London or Alexandria.

Dated, Alexandria, the 3rd April, 1916.

By order of the Board,
H. R. C. BLAGDEN,
Manager.

NOTES OF THE WEEK.

It is satisfactory to find that the British Mesopotamian Force is not intended to remain dug-in at the spot where the capitulation of Kut found it. A more hopeless confession of failure could not be conceived, and we do not pretend for a moment that such a proceeding was ever seriously considered. But the aggressive opposition that has manifested itself to what is regarded as the dissipation of strength on so-called side-issues had given rise to the fear that advantage might be taken of the failure to relieve Kut in order to cry halt to further operations in Mesopotamia. In passing, it may be pointed out that the answer to the lament over the dissipation of our fighting strength is to be found in Colonel Churchill's remarks in the House of Commons regarding the ample margin of troops not yet usefully applied to the prosecution of the war. We may not always agree with Colonel Churchill as a critic, but he voiced the opinion of those whose attention has been particularly directed to the Eastern theatres of war, when he commented on the "very large" armies in the East. "Sent and used in time, the forces which were now accumulated in the East—there was no military object in that theatre which they could not have achieved. The Government were open to obvious and serious criticism every day that passed without those forces being made to play their part against the enemy."

As was hoped, the abatement of the exceptional floods caused by the heavy rains has given the Tigris Corps its opportunity to advance. Leaving the Turks in their position at Sanna-i-Yat on the left or north bank of the river, General Gorringe has pushed forward on the right bank, has captured Dujailar Redoubt, which successfully withstood General Aylmer's efforts to take it early in March, and is now established on the Shatt-el-Hai to the south of Kut. As a result of this movement the Turks have had to abandon the south side of the river, but retain Sanna-i-Yat and Es Sinn on the north. Unless the situation in Baghdad is causing the enemy uneasiness, he may rely on the Tigris and the normal floods at the present season to protect him in his positions on the left bank until they can actually be carried by assault. The future progress of the operations so successfully inaugurated by General Gorringe may still be determined by the condition of the river. The flood season lasts into July, but it would be possible to turn it to advantage, if the supply of river craft were adequate to the needs of the Expedition.

The announcement that "a force of Russian cavalry has joined General Gorringe after a bold and adventurous ride" adds a touch of colour to a picture which has sorely needed it. There is no call for exaggerated expectations. A Russian force has been operating within a hundred and fifty miles of the British camps on the Tigris, and a dash over this distance would be an exploit entirely to the liking of the daring Cossacks. The arrival of the small band which braved the risks—the intervening country is probably inhabited by hostile tribes—is evidence of the fact that the forces converging on Baghdad are working together. The size of the band constitutes no appreciable addition of strength to the Tigris Corps; and, we may add, if there should be any friendly rivalry in what we hope is a race for Baghdad, the presence of a handful of Cossacks will not impair the British character of the Expedition any more than a few British aviators with General Baratoff would detract from the Russian honours, if his forces should happen to reach Baghdad first.

Whatever may be the forces employed, there can be no doubt that our Russian Allies are dealing systematically with Turco-German designs on Persia. The latest reports speak of the advance on Mosul being continued from Rowandiz; but in the meantime another force operating on the left of this line of advance has occupied Sakiz and Baneh, the latter only some thirty miles from the Turco-Persian frontier. As there is reason to believe that the Russians are also clearing the country north of Kermanshah, they will have practically established touch along a six hundred mile front extending from Trebizond to Kermanshah. These sweeping movements must prove even more disconcerting to the Turks than a concentrated attack at a given spot. The advance forces of the Russians will be for the most part cavalry, but they offer an effective screen for possible developments behind, and the danger of the Turkish lines of communication being cut grows with the extension of the Russian front.

The absence of news from the Armenia sector suggests that the Turks have exhausted their first attack and are not receiving reinforcements rapidly enough to follow up their initial gain. As they did not force the Russians back any considerable distance, it must be problematical whether the success was commensurate with the costliness of the effort. The course of events on the Tigris points to a hurried redistribution of the enemy's forces. After the formidable stand made in these very positions during the last few months it is

Digitized by Google

unlikely that the Turks would allow General Gorringe to advance so easily, if they had retained the same number of troops in front of him. These signs of increasing embarrassment in Turkey's military position, taken in conjunction with the persistent reports of the precarious situation in Constantinople, should serve as a special stimulus to the Allies to drive home their advantages with all the strength at their disposal.

The Triple Alliance has been formally reconstituted with Turkey in the place of Italy. An announcement to this effect was made on April 27 by the Turkish Minister of the Interior in a speech at a banquet given in honour of the visit of members of the Reichstag to Constantinople. Certain points in Halil Bey's speech are not without interest. He admitted that the Entente Powers offered to guarantee the integrity of Turkey, but added that, as this implied an "oppressive guardianship," the proposal could not be accepted. Germany, on the other hand, offered "an alliance, with equal rights and of long duration, on the principle of mutual and equal assistance against every danger." As a result of this agreement, "Turkey regained her independence, in order to rank as one of the members of the Triple Alliance." Since that time separate conventions have been arranged between Germany and Turkey in regard to Consular jurisdiction, right of residence, extradition, and other matters. In none of the German proposals, Halil Bey added, was to be found the faintest glimmer of the Capitulations. This alliance on equal terms has received somewhat stilted approval from the Press in Germany; and the extent to which Turkish enthusiasm on the subject is shared may be gauged by the remarks of the Cologne *Volkszeitung*. "It remains to be seen whether and how Turkey, in respect of the new conventions, will be able to conform with the ideas of a modern State. There is no room for the least doubt in regard to the good intentions of the statesmen now in power. Not only they, however, but also numerous other authorities in all the provinces of the Empire, are called upon to co-operate. . . . It is not to be supposed that, with the ratification of the Convention, all difficulties will be overcome. Turkey has taken a great step forward. But to consolidate and extend the progress made will require still a great deal of trouble and effort." Finally, Turkey is reminded that, as the conventions were prompted by Germany, so in the future she will have the benefit of German suggestions, and she is exhorted not to reject Germany's "disinterested and impartial assistance."

On May 18 El Arish, a post on the enemy's line of communications from Syria to Egypt, was bombarded by ships, aeroplanes, and seaplanes. The work was done thoroughly. The ships bombarded the fort to the south-west of the town, while the seaplanes and aeroplanes gave special attention to enemy troops and camps. As a means of worrying the Turks and breaking up hostile formations collected for the purpose of raiding Egypt, this incident, no doubt, serves a useful purpose, accomplished with little effort. It is well, however, to remember that there is a difference between "strafing" the Turks and undertaking military operations calculated to hasten the end of the war. The bombardment of El Arish seems likely to be used as a book entry on the credit side to balance the Katia affair; but it ought not to count as exoneration for the latter, or in itself provide an occasion for an exhibition of self-complacency in Egypt. The time has arrived for judging military operations by the concrete advantages achieved rather than by the space devoted to them in *communiqués*. On this principle the value of the attack on El Arish will depend on the extent to which it is followed up by further operations.

The policy of inactivity—whether masterly or the reverse it is not possible to judge—pursued at Salonika for many months now has been varied by a change in the command of the British forces. Lieutenant-General Sir Bryan Mahon has been transferred to the Western Frontier of Egypt, where his particular knowledge of the country will prove of great advantage, if he be given a free hand, and he is succeeded in the Balkans by Lieutenant-General Milne, previously Chief Staff Officer at the Headquarters Staff of the Second Army in France. If General Mahon was sent to put Salonika in an adequate state of defence, he has carried out his mission in a manner which has won the admiration of all those who have seen the results of his work. The new Commander-in-Chief has had considerable experience in the employment of artillery on the scale rendered necessary in this war, and the task devolving upon him, it is to be hoped, will be to conduct a vigorous campaign in the Balkans, which, in its earlier stages at least, must prove an arduous undertaking.

Although the Anglo-French forces have attempted no advance from Salonika, credit must be given them for having achieved all that is possible within the limits of the policy imposed upon them. There has been no respite in the organisation and consolidation of their positions along the whole front; enemy camps and working parties have been systematically bombarded, and the line held has been tentatively extended here and there. But the fact remains that the enemy has been given ample time to strengthen his positions with a view to the employment of the minimum number of men in challenging any attempt to advance that may hereafter be made by the Allies. He has been able to withdraw a certain proportion of the German and Austrian troops for service elsewhere, with the result that the Allied force now at Salonika and in the surrounding districts is probably out of all proportion to the number of the enemy it serves to contain.

The report that Mr. Henry Morgenthau, the United States Ambassador at Constantinople, has resigned his post is confirmed. Britons the world over would not wish to allow the occasion to pass without recording anew their indebtedness to him for the devoted manner in which he applied himself to the protection of British interests in Turkey during the war. To his good offices we owe it that any attempts to introduce German methods of treating prisoners of war in Turkey were frustrated. Mr. Morgenthau's influence, we may hope, will survive his departure. In connection with the arrival of General Townshend and his staff at Constantinople, a communication has been received from the United States Embassy, which speaks, on the authority of the Ottoman Red Cross Society, of Baghdad, where many of the British prisoners are, being provided with an ample supply of medical stores. This is satisfactory, as far as it goes, and it is reassuring to know that the United States Consul at Baghdad is to put himself in touch with the prisoners with a view to gaining information of any special needs they may have.

A contribution to Turkey's problem of the settlement after the war was made by Mr. Morgenthau during his stay in Constantinople with the suggestion that the Turkish Government should sell Palestine to the Zionists. Ministers, he now states, eagerly approved of the project. "They discussed figures, and argued whether Palestine should be converted into a republic," and were ready to grant concessions at once for the building of harbours and hotels. This alacrity on the part of Turkish Ministers to seize upon an idea which clearly has "money in it" is not altogether remarkable at the present moment; but the Zionists will be well advised to proceed somewhat more deliberately than the present owners of Palestine may wish.

The movement of troops in the direction of Darfur, which was reported from Cairo in our issue of April 14, is a reminder that the unrest in North Africa has not been entirely disposed of by the successes gained in Western Egypt. Ali Dinar, the Sultan of Darfur, repudiated his allegiance last year by refusing to pay his annual tribute to the Sudan Government, in whose side he has long been a thorn. His latter-day pose as a miracle-working Prince of the Faithful and his anxiety to have his miracles published in book form at the expense of the Government are an indication of the suit-

Digitized by Google

able material on which Turco-German intrigues had to work. It is, perhaps, fortunate that the leaven thus implanted has germinated more slowly in Darfur than it did among the Senussi. No further conflicts are reported in the North; but from the appointment of General Mahon to command the western frontier of Egypt we are led to infer that the possibility of fresh fighting in this quarter has not been altogether eliminated. If Ali Dinar is forced into the field, he will naturally cast about for support.

In common with other organs of the Press, THE NEAR EAST has had the privilege of receiving from a conference composed of delegates from six neutral countries, convened upon the initiative of Henry Ford, an appeal for sympathetic consideration of the conference's views regarding "the universal principles and concrete proposals" upon which agreement between the present belligerents seems possible. The universal principles expounded are unexceptionable. They include recognition of the principle of nationality, which entails the dismemberment of Austria-Hungary; at the same time the Dardanelles and the Bosphorus are to be internationalised. To what extent the Central Powers are prepared to accept these suggestions the neutral conference is perhaps better informed than the rest of the world. Other "concrete proposals" are that German colonies ought to be returned, and "Germany's access to the Near East guaranteed." Whether the proposal to return Germany her colonies is prompted by a direct appeal from the natives in those countries, the conference does not state. If not, it might be of interest to hear their views on the subject. The expression, "Germany's access to the Near East," is not explicit enough to convey the conference's meaning. If it is to entail the transfer of Austro-Hungarian, Bulgarian, and Turkish territory to Germany, it is a contradiction of the principle of nationality.

It is announced that the question between the Allies and the Greek Government in regard to the transport of the Serbian army from Corfu to Salonika has been settled by the Entente Powers withdrawing their claim to use the Greek railways. The troops are to proceed to their destination by sea. As was suggested in these columns some weeks ago, it was unfortunate that the matter was ever allowed to develop into the resemblance of a crisis. In view of the attitude of the Greek Government it was obvious that it would never willingly give its consent to the proposal, and, as the Allies could not of their own accord collect the rolling stock required for the transport of the troops without taking possession of the whole of Greece, there was no need to give the Greek Government what it was looking out for—an opportunity to administer a rebuff to the Entente Powers. The request was probably made at a time when the submarine menace in the Eastern Mediterranean was acute; otherwise the military authorities would have realized that it was easier, when once the Serbians were put on board at Corfu, to convey them all the way to Salonika by sea than to disembark them at Patras and send them on by rail.

A question was asked in the House of Commons on May 24 which raised the point whether the pledge given by Great Britain to respect the Holy Places of the Mohammedans would apply to Baghdad. The point is an important one in view of the possible approach of British and Russian forces on Baghdad. But any anxiety on the subject is misplaced, for Baghdad is not a Holy City. That status belongs to the neighbouring towns of Kerbellah and Nejef, in which, though one degree less sacred than Mecca and Medina, non-Moslems are not permitted to stay.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, May 10.

Trial of Sultan's Would-be Assassins.

The trial of Mohammed Neguib Helbawi and Mohammed Shamseddine, who are charged with having conspired, together with persons unknown, to cause the death of the Sultan, and with having been concerned in the attempt made on the life of his Highness on July 9 last—Helbawi as thrower of the bomb, and Shamseddine as renter of the house from which it was thrown—started on Monday before a military court sitting at the Native Court of Appeal, under the presidency of Major-General Watson, G.O.C. Cairo District. Mr. A. S. Preston acted as Judge-Advocate; Sir William Brunyate, assisted by Mr. G. E. Jeffes, prosecuted; and Messrs. J. P. Foster and C. H. Perrott defended the prisoners in the order named. The trial has not aroused much local interest, probably owing to its having taken place so long after the attempt was made. The court has sat every morning this week, and it looks as if the trial will last yet another couple of days, as the number of witnesses for the prosecution and the defence is considerable.

Residency Interest in Education.

Since their arrival in Egypt the High Commissioner and Lady McMahon have taken a very lively interest in the practical side of education. Recently his Excellency extended the series of inspections which he has been making to the School of Engineering at Giza, where he visited the laboratories and watched some of the experiments, and to the Higher School of Commerce, where, among other features, he was shown the bureau in which instruction in the conduct of a commercial office is given in Arabic, English, and French. Both of these schools appeared to be conducted on eminently practical lines, and his Excellency expressed himself as highly satisfied.

Lady McMahon has also paid a series of visits to various institutions where female education is being carried out, and has repeatedly shown by her sympathetic inquiries her interest in, and appreciation of, the efforts that are being made to render the women of Egypt more useful members of society and more capable wives and mothers than their parents and their female relatives of past generations. The success of such a movement as this depends, of course, in great measure on the amount of sympathetic encouragement it receives at the hands of the foreign communities; and it is to be hoped that the ladies of those communities, some of whom, it must be acknowledged, have in the past evinced practical interest in the movement, will whole-heartedly and more generally follow the example set them by her ladyship.

The Entry of Ladies into Egypt.

Great satisfaction has been expressed at the removal of the embargo placed on the landing of ladies in this country. The prohibition, which came into force at the close of 1915, gave rise to very real hardship in the case of bonâ-fide residents, who, willing as they were to bear their full share of the war, felt that adequate consideration had not been given to the peculiar situation in which they found themselves. That they had right and reason on their side there is not the shadow of a doubt. It would, however, serve no useful purpose to dwell on the question. Rather is it a matter for sincere congratulation that the authorities responsible for the prohibition have now recognised that its wholesale application was having effects that they probably never

NORTH BRITISH AND MERCANTILE INSURANCE CO.

contemplated, and that they have had the courage to amend the regulations satisfactorily to meet the situation. It is true that the permission to return to Egypt now accorded to residents is made conditional on the situation in Egypt undergoing no change prior to their return; but there is reason to believe that every case will henceforward be treated on its merits, and that the Egyptian situation will have to undergo a very considerable change for the worse for residents to be called upon to undergo anything approaching the personal hardships which fell to their lot last winter.

The Truth about the "Turkish Atrocities."

During the Gallipoli campaign all manner of stories were current as to the conduct of the Turkish troops towards our wounded and prisoners. Whilst many affirmed that John Turk played the game, a good number of our men narrated instances of the atrocities practised by him on those who had the misfortune to fall into his hands. A year has now elapsed since the campaign started, and it has been possible to sift the information available and arrive at the truth. I have good authority for stating that there has been a good deal of probably unavoidable exaggeration. At the outset there may have been one or two isolated cases of brutality, but the evidence goes to show that both at Helles and at Anzac the Turks played the game right through. The only bad break was at Suvla, where it appears that a different class of men—probably Kurds—was in the enemy ranks; but even there the break was only temporary, so to speak, and the general conclusion come to by those who are in a position to know and whose cool judgment may be relied upon, is that, generally speaking, the Turk has proved himself to be a clean fighter.

The Anglican Church in Egypt.

The public meeting of the Anglican community, the calling of which was foreshadowed recently in this correspondence, took place, by kind permission of the High Commissioner, at the Residency on Thursday last. The question before the meeting was the consideration of the proposal to build a new church in place of All Saints', the present parish church in Cairo. Sir Henry McMahon, who was in the chair, explained the situation which necessitated the building of a new place of worship. His Excellency stated that "from every aspect that one views the question of a new church here in Cairo, the more urgent becomes the necessity of providing a building that in size and accommodation will meet the requirements of future congregations, and in style, appearance, and dignity will be worthy of our religion, our Empire, and our co-religionists"; and the Bishop of Jerusalem, who followed his Excellency, and further explained the situation, added that it was well within the bounds of possibility that eventually there would be a bishopric in Egypt, and that every consideration pointed to the centre of the diocese being Cairo.

The meeting then unanimously passed the following resolutions. First, that instead of rebuilding All Saints' as a parish church, it be rebuilt by the whole community as a cathedral worthy to represent our religion and our position in Egypt. Secondly, that a Building Committee be appointed under the presidency of the High Commissioner to undertake in conjunction with the Bishop of Jerusalem the working out of all questions relating to finance, site, and building, the committee to be empowered to add to their number, especially with a view to obtain the representation of Alexandria and other important centres, and to consist (in addition to representatives of other Anglican communities in Egypt) of the present Church Committee, to whom were added Mr. Somers Clarke, for many years the architect in charge of the fabric of St. Paul's Cathedral, and Mr. A. H. Hooker, one of the oldest members of the community. Thirdly, that though no general public appeal for funds be made at present, a statement of the project be issued as soon as possible, and that residents in Egypt particularly be invited to begin contributing to the Building Fund, such sums to be invested at once in the War Loan. A meeting of the Anglican community of Alexandria will be held early next month, and as soon as it has selected its representatives the above-mentioned Building Committee will commence its labours.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, May 7.

The Legislative Council reassembles on May 23 for passing the Supplementary Estimates. One of the Greek members of Council, the Hon. John Kyriakides, who has done long and valuable service as a representative of the Limassol-Papho Electoral Division, does not propose to seek re-election. Should he adhere to this resolution, his loss will be much felt, for he is deservedly esteemed as one of the ablest and most experienced members that the island has sent to the Council.

A return of births and deaths in Cyprus for the year ended December 31 last shows that there were 9,141 births, or 31 per thousand, and 5,473 deaths, or 18.5 per thousand. Unfortunately, great value cannot always be attached to the returns as regards the villages, and the figures must be regarded with caution.

A Nicosia paper, the *Voice of Cyprus*, relates the adventures of two Cypriots in Mesopotamia, who were employed on the Baghdad Railway before the outbreak of the war. Arrested, imprisoned, and ill-treated as British subjects by the Germans, they were subsequently regarded as Ottoman subjects and compelled to serve under the Turkish flag. Finding an opportunity to escape, they made for the British camp. Falling into the hands of Kurds, they were stripped and ill-treated, but afterwards released. After much wandering they succeeded in reaching the British camp, but knowing nothing but Greek, which no one in the camp could understand, they were arrested and held as spies. After a considerable time they were able to show that they were Cypriots who had escaped from Turks after maltreatment. One of the two, a villager of Kaimakli, was then released and provided with means for reaching Egypt, whence he has returned, to the joy of his family. The other was detained, for what reason is not yet known.

The Greek Athletic Meeting was fixed for May 6, the anniversary of the King's accession, and the next day. May 6 was also a fête day of the Greek Calendar, that of the martyr Georgios, observed by the Greek Church. Honours were paid to the Crown Prince, George. Prayers were also offered, and much mention made of King George, the founder of the present dynasty, and also of the King's brother of that name.

PRISONERS FROM SINAI.

(From a Correspondent.)

Cairo, May 1.

Statements made by prisoners taken in the recent engagements in Sinai confirm the reports published lately by the telegraphic agencies and the Press about the state of feeling among the Arabs of Turkey and the economic condition of the country, and throw further interesting light on the former subject. It would seem that the Arabs, especially those of Irak and Syria, are divided into three groups, the first being decidedly pro-British, the second pro-Turkish, and the third favouring the establishment of an autonomous Arab State. The second group can be only a small and unimportant one, and confined to the illiterate and narrow-minded. As a matter of fact, the large majority of prisoners were delighted to have been captured; and the kindness lavished on them by the Red Cross workers is calculated to strengthen this feeling in them.

It seems that while crossing the desert they were sometimes more than two days without drink or food. Some of the companies tried on a few occasions to kill their officers and flee, but in every case these movements were sternly suppressed by the overpowering numbers of troops that were quickly called up. So far, the majority of troops encountered in Sinai are Bedouin, with a sprinkling of the settled population—Moslem, of course—of Palestine, and just a few real Turks to stiffen these more or less unreliable Arab formations. Some of the prisoners recently caught are Bedouin from Irak, adherents of Ibn Saud, who had come over to Syria to buy camels, and who were compelled by the Turks to enlist in the expeditionary force against Egypt, under the threat of execution of their chiefs.

One of the prisoners, an Arab of Medina, made the significant answer to a question put to him as to his state of feeling: "I am now one of the many millions of Moslems who are under Christian rule." The feeling of resignation implied in this vague reply betrays the fact that the pan-Islamic idea seems to be dominant only in certain centres where the Enver propaganda has had some measure of success.

All the prisoners confirm the reports of economic distress in Palestine, if any confirmation were needed after all the official reports of neutral consuls on the subject. They further confirm the fact that the people are still refusing to deal in the new issue of paper money signed by Talaat and Javid.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, May 1.

The Situation.

Military operations have been practically at a standstill throughout the past week, mainly in consequence of the bad weather. There has been a continuous downpour of rain for several days, and as it falls alike on the just and the unjust, both the Allies and their enemies had to suffer the same inconvenience. This condition of things has hindered not only land, but aerial, warfare, and there is consequently nothing of importance to record in either connection. General Sarrail informed us the other night that there had even been a heavy fall of snow at the front.

By the time these lines reach you the difficulty in regard to the transfer of the Serbian troops from Corfu to Salonika will doubtless have been solved, but the strained relations resulting from this inimical action of the Greek Government is exasperating the Allies here. The Greeks seem really afraid of the Serbians; and the way in which the present pro-German Government is putting every obstacle it can in the way of the Allies generally is calculated to intensify the bitter feeling. In any case, it will take a good deal of diplomacy to smooth matters down after the war, and this country ought to realise by this time which side is going to have the advantage in the end.

Another German Consul Arrested.

A short time ago the Germans appointed a new Consul at Drama. I learned from private sources that he was no other than a German officer whose consular duties were merely nominal, and whose principal object was to establish and maintain an elaborate system of espionage upon the Allies. In pursuit of this object he made frequent visits to Serres and other places. The British were not entirely ignorant of his movements and occupation; but, as usual, they delayed his arrest until the proofs became overwhelming. On Thursday last they acted. The Consul was returning from Serres by train when a detachment of British cavalry suddenly appeared and signalled to the driver to stop. This he promptly did, and the passengers were naturally much alarmed. No one, however, was interfered with excepting the German Consul, who was soon found. He was conducted to Salonika and transferred to a warship; while the papers he carried, as well as those found at the Consulate, were taken away for examination. It is expected that information contained in these will lead to further arrests. It is known that this quasi-consul was formerly attached to the German Embassy in Sofia.

Mounds of Macedonia.

I referred some time ago to the musical talent existing among the Tommies, but their talent is by no means confined to music. Many persons, with expert knowledge in various branches of science, and even some learned professors, have considered it their duty to join the British Army during the present war; and we have a considerable sprinkling of such people in Salonika and its neighbourhood. One of these experts has been writing in a local journal about the birds of Macedonia, and another about the peculiar ancient mounds, or tumuli, to be seen in many parts of the country here.

These mounds are of two kinds—the one small and conical, while the other usually covers a large space and takes an oval flat form. A very good example of the conical class exists about nine kilometres from Salonika on the road to Langaza. This class consists of tombs dating from long before the Christian era, and many have been found to contain beautiful marble and bronze fittings. In the course of trench-digging and other military operations the contents of a few more of these curious mounds are being brought to light, and after the war is over we shall no doubt have many learned papers from the experts above referred to. The other mounds are not tombs at all, but the sites of early towns or villages, some of which date from remote antiquity. They usually contain immense quantities of fragments of pottery.

No systematic exploration of these mounds has yet been undertaken, but it is hoped that when peace is restored they will receive closer attention. Meantime, a provisional museum has been established by the British at the White Tower here, and the military are invited to preserve and bring to the museum any pottery or other articles they may discover in the course of their operations. This collection may then furnish quite a useful basis for the study of Macedonian archæology.

Still More Spies.

It is painful to have to record that evidence is accumulating on every side to prove that some Greeks are exercising an extensive espionage on the operations of the Allies. Several cases have occurred recently. When the spies have been Greek soldiers, General Sarrail has hitherto contented himself with handing them over to General Moschopoulos, who commands the Greek troops here, to be suitably dealt with; but, so far as I can learn, the way in which they have been dealt with is calculated rather to encourage than to prevent espionage.

The latest instance is that of two soldiers who had apparently been allowed leave for the purpose of exercising a kind of journalistic function. One of these, a Lieutenant Malousis, is well-known to all newspaper correspondents who have had occasion to call at the censor's office of an evening to have their press telegrams passed. I always found him there. He spoke French very well indeed, and did his best to discuss political questions with the pressmen. It is understood that he was made acquainted with the contents of all our telegrams, and that he communicated what he thought worth while to the Germanophile Press here and in Athens. There was associated with him another soldier named Pounguras. These men also went about among the French soldiers and spied upon their movements. When made aware of these facts, General Sarrail formally requested the Prefect to have both men removed from Salonika and neighbourhood. Perhaps this has been done. Perhaps, on the other hand, they are on their way to Athens to be decorated for their services. In any case, Malousis is no longer to be seen at the censor's office. I know from private sources that there is still another of the same quasi-journalistic spy class who regularly communicates with an Athens journal, and who has so far escaped the General's attentions. In fact, I have had in my own hands the original MS. of one of this gentleman's communications to that paper with all the necessary proofs of authorship.

THE STATE OF PALESTINE.

(From a Correspondent.)

Cairo, May 8.

A traveller who left Palestine six weeks ago confirms the report as to the calling to the colours of all males up to the age of fifty-five, including even the physically unfit, such as the one-eyed and those with weak sight, and to the subsequent modification of this law, so that the military exemption tax is being again accepted, on the condition, however, that the redeemed men should have undergone three months' training. This is further confirmed by a private letter received recently from Beyrout viâ Greece. This relaxation of military measures may be due to the Government's urgent need of gold, or the uncertain military value of the Palestinian, and indeed of all the Syrian conscripts. So little is the people's heart in this war that, according to this new informant, large numbers have been deserting and taking to the hills to hide in caves. These cases were becoming so frequent that the Government had to resort to the ruse of issuing orders of general amnesty so as to entice the deserters to quit their hiding places; but the deserters did not believe in the sincerity of these orders, and the Government had finally to organize local bands of gendarmes well acquainted with the local features of the country and its hiding places, with the view of tracking and arresting the refugees. This, however, chiefly served the purpose of the gendarmes, who, in the majority of cases, returned with empty hands, but full pockets.

An Athens message reports that Greeks are now allowed to pass into Bulgaria by the route via Oxilar.

An Italian force despatched from Tripoli to Zuara, which was threatened by rebels, met with an enthusiastic reception from the population. The rebels were defeated, and a considerable quantity of booty and prisoners was captured.

The State trial of the two conspirators against the Sultan of Egypt was continued on Monday, when the prisoners' counsel began to outline the defence.

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, April 25.

More "Waste Paper."

It is unreasonable that neutrals travelling through belligerent countries should take offence when they find themselves subject to some measure of control, especially when there rests upon them rather more than a suspicion that they harbour unfriendly feelings towards the people through whose country they happen to be passing. Roumanians, however, have had to be particularly long-suffering in this respect, for when they venture to traverse Austro-Hungarian or German territory they become the victims of every sort of vexatious *chicane* which Teuton-Magyar officialdom can devise. The last case of the kind is that of M. Grégoire Filipesco, which has aroused more than usual interest, as well as indignation, owing to the fact of his being the son of the well-known leader of the Roumanian Conservative party. M. Filipesco, junior, and his wife passed from Switzerland into Germany, were there arrested without explanation, subjected, according to the papers, to what seem very unnecessary indignities, and then reconducted to the Swiss frontier under escort.

It is natural that every Roumanian should be strongly incensed at the scant respect which the Roumanian passport obtains in the Central States, but I am afraid that their prolonged neutrality has caused them to remain behind the times. Why, indeed, should a people who tear up solemn treaties to which they are signatories as being so much waste paper accord greater importance to a passport, even though it be viséd under the signature of his Imperial Majesty's representative?

A Jockey Club Incident.

The other night M. Filipesco, senior, who was in one of the rooms of the Jockey Club, and doubtless smarting under the insults inflicted upon his son by the Germans, was accosted by the German Minister, who walked up wearing his most affable smile, his hand extended in greeting. This was apparently a little too much for M. Filipesco's serenity, for he rejected Herr von dem Bussche's advances in terms which left no doubt as to the true state of his feelings.

It is, perhaps, as well that the incident should have had no unpleasant sequel, in view, of course, of the abnormal conditions which obtain. The German Minister subsequently stated that his intentions had been conciliatory, etc., M. Filipesco, on his part, being prevailed upon to express regret for what had occurred. The incident is regrettable from the fact that M. Filipesco is vice-president of the club and the German Minister a member by courtesy; none the less, most people sympathise with M. Filipesco, and the general impression is that Herr von dem Bussche's system of braving public opinion has brought upon him another well-merited rebuff.

High-handed Methods.

The Roumanian Military Attaché in Berlin, Colonel Mircescu, who was on his way to Bucharest in charge of the diplomatic bag, was stopped at Brashov, where his personal correspondence was read by the Hungarian authorities and he himself had to submit to a thorough search. He was even summoned to open the diplomatic bag, which he naturally refused to do. The bag was thereupon confiscated, and the Colonel allowed to resume his journey. Later on the bag was returned as a result of representations made in Vienna. Both Count Czernin and the Austro-Hungarian Military Attaché are since reported to have expressed regret for what has occurred.

A Royal Gift.

His Majesty King Ferdinand has, on the occasion of the Easter festivities, made a generous gift of one and a-quarter million francs to the poorer members of the town populations, in view of the cost of living, which has greatly increased since the war has been in progress.

Dr. Sion, Director-General of the Sanitary Service, has returned to Bucharest after a sojourn of many months in Germany, whither he had gone for the purpose of effecting different purchases. These are said to have arrived, and consist of twenty truckloads of drugs, dressings, surgical instruments, etc.

"La Politique."

Even those to whom the result of this war is a foregone conclusion will, especially if they live in a neutral country, cast an occasional half-contemptuous glance over the papers which are said to represent the views of the enemy out of curiosity rather than impartiality. It was in this frame of mind that I resolved some days ago to sink a copper in M. Alexander Marghiloman's paper, *La Politique*, a daily which is printed in French. The leading article, under the heading "Illusions Dangereuses," contains quotations from a French revue and suggests that the "poilu" is not as happy in his trench as people think, that the trench is not so luxurious as people say, that the much-vaunted friendships resulting from a confraternity of arms exist only in the imagination, that suffering only hardens the heart, that the French soldier's privations, be he a man of education or not, necessarily lead to complete moral degeneration, and so on. That is all this paper, appearing in the French language, has to say of the French. The remainder of the issue is chiefly devoted to annihilating the English. In a word, *La Politique* is, like the *Journal des Ardennes*, nothing but a German propagandist organ masquerading in French garb, with the peculiarity that it bears a marked Anglophobe character.

INTERNATIONAL ETHICS.

At the meeting of the Cercle d'Etudes Ethnographiques, on May 18, at Prince Henry's Room, 17, Fleet Street, Mr. C. F. Ryder, a Vice-President of the Anglo-Ottoman Society, lectured on "Christendom and Islam." Describing himself as an Englishman, a member of the Church of England, a seeker after knowledge, and an interested student of the religions and philosophies of the East, he pointed out that the war is bringing about great changes, and that the relations between Christendom and Islam are more interesting to-day than ever before. The losses of the war are falling principally upon the European nations; in proportion as Europe is thus weakened, Asia is strengthened. As a matter of policy as well as right, Europe should know more of her neighbours in Asia and Africa. For the first time Asia has been brought into a struggle in Europe, and this fact will produce a profound impression in Asia. He urged the importance of cultivating good relations with Islam; in view of the seventy millions of Moslem British subjects in India, the prevailing ignorance about the religion was most regrettable. Islam was seriously misunderstood, but the prejudice against it was largely due to ignorance. Christendom should recognise the beneficent results achieved by Islam. Mr. Ryder suggested that if the nations understood each other's religions a system of international ethics might be introduced which would go far towards overcoming existing hatred.

Mr. A. Yusuf Ali, who presided, warmly supported this suggestion as an important factor making for the progress of the world. In an interesting speech, summing up the discussion, he pointed out that Islam is a great democracy, the religion of brotherhood, and that co-operation is the special need of the present and the future.

The discussion will be resumed at a later meeting, at which it is expected Mr. Marmaduke Pickthall will be present.

Sunday, June 4, has been fixed by the English Zionist Federation as "Declaration Day." Signatures are being obtained to a declaration which reads:—"We earnestly desire the establishment of a publicly-recognised, legally-secured Home for the Jewish people in Palestine, as formulated by the First Zionist Congress in 1897."

THE ROUMANIAN FLOUR DEAL.

(From Our Own Correspondent.)

Bucharest, April 25.

A short while ago the Roumanian millowners held a meeting in order to come to a decision regarding two offers which they had received, the one German, the other British. After a lengthy discussion the question was put to the vote, with the result that the British offer proved to be acceptable to a very large majority. Six-sevenths of the millowners have up to the present agreed to lease their mills for a period of four months—for that is what the affair really amounts to. No pressure has been put upon the minority, so that they are at liberty to dispose of their flour as they will; none the less, there are excellent prospects of an even higher proportion of owners accepting the British terms, which have been made through the bank of M. Chrisoveloni.

In accordance with recent legislation, the Roumanian millers found themselves under the obligation of putting aside 40 per cent. of their produce for internal consumption and of furnishing another 20 per cent. to the Army. This left them free to export the remaining 40 per cent. of their flour.

Such was the situation when the Austro-German "consortium" made them an offer of 5,800 frs. per wagon for the available quantity, which is said to amount to about 10,000 wagons. The millers were on the point of accepting, when M. Chrisoveloni stepped in with another proposal, which may be summed up as follows:—The millowners bind themselves by an agreement not to grind any corn for a period of four months, with the exception of that required for internal consumption and to meet the needs of the Army. In exchange, M. Chrisoveloni pays them the sum of twenty million francs, to be distributed in proportion to the capacity for output possessed by the different mills. The heaviest penalties threaten millers who, having signed the contract, are found guilty of grinding or selling flour otherwise than as stipulated in the agreement.

The lease of the Roumanian mills for a period of four months by M. Chrisoveloni, whereby nearly all the exportable flour remains in the country, is a veritable disaster to the Germans, and will very likely prove to be the last straw that breaks the Turkish camel's back. He is, indeed, struck in his weakest point, and at a moment which for him could not be more unfavourable. The desperate situation in Constantinople is well known here, especially in Constantza, which, it is said, has assumed the aspect of a port of Asia Minor, from the fact that thousands of Turkish sailors have come with boats to ship Roumanian flour to Constantinople.

The ultimate effect of this *coup* (a *coup de grâce?*) can be foreseen, but presumably cannot be foretold with certainty. Anyone, however, harbouring doubts regarding the probable results, has but to read the comments of the German-bought Press in order to have his doubts immediately removed. We read that the over-sensitive Teuton—who would willingly be taken for a Roumanian—is quite revolted at the immorality of the transaction, and he calls upon the Government to prevent its realization. He is deeply pained by the *naïveté* of the Roumanian who will not see that Turkey cannot be starved and that England is insidiously undermining the Roumanian milling industry. Hark to the *Steagul*:—

Both millowners and Government must realize that England does not so much aim at the starvation of Turkey as at our removal from the Oriental market. If during the course of six months we do not export flour in the East, she will take our place, together with the Bulgars, who were already proving serious rivals in Asia Minor.

(Note that the Teuton, in order that he may the more readily be taken for a genuine Roumanian, does not disdain a dig at his Allies.) Again:—

The war will not last for ever, and England, with all her exertions, pursues purely economic ends. When the war is over she will give the flour to the Turks and will hasten to forestall the Oriental market, which we are losing through this contract.

I think this specimen of Boche hypocrisy, as practised in Roumania, will suffice. Roumanians know what attitude to adopt in the face of such stuff. The fact is that the arrangement has given widespread satisfaction among the people of Roumania, and it is pleasant to know that, whatever may have been the difficulties encountered by the promulgators of the transaction—and they seem to have been considerable, for here and there individual interests have of necessity been compromised—the Roumanian Government as such placed no difficulties in the path of the agents who have so actively furthered the interests common to Britain and Roumania.

An Armenian Congress was opened in Petrograd on Tuesday in order to co-ordinate the efforts to help the Armenian people. More than 200 delegates are attending the congress.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, May 5

Shortage of Foodstuffs.

The problem of provisioning Bulgaria becomes more difficult daily. In face of the growing discontent, which shows itself more clearly as time goes by, the Germans, who had made large purchases in the country, have had to abandon all importation of foodstuffs from Bulgaria.

The Council of Ministers has lately been considering what steps can be taken to cope with the crisis, especially with regard to the invaded districts. Meanwhile the population suffers cruelly. Thus at Shabatz a kilogram of salt costs 14 francs; at Belgrade, 13 frs.; and at Nish 17 frs.; a kilogram of flour in the same towns costs, 1 fr. 10 c., 95 c., and 1 fr. 15 c.; while sugar is 9 frs., 2 frs. 60 c., and 3 frs. 20 c. Bread tickets similar to those in use in Germany and Austria-Hungary have been introduced; and in the principal towns, notably at Belgrade, the people are not allowed to take meat or fatty substances on two days of the week.

The Ministry of War, which has assumed responsibility for the application of the Law for Public Supply, has just issued instructions to the authorities that they are not to interfere in any way with the supply of goods destined for districts in need of provisions. On the other hand, people are invited to sell their goods only at the prices fixed by the Committee of Public Supply. In any case, nothing can be purchased without an authorisation from the military commander certifying that that district is not in immediate need of the goods in question; nor, in the case of foodstuffs or cattle, can the person desiring to buy goods do so without a military certificate that there is need in the district from which he comes.

The Austrians in Serbia.

The Austrian "Governor" of Serbia has given instructions with a view to encouraging the cultivation of land abandoned by the Serbians. The inhabitants of the villages are compelled to participate in this work—under the surveillance of Austro-Hungarian officials.

It is calculated that, taking into consideration the ground already planted, Serbia will be able, after the next harvest, not only to supply her own needs, but also to contribute substantially to the needs of her conquerors.

Terrorism.

The Commission of Inquiry regarding the Gueshoff-Daneff Cabinet has resumed its labours. This is a sure sign that the Government feels itself unsafe, for it is M. Radoslavoff's favourite method of holding the Opposition in check. A sword of Damocles is suspended over the head of every man of mark who does not share the opinions of "Tsar" Ferdinand. In the case of M. Ghennadieff, it is the Declausier affair; in that of MM. Gueshoff and Daneff, it is the Commission of Inquiry. The long periods of inactivity and the short, sharp bursts of energy on the part of the precious body afford a safe index to the state of the Cabinet.

Apparently Ferdinand of Coburg and his supporters find themselves in peril once more. Therefore the Commission has resumed its labours, and, judging by the tone of the Press, it looks as if it may really strike a severe blow this time. Thus the *Outro* writes about the discovery of "proofs of a total want of foresight and spirit of combination on the part of the Government of that period," and of "unexpected irregularities committed during the Balkan War" in certain military departments, notably those responsible for the commissariat and the sanitary service. It seems that a good many military men, as well as politicians, are "marked down" by M. Radoslavoff and the King!

NEAR EAST BOOKSHELF.

OMAR RETRANSLATED.*

Was Omar a great poet? Some would have it that in the temple of Persian poetry his niche should be of right but a small one, that he is one of the lesser luminaries of the Persian poetical constellation, that the native Persian smiles at the extravagant Occidental enthusiasm for a minor poet. It may be so; but it is certain that hundreds of English-speaking people who know their Omar well have never heard of any other Persian poet. For this we have to thank Edward FitzGerald. But, then, we are continually being told that FitzGerald's Omar is not the real Omar. Scholars who can go to the original say that they value him for himself, and with a noble generosity they want other people to share in their love and admiration. They have the key with which they unlock the gate that leads into the enchanted garden; but they love not solitude even with so many delights. No more are they satisfied even with a select company, with a few choice spirits, who can use the magic key. They must needs go into the world's highway and implore the multitude to allow themselves to be hoisted over the wall by means of an English verse translation.

The latest of these missionaries is Dr. John Pollen. He has attempted the difficult task of a literal translation into English verse. In a brief preface his Highness the Aga Khan contrives to say something worth saying concerning Omar and FitzGerald's famous translation. As a Persian scholar, he vouches for Dr. Pollen's faithfulness to the original, and recommends Dr. Pollen's translation as possessing the qualities of attractiveness and simplicity. It certainly does succeed in pleasing. An example will show best the metre adopted:—

> Wine—lovers' lips—and meadow's slope—
> Robbed me of Bliss and you of Hope;
> To Heaven or Hell man's doomed, but tell,
> Who came from Heaven or went to Hell?

Dr. Pollen apologizes for adopting this simple hymn measure, and "thus presenting Omar in a quasi-Puritan dress." He alleges as an excuse that he has thought he has detected in Omar something of the Miltonic Puritan. The parallel is interesting and suggestive, but perhaps a little misleading. Indubitably the English poet believed in Heaven and Hell. He was not satisfied with the "cash." His hopes were fixed on "credit." He told—

> Of things invisible to mortal sight.

Dr. Pollen says that Omar was a recluse without ambition. Milton had a Government appointment, and was keenly interested in the controversies of the time. Besides, he speaks somewhere (does he not?) of love of fame as—

> That last infirmity of noble minds.

English-speaking admirers of Omar will do well if they place this severe little volume on their shelves beside their *editions de luxe* of FitzGerald's translation.

Which is the real Omar?

The profits from the sale of the book, it should be noted, will go to benefit the Indian soldiers who have so nobly fought for the Empire in this war.

WAR VERSES.†

The brochure of verses which Mr. McCartney has produced will doubtless interest those who are following the events of this war with a keen eye to their religious significance. The greater number of his verses deal with this aspect of the war, although the first, which is also the only one that can lay any real claim to imaginative power, is quite free from controversial texture. This particular poem, which treats of the return of warrior spirits from Gallipoli to the familiar haunts of their lifetime, was, we are informed, written between the hours of 2 and 4 a.m., and is certainly the best of the collection. It is pleasing to notice that in "Fatty—Turkish Hero," Mr. McCartney, whose love for the Turks is not strong, pays unstinted praise to a Turk who cheerfully braves the inferno of "no-man's land" to carry water to two wounded Australian soldiers.

BOOK NOTES.

Messrs. Smith, Elder will publish very shortly "Travel in the Middle East: Being Impressions by the Way in Turkish Arabia, Syria, and Persia," by Captain Trenchard C. Fowle, 40th Pathans. The volume will be illustrated by the author's own photographs taken on his travels extending from the Indian frontier to the heart of Persia.

Messrs. Hutchinson and Co. will publish shortly "A Woman in the Balkans," by Mrs. Will Gordon, F.R.G.S. In this work the author gives an account of her travels in Balkan lands, and of their history, peoples, and customs. Serbia (past and present), Bosnia and Herzegovina, Montenegro, Albania, Bulgaria, and Turkey are described. Roumania is also fully depicted, as well as the social life of the capitals, political problems, the war, and the ideals and aspirations of the people. The book will be illustrated with reproductions from photographs.

The *Correspondance d'Orient*, we are glad to see, has resumed publication, which was temporarily suspended by the outbreak of the war. The first number (No. 141) of the new issue appeared on May 5, and others are to follow on the 20th and the 5th of each month. The first number of the new series (we have not yet received the second) is, perhaps, not so Oriental in character as the journal was in the old pre-war days, but it is interesting and lively. M. Ernest-Charles writes on "La France devant la Monde," MM. O. Guiheneuc and E. Miles on the naval and the military situation, and M. Georges Loiseau reviews various events in the Near East, under the heading of "Les Idées et les Opinions." Our contemporary has not yet had time to get quite into its stride again, but it is a valuable review of events from our Ally's standpoint, and we cordially welcome its reappearance.

EARLY CRETAN CIVILIZATION.

Speaking last Saturday at King's College, Dr. R. M. Burrows said that until a few years ago the earliest civilization known in Europe was that of Greece—the Greece of Homer—which was contemporary with the classical period of Hebrew civilization; but excavations in Crete showed that Europe had a civilization contemporary with those of Egypt and Babylon. This early Cretan civilization was neither Asiatic nor African, but essentially European, as was shown by the remains of pottery and other artistic productions. One great influence in the evolution of this civilization had been that of its environment. The civilizations of Egypt and Babylon had developed beside slow-moving rivers and in the midst of flat and sandy plains, but the Cretan was surrounded by the sea, instinct with life and movement, and with hills rising up from that sea, covered at this season of the year with flowers that made the country a blaze of glorious colour. These facts had influenced the early Cretan artists, and they had drawn their inspiration for decoration from mountain creatures and flowers. More remarkable than their art were the people themselves, who were European in physical form, emotions, and mentality. The small waist, the tilted pelvis, and the pose of the head of the women, as portrayed in the survivals of their art, suggested the Parisienne of to-day. The people's sentiments apparently were the same as made Europeans of to-day sporting and dramatic. Oriental people liked to portray themselves in the moment of victory, but the Cretan pictures of bull-baiting sometimes showed the bull as the victor. That showed that they were ready to take a licking as well as to give one, and their wonderful engineering work proved them to be fitting ancestors of the European scientists and inventors of our own times.

A Cyprus correspondent informs us that the Island Government is not at present issuing passports to persons intending to proceed to Greece.

The treatment of British prisoners at Philippopolis has improved. They get medical attendance and baths, and play cricket and tennis. They have also a gramophone.

One thousand two hundred Austrian prisoners captured by the Serbians at the beginning of the war have been landed at Toulon.

In connection with a speech delivered by M. Rallis in the Greek Chamber on Saturday, an official communiqué has been issued in Athens denying that any attempt has been made by the Entente Powers to force Greece to abandon her neutrality.

A semi-official denial is given in Athens to the report that numerous desertions from the Greek Army are occurring daily, and that long furlough is being given. It is declared that, on the contrary, the discipline of the Army is as excellent as ever, and that only the usual leave is being granted.

"Fairplay" writes, from Hastings, to the *Times*:—"Over two months ago mention was made in the House of Commons that the Aden and minor operations on the Indian frontier would shortly be published. This has not been done, and though severe and hard fighting has several times occurred at Aden under most trying climatic conditions, these brave and gallant men have had no mention, while their equally brave and more fortunate comrades in other zones of operations continually come under the limelight and reap the reward that they merit."

* "Omar Khayyam: Faithfully and Literally Translated from the Original Persian. By John Pollen, LL.D., with foreword by H.H. the Aga Khan. (East and West. 3s. 6d. net.)

LETTERS TO THE EDITOR.

AN APPEAL.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May we call the attention of your readers to the sad case of a well-known and most deserving English family at Jerusalem, who are suffering seriously through the war? The head of the family is interned in Turkey, and there has been no communication with him for a long time. Full particulars will be given on application to any of the undersigned.—Yours, etc.,

NINA BLYTH,
97, Comeragh Road, West Kensington.
STEPHEN CAMPBELL,
Canon Missioner in Jerusalem,
Maydore, Mattock Lane, Ealing, W.
BERESFORD POTTER,
Archdeacon in Cyprus and Syria,
Rake Manor, Milford, Surrey.

May 18, 1916.

THE LARNAKA SOUP KITCHEN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—My attention has been called to a paragraph in your paper, in which I am reported to have started and maintained a soup kitchen in Larnaka, Cyprus, during the past winter months entirely at my own expense.

May I ask you to kindly correct this and to give the real facts, which are:—

That I started a soup kitchen at my own expense, that I was very kindly lent a house, free of rent, that the municipality lent me the furniture and cooking utensils, and that my friends, by their entirely voluntary contributions, have practically maintained it since.

Further, though my daughter certainly manages the soup kitchen, she is ably assisted by several other young ladies, who only take food to a very few persons who, being bedridden, are unable to attend in person.—Thanking you in advance for kindly inserting this correction, I am, etc.,

C. WODEHOUSE,
Com. of Larnaka.

Larnaka, Cyprus, May 8, 1916.

*** We very gladly publish the above generous letter, which refers to a paragraph that appeared in our issue of March 31 (p. 592). At the same time we would point out that our Cyprus correspondent, in his reference to the subject dealt with, wrote that Mr. Wodehouse had "established a 'common meal' room . . . *almost* entirely at his own expense." Our correspondent also expressly stated (1) that Miss Wodehouse was helped in her charitable work of distribution by other ladies—the names of two of these ladies were given—and (2) that the house used as the soup kitchen "was given by a philanthropic citizen of Larnaka."—ED.

M. CARP AND THE CENTRAL POWERS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of March 3 appears a letter from Mr. D. Mitrany, in which he writes:—

In a message from your correspondent in Bucharest, published in your paper a few weeks ago, it was stated that ONLY *his advanced age secured M. Carp an undisturbed hearing* during the great speech he made recently in the Roumanian Chamber.

May I, for the sake of history, etc., etc., correct to some extent the above statement, etc.?

Any person aware of M. Carp's high character and the universal respect he enjoys would, on reading Mr. Mitrany's lines, infer that your correspondent's appreciation of M. Carp was pinched, ungenerous, and unfriendly. This is particularly unpleasant to myself, as I am personally acquainted with M. Carp, and on friendly terms with many members of his family. Further, there are to my knowledge two near relatives of his who are readers of THE NEAR EAST, and they are aware that I am your correspondent.

Few readers of Mr. Mitrany's letter would, I assume, look up the back numbers of THE NEAR EAST to see what your correspondent had actually written. But if they did, they would read the following lines on p. 358 of the issue of January 28:—

. . . . There were but two speakers who advocated adhesion to the Central Powers, M. Stere and M. Peter Carp. The latter ALONE *was listened to with attention, his great age, his reputation for integrity, the sincerity of his convictions, and the high offices he has held in the State* commanding a respect that the character of his opinions could not have imposed.

Further comment is unnecessary, and I should not have presumed to draw your attention to the matter had not Mr. Mitrany's distortion of my words and their sense appeared in your columns—or, rather, I should say, had they appeared elsewhere than in the columns of THE NEAR EAST.—I am, etc.,

YOUR BUCHAREST CORRESPONDENT.

Bucharest, April 25, 1916.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Mesopotamian Operations. May 22.

Lord ISLINGTON, replying to questions put by Viscount MIDLETON and the Marquess of SALISBURY, said that further papers as to the operations in Mesopotamia were in course of preparation and would, he hoped, be laid before the House in a few days. He could not state off hand whether all the telegrams between the Viceroy and the Secretary of State for India would be included. He was not prepared to say that the Government did not expect Parliament to be in a position to discuss this question until after the Whitsuntide recess.

May 23.

Lord ISLINGTON referred to the question asked on Monday by Viscount Midleton as to the papers to be published with reference to the operations in Mesopotamia. The noble viscount had asked whether private correspondence between the Governor-General and the Secretary of State would be included. Inquiries had been made, and a large mass of correspondence relating to Mesopotamia, both official and private, had been examined in the War Office with a view to deciding what documents could be published consistently with the public interest. Until the consent of other departments concerned had been obtained it was not possible to say what papers could be laid. The Government, however, had no wish to conceal anything that could possibly be made public. National interests, in regard to which they must be guided by their expert military advisers, were the sole consideration.

The Marquess of SALISBURY said that he was advised that unless the private correspondence between the Viceroy and the Secretary of State was in some cases included the papers would probably be insufficient to enable a just conclusion to be reached as to the circumstances.

Prisoners at Katia. May 24.

Mr. TENNANT, replying to Mr. BALDWIN, said:—No lists of officers or men taken prisoners at Katia have yet been received from the Turkish Government. It is reported from the base that Colonel Coventry, with twenty officers and 202 men of the Worcestershire Yeomanry, were taken prisoners, also two officers of the Gloucestershire Hussars. In addition, two officers of the Worcestershire Yeomanry were reported missing, believed killed, one of whom had since been reported dead. Nine of the rank and file missing were reported wounded.

TURKEY AND ZIONISM.

The New York correspondent of *The Times* reports that Mr. Henry Morgenthau, late American Ambassador at Constantinople, speaking at Cincinnati on Sunday evening, disclosed the fact that he had recently broached to the Turkish Ministry the advisability of their selling Palestine to the Zionists after the war.

The Turkish Ministers, he said, eagerly approved of the project. They discussed figures and argued whether Palestine should be converted into a republic. "I told them that if harbours were built at Jaffa half a million visitors would be attracted yearly to Jerusalem, each one of whom would spend £20." "Why wait until you raise the money?" they responded. "We will grant concessions now, so build your harbours and hotels."

Mr. Morgenthau added that the Turks were seriously considering sending the Grand Rabbi of Turkey, Nahoum, as Ambassador to the United States.

MISSIONARIES IN PERSIA.

Following upon the occupation of Ispahan, the old capital of Persia, by the Russian forces on March 12, the British Minister at Teheran has consented to the return of C.M.S. missionaries to that city. Dr. Emmeline Stuart and Miss J. Biggs have proceeded thither from India, and Dr. D. W. Carr, the acting secretary of the mission, is on his way there from England. A telegram from Teheran on April 28 stated that the staff of the society from Yezd, who had retired within the Russian sphere of influence, would be leaving for their station on May 2. Dr. White wrote from Teheran on March 9:—"That the people of Yezd need us very badly, and are prepared to give us a great welcome, we have heard from various sources. Only last week, among numerous letters from Yezd, was one from a large landowner, in which he said how very badly the people needed their hospital and doctor. He went on to say, 'If you will only come back I will guarantee your safety—in fact, not a hair of your head shall be injured!' Another Yezd grandee who has been living in Teheran, and has just been appointed to a high office in Yezd, came to see me before he left and pressed me to go back with him, and said, 'As soon as I arrive in Yezd I shall begin an agitation to bring you all back again.'

A NEW ART.

Mr. Montague Summers, who is well known in Egypt, was responsible for one of the principal attractions in the Art Section Tent of the Chelsea Flower Show this week with an exhibition of butterfly pictures. These pictures, which were designed and executed by the exhibitor, include real butterflies of England and of the Tropics among charmingly painted representations of the flowers which they most favour. Particularly beautiful are those in which Mr. Summers has chosen the soft lights of evening for his background, as in the one which depicts the large white butterfly settling upon the meadow-sweet. The pictures are set in patent airtight frames, for which Mr. Summers has been awarded the Branksian Silver Medal of the show.

June 1	19	Thursday	29	29

To-day is the birthday of H.M. Queen Mary.

Tuesday is the birthday of H.R.H. Princess Theodora of Greece, third daughter of Prince Andrew and Princess Alice, who was born at Athens in 1906.

Prince Christopher of Greece, who left Petrograd last week, has arrived at Marlborough House on a visit to Queen Alexandra. On Wednesday he accompanied Queen Alexandra to the R.H.S. Flower Show at Chelsea Hospital.

The Sultan of Egypt arrived in Alexandria on Tuesday. An Anglo-Egyptian guard of honour was mounted at the station, and H.H. was welcomed by a number of prominent representatives of the various communities. The town was gaily beflagged in honour of his arrival.

H.H. the Aga Khan has arrived in Paris, and is expected in London very shortly.

Lady Ninian Crichton-Stuart left London for Edinburgh on Monday.

Tuesday was the Roumanian national fête day, but on account of Court mourning the Roumanian Minister did not hold his usual reception.

Mlle. Margaret Lahovary, sister of Princess Bibesco of Roumania, arrived in London on Monday, and is leaving shortly for Paris.

At a Council of the British Empire League, held at the House of Lords on Wednesday, Lord Kitchener was elected a Vice-President of the League.

Lady Maxwell is now making very satisfactory progress towards recovery.

Lord Howard de Walden, having obtained a month's leave, left Egypt for England on May 8, accompanied by Lady Howard de Walden. They are now at Dean Castle.

The Right Hon. Sir H. M. Durand has been appointed by the King to the County of London Appeal Tribunal.

The *London Gazette* announces that his Majesty the King has been pleased to appoint General Sir James Willcocks, G.C.M.G., K.C.B., K.C.S.I., D.S.O., to be Colonel of the Loyal North Lancashire Regiment.

The *London Gazette* announces the appointment of Colonel C. E. Yate, C.M.G., M.P., as a Deputy Lieutenant of the County of Leicester.

22, Great Chapel Street, Oxford Street, W.

M. Emile Costinescu, the Roumanian Minister of Finance, has recently been ailing, but we are glad to learn that he is now restored to health as a result of his rest in Constantza. In his absence M. Antonescu, Minister of Justice, has taken charge of M. Costinescu's department

General Mahon left Salonika on Friday amidst many signs of regret at his departure. General Sarrail, who was at the White Town to bid him good-bye, told a special correspondent that he had found in General Mahon "not only an ideal collaborator, but a real friend," and said that he regretted his departure very much. There were also present many British generals and Staff officers, and several Serbian officers; while General Moschopoulos and Colonel Messalas, with their respective staffs, represented the Greek Army.

Lieutenant-General Milne, who succeeds Sir Bryan Mahon, is, like him, acquainted with the Sudan, having served in the Khartoum Campaign of 1898. He also served in the Boer War, and is a well-known and distinguished officer. In the present war he has been twice mentioned in dispatches, and he was promoted major-general last year. He was Chief Staff Officer on the Headquarters Staff of the Second Army before going to Western Egypt, where he distinguished himself by his prompt handling of the Senussi tribes when, at Turco-German instigation, they invaded Egypt.

At Buckingham Palace on Saturday the King invested General Sir Edmund Barrow with the insignia of a Knight Grand Cross of the Order of the Star of India.

The marriage arranged between Captain Philip C. Field, Royal Army Medical Corps, attached Egyptian Army, and Miss Katharine Gordon, third daughter of the late Alexander Gordon, barrister-at-law, and Mrs. Gordon, of 13, Rossetti Mansions, S.W., and Molino di Sopra, Alessio, Italy, will take place quietly in London next Thursday.

On Monday, at St. Peter's, Sheringham, the marriage was solemnized of Major Frank De Winton Harman, D.S.O., Norfolk Regiment (attached Egyptian Army), son of the late Canon Harman and Mrs. Harman, to Evelyn Mary, daughter of Lieutenant-Colonel Gully (late Norfolk Regiment) and Mrs. Gully, of the Croft, Sheringham.

In Lines of Communication Orders issued in Cairo on May 8, the Inspector-General of Communications records his appreciation of the courage of Second Lieutenant H. Frayling, Royal Scots, and Private W. Scott, who both gallantly effected rescues from drowning at Alexandria.

In a dispatch dated May 9 Mr. Edmund Candler, the representative of the British Press with the Expeditionary Force in Mesopotamia, writes (from "At the Front"): "The first four British officers from Kut arrived here to-day. They are Captain Maclean (78th Punjabis), Lieutenants Bullock and Portsmouth (2nd Norfolks), and Hinds (103rd Mahrattas). All have been in hospital at Kut for periods varying from December 25 to the beginning of April.

Signaller Ellis Silas, 16th Infantry Battalion, Australian Contingent, had the honour of submitting his sketches of Gallipoli for the inspection of the King and Queen at Buckingham Palace last Saturday.

Mr. Tickner Edwardes, the well-known author of the "Lore of the Honey-Bee," which has become the standard work on the subject, and also of many successful novels dealing with English village life, is at present in Cairo assisting in the operating theatre of the Citadel Military Hospital, says the *Egyptian Gazette*. As a member of the Royal Army Medical Corps, Mr. Edwardes was on the Peninsula until the last days of the retirement and there had many exciting experiences. His many readers, both in Egypt and the old country, will be glad to hear that he has come through all unscathed.

Mr. Herbert Vivian, a well-known writer on Near Eastern affairs, applied for his discharge from bankruptcy on Tuesday, but the discharge was suspended for three years.

We are informed that the Rev. W. J. C. Armstrong has accepted the assistant chaplaincy of All Saints' Church, Cairo, and hopes to begin work in August. Mr. Armstrong is a graduate of Cambridge and is senior curate of St. Peter's, Mansfield, Nottingham, where he has worked for six years.

Owing to illness Prince Abdul Karim Khan was unable to open the art exhibition of the Société Internationale de Philologie, Sciences et Beaux-Arts, held at the society's rooms in Upper Bedford Place on Monday. The president of the society, M. Jaakoff Prelooker, took his place.

The Société Internationale de Philologie, Sciences et Beaux-Arts will hold its forty-first annual conference from May 30 to June 3. Amongst the items of its programme are the following:—On May 31, H.H. Prince Abdul Karim Khan will take the chair at a meeting of the Poetry Section, and Syed M. El-Ehsan El Bakry will read a paper on "Arabic Poetry." On June 1, Professor H. M. Léon, M.A., LL.D., will read two papers, one in the Philological Section on "The Massalji, or Turkish Story-teller," the second in the Natural History Section on "The Shield Reptiles of Palestine." On June 2, Dr. John Pollen will read a paper on "Eastern Mysticism from a Western Point of View," before the Oriental Section; and Mr. Harendranath Maiha one on "A Comparative Study of Civilization in the East and West" before the Oriental Section.

The *Oxford Magazine* (May 19) announces that it is proposed to form a local advisory committee in connection with the settlement of Serbian boys at Wycliffe Hall. The proposal has the sympathy and support of the Vice-Chancellor and the Mayor, and the committee will be composed of representatives of the University and City. Sir Arthur Evans (representing the Executive of the Serbian Relief Fund), Professor Vinogradoff, Mr. Nevill Forbes, Professor Turner, Mr. Matheson, Dr. Hoey, and Mr. Ball (who is acting as chairman) have already consented to serve. It is generally felt that the formation of a Serbian Committee will not only be in itself an expression of welcome and goodwill, but will be of considerable assistance to the settlement in various ways. It will be no more than a consultative or advisory body and not of the nature of a "Relief" Committee. But it is proposed to raise a local fund for the provision of educational books and appliances, as also for games and recreation purposes. A number of volunteers have already given a good deal of personal assistance both in teaching and in other ways. A fuller statement will be issued later: in the meanwhile the committee would be glad to receive further offers of help. All communications may be addressed for the present to Mr. S. Ball, at Barnet House, or to Dr. Hoey, Indian Institute.

At the recent Cape to Cairo Red Cross Fair an autograph of Florence Nightingale was purchased for a substantial sum by the Lord Mayor, who sent it to Mrs. Louis Botha at Cape Town as a souvenir of the sale.

By kind permission of the Vice-Chancellor of Cambridge University, a meeting was held at the Lodge, Quinn's College, in connection with a scheme of repatriating Armenian sufferers by the war. The principal speakers were the Bishop of Ely and the Regius Professor of Divinity.

Six Turkish Deputies and Hussein Ashawid Bey, the Vice-President of the Turkish Chamber, are now in Germany to return the recent visit of the German Deputies to Constantinople.

CIGARETTES.—Egyptian blend, 3s. per 100; Extra Fine, 5s.; cork, gold tipped the same. Colonel B. writes: "None better; am very pleased to recommend to all friends."—Write Ezbekea Co., 3, Little Titchfield Street, Oxford Street, London, W.

APPOINTMENTS, PROMOTIONS, Etc.

The New York *Independent* announces quite definitely that Mr. Morgenthau's resignation as United States Ambassador to Turkey is to be accepted by the President.

"The nomination of his successor," adds the *Independent*, "is to go to the Senate as soon as the formal inquiries as to his acceptability have been responded to by the Turkish Government. He is Abram I. Elkus, a prominent lawyer of New York. There are few men in New York City who have such an unusual record in promoting legislation for the correction of industrial abuses and the furtherance of commercial welfare as Mr. Elkus. He was the counsel for the New York State Factory Investigation Commission, whose recent report is recognised as a model of thoroughness and impartiality. The set of laws which he drew up to safeguard the lives and health of workers was subsequently passed by the New York Legislature. He has been counsel for the Merchants' Protective Association of New York City, and has long been active in stamping out fraud in mercantile life, particularly in bankruptcy cases. He was nominated for judge of the Court of Appeals of New York on the Democratic ticket in 1913, and is now an active worker in many benevolent and civic organisations."

The War Office announced last Friday: Lieutenant-General Sir Bryan Mahon, K.C.V.O., C.B., D.S.O., has assumed command of the Western Frontier of Egypt, and Lieutenant-General Milne, C.B., D.S.O., is now commanding the British troops at Salonika.

The *Morning Post's* Berne correspondent reports that Lieutenant-Colonel H. Picot has been appointed to take charge of the arrangements for British prisoners to be interned in Switzerland, whose number is estimated at about 1,300.

Judge Walter Bond is leaving Cairo definitely on July 1, and will retire from the service in October, when his leave will expire.

Our Cyprus Correspondent writes (May 7): Mr. Jardine, an assistant to the Chief Secretary, who collaborated with Mr. Lukach in editing the excellent "Cyprus Handbook," has been appointed Chief Secretary in Somaliland.

The *Cyprus Gazette* of May 2 announces that Mr. Herbert Dunk, Registrar of Deeds, has been appointed Public Custodian of enemy property.

El Miralai G. F. Clayton Bey, C.M.G., Director of Intelligence and Sudan Agent in Cairo, has been granted the temporary rank of Lewa.

Mr. F. E. de Halpert, of the Egyptian Ministry of Finance, has been appointed Intelligence Officer, Headquarters Staff, Egypt, as Lieutenant.

Our Bucharest Correspondent writes (May 9):—

M. Marinkovitch, Serbian Minister in Bucharest, has left for Petrograd, where he is to meet M. Pashitch, the Serbian Premier. In his absence M. Rakitch has charge of the Legation.

M. Stanoevitch, late First Secretary of the Serbian Legation in Bucharest, has been appointed First Secretary of the Serbian Legation in Petrograd.

Colonel Bronsart de Schellendorf, the German Military Attaché, has been recalled. Colonel Hammerstein has been appointed as temporary substitute.

Mr. A. J. Pawson, Judicial Inspector, Legal Secretary's Department, Sudan Government, has been transferred to the Upper Nile Province as Second Inspector.

Kaimakam E. H. Ross Bey, Senior Inspector, Kordofan Province, Sudan, has been transferred to the appointment of Assistant Civil Secretary. Mr. E. N. Corbyn, Inspector Finance Department, Khartoum, succeeds him as Senior Inspector, Kordofan.

Captain A. Capel, the Gloucestershire Regiment, has been attached to the Egyptian Army as a Special Service officer. He has been granted the temporary rank of Bimbashi and attached to the Cavalry and Mounted Infantry for duty.

Lieutenant A. J. R. Lamb, D.S.O., 2nd Dragoon Guards (Queen's Bays), has been attached to the Egyptian Army as a Special Service officer, with the temporary rank of Bimbashi in the Cavalry and Mounted Infantry.

OBITUARY.

ADMIRAL C. WINDHAM.

We regret to announce the death of Admiral Charles Windham, C.V.O., which took place on Saturday at Reymerston Hall, Norfolk, the residence of his brother-in-law, Colonel Hare, C.B. The second and eldest surviving son of the late Lieutenant-General Sir Charles Ash Windham, K.C.B., and grandson of Vice-Admiral William Lukin Windham, of Felbrigg Hall, Norfolk, and of Admiral Sir John de la Poer Beresford, he was educated at Lees School, Brighton, and on his Majesty's ship Britannia. He entered the Navy in 1865 and served with the Abyssinian Expedition, 1868, in Ashanti, 1874, and in Egypt, 1882. From 1896 to 1901 he was captain of the Royal yacht Osborne. He was captain of his Majesty's ships Isis, 1901-2, and Amphitrite, 1902-5, and was promoted Rear-Admiral in 1905. Since 1907 he had occupied the post of Gentleman Usher to the King. At the funeral, which took place at St. George's Cemetery, Hanwell, on Wednesday afternoon, the King was represented by Colonel H. Fludyer.

The death is announced as having taken place at Aden, on the 6th inst., of Major Francis de Bercken Hancock, of the Bombay Political Department. Major Hancock was at one time Assistant Political Agent and Assistant Resident at Aden. But in 1908 he was transferred to Kathiawar as Political Agent, and since 1913 he had been Service Administrator of the Porbandar State. He was on the voyage home at the time of his death.

The death is announced as having taken place at Bournemouth on Monday of Mr. J. B. Camm, father of Dom Bede Camm, O.S.B., who is now serving as chaplain to the forces in Egypt.

We record with deep regret the death of Mr. Schöndorff, who had occupied for several years the honorary post of British Vice-Consul at Bucharest. Mr. Mutcheon, Vice-Consul at Galatz, has taken temporary charge of the Vice-Consulate in Bucharest pending the appointment of Mr. Schöndorff's successor.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

PRIDEAUX-BRUNE.—On May 14, at Cairo, Egypt, the wife of Captain Fulke K. Prideaux-Brune, Australian Light Horse, of a son.

MARRIAGE.

BRENAN—CAMPBELL.—On May 16, at the Church of the Sacred Heart, Norton Road, Hove, by the Very Rev. Canon Ottley, Lieutenant Terence Vincent Brenan, 11th Essex Regiment, second son of the late Edward Vincent Brenan, of Rockleaze, Bristol, to Marguerite Julia, eldest daughter of Tomlin Joyce Campbell, Egyptian Survey Department, Cairo, and Mrs. Tomlin Campbell, 52, Norton Road, Hove, Sussex.

DEATH.

EDE.—On May 19, at The Moors, Bishopsteignton, Devon, Edward Denzil Ede, of 33, Croham Road, South Croydon, and the London County and Westminster Bank, younger son of the late Charles William Ede, of Blackheath, and Constantinople, aged 54.

IN MEMORIAM.

LAW.—In loving memory of Captain Alexander Duncan Law, the Hampshire Regiment, attached Egyptian Army, only son of Major James Law, Royal Engineers, Aldershot, who died suddenly at Khartoum North, Sudan, May 23, 1914.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

NAJEM HOURY'S CYPRUS HOTELS CO., LTD.

Open all the Year Round—
NIKOSIA—Cyprus Palace Hotel.

GREECE AND THE ALLIES.

In happier circumstances the opening of the line connecting Larissa and Salonika, which places Athens in railway communication with the rest of Europe, would have attracted more attention both in Greece itself and also abroad. It is a little over two years since the contract for the extension of the Athens-Larissa line from Karali-Zerven, a few yards from the old Greco-Turkish frontier in Thessaly, to a point near Gida on the line between Salonika and Monastir, was signed. The outbreak of the war delayed the construction, but the section is at last completed, and Athens in normal times will be reached by rail from Paris within about sixty hours. It is early for the potentialities of this Greek line to be fully appreciated. Piræus is now the furthermost port of the European railway system on the way to Egypt and India, and in due course should make a successful bid for the international traffic to those countries, which is ever on the look-out for a shortened sea-route. For the present Greece must rely on a branch line which leaves the trunk line to Constantinople at Nish. If at the end of this war there is to be a Southern Slav State, one of its first concerns will be not only to improve its railway connection with Western Europe, but also to see that its railways are joined to those of the kingdom of Serbia and of Greece. When that day comes the position of the Piræus will be still further strengthened, provided the various links in the railway chain across Jugoslavia can be maintained at the transcontinental standard of efficiency. The absence of a through route from Athens to "Europe"—to use the phraseology current in States south of the Danube—has long constituted a grievance to Greece. Before the Balkan wars the Turkish Government had refused to grant the necessary permission for a junction with its own lines, and Greece has had to wait until she was in possession of Salonika to see her ambition realised. Even now a contrary fate ordains that the opening ceremony in connection with this coveted section, which took place last Sunday in the presence of King Constantine and his Ministers, finds the Greek railway system still "in the air." While traffic on the new line is to be postponed until the Athens-Larissa Railway has been repaired and strengthened with a view to enabling it to cope with the heavier demands that are likely to be made upon it, through communication with the rest of Europe must wait until the end of the war. But it is all to the good that Salonika should at this stage be brought within twelve and a-half hours of the capital, and it is possible that this material factor may exercise some influence on Greece's attitude towards the course of events in Macedonia.

For Greece, if there were any anomaly in the opening ceremony at Libanovo, on the Gulf of Salonika, on Sunday, it will have been not so much in the impossibility of marking adequately the international importance of the event, but rather in the absence of the first Greek of his day. The contract for the construction of the line was signed in Paris by M. Venizelos, and, under ordinary conditions, he would have been present at the ceremony, whether in office or out of office. It must have been impossible for those who were at Libanovo to banish from their minds the fact that he was not there and the reasons for his non-attendance. No amount of self-complacency can confute the uncomfortable logic of the course of events which has followed upon the repudiation of M. Venizelos and King Constantine's refusal to conform with the wishes of the majority of the people. Greece has kept herself out of the great upheaval; and those who are responsible for her policy no doubt congratulate themselves and their country, because they conjure up only the terrors and destruction of war. They have probably never stopped to think whether war has not also its advantages, whether the stern realities of a life and death struggle—not the comparatively easy campaigns which the Greek army experienced in the Balkan Wars—are not calculated to bring out the latent good in a nation, to awaken among a politics-ridden people a consciousness that national interests are of greater importance than the pursuit of purely selfish ends by each individual. But, apart from metaphysical considerations, what has Greece had to face as the price of her freedom from participation in the war? In the first place, in spite of all the sophistry brought to bear upon the subject, she stands revealed to the world as having broken her pledged word to Serbia, and the measure of the reliance placed upon her good faith in the future will be determined solely by the possibility of compelling her to remain true to her bond. She is a country divided against herself, with the bitterness of party strife intensified at a time when all the countries in the Grand Alliance, on whose side she ought to have been ranged in virtue of her treaty with Serbia, are proving the solidarity that war waged in a righteous cause brings to a nation. Reports of the revival of the baneful Military League are denied by the Government, although its own supporters in the Press are responsible for the statement, and apparently intended it to be a warning to a people whose constitutional freedom it would be the object of the League still further to curtail. Finally, Greece's material position, if we may judge by the utterances of Ministers, is no better than her peace of mind. The army remains mobilised at great cost to no purpose, the finances of the country give rise to anxiety, and owing to the equivocal attitude of the Government the Allied Powers have to regulate imports to an extent which makes it easy for unpatriotic Greeks to corner food supplies and reduce sections of the population to the direst extremities of want.

Between the relative merits of the two policies open to them the Greeks themselves have to decide. In a speech defending the Government's course M. Rhalli declared last week that a departure from neutrality would bring on Greece poverty, privations, and calamities worse than those from which she already suffers. "It would probably lead to complete disaster," he added. The sordidness of the considerations which the Government asks should determine the people's choice must have been apparent to M. Rhalli's audience, and a belligerent would need to be hard pressed to require the help of a nation inspired by such motives. M. Rhalli, however, we believe, is as unjust to his countrymen as he was mendacious in his references to the Allied Powers. "The aim of the Entente," he said, "is to make Greece depart from neutrality. We have arrived at a point when protests are no longer heeded." In the face of such a travesty of facts, the Greek Foreign Office was compelled to dissociate itself from M. Rhalli by issuing a statement to the effect that, since the written assurances given by the Allies last November repudiating any such intention, no further communication had been received by the Greek Government. The time for Greece's participation in the war was when her co-operation was asked for, first, by Great Britain in return for generous compensation; and, secondly, by Serbia, in accordance with the terms of the Greco-Serbian treaty. Greece refused both requests, and the Allies have been able to dispense with her services. They ask nothing from her now; but, in reply to protests from a Government whose policy does not enjoy the support of the nation, they can only point out that they are acting in the interests of Greece, and on lines to which she gave assent when she invited the Allies to land at Salonika. Any dilemma in which the Greek Government finds itself is one of its own contrivance, and those who regret to see Greece placed in a false position will hope that the opening of the railway which gives the capital direct communication with Europe will bring the Government into line with the people in realizing that Greek interests are inseparably bound up with those of the Allied Powers.

PRINKIPO.

By MARY A. POYNTER.

If recent despatches from the Near East are to be relied upon, then General Townshend's lines as a prisoner of war have fallen in pleasant places. Let us hope the report is true, that he is to be given free roaming of the peaceful and beautiful island of Prinkipo, situated in the Sea of Marmora just at the line where the Gulf of Ismidt begins, and only a dozen miles from Constantinople. It will furnish an ideal place for our hero to recuperate from the strain of all his hard fighting, and from the strain of those horrible months when he was besieged—always under fire and suffering every privation—in Mesopotamia. The Turks, in offering him the hospitality of Prinkipo, are simply living up to their old tradition of showing courtesy and kindness to a valiant enemy who is temporarily in their power.

Prinkipo is the largest of the half-dozen small islands called by the Turks Kizil Adalar, but better known to the foreigner and the world in general as the Princes' Isles. In old Byzantine days they were distinguished for their many churches and monasteries, several of which have endured to this time. These islands were also used as the retreats, enforced or otherwise, of princes and powers

When in disgrace with fortune and men's eyes.

Romanus IV. was one such sufferer, and at least three Empresses—Irene being one of them—were imprisoned on the island of Prinkipo, whether for sins of commission or omission this is, perhaps, not quite the moment to inquire. A green-embowered hillside of Halki, the island literally within a stone's throw of Prinkipo, furnishes the last resting-place of one of Queen Elizabeth's Ambassadors—England's first Embassy here—who was sent to the Grand Seignior at Constantinople to ask his assistance for Great Britain in her difficulty with the then reigning monarch of Spain.

To-day these islands are distinguished mostly for their beauty, their desirability as places of residence, as places of sweet and peaceful summer life. They do not lie flat upon the surface of the water, but rise to heights, even to hundreds of feet sometimes, so that they shall not be overlooked, though they be small. Small pines grow up the hillsides and crown the heights of these islands, and give them the reputation of being salubrious, a reputation that anyone acquainted with them would not wish to contradict. Their soil is red, as their Turkish name would indicate, and the soil of Prinkipo in particular is a soft rosy-red that the sunshine delights to bring out and emphasize while at the same time drawing forth the resinous breath of the pines.

These Princes' Isles lie near to the coast of Asia—whose heights are bare in contrast to the islands' green summits—and they are surrounded by a sea as blue as the sky knows how to picture. Constantinople's domes and minarets can be seen plainly in the distance, though none of its noise and dust can reach these favoured isles. One would certainly call Prinkipo the delectable, the crown jewel of this little cluster of red islands, though each has a claim to distinctive beauty and interest. It is an island full of delightful suggestions of Italy, as well as of constant reminders of the Orient to which it belongs. Prinkipo's sunsets of a summer evening are a pageant that even the oldest inhabitant would not miss. Then the blue seas of the daytime glow redder than the reddest cliffs of the isle itself, or they shade off into gold—become painted seas, in fact—painted with every colour that Nature has ever spread out on her palette of the skies to be reproduced on the waters below. One hardly needs to add that these Prinkipo shores are the haunt of the halcyon bird—he of the iridescent wing.

The gardens of Prinkipo are celebrated—or ought to be—both in song and story. Sir Edwin Pears' garden there, with its cypress avenue, is a favoured spot both on account of the charming views it commands and for the varied shrubs and flowers that seem to o'erleap all bounds in the profusion with which they grow. And other English gardens there are in Prinkipo that no one who has ever seen them in the old days of peace would like to forget now.

The native population is mostly Greek, though the spring, summer, and autumn residents in peace times are made up of representatives of most nations. The American Ministers and Ambassadors, having no settled official summer residence, have shown much appreciation of Prinkipo in the past. A few years ago one of them, familiarly and affectionately called "Sunset Cox," went so far with his appreciation as to write a large volume, called, as I remember, "The Isles of the Princes; or, The Pleasures of Prinkipo." He shows these pleasures were many and varied.

Only in comparatively recent times have the Turks frequented Prinkipo to any great extent. During the later years of Abdul Hamid's reign something like a summer invasion of Turkish visitors, nearly always of the upper class, began to take place. The Turkish ladies especially began to come in numbers, finding that here they were more free to drive and walk about by themselves—driving often in open carriages and with the merest excuse of a veil thrown about their heads.

The donkey is a time-honoured institution of Prinkipo, and he has all the uncertain tricks of the donkey tribe. The rich and the poor, the great and the small patronise this animated vehicle of locomotion, especially if an excursion is to be made to the monastery of St. George—an excursion that leads up a steep ascent to the highest point on the island. These donkeys were, at least until recently, in fairly fine condition, as the S.P.C.A. (under English and American auspices) used to offer prizes to the donkey-boys who should turn out the happiest and most prosperous-looking donkeys at the end of the season. Poor fellows, they may be thin enough now!

There have come vague reports of Prinkipo having been fortified by the Germans since the present war began. But of what one does not know one should not speak; one can only feel certain that it would take much unsightly human handiwork to destroy the natural beauty of Prinkipo. It is far and away the most charming haunt within easy reach of Constantinople—no, I forgot for a moment the claims of the Bosphorus, and let me revise my statement and say that the shores of the Bosphorus and Prinkipo are beauty spots that any city might envy, and of which all cities might be proud.

PRISONERS OF THE TURK.

The following information has been communicated to the Foreign Office by the courtesy of the United States Ambassador:—

The United States Embassy at Constantinople learns from the Ottoman Government that General Townshend and his staff will be brought to Constantinople, and that suitable accommodation will probably be assigned to them on the Island of Prinkipo, where they will be allowed full liberty.

The Embassy understands that most of the officers and men are still at Kut and Baghdad, and that some of them will be sent to Damascus. The Ottoman Red Crescent Society state that there is at Baghdad an ample supply of medical stores, and that they have so informed the British Red Cross Society. No information is available as to the special needs of the prisoners, but the United States Consul at Baghdad has been instructed to communicate with them and to supply, if possible, detailed information.

The United States Embassy at Constantinople learns from the United States Legation at Sofia that the Bulgarian authorities will transmit merchandise received at the Greco-Bulgarian frontier for Constantinople. The Embassy expects to receive Red Cross supplies from Athens by that route (via Oxilar), and suggests that it should be used for the transmission of clothing and supplies for the British prisoners.

TANGIER TO TEHERAN.

I am full of contrition and abject apologies. Last week I perpetrated a "limerick" about an old lady who dwelt in "Yanina," suggesting that the said venerable dame "might have been cleaner." Now I regret it. Not that I am threatened with an action for libel. But I learn from a Greek friend that "Yanina" is not pronounced to rhyme with cleaner, as I thought, but, as the bard of the *Oxford Magazine* made it, with "ran in her." *Hinc illæ lacrimæ.*

***

The Limerick Spirit certainly seems to have been very active of late. Not only did it inspire the "Balkan Verses" which have, indirectly, got me into trouble—for my Greek friend was not my only critic, by a long way—but it prompted a correspondent, to whom I am indebted for numerous kindnesses, to send me a copy of some delightful rhymelets. He writes: "In turning over some papers, associated with ten or a dozen years ago, the following limericks have come to hand. They appear to have been written in the old dog days of Constantinople, by one M. A. M." Perhaps some of my readers who remember the days referred to may guess the identity of the author:—

If you are inclined to write verses
In a city where canine the curse is,
  You must surely expect,
  If you pause to reflect,
That your dog-gerel so much the worse is.

Yet when you are once more at home—
With minaret, tower, and dome
  Afar from your view—
  You would welcome a few
Gentle barks from the streets of New Rome!

Poor old scavengers of Constantinople! It is strange how many of us think kindly of you, and of the Old Turks who treated you well. But then you were always grateful—like the Old Turk himself.

***

Here is an interesting passage from the letter of a Roumanian correspondent regarding the attitude of the Neutral towards the war::—

For people who are at war it must be no easy matter to understand the frame of mind of a member of a neutral nation who would, so to speak, himself adopt the attitude which dictates the policy of the State, and attempt to weigh contemporary events in a spirit of impartiality. Such people are few even in the neutral States—to judge from what we observe in Roumania—though there are a number who give themselves out to be impartial. The reasons are: First, the fact that nearly everybody is materially affected by the great war; secondly, because there are involved moral factors of overwhelming weight; and thirdly, because very few people (if any) possess qualifications which permit of their observing current events in their true perspective. Failing such qualifications, the neutral voluntarily limits his political horizon by allowing his sympathies to bear him, figuratively speaking, into one or the other camp. So a man will in all probability be either pro-German or pro-Entente—the latter if he is wise—but he will in any case abandon all absurd pretensions to impartiality.

***

Regarded as a demonstration of the solidarity of our alliance and a proof of good-fellowship, the arrival of the party of Russian cavalry in the midst of our Tigris force is distinctly gratifying. It also shows the dashing quality of the little force—for, I take it, the force is a very small one indeed—which must have had a rather anxious time, whichever route it followed to join up with our men. But I am sorry to see the attempts made in some quarters to represent the incident as an epoch-making one. Some of our newspapers are apparently bent on representing to the world—and, incidentally, to our enemies—that we are in a very bad way indeed, which is hysterical folly. It seems to me that it would be no bad idea for us to send off a small force of cavalry—a hundred or so would suffice—to link up with the Russians. That would be the fittest way of returning our Ally's pretty compliment, and it would also show the croakers that we are not quite so near the last gasp in Mesopotamia as their nonsensical writing would lead one to suppose.

***

The said croakers appear to forget what this country has done, and is doing, in the war. A little reflection would serve to show them that, though we may not be doing all we should like to do, we really *are* "doing our bit." To say nothing of supplying some of our Allies with arms and munitions, stores, foodstuffs, and the proverbial "sinews of war," we have put a good many German colonies out of action, so to say; we are helping to hold the line in France and Belgium; we are helping to make the Bulgars and the Austro-Germans more than a little unhappy; and we are keeping the seas open to our traffic and closing them to enemy traffic by bottling up the All-Highest's fleet in the Kiel Canal. That, if you consider it quietly, is not a record of which we need be ashamed. Moreover, as our Allies have been generous in acknowledging, even our Mesopotamian Expedition has helped the common cause enormously, facilitating the Grand Duke's operations by drawing off very considerable Turkish forces from the North. The pessimists—British and otherwise—have no good reason to say, or to think, that we are not pulling our fair share of the burden.

***

We have not been allowed to read much about the doings of the Navy of late, but I gather that when the story of the war comes to be told in full we shall all feel very proud of what has been going on down the Mediterranean recently. It is not showy work, but it is very effective; and it is satisfactory to know that it makes the enemy enormously angry. Reference to the senior Service reminds me of a neat remark made by a distinguished naval officer at the R.G.S. dinner on Monday evening. Lord Hardinge, in the course of his speech, had observed that he belonged to a service in which eloquence was at a discount. The Navy speaker prefaced his remarks by observing: "I belong to a service in which eloquence is—punished." A bull's-eye!

***

So General Mahon is back in Egypt. I am glad of it, and so also will be his numerous and more fortunate friends who are resident in that country now. He is very Irish, is this famous general, and as popular as any son of Erin. He was one of the few officers of high standing in the Sudan against whom I never heard a word of criticism when I was in the country. And yet, like most of his countrymen, he was unsparing in his chaff. I recollect an instance of this which occurred at dinner one night up-country. Among the members of the mess was a certain captain who possessed one of the most penetrating voices I have ever heard. He was rather sensitive in regard to this organ, although I must say he never appeared to make any attempt to modulate it. While we were talking during a change of courses there was suddenly a most appalling racket from the steps, up which a servant was falling with the entire change of plates. Mahon alone appeared to treat the matter as a most commonplace one. "Och, it's all right," he said, "it's only —— dropping his voice; thanks be to Providence." Then he turned to ——, who was sitting next him. "I beg your pardon, ——, I did not notice you were still here. It must have been a boiler bursting." For the only time on record the officer took the aspersion on his vocal powers in entirely good part.

***

I was looking through a magazine the other day when all manner of strange caligraphy caught my eye. A paragraph in Turkish characters crowded away on an advertisement page with a brief note directing the readers to another page was the first to arrest my attention, and then I found the same paragraph repeated in no less than fourteen different languages. It ran:—

We shall not sheathe the sword which we have not lightly drawn until Belgium—and, I will now add, Serbia, recovers in full measure all, and more than all, which she has sacrificed; till France has adequate security against the tyranny of aggression; till the rights of the smaller nations are placed upon an unassailable foundation, and until the military domination of Prussia is wholly and finally destroyed.

Brave words these, and heartening, and uttered, moreover, by the Prime Minister of Great Britain. It is well to keep these words constantly in the minds of all, ourselves, our friends, and our enemies. Mr. Asquith, too, will probably be very grateful for the fullest publicity given to phrases which can by no possibility be misinterpreted, but which mean exactly what they seem to—perhaps more—certainly not less.

***

What an extraordinary number of artists have taken to the production of landscapes and skyscapes of Egypt! I do wish they wouldn't. Very few pictures of Egypt, especially of the desert, are at all satisfying, although, of course, one or two artists can give us all that could be desired in this respect. But I am sick to death of the unenviable "Hand-painted desert scenes; framed complete, five shillings," which are dotted about at picture-dealers in various parts of London. The sun is always setting, naturally; equally naturally the Pyramids loom eternally in a vague sandy background, and the best of the five-shilling types always include at least one camel—trotting—a native, and several palm trees. The latter really don't count much, they are so easy to draw, but a camel with crossed legs is different, a special art is required for that sort of thing. Much of the art I have seen in this regard is very special indeed; the paintings would make excellent wedding presents to relatives of the artists, but they don't look well in shop windows. Perhaps the vendors do not hang them suitably; there is something wrong, anyway

CORSAIR.

THE PRESS ON THE NEAR EAST.

India and Mesopotamia.

Apropos of General Sir Arthur Barrett's return to India to take up an important command there, the *Indiaman* (May 19) observes:—

His return will be all the more welcome in that he was associated with what may be described as the earlier and happier phases of the Mesopotamian campaign. The evidence that accumulates about its later phases gives, alas! more and more occasion for general dissatisfaction. Not only were the relative operations unfortunate, but they also appear to have been gravely mismanaged. Why, for instance, should our generals have launched their men on attacks that were not adequately supported by artillery? Why, again, should they have been supplied with old and ineffective aeroplanes? These are questions to which the public is entitled to have some reply. We have no wish to anticipate such explanations as may be forthcoming. We venture to suggest, however, that if there proves to have been a shortage of the equipment indispensable to the various military responsibilities undertaken by India, the blame for this shortage assuredly rests with those who deliberately starved the Indian military administration for several years past far more than with the officials in India at the present time, who have had to improvise necessary material since the outbreak of the war.

Operations at Es Sinn.

The *Times* (May 23) refers to the announcement that General Gorringe has carried the Dujailar redoubt as "the best news we have had from Mesopotamia since General Townshend fought and won the battle of Kut-el-Amara last September." The paper presses for an early telling of the whole story of this campaign, and continues:—

Meanwhile, the dramatic and adventurous ride of the force of Russian cavalry, which has crossed the plain from Persia and joined General Gorringe, is a further indication that the tide is turning in Mesopotamia. The Turks are credited with the intention of trying to hold Baghdad, but the defence of such an open city will be no easy matter. Russian columns are traversing the heights on the Persian border at various points, and they may very soon be in a position to raid the Turkish communications between railhead and Baghdad. . . . The military interest of the situation lies in the fact that the Turks apparently propose to commit themselves to two separate campaigns in the Baghdad area and in the uplands west of Erzeroum. Their southern line of communications, furnished by the Baghdad Railway and the road and river route beyond, lies midway between their two main theatres. In course of time they may find that a position so perilous contains the seeds of defeat in one or both areas. But it must also be remembered that they are recovering their balance between Erzinjan and Erzeroum, that they have evidently made up their minds to resist the Grand Duke from the excellent base of Sivas in Anatolia, and that our troops in Mesopotamia are now fighting in one of the most trying climates in the world. Even if the tide is turning, we must not expect anywhere in Asia Minor this summer successes on a scale which will materially affect the course of the war in Europe.

The *Globe* (May 22) refers to the meeting of the Russo-British forces as "one of the most dramatic and inspiring in the history of the East":—

Orientals set little store by agreements, paper alliances, and so forth, but the sight of Russian and British troops fighting side by side is one which will alike convince their intellect and inspire their imagination. It will be to them a proof, as nothing else could be, that the age-long rivalry and the distrust so carefully fostered from Berlin have come for ever to an end, and that in Asia civilization will in future rest firmly upon two great pillars, of which these Russian squadrons are, as it were, the first stones of the mighty connecting arch. It is news which will ring through every bazaar from Samarcand to Cabul, and from Peshawar to Kandy, and everywhere it will be hailed with rejoicing.

The *Manchester Guardian* (May 22) says:—

It is a fine raid, of the kind for which this war has given the Russian cavalry few opportunities. In the autumn of 1914, when the Russians first drove the Germans back from the Vistula across Poland, some troops of Cossacks raided the Posen frontier in the rear of the retreating army and cut the frontier railway. But there has been nothing else of the kind, and the trench-lines, with their unturnable flanks, have exalted the gun and the infantryman at the expense of the Cossack. In Asia Minor and Mesopotamia the enemy has still a flank to be turned, and the horseman retains his liberty of movement. Perhaps the Cossack, like Russia herself, will regain here what he has lost in Europe.

Outposts of Baghdad.

The quotations which we reproduce below are taken from an interesting article which Mr. Perceval Landon contributed to the *Daily Telegraph* (May 23):—

Some ten miles out from Khanikin the Turkish frontier post, Kula Ismail, is passed, and twenty minutes later Kala Sabzi, the Green Fort of Persia. This, the Persian guard-house, is held by a man of no mean reputation, Ali Akbar Khan, whose personal authority and a long respect for his almost superhuman acts of daredevil bravery form a better guard than the two dozen Martinis which was all that the Persian Government allowed for its defence.

It is here that Von der Goltz must have set out his main outer defences. After a general description of the surrounding country, Mr. Landon continues:—

No doubt Von der Goltz has laid his defences with skill. But he has had along these low Zagros spurs no such chances as those which Nature provided in the Es-Sinn district near Kut. It is true that to the west are marshes, but eastwards the terrain is hard, and there are obvious possibilities of outflanking trenches, however extensive and however skilfully constructed. It would not be necessary to take Khanikin and its defences by storm; it would be helpless if a sufficiently wide detour was made and it were cut off from the south. After that Kisil Robat and Shah Roban would probably be taken without resistance, and, as Baghdad is indefensible, the final opposition at Bakuba would be in the nature of a rearguard action, as the Turks would by that time be steadily retreating to the Euphrates.

On the other hand, the difficulties of supplying the advancing Russians will be great, especially until the Mosul column has control of the Tigris. After that, with summer well begun and the Mesopotamian crops reaching maturity, there should not be any serious trouble, especially as the haughty and exclusive Kurds, through whose territory the twin Russian advance is being made, have a time-honoured vendetta against the Turks, who in all these centuries have never succeeded in making their writ run among these aristocratic mountain nomads.

The New Serbian Army.

Mr. Crawfurd Price, in an article contributed from Corfu to the *Daily Chronicle* (May 22), describes what he terms the miracle of the Serbian army's recovery:—

The wonderful physique of the Serbian peasant has combined with the organising genius of the British and French missions and the resources of the Grand Alliance to save from the Serbian retreat no fewer than 150,000 hale, hearty, and well-equipped fighting men, full of renewed courage and enthusiasm, and waiting impatiently for the order to march homeward.

The Corfiotes did not welcome their unbidden guests. They, who, on their beautiful island, live a tranquil life at the expense of a German potentate and passing tourists, rather resented the intrusion of French chasseurs, British Army Service men, and stricken Serbians. They feared disease, devastation, pillage, and outrage. But they have discovered that there are distinctions to be drawn between armies, and though they have suffered inconvenience enough, the inhabitants are unanimous in their praise of the Serbians, and marvel not a little that they have had to record no instance of theft or violation.

There were many difficulties encountered at first, but Mr. Price shows that French and British organisation overcame them all:—

The Serbian army was never so well equipped as to-day. In this connection, as in the bearing of the men, the enthusiasm of the visitor is necessarily aroused, for the contemporary Serbian soldiers are a living embodiment of our alliance. The infantry are garbed in British uniforms complete even to the buttons; puttees have replaced the gaudy native hose, and Balkan sandals have given way to English boots. A French rifle and overcoat add to the picture, and only the national head-dress remains of the familiar make-up of King Peter's battalions. The cavalry present a smart and businesslike appearance in the silver-blue tunics of the French horsemen.

The writer concludes his article with the following expression of belief:—

The depression which one might expect to find is non-existent, for there is not a Serbian on the island who regards his exile as other than temporary. To this race of peasant proprietors, deeply attached to their own little patch of earth, the call of home and loved ones left behind makes an ever-increasing appeal. They know that the way back will be arduous and bloody; but none can doubt that when once they see the shadow of the mountains which stand between them and reunion with farm and family they will sweep forward with such *élan* that neither Germans, nor Austrians, nor Bulgars will be able to withstand the fury of the onslaught.

Turkey, Bulgaria, and Peace.

The Right Hon. Sir Joseph Compton-Rickett, writing in the *Daily News* (May 19), says that a very little more will suffice to make it impossible for Turkey to conclude a separate peace. He emphasises the necessity of safeguarding the safety and dignity of the Khalifate in any and all circumstances. He continues:—

A settlement with Turkey means a redistribution of the Allied forces in every sense of the word, and Russia from first to last would benefit. Turkey knows that she can do no better; that a continuation of the war means continued loss of territory, social wreckage, and an impoverished future. The interests of the Mohammedan world are clearly in the direction of peace, the consolidation of Asia Minor, Syria, and its hinterland. Such a workable State would confer sufficient honour upon the supreme head of the Mohammedan world. It will be for Turkey and Persia, in spite of some ecclesiastical differences, to get together in a common understanding for the promotion of political reform suited to the races and religious sects they both control.

He shows that Turkey is not likely to get much further help from Germany, and concludes:—

It is evident that some understanding amongst the Balkan States must be set up, an understanding which may be provisional, but which ought to issue in a Federal Union. It is to the

Digitized by Google

interest of Bulgaria to come to terms. She will get nothing in the future from an Austrian occupation of Serbia or of Albania, and a permanent estrangement from Russia is not to be desired. Whilst the Balkan States are quarrelling they are imperilling their future. A union of some sort is the one condition of political independence. Of all the Allied Powers Russia can do the most to bring Roumania and Bulgaria to terms. A generous settlement of territorial difficulties is really a question for Russian initiative. It is of vital importance for the Balkan States to find an outlet into the Mediterranean without passing through the Dardanelles. That natural outlet is at Salonika. If that city were mediatised, together with the railways approaching it, the Balkan States might share equally in the benefit of a free port, Greece would lose no commercial advantage, and in exchange for her nominal sovereignty she could be given compensation elsewhere.

German Aid to Russia.

The Petrograd correspondent of the *Morning Post* (May 22) concludes a despatch, dated the 19th inst., regarding the Russian operations against Turkey, with the significant paragraph which we quote below. He says that for the past few days news from the Asiatic front "has been of that very meagre, indefinite character which we here have come to regard as a certain augury of a new success now in course of preparation," and continues:—

Private advices, however, state that the Germans, if they have not contrived to spare many men to aid their unfortunate Ottoman Allies, have, at any rate, sent maxims and wire in vast quantities. This is particularly noticeable in the Diarbekr direction. Turkish methods of attack are reported to have changed with the arrival of the Germans, but the change favours Russia. The Turks are now hounded forward in masses to attack, whereas, when left to themselves, they used to come on in a formation which offered an unsatisfactory target for the Russian artillery. Their extensive use of wire also marks the presence of German direction and German technical war stores. As German stores and some German troops have certainly reached Diarbekr, it is possible also that they reached Mosul. In any case, the total number of the available reinforcements for the Ottoman Ally is small compared with the urgent requirements, and it is all to Russian advantage that they should be as widely dispersed as possible.

Attack in the Balkans.

To the *Evening Standard* (May 22) Mr. R. A. Scott-James contributes an article on the various means at our disposal for beating the Germans:—

Now, if we were willing to go on waging war indefinitely, almost any persistent military plan would enable us to win. But we cannot be content with the costly victory of attrition and siege warfare. The whole country demands the utmost energy and enterprise in war; it demands that the Allied Governments should create opportunities for effective offensive action; for beating the enemy, not merely for wearing him down.

With the lesson of Verdun before us, the writer inclines to the opinion that the West is, as yet, too strong to justify an offensive. There, as on the Russian front, the enemy has the advantage in communications. He goes on:—

Very different is their position in the Balkan Peninsula. Here alone is it possible for the British to engage Germans without being at a positive disadvantage in the matter of communications. It will be said that the sea-route is much longer, and that the available merchant shipping is limited. The reply is that we already have large armies in the Near East, and that the sea-route, though longer, is far more adequate than the tortuous single line across Serbia. And before the enemy can use this single line they have to traverse vast spaces of their own Austro-Hungarian territory.

In the initial stages of an advance from Salonika we have the advantage in every respect.

The enemy has to depend upon the single line, which runs along the valley of the Varda. The re-organised Serbian army will be sufficient to neutralise the effective strength of Bulgaria:—

Consider the effect, not merely military, but also political and economic, of an Allied advance in the Balkans. A comparatively short line, from Salonika to the Danube, cuts the enemy territories into halves. Oust the Germans and their allies from Serbia, and they can no longer send munitions to Bulgaria and Turkey, or receive food supplies in return. But this is not all. A victorious Allied force in the Balkans would make certain the intervention of Greece and Roumania on our side, and Austria-Hungary would find herself invaded from the Adriatic to the Russian frontier by an overwhelming force of Serbians, Roumanians, and Greeks, along with the armies of Great Britain and France.

Here, too, the Allies would be fighting on favourable ground. The Slavs of the Southern Empire are heart and soul with the Allies, and the discontent of the Hungarians is known to be increasing. Here is the real vulnerable point of the Central Powers—the point which they can least easily defend, where their strength would most quickly collapse.

It is not suggested by any competent critic that we should cease to press the war in the West or to develop our most powerful offensive there, and to deal in that quarter our most deadly and final blows. But in the meantime we can hurry on the conclusion by energetic action in that region where the enemy is unquestionably weakest, and where he is least sure of his allies, his communications, and his supplies.

Turkey's Destroyers.

Writing recently in *Le Matin*, General Cherif Pasha criticizes strongly the destroyers of Turkey—that is to say, the Germans and the so-called "Young Turks." We quote the following passage from his article, which is entitled "La Turquie après Trébizonde":—

Les historiens de l'avenir se poseront la question de savoir si, dans la guerre actuelle, c'est l'Allemagne qui a trompé les Jeunes-Turcs ou si ce sont les Jeunes-Turcs qui ont trompé les Allemands. A la vérité, les uns et les autres ont joué un jeu de dupeurs dans la pensée de tirer de leur concours réciproque le plus de profit possible, les Allemands en faveur de leur patrie et les Jeunes-Turcs en faveur de leurs intérêts personnels. On peut donc se demander qui sont les plus infâmes en l'espèce, les suppôts de Talaat ou les diplomates des puissances centrales.

In an interview which he accorded to M. Georges Régnier, of *L'Evenement*, a few days later, Cherif Pasha reverted to the same subject, and amplified his views:—

Sous le déguisement du nationalisme, me dit Chérif pacha, le Comité Union et Progres sème en Turquie la haine non seulement contre l'étranger, mais encore entre les diverses nationalités musulmanes et non musulmanes qui composent l'empire ottoman. Le Comité Union et Progrès se soucie peu de l'intérêt du pays. Le sien passe avant celui de la patrie.

La France et l'Angleterre ont eu l'imprévoyance d'encourager inconsciemment les Unionistes dans leurs appétits. Les hommes politiques de ces deux pays, amis traditionnels et séculaires de la Turquie, se montrèrent enthousiastes du changement de régime, sans prévoir que le despotisme ne ferait que changer de main. Moi-même, j'ai cru pendant quelque temps que l'empire était entré sérieusement, cette fois, dans la voie du progrès et des réformes, et j'ai travaillé au milieu des Unionistes pour l'accomplissement de cet idéal. Mes yeux n'ont pas tardé à être dessillés et j'ai vu que le plus grand souci des dirigeants du Comité Union et Progrès était d'accaparer le pouvoir, de se livrer à des spoliations envers le Trésor et envers les particuliers.

"The Dead March of Blood and Iron," in the *Field* (May 20).

"Greece in War Time," in the *Financial News* (May 23).

PERSIA'S FIRST RAILWAY.

"On March 7," writes the U.S. Commercial Attaché in Petrograd, "I had the opportunity of witnessing an extremely important event in the history of Persia—the opening of its first railway, which marked the first important step in the modernisation of this ancient nation. I came to Tabriz, travelling part of the way from the Russian frontier by the new railway, which was almost completed, and part of the way by carriage. Several days after my arrival at Tabriz the railway was completed, and the first train arrived in that city gaily decorated with the flags of Russia and of Persia. Thousands of people, including all the foreign Consuls and other officials in the city, came to witness the entrance of the first train into Tabriz, and there was immense excitement as the blowing of whistles announced its approach. In front of the locomotive was a huge emblem showing the Persian lion with the sword, with the sun in the background. The train consisted only of freight cars, the railway being at present intended not for carrying passengers, but for military purposes

"The great crowds waited to see the train start on its return trip. Through the courtesy of the Russian military authorities, I was permitted to be the first passenger on this first train on its return to the international boundary, one of the freight cars being specially furnished for my accommodation. The train left Tabriz about 5 o'clock in the afternoon, and the distance of 93 miles to Julfa, on the Aras River, separating Russian Transcaucasia from Persia, was covered by 5 o'clock the following morning. The trip would have taken three days' travelling by carriage.

"After the train left Tabriz it was interesting to watch the excitement occasioned among the rural population. In the different villages the people climbed up on the roofs of their mud houses to see this great spectacle; it was probably the first time that most of them had ever seen a railway train. The sheep and cattle and teams of horses along the route were greatly terrified.

"When the train crossed the bridge over the Aras River, its trip on the Persian side was ended. As there is railway connection here for Tiflis, and thence for all parts of Russia, there is no reason why it might not be possible for trains to run from any part of Russia to Tabriz, the chief commercial city of Persia. The gauge of the new road is the same as that of the Russian railway system, and the railway is under Russian control and management. Possibly the railway may be extended to Teheran, and thence south-east to Ispahan, in Central Persia, and into Beluchistan, where it could connect up at Nushki with the railway system of British India. The railroad now follows between Julfa and Tabriz the line of the Indo-European telegraph system of India. From the town of Sophian, about 25 miles from Tabriz, a branch of the railway has already been completed to Lake Urmia."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The news of the week concerns Roumania and the Balkans rather than Egypt, where everything seems to be following the even tenor of its way. As regards Roumania, the phenomenal success of the loan is reported elsewhere, and I agree with our Bucharest Correspondent when he points out that it is a wonderful proof of the economic stability of the country. Until a few years ago little was heard and less understood of the remarkable economic progress of the little kingdom on the Danube. A young country, untried in the arts of modern warfare, and just as inconspicuous in those of diplomacy and finance, it has risen to be a Power to be reckoned with. Its resources are being developed with energy and success: its industries are growing, its wealth is accumulating. Hitherto, owing to its youth rather than to its lack of self-consciousness, it has been financially dependent on the goodwill of Austro-German exploiters, on the forbearance of its neighbours up the Danube. The success of the loan, however, will come as a smack in the eye to the Central Powers, who always thought that in Roumania they had a willing tool. For the first time in her modern history, Roumania has asserted her complete independence of German machinations, and, judging by the Press, enthusiasm reigns in Roumania at the discovery. Since Italy joined us in the fight against the Huns, I do not think that the latter have received a more direct thrust. For their reign of terror, of intrigue, of corruption, and of illicit propaganda in Bucharest has come to an end, killed by Roumania's declaration of her own financial independence.

***

Other news from Roumania includes the running of the first through freight train from Germany to Bucharest. It will be remembered that one of the conditions of Roumania's second grain deal with Germany was that Germany should reciprocate by sending in exchange manufactured goods—at present sorely needed in Roumania—in trucks which were Roumanian property but which had been sequestered by the enemy. The first train, made up at Ratibor, in Silesia, and composed of 33 wagons, duly arrived at the Roumanian frontier, drawn by an engine called the "Carmen Sylva." The Germans and their champions in Roumania seized the opportunity to make a popular demonstration in favour of the Kaiser and his myrmidons. But they reckoned without the Roumanian Government, which promptly prohibited demonstrations of a nature calculated to infringe the sovereign rights of the State. So the Kaiser was not acclaimed!

***

Matters between Roumania and Bulgaria are not so hopeful, from the Bulgarian point of view, as Tontcheff, that arch-liar and paid agent of the Huns, would wish us to believe. He boasted about the conclusion of a Bulgar-Roumanian commercial entente on Roumanian initiative, but he was given the lie direct by Bucharest. This has had a salutary effect for the time being, but I wonder when the little whipper-snapper will bob up again to be again snubbed.

In recent notes, as early as the first meeting of the German Inland Navigation Association, and as recently as last week, I drew attention to the possibilities of a through waterway from the mouth of the Rhine to the mouth of the Danube across Germany and Austria. By a strange coincidence the report is now published of a second meeting of the association in which a resolution was adopted approving the construction of a navigable Rhine-Danube waterway, and urging the Government, in view of the great commercial possibilities of the new waterway from the Atlantic to the Black Sea, to hasten its construction. Whether the Prussian Government will rise to the occasion is not known, but I think it can safely be assumed that it will do so, in which case we must reckon with a prospective cheap transport competitor through the heart of Europe. The matter is not one to be regarded slightingly, though, in spite of our great trade interests, it is likely that the politicians, lawyers, and diplomats who draw up peace terms after the war will fail to realise the importance of the Canal scheme, and will do nothing to insure our interests at both ends of the waterway, namely, in Roumania and Holland. In last week's notes I referred to the changes which ought to be introduced in the Roumanian area—to the greater strength of that country. As regards the Dutch area, foreign to these notes, my only suggestion is that the much vaunted "German Rhine" is *not* German at all, and that the more we can reduce German arrogance on the banks of that river the better for France, Holland, Switzerland—and ourselves.

***

I understand (writes our Bucharest Correspondent) that the Bulgarian Ministry of Finance has approved the Budget of the National Bank for 1916. The Budget allows for expenditure amounting to 4,252,800 lewa on the personnel and 1,800,000 on the general side. Provision is made for an increase of the bank's branches in the Serbian territories now occupied by the enemy. There, prior to the war, the bank had eighteen branches, but arrangements have now been made for the organisation and upkeep of seventy branches. Of course, this economic exploitation of a territory temporarily and treacherously occupied by the enemy is a matter of little or no importance, and will be rapidly cancelled when General Sarrail comes into his own. In the meantime, I have a shrewd suspicion that the Bulgarian bank's activity in Serbia has more to do with rifling the peasantry (and other Serbs) of all their worldly possessions than with the economic development of the country. Because, as I learn from a good source, the Bulgars themselves are not at all convinced that the issue of the war will be in their favour. On the contrary, they are inclined to be despondent.

***

The editor of the *Journal des Balkans*, published in Bucharest, has received from a friend a letter written in one of the belligerent countries, and inscribed "d'une autorité qui ne saurait être soupçonnée." The writer, after devoutly hoping that "Fritz" is going to be punished as he thoroughly deserves, goes on to say (I translate his words textually):—"I am afraid, however, that no civilised nation will ever be able to treat him as he deserves. His most recent way of treating his dead is simply revolting. He sends them in train loads to the rear, nominally to cremate them, but in reality they are cooked, the fat is extracted, transformed by some chemical process into glycerine, and then used in the manufacture of shells! Is it possible to imagine a more ignoble and disgusting action? Dead or alive, Fritz is simply an article of military utility. Happily the dear dead cannot provide the army with cotton."

***

Pending the great international industrial fair which it is suggested should be held after the war in Paris (the Germans and Austrians being barred from exhibiting), the idea of local exhibits is being pushed forward in various countries, Egypt among others. Thus, according to the *Egyptian Gazette*, the Industrial Commission recently appointed by the Government, under the presidency of Sidki Pasha, has decided to organise an "industrial exhibition" in Alexandria, presumably in August next. Emin Yahia Bey, one of the members of the Commission, has been appointed to arrange all preliminary measures, and it is believed that the exhibition will be open at least a month. The exhibits will include all manufactured articles made in Egypt and every kind of raw material produced by the country for industrial purposes. The idea is certainly an excellent one, but unless facilities are given to the merchant importers abroad to visit Alexandria and study the possibilities of the country from a merchant's point of view I fail to see to whom the exhibition will appeal, or how it will benefit Egypt's foreign trade. Apart from this, however, and supposing the above difficulty to have been removed, I should like to make one suggestion, namely, that the Sudan be invited to participate in the exhibition on a generous scale.

***

The torpedoing of three Greek steamers by the Boches in the Mediterranean last week is, let it be hoped, one of the last flaps of the fish tail in the Mediterranean. That the revolting pirates, in their rage at being unable to wound—much less to sink—every British steamer of consequence in the great inland sea, should vent their spleen on small Greek steamers is a natural procedure, but I doubt whether it will have the desired results. The Greeks, be it said in their honour, are fond of their ships, and it is not by destroying them that German prestige will win at the Piræus. Judging from the protest issued by Greek shipowners in that port, it would seem as though the contrary effect has already been achieved.

***

At a public meeting of the Suffolk Herb Growing Association, held at Ipswich recently, the aims of the society were ably exposed by Miss Alice Stanford, who said that it was not until last year that it was discovered how serious was the shortage of drugs, due to the fact that herb-growing had long been practically a monopoly of Central Europe and the Balkans. It was, therefore, incumbent on us to grow our own medicinal herbs, so as to be independent of the foreign, including the Near Eastern market. Most of the herbs necessary for drugs, continued the speaker, were indigenous to England, and the English plants were more profitable from the chemist's view than foreign herbs.

COMMENTATOR.

Digitized by Google

The Imperial Institute.

The control of the Imperial Institute will by the new Act which has recently passed through both Houses of Parliament rest with the Colonial Office. The change is explained in detail in the current number of the *Bulletin of the Imperial Institute*. By the establishment of an Executive Council a Board of Management will be created, which, subject to the control of the Colonial Office, will be responsible for the operations of the Institute. The relationship between the Colonial Office and the Institute will thus be analogous to that between the Colonial Office and a Crown Colony. Matters of important policy will have first to receive the sanction of the Colonial Office, but subject to this the Executive Council will possess a general executive authority.

Some idea of the importance and extraordinary variety of the work which the Institute is asked to perform may be gathered from a perusal of the last annual report, which has just been presented to Parliament and published. This annual report is a mine of information on new or not generally known Colonial and Indian raw materials. Particular success has been achieved by the Technical Information Bureau of the Institute, which forms a kind of agency between the producer in the distant colony and the manufacturer at home. The arrangements for starting this bureau were fortunately so far advanced on the outbreak of war that it was in full operation before the conflict was many weeks old, and was able at once to indicate markets for the many Indian and Colonial raw materials which before the war had gone to Germany.

The following are extracts from the report dealing with our colonies in the Near East. It is regrettable, however, that the report itself does not cover the activities of the Institute in 1915, because of the greater importance of the work done during the past twelve months. It is to be hoped, however, that a further report, dealing with the year in question, will be issued before 1917.

Egypt.

Investigations.—A large number of samples of cotton were examined and reported on during the year. Ten samples, representing earlier and later pickings of different cottons, were of special interest. They were all of satisfactory quality, though the later pickings of each cotton were somewhat inferior to the earlier pickings.

Twenty-two specimens, representing the results of selection experiments, and fifty-six obtained in a series of manurial experiments, were also examined and reported on.

Three samples of sisal hemp were of excellent quality, being comparable with the highest grades of commercial sisal hemp, and represented fibre which would be readily saleable in large quantities.

Three samples of wheat were of qualities suitable for this market.

A report was furnished on the volatile oil obtained from *Santolina Chamæcyparissus*. Specimens of Egyptian henbane (*Hyoscyamus muticus*) and stramonium were under examination at the end of the year.

Inquiries.—Information was supplied as to market conditions in the United Kingdom for the following Egyptian products:—Sisal hemp, wheat, maize, barley, rice, lentils, sesame, ground nuts, and apricot kernels.

A great deal of attention has also been given to the question of creating a market in the United Kingdom for a number of important Egyptian drugs, the trade in which had been allowed to drift into the hands of German merchants before the war. Among these are senna and Egyptian henbane. From the latter the alkaloids atropine and hyoscyamine are prepared. British chemical manufacturers have now been placed in touch with Egyptian exporters of henbane, and it is anticipated that the manufacture of these alkaloids, hitherto mostly carried on in Germany, will be extended in the United Kingdom.

A number of other matters relating to Egypt were dealt with, among which drugs and indigo may be mentioned.

The Sudan.

Investigations.—Fifty-one samples of different varieties of Sudan cotton were examined. The cottons, which represented both Egyptian and American varieties, were all of good quality.

A sample of kapok (*Eriodendron anfractuosum*) consisted of clean, lustrous floss, comparing favourably with a standard commercial sample of Java kapok. A specimen of Ushar floss (*Calotropis procera*) was examined and submitted to commercial experts, who reported that it should be possible to dispose of consignments at satisfactory prices. Information was also supplied as to possible uses for this material.

Leaves of the dom palm (*Hyphæne thebaica*) were examined, and it was found that a very satisfactory paper could be made from them. The leaves were also tried by a manufacturer as a material for the production of braiding for straw hats; he reported that they were satisfactory for that purpose, but the manufacture of braid from them would only be practicable if labour and other conditions would allow of its being undertaken as a local industry in the Sudan. Inquiries on this point are still in progress.

A trial sale consignment of "Sant" pods (*Acacia arabica*) was sold at £7 per ton (February, 1914), and there is little doubt that a regular market could be found in the United Kingdom for this product as a tanning material.

A trial consignment of Ceara and Landolphia rubbers was sold through brokers at 1s. 9½d. per lb., with fine hard Para at 3s. 0½d., and first quality plantation Para at 2s. 4⅞d. per lb.

Other materials from the Sudan dealt with during the year included sugar-cane, frankincense, and pearl shells; a supply of Sudan pearls was being dealt with at the close of the year, and volatile oil from *Cymbopogon senaarensis* grass was being fully examined.

Inquiries.—Information was supplied to inquirers regarding a number of Sudan products, including senna, gums, sant pods and other tanning materials, ground nuts, dura, hides, and skins. The attention of British merchants and manufacturers was drawn, by means of a notice issued to the Press, to a number of Sudan products capable of replacing similar materials, the supply of which from the usual sources had become restricted owing to the war. The interest of a number of firms in the United Kingdom was aroused, and several, at their request, were placed in communication with exporters in the Sudan. It is understood that this action has already resulted in increased trade in Sudan produce with the United Kingdom.

Exhibits.—The reorganisation and development of the Sudan Court has been proceeded with. A series of photographic transparencies has been fitted in the windows of the Court, and a number of large photographic pictures, framed and glazed, have been added. The scale-model of Port Sudan has been completed and placed in the centre of the Court.

The Sudan Government exhibit at the Fourth Rubber and Allied Industries Exhibition has been installed in the Court.

The glazed screen carrying the plans of Khartoum and Omdurman was lent to the Victoria League for display at a Town Planning Exhibition held at the Imperial Institute during May. A collection of typical Sudan products was prepared for exhibition at the Bristol International Exhibition, 1914.

Somaliland.

Investigations.—Among the Somaliland products examined were crude petroleum, a series of minerals, specimens of *Calotropis procera* and *Acacia arabica*, gum from the last-named plant, and bast fibre from the Galol acacia.

At the close of the year samples of salt were under examination.

Inquiries.—Information was supplied regarding the cultivation of date palms.

Exhibits.—A case containing a number of samples of Somaliland produce was in course of arrangement at the end of the year.

Cyprus.

Investigations.—A sample of salt from the Salt Lake at Larnaca was analysed, and a report furnished to the High Commissioner. A memorandum on the refining and marketing of this salt was in preparation at the close of the year.

A sample of barley, forwarded from Cyprus with a view to ascertaining its suitability for malting, was regarded by commercial experts as of good quality for that purpose. It contained a low percentage of nitrogen, which is a good feature in malting barley.

Inquiries.—Among inquiries relating to Cyprus products which were dealt with, Cyprus origanum oil may be specially mentioned. This oil contains carvacrol, which possesses antiseptic properties similar to those of thymol, and it was suggested that in view of the shortage of the latter material owing to the war, carvacrol might be prepared from the oil for use as a substitute.

Exhibits.—The exhibits received during the year for the Cyprus Court comprised carobs, olive oil, cotton and cotton yarns, soy beans, orange oil, and silk. The representation of Cyprus products in the Court has been much improved by the addition of these samples.

***Regarding Cyprus salt, this product has for a long time been extracted for local use in Cyprus. It is obtained from two salt lakes, and is a Government monopoly. There is no regular market outside the island at present for the crude salt, though a certain quantity was exported to Turkey and Bulgaria before the war. The result of the examination of Cyprus salt at the Imperial Institute alluded to above has proved very satisfactory, and it is now considered that when refined it should, at a suitable price, find a ready market in the salt-importing countries along the Mediterranean, and possibly in India and East Africa.

SINKING OF GREEK SHIPS.

Reuter reported from Athens on Wednesday that the torpedoing of the two Greek steamers Adamantios Korais and Anastassios Coroneos by Austro-German submarines had caused indignation in Greek maritime circles. The Piræus shipowners held a meeting on Tuesday and sent a telegram to the Premier protesting against the unjustified torpedoing of Hellenic steamers, and begging the Government to make representations to the German Government.

*** Since the above message was despatched, news has been received in London of the sinking of another Greek steamer by the Huns, namely, the s.s. Istros. She was sunk by a submarine off Tarragona. The captain states that three sailing ships were also sunk by the same submarine. The crew of the Istros have been saved.

The *Times* City Editor, commenting on the sinking of the above three Greek steamers, says that underwriters have not failed to note it. Until lately Greek steamers seemed to have charmed lives, and a discrimination of about 10s. per cent. in the rate of war risk premium was made in their favour. Now that the enemy seems to be treating them in the same way as other neutrals, underwriters are no longer disposed to discriminate.

Latest news concerning the steamers sunk states that the crew of the Anastassios Coroneos, previously reported sunk, have been saved.

DELICIOUS COFFEE.

Mineral Wealth of Asia Minor

On Wednesday last Dr. Soll, the German Secretary of State for the Colonies (sic) delivered a lecture in Berlin on Germany's colonial policy, and came to the conclusion that "the original reasons for an active German colonial policy not only still exist, but have even become more weighty." In continuation he stated (1) that "supremacy of the seas is not an absolutely necessary preliminary condition for the possession of colonies," and (2) that "an inter-Continental economic union between Berlin and Baghdad would prove an important adjunct to Germany's Colonial Empire."

The "adjunct" in question, namely, Asiatic Turkey, is remarkably wealthy in more ways than one. The natural resources of the country are both agricultural and mineral. As regards the latter, attention can be appropriately drawn now to an article by Leon Dominian, of New York, on the "Distribution of Mineral Products and Railways in Asia Minor," which appeared, together with an excellent map, in *Cartographic Documents of Economic Geography* (Geographischer Kartenverlag, Bern), No. 2, 1913. A perusal of the expert's opinion anent the mineral resources of Asia Minor will enable us to realize more fully why Germany desires to make the region in question and "adjunct" to its obliterated Colonial Empire. We, therefore, reproduce the following extracts:—

Coal.

Coal is of widespread occurrence in Asia Minor. The north-westernmost projection of Asia Minor forms part of a district wherein lignite deposits have been worked in a number of localities The lignitic beds occur mostly in Tertiary lacustrine deposits and appear to belong to a zone of transition between the Miocene and the Pliocene. A typical deposit is worked at Manjilik. The seams outcrop here for a distance of 4 kms. The product is used as fuel for an electric power station feeding the smelter and workings of the Balia lead silver mines. The Lampsacus seams have not been mined. In the Troad, this variety of coal is extracted near Edremid. Farther south at the short distance from Soma, the terminal of a branch line from Manissa, a fair quantity has been mined on a small scale. Lignite outcrops are also known at Demirtash, 20 kms. north of Brusa. The most westerly extension of this Tertiary lignite is found in the mountains environing Chai near Afiunkarahissar. The thickness of the coal here attains 2 m.

A number of seams are known to occur in the region extending east of the 34th meridian east of Greenwich to the Russian and Persian boundaries. In the Erzeroum province an attempt has been made to mine lignite in the past few years. About 1,000 tons are produced annually from various localities. The south-western coast of Asia Minor with its hinterland does not appear to be devoid of coal. In the province of Smyrna, the Sokia and Nazili beds have been developed for local use. Coal was mined about half a century ago in the northern section of Mesopotamia, near Jesireh. Some work was also undertaken in the Hamrin mountains. The deposits near Mosul have not been worked. In the hills lying east of Kifri, the natives indulge in occasional desultory exploitation of this fuel: In Syria and the Lebanon a number of native exploitations are encountered. Some of these were undertaken to supply the small silk factories with fuel.

The best developed Turkish coalfield is found at Heraclea. The coal is bituminous and occurs in a belt about 60 kms. in length. The coalbeds outcrop near the coast. They overlie carboniferous limestones and are in turn unconformably overlaid by cretaceous beds of great thickness. The output for 1912 from this field exceeded 700,000 m.t. It is expected that it will attain 1,000,000 m.t. before long. Occurrences of bituminous coals are also reported from the eastern section of the peninsula. The district between Lake Van and the Persian frontier appears to be favoured in this respect.

Gold.

Very little gold is produced at present. The precious metal is known to occur at Serjiller, south of the Dardanelles. The abundance of gold jewellery found in the excavations on the site of the several cities of Troy indicates a large production from near by localities. An ancient locality which was famed for the gold mines in its vicinity is Astyra, the site of which is now marked by mines which existed already at the time of Strabo's explorations. This geographer refers to numerous traces of ancient workings. At this point modern geologists have detected in this locality. Tertiary igneous rocks in which the presence and successions of rhyolites, andesites, and basalts are remarkably similar to the sequence of events observable in certain districts of the Great Basin region, such as the south-western portion of Nevada, where much gold has been recovered from the subsoil.

The valleys of the Hermos and the Pactolus in Anatolia* have been the site of ancient placer mines. How prolific in their yield of the precious metal the banks of these rivers must have been may be inferred from the frequent allusions in ancient literature to the gold-bearing sands of the district, which is known as the valley of the Gedis river. In recent times peasants living in the vicinity of Boz Dagh make a scanty livelihood by washing the gravels brought down by the rivers.

Throughout the nineteenth century small quantities of gold were mined intermittently from the Bulgar Dagh workings. This is a region which bids fair to become the site of heavy producers of gold, silver and lead.

Lead and Silver.

The best developed silver-lead mines are found near Balia, at a distance of about 100 kms. from the sea. The ore occurs in a contact-zone between Tertiary augite, andesite and carboniferous limestone. The contact-zone varies between 2 and 5 mts. in width. The limestone at the contact is silicified, but barren. In the andesite, on the other hand, are found accumulations of pure galena, which seem to be connected with fissures parallel to the contact-zone. The ores carry galena, blende, and pyrite, and contain on an average from 16 to 20 per cent. Pb and 8 per cent. Zn.

Copper.

The existence of a rich belt along the eastern portion of the Black Sea shore is suspected between Fatissa Bay and Trebizond. A good deal of exploration work has been undertaken in that region, which is thickly studded with old workings. The Argana mines in the basin of the Upper Tigris are favourably known. From all accounts very high-grade ore is mined at this point within an area 12 kms. square. The deposit is known to have been exploited since the year 1096 A.D.

Manganese

A notable quantity of pyrolusite is mined from the Phlinika district. Producer of the ore assays 52 per cent. Mn. At the Zengan mines the Mn contents attain 83 per cent. This ore is also known to occur near the Russian frontier in the eastern Pontic area.

Antimony.

The two important centres of production are Odemish and Jinlikaya. High grade ore often carrying as much as 65 per cent. antimony is found in both. At Jinlikaya the veins occur cutting through crystalline schists. Shipments are made chiefly to England by way of Smyrna.

Chrome.

Asia Minor has contributed largely to the world's supply of chrome ore. The Turkish ores are soft, rich in chromic oxide, have a low silica content, and are free from objectionable impurities. Although the production has fallen off in recent years, the mineral is of widespread occurrence in Anatolia.

Borax.

Extensive beds of pandermite, a massive and not entirely pure variety of colemanite are mined at Sultanchair. The mines lie on the mail-route leading from Panderma harbour to Balikesser. The pandermite occurs in Tertiary sedimentaries lying in a basin surrounded by steep hills of gabbro, granite, and crystalline schist. The productive beds consist of a brownish to bluish-gray gypsum, containing nodules of variable sizes dispersed within the gypsum, and forming from 10 to 20 per cent. of the aggregate mass.

Emery.

The production of emery from Asia Minor and the islands of the Ægean Sea practically constitute the bulk of the world's supply. The output of the former exceeds that of the latter. The mines lie in a belt extending south and south-east of Smyrna. The ore is found in lumps up to 15 cm. in diameter embedded in a red-brown clay and associated with calcite.

Meerschaum.

The plains near Eskichehir constitute one of the most important localities in the world from which this hydrous silicate of magnesium is mined. The meerschaum district extends from the town of Eskichthir almost due eastward to the city of Angora. The mines lie at a distance of about 22 km. from the railroad station to which the ore is packed by camel trains. The two chief producing mines are those of Sarasu and Sepki. The deposit occurs in a valley filled with drift material from the surrounding mountains. The sepiolite is scattered through the drift in rounded nodular masses with fragments of magnesian and hornblendic rocks. As a rule the nodules do not exceed 10 cm. in diameter, but a few attain larger dimensions. In the raw condition the mineral is soft, light and non-transparent. The colour is white with occasional blending of yellow, red or gray. The thickness of the meerschaum-bearing strata varies between 30 and 40 mts.

Mercury.

Two deposits of cinnabar are worked at present. The Karaburmu mines situated about 30 km. from the town of Smyrna produce about 3,000 flasks annually. The deposit lies in the vicinity of basaltic flows and consists of metamorphic silicious schists impregnated with cinnabar. Mining is done entirely in open-cuts on ores containing as little as 0.25 per cent. Hg. When sorted, the cinnabar appears to be concentrated in the fine, and the ore is accordingly screened. The concentrated assay from 0.75 to 2 per cent. Hg. The plant at the mine comprises two double Spirek tower-furnaces for broken ore and a Cermak-Spirek furnace for fine. This installation has a capacity of thirty tons per day. The other deposit occurs in the vicinity of Konia. Here the ore is found in veinlets, nodules, and small particles, in a crystalline limestone close to schist, at no great distance from old eruptives. The mineral appears to be present whenever the limestone becomes silicified. Some stibnite is associated with the cinnabar.

Other minerals have also been mined or are known to exist in various districts of Asia Minor. Arsenical pyrite has been found near the Odemish deposits. Lithographic stone occurs in extensive massive beds north of Mihailich, also east of Kimasti and south of Abulonia Lake. Iron is formed in almost every district. The region east of Adalia Bay may soon become the site of exploitation.

Although it is difficult to obtain statistics in Turkey, the following table reveals the approximate yearly production of the more important ores mined in Asia Minor:—

Kind of Ore.	Production.
Antimony ore	1,500 met. tons.
Asphalt	7,000 ,,
Bituminous coal	730,000 ,,
Boracite	16,000 ,,
Chrome ore	15,000 ,,
Copper	1,500 ,,
Emery ore	15,000 ,,
Gold	45 kgs.
Iron pyrite	20,000 met. tons.
Lead	13,000 ,,
Lignite	30,000 ,,
Manganese ore	12,000 ,,
Meerschaum	250 ,,
Mercury	4,500 flasks.
Silver	250 kgs.
Zinc Ore	2,000 met tons.

Oil.

Noteworthy is the N.S. spread of an oil-bearing region which extends from the Black Sea to the Persian Gulf, and which is particularly well defined throughout its southern section—along the Turco-Persian boundary.

* The term Anatolia is employed here in the sense generally accorded to it by European writers, and whereby it refers to the Western section of Asia Minor. The Turkish name "Anadolu" is used, however, by the Turks and Turkish-speaking races to designate the entire peninsula.

Trade Notes.

Egypt.

H.M. Consul at Cairo has forwarded conditions of a contract in connection with a call for tenders by the Egyptian Ministry of Finance for the supply of stationery articles required for the use of the various Government Administrations during the year 1916-17, including pencils, penholders, pen wipers, pins, gum, paper clips, sealing wax, ink, etc. Copies of the conditions and form of tender may be obtained from the "Economat Central, Ministère des Finances," Cairo, at which address also sealed tenders, made out on the proper form and accompanied by samples (in duplicate) of the goods it is proposed to supply, will be received up to noon on June 1.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

The Superintendent of Stores, Ministry of Education, Cairo, invites tenders for the supply of 10,000 dozens of Arabic reed pens required for the school year 1916-17. Persons unable to tender for the supply of the total quantity required may submit tenders for any substantial portion thereof. Date, May 31.

Tenders will be received up to June 10 for the supply and delivery of linen and table requisites, including towels, linen sheets, tulle for mosquito-nets, tape, blankets, plates, dishes, tumblers, cups and saucers, spoons, carafes, serviette rings, salt-cellars, sugar-basins, and metal knives. Samples may be inspected and the *cahier des charges* and form of tender obtained at the Central Stores, Ministry of Education, Darb el Gamamiz, Cairo. Sealed tenders, accompanied by a deposit of 2 per cent. or a bank guarantee of 10 per cent. of the value of the offer, will be received up to the date mentioned above at the Central Stores, Minstry of Education, Cairo. A copy of the *cahier des charges*, etc., may be inspected by United Kingdom manufacturers of the above-mentioned goods at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The Ministry of War, Cairo, invites tenders for the supply of 750 lamps, candle, with globes, and 1,000 globes, spare, for them, at the Citadel Stores, Cairo. Date, June 1.

The Ministry of War, Cairo, invites tenders for the supply of 4,000 tins of petroleum at the Citadel Stores, Cairo, and 300 tins to be handed over to the Stores Officer, Egyptian Army, at Alexandria; also 1,600 gallons of petroleum in bulk at Cairo. Date, June 15.

Notice is given in the *Official Journal* that the General Officer Commanding-in-Chief has appointed Mr. E. D. Joyce, of the Imperial Ottoman Bank, Alexandria, to be receiver of the business and property in Egypt of the "Prima Fabbrica Birra di Graz," with power to take all such measures as are necessary to liquidate the business, which he is hereby required to do with as little delay as possible. The Receiver will take legal proceedings, where necessary, for the recovery of debts or otherwise, and will realize by sale, in such manner as the licensing officer may direct, all the assets in Egypt of the above business.

Notice is given that the licences granted to the Deutsches Kohlen Depot, Port Said, and Mr. Jacob Lanz, Alexandria, have been withdrawn. Further, that the General Officer Commanding-in-Chief has appointed Mr. F. Lloyd Jones, of Port Said, receiver of the business in Egypt of the Deutsches Kohlen Depot, with instructions to liquidate the same.

Greece.

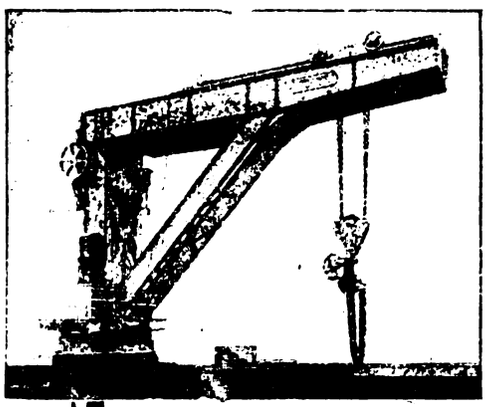
H.M. Consul at Piræus has forwarded to the Board of Trade a copy of the "Greek Government Gazette" (No. 63) of March 30/April 12, containing the text of an agreement, in the French language, made between the Greek Government and an American steel company, concerning the supply of rails, sleepers, and accessories for the Greek railway between Papapouli and Topsin, now in course of construction. Attached to the agreement is a schedule of the various materials required. United Kingdom manufacturers may consult the above-mentioned "Gazette" at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Cyprus.

Tenders are invited by the Government for the making of approximately fifty-four winter and fifty-four summer uniforms. The winter uniforms to be delivered not later than September 15, 1916, the summer uniforms not later than March 15, 1917.

The uniforms should consist of the following:—

Winter Uniforms.—Serge coat and waist-



20 Ton Electric Forge Crane.

CRANES

For RAILWAYS, DOCKS, HARBOURS and WORKS.

— ALSO —

HYDRAULIC BUFFER STOPS AND OTHER RAILWAY PLANT

SUCH AS

Turntables, Traversers, Tanks, Pumps, Water-Cranes, Capstans, Winches.

Seaplane Launching Apparatus.

Also Sole Makers of the "Stoney" Control Sluices, with Stokes' Patent Improvements. Over 1,000 already installed.

RANSOMES & RAPIER, Ltd. (DEPT. L), 32, Victoria St., London, S.W.

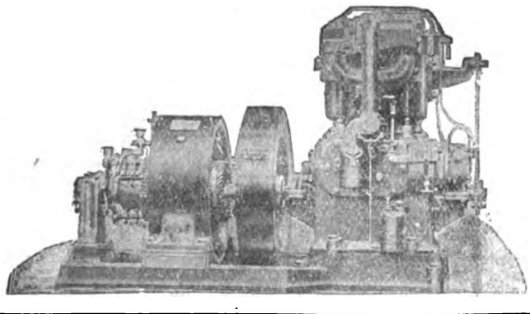
Telegrams and Cables: "RANSOMES RAPIER, LONDON"; "SLUICE, LONDON."

W. H. ALLEN, SON & CO., LTD.,

BEDFORD, ENGLAND.

OIL AND GAS ENGINES.

Vertical Enclosed Forced Lubrication. Designed for Paraffin, Petrol, Alcohol, Town, or Producer Gas, &c.



Suitable for driving:— Dynamos, Pumps, Fans, and other forms of Machinery.

Foreign Branches and Agents:

INDIA. GREAVES COTTON & CO., Bombay and Calcutta.

TURKEY. EDWARDS & SONS, Dilsiz Zade Han, Stamboul, Constantinople.

EGYPT. W. H. ALLEN, SON & CO., Ltd., Cairo.

Digitized by Google

coat, coat to be lined (serge and buttons supplied by Government); corduroy riding breeches (corduroy supplied by Government).

Summer Uniforms.—Khaki coat, coat *not* to be lined (khaki and buttons supplied by Government); khaki riding breeches (khaki supplied by Government).

All other material, such as knee buttons for riding breeches, linings, etc., required for the making of the uniforms, should form part of the cost of making, and should, therefore, be included in the tendered price.

All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Uniforms, Treasury Department," in the left-hand top corner of the envelope, and should reach the Office of the Treasurer not later than 11 a.m. on June 8, 1916.

THE EDFOU COAL DISCOVERY.

According to the *Egyptian Gazette*, the recently reported discovery of coal beds in the vicinity of Edfou appears to be more important than was at first supposed. The Government has taken up the question very seriously, and has appointed (as previously announced in THE NEAR EAST) Mr. Wells, formerly Director-General of the Mines Department in Egypt, to make a complete study of the district and report on the extent of the coal beds, the nature of the coal found there, and other necessary details. A special credit of £E5,000 has been earmarked by the Ministry of Finance for this work, and it is expected that Mr. Wells will be able to complete his investigations and submit his report on them within the next two or three months.

The first coal bed was discovered by one of the officials of the Survey Department in the close vicinity of Edfou Town, at a depth of only 30 ft. Other shafts have now been sunk a few hundred yards distant, and the work is being carried out in a most energetic manner.

THE EGYPTIAN SMALLHOLDER.

The following amendments (in French) to the law governing the inviolability of the Egyptian smallholder appears in the *Official Journal* of April 10:—

NOUS, SULTAN D'EGYPTE.—Vu le Décret en date du 14 juin 1883, portant réorganisatiou des Tribunaux Indigènes: Vu la Loi no. 4 de 1913 instituant l'insaisissabilité de la petite propriété agricole. Sur la proposition de Notre Ministre de la Justice et l'avis conforme de Notre Conseil des Ministres. Décrétons:—

ARTICLE PREMIER.—Le dernier alinéa de l'article 2 de la Loi no. 4 de 1913 sus-visée est remplacé par la disposition suivante:—

"Les créanciers originaires ou substitués pourront, sans perdre le bénéfice de la réserve établie en leur faveur, consentir au débiteur, même par substitution d'un titre nouveau au titre originaire, un ou plusieurs renouvellements ou prorogations de terme, pourvu que la dernière échéance ne soit pas reportée au delà de cinq années après la date fixée par le titre originaire et que le titre originaire soit représenté et porte mention du renouvellement avec indication précise du ou des titres nouveaux."

OIL MONOPOLY IN ROUMANIA.

In view of the artificial rise in the price of petroleum since the beginning of the war, the Roumanian Government on several occasions vainly asked the producers, mainly firms worked by German capital, to make a reduction in their prices. Owing to their refusal, and in face of strong pressure, the Minister of Industry has fixed a maximum price for the sale in Roumania of petroleum and of its products. Writing in the *Independence Roumaine*, M. Vintilia Bratiano, the Premier's brother, and leader of the movement, for the financial and economic independence of Roumania, openly advocates the institution of a petroleum monopoly, without which, he says, according to Reuter, the economic emancipation of Roumania is impossible.

A special service for the general census of the population of Egypt has been created in the Ministry of Finance. The Controller, Statistical Department, is placed in charge.

Engineering Notes.

Bulgarian Railways.

The Bulgarian Government has decided that the Ferre-Oksilar Railway, which formerly was in French possession, is to pass under the Bulgarian State management. This means, says *Engineering*, that, as the Svilengrad-Kuheli, Burgas-Dedeagatch line of 186 kilometres length was taken over by the State last October, all the Bulgarian railways are now being worked by the State. The two lines Ferre-Oksidar (158 kilometres) and the Dedeagatch line (9.3 kilometres) form a section of the so-called connection line Salonika-Constantinople, which originally was built by the Turks for strategical purposes. With the two new lines the extended Bulgarian railway system has an aggregate length of 2,560 kilometres, normal gauge, besides a normal-gauge industrial railway from the Sindel station, on the Rustchuk-Varna line, to the Tsali-Meschle station, in the interests of the timber of the district.

The Salonika Zeppelin.

Reuter's News Agency sends the following particulars of the Zeppelin brought down at Salonika, which are alleged to be official:—"The vessel was No. Z85, and was built at the latter end of 1915. Her length was 170 metres (560 ft.), and she had four engines, each of 100 h.p. Her speed was 95 kilometres (60 miles) an hour. The tanks held 2,500 litres of petrol. She was recently engaged in bombing Riga, Minsk, and Dvinsk, and attempted at the end of February and in the middle of March to approach Salonika, but was driven off near the frontier. The Zeppelin was hit three times, once in the reservoir, once in a balloonet, and once near the stern." There seems to be some mistake about the engine power, says *Aeroplane*, as 180-200 h.p. Maybach motors are standard, and 400 h.p. would not produce 60 miles per hour. Also, she was probably "LZ85"—that is to say, the eighty-fifth Zeppelin built, according to shop numbers. "Z85" would be the military number, and it is impossible that the German Army alone should own eighty-five airships of Zeppelin class. [There is no reason why the German Army should not be in possession of eighty-five Zeppelin airships at the present time.—ED.]

Projected Union of the Rhine with the Danube.

In last week's "Notes" reference was made to a contemplated international conference in Vienna concerning the Danube navigation. The subject is, of course, of great importance to Germany and her schemes in connection with the Central European Commercial Union; but it is, at the same time, an international matter concerning the rival interests of Austrian, Hungarian, and German towns on the Danube. If any new regulations are voted at this Conference altering the *status quo ante bellum* on the Lower Danube, such regulations will be of no value without the consent of Great Britain, France, and Russia. Of more general and greater importance at present, in view of the Allies' preparations for a trade war, is the project which, according to the American Consul at Brunswick, is being considered for the improvement and extension of the German canal system. At a recent meeting of the Central Association for German Inland Navigation, the second held since the outbreak of war, a large part of the session was devoted to the consideration of two important waterways. These are the Danube-Oder Canal and the great project of the Rhine-Main-Danube Canal. After a thorough discussion of the commercial and other advantages of these canals, and their possible profits, a resolution was adopted approving the construction of a navigable Rhine-Danube waterway, regarded as essential to the promotion of Germany's foreign commerce. It is further suggested to open up in connection with the western canals a north-west and south-east route. The enterprise is recommended because a Rhine-Danube canal can be technically carried out, and its geographical course will assure Germany a commercial route, which cannot be blockaded or cut off in war, and in time of peace will provide the most effective means for the strengthening of middle European commerce. It is obvious how this new waterway will affect British trade with Southern Russia, the Near East, and even Middle East. Heavy goods, such as engines, machinery, etc., will not be sent by rail to Hamburg or Trieste to be shipped for those regions, but by this new waterway, viâ the Rhine, the Danube, and the Black Sea, will reach their destination at, undoubtedly, very cheap rates.

The Importance of the Danube.

The Danube is the second largest river in Europe. It rises in the Black Forest, is 1,740 miles long, and has over 400 tributaries. Its delta on the Roumanian coast is enormous, two of the mouths in the Black Sea being sixty miles apart. For centuries this river has been the path for conquering nations; the Huns, Slavs, Magyars, and Turks poured from the East, only to be thrust back again slowly by the advance from the West of the Romans, Franks, and Bavarians. For centuries, again, the trade of Central Europe concentrated along this natural commercial route, the chief connecting link between East and West. The Danube is navigable from Ulm, the manufacturing town of Wurtemberg, where 100-ton boats begin to ply; but from Passau, on the Austrian frontier, larger boats, carrying passengers and cargoes, run to Linz, Vienna, Pressburg, Buda-Pest, and other secondary towns eastwards. The two dangerous spots of the river—the Strudel and Wirbel whirlpools, near Grein, and the rapids at the Iron Gates—have been scientifically harnessed, the former by blasting away some of the rocks in the stream, and the latter by diverting the river into a new channel, opened at enormous cost in 1893. To what importance, therefore, this natural commercial route will rise when it is linked with the Rhine, which runs through the most important manufacturing centres of Germany, is too obvious to be emphasised.

SULZER BROTHERS, WINTERTHUR, SWITZERLAND
Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 20 to 6,000 B.H.P. Pumps of various systems, particularly Sulzer's high and low lift Centrifugal Pumps. Fans of all kinds. Steam and hot water heating. Ice and Refrigerating Machinery (Linde system)

NEAR EAST MARKETS.

PRODUCE REPORT.

LONDON, May 25.

Currants.

There has been a steady demand for all qualities this past week, but a shortness of supply of almost all kinds is evident, whilst provincial in bags and smalls are very scarce. Reports from Greece concerning the prospects of the new crop are very unfavourable. Prices of all grades are unchanged.

Sultanas.

Only small business done during the week, mostly in Greek and Afghan fruit, at steady rates, the demand being generally for immediate requirements.

Figs.

The demand is moderate, but the market is steady, all transactions being effected at full prices.

Dates.

There is a better demand, with a tendency for higher prices for Khadrawi and Siar.

Seeds.

Linseed is stead. London-Calcutta spot is quoted 73s., afloat 72s. 6d. May-June and June-July also 72s. 6d.; Bombay ordinary, May-June, 74s.; small grain, 73s.; La Plata-Hull, May-June, 69s. Rapeseed is quiet. Toria, May-June to Hull, 68s. 6d. Cotton-seed is firm. London Egyptian, May, is quoted at £14 10s. and Sakeloviedes £14 ton.

Oils.

Linseed oil is quiet, spot pipes being quoted £35 5s., barrels ditto £36 5s., landed terms. Rape oil is very quiet. Ordinary brown, naked, spot, £49; English refined, barrels, £52 to £53. Cotton oil is well maintained. Crude, spot, in pipes, £45 5s.; refined pale, pipes, £49 10s.; and barrels, sweet, £54 to £55 as to make.

Oilcakes.

Egyptian oilcakes are very scarce, while for June shipments £9 17s. 6d. to £10 is asked, ex ship. English are in very small supply, and firmly held at £10 18s. 6d. to £10 10s. per ton. Linseed cakes are in scarcity both for foreign and home-made descriptions, and owing to a better inquiry quotations are 10s. per ton higher since last week. Best London made is selling at £12 15s. to £13, ex mill, while fine quality Calcuttas are held at £13 to £13 5s. per ton.

ROUMANIAN NOTES.

(FROM OUR OWN CORRESPONDENT.)
BUCHAREST, May 2.

Cattle Contraband.

The contraband of cattle, which took place on such a large scale all through last year, and caused a loss to the country which is now making itself heavily felt, has ceased completely, it is said, since the new prohibitive law has come into force. This law inflicts heavy punishment upon contraveners, and renders compulsory the registration of all cattle in the districts contiguous to the frontier, so as to enable the Government to requisition the same at a moment's notice.

Bulgarian Tobacco.

Some time ago a Commission was sent to Sofia for the purpose of acquiring a stock of Macedonian tobacco for Roumania. The Commission has now returned, having completely failed in its mission in consequence of the ill-will of the Bulgarian officials and the difficulties created by them. It is reported that the Roumanian Government has decided to prohibit the passage through the country of goods destined for Bulgaria until the Bulgarians consent to provide Roumania with the tobacco she requires.

Export of Grain.

The Central Commission of Exports met to-day under the presidency of M. Constantinescu, Minister of Domains and Agriculture. In order to assure the necessary supply of cereals for internal consumption, the Commission resolved to annul all individual permits for the export of Indian corn. Agriculturists and merchants owning such permits have to notify the quantity of grain of which they dispose, in which case they will be allowed to participate in the second Austro-German sale.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

COMPANY REPORTS.

Land and Mortgage of Egypt.

The report of the directors for the year ended March 31 last states that the gross earnings amount to £32,690. Deducting total expenditure, including interest on debenture bonds and debenture stock, £27,794, the net earnings are £4,896; add brought forward, £6,550, the balance carried forward is £11,446.

North British and Mercantile.

Though the Life business of the North British and Mercantile Insurance Company no more escaped the adverse influences of war conditions last year than that of other offices, the management is able to report extremely satisfactory results in practically all other departments. The Fire branch makes a particularly fine showing. The premium revenue at £2,146,800 approximates remarkably to that for 1914, which amounted to £2,146,300, but the claims dropped from £1,407,500 to £1,097,200, representing a decline in the loss ratio from 65.57 to 51.10 per cent. This is the best outcome of trading since 1909, when the ratio was 50 per cent., and how favourably it compares with the general experience of the company can be seen from the average for the decade, which works out at 56.70 per cent. In the Life department new proposals completed fell from £2,259,100 to £1,324,700, a decrease rather above the average registered by most offices. The increase in death claims, however, was below the general average, the payments going up from £820,300 to £948,200. The war was responsible for £153,600 of the latter and for £79,600 of the former sum. Thus but for these exceptional obligations the mortality rate would have been gratifyingly low last year. Annuity and sinking fund business was also smaller. In the Accident department, in which the Railway Passengers Company operates, premium revenue amounted to £399,300, or within £20,900 of that secured in 1914, while claims went down from £182,300 to £160,600, every section exhibiting a decline. The Marine branch, represented by the Ocean Marine Company, likewise did astonishingly well, premium income rising from £309,700 to £429,700, and claims from £120,900 to only £173,300, a much less proportionate advance. The final result of 1914 underwriting now brought to account is £57,600, as compared with £40,100 in respect of 1913. Assuming the total loss ratio to be the same for 1915 as for 1914, the eventual profit for the past year should be about £150,000.—*Financial Times.*

Indo-European Telegraph.

The report of the Indo-European Telegraph Company for 1915 states that owing to the continued interruption of the company's route during the whole of the year the actual receipts were confined to local traffic. In consequence of the war it has been impossible to make final arrangements for the re-establishment of the route. Under the existing arrangements with other companies and administrations, this company's receipts for 1915 have not been prejudicially affected, but the directors foresee a diminution in the receipts for 1916. The directors hope shortly to conclude an agreement for the acquisition of a substantial interest in a prominent manufacturing firm under which that firm will manufacture and develop apparatus for radio-telegraphic transmission and reception covered by the several patents now owned by the company; these will under the proposed agreement be transferred to that firm. The revenue from message account and other sources amounts to £204,190, an increase of £14,806. The expenses are, on commercial and general account £58,442, and on maintenance account £23,776, making £82,218, a decrease of £6,177. The revenue account therefore shows a balance of £121,972, which is carried to profit and loss account, 1915, and after deduction of income-tax and payment of excess profits duty for 1914 is reduced to £101,705. To this is added the balance brought forward of £20,592, making £122,297. Deducting £35,000 provided for investment fluctuations, £15,000 provided towards excess profits duty for 1915, and the interim dividend of £10,625, there remains £61,672. An interim dividend of £2 12s. 6d. per share was recently paid. This payment, amounting to £44,625, the shareholders will be asked to confirm in the form of a final dividend and bonus of £1 17s. 6d. per share, amounting to £31,875, with a special distribution of 15s. per share, all free of tax, amounting to £12,750. The latter sum is derived from interest on unappropriated investments and advance accounts, and it would be necessary to provide out of profit only £31,875, by which sum, therefore, the balance of £61,672 above referred to would be reduced. It is proposed to provide a further £10,000 for wireless and other technical development work, carrying forward £19,797.

TURKISH LAW OF SECURITIES.

The law passed by the Ottoman Parliament on January 27, 1916, regarding the interest and amortisation of securities held by the nationals of enemy States and their Allies, and also of neutral States, contains, among others, the following provisions:—

"The interest and amortisation of loans and Treasury notes issued by the Government or by municipalities, and which are owned either by individuals or corporations of the nationality of the enemy States and their Allies, will not be paid from October 15-28, 1914, until the restoration of peace. In like manner Ottoman joint-stock companies are forbidden to pay during the said period and to the said nationals the interest, amortisation, and income of shares, bonds, and other obligations which they have issued. Nevertheless, the said companies, upon an order to be given by the Ministry of Finance, will be obliged to deposit, in a bank designated by the Government, the amount of the said interest, amortisation, and income. Companies which fail to observe this law will be liable to punishment.

"The interest and amortisation of loans and Treasury notes, which are in the possession of the nationals of neutral States, will be paid at Constantinople, at the Ministry of Finance, except that the interest and amortisation of loans which the Imperial Government contracted in Germany and in Austria-Hungary will, in conformity with the former obligations and agreements, continue to be paid in the established places, except in enemy countries.

"The manner in which the nationality of the holders and the mode in which they acquire possession of these securities is to be established will be determined by a special regulation."

THE ROUMANIAN LOAN.

(From Our Own Correspondent.)

Bucharest, May 2.

The Roumanian Government have issued their loan of an unlimited amount. The National Bank has underwritten 50,000,000 lei and other local banks 100,000,000 lei. The loan, bearing interest at 5 per cent., is issued at 84. The lists open on May 4, new style, and close on May 18, but the Minister of Finance can close them before that date if he thinks fit. Financial circles are sanguine as to the results, and it is believed that the subscriptions will total 200 to 250 million lei.

The object of the loan is to repay the National Bank part of the money borrowed against Treasury bills, so as to reduce its circulation of bank notes.

The Public and the Loan.

May 3.

"It is the duty of every Roumanian to subscribe to the public loan." Such is the motto adopted throughout the country, not only by the Press, but by many State institutions. The public has the impression that it is, by subscribing to the loan, participating in a national and patriotic work, and this attitude is warmly encouraged by the Press, for the papers, regardless of their political colour, not only reproduce a full-page prospectus in every copy printed, but offer their readers daily leaders and articles on the subject. In shop windows the prospectus is posted up so as to attract the eyes of those who pass. Rich and poor alike are urged to bring their economies to swell the amount of the loan, for thus, they are told, will they best proclaim Roumania's financial independence before the world.

Facts such as the following may be mentioned as evidence of the popularity of the loan. The committee of the Union of Native Israelites has published a warm appeal to all Jews born in the country to subscribe to the public loan. The Apothecaries' Bank makes known to all chemists and druggists that it receives subscriptions, pointing out that it is the duty of the pharmaceutical and medical corps to support the project. His Holiness the Metropolitan Pimen of Moldavia has addressed a circular to the priests of his diocese calling upon them all to subscribe a sum, however small, and urging them to use their influence in the same sense among their parishioners.

Initial Success.

May 9.

One hundred and seventy-seven million lei were subscribed by the Roumanian people on the very day that the subscription was opened. His Majesty King Ferdinand personally subscribed to nearly one and a-quarter million lei. On the second day the total subscriptions rose to 220,000,000 lei, and by the end of the third day the total is said to have attained the imposing figure of 250,000,000 lei, or 10,000,000 sterling.

In financial circles people had been sanguine as to the result from the first. A leading Bucharest banker with whom I conversed on the subject was of opinion that the figure might ultimately reach 200,000,000 or 250,000,000 lei. But the call of the State for subscriptions has been responded to in a measure so generous that now, on the third day of the loan (for the two intervening holidays cannot be counted), the higher of these two figures has already been attained.

Many agriculturists were unable to subscribe, for they are still awaiting payment for

NATIONAL BANK OF GREECE.

the cereals sold to the Austro-German consortium and the British Bureau. Had the loan been delayed until after the execution of these contracts the amounts subscribed would, without a doubt, have been considerably greater. Nevertheless, and as matters now stand, we are in a much better position to form an opinion regarding Roumania's financial situation, which is in every way excellent. Moreover, the sums due from the two grain sales assures the existence of a large reserve on which the Government can count in case of necessity.

GREEK FINANCES.

Reuter reported from Athens on May 21 as follows:—

"Parliament has adjourned for ten days, on the proposal of the Finance Minister, in order to enable the Government to draft bills relating to new general taxation. Negotiations with the National Bank for an internal loan are not finished. Official circles now state that a convention will be signed on Wednesday and submitted to Parliament when it reassembles. It is stated that the amount of the loan will be 115 million drachmas (£4,600,000).

**Central News reported from Athens on Wednesday to the effect that it is stated that a contract between the Government and the National Bank for an internal loan of 115,000,000 fr. will be signed this afternoon at five o'clock. The issue price will be 88½ and the rate of interest 5 per cent. The terms include an extension of the privileges enjoyed by the bank for a period of twenty years. The forthcoming deal has already occasioned a heavy rise in the shares of the National Bank.

COMPANY RESULTS, Etc.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for the week, 169 tons (last week 89 tons); Hurgada production for the week, 555 tons (last week 555 tons).

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended April 30 amounted to £E4,426, as against £E3,713 for the corresponding period of last year.

GHARBIEH LAND COMPANY.—The annual meeting of shareholders will be held in Cairo on Wednesday, May 31.

INDO-EUROPEAN TELEGRAPH.—The annual meeting of shareholders will be held at 10, Old Broad Street, on May 30, at 12 noon.

LAND AND MORTGAGE COMPANY OF EGYPT.—The annual meeting of shareholders will be held at the Cannon Street Hotel on June 2, at 12 noon.

ROUMANIAN FOUR PER CENT. REDEEMABLE LOAN OF 1890.—The numbers are announced of 4,671 bonds drawn for redemption on April 1.

ROUMANIAN FOUR PER CENT. REDEEMABLE LOAN OF 1891.—The numbers are announced of 400 bonds drawn for redemption on April 1.

ROUMANIAN FOUR PER CENT. REDEEMABLE LOAN OF 1894.—The numbers are announced of 899 bonds drawn for redemption on April 1.

The U.S. Minister in Teheran, writing on March 13, says that the cost of the Persian toman is at present abnormally high. The Persian silver kran is of the normal value of $0.0875, and the toman, therefore, of the value of $0.875, but at the date of writing the Imperial Bank of Persia pays 8½ krans per dollar for fifteen days' sight draft on New York, which makes the value of the toman about $1.17, or more than one-third higher than normal. While American dollars are low, English pounds are even lower, the bank quoting a rate of 40 krans for the pound sterling, but not buying at any rate.

NOTES OF THE WEEK.

The Bulgarian advance into Greek territory is calculated to throw Greece into a ferment; but the Government will probably hold its hand until the intentions of the Germans and Bulgarians are more clearly revealed. According to the German official *communiqué*, the troops have been moved across the frontier "as a safeguard against an obviously intended surprise by the Entente forces." This is a plausible explanation of the occupation of Fort Rupel, but would not account for any large concentration at the eastern end of the frontier. The censorship on telegrams from Athens is a noticeable feature in the situation. So far, most of the news arrives from Salonika, which does not necessarily reflect the whole of Greek opinion. Not only is the town favourably disposed towards the Allies as a result of the presence of a large and well-paying army, but it has also become a strong centre of the Venizelist party. Feeling would in any case run high in Macedonia, and we must wait for fuller information from Athens before we can gauge the extent of the following which the Government can still command for a policy of neutrality.

Even if the German-Bulgarian force remains content with the ground it has already occupied, it is certain to lay hands on all foodstuffs within reach. Since the destruction of the Demir Hissar railway bridge by the Allies the inhabitants of this portion of Greece have relied for their supplies in part on French motor-vans. They will now be cut off from this source of supply. Consequently, although the Greek Government might affect to ignore the military aspect of the invasion, it will be confronted with the problem of alleviating distress in the neighbourhood. King Constantine and his advisers chose a policy which promised to follow the line of least resistance. It has proved a particularly thorny path, and the latest development opens up the prospect of the difficulties in the way increasing, the longer they persist in the policy.

The reference in these columns last week to Ali Dinar, the Sultan of Darfur, has been followed rapidly by news of the complete success of the expedition sent against him. Early in February Ali Dinar had concentrated a force near the Kordofan frontier at Jebel-el-Hella. A mixed force of all arms was despatched against him, and by the end of March had occupied Umshanga and Jebel-el-Hella. The official statement makes no mention of encounters with the enemy until the neighbourhood of the capital was reached. Starting from Abiad, ninety miles away, on May 15, Colonel Kelly's force engaged and defeated Ali Dinar's main body at Beringia, a village twelve miles to the north of El Fasher, and entered the town the following morning, May 23. The enemy are reported to have held a strongly entrenched position at Beringia, which they were "successfully induced" to leave by the Camel Corps. They then attacked the British column with the utmost rapidity and desperation. Their onset was met with withering fire, but a few penetrated to within ten yards of the Anglo-Egyptian lines. A counter-attack completed their discomfiture, and they are reported to have lost a thousand out of a force numbering between two and three thousand. All the Sultan's best troops and commanders took part in the battle. Ali Dinar himself fled with a small following in a south-westerly direction, the movements of his party being expedited by the attentions of a British aeroplane.

Whatever may be the end of Ali Dinar, his name helps to swell the already long list of German dupes in connection with this war. It is true that he has long been an obstreperous neighbour for the Sudan Government, but his final revolt must be attributed to Turco-German intrigue. On May 19 the *Deutsche Tageszeitung* gave some interesting information about the Sultan of Darfur. News had been received, it stated, from Constantinople that he had proclaimed a "holy war," and was advancing against Kordofan. Indian and Egyptian troops had been sent against him, but had been defeated, and Ali Dinar's "next objective" was El Obeid. The writer warned his readers against basing exaggerated expectations on these "conquests," but pointed out that they were a serious sign of the break-up of British power in the Sudan, the more so as Ali Dinar was a particularly true friend "of Kitchener and Sir Reginald Wingate!" Not the least instructive part of the article comes at the end, where the assurance is given that in this business the Sultan of Darfur is not acting alone. German information regarding the course of events in Darfur seems to have covered the period up to the concentration of Ali Dinar's forces on the borders of Kordofan. Having persuaded the misguided fanatic to take this step, German agents doubtless left him to his fate, buoyed up, it may be, with fantastic accounts of the support he was to have

Digitized by Google

from the Senussi and the Turks. When the capture of El Fasher was announced, the Germans adopted the simple course of denying the statement and declaring that Ali Dinar was marching on the Sudan.

A question in the Reichstag regarding the statement of the Turkish Minister of the Interior to the effect that Turkey had formally taken her place in the reconstituted Triple Alliance elicited the information that a defensive alliance for a long period had been offered Turkey by Germany at the beginning of the war, had been accepted by the Porte, and had been duly signed and ratified. Its terms were secret, and could not, therefore, be divulged. At the present time various conventions were under the consideration of the two Governments and were on the point of being signed. These would in due course be presented to the Reichstag for ratification.

The Austro-Hungarian Government continues to provide the strongest argument for the formation of a Southern Slav State at the close of the war by its persecution of those who are suspected of separatist leanings. For treasonable acts and utterances the authorities have every right to enforce the penalty of the law; but, as far as can be gathered, the wholesale condemnation of its prominent Slavs is being carried out solely to serve political ends and not with reference to their individual guilt. Five trials, in all, of Bosnian Serbs have been held in the Austrian Courts, and at the last one the accused numbered 154. Sixteen of these were sentenced to death. Most of, if not all, the defendants had been arrested at the beginning of the war. If it were not so, there would be good reason for those who are conducting the Southern Slav movement to deprecate any act on the part of Austrian subjects which brought them within the clutches of the law. Their cause has now been taken out of the hands of the people in the country, and no good purpose would be served by sacrificing their lives unnecessarily. The spokesmen of the movement in this country have done good service in explaining to the world Southern Slav aspirations; but they have still to be careful to avoid creating the impression that there must needs be antagonism between Italian interests and the realisation of these aspirations. In this connection we are glad to learn on the authority of M. Pashitch that no serious discord exists between Italy and Serbia, and that all Serbians were bound to recognise "Italy's incontestable right to a hegemony of the shores of the Adriatic." He added, according to a correspondent in the *Morning Post*, that the only difference was as to the number of naval bases necessary to Italy for her defence in the Adriatic, and that this difference was one of minor importance.

Little or no information has been published regarding the domestic situation in Persia, but there is reason to suppose that some headway is being made in placing the affairs of that country on a more satisfactory basis. The first step to be taken was naturally the restoration of order. As far as the Russian sphere of influence is concerned, this work may be regarded as having been practically finished. A number of German and Austrian agents made their way south of Ispahan; but these are gradually being rounded up, some of them after experiences which have made them welcome arrest and subsequent imprisonment in India. In the South British forces, we may infer from an occasional *communiqué*, are now engaged on work that ought to have been undertaken long ago. The success achieved by Turco-German agents before the war and during its early stages encouraged the Germans to believe that a Turkish army had only to march into Persia in order to make the Persians declare war on Russia and Great Britain, and that it could then make its way to Afghanistan and stir up trouble in India. That this programme failed was due entirely to Russia's resolute action in sending troops to Teheran and subsequently clearing the enemy out of north-western Persia.

Great Britain's soundest course to pursue would have been to have carried out simultaneously in the South what the Russians were doing in the North. By this means the activities of the enemy agents would have been curtailed. As things are they have been able, in many cases, to transfer their intrigues from one sphere to another and the work of counteracting their propaganda has been made more difficult. Fortunately, the Russians have performed their share so thoroughly that the capacity of the agents for mischief even in a new region has been circumscribed. It is, however, only by a show of force in the South that order will be restored in Persia. Some idea of the state of anarchy into which the country had been allowed to drift may be gathered from the ease with which the Gendarmerie, officers and all, changed from guardians to disturbers of the peace. They formed the sole embodiment of law and order for a considerable portion of Persia, and one of the greatest mistakes that the protecting Powers could have made was to entrust the force to subjects of a neutral State which had no interest in the country. If the Gendarmerie had been under British officers in the South and Russian officers in the North order would have prevailed over all, or the greater part of, the country. It would go far to reassure those interested in the affairs of Persia if the British Government would issue a statement explaining some of the steps that are being taken to carry into effect the complete understanding which, Mr. Asquith announced to the members of the Duma and the Council of State recently on a visit to England, had been arrived at between Russia and Great Britain in regard to Persia.

In order to meet criticism of the decision to send General Townshend with an inadequate force against Baghdad the Government has issued in the form of a White Paper "Papers relating to Major-General C. V. F. Townshend's Appreciation of the Position after the Battle of Kut-el-Amara." These documents purport to throw light on the statement made in *The Times* that General Townshend protested against moving on Baghdad with the insufficient forces at his command. Reference is made to a version of an "appreciation" of the situation by General Townshend; but in returning to the charge *The Times* indicates that the wording of the original was far stronger than this version implies.

It is difficult to understand the Government's object in publishing this incomplete instalment of papers relating to the Baghdad advance. There is no question that the whole campaign was mismanaged, and the demand to know the reason why is prompted by the desire to prevent a repetition of the mistakes and to see that no injustice is done to individual commanders. The Government has already announced through the mouth of the Secretary of State for India that the British Cabinet, the Imperial General Staff, the Indian Government, and the Indian General Staff all approved of the advance on Baghdad. This assumption of responsibility, it would have been thought, would be at once followed by a readiness to court the fullest inquiry and to have the matter cleared up with the least possible delay. But Mr. Chamberlain's statement is now shorn of much of its meaning, for not one of the authorities quoted, in according their approval to the advance, appears to have taken sufficient interest in this particular campaign to inquire of General Nixon whether he was quite satisfied that the move had a chance of success. The point is just this: if General Nixon alone was to decide on the wisdom of an advance, let the sole responsibility be left to him; if, on the other hand, there is felt to be a need for the British and Indian Governments, the Imperial and Indian General Staffs, to have a say in the matter, then, before they give their approval, which *ipso facto* relieves General Nixon of his responsibility, they ought at least to examine the conditions under which the advance is to be made and not merely echo General Nixon's opinion. The former course is at least sound devolution of authority; the latter appears to be wasted interference.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 17.

The Bomb Outrage Trial.

The trial of the two men implicated in the throwing of the bomb at H.H. the Sultan in Alexandria last July is still unfinished. The Court sat throughout the whole of the last week—the trial started on the 8th inst.—and adjourned to Alexandria on Saturday for an examination of the premises from which it is alleged the bomb was thrown and for a reconstruction of some of the incidents connected with the question of identification which took place in the course of the inquiry. The hearing was resumed on Monday, and to-day the examination of the witnesses for the prosecution was concluded. There appears to be some slight confusion in the evidence of some of these witnesses, especially in that of the barber and the schoolboy whose information led to the arrest of the accused. The witnesses for the defence have still to be called, and then the prosecution and defence will have to address the Court, so there is every likelihood that the trial will last the full fortnight. The little interest that was evinced in the case by the general public seems to have evaporated, and the sole regular attendants in the audience are the reporters of the vernacular Press, whose readers have also lost their interest in this protracted case.

The Anglican Cathedral.

The resolution of the Anglican community of Cairo to rebuild All Saints' as a cathedral, and the announcement of the forthcoming holding of a meeting of the Anglican community of Alexandria, have raised the question as to why the latter city should not be given preference in the matter of the choice of a site; and several letters have appeared on the subject in the local Press. Apart from the fact that Alexandria already has a church of stately proportions, which is quite adequate for its immediate and future requirements, and that the permanent and winter Anglican population of Cairo is larger, there are many other considerations in favour of the selection of a site for the new Anglican cathedral in the capital of the country in preference to its senior port. No doubt all the arguments for and against the present decision will be developed at the forthcoming meeting, which for that reason alone will be of interest to the community in general; but as far as one can see at present there can be no question as to the soundness, from every point of view, of the decision to erect the cathedral in Cairo.

The Financial Adviser's Note.

Lord Edward Cecil's Note on the Budget for the current year has been exceedingly well received. I am not judging by the Press comments, which, in the present circumstances, are not to be relied upon as a true expression of opinion, but by the views expressed privately by prominent financial and commercial men. Perhaps the Financial Adviser's Note has received an extra warm welcome because, apart from the fact that it demonstrates to the world Egypt's solvency and extraordinary recuperative powers, it confirms in every respect the opinion freely expressed during the past year by local financial authorities as to the satisfactory economic situation of the country and the confidence that should be reposed in the future.

The Coal Question.

The Government has come to the rescue of the cultivators in the matter of the coal required by them for the driving of their irrigation pumps. A fairly large consignment of coal has been secured by the Ministry of Finance, and will be distributed through the Ministry of Public Works to all bonâ-fide consumers for irrigation. No cultivator will be allowed to obtain more than two months' supply. The price has been fixed at P.T.550 per ton, plus freight from Mex to the interior, subject to alteration a month hence. Sales will be on a cash basis, but in exceptional cases and on certain conditions credit will be allowed. Considering that the latest quotation in Cairo is £8 per ton, the Government price, although three times the normal rate, is an exceedingly favourable one. It remains to be seen whether the stock held by the Ministry of Finance will be adequate to meet the bonâ-fide irrigation demands.

Up to the time of writing there is no news of the investigations which Mr. Wells is carrying out at Edfu, and we may have to wait some little while longer for an official statement.

Egyptian Crafts: A Suggestion.

In these days when efforts are being made to find fresh outlets for the activities of Egyptian industry one comes daily across articles of purely European manufacture which Egyptian craftsmen could quite easily produce. A recent letter appearing in the *Egyptian Mail* suggests one such line of activity. The letter was from some British soldiers asking for a chessboard and a set of chessmen wherewith to while away the tedious evening hours in the desert. The obvious thought that strikes one is: Why has no Egyptian as yet made it his business to produce sets of chessmen fashioned after celebrated characters in Egyptian history? As a visit any day to the bazaars will show, the Egyptians are excellent carvers in ivory, wood, stone, or metal; and industrious and ingenious craftsmen ought to be able to make quite a good thing out of sets of, say, "Egyptological" chessmen, for which all the model material is to be found on the tombs and ancient monuments, and which, seeing that chess is a cosmopolitan pastime, would by their originality attract purchasers from the four corners of the earth. I commend this modest idea to the attention of the gentlemen who are now engaged on the task of finding new fields of activity for Egyptian industries, in the hope that it may suggest other similar articles in the production of which the Egyptian craftsmen could successfully compete.

After seventeen days' hearing the trial of Shems-ed-dine and Helbawi on the charge of conspiring to assassinate the Sultan of Egypt concluded on Saturday. Both prisoners have been found guilty and sentenced to death.

The Syrian community in Cairo has requested the good offices of the United States to obtain alleviation of the great sufferings of their compatriots. Refugees from Syria bring harrowing details of distress among the people.

We are informed by a Swiss correspondent that the ex-Khedive Abbas Hilmi has arrived at Zurich for a short stay. The same correspondent reports that Farid Bey, the notorious Egyptian agitator and self-styled leader of the Egyptian "Nationalist" Party, has returned to Geneva from Constantinople.

Of the state of Egypt Bishop MacInnes, who has had sixteen years' experience in the country, wrote on February 24: "Last year there was a great deal of talk in native circles, and both the conviction and the desire that the Turks would succeed in ousting us from the Nile Valley were widespread. The desire may remain, but the conviction is gone, and, speaking generally, I have never known Egypt more quiet. Numbers of Egyptians are beginning to realize that even if the Turks do take Egypt they will only be allowed to rule it under the strict watch and ward of the Germans. The Turk is popular, but the German is very much the reverse, and Egyptians may now be heard saying, 'If it's only changing one Western master for another, we'd much prefer to keep the English.'"

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, May 7.

A Storm in the Ice Chest.

Years ago, before there was any railway to Port Sudan, and communications were less precise than now, the installation of an ice factory at Khartoum was looked upon as a piece of speculative enterprise, and people gladly paid whatever was asked for the commodity; for, indeed, once the thermometer goes over 105 deg. F. ice becomes a veritable necessity—the necessity increasing with every degree of heat. Thus, one firm enjoyed a practical monopoly in Khartoum until, with that healthy spirit of competition which gladdens the heart of the consumer in anticipation of lower prices, another firm set up a plant, and the price was reduced by 50 per cent. An enterprising native, moreover, who had a permit for an ice factory in Omdurman also assisted to this end, because he found he was able to undersell both firms in Khartoum.

Now the water supply of Khartoum is the result of extensive research into the bowels of the earth, and the water rate is high. In Omdurman there is a small water supply laid on from shallow wells, but most of the population use the wells in the old-fashioned way, and carry their water on donkeys or by hand. So the rate is low or nil. Authority stepped in and declared that ice made in Omdurman, not being of the strict purity of the Khartoum water, must not be sold in Khartoum. The proprietor of the ice factory saw one rival removed, bought out the other, and adjusted the price to suit himself. The consumers were dismayed; representations were made. It was pointed out that the Omdurman ice had never done any harm; that what was good enough for Omdurman was surely good enough for Khartoum; and if Omdurman ice were not good enough for Khartoum, what made it sufficient for Omdurman?

The matter came under serious consideration. Several prominent bodies met and deliberated, with what result is not yet known. Meanwhile the consumers reluctantly pay the enhanced price and hope for better things.

Hot Weather: Mails and Storms.

The hot weather train service begins on May 1, and mails arrive and leave on Mondays and Fridays, instead of Tuesdays and Fridays. The change was heralded this year by storms of rain, which resulted in some delay, so that the mail train arrived at noon on Tuesday, May 2, instead of Monday afternoon. There was a washout between Abu Hamed and No. 6, which was, however, immediately repaired. In Khartoum a considerable "hubbub" or duststorm was seen approaching from the North on Wednesday afternoon, but it was fortunately cut short by a shower of rain.

It would doubtless allure our enemies, though it ought equally to depress him, to peruse the list of travellers northwards on their way to England. A large number of officials' wives have left, regardless of submarine dangers.

Official Movements.

H.E. the Governor-General and staff returned from Erkowit to Khartoum on May 5. Mrs. Symes, who has recently joined Major G. S. Symes, the Private Secretary, also came to Khartoum.

Mr. R. E. More, the Governor of Khartoum, and Mrs. More have gone to Alexandria. After a month's change of air he will return to Khartoum, and Mrs. More will proceed to Europe.

Major R. M. Fielden, the Governor of the Bahr el Ghazal Province, has arrived in Khartoum, and will proceed on leave on medical grounds.

Major E. H. Ross, who has been absent on leave owing to persistent phlebitis, has returned to Khartoum, and has taken up his duties as Assistant Civil Secretary. The position of Senior Inspector, Kordofan, which was to have been his appointment had health permitted, has been filled by Mr. E. N. Corbyn.

Now that the San Stefano Hotel is open near Alexandria a number of Sudan officials and their wives are going there for a short change, to brace them against the hot weather.

SUDAN APPOINTMENTS.

(From a Sudan Correspondent.)

The granting of the rank of Lewa (Major- or Brigadier-General) to Colonel G. F. Clayton, has occasioned general satisfaction among those who know this capable and obliging official, and have had relations with him in connection with the important position which he holds in Cairo as Sudan Agent and Director of Intelligence. As a member of the Sudan Government, Brigadier-General Clayton has long been popular, and, although but rarely seen in Khartoum, practically every minor official and distinguished visitor to the capital of the Sudan has, perforce, to make his acquaintance before proceeding to the South from Cairo. General Clayton has been in the service of the Sudan Government since the end of 1902, and he has occupied his present position, with a short interruption, since August of 1906. The duties of his office are very important, and sometimes onerous; the responsibilities attached are likewise heavy, and while the Governor-General is in Cairo (usually during a portion of the months of September and October) the time of the Sudan Agent is particularly occupied. At all times he is the responsible official, acting as "intermediary" between the Palace at Khartoum and the British Residency at Cairo.

Mr. E. N. Corbyn, who has been appointed Acting-Governor of the Kordofan Province during the absence of Captain R. V. Savile, has been permanently raised to the post of Senior Inspector of this province, such appointment to date from April 1. Formerly an Inspector in the Finance Department, Mr. Corbyn has had some twelve years' experience of Sudan official life, and he has earned for himself a sound and enviable reputation as a very earnest and dependable officer. The Kordofan Province, the third largest of the fourteen political departments of the Sudan (the Bahr-el-Ghazal and Dongola being the first two), employs the services of one senior inspector, five second inspectors, and three third inspectors, as well as a resident district judge. Besides the Governor, two of the junior inspectors are at the present time away from their posts, while one other, Mr. W. E. Jennings Bramly, is temporarily detached.

Mr. A. G. Pawson, who will, in September next, complete five years' service with the Sudan Administration, has been transferred from the Legal Department, wherein he held the post of a District Judge, to the Province of the Upper Nile, where he will act as one of the three Second Inspectors of the province, with residence at Renk. This is one of the eight Mamurias of the Province of the Upper Nile, and the terminus of the Gule-Renk road, a thoroughfare which, in spite of the difficulties arising from its forty-five miles of waterless stretch, is constantly used in the dry season, and proves a great boon to the merchants who must traverse it.

The appointment of Mr. H. P. Hewins to be Custodian of Enemy Property under the Trading with the Enemy (Custodian of Property) Ordinance, which was enacted this year, is quite in conformity with the value of the services which this useful official has already rendered in his capacity of Director of Commercial Intelligence. This branch of the Central Economic Board was established in 1914, and it has long since justified the high hopes entertained by its promoter, Colonel E. E. Bernard, C.M.G., who also is its president. In speaking of the work done by the Board, and more particularly by the Commercial Branch, during the first year of its existence, the Governor-General, Sir F. Reginald Wingate, said: "The services of the Central Economic Board have been of the greatest value in considering economic and similar questions, while an interesting development has been made by the formation of a Commercial Intelligence Branch under the direction of Mr. H. P. Hewins, who continues to discharge the functions of secretary to the Board in a very efficient manner." Mr. Hewins, who will be remembered by readers of The Near East as the author of the excellent paper "Economic Developments in the Anglo-Egyptian Sudan," which was read at the International Congress of Tropical Agriculture held some time ago in London, has been twelve years in the service of the Administration, and is regarded as one of its most valuable members.

SAN STEFANO.

(From a Correspondent.)

Alexandria, May 15.

The Hotel Casino, San Stefano, Ramleh, is to be reopened on June 1. Those who have known it only as a military hospital will marvel at the transformation, whilst old habitués will welcome it in its more familiar guise. In any other circumstances, Cairo residents would have been inclined to grumble at being deprived of their favourite resort during the summer months; but they suffered in a good cause last year, and will reap their reward when they see what the army of workmen have accomplished in the way of renovation since May 1. The entire premises have been disinfected by the Municipality, every particle of woodwork has been repainted, the walls of the bedrooms re-papered in exquisite taste, and, to make assurance doubly sure, all the soil in the neighbourhood of the hotel has been removed and replaced.

Already every bedroom in the establishment has been reserved for June 1, by which date the bathing establishment will also be reopened, and there is every promise of a prosperous season. A special tariff is being arranged for military guests.

It is to be hoped the management will succeed in recruiting a good orchestra. Among local musicians, the older men, who have not been mobilized in either Italy or Greece, must have felt the pinch of circumstances since the outbreak of war.

DARFUR.

THE STORY OF THE EXPELLED SULTAN.

By Percy F. Martin, F.R.G.S.

For the past sixteen years, that is to say from the commencement of the British occupation of the Sudan, the condition of things in Darfur has occasioned trouble, if not actual anxiety, to the Sudan Administration. The Sultanate lies in the eastern Sudan, between the Libyan desert, Wadai, Dar-Runga, Dar-Fertit, and the Kordofan Province. Modern Darfur (between N. lat. 10° and 16° and E. long. 22° and 27° 30) is practically an enormous sandy plateau with a steppe-like aspect, although it contains many fertile valleys yielding wheat, cotton, sesame, and tobacco; cattle, however, constitute the greatest wealth of its people. The area is probably not less than 400 miles by 400 miles. The population is estimated at between 1½ and 2 millions. The autochthonous inhabitants of Darfur are Fur, of mixed negroid stock. Other inhabitants of the country include numerous Arabicised tribes, who are camel and cattle owners, and a liberal infusion of Fellata and kindred peoples from the western Sudan.

Until the year 1874 Darfur was an independent State; in that year, however, it was conquered by the notorious slave dealer Zobeir Pasha, while in 1884 it was reconquered by the Mahdi at the time that Sir Rudolf Slatin was its Egyptian Governor. Although within the limits of the Anglo-Egyptian Sudan, the government has always been an entirely independent one, administered by a Sultan. Ali Dinar is a grandson of the Sultan Mohammed, whose family had ruled in Darfur for 400 years, with all the old-time methods—not always of the mildest—of the Eastern potentate.

Now that Ali Dinar has been expelled there is likelihood of at least one legitimate claimant to the throne presenting himself. This is a descendant of the royal house of Amur Abdul Shakur, the same individual who left Cairo under the immediate protection of General Gordon in order to mount his vacant throne, but paused to drink himself into a state of intoxication before finally returning to Cairo, there to pursue the more luxurious and less dangerous rôle of *roi en exile*. The more robust and decidedly more enterprising Ali Dinar, who became hardened by several years' confinement in one of the Mahdi's most loathsome gaols, not only assumed, but until lately maintained himself in, the Sultanate, being supported by the Anglo-Egyptian Government. But his position, as he has now found out, was dependent upon the maintenance of friendly relations with the Administration at Khartoum.

With regard to the future government of the country, it would seem that the best method to adopt would be the appointment of a British Resident charged with the duty of advising the Sultan upon foreign affairs and generally controlling his proceedings. The French authorities would probably welcome such an arrangement, since matters have been the cause of continual annoyance to them, principally occasioned by frontier raids upon the people of the French Sudan. Indeed, just previous to the outbreak of the war, the British and French Governments were about to refer to independent arbitration the very delicate and vexed question of the boundary between Darfur and the French possessions.

FOR TROOPS IN MESOPOTAMIA.

The Secretary of the War Office makes the announcement that, under arrangement with the Military Department of the India Office, Colonel Sir Edward Ward, Director-General of Voluntary Organisations, will for the future deal with questions relating to the supply of comforts for British troops serving in Mesopotamia. All communications upon the subject should be addressed to the Director-General of Voluntary Organisations, Scotland House, New Scotland Yard, London.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, May 19.

The Prerogatives of the Crown.

Has the King the right to dissolve the Chamber for an indefinite period and to dismiss and replace his Ministers whenever he may wish? That is the question under discussion by the Governmental Press, as a result of an article on the rights and duties of the King, published last Sunday by the *Kyrix*, the official organ of the Liberal Party. This article, frank and fearless, caused a lively sensation in Ministerial circles; and the inspired Press has entered on a campaign against M. Venizelos, endeavouring, by means of the most far-fetched theories, to refute this exposure of the attempt of certain political and military groups to do away with the constitutional régime and to substitute a despotism. Thus, according to these Ministerial journals, the Crown has unlimited power to dissolve one Chamber after another as soon as they have been elected, and to appoint fresh Cabinets. In support of this weird contention they quote a clause of the Charter according to which "the King appoints and dismisses the Ministers," and point out that there is no restriction attaching to this clause—without taking into consideration the other constitutional stipulations regarding the circumstances in which the King may dissolve the Chamber, stipulations which naturally govern the exercise of this prerogative.

The bold declaration of the Liberal leader, in the *Kyrix*, that, by the elections, the supreme factor in public power, the People, not only indicates but demands responsible Governments, could not fail to be displeasing to the present Government, which exists only on the principle that the King possesses the absolute right to appoint and dismiss his Governments. In order to uphold its own view, the Ministerial Press has not hesitated to propound a new theory, according to which the party of the majority—which, having found itself in disagreement with the King, was obliged to abandon power—cannot maintain that its policy, disapproved by the Crown, is approved by the people so long as that people fails to rise, in order to enforce it—evidently by a revolution! In other words, the Government journals argue that the King is not bound to consider the will of the people, on whose affection his power rests, or to respect the Constitution, except when he fears a popular rising; and when he has nothing to fear he may safely violate the Constitution and act as seems good to him!

The *Kyrix*—or, rather, M. Venizelos—however, reminds these partisans of a degenerate monarchy, who recognise only revolution as a check on their designs, that the pan-Germanic ideas that inspire them are put forward in Germany only for the purposes of export, so to say; at home the Prussian Sovereign exercises constitutional power not only by virtue of force but also of right. He has allowed the people to share political power as far as seemed good to him, but to him alone remains all authority which he has not voluntarily given up. Moreover, says the *Kyrix*, the Hohenzollerns, having created Prussia in co-operation with an ancient military aristocracy and an admirably organised hierarchy of officials, seek, and easily find amongst them, their political helpers. But where would the political collaborators of monarchism be found in this country?

These articles have made such an impression that it is said that the Government has been considering the question of prosecuting their author, but so far no action has been taken against the *Kyrix*, which seems to indicate that no grounds for a prosecution can be discovered.

Action Against the "Kyrix."

The Headquarters Staff of the Army has lodged a complaint against the *Kyrix*, which accused it of being more concerned with politics than with its military duties and of maintaining the state of mobilization for

Digitized by Google

reasons of internal policy. As soon as the author of the article complained of is called upon, M. Venizelos will declare himself responsible. The affair will thus take on an exceptional interest, especially if it is carried before the Assize Courts. Venizelist circles take the matter quite calmly, and it is believed that it will be a brilliant success for the Liberal Party. The *Athenai*, an anti-Venizelist journal, blames the Government for having allowed the staff to take such action, and implores Providence to inspire those who direct the country's policy with a little common sense.

The Bye Elections.

The Ministerial Press endeavours, by absolutely puerile arguments, to depreciate the importance of the brilliant victory gained by the Liberal Party in the bye elections at Drama, Mytilene, and Chios. Thus the *Nea Himera* likens M. Venizelos to a charming young lady who is loved, not for her opinions, her dowry, or her birth, but for her personal attraction; and declares that M. Venizelos won his votes by his personal charm, apart from his political views, and especially his external policy! The arguments of the other Ministerial journals are still more amusing. But Governmental circles have been stupefied by the results of these elections, especially of that at Drama, where the Turkish element, favourable to M. Gounaris, preponderates. The Venizelist success in this division was the more significant because at the elections in May of last year the inhabitants of the district were told that M. Venizelos wished to hand them over to Bulgaria, and as a result all his candidates were then rejected.

The following passage from the Ministerial *Embros* is very characteristic of the state of alarm in official circles, which are beginning to recognise that the Venizelists are gaining ground every day. "If in the midst of this exceptional crisis the popular vote should to-morrow seek to return the former President of the Council to power, with the same programme clearly set out—which would debar the King from saving Greece a third time—it would be better that, instead of a fresh disaccord with him, the King should retire, leaving M. Venizelos and his partisans the task of coping with events."

THE PRINCIPLE OF NATIONALITY.

In the course of an address on "Italy and the Principle of Nationality," delivered last Monday at University College, London, Dr. Raffaello Piccoli said that Mazzini, who had a keen sense of political reality in international affairs, knew that the causes of the future wars lay in Central and Eastern Europe. "The map of Europe," he said, "has to be re-made." In the new map that Mazzini foresaw there was no place either for the Austrian Empire or for that of Turkey; for the Empire of Austria did not represent a nationality, but an administration imposed by the right of might on peoples differing in language, religion and custom, and, naturally, tending to spend their lives in different directions; while, if this was true of the Austrian Empire it was also true of the Turkish Empire in Mazzini's time, and partially true to this day. The Southern Slav nation had taken as the model for its future development the Italian *risorgimento*, and was engaged in a war not for territorial expansion but essentially for liberty both within and without the Austrian Empire.

Commenting on this passage in Dr. Piccoli's address, Lord Bryce, who presided, said that Mazzini had observed two empires in the modern world which were fundamentally opposed to the principle of nationality, and which, in his view, ought, therefore, to disappear. Those were the Turkish and Austrian Empires. Most would agree with Mazzini, and in the case of Turkey the problem was a comparatively simple one. The Turks must not be allowed the opportunity of massacring any more. So far all were agreed. The problem of Austria was a great deal more difficult; but he would venture to express his sympathy—and he thought it was a sympathy generally felt in Britain—with the subject nationalities, especially the Czechs, the Poles, and the Southern Slavs. Of course, the problem of recognizing the principle of nationality in those countries presented great difficulties, because the populations were mixed; but if the Allies achieved the decisive victory which we desired, and in the approach of which we believed, the problems ought to be settled on the principle of nationality; and with good will, and a thorough knowledge of the conditions, he did not believe they would turn out to be insoluble. He believed, for instance, that the difficulties in the relations between Italy and her Slavonic neighbours in the East beyond the Adriatic were quite susceptible of being arranged in a way which would be conformable to the principle of nationality, just in itself, and leaving nothing but good feeling between Italy and those Southern Slav neighbours.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, May 2.

Will Bratiano Yield?

M. Simeon Mandresco, professor at the University of Bucharest and president of the Transylvanian Associations, has, in an appeal addressed to the people of Roumania, condemned in scathing terms the barbarity of the Magyars as well as the neutrality of Roumania; and he invites those who share his convictions to support him in a renewal of the struggle against the present attitude of the Government. On May 6 there will take place a Requiem service at the Church of St. George for the souls of the Roumanians of Austria-Hungary who have fought for their oppressors and lost their lives in defence of a cause which was not their own. A meeting will be held at the Athénée on the same day, and a monster meeting at the Dacia is announced for the following day.

A Tale of Espionage.

An evening paper gives an account of a curious incident which ended tragically. One evening a peasant from Vlashka was returning home from work with his oxen and cart, when a woman whom he met on the way asked for a lift. The request was granted, and soon the woman remarked that the man looked tired and suggested that she should drive the oxen. He readily complied, and presently fell asleep. After a time the unaccustomed bumping of the cart woke him up. Discovering that they had left the road, and not recognizing the surroundings, it flashed upon him that the woman was driving him into an ambush. Seizing a hammer that lay at hand, he struck her a blow on the head, with the intention of stunning her, but, striking too hard, caused instantaneous death. Realizing the gravity of his over-hasty act, he gave vent to loud lamentations, which soon brought a number of soldiers to the spot, for the cart had been driven over rough ground right up to some newly established military works! An attempt to raise the body revealed the fact that the female dress concealed the body of a man. Investigation on the part of the military authorities discovered that he carried on his person papers and sketches of a character that amply proved him to have been engaged in espionage.

Roumanian Subjects of Francis-Joseph.

The Archduke Joseph has recently decorated 340 Roumanian soldiers belonging to the 43rd Regiment of Infantry at Caransebesh. Since the beginning of the war not less than 1,700 officers and men belonging to this regiment have received decorations in recognition of their bravery. Indeed the splendid heroism displayed by the Roumanians of Transylvania and Bukovina is marvellous when we remember that it only furthers the cause of their oppressors and hereditary enemies. But then, of course, the poor fellows are not kept informed of the course of political events. What may not be expected of them if ever the opportunity comes to strike a blow for the liberation of their children from a cruel servitude!

Pilgrimage to Curtea de Argesh.

Sunday last being the feast of St. Elizabeth, a committee of ladies belonging to Bucharest society organized a pilgrimage to the last resting-place of Roumania's first sovereign. More than two hundred ladies are said to have participated. A special saloon train was put at their disposal, and they bore to the tomb of Carmen Sylva nearly every flower to be found in Bucharest.

THE WORLD-FAMOUS
YAGHOURT
may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.
Also LEVANT PRODUCE:
Tomato Paste, Black Olives, Locoums, Samias, &c.

BULGARIAN NOTES.

(From Our Own Correspondent.)

Bucharest, May 1.

In the Occupied Territory.

From a trustworthy source in Sofia comes news that all German non-commissioned officers and commissioned officers up to and including the rank of captain who are at present in territory invaded by Bulgaria have received orders to return at once to Bulgaria.

According to the news received here from different sources the situation in Serbia is truly terrible. From Ghevgeli, for instance, comes the news that for fear of the German and Bulgarian "liberators" the inhabitants dare not venture into the streets. The women, both Christian and Moslem, are continually ill-treated by the soldiery, and for this reason the Turkish population are very excited against the invaders.

The Bulgarians are constantly increasing their list of murders, but it will only be possible to get a complete record when the invaders are driven from the region. It is reported that of the people "removed to the interior" most have been shot on the way.

The Bulgarian Government has at last decided that the Serbian territories shall be governed by a special commission, which will be presided over by General Daniloff. Whether this will improve matters, or the reverse, remains to be seen.

"The Prussians of the Balkans."

A deserter from the Bulgarian army, a Greek by birth, states that at the first battle of Valandovo the Bulgarians took prisoners thirteen French soldiers, and that these unhappy men suffered terrible tortures and indignities. They were escorted from town to town and village to village for purposes of show, apparently, their guard calling to the spectators: "Look at us! See, we can fight the French and English!" Then, with a refinement of cruelty, the Bulgarians put out the eyes of these prisoners, left them without food for some days, and finally shot them and cast their bodies over a precipice. If this tale be true, the Bulgars are indeed fit allies for those "conquering heroes" the modern Huns!

Bulgarian deserters who have been taken into Salonika state that Ferdinand of Coburg's soldiers are now learning a new marching song, one line of which, translated, means: "When we get to Salonika we shall find there pretty women." This clever effort is sung daily in chorus in the Bulgarian barracks and camps. Another recent composition is entitled "The Dishonest Allies," and consists of a long string of insults addressed to Greece, Serbia, and the enemies of the Central Powers in general. The words of this masterpiece are said to have been distributed among the troops by order of the military authorities. Bulgaro-Germanic co-operation appears to be achieving some curious results.

The Sanitary Service.

In one respect the Germans have certainly been of help to the Bulgars; that is in regard to the sanitary service. Six months ago the German Sanitary Mission numbered 165 persons: to-day it boasts of 330 men, of whom thirty are doctors, and 300 women nurses, all Germans. It has taken over the entire control of the medical service of the Bulgarian Army; and those who know what a lamentable state that service was in before will be able to appreciate what a boon this must be.

The German doctors have established an orthopædic institute, in which those mutilated in the war are fitted with, and instructed in the use of, artificial limbs.

Serbian Legation Seized.

At the beginning of the war the Serbian Legation at Sofia was seized by the Bulgarians under the pretext that it was "property without an owner." The building has now been handed over to the Commandant of Sofia, and is already being put to use by him.

Bulgarians, it is stated, have taken possession of the churches in Serbia and Bulgarian priests have been placed in charge.

One million dollars (£200,000) has been set aside by the Rockefeller Foundation for the relief of Poland, Serbia, Montenegro, and Albania.

FIVE DAYS FROM MY SERBIAN DIARY.

By ELBRIDGE COLBY.

If there was any one thing that characterised the Serbs it was dilatoriness, and the perpetual hurry, hurry, hurry of Americans did not so much amaze as it amused them. Five days from my Serbian diary will illustrate a characteristic American impatience. In the West we make haste and also waste; in the East they stagnate. Both measures have their advantages.

First Day.—We were transporting goods for the Minister of the Interior from Klitchevatz, on the Danube, to the small town of Osipaonitsa, on the railroad. After my first two trips for the day, I had an official visit to pay to the police captain of the arondissement. I returned to Klitchevatz at six in the evening, and, learning by telegraph that six more autos. were coming up two nights hence, and that we were short of petrol, I decided to make the all-night trip to Nish. Shortage of petrol was the bane of my life; it was always "*Nema*" (there is none), "*Cheka*" (wait), or "*Sutra*" (to-morrow), when we were getting low in our supply. So I usually telegraphed three days ahead that we were already "out," and then went myself at the last moment to hurry things up. Thus, between six and six-thirty I arranged things, ate dinner between words, and left in a hurry, to travel by dark without lights, over bad roads, and catch a train at eight o'clock. Fast driving over bad roads caused a "blow-out" in the rear tyre. Without a light it was difficult to manipulate those "predigested" tyre patches that I disliked so much. So there we were stranded. My Serb interpreter, an excellent chap by the name of Varadjinin, volunteered to walk back and get a spare inner tube, while I curled up in my army blanket and tried to sleep, in spite of all the inquisitive barking dogs and half the wild animals in the neighbourhood. About three hours later "Pete" returned with the inner tube and an extra patch. Before long we were on the road again, but about three miles farther on I had a second "blow-out." Luck and the gods of Serbia certainly seemed against us this night, for again fumbling in the dark and burning our fingers with frantic matches we made a bad job of the patch, and were completely stranded. Thus I left "Pete" to guard the car, and started about one o'clock to walk on a muddy, rainy night all the way to Osipaonitsa.

Second Day.—The walk lasted until eight in the morning, for I had stopped in Posharevatz and waited until the bake-shops could supply me with a loaf of bread for breakfast. Then I went to the railway.

"Train for Nish?"

"*Nema!* To-night at nine o'clock."

"But I must get there sooner."

So I was put in an empty freight van on a special train, with an office boy to guard the chair they had lent and to amuse me. Velika Plana at eleven-thirty.

"Train for Nish?"

"*Nema!* To-night at 3 a.m."

"But I must get there sooner."

At one I left on a flat car with a lot of army subalterns, who usually travelled that way. So it was from station to station, exchanging conversation in broken Serbian for soldiers' rations, changing at several different towns, and finally arriving in Nish at midnight, in a driving rain, seated on top of a carload of soft coal. I found our base camp very quickly, learned that the extra autos. had left that night, and not the following, as had been planned, and so in disgust rolled up in a blanket on the ground—there were no spare beds—and went to sleep at 1 a.m.

Third Day.—I arose at six, executed a host of little commissions, made good use of the half-day before the arrival of the passenger train for which I would not wait, visited the Ministry and the Inspector of the Interior, and took the night train north. I cannot sleep well on trains, so last night's sleep was my first and last in all these four wild days.

Fourth Day.—At 3 a.m. we arrived at Velika Plana, where I had to change cars. There, to my surprise, I saw P——, and T——, his interpreter, who were supposed to be in Klitchevatz already with their autos.

"What are you doing here?"

"Well, you see, we lost our suit-cases."

"How?"

"Well, some soldiers climbed on the flat-car which was carrying our autos; we could not keep them off [though I had stayed up all night and kept them off the night my first unit came over the same route], and they stole my suit-case, containing all the tyre cement, patches, and spare tubes for all the cars."

Drama! And here they had been wasting a day in police stations and railway offices looking for that suit-case! I was too raving angry to say a word, so simply told them to take my luggage on with them. I was going back to Nish to buy some more cement and patches. Next to gasoline, the

Digitized by Google

repair materials for tyres represented our worst worry. So I met the down train at Velika Plana, travelled until noon, reached Nish, bought the necessary articles, and boarded the train the next night.

Fifth Day.—Another entire night without sleep, but by this continual, impatient pushing ahead, walking muddy roads, travelling incessantly, and hurrying to save a half-day here or there I had got something accomplished much quicker than any dilatory Serb could ever have done. I was responsible for the Klitchevatz unit, and had to keep things moving; and though the Serbs thought all us Americans half-mad, or half all-mad, I had got something done. But when I arrived again on the Danube during the fifth day, though completely exhausted, with only about six hours' sleep since my wild journey began, I spent the entire day on the road working as usual, and the entire evening answering official correspondence that had accumulated since my departure.

TANGIER TO TEHERAN.

I seldom read letters to the editor in the papers, but the name of Lord Cromer at the end of one is sufficient to draw anyone to its perusal. Thus it comes about that I have just read a letter which the Earl has written to the *Times* on "Mr. Wilson's Part in the War," and have found it the best thing in the day's paper. Lord Cromer is well known to have been a life-long friend and admirer of the American people, and his opinions—which, as I think, very rightly, he believes to be shared by his countrymen—are entitled to the greatest consideration in regard to America, the War, and the Allies. The sum total of these opinions is that neither Great Britain nor any of her Allies will look to America for a solution of the struggle in which they are at present engaged. We do not want a patched-up peace; the only peace tolerable would be that dictated in the name of right and humanity to a thoroughly defeated foe, and we are out to fight till we get it. No less is possible if we are to retain any of the fruits of the labours of nearly two thousand years.

***

A few days ago I was talking to an old sea captain about the difficulties of navigation in the Red Sea. He did not know those waters well, having spent most of his sea-days on the Atlantic and the Pacific, but he agreed that they were not exactly easy going, owing to the paucity of lights; and he told me of a curious experience of his own. He was once passing down the Sea, he said, when he picked up one of the few lights—the Dedles, I think he called it, but I am not sure. But just as he came abreast of it the light suddenly went out, or, at any rate, disappeared. Consulting his authorities, he could find no indication of the light being invisible from any particular direction, as is the case with some others, and, naturally, he felt slightly uneasy. Fortunately, all went well, and he eventually reached Aden safely. But, he added, he had always wondered "whether they only showed the light when they saw a ship approaching."

***

This suggestion rather startled me, for, corsair though I be, I have a large respect for lights at sea, and the idea of such economy as that suggested by my informant's remarks did not commend itself to me. I said as much, and hinted that he might be trying to pull my leg, since lights at sea were *always* kept going o' nights, save, of course, in war time. But he laughed, and told me of another case within his own knowledge; and as it happened in Near Eastern waters I may pass it on. An English vessel coming from Sicily to Corfu had to pass a certain point which by all the rules and regulations should have showed a light. But the skipper could see no light, nor could anyone else on board; so having, by good fortune and extreme care, avoided losing his ship, the irate sailor proceeded to his Consul and lodged a formal complaint. The Consul made inquiries, and in due course was able to inform the sailor that he was right: there had been no light. And the explanation given was that all the olive oil that should have fed it had been used up for cooking purposes!

***

We have not heard much about the Censor of late. Perhaps he took his departure with the Captains and the Kings? But travellers home from Egypt tell a story about him which, though it refers to events many months old, may be new to some readers. A certain popular man in Cairo employed his spare time by acting as one of the Press Censors. The work was difficult—as those who know Egypt will readily understand—and entailed late hours; but he stuck to it, though it was purely voluntary, and exhibited so much tact and discretion that he achieved great success. Then he fell ill and died. The local editors, grateful for the qualities he had evinced, wished to take the opportunity of paying tribute to his ability; and accordingly, at the end of the obituary notices, added a note rendering homage to the sagacity with which he had exercised his functions in often trying circumstances. But the Censor would not pass the note, on the ground that the public must not know who the censors are—or were!

***

The irony of this objection lay, of course, in the fact that everybody in Cairo knew, and knows, quite well who the censors were, and are. For that matter, I am informed, no secrecy had up to that time been observed in respect to the point. Indeed, in Egypt it would be a practical impossibility to maintain such secrecy. But even allowing for the moment that it ought to have been, and could have been, maintained, one wonders what harm any sane person would have thought could be done by the publication of an appreciation of the services of the poor man who was at the time lying in his grave. It would have been a graceful recognition of his assistance, ungrudgingly rendered, and would have afforded intense satisfaction to his family and the Egyptian Press in general. As my informant remarked, "It was just one of those censorial absurdities which would have caused poor old ——, who had a pretty wit and a keen sense of humour, intense amusement. One can almost hear his merry laugh and the sarcastic remark that the relation of the incident would certainly have called forth from him."

***

The "Bull of Bulls," to give the Sultan of Darfur only one of his numerous titles, has been having rather a thick time of it lately, and he will probably regulate his rushes with greater care in the future. The astonishing part of the business is, however, not that he became truculent, but that he has given so little trouble on the whole. To be allowed to remain a real live Sultan when all the adjacent territories were placed under the direction of conquering white men must have seemed a very gratifying tribute to his wisdom and power, and even Sultans are not insensible to flattery, however subtle. It has turned stronger heads than that of Ali Dinar in its time, and it has led to many a quest no less wild and hopeless than the invasion of Sudan territory, which was presumably the aim of Dinar's concentration of troops on our frontier. The whole thing is over now, and the Sultan is a fugitive in the hills; but it was an interesting little campaign while it lasted. Its outstanding feature was the use of an aeroplane for hostile purposes, and it would not have been surprising had the victory been won without any terrestrial fighting at all. I wonder what the hosts of the recalcitrant Sultan thought when they saw the gigantic bird approaching, and received its message from the sky. It is not so long ago since Englishmen looked on an aeroplane with awe, although they knew of its advent and the times were peaceable. It says a good deal for the courage of our foes in the Western Sudan that they could find nerve to fire at—and wound—our pilot when he appeared.

***

According to the latest news from Germany, the Turkish members of Parliament who are now in Berlin have visited the camp for Mohammedan prisoners near that city. Naturally these gentlemen were at pains to show that all went well with the German cause, and especial reference was made to "the extraordinary goodness of the German authorities towards Mohammedan prisoners." Extraordinary indeed, if we are to consider it in comparison with the German treatment of men of their own creed. But will even this last? Perhaps we may judge from the evidence of Boche methods which has been given in the course of the Irish inquiry. The Irish prisoners were well and humanely treated just as long as there was any prospect of their becoming traitors to their King. After that there was a different tale to tell, and I fancy that no love of Islam will stand in the way of German brutality if the Mohammedan prisoners remain loyal to their flag. These little things will not be forgotten in the day of reckoning, and let us hope that those whose trade is the making of traitors will meet with a traitor's fate.

***

Professor Theodore Birt has been thinking, and he has come to the conclusion that the Germans are the heirs of that old Hellenic culture which first made life worth living. If this is indeed the case, something has gone wrong somewhere and the entail has been broken, because no autocracy such as that of the Boche Wilhelm II. can ever inherit the culture of the purest democracy the world has known. Perhaps, however, the Herr Professor is a seer, and looks forward to the day when the Hohenzollerns will be swept from kingship and the German race become human again. Even so, his prophecy does not greatly impress me. The Hohenzollerns may well be swept from the throne; the German people will become tame when they have been sufficiently whipped; but it is too great a strain on one's imagination to connect them with culture—real culture, without the K.

CORSAIR.

NEAR EAST BOOKSHELF.

SYRIA IN THE ROMAN EMPIRE.*

Syria's importance to Rome was due not only to trade, and to the fact that Phœnicia and Palestine formed a natural medium of commerce between East and West, but also to the peculiar strategic position of the country, which made it a valuable base of operations on the frequent occasions that Rome came into hostile contact with the East. While the natural defences of Syria were far from insignificant, they were not of themselves sufficient to serve as a foil against aggression, and so it is not surprising to find the improvisation of lines of defence a continued feature of the Roman occupation. In his masterly work Mr. Bouchier deals in considerable detail with the efforts made to render Syria immune from attack, and it is his opinion that the Romans devoted as much care to the defence of this province as they did to that of the Rhine or Danube districts. About the third century, for instance, two main lines of forts were established on the frontier, the most easterly intended to defend the approaches to Damascus, backed by a strong garrison at Bostra, while another line connected Bostra and Petra. After the defeat of Narses by Galerius in 297 A.D., the whole frontier system was overhauled by Diocletian, and the reforms he introduced were responsible for delaying the Persians' advance by fifty years. In augmentation of the Syrian *limes* he carried a long line of forts from the Euphrates past Bostra and Petra to the Red Sea. He also built a strong camp on the Euphrates, strengthened Circusium, again fortified Palmyra, and established arsenals at various towns, besides improving the harbour at Seleucia.

Rome had to deal in Syria both with a civilization equal to her own and with a half-civilized community, and this aspect renders any consideration of Roman rule in the province of particular interest. On the one hand there were the prosperous Greek and Phœnician cities which, "with their fully developed city life, their extensive commerce and schools of art and literature, had no inclination to borrow much from the West," and for them the Imperial connection meant very little. With regard to the Arab peoples east of the Antilibanus, the situation was different, for, as the writer points out, they were at a stage of development where guidance could be serviceable. This striking difference in population goes far to illustrate the difficulties encountered by the Romans in their administration, and also to explain the comparative absence of the success which attended their efforts in Gaul, Spain, and elsewhere. Syria, when the Romans began its organisation, presented a strange diversity of governments ranging from the city states of the Semites, mainly on an oligarchical principle, to the loose tribal unions of the Arabs, and it is a tribute to the wisdom of the Imperial authorities that these diversities were in the main allowed to continue, with a few salutary alterations, such as the removal of tyrants and the freeing of Greek cities from Jewish or Arabian rule. As to the system which the Romans imposed on Syria, it must be sufficient to say that it does not show any remarkable divergences from the treatment of other provinces, and the main feature to be noted is that, as elsewhere, the guiding principle of *divide et impera* becomes increasingly noticeable as time passes.

Perhaps the most piquant feature in Syria's thorny career as a pawn in the perpetual struggle between East and West, in the course of which her cities were not infrequently ravaged, was the short-lived Syrian dynasty, which owed its rise to the purple to the marriage of Septimius Severus with the daughter of Julius Bassianus, priest of Elagabal at Emesa. The most vivid figure in this brief episode was the eccentric Elagabalus, who brought the sacred emblem of the sun god to Rome and erected temples to that deity there. Mr. Bouchier makes it clear how little taste the Romans had for this religion by mentioning that knights and senators were compelled to watch the ceremonies at the temple in the Palatine, while those inclined to ridicule were severely punished. Every summer, we are told, there were also magnificent processions to a temple in the suburbs conveying the sacred stone:—

> The emblem was carried in a gold chariot enriched with precious stones, and drawn by six horses, all white, with trappings of gold. The emperor himself ran before, holding the reins, his steps supported by attendants; torch-bearers accompanied him; wreaths, flowers, even gold dust were strewn in his path.

The whole question of religion in Syria, of which the worship of Elagabal is merely an unimportant phase, is an exceedingly complicated subject, and one that offers an exceptional field of research to the student of comparative religion. The rise of Christianity was contemporaneous with the decay of the ancient cults, and their decline was accompanied by the growth of superstition, which took the form of a belief in the activity of demons. Thus, Libanius and Chrysostom described the outbreak at Antioch under Theodosius as due to the malevolent action of demons, while Lucian mentions a Syrian who could expel any demon, provided the remuneration was satisfactory. It is interesting to note that the Jews of Antioch were not free from these beliefs, and their synagogues were reputed to contain powerful spirits. One of the strangest manifestations of this superstitious tendency was the rise of a society of occultists in the school at Berytus. This society was severely repressed by the authorities, and its books were publicly burnt.

Considering the conditions, it seems not a little strange that Syria should have produced not a few writers and poets of distinction, and, indeed, should have proved a field of surprising literary fertility. In the early period, which covers such names as Meleager, Philodemus, and Archias, most Syrian writers found it necessary to seek their fortunes away from home, Mr. Bouchier's explanation of this being that at the time there was no large reading public in Syria, and "the Seleucid kings were never great patrons of learning, the early Roman governors and officials still less, and the cultured middle class of older Greek towns was slow in appearing." Later on there are the New Testament writers, Josephus, the historian, and Lucian, the sophist, not to mention many others. If Roman Syria had no other claim to remembrance, her literary achievements of themselves would ensure her a place in posterity.

* "Syria as a Roman Province." By E. S. Bouchier, M.A. (B. H. Blackwell, Oxford. 6s. net.)

BOOK NOTES.

The Sufi Publishing Company has issued (at 2s. 6d. net) "Sufism: Omar Khayyam and E. Fitzgerald," by C. H. A. Bjerregaard.

Messrs. Luzac have published "Maliki Law," by F. H. Buxton, Political Department, Nigeria. The book, which is issued by order of the Governor-General of Nigeria, is a summary from French translations of the Mukhtasar of Sidi Khalil; and Maliki Law is the form of Moslem law prevalent in North Africa and Upper Egypt.

Messrs. Duckworth and Co. have published "The Passing of Nahla," a story of Egypt, by Bey Somerville.

AN EARLY ARAB WARRIOR-POET.

Speaking on Wednesday at the annual conference of the Société Internationale de Philologie, Sciences et Beaux-Arts, Mr. Syed M. El-Ehsan El-Bakry said that Arabic was the language richest in poetry in the whole world, and every Arab was a poet. There were three schools—the Gahilieh of the period before the coming of Islam, the Sadr-ul-Islam of the period of Islamic power and civilisation, and the modern poets who were chiefly Egyptians and Syrians. The greatest Arab poets appeared in the first period. Never before or since had poetry a greater hold over a people; every year there were meetings at Suk Ikaz, the principal market, when poets recited their verses and competed for the envied laureateship. Poetry was even worshipped, and seven poems were hung in the Kaaba to receive the adoration of pilgrims. Among these early poets was Antar, born about 498 A.D. His mother was a black slave, and at first Antar was treated as a slave himself. One day, when the tribe was attacked by another tribe and defeated, Antar sat apart looking after the cattle. His father called to him, asking why he took no part in the fight, and he replied that such was not the duty of a slave, but of a free man. The father, moved by the answer, promised his son his freedom if he would join in the battle, and Antar went forth at the head of the remaining tribesmen, completely defeated the enemy and freed the captives they had taken. Thereafter he became the greatest warrior of his time, as well as the greatest poet. He fell desperately in love with his cousin Abla, wrote poems in praise of her beauty, and fought many desperate battles with his rivals before he became possessed of her. His death was like his life. Mortally wounded, he remained sitting on his horse and facing the foe so as to give his wife time to escape to the tribe. Such was the fear he had inspired that none of the enemy dared approach, until noticing that he did not move but remained leaning on his spear, some of them rode up and found that he was dead.

The lecture was illustrated by quotations from Antar's works. An interesting discussion followed.

Roumania has recently celebrated the tercentenary of Shakespeare. At Bucharest great audiences of Roumanian students assembled in the institute known as the King Carol's Foundation, where speeches were delivered on the works of England's greatest poet.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. June	1916. May.		1334. Rejeb.	5676. Sivan.
2	20	Friday	30 Shaaban.	1
3	21	Saturday.....	1	2
4	22	Sunday	2	3
5	23	Monday	3	4
6	24	Tuesday	4	5
7	25	Wednesday	5	6
8	26	Thursday	6	7

Saturday is the birthday of H.M. the King.

King Peter of Serbia, who has completed his cure at Edipso, is going very shortly to Chalcis, where he will spend the summer.

H.H. the Zil-es-Sultan arrived in Petrograd last week on his way to Persia. He was accompanied by Major Swift. He is expected to make a stay of some duration in the Russian capital.

Prince Christopher of Greece visited the King and Queen at Buckingham Palace last Friday and took lunch with them.

On Saturday H.R.H. accompanied Queen Alexandra to the concert given by the massed bands of the Household Brigade at Albert Hall in aid of the Prisoners of War Fund of the Household Brigade.

On Sunday Prince Christopher was present at Divine service at the Marlborough House Chapel.

Prince Antoine Bibescu, First Secretary to the Roumanian Legation in London, has returned to town from Wales.

The Austro-Hungarian Government has notified M. Take Jonescu that his name has been removed from the list of those decorated with the Order of the Iron Crown.

Sir Louis Mallet was one of the first visitors who called on Mr. Asquith on Monday afternoon on his return to town.

The Sultan of Egypt has conferred the 3rd Class of the Order of El Kamel upon Mme. Valentine Rolo, lady-in-waiting upon H.H. the Sultana.

Countess Percy has given birth to a daughter at 3, Upper Belgrave Street. The child is Earl and Countess Percy's first daughter, their two other children being boys.

The engagement is announced of Captain John Francis King, 3rd Battalion, Suffolk Regiment, only son of Mr. John King, of Wandsworth Common, London, and Helen Muriel, eldest daughter of Dr. M. A. Ruffer, C.M.G., of Bulkeley, Ramleh, Egypt.

The marriage arranged between Lieutenant Donald Carey Brock, R.N., Flag Lieutenant to the Senior Naval Officer at Gibraltar, youngest son of the Rev. and Mrs. H. Walter Brock, of the Rectory, St. Pierre du Bois, Guernsey, and Jocelyn Florence, younger daughter of Admiral and Mrs. John Denison, of Rusholme, Alverstoke, Hampshire, will take place quietly at Gibraltar about June 21.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek. tc. , rapidly taught by natives.
Σχολή γλωσσων. Διδασκαλια ουσιημαυμή. Διερμηνετς ιγδ.
Lyceum Institute, 85, New Oxford Street, and 64, Haymarket.

The wedding of Mr. Norman Macnaghten and Miss Ida Gunning took place on May 9, at All Saints' Church, Cairo, the Rev. C. T. Horan officiating. The bride was given away by Sir Ronald Graham, and Mr. W. S. Roberts acted as best man. The ceremony was a very quiet one, no invitations being issued.

By a slip of the pen, our Cairo Correspondent omitted to include in the list of names of the building committee for the new Cathedral in Egypt that of Sir Alexander Baird, one of the original committee of All Saints' Church.

The Salonika correspondent of the *Times* reports: The correspondent of a Constantinople newspaper, who had an interview with General Townshend before his departure for Baghdad, quotes the General as saying:—"I and my staff are deeply impressed by the chivalrous attitude to us of Halil Pasha. Our ease and comfort have been consulted, and all our wants attended to in a manner beyond expectations. Be assured we will never forget his magnanimity." The correspondent adds that General Townshend was very pleased at the prospect of being sent to Constantinople.

General Friend, who has been giving evidence before the Dublin Commission, was at one time, the *Globe* reminds us, director of works and stores of the Egyptian Army and of Egyptian Public Works, assistant director of fortification works, and served with no small amount of distinction in the Omdurman campaign.

At the Greek Church in Moscow Road, Bayswater, on Sunday, a *Te Deum* will be sung after the morning Liturgy in celebration of the anniversary of the name day of the King of the Hellenes.

Writing under date of May 12, our Cyprus Correspondent reports:—The amateur theatrical performance given by members of the British community in aid of blinded soldiers and sailors, on the evening of May 10, was a great success. Sir John and Lady Clauson were present, and both the English and Greek communities were well represented. All the parts taken were admirably filled by those who gave their services.

Mr. T. H. Mawson, whose work in connection with the re-planning of Athens is familiar to our readers, has received permission to dedicate his book, "Athens: Past, Present, and Future," to the King and Queen of Greece.

In his moving description of the extraordinarily generous welcome extended in Switzerland to the first party of British prisoners of war to reach Zurich, the special correspondent of the *Times* reports that Colonel H. P. Picot, "appointed by the War Office as official *parrain* of all the British prisoners in Switzerland, was waiting to receive our men and make the journey with them to Chateau d'Oex." Afterwards, at Montreux, when the Swiss inhabitants gave our men a breakfast at the Suisse Hotel, Colonel Picot was one of the speakers. The whole journey was made the occasion of such warm demonstrations of sympathy and of goodwill towards this country that Colonel Picot's friends will certainly be tempted to envy his good fortune in taking part in it; though his responsibility is not a light one, since the number of British prisoners in Switzerland is expected to reach a total of about 1,300.

A telegram from Constantinople received in Amsterdam states that Enver Pasha for some time has been travelling in Anatolia. On May 25 he stayed in Baghdad.

Her Majesty Queen Alexandra, Princess Royal, Princess Victoria, Princess Maud, and the Grand Duchess George of Russia have all promised to visit the Caledonian Market, Islington, on the first day of the great two-days' rummage sale to be held on Tuesday and Wednesday, June 6 and 7, in aid of the funds of the Wounded Allies' Relief Committee, Sardinia House, Kingsway, W.C.

M. A. Levitch, the Secretary-General to the Serbian Minister of Finance, arrived in London from Corfu on Sunday.

Our readers, both in Roumania and the City, will be pleased to learn that Mr. H. Locke, former sub-manager, has been appointed secretary of the Bank of Roumania and manager in London.

A party of wounded soldiers from Manor Court Army Nursing Home, Folkestone, were the guests of Lord Kitchener at Broome Park during the week-end.

A meeting of the General Committtee of the Montenegrin Red Cross and Relief Fund, presided over by Sir Roper Parkington, was held last Friday at Claridge's Hotel to receive a report from their Commissioner (Mr. Alex. Devine), who had just returned to London. Several resolutions were passed, both in reference to the organisations of the fund in France, Italy, and Switzerland, and also with regard to important developments of the work for Montenegrin relief now in process of arrangement.

The reception with which the Société International de Philologie, Sciences et Beaux-Arts inaugurated its forty-first annual conference was a very bright and pleasing affair. It was held last Tuesday evening at the Société's premises in Upper Bedford Place. There were representatives from every Continent, and many of these wore native dress, thus adding colour to the picture which the assembly presented; and many languages were spoken. Among those present were H.H. Prince Abdul-Karim Khan, who made a short speech in the course of the evening, Mr. Syed M. El Ehsan El Bakry, who recited in Arabic, and Messrs. M. Lakhani, Dr. Hassan Ali, M. T. Kaderbhoy, Erfan Ali, and Suleiman Dauod. The guests were received by the newly-elected president, Mr. Jaakoff Prelooker, and Mrs. Prelooker, and by the secretary, Dr. Henri M. Léon, Dr. Léon wearing for the occasion the official costume that belongs to the days when he was in the service of ex-Sultan Abdul Hamid. Mr. W. Zélin played Oriental and other music on the piano, and Madame Slana Krassavinia, prima donna of the Petrograd opera, sang. A short play was performed in the course of the evening, and there was an interesting exhibit of microscopic objects.

At Tuesday's meeting of the French Cabinet a letter was read from the Crown Prince of Serbia congratulating the French Navy on the transport of Serbian troops from Corfu to Salonika.

On Tuesday, at Hull, a sale was held of some outlying farms and land on the Seedmere estate, belonging to Sir Mark Sykes, M.P. Several lots were withdrawn, but the sale realized over £30,000.

Dame Florence Barbara Mary Baker, of Sandford Orleigh, Newton Abbot, Devon, who died on March 11 last, the first white woman to visit the lake region in Central Africa, widow of Sir Samuel White Baker, the famous Central African explorer, left estate of the gross value of £11,448, of which £11,333 is net personalty. The testatrix left the proceeds of the sale of the remainder of her furniture and personal effects, etc. (some having been specifically bequeathed to her stepdaughter), to form an endowment fund for the Cottage Hospital at Newton Abbot "in memory of Sir Samuel and Lady Baker."

Now that Lady Maud Wilbraham, with the assistance of Miss Hope-Clarke, 2, Crescent Road, Wimbledon, has by means of her "Silver Thimble" ambulances movement provided the three hospital boats asked for, which are being used on the Euphrates and Tigris rivers, her efforts are being directed to raising £2,000 with which to endow a bed in the Star and Garter Home for Disabled Sailors and Soldiers.

The Massalji, or Turkish story-teller, was the subject of an interesting address delivered yesterday by Dr. H. M. Léon at the Conference of the Société Internationale de Philologie, Sciences et Beaux-Arts. We hope to publish a short report in our next issue.

APPOINTMENTS, PROMOTIONS, Etc.

In a message dated May 29, the Cairo correspondent of *The Times* reports: The retirement of Sir Malcolm M'Ilwraith, Judicial Adviser to the Sultan, is announced. Sir Malcolm has presided over the Judicial Administration in Egypt for eighteen years, having succeeded Sir J. Scott in 1898. During his tenure many important international legal questions have been settled, and the Administration completely reorganized and united. To-day the state of justice in the country is in the highest degree satisfactory. It is expected that Sir William Brunyate will succeed him.

The *Times'* Correspondent in the Balkan Peninsula says that the retirement of M. Blondel, the French Minister at Bucharest, is believed to be to some extent due to the diplomatic situation. M. Blondel was one of the principal authors of the Treaty of Bucharest.

The King has been most graciously pleased to confer the Military Cross upon Major Clement Leslie Smith, V.C., Duke of Cornwall's Light Infantry, and now in command of the Egyptian Camel Corps, and Saghkolaghassi (Adjutant Major) Mohammed Effendi Fuad el Seynfi, Camel Corps, in recognition of their distinguished services in the field from April to June, 1915, during the operations against Jebel Miri District, Nuba Mountains Province, in the Sudan.

Dr. Heinze, a Judge of the Supreme Court at Leipzig, and formerly member of the Reichstag for Dresden, has been appointed Under-Secretary of State for the Turkish Ministry of Justice.

Mr. Leopold Jullien, the manager of the Union Foncière d'Egypte, is now in the automobile service of the French Army and is stationed at Pierrelatte.

OBITUARY.

M. NICOLAS GANE.

Our Bucharest Correspondent writes (May 9):—I regret to record the death at Jassy of M. Nicolas Gane at the ripe age of eighty years. He was a sympathetic figure of a generation which is now all but extinct, and one of the builders of the young Roumanian State. In the course of his long career of unremitting labour he occupied a number of high offices, to which his intelligence, probity, and activity gave an additional dignity. He was repeatedly deputy and senator, on several occasions prefect of different departments, five times Mayor of Jassy, twice President of the Senate, and in J. C. Bratiano's Government of 1888 he held the portfolio of Agriculture. But this account of his activity is incomplete, for if to the mass of his fellow-countrymen he was known as a clear-headed, hard-working magistrate and politician, he will be remembered by a minority for his labours in the literary field. He published works of real worth, devoting much of his time to the history of Roumanian literature. In 1908 he became a member of the Academy, and he subsequently translated Dante's "Inferno" into Roumanian verse.

It is now officially announced that Lieutenant H. O. B. Firman, R.N., who was the officer in command of the ship which made the gallant attempt to take supplies up the Tigris to Kut on April 24, was killed in that attempt. He was previously reported "missing, believed prisoner." Lieutenant Firman was the only son of Mr. Humphrey Brooke Firman, late of Gateforth Hall, Selby, Yorkshire. Born in 1886, he joined the Britannia in 1902 as a naval cadet, and became midshipman in 1903. He was promoted to sub-lieutenant in 1907, and was selected for service in the Royal yacht Victoria and Albert, being specially promoted lieutenant in August, 1908. He held the Persian Gulf and Somaliland medals. On the outbreak of the war he was serving in H.M.S. Hannibal, but soon afterwards was selected as first lieutenant of the Proserpine, which post he held until January, 1916, when he was selected to command a river gunboat on the Tigris, in the operations directed against Baghdad and for the relief of Kut-el-Amarah. It was proposed, after all efforts had failed to relieve the garrison, to try to convey provisions to General Townshend's force. It was a forlorn hope, but he cheerfully volunteered for the duty. The approaches to Kut were too strongly defended, and the vessel went aground near Magasis, about four miles from Kut, and was captured.

It is officially announced that Lieutenant-Commander Charles H. Cowley, R.N.V.R., who was previously reported missing on April 24, is now reported killed on that date. We understand that he met his death while taking part in the gallant attempt to take a shipload of food through to Kut for the relief of the beleaguered garrison. Lieutenant-Commander Cowley was, before the war, in command of one of the British steamers owned by the Euphrates and Tigris Steam Navigation Company and engaged on the Busreh-Baghdad service. The eldest son of the late Captain Cowley, who was the senior captain in the same service, and was well known to and liked by all travellers to Baghdad, he had been in the service of the E. and T.S.N. Co. for many years, and had a most intimate knowledge of the Tigris and its navigation, and he had also served on the Karun. Like his father before him, he was an extremely popular officer. The Cowley family is one of the best known and respected in Baghdad, and much sympathy will be felt with its members in the loss they have sustained. That sympathy, it is safe to say, will be shared by many of the natives of Baghdad, amongst whom the family, by reason of its long connection with the city, its hospitality, and its constant readiness to help whenever help was needed, is held in high respect.

It is officially announced that Captain George Alexander Brown, Royal Engineers, died of pneumonia on May 27. He had retired before the outbreak of war, but volunteered for further service, and was gazetted for re-employment in September, 1914. Born in March, 1859, he served for twenty-one years in the ranks, and afterwards for three years as warrant officer, while in April, 1901, he received the rank of lieutenant, and in 1910 was promoted captain. He took part in the Sudan (Nile) Expedition of 1884-5, and had the Egyptian medal with clasp and the bronze star, and he was also employed with the Frontier Field Force in the Sudan in 1885-6. In the South African War (1899-1902) he again won distinction, and was decorated with the Queen's medal with three clasps and the King's medal with two.

The death is announced of Mme. Dieulafoy, wife of M. Marcel Auguste Dieulafoy, who assisted her husband in his archæological travels in Persia.

Brigadier-General Gerard Beechey Howard Rice, Indian Army, who died on May 7 from cholera, aged fifty-one, was the grandson of the famous Nile explorer, Captain the Hon. C. L. Irby, R.N.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

MARRIAGE.

FULLER—HAGGARD.—On May 15, at Alexandria, Egypt, Major Brian Maitland Fuller, Dorset Regiment, youngest son of the late George Fuller, of 71 Lexham Gardens, Kensington, to Olive Phyllis, only daughter of the late Colonel and Mrs. Claude M. Haggard.

DEATHS.

JOSEPH.—On May 15, at Little Nook, Gerrards Cross, after a very short illness, Elizabeth Mary Joseph, wife of W. O. Joseph, of Pont de Koubbeh, Egypt, and Gerrards Cross, Bucks.

MAY.—On May 25, at Zeitoun, Cairo, Winifred May, the beloved wife of Herbert Bunnell May, and daughter of James Charles and Ellen Horsey, of Amherst Park, London.

WHERE TO STAY.

FRIDAY, JUNE 2, 1916.

THE BULGARIAN INVASION OF GREECE.

An important and not altogether unexpected development has taken place in the Balkan situation. The Bulgarians have crossed the Greek frontier to the east of that portion of Macedonia occupied by the Allies, and have taken possession of one fort and have approached the town of Demirhissar. So far, the information regarding their movements is of a meagre description, and points to a reluctance on the part of the Greek Government to divulge more than it is obliged. A few shots were fired by the garrison of Fort Rupel, but, acting on instructions from Athens, the Greek troops then withdrew, handing over the fort to the German officers accompanying the invaders. It is reported that Bulgarian columns are also grouped along the eastern frontier in the neighbourhood of the pass through which the railway to Dedeagatch runs. If this should be true, it points to a comprehensive invasion of the eastern portion of Greek Macedonia, and if the Greeks continue the policy adopted in the case of Fort Rupel, they will see Seres and Kavalla pass into the hands of the Bulgarians and Germans. The enemy's intentions are not yet established. They may at last be launching the long-promised attack, which is meant to drive the Franco-British forces into the sea. In this case they would naturally try to surround, as far as possible, the territory occupied by the Allies in order to converge upon Salonika from three directions. Again, they may be uneasy at the prospect of an Allied advance, and have decided that it was not sound strategy to leave so much ground uncovered on their flank, especially as the Greeks might sooner or later change their attitude and use this very district for an invasion of Bulgaria. Finally, there may be a third explanation. The Bulgarian army is known to have become restive under the existing conditions of disheartening inactivity. It has been inclined to argue that with the conquest of Serbia its work is done, and that it ought to be demobilised. By sending it against Kavalla the Bulgarian Government may hope to still its murmurings, and, incidentally, to secure for it fresh supplies. While the Greeks are told that the occupation of Greek Macedonia is forced upon Germany and Bulgaria by a temporary necessity, the Bulgarian soldiers will be encouraged to believe that they are now about to round off a successful campaign by seizing the balance of the territory to which they claim a prescriptive right.

That the Greek nation will relish being made the doormat of Europe at war no one acquainted with it will for a moment believe. President Wilson has introduced the conception of a people too proud to fight; but such a description ill accords with the spirit of a country which gained its independence at the point of the sword, flung itself in 1897 with unwise precipitancy against Turkey for the sake of its Cretan brethren, and four years ago, more sanely equipped, couched a lance for the people of Macedonia. The mere thought of the Bulgarians in occupation of territory for the time being Greece's own has stirred the nation to its depths. Whether it will allow its indignation to find a logical vent remains to be seen. The present situation, as has been pointed out, cannot be regarded as unexpected. Indeed, King Constantine has all along contemplated it with equanimity. Greece, he has declared in one or other of the Palace interviews which have enunciated Greek foreign and domestic policy, did not bargain for the presence of the Allied Powers on Greek soil; the Government is irrevocably committed to neutrality, and if the other group of belligerents elect to cross into Greece in order to drive their enemies out of the Balkans, it will raise no objection, but preserve a strict attitude of neutrality. Those interviews, however, were given when to the Greek mind it appeared not at all unlikely that the Central Powers would make short work of the Allies' occupation of Salonika. German threats in this direction have been a long time in materialising. The Allies have proved most exasperating from the point of view of the Greek Government; they will do nothing themselves, as far as military achievements are concerned, but they prevent the enemy from effecting anything decisive; meanwhile their occupation of Greek territory, in spite of the Government's protests, is popular with the whole country, especially with the portion where their troops are, which includes the second city in Greece. On the other hand, we may imagine King Constantine and his Ministers sadly reflecting, similar action on the part of the Central Powers, to whom they themselves are not unfavourably disposed, has only to be taken in regard to a few unimportant forts and some mountainous country, and a cry is raised from one end of Greece to the other. The explanation of this phenomenon must be left to the Greek authorities, although the outside world, which, with none of the actual experiences of a Greek population in Bulgarian hands to guide it, simply recalls the record of the Germans and their Allies at war, will have little difficulty in understanding the Hellenic nation's point of view.

But the more serious the situation as it presents itself to the Greek mind, the greater the need for the nation to close up its ranks in the face of an admitted danger. Lapse of time has probably made such a course easier. King Constantine's protestations of friendship for Great Britain and her Allies showed that the mainspring of his policy was fear of Germany. There has been time for this obsession to wear off; German militarism has been too long in making good. We refuse to believe that a King deservedly popular in his own country has failed to appreciate the inwardness of public feeling towards the war—that the sympathy felt for the Allies is instinctive, born of the knowledge that Greece owes to the Entente Powers its very existence, while any following that the Germans have among the Greeks may generally be traced to a pecuniary origin. If the Bulgarians advance on Kavalla, it is almost incredible that the Greeks should tamely evacuate a town on which they have spent so much labour and money as to render it virtually impregnable in the hands of a resolute force. The Bulgarians, therefore, will either have to fight for Kavalla, if they want it, or must pass it by and, ignoring the Greeks, continue their operations against Salonika. Whether Greece will remain a passive spectator with Bulgarians in possession of the neighbouring country must remain for the present an open question. She will not be urged to fight by the Allies, although they will be ready to welcome her co-operation. Her rulers have proved false to one treaty, and allowed Great Britain to expect help in an attack on the Dardanelles which was not forthcoming. If Greece declares war on Bulgaria now, it will not be with the idea of aiding the Allies, who no longer need her support, but it will be for the purpose of protecting Greek interests, and, we may hope, of welding the nation into one harmonious whole again. In order to bolster up an unpopular policy King Constantine has had to revive the political passions which have been the bane of Greece in the past. The country has an opportunity now of being freed once more from this incubus by the ordeal of war. For this reason we trust that the antagonism between the Crown and M. Venizelos is not irreconcilable. Their differences have been largely the outcome of German intrigue, and if the menace to Kavalla causes King Constantine to modify his former policy he owes it to the man he has wronged to reinstate him in office, in order that the country may present a united front to the enemy.

SULTAN HUSSEIN'S TOUR.

(From our own Correspondent.)

Cairo, May 15.

As has ever been the custom of the ruler of this country, the Sultan, since his accession, has almost every week said his Friday prayer in a different mosque, according as his official residence has been Cairo or Alexandria. His Highness has, however, lately made two important departures. In the first place, he has visited Al Azhar Mosque for the weekly prayer, and secondly, he has begun a round of visits to the most celebrated mosques in the Delta, commencing with the Al Ahmedy Mosque at Tanta. Both departures are entirely due to his own initiative.

His Highness knew that the Mosque of Al Azhar was the fountain-head of Moslem learning in Egypt, and for matter of that in the world, and that it reflected the trend of Mohammedan thought and feeling from the very fact that its several thousand students come from, and its graduates are to be found at, the four corners of the universe. No sovereign had visited the Mosque for the purpose of prayer for more than a generation. His Highness decided to break with precedent, and, while offering up prayer in this ancient and historical building, to test the feeling of his Moslem subjects towards him, and find out whether, since his accession to the throne, he has enjoyed the popularity that was peculiarly his when he was plain Prince Hussein Pasha Kamel.

No extraordinary preparations were made for giving effect to this resolution; although it was admitted that no one could foresee what would take place at the Mosque. His Highness, refusing to allow any special place to be set aside or prepared for him, took up his position in the front row of the worshippers, with the Princes of his family, the Ministers and prominent Moslems on either side of him. Evidently the spectacle of the ruler of the country standing in their midst and offering up the customary Friday prayer without any *fantasia* or pomp, but in all the humility and simplicity decreed by the Prophet, appealed to the many thousands assembled within the vast building; for, when, at the conclusion of the ceremony, Sultan Hussein walked through the class-rooms and corridors, he was accorded a great ovation, which was as spontaneous as it was wholly unexpected. In short, the Al Azhar visit proved an unqualified success.

The visit to Tanta was equally successful, and equally made its impression on the Moslem community in general. The Sultan, accompanied by the Palace staff, travelled down by special train to that town, where he was received on arrival by the Mudir and his staff. From the station his Highness proceeded to the Al Ahmedy University, one of the most important religious educational institutions in the country, where he was received by the Ulema, the Grand Sheikh of Al Azhar, the Grand Mufti, and various other prominent Moslems. He visited the different class-rooms, and after addressing the students and professors left amid a veritable ovation, and proceeded to a special marquee, where he held a reception of the notables of the Mudiria and made them a speech. The text is well worth reproducing, as it is typical of the addresses which his Highness has systematically given to all assemblies of his subjects with whom he has come in contact since his accession, and it illustrates the line of conduct which he has tried to get his subjects to follow. His Highness said:—

"I am very pleased to see you to-day in this town where I spent three years thirty-four years ago, when I was General Inspector of the Provinces. I saw your fathers and grandfathers during that period, so that I am not a stranger to you. To-day I notice considerable progress in Tanta, schools and religious institutions having been established, which was not the case when I was here formerly.

"In fact, Tanta is not the only town which has made progress. The whole country has undergone considerable development, all of which is due to the untiring efforts of the Government and the energy of the people. One of the most important directions in which development has been made is in irrigation. If we cast our thoughts back we find that forty years ago only the canals, such as the Jaffaria and Bahr Shebin, irrigated—and then very sparsely—a part of the cotton in summer and that the rest of the cotton area was irrigated when the Nile rose. The comparison of the state of affairs at that time with what it is to-day is striking. The Irrigation Department has done excellent work, and has spent a large sum in the improvement of the irrigation system and the construction of drains, which were greatly needed by the country. At the present moment the financial crisis has delayed the completion of these drains; but the Government will continue to interest itself in the question, and will complete in due course the work which has been started.

"Many schools and Kuttabs have been established, but they have not yet attained the object which we looked for. Science alone is not sufficient; it must be accompanied by moral education and good conduct. We notice that you are all educating your children with a view to their obtaining employment under the Government. This is, however, quite impracticable. You should educate your children and encourage them to take up commerce, industry, and agriculture. It would be a good example for other provincial councils if your council were to establish schools for women teachers. The most essential and effective means of promoting the welfare of the nation is the education of the girl so that she may eventually become a helpmate to her husband and her family. I do not mean that a girl should be taught to wear costly dresses. It is our duty to learn economy, of which we are in great need. Our country is agricultural, but we have so far only reached a low standard in comparison with other countries. We are now going through a financial crisis; but those who have visited Europe are of the opinion that we are, comparatively speaking, in an enviable state of prosperity. We send millions of pounds abroad every year to pay our debts, so we should economise, so as to save these millions, and thus assist towards the welfare and prosperity of the country.

"Agriculture cannot be improved without syndicates, and I must draw your attention to the necessity of establishing these syndicates, which would be of great assistance to the cultivators.

"I now address the Omdahs, and I should like to impress upon them that they hold Government posts, but that they also stand in a paternal position towards their fellow-countrymen. The Omdah resembles a father of a family; if he and the Sheikh of Ghaffirs administered justice with fairness and kindness, the result of their work would be excellent, and we should hear no more of breaches of public security.

"On my way to Tanta I conversed with the Minister of Public Works about irrigation; his administration is doing its utmost to help the farmers. I may draw your attention to an incident which I think is worthy of consideration. When, some years ago, I visited Italy in order to study the question of co-operative syndicates, I met a farmer who owned a farm of fifteen feddans. I found him lifting water from three wells sunk in his land, in which there was a canal. I asked him why he took the trouble to irrigate his land from wells, when he had water running so near to his farm and could irrigate his farm without trouble. He replied that it was the time of rotation and that he had already taken his share of water from the canal. He said he must allow his neighbours to take their share also; for he did not like to rob others, so that others should not rob him. I asked him how he knew that this was rotation time, and he replied that he could read well, and that he read the notice of rotation, which had been placed by the Government at the entrance to his farm. If every one of us knew his duty like this farmer, there would be no complaints of insufficiency of water, and in fact water would suffice for all.

"We have studied the question of the coal that will be required for your lifting engines during the coming months of low Nile. We have imported a small quantity, and a Committee, presided over by the Minister of Public Works, has been created for the distribution to those who need coal for the irrigation of their lands.

It would be a good thing for you all if you were to put aside all matters likely to lead to disputes, and if you were to get on peacefully together. I do not mean to criticise you, but to encourage you to help one another; for this is all in your own interests and in that of your country. Your province is the largest in Egypt, and contains about 900,000 feddans of uncultivated land, which I hope may be turned into a cultivable State. Remember that my happiness depends on your happiness, and the prosperity of my family depends upon your prosperity. We are now under a new regime, and all the Ministers join me in doing their utmost for the good of the country. I have visited this largest town in the provinces, and shall visit the others in due course. All that I say to you is in the form of advice. I am a *fellah*, like yourselves. Remember that I did not make any efforts to become Sultan of Egypt, but my accession was brought about by the will of God, and I shall do my utmost as long as I live for the promotion of the welfare of this country and of that of its inhabitants."

The address was listened to with attention by all the notables present. At its conclusion his Highness conferred decorations on various persons, and then proceeded to perform his Friday prayer in the Ahmedy Mosque. The same procedure as at Al Azhar was followed, and a similar ovation was accorded him at the close of the service. The Sultan then gave a luncheon party, and after holding another reception he left again for Cairo amid the acclamations of the people and of the religious students.

During the next few weeks his Highness proposes to visit the Dessuki and other celebrated mosques in the Delta. From the tone of the local Moslem Press and of the conversations of the Moslem people, there appears no doubt at all that his visits are having the happiest effects, and are bringing about a rapprochement between the masses and their ruler without in any way affecting the good relations existing between the latter and the British authorities. This is in itself a highly satisfactory feature, for in the past cordial co-operation (or, shall I say, sympathy between the people and their sovereign?) has always been in inverse proportion to the existence of those relations between the Palace and the British representatives. The reasons for this are well known to all who have any acquaintance with the inner history of Egyptian politics, and no useful purpose would to-day be served by dwelling upon them. It is a

NORTH BRITISH AND MERCANTILE INSURANCE CO.

Digitized by Google

matter for sincere congratulation that those causes are steadily being eradicated, and it is no exaggeration to say that their disappearance, which is for the good of the country and of the Empire, is entirely due to the untiring efforts of Sultan Hussein.

When the history of this country during the past two years comes to be written, the historian will assuredly give a prominent place to the attitude taken up by Hussein I. and to the courageous manner in which, despite all difficulties, he has stuck to his task and has sought means for getting into closer touch with his people. The visits to Al Azhar and to Tanta, the two main centres of potential fanaticism, stand strikingly to his credit, especially when one considers that, owing to the circumstances amidst which he ascended the throne, he lost a good deal of his popularity, and was held up to the masses by agitators and malcontents as a man who had sold himself and his country.

Sultan Hussein has loyally and pluckily stood to his purpose and performed the duty which his exalted position imposed upon him. He has not swerved one whit from the cordial co-operation which at the outset he promised the British Government, and which his past record had led them to expect from him. At the same time he is, by his dignified attitude, his constant solicitude for the welfare of the people, his sympathetic, though on occasion critical, treatment of his subjects, and his unbounded liberality, succeeding in weaning them, Nationalists as well as *fellaheen*, from their previous misguided train of thought, and making them realise that Sultan Hussein I. is the same Prince Hussein Kamel Pasha whom they knew and respected of old; but that he is widely different in his conduct and personality from the ex-Khedive, Abbas Hilmy II., at whose hands they one and all suffered so bitterly. This personal achievement is on its own merits worthy of record, but it is even still more worthy of record when we take into consideration the fact that Egypt is now an integral part of the British Empire, and that this country is in very close relationship with all the Moslem communities owning allegiance to the King-Emperor.

ILLITERATES AS SOLDIERS.

(From Our Bucharest Correspondent.)

The *Journal des Balkans* gives some interesting facts with regard to the proportion of illiterates in various countries, as indicated by the degree of instruction possessed by the recruits of their respective armies. The number of illiterates in certain countries is as follows:—Serbia, 45 per cent.; Bulgaria, 28 per cent.; Italy, 30 per cent.; Belgium, 10 per cent.; France, 4.8 per cent.

Roumanian statistics on this subject have not been published regularly in recent years, but there are a few available facts. Thus the 1909 class of recruits had, in the year 1910, a percentage of illiterates amounting to 43.2; the following year the percentage had dropped to 41. The 1914 class had a percentage of illiterates in 1915 of rather less, namely, 37. So that there seems to be a distinct improvement noticeable in the last years, and this is the more striking if we compare the present percentage of illiterates among the Roumanian recruits with that of 1900, when there were registered no less than 67 per cent.

ARREST OF CYPRIOTS IN ATHENS.

Our Cyprus correspondent writes (May 14):—In connection with the bomb-throwing outrage at the Bulgarian Embassy, two Cypriots were arrested on suspicion of being implicated. They were in the Government service, but had been transferred some time ago to Lemnos, whence they obtained leave to visit Athens for Easter. A short examination, however, convinced the police that they were innocent, and they were promptly released.

An "Officer's Wife" writes to the *Times*:—"Only those who know the true story of Kut can ever know all our brave men suffered there for King and country; and now we have been informed that the question of the pay of officers taken prisoners while serving on the Indian Establishment is at present under consideration, and that in the meantime, under the existing rules, the officers from Kut will, after the first sixty-one days' full Indian pay, be put on British pay. I want to know why India should not perform its obligations to the officers in its divisions who have been taken prisoner through no fault of their own—at any rate, until the India Office have considered the question, why we should not draw the pay we are entitled to, as British pay will mean a great difference now that living has gone up so much. It seems too hard to believe that this is the way India treats her heroes from Kut."

HOUSE OF LORDS.

Prisoners in the Balkans. May 31.

Lord Newton, in the course of a debate on the treatment of British prisoners of war, said there were in Bulgaria 449 prisoners, all of whom were military, and in Turkey there were 8,857 military prisoners, 103 naval prisoners, and 60 interned civilians. In the case of Turkey there had been difficulty in obtaining accurate information, because the American representatives had found great difficulty in visiting the camps, and they had not been able to visit any of the camps in Asia Minor. With regard to Bulgaria the first reports were extremely unfavourable, and the condition of the prisoners was not at all happy, but according to information which had reached the Government recently the position of the prisoners in Bulgaria had greatly improved. The majority of the prisoners were now interned at Philippopolis, and according to the latest reports they were well and kindly treated. It had not been found possible to obtain accurate information with regard to small working parties spread about the country. The first reports from Turkey were extremely unfavourable, but according to private information improvement had taken place even in remote parts of Asia Minor. Parcels and postcards were arriving regularly, and the men were receiving pay equal to about 1s. 6d. a day.

HOUSE OF COMMONS.

Aid for Serbia. May 29.

Mr. Annan Bryce asked the Foreign Secretary whether he was aware that numbers of the people of Serbia were every day dying of starvation, and the remainder becoming so enfeebled from want of food as gravely to diminish the possibility of renewing the population; whether offers of efficient distributing organizations had been made by two sets of neutrals; whether the services of Serbia to the Allied cause deserved at least as much recognition by way of aid as those of Belgium; and whether he could now make any statement with regard to the provision by his Majesty's Government of help to Serbia.

Lord Robert Cecil: I have no official information as to the first part of the question, but I cannot doubt, in view of past experience of the way in which the enemy treat the population of occupied territory, that the state of Serbia is very grave. In regard to the second part of the question, his Majesty's Government have received various proposals, but none which gives any particular guarantee of the effective organization of distribution and control. The answer to the last part of the question is that his Majesty's Government have demanded of the German and Austrian Governments that the latter should provide adequately for the civil population of Serbia, Montenegro, and Albania in return for facilities for the relief of Poland. This demand has been published, and we await a reply.

The Mesopotamia Inquiry. May 30.

Colonel Yate asked when the report upon the breakdown in the medical arrangements in Mesopotamia might be expected.

Mr. Chamberlain: The Commission has not concluded its inquiry, and I am unable to give any date for the submission of the report. The terms of reference require the Commission to ascertain and assign the responsibility of individual officers for any inadequacy or failure of relief or shortage of *personnel*, equipment, vehicles, or stores.

Mr. Malcolm: Will the right hon. gentleman consider the desirability of issuing an interim report, if possible?

Mr. Chamberlain: No; I am entirely opposed to that suggestion. I invited the Government of India to appoint this Commission on my own motion and without pressure from anybody. I did so because I thought it was very desirable that we should ascertain the facts, and I think when the Commission reports it should report with a presentation of the whole of the facts.

Seamen Interned in Turkey.

Mr. Butcher asked the Secretary for Foreign Affairs whether he would request the United States Ambassador in this country to furnish, if possible, through the good offices of the United States Consul-General at Constantinople, a statement of the general conditions and the diet supplied to the captains, officers, and seamen comprising the crews of the steamers City of Khios and Assiout, who were interned at the Magnesia camp, near Smyrna, Turkey.

Sir E. Grey: The last report on the condition of the crews of these vessels was received in February. It indicates that there was a lack of proper exercise, only a few men being allowed out each day to buy provisions. The food supplied was being diminished in quantity and was inferior in quality. For seven weeks only one leg of goat was supplied in the way of meat. The usual rations were horse beans, olive oil, and flour, and sometimes olives. Very little oil for lighting or charcoal for heating in the cold weather had been supplied. On the receipt of this information a protest was addressed to the Porte on the subject of the inadequacy of the rations supplied, and the United States Consul-General at Smyrna was requested to increase the allowance to the prisoners from 8d. to 1s. a day for each man. Inquiries are being made as to the present condition of the crews.

Alleged Use of Flat-topped Bullets.

Mr. King asked Mr. Tennant if he knew anything about flat-topped bullets used by the Turks in Mesopotamia, Aden, and on the Egyptian front, and whether these were identical with certain bullets in cartridges captured during the rebellion in Dublin.

Mr. Tennant said it had been necessary to telegraph to Mesopotamia on this matter. The question raised an interesting point, and he would communicate the answer as soon as received.

THE PRESS ON THE NEAR EAST.

Responsibility for the Baghdad Advance.

A leading article in the *Times* (May 31) on the documents relating to the responsibility for the Baghdad advance declares its opinion that the Government have taken an improper and misleading course in publishing papers about this single question. "They should have told the whole story or nothing. The main issue is not what General Townshend said to General Nixon, but, first, who was ultimately responsible for the mad decision to advance to Baghdad, and, secondly, why the attempt to relieve Kut came to such disastrous and costly failure." The article proceeds to deal with the Government assertion that a certain "Appreciation" written by General Townshend cannot now be identified.

Let us endeavour to throw some light on the mystery. The word "Appreciation," as the title of General Townshend's protest, occurs in these official papers for the first time. That is a very significant fact. It has not hitherto been mentioned in *The Times*, and the use of it shows that the existence of a document bearing this title is well known both in England and in India, quite independently of anything which has appeared in these columns. Our information, which is based on more substantial grounds than gossip or hearsay evidence, is that General Townshend did write such an "Appreciation" on October 3 on board the steamer "Mejedieh." It discussed the whole position, and set forth in clear and forcible language the grave risks of an advance on Baghdad. It said, in words quoted in the Parliamentary paper, that in view of the weak forces then in Mesopotamia, "anyone advocating such a step would show, in my opinion, that he was utterly ignorant of the art of war." The truth is that the existence of this document is not only known to a large number of people, but many of them have seen copies of it. One copy, for instance, was sent to India, apparently in the hope that it might be shown informally to the executive authorities; but we have reason to believe that, as a matter of fact, it was never shown at the time to any member of the Government. If the original reached Sir John Nixon and his staff—a point which is by no means clear in the published correspondence—then it never got beyond them.

After emphasizing the fact that General Townshend had done all that was possible in the way of bringing his opinion before his "superiors," the paper continues:—

Obviously the matter cannot rest here. We trust that Sir John Nixon will explain why he never transmitted General Townshend's views, and why he decided to disregard them. Serious responsibility evidently attaches also to Sir Beauchamp Duff, the Commander-in-Chief in India. He may not have been acquainted with General Townshend's objections, but he knew the precise strength of his force, and ought to have been aware of the risks involved. The whole of the later stages of the Mesopotamian campaign require much fuller investigation than they have yet received. The final order to advance must have been given by the Home Government, and the grounds on which their unfortunate decision was based ought to be disclosed. . . . Many other matters, such as the breakdown of the medical arrangements, the transport defects, and the unaccountable failure to build light railways, should be explained. Above all, the truth should be told about the repulse of General Aylmer at the Es Sinn position on March 8. Perhaps the most distressing feature of the whole story of Kut is that on that day the beleaguered town could have been relieved with ease, if unpardonable mistakes had not been made. All that the public have been permitted to know is that five days afterwards General Aylmer was recalled, and that he has since been inexplicably rewarded with one of the biggest commands in India.

The *Evening Standard* (May 30) says:—

We do not wish to prejudge the case until all the papers are available. But meanwhile it is clear that General Townshend did "protest" as far as a subordinate commander could do, but that nevertheless he embarked on the ill-fated enterprise against which he had advised. In whatever quarter the onus of a disastrous decision must be placed, it cannot be on General Townshend. His conscience may well be, as he says, quite clear. Responsibility must rest on others than the man who, after indicating the insufficiency of his resources, went gallantly on a hopeless enterprise.

The Defence of Egypt.

The Military Correspondent of the *Glasgow Herald* (May 27) in a general article on the war concludes with the references to the position of Egypt which we quote below:—

The official announcement that the Turco-Germans are being made to pay dearly for the recent air raid upon Port Said is interesting and gratifying up to a certain point. But the situation as regards the Sinai Peninsula does not appear to be entirely satisfactory, since the mere presence of German and Turkish forces in this region, even if it cannot be described as a serious menace, is an insult, and consequently detrimental in some degree to the maintenance of our local prestige. . . . Very possibly our military position here is quite as secure to-day as it was last autumn; in some respects, perhaps, more so; and the writer is far from wishing to exaggerate the importance of the enemy demonstrations in Sinai or to underrate the effectiveness of what has been done to nullify them. There is something, too, to be said for the policy of luring the enemy on to continued efforts in this region. But we must not forget that very large questions of Asiatic policy are bound up with our handling of the war in these regions, and that the presence of considerable German and Turkish forces in the Sinaitic Peninsula—which is, of course, Egyptian territory—may be, and probably is, misconstrued by a large proportion of the inhabitants of Egypt, Arabia, and Syria, to say nothing of several other Asiatic countries. Strategically speaking, it may be quite correct to allow the Germans and Turks to waste time and energy in trying to creep up gradually to within striking distance of the Canal. But there must be many with long Eastern experience who are not altogether satisfied with a policy which produces such contretemps as the recent enforced withdrawal from Duweidar, and makes it necessary to exact retribution for aerial attacks based upon points well within Anglo-Egyptian boundaries.

Greece and the Entente.

A special correspondent of the *Morning Post* (May 29) gives some illuminating details of the anti-Entente methods of the present Greek Ministry. We quote one instance:—

On Tuesday the Russian Duma sent a message to the Greek Chamber protesting against the sinking of the Russian hospital ship "Portugal" in the Black Sea by a German submarine. Last night, when the Chamber met to discuss the protest, M. Skouloudis communicated a letter from the Turkish Minister in Athens defending the sinking of the ship on the ground of the well-known pretext that she was carrying troops and munitions. A Macedonian member raised objection to the presentation of this letter to the House by the Premier as unseemly and irregular, but M Skouloudis replied that Greek neutrality and the sense of fairplay required that both sides in this "controversy" should be given a hearing. In other words, the Greek Premier placed Russia, one of the three Powers which liberated Greece from the Turkish yoke, on the same footing as Turkey, the hereditary foe of the Greek race, who at this moment is busily engaged in exterminating the Greeks of the Ottoman Empire.

Bulgaria's Aims.

We quote the following interesting expression of opinion by Count Chedo Miyatovitch from the *Evening Standard* (May 29), which had received an interview with the ex-Serbian Minister on the Bulgarian invasion of Greece:—

"The new move," he said, "is alarming, but it is not surprising, because the Bulgars' ambitions were very well known. In the first place, they wish to get Kavalla, but their ultimate aspiration is to take Salonika. To get Salonika from the Greeks has for them been merely a question of time. It is astonishing that the Greeks, who were aware of this, should not have carried out the policy represented by M. Venizelos, which would have frustrated Bulgarian designs.

"The Greeks are helpless, and their only hope is that King Constantine may prevail upon Germany to restrain Bulgaria's designs. The only real chance for Greece, however, is to throw in her lot with the Allies. That will be the best solution of the Greek problem, both from their own standpoint and ours; but I am rather doubtful whether Greek public opinion will be strong enough to bring about this course.

"On the other hand, this Bulgar advance may prove to be a great eye-opener to the Greeks. Knowing King Constantine personally, I frankly believe—however some of my friends may demur at this view—that he is first and foremost a Greek patriot. If he and his advisers were once to realise that they had been mistaken, then, even at the twelfth hour, I believe he would throw in his lot with the Allies."

Bulgarians in Greece.

Referring to the Bulgarian invasion of Greece and to its probable object, the *Times* (May 30) in a leading article remarks:—

Whatever be their purpose, the Allies can afford to regard them with equanimity from the military standpoint. Amongst the Greeks they must naturally cause the deepest resentment and suspicion. The unfortunate inhabitants of Seres, of Drama, and of other places directly threatened by the invasion, have but too good reason to remember the horrors of the last Bulgarian occupation, and to fear that the presence of German officers may not save them from being again treated as were the inhabitants of Dinant and of Aerschot. The Bulgarian atrocities are still fresh in the memories of Greeks everywhere. They must look forward with a sickening fear to the probable fate of the invaded districts.

Owing to the strict censorship which evidently prevails at Athens, the only news from the capital commented upon in this article is that the Venezelist papers published on the morning following the invasion came out with black borders in token of national mourning. The *Times* continues:—

M. Venizelos and his followers evidently feel that the old controversy which has divided Greece since the beginning of the war is with them again, and with them more acutely, perhaps, than at any earlier stage. They stand for one policy, while King

Digitized by Google

Constantine and the General Staff stand for another. Hitherto the nation have wavered and hesitated. Will they waver and hesitate now, when they see their traditional enemies seizing, unresisted, the strategic positions which command the entrance to Eastern Macedonia and drawing nearer to Kavala? It was M. Venizelos's wise suggestion that Kavala might, in certain circumstances and in certain conditions, be given to Bulgaria, in return for the promise of splendid compensation elsewhere, which enabled the Court to discard the powerful Minister with impunity. What will the men who overthrew him have to answer, if the Bulgarians should seize Kavala without any hopes of compensation at all? If the Government mean to follow up their protest by vigorous action, they would doubtless be able to count upon the whole-hearted support of the statesman who saved the Monarchy and the country when ruin was impending over both. But if it remains a mere formula, will the nation find much solace in it? . . . The Greeks must settle their own policy now, as in the past. Their friends in the West can only hope that they will weigh well the consequences of their decision before it is too late.

Presumably awaiting further news of a definite nature, most of the papers have refrained from editorial comment. The *Nottingham Guardian* (May 29), however, publishes a leading article, from which the following extract is taken:—

The enemy seems to be making a new thrust, inasmuch as the Bulgarians have invaded Greek Macedonia. Whether this invasion of their territory will stimulate the Greeks to action we do not know, and it does not really matter. The time has gone by when Greek intervention on the side of the Allies might have had a determining effect upon the war. But if the Bulgarians are to make a thrust in the Balkans as the Germans are doing in France and the Austrians against Italy the task of crushing the Bulgarians will be made easier. That is all. It is not the duty of the Allies to defend Greek territory. The Greeks must do that for themselves. But it is not likely that the Allies will sit quietly at Salonika much longer, and if when they move the Bulgarians have weakened their defences by invading Greece so much the better.

The Military Correspondent of the *Morning Post* (May 30), in discussing the new move, says:—

It is, therefore, probable that the Bulgarian irruption into Greek Macedonia is no more than a defensive move. Incidentally, it may be designed to draw a portion of General Sarrail's army out to fight in the open against prepared positions or to make the situation less tolerable for the Greeks, and further embarrass their relations with the Allied Governments. It is hardly to be supposed that the move came as a surprise, and that General Sarrail would not have anticipated it by taking the initiative if it were considered that the propitious moment had arrived. The immediate and principal object appears to be to gain possession of the Dedeagatch railway, and possibly to occupy certain important points in Greek Macedonia as a menace to the right flank of an advance from Salonika, against which General Sarrail guarded himself, while his defences were incomplete and his forces still weak, by destroying the bridges at Demirhissar and Kilindir on January 12. Large hostile forces are said to be assembled in the neighbourhood of Xanthi, where the 10th Bulgarian Division was raided by French aeroplanes a fortnight ago, and a move on Kavalla seems to be in prospect. The Greek Government appears to have accepted the situation on the strength of an agreement that the Bulgarians will ultimately evacuate the occupied province. We can only hope that its trust in the good faith of its ancient enemy will not prove to have been misplaced, for the fulfilment of such an undertaking can, in the last resort, only be secured by force of arms.

Cyrenaica.

An exceedingly valuable article on Cyrenaica from the pen of Professor J. W. Gregory appears in the *Geographical Review* (May). We quote from its opening passages, but the article should properly be read *in extenso*.

Between the lowlands of Egypt and of western Tripoli Africa projects northward as the high plateau of Cyrenaica, which enjoys a bracing climate, a rich easily-tilled soil, and the finest mountain scenery on the northern coast of Africa. It stands moreover beside the northern end of the caravan road across the Sahara, which brought to the Mediterranean the Tropical products of the Sudan. No wonder this favoured land, being the nearest part of Africa to Greece, was early colonised by Greeks; and about 623 B.C. a party of emigrants under Battus established the famous city of Cyrene beside the fountain of Apollo, one of the chief springs on the northern front of the Cyrenaican plateau. The country proved a very useful supplement to Greece. It had no permanent rivers, and its water-supply was scanty; but the Greeks were accustomed to similar conditions during the summer in their own land. The plateau, however, after wet winters, produced abundant crops of corn; its coastal plains grew rice and dates; the flowers of its limestone moors yielded honey which rivalled that of Hymettus; and from its herbs were extracted condiments and drugs that were highly prized by epicures and apothecaries who could not draw on the spice islands of the East. So the Greek colony flourished; it was known from its five cities as the Pentapolis; and its citizens proved famous for intellectual power and physical prowess. There the philosophers of the Cyrenaic school partially anticipated Hume; thence came many of the victors in the Olympia games; and it has special claims to the respect of geographers as the home of Eratosthenes and the site of localities so famous in classical follore as the River Lethe and the Gardens of the Hesperides.

THE TURK AS PROTESTANT.

Mr. Oliver Bainbridge, speaking at the Lyceum Club last week on "Turkey and the Turks," said: "I have to think of the terrible consequences which have arisen from excluding Turkish women from exercising those beneficent functions for which Nature has endowed them. Seclusion denies to their intellect the very food which it needs to build it up and strengthen it. The abominable marriage system in Turkey which does not permit a woman to meet the man she is to marry until the wedding day is responsible for much unhappiness, for nothing can compensate for the lack of a free and spontaneous choice of a helper for life.

"Whatever faults the Turks, as a people, may possess, there is something of a really sublime and very superior nature in their idea of religion. When we compare a Turk on his knees in a mosque worshipping God, and God alone, indignantly refusing to bow to an image, or even to dedicate his mosque to a saint, when we regard him as a being who, ignorant and prejudiced and bigoted as he is, contemptuously rejects the idle traditions and fables and mummeries which have thrown such discredit on the Christian faith amongst its degenerate and idolatrous professors, we cannot help admitting the probability of the fact that the Turk has a mission to protest against the idolatry of the Western world as long as it exists."

GERMAN PROPAGANDA IN PERSIA.

Under date of May 31, Reuter's Petrograd correspondent reports:—A telegram from Teheran states that the Persian Government has received information from Shiraz that the local authorities have intercepted two cases containing secret documents of great importance which the notorious German agitator, Dr. Pujen, had despatched to that place with the object of having them concealed there.

The Russian Legation at Berne announces that regular postal and telegraphic communication with Trebizond has been opened, the local government of that town having been organised by the Russian authorities.

The Stockholm correspondent of the *Morning Post* reports that the Turkish Government has offered to exchange disabled prisoners of war with Russia through the Swedish Red Cross. Negotiations on the subject are now proceeding between the Governments concerned.

An enemy seaplane was brought down in the Lower Adriatic on Tuesday morning.

Under date of May 31, Reuter's Athens correspondent reports:—M. Passaroff, the Bulgarian Minister, has protested to the Greek Government against the firing by Greek frontier troops on the Bulgarian forces when they occupied Fort Rupel. M. Skouloudis, the Prime Minister, has declined to consider the protest.

Professor Ronald M. Burrows and Dr. A. W. Seton-Watson write as follows to the *Morning Post* on a subject which has been referred to on more than one occasion in THE NEAR EAST:—"Mr. Joseph King has seen fit to mention our names in the House of Commons as having 'attributed to General Howell' a certain pro-Bulgarian memorandum which was published as his in *Britannia*. We have never said, nor meant to imply, nor ourselves believed, that this memorandum was written by General Howell. We are not responsible for the fact that its publication in *Britannia*, without our knowledge, has caused a meaning to be read into words of ours which was not there. We can only endorse Lord Robert Cecil's and Mr. Tennant's plea that nothing is to be gained by probing the matter further at this stage. We ourselves urged this view on Mr. Noel Buxton, and regret that he and Mr. King have not rested content with General Howell's denial of authorship. We are glad, however, that they resent the name of a friend of theirs being in any way associated with so detestable a document as the memorandum in question, counselling, as it does, the basest treachery to our much-enduring Serbian Allies. We sincerely hope that General Howell will ere long have the opportunity of repudiating not only its authorship, but also the views which it embodies."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Bulgarian Government, it would seem, is not going to lose time in exploiting the mineral wealth of the occupied territories in Macedonia. According to our Bucharest Correspondent, the Bulgarian Ministry of Commerce and Industry has asked the Bulgarian authorities in Macedonia to report on the mines and occurrence of minerals in their districts, as the Government wishes to exploit them "as soon as possible." At the same time, it would appear that the Bulgarian papers are full of articles pointing out the mineral wealth of Serbia. Thus, they maintain that in the neighbourhood of Salonika gold is to be mined, and that gold washings in the Vardar River would be a most profitable undertaking. According to these experts, the tributaries of the Vardar bring the dust down from the Kara Dagh mountains and deposit it in the Vardar. All this sounds very nice indeed; but I should strongly advise the Bulgars to start their filching of other people's property in the neighbourhood of Salonika. The Vardar can wait—a little while longer.

***

The same papers also state that there are important iron mines in the Sarakini (?) district, and that in the Kossovo vilayet deposits of gold, silver, copper, iron, etc., have been located. All of which is good news for the Serbs, if proved true. There is no denying the fact that though the country (Serbia) is rich in mineral ore hitherto the exploitation thereof has been with but few exceptions of a tentative rather than of a practical nature. The fault does not lie with the Serbs. Cut off from the sea as they were and dependent on the goodwill of Austria, they could not expect the great financiers of Western Europe—British, French and Belgian—to invest capital far from the seaboard. The proposition, in other words, was not good enough, and as the Serbs, themselves an agricultural people, were not anxious to sink their savings in mines, the latter remained unexploited. After the war, however, when Serbia has acquired a port on the Adriatic, and is no longer subject to Austrian machinations, a new history of the country will begin, and it is to be hoped that British capital will participate in the working of the mines.

***

Another passage which appears in our Bucharest Correspondent's letter is of extraordinary interest. He says: "The German and Austrian Governments have given permission for the free transit on their railway systems of goods from Bulgaria." At first sight this would appear to be only a military measure designed to assure the necessary supply of foodstuffs, etc. But behind it lurks also a political motive, and it has to do with the realisation of the "Central European Economic Union," the dream of all Pan-Germans. Bulgaria will have to be dragged or sucked into the combine, and the fact that now already her goods are allowed free transit through Austria and Germany is intended to impress her with the great generosity and wisdom of her Allies. In other words, a German bribe of the most glaring description. It indicates, moreover, that Germany is alive to the great trade war which will commence as soon as ever this military war is over, and that she is now taking all adequate steps to secure a most favourable position. Of course, Bulgaria is one of those countries which must be attached economically to the Kaiser's chariot, and hence this sudden display of generosity.

***

According to *The Times* correspondent in the Balkan Peninsula, Roumania will shortly make a commercial arrangement with Turkey on a basis of compensation, Roumania allowing the exportation to Turkey of petrol, benzine and wheat in return for tobacco. In the case of Bulgaria, says a message from the same correspondent on May 27, it was decided, at a meeting of the Roumanian Cabinet held on May 24, not to come to a similar economic arrangement. It would appear that in exchange for wheat and petrol the Bulgars offered tobacco and onions.

***

It seems to me that Roumania is here on dangerous ground, or else that her transit difficulties with Bulgaria have been satisfactorily settled. Petrol and benzine are contraband of war, and it is therefore hardly likely that they will be sent to Constantinople via Constantza and the Black Sea, where Russian ships command the situation. The only other course open to Roumania is to send the goods by land via Bulgaria, which is equally difficult considering that the Bulgars, in their mighty valour and self-assurance, have hitherto, to the best of my knowledge, refused to give any guarantee for the safe transit through their country of goods destined for Constantinople. In view of which we do not see how Turkey is to obtain her wheat and petrol, unless, of course, the Bulgar-Roumanian transport question has been settled or Russia is ineffective in the Black Sea. We know very little about either supposition—so energetically is the Censor at work—but we sincerely hope that the Russians are alive to the danger of letting a tin of petrol or a pound of wheat reach Constantinople from Roumania.

***

We reproduce elsewhere a short analysis of the new Greek Internal Loan from the pen of our Athens Correspondent. Since writing his note negotiations have come to a head, and I read that the convention with the National Bank has been signed by the Ministers of the Interior and Finance and the Governor of the Bank. The Bank's charter is extended twenty years until 1950, which proves that all opposition by M. Venizelos and his Liberal Party to the all-powerful Government clique is so much waste of time. The nominal amount of the loan is 115,000,000 drs., or net about 100,000,000 drs. It is issued at 88½, and will bear interest at 5 per cent. The National Bank will take firm 75,000,000 drs., and beside the extension of its charter twenty years, it has obtained permission to issue new notes for 30,000,000 drs. in both Old and New Greece, and to increase its reserve by the issue of new debentures for 25,000,000 drs.

***

The Imperial Ottoman Bank has opened a branch in Marseilles. I think that the idea was an excellent one, because, after all, Marseilles is the port of Paris for the Mediterranean and the Near East, and it will facilitate the bank's shipping operations in that part of the world to have an office in the great French port. Of course, all ordinary operations will continue through the head office in Paris, just as operations in this country are centred in the London bank, but by opening at Marseilles the French directors have followed the example of their British confrères, who have long since had a branch office in Manchester. Apart from the commercial significance of the new branch, the knowledge of its existence will be welcomed by many travellers whose journey takes them eastwards through Marseilles.

***

An interesting speech was that read by the chairman of the Bank of Roumania at the meeting of the shareholders on Wednesday, and reported elsewhere. Like most speeches of its kind, it consisted of two distinct parts, the one dealing with the general situation of the country in which the bank operates, and the other with the bank itself. Regarding the first, attention is drawn to the Budgetery surplus of Roumania for 1914-1915, amounting to 28,094,714 lei. There was a decrease in the revenue from railways and navigation, but an increase in those from State monopolies. The rate of discount of the National Bank was 6 per cent. during the year, and of advance against securities 7 per cent. The former was, on the 16th inst., reduced to 5 per cent. As for banknote circulation, it amounted on December 31 last to 762,210,210 lei, against which the bank held gold and gold bills for 301,949,775 lei.

***

Regarding the Bank itself, it is stated that the deposits in Roumania are approximately the same as those at the end of 1914. An important part of the business of the year was the transmission of money to this country in settlement of pre-war debts. The dividend for the year has been fixed at 8s. per share, free of British income-tax. Incidentally, the speech mentioned that both in London and Bucharest the bank has leased new premises, those in the capital of Roumania being situate in the centre of all business activity, in the famous Calea Victoriei, and those in London at 27, Throgmorton Street. I wish the Bank continued success in both its new offices.

***

The Hungarian Commercial Museum has received a report from Jaffa, according to which the industrial and commercial position remains unaltered, in spite of the opening of the direct railway connection, Berlin-Budapest-Sofia-Constantinople. No consignments of goods have arrived. Firms intending to do business in those regions are recommended to prepare the way by sending out catalogues and other trade literature. A good market for agricultural machinery is anticipated in Palestine and other parts of the near Orient. A report from Constantinople to the same museum states that on account of the coal famine in Constantinople coal can now be imported into Turkey free of duty, as long as the war lasts. Constantinople has to rely upon railborne coal, and at present, says *Engineering*, some thirty wagons of coal arrive every day from Germany.

COMMENTATOR.

Alexandria Prize Court.

S.S. Derfflinger (ex Cargo).

His Honour Judge Cator has delivered judgment in the Supreme Court for Egypt sitting in Prize in a case relating to cargo at Port Said, the facts of which are set forth in the judgment as follows (extracts) :—

In this case goods belonging to a Turkish firm were shipped prior to the war on the s.s. Derfflinger, a German ship bound for the Far East. It seems that the shipment was on a through bill of lading to a Turkish port, and in the ordinary course of trade the Derfflinger discharged this cargo at Port Said two days before war broke out between England and Germany. When that event occurred the goods lay in the Custom House at Port Said as merchandise of a neutral awaiting transhipment to a neutral port, and there they still lay three months later when hostilities ensued with Turkey and so changed their condition from neutral to enemy property.

In most cargo cases that come to be dealt with there is some bond of connection between the goods and a particular ship, but here the cargo stands alone. For I am satisfied that it cannot be treated as part cargo of the Derfflinger. The only duty of that vessel was to bring the goods to Port Said. She arrived as a friendly ship before the war broke out. As such she discharged this consignment, and the moment that it was put over her side I think that all connection between ship and cargo came to an end.

I cannot even assume that the cargo would have been forwarded to its destination in an enemy ship. Indeed, from what counsel tells us the likelihood is rather the other way, but we have no evidence on the point, and I think the question is immaterial.

I am of opinion that we must treat these goods merely as Turkish merchandise awaiting transhipment or delivery when the war broke out with Turkey, physically on land and unconnected with any particular vessel; but within the limits of a port and still subject to the bill of lading under which it had been shipped. Under these circumstances the Crown claims the right to seize the goods as maritime prize; the owners contend that the Court must decree their release as goods seized on land.

This leads to a consideration of the meaning of "on land" as used in opposition to the word "maritime" when applied to the seizure of enemy property.

International law recognises a marked distinction between private property which may be the subject of maritime prize and private property which cannot be so treated. The distinction is sometimes expressed as a difference between goods captured at sea and goods captured on land. But this language is inexact, for there are cases when goods on shore are subject to prize law, and on the other hand the personal effects of the master and crew, not being in the nature of cargo, are not confiscated even though they are enemy property seized afloat. It would certainly be a great convenience if a better terminology could be invented to distinguish the two categories.

Formerly it was the practice to appropriate private enemy possessions of every kind wherever found, and the text-books admit rather grudgingly that a belligerent still has a theoretical right to confiscate everything owned by an enemy. But indiscriminate pillage has long been discountenanced, and provisions of the Hague Convention of 1899 and 1907 definitely forbid the confiscation of private property on land.

Maritime property, on the other hand, has always been recognised as a legitimate subject for capture. The reasons which justify a discrimination between the two classes of property are stated at length in Dana's Note to Wheaton, which Sir Samuel Evans has quoted with approval in the case of the Roumanian. After stating grounds for respecting private ownership on land, Dana proceeds: "But, on the high seas, these reasons do not apply. Strictly personal effects are not taken. Cargoes are usually purely merchandise. Merchandise sent to sea is sent voluntarily; embarked by merchants on an enterprise of profit, taking the risks of war; its value is usually capable of compensation in money, and may be protected by insurance; it is in the custody of men trained and paid for the purpose; and the sea, upon which it is sent, is res omnium, the common field of war as well as of commerce."

The laws and customs which regulate the condemnation or release of such property is termed prize law, and the question whether any particular goods fall within the category of prize is determinable by the Prize Court. That is to say, if the Crown advances a claim to goods as maritime prize it is for the Prize Court alone to determine all questions to which the claim gives birth, whether such questions relate to ownership arising out of capture of goods admittedly subject to Prize Law, or go to the jurisdiction of the Court by a defence that the goods have not such a quality as to render them susceptible of what I may call maritime capture.

For instance, if the Crown were to seize a piano in the house of an enemy and advance a claim to it as maritime prize or merely place it in the custody of the Marshal, the Prize Court would alone have jurisdiction to determine the rights of the parties. But if it seized the piano as booty on land and took no steps to submit any claim to the Prize Court I appreciate that the owner would be left to such remedy as he could get from the ordinary Court.

It is not often that a question arises as to the quality in which goods are taken, for they are usually seized on board a ship, and it is fundamental that all goods captured afloat are subject to Prize Law. Still, it does sometimes happen that a cargo has been separated from a ship, and a dispute has ensued between the captors and owners as to whether it falls within the jurisdiction of the Prize Court or not.

One important case on this subject has already been decided on appeal in the course of the present war. The British steamer Roumanian came into an English port, after hostilities had broken out, carrying a cargo of enemy oil. A great part of the oil was discharged into tanks on shore when it was seized on behalf of the Crown. The owners sought to establish that it could not be condemned as prize because it was on land when the Crown laid its hand upon it. Sir Samuel Evans held that it was a cargo which had come into port as maritime merchandise of the enemy, and that the rights of the Crown to capture had not been defeated by reasons of its removal from the ship. The case was appealed. The Privy Council dismissed the appeal, emphasised the fact that the oil, when it entered British waters, was hostile cargo, and decided that its removal from the ship could not alter its quality, that it remained liable to seizure after removal, and that whether it was put ashore within or without the limits of a port was an indifferent matter.

This case determines once and for all that the mere fact of goods being on shore will not defeat a claim of the Crown for a declaration that they are prize, but there is a radical difference between that case and the present. For when the Roumanian entered port she carried a cargo liable to seizure, whereas the goods on the Derfflinger were discharged before war broke out, and at the time of the discharge they belonged to a neutral who might have removed them, and it was not until three months later that the neutral became an enemy.

Nevertheless, I have come to the conclusion that this merchandise is a proper subject for prize. In examining the cases and pondering upon the principles which determine whether goods are capable of being made prize or not it has been borne in upon me that the determining factor is not whether the goods are referable to any particular ship, or whether they came into the country stamped with a hostile character, but whether when the Crown lays its hands upon them they are cargo or not cargo.

I am of opinion that all the trouble has arisen out of the use of an unfortunate nomenclature. The phrase "on land" has become a term of art in Prize Law, and is, I believe, equivalent to the words "not cargo" and nothing else. If instead of saying that goods were seized on land we were to give as the true reason that they were not cargo I believe we should go far to harmonise the cases. By employing the words "on land" sometimes as a term of art, and sometimes in their literal signification we only confuse ourselves and end in a victorious circle.

Whether goods are or are not cargo is usually susceptible of easy proof. From the moment they are shipped under a bill of lading I think they become cargo and so remain until they cease to be bound by that instrument. Whether they are shipped through to another port, as in this case, or have reached their destination, but have not yet been handed over to the consignees, I think they are equally subject to capture as maritime prize.

BULGARIAN NOTES.

(From Our Own Correspondent.)

Bucharest, May 1.

By order of King Ferdinand a trainload of seed grain and seeds has been sent to Macedonia, the contents of which will be distributed gratuitously among the original inhabitants of the invaded districts, so that grain and vegetables may be sown in the uncultivated parts.

The mission from Roumania, charged with the purchase of tobacco for the Roumanian Regie, has been obliged to return to Bucharest without having concluded any purchases on account of the difficulties of every description put in their way by the Bulgarians. The Roumanian Government has, therefore, decided not to permit the passage of goods to Bulgaria.

A very severe thunderstorm, accompanied by hail, struck Sofia and the surrounding district on the 26th instant, causing great damage, especially to the fruit trees, so that the yield of fruit is seriously compromised.

In a report on the economic relations between Germany and Bulgaria, the Bulgarian Consul-General at Berlin recommends his countrymen to take advantage of the present situation in order to ensure Bulgaria a first place in German commerce. Bulgarian goods, such as cereals, calf and buffalo skins, horns, dry vegetables, eggs, etc., are in great demand on German markets. Bulgarian cigarettes have also a good sale in Germany. The Consul-General advises his compatriots to prepare large stocks of goods in order to supply German requirements. On the other hand, the German and Austrian Governments have given permission for the free transit on their railway systems of goods from Bulgaria.

With reference to the article on Trade in the Sudan published in our issue of March 31, and to the paragraph dealing with transit trade, a slight mistake was made in the amount of transit trade assigned to Abyssinia and the Congo, owing to a difference in the figures published in the quarterly and annual statements of the Sudan Customs. The transit trade done with Abyssinia and the Congo in 1914 was £E56,693, and in 1915 £E67,974; the previous record for transit trade with those two countries was in 1913, when the amount was £E68,339. The total transit trade handled by the Sudan in 1916 came to £E36,275, which is the highest figure attained since the reconquest.

Trade Notes.

Egypt.

Tenders will be received up to June 10 for the supply and delivery of linen and table requisites, including towels, linen sheets, tulle for mosquito-nets, tape, blankets, plates, dishes, tumblers, cups and saucers, spoons, carafes, serviette rings, salt-cellars, sugar-basins, and metal knives. Samples may be inspected and the *cahier des charges* and form of tender obtained at the Central Stores, Ministry of Education, Darb el Gamamiz, Cairo. Sealed tenders, accompanied by a deposit of 2 per cent. or a bank guarantee of 10 per cent. of the value of the offer, will be received up to the date mentioned above at the Central Stores, Ministry of Education, Cairo. A copy of the *cahier des charges*, etc., may be inspected by United Kingdom manufacturers of the above-mentioned goods at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of paints, mainly for the scavenging and watering service. Bulaq. Date, July 15.

The Physical Service Department, Cairo, invites tenders for the supply of weighing machines, balances and weights required for Government during 1916-17. Date, July 15.

The Army Finance Department, Cairo, invites tenders for the supply of 4,000 tins of petroleum at the Citadel Stores, Cairo, and 300 tins to be handed over to the Stores Officer, Egyptian Army, at Alexandria; also 1,600 gallons of petroleum in bulk at Cairo. Date, June 15.

Morocco.

The Acting British Consul at Casablanca has forwarded to the Board of Trade an extract from the local Press relative to openings for trade, from which the following translation has been made:—

In Morocco the most widely distributed goods of German manufacture which were formerly imported can be divided into five groups: (1) glassware and crockery; (2) textiles; (3) stamped metals; (4) ironmongery; and (5) clocks and watches. It should not be difficult to replace and improve on these goods, and already French firms supply a large quantity of tarbouches (fezzes) and nearly all the silk handkerchiefs, which have a great vogue in Morocco.

A large field offers in articles of clothing, which native industry can only supply at high prices. In this connection mention may be made of silk sashes (cummerbunds), woollen haïks, underclothing, woollen djellabas, flannel selhams, and cloth vests and burnous. In this class of goods all qualities would find ready purchasers, but only on condition that as regards fashion and ornamentation the Moroccan fashions are closely followed. It should be easy to introduce to the natives articles of equal quality and similar appearance at a cheaper price than those of Moroccan origin. When it is remembered that (save for woollen clothing, the fabrics for which are woven on the spot) all the raw materials for clothing are imported from Europe, that they are bought retail by the Moorish artisans, and that the making of cloths is entirely by hand, the reason for the high cost of native-made clothing can be understood.

Other articles for which there are markets are furniture and small household goods, the latter including white metal trays, metal coffee-pots, iron beaten or enamelled plates and dishes, metal candlesticks, glassware, floor rugs, etc. For all these articles there has been an important German trade, but German firms, like United Kingdom firms, have only introduced into Morocco goods manufactured for home consumption or for their colonies. Except for certain nickel-plated trays, no attempt has been made to prepare goods specially for the Moroccan market.

It should not, however, be difficult to borrow from native craftsmanship the forms and designs fixed by tradition to most of the furniture and household goods. For example, it should be no more difficult to imitate the carpets of Rabat, of Casablanca, or of the Berber districts than to attempt to popularise, by means of cheap moquettes, designs of the style of Louis XV. or Louis XVI. The good prices fetched by genuine Moorish carpets allow of a sufficient margin for the production of good and cheap machine-made imitations.

Glassware, of which the Moors use a great deal, furnishes another example. It should be possible on drinking cups and tea tumblers of all sorts and prices to substitute Arab decorations for the rudely designed flowers and fruits that are seen on goods of German origin.

NATIONAL WEALTH OF ROUMANIA.

(From Our Own Correspondent.)

Bucharest, May 9.

The national wealth of Roumania is difficult to estimate. The figure given is thirty-six milliards of francs (one milliard francs equal to £40,000,000), but seems very high when we take into account the area of the country, its population, the short period during which it has enjoyed the advantages of systematic administration, and the relatively recent origin of her industries.

The following list indicates the position occupied by the country in the hierarchy of wealth:—

United States	350 milliards
Great Britain	300 ,,
France	290 ,,
Germany	270 ,,
Russia	200 ,,
Austria-Hungary	130 ,,
Italy	80 ,,
Spain	50 ,,
Roumania	36 ,,
Holland	32 ,,
Belgium	30 ,,
Sweden and Norway	28 ,,

Roumania's national wealth is distributed as follows:—

Agriculture	17 milliards
Forests	4 ,,
Commerce and Industries	5 ,,
Mines	1·3 ,,
Town property	1·5 ,,
Railways and Merchant Navy	1 ,,
Gold in vaults of National Bank	420 million

CYPRUS SHIPPING RETURNS.

The number and tonnage of vessels which entered and cleared in the foreign trade of Cyprus for the year 1915 were as follows:—

Ports.	Entered. Total. No.	Entered. Total. Tons.	Cleared. Total. No.	Cleared. Total. Tons.
Larnaca	121	15,249	89	8,351
Limassol	188	50,349	166	62,368
F'gusta	171	65,479	122	29,223
Carpass	—	—	—	—
Kyrenia	—	—	7	559
Paphos	1	36	59	25,888
Latchi	—	—	5	1,715
Levka	11	24,039	33	25,055
Total	492 (of which 371 of 20,149 tons were sailing vessels)	155,152	481 (of which 359 of 19,749 tons were sailing vessels)	153,159
12 months ended Dec. 31, 1914	870 (678 sailing vessels of 28,682 tons)	290,014	872 (680 sailing vessels of 29,876 tons)	291,912

NEAR EAST MARKETS.

PRODUCE REPORT.

London, June 1.

Currants.

The market has been very active during this past week with an increasing demand for all kinds, and prices have generally advanced from 1s. to 2s. A further advance is almost certain, as stocks are considerably reduced and reports from Greece continue unfavourable.

Sultanas.

There has been only a small demand during the week, with more business done in Greek fruit at prices favouring buyers. Other kinds are somewhat neglected, although holder's quotations are slightly reduced.

Dates.

There has been a fair demand during the week, with full prices being maintained for all kinds.

Seeds.

The market for all seeds has been, more or less, quiet. Linseed was dull, London-Calcutta, spot, quoted at 72s. 6d., afloat, and June-July ditto. Bombay, ordinary, May-June, 73s. 6d. La Plata, Hull, May-June is offered at 70s. 9d. Rapeseed continues dull. Toria, June-July, is quoted at 68s., while brown Cawnpore, ditto, is offered at 65s. 6d. Cottonseed is quiet; London-Egyptian, June, £14 2s. 6d., and Sakelarides, loading, £13 12s. 6d. per ton. Mustard seed remains scarce and dear, while canary seed is rather quiet and cheaper.

Oils.

Linseed oil is easier, with a limited demand. Spot, pipes, landed, quoted £35 15s.; barrels, ditto, £36 15s. Rape oil is quiet. Ordinary brown, naked, spot, £49; English refined, barrels, £52 to £53. Cotton oil remains steady; crude, spot, in pipes, £45 10s.; refined pale, pipes, £49 10s., and barrels, sweet, £54 to £55 as to make.

Oil Cakes.

Egyptian cotton cakes continue very scarce on spot, and buyers are compelled to pay £10 10s. to £10 12s. 6d. for immediate delivery, while sellers of May-June shipment offer at £10 ex ship terms. English makes are dearer, commanding £10 10s. to £10 12s. 6d., whilst Bombays are not available. Linseed cakes during the week have been dull and inactive, but, owing to the small quantites of foreign on the way, and the restricted production in home mills, prices are well maintained. Best London made is offered at £12 17s. 6d. to £13, whilst fine quality seedy Calcutta is quoted at £13 5s. to £13 10s. per ton.

FOOD SCARCITY IN GREECE.

Cabling on May 21, the Special Correspondent of the *Times* in Salonika say that, great scarcity of food, and even actual cases of death from starvation, having been reported from the frontier towns of Florina and Koritza, an indignant outcry is being made by the Athens Government Press against the restriction of the food supplies imposed upon Greece by the Allies.

The measure in question had reluctantly to be adopted as the only means open to the Allies of checking the conveyance of foodstuffs to the enemy in Serbian Macedonia. The reported deaths from starvation in Greek Macedonia are contradicted by all impartial evidence, and have probably been invented by cornerers in provisions and by those interested in frontier contraband, with the object of bringing pressure to bear upon the Allies to allow larger imports. But even if true, they are attributable entirely to these harpies, whose greed has caused something approaching a famine in Greek Macedonia.

A partial check on frontier contraband was effected by the French occupation of Florina, where hundreds of horses and mules employed in this traffic were confiscated and several smugglers arrested; but a leakage is still known to exist at other points of the frontier, and while this continues it would be foolish for us to relax our grip on the importation of foodstuffs. If the population suffers, it is for the Government to bring relief by taking stern measures against native speculators.

EGYPTIAN YARN TARIFF.

The *Official Journal* of April 6 last contains certain revised tariff valuations for use in assessing duties on cotton yarns imported into Egypt from April 5 to June 4, or until denunciation, as follows :—

Articles.	Import valuation per kilo (2·2046lb.) Milliémes.*
Cotton, single yarns, grey and bleached—	
From India—	
Nos. 4 to 12	71
Nos. 14 to 20	88
From other countries—	
Nos. 4 to 12	106
Nos. 14 to 20	113
Knittings—	
From India—	
Nos. 3 to 12	94
From other countries—	
Nos. 3 to 12	121
Cotton sewings, grey or bleached—	
From India	113

EGYPTIAN COTTON.

The following has been received from Alexandria, dated April 19 :—

"Notice is hereby given to the brokers that the Alexandria General Produce Association has informed the Committee of the Exchange that they consider it to be in the interest of the market to introduce a new 'Sakellaridis' contract, in which it will be possible to deal soon, even for November, 1916, delivery. This contract is meant to take in future the place of the present F.G.F.BR. contract.

"The F.G.F.BR. contracts will continue to be transacted on the Exchange, and will follow their course, but only as far as July-August, 1917, delivery, after which position it will not be possible to deal in F.G.F.BR. contracts on the Exchange.

"The Committee have also been informed that the Association have taken steps that the indemnity to be allowed to the sellers, and which has been raised from P.T. 40 to P.T. 80 should only apply to March, 1917, contracts.

"The Alexandria General Produce Association have asked the opinion of the Committee on this matter, and the latter have replied that they agreed to the proposal.

"In order to avoid any difficulties in case the new contract should come into force, the Committee requests you to stipulate for all the new business you may transact that contracts for delivery in and after March, 1917, will be subject to the new contract which may become official."

THE COAL SHORTAGE IN EGYPT.

The Egyptian Ministry of Public Works has issued an official communiqué notifying agriculturists that the Government has been able to secure a fairly large quantity of coal this year, which it proposes to sell to agriculturists on condition that it is solely utilised for irrigation works. The price will vary from time to time. It has now been fixed for one month from date at £E5.500 milliemes, delivery on the railway trucks at Mex, the purchasers defraying all expenses in connection with transport, etc., from Mex to the place of destination, in accordance with the railway tariff in force for the time being.

The coal will be sold only in quantities of ten tons or multiples of ten, and against cash payment, except in special cases.

Applications for the coal should be submitted to the Director-General, Mechanical Service, Ministry of Public Works, with the following particulars :—The name of the owner of the pumping engine, the district, the railway station where delivery of the coal is to be made, the quantity of coal required, the number of the licence, and the horse-power of the engine.

The amount of coal to be sold to any person will not exceed the requirements of his engine for more than two months.

An optimistic view is taken of the coming Egyptian cotton crop. An unofficial estimate places it at eight million cantars (800,000,000 lb.).

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,

Engineering Notes.

A Process of Refining Nickel.

Nickel, which abounds in Canada, is one of our most useful alloys, being largely used in the manufacture of "German silver"—which, by the way, is neither German nor silver—and of nickel coins in America, France, Belgium, Greece, etc. It is especially valuable for covering other metals, as it is little injured by damp, or by acids, except nitric acid. It is, therefore, of great interest at the present moment, when the necessity for careful attention to the progress of scientific research in connection with British industry is strongly emphasized, to hear that a new process of refining nickel has been discovered in Canada, by which 100 lbs. of ore can be converted in 50 lbs. of metal in forty-eight hours. The fact that the discovery was made by Professor L. P. Burrows, a British scientist, and in a region of the British Empire where the ore abounds is, of course, very gratifying. By Professor Burrows's method there is no preliminary roasting. The ore, when mined, is crushed and placed in the refining apparatus, where it is subjected to a gaseous treatment for about five hours. After this it is smelted and refined to the finished alloy in the form of a very fine powder, being a very superior article for alloying steel. This powder equals about 75 per cent. of the ore. If desired, the powder can be reduced to the metallic form, producing about 50 per cent. in weight of the ore, entirely free from sulphur and eminently suitable as a high-grade metal for many purposes, as well as for alloying steel. The steel produced by this alloy has proved better than steel produced by a higher percentage of alloy as done by the old method. With reference to "German silver," it may be mentioned here that it is an alloy of copper, nickel, and zinc, and is largely used in the manufacture of spoons and forks, teapots, salvers, and similar articles. It is easily attacked by vinegar, and for that reason forks and spoons made of it are usually plated with silver. The alloy was originally introduced from China; it is, therefore, neither "silver" nor "German," but by the Germanic law of appropriation and kultured subtlety of business the very useful alloy was so branded, and it is satisfactory to hear that even before the war the British Alloys Nomenclature Committee had suggested an alteration of the name.

The Demir Hissar Bridge.

According to reports from Athens, the difficulties that have arisen as a result of the destruction of the iron railway bridge at Demir Hissar, near Serres, by the Allies will soon be removed. By an order of the Greek Government the local staff of engineers have completed all the necessary plans and estimates for the construction of a temporary wooden bridge by the side of the one destroyed. The new bridge will have a length of 120 metres (393.60 ft.), and all the necessary wood and other materials, to the value of £1,200, have already been ordered in America. The construction will take about two months, and will begin as soon as the materials reach Demir Hissar. Trains and other vehicles will run over this new bridge as usual until the iron one is reconstructed.

Athens-Salonika Railway.

But for the war, Greece would now at last be placed in direct communication by rail with the rest of Continental Europe (says the *Economist*). The final link in the line connecting Athens with Salonika, which has been constructed within the last two years by a French firm of contractors, was opened with due ceremony in the presence of the King, the Crown Prince, and several Ministers on Monday last. It starts from Papapouli, near the mouth of the Peneus, and runs along the coast of the Gulf of Salonika, eventually joining the line from Monastir to Salonika, near Topsin, apparently just before the Vardar is crossed. Its completion was always opposed by the Porte, and has only been made possible by the victory of Greece and the other Balkan States in the first Balkan War of 1913; and it was facilitated by the action of the French Government in authorising the French company which owned the line from Athens to Larissa to cede its property to the Greek kingdom. The completion has been hastened for military reasons, but hereafter the line may be of high commercial importance, though no doubt the chief route to Greece from Western Europe will for many years pass through Brindisi, and at no distant date, it is to be hoped, there will be a railway from Valona or Durazzo to connect with the Greek system, possibly at Kalabaka. The war, indeed, is hastening railway extension elsewhere.

ZINC ORES IN THE NEAR EAST.

The *Bulletin of the Imperial Institute* (vol. xiv., No. 1) just published contains an article on "The Occurrence and Utilisation of Zinc Ores," from which the following are references to Near Eastern countries :—

Bulgaria.

Zinc ore has been raised from the Sedmolchileniza Mine, about six miles south-west of Vratza. The ore-bodies, which are found on the sides of a steep valley, occur as bands and lenses two to seven feet thick, in the stratification planes of a Triassic dolomitic limestone. The more important minerals present are finely disseminated zinc blende, zinc carbonate, and galena. Samples taken across the vein showed zinc 18 per cent. and lead 2.5 per cent. By hand-picking the ore, the proportion of zinc and lead can be raised to 28 and 6 per cent. respectively. At Roupio, ores containin workable amounts of lead, copper, and zinc have been obtained. Ore containing zinc 25 per cent. and lead 15 per cent., is obtained from the Blagodat Mine, in Kustendil.

Greece.

The most important mines appear to be those of the Laurium district, where both zinc blende and carbonates occur. The mines are of great antiquity, and yield ore at the contact of limestone and schists of probably Silurian age. The ore, which consists of argentiferous galena and zinc blende, with some pyrite, chalcopyrite, cerussite (lead carbonate), and smithsonite, occurs in lenses and pockets. Bedded deposits, varying in thickness from 2 to 40 feet, occur, in one case at least extending for a distance of 1½ miles; parallel ore-bearing beds are found at several levels. The carbonate ore is usually calcined before export, and then contains about 60 per cent. of zinc.

Deposits are found in many other localities, among which may be mentioned Mount Hymettus, where the ore occurs in irregular masses in limestone.

Turkey in Asia.

Little information is available regarding the nature and extent of the zinc deposits in Asiatic Turkey. Zinc ore has been produced from Iotape in the province of Adana, and from Balia in the province of Broussa; but it has been stated that the chief source of supply is Karsasu on the Black Sea.

BRITISH OIL COMPANIES IN ROUMANIA.

Oil News publishes a letter on the above subject from a "well-informed correspondent in Roumania who is a practical oil man, knows the language, and has resided for a considerable time in the country." He gives the total production of principal foreign companies in Roumania for the year 1915 as follows :—Dutch, four companies, producing 477,267 tons; German, two companies, producing 445,455 tons; one America company, producing 375,915 tons; and fifteen English companies, producing only 155,570 tons. [In reality there are thirty-five English companies, fifteen of which are mentioned. The others are not producing.] The writer then says :—

"As will be seen, there are no fewer than thirty-five English petroleum producing or would-be producing companies. The number of these concerns which are in the hands of the most undesirable type of foreigners is amazing; in fact, it is one of the chief reasons of the failure, or at the best slow progress, of these companies. It is almost absurd the way in which rash British speculators place these people in the most confidential positions. The following is a most striking example :—An English company, the local manager of which also holds the power of attorney, is sole representative. He is an Austrian subject, and, above all, one who holds a high position in the Austrian secret service. This is a most striking example of the negligence of some English directors and shareholders.

"Again, some concerns are in the hands of Englishmen. Honest—by all means, but men who when sent out to the oilfields 'taste gas' for the first time in their lives, and who promptly mix themselves in technicalities of which they know nothing. And what happens? In the practical work there is a stage when every beginner has learnt a little in the way of drilling, etc. Things then look very simple. In oilfield language a person at this stage is said to 'know enough to be dangerous.' From the interference of such persons all kinds of evils result—fishing jobs, collapsed pipe, water not shut off, in short, all sorts of disasters.

"Such are, I am sorry to say, the chief causes of the failures amongst British concerns.

"The public should bear in mind that every English failure means business passing into the hands of foreign companies, many of which now during war time are opposed to our cause. The country also is blamed and suffers through these mistakes. Roumania is the oil country with the finest future in Europe, and why? Because there are no real difficulties. Almost everywhere where serious drilling operations have been undertaken favourable results have been obtained. At Bana hundreds of cars (a car is 10 tons) of oil have been extracted from wells which have been 'drilled in' in a month and a-half to two months. The Baicoi wells, some of which are now producing enormous quantities of oil, did not take more than three or four months to drill. Roumania's oil-bearing territories are vast and easily got at in comparison with some of those of other countries. Another great advantage is that there is 'room for all.'

"Let us hope that after the war people will open their eyes and realise that past failures are not due to the difficulties of the country, but that the mistakes have chiefly been made by the directors in London."

THE GREEK LOAN.

(From Our Own Correspondent.)

Athens, May 19.

The impossibility of raising a loan abroad has obliged the Government to try and arrange for an internal loan. This loan—the negotiations of which are now being concluded—will amount, according to official communication, to 100,000,000 drs. at 5 per cent., of which the National Bank will subscribe two-thirds of the whole amount, the issuing price to be 87 or 88. In other words, the bank will take over approximately 58,000,000 drs. But, as, on the other hand, the bank has already advanced to the State more than 35,000,000 drs., there will only be 23,000,000 drs. reverting to the latter; and if the other third of the loan, which is to be open to public subscription, is fully covered, the total net proceeds will be approximately 51,000,000 drs. Out of this sum there will have to be paid 30,000,000 drs. for requisitions, 15,000,000 drs. on account of allotments to soldiers' families, and 7,000,000 drs. on account of military supplies. The result is that, even supposing it is only intended to meet the most immediate demands, nothing will be left of the loan, which is a settlement of accounts rather than a source of revenue for the Exchequer. Doubtless, it is in consideration of this that, according to a Ministerial newspaper, the nominal amount of the loan will be raised to 115-120,000,000 drs. with a view to obtaining an effective surplus of about 20,000,000 drs.

Although nothing is positively known as regards the guarantees to be given to the bank, according to the Ministerial Press the principal securities consist in a tax on currants, in the surplus of the revenues devoted to the service of the old Debt, and the State's participation in the profits of the bank. The bank insisted on the right to issue further notes to the value of 30,000,000 drs., but the International Committee of Control refused to agree to this arrangement. Now it is asserted that the Government is disposed to prolong the privileges of the bank, which expire in 1930, for a further period of twenty years. The Liberal Press criticise this concession, which would bind the State for thirty-four years.

It is reported that maximum prices have been fixed in Roumania for petroleum and petroleum products. It is also reported that M. V. Bratiano, the Prime Minister's brother, is a strong advocate of the establishment of a petroleum monopoly.

CYPRUS NOTES.

(From a Correspondent.)

The estimates chargeable to surplus balances, to be presented to the Legislative Council on May 13, amount to £22,100, and include £8,000 for relief of distressed Cypriots abroad; £3,000 for the campaign against fever; £2,500 for special tree planting; £2,500 for roads for motor traffic; £1,800 for forest service—saws and appliances, etc.; and £800 for railway improvement.

Harvest work is in full swing over the wide, fertile plains of the Mesaoria. Weather conditions have continued to be favourable.

The Animal Show held at Nicosia on May 12 was a success. Prizes were given for horses, asses, cattle, and sheep. High prices were offered for some of the prize animals. The entries were not numerous, partly, no doubt, owing to the claims of harvest.

NEW EGYPTIAN REGULATIONS.

The *Official Journal* of May 16 publishes a proclamation by Sir Archibald James Murray which contains, *inter alia*, the following prohibition:—

No person shall send or bring into Egypt or send or take out of Egypt any letter or other like document otherwise than through the post.

No person shall introduce into Egypt otherwise than through the post any newspaper of which he is not in possession for his own personal use.

No person shall carry on the business of receiving letters, telegrams, or other postal packets for delivery or transmission to the persons for whom they are intended without disclosing to the police on behalf of the military authorities the fact that he is carrying on any such business, and every person carrying on any such business shall conform to all such instructions with respect thereto as may be given him by or on behalf of the military authorities.

An order has been obtained which will relieve creditors of Ahmed Mustafa's Son, 52, Princess Street, Manchester, an alien enemy. According to the *Mercantile Guardian*, Mustafa at the outbreak of war was insolvent, and had suspended payment at his principal place of business, Constantinople. His compatriots would not hear of any Turkish money being sent to England, and his attorney in this country was left to apply for a deed of assignment. The war came and put a stop to the proceedings, but meanwhile the assets have been realised by the Public Trustee, and now the funds are ready for distribution.

COMPANY MEETINGS.

BANK OF ROUMANIA.

The Chairman, in moving the adoption of the report, said:—In rising to move the adoption of the report and accounts for the year 1915, I have to deplore the death of the Dowager Queen Elizabeth of Roumania, which occurred on March 2 of this year. Her death is mourned by the many to whom she had endeared herself. I presume, gentlemen, that you will take the directors' report and balance sheet as read, and would only draw your attention to an item of £7,021, referred to in that report. This sum represents the balance of the cost of new fittings and of the erection of the strong room in the new premises at Bucharest, on which we have recently taken a lease. They are situated in a modern building in the Calea Victoriei, in what is, for us, a most advantageous position in the centre of the business quarter of the city. The strong room is constructed by an English firm, and contains a safe-deposit for the use of our clients. We have recently taken a lease of more convenient offices in London at No. 27, Throgmorton Street, which we expect to occupy on or about the 15th of next month. Our deposits in Roumania are approximately the same as at the end of 1914, and represent, to a considerable extent, the proceeds of bills, etc., collected in Roumania, which accounts, chiefly, for the large amount of cash in hand. An important part of our business during the year 1915 has been the transmission of money to this country in settlement of pre-war debts for goods supplied by shippers to Roumania. The total Treasury receipts amounted to Lei 557,798,014 for 1914-1915, as against Lei 608,502,889 for 1913-1914, while the total expenditure for 1914-1915 amounted to Lei 539,703,300, thus showing a surplus for the financial year 1914-1915 of Lei 28,094,714. The treasury receipts for the first half of the financial year 1915-1916 amount to Lei 208,053,671, as compared with Lei 217,236,194 for the same period in 1914. The gross receipts of the State Railways—3,702 kilometres in length—amounted to Lei 110,949,868 for the financial year 1914-1915, as against Lei 115,046,192 for the financial year 1913-1914, being a decrease of Lei 4,096,324. For the financial year 1915-1916 the gross takings for the period from April 1 to December 31, 1915, amounted to Lei 85,276,494, as compared with Lei 89,684,648 for the same period in 1914. The receipts of the State maritime service, State river services, and Danubian ports dues show a diminution for 1914-1915 of

LONDON COUNTY & WESTMINSTER BANK, LTD.

ESTABLISHED IN 1836.

CAPITAL - £14,000,000, in 700,000 Shares of £20 each.

PAID-UP CAPITAL - £3,500,000. RESERVE - £4,000,000.

Chairman - THE RIGHT HON. THE VISCOUNT GOSCHEN.

Deputy Chairman - WALTER LEAF, ESQ.

HEAD OFFICE: 41, LOTHBURY, E.C.

The Bank is represented by Branches or Agents in all the Principal Cities and Towns of the United Kingdom, and has Correspondents throughout the World.

PARIS: LONDON COUNTY AND WESTMINSTER BANK (PARIS) LIMITED, 22, Place Vendôme.

Sums of £10 and upwards received on deposit, and interest allowed thereon.

Every description of British and Foreign Banking Business transacted.

EXECUTOR AND TRUSTEE DUTIES UNDERTAKEN.

Digitized by Google

about seven million lei, as compared with 1913-1914. On the other hand, the State monopolies show a surplus over the Budget estimates for 1914-1915 of Lei 8,304,899. In the other items of the Budget no material change is recorded. The Consolidated National Debt amounted on April 1, 1915, to Lei 1,758,707,374, which should be reduced by April 1, 1916, through the operation of the Sinking Fund, to Lei 1,721,386,499. The National Bank of Roumania has, as usual, lent its full support both to the State as well as to the commerce of the country. During the year, its rate of discount was 6 per cent., and the rate for advances against securities 7 per cent. The rate of discount was, on 16th of this month, reduced to 5 per cent. The bank-note circulation amounted on December 31, 1915, to Lei 762,210,210, against which the bank held gold and gold bills for Lei 301,949,775, this representing about 39½ per cent. cover, the legal minimum cover being 33 per cent. The total output of crude petroleum for 1915 amounted to 1,625,242 tons. as against 1,722,868 tons for 1914. This reduction of 97,626 tons is primarily due to want of storage space. The prosperity of the country is strikingly demonstrated by the result of the offering for the first time in the history of Roumania of an internal loan. This loan, issued at 84, bearing 5 per cent. interest, repayable within forty years by the operation of a sinking fund, was underwritten by the banks in Roumania to the extent of Lei 150,000,000, of which your institution did its share. The total amount subscribed on the closing of the loan was Lei 400,000,000, subscriptions being received through this bank for an amount more than three times that of its underwriting. The prospects of the crop for the present year are reported to be very good, so far, but it is, of course, impossible at present to state definitely what the result will be. Owing to the absence of Major-General the Hon. H. A. Lawrence and of Colonel the Viscount Goschen on military duties, Mr. J. Mason Williams has accepted an appointment to the Board. I have again to express to the staff of the bank, both here and in Roumania, our thanks for the services they have rendered during these exceptional times. In view of the existing circumstances, extra allowances have been accorded them. I now beg to move: "That the report and balance sheet, now read, be received and adopted; that the sum of £7,525 15s. 11d. be placed to the credit of the reserve fund; that the dividend for the year ended December 31, 1915, be fixed at 8s. per share, free of British income tax, and that this dividend be paid on and after June 5, 1916."

Mr. E. W. H. Barry seconded the motion, which was carried unanimously; and the retiring directors and auditors having been re-elected, the proceedings terminated with a vote of thanks to the chairman, the directors, and the management and staff both at home and abroad.

INDO-EUROPEAN TELEGRAPH COMPANY

Mr. J. Herbert Tritton presided at the annual general meeting of the above company held on Tuesday. He said their communications through Germany were severed on July 31, 1914, and had remained so. Their South Russian and Persian lines had, on the other hand, done good service, their staff having everywhere remained at their posts. The Odessa-Constantinople cable, in which they had a joint interest, had been closed down since the entrance of Turkey into the war. There was no prospect of resumption of their main route, and it was the wish of the British Government and the cable companies with whom they had working arrangements that they should await the termination of hostilities before they committed themselves to any definite decision for the re-establishment of their through service to India viâ Russia, in order that the most suitable route should be determined upon by the administration and companies concerned in collaboration with themselves. At the meeting held last year, he said that they had received an assurance from the British Government that facilities would be given to the company for the re-establishment of the Indo route, and the Imperial Russian Government had also promised them facilities to the same end, together with an extension of their existing concession. Such extension should render possible the very considerable expenditure on capital account which would be involved in the re-establishment of their route. The report was adopted.

SOCIETE ANONYME DU BEHERA.

The ordinary general meeting of the shareholders of the above company was held in the company's offices at Alexandria on April 27. The meeting unanimously approved the accounts as submitted, and decided to carry forward the balance of the profits, amounting to £E56,448,371. The following are extracts from the directors' report read at the meeting:—"In the balance-sheet two new elements figure under 'Creditor and other accounts,' namely, accrued interest and accrued rents in suspense for amounts of £E42,725 and £E1,026 respectively. These figures result from the adoption of an automatic system of passing to reserve all interest on land sales and rents which, twelve months ofter maturity, still remain outstanding and include sums thus set aside from the profit and loss account in 1913, 1914 and 1915. The general tone of the balance-sheet is one of consolidation, while, on the one hand, a further sum of £E11,427 has been redeemed from the debenture (obligations) loan, on the other, your directors have thought it prudent to take advantage of the company's present financial situation to apply a considerable depreciation to plant and furniture and a further extraordinary depreciation of £E5,000 to the workshops. Capital expenditure within the limits previously referred to has been effected and includes two drainage installations capable of dealing with about 4,000 feddans each, of which one is for your Sidi Salem property. These installations will shortly be completed. As was to be expected, the sale of land has temporarily almost ceased, not only on the company's estates, but throughout the country. On the other hand, expropriations continue, though to a much less degree than in 1914. Dredging under Government contract has been maintained at the minimum provided by the terms of the contract, hence the reduction in the cubes dealt with as shown in Table III. This restriction of work is also reflected on both sides of the profit and loss account and is a further consequence of the war. Apart from a certain quantity of munition work, our shops have been normally occupied."

ABOUKIR COMPANY.

At the twenty-ninth ordinary general meeting of this company, held recently in London, the Chairman said, *inter alia*:—When last we met this company had been suffering in many ways from the effects of the war, and from the inactivity of trade and the low price of cotton. During the past year one at least of these drawbacks has disappeared. The price of cotton has risen nearly to the level of 1913 and the year's crop has been sold at £4 9s. 6d. per cantar, against £2 18s. in 1914, but other drawbacks have occurred, which have seriously interfered with the return of the company's accounts to a more satisfactory condition. I will mention four of these drawbacks. First, the returns of the cotton crop on two out of three of our divisions are considerably reduced owing to the reduction in the cotton area which was decreed by the Government in 1914, viz.—It was decreed that we should grow cotton on only one-third of our land in each year and other crops on the other two-thirds. This decree has since been rescinded, but, as I stated when addressing you twelve months ago, we are advised that in the interests of the quality and quantity of the cotton crop it is not desirable to revert to the former system of a two-years' rotation. Our manager considers that the growing of cotton on only one-third of the land each year will eventually be the more profitable policy, but for a year or two the adoption of this system will be at the cost of a temporary reduction in our revenue. Second, the insufficiency of the water supply, which has materially interfered with the letting. Third, the price we have to pay for various needful commodities, especially coal. A few months before the war broke out we made a shipment of anthracite coal delivered at Alexandria at £2 10s. per ton. Last year we paid £3 9s. 6d. per ton, and more recently, including the extra amount for freight, etc., the price works out at £7 10s. per ton delivered in Egypt. Fourth, both ordinary and pink bollworm undoubtedly account for a loss in yield, but the attack was not so severe as in previous years. As to the future, it is very difficult to forecast anything in these times. We are informed that the Nile flood this year is expected to be a poor one. It is possible that this drawback may to some extent be mitigated, owing to the fact that in certain districts the Government has greatly restricted the cultivation of rice, and in the district in which Aboukir is situated the cultivation has been entirely prohibited. This, however, will not affect the company, as we grow little or no rice. It is to be hoped that this action of the Government will enable a better supply of water to be given to the cotton lands, and we presume that is the object in view. The normal area of summer rice cultivation in Egypt is, I believe, about 200,000 feddans, but this year it has been cut down to 100,000. With regard to rent and fresh lettings, there does not seem any immediate prospect of improvement until and unless there is a good Nile. One of the features of this year, 1916, is the sale at a good price of berseem to the Army. The money received from this source will assist the tenants in the payment of arrears and current rent. With regard to the probable price of cotton for the year 1916, the directors do not expect to sell at a lower price than in 1915. The report of the directors was moved and adopted. No dividend is being paid for the past year.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

Aegion, Agrinion, Almyros, Amalias, Amphissa, Arta, Atalante, Calamata, Calavryta, Céphalonia, Chalkis, Corfu, Corinth, Cythère Dimitsana, Gythium, Ithaque, Janina, Karditza, Kyparissia, Lamia, Larissa, Lévadia, Mégalopoli, Messina, Missolonghi, Naupacta Nauplia, Patras, Paxos, Pirœus, Poros, Pylos, Pyrgos, St. Maure, Salonika, Santorin, Sparta, Syra, Thèbes, Trikkala, Tripoli, Volo, Zante

COMPANY REPORTS.

Bank of Roumania.

The directors, in presenting to the shareholders the balance-sheet made up to December 31, 1915, stated that the balance of profit, after making provision for bad debts, taxes, including British income-tax and writing down investments, amounts to £35,102 7s. From this is taken £7,021 (balance of cost of moving into new premises at Bucharest and of erection of strong-room and safes), and, after placing £7,525 15s. 11d. to the reserve fund and deducting the percentage for the directors, there remains a balance of £20,000. A distribution at the rate of 8s. per share, free of British income-tax, is recommended. The cost of moving into new premises and erection of safes now being fully covered, a portion of the contingency fund is thus freed, and the sum of £15,000 is transferred to the reserve fund. This transfer is in addition to the sum of £7,525 15s. 11d. mentioned above, and brings the reserve accounts up to over £200,000. The accounts in lei from Bucharest are calculated for the purpose of the balance-sheet at 25 lei to the £. As regards this rate and the abnormal exchange ruling at the end of December, due provision has been made for current business; and with regard to the capital employed in Roumania, the difference is covered several times over by the reserve accounts. In accordance with the articles of association, the retiring members of the board are the Right Hon. the Earl of Bessborough and Mr. E. W. H. Barry, who, being eligible, offer themselves for re-election. Since the last general meeting, Mr. John Mason Williams has been appointed a director, and, in accordance with the articles of association, retains his office only until this ordinary general meeting, but, being eligible, offers himself for re-election.

Anatolia-Serdjiller Syndicate.

The annual report of the directors states that on the declaration of war with Turkey the immediate closing down of the company's mine in Asia Minor and the dismissal of the employees became necessary. Mr. Dawson, the superintendent at the mine, in his great desire to leave everything on the property in good order and well protected, unhappily reached Dardanelles only to find that he had become a prisoner in the hands of the Turkish Government. Unfortunately, he has not yet been released. Under the terms of an agreement dated March 16, 1914, Mr. Dawson's engagement with the syndicate was for two years from February 20, 1914, and would, therefore, have expired in the ordinary course in February of this year. The directors are advised that the effect of the war having rendered the performance of the agreement impossible, no legal responsibility on the part of the syndicate in respect of Mr. Dawson's services remained after November 4, 1914, the date on which all operations on the property ceased. Under the very regrettable circumstances, however, of his detention in Asia Minor, a moral responsibility rests upon the syndicate to render to his wife and family such financial assistance as they may require until the syndicate can reinstate him in his former position at the mine or he is able to return to his home. There is no immediate probability that operations upon the property can be resumed until hostilities between Turkey and the Allies have been concluded. The total expenditure during the twelve months to March 31 last, including an allowance to Mrs. Dawson, was £803 14s. 6d. The cash position at that date, including uncalled capital, showed a surplus of £7,843.

At the request of the Crédit Foncier Egyptien, mortgage creditor of about 1,000 feddans of land belonging to Messrs. Nicolas and Jean Axelos, of which the Daira of Prince Halim is the third holder, the Mixed Court of Appeal has appointed Mr. J. H. Russell as judicial sequestrator of the estate. This measure has been taken owing to the fact that the Daira has ceased to meet its payments to the mortgage creditors and has rented the lands to the firm mentioned, from whom the Daira bought them. Mr. J. H. Russell was recently appointed Controller of the Daira of Prince Halim.

COMPANY RESULTS, Etc.

ANGLO-EGYPTIAN.—Gemsah, for the week, 14 tons (previous week, 169 tons). Hurgada, 498 tons, against 555 tons.

BANK OF ROUMANIA.—On and after June 5 a dividend of 8s. per share, free of British income-tax, will be paid to the shareholders, against delivery of Coupon No. 24.

EGYPTIAN MARKETS.—First 5 per cent. debenture coupons No. 35, falling due on the 1st inst., are payable at the Anglo-Egyptian Bank, 27, Clements Lane, E.C., at the face value, and at the branch offices at Cairo and Alexandria, at the current rate of exchange.

FOUR PER CENT. EGYPTIAN GOVERNMENT IRRIGATION TRUST CERTIFICATES.—The numbers are announced of the certificates, amounting to £39,800, drawn for redemption on July 1, when interest thereon will cease.

GEORGE NUNGOVICH EGYPTIAN HOTELS COMPANY.—The numbers are announced of the debentures, Series A, B, C, and D, redeemed on May 1.

ROUMANIAN CONSOLIDATED.—Week ended May 20, 510 tons.

SUEZ CANAL.—Receipts for May 28 amounted to 340,000 fr., as compared with 370,000 fr. for the corresponding day last year.

The Bureau of Railway News and Statistics report that the Constantinople line was open for through traffic on January 15, 1916, there being two trains each way per week, the distance of 1,521 miles being covered in 60 hours. From Vienna to Constantinople occupies 48 hours, sleeping berths being charged at 16 marks per night.

BANK OF ROUMANIA, LIMITED.

Notice is hereby given that on and after the 5th June, a DIVIDEND of 8s. per Share, free of British Income-tax, for the year ended 31st December, 1915, will be PAID to the Shareholders on the books of the Bank at the close of business on the 16th instant, and against delivery of Coupon No. 24 of the shares to bearer.

The coupons must be entered on forms, which can be obtained on application at the Bank on and after this date (Saturdays excepted) and left three clear days for examination.

NOTES OF THE WEEK.

The past week stands out prominently even in a war of sustained effort and violent shocks. A naval battle with the whole German High Sea Fleet off the Horn Reef; the struggle before Verdun raging with an intensity that eclipses the most desperate attempts yet made by the enemy during fifteen weeks of uninterrupted attack; another grim duel for the possession of shell-battered Ypres; in the Trentino the Austrians striving to hold against the Italians what they have been able to win only at a heavy cost; and last, but by no means least, a fresh thrust on the part of the Russians along the whole of the southern portion of their European front, which, if not checked, promises at last to modify the situation in the Balkans—these are the main happenings which have to be recorded since the appearance of the last issue of THE NEAR EAST. Little wonder that the world has been profoundly stirred and is asking how long such a conflict can last.

To the strain that the British nation has had to endure has been added a great personal loss in the tragic death of Lord Kitchener. No other living personality had acquired such a hold on the popular mind. At the outbreak of the war he was acclaimed as the one man who could make up for the past neglect of national defence. He had long foreseen the war with Germany, and he was fully aware of the inadequacy of Great Britain's military organisation to play a proper part in it. As Secretary of State for War he compelled the nation to prepare for a long struggle, and gradually persuaded it to put forth its maximum effort. No one else at the time was able to conceive the results which he deliberately set out to accomplish. Lord Kitchener was still on duty—he had never been free from it—when his life came to an end. But his main task had been accomplished, and he has passed away, leaving the Empire, whose service he loved so well, in reality more secure than when he started to serve it. For although the dangers it has had to face and is still facing are greater than any that have confronted it before, the arousing of the nation's consciousness to an appreciation of its latent resources has given the Empire, under his direction, sufficient confidence in its strength to bring it through all the difficulties that beset it.

Important as are the struggles now raging before Verdun and, in lesser degree, before Ypres, attention in these pages must be directed mainly to the course of events in the East. The Russian offensive has opened with important successes. In a few days over 40,000 of the enemy have been taken prisoners, as well as large quantities of guns and ammunition. Russia has penetrated the enemy's lines before by sheer weight of numbers, but this time she is supported by the artillery that she has lacked hitherto, and the thrust for that reason becomes the more serious for the Austrians. Whether it is the first move in a general advance, or whether it is a timely operation intended to relieve the pressure on the Italian front, remains to be seen. If the Austrian line should prove unexpectedly weak, the attack may develop beyond the original intentions of our Allies. The theatre of the operations, it will not be forgotten, is of special significance to Roumania. Somewhere in the Bukovina, it is believed, exists a line which the Roumanians are only waiting for the Russians to cross, in order to play the part in this war that the national interests and the national desire have long since mapped out as the policy to which the country must sooner or later commit itself. The main Russian success of the last few days has been obtained within twenty miles of the Roumanian frontier.

For a day or two the thought must have flashed through the Near East that after all the British Navy had shared the country's fatality for registering failures in its early efforts in every war. The German version of the Battle of Horn Reef had for geographical reasons a good start. It was followed by a somewhat unhappily worded statement from the British Admiralty, which correctly characterised the British losses as heavy, but failed to emphasise the completeness of the enemy's discomfiture. Neutrals cannot be blamed for not appreciating the fact, which the Admiralty itself showed that it had not adequately grasped—that more counts in a naval battle than mere loss of ships. The German Navy left the safe anchorage where it has remained hidden throughout the war and sallied forth on a mission known to itself. It was very quickly engaged by a portion of the British Fleet, which endeavoured to hold the enemy's ships until other units of the Grand Fleet, more of a match for the Germans, could arrive on the scene. In the fight that ensued the enemy made the most of his superior strength, and the British losses were considerable. But before Admiral Jellicoe's battleship squadron could take an effective part in the battle, the German Navy was flying for safety in different directions to its own ports. It was pursued up to the mine-protected area, and the British Fleet returned to the scene of the engagement in the hope of saving life, in due course

Digitized by Google

making its way to British waters. Five hours after its arrival in harbour it was able to report itself ready to put to sea again. From these facts neutral States will draw their own conclusions in regard to the "victory" claimed by the Germans. The German Fleet, whether its losses were great or small, remains a prisoner in German waters, and the blockade of Germany continues as before.

The fighting in Asia Minor continues to mark a transition stage in the history of the campaign. By the time the Russians had advanced as far westward as their resources for the time being allowed, the Turks had been able to draw upon their local reserves and to hurry forward reinforcements from Constantinople. These forces sufficed to hold up the Russian line and to force it back some distance. By now, however, the advantage in numbers held by the enemy a few weeks ago is being counteracted by his losses, and the Russians are in a position to push home occasional counter-attacks. The future course of the struggle at this point would seem to depend entirely on the question of reinforcements. Whichever side is able to throw more men into the firing line will once more be in a position to advance. For the present the problem of reinforcements is a difficult one for both our Allies and the Turks, but the general situation in Russia justifies the expectation that steps have long been in train to maintain the Grand Duke Nicholas's army at full strength. The chief purpose of the Russians is served so long as they contrive to keep the main Turkish forces occupied; but they will be at a disadvantage in holding any front in this region which does not leave them in possession of the highway connecting Trebizond and Erzeroum.

Of the Russian columns operating in the directions of Mosul and Baghdad there is little to report. Fighting has taken place in the neighbourhood of Khanikin, on the Persian frontier. Turkish positions there, which are described as strongly fortified, have been occupied and Turkish battalions have been cut up. At Rowandiz the Russian advance is still checked, and, as in the case of the army west of Erzeroum, is probably awaiting reinforcements. A Turkish *communiqué* reports that there has been no change on the Tigris below Kut, a statement which the silence of the British War Office tends to confirm. On the other hand, a Turkish reference to the sector east of Nasiriyeh, where three large sailing ships laden with foodstuffs for the British forces are said to have been captured, draws attention to an outpost of the Mesopotamian Expedition about which little has been heard of late. There has been a garrison at Nasiriyeh for some time. It is to be hoped that the Turkish report does not point to a successful attempt to cut its lines of communications.

Various indications point to the approach of interesting developments in the situation in Greece. The Bulgarian invasion, following hard upon the overwhelming success of M. Venizelos and two of his supporters at three by-elections, has led to some remarkably outspoken criticism of the powers that be. It is, therefore, not a matter for surprise to find that the Government is contemplating the proclamation of martial law. Feeling is running high in the country, and will inevitably become more embittered as the Bulgarian occupation of Greek territory is extended. The Government cannot fail to realize its own precarious position, and unless it is prepared to stultify its whole past and admit that it has remained in office merely to do Germany's bidding, it must take steps to safeguard itself. But the proclamation of martial law will knock the bottom out of King Constantine's pose as a constitutional monarch. It will regularize a despotism, and show the world that the King and his Ministers have found military force necessary in order to coerce the country into maintaining a policy to which it is almost unanimously opposed.

To the majority of people acquainted with Greece and the chief persons in this Athens drama the situation is as bewildering as it is regrettable. King Constantine and his Ministers are far from being condemned unheard. The former has been prolific in explanations, which seem to have convinced no one. His Government has adhered to a single line of defence—that of undisguised fear. It knows nothing of national honour, principles, or faithfulness to a pledged word; its policy, it openly avows, is dictated solely by the consideration that to fight means disaster to Greece. Its attitude may be sound. If it is, it constitutes a sad reflection on the Greek army, or at least on the courage and efficiency of the Higher Command. But the Government's attitude is weakened by the support it receives in the Press. This support is frankly subsidized by Germany: the papers which uphold the Government do so because they both expect and want Germany to win the War, and feel that the present Ministry, like themselves, are on the side of the Central Powers. With the great bulk of the nation in sympathy with the Allies, this attitude, asserted with no little aggressiveness, is combated with the utmost bitterness. Greece's neutrality, therefore, is persisted in only at the expense of the nation's domestic harmony.

In some quarters the Allies are asked to believe that King Constantine and the Greek Government are deliberately imitating the trick played so successfully by King Ferdinand of Bulgaria; that under the guise of neutrality they are clandestinely preparing for the moment when they will throw in their lot with the Central Powers against the Entente. We should require very explicit proof of Greece's treachery before giving credence to such an assertion. No doubt, the attitude of the Greek Government encourages a number of Greek officials to play into German hands, and probably for this reason the Franco-British authorities at Salonika have at last felt compelled to supersede all Greek officials in the town. But, even if no other consideration held good, we may feel confident that the Greek Government's fear of the guns of the Allied Fleets is at least as deep-seated as the fear of Germany's military might. The factor that weights the scale on the side of the Central Powers is the knowledge that there is little chance of escaping Germany's ruthlessness in the event of her winning, while the tenderheartedness of the Allies, particularly of Great Britain, may safely be relied upon, if Greece should by chance "put her money on the wrong horse."

The visit to Constantinople of members of the Reichstag has been duly followed by a visit to Berlin of members of the Turkish Parliament. As was to be expected, the fullest advantage was taken of the occasion to impress upon the Turks the complete identity for all time of Ottoman and German interests. At every gathering in honour of the visitors, as far as can be gleaned from the reports in the German Press, the Turks were reminded of the "Central Europe *bloc*," which is to spell political and economic blessings for the participants. In the replies to these enthusiastic toasts, however, the subject was with equal persistence avoided. The nearest reference that the spokesman of the Turks allowed himself was in responding to the speech of the Imperial Chancellor, when he reminded his hearers that the alliance with Germany "which so far has imposed sacrifices on us" was to prove in the future a valuable means for progress. In the past the obstacle to progress in Turkey had been the Capitulations. This had been cancelled, and Turkey looked to the war to free her from European intrigues and to allow her freedom to reorganise. Young Turkey was pledged to reform, and felt the necessity of entering the circle of European culture. With this end in view it had engaged Germans to remodel its judicial and educational systems, and was sending its children to be educated in Germany. If the Germans had failed to realise before that their scheme of a "Central Europe from the North Sea to the Persian Gulf" evoked no responsive enthusiasm in Turkey, they must have learned the fact from the visit of the Turkish parliamentarians.

However much one may feel tempted to discount reports of conditions in enemy countries, there is unfortunately good ground for supposing that the state of the Syrians leaves much to be desired. Pathetic accounts of the sufferings of the people continue to reach

Digitized by Google

us from many quarters. One of our correspondents pleads for the formation of a Syrian Red Cross and Refugee Fund, urging that, as the result of a variety of causes, the inhabitants are faced with ruin and starvation. It need hardly be said that such a request is not likely to be lightly disregarded in this country. But it must be apparent to anyone fully acquainted with all that the people of Great Britain are doing to relieve distress in various parts of the world and with all the duties imposed upon them by the war that a fresh appeal at this stage has little chance of meeting with the success it deserves, and, indeed, would have to meet, if it were to fulfil its object. Perhaps American generosity will feel stirred to champion the cause of the Syrians, not only with financial assistance, but also by means of diplomatic representations at Constantinople.

American interest in Syria has already been aroused by the efforts of the late Ambassador, Mr. Morgenthau, to interest the Porte in the future of Palestine. His scheme was to dispose of it to the Zionists, and we may be sure that the suggestion was prompted by altruistic motives. The hope of several portions of the Ottoman Empire, and particularly of the Christian sections of the population, lies in some form of autonomy. One of the immediate effects of the Turco-German alliance was to aggravate the condition of the Porte's Christian subjects. The Armenians were massacred, the Greeks were harried from pillar to post, and Lebanon was deprived of its autonomy. It is not without interest to note that the fate of Lebanon when left entirely to Turkish mercies aroused misgivings among Germans settled in Palestine. The necessity of ousting French influence was admitted, and allowance was made for Turkey's natural desire to re-establish her authority; but German trade interests prompted an expression of hope in the German Press as long ago as last November that Turkey would be content to change things slowly. It was pointed out that Lebanon, though most regrettably under French influence, had managed its own affairs satisfactorily, that it was impossible for Germany straightaway to fill the whole of the rôle which France had played, and that Turkish administration was not yet equal to replacing in its entirety the autonomous régime. Some of these considerations must have weighed with the Turks, for Lebanon was left in part to carry on with its own administrators; but as the strain of the war has increased the lot of the Lebanese has been less fortunate, and they are probably as badly off to-day as any portion of Syria. As both France and Britain are interested in this part of Turkey, it would be well if some relief could be brought by force of arms to the wretched inhabitants.

Changes have taken place in the British Foreign Office which have a particular interest for those who have followed closely the course of British diplomacy in the Near East. After a long and successful diplomatic career, Sir Arthur Nicolson, Permanent Under-Secretary of State since 1911, will shortly retire, and has received the well-earned honour of a peerage. In resigning his office he has the satisfaction of knowing that Near Eastern affairs will henceforth be given more attention than they were able to command in this country before the outbreak of the war. He is succeeded by Lord Hardinge, who thus returns to a post which he occupied before he was appointed Viceroy of India. British diplomacy has suffered a special loss in the untimely death of Mr. H. J. O'Beirne, who perished with Lord Kitchener and his staff on board H.M.S. Hampshire. He was a diplomatist of considerable promise, and if his appointment to Bulgaria had taken place at an earlier date there would have been at least a strong probability of the war in the Near East following a very different course from that which it has taken as a result of the defection of Bulgaria.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 24.

H. H. the Sultan.

H.H. the Sultan proceeded to Alexandria on Tuesday last, accompanied by the Ministers, the Financial Adviser, and his suite. Contrary to custom, no official reception took place at Abdin before his departure, but the senior officials and leading notables assembled at the station to bid the Sovereign farewell. His Highness was received with acclamation at the chief towns through which his train passed, and at Alexandria, where on arrival he proceeded to Ras-el-Tin Palace.

Three days before he left Cairo the Sultan made another journey into the Delta, this time visiting Shebin-el-Kom, one of the more important provincial towns and the capital of the flourishing Mudiria of Menufia. His visit was a veritable triumph, and he received ovations from the people the like of which have not been witnessed for many years. His Highness on this occasion distributed decorations of the "Fellahi" Order to deserving cultivators, and delivered a stirring and instructive address to a mass gathering of the inhabitants. He also caused a free meal and food to be given to several thousand poor persons in honour of his visit, and when he finally left again for Cairo crowds of fellaheen followed his train along the line for some distance, cheering him in an enthusiastic manner. There is little doubt that the Sultan is gradually establishing for himself a special place in the affections of his people. The result of this visit to Shebin-el-Kom fully bears out what I wrote on this subject last week. The people are openly contrasting him, to his great advantage, with his predecessor, Abbas Hilmy Pasha, who entirely lacked his princely dignity, and whose visits, partaking as they did of the nature of a revenue-raising raid, were ever a source of dread to his long-suffering, much-mulcted subjects. They are comparing their present ruler to the Khalifs of mediæval times, and the personal note, which is characterising more and more the actions of Sultan Hussein I., bids fair to make of him a modern Haroun er-Rashid.

The seat of Government is now transferred for the summer to Alexandria, where the Ministers are already in residence, and whither some of the ordinary staff will proceed at the end of the month. For economical and other reasons, no wholesale transfer of personnel will take place this year to Egypt's second capital, but Government officials are all to be given leave of absence. It is in a year like this that we feel the need of some hill station, such as Cyprus possesses in Mount Troödos and the Sudan in Erkoweit. Alexandria and Port Said are all very well as summer resorts for the local population, and on occasion for foreign residents; but European officials, many of whom have not left the country for three years now, and who have since the outbreak of war one and all been subjected to unusual strain and stress of work, require something more bracing and a more complete change than those seaports can offer them; and, in the circumstances, it has been decided to give them special permission to proceed to Europe on ordinary leave of absence.

New Egyptian Coinage.

It has been arranged that a new issue of Egyptian coinage shall be made. The new coins will be of the same denomination as those already in circulation, but the design will be quite different. The gold piece—an Egyptian pound of one hundred piastres—will have on one side the "toughra" (monogram) of Sultan Hussein I., with below it the date of his accession to the throne, all in Arabic; and on the other side the words "Al Sultana al Masryia" (the Egyptian Sultanate), with the value and minting date in Arabic and Euro-

NORTH BRITISH AND MERCANTILE INSURANCE CO.

Digitized by Google

pean characters. The inscriptions will be framed by two palm branches. The silver, nickel, and bronze coins will be similarly inscribed, with, of course, variations in the values, and will be the same as those now in circulation with the exception of the nickel coins, which will have a hole in the centre. The issue of new coinage has been rendered necessary, of course, by the change in the status of Egypt, the coins in circulation to-day all bearing the "toughra" of the Sultan of Turkey, as suzerain of Egypt. The inscription of the values and dates in European as well as Arabic characters is also an innovation, and will be welcomed by all newcomers, who, at the outset, always experience difficulty in recognising the Arabic numerals. It is understood that the order has been passed to the mints, but that the coins will not be available for some good time yet. As soon as they arrive a decree will be promulgated legalising their circulation. The style of the present issue dates, it is understood, from the readjustment of the local currency in 1885, the only change made since that date being when Mohammed V. succeeded Abdul Hamid, and a different "toughra" had to be inscribed.

The Bomb Outrage.

The trial of Helbawi and Shemsed-Din on the charge of being implicated in the attempt last July on the Sultan's life is still unfinished. It was suspended for a day at the end of the week, owing to the temporary indisposition of Sir William Brunyate, counsel for the prosecution; and the Court, which has hitherto only sat in the mornings, is sitting this afternoon in the hopes of getting the trial concluded by the end of the week. At the present moment Shemsed-Din is in the box, and is giving his version of the reason he rented the ill-fated house, a version which is by no means convincing. The prolongation of the trial is due to the fact that every question has to be put through the interpreter. There have been one or two interesting passages in the evidence, but no useful purpose would be served by quoting them.

General Sir John Maxwell.

No little pleasure was expressed in all circles out here when it became known that the late G.O.C. the British troops in Egypt, General Sir John Maxwell, had been appointed to deal with the Irish disturbances. His success in Dublin has come as no surprise to anyone; for we all know his sterling qualities and his fitness for the work. General satisfaction is felt locally that an occasion has so quickly arisen to bring him once again before the public eye, and that, as the latest London papers would seem to indicate, the true value of his work in Egypt is beginning to be appreciated at home.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, May 22.

Heat Wave.

The week beginning May 14 has been marked by a heat wave of extraordinary intensity for the season, thermometers registering 90° to 92° F. in the shade. The "oldest inhabitants" do not remember such oppressive weather in May. The heat has been rendered worse by dampness. On the coast this is always a trying feature; but the climate at the capital has undergone considerable change. The dryness which used to characterize it all through the summer has given way, owing to tree planting and other causes, to a large increase of moisture.

The troops move from their winter quarters to their summer quarters on May 23. The march is made as a rule in three days. The High Commissioner, the Chief Secretary, and certain officers leave Nicosia on June 4. At the height of the camp the nights are still chilly in June.

Inter-School Athletic Sports.

The annual meeting of the English School at Nicosia, at which the events were contested by boys of the American School at Larnaca, were largely attended. Sir John and Lady Clauson were present, and the latter distributed the prizes. The majority of the events were won by the Larnaca boys, to whom fell the challenge cup presented by the late High Commissioner, Sir Hamilton Goold-Adams.

Passports for Greece.

The issue of passports to persons desiring to proceed to Greece, which was recently suspended, is now allowed.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, May 22.

The weather has been extremely depressing here. The temperature crept gradually higher, and there has been a number of sand storms, while the short shower of rain that did come was not sufficient to cool the air, but did make it damp. The nights especially have been hot and oppressive. Rain has, however, fallen over a considerable part of the country, and native experts hope for long and considerable rains.

The Blue Nile is beginning to show signs of the "false" rise which occurs shortly before the real one.

An outlaw, El Hag Ali Taher, who has long evaded justice, became a serious danger, as he shot at and wounded several people in the Blue Nile Province. The local authorities, however, hunted him down, and he met his end endeavouring to escape arrest. He had for years been the terror of certain districts.

ALI DINAR.

Darfur, the scene of the recent fighting in the Sudan, when the forces of its Sultan were routed by a mixed Government force, has always been prominent in the history of the Sudan. During the 16th century the Sultans of Darfur were among the most powerful Mohammedan potentates in the world, but their fame was rivalled, and subsequently outclassed, by the Sultan Adlan, of Sennar, who is reputed to have reigned from 1484 to 1526. During the life of this monarch the fame of Sennar became known throughout the whole of the Near East, and his Court was visited by learned men from various important centres, including Cairo and Baghdad.

The war-like characteristics of the Darfur people, however, appear to have led them to triumph long after the fame of their more pacific neighbours was forgotten, and in the early part of last century we find them in possession of the Kordofan Province. This province remained as part of the kingdom of Darfur until 1821, when it fell before a sharp onslaught by an Egyptian Army during Ismail's campaign up the Nile in that year. The invading army on this occasion was commanded by Mohammed Bey, the *defterdar*, son-in-law of Mohammed Ali, who ultimately returned to Shendi to revenge the death of Ismail, who, with his chief officers, had been burned to death while feasting in the house of a treacherous *mek*.

In the year 1877 General Gordon, who had just arrived in the Sudan as Governor of the Egyptian territories outside Egypt proper, was called upon to suppress a revolt in Darfur. Although he was successful in this, and received the submission of Suliman Zobeir—son of Zobeir Pasha—who was at the head of a gang of slave traders, there was further trouble in the following year. The local disturbance was soon quelled, but Suliman, acting upon the instruction of his father in Cairo, broke out into open revolt against the Government and was ultimately executed.

It was in Darfur that Slatin Pasha surrendered to the Mahdi in 1883. That some of the difficulties which had to be contended with in that district were the direct result of misgovernment may be gauged by the following extract from a note written by General Gordon from Darfur in 1879:—

"The government of the Egyptians in these far-off countries is nothing else but one of brigandage of the very worst description. It is so bad that all hope of ameliorating it is hopeless."

During the time of the Khalifa the peoples of Darfur veered from their allegiance to the Mahdist cause, and prior to the Battle of Omdurman Darfur had thrown off the Khalifa's yoke entirely, and was again under a native sovereign, Ali Dinar. It was to this ruler that the last surviving Dervish Amir of any importance surrendered in 1902. When, therefore, the definite reorganisation of the country began, and its various provinces were placed under the direction of English Mudirs, or Governors, an exception was made in the case of Darfur, and Ali Dinar was permitted to hold his Sultantate, subject to the payment of an annual tribute to the Government of £500. The state has an approximate area of 150,000 square miles.

MOHAMMEDAN MYSTICISM.

In the course of an address delivered last week before the Société Internationale de Philologie, Science et Beaux-Arts, on "Eastern Mysticism from a Western Point of View," Dr. John Pollen said: Let us turn now to the Islamic mystics—the Sufis—and ask whether Mohammed himself was a mystic or not. I think there can be little doubt that he was. He was one of those earnest ecstatic souls who crave for direct revelation from God. He felt God both afar off and also very close at hand, transcending yet immanent, the light of the heavens high above the earth, and yet the worker right in the midst of the world and in the very heart of man. All thinking religious Moslems are mystics, and recognise Emmanuel (God with us) as profoundly as the most mystical and orthodox of Christians. He who dies to self lives in God; and *fana*, the consummation of this death to self, marks the attainment of *baqr* or union with the Divine life—the ultimate aim of true Sufism.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, May 27.

A Fresh Incident.

Another "incident" between the Entente Powers and the Government has arisen as a result of a statement made in the Chamber by the Minister of Communications and of Finance, M. Rallis, who declared that the said Powers were putting pressure upon Greece to make her abandon her neutrality. The incident has terminated, like the earlier ones, in the discomfiture of the Government. As soon as they heard of M. Rallis' statement, the Ministers of the four Powers called together on M. Skouloudis, and protested energetically. Just what M. Skouloudis replied is not known; but the governmental *communiqué* given out by the Press Bureau the same evening sufficed to show that the representations made by the four Ministers must have been very strong. For M. Skouloudis had to admit that the Greek Government had six months ago acknowledged in writing a declaration of the Powers to the effect that they had neither the intention nor the wish to make Greece abandon her neutrality. This admission, which was published in all the journals, created intense surprise. But what caused a feeling of positive stupefaction, and gave rise to all sorts of comments, was the first part of the Ministerial *communiqué*, in which M. Rallis' remarks in the Chamber were referred to as rumours, rumours which had given rise to his declarations, which were thus indirectly represented as containing no allusion to vexatious measures against Greece on the part of the Entente. It was only a "family matter," so to say, between M. Skouloudis, who edited the official *communiqué*, and M. Rallis, who was absent from Athens! What struck many people most forcibly was the revelation made in the *communiqué* that the Government, having received such a categorical declaration from the Entente six months ago, and having acknowledged it in writing, had not only carefully kept this fact from the people, but had even accused the Powers referred to, both in the Chamber and in the Ministerial Press, of exercising pressure on Greece in order to force her to abandon her neutrality.

On the day of the four Ministers' *demarche* and of the *communiqué* which followed it M. Rallis was at Larissa for the opening of the new railway, and it was there that the President of the Council informed him, in a long telegram, of the Entente representations regarding his remarks. To this doubtless one must attribute the fact—learned with lively surprise—that a few hours later M. Rallis, in addressing the King in connection with the subject of the new line, made grateful mention of the services rendered by *la chère France* in regard to the work. But the censorship—exercised, it is said, by his colleague, M. Gounaris, who was also at Larissa—struck out the word "*chère*" from the Press telegrams, and replaced it by "*noble.*"

Behind the Scenes.

The rivalries which have existed from the first between the members of the Cabinet have not been laid aside for an instant. It is stated that both M. Rallis and M. Gounaris are working and manœuvring behind the scenes with a view to the formation of a fresh Cabinet. Needless to add, each is working in his own interests and playing for his own hand. Each believes that he has a majority. It is rumoured in political circles that as soon as the 1916 Budget has been voted—it is to be presented on June 5—a vote of confidence will be taken; another report has it that M. Gounaris is waiting for the fall of Verdun to have himself proclaimed President of the Council. Such a situation, dragging on from day to day, naturally gives rise to rumours of Ministerial crises, which are, equally naturally, denied. It is certain that such a Cabinet, composed of political adversaries, would have been wrecked long ago, if its leaders were not more or less held together by the fear of seeing their common adversary, M. Venizelos, recalled to power.

The Torpedoing of Greek Steamers.

Three Greek cargo boats have been torpedoed in three days by German submarines. Everyone has been considerably impressed by this activity; but the Governmental Press has endeavoured to excuse this act of piracy on the part of the Germans by representing that the torpedoed Greek boats were carrying contraband of war destined for the Entente! The Liberal Press, on the other hand, recalling the heavy losses caused to Greek shipping by the Germans since the beginning of the war, blames the Government strongly for not having protested energetically to the Central Powers instead of declaring, through its Press, that it is expecting information as to the conditions in which the outrages were perpetrated.

SIR ARTHUR NICOLSON.

The news of the honour conferred by his Majesty the King upon Sir Arthur Nicolson will come as no surprise to those who have had opportunities of observing the excellent work accomplished by Sir Arthur during his tenure of the responsible position which he will shortly vacate. It would be difficult to overestimate the value of his services to this country and, since the outbreak of war, to the Allied cause. His knowledge of the Near East, which must have been turned to good account during this time of stress, was gained at first hand. It was in 1879 that he went to Constantinople as a Second Secretary, and he was almost immediately appointed Superintendent of Student Interpreters in Turkey. In 1881 he was appointed, with Sir C. Wilson, to inspect consulates in Syria and Asia Minor, and the following year he accompanied Lord Dufferin to Egypt. Thereafter he saw service at Athens, Teheran, and Budapest before returning to Constantinople as Secretary of Embassy. In 1894 he went to Bulgaria as Agent and Consul-General, and the following year was promoted to be Envoy Extraordinary and Minister Plenipotentiary at Tangier. In 1905 he became Ambassador at Madrid, and the following year he represented this country at the Conference of Algeciras. With his transfer to Petrograd (or St. Petersburg, as it was then called) in 1906 his association with the Orient and the Nearer East terminated, but both in Russia and afterwards at home as Under-Secretary for Foreign Affairs his work for his country continued—with results which have been made so happily apparent during the past twenty months. That his services have been appreciated is proved by the honours bestowed upon him. He was made a C.M.G. in 1886, a K.C.I.E. two years later, K.C.B. in 1901, K.C.V.O. in 1903, G.C.V.O. in 1905, G.C.M.G. in 1906, and G.C.B. in 1907. He also holds the Grand Cross of the Order of Charles III. of Spain and the Grand Cross of the Russian Order of Alexander Nevsky.

TORTOISES AND KINDRED REPTILES OF PALESTINE.

Last week at a meeting of the Société Internationale de Philologie, Sciences et Beaux-Arts Dr. H. M. Léon read an instructive paper on "The Family Testudinæ or 'Shield Reptiles' of Palestine." He said the most common species of tortoise found in the Holy Land was the Mauritanian tortoise. This was found in every part of the country with the exception of the district around Hebron. Its southern limit appeared to be the hill country of Judæa, south of which and of the Dead Sea it was replaced by the species known as Kleinmann's Tortoise. It so closely resembled Testudo græca as often to be confounded with it; this latter species being the one which was very frequently brought to this country, and whose flesh, it was said, was often used to make "turtle" soup. These creatures were vegetarians, but the two species of terrapin that inhabited the streams and pools of Palestine lived on an animal diet. One (Emys Lutaria Lacépedé) was a pest to sportsmen, seizing and dragging under water any killed or wounded bird, and another (Emys Europæa) regularly stalking fish. Said Dr. Léon: "The tortoise watches its opportunity, slowly it half crawls, half swims along the bottom, rises imperceptibly by a few gentle movements of the widely spread-out webbed feet, then opens as widely as possible its sharp cutting jaws and makes a grab at the belly of the fish. Frogs are most easily stalked when they are seated upon a floating leaf. The tortoise rises from below, and often waits with nostrils and eyes just above water close to the frog."

With reference to the report that the Greek Government proposed to proclaim martial law throughout Greece, Reuter's Agency is informed that telegrams received at the Foreign Office as late as Tuesday afternoon gave no indication that such a course had been adopted.

At a meeting of Alexandrine Greeks it was resolved to send a message to King Constantine protesting against the Bulgarian invasion of Greece, and urging Greek co-operation with the Entente Powers in order that the enemy might be ousted. The Association of Greek Patriots in Paris passed a similar resolution on Sunday.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, May 16.

Prince Carol's Escape.

His Royal Highness Prince Carol had a lucky escape on May 10. He was driving his car down one of the principal thoroughfares when a cart laden with hay drove across his path from a side street. In order to avoid it the Prince swerved, and crashed into an electric tramcar which was travelling in the opposite direction, and hidden by the cart. The Prince, who fortunately escaped without injury, descended calmly, and proceeded on foot to the Palace of Cotroceni.

Russian Soldiers in Roumania.

On May 10, at break of day, twenty-five Russian soldiers swam across the Danube and landed at Turnu-Severin. They had been taken prisoners by the Austrians, and were employed at work in the fields when they took to the river.

Turko-Bulgarian Megalomania.

We read in the *Nationalul*:—

To judge by the tone of their Press, the Bulgars and Turks have developed what is known as Megalomania to a degree hitherto unknown. Whereas, before they became the Allies of the Central Powers, the Bulgars still consented to enter into polemics with Roumanians, Greeks, or Serbs, as the case might be, they now measure themselves with, and even treat with contemptuous merriment, the English, French, Italians, Americans, etc., that is, people of their own calibre.

The Turk—who seems to call out incessantly: "Pull him off me, lest I slay him" (as we say in Roumania)—is also performing prodigious feats, such as the reduction of Kut-el-Amarah by starvation. The Smyrna journal *Anadalu*, speaking of the Turkish victory (!?) at Kut, says: "Napoleon III. expressed himself as follows with regard to the Italians: 'The Almighty created the Italians that they might be beaten by the Austrians.' To-morrow history will say: 'The English were created that they might be wiped out by the Turks.'"

Landlords v. Tenants.

Contracts for the lease of houses, flats, shops, and so on are signed at two seasons in the year, one in the Spring, on St. George's Day, which falls on May 6 (new style), and the other on the day of S. Demetrius, which is November 8. About this time in spring and autumn one generally has the impression that all Bucharest is moving, the streets presenting a curious sight with their strings of vehicles of every description laden with an infinite variety of household goods, all piled up pell-mell. We missed this familiar sight on last St. George's Day, as a result of recent legislation, which prohibits owners from raising rents during the whole course of the war. To facilitate the proper application of this law, a clause was added making illegal the expulsion of a tenant even on expiration of his contract. This measure is excellent, and approved by all but house-owners, for rents were really becoming exorbitant. But the framing of a law is no simple matter, and if, as in this case and other instances of recent legislation, the project is prepared hastily and without due attention, each man interprets it as he pleases. Naturally owners and tenants have not always the same point of view, so that the last St. George's Day was characterized by an unusual number of quarrels, arguments in many cases being emphasized by blows. Police agents have had all their work cut out, having had to give immediate ruling in the questions at issue. Infractions of the law have been frequent. There are said to be some seven hundred house-owners awaiting trial.

In accordance with the desire of the Sultan of Egypt, Sir Archibald Murray has commuted to penal servitude for life the sentence of death on Shem-ed Din and Helbawi, who were found guilty of complicity in an attempt to assassinate the Sultan by throwing bombs.

Under date of May 29, Reuter's Bucharest correspondent reports:—It is officially stated that a fire which broke out in the arsenal at Bucharest destroyed two small powder stores and one of the workshops where cartridges were made. Thanks to the courage of the troops and the speedy help that was forthcoming the munitions and artillery were saved, thus averting a great disaster. King Ferdinand directed in person the salvage operations. The cause of the fire is not believed to be an accident. A military inquiry is proceeding.

THE STATE OF SYRIA.

(From a Correspondent.)

Cairo, May 20.

When the *Mokattam* published a few weeks ago those gloomy accounts of a new informant regarding the economic distress and incipient famine in Syria, and the barbarous treatment of the population by the Young Turks, the Syrians abroad were naturally deeply agitated. Some, to comfort themselves and others, pronounced these accounts as gross exaggerations, published with a purpose, and preferred to hope against hope. Now, however, another important organ of the Arabic Press comes out with accounts, far surpassing in seriousness those of the *Mokattam*. This paper declares that the recent visit of Enver Pasha to Syria spelt disaster to the Lebanese, because he actually cut off their rocky mountain from the neighbouring vilayets, and allowed only an unwholesome quality of flour, made up of dark barley and vetches, to enter the Lebanon and be distributed at the rate of 4 kilos per head every twenty-five days. As the already poor Mountain had been laid bare by the locusts, the starved population were lately finding difficulty even in collecting weeds of the fields. When some of the notables begged for merciful treatment the Mutessarif, Ali Munif Bey, replied that it was the Government's concern and not theirs. Most of the leading members of well-known families are said to have been exiled lately; beasts of burden have been taken away; and the weak and unfit, left behind, are dying of starvation, so that the land could not be ploughed and sown. The strict prohibition of shooting has barred the last door to the poor people's natural resources; and it is said that the death-rate was so appalling that the Mutessarif had to allow burial outside the cemeteries. Whole families are alleged to have disappeared, and some of the villages lost more than one-third of their population! While the oke of bread in Beyrout is sold at about 5 piastres (10d.), it is sold in the Lebanon at 25 piastres, if it can be found. The Lebanese are said to be prohibited from buying provisions in Beyrout; and those who do so are, on crossing the frontier, deprived of their purchases, and subjected to personal maltreatment. The paper goes so far as to state that up to the beginning of this month the death roll in the Lebanon had attained the appalling figure of 80,000. Such remittances as are sent by the Lebanese emigrants in America to their people, through the American Mission, for distribution have now to be deposited at the Ottoman Bank, with a list of the payees; and orders have been passed to the said bank not to effect payment till one year after the date of the receipt of the money, and only in Government paper. Hanging on a large scale is said also to be still carried on, and during last month eleven executions are said to have taken place in Beyrout, eight in Aley, seven in Damascus, and nine in Caiffa.

According to a New York paper the Maronite Patriarch's delegate at Philadelphia has requested the U.S. Ambassador at Constantinople to use his good offices with the Ministry of Foreign Affairs, with a view to arranging for a shipment of grain and foodstuffs to the Lebanon, and the Ambassador has kindly promised to reserve space for a quantity of foodstuffs for the Lebanon by the steamer that is to ship a cargo for the Jews and Armenians of Turkey. The Syrians of Egypt are also taking collective action with a view to obtaining permission from the British and French Governments to send relief to their unfortunate countrymen irrespective of creed.

May 22.

On the day following the publication of the accounts regarding the very serious situation in the Lebanon, of which I sent you a summary last week, the editor of the paper in question gave a categorical confirmation of the authenticity of the news. The writer at the same time made careful inquiries at serious and reliable sources, and, to his infinite regret, got a further confirmation of the facts. The last informant's account tallied, in almost every important detail, with that of the person who had preceded him in his secret journey to Syria and the Lebanon, and whose account was published in the *Mokattam*, save that the situation had since developed for the worse, and was daily assuming a more alarming character. The sinister design of the authorities there began to manifest itself at the beginning of last February. The last informant brought with him samples of the flour said to consist of a mixture of bad barley and vetches, and, on examination, it was found to be bad-smelling and more like a mixture of bad flour and sawdust. A military cordon is drawn around the Mountain to prevent any smuggling of foodstuffs from the neighbouring districts, and the wealthy and influential clergy, including the monastic establishments, have been dispersed so as to bar the last means of succour to the starving population. The Maronite

Digitized by Google

Patriarch's staff has been broken up, and only one clerk left to the aged prelate, and even this man was at the beginning of May called away to Aley, while most of the Maronite, Greek Orthodox, and Greek Catholic bishops were called to Damascus, together with forty of the leading spiritual heads. At the same time, the leading members of influential families and tribes were exiled, the total number from Beyrout, Baalbek, and the Lebanon being estimated at 4,000.

To one who is acquainted with the Lebanon it is not difficult to understand how the whole population of such a province can be starved. The chief means of livelihood of the Lebanese are the rearing of the silkworm, the cultivation of fruit trees and vegetables, the rearing of cattle on a small scale, and transport by mules, donkeys, etc. The blockade has killed the silk industry; the commandeering of all sound cattle and beasts of burden has ruined the limited agricultural resources of the mountain and the muleteers' business; while the locusts have put the finishing touch to the work of desolation of the Turk. Further, the seizure of the remittances from abroad has tightened the cord round his neck to the degree of strangulation.

There can be little doubt left as to the design of the Turco-Germans. Just as they have attempted the extermination of the Armenians, so now they are trying, by more silent means, to dispose of the Lebanese, as an equally inconvenient element. Talaat Bey, with cynical impudence, declared lately that, if some of the exiled or massacred Armenians were not actual rebels, they were expected to become such. To the writer's own knowledge, the German Consuls in Syria did not scruple to manifest their hatred of the Christian element, whom they regarded as a stumbling-block in their way. Since then the majority of the Moslem Arabs have come within the circle of their hatred.

The Allies cannot divest themselves entirely of responsibility in this further crime which the Turco-Germans are committing against humanity. The French occupation of Ruad Island, the constant cruising of the Allied Fleets along the Syrian coast, and the occasional aerial reconnaissances, while acting as pin-pricks to the enraged Turco-Germans, have been feeding forlorn hopes in the hearts of the poor Syrians and prompting some of them to overt acts of sympathy, which only led to the multiplication of the cases of hanging. It may be argued that in a world war like this military exigencies must over-rule humanitarian considerations; but, even from a strictly military point of view, the speedy liberation of Syria and the Lebanon imposes itself. A landing in Syria before the complete extermination of the male population is accomplished would seem to be advisable.

The Syrians and Lebanese abroad are wealthy, and the threatened extermination of their countrymen and the devastation of their country have awakened in them a deep sense of their responsibilities, and, both from the point of view of feeling and of material interest, they would gladly contribute as far as their means permit to the expenses of a prompt expedition to Syria. If only the Allies would give them encouragement, they would endeavour to organize forthwith a movement to that end.

BRITISH REFUGEES FROM TURKEY.

We much regret to learn that the fund raised by a committee, of which Sir Louis Mallet is the president, for the relief of British refugees from Turkey, is almost exhausted. In Constantinople itself there are many British families who have been deprived of their means of livelihood by the war, and who are yet unable to leave the Turkish capital, and in Greece there are many quite destitute British who have fled from Turkey. There are also refugees in London who are being helped. The committee appeal for subscriptions to enable them to continue the relief which they are giving, and we very earnestly recommend the appeal to our readers. The headquarters of the committee are at Lowndes House, Lowndes Place, Belgrave Square, and the bankers of the fund are the Union of London and Smiths Bank, Sloane Square branch.

THE SIRDAR AND LORD KITCHENER.

Reuter's correspondent at Erkowit telegraphs (June 8):—

Sir Reginald Wingate, Sirdar of the Egyptian Army, has sent the following despatch:—"On behalf of the British officers and officials of the Sudan, the officers and men of the Egyptian Army whom he led to victory, and the inhabitants of the Sudan whom he released from Dervish tyranny and misgovernment, his successor in this country and comrade-in-arms offers heartfelt sympathy to Lord Kitchener's family in what is a personal and national bereavement."

LETTERS TO THE EDITOR.

UNHAPPY SYRIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The kindly attitude that you have continually adopted towards Syria and the Syrians encourages me to draw your attention to the severe famine, cruel poverty, and utter destitution that prevail in Syria. Reports of the most grave and disquieting character have lately reached this country from Syria. The situation there is pitiable in the extreme. The complete isolation of the country, the strict blockade imposed by the Allies, the ill-treatment meted out by the Turks, and, finally, the havoc caused by the locusts to the crops have all contributed to render the condition of the people most miserable. If such a state of affairs is allowed to continue indefinitely, the complete ruin and starvation of the unfortunate inhabitants is sure to result.

On the attitude and sympathies of the Syrians I need not touch. Suffice it to mention that they have long reposed unshakable confidence in the English people, and were looking forward (even before the war) with intense eagerness to the time when Great Britain would come to their rescue from a long term of ill-treatment, oppression, and cruelty. Now they are suffering; they are dying; they are in need of help and relief. They look to the English for help and protection. Is it not possible for you to champion their cause, to evoke the interest of the public on the matter? As you are probably aware, there are numerous Syrians who possess considerable wealth, and are very eager to help their fellow-countrymen. What they actually lack is proper guidance, encouragement, and support from a sympathetic and generous nation. If a fund were started, I am sure it would receive liberal support.

Sir, the Syrians are in distress. They have suffered sufficiently already. No ruler has contributed more to the chaos of the history of Syria and Palestine than the Turk. At his hands the Syrians suffered; they were oppressed; they were hanged. It is therefore ardently to be hoped that some sort of help may soon be forthcoming, and that this war may see the passing of the Holy Land into the possession of a Christian Power. Indeed no time is more opportune for such a desirable and long-cherished eventuality than the present. The British Government could afford the deplorable loss of many thousand soldiers in Gallipoli; they are risking the lives of many brave soldiers in Mesopotamia and at Salonika. Could not soldiers be spared for Syria and Palestine, where the Allies are sure to receive a hearty welcome, and thus bring to an end a much-vexed question?—I am, etc.,

A FORMER HAIFA RESIDENT.

Alexandria, May 24, 1916.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Dardanelles and Gallipoli Operations. June 1.

Sir H. DALZIEL urged that papers respecting the Dardanelles and Gallipoli operations should be published forthwith, whatever the consequences to individuals might be.

Colonel CHURCHILL said that the decisions with regard to both the naval and military operations connected with the Dardanelles and Gallipoli were come to in this country by the Cabinet and War Committee, and it would be very injurious to the reputations of Ministers and those who had been Ministers if it could be represented that they were trying to delay the publication of the papers to shield themselves and allow the whole blame to fall upon the military or naval commanders. Personally he was in favour of publishing everything that the public interest would permit to be published. That course would enable Ministers to free themselves altogether from the charge of seeking to throw an undue burden upon Sir Ian Hamilton and other officers.

Mr. BONAR LAW, having explained that the Prime Minister had asked him to deal with this subject, said the Government had come to the conclusion that papers relating to the Dardanelles operations should be laid before the House. They would be as full as possible, because if the story was to be told, it should be the whole story, so that if there were any blame it should be fairly apportioned. It was obvious, however, that there might be among the papers documents so confidential that they could not be published. A limitation to his promise would, therefore, arise in that respect. There was also a possibility that some of the papers might throw light on operations still going on though not at the Dardanelles. Such papers, if there were any, would not be published.

NEAR EAST BOOKSHELF.

STUDIO DAYS.*

The writer of the book under review has decided opinions, whether they be on art or on Aberdeen, on life in general, or on those individual actions which go to make up the comedy called life. That is the first impression gathered from "Hearts and Faces." It is followed by the conviction that the author is a consummate artist, a man seeing the colour and form of all things and sketching them boldly. The result is that, with the exception of the central figure, who is decidedly unconvincing, especially in the later chapters, we are presented with a series of portraits drawn with admirable skill and ease. Unfortunately, the types sketched are of Western Europe (and America), whereas Near Eastern faces, if exception be made of an "international" mask caught sight of at a riotous carnival at Vienna, are conspicuous by their absence. Nevertheless, there are Aberdeen men and women scattered broadcast throughout the world, and to them the book will appeal strongly, for it "smells" of that wonderful town far away up North. It is the old Aberdeen we are shown—say thirty or more years ago, when, in all probability, the author himself was studying at King's College, ploughing his way through a translation of Eurypides, and, as likely as not, cursing his luck and longing for a life of more strenuous activity. The Aberdeen of those days was a quieter place than the Aberdeen of to-day, lying almost within gunshot of the great battlefields of the North Sea, and, therefore, it appeals the more to the many Aberdonians roaming abroad, and who are of maturer age. One I remember distinctly—tall, gaunt, gingery, with small blue eyes and beard unkempt (at least, it looked like it), who had been everything and had played all parts in the land of the Turks, except that of a "meenister" or an apostate, and who honestly hated both Bulgars and Greeks. According to his conception of Near Eastern propriety, he broke no commandment by coveting anything that belonged to a Greek (perhaps he also had translated Eurypides in the days of his youth at King's College), and when war broke out I left him in possession—somewhere in Turkey—of a fruit farm which had originally belonged to a Hellene obliged by major force hurriedly to escape the wrath of the Young Turks. What has happened since I do not know. In all probability the farm has gone to weeds, and my friend, who was decidedy of an adventurous disposition, has joined his Majesty's forces in some roving capacity.

From Aberdeen Mr. Murray Gibbon, or, rather, George Grange, the boy student who burns his books (or does he sell them?) and devotes himself to art, takes us into the studios and art classes of London and Paris. But before doing so, we are introduced to two of the finest characters in the book—Mrs. Middleton, a sane, motherly being full of humanity except when, now and again, she plucks some higher psychic and philosophic theories on her path to and from the kirk—to the honest disgust of her friend and distant cousin, Nathaniel Reid, artist. The latter is, without a doubt, the most perfectly drawn character in the book. Rugged as is the granite of his native Aberdeen, he is equally strong, and his philosophy is of that homely, wise kind that can only be acquired by an observant man after a long life of dearly bought experience. How different are those two beings from the men and women hobnobbing together in Chelsea or the Quartier Latin! The contrast, though not implied by the author, is there, nevertheless, and it adds to the value of the book by emphasising the hurry and flurry, wear and tear of modern city life seething with ambitions, passions, sorrows, joys, and longings. Painters of renown and hopeless failures, all-knowing critics and keen-scented parasites, virtuous women and—others: we meet them all pell-mell, much as we meet types and faces in a crowded thoroughfare. The portraits are admirably sketched, but the author—journalist, artist, and now one of the "big" men of the Canadian Pacific Railway Company—has a knack of emphasising defects and failings rather than virtues, whereby he resembles a cartoonist more than a portraitist. However, these chapters on studio life, full of life, vigour, and the human touch inseparable from all good, lasting work, are good reading. C. R.

* "Hearts and Faces." By J. Murray Gibbon. (Lane. 6s.)

SOME ANGLO-EGYPTIAN WRITERS.

(From a Correspondent.)

In a recent number of the *Egyptian Mail* mention was made of Mrs. R. L. Devonshire's admirable translation of Vallery-Radot's "Vie de Pasteur." It is evident that the book, which was published some years ago, is not as well known in Egypt as it deserves to be. Among other works by Anglo-Egyptian writers, Mrs. A. C. Hann, of Alexandria, is responsible for a dainty adaptation from Rostand's "Chanticler." Shortly before the outbreak of war Mr. A. T. Cull, of the Ottoman Bank, who now holds a commission in the Army, published a small volume of verse, "To Pavlova," which is no mean tribute to the great artist to whom the poems are dedicated, and by whom they are one and all inspired. A writer of short stories which continue to find their way into the better-class English magazines is Mr. Micklem, of the Egyptian State Railways. And, if it be not impertinent to ask the question, when may we expect a second volume of "Egypt in the Nineteenth Century," by Mr. D. A. Cameron, H.B.M. Consul-General in Alexandria, thereby bringing his interesting history up to date?

Among Anglo-Egyptian writers who have, alas! left Egypt, the works of Mrs. Butcher (*née* Floyer), Mr. A. E. Weigall, and Mr. René Francis are widely known and appreciated.

Finally one would welcome in book form the collected stories and sketches of Egyptian life with which the late Bimbashi Claud D'Aubuz, under the pen-name of "Madge Hoole," was wont to enliven a considerable number of readers in Egypt and at home.

The tragic death of Lord Kitchener gives a mournful interest to a book nearly completed by Mr. Harold F. B. Wheeler, F.R.Hist.S., "The Story of Lord Kitchener." But two chapters remained to be written when the fateful news arrived of the sinking of the Hampshire, and the book will be available in a very short time. It will be published by Messrs. Harrap and Co. at the price of 3s. 6d.

THE MASSALJI, OR TURKISH STORY-TELLER.

At one of the meetings of the Société Internationale de Philologie, Sciences et Beaux-Arts, last week, Dr. Léon gave a most interesting address on the *Massalji* or story-teller. The lecturer said that he first made acquaintance with the *Massalji* many years ago when in Morocco; subsequently he had met many of the class. He had a very distinct recollection of one occasion, when, sitting in a house in a little village about six or seven hours' ride from Brusa on the way to Eskishehr, they had just finished their evening meal when the little girl of the house came running in, crying out: "The story-teller has come! Hurrah!" The man was given a meal, and then sat down to tell his story, illustrating it with gesticulations. It lasted a full week, night after night, during which time the *Massalji* was boarded and lodged free, and received sundry small coins from people who came to see and hear him. The story was told not only to the people of the house, for the neighbours also came in to listen; and during the daytime, while the men of the house were absent, the ladies were entertained with either another story or an elaboration of the one that he was telling in the evenings. According to Turkish custom the ladies did not come into the same room as the *Massalji*, but sat in one room while he was in another. The story he told was an elaboration of one found in the Talmud, and related how a man who had travelled from afar fell in love with a beautiful maiden, who returned his affection. Then he received a letter from his father summoning him home, and before going went to his lady-love and asked her to plight her troth that she would marry him and none else. She was willing to do so, but asked: "Where are the witnesses?" In the Talmudic version the man calls the well and a weasel to witness; but Islamic law requires three witnesses to a betrothal, and in the version told by the *Massalji* the coney was added as a third witness. The story then related how the man returned to his father, forgot his vow, and married another woman. Night after night the girl waited at the well for the lover who did not come back to her, the coney entertaining her at these times with many stories that were interwoven with the original story, after the manner familiar to every reader of the "Arabian Nights." Meantime the married couple had a child, which grew up to be four or five years old. One day when it was sleeping in the garden the coney whispered to the weasel that it was the child of an enemy of weasels, and that it would itself kill weasels when it grew up. The weasel thereupon bit the child's neck and caused it to bleed to death. Afterwards another child was born, and this, one day, wandering in the garden, came upon a well. Stooping over this it saw its reflection in the water, and leaning too far over fell in and was drowned. When the little body was drawn out the agonised father remembered the witnesses he had called to his betrothal with the girl in the far country—the weasel and the well. He repented of the wrong he had done her, and the coney came to enforce the lesson and to tell him that but for his repentance he would himself have been the next victim. He told his wife, and she bade him divorce her. He did so, making a settlement upon her; and returned to the girl to whom he had first been betrothed, to find her still waiting for him. He begged her forgiveness; this was given; and they were married.

Dr. Léon told one or two other very popular Turkish tales. He said there were many such stories recounted by the *Massaljis*. Most of them had not yet been reduced to writing, and but very few had been printed.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. June	1916. May.		1334. Shaban.	5676. Sivan.
9	27	Friday	7	8
10	28	Saturday.....	8	9
11	29	Sunday	9	10
12	30	Monday	10	11
13	31	Tuesday	11	12
	June.			
14	1	Wednesday	12	13
15	2	Thursday	13	14

Sunday is the birthday of H.R.H. Princess Olga of Greece, eldest daughter of Prince Nicholas and Princess Helen, who was born at Tatoi, May 29, 1903 (O.S.).

Next Wednesday is the birthday of the Queen of the Hellenes, who was born in 1870, and was married in Athens on October 15, 1889.

Next Thursday is the anniversary of King Peter's accession to the throne of Serbia in 1903.

On the departure of King Peter of Serbia from Ædipsos on Thursday of last week, his Majesty was given a hearty send-off, says an Athens telegram. He left a sum of money for distribution amongst the local poor.

Prince Christopher of Greece left Marlborough House on Monday, and is now in Paris.

On Sunday Prince Christopher visited the King and Queen at Buckingham Palace and took luncheon with their Majesties. He had previously attended Divine Service in the Marlborough House Chapel.

Princess Ouroussoff, the wife of the First Secretary to the Russian Legation at Athens, left London for Petrograd last week.

At the Greek Church of St. Sophia, Moscow Road, Bayswater, on Sunday morning, a Te Deum was sung in commemoration of the name day of the King of the Hellenes. The Great Archimandrite, Dr. Constantine Pagonis, officiated. Among those present were the Greek Minister, M. P. N. Delyanni, M. Constantine Collas, Captain Criezis, the Greek Consul-General, the staff of the Consulate, the Roumanian Minister, and members of the Greek Colony.

The Greek Minister and Madame Gennadius held a reception at the Legation in the afternoon. It was attended by the principal members of the Greek Colony in London. The Hellenic Community in London, through the Greek Minister, sent a congratulatory message to the King of the Hellenes.

The Duke of Sutherland, who had recently been staying at Shepheard's Hotel for a few days, has now left Cairo on active service.

M. Pashitch, the Serbian Premier, has returned to London from Petrograd. M. Yovanovitch, who accompanied M. Pashitch to Petrograd, has also returned to London.

M. Grouitch, Serbian Under-Secretary for Foreign Affairs, who was formerly Serbian Chargé d'Affaires in this country, arrived in London from Corfu on Saturday.

Sir Ronald Ross has been elected a vice-president of the Poetry Society.

H.H. Prince Kiamil Fazil, doyen of the family of Mohammed Aly, has received a communication from the High Commissioner of Egypt informing him that he has been commanded to thank his Highness for his loyal telegram to King George on the occasion of the anniversary of his Majesty's accession.

Our Bucharest Correspondent reports (May 16):—

Mr. Vopicka, United States Minister in Bucharest, has been indisposed as a result of gastric trouble. His illness has, however, not been serious, and we are glad to hear that he will soon be completely restored to health.

Mr. Couché, formerly Chancellor of the United States Legation, has returned to Bucharest. It will be remembered that, wishing to travel to Salonika in the course of last winter, he was arrested near Sofia on the charge of attempting to bribe a public servant. This was the result apparently of offering a backsheesh to an official, the amount of the backsheesh, we may assume, not corresponding with the Bulgar's expectations. Mr. Couché was detained several months, during which time he was tried on the charge mentioned, and has now been finally acquitted by the Court of Appeal.

Our Cyprus Correspondent writes (May 22):—Mr. Jardine, of the Chief Secretary's Office, left for Somaliland to take up the duties of Chief Secretary, on May 15.

The Anglican Bishop in Jerusalem, who since the outbreak of the war has been in Egypt, arrived in the island on May 15.

We congratulate Lieutenant-Commander H. C. Lukach, R.N.V.R., on having obtained his "half-stripe" by a well-earned promotion. This officer, who for more than fourteen months has been engaged in the arduous, and at time tedious, labour of directing the civil affairs of Mudros as Government Secretary, is perhaps better known to readers of THE NEAR EAST as the author of "The Fringe of the East" and "The City of Dancing Dervishes." We understand that Lieutenant-Commander Lukach, R.N.V.R., will probably shortly return to Cyprus to resume his duties in the administration of the Enchanted Island.

Sir Ronald Graham, who, as announced in another column, has been promoted to the rank of Minister Plenipotentiary in the Diplomatic Service, has certainly earned the promotion. He has been Adviser to the Egyptian Ministry of the Interior since 1910, and has fulfilled his duties with great tact and skill. Before going to Egypt he had served in Paris, Teheran, and St. Petersburg, had been on special service in Crete (in 1906), and had been British Agent in the Muskat Arbitration at The Hague.

We are pleased to notice the name of Mr. Ronald Storrs, Oriental Secretary at the British Residency, Cairo, in the list of Birthday Honours. Mr. Storrs has long served in Egypt, where his many friends will learn with pleasure that his Majesty the King has been pleased to appoint him to a Companionship in the Distinguished Order of St. Michael and St. George.

Lieutenant-Colonel Percy W. Machell, who has just been awarded the D.S.O., has a long record of service in Egypt to his credit. He served with the Nile Expeditionary Force in 1884-85, and, joining the Egyptian Army in 1886, was in command at the capture of Fort Khor Moussa, and took part in the operations at Suakin and Gamaizah ('88), the Toski Expedition, and the capture of Tokar. From 1891 to 1895 he commanded the 12th Sudanese Battalion; in 1896 he became Inspector General of the Egyptian Coastguard, and two years later he was appointed Adviser to the Egyptian Ministry of the Interior, which post he held till 1908.

Sir Armand Marc Ruffer, whose name makes a welcome appearance in the list of Birthday Honours, is well known for his work in Egypt in various branches of sanitation and hygiene. He is president of the Sanitary, Maritime, and Quarantine Council of Egypt, President of the Municipal Delegation, and Vice-President of the Municipality, Alexandria, and Egypt's representative on the International Bureau of Hygiene. He has taken an active interest in the work of the Red Cross in Alexandria since the outbreak of the war.

A second honour goes to Alexandria by the conferment of a C.M.G. on Dr. Alexander Granville, Director-General of the Municipality there (and not in Cairo, as stated in the official announcement). Dr. Granville, who was formerly an official of the Public Health Department in Cairo, has occupied his present post with conspicuous ability for a number of years, and has made himself extremely popular among the cosmopolitan community of Egypt's commercial capital.

Captain Sir Arthur Henderson Young, whose name also appears in the Birthday Honours, has been Governor of the Straits Settlements since 1911. He was formerly in Cyprus, where he was Commandant of Military Police at Kyrenia in 1878, and afterwards became Assistant Commissioner and then Commissioner at Paphos (1878-9), and at Famagusta (1882). He next became Director of Survey and Principal Forest Officer ('92), and then Chief Secretary ('95). He administered the government of the island at various dates up to 1906, when he was transferred to the Straits Settlements.

Mr. Mansfeldt de Cardonnel Findlay, C.B., C.M.G., H.M. Envoy Extraordinary and Minister Plenipotentiary at Christiania, whose name appears in the Birthday Honours, was born in 1861. He was educated at Harrow and nominated Attaché in 1885, serving at Stockholm and Constantinople. In 1896 he acted as Chargé d'Affaires at Belgrade, was in charge of the Agency at Sofia during part of 1897 and 1899, and of H.M. Agency at Cairo during the summer, 1902-07. In the latter year he was appointed Counsellor of Embassy at Cairo, a post which he held until his transfer to Dresden and Coburg as Minister Resident (1908-09). From 1909 to 1911 he was Envoy Extraordinary and Minister Plenipotentiary at Sofia, after which he was transferred to the post he now holds.

A Bucharest message, considerably delayed in transmission, reports that Captain Cantemir Campineanu, son of the Roumanian ex-Minister, has been killed in an aviation accident. Captain Campineanu's mother is President of the Roumanian Red Cross.

A tablet erected in Winchester Cathedral to the memory of Major Arthur John Byng Wavell, of the Welsh Regiment, killed in action on January 9, 1916, near Mwele, British East Africa, while in command of the Arab Rifles—a force raised by him in August, 1914, to protect Mombasa—was last week unveiled by Major-General Sir Thomas Fraser. Major Wavell, who served with distinction in the South African War and was a well-known author and explorer, was the eldest son of Colonel A. H. Wavell, also of the Welsh Regiment, and was educated at Winchester and Sandhurst. The tablet was dedicated by the Dean of Winchester.

The organisers of the Serbian Relief Matinée, held at Drury Lane Theatre on May 9, regret that owing to a mistake the name of Prince Bibesco was included in the programme. The mistake was the more regrettable owing to the fact that Prince Bibesco, as a Roumanian diplomatic representative, is in mourning in consequence of the death of the Dowager Queen of Roumania.

Every Ambassador and Minister accredited to the Court of St. James has visited the Foreign Office to express sympathy with the Government in the loss of Earl Kitchener and his companions in the Hampshire.

Lord Bryce, speaking at the meeting to initiate the repatriation of the Armenian people, held last Wednesday at the Mansion House, said that one of the most attractive features of the character of the late Lord Kitchener, was that he always got on well with those of other races who were placed under his charge. There was no one more popular in Egypt, no one who had done more to make British rule go smoothly in Egypt than Lord Kitchener. He had been there but a very short time when he had won the respect and confidence of the Egyptian people.

Digitized by Google

Sir Mark Sykes, Bart., M.P., at the same meeting, said that the loss of Lord Kitchener to those who knew him personally was as great as it was to those who knew him only as a public man. The beginning of his career Lord Kitchener had spent in Armenia trying to do something to get that wretched country straight. Perhaps if more men of the same stamp had gone there, or if he had remained longer, we should not be faced with the situation that we are faced with to-day. At any rate, he was there, as elsewhere, the protector of the weak.

A telegram from Constantinople states that General Townshend arrived there, but did not enter the city, being taken immediately to the island of Halki, adjoining Prinkipo.

A meeting of the Nile Society was held on Wednesday afternoon at 17, Fleet Street, when Mr. S. H. Leeder lectured on "Popular Misbeliefs About Egypt." The objects of the society, it may be noted, are :—"To create a better understanding between the Egyptian and the British nations; to correct mis-statements circulated about Egypt; to serve and defend Egyptian interests by every peaceful means; and to promote scholarly interests amongst the Egyptian students in Great Britain and to help them in every possible way."

The Sufi Order of Universal Brotherhood held its annual reception last Wednesday, the venue being 86, Ladbroke Road, W. Sir Francis Vane, who has just returned from Ireland, presided, and there was a crowded assembly. Among others whom we noted as being present were the Princess Tolly Ottino, Colonel and Mrs. Cockburn, Professor and Mrs. Léon, the president of the Islamic Society, Dr. Majid, and its honorary secretary, Mr. Hussein Aly. The proceedings were opened by a short address by the chairman. Inayat Khan and the Durbar musicians delighted the audience by Oriental music, and a long programme of songs, recitations, etc., with intervals for conversation, kept the proceedings going until a late hour.

The Sultan of Egypt has conferred the fourth class of the Order of the Nile upon: El Kaimakam F. Fail Bey, formerly Veterinary Department; Kaimakam W. G. Huskisson Bey, formerly Assistant Financial Secretary; Kaimakan R. E. M. Russell Bey, formerly Sudan Government; Kaimakam C. C. Macnamara Bey, formerly Officer Commanding Equatorial Battalion; Kaimakam S. S. Butler Bey, formerly Sudan Government; Kaimakam A. M. Collard Bey, formerly Officer Commanding 14th Sudanese; Kaimakam C. L. Smith Bey, V.C., formerly Second in Command, Camel Corps; Kaimakam C. L. Barlow Bey, D.S.O., Sinai Peninsula; Kaimakam Abd El Wahhab Bey Habib, Officer Commanding 7th Battalion; Bimbashi J. L. F. Tweedie, formerly Sudan Government; Bimbashi S. Hutchins, Department of Supplies; and Bimbashi L. Tunnard, Sudan Government.

On Thursday, June 15, at 5.30 p.m., at the Æolian Hall, New Bond Street, under the auspices of the Anglo-Hellenic League, Dr. R. M. Burrows will give an address on "The Present Condition of the Balkans."

Magdalen College, Oxford, has voted £20 to the British School at Athens.

The Governor of the Gold Coast has forwarded to the Secretary of State for the Colonies a draft for £110, being the sum contributed by the Syrian traders in Lome, Togoland, to the British Red Cross Fund.

The Association des Journalistes Serbes (22, Rue de la Paix, Paris), has been established to assist Serbian "intellectuals" who are suffering as a result of the war. The president of the association is M. Naoum Dimitrievitch, former editor and director of the *Tribouna*, of Belgrade, and now director of the weekly magazine the *Nouvelle Serbie*, edited in Paris; the vice-president, M. Mil. G. Glouchtchevitch, docteur en droit, Secretaire de la Legation Royale de Serbie, Paris; the treasurer, M. Douchan Chiatchiki, director of the *Straja de Belgrade*; and the secretary, M. Georges Utesenovitch, of the *Nouvelle Serbie*. In order to accomplish its contemplated work the association appeals for the sympathy of the British public, and asks them to contribute to the work of the organisation just formed. Subscriptions may be addressed to the care of Mr. John Lane, the Bodley Head, Vigo Street, London, W.

On Monday the Grand Duke Michael of Russia opened, at the Royal Institution Galleries, 195, Piccadilly, a striking exhibition of Serbian war photographs, taken by a Russo-Serbian artist, M. Tchernoff, who accompanied the Serbian Army during the Balkan Wars, during its campaigns in the present war, and in its retreat across Albania to Corfu. The Serbian Prime Minister, M. Pashitch, and the Permanent Under-Secretary of State, M. Jovanovitch, and a large company of guests attended the ceremony.

According to information received in Bucharest it seems absolutely certain that Marshal von der Goltz was assassinated at Baghdad by Keimal Bey, a staff officer. As soon as the crime was committed Keimal Bey was killed by a German official. From the same source it is learned that General von Bluem was also assassinated in Armenia after the taking of Trebizond by the Russian Army.

The Right Hon. Archibald Fitzroy George Hay, 12th Earl of Kinnoull, of Balhousie Castle, Perth, who served on the Staff of Baker Pasha in the Sudan, left unsettled personal property in the United Kingdom valued at £24,245.

M. Venizelos has given £400 to the Serbian Red Cross.

APPOINTMENTS, PROMOTIONS, Etc.

The King has been pleased to approve the promotion of Sir Ronald Graham, K.C.M.G., Counsellor of Embassy and Adviser of the Egyptian Ministry of the Interior, to the rank of Minister Plenipotentiary in his Majesty's Diplomatic Service.

The *London Gazette* announces the promotion of Major-General (temp. Lt.-Gen.) the Hon. Julian H. G. Byng, K.C.B., K.C.M.G., M.V.O., Colonel 3rd Hussars, to be Lieutenant-General.

Colonel (temp. Brig.-Gen.) J. J. Asser, C.B., has been appointed from the Retired List to be Major-General on the Active List.

Captain (temp. Lt.-Col.) P. W. Machell, C.M.G., retired, has been awarded the D.S.O.

Our Khartoum Correspondent writes (May 22) :—Major Logan arrived in Khartoum from the Sobat Pibor district, and proceeds to England on medical certificate.

Capt. Alexander has arrived from Wad Medani, and proceeds to England on sick leave.

Major Stigand has reached Khartoum from the Upper Nile Province, and has been appointed to special duty in the West.

The *Egyptian Gazette* of May 19, reports :—Mr. Buckley, Inspector, 2nd Circle of Irrigation, who has been for several months on a special mission on the Blue Nile, is expected back at Cairo early in June with Mr. Prowde, private secretary to the Under-Secretary of State for Public Works, who accompanied him on his mission.

The *Cyprus Gazette* announces that the King's Exequatur empowering Monsieur Margarot to act as Vice-Consul of France at Larnaca has received his Majesty's signature.

Our Bucharest Correspondent reports (May 16) :—

M. Costinescu, Minister of Finance, has had his leave prolonged until June 8. M. V. Antonescu, Minister of Justice, will continue to act as his substitute.

M. Michel Pacliano, Roumanian Minister at Berne, has been in Roumania on leave, but is now on the point of returning to his post.

M. Emile Pitishteanu, Roumanian Consul at Bitolia, has been decorated by the French Government with the Cross of the Legion of Honour.

M. Alexander Loievitch has been appointed Attaché to the Russian Legation in Bucharest.

Our Cyprus Correspondent writes (May 22) :—Mr. Thompson, recently appointed District Medical Officer at Larnaca, has arrived and taken up his duties.

Reuter's Athens correspondent reports that King Constantine, on his name day, conferred the Grand Cordon of the Order of the Redeemer on M. Skouloudis, the President of the Council, and M. Rallis, the Minister of Communications.

Kaimakam C. L. Barlow Bey, D.S.O., Sinai Peninsula, Bimbashi S. Hutchins, Department of Supplies, and Bimbashi L. Tunnard, Sudan Government, have been struck off the strength of the Egyptian Army.

Major A. W. B. Wallace, Durham Light Infantry, has been attached to the Egyptian Army as a Special Service Officer, with the temporary rank of Bimbashi.

Captain Robert K. B. Walker, the South Wales Borderers, has been taken on the strength of the Egyptian Army, with the rank of Bimbashi, and posted to the 15th Sudanese.

Captain R. W. Eaton, 3rd County of London Yeomanry, has been attached to the Egyptian Army as a Special Service Officer. He is granted the temporary rank of Bimbashi and attached to Kordofan District for duty.

Second Lieutenant C. G. Kemp-Small, R.E., has been attached to the Egyptian Army as a Special Service Officer. He is granted the temporary rank of Bimbashi and attached to the Military Works Department for duty.

The following transfers have taken place: Bimbashi J. L. Garstin, Bahr-el-Ghazal District to Department of Supplies; Bimbashi R. B. L. Bazley-White, 1st Battalion to Equatorial Battalion; Bimbashi (temporary) A. H. Betterton, Camel Corps to Cavalry and M.I.; Bimbashi (temporary) B. T. Phillips, 12th Sudanese to Equatorial Battalion.

KING'S BIRTHDAY HONOURS.

The following are amongst the honours conferred by the King on the occasion of his birthday :—

A barony of the United Kingdom has been conferred upon the Right Hon. Sir Arthur Nicolson, Bart., G.C.B., G.C.M.G., G.C.V.O.

A knighthood has been conferred upon Armand Marc Ruffer, Esq., M.D., President of the International Quarantine Board in Egypt.

Sir Arthur Henderson Young, Governor and Commander-in-Chief, Straits Settlements, is promoted from a Knight Commander of the Order of St. Michael and St. George to a Knight Grand Cross of the Order.

His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Teheran, Mr. Claude Murray Marling, C.B., C.M.G., has been promoted to a Knight Commander of the Order of St. Michael and St. George.

H.M. Minister Plenipotentiary at Christiania, Mr. M. de Cardonnel Findlay, C.B., C.M.G., also receives similar promotion.

Dr. Alexander Granville, Director-General of the Municipality of Alexandria, has been made a Commander of the Order of St. Michael and St. George.

Mr. Ronald Storrs, Oriental Secretary at the Residency, Cairo, has also been made a Commander of the Order of St. Michael and St. George.

H.E. Sheikh Jubar bin Mubarak bin Subah, Sheikh of Koweit and Dependencies, has been appointed an Honorary Companion of the Order of the Star of India.

H.E. Sardar Arfa, Amir Nuyan Sheikh Khazzal Khan, ibn Hajji Jabir Khan, K.C.S.I., K.C.I.E., Sheikh of Mohammerah, has been promoted to be a Knight Grand Commander of the Indian Empire.

OBITUARY.

Mr. H. J. O'BEIRNE, C.V.O., C.B.

We have to record with much regret that Mr. Hugh James O'Beirne, C.V.O., C.B., was amongst those who lost their lives as a result of the sinking of H.M.S. Hampshire off the Orkneys on Monday night. His death will be severely felt in the Foreign Office, where he was regarded as a particularly able diplomatist, and he will be sincerely mourned by many friends not only in this country, but wherever his diplomatic duties and his travels had taken him.

Born in 1866, Mr. O'Beirne entered the Diplomatic Service in 1892, and was appointed to St. Petersburg (Petrograd) the same year. In 1895 he was transferred to Washington, and two years later (now a Second Secretary) to Constantinople. After a very short time in the Turkish capital he was moved to Athens, temporarily, and thence to Paris (1900). Early in 1904 he was promoted a First Secretary, and in December of the same year he served on the North Sea Inquiry Commission. For a short time in 1905 he acted as Chargé d'Affaires at Washington, and was then transferred to Paris again, having meanwhile been made a C.B. In July, 1906, he was promoted to be Counsellor of Embassy at the Russian capital, and in 1913, after acting on various occasions as Chargé d'Affaires, he was appointed a Minister Plenipotentiary.

In July of last year, when the situation in Bulgaria was recognised as extremely difficult, not to say dangerous, Mr. O'Beirne was sent to Sofia in the hope that, if anybody could turn King Ferdinand of Bulgaria and his Ministers from the course on which they appeared to be set, he would be able to do it. That he was unable to do so was due to circumstances beyond his control, and, as is now realised, probably beyond the control of any man. He left Sofia on October 7, 1915, and returned to London, where, the following month, he was transferred to the Foreign Office.

LIEUT.-COL. A. G. FITZGERALD, C.M.G.

Lieutenant-Colonel Oswald Arthur Gerald Fitzgerald, C.M.G., who was drowned with Lord Kitchener, belonged to the 18th King George's Own Lancers, the same regiment as Lieutenant-Colonel Clive Wigram, Assistant Private Secretary to his Majesty, and Colonel Maxwell, Military Secretary to Lord Hardinge, during his Viceroyalty. "Fitz," as he was familiarly known, originally joined Lord Kitchener's Staff when he was Commander-in-Chief in India, subsequently accompanying him on his mission to Japan, Australia, and New Zealand, and has been his constant companion ever since, whether at the Residency at Cairo, the War Office, or Broome Park. He was a man of exceptionally attractive and lovable personality, and had well served Lord Kitchener, who was greatly attached to him.

ADMIRAL THE HON. H. L. A. HOOD.

Rear-Admiral the Hon. H. L. A. Hood, who lost his life in the sinking of H.M.S. Invincible, had seen stiff fighting on the Nile in the course of his long and distinguished service. A correspondent writes:—

"Nowhere will the death of Rear-Admiral the Hon. Horace Lambert Alexander Hood, C.B., M.V.O., D.S.O., be received with greater regret than among his old comrades and friends in the Sudan. Although it is about seventeen years since they were together in the struggle waged by the British troops against the waning power of the Khalifa, Hood's splendid services, his charm of manner and his whole-hearted enthusiasm for whatever duty he was engaged upon, are remembered and sometimes talked of. His great ability as a gunner was generally acknowledged, and General Kitchener found in him one of his most brilliant and reliable officers. It was in March of 1898 that a British brigade—1st Battalions of the Warwickshire and Lincolnshire Regiments, and the Seaforth and Cameron Highlanders—was despatched to reinforce the Egyptian troops. Hood—who was at this time but twenty-eight years of age—was attached to the naval brigade. The intention was to intercept Mahmud's force and the capture of its commander, and, as is known, both objects were accomplished. Mahmud, with Osman Digna and a large force, was making for Berber. On April 8 was fought the battle of the Atbara, in which Hood took a very prominent part in connection with the gunboats on the Nile, which rendered invaluable services. Hood was with Major T. Hickman of the 15th Egyptian Battalion when he occupied Shendi, on March 28, 1898, after a short fight. The Sirdar (then Sir H. H. Kitchener) mentioned Hood's name very prominently in his despatches on the battles of both the Atbara and Omdurman, upon which occasion Hood was awarded the 4th Class of the Mejidieh."

Subsequently, as captain of the Hyacinth, Hood landed in command of a Naval Brigade for the capture of the Mullah's stronghold at Illig in April, 1904, was mentioned in despatches, and received the D.S.O. (General East African medal, Somaliland, 1902-4, clasp).

Another gallant officer who took part in the capture of the Mullah's stronghold at Illig and won the Somaliland medal with clasp, and who is reported killed in the battle of last week, was Lieutenant Cecil Abercrombie. He was a midshipman on the Hyacinth when he formed one of the landing party for the capture of Illig. In the early part of this war he was on service down the Mediterranean. He was killed on board the Defence.

Captain Cecil Prowse, of H.M.S. Queen Mary, and his Commander, Sir Charles R. Blane, who are officially reported to have lost their lives in the great North Sea battle of May 31, had both seen service in Near Eastern waters. Captain Prowse was midshipman of the Agincourt during the Egyptian war of 1882, and had the Egyptian medal and the Khedive's Bronze Star. Afterwards he was first lieutenant of the Racoon, and served in the Naval Brigade landed by Rear-Admiral Rawson at Mombassa for the punishment of an Arab chief, the expedition resulting in the capture of the stronghold of M'weli in 1895. For his services he was decorated with the General African Medal. He was also present at the capture of the Sultan of Zanzibar's Palace in August, 1896, by the squadron of Rear-Admiral H. H. Rawson. Commander Sir Charles Rodney Blane was also present, as a midshipman of the St. George at the bombardment of the Sultan of Zanzibar's Palace. He also served in the expedition which landed to punish the King of Benin in 1897.

The death is announced of Commander W. Maitland-Dougall, R.N., retired, at Scotscraig, Tayport, aged sixty-three years. He served as aide-de-camp to General Sir Arnold Kemball during the Turco-Serbian campaign of 1876, and was at the siege of Alexinatz, and took part in the battles of Preschinitza and Junis, and the subsequent occupation of Alexinatz. Commander Maitland-Dougall also served as aide-de-camp and secretary to General Kemball throughout the Russo-Turkish War of 1877-8, and was present at the relief of Kars. He was under Moukhtar Pasha in the retreat from Kars to Erzeroum, and was at the battle of Deveh Boyoun and subsequent investment of Erzeroum. He was specially mentioned in despatches, and received the Turkish war medal. Commander Maitland-Dougall, who was the eldest son of Admiral W. H. Maitland-Dougall, married in 1886 Charlotte, daughter of Mr. F. King, of Fryern, Sussex.

Captain Charles Kennedy Kennedy-Purvis, R.N., retired, second son of Mr. Arthur Purvis, of Darsham, Suffolk, died at Rathcline, East Molesey, last week, aged sixty-six years. As lieutenant of the Penelope he was at the bombardment of Alexandria in 1882. He was seriously wounded at Kassassin during the repulse of the Egyptian reconnaissance, necessitating the amputation of one of his feet. At the time he was in command of the naval detachment serving with the 40-pounder, which was mounted on a railway truck. Lieutenant Kennedy-Purvis was specially mentioned by Sir Garnet Wolseley in despatches, and promoted for services rendered during the operations, receiving the Egyptian medal, the Alexandria clasp, the Khedive's Bronze Star, Osmanieh, 4th Class.

WHERE TO STAY.

FRIDAY, JUNE 9, 1916.

LORD KITCHENER.

Death has been kinder to Lord Kitchener than to the nation which loses him in this grave crisis in its history. After a life of crowded activity, spent in the service of the Empire and full of achievements for which his countrymen have reason to be grateful to him, he has passed away with a suddenness that a soldier covets and in a manner which, for all the tragedy surrounding it, is strangely in keeping with his known dislike for the trappings of public ceremonies. Lord Kitchener died, as he had lived, in harness. His first consideration in this struggle had been to see that Britain provided her maximum of man-power for the prosecution of the war. This task accomplished, he was free to devote closer attention to the co-ordination of the Allies' efforts, on which depends the successful conclusion of the war. It was in the furtherance of this object that Lord Kitchener was called to a personal consultation with the Russian Government and military authorities. With the members of his Staff he started for Archangel on board H.M.S. Hampshire, but before the cruiser had left Scottish waters she was struck by a mine or a torpedo. No escort apparently accompanied her; she sank, and all those on board perished.

The British nation received the news of the death of Lord Kitchener as it would have received the announcement of a severe defeat to its arms. It felt for the moment stunned; and in that feeling may be found the finest tribute that could be paid to the great soldier. Lord Kitchener was a stranger to all the arts and qualities that are supposed to evoke spontaneous recognition from the public. No man so keenly susceptible at heart to popular approval ever tried less to court popularity. His reserved disposition as well as his dislike of public speaking and of all pomp and pageantry made him shun platform and public gaze. From this attitude arose the popular conception of a Kitchener who cared nothing for anybody, but was bent on having his own way. But while he regarded all obstacles as only existing to be overcome, and was accustomed to ride roughshod over anything or anyone blocking the achievement of the purpose he had in hand, he would have suffered acute disappointment, if he could not have counted upon carrying with him the approbation of his countrymen. Not that the knowledge that he was running counter to public opinion would have deterred him from any course of action on which his mind was set. He was accustomed to rely too much on his own judgment to seek promptings from others. Nothing, therefore, but his actual achievements and force of character had won for him in the public esteem a place which, during this war at least, he shared with no other man. To the great bulk of his fellow-countrymen as well as to the outside world Lord Kitchener stood as the embodiment of the British character—forceful, thorough, and tenacious. When the war broke out it was to him that the country turned instinctively to rescue it from the slough of its own unpreparedness. It looked to him less as a successful commander in the field than as the one man capable of the necessary driving power to carry through an undertaking of the vast proportions of a European war. The national confidence was not misplaced. Lord Kitchener took over control of the War Office, and at once thought and spoke in millions, where others would have dealt hesitatingly and apologetically with hundreds of thousands. During his tenure of office he schooled the country into an adequate appreciation of the magnitude of the struggle in which it was engaged. This was a fitting crown to his life's service. The hard logic of work done for the Empire had won for him the whole-hearted faith of the people. He at once put that faith to the test, and found the people ready to follow his lead with a spontaneity which no one else could have aroused to an equal degree.

Lord Kitchener leaves behind him a record which must ever prove an invaluable asset to the British Empire. In the United Kingdom his activities have been restricted to the present war; in South Africa and India he was engaged on purely military duties; in Egypt alone—the scene of his earlier achievements—he had opportunity to build an administrative edifice on the foundations which he himself had helped to lay. Throughout all the other phases of his eventful career he looked back to Egypt with unfailing interest, and always spoke of it with affection. It was there that a lucky accident set his foot first on the ladder of fame. Colonel Kitchener had been recently appointed Sirdar when Khedive Abbas, then a comparatively young man, took it upon himself to make in public some undeserved criticisms on the efficiency of the Egyptian troops. Lord Cromer's reply was to insist that the British Government should at once confer the dignity of knighthood upon the Sirdar in order to dissociate itself from the strictures passed by the Khedive. The honour was merely premature, for it was Sir Herbert Kitchener who thought out, with Lord Cromer, and eventually carried through the reconquest of the Sudan. When after the Boer War and the period of his command in India Lord Kitchener returned to Egypt as British Agent and Consul-General, he gave evidence of the particular solicitude he felt for the country. No longer the inaccessible military commander, he made it his business to listen to all that anyone in Egypt who had a claim on his attention might have to say. No detail of the public service escaped being handled by him, and thanks to his personal prestige the régime achieved admirable results. Bluebooks tell the story of the continued advance of Egypt's prosperity; in Lord Kitchener's popularity among the fellaheen is to be found the record of the success achieved by his paternal administration. In that popularity Egypt repaid in some measure its debt to him, just as among his fellow-countrymen at home, we have not the least doubt, he found his main reward for a life of unstinted service in the unique position which he occupied in their esteem. His career will prove in the years to come an incentive to many in the service in which his heart was. In his own generation his personification of certain national characteristics served, it may be, to arrest the danger of their becoming atrophied, and before his death he had the satisfaction of seeing the nation as a whole, partly at his instigation, vindicate once more its reputation for vigour, thoroughness, and tenacity of purpose.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

"KITCHENER OF KHARTOUM."

AN APPRECIATION.

With flags at half-mast, but with her heart already steeled to the energy of a new resolution, Britain is mourning the death of Lord Kitchener of Khartoum. Lord Kitchener is dead, but Kitchener's Army—five million men in arms—remains to see that his cause endures. Never before has a fallen soldier left such a monument as this; never surely was the wonderful spirit of the Field-Marshal more powerful than in this the hour of his death. In life the name of Kitchener was a name to conjure with, in death it has become something more than this, it is already a symbol and a goal. It is a symbol of all that we as Englishmen hold most dear, silent strength builded upon foundations of unassailable moral and physical courage; it is a goal because only in compassing his standards may we hope to attain the end of victory.

It is hard to realise that on the 24th of this month Lord Kitchener would have celebrated his sixty-sixth birthday. Notwithstanding the fulness of his life, the advancing years had fallen upon his virile personality so lightly that they had left him seemingly untouched and in the full prime of his manhood. It is only when we look back into history and see the part he had played in its making that we can appreciate the fact that Lord Kitchener was no longer a man of middle age. By a remarkable coincidence his life as a soldier ended in the same manner as it began. For it was as a private in the French Army fighting against Prussia that he began service; it was as a Field-Marshal fighting against Prussia that he ended it. Lord Kitchener's first appointment in the Near East—where he was ultimately destined to become world-famous—was in 1874, when he accepted a position on the staff of the Palestine Exploration Society. For three years he acted as assistant to Lieutenant Conder, R.E., and subsequently remained in sole charge to complete the survey. It was here, working under conditions of considerable hardship, and exposed to the frequent attacks of marauders, that the young officer laid the foundations of his reputation. His work was done with a thoroughness and attention to detail that was quite unusual in so young a man, and his periodical reports proved him to possess exceptional powers of observation. From that time onward Kitchener never turned back. Step by step, and by sheer ability and resolution, he worked his way up to the high position which was thrust upon him at the beginning of the present war.

We do not propose to attempt any detailed account of Lord Kitchener's career in this article. It would indeed be impossible to do so; the daily papers have already devoted column after column to the subject, and have still been forced to leave it incomplete. But the reputation of Kitchener of Khartoum belonged in the first place to the Near East, and the personal sense of loss which comes to Englishmen at the thought of this giant personality removed is by no means ours alone. Lord Kitchener served through the campaign consequent upon Arabi's revolt in Egypt; he smashed through the Khalifa's hosts at Kerreri and conquered the Sudan; yet his name is magic in both lands, and it is not the magic of fear. At the beginning of his career he determined to master the Arabic language; at its end he had mastered not only the language but the people who spoke it, from Alexandria to Gondokoro. His popularity in the Sudan was the more remarkable because it was attained so quickly. His first message was at the "mouth of his clean-lipped guns," a message of vengeance and of death; but scarcely had the Sudanese time to realize defeat before their conqueror appeared before them in the new light of the white man who understood. He left to subordinates no work of importance that it was humanly possible for him to undertake himself. No incident of government which affected the native was too trivial for his attention in case of complaint.

And so it came about that the character of the avenger of Gordon was speedily lost in that of a munificent distributor of justice, a fit subject for reverence. Upon the foundations laid by his organizing and administrative genius in those early times rest the loyalty and well-being of the Sudan to-day. When he left the Sudan for South Africa he left a country bright with the vision of regeneration and already moulded to meet the new demands of civilization. The devotion of his staff and other officers was never wholly devoid of fear, but it was spontaneous and sincere, and not a man would have remained behind had the opportunity presented itself of following him to South Africa.

For many subsequent years the scenes of his labours were laid in lands far distant from that which he had conquered, but the Sudan, advancing in knowledge, grew increasing proud of its hero, the first lord of Khartoum. When he was at last given the appointment which he held when war broke upon Europe that nameless magic which was his alone among Englishmen set peace upon the Egyptians in a day. To no man of modern times has such a reception been given as to Kitchener of Khartoum when, as we are told, in opposition to the advice tendered by those who had watched the growth of Egyptian nationalism, he appeared alone on the steps of the Bab-el-Louk and looked down upon the people. Here, as at a later date in the Sudan, his personality, cold and stern as it seemed to many even of his own countrymen, touched the crowd and stung it to a wild and unprecedented enthusiasm. From that moment the whole aspect of Egyptian affairs was changed. With characteristic penetration, Lord Kitchener grasped the essential needs of the nation; with equally characteristic energy he proceeded to satisfy them. His administrative measures were brilliantly successful, and he would be remembered with gratitude even if the Egyptian public had only the Five Feddan laws and the popularisation of the cotton *halakas* before it as evidences of his tenure. The subject of education in Egypt was, as he informed the present writer, the one which was of all others nearest to his heart. But he held that no move at all was preferable to any action that had not been thoroughly weighed from every point of view, and he was naturally forced to postpone an elaboration of his cherished scheme until the more apparent needs of the country had been dealt with. The establishment of Kitchener's school in Khartoum was the inspiration of a mind capable of looking far beyond the needs of the moment; in all his dealings with Eastern peoples, as in the establishment of this wonderful voluntary army of Britain to-day, he showed the same breadth of vision. With his passing, the East and West, united in their loss, may look back with almost equal pride upon the memory of this man who had served them both so well. Somewhere beneath the waters of that sea which has so lately given to our Empire another victory, Kitchener of Khartoum has gone to a warrior's grave. His work and his example remain. Carry on!

TANGIER TO TEHERAN.

I see that, according to Mr. Robert S. Stapleton, who was the American Consul at Erzeroum, several German officers who were present at the massacre of fifty Armenian artisans just before the entry of the Russians into the city made no attempt to take a hand in the congenial business themselves. This is as surprising as it is gratifying, but perhaps they felt that their presence at the entertainment, giving moral support to the murderers, was all that was necessary in the circumstances, considering that the work was sure to be well done. At the conclusion of the ceremony they proceeded to appropriate certain wives and daughters of the murdered artisans to themselves, thereby demonstrating the true spirit of German kultur and refinement to the homeless ones. There are some beings infinitely more degraded than the red-handed murderer!

***

A correspondent who has recently returned from the Mediterranean has written to one of the technical papers saying that Egypt is an ideal country for the motorist just now; there are no placards urging him not to motor for pleasure, neither are lighting or speed regulations in force. Things have altered since I was last there if the latter assertions be true, but, candidly, I doubt it. In my day the one ideal run, from Cairo to the Pyramids, was frequently beset by lurking *shawish*, and my chauffeur ran me in for a fine for a breach of the lighting order while driving home a new car on the day it was purchased. Indeed my recollections of motoring in Egypt are far from ideal in any way, for the difficulties of street driving are immense. For many years accustomed to regulate traffic by the simple expedient of shouting "Mind your legs!" to the obstructing pedestrian, the *arabaghi* was a trying person to deal with, and as after a considerable period of driving I escaped with no charge of man—or even horse—slaughter against me, I always considered myself to be one of the very fortunate.

***

The story published by the Bombay Government of the treatment meted out by the Turkish authorities to three Indian Moslem pilgrims to Kerbellah is not a pleasant one. It shows, to my mind, at least, what a grip on the luckless Turkish Empire German influence had obtained even before the war, for it is impossible to account otherwise for the brutal treatment of helpless Moslems by their fellow-Moslems. It has always been the boast of Islam that its followers regarded one another as brothers, and behaved accordingly, but the influence of the Germans and the Young Turks has evidently changed all that! When Zakir Husain and his companions "protested that we were Moslems" these improved (?) and up-to-date Turco-Germanized gentlemen "never paid heed." Again, we are told: "The Turkish authorities issued orders that the goods and women of Indians were the legal property of those who plundered them." No wonder that the indignant pilgrim, who had been visiting the sacred shrines accompanied by his mother and sister, exclaims: "They themselves are no Moslems, and do not act according to the precepts of Islam." That is the naked truth. Enver, Talaat, and company have sold themselves body and soul to their Hunnish masters. They are not, and never have been, "true Moslems," any more than the arch-impostor Wilhelm II. is a Moslem, despite the frantic attempts to mislead the Moslem world on the matter. They care not one whit for the precepts of Islam, which they have done their best to disgrace eternally by their hypocritical professions. The sooner the Moslem world realizes the truth fully the better for Islam, the better for the safety of Moslem pilgrims, and the better for the reputation of the Holy Cities. As one who sincerely admires the great religion of the Arabian Prophet, I deplore the stain cast upon it by conduct such as that of the German-inspired Turkish officials who treated Zakir Husain, his women-folk, and his fellow Indians in Mesopotamia in such disgraceful fashion. But I am glad that the victim put his finger so unerringly on the explanation of that conduct: "They *are no Moslems.*"

***

I hope to return at an early date to the subject of Germany's despicable efforts to mislead the Moslem world in order to serve her own utterly selfish ends, for I have been favoured with a copy of a very remarkable document which throws an interesting light on the dirty work. But this week there is a subject even more pressing—the subject of the German attempt to mislead the whole neutral world as to the result of the North Sea battle last week.

***

To give the Huns their due, their advertising agents did *their* part to perfection. The latest and greatest German Lie was launched with a swiftness and a mass of corroborative detail that went perilously near to giving a touch of artistic verisimilitude to what would otherwise have been "a bald and unconvincing narrative" indeed. Perhaps the most artistic touch of all was the patronising admission that our poor, deluded, defeated, generally-mopped-off-the-face-of-the-earth sailormen had "fought bravely." For one awful moment that nearly persuaded me that the Huns had, by some miracle or other, done something of which they might legitimately feel proud; and, of course, there is no good denying that most people in this country felt far from happy on Friday night. It looked as if we had had "a nasty one in the eye," and though we did not for one minute accept the German Lie at its face value, we feared that "someone had blundered." Now we know the truth; and we are kicking ourselves for being misled, even momentarily, and to such a slight extent. Admiral Jellicoe and his brave men were too busy sweeping up the pieces of the German High Seas Fleet, which could not keep the High Seas, to let us know the good news at once. But it *was* good, in spite of the splendid men and the fine ships we have lost.

***

But what effect, I wonder, will the Lie have in that part of the world with which THE NEAR EAST concerns itself? A lie that gets a good start is always hard to kill. The Germans recognized this fact long ago, and with characteristic thoroughness they have turned it to the best advantage for themselves. They have lied often and lied early. And by its sheer daring their latest effort is like to make many dupes. America, Holland, Norway, Sweden, and the rest of the Western nations have already learned the truth. But what about Persia, Arabia, and other countries not well placed for getting the real facts? I hope our Government will see to it that everywhere the German Lie is nailed to the counter promptly.

***

Will anybody in Turkey or Bulgaria really swallow the Lie? Of course, a lot of people in both countries will have to pretend to do so. For them I care not a rap; they will share the fate of the German Government itself when their dupes find out the way they have been tricked and bamboozled. But I am sorry for the others. They really cannot be blamed for being fooled. The Germans had the news of the "Great Victory" out almost before the remnants of their fleet had got themselves safely tucked away in their harbours of refuge; and I am not sure that that wonderful old party the King of Saxony had not hustled off his congratulatory wire before the first of the runaways had reached safety. Indeed, giving him credit for not being quite so fatuous as he looks, I suspect he was in a mortal hurry to dispatch it before the truth leaked out. And his message and the other messages from the All-Highest, the German Admiral—Admiral Sheer-off, is it not?—and the rest of them got a fine start. Let us hope, however, that even the Turk and the Bulgarian are beginning to appraise German "officials" at their true worth at last. They are neither of them learned in seafaring matters; but they are not quite fools. And they have had only too many chances of sizing up the Huns by now.

***

On the morning of the day that brought us news of the Bulgarian invasion of Greece I happened to stop before a second-hand bookseller's in Chelsea. The first book that caught my eye was a Greek primer, and, opening it, this was the first paragraph which caught my eye:—

> All through Greek history there is the same cause at work, ruining the power of Greece, and causing it endless miseries—the incapacity of the Greeks for acting together.

There in a nutshell is the position of 1916; the nation is divided and uncertain in face of events which might have carried it to the summits of its ambition, which might, on the other hand, drag it to the last depths of misery and despair. The happenings of any moment now may suffice to deprive the Greek people of their right of choice; fate will not wait for ever. Already we see the blackness of the separating shadow that seems destined to fall between Greece of to-day and the traditions of her past. Can nothing be done to snatch the blinding veil from the eyes of her people before they lose in darkness the power of sight? The passing moments are charged with tragedy, but the people dream on, content to bicker at the brink of their nation's grave. "The moving finger writes"—has it already written "Too late"?

THE PRESS ON THE NEAR EAST.

Lord Kitchener.

Out of the great mass of Press comment on the death of Lord Kitchener, we have chosen, almost at random, the following:—

The *Morning Post*:—

But let the nation console itself with the thought that Lord Kitchener has done a great work, and that the great work remains. . . . He laid the foundations of success, and the nation will honour him best by schooling itself in his silence, his energy, and his grim resolution. The country will raise the best memorial to his name by carrying his work on to the victory for which he prepared. Let us all work the harder and set our teeth the firmer because he is gone, and resolve that there shall be neither stop nor stay nor any shadow of turning until this great work is done.

The *Times* says:—

High in fame with the masses of his countrymen and in the esteem and confidence of all the Allies, in the unabated vigour of his powers, at the hands of the enemy and in the discharge of duty, Lord Kitchener of Khartoum has died a soldier's death. . . The one effect of his death at German hands will be to heighten their anger against the enemy and their zeal for the prosecution of the war. Of that Allies, neutrals, and enemies may rest assured.

The *Daily Chronicle*:—

When he was called to the War Office in August, 1914, he had no personal desire for the post. He held the highest position in Egypt, which he was filling with extraordinary credit. To his reputation as a war-organiser he was adding a scarcely less remarkable reputation as an Oriental statesman. . . . Nevertheless, he responded to the call, and took up his new duties with characteristic thoroughness.

The *Evening News* printed the article from which we quote within a few hours of the soldier's death:—

While he yet lived we made a sort of legendary figure of him. It pleased us to see in Kitchener a type and tall image of our race. Praising him we praised ourselves, saying that this was your Englishman, strong and silent. This although very few Englishmen have ever been like Lord Kitchener. . . . He came deliberately to his fame and honours. There was a Lieutenant Kitchener, a sapper subaltern who did good work, engineer's work, for the Palestine survey. There was a Captain Kitchener who went to the job of making troopers out of Egyptian peasants: it is recorded that Captain Kitchener said, "We'll have to drive it into those fellows"; he spoke so little that a light word of him is remembered. And then we in England began to hear of Colonel Kitchener when people talked of the long account that would some day be settled by the Mahdi. Colonel Kitchener was Sirdar of the Egyptian Army. The fellah was drilled and blooded to the work on the Nile: Colonel Kitchener had "driven it in." Then came a day when we knew that the army was for Khartoum. Atbara: Omdurman: the names are already of old battles, but we remember them. Kitchener was Kitchener to us at last.

From the *Morning Post* (June 8) we take the following expression of American opinion:—

The *Sun*: "He was a genius of efficiency, and his advice was invaluable. His prestige was such that at any council table in Europe he was a commanding figure. When the history of the war is written it will probably be found that he had more to do with consolidating the military resources of the Allies and effecting co-operation between their armies on the various fronts than any other man. His talents were indispensable to England and the common cause." Referring to Lord Kitchener as a great moral force, to the power of his name, and to the faith which the English people had in him, the *Sun* adds: "England can ill spare him. He was a man among men, always brave, calm, stoical, resourceful, confident, a born leader, a tower of strength. Armies can be replaced, it matters little if battleships are sunk, but to lose the organiser of victory, as England fondly believed him to be—that was a cruel blow of fate."

An Eve-less Eden.

To the June *Blackwood* Lieutenant-Commander H. C. Lukach, R.N.V.R., contributes a most interesting and delightfully written article on Mount Athos in Peace and War. The sketch of the history of the peninsula and of the "Holy Parliament" is valuable indeed, but it must be studied in the original article. We have space for only two short quotations. The first is a character sketch of the Kaimakam, who in 1907 received the author and his friend, Mr. H. Pirie-Gordon, on the occasion of their first visit to the Holy Mountain:—

Papayanni Bey was an Albanian and a Christian, but, despite his Christianity, showed a regrettable lack of affection for his holy charges. Regrettable, but not altogether incomprehensible. For years he had associated with none but black-robed *kalogeroi*, had heard no livelier music than their nasal chants; moreover, it annoyed him, the deputy of the Grand Signor, to have to submit to the law banning everything female from Athos. He admitted that in principle such a law was all very well for monks—was, in fact, a most salutary precaution; but he felt that it was humiliating for the Governor to be bound by a regulation intended solely for the welfare of the governed. Also, he thought, it was erring on the side of over-caution to extend the prohibition to useful beasts such as ewes and hens. It was not clear to him how the morals of the monks were thereby benefited; on the other hand, it meant that his milk was perforce condensed, and his eggs imported from Salonika

The second passage refers to Chilendar, the monastery established by Stephen Nemanya and his greater son, St. Sava, towards the end of the twelfth century. Mr. Lukach is of opinion that "the epitome of Serbian history is to be found, not at Belgrade, but at the Holy Mountain:—

Surrounded by a dense forest of pines and enclosed within stout, battlemented walls, Chilendar imports into the placid atmosphere of Athos a whiff of the wilder air of the Balkans; the very porch gives indication of the vigorous habits of its builders. A triple gate of great strength wards off unwelcome visitors; above it, holes cunningly devised for the passage of boiling oil render still more perilous the advance of the intruder. Within all is of an indescribable picturesqueness, Slavonic mediævalism at its best. Around you are Romanesque cloistered buildings, their walls inlaid with priceless Rhodian dishes; across the great Court stretches the Church of many domes, a marvel of thirteenth-century architecture and decoration. But it is in the interior of the Church that the significance of this Serbian microcosm is realised to the full. Either by a tomb, or a banner, or some precious offering, each national dynasty is represented here, has left some tangible record of its share in its country's making. It is here, in the monuments of this glorious specimen of Eastern European art, that should be read the tangled story of the Serbs, for here, and not on their own soil, is the whole of that story written. At the time of my first visit to the Republic of the monks, what most impressed me in Mount Athos was its aloofness from the teeming world around it; I am not sure that Chilendar, as the embodiment of the living soul of Serbia, will not be the most lasting memory of my second.

Greece and Bulgaria.

We are now able to give further expressions of Press opinion on the Bulgarian invasion of Greece, which were too late for inclusion in our last issue, but which have since appeared under various dates. The *Morning Post* begins a leading article by saying that "Those Englishmen who used to take an almost paternal pride in the re-birth of Greece must have thoughts too deep for tears."

After showing that the policy of Venizelos alone can prevent the destruction of Greek aspirations, the paper continues:—

But the national interests of Greece are the sport of her Government, which knows nothing of, and cares nothing for, the spirit and the traditions of a people once great and free. For whatever the King may think, Germany is not going to win. And the Greek Army might even now hurl the Bulgars back across their border, for it would have the support of the strong British and French force at Salonika and the reconstituted Serbian Army. The Greeks may take this chance or leave it. If they leave it the opportunity will never come again. Either, as we believe, the Allies will be victorious, when the Greeks, if they do nothing, can expect no consideration, or Greece will be faced by the victorious Bulgars and Turks. Such is the choice to be made. But the King, who is now openly working for the victory of Turkey and Bulgaria, is determined that the Greek people shall have no voice in their own destinies. He has even put the keys of the frontier in the hands of the enemies of his

country. Such is the position to which Greece has been reduced by a policy designed not to further the interests of Greece, but to secure the victory of Germany. It remains to be seen whether the King in this design has not strained his power too far. To surrender hard-won fortresses and frontiers cannot be popular with the army which conquered them, while it is certainly detestable to the rest of the Greek nation.

The *Pall Mall Gazette* concludes a leading article with the paragraph quoted below:—

The attitude of the Greek Government would be perfectly comprehensible on the assumption that it acts entirely in the interests of Germany and in close collusion with Berlin. Upon no other theory are its proceedings reconcilable with national interests and feeling, or with reason and honour. Whether their country has a real independent existence or whether it is a mere Prussian outpost is a question which the Greek people must feel to be clamorous for a clear decision.

The *Birmingham Daily Post* says that—

there is very good reason for affirming that messages which represent the situation with truth and impartiality are remorselessly held up. And in the circumstances, if this be not a sign of conscious weakness, it is indubitably a policy of misdirected energy. For the Greek people will form their own opinions upon the facts well known to themselves, while the suppression of news can do nothing to assist the cause of Greece abroad. A contrary view might, of course, be held if the Allied Governments had shown any disposition to make capital out of Greek internal dissensions. But they have not. They are fully mindful of the difficulties of the Greek Government, and they have already demonstrated the sincerity of their desire that the policy of Greece shall be determined solely by herself, in accordance with her own national interests.

The *Western Press* points out that King Constantine has consistently over-ruled the Constitution since the outbreak of war, and adds that "Thrones have tottered under the pressure of events less sensational than those which are in process of being enacted in Greece."

Government and People.

A special correspondent of the *Morning Post* (June 8) in Rome writes:—

That the Government realises the gravity of its situation, even with a big majority in the Chamber, is evident from to-day's postponement of the re-opening of Parliament and the rumours of the proclamation of Martial Law, thereby suspending the Constitution even in theory, as it has long been in abeyance in practice. But neither the majority in what is universally considered a "mock Parliament" nor the golden wreaths which the Government agents at Piræus are getting up by so-called "public subscription" to be presented to King Constantine on his Fête Day on Saturday on the part of Piræus working men for having "saved Greece by his wise policy" can stand against the irrepressible feelings aroused by the re-appearance of the hated Bulgar on Greek soil, and the unresisting surrender to him of Greek fortresses in the fairest Greek provinces, where the blackened ruins of Demirhissar, Seres, Doxato, Alistrati, Nigrita, and a dozen other towns and villages still bear witness to his desolating passage in 1913. It is useless for the Greek Government to plead the necessity of impartiality between the Bulgars and the Allies, for the two sides stand in diametrically opposite relations to the Greek nation. When the Allies came to Macedonia, and wherever they have penetrated there, the populations felt no fear and made no move to fly. Not all the Germanophil intrigues of the various Greek officials and officers succeeded in poisoning the minds of the Macedonian Greeks against the Allies, and if thus far Greek public opinion has shown a reluctance to plunge into civil war over the violations of the Constitution and organised intrigues for the establishment of a Monarchical Government on Prussian lines, it will hardly show itself equally long-suffering on the Bulgarian question.

Nearer Asia.

In turning from other theatres of the war to the struggle in Nearer Asia, the *Observer* (June 4) says:—

If we could all see what is happening in that region the final conflict between the Grand Duke and his opponents would cause us to hold our breath with suspense. It may well be, as has been reported, that General Mackensen is in command of the Turks. In any case, the Russians have to meet the shock in the manner we have expected. The Turks are at high strength, and it is probable that the Grand Duke is again outnumbered—no new thing in his experience, but a factor with which he is accustomed to grapple. The evident object of the Turks was to sever both his wings, to close on his centre, to drive him out of Erzeroum, and then to recover all Armenia. They have made a stubborn effort, but reckoned without the ability of their antagonist and his colleague General Yûdenitch. . . . If Verdun is the tremendous episode of the siege-war, the Armenian campaign, with its Mesopotamian extension, is fascinating as a war of manœuvres. The Central Empires are known to be profoundly disquieted about the fate of Turkey in the present campaign. They have reason. We have a feeling that the Grand Duke will hold his own and will yet be heard of in wider fields.

Articles to Note.

"The Soldier in Egypt," by Stephen Graham, and "General Townshend's Island Prison, in *Country Life* (June 3).

"Lord Kitchener," Memoir in the *Times* (June 7).

REPATRIATION OF ARMENIAN PEOPLE.

Last Wednesday a meeting, over which the Lord Mayor of London presided, was held at the Mansion House, for the purpose of initiating a movement for the repatriation of the Armenian people. In opening the proceedings the Lord Mayor said that the Armenian Refugees' Fund that had been started in the Mansion House last October had been so successful that over £53,000 had been collected and distributed amongst 250,000 people. Now the problem was one of repatriation rather than of relief, for all the able-bodied men and women were hastening back to their homes, and, unless they were placed in a position to support themselves before next winter, there would be famine.

Mr. Aneurin Williams, M.P., chairman of the fund, read letters of regret from various eminent people unable to be present—among these was one from the late Lord Kitchener—and gave details explaining how the money that had been raised had been distributed. Among other beneficiaries were a Moslem race who lived by the shores of the Black Sea from Trebizond to the Russian frontier, whose homes had been destroyed by the war. To these £1,000 had been sent. Mr. Williams said that nothing would prevent the able-bodied Armenians flocking back to their homes, so the chief work of the fund was to help the women and children who had been found in Armenia suffering terrible distress when the Russian armies advanced, and to assist the men to re-establish their homes.

Among subsequent speakers were Lord Bryce, Lady Ramsay, Mr. T. P. O'Connor, M.P., and Sir Mark Sykes, Bart., M.P. Sir Mark Sykes said that in Oriental countries the questions of religion and nationality were extraordinarily confounded, and it was not purely a religious persecution that the Armenians suffered from, but he believed that, if the Armenians would have abandoned their religion, it would have brought their troubles to an end. He remembered the events of 1896, and had always found magnificent examples of right-dealing by leading, learned, pious, and just Moslems. Among others, Ibrahim Pasha had saved four thousand Armenians, and given them an asylum. In the East the perpetrator of a crime was often but an instrument, and it was so in this case. Among those who acted with their eyes open was the German Emperor. Immediately after 1896 he went as a bagman to get concessions for his people, and to do so condoned the massacres. The massacres that had taken place since the outbreak of the war were the worst since the time of Timour. Evidence that he (Sir Mark Sykes) had been able to collect satisfied him that the massacre at Diarbekr, for instance, was everything that rumour said. He had also evidence that these crimes were not the uncontrollable acts of an excited populace; on the contrary, the populace acted under orders, and were driven to massacre by threats against themselves. Another thing that came out plainly was that the German advisers were all over the place, and condoned the crimes. For over a thousand years the Armenians had been a persecuted race. Nearly all the conquerors marching east or west had trampled over them. If it were not that the instinct of sticking to their land was developed in them to an extraordinary degree there would not now be such a name or people. It was our duty to assist the surviving remnant to perpetuate themselves as a nation and to fulfil their destiny.

THE MARTYRDOM OF ARMENIA.

A meeting of the Anglo-Russian Literary Society was held at the Imperial Institute on Tuesday last, at which Major Edward Atkin delivered an address on Armenia. He said that no one could approach the subject without a feeling of humiliation that civilised and Christian Europe had stood aside for forty years, seeking excuses for inaction rather than striving after practical schemes for the rescue and preservation of a people second to none in fidelity to the faith of its fathers and love of home life, and gifted with high intellectual powers that had won for its sons high places in the world's records of literature, art, science, music, the drama, and all departments of commercial enterprise. The Armenian nation was founded more than 2,000 years before the Christian era. The earliest authentic account of the introduction of Christianity dated from the apostolic exertions of St. Gregory the Illuminator in the Fourth Century, and Christianity was confirmed by Mesrob's translation of the Bible in the century following. In 1439 part of the Armenian church accepted papal supremacy, while retaining its national and ritual peculiarities. Thus the church was split into two sections fanatically opposed to each other. But no nation in the world had been better served by its clergy; they worked for the people with a zeal that never flagged, watched over, fed, and clothed the poor, ministered to the sick, comforted the suffering, and pleaded throughout Europe for the widows and fatherless. The best friends of Armenia, he said, were the Armenians themselves. Nothing could exceed the devotion and generosity of those living outside their own country in their endeavours to help its unfortunate inhabitants

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

My reference last week to the new branch of the Imperial Ottoman Bank at Marseilles is followed to-day by a comment from a correspondent in Cyprus, who writes: "The establishment of an agency of the Imperial Ottoman Bank at Marseilles (Rue St. Ferréol, 38) is welcomed in commercial circles. A good deal of trade is transacted with that port in normal times, and facilities for business should be increased. In the wine trade relations with Cyprus have fluctuated considerably. At the time, *e.g.*, when phylloxera ravaged French vineyards, there was a large demand for Cyprus red wines for blending purposes. Then, again, it fell off, and, moreover, the folly of the Cypriot in over-plastering his wines, which were in consequence repelled, added to the trouble."

***

The news published elsewhere that the Egyptian Government has at last decided to order the liquidation of Stein, Tiring, Mayer, and Salamander, the great enemy furnishing stores in Egypt, will be genuinely welcomed as an excellent, though tardy, measure. I have frequently insisted that this should be done, and THE NEAR EAST has continuously advocated that a clean sweep should be made of enemy firms in our new Protectorate, and has quoted from eminent trade writers in support of drastic action. The object fought for having thus been achieved in the particular cases of Stein, Tiring and Mayer, it behoves us now to reconstruct the furnishing business with British capital and goods. For this purpose we must bear in mind the class to whom Stein, Tiring, etc., appealed, namely, the big native and Levantine class—the people who want cheap, showy goods and ready-made clothes, etc., of no particular merit. A large British store selling high-class goods will never appeal to the above class. Some there are most likely who will still persist in saying that if we educate these people to our tastes they will finally buy what we give them. Rubbish! Instead of wasting our time in trying to foist on foreign markets goods that are inacceptable to our prospective buyers, let us study their tastes and needs and give them what they want. If not, when war is over a new Stein, a new Tiring, a new Mayer and Salamander, stocked with cheap, bad enemy goods, will rear their ugly heads in Egypt. For the time being we have satisfactorily cleared them out of the way, but unless we replace them and cater ourselves for the class alluded to above (which, by the way, is on the aggregate the biggest purchaser in Egypt), the enemy will rush to do so when war is over. There is a fine chance *now* for some enterprising British firm to prepare a "Stein" or "Tiring" on the lines which have enabled these firms to wax fat in Egypt and the Near East.

***

A curious circumstance has been brought to light by the French Chamber of Commerce at Athens. It appears that a Greek firm in that city represents a Paris house, but, unknown to the latter, also represents a German firm at Karlsruhe in the same line of business. All the samples sent by the French firm to Athens are immediately forwarded by the Greek representatives to the German firm at Karlsruhe, together with prices and other details. The Karlsruhe firm in due course supply an article somewhat of the same pattern, but underselling the French article at whatever its price. There is such a thing as dishonest trading, and the above certainly falls within this category. It is a danger attendant on foreign trading, and can only be avoided by the careful choice of agents. Needless to say, what applies to French firms applies to British firms as well. It is hardly likely that our Greek friend will differentiate between them. It is a pity that the latter's name has not been published for the edification of his guild.

***

Domestic troubles are assailing the Egyptian Markets, and I very much regret it. In a nutshell, the position is as follows: The death at the Front of General Kenna, V.C., one of the directors, deprived the board of the services of a very admirable man, and now, it is stated, Major le Breton, the chairman of the company and its guiding spirit during the past many years, is retiring. In the interim the directors have appointed, owing to his knowledge of Egypt, Mr. P. W. F. le Breton, son of the chairman, to the board, and have, I understand, circularised shareholders informing them that it will be necessary to confirm the appointment at the ensuing annual meeting, to be held in London some time this month. In the meantime, an Egyptian group has backed another gentleman, Mr. S. H. Redwood, for the vacancy, and is presumably circularising shareholders and asking for proxies in support of their candidate. Personally, I hold a brief for neither the board nor its dissentients, but, in the interests of the Egyptian Markets, which have been doing extremely well during the past few years, I would urge warrant-holders carefully to study the circulars issued before they give their proxy to either one party or another. The company's circular can be obtained at their offices; that of the dissentients has been issued, I believe, in Egypt.

***

As stated above, I regret that this domestic disputation should have occurred now. The company's prospects are excellent in every way, but if they are to bear fruit it is essential that at the head of affairs should be somebody whom the Egyptian Government can regard with confidence. However keen the business man placed in control of the Markets, if he does not know Egypt, its conditions and possibilities, he is a useless superfluity. Shareholders should bear this in mind if they wish their property to continue paying anything between 8 and 10 per cent. dividends.

***

The German-Roumanian Convention, about which such a lot has been written tending to accuse Roumania of breaking faith with the Entente Powers, is as far from realisation as ever. The whole story reads like a comedy, if we read between the lines of the article on the subject contributed this week to THE NEAR EAST by its Bucharest correspondent. In the first place, we have Germany eager to obtain foodstuffs in Roumania—at any price—in exchange for manufactured articles. The Roumanian Government agrees, but, not wishing to have foisted on her worthless German truck, she insists on the appointment of a Roumanian Bureau in Berlin to supervise all purchases. The Huns, nothing loath, considering that they were only keen on procuring foodstuffs and of advertising their "friendship" with Roumania to the world, agreed. The second act shows Germany persuading Hungary not to permit the transit of German goods to their Roumanian destination, with the result that as the only open route passes through Hungary, the Roumanians could not receive their purchases. The upshot was that King Ferdinand's Government had to bargain with the Hungars before they could get their goods through! But the third act is the sublimest piece of Boche effrontery that has been seen for some time. Disgusted with the fact that Roumania had been able to come to terms with Hungary, and perceiving no further obstacle which they could possibly place in the way of the transit of the goods already sold to their customers, the Huns calmly put up the price of the goods, in some cases 200 per cent., and naturally asked for payment in advance! It is the old story over again—"scraps of paper." I trust, however, that the Roumanian Government has been alive to German deceit, and has refused to allow the passage out of the country of any foodstuffs until the German goods, with their final price attached, had been received. In which case they could calmly put up by at least 200 per cent. their price of barley, wheat, etc.

***

Actuality attaches to my remarks last week anent the statement that the "German and Austrian Governments had given permission for the free transit on their railway systems of goods from Bulgaria." I hinted at the time that this was merely a bribe in order to oblige Bulgaria to enter the Central European Economic Union, but I did not realise at the time that my words would come true within a week. Nevertheless it would appear as though the bribe had already had its effect, judging by the following message received in London on Monday: "The Bulgarian Government has agreed to conclude with Germany a new commercial treaty for a period of fifty years. A draft treaty has been prepared by the commercial department of the German Foreign Office, and this is now being examined by a committee nominated by the Bulgarian Government. It is expected that the treaty will be signed before the end of this month." So far, so good, and the bribe has worked. But do the Bulgars know that last week the Argentine Minister in Berlin telegraphed to his Government that the financial and commercial state of Germany was now such *that it was advisable to warn the Banco de la Nación Argentina?* What will they say when they know this, and what will Roumania say, and Turkey, and our friends the Hellenes?

The Egyptian Cotton Crop.

The Supply of Fine Cotton.

BY PROFESSOR TODD.

The one thing that cotton people would most like to know just now is whether the various cotton-growing countries of the world will this year return to their normal acreage before the war restriction of 1915, and what is likely to be the amount of the chief crops this year. The question is of special importance in regard to the Egyptian crop, because, as will be seen from the table below, the reduction there was very severe, the acreage in 1915 being only 68 per cent. of the record acreage of the previous year. Unfortunately no area statistics for Egypt will be available for some time yet. The Direct Taxes Department did not issue their estimate till August last year; and so far we have nothing to go upon but an opinion recorded by the Alexandria General Produce Association in their first report of the season that "the area sown with cotton has again become normal owing to the fact that the restriction which was issued in October, 1914, has not been renewed."

Under these circumstances the only light that can be had on the subject is to be obtained from the statistics of previous years which are summarised in the table below. This shows what the area has been in recent years, though one can hardly speak of a normal where the figure has been rising steadily for many years. Assuming, however, that the area this year is equal to that of 1914, and we think that is rather an optimistic view, what crop may be expected? That again can only be inferred from the recent history of the average yield per feddan, which is also shown in the table. The figure of the crop for 1915 is, of course, only an estimate as yet, but the facts upon which that estimate is based are also given. The total arrivals up to May 26, the latest date available at the moment of writing, were 4,537,928 kantars. How much still remains to come in can be guessed with tolerable certainty by comparing the figures for the same date in previous years, and from this it will be seen that the estimate of the total crop of 1915 at 4,750,000 kantars is likely to be on the high side; 1914-1915 was quite an exceptional year in respect of the late arrival of the crop.

Taking the total amount of the past season's crop at this figure, it is next to be noted that the average yield for the past two years has been decidedly low, and the cause is pretty well known—the devastation done by the new insect pest, the pink boll worm. It would, we fear, be over sanguine to hope that this will be much improved this year, and it would therefore be well not to estimate on an average yield this year of more than 4 kantars per feddan. On this footing, and taking the area at, say, 1,750,000 feddans, we do not think it would be wise to count upon a crop of more than 7,000,000 kantars. This hardly agrees with the highly optimistic "unofficial estimate" quoted in THE NEAR EAST of June 2, which places the crop at 8,000,000 kantars.

There is, however, a further point to be considered in regard to Egyptian cotton, and its probable value during the next season—namely, the advent of boll weevil to the Sea Island district of America. Floridas and Georgias, which are second-grade Sea Islands grown in the coastal areas of these States from original Sea Island seed, are the chief competitors with the best Egyptian cottons, especially Joannovitch, Abbassi, and Sakellarides. The boll weevil in its steady advance westwards encroached upon this Sea Island area in 1913, and there is every reason to believe that its progress through that district has already been rapid, and will be still more so in the future. For all the conditions in the Sea Island area are peculiarly favourable to boll weevil, especially the ample vegetation and a mild winter climate with the minimum of frost. It is to be feared, therefore, that the history of the Mississippi Delta area will be repeated in the Sea Island country. In the Delta, when the boll weevil appeared, the growers of long staple cotton simply gave in without a struggle and abandoned their superior cotton without waiting for the weevil to do the actual damage.

Should this forecast prove anything like true, the Florida and Georgia crop is likely to be seriously reduced in the immediate future It is all the more to be regretted, therefore, that the Egyptian crop should at this juncture be in danger of falling so far below its record, and everything possible should be done at once to combat the new pest in Egypt.

Season.	Area.	Crop (adjusted total).	Average yield per feddan.	Arrivals to May 26.	Total Arrivals.

*Estimated.

A PAPER MILL FOR EGYPT.

According to *Misr*, Sheikh Khalil Afifi, a merchant of Zagazig, has submitted to the Sultan a report on the creation of a paper-mill in Egypt. The sheikh says that it would be very easy to establish such a mill as the materials from which paper is made exist locally, the profits would be 21 per cent. if the Government were not to charge custom-dues on the paper made, and 14 per cent. if it should.

The sheikh estimates that the cost of the construction would be £E50,000, which could be subscribed in 10,000 shares of £E5 each. Of this sum £E17,000 would be spent on machinery, £E7,715 on buildings, £E1,928 on working the mill during the first three years, and £E3,857 on unforeseen expenses.

If the mill works 350 days of every year it can produce from three and a-half to four million kilogrammes of paper of various sorts, which can be sold for £E38,580. Of this sum £E31,651 will be spent on coal or crude petroleum, salaries, wear and tear of the machinery, insurance, etc. The net profits will therefore be £E6,927, or 15 per cent., says the *Egyptian Mail*.

The Sultan has recommended the sheikh to see the members of the Industrial-Commercial Commission on the subject.

Commenting on the above, *Al-Akhbar* says that sheikh Khalil is an energetic merchant who is anxious to promote the industry of his country; but making paper is a particular industry which requires expert workmen who are not easy to obtain from Europe just now, while their salaries, the price of coal, and other materials would at present be too high. Our contemporary concludes by asking the Industrial-Commercial Commission to give its explicit opinion on the matter.

THE HUNS AND ROUMANIA.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, May 16.

When Roumania decided to establish in Berlin a bureau which, acting as a branch of the Central Importation Commission, should receive and execute Roumanian orders with regard to raw materials, which Germany is compelled to cede in accordance with the recent agreement, the German and philo-German Press hailed this simple commercial convention as a political event of first importance, presaging a rapprochement between the kingdom of the Danube and the Central Powers. It is pleasant to read that British commonsense would have nothing of this explanation, and refused to invest an arrangement so obviously commercial with any political significance, recognising, in the words of "Commentator" in THE NEAR EAST, that "someone must be on the spot to prevent the Prussians dumping worthless stuff—as is their custom—on the Roumanian market."

A portion of the philo-German Press went even further and announced the stoppage, on the part of Russia, of all exports destined for Roumania. The lying nature of this statement has been amply proved, because, apart from categoric official denials, the Russian authorities have displayed extreme goodwill in the matter of meeting Roumania's economic needs, and have exported into Roumania in the course of the last six weeks some three hundred wagons of materials.

Russo-Roumanian Agreement.

Moreover, I hear on good authority that a reciprocal commercial arrangement will shortly be conducted between Roumania and Russia. The Russian authorities have already made known to Roumania the articles which they would be disposed to export, but the convention cannot be expected to be fruitful of immediate results, because there are in Russia even more export and other "commissions" than in Roumania, and formalities are in consequence numerous.

An indispensable condition for the prompt execution of the German-Roumanian convention is the free and rapid transit through Austro-Hungarian territory of goods destined for Roumania. There were no reasonable difficulties to be foreseen from this direction. Nevertheless, the Austrians (we may read "Hungarians") have thought good to raise objections and to uphold them, claiming certain economic compensations. The upshot of the matter is that a convention is said to have been signed (after much haggling) between Austria-Hungary and Roumania, analogous to that existing between Germany and the latter.

As a result, we might have expected the early arrival of German goods here had not fresh difficulties arisen, namely, as regards prices. The Germans have, indeed, put war prices on the articles destined for exportation into Roumania, amounting in many cases to 200 per cent. of the commercial value! The surplus is fixed by the German Government and goes to defray military expenses. Such terms are not acceptable to Roumania, so that the Germans will have to reduce their prices considerably, or Roumania will have to raise the cost of the articles she exports into Germany to a corresponding degree.

BULGARIAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, May 24.

The Bulgarian Commission for Requisitions has informed its branches in the provinces that all wool, whether of the old or the new shearings, as well as that now in the weaving factories, must be requisitioned.

Possessors of wool must be informed that they have not the right to sell any they possess. The Commission branches are requested to collect figures as to how much wool exists and to proceed in the country to requisition all there is.

What this order indicates is not known, and is causing great discontent among the possessors of wool.

Mr. Radeff, Mayor of Sofia, has presented a report to M. Radoslavoff, according to which the bakers complain that the supply of wheat is both irregular and short of public needs.

Trade Notes.

Egypt.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of paints, mainly for the scavenging and watering service. Bulaq. Date, July 15.

The Physical Service Department, Cairo, invites tenders for the supply of weighing machines, balances and weights required for Government during 1916-17. Date, July 15.

The Army Finance Department, Cairo, invites tenders for the supply of 4,000 tins of petroleum at the Citadel Stores, Cairo, and 300 tins to be handed over to the Stores Officer, Egyptian Army, at Alexandria; also 1,600 gallons of petroleum in bulk at Cairo. Date, June 15.

The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of agendas required for Government Departments. Date, July 12.

The superintendent of Stores, Ministry of Education, Cairo, invites tenders for the supply of 3,600 table serviettes required for the school year 1916-17. Date, July 5.

The Army Finance Department, Cairo, invites tenders for the supply of brooms, baskets, basins for zirs, and hooping iron, to the Citadel Stores, Cairo. Date, June 15.

The Army Finance Department, Cairo, invites tenders for the supply of copper cooking utensils to the Citadel Stores, Cairo. Date, June 20.

The Egyptian *Journal Officiel* contains revised tariff valuations (No. 2) for use in assessing Customs duties on coal and coke imported into Egypt, with effect from May 1 to May 31. The valuation per ton of 1,000 kilos (2,204 lb.) is stated in millièmes, 1,000 of which are worth 20s. 6d. :—South Wales coal, 7.050 millièmes; Newcastle, Sunderland, and other North Country coal, South African, and Indian, 6.900; Lancashire, Yorkshire, North Wales, and Scotland, 6.900; gas coal (Newcastle) for use in gas factories, 6.650; briquettes (patent fuel), from Swansea and Scotland, 7.000; dust, slack coal, and small coal of any origin, also rubbly culm and duff (excluding nuts), 6.400; foundry coke and cannel coal, 7.900; gas coke of any origin, including chemical coke, 7.400; American, Belgian, and French coal, 6.800; anthracite coal of any origin, 7.100 millièmes.

Morocco.

His Majesty's Consul at Fez writes, with reference to the appointment by British firms of Moorish merchants as agents in Morocco, that one of the greatest needs for the development of British trade there is for United Kingdom firms to establish houses of their own for agency business at Mequinez and Fez. Particularly is this so in connection with the new trades which are coming into existence by reason of developments of the country since the French Protectorate was established, and also as regards competing for a share of the trade in Morocco formerly carried on by German and Austrian firms.

Wholesale, of Hansen's, London, England.

EGYPTIAN CUSTOMS IN APRIL.

(From Our Own Correspondent.)

Cairo, May 21.

The Customs statistics for April, just published, show a continued improvement in general trade conditions. Imports amounted to £E2,348,274 and exports to £E1,482,860, as against £E1,476,767 and £E2,287,723 a year ago respectively.. It is interesting to note that whilst imports have increased and exports have decreased by about the same amounts (£E871,507 and £E804,863 respectively) as compared with April, 1915, a comparison with the corresponding month in 1914, when everything was normal, shows that imports are this year £E78,677 above the figure recorded for April two years ago, whereas exports are £E693,087 better. As a matter of fact, for the first four months of the current year, imports have been £E460,472 and exports £E1,105,324 above what they stood at at the end of the same period of 1914.

Under imports, the main increases are, preserved fish £E16,152, jams and preserves £E31,688, biscuits £E10,446, beer £E48,131, liqueurs £E40,673, candles £E5,234, medical products £E19,741, stationery £E41,356 (all attributable to the presence of troops), coal £E278,043 (but the quantity is approximately the same, 73,000 tons), textiles £E444,585, and worked iron and steel £E38,718. Petroleum fell off by £E56,430; as a matter of fact, none came in. No indigo was imported, and, likewise, no chemical manures, whilst the diminution in cereal imports continued, the decrease amounting to £E68,661 as against an import of £E142,103 in April, 1915, and one of £E253,694 in April, 1914.

The main increases in exports were eggs £E28,935, maize £E71,888, rice £E21,881, sugar £E79,505, and alcohol £E28,198. It is interesting to note that there was scarcely any export of sugar and maize in April, 1914, and none of alcohol, whilst rice was about 30 per cent. less than this year. Important decreases are recorded in cottonseed by £E105,057, oilcake by £E20,753, and cotton by £E843,007; of the latter 406,921 less cantars were exported, and of cottonseed 187,656 less ardebs were exported. Gold and silver bar exports fell off by 65 per cent., whilst cigarettes remained practically stationary.

Under countries sharing in the trade of Egypt, Great Britain is more than holding her own. She sent over half the total imports and took just under that proportion of the exports during April, her chief contribution in the former being textiles, coal, flour, and worked metals. The Colonies also took a prominent share, India again sending all the sacks and a large portion of cotton threads. America fell off both in imports and exports, her share in cotton decreasing by about half. Switzerland also reduced her purchases, but in her case the decrease was by about 90 per cent. Imports from France improved very much, as also did those from Italy, but the latter's purchases fell off by nigh on 40 per cent. It is interesting to note that Holland and Denmark imported between them beer to the extent of £E18,735 out of a total import of £E57,783, and that half the milk imports came from Holland.

Sudan Trade.

The total trade turnover between Egypt and the Sudan during April amounted to £E151,671, as against £E113,668 the previous year. Imports into Egypt, which came to £E65,799, comprised livestock £E10,936, sesame £E11,689, maize £E3,720, charcoal £E3,151, and cotton £E20,484. Traffic in the opposite direction, which amounted to £E85,872, included refined sugar £E22,176, flour £E1,298, coffee £E2,940, cotton tissues £E15,973, and ready-made clothes £E4,160.

The Egyptian Customs Administration has increased the import dues on paper for newspapers, consignments of which have of late arrived at Alexandria from England, by arbitrarily estimating the value of the paper at 40 per cent. over and above the price paid for it in England.

PERSIAN TRADE REPORT.

H.M. Legation at Teheran reports that during the year ended March 20, 1915, the trade of Persia with foreign countries amounted to £16,279,000, as compared with £20,054,600 in the twelve months ended March 20, 1914, a decrease of nearly 19 per cent. Of the total trade in 1914-15, imports amounted to £9,078,600, or nearly 56 per cent., and the exports to £7,201,000, or a little over 44 per cent. As compared with the previous twelve months, imports showed a decrease of £2,688,000 and exports a decrease of £1,087,000.

Of the countries trading with Persia, Russia headed the list in 1914-15 as regards both imports and exports. Persia exported to Russia goods to the value of £4,772,000 and imported from Russia goods to the value of £5,093,000, making a total of £9,865,000, or almost 61 per cent. of the entire foreign trade of Persia. Nevertheless, this total was £2,098,000 less than in the corresponding period in 1913-14. It is pointed out, however, that these figures do not really give an accurate estimate of Russo-Persian trade. For example, a large quantity of tea enters Persia as being of Russian origin, whereas in reality it is Indian tea imported viâ Batoum. Again, a considerable proportion of exports from Persia, although declared as destined for Russia, are in reality destined for other countries.

In 1914-15 the British Empire continued to occupy the second place among the countries engaged in trade with Persia. The British Empire supplied Persia with £2,692,000 worth of goods, or nearly 30 per cent. of the total imports, and received from Persia goods to the value of £1,606,000, or 22 per cent. of the total exports. The marked difference between the amount of trade done with Persia by the British Empire and that done by Russia is to be accounted for by the fact that the Northern Provinces of Persia, which are the richest, export to Russia, while the Southern Provinces, which export to the British Empire, are the poorest. The important exports from Persia to the British Empire are grain and dates from Arabistan, carpets from Kerman, gums, pearls, wools, skins, opium, tobacco, and oil from the Anglo-Persian oil fields.

German trade ranked third with a total of £349,000, a decrease of £256,700 on the preceding twelve months. German trade would probably have figured more largely were it not that a large quantity of German goods imported into Persia were included under Turkish imports. The war has seriously affected German trade with Persia, and particularly the grain trade through Hamburg.

France continued to occupy fifth place, with a total trade of £222,000, a decrease of £218,000 on the preceding twelve months. This decrease was principally due to smaller imports from France of sugar, tissues of all kinds, motor-cars, and wine and liqueurs.

The position of Italy in the list of countries trading with Persia fell from sixth in 1913-14 to twelfth in 1914-15. This was almost entirely due to the fact that the export of raw silk from Persia to Italy became impossible by the closing of the Dardanelles.

During the period under review exchange rates fluctuated between 55.75 krans per £ sterling in April, 1914, and 62 krans per £ sterling in March, 1915, rising as high as 68.5 krans in December, 1914. The market was greatly affected by the sudden rise in Russian exchange on London at the outbreak of hostilities, and for a considerable period transfers from Petrograd to London were unobtainable. There followed a complete cessation of exports to Russia. On the other hand, buyers of exchange for the import of Manchester goods and tea were plentiful. It was only at the end of 1914 that exports to Russia were resumed on a small scale.

The transit of sugar through Bulgaria can now no longer take place without permission from the Ministry of Finance, says our Bucharest correspondent. This means that any quantity of sugar coming from Austria and bound for Turkey can be drawn upon up to 50 per cent. of the whole quantity.

The Extension of British Trade in Egypt.

Under the above title, Mr. C. W. Green contributes an article to the *Monthly Journal* (April) of the British Chamber of Commerce of Egypt, from which the following extracts are reproduced :—

"If the commercial campaign is to be brought to a satisfactory conclusion, it will be necessary for the old-fashioned British supplier, to the manufacturer or merchant, to change his views and methods in many respects.

"The well-known attitude of a class of British firm : 'that is our way of doing business, if it does not suit you, please look elsewhere,' has led to the purchaser looking elsewhere, and in two out of three cases finding what he wanted in Germany. This attitude has probably arisen from a laudable pride in the knowledge such firms have that their articles are excellent of their kind, and no doubt superior to those produced by their foreign competitors, and in the belief that in the long run good merchandise will obtain and hold the position it deserves in any given market. This latter is, however, only a half truth, for while it is correct that the good article will maintain its position in the market where the demand is for a high class of goods, the same article will be ousted in the market where the purchaser is not so particular as to quality, and chiefly concerned with lowness of price. Again, if a certain type of goods is in demand it will usually be found more satisfactory to endeavour to meet that requirement, rather than to expend time and energy on trying to force a different article upon the purchaser.

"By these remarks it is not intended to suggest that it would be politic for the British manufacturer to make a practice of turning out an inferior class of goods simply because some of his foreign competitors have apparently derived benefit from doing so. The reputation of British merchandise is deservedly high, and is in itself a great asset of which we should be most jealous. What it is desired to convey is that between the two extremes of want of adaptability and a too great readiness to adopt questionable methods in business, there is a happy medium which, without injury to reputation or the following of unsound lines, spares no pains to fall in with local conditions and present its wares in the most attractive manner.

"There is very little doubt that amongst the chief causes of Germany's commercial success are thoroughness and great attention to detail. It will therefore be necessary for the British supplier who wishes to extend his activities to spare no pains in this direction.

"A glance at the figures of the value of goods imported into Egypt in the years immediately preceding the war, is reassuring so far as British trade is concerned. Taking the figures of imports in 1913, which is chosen as being the last complete year in which the returns were not affected by the war, it appears that out of a total value of £E27,865,000 no less than £E8,496,000 represented Great Britain's share (viz., 30.5 per cent. of the whole), which, added to £E1,985,000 from British Possessions, gives a grand total for the Empire of £E10,481,000, as compared with £E3,549,000 from Germany and Austria. Great Britain and her Colonies, therefore, sent to Egypt merchandise valued at three times as much as that supplied by the Central Powers, a very satisfactory state of affairs from the British point of view.

"On examining, however, the tendency of these figures for the thirty years ending in 1913, a rather disquieting feature is apparent. Great Britain's share of Egypt's imports in 1884—1885 was 37.8 per cent. of the whole, and Germany's was only one-half per cent. and even less in the two subsequent years. But while Great Britain's figure has fallen to 30.5 per cent. in 1913, Germany's has risen to nearly 6 per cent.

"The following table shows how steady has been the decrease in the one case and the augmentation in the other. The percentages given are the averages for each period of five years :—

	Great Britain. Per Cent.	Germany. Per Cent.
1884-1888	37·84	0·44
1884-1893	35·04	1·46
1894-1898	33·1	2·74
1899-1903	36·82	3·66
1904-1908	32·84	4·94
1909-1913	30·8	5·46

"Great Britain's total has decreased by 7 per cent., while Germany's has increased by 5 per cent., being thirteen times as much as it was at the beginning of the period under review.

"If the British supplier is to adjust this retrograde movement, and extend his hold on the Egyptian market, it will be necessary to ascertain what are the principal articles imported by the Central Powers, and to what extent they can be replaced by goods of British manufacture. This is a highly technical matter, and can only be dealt with satisfactorily by each trade concerned, but it will probably be of assistance to those interested if the details of such imports are furnished with their respective total annual values. This should enable any given trade to see what scope there is for its activities and indicate in what direction its enquiries might profitably be set on foot.

"Nearly a quarter of the total amount of imports from Germany and Austria is made up of various textile goods, ready-made clothing, millinery, etc. During 1913 the value of ready-made clothing and millinery was no less than £E323,000. Practically the whole of the shawls imported came from the same countries—the actual figures being 911,894 shawls of various makes and qualities, valued at £E76,000, as against only 33,244 valued at £E2,700 from Great Britain and the Colonies. Of woollen fabrics the total was 764,881 metres, value £E157,800, and cotton fabrics from the same source of supply were worth £E134,600.

"Next in importance to the foregoing are machinery, hardware, metals, etc., the total value of which imports from Germany and Austria in 1913 was £E664,959, as compared with £E1,488,054 received from Great Britain and her Colonies. Germany and Austria were doing a very important business with Egypt in all goods of this class, and there ought certainly to be possibilities of expansion for the British supplier dealing in such articles. Germany accounted for nearly the whole of the locomotives and road machines, as well as for more than half of the railway and tramway carriages, etc.; while practically all the household utensil and enamel-ware trade was in the hands of Austria, £E39,000 out of a total of £E40,900. Of the locks imported, more than half came from Germany and Austria, Great Britain figuring under this heading for only £E28,500 out of a total of £E110,900. The Central Powers also imported twice as much wrought copper and bronze as did Great Britain and the Colonies.

"In a market like Egypt, where a very large percentage of the consumers are ignorant people easily taken in by the inferior article at a low price, the task of competing with such goods, if unaided by tariff arrangements, may prove to be attended with considerable difficulties. It remains to be seen whether the British trader in Egypt will prove equal to the task. That it is worthy of his serious consideration would appear to be sufficiently well established."

THE SITUATION IN JAFFA.

The Hungarian Commercial Museum has received a report from Jaffa, according to which the industrial and commercial position remains unaltered, in spite of the opening of the direct railway connection, Berlin—Budapest—Sofia—Constantinople. No consignments of goods have arrived. Firms intending to do business in those regions are recommended to prepare the way by sending out catalogues and other trade literature. A good market for agricultural machinery is anticipated in Palestine and other parts of the near Orient.

DRESDEN COMMERCIAL CONFERENCE.

(From Our Own Correspondent.)

Bucharest, May 24.

The Sofia Chamber of Commerce has been invited to send delegates and to invite delegates from among Bulgarian commercial circles to participate at the commercial conference to be held at Dresden in June. The conference will occupy itself with questions relating to trade and commerce between the Central Powers and Turkey and Bulgaria.

ECONOMIC DEVELOPMENT OF MOROCCO.

H.M. Agent and Consul-General at Tangier has furnished, under date February 16, the following information regarding the recommendations emanating from the joint meetings at Casablanca in October last of the "Comités des Etudes Economiques" with respect to the economic development of Morocco and, particularly, with regard to railway construction :—

For some time past there have existed in the principal towns of the French zone groups of local merchants and others forming the above-mentioned "comités," for the purpose of studying questions of commercial, industrial, agricultural or economic interest and placing their views before the Protectorate Authorities. Advantage was taken of the holding of the Casablanca Exhibition to centralize these various committees and afford them official recognition. All the members of the various committees were invited to attend a general meeting in the Exhibition buildings on October 24 and succeeding days, and, in the opinion of H.M. Agent, the facts that these meetings were opened and closed by the Resident-General, were presided over by the Secretary-General of the Protectorate, were attended by the heads of various Government Departments, and their proceedings reported in the Official Bulletin, lend a certain importance to the views expressed by the various committees.

One of the first questions studied was that of the railway lines to be laid in the French zone, with the subsidiary question of ports. The first point which strikes one in the report on this subject, remarks H.M. Agent, is the desire to concentrate the whole trade of the country at Casablanca, which is to be the one big port from which all railways and roads are to radiate. With this object it is considered desirable to eliminate, if possible, the rival ports of Tangier and Laraiche, and, therefore, it is hoped that the Tangier-Fez railway will never be more than a project.

The committees urge the construction of the following lines in addition to the already existing Kenitra-Mequinez-Fez line : (1) Casablanca to Fez viâ Camp Boulhaut, Merzag and Mequinez; (2) Casablanca to Marrakesh viâ Bershid and Setat; (3) Kenitra to Rabat, round by the Marmora forest; (4) Rabat to Casablanca, viâ Korifla, Camp Boulhaut and Ouled Zian; and (5) Casablanca to Mogador by inland route with branches at Mazagan and Saffi. The result of this scheme of railways would be to sacrifice the existing southern ports to Casablanca.

It is not at all certain, adds H.M. Agent, that the Protectorate authorities will share the views of the committees, though it is undoubtedly their intention to make Casablanca the principal port of the zone.

An extract (in French) from the Cherifian *Bulletin Officiel* relative to the report made to the committees on the proposed railway development in the French zone may be consulted by United Kingdom firms at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The *Egyptian Gazette* understands that M. Melnchrim has bought all the assets of Messrs. Fritz Andrès and Co., the Alexandria cotton firm. He has no partners, and is the sole manager of the business, which has been formed with a capital of £250.000. The new firm began operations nominally on June 1.

We understand that the Wood-Milne Tyre Company are successfully working the Egyptian market, and their agent in Cairo reports that in the recent daring raid by armed motor-cars on the Senussi, several cars were shod with their tyres.

Engineering Notes.

New Small Vulcanisers.

The process of vulcanising for a repair of tyres consists, as is known, of applying raw rubber, mixed in correct proportions with other ingredients—more especially sulphur—to the tyre, and subjecting it to suitable heat and pressure. There are several vulcanisers which can be conveniently carried on a car, but most of them (if not all) require skilful handling to make a proper job; consequently, the cost of vulcanising is an item over which car owners are often dissatisfied. The fact, therefore, that there are now small vulcanisers which can be used by the car owner himself successfully is very important in these days of enforced economy and scarcity of skilful mechanics. We refer to two such devices, brought out recently, which apparently give entire satisfaction. These new vulcanisers are simple, very efficient, and of a moderate price. They work on the steam principle, and are quite automatic, so that after the cut or other damage to the tyre is properly prepared, it is only necessary to light the lamp of the vulcaniser and leave it to do its work, as there can be no overheating or burning of the repair. The fuel used for the lamp is either methylated spirit or petrol. They are equally suitable for cover and tube repairs, and the vulcanising surfaces are suitably shaped for each class of repair. The complete outfit is supplied in a box, and the user has only to provide a small quantity of fuel for the lamp to be able to start on repairs right away. The two vulcanisers differ slightly in appearance, but they are equal in simplicity, efficiency, and results of work.

A New Reinforced Tube.

At the present time, when motorists are anxious to reduce their running expenses as much as possible, anything that tends to lessen them is, of course, welcomed; and as tyres and tubes form a big item in the cost of the upkeep of a car, it will be interesting to owners to hear of a new tube that has recently been placed on the market, which, it is claimed, does much to minimise tyre and tube renewals and repairs. The new tube is of the reinforced kind, but is constructed on lines differing entirely from any others, the process being patented. It is of tapered thickness, becoming gradually thicker from the top downwards, until at the base it is twice as thick as at the top. On the outer side of the tube, starting just where the rubber begins to thicken, a three-ply canvas covering is taken, which is continued all over the tube on to the opposite wall at a corresponding point. A noteworthy feature of this tube is that each successive ply starts a little short of its predecessor, the longest being the outside layer. This gradation of the plies corresponds to the thickening of the rubber, leaving no abrupt end to the canvas layer, as would be the case if each ply ended flush. There is then a large portion of the tube that is uncovered, viz., the bottom, which is adjacent to the rim, this being left for expansion to fill the cover where it lies between the beads next to the rim. The tapering of the canvas in one direction and the rubber in the other eliminates any abrupt point at which expansion commences or terminates. Owing to its protected exterior next to the cover the new tube helps to support the cover, and any weak spots in this are bridged over by its resistance. Friction does not affect the tube in the least, as it is finished with a smooth anti-frictional outer covering. A repaired cover generally, after a time, gives way to the bulging effect set up by the expansion of the inflated tube inside, but this tube never affects it in this way. If the tube gets damaged it can be vulcanised, and though its initial cost is a trifle more than the ordinary tube, its merits outweigh this, owing to the increased mileage it can extract from the cover.

An Electric Bath Chair.

One by one the old and homely means of conveyance are being driven away from the road, and replaced by what modern science and technics in their unceasing efforts bring forth to save time, to eliminate manual labour, etc. Yet, in spite of the incomparable advantages that modern conveyances offer, the "old things" are pleasantly remembered. The Sedan chair, which many still living have used in the "good old days," can be seen now only in museums. The comfortable horse 'bus has been deported and is now creaking over the uneven dusty roads of distant semi-civilised towns abroad until collapse of wood and metal brings a needed end. And now the time of the bath-chair has come. The oldest, slowest, and most quiet conveyance is to be "electrified"! A patent has been applied for for an electrically-propelled bath-chair or similar light vehicle, having one or more front driving and steering wheels, in which the motor is arranged with its axis vertical in a casing bolted to a frame secured to the chair, a hollow frame carrying the axle and wheels being arranged to rotate in the frame. The front end of the frame of the chair is secured by clips to the end of arms projecting from each side of the frame. A bolt further secures the chair frame to a lug on the frame and to the lower end of a yoke, the upper end of which is bolted to the top of the frame. The motor drives the axle through a flexible and slightly telescopic shaft, while worm gearing and a toothed clutch is operated by a finger grip. Electric or mechanical reversing gear may be provided. The accumulators are arranged under the seat.

An Automatic Balancing Aeroplane.

An important advance in aeronautics has, evidently, been accomplished in Australia. According to recent information, an automatic balancing aeroplane has been designed by Mr. G. Austin, of Melbourne, who, for years, has been engaged in the study of aeronautics, and particularly in the perfection of this machine. That the invention is practically successful may be inferred from the fact that a company has already been floated to proceed at once with the construction of the new aeroplane in England. It is said that this machine will lift greater weights than present designed aeroplanes, and, consequently, will carry greater range of guns. Having a suspended car, it gives a steady platform, ensuring accurate sighting. An air-brake in the planes provides for safety in landing. This class of machine is, it is claimed, "an ideal one to destroy gun factories, arsenals, bridges, and the like, and, therefore, is the instrument to end this dreadful war in the quickest possible time." A working model is being exhibited in the company's offices, at Melbourne, which apparently convinces observers as to the practicability of the new machine and the merits claimed for it.

A Gigantic Triplane.

While the construction of the above-mentioned Australian machine is urged, another machine, a giant triplane, is now building in another part of the New World, namely, in America, for a flight across the Atlantic Ocean. This gigantic flying machine is, according to recent reports, of larger proportions than anything hitherto attempted, mounting motors capable of developing 1,800 horse-power. The present understanding is that the flight is contemplated for the early part of the coming summer; the pilot for the trip has not yet been decided on. The course, too, is still undecided, although it will probably be laid from St. John's, N.F. Details concerning both the aircraft being built and the contemplated journey are being withheld from the public, and comments, therefore, on the undertaking, at least, at present, cannot be made.

Nothing Like Water.

The report of the Committee appointed by the Home Secretary to test the value of dry powder extinguishers as compared with water and other "first aid" appliances for dealing with fires caused by bombs, states that the experiments made proved water to be much the most effective extinguishing agent. Though water, like the other agents employed, could not be said to have any material effect on the combustion of the bomb itself, its application greatly limited, and in some cases totally prevented, the spread of the fire: whereas, after the application of dry powder, the fire continued to burn, although some temporary check was noted. As to the method of application, the experiments also showed that a given volume of water applied as a jet from an extincteur, was decidedly more effective than if applied from buckets, but the Committee insists that extincteurs of reliable make should be used. The conclusion arrived at is that a plentiful supply of water is by far the best extinguishing agent, and that the use of dry powder extinguishers is to be deprecated as giving a misleading sense of security and as being practically useless in the case of fires caused by bombs.

Jamming the Wireless.

It is well known that in encounters at sea and at other times when the approach of British warships is not desirable, the Germans "jam" the wireless telegraph, thus preventing messages being effectively passed between our ships. It is said that a similar attempt was made by them during the battle of Jutland last week, but with, apparently, little or no success. Referring to the question of "jamming," Mr. Marconi, in an interview recently, said that too much importance should not be attached to it, for it is not so serious as one would imagine. It is, in fact, he said, very difficult to prevent a message getting through. What happens is that the German operators attempt to produce confusion. It is like a lot of people all speaking at once, or like the type in a printed page getting mixed up so that the matter is unintelligible. A great deal depends on the skill of the operators, and those in the British Navy are splendid. He also stated that many improvements have been made in wireless telephony for use in the war, and that the war has by no means hindered the development of the science. He anticipates great strides in the commercial use of wireless when the war is over. With regard to submarines, Mr. Marconi said that these can still only establish wireless communication when on the surface of the water "I don't say," he added, "that they will never be able to do it when submerged, but it has not yet been found possible to send messages through the water to any considerable depth."

SULZER BROTHERS, WINTERTHUR, SWITZERLAND
Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 20 to 6,000 B.H.P. Pumps of various systems, particularly Sulzer's high and low lift Centrifugal Pumps. Fans of all kinds. Steam and hot water heating. Ice and Refrigerating Machinery (Linde system)

NEAR EAST MARKETS.

PRODUCE REPORT.

LONDON, June 8.

Currants.

Owing to an increasing demand, and an apparent revival of trade, prices have advanced again from 1s. to 2s. 6d. since last week; whilst stocks are rapidly diminishing. The same activity and advance of prices is reported from Liverpool.

Sultanas.

There has been a fair demand, mostly for Indian fruit, and prices for same, as well as for other growths, are well maintained.

Figs and Dates.

Both are quiet, but prices are firm.

Seeds.

Linseed is quiet. London-Calcutta, spot, being quoted at 69s., also afloat, and June-July at 69s., and July-August 69s. 3d. Bombay ordinary, afloat, 73s., June-July 73s. 6d. Rapeseed is dull, brown Cawnpore June-July quoted 64s. 6d., and Toria ditto 65s. 6d. Cotton seed is quiet, London-Egyptian June-July £14 5s. and Sakelarides, loading, £13 15s. per ton.

Oils.

Linseed oil is easier this week, spot pipes £34 10s., barrels ditto £35 10s., landed terms. Rape oil remains dull, ordinary brown naked, spot, £49, English refined barrels £51 to £52. Cotton oil is quiet. Crude, spot, in pipes £44, refined pale pipes £49, and barrels sweet £54. to £55, as to makes.

Oil Cakes.

Cotton Cakes.—Egyptian are in very moderate supply, with prices fairly well maintained. Linseed cakes are very dull, owing to almost a total absence of demand.

TREES IN EGYPT.

Mr. Somers Clarke, writing in the *Egyptian Gazette* from Upper Egypt, on May 16, states that the Kom Ombo Company is "sending round its agents and buying up all the wood that can be got as fuel for the great pumping-engines. As these engines take, under ordinary circumstances, 6,000 tons of coal a year, it can well be imagined what a destruction must be caused by a substitution of wood for this mass of coal. The paternal Government must come in here. There can be no question that unless immediate action be taken the southern part of Upper Egypt will be seriously if not completely denuded of trees. Already some districts of small extent are arriving at this condition, so there is no time for delay—prompt action is the only hope."

A strict inquiry is to be held by the Roumanian Government into the smuggling of 150,000 head of cattle into Austria and Germany.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

There is a small fall in the price of wheat, owing to the new harvest. Export is still prohibited.

The olive crop, important as it is for the island, has suffered severely from the recent heat wave in some districts. Vine prospects are so far promising. The Government will probably import no more sulphur for sale to villagers as it has done for many years past. The price of wines of the last vintage continues to be good, village producers realising up to 50s. the "load" (about 35 gallons), and even more, for sound red wines.

Operations against locusts continue. As far as can be ascertained the Syrian swarms of last autumn and winter did not deposit eggs. Altogether the year's prospects for agriculturists are quite satisfactory.

By proclamation of the High Commissioner, dated May 13, the export of vetches, butter, cheese, eggs, and poultry is absolutely prohibited.

The yield of carobs, as far as can be judged, should be very good, both in quantity and quality; but the coming months are critical, for an excess of heat, as the crop ripens, dries the pods, and sometimes spoils the quality. The price of the beans of last year's stock remains at 20s. the (Aleppo) kantar (of 180 okes). A considerable quantity is still locked up, owing to lack of steamers.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

COMPANY MEETING.

LAND AND MORTGAGE COMPANY OF EGYPT.

The annual meeting of the shareholders of the Land and Mortgage Company of Egypt was held last Friday at the Cannon Street Hotel, Sir Walter F. Mieville presiding. The Chairman said, *inter alia*:—I will speak first of the question of dividends. During the past six months a few shareholders—about half a-dozen in all—have addressed the board on this subject. By way of reply I will take this opportunity of making a plain, straightforward statement of the board's policy. When war was let loose your directors decided to exercise foresight, and took immediate steps to ensure the continuance of the stability of our company's credit. Our first care was to assure sufficient cash to meet necessary payments—working expenses, debenture interest, and the annual drawings of the 4½ per cent. and 5 per cent. debenture bonds. I may here state that from November, 1914, to March 31, 1916, we have paid £20,893 in interest and have redeemed at par £26,400 of our debentures, and since March 31 last we have paid further considerable sums. Our next care was to prevent any undue increase in the item "foreclosed mortgage properties"; for, on the one part, this company does not wish to become the possessors of large estates entailing expenses and responsibilities, and, on the other hand, it desires to refrain from harsh treatment of old and solvent clients. Given a sufficiency of water, good weather conditions, and immunity from worms, we may confidently anticipate for the coming season a bumper crop of between 7,000,000 and 8,000,000 cantars, instead of 4,300,000 cantars last year, and there is no apparent reason why high prices should not again rule, provided always the quality and staple are up to standard. Of course, the coal question is a difficulty, as the price of coal in Egypt today is over six times as high as it was before the war; yet even this drawback can be greatly minimized if the efforts of the Egyptian Government to supply a sufficiency of water are successful. Our company have felt constrained, therefore, to show consideration to their agricultural debtors, especially as many of our clients had sold their cotton crop last year before the high prices were reached, the merchant, rather than the cultivator, benefiting thereby. To the further suggestion that your directors should propose to you the payment of a dividend by employing a portion of our reserves, I would reply that to deplete reserves, on which we can, and do, raise money to meet current liabilities, would weaken our position and increase the difficulty of financing the company. To sum up, your directors' policy has been, and, with your sanction, will continue to be, to refrain from proposing dividends until earned profits shall have been encashed. The amount of the 4 per cent. debenture stock, which we have powers to issue, stands to-day at £106,000 odd, but we must perforce wait some time before even contemplating such an issue. The profit for the year is shown at £4,896, after making provision for possible losses. Our loans on mortgage have been reduced by £12,826, and our foreclosed mortgage properties have increased by £7,747.

COMPANY REPORT.

Suez Canal Company.

The annual general meeting of the Suez Canal Company was held on Monday afternoon in Paris, reports the *Daily Telegraph* Paris correspondent, with M. Jonnart in the chair. Among others present were Sir Henry Austin Lee and Earl Granville. M. Jonnart in his address spoke of the closest co-operation between the company and the naval and military authorities of the Allies, and the company had received testimonials from the highest quarters. Two attacks were planned on the Canal, the first of which was a complete failure, while the enemy never even attempted to put the second in execution. The chairman spoke with gratification of the successful issue of 100,000 new 5 per cent. shares at 450fr., which were taken up in two or three days, in spite of present circumstances. Finally he announced that steps were being taken to increase the transit rates by another 50c. per ton, making a total increase from April 1 last of 1fr. All the resolutions on the agenda were carried unanimously.

***The report of the Suez Canal Company for 1915 contains many items of special interest. The net tonnage passing through the waterway was 15,266,200, as compared with 19,409,500 in 1914. This is a decrease of 4,143,300 tons, but is practically all accounted for by the disappearance of German, Austrian and Turkish vessels, whose tonnage in 1913, the last normal year, amounted to 4,239,800. There was, of course, a good deal of commercial traffic displaced last year, but much of it was made up for by the voyages of warships, which represented 3,379,600 tons, as compared with only 301,100 tons in 1913. The British proportion of the total tonnage using the canal is greater than ever. In 1913 the ratio was 60 per cent. and in 1914 it was 66 per cent.; now it is no less than 76 per cent. The leading lines of the British commercial contingent were as follows:—

	Voyages.	Tonnage.
Peninsular and Oriental and British India	390	1,955,000
Ellerman Lines	248	1,142,000
Holt and Co.	215	1,103,000

The P. and O. tonnage itself was only 1,101,000, but the British India Line, representing 854,000 tons, is, as last year, included in its total, and without this comparatively recent acquisition its figures would have been exceeded both by the Ellerman Lines, which would then have ranked first on the list, and by Holt and Company. The figures given, says the *Financial Times*, exhibit a decline as compared with 1914, but it is substantially less than the general decrease. Next to ourselves, the nation which figures most prominently in the use of the Canal is Holland, the tonnage of whose ships was 1,334,500, or 8 per cent. of the total. This, as compared with 1914, is an increase in the proportion, though a decline in the amount of tonnage. The latter was then 1,389,400, giving a ratio of 7 per cent.

NEW BANKS IN BELGRADE.

Writing on May 24, our Bucharest Correspondent states that according to Berlin papers, three new banks have been opened in Belgrade. They are:—

The Austro-Hungarian Bank,
Union Bank,
Industrial Czech Bank.

There are now seven Austro-Hungarian banks in Belgrade.

ROUMANIAN NATIONAL LOAN.

A Great Financial Success.

(From Our Own Correspondent.)

Bucharest, May 16.

The Roumanian National Loan has had a success surpassing the most extravagant expectations. The Finance Minister, availing himself of his right, closed the subscription on May 13, six full days before the date of closure originally indicated. The total amount subscribed attains the sum of 400 million francs. The amount asked for—150 millions—has thus been covered nearly three times over in a period of eight days. Of this amount the general public has subscribed more than 220 millions.

The following list gives the subscriptions registered by the more important banks:—

	Millions.
Banque Nationa'e	67
Marmorosch, Blank and Comp.	55
Banca Romaneasca	45
Banque de Crédit	45
Banque Générale	18
The Bank of Roumania	18
Banque Agricole	15
Banque d'Escompte	10
Maison Chrisoveloni	10
Banque Commerciale	8
Banque L. Berkovicz	5

That the Bank of Roumania, the oldest bank in the country, should occupy a relatively modest position on the list is explained by the fact that it possesses no provincial branch offices, and in consequence has not had the opportunity of collecting the savings of the humbler elements of the community scattered about the country, who have contributed in a colossal degree to making the loan such a striking success, and who have given it a character so eminently *national*.

NATIONAL BANK OF BULGARIA.

According to our Bucharest Correspondent (May 24), the situation of the national Bank of Bulgaria on April 30 was:—Gold, 62,982,000 lewa; silver, 19,375,000 lewa; bills on foreign countries, 286,518,000 lewa.

Money in circulation on the same date:—Paper, 339,316,000 lewa; and specie, 140,838,000 lewa.

The bank has opened branches at Prishtina, Prizrend, and Kavadartzi (?) The amount of business done is stated to be unimportant.

Further paper currency is to be issued by the bank, namely two-lewa notes to the value of 15,000,000 lewa. Small silver coins to the amount of 10,000,000 lewa are likewise to be issued.

BANQUE EGYPTIENNE DE COMMERCE.

A shareholder in the Banque Egyptienne de Commerce, better known by its former name of Sednaoui, Zariffa, Nahas and Co., Limited, recently brought an action against the directors in the Cairo Mixed Court, asking the Court to hold them financially responsible for their mismanagement. The Cairo Court dismissed the case.

The Court of Appeal at Alexandria has reversed the decision of the lower Court, and decided in favour of the shareholder. An expert was appointed by the Court to inquire into the management.—*Egyptian Gazette.*

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

Aegion, Agrinion, Almyros, Amalias, Amphissa, Arta, Atalante, Calamata, Calavryta, Céphalonia, Chalkis, Corfu, Corinth, Cythère Dimitsana, Gythium, Ithaque, Janina, Karditza, Kyparissia, Lamia, Larissa, Lévadia, Mégalopoli, Messina, Missolonghi, Naupacta Nauplia, Patras, Paxos, Piræus, Poros, Pylos, Pyrgos, St. Maure, Salonika, Santorin, Sparta, Syra, Thèbes, Trikkala, Tripoli, Volo, Zante

Every kind of Banking Business Transacted.

Cable Address—NATIONALBANK, ATHENS.

Correspondents in all Parts of the World.

Codes Used—LIEBER'S; A.B.C. (5th Edition).

CYPRUS FINANCES.

A supplement to the *Cyprus Gazette* of May 19 contains the following Bills:—

Surplus Balance Appropriation Law, 1916.

There shall be issued and applied during the period of twelve months ending March 31, 1917, to the services enumerated hereunder an additional sum not exceeding the sum of £22,100 for defraying the services herein declared. The said amount shall be appropriated as follows:—

	£
Medical—	
Malarial campaign	3,000
Agriculture—	
Purchase of breeding stock	300
Forest—	
Construction of forest roads	500
Special tree planting	2,500
New saw benches and engines	1,800
Railway—	
Railway improvements	800
Additional rolling stock	1,000
Public works—	
Water supplies and culverts	1,500
Motor roads	2,500
Miscellaneous—	
Museum, buildings and fittings of	200
Relief of distressed Cypriots abroad	8,000
	£22,100

Supplementary Appropriation Law, 1916.

There shall be issued and applied to the service of the twelve months ended March 31, 1916, an additional sum not exceeding the sum of £4,776 8s. for defraying the charges of the Government of Cyprus for such period. The said amount shall be appropriated as follows:—

	£	s.	cp.
Vote 2—Pensions	300	14	4
,, 3—His Excellency the High Commissioner	5	15	0
,, 9—Customs Department	252	7	7
,, 14—Prisons Department	405	14	0
,, 20—Forest Department	2,680	17	1
,, 26—Public Works Extraordinary	197	17	6
,, 28—Miscellaneous Services	933	2	0
	£4,776	8	0

DEPRECIATION OF THE LEWA.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, May 24.

The Bulgarian Government has another worry to add to its already large collection. It is useless for them to declare on all sides that Serbia no longer exists: the value of Serbian bank notes rises continually, even in the interior of Bulgaria, whilst Bulgarian paper continues to fall.

In order to combat this the Ministry of Finance has given orders to all the banking institutions to throw all the Serbian paper they possess on the market in the way of payment of employees, etc. In this way they hope to produce an artificial depreciation in the value of Serbian money. But this, so far, has not had the desired result. The tendency is maintained, and Serbian paper money is in great demand, whereas the public continues to get rid of as much Bulgarian paper as possible.

COMPANY RESULTS, Etc.

ANGLO OTTOMAN TOBACCO.—Dividends have been declared of 6 per cent., less tax, on the 6 per cent. cumulative preference and participating shares, and of 10 per cent., less tax, on the ordinary shares, both payable July 1, for the year ended March 31.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the twenty days ended May 10 amounted to £E4,815, or an increase of £E1,078 over the corresponding period of last year.

EUROPEAN OILFIELDS.—Week ended May 28, 106,300 poods.

ROUMANIAN CONSOLIDATED.—Week ended May 27, 409 tons. Well No. 68 Moreni reached oilsand; expert to test this week. No. 32 cleaning, improving.

ENEMY FIRMS IN EGYPT.

We read in the *Official Journal*:—

The original licences granted to the firms mentioned below have been cancelled and replaced by a licence, under the same number, for the purposes of liquidation only, with the addition of a sixth clause, the terms of which were published in the *Journal Officiel* of February 14, 1916.

The firms in question are:—

Mayer and Co.
Salamander Shoe and Clothing.
Stein's Oriental Stores, Limited.
Victor Tiring and Frères.

The existing powers of the Controller of the above businesses (Mr. R. E. Moore) have been extended so as to enable him to ensure the strict observance of the terms of their new licence, and to take such measures as may be necessary for the speedy liquidation of the businesses in liquidation.

***Clause 6, to which reference is made above (see NEAR EAST, March 10, p. 527), states:—

"(6) The operations of the firm under this licence shall be carried out under the supervision of a controller appointed under the authority of the General Officer Commanding in Chief, and paid by the firm, the said Controller having power to take all such measures as may be necessary to ensure the speedy liquidation of the business."

NOTES OF THE WEEK.

The Allied Governments are bent upon buying, at a wholly unnecessary price, their experience in the Near East. They are by this time well versed in matters Bulgarian, and could probably be relied upon for a fairly accurate estimate of King Ferdinand's character, which in its main features has been an open book for a couple of decades to every one with the least knowledge of Balkan history. A similar process of orientation in regard to Greece and its present rulers has now been undertaken in the respective Foreign Offices; but unfortunately the situation in the Near East refuses to hibernate until the Governments have made themselves proficient. The result is the application of a policy of fits and starts, of blowing alternately hot and cold. Thus last November action had to be taken against Greek shipping; but the mild embargo was almost immediately removed. At an early opportunity King Constantine denounced the Allies as behaving no better towards Greece than Germany had towards Belgium. This particular outburst is overlooked, and British and French generals pay friendly visits to the Palace at Athens. A little later great stress is laid on the transportation of the Serbian Army over the Greek railways. The Greek Government refuses, the Allies press the matter, but finally give way. Only when the Bulgarian Army crosses the Greek frontier and occupies, unopposed, Greek forts and towns do the Allied Governments realize that Greece's official attitude is proving consistently unfriendly. The discovery has stirred them to reintroduce a pacific blockade of the Greek coasts.

On June 8 the British Government announced that the attitude of the Greek Government in connection with the situation arising out of the surrender of Greek territory to Bulgarian troops had made it necessary for the Allies to take certain precautionary measures. "Certain precautions" were to be taken with regard to Greek shipping in British ports, and the question of restrictive measures affecting Greek ports was said to be under consideration. As a matter of fact, the embargo on Greek shipping, amounting to a blockade, had been put into force in Greek waters two days previously. General Sarrail's interpretation of the Allies' intentions is said to have been given in a communication to the Greek Inspector of the port of Salonika, stating that the French Government had decided to suspend all Greek navigation. Certainly this version corresponded more closely with the facts of the case than the vague wording of the statement issued by the British Foreign Office. The course actually adopted by the Allied Fleets was to prevent shipping to or from foreign ports leaving or entering Greek waters, while permitting the Greek coasting trade to continue everywhere except along the coast of Eastern Macedonia.

This slight pressure sufficed to endow the Greek Government with an intelligent anticipation of the Allies' wishes. The very next day, on the Government's own initiative, as the Premier was careful to inform the Chamber, a partial demobilization of the army was proclaimed. This measure, it is true, anticipated by a few days any formal representations on the part of the Allies to the Greek Government. When those representations were made, the latter would have been able to adduce the demobilization as proof that Greece entertained no aggressive designs, and no doubt much play will have been made with an attitude of injured innocence. If the Allies are content to let the matter rest at this point, they will have removed whatever danger there may have been of the Greek army being used against them; but they can hardly expect to find the Greek Government abandoning its policy of passive resistance.

Quicquid delirant reges plectuntur Achivi. According to the ordinary canons of international intercourse the Allies are in a difficult position. But in view of the fact that the Greek people are the sufferers from any blockade, and that the great majority of the nation is opposed to the Government's policy, it is unfortunate that the only measures adopted by the Allies are calculated to injure those of the Greeks who are friendly to them. The wording of the statement issued by the British Foreign Office, and more outspoken messages which have evaded the Greek censor, leave no room for doubt that the Allied Governments entertained the possibility of Greece making common cause with the Central Powers against the Franco-British troops. If there was the least justification for such a suspicion, the Court party at Athens must have taken a very definite step along the road to madness, and the Allies themselves can hardly escape blame for mismanaging once more a Near Eastern situation. Only a policy of extreme vacillation on the part of the Entente Powers would have encouraged the Greek Government to play with fire in this way. We prefer to think that the suspicion is merely the result of the Allies' Balkan lessons being still only half learned. With the mastery of the Mediterranean in their hands, the Allies are in a position to dictate any terms they like to Greece. If they have

Digitized by Google

allowed King Constantine to forget or to ignore this point, the fault is wholly theirs.

Some explanation, however, of the Bulgarian advance into Greece is required. It is possible to imagine the Greek Government being privy to the step without committing itself to subsequent co-operation with the invaders. With King Constantine and his present Ministers neutrality has become an obsession. To what extent fear of Germany or pique against the Allies accounts for this obsession it is not necessary to inquire; we are dealing with small minds and cannot hope to plumb all the motives that inspire a definite course of action. But there was no reason to expect that the Greek Government, if left to itself, would do otherwise than acquiesce in Bulgarian advances into Greek territory. If the Allies had wished to spare themselves anxiety on this score, they were in a position to command the good behaviour of the Greek Government at a much earlier date. The policy adopted has been to postpone extreme measures as long as possible in the hope that King Constantine would learn wisdom. If he did not, it was obvious that the Allied troops could not advance into Bulgaria and leave the Greek army mobilized behind them with a pro-German Government in power and the Commander-in-Chief and his Chief of Staff personally antagonistic to the Allies. By resorting to a blockade in order to secure the demobilization of the Greek Army the Allied Powers have given the Greek Ministry an argument to use in influencing public opinion, and for the first time we hear of anti-Venizelist demonstrations.

The Greek Government finds a drastic censorship necessary to save its face both at home and abroad. Without it there might be some difficulty in justifying the expense of having kept the army so long on a war footing, if it was not intended to defend the country against either the Bulgarians or the Allies. Having ordered a demobilization, "on its own initiative" at this stage, the Skouloudis-Gounaris Cabinet lays itself open to the charge of using the army to serve its own political ends. One of the reasons which prompted the Liberal Party to remain aloof from the last elections was that mobilization deprived them of a large number of their supporters—a statement that was by no means refuted when arrangements were made to enable the army to vote, in such a way that only supporters of the Government secured the necessary leave. With regard, therefore, to the trend of public opinion in Greece we are more or less in the dark. But with the army demobilized and the risk of a *coup de main* effected at the instance of German intrigue removed, the Allies will doubtless adopt the attitude that they have no call to interfere with the domestic affairs of Greece, so long as these do not threaten to affect the welfare of the Franco-British forces in Greece.

The Bulgarian advance into Greek Macedonia has resulted in an accession of liveliness in that theatre, which it will be hoped in many quarters is to prove the preliminary stage of an Allied advance. French aviators are paying considerable attention to the enemy, and with their almost unchallenged supremacy in the air must prove as useful as an additional division when the time to go forward arrives. With the Serbian Army recuperated and re-equipped, and claiming to be sent "to the front," General Sarrail must feel his whole force straining at the leash—an attitude which is likely to become intensified as the Russians make good their initial successes in the north. The achievements of General Brusiloff's forces in the week June 5 to 11 eclipse all records in this war, even those of von Mackensen in the same regions and Hindenburg at an earlier stage in the north. It is clear that the advance cannot be maintained indefinitely at the same pace, and we shall do well not to build extravagant expectations upon it. But just as the Russians were able to strike at an earlier moment in consequence of the defeat of the German fleet at Horn Reef, so we may look for results from the Russian advance in other theatres. There can be little doubt that the Italians will obtain some relief; on the other hand, the naval reverse and the Austrian débâcle may force the Germans to hammer all the harder at Verdun and Ypres. In the Near East, particularly in Roumania, the fortunes of the Russians will be followed, if possible, more keenly than in the Allied countries, for it is in this quarter that the more immediate consequences may be anticipated.

It is not quite apparent why an air of mystery should have been superimposed upon the course of events in Southern Persia. A fortnight ago it was pointed out in these columns that British forces were engaged there on work that ought to have been undertaken long ago; but there has been no official statement to the effect that the British Government has charged itself with the duty of restoring order in the south as the Russians have done in the north. Now, however, comes a telegram from Teheran to announce that General Sir Percy Sykes and the British column under his command entered Kerman on June 12, and were cordially received by the officials and public. It is three months since Sir Percy Sykes, with the rank of brigadier-general, landed at Bunder Abbas to organise a military police for Southern Persia. At the same time steps were taken to raise levies on the Baluchistan border to co-operate with General Sykes' force. So expeditiously has this work been done, and so eagerly have the Persians accepted the all too tardy measures taken by the British Government, that law and order may now be regarded as having been restored in the chief towns of Southern Persia. The majority of the tribesmen will be quick to dissociate themselves from Germany's discredited agents; the remainder will probably require very definite chastisement before they abandon a means of livelihood which has by this time become second nature to them.

The School of Oriental Studies has now received its Royal Charter of incorporation, and the governing body has been constituted under the chairmanship of Sir John Hewett, formerly Lieutenant-Governor of the United Provinces. In a short time the necessary additions and alterations now being made to the building of the London Institution in Finsbury Circus will be completed, and the school, it is hoped, will be duly inaugurated in its permanent home. A few months before the outbreak of the war, when an appeal was made for public subscriptions, it was announced that the school could not be opened unless it were assured of an income of some £7,000 over and above the sums promised by the Home Government, the Government of India, and the London County Council. Whether the necessary endowment fund has been raised since that date is not stated. The war has probably interfered with the plans of the promoters; but it has in no way diminished the need for the school. Rather has it emphasized the anomaly of the absence of such an institution in the capital of an Empire with paramount interests in the East. No doubt British commerce stands to benefit primarily by the School for Oriental Studies, but the war has shown how every man of the right type conversant with the languages, customs, and traditions of Oriental peoples has it in his power to become an Imperial asset.

As far as is known, the Turks have made no further advances in Armenia or near Rowandiz, but they claim to have retaken Kasr-i-Shirin after driving back the Russians from the frontier. Too much importance need not be attached to the swaying to and fro of the battle-line in the Middle East. Both belligerents must be in need of reinforcements, and until there is some indication as to which of the two will receive them first, we may discount Turkish claims and Russia's silence alike. One point, however, emerges from the course of events in the Middle East, that the numerical strength of the forces that Turkey has been able to put into the field, with Germany supplying arms and equipment, has been underestimated by the Allies. The British Mesopotamian Expedition is still meeting with determined resistance. Three weeks ago General Gorringe had captured the Dujailar fort, the key to Kut, but there is no news as yet that the town itself has fallen, or that the enemy has been ejected from the Es Sinn position.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 1.

The Bomb Outrage Trial.

The trial of the two men, Shems-ed-Din and Helbawi, implicated in the attempt on the Sultan's life last July, was concluded on Saturday last, after having lasted seventeen days. The closing speech of Sir William Brunyate, the counsel for the prosecution, was a most brilliant exposition of the evidence against the accused, whilst both the defending counsel, Messrs. Foster and Perrott, acquitted themselves most admirably of their admittedly difficult task. Helbawi, it may be mentioned, did not go into the box, and the opinion at the close of the trial on Saturday was that he stood a very good chance of getting off. However, on Monday morning the Court was reopened and evidence of character of the accused was asked for by the President. It is now announced that both have been found guilty of all the charges, and that General Murray has approved of the sentence of hanging passed on them by the Military Court.

From conversations I have had with enlightened and educated Egyptians I find that the ability with which the President, Major-General Watson, conducted the proceedings, and the impartiality and regard for fairness which have characterised this trial, have made a profound impression. It has been another triumph for British justice, for, as one Egyptian put it to me—and his view is not an isolated one—if such is the treatment accorded to accused persons under the regime of Martial Law, which usually is less bound by rules of procedure and evidence than the ordinary criminal law courts, then the inhabitants of this country, foreign as well as local, need have no anxiety as to their fate if and when a purely British judicial organisation replaces the present jurisdictions.

The Judicial Adviser.

It is with very sincere regret that everyone has heard of Sir Malcolm McIlwraith's decision to retire from the position of Judicial Adviser to the Egyptian Government, which he has filled with such distinction ever since he succeeded Sir John Scott on May 12, 1898. The years following that date have been, perhaps, amongst the most eventful in the history of the British administration of Egypt, and have certainly been the most fruitful in judicial reforms and in legislation. Sir Malcolm McIlwraith has administered the Ministry of Justice with signal ability, and his wide knowledge of international law has stood him and the country in good stead. His retirement is all the more to be regretted, since his experience and ability would have proved invaluable in the reorganisation of the judicial machinery of the country, which, as the result of the declaration of a British Protectorate over Egypt, must take place after the restoration of peace. Sir Malcolm McIlwraith will proceed to England at the end of June on three and a-half months' leave, on the conclusion of which his retirement will take effect. It is understood that he will be succeeded by Sir William Brunyate, Legal Adviser to the Residency and to the Ministry of Public Works, who has replaced him several times whilst on leave, and whose excellent work, both before and since the outbreak of war, make him *l'homme tout indiqué* for the post.

Judge Bond.

On Saturday last Judge Bond, who is about to retire from the Vice-Presidency of the Native Court of Appeal after thirty years' service on the bench, presided for the last time over the Court of Cassation, and the Parquet and Native Bar took the opportunity of giving expression, through the persons of Simeika Bey and Ahmed Bey Lutfi, to their deep regret at his forthcoming departure and to the respect and affection in which they hold him. Judge Bond's retirement is in the nature of an irreparable loss both to Egypt and to the Anglo-Egyptian administration. He has deservedly acquired amongst all the elements of the community an unrivalled reputation for fairness, firmness, and legal knowledge. If the Native Courts to-day are free from all the abuses which were a by-word of the administration of justice in this country when the Occupation took place, and if the judicial officials attached to and practising in them have a high conception of their duties and perform them so conscientiously and impartially, it is solely owing to the strong personality of the retiring Vice-President of the Court of Appeal, whose influence for good has been very widespread, and whom it will be exceedingly difficult to replace.

An Arabic Academy.

A proposal has been set on foot to form an Arabic Academy. It was mooted at a recent dinner given in honour of Dr. Faris Nimr and Dr. Yacoub Sarruf, on the occasion of the fortieth anniversary of the foundation of their scientific and literary review, *Al Muktataf*. The proposal has found support in Rushdi Pasha, the Prime Minister; Adly Yaghen Pasha, the Minister of Education; Ahmed Zaki Pasha, the well-known Oriental scholar; Lutfi Bey El Sayed, the curator of the Sultania Library, and the above-mentioned two gentlemen. Its object is to improve the Arabic language, and bring it up to date. That there is need for this cannot for one moment be disputed; for while Arabic is for most purposes a flowery language, rich in synonyms, it is at present quite inadequate for the expression of the modern terms which the progress of science and the intellectual development of the world have created. Should anything come of this proposal, and serious efforts be made so to modernise the Arabic tongue that means of expressing modern scientific and other terms can be found in it, then a great benefit will be conferred on the Arabic-speaking races, and especially on the Egyptian nation, for they will then be able to keep abreast of the times, which is hardly the case to-day.

A scheme for creating an Arabic Academy was started some few years ago, but it relapsed into oblivion mainly because its promoters lacked the necessary educational and intellectual qualifications. The fact that such men as Drs. Nimr and Sarruf are lending their support to the proposal leads one to foresee that it will receive serious attention, and will be given every chance of success. These two gentlemen, who have been settled in Cairo ever since they emigrated from Syria in 1884, have for years been the leaders of Egyptian journalism, and indeed of Egyptian thought. Dr. Nimr, who is the editor of *Al Mokattam*, has obtained a foremost place as a stylist amongst writers of Arabic prose, whilst his partner, Dr. Sarruf, holds a no less prominent position amongst Oriental scientists, *Al Muktataf*, which is primarily conducted by him, being unique of its kind in the East. They have throughout been the most sincere and helpful supporters of the British regime, but at the same time they have never scrupled to criticize any line of action of which they did not approve. *Al Mokattam* has acquired even amongst Moslems a reputation for accuracy, independence of opinion, and moderation which is quite remarkable, and Mr. Foster, counsel for Helbawi, was perfectly correct when, in the course of the recent bomb outrage trial, he stated that *Al Mokattam* was the leading and most widely read Arabic newspaper in the East.

PORT SAID NOTES.

(From Our Own Correspondent.)

Port Said, May 25.

War Conditions at Port Said.

Some of the minor thrills and rigours of war have been experienced during the past few weeks in Port Said. The bombing raids by hostile aeroplanes have resulted in the strictest measures being imposed for the general safety, and the port is now practically without lights. Windows facing the sea have to be carefully shuttered at nightfall; street lights are dimmed almost to vanishing point, and certain lighthouses have ceased working.

The last raid, which took place on the early morning of the 21st, was considerably more serious than its two predecessors, and caused a certain amount of anxiety, happening as it did at night-time. The raiders must have been flying very high, as, although the moon was nearly full, nothing could be seen of them by the populace, except an occasional flash, which the official *communiqué* states was from searchlights. Their course could, however, be marked by the shell-bursts of our anti-aircraft guns, while the continual humming of motors, explosion of bombs, and booming of guns combined to create in the small hours of the morning a realistic atmosphere of war conditions. Little damage was caused, and that mostly in the Arab town. Two civilians were killed—one Greek and one native—and a number of Greek civilians were wounded.

On the previous raids, which took place in the daylight, the planes were easly discernible; and it was a fascinating sight to watch them scurrying across the sky, followed by puffs of smoke from shell-bursts as the gunners were getting nearer the mark.

These exhibitions of "frightfulness" have resulted, as could only be expected, in keeping away the usual summer visitors from up-country, who are now forbidden to come here for the sea-bathing and cool breezes, as a great many did last year. Port Said and the Canal generally is strictly regarded as a war zone, which can be entered and left only by special permit. The regulations when leaving the country are also more rigorous, a lengthy notice having to be given if a permit is required, and the authorities are still inflexible on the subject of ladies entering the country.

Empire Day Celebrations.

Under the auspices of the Over-Seas Club and Patriotic League of Britons Over-Seas a musical concert was held on Empire Day at the El-Dorado Hall in aid of the British Red Cross Society, when an excellent and varied programme was given, the talent being chiefly naval and military.

A children's fête was held in the afternoon at the Casino Hotel, also in support of the society's funds.

EMPIRE DAY IN ALEXANDRIA.

(From a Correspondent.)

Alexandria, May 30.

Empire Day celebration in Alexandria took the shape of an entertainment at the Alhambra Theatre, under the patronage of H.R.H. the Prince of Wales and the High Commissioner, his Excellency Sir Henry McMahon, who was present throughout the proceedings.

The theatre, which has been extensively requisitioned for patriotic purposes of late, was tastefully decorated for the occasion, and well filled with representatives of both Services and of the British community. The programme comprised a concert, patriotic tableaux, a cinematograph performance, and a speech by H.M.'s Consul-General in Alexandria.

While it would be invidious to attempt a detailed criticism of the admirable entertainment provided, the vocal contributions of Signor Azzopardi and of Mrs. Moss, an established favourite with Alexandrian audiences, deserve special mention. An old friend in a new guise was Major South's version of "Old King Cole," which was keenly appreciated, and secured an equally mirth-provoking encore; while Sergeant-Major Morfitt's rich trained baritone voice and fine presence made "A Sergeant-Major of the Line" more popular than ever.

The tableaux, representing epochs in the history of England and of the Empire, were one and all a triumph of artistic conception and execution. Those of "King Henry VIII. Dismissing Cardinal Wolsey" and the "Accession of Queen Victoria" were, perhaps, the most noteworthy, although this was very much a matter for individual appreciation.

Mr. Cameron, the Consul-General, in a short but effective speech, epitomised the object of Empire Day, making special reference to Lord and Lady Meath and to the late Mr. Joseph Chamberlain, whose great efforts on behalf of the Empire have been signally justified, particularly in these days.

The programme was most tastefully designed, and will be treasured by those present who collect such souvenirs.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, May 25.

Dar Fur.

On May 23 the troops of the Sudan Government entered El Fasher. The bald announcement was made at Khartoum on the 25th, and further details will doubtless arrive later. The salient fact, however, is that the long and difficult line of communications is now complete and held at the further end. The entry into El Fasher could only be made after a successful repulse of the Fur troops, and the surrender of the body of the people to the Sudan Government is certain. The capture of El Fasher means the extension of the gum forests by a very considerable area, the reopening of the most profitable cattle market in the Sudan, and, it is to be hoped, the beginning of considerable commercial relations with the French in Wadai, who will find this their easiest outlet. It means the security of the southern end of the Arbain road down which the Sennoussi was said to hope to march, and it is a satisfactory reply to the German lies of the advance of a horde of Fur fanatics towards the Nile.

A Spectacular Sandstorm.

On May 22 Khartoum enjoyed one of the spectacular sandstorms that bear comparison with a "London particular." At 4.30 p.m. the whole northern horizon was seen to be banking up with clouds upon clouds of dust. As the storm approached the extraordinary mass covered the whole sky from east to west like a wall. But the whole surface was continually changing as spirals of sand shot up and clouds rolled over and were enveloped in others. Every shade of colour between black and brown to dark red alternated within the moving mass, and the remote wings stood grey against the sky. Then suddenly the storm leaped the river, the wind making a sharp hissing noise as the waves and sand met, and in a minute the whole of Khartoum was plunged in Cimmerian darkness. The unfortunate wayfarer could not see a few yards in front of him, eyes, ears, nostrils, and mouth were full of sand, and the wind blew furiously. Such a state could last but a few minutes, and gradually the darkness lightened, familiar objects returned to sight, and in an hour the tail of the storm, with its blessed rain, arrived. A short shower laid the dust, and then followed peace.

CRICKET IN CAIRO.

(From Our Cairo Correspondent.)

Quite a large crowd gathered on the prettily situated cricket ground of the Gezira Sporting Club on Saturday, May 27, to watch the second day's play of the eagerly anticipated match between "Egypt and Australia." Amongst those present were H.E. the High Commissioner and Lady McMahon, the G.O.C.-in-Chief, and Generals Altham, Godley, Watson, and Clayton, etc. An Australian band played during the afternoon.

The "Egypt" team, which was captained by Mr. E. H. Goschen, included several county players—viz., D. W. Carr and E. W. Dillon (Kent), C. D. McIver (Essex), Hon. M. Herbert (Somerset), and R. V. Buxton (Middlesex). Messrs. R. E. More (Middlesex) and M. Falcon (Norfolk) were unable at the last moment to play.

The "Australia" team, which was one of the best ever seen in Cairo, included the following well-known inter-State players:—Messrs. Sterling, Moyes, Pellew, and Steele (South Australia), and Barbour, Matthews, and Long (New South Wales).

The result of the match was a decisive victory by four wickets and 143 runs for the Australians, who bowled and fielded brilliantly.

THE WORLD-FAMOUS
YAGHOURT
may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.
Also LEVANT PRODUCE:
Tomato Paste, Black Olives, Locoums, Samiss, &c.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, May 31.

The State of Constantinople.

After being cut off from communication with Constantinople for about six weeks, we have suddenly received an accumulation of mails here. At the same time the opening of the Greek and Bulgarian frontiers to passenger traffic has enabled a few travellers to come from Constantinople, and the Greek courier is now allowed to cross Bulgarian territory.

There seems to be no material change in the situation at Constantinople. In some respects life there appears somewhat easier, and it is quite evident that supplies of foodstuffs, to a limited extent, perhaps, are reaching the city from Roumania. The cost of living has become very heavy, but those who can afford it are evidently able to obtain their daily requirements. Pera presents its usual gay appearance; cinemas, theatres, cafés, and other places of amusement are well patronised; but those accustomed to a busy life describe the situation as extremely monotonous. The poor must, however, be undergoing great hardships. In fact, hundreds must be dying from starvation or from the use of improper food, not only in Asia Minor, but also in Constantinople.

Asia Minor: A Gloomy Outlook.

According to information from various sources, the grain crops in Asia Minor will this year probably be considerably below the average. In some places much damage has been done by locusts, and a specialist has been brought from Germany to take measures to eradicate this evil.

It is said that the Turkish populations in all those towns occupied and threatened by the Russians are all making their way westward in terror of their "traditional enemy." Their immigration into Western Anatolia is likely to prove a serious embarrassment to the authorities, who will be confronted by the problem of feeding additional populations at a time when stocks of corn are insufficient for normal requirements. One effect of this emigration of Turks from Eastern to Western Asia Minor will be to increase the hardships of the Christian populations in the western vilayets, more especially the Armenians, who will doubtless be turned adrift to make way for the Mussulmans, and the Christian will have greater difficulty in obtaining his loaf of bread.

Coal, apparently, still finds its way into Constantinople, and much lignite is being used on the railways and for industrial purposes. An improved service of steamers on the Bosphorus for the summer months is announced, which would indicate that sufficient coal is available.

Huns at Smyrna.

Rahmi continues to rule Smyrna, but Perteb is no longer Military Commander, having been replaced by a German; and it is said that a fairly large number of Austrian or German troops are now stationed in or about Smyrna. Allied aeroplanes make frequent flights over the town and drop printed leaflets giving the latest news to counteract the lies of the Huns. These visits cause a little diversion, and there is a great scramble for the leaflets, many of which are secured by the people in spite of the efforts of the police to seize them.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, May 27.

Work of the Legislative Council.

The High Commissioner presided at the last meetings of the Council on May 23. The votes passed included those making provision for distressed Cypriots abroad. Strong representations were made by Mr. Economides, of Nicosia, and by Eyoub Bey, Councillor from Papho, on behalf of Cypriot refugees in the island, and of Turks who, being in Cyprus at the time of the annexation of the island, remained in it as prisoners of war. It was suggested that work should be provided for some of them. Petitions for relief from some of the villages which suffered so heavily by the destruction of cereals and other produce from recent hailstorms were laid before the Council. The consideration of some draft laws was postponed. On May 25 a few short bills were passed, and the High Commissioner then prorogued the Council *sine die*.

Employment for Cypriots at Salonika.

The military authorities at Salonika have made inquiries regarding young Cypriots who can read and write Greek, and can speak Turkish well, who would be disposed to serve as interpreters with the British Forces. The pay offered is said to be £9 a month, with expenses paid to Salonika. A considerable number of candidates have offered themselves.

Drink and Crime.

The annals of serious crime, as regards murder and homicide, still present their dismal features with painful regularity. The frequent executions which have taken place have had but little effect. On May 23, *e.g.*, two Turks, named Saadi Kadir and Hussein Tourmouzes, of Nicosia, while under the influence of drink quarrelled and drew their knives, inflicting various wounds on each other, from which one died during the night, while the other was taken to hospital. The police also arrested another Turk, named Hassan, who appears to have intervened with the object of separating the men.

THE DISTRESS IN SYRIA.

(From a Correspondent.)

Cairo, May 25.

The movement among Syrians abroad in regard to the recent revelation of the very serious situation of their countrymen at home is extending in scope daily. Although the initiative lies naturally with the Syrians, yet the co-operation of Egyptians, Copts, and Moslems alike is invited, and the committees that are being formed at different centres in Egypt are to include representative members of both. The end is purely humanitarian, and the fact that Moslems also are among the sufferers and that the proposed relief is to be afforded without any distinction of sect or creed justifies a call being made on the Egyptians. All the spiritual heads, including those of the Copts and Moslems, are not only patronizing the movement, but taking active part therein, and the Sultan of Egypt has lent cordial encouragement to the promoters of the movement. Indeed, the Syrians have, according to their capacity and means, contributed to the various humanitarian works that the war has called forth, and it is proposed to make appeals in the different Allied and neutral countries. The generous disposition evinced in this connection by persons in high authority encourages the belief that such appeals will meet with a ready response. It is true that each of the Allied nations has many calls on its charity in connection with national needs, yet the measure of their resources is such that even a small part of their charitable funds might help largely in alleviating the conditions of the Syrians, and the Holy Land has ever had a special claim on the attention of Christendom.

The Syrians in America, judging by a telegram received from a representative body in New York, seem to be fully alive to their responsibilities at this critical juncture in their country's history. Their own resources are sufficient to enable substantial funds to be raised, and they have, moreover, in the wealth of the Americans, increased to a plethoric degree by this war, a vast field to work upon. The fact that the U.S. Government is being asked to undertake the task of intervening with the Ottoman Government for the admission of a shipment, or shipments, of foodstuffs, which it is proposed to send to Syria, and the distribution thereof by a commission appointed by them, is calculated to increase the national interest in the movement. Besides, the United States have moral and economic interests in Syria, which they cannot afford to neglect and leave exposed to such risks as the present conditions are calculated to cause.

Furthermore, as the clergy (and more particularly the Maronite clergy) have suffered no less than the population, it is proposed to make an appeal to his Holiness the Pope, who, by the exercise of his own great authority, together with that of the Emperor of Austria as the protector of the Catholic Christians of the East and an ally of Turkey, may be able to put a stop to the present campaign of persecution and extermination by famine. The Maronite and Greek Orthodox Bishops in Beyrout—both men of exceptional ability and high moral influence—have been first ordered to out-of-the-way convents in the Lebanon, and finally expelled to the interior. The Maronite Patriarch, once a great power in the land, after being deprived of his clerical suite and seeing the leading heads of his Church expelled, was subjected to the humiliation of quitting his permanent residence to go to Aley, where the court-martial sits. Owing to the infirmity of old age, he could accomplish the journey only in two days; and now not only has he been shorn of all influence, but has also been reduced to such a terrorized condition that he sought complete isolation in his summer residence near the immemorial cedars.

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, May 23.

What Next?

M. Simeon Radeff, the Bulgarian Minister in Bucharest, is still absent in Sofia, ostensibly for the purpose of arranging the terms of an economic convention between Roumania and Bulgaria similar to that existing between Roumania and Germany. That Germany can, in exchange for Roumanian corn, export many indispensable articles, articles which Roumania cannot obtain elsewhere, is evident. It is no less clear that Roumania could prove extremely useful to Bulgaria. But it is difficult to see what Bulgaria can offer in return, for the Germans seem to have made a clean sweep of everything exportable.

According to a leading journal, which is generally well informed with regard to diplomatic matters, M. Radeff has been definitely recalled by his Government, and is said to be retiring from the diplomatic service. No statement is made regarding the nature of his future occupation, though this would appear to be a subject not devoid of interest—if indeed it is true that he was a *komitaji* in an earlier stage of his career.

Among his possible successors are mentioned M. Sarafoff, formerly Consul at Constantinople, and M. Atanassoff, the son-in-law of M. Radoslavoff, at present First Secretary of the Bulgarian Legation in Berlin.

Royal Charities.

Her Majesty Queen Marie and the Princesses Elizabeth and Marie are at present in Moldavia for the purpose of distributing to the poor a portion of the gift of one and a-quarter million francs recently made by the King. They return to Bucharest for the 10th of May, and will then continue their good work in the north of Moldavia and other parts of the country.

The Plain of Blaj.

May 3 (Roumanian style) was the sixty-eighth anniversary of the memorable day of the year 1848, when the Roumanians of Transylvania gathered together on the plain of Blaj to proclaim their rights to liberty and independence. The date was celebrated in Bucharest by a requiem service for the souls of these martyrs of the revolution, and of their successors who have shed their blood so freely, not for their own cause, but for that of their oppressors of yore. Meetings were held in different places to commemorate those who laid the foundation-stone of Roumanian national policy in Transylvania. At Jassy the students of both universities united for a similar purpose, visiting in solemn procession the historical monuments of the Moldavian capital.

By the treaty of Carlowitz, Hungary, which included the province of Transylvania, was attached to the Crown of Austria. But in 1848 the Magyars, who were devoured by the ambition of constituting themselves into an independent kingdom, resolved to match themselves against Austria. In the event of success there could be, however, no hope of the new kingdom maintaining itself unless it embraced the foreign nationalities within its boundaries, and of these the Roumanians represented the most powerful element. Collaboration on their part was excluded, and quiet submission improbable. The Hungarians must set themselves the task of gaining complete mastery over the Roumanians before venturing on further enterprises. Hence they gave themselves a Constitution, and Transylvania was allowed sixty-nine seats in the Parliament of Budapest, with the proviso, however, that her representatives should be exclusively of Magyar and Saxon nationality, in spite of the Roumanians forming the overwhelming bulk of the population. At the same time one of the articles of the Constitution made any person amenable to a heavy fine who was found guilty of any action or conduct directed against the principle of Hungarian unity, in the words of Dr. Jean Cantacuzène: "A singularly elastic formula authorising every abuse of power."

The immediate result was an armed uprising. Forty thousand Roumanians assembled at Blaj, at a spot known to this day as the Plain of Liberty, and each man took a separate oath to uphold the Roumanian laws and cultivate the Roumanian tongue, to comply with the dictates of liberty, equality and fraternity, to suffer none to interfere with his rights, while himself respecting the liberty and nationality of his fellow-dwellers on Transylvanian soil. The movement spread, but the poor peasants were badly organised and miserably armed, and they became the victims of a fearful massacre. Forty thousand lost their lives, including two hundred priests, and three hundred of their villages were razed to the ground.

The revolt, however, had perilously hampered the Hungarians, who, in their turn, were involved in a revolution. Russia, fearing lest it should spread to Poland, came to the aid of Austria, and the Hungarian movement was quashed.

It is interesting to note that the Crimean War delivered the Roumanian principalities from Russian "protection," and restored to Moldavia a fragment of Bessarabia; while Russia, by her support of Austria in 1849, had indirectly delivered Transylvania from the Hungarian yoke.

But the Roumanians' respite was destined to be of comparatively short duration. Austria's unfortunate war with Prussia resulted in the defeat of Sadowa in 1867, Austro-Hungarian Dualism was established, Transylvania was abandoned to the Crown of Hungary, and a vigorous campaign of persecution and denationalisation was instituted against the Roumanian elements—a system, which, in spite of dogged resistance and feeble results, continues to this day, and goes by the name of "Magyarization."

"KOSSOVO DAY"—JUNE 28.

An influential committee has been formed for the purpose of organising a demonstration in honour of Serbia on June 28, the anniversary of Kossovo. The object is one which is sure to commend itself to the people of this country, who have been profoundly moved by the gallantry and the unmerited misfortunes of Serbia and the Serbs. A manifesto has been issued by the committee showing how those desirous of helping can do so, and from this we extract the following passages:—

"We ask the people of Great Britain to join in manifesting their sympathy with these bravest of patriots in their long agony of untold indignities, famine and death, in upholding their glorious traditions of democracy and freedom.

"The battle of Kossovo in 1389 was indeed a crucial defeat of the Serbian champions of Christian Europe by Islam; and the day has been kept ever since in remembrance of this historic calamity. But with indomitable courage it has been observed as a festival in the joyful anticipation of the freedom which is to come again.

"Serbia is once more under the heel of a conqueror. Serbs are in our midst. We are sure the British public will enthusiastically join with them in celebrating this day, June 28 (June 15 old style), not as strangers in a strange land, but as heroes among friends in the welcome of a home. We appeal for help in carrying out the following proposed methods of bringing the meaning of Kossovo Day before our people:—(1) Services to celebrate the day in the form either of a memorial service for the Serbian and British troops, doctors, and nurses who have fallen in the war, or of intercession for our brave Ally, on June 28 or on the Sunday following. The Archbishop of Canterbury is in cordial sympathy with the commemoration of the day, and is taking part in the memorial service at St. Paul's. (2) Lectures in primary and secondary schools and in the private and public schools. The object is to give the coming generation a sympathetic understanding of Serbia. (3) Lectures on the same day (or in anticipation) in drawing-rooms, at garden fêtes, or in public halls. Lantern slides can be supplied. Pamphlets specially written for the purpose can also be sent free for the help of speakers. Many of our doctors and nurses who were in Serbia are willing to speak. The Lord Mayor is entertaining the Serbian children in this country at the Mansion House. (4) Lectures on the Serbian and Russian Orthodox religion. (5) Distribution and sale of literature. (6) Help in securing the insertion of articles and in the local Press notices concerning Kossovo Day, which can be supplied by the committee. (7) Pictures for cinemas.

"The object of the commemoration of the day is not primarily to raise money, but to draw together more closely the two nations. But it is hoped, nevertheless, that there will be liberal gifts as a mark of our national sympathy. All that is raised, after expenses are deducted, will be given, one-fourth to the Scottish Women's Hospital in Serbia and three-fourths to the Serbian Relief Fund (Children's Branch).

"Let all who value what Serbia has done for us and for humanity give all help possible. The aim of the movement is to interpret to the people of Great Britain the place that Serbia has in civilisation, in the arts and religion; the part she has taken in history, and will certainly take in the future, of Eastern Europe; and, lastly, the place she must take in the hearts of those who love her simplicity and know her greatness."

The manifesto is signed by Dr. Elsie Inglis, chairman, and the Rev. H. J. Fynes-Clinton and Mr. R. W. Seton-Watson, D.Litt., joint hon. secretaries of the committee. The offices are at 50, Parliament Street, Whitehall; the telephone number is 6896 Victoria, and the telegraphic address "Kossovo, London."

The New York *Evening Sun* is unkind enough to suggest that "Considering what the Crown Prince has done to the Germans at Verdun, the Turks should receive with apprehension the news that one of the Kaiser's sons will join their forces shortly."

THE NEW ARMENIA

A LITERARY AND POLITICAL PERIODICAL.

THE NEW ARMENIA, published fortnightly, is the only English Periodical in America for those who are interested in Armenian life and letters; and for all devotees of justice who believe, with the late Gladstone, that "To serve Armenia is to serve civilisation."

Yearly Subscription, $2.00 in advance. Foreign countries, $2.50.

THE NEW ARMENIA, 949 BROADWAY, NEW YORK.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, May 17.

The work of the Parliamentary Inquiry Commission reminds one of Penelope's weaving. It goes on, but shows no signs of nearing completion. The only thing yet proved by it is the barefaced *chantage* carried on by "Tsar" Ferdinand and M. Radoslavoff.

The Economic Situation.

The sittings of the Municipal Council of Sofia, which have just begun, have been pretty well taken up with the question of the cost of living. Members of all parties discussed the topic, deploring the state to which the capital has been brought by the Government's negligence, and their speeches seem to have had some effect. The Government has promised to do its best, and requisitioning on an extensive scale has been ordered, so that the city may have supplies of meat and provisions. Thus, menaced in Sofia, the Government does not hesitate to pillage the rural population, which is less capable of combined action in its own defence, in order to pacify the population of the capital.

The economic situation becomes daily more precarious, and numerous deaths from starvation are reported. The military authorities are granting as little leave as possible to soldiers, because the latter frequently refuse to return to their military duties when they see the pitiable state their families are in. Of course, the Government does its best to allay the unrest by spreading reports that the war will be over before the time of harvest, etc., etc.

Negotiations with Roumania.

For a long time negotiations have been carried on between Roumania and Bulgaria for an arrangement by which goods destined for the former country and now lying at Salonika would be forwarded through Bulgaria, the latter receiving in return facilities for obtaining goods required in Roumania and in the passage of wagons of merchandise coming from Austria and Germany. Pourparlers are said to be still in progress between M. Radoslavoff and the Roumanian representative at Sofia; but it looks as if the conclusion of any agreement were impossible, so persistently do the Bulgarians indulge in their proverbial trickery and chicanery.

A Necessary Precaution.

Queen Eleonore has taken the initiative in regard to the construction of a disinfecting establishment near Sofia station. All soldiers, whether sick or wounded, will have to undergo disinfection there. The idea is a laudable one, for the state of filth in which the Bulgarian soldiers return has been a subject of amazement to and comment amongst most neutrals visiting the country.

A Very New Map.

Persons arriving from Bulgaria report that that country is full of maps which show what is to be (perhaps!) Great Bulgaria. These interesting productions are delivered free to the military, and are pasted up on many walls in Sofia. The map shows the frontiers of a Bulgaria stretching from Valona to the Black Sea, and from Diama to the Ægean. The new empire is to include all Macedonia—Greek as well as Serbian—all the Roumanian Dobruja, and the towns of Salonika, Seres, Kavalla, and Drama. It seems almost a pity that such an ingenious production should be confined to Bulgaria. It might be studied with profit in Athens, to say nothing of Albania.

May 24.

M. Radoslavoff's Activities.

The Central Committee of the Agricultural party has called a special meeting of the Parliamentary members of the party for June 4 to discuss the attitude to be taken up by the party in regard to the Déclausier affair and the sale of wheat to Great Britain. It is well known that a certain number of Agricultural members are implicated in the Déclausier affair; and, as it is quite possible that it may come before the courts, the meeting is to consider whether M. Radoslavoff, the leader of the party on the Committee of Public Supply, will do well to continue to hold that position, or whether he had better resign.

M. Radoslavoff has been very much engaged of late with M. Rizoff, Bulgarian Minister at Berlin, and M. Kosseff, Secretary-General of the Ministry of Foreign Affairs. It is thought that fresh negotiations of importance between Bulgaria and Germany are afoot.

Proposed New Stamps.

The Ministry of Finance is considering the question of a new issue of postage stamps, as a souvenir of the present war. As square, rectangular, circular, oval, and triangular forms have already been used, and as it is proposed to make these stamps symbolical of the war, and especially of Bulgaria's share therein, it is suggested that they should be cruciform. Comment is needless.

The Bulgarian Soldiery.

A traveller lately returned from Bulgaria reports that the *moral* of the Bulgarian army could hardly be worse. Absolutely nobody there wishes for the prolongation of the war, and an active agitation is carried on against the pro-German Government of M. Radoslavoff. The Government is accused of allowing the export of foodstuffs to Germany and Turkey, especially of meat, thus causing excessive prices in Bulgaria itself. These things, together with the delay in payment of war allowances to the families of men mobilized, are exasperating the troops. Desertions continue to be numerous, and shootings seem to have no deterrent effect. Finally, the Bulgarian soldiers, while poorly clad, ill-fed, and constantly hard worked, see their German "brothers-in-arms" well equipped and well nourished; and have on occasion to put up with a good many jeers and gibes from the Huns. The result is that a spirit of mutiny seems to be abroad.

LONDON SCHOOL OF ORIENTAL STUDIES.

The School of Oriental Studies has now been incorporated by Royal Charter. It will be located at the London Institution, Finsbury Circus, the necessary alterations and additions to which are reported to be nearly completed. The following is a list of members of the governing body, as set out in the charter:

The Vice-Chancellor of the University of London (Sir Alfred Pearce Gould, K.C.V.O., M.S.), ex-officio.

The Principal of the University of London (office vacant), ex-officio.

The Director of the school, when appointed, ex-officio.

Sir John Prescott Hewitt, G.C.S.I., C.I.E. (chairman), and Mr. Philip Joseph Hartog, M.A., appointed by the Crown.

Professor Arthur Berriedale Keith, D.C.L., D.Litt., of the University of Edinburgh.

Professor Edward James Rapson, M.A., of the University of Cambridge, and Mr. David George Hogarth, F.B.A., keeper of the Ashmolean Museum, Oxford, appointed by the Crown with special regard to the representation on the governing body of universities other than the University of London in the United Kingdom.

Mr. John Anthony Cecil Tilley, C.B., M.A., appointed by the Secretary of State for Foreign Affairs.

The officer for the time being in charge of the Indian subsection of the Military Operations Directorate War Office, appointed by the Secretary of State for War.

Sir Charles James Lyall, K.C.S.I., C.I.E., appointed by the Secretary of State for India.

Dr. Thomas Gregory Foster, Provost of University College, London.

Dr. Ronald Montagu Burrows, Principal of King's College, London, and the Hon. William Pember Reeves, Director of the London School of Economics, appointed by the Senate of the University of London.

Sir Marcus Samuel, Bart., appointed by the Corporation of the City of London.

Mr. Harry Evan Auguste Cotton and Mr. Henry Cubitt Gooch, appointed by the London County Council.

The Right Hon. Lord Reay, K.T., G.C.S.I., G.C.I.E., appointed by the Council of the Royal Asiatic Society.

Professor Thomas William Rhys Davids, LL.D., D.Sc., of the University of Manchester, appointed by the British Academy.

Sir Albert Kaye Rollit, LL.D., D.C.L., appointed by the London Chamber of Commerce.

The school will have its home at the London Institution, Finsbury Circus. It will be remembered that by a special Act of Parliament the London Institution was transferred to the Office of Works for the purpose of the school, and that the Government has allotted a sum not exceeding £25,000 for the purpose of altering the buildings and providing new accommodation. The additions and alterations, which were delayed, first, owing to the building strike and then owing to the war, are now nearly completed.

TANGIER TO TEHERAN.

With the biting winds of June howling a cheerless accompaniment to the patter of incessant rain upon my window, it is small comfort to think of the sun in Egypt. And yet time and again I find myself doing so. My mind, equally with my body, is, I suppose, heartily sick of this unnatural spell of winter in mid-June, and is seeking warmth in imagination. And yet were I in Egypt to-day, I should probably be thinking with warm affection of the chilly winds which sometimes come to us during an English summer, and would give the world, an I possessed it, for a bath of good English rain. Somewhere long ago I picked up a verse which has clung in my memory ever since, and is insistent now:—

I maintain that, as a rule, man's a fool.
When it's hot he wants it cool,
When it's cool he wants it hot,
Ne'er content with what he's got,
He's always wanting what it's not,
So I maintain, as a rule, man's a fool.

I hasten to add that this in no way applies to myself. I like the winter well enough in its place. But its place is not in June.

***

I see that arrangements are being made for the reception and boarding of a large number of Serbian boys in English families, where they will meet with boys of their own age. This is an excellent move, for more reasons than one. In the first place it is good to know that these lads, exiles from their own country, will be well housed and properly treated; and if, as I believe to be the case, the cost is to be a national charge, every ratepayer will feel that he is taking his part in acknowledging the heroism of our gallant Balkan allies. Again, it is well that Serbia, which seems destined to become the predominant power in the Balkans, should be brought into intimate connection with her Western comrades, and that her men of a future generation should be given the freest and most extended knowledge of a governing system which cannot fail to be of value when they themselves are called upon to govern. The strong natural simplicity of character which has enabled the Serbian people to mock disaster is too deeply rooted in their souls to suffer under the influences of our more material standards; it is indeed possible that our visitors will give more than they will take in this regard. If this proves to be the case, our hospitality will be more than repaid. It is impossible—with the horrible results of Prussian materialism before our eyes—to deny that, with the passing of simplicity and faith, a nation loses grip of her own soul, and to any claim to the nobility and chivalry of former days.

***

Why, I wonder, does the *Journal Officiel*, which is the Egyptian equivalent, so to say, of our own *London Gazette*, still appear with a French title? And why is so much of the matter published in French? There may be, and no doubt are, very sound reasons for this, but I cannot myself divine them. Now that Egypt has become a British Protectorate it seems to me that we might have an *Official Journal* printed entirely in English, or else in English and Arabic.

***

The particular copy of the *Journal* which I consulted (it was the issue of May 25) contained a quite fascinating list of goods lying in the Alexandria Customs House waiting to be claimed. There were many empty barrels, boxes, and cases, which probably are not greatly desired by anybody. But there were also cases of brandy and of wine, a barrel of biscuits, a case of condensed milk, and another of coffee and milk, many cases of soap, a sack of peas, another of seeds, and many other items that seem to suggest that Egypt, unlike Germany, is not suffering from any shortage of food. Eighteen cases of copies of the Koran appear to be hopelessly stranded, since the consignee is unknown; a bottle of eau de cologne, a box of cigarette papers, and a box of soap are in even worse plight, since they have no distinguishing marks whatever. The other goods listed include: Cartridge cases, ironmongery, "motor parts," "rubber rings," cotton, paints, plums, furniture, a box of calendars (1915), old clothes, and a great many other things. What strikes me as the strangest part of the business is that several of these cases appear to be marked so clearly that I should have thought there could hardly have been any doubt as to their destination. Two are for two lieutenants, whose names are given, one for the matron of a certain "British General Hospital"—number stated—and two for a "United States Consul."

***

I have on more than one occasion referred to the ancient usages of war which, after the lapse of centuries, have found regeneration in the course of the present Titanic struggle. The latest revival of ancient custom comes from the field where Russia is driving the surprised and broken enemy before her. Pits, we are told, had been dug, and in these spikes had been prepared to receive the advancing foe. The same device was used at Bannockburn, in our own country. But it does not appear to have been at all effective to stay the Russian advance on this occasion. In Africa similar methods have prevailed among savages from time immemorial for the purposes of trapping elephants and other heavy animals. It is curious to turn from the reading of an account of one battle in which asphyxiating gas, liquid fire, and other products of modern science have played their deadly part, to a battle where we recognise the first device of the human hunter. In the Kharga Oasis the use of hidden spikes was one of the principal, if not the only, means of defence adopted by the inhabitants against the raids of Desert Arabs. The village of Kharga itself was practically all sub-terrestrial. The people burrowed beneath the earth and made their homes—the "streets" had many turnings and bristled on all sides with sharply-pointed spikes set breast-high in the walls. Then when hostile Arabs appeared the local braves would only make the merest show of fight at first, but would lead them on until, in mad pursuit at the last, they dashed against the hidden defences of the underground village and were slaughtered at convenience.

***

Travelling on the Underground Railway recently I chanced to get into conversation with the man sitting next to me; he proved to be a pawnbroker, and a most interesting conversationalist into the bargain. I should not have presumed to talk his own "shop" to him, but he dived into the subject of his own accord, *apropos* of a trade paragraph in the evening paper. From him I learned the following interesting facts concerning the economical position of England, present and future. Business—his business—was hit very hard by the war. No one—his business, I may remark, was in a working-class suburb—brought things to pawn because they had plenty of money without, and no one redeemed their pledges because they preferred new things and bought them. I asked him how he proposed to go on if things continued in this manner. "Oh, that is all right," he assured me; "the people who used to pawn now come to buy jewellery, so it all balances very nicely. And directly the war is over they'll bring back the jewellery to pawn," he added, "so we'll do all right in the end." This conversation reminded me of the Egyptians and of their manner of investing their wealth in solid gold bracelets and anklets for their wives. It pleases the women, and after all there is a solid stock of gold in the house to draw upon in case of emergency. But the Egyptians are wiser than the people of our own country. The former at least know the value of the weight of gold they buy, while the latter pay large sums for tawdry ornaments of minute value, as my friend the pawnbroker will doubtless explain when his time comes. The pity of it!

***

I notice that one of the religious papers has been calling attention to the fact that the principles of Moslem belief are introduced into the teaching of the Gordon College at Khartoum. The question of religion is always a difficult one when a Christian country is called upon to administer one of a different faith, but it must be admitted that the British have been remarkably successful in this regard. The teaching of Christianity in Khartoum is not, as the paper referred to admits, forbidden, but it is an offence under the law to proselytise among children without the consent of their parents and guardians. Subject to this consent, any child may be trained in a Christian school and receive full instruction in the Christian faith. Among the pagan tribes of the South missionaries are given an entirely free hand in this respect. Now, while it is natural enough that the limitations of Christian teaching and the support given by the Government to Islam in the schools should be the subject of complaint to a paper published solely on religious grounds, it is certain that those complaints would not, upon full investigation, receive the encouragement of a single important Church dignitary of any creed in England. Methods of proselytising such as this paper would seem to suggest would inevitably lead to trouble and a resort to arms, eventualities against which every Christian is anxious to guard. The safest, and indeed the only rational, way of dealing with these people who are entrusted to our guidance is to allow them the fullest knowledge and benefit of their particular faith, while, by example and the exercise of a rigid standard of justice, we lay our own open to their inspection and regard. In passing, I may mention that the books used in the Gordon College and preparatory schools of the Sudan were not prepared by order of the "Anglo-Egyptian" Government, but by the Sudan Government, which is an absolutely different thing.

NEAR EAST BOOKSHELF.

EARLY CIVILIZATIONS: EAST AND WEST.*

Professor Elliot Smith's book is an elaboration of his John Rylands lecture, and, small as it is in compass, it contains much valuable information and many most suggestive points, even theories.

Professor Elliot Smith indicates, first of all, the complexity of Mediterranean history, and the extreme difficulty of deciphering therein the story of Egyptian influence. We may add here that, strange as it may seem, there is as yet no written history of the Mediterranean, old and new! The subject might and should make a notable volume, or even a series. But his main thesis is that "the essential elements of the ancient civilizations of India, Further Asia, the Malay Archipelago, Oceania, and America" arose from maritime and commercial intercourse about 800-600 B.C., and gradually spread "from the Eastern Mediterranean to America." He gives an interesting list of items in such civilization, ranging from sun worship and megalithic monuments to the Swastika and Couvade. The distributors, however, of these various items were, according to him, Phœnicians; absorbing themselves everything that appealed to them, they diffused what they had learnt on the different littorals which they visited. Art, building, worship, tribal customs, sport, industrial methods, all were swept into the Tyrian net, to be redistributed—at a price, no doubt!—throughout the ancient world. However, the Phœnicians were not, so to speak, the sole agents, but rather the supervisors of the propaganda: recruiting, as they did, their merchant service from skilled sailors of whatever nation, they left the specialized branches—the items, in fact, of civilization—to the care of these latter. The professor gives countless instances, all of which are worth study, and in the main it is hardly possible to reject his careful data.

In one point, however, we cannot wholly accept his conclusions. We can agree that his cultural wave affected all countries and actually remodelled—and was remodelled by—India, the Malay Archipelago, and certain other parts of the world, even a part of Pre-Columbian America. But we cannot accept his dates for the more ancient monuments of Yucatan, the more so when we consider the illustrations he gives in confirmation of these (Figs. 5, 6, and 7). The Palenque Sanctuary is so elaborate as to suggest centuries of development, and the only support we can assume for Professor Elliot Smith is to imagine that South America began her instruction and developed it from, and not before, the arrival of his Phœnician mariners, who must, moreover, have brought with them several expert draughtsmen and architects. But surely much of South American art dates from far further back than the eighth century B.C.!

We are inclined to suggest that the key to the early connection of East and West is to be found in the earliest Minoan and Island civilizations, even as early as the twelfth Egyptian dynasty, a period of paramount effort both in art and in oversea enterprise. Professor Elliot Smith forgets apparently, when speaking of Queen Hatasu, her terraced temple, and her expedition to Punt, that she copied not only the temple, but also the expedition—in truly royal plagiarism—from Menthuhotep. We are disposed, moreover, to believe in the independent development of races on much the same lines, with certain interacting influences, and not in the sudden slavish obedience of one nation to another. The solar myth is an instance of the way in which certain thinkers insist on subordinating the initiative of primitive humanity, and scientists should beware of falling into the traps that have caught so many of their lesser confrères. The attributed age of early Peruvian pottery should be a sufficient warning in the present case against the idea of a wholly uncivilized and hopelessly receptive American seaboard.

To sum up, we are inclined to regard the professor's "cultural wave" as a renaissance rather than a commencement. but, in any case, we recommend this little book most strongly to all who take an interest in early civilizations and their interaction.

R. F.

MORE "NIGHTS."

"Stamboul Nights," by H. G. Dwight, published by Doubleday, Page and Co., is a collection of short stories dealing with Constantinople and its environs, most of which have appeared in monthly magazines in America. Mr. Dwight tells the tales in that rather whimsical style which he has made distinctly his own, and, like all his other writings, they are treated with much care and polish. The stories are sometimes woven around events which have actually taken place, as, for instance, "The House of the Giraffe," which tells the story, thinly veiled, of the notorious Fehim Pasha, who, on the outbreak of the revolution in Turkey in 1908, was banished to Brusa, where he was eventually torn to pieces by the mob. In "The Leopard of the Sea" we have a story of the adventures of the old Turkish gunboat "Palenk-i-Bahrie," and "The Golden Javelin" is connected with the discovery at Sidon of the Alexander Sarcophagus. The best story is, perhaps, "The Pasha's Garden," a somewhat grim tale of a Pasha married to a European wife, and how he dealt with a personage, to the reader unseen and unknown, whom he suspected of trifling with his wife's affections.

The book should make a special appeal to those who are familiar with the people and scenes so vividly described by Mr. Dwight; indeed, in some cases the author carries his local colour and topical allusions so far as to render them sometimes almost unintelligible to those to whom the East is still a closed book. This is, perhaps, because Mr. Dwight is so steeped in the atmosphere of Constantinople that he may forget that he is not telling his stories only to his friends who so fully understand and sympathise with him. Who but one who knows Turkish sufficiently well to know the trick of repeating a word, only changing the first letter to "m," would understand why the Pasha's servant talks about "wives, mives"? But the stories, anyhow, make delightful reading, and we wish Mr. Dwight every success with this his latest volume.

* "The Influence of Ancient Egyptian Civilization in the East and in America." G. Elliot Smith, M.A., F.R.S. (Longmans. 1s. net.)

BOOK NOTES.

Messrs. Blackwood will publish very shortly "From the Gulf to Ararat: An Expedition through Mesopotamia and Kurdistan." The author, Mr. G. E. Hubbard, was secretary to the British section of the Turco-Persian Frontier Delimitation Commission, and was unfortunately wounded in an attack on the Commission, as our readers may remember. His book covers ground of great interest, and as he had facilities for collecting information denied to most European travellers, it is likely to be in considerable demand.

Another book to be issued very shortly by the same firm is "Across Asia Minor on Foot." by W. J. Childs. It will be illustrated, and its price 10s. 6d. net.

BOOKS RECEIVED.

Histoire des Roumains de Transylvanie et de Hongrie. By N. Iorga, Professor at Bucharest University. Two vols. (Bucharest: Joseph Göbl's Successors, 20, Rue Paris. 5 frs. the vol.)

The National Music of Poland: Its Character and Sources. By Marguerite Walaux; with an Introduction by Emil Mlynarski. (George Allen and Unwin, Limited, for the Polish Information Committee. 6d. net.)

Poland Ravaged and Bereaved! By Countess Julia Ledochowska; with a Preface by Henryk Sienkiewicz. (The St. Catherine Press, for the Polish Information Committee. 6d. net.)

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

17	4	Saturday.....	15	16
18	5	Sunday	16	17
19	6	Monday	17	18
20	7	Tuesday	18	19
21	8	Wednesday	19	20
22	9	Thursday	20	21

Under date of June 8, Reuter's Bordeaux correspondent reports:—On the occasion of King George's birthday King Nicholas of Montenegro sent his Majesty the following message:—"I beg your Majesty, on the occasion of your birthday, to accept my most sincere wishes for the welfare of yourself, your people, and your arms on sea and land. Praise be to Heaven for having granted your glorious Fleet a victory over our common foe."

King George replied as follows:—"I warmly thank your Majesty for your very kind congratulations, and beg you to accept my best wishes for your happiness. Your words have much touched me. I am happy to say that my Fleet still holds the mastery of the sea, and has forced the enemy to seek refuge in his ports."

A Reuter's message from Bucharest states that King Ferdinand of Roumania has returned to Bucharest from his trip on the Danube.

Lady Maxwell left London for Ireland on Wednesday.

We understand that Sir Frank Benson and Lady Benson are shortly taking over duties at one of the hospitals at Salonika at which Serbians are treated.

Mrs. Parker, sister of Lord Kitchener, has been the recipient of innumerable letters and telegrams of sympathy in her personal loss. The King sent her the following telegram:—

"Buckingham Palace, S.W.

"While the whole nation mourns the death of a great soldier, I have personally lost in Lord Kitchener an old and valued friend, upon whose devotion I ever relied with utmost confidence. To you and the members of your family I desire to express my heartfelt sympathy in the loss which has befallen you under such sudden and tragic circumstances.

"GEORGE, R.I."

Queen Alexandra sent by hand a personal letter of deep sympathy.

Sir Arthur Nicolson will take the title of Lord Cardock.

In connection with the successful operations in Darfur and the occupation of El Fasher, the Governor-General of the Sudan, Sir Reginald Wingate, received telegrams of congratulations from H.M. the King, H.H. the Sultan of Egypt, H.R.H. the Prince of Wales, Earl Kitchener, Sir Henry McMahon, and General Sir Archibald Murray.

On Monday, at Westfield, Farndon, Newark, the wife of Mr. H. J. Higgs, of the Egyptian Irrigation Service, and Special Reserve of Officers, R.E., gave birth to a daughter.

A marriage has been arranged between Captain Ralf Sumner Gibson, R.M.L.I. (attached Egyptian Army), second son of the Right Rev. the Bishop of Gloucester, and Anne Christina, second daughter of the Rev. E. R. Bernard, of High Hall, Dorset, Chancellor of Sarum and Chaplain in Ordinary. The marriage will take place very quietly towards the end of June.

The British Red Cross Society has received information from the Ottoman Red Crescent Society that Lieutenant Lord Elcho, who was officially reported missing early in May, is a prisoner at Damascus. Lord Elcho, who is the eldest son of the Earl of Wemyss, was in the same regiment as Lord Quenington, who died of wounds received, and was reported missing after the engagement at Katia.

As reported in another column, a very strong committee has been formed in London for the purpose of organizing a demonstration in honour of Serbia on "Kossovo Day" (June 28). Dr. Elsie Inglis is chairman, and the members of the committee are:—The Lady Cowdray, Lady Grogan, Lady Paget, the Hon. Mrs. Haverfield, Dr. Dickinson Berry, Mrs. Kinnell, Mrs. St. Clair Stobart, Mrs. Carrington Wilde, Mr. James Berry, F.R.C.S., and the Rev. Percy Dearmer, D.D. The hon. treasurer is Mr. F. C. Lindo, and the joint hon. secretaries are Mr. R. W. Seton-Watson, D.Litt., and the Rev. H. J. Fynes-Clinton.

A Bucharest telegram reports that the Roumanian Academy has elected M. Pulieni, a well-known scientist, as its president.

Admiral Sir Frederic Inglefield, K.C.B., who has been placed on the retired list at his own request, served in Egypt in 1882, receiving the Medal and Star, and at Suakin, 1884-85.

Admiral Sir Arthur M. Farquhar, another Admiral who has been placed on the retired list at his own request, commanded H.M.S. Renown when she conveyed the Duke and Duchess of Connaught to Egypt for the opening of the Assuan Dam.

On June 7 a banquet was given in Bucharest in honour of M. Take Jonesco and other leading Roumanians who surrendered their Austrian decorations. Over five hundred guests attended, including many ex-Ministers, members of the Chamber, and distinguished officers.

Vice-Admiral E. C. T. Troubridge, who has just been promoted to that rank (from Rear-Admiral), was recently in charge of a naval brigade in Serbia, where he and his men did most valuable work, and won the heartiest admiration of our brave Allies.

Sir Percy Molesworth Sykes, K.C.I.E., C.M.G., whose entry into Kerman at the head of a force of Military Police has given rise to so much satisfaction, is undoubtedly "the right man in the right place." Formerly an officer in the 2nd Dragoon Guards, he has been employed on diplomatic work in Persia for many years, and his knowledge of the country and his real sympathy with its people fit him admirably to deal with what is admittedly a somewhat difficult problem. In 1899-1901 he served in the South African War, and was afterwards transferred to the Indian Army. His diplomatic work in Persia has included service as Consul for Kerman and Persian Baluchistan, as British Assistant Commissioner on the Perso-Baluch frontier, the establishment of a Consulate at Seistan, and as Consul-General at Meshed and at Kashgar. He was made a K.C.I.E. in June of last year. He is the author of a fine "History of Persia" and of other works of value on the country.

The Earl of Cromer, feeling that he has throughout his life derived the utmost benefit and instruction from Greek writers, and being strongly of opinion that in the national interest it is most desirable that the teaching of the Greek language and study of Greek literature should continue to form part of the educational system of this country, has offered to the British Academy the sum of £1,000 to be held in trust by them for the purpose of establishing an endowment, the annual interest of which should be applied as a prize for the encouragement of Greek study, and specifically for the best essay on any subject connected with the language, history, art, literature, or philosophy of Ancient Greece, the Academy having the function of deciding as to the nature of the subject. The Council of the Academy have accepted Lord Cromer's gift.

APPOINTMENTS, PROMOTIONS, ETC.

A Bucharest telegram to the *Frankfurter Zeitung* says that the Greek Minister, M. P. Psycha, has been recalled "owing to his anti-Royal policy," and that he will be replaced by M. Rangabe, from Copenhagen.

Under date of May 27, our Cyprus Correspondent reports:—The new Vice-Consul for France, M. Margarot, has arrived in the island and taken up his duties.

Major Sir F. C. R. Price, Bt., Glamorgan Yeomanry, has been attached to the Egyptian Army, as a Special Service Officer, with the temporary rank of Bimbashi, and has been attached to the Camel Corps for duty.

Lieutenant J. Donald, Royal Army Medical Corps, has been attached to the Egyptian Army, as a Special Service Officer, with the temporary rank of Bimbashi, and has been attached to the Medical Corps for duty.

El Kaimakam J. A. Pollock Bey, Officer Commanding 11th Sudanese, has been struck off the strength of the Egyptian Army.

A Berlin telegram reports that the former Turkish Minister at Athens, Mukhtar Bey, who was lately Under-Secretary for Foreign Affairs, has been appointed Turkish Minister at The Hague.

Mr. Day, formerly secretary of the New Egyptian Company, has been appointed London manager.

OBITUARY.

Lieutenant Eustace N. G. Maton, R.N., who lost his life in the sinking of H.M.S. Tipperary, had seen service on the East Indian Station from July, 1910, to September, 1912, during which period he served as sub-lieutenant in H.M.S. Proserpine. He was awarded the Naval General Service Medal with the Persian Gulf clasp. Promoted lieutenant in April, 1912, he served in the Lord Nelson, and entered his Majesty's Navigation School at Portsmouth, in February, 1913, passing out in June, 1913, when he was appointed to the Collingwood. In September, 1913, he was appointed first and navigating lieutenant in the Scourge, and was serving in her in the Mediterranean when the war broke out. In September, 1914, he was present at the bombardment of Akaba in the Red Sea.

The death of Lieutenant-Colonel Charles James Robarts, late of the Indian Army, occurred last Friday at The Moorings, Fleet, at the age of sixty-six years. Colonel Robarts saw active service in the Afghan War of 1879-80, being awarded the medal, and in the Egyptian Expedition of 1882. He was in the action of Kassassin and the battle of Tel-el-Kebir, and received the medal with clasp and the bronze star.

The death is announced from Cairo of Mr. Patrick Plunkett, whose residence in Egypt dates back to the time when, as sergeant-major, he was selected to assist in the reform of the Egyptian Army under Sir Evelyn Wood. He held the Khedive's Star, and several medals for service in the country, and was confidential clerk to Lord Kitchener before the latter left for South Africa.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

INNES.—On May 26, at Suez, Egypt, the wife of Walter Innes, of twins, boy and girl.

MARRIAGES.

LOVEDAY—TARNOSCHI.—On June 10, at St. Saviour's, St. George's Square, S.W., by the Rev. Francis K. Aglionby, D.D., Alexander Loveday, fifth son of the late J. E. T. Loveday, of Williamscote, near Banbury, to Nathalia Irena Tarnoschi, eldest daughter of Colonel and Mme. Tarnoschi, of Jassy.

FOX-STRANGWAYS—MAZARAKI.—On April 8, at Port Said, Walter Angelo Fox-Strangways, Levant Consular Service, son of M. W. Fox-Strangways, C.S.I., and Mrs. Fox-Strangways, of Ardmore Cottage, Parkstone, Dorset, to Laure Georgine Emilie, daughter of E. G. Mazaraki, treasurer Suez Canal Co.

Digitized by Google

LORD KITCHENER.

MEMORIAL SERVICE AT ST. PAUL'S.

The King and Queen were present at the memorial service for Lord Kitchener, which took place at St. Paul's Cathedral on Tuesday. Queen Alexandra, accompanied by Princess Victoria, were also present. The Grand Duke Michael and two Staff officers represented H.I.M. the Emperor of Russia; the Queen of Norway was represented by Colonel Sir Henry Knollys; Sir Sidney Greville represented the Prince of Wales; and Lieutenant-Colonel Sir Malcolm Murray represented the Duke of Connaught.

Amongst the members of the Diplomatic Body present were: the French, Russian, and Japanese Ambassadors, the Serbian and Portuguese Ministers, and the Ministers of Greece, Persia, and Roumania. The Sirdar and the Egyptian Army were specially represented.

Special seats were reserved for Commander Kitchener, R.N., and Captain H. H. Kitchener, R.F.C., nephews, and for Mrs. Parker and Miss Kitchener, sisters of the late Field-Marshal, and for other relatives and personal friends.

The members of the Board of Admiralty and the Army Council were present, and Field-Marshal Sir Evelyn Wood, Lord Grenfell, Lord Nicholson, and Viscount French. In the seats reserved for Cabinet and ex-Cabinet Ministers were the Prime Minister and Mrs. Asquith, Mr. and Mrs. Lloyd George, Mr. Balfour, Sir Edward Grey, Mr. Austen Chamberlain, Lord Buckmaster (Lord Chancellor), the Earl of Rosebery, Mr. Walter Long, Earl Curzon, Mr. Herbert Samuel, Viscount Haldane, Mr. Harcourt, Mr. McKinnon Wood, the Earl of Selborne, Lord Robert Cecil, Mr. Masterman, Mr. Winston Churchill, Viscount Morley, and the Speaker and Mrs. Lowther. The Duke of Devonshire was also present.

WORLD-WIDE TRIBUTES.

A memorial service was held at Salonika attended by General Milne and his Staff, the Duc de Mouchy, representing General Sarrail, General Boyovitch, the Serbian Commander, General Moschopoulos, Commander of the 3rd Greek Army Corps, and Mr. Wratislaw, British Consul-General.

The British Minister and the staff of the Legation at Athens attended a service which was held at the local English Church in memory of Lord Kitchener.

A telegram from British Headquarters received through Reuter's Agency states that General Sir Douglas Haig has issued a special Order of the Day containing the following telegram:—From General Marchand to General Sir Douglas Haig: "I desire to express to you with sincere respect my regret at the news of the cruel blow that has fallen upon our valiant comrades of the British Army in the death of Field-Marshal Lord Kitchener of Khartoum. I personally feel deeply the bitterness of the loss which is sustained by Great Britain and France in alliance."

The following telegram was received by the War Office from the General Officer Commanding-in-Chief, Egypt:—

"CAIRO, June 13.—A memorial service for Lord Kitchener was held at 6 p.m. to-day in the Kasr-el-Nil Barracks, Cairo, and attended by the High Commissioner, Prince Fuad, representing the Sultan, the Diplomatic and Consular representatives of all Allied and neutral Powers, the Egyptian Ministry, the ecclesiastical heads of the Christian, Jewish, and Mussulman faiths, representatives of the official and non-official British and Allied and neutral communities, 400 Egyptian notabilities, British and Egyptian troops, the representative of the Sirdar, and myself and staff and representatives of the force in the field. I have been greatly impressed with the eager desire of all branches of the whole community of Egypt to take part in this ceremony and the affection and respect with which Lord Kitchener's memory is cherished."

M. Vidovitch, President of the Serbian Council of Ministers, sent the following message:—

"Profondément ému par la nouvelle de la mort tragique du Lord Kitchener, je m'associe avec tous mes collègues du cabinet à la grande douleur qui frappe la noble nation anglaise en la personne de son grand soldat et homme d'état, et je prie votre Excellence de vouloir bien agréer nos condoléances les plus sincères. VIDOVITCH."

The following are some of the messages which have been received from the Near East. The General Officer Commanding in Egypt telegraphed in the following words:—

"The troops under my command have learned of the death of Lord Kitchener with the deepest regret, a feeling that we know is shared by the country for which he had done so much, and where he laboured so untiringly. All ranks of the armies recently created under his auspices share the feeling of confidence that inspires us all in the certainty of the eventual victory which his great work as Secretary of State for War has brought within measurable distance of accomplishment."

Other Egyptian tributes included the following:—

"The Egyptian students of the University of Bordeaux, profoundly moved by the glorious death of Lord Kitchener, the revered friend of the Egyptian people, associate themselves in the most heartfelt way with the sorrow which has befallen the noble Allied nations.—For the Egyptian students of Bordeaux, ELIE MUSCAT."

The General Commanding the Expeditionary Forces in Mesopotamia telegraphs from Busreh:—

"The officers and men of the Expeditionary Force in Mesopotamia desire to express their deep feeling of grief and regret at the loss which the whole Empire has sustained in the death of Field-Marshal Earl Kitchener. The following telegram has been received by me from the senior naval officer in Mesopotamia:—'We, the officers and men of the Royal Navy associated with your Army, desire to offer our profound sympathy and deep regret at the loss sustained by the Empire in the death of Field-Marshal Lord Kitchener.'"

FUNERAL OF COLONEL FITZGERALD.

The funeral of Colonel Fitzgerald, Military Private Secretary to Lord Kitchener, took place with full military honours at Eastbourne on Saturday last. Alone among the members of the Staff which accompanied the late Secretary of State for War on his fateful voyage to be given up by the sea, the body of Lord Kitchener's closest friend rested for a brief period in St. Matthew's Church, Westminster, where a short service was held in the presence of a few relatives and personal friends and of representatives from the War Office.

A bearer party from the Scots Guards carried the coffin from the church to Victoria Station, where it was placed in a reserved saloon for Eastbourne, together with a number of wreaths sent by friends of the late officer. Lord Esher, General Sir John and Lady Maxwell, Colonel and Mrs. Ricketts, Lord French, Mrs. Parker (Lord Kitchener's sister), Captain and Mrs. Meredith of Thurso, Lord Derby, the Duchess of Portland, Lady Drummond, Colonel Wigram, and the regiment to which Colonel Fitzgerald had belonged were amongst those who sent wreaths.

Large crowds had assembled to pay a last tribute of honour to the memory of Colonel Fitzgerald and his illustrious chief at Eastbourne, where the body was borne to All Saints' Church, which stands only a few yards from the late Colonel's residence of twenty years. At this church the Bishop of Chichester officiated at the first part of the burial service, and subsequently a vast procession, headed by Brigadier-General Colomb, marched with its bands through densely crowded streets to Ocklynge cemetery, where the body was laid to rest beside that of his father, Colonel Sir Charles Fitzgerald.

The King was represented by Lieutenant-Colonel Clive Wigram; the Army Council by Captain Earl Percy; the Imperial General Staff by Lieutenant-Colonel Buckley; Lord French by Lieutenant-Colonel A. F. Watt; Sir Douglas Haig by Major Parker, and General Sir John Maxwell by Prince Alexander of Battenberg. The Duke of Devonshire represented the First Lord of the Admiralty, and Lord Derby was also present. Lieutenant-General Sir E. Locke Elliot represented Sir John Nixon, while the French, Russian and Italian Governments and Armies were also represented.

PALESTINE EXPLORATION FUND.—The Annual General Meeting will be held (for business purposes only) at the office of the Society, 2, Hinde Street, Manchester Square, W., on Thursday, June 22, at four p.m. There will be no special Address.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.
Σχολὴ Γλωσσῶν. Διδασμαλία συστηματική.

PEACE IN THE SUDAN.

Gordon once described the Sudan as "one of those countries which are to some degree civilised, and which, if properly governed, are quiet and orderly." The occasional minor border troubles and internal uprisings, such as the recent abortive outbreak of the Sultan of Darfur, merely serve to accentuate and throw into bolder relief the general peacefulness of the vast territory—measuring nearly a million square miles in area—known as the Anglo-Egyptian Sudan. While the greater part of Europe is convulsed in war, the most destructive and the most horrible, the Sudan has remained almost throughout its entire length in the enjoyment of a political peace and material prosperity unexampled during its long and varied experience of alien rule. This remarkable transformation in its affairs has come about without *réclame*, without noise, almost without remark, the result of sixteen years of sound and honest administration. As Lord Rosebery has reminded us, "The British Empire is the greatest secular agency for good known in the world," and what has been effected in the course of sixteen years in the Sudan provides further evidence of the contention. The simple facts related in the official telegrams received from the Sudan afford but little insight into the actual conditions prevailing in that country of limitless desert, difficult mountain passes, torrential rivers, and vast distances. They tell in the coldest language of the heroic actions of the skilful British officers who administer the country or of those who occasionally carry out the necessary punitive operations, or of the splendid services rendered by the Egyptian troops under their command. But that a victory so complete and practically bloodless should have been gained over the turbulent Sultan of Darfur, and that comparative quiescence should already have come to his long-troublesome territory, are assuredly the most telling proofs of the control secured by the Sudan Administration over the enormous tract of country entrusted to its care. Now that the worst has happened, it may be safely assumed that the whole of Darfur will at no distant date be brought under the same excellent form of government as the rest of the Sudan, and that its people, given the same privileges and benefits as the rest of the population, will settle down contentedly under the new régime.

It is difficult for those who know but little of the Sudan and of its form of administration to comprehend the onerous and often discouraging nature of the task imposed upon the officials. Lord Cromer, while filling the position of British Agent and Consul-General in Egypt, observed at the conclusion of one of his official reports, that "in order really to appreciate the zeal and intelligence which the various officials in the Sudan are bringing to bear upon their work it would be necessary not merely to read their reports, but to visit the remote and inhospitable localities in which their work is conducted." The mental strain which is entailed upon them, occasionally very severe, might be referred to with equal justice. Sometimes a hundred miles or more will separate their headquarters from the nearest white man's habitation, and months may elapse before a friend's face is seen; the nearest telegraph is likewise possibly many miles distant, while mails are but rarely received. A single officer placed in charge of a district, extending over an area of some six thousand miles, may have no more than twenty or thirty native troops to assist him in maintaining order among a population of, perhaps, fifteen or twenty thousand, composed of various distinct tribes, several of which may be at enmity with one another, and among whom petty larceny is a very common form of crime, demanding continual watchfulness. Murders are rarer, but still not infrequent; the authority of the British official alone stands between the criminals and their victims. Occasionally, as already stated, a punitive expedition must perforce be entered upon in order to vindicate the authority of Government which has been defied, and in connection with such an undertaking the discretion of the officer in charge is put to a severe test. Headquarters would scarcely be pleased were any armed interference to be entered upon lightly; nevertheless, action, if taken at all, probably calls for urgency; an officer may entertain doubts concerning the subsequent approval of his superior, but prompt and vigorous measures may well mean the instant repression of a tribal disturbance which, if left undealt with even for a few hours, may develop into trouble calling for wide measures of repression. Herein lies the opportunity of the responsible official to show his powers of discrimination, and it speaks eloquently for the generally dependable character of the officials employed that so few among them have been found lacking in this essential.

Recollecting the fact that the majority of the troublesome tribes in their native fastnesses possess almost complete security from aggression upon the part of the authorities, and armed, as they mostly are, with European weapons—relics of the plunder seized from other tribes, or supplied, in spite of official watchfulness, by German agents—it is surprising that there should have been so little evidence of resistance to the demands of Government, and so great a respect shown to its silent and almost unobtrusive authority. But for the constant preparedness of the Administration and the dexterous manner in which its far-away officials deal with the natives under their charge, much more might have been heard of disturbances which arose in recent years in several of the Provinces. Thanks to the vigilance of the local authorities and the prompt measures taken to guard against surprises, however, none of these local commotions was allowed to interfere with the generally calm and uninterrupted progress of the Sudan. Towards a peaceful and prosperous future for the country nothing has contributed more effectively than the provincial administration entrusted, for the most part, to comparatively young men, civil and military. The great secret of their success in handling an always difficult and sometimes a grave situation may be found in the confidence reposed in them by the Chief Executive in Khartoum, once convinced that such confidence is deserved. As our greatest Pro-Consul, Lord Cromer, once declared—"All that is wanted for our Sudan officials is to give them a little friendly guidance on matters of principle, and then mainly leave them alone. They will, of course, occasionally make mistakes, in which case their superiors have to get out of the difficulty as well as they can, and should always, if it is at all possible to do so, afford them strong support in public. But such mistakes, even when they occur, are of slight importance compared with the advantage gained by leaving them free agents, and not deadening their sense of responsibility by constant interference and orders on matters of detail." No one better understands the value of adopting this very sound and sensible policy than the Governor-General of the Sudan; of all the chief administrators of our far-distant possessions probably no one among them more thoroughly imbues the junior officials with greater confidence in him and in themselves; for, as La Rochefoucauld declared—"*la confiance que l'on a en soi fait naître la plus grande partie de celle que l'on a aux autres.*"

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

LORD KITCHENER AND PALESTINE.

By ESTELLE BLYTH.

The tragedy of June 5 is still too close to us for any true value to be set upon the supreme figure that is its centre. Stunned as we are, we can only realise as yet the magnitude of our loss. It will be years before we can adequately sum up the achievements, the genius, the patience, the self-control of the great statesman and soldier who served England for forty-five years. Lord Kitchener had slipped beyond our ken before most of us knew that he had even left England; but the grand completeness of his work and character is now his own sure guarantee to his fellow-countrymen that he would never have quitted England for an hour had he not left all so perfectly ordered that another hand could take up where he left off, and carry on. There will be soreness of heart for us all in the remembrance of recent despicable attacks upon him by a section of party Press and party opinion, to whose base minds the only test of worth or achievement is just the one dirty test of money; we are all ashamed that *English* men, under whatever influences, could so degrade themselves. And we shall offer a tribute of reverent sympathy to our King in a loss that strikes him with double force as Sovereign and as man.

But the blow has an added significance to all who have ties of any sort with the Near East. Few men knew so much about the Debateable Lands classed under that heading; he knew them intimately, with all their fascinating complexities of race, religion, and politics, long before he was called upon to assume any rule over them. There was in him a strong vein of imaginative force; it comes out in all his writings, illumining the clear-cut, often terse, sentences in which he expressed himself. Here are a few examples, taken absolutely at random from the "Quarterly Statements" of the Palestine Exploration Fund. "The country is now very lovely, carpeted with flowers and green with the growing crops" (March, 1877). Have we not seen the beauty of the land in spring? "The hills on the eastern side (of the Lake of Galilee) have an almost level outline, scarcely broken by any valley of importance, and decidedly monotonous in appearance; still, the bright sunshine throws a rosy haze over the country, and the contrast with the bright blue water is very beautiful. The best views of the lake are from a distance on the many heights from which it is visible; as thus seen in the evening it is particularly lovely. Deep blue shadows seem to increase the size of the hills, and there is always a rosy flush in the sky and on snow-clad Hermon." "The village (of Banias) is completely surrounded and shut in by trees of all sorts, and looks remarkably green and lovely with the castle of Subeibeh towering above it. On approaching the village the rushing water (Nahr Banias) is seen falling over cascades, tearing through thickets, and almost hidden by creepers. . . . A bridge crosses the stream before the town. . . . Little streams seem to be running in every direction, cooling the air and making this one of the loveliest spots in Palestine." This was Kitchener, and the land he wrote of Palestine—a land in which a later traveller—never to be forgiven—saw only what was lifeless, despairing, and desolate. Here, too, is a sympathetic little bit about the people, which might have been written yesterday. "The people complain of being short-handed, owing to the large numbers that have been taken away for military service. The second ban and some of the third ban of redifs have been called out, and the people fear lest the Muharfez, or Landwehr, may be required. Old men and women have to take their places in the fields, and when the harvest time comes it will be very difficult to gather in the crops."

Those who loosely termed Lord Kitchener a man of iron, a sphinx, dry, harsh, a man of action only, overlooked this quality, but no great man is without it; we call it variously imagination, sympathy, romance, insight, poetry; perhaps Vision expresses it most nearly; it is a supreme asset in dealing with the East. To this quality in Lord Kitchener the East appealed very greatly; he understood the atmosphere and the temperament of the East as only Englishmen can, and not all of them; despite his clear-cut notions, his uncompromising sincerity, his contempt and impatience of anything sham or unstable, he had a wonderfully sympathetic understanding of the perplexing subtleties of the Eastern mind, and thus could judge exactly on the actual merits of a case. Europeans will often mistake the somewhat vague and expansive style of Eastern thought and speech for untruthfulness; a little imagination would help them to a clearer understanding. Lord Kitchener's known interest in the Holy Land inspired in many of us the hope that when Peace brought about the final adjustment of things he would consider Jerusalem not merely as a political unit of the Near East. There are so few now who care for her and believe in her future who have the ability to help her to its realisation.

It was in November, 1874, that Lieut. Kitchener, R.E., first saw the Holy Land. He came out to assist Lieut. Conder in the survey of Western Palestine under the auspices of the Palestine Exploration Fund. One who saw him shortly before he sailed describes him as one of the most soldierly-looking men he ever saw—tall and straight and very spare. The Survey had been in progress since 1871, Lieut. Kitchener succeeding Mr. Tyrwhitt Drake, who had died suddenly. The work went on steadily till the following July, when the little camp of English explorers was suddenly attacked by fanatics at Safed. Kitchener saved Lieut. Conder's life by intercepting a blow—as he saved him on another occasion from being drowned at Ascalon. Severe steps were taken on the energetic representations of the two officers, both of whom were hurt in the affray, and the ringleaders were imprisoned and a fine of £150 exacted from the town that had thus rudely violated every tradition of Eastern hospitality and honour. The Survey was completed in 1877, Lieut. Conder remaining in England to supervise the work then going through press, while Lieut. Kitchener returned to Palestine and finished the survey of Galilee. The results of nearly six years of arduous and devoted work were published by the Palestine Exploration Fund in the seven large volumes of "The Memoir of the Western Survey of Palestine," which, with one other book (also published by that society) include the only publications on which Lord Kitchener's name appears as an author. There are, of course, various reports by him, all admirably lucid and direct, in the "Quarterly Statements" of the Palestine Exploration Fund, and these, with some papers published in "Blackwood," are, I believe, the only literary remains of one who was a real Bible student. In 1882 Lord Kitchener surveyed Cyprus for the British Government, and in 1883 he joined Professor Hull in a Survey of Wady Arabah, which stretches for some 112 miles from the south end of the Dead Sea to the head of the Gulf of Akabah. The party passed through the Sinai Peninsula, and when the Survey of Akabah was completed Lord Kitchener returned to Egypt across the desert. The minute and accurate work accomplished in these great surveys was of incalculable value, and may be claimed as the basis of all later knowledge and research. It is not too much to say that Lord Kitchener's interest in, and grasp of, Near Eastern questions date from that November day in 1874 when, as a young lieutenant of Engineers, he landed in Palestine. He studied not only the land but the people; it may be that to his soldierly ideas of obedience and duty and discipline, the simplicity of the Moslem doctrine of resignation, and the Eastern patriarchal system generally, were very sympathetic. In later life, as he passed from one trust to another of growing importance, he never once struck a false note in his dealings with Easterns. He never forgot Palestine either. Only a very few years ago, in a letter written from Cairo to the Bishop at Jerusalem,* he said how much he "wished he could renew his acquaintance with the Holy Land," and that perhaps the opportunity would come some day. Of course, as long as he was British Agent in Egypt it was impossible, on account of the political construction that would have been put upon his visit. It is extraordinary how deep an impression those early years of work have left in Palestine; young as he was then, the people knew him to be great, and never forgot him; and his appointment to Egypt, so long afterwards, aroused in the Holy Land those bright hopes of British rule for Palestine that have been so often and so sadly disappointed. As one Moslem said, "Lord Kitchener knows this country: now he is in Egypt he has only to say, 'I am going to have Jerusalem, too,' and he can take it."

"But what would your Sultan say?"

"*He* not care!" was the contemptuous answer, accompanied by that indescribable little movement of the fingers that means "baksheesh." I quote again from Lord Kitchener's own report ("Quarterly Statement," April, 1878), written at Jerusalem. He had inadvertently entered a mosque at Amwâs with his shoes on, and had measured it. "On coming out I found a throng of people, who said it was a most sacred place, being the tomb of Sheik Obeid. I apologised for going in with my shoes on. The people were extremely civil and obliging, and though I had a Turkish soldier with me they expressed their longing that England would take the country and give them the benefits of a just government. Nothing I could say would induce them to believe that England had no intention of doing anything of the sort." The same memory of his greatness lingers in Cyprus, too. The house in which he stayed in Nicosia was carefully pointed out to me in 1910, with the information that the owner, a Greek, was so much impressed by the personality of the visitor that he always declared he would

be a great man some day, and faithfully kept Lord Kitchener's room as far as possible as it was when he had used it.

Our great dead has not been given back to us, to bury out of our sight. We are denied the sad privilege of offering that last tribute of reverence and mourning. But his imperishable memory is a heritage for all ages to the Empire he served and helped to weld in one; and, for the rest, his body, lying under the sea, is no less in England's keeping—

"Nothing is here for tears, nothing to wail
Or knock the breast; no weakness, no contempt,
Dispraise, or blame; nothing but well and fair,
And what may quiet us in a death so noble."

(*Samson Agonistes.*)

[The quotation from the "Quarterly Statements" of the Palestine Exploration Fund are by kind permission of the Society.]

LETTERS TO THE EDITOR.

FRIENDS OF ARMENIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—A very interesting letter, dated Van, Turkey in Asia, April 21, has just been received by us from Mr. Gracey, lately one of our colleagues in Turkey, and now attached, with Dr. Macallum, late of Marash, to the American Committee assisting in the repatriation of the Armenian refugees to the conquered districts of Turkey. He tells us that the kind-hearted Russian Governor in Van is assisting him and his colleagues to the best of his ability. The General-in-Command, however, desires them—for military reasons—to buy the necessary oxen, seed, grain, etc., in Persia, and Dr. Wilson, chairman of the Committee, and a colleague are now in Khoi on this errand. About 100 men are employed on relief work in Van, of which the need is very imperative, and the cleaning of the city will give employment to yet a large number, thus solving a part of the great problem by making a portion at least of the people self-supporting. With reference to the condition of the city, I cannot do better than quote Mr. Gracey's own words: "I plan to leave here for the villages to-morrow to distribute the first 120 oxen and some barley seed. Dr. Macallum will remain here to look after the supplies, while I go the round of the villages on horseback. We are hoping to begin some time next week to clean up this city for its thirty thousand inhabitants. Over 800 houses and 500 small shops have been burned down or else the woodwork gutted out. The place is in an extremely filthy condition, and may become a hotbed of disease to our emaciated people.

"This, and trying to rehouse our people in some small way, will require tremendous effort and capital. You, I know, dear friends, will come to our help in this way in the present as you have always done in the past. We plan to start chicken farms and teach the people how to look after them—also pigs. And with starting up the workmen, all grades of people will be helped."

I like the way Mr. Gracey speaks of "our people." He, in common with all who have assisted them, has a protective, parental regard for them, and longs for their well-being. And so it will be seen that yet another enemy to the peace of these poor Armenians is threatened, but this time—God be thanked—it can be overcome by determined will and organisation, and these our two friends possess in abundance. A third factor is also imperative—money, whereby the sordid, unhygienic present conditions may be turned into healthy and cleanly ones.

There is complete security from Turks and Kurds in these districts, and we may hope that in the not far distant future, with the help that sympathy and unselfishness and devotion will bring, this much-tried people may see their homes restored and smiling fields and gardens giving of their abundance, to atone, in some small degree, for the sorrows and bereavement and sufferings of the past. There could be no better way of using money, and the smallest amount will find its goal and contribute to the general good. We plead, therefore, once again with the generous public which has always responded to our calls so graciously to come to our help in this good work. Remittances in aid of our fund should be addressed to E. Wright Brooks, Esq., Hon. Treasurer, Friends of Armenia, 47, Victoria Street, London, S.W. Cheques and postal orders should be crossed "London County and Westminster Bank."—I am, etc.,

(Mrs.) MARY HICKSON,
Hon. Sec., "Friends of Armenia."

47, Victoria Street, Westminster, S.W., June 9, 1916.

PRIMITIVE SURGERY.

A remarkable story of surgery, primitive in method but successful in result, was told by Lady Ramsay at the meeting for the repatriation of the Armenian people that we briefly reported in our last issue. Lady Ramsay said a Greek lady living not far from Konia suffered from a morbid growth on the back of her neck. She could not hold her head up, became ill, and was in great distress. Some friends advised her to go to Smyrna, where there were excellent European hospitals with first-class surgeons. This would be expensive, but she was a woman of means, and undertook the journey. Arrived in Smyrna, she went to the English, Greek, and other surgeons; but they all declined to perform the operation, as the risk to life would be too great. She was then advised to go to Constantinople, and did so, but with the same result. Then the friend who accompanied her on her journeys said: "Don't give up in despair. I know an Armenian woman who would do the thing for you." Accordingly they went to this Armenian woman. She was not a doctor; she had no profession of any kind, but she examined the growth, and offered to remove it—and at once. Then she went out to the rubbish heap and picked up a fragment of glass. Wiping this on her skirt, she returned, set to work and cut the polypus out of the Greek's lady's neck. She found that the roots were creeping up into the head and down towards the spine, that there were in fact two growths, and that the condition of affairs was worse than she had supposed. But she was successful in the operation, and in a few days the patient returned to her home near Konia, where Lady Ramsay saw her two or three years afterwards in perfect health.

COMFORTS FOR MESOPOTAMIA FORCE.

With reference to the announcement that the Director-General of Voluntary Organizations has taken over the supply of comforts for the British troops in Mesopotamia, it is notified by the War Office that—

(1) All letters and parcels under 11 lbs. in weight should be sent by post and addressed with the usual details as to rank, regiment, etc., to

Indian Expeditionary Force "D,"
Care of India Office, London, S.W.

(2) Parcels exceeding 11 lbs. but not exceeding 56 lbs. in weight may be forwarded, carriage paid, to Devonport, addressed:

Name, rank, and regiment of addressee,
Indian Expeditionary Force "D,"
Care of Military Forwarding Officer,
Devonport.

(3) Comforts for general distribution to British troops in Mesopotamia should be forwarded under directions which can be obtained on application to the Director-General of Voluntary Organizations, Scotland House, New Scotland Yard, London, S.W.

COMFORTS FOR INDIAN TROOPS IN MESOPOTAMIA.

(4) Letters and parcels under 11 lb. in weight should be forwarded as indicated in Section 1.

(5) Parcels exceeding 11 lbs. but not exceeding 80 lbs. in weight, and subject to the following limits of size:—For cases: length 28 ins., width 16 ins., depth 14 ins.; for bales: total content, 6½ cubic ft.; for Indian units may be forwarded, carriage paid, addressed:

Name, rank, and regiment of addressee,
Indian Expeditionary Force "D,"
care of the Superintendent,
India Store Depôt,
Belvedere Road, Lambeth, S.E.

(6) Consignments, other than gifts of comforts or clothing (*e.g.*, those of a commercial character), should be sent, carriage paid, to:—

care of the Embarkation Officer,
Bombay.

(7) Consignments, except those containing goods of a dutiable nature, intended for the general use of the Indian troops of the Indian Expeditionary Forces, whether of clothing or of comforts, such as sweets, condensed milk, etc., should show on the label the name and address of the sender, and should be sent to:

care of Indian Soldiers' Fund,
11, Somerset Street, W.

The Indian Soldiers' Fund has a room at the India Store Depôt in which gifts of dutiable goods can be received in bond and from which such gifts can be issued to the front or to approved hospital institutions, free of duty.

(8) It must be clearly understood that parcels under categories 2, 5, and 7 can only be forwarded when vessels are available, and that no responsibility can be accepted by either the War Office, the India Office, or the Indian Soldiers' Fund for delays or irregularity of despatch.

The governing bodies of Cheshunt and Westminster Colleges, Cambridge, have temporarily placed their buildings at the disposal of the Serbian Relief Fund Committee for the reception of a further contingent of Serbian boys chosen by the Serbian Government to pursue their studies in Great Britain in consequence of the enemy occupation of Serbia. About 150 of these young Serbians have already arrived.

THE PRESS ON THE NEAR EAST.

Alexandretta—and Cyprus.

"The Gulf of Alexandretta" is the title of an important article which "W. J. C." contributes to the June *Blackwood*. The writer has much to say regarding the historical associations of the region, and he quotes some delightfully quaint bits from the records of early travellers; but one feels that what he is most interested in—and very rightly so at the present time—is the future of the Gulf. Who, after this war, will own it and develop it? He does not answer the question. But he is very glad to remember that Great Britain still holds Cyprus; and anyone who reads his article with care is unlikely to support any sentimental agitation for the cession of that island to Greece—or any other nation. Here is his first reference to the island:—

Maybe you have traversed the country all round the Gulf; followed the Baghdad railway for many hundred miles; watched its progress; have been the guest of those engaged in building it; and in one way and another realised the inward purpose of it all. If so, you look from Beilan Pass with the greater interest. For here, before you, in one wide comprehensive view to be grasped by eye and mind, and appealing to the imagination, is the heart of the whole scheme. And knowing this you turn instinctively towards the south-west, and scan the horizon of the Mediterranean closely, hoping to see the dim island of Cyprus which covers the entrance to the Gulf, and was occupied by your country in a flash of unconscious prescience many years ago. Cyprus cannot be seen from this point, because a great brown and green spur of Ahmar Dagh intervenes; but you know it is there, and are glad. Of some such nature as this must have been the thoughts of any English traveller who looked from the seaward slope of Amanus a year or so before the war.

Later, having shown the ease with which a good snug harbour could be constructed in the Gulf, and how the Germans had been at work on the scheme for more than a year before the war broke out, and how they had linked up the town with their great so-called Baghdad Railway, he proceeds:—

Now, on the face of things, all this development of Alexandretta seems very natural and admirable, and highly satisfactory for the Ottoman Empire. It is all these things and much more. It is also an intelligent preparation for the fulfilment of the great scheme of a Germanised Turkey-in-Asia. To understand the enormous importance of Alexandretta, or to speak more accurately, of the Gulf, you must look ten or twenty years ahead and consider Turkey-in-Asia as a whole. Assume it to be fairly well supplied with railways; various ports to have been made, and joined by railway lines with the districts which they naturally serve. So doing you find that about two-thirds of Asia Minor proper is served by ten ports—Trebizond, Samsoun, Constantinople, Ismid, Mudania, Chanak, Aivali, Smyrna, Adalia, and perhaps Selefke. Mersina may be left out of this count. . . But for the great territory of south-eastern Anatolia, Northern Syria, and Mesopotamia to the Persian Gulf, there are, owing to the configuration of land and water, only two conceivable outlets. One of these is on the Persian Gulf, the other is on the Gulf of Alexandretta.

Making every allowance for developments in Mesopotamia, "there remains about 100,000 square miles of country, much of it the richest in the Turkish Empire, for which a port on the Gulf of Alexandretta will be the outlet, and have no rival." Again—

You see something of the importance of the Alexandretta Gulf port on the map; but you do not see nearly all of it so. You need to be familiar with the country in order to understand the future of this north-eastern end of the Mediterranean. You need to have seen the agricultural possibilities of the Cilician Plain; of the Central parts of Anatolia; to have travelled in Northern Syria and seen wheat going to the horizon like prairie grass. You also need to realise what mineral riches are awaiting scientific mining and means of conveyance. There are copper deposits near Kharput and Diarbekr equal to any in the world. In the mountains of Albistan peasants bring lumps of lead ore and lumps of magnetic iron and tell you what masses these samples have come from. From a mineralogist's point of view, it is an almost unknown country.

The writer considers that "if at the present time the Gulf of Alexandretta is the most vital spot in the Turkish Empire outside the capital, not less but more so will it be a vital point in any conceivable new order of things which shall follow the war." Its importance will increase with every year, and in view of the developments likely to take place between the Ægean and the Persian Gulf it is difficult to overestimate its future.

Call Alexandretta of the future one of the greatest, perhaps the greatest, seaport on the Mediterranean, and you still will not have estimated its full possibilities. You may in any case be glad that Cyprus continues a British possession.

Armenians and the Army.

The *Manchester Guardian* (June 8) in a leading article on the forthcoming instructions of the Army Council whereby "friendly aliens" are to be allowed to enlist in the British Army, concludes with the following reference to the position of Armenians:—

There is no mention in the Army Council's new arrangements of the case of a rather different class of "friendly" aliens—the Armenians in this country. Technically, being Turkish subjects, they are enemy aliens. But they have the very keenest interest in the campaign against Turkey and the triumph of the Allied cause. Many of them would certainly rejoice to show that interest in the most obvious and practical way, and we trust that the new regulations will also make possible some arrangement whereby they may in suitable cases be allowed to enter the British Army.

The Allies and Peace.

In a leading article dealing with the restrictive measures forced upon the Allies by the uncertain attitude of the Greek Government, the *Times* (June 9) points out that in the words of the Foreign Office *communiqué*, it is "the attitude of the Greek Government in connection with the situation arising out of the surrender of Greek territory to Bulgarian troops" which has compelled the Allies to adopt precautions. The article continues:—

They are willing, as they have been willing all along, to maintain friendly relations with Greece. They are the guarantors of her independence. They wish now, as Lord Aberdeen wrote in 1843, "to see her independent and under the auspices of a sound and well-regulated constitutional system of government." But they cannot shut their eyes to the apparent trend of the policy which the present Ministry and General Dusmanis, the Chief of the Staff, have been pursuing. It is not a constitutional policy, in the judgment of the Greek statesman who framed the present Greek Constitution, and it is plainly fraught with possibilities of very serious import to the Allies. . . . King Constantine may be perfectly sincere in his professions of amity for us. But King Ferdinand of Bulgaria made professions too. We trusted them too long, and we know the result. We cannot run the risk of having King Constantine suddenly overborne at some critical moment by his pro-German *entourage*. We do not demand that Greece shall be with us. But we do demand, and we have every right to demand, that she shall not maintain an attitude which would enable her at any moment to side with our enemies.

The *Daily Telegraph* (June 10) devotes a long leading article to the subject, and details the many reasons by right of which the Allies may expect that Greece's neutrality should be in fact as in words, benevolent towards the countries to which she owes so much. It proceeds:—

We are quite aware, of course, that Greece finds herself in a very difficult position, and we know the reasons why King Constantine pleads the necessity of remaining neutral. But the neutrality must not be interpreted so as to cover a wanton outrage like the recent Bulgarian invasion. . . . . Greece may be able to put up with this insult from her hereditary foe at Sofia, but there is no reason why Great Britain and France should allow their lines to be imperilled by any such flank movement. In short, the time has come when Greece must definitely declare her sympathies. We do not wish to force her neutrality, but at the very least it must be a real neutrality, and not a veiled surrender to the Teutonic enemy. . . General Sarrail, no doubt, has received full instructions as to the steps which must now be taken to protect his forces and define our relations with M. Skouloudis and his Administration.

The *Scotsman* (June 9) says that "treachery is, with good reason, suspected, and the culprits pointed to are high military and civil authorities of Greece, who are charged with the duty of defending the honour and the interests of the kingdom." Continuing, the article points to the warning menace of the Russian armies to those who put their faith in Germanic invincibility:—

The Greek Government have shown that, impervious to milder arguments, they are prone to respond to that of force. The word had only to be spoken to open the gates of Fort Ruppel to the Bulgars. King Constantine and his Councillors have paid homage to their conception of military force—to their belief in the ultimate triumph of the Germanic Powers—if not in what they have openly said, in what they have secretly worked for. The reminder that the Entente Powers have the means of bringing both naval and military force to bear at still closer range, while it may have a disturbing effect on the Royal Fête day celebrations to-morrow, should have a salutary influence on Greek policy.

While sea power is being pressed visibly on the attention of those who have been able hitherto to dictate the attitude of Greece, the Athens politicians and militarists must have had their faith in German invincibility shaken also by events that are happening on land. They have not travelled so far away from Hellenic traditions as to forget that Russia is among the world-forces that count heavily and directly in Balkan affairs.

The Salonika Forces.

In regard to the strained relations existing between Greece and the Allies, the *Observer* (June 11) considers that the demobilization of the greater part of the Greek army will have to be "watched and its completion verified before any sufficiently satisfactory change in the state of affairs can be said to have occurred." The *Observer* continues:—

For the rest the time is at hand when the very great force now assembled under General Sarrail at Salonika will have to justify its existence in one way or another. Unanswerable reasons have compelled a pause pending full concentration by the addition of the reconstituted Serb forces. This war has reached a point where no large part of the Allies' armies can remain without full influence on the struggle in proportion to its numbers and equipment. Every atom of available weight must be made to tell in the scales. This is elementary doctrine, and we are bound to conclude that the obvious inferences will be drawn.

In a leading article the *Liverpool Courier* also concludes by urging a Balkan offensive from Salonika.

The Russian Advance.

The great Russian offensive which, developing with almost incredible speed, is now raging close to the Roumanian frontier is the subject of a leading article in the *Morning Post* (June 13), from which we take the following quotation:—

As our military correspondent points out, our Russian Allies have chosen exactly the right moment for their blow, which may well mark the turning point of the war. For one of the significant facts in this great advance is the admittedly overpowering efficacy of the Russian artillery—which shows that our Allies are amply re-equipped with the *matériel* of war; and another fact is that the armies which have so irresistibly broken through the long-prepared Austrian positions are new formations—proving that the man-power of Russia is not only inexhaustible in quantity but undiminished in quality. It is much too early yet to see the effects on the Western and Southern fronts of this new factor in the balance of forces, but those effects can hardly fail to be profound, and Russia, who has rendered already such incalculable service to her Allies, has rendered none more timely or splendid. She is indeed wonderful.

The *Daily Telegraph* says that—

The victory at Volhynia will have consequences of great magnitude all down the line between the Pripet and the Roumanian boundary. . . . Apparently the enemy are surprised to find the Russians so well supplied with artillery, for all accounts lay stress on the exceptionally severe nature of the bombardments which preceded the infantry attacks. They seem to have thought it impossible for Russia in so short a time to make up the deficiencies which cost her so dear last year, and they may already be regretting the assumption on which they withdrew so many divisions from the Eastern front.

The Military Correspondent of the *Times* (June 9), after dealing with the far-reaching consequences which may possibly attend the Russian onslaught, points out that there are now at Salonika very considerable Allied forces, and concludes:—

The expedition to Salonika was a political and not a military operation. It has not as yet secured political results commensurate with the amount of military energy expended upon it, but now that we are so strong in the Eastern Mediterranean, and the Russians are once more on the move, the time has fully come for drastic measures which will compel our enemies and false friends in this region to mend their manners. History will be very severe upon the Allies if the absence from the decisive theatre of this large army at Salonika converts what might have been a *bonne bataille* in the West into what Napoleon described as a *bataille ordinaire*.

Greece's One Hope.

The *Pall Mall Gazette* (June 9) publishes an article under the head of "Unhappy Greece," written in Athens by M. Ch. Protopappas in the last week of May. The writer shows how opportunity was deliberately cast aside by the Greek Monarch, and continues:—

Greece to-day is the Greece of twenty years ago; penniless, without credit, and distrusted by all other nations. This is the direct result of German propaganda upon Court circles and upon a clique of superior officers who, having pursued their military studies in Germany, are influenced by their old German comrades and are persuaded that the Central Powers will win the war.

On the other hand, the people are intensely pro-Entente in their sentiments, and dislike the Germans as heartily as any other nation does. Civilians of all classes are Venizelists to the core, and many soldiers have recently been arrested for shouting "Long live Venizelos" when the ex-Premier appeared at any public function. In spite of the King's great popularity, on a recent occasion when they both appeared in the same procession, the shouts for Venizelos were louder and more prolonged than those for the King, and as the latter passed by many voices from the back of the crowd lining the route cried: "With Venizelos to Constantinople."

The Greek people, with all its good will towards the Entente and its desire to see its troops marching victoriously side by side with the Allies, is actually suffering greatly by the obstinacy of the King.

The writer defines the Government as being composed of aged members who have developed a spirit of "mulish obstinacy" and younger members who are "viciously cantankerous." He concludes:—

The country under its present rulers is drifting rapidly towards ruin when it might have been marching gloriously to victory.

Only one thing can save Greece, as she was saved before in 1909, and that is the return to power of the one man capable of dragging her out of the pit—Eleftherios Venizelos—the only Greek in whom the Allied Powers place full confidence. And there are signs of a coming storm; of a reaction of the people in favour of their idol. The Liberal party, that is the Venizelist party, is beginning a vigorous campaign both by the holding of public meetings and through the medium of the Press, against the present order of things. The Government party hires bravoes to break up the meetings, and the police and gendarmerie mishandle innocent spectators for no cause except that they attend the meetings; but public sentiment is manifesting itself in no uncertain manner for all that.

There can be little doubt that within a short time Venizelos must be recalled to power, and it then remains to be seen whether he will be able to restore Greece to her former status amongst the claimants in the distribution of Turkey's former possessions when the war is over.

Articles to Note.

"Typhus Fever in Serbia," lecture delivered by R. O. Moon, M.D., etc., in the *Lancet* (June 10).

"Tirnova," in the *Christian Service Monitor*, Boston, Mass. (May 20).

"On the Turco-Egyptian Front," by "Nimrod," in *Chambers's Journal* (June).

TURKS PERSECUTE INDIAN MOSLEMS.

The following story of an Indian Moslem pilgrim, Zakir Husain, who recently escaped from Kerbellah, whither he went on pilgrimage with his mother and sister in the summer of 1914, is published by the Bombay Government:—

"Zakir Husain states that after the outbreak of war all routes homewards were blocked, and the many Indian pilgrims at Kerbellah were subjected to the utmost discomfort and cruelty. The Turkish authorities issued orders that the goods and women of Indians were the legal property of those who plundered them. Their houses were searched, their goods taken, and dozens of Indians were arrested and deported to the Aleppo side, while their families and children were left in Kerbellah.

"Throughout these fourteen months," he continued, "we never got meals more than once a day. We could not get any work, and consequently we had to beg from door to door in order to get a few scraps of bread to eat, and the state of the women and children was worse even than that of the men. For a man to be an Indian was considered a sufficient reason by Turks to torture and imprison him. We protested that we were Moslems, but they never paid heed. They themselves are not Moslems, and do not act according to the precepts of Islam. According to what I heard, the Indians in Nejef, Kazimain, and Baghdad have also been treated in the same cruel way as we were. Hundreds have been deported and their houses pillaged."

SLAVONIC STUDIES.

The last meeting for the present session of the newly-formed School of Slavonic Studies at King's College, London, was held on Wednesday, when a lecture on Panslavism was given by Dr. R. W. Seton-Watson, Lecturer in East European History at the College. Mr. J. St. Loe Strachey presided over a good attendance. During the course of his lecture, which sketched a good deal of the history of the Slav races, Dr. Seton-Watson said that the ties which bind the various branches of the Slav race together are far closer, far more subtle, and far more irresistible than those between the branches of the Teutonic and Latin races. Unless the war brought concord between Russia and Poland there would be no solution of the Panslav problem. What was at stake in the war was the emancipation of the Slav world. Russia was on the side of the future just as surely as Germany, with all her energy and organisation, was on the side of the past. The School of Slavonic Studies meant to be in the vanguard of the Entente with Russia. Britain meant to be the friend of Russia and of the whole of the Slavonic world, and we must help the Slav to victory as an essential factor in the new Europe. Dr. R. M. Burrows, Principal of the College, announced that the school would be continued next session.

The Cairo correspondent of the Allahabad *Pioneer* reports that four railway engines intended for use on the Baghdad railway were secured on one of the prizes made in the Mediterranean, and that they are now doing service in hauling trains full of British troops and munitions on the Egyptian railways.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,

London, E.C.

In a message from Bucharest, dated June 3, and published last Friday in the *Times*, the latter's correspondent in the Balkan Peninsula stated that "the need of cereals is felt locally owing to the great amount sent to Germany, and the Prefect of Vlashca has found it necessary to sequester the wheat purchased by the British bureau in order to meet the requirements of the population of the department." Yesterday, M. Mishu, the Roumanian Minister in London, in the course of a letter to the editor of the *Times*, denied the accuracy of the statement, and said: "At the request of my Government I am writing to say that this news is without any foundation, and to give it a formal *démenti*. The Roumanian Government also desires me to add that the quantity of wheat held in reserve is considerably in excess of the internal consumption."

***

I am indeed pleased to see that the Roumanian Government has seen fit to issue the above denial, the more so considering that the impression has certainly prevailed in British non-official circles in Roumania that all was not well with our grain deal. As a matter of fact, prior to the publication yesterday of M. Mishu's letter, I had written some "Notes," based on the information contained in the *Times*' statement and on a letter which I had received from Braila. I urged the Roumanian Government, in her own as well as the Allies' interests, to make a reassuring statement. The news which had reached me, and to which I referred more particularly, was to the effect that, in view of the shortage of wheat in the country, the Roumanian Government had not been able to fulfil her part of the bargain whereby she sold us firm 80,000 wagons of wheat, and had insisted that the balance still owing should be made good out of the new crop as yet unharvested. Such a procedure, I pointed out, would destroy the very object of our purchase of the wheat, and not for a moment could it be countenanced by the British Bureau in Bucharest.

***

That object, it will be remembered, was to acquire all stocks of wheat in Roumania available for export so as to prevent it going to the enemy; therefore, any concession made by our Bureau whereby we agreed to wait for delivery of the wheat, in whole or in part, until the new crop should be harvested, would of a necessity defeat that object, and was, consequently, unthinkable. The only alternative supposition was that the Roumanian Government had broken faith with us as regards her part of the bargain, and had left us no choice but to accede to the modified terms imposed on us in the eleventh hour.

***

But, knowing Roumania and the Roumanians, and acquainted as I am with their real interests in this gigantic struggle now raging across the face of Europe, I could not conceive of any such high-handed action. Therefore, I refused to believe these continual rumours of the fiasco of our wheat deal, most likely spread about in Roumania by Boche agency, and urged that in our mutual interests some statement should be issued to the effect that the deal is being satisfactorily carried out, and that the Roumanian Government is neither requisitioning the wheat sold to us, nor withholding part of it until the standing crop has been harvested.

***

Further particulars concerning Roumania's exports of flour, etc., will be found in our Bucharest Correspondent's letter published on page 162. The resolutions adopted by the Commission of Exports are practical, and I hope that they will be carried *au pied de la lettre*. Regarding the new crop, private news which reaches me is unfortunately not favourable, heavy rains having damaged the growing corn in many districts. This is not likly to affect home supplies for next winter, but it will reduce Roumania's exports to other countries.

***

The German *Illustrierte Zeitung*, the notorious illustrated paper that in pre-war days was always noted for selling its soul to the highest bidder, has, it seems, produced a supplement of 100 pages, on art paper, devoted to Turkey—or rather, to German interests in Turkey, which is not quite the same thing. Eighty pages of gaudy advertisements accompany thirty pages of text, and prominent contributors to the former are the Deutsche Bank, Deutsche Orient Bank, and Hamburg and Bremen shipping companies. The alleged object of the publication, which has been brought out under the auspices of the "German-Turkish (with an emphasis on German) Union," is to strengthen the commercial ties between Germany and Turkey; but, judging by the wonderful dishes to be presented to the Turks, the latter are to be buyers rather than sellers. The advertisements are bi-lingual, in Turkish and German, and have been designed with the usual Teuton cleverness in showy bad taste. But, in spite of all this propaganda braggadacio, I doubt very much whether this eminently German production will circulate to any appreciable extent in Turkey.

***

Yesterday the Bank of Roumania changed its place of abode—in other words, the London offices were transferred from their old quarters in Great Winchester Street to No. 27, Throgmorton Street, E.C. The new offices, as compared with the old, are palatial, quite near the Stock Exchange, and in the busiest part of the busiest City in the world. The change in address is a great step onward, and I predict that in future no Roumanian financial transactions in London, such as loans, etc., will go through other banking establishments. The Bank of Roumania, sound in its policy and as keenly favourable to the welfare of Roumania as it is to our growing interests in that country, deserves to be recognised as the financial intermediary between the two people, and I have no doubt that under the able management of Mr. Locke in London the bank will continue to prosper.

I have been unable to obtain any reliable information from Constantinople for some time past. Nevertheless, I am not inclined to believe all the statements which appear to the effect that the city is being starved. Most of those rumours, doubtless, are of Boche origin, and not worth much. However, a correspondent from Athens gives me some news regarding freights in Turkish waters which may be of interest to my readers. He says:—"In spite of present high freights I think the following constitutes a record, considering the shortness of the voyage. About two or three months ago (my correspondent wrote on May 31) one of the few remaining Ottoman steamers sailing from Constantinople loaded a cargo of about 1,200/1,300 tons at Panderma for the capital, consisting of flour, olives, oil, cheese, beans, etc. The rate of freight paid was one and a-half piastres per oke, equal to £12 a ton; the steamer grossed £15,000 pounds, and the journey occupied about six hours, the distance being fifty miles."

***

News from Bulgaria to hand viâ Bucharest continues to show the enemy's activities in the temporarily occupied districts of Serbia. I previously mentioned that the Central Government had asked for reports from the Macedonian district as regards mineral deposits. Some of these have now come in. The Prefect of Komanovo reports that in his district there exist many rich deposits of silver and lead. A similar report comes from Cratovo, where are also to be found mineral water sources comparable to those of Giesshübler and Vichy. In Nish the Bulgarian authorities are trying to farm out the mineral water sources of the place, but no one can be found foolish enough to acquire a concession the duration of which is extremely problematical. Furthermore, I learn that the Bulgarian Government has decided to put a tax on herds in Serbia, an imposition that has not been heard of in the country for many years. This, says my correspondent, will especially affect the Roumanian Vlachs, the only people who take to goat and sheep breeding on a large scale. From all of which it would appear that the Bulgarian Government is endeavouring to make as much money, or hard cash, out of its temporary holding as is humanly possible, regardless of the day of reckoning.

***

In connection with the article reproduced elsewhere on Macedonian railways and roads, our Bucharest Correspondent gives the following particulars concerning new constructions in Serbia. It appears that the Bulgars have constructed a strategic railway from Monastir to Prilep, and are concluding one from Uskub to Doiran, passing through Strumnitza. The military roads of Petrich-Meleniko and Nevrokop are nearly completed.

Drugs from Egypt and the Sudan.

The present scarcity and high price of the alkaloid atropine, due to the cessation of supplies from the Continent owing to the war, have caused considerable interest to be taken in drugs capable of serving as a source of this alkaloid. Atropine does not, as a rule, occur in plants as such, but can be readily prepared from its isomeride, hyoscyamine, the best source of which is Egyptian henbane, *Hyoscyamus muticus*, Linn., a plant which grows wild in Egypt and the Sudan and eastwards to India. Examination of specimens of the Egyptian plant at the Imperial Institute have shown that the leaves may contain as much as 1.2 per cent. of hyoscyamine. Amongst other possible sources of hyoscyamine reference may be made to the various species of *Datura*, of which ordinary Stramonium or thorn apple *D. Stramonium*, is perhaps the best known. The latter contains less alkaloid than *Hyoscyamus muticus*, and probably could not compete with the latter for the manufacture of alkaloid so long as *H. muticus* was obtainable in adequate quantity.

Specimens of *H. muticus* from the Sudan and of *Datura Stramonium* from Egypt and the Sudan have been examined recently at the Imperial Institute, and the results are given in the current issue of the *Bulletin* (Vol. XIV., No. 1).

Hyoscyamus Muticus from the Sudan.

The sample of *H. muticus* which is the subject of this report was forwarded for examination to the Imperial Institute in May, 1915. It consisted of the mixed leaves and stems in a dry and broken condition.

The examination of a representative portion of the whole sample showed that the material as received contained 0.67 per cent. of total alkaloid, equivalent to a yield of 0.77 per cent. of total alkaloid from the dry material. The purified alkaloid was obtained almost entirely in the crystalline condition characteristic of hyoscyamine, and further examination confirmed its identity with that alkaloid.

These results indicate that this sample of *H. muticus* from the Sudan contained as large a percentage of total alkaloid as samples of the stem and leaves of this plant received at the Imperial Institute from Egypt.

If abundant supplies of *H. muticus* can be obtained in the Sudan, of similar quality to this sample, there is no doubt that consignments could be disposed of to alkaloid manufacturers in the United Kingdom. The value of consignments of the plant will vary from time to time in accordance with the demand for manufacturing purposes, but it is understood that a price of £15 per ton, f.o.b. Egyptian port, was paid for supplies of the dried plant in 1915.

Datura Stramonium from Egypt.

A sample of *D. Stramonium* was received at the Imperial Institute from Egypt in October, 1914. It consisted principally of dry, broken stems with attached fruits containing a quantity of seed. A small proportion of leaves was present, but owing to the dryness of the material these had become reduced to powder.

A representative portion of the entire sample was selected for chemical examination and furnished the following results:—

	Per cent.
Moisture (on drying at 100° C.)	9.4
Total alkaloid:	
(1) On material as received	0.125
(2) On dry material	0.138

The total alkaloid was easily obtained in a crystalline condition, and subsequent examination showed that it consisted principally, if not entirely, of hyoscyamine.

The percentage of alkaloid present in this sample is much less than in a specimen of *D. Stramonium* from Egypt examined at the Imperial Institute in 1900, which was found to contain 0.35 per cent. of total alkaloid in the seeds and 0.3 per cent. in the mixed stems, leaves, and fruit-cases, and is considerably below that recorded for Stramonium leaves, stems, and seeds from other countries.

A further sample of the dried leaves of *D. Stramonium* from Egypt was received at the Imperial Institute in July, 1915. It consisted of leaves measuring from about 6 by 3½ in. to about 9½ by 7 in. The colour varied from light green to brownish-green, but most of the leaves were of a sage-green colour. The leaves were in good condition on the whole, but some of them had been attacked by insects and a few showed signs of mould.

The leaves were submitted to chemical examination, and were found to contain 0.28 per cent. of total alkaloid in the material as received, equivalent to a yield of 0.32 per cent. from the dry material. The alkaloid was identified as principally hyoscyamine, and this result agrees with that obtained for specimens of *D. Stramonium* leaves from other sources. The amount of alkaloid present in this Egyptian sample is, however, below the average.

The leaves were submitted to manufacturing druggists in London, who stated that they were in excellent condition, so much so that it was doubtful whether leaves of equal quality could be produced on a commercial scale.

Datura Stramonium from the Sudan.

Specimens of (1) the mixed stems, leaves, and capsules of *D. Stramonium* and (2) the seeds of the plant were received from the Sudan for examination at the Imperial Institute in May, 1915.

(1) Stems, leaves, and capsules. — The material was in a dry and broken condition, the leaves being largely reduced to powder. A few seeds were also present.

A representative portion of the whole sample was submitted to chemical examination, and was found to contain 0.12 per cent. of total alkaloid, equivalent to a yield of 0.13 per cent. from the dry material. On purification the alkaloid was nearly all obtained in a crystalline condition, and was identified as hyoscyamine. The predominant alkaloid is therefore hyoscyamine, and in this respect the results agree with those obtained for specimens of *D. Stramonium* plants from other sources. The amount of alkaloid present in this sample is, however, considerably below the average.

(2) Seeds.—This sample consisted of small, greyish-black, flattened, wrinkled seeds. The seeds, as received, were found to contain 0.09 per cent of total alkaloid, equivalent to a yield of 0.096 per cent. from the dry seeds. Examination showed that in this case also the predominant alkaloid was hyoscyamine, as is usually the case in *D. Stramonium* seeds. The percentage of alkaloid present is, however, very low in comparison with that furnished by seed from other countries.

The results show that the samples of *D. Stramonium* from the Sudan contained too low a percentage of alkaloid to be of any interest to alkaloid manufacturers. It is difficult to account for the low yield of alkaloid from the Sudan Stramonium products, and further samples have been asked for in order to ascertain whether this is characteristic of Sudan Stramonium. Special recommendations were made with reference to the collection and packing of the samples.

Commercial Value of D. Stramonium.

The leaves and seed of *D. Stramonium*, separated from the other parts of the plant, were formerly included in the British Pharmacopœia, and were used for making official pharmaceutical preparations. In the new Pharmacopœia, however, *D. Stramonium* has been replaced by *D. fastuosa* var. *alba* and *D. Metel*, so that Stramonium leaves and seeds will no longer be required in the United Kingdom for official purposes.

There is, however, a special market for the leaves of *D. Stramonium*, which are used for the manufacture of asthma remedies, and it would probably be possible to sell consignments of good quality for this purpose. The leaves should be carefully collected and dried, and should be packed so as to prevent their becoming broken during transit.

A firm of manufacturing druggists, to whom the samples of leaves from Egypt were submitted, stated that the price of Stramonium leaves in London was rather high at the date of valuation (December, 1915), French supplies selling at 67s. per cwt,. and Italian at 57s. 6d., against a price in normal times of 30s. to 40s. per cwt. The firm added that Stramonium leaves might possibly be used as a substitute for belladonna leaves if the present scarcity of the latter drug continues.

The value of the *D. Stramonium* plant as a source of hyoscyamine, or of atropine, which can be readily prepared from hyoscyamine, will of course depend on the percentage of total alkaloid present. In the first sample from Egypt, and in that from the Sudan dealt with above, the amount of alkaloid is very low, and the value of such material for alkaloid manufacture would consequently be small. Even the highest yield of alkaloid recorded for *D. Stramonium* is, however, very much less than the amount usually present in *Hyoscyamus muticus*, and it would probably be difficult to sell supplies of the former in competition with the latter except at an extremely low price. Enquiries among manufacturing druggists have confirmed this conclusion, and there seems no doubt that, so long as adequate supplies of *H. muticus* are available, they will prefer to use this plant rather than *Datura Stramonium* for the manufacture of atropine.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, May 26.

When the members of the Commission of Export met last week, M. Greceano proposed a series of measures with a view to preventing the fraudulent exportation of flour into Turkey. His proposals seem to have found favour. According to one of the resolutions voted by the Assembly, no matter relative to the question of exports may in future be dealt with by any authority other than the Commission of Exports.

Another resolution prohibits millers from exporting flour other than that produced from wheat purchased at export prices and of the quality set aside for exportation. In other words, they are only allowed to export flour produced from a stock of wheat which is no longer available, the last lot of wheat having been sold to the British Bureau. This last resolution is most satisfactory from the British point of view, for it tends to render all the more effective the agreement recently signed between M. Chrisoveloni and the millowners.

The temptation to export flour into Turkey must be great in some instances, for the wagon of flour commands a very high price in Constantinople, the figures mentioned varying between 25 and 45 thousand francs. It is said that the population of this city normally consumes 120 wagons of grain per day, and it is now, according to information volunteered by a German, receiving 40 wagons of grain (not wheat) a day from the amount which the Germans export from Roumania in accordance with the terms of the last contract.

It may here be stated that the Roumanian Conservative Party, in conjunction with the party represented by Mr. Take Jonesco, is agitating with a view to preventing the toleration of any measures tending to allow the Turkish Empire to receive supplies from Roumania, the state of famine which exists in Constantinople being eminently favourable to the interests of the Entente.

Trade Notes.

Egypt.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of paints, mainly for the scavenging and watering service. Bulaq. Date, July 15.

The Physical Service Department, Cairo, invites tenders for the supply of weighing machines, balances and weights required for Government during 1916-17. Date, July 15.

The Army Finance Department, Cairo, invites tenders for the supply of 4,000 tins of petroleum at the Citadel Stores, Cairo, and 300 tins to be handed over to the Stores Officer, Egyptian Army, at Alexandria; also 1,600 gallons of petroleum in bulk at Cairo. Date, June 15.

The Central Stores, Ministry of Finance. Cairo, invites tenders for the supply of agendas required for Government Departments. Date, July 12.

The superintendent of Stores, Ministry of Education, Cairo, invites tenders for the supply of 3,600 table serviettes required for the school year 1916-17. Date, July 5.

The Army Finance Department, Cairo, invites tenders for the supply of brooms, baskets, basins for zirs, and hooping iron, to the Citadel Stores, Cairo. Date, June 15.

The Army Finance Department, Cairo, invites tenders for the supply of copper cooking utensils to the Citadel Stores, Cairo. Date, June 20.

The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of globes, bees-wax, and mats necessary for the Hedjaz. Date. July 1.

GREEK EMERY PRODUCTION.

Emery, says the U.S. Consul-General at Athens, is found in beds in various islands of Greece, but the only mines are on the island of Naxos, in the Cyclades group. This island's emery product (Al_2O_3) is a monopoly of the Greek Government, the sale of all Naxos emery being under the supervision of the Ministry of National Economy.

The product of the Naxos mines for 1915, delivery of which will be made in the current year, is estimated at 15,000 metric tons, of 2,204.6 pounds each. Applications have been filed for about 70,000 tons to date. In the past distribution has been made on the basis of order of application. There appears to be now a disposition to alter this arrangement, but no positive steps looking to this end have as yet been taken.

The world production of emery stone has been estimated by a local expert at 100,000 tons per annum; of this quantity, Greece produces in normal times perhaps 15 per cent. The largest centre of production is Asiatic Turkey; a fair proportion of the Greek product is shipped into Turkey and finds its way to market together with the product of Asia Minor.

The beds at Naxos are worked by the inhabitants of the island, who stoutly maintain that the mines are their property, and in practice, at least, this contention is admitted by the Government; no outsider, therefore, even though a Greek subject, is allowed to work in the mines; the inhabitants, however, reserve the right to employ outside labour should they see fit to do so. The ore extracted by this outside labour is for the account of the villages.

After extraction the mineral is transported to the seashore at either Lyonna or Moutsouna where delivery is made to officials of the Ministry of National Economy, who pay the villagers.

Government warehouses for the storage of emery are to be found at Syra; the contract for transportation of the mineral to the warehouse is given to the lowest bidder, the contractor being required to keep in the warehouse a minimum of 3,000 metric tons. The Government at present pays 10 drachmas per metric ton for the transport from Naxos to Syra, including shipping expenses at Naxos, and weighing, landing, and storage at Syra.

The present prices for emery, established by royal decree, represent an advance of about 30 per cent. over the prices prevailing in 1913. Delivery is made to the buyer at Syra; all expenses for weighing, cleaning, lighterage, and shipping are for the buyer's account, and average 3 frs. per ton. The maximum quantity that the Government can deliver per day is 250 tons.

THE FUTURE OF TABRIZ.

The U.S. Commercial Attaché at Petrograd, who witnessed the opening of the Julfa-Tabriz railway last March, has written a description of the ceremony, which will be found reproduced on another page of this issue of THE NEAR EAST. He mentions that possibly the line will be extended to Teheran and thence south-ast to Ispahan and into Beluchistan, "where it could connect at Nushki with the railway system of British India." The railway now follows between Julfa and Tabriz the line of the Indo-European telegraph system of India. From the town of Sophian, about twenty-five miles from Tabriz, a branch of the railway has already been completed to Lake Urmia. Around this lake (says the writer alluded to) is one of the richest districts of Persia, producing large quantities of raisins and other dried fruit, as well as considerable wine and wood. The completion of the railway to Lake Urmia has made it possible to bring big motor-boats to take the place of the old primitive sailing boats.

The railway to Tabriz, with its branch line from Sophian to Lake Urmia, will doubtless cause an enormous development through all this part of Persia. Much new land will be opened up to agriculture, and various mines, chiefly copper and wolfram, will be worked, which have not been developed because of transportation difficulties. Although the railway is to be used at present only for military purposes, it is the intention later to devote it to the interests of trade between Russia and Persia. The railway will doubtless cause a diversion of traffic to a large extent from the caravan route from Trebizond in Turkey to the railway route viâ Tiflis and other cities of the Caucasus. Before the war the greater part of the trade of north-western Persia went through the port of Trebizond in Turkey and through Persian and Russian ports on the Caspian Sea. The Caspian Sea ports will still be used for business originating in and around Teheran, the capital of Persia, but it will be unnecessary hereafter for any of the business of Tabriz, the largest commercial city of Persia, to be conducted through Caspian Sea ports or through Trebizond on the Black Sea. The commercial importance of Tabriz, now the leading carpet market of the world, should be greatly increased. It is understood to have at present a population of about 200,000. Its bazaars cover many miles of arcaded streets, and its carpet bazaars are specially noted. Besides the enormous trade in carpets, there is an important trade in cotton, dried fruits, tragacanth, etc.

SUDAN CATTLE TRADE.

The total number of big cattle exported from the Sudan during last April did not exceed 863 head, though in April of the preceding year, 1,842 head were exported. The total exports, however, from January 1 this year to April 30, exceeded those of the corresponding period in 1915 by 345 head, the figures being for 1915 and 1916 respectively, 4,992 and 5,337.

The exports of sheep during last April also showed a decrease from those of the corresponding month in 1915. The exports in April, 1915, were 3,561, while those in April, 1916, were only 1,502. The total exports of sheep from January to April 30 of the present year were 16,440 head, or 7,779 less than those of 1915, which were 24,219.

CYPRUS AND THE WAR.

Freight Rates.

The following are extracts from the recent speech of the High Commissioner at the opening session of the Legislative Council:—

Shipping

"In the particular case of the subsidized mail service the enormous rise in the price of coal, the large premiums payable for marine insurance, the high wages of crews and other charges due to war conditions have so increased working expenses that it has been found necessary to sanction an increase in the maximum goods and passenger rates contained in the agreement with the Khedivial Mail Steamship Company. The Government has deemed it expedient to negotiate for an entirely new standard of low freight rates on flour and other imported necessaries in temporary substitution for the schedule of maximum rates in the agreement. These latter relate almost exclusively to exports from Cyprus which now command high prices in Egypt, and are able to bear transport charges remunerative to the steamship company, while the interests of the general population are under present conditions better secured by lowering the rates for the importation of flour, oil, and other essential commodities."

Cyprus Timber.

The Forest Revenue has derived benefit from the closing of the foreign timber ports. The twelve months ended February 29 produced a revenue of £15,600, exclusive of the value of the fuel cut for the troops in Egypt, as against £11,275 in 1913-14. The Cyprus timber is much appreciated, and is of better quality than that usually imported from Austria and Anatolia. The two existing saw mills have been unable to meet the local demand, and two new sawmill outfits have been ordered and are expected shortly. In compliance with the wishes of a full meeting of the Executive Council, a gift of wood fuel was made for his Majesty's troops in Egypt. Two thousand tons were cut, and Cyprus sailing ships are delivering it at Port Said as quickly as shipment can be made.

Cyprus as a Health Resort.

In addressing you a year ago, I anticipated that Cyprus was likely to be brought more within the orbit of the war by the reception of large numbers of refugees from abroad, the utilization of its health-giving summer resorts for convalescent soldiers, and possibly other war measures. The influx of conducted refugees has been limited to between two and three hundred British subjects maintained at the cost of his Majesty's Government. On the other hand, the value of the Island as a convalescent station is being increasingly recognized.

INDIGO AND JUTE IN EGYPT.

At a meeting of the Egyptian Commission of Agricultural Commerce, held in Cairo on May 21, the two following decisions were taken:—

Indigo.

The meeting, after considering the various matters bearing upon indigo culture, were of opinion that it would be inadvisable to encourage its extensive cultivation in Egypt, as, owing to the relatively high cost of land and labour as compared with India, and in view of the greater facilities offered by other countries for the development of the industry, Egypt could not compete with success. This decision did not, however, apply to the Sudan, where it was proposed that recommendations should be made of the study of the question.

Jute.

With regard to jute, the same difficulties applied as were cited in connection with indigo, but the Commission recommended that the Industrial Commission should be communicated with in reference to experimental work in sack-making with the fibre of *H. cannabinus*, the common "Til" of the country, after which, if success attended their efforts, the matter might again be referred to the Commission of Agricultural Commerce.

Other matters up for decision were referred to sub-committees.

Near East Markets.

PRODUCE REPORT.

London, June 15.

Currants.

In consequence of the recent strong demand in the French and English markets, and the apparent shortage of available fruit for export in Greece, prices for all grades have considerably advanced. In the meantime there is no prospect for any new arrivals at present.

The apparent scarcity of currants for export in Greece compelled the Government to call a meeting of the Board of Directors of the Privileged Currant Company, in the Ministry of Finance in Athens, to discuss the question with a representative of the Government, and suggest the necessary measures to be taken. It was explained that, as it is known, France, being in great want of currants for the manufacture of wine and alcohol, has abolished the law by which the importation of currants was prohibited, revoking at the same time all relative regulations for import duty, etc. There has also been a greater demand in England; and the result is that with the available supplies for export such demand could not be satisfied. In the discussion it was proved that the scarcity of currants for export is due to the fact that all the taxes on the fruit, and the retention, amounting to 35 per cent., are kept in kind (currants) and used for industrial purposes in the country. And as the export of any quantity of that portion is prohibited, without coming to any final decision, the company suggested the passing of a Bill by which the tax may not be paid as hitherto entirely in kind. By this measure a larger quantity may be available for export.

Seeds.

Linseed is easier; London-Calcutta, spot, 68s. 6d.; July-August, 69s.; August-September, 69s. 6d. Bombay, afloat, 70s. Rapeseed is dull. Cawnpore brown, June-July, is quoted 65s. 6d. Cottonseed is quiet. London Egyptian, June, £14 5s., and Sakelarides, ditto, £13 10s. per ton.

Oils.

Linseed oil is quiet. Spot pipes quoted at £34 10s.; barrels, £35 10s., landed terms. Rape oil is dull. Ordinary brown, naked, spot, selling at £49. English, refined barrels, £51 to £52. Cotton oil is quiet. Crude, spot, in pipes quoted £43 10s., and refined pale pipes, £47; barrels, sweet, £52 to £54.

COTTON-WORM IN EGYPT.

(From Our Own Correspondent.)

Cairo, June 1.

The recent comparatively mild weather has coincided with the appearance of cotton-worm in certain districts. The attack is by no means serious, and is causing little anxiety to the authorities, who are closely watching the situation, and are taking all the necessary measures to prevent any extension in the area affected or the nature of the attack. A rise in temperature would have a most salutary effect on the activities of this pest, but, as I have said, there is absolutely no reason for any alarm to be felt.

SUDAN DATES.

The Director of the Imperial Institute has reported to the Sudan Government as follows (extracts) on three samples of dates forwarded to the Institute for examination:—

The samples submitted were:—

1. About 1 lb. of dates packed in a small basket made of plaited palm leaf.
2. About 1 lb. of dates packed in the same manner as selected Tunisian dates in a small wooden box.
3. About 4 lbs. of dates packed in a tin.

Digitized by Google

All three samples arrived in good condition, and consisted of soft dates rather smaller than typical Tunisian and Persian dates. They were not quite so plump as selected Tunisian dates, but apart from their size they seemed to be quite as good as the common Tunisian, Persian, and Egyptian dates imported into this country.

Representative samples of the dates were repacked in small boxes at the Imperial Institute and submitted for valuation to firms in Liverpool and London, who furnished the following reports:—

1. The London merchants stated that the present samples were somewhat similar to Tunisian dates, though not so fine, and that as the latter dates are available, in large quantities and at a very reasonable price, they were not of opinion that there would be any market for these Gondela dates in the United Kingdom. The firm mentioned that the price in London of the selected Tunisian dates, carefully packed in boxes of about 1 lb. each, ranged from about 3s. to 5s. per dozen boxes.

2. The Liverpool merchants stated that they could not hold out much hope of business in Gondela dates. They pointed out that the date trade is a very doubtful one at best, and considered that in normal times, the competition of Persian, Tunisian, and other dates would be too strong to allow favourable results for these shipped from the Sudan.

For your guidance it may be mentioned that the following prices were realised for dates sold in London on Wednesday, December 1, 1915:—

Tunisian dates—Hallowie.....	16s.	per case of 56 lb.
Khedrowie....	16s. 6d.	ditto
Sair	14s. 9d.	ditto
Egyptian dates—38s. to 40s. per case of about 1 cwt.		
Persian dates—Bussorah, 14s. 4½d. to 15s. 9d. per case of 56 lb.		

It is probable that the Gondela dates would fetch prices a little below Tunisian dates, and if such prices are likely to be profitable in the Sudan, it will be worth while to adopt the suggestion made by one of the firms consulted and send a trial consignment of the dates for sale in this country. It is suggested that this trial consignment should consist of about fifty 10 lb. boxes. The wood used in making the boxes should be devoid of taste and odour, and the boxes should be lined with thin parchment paper like that used in packing the third sample now reported on.

SUDAN COTTON.

In the annual report of the Director, Commercial Intelligence Branch, Central Economic Board, Sudan (1914), it is stated that the exports of cotton in that year amounted to 9,435 bales of 400 lbs., as compared with 12,830 bales in 1913, the decrease being due to the production of an unusually small crop at Tokar, owing to an unsatisfactory flood.

The whole of the Tokar crop in 1913-14 was grown from Sudan seed, owing to the importation of seed from Egypt being prohibited in order to prevent the introduction of the pink boll-worm (*Gelechia gossypiella*). The results have shown that the use of acclimatised seed is quite satisfactory, and is much more economical both to the Government and the grower. Only 11,353 feddans (1 feddan = 1.038 acres) were planted, owing to lack of control of the flood water, much of which broke away and was lost. In the Blue Nile Province, on account of the lack of rain, very little cotton was grown, except at Tayiba and at a cotton experiment station at Barakat, near Wad Medani, which has been established recently by the Sudan Plantations Syndicate. On the Zeidab Estate about 3,900 feddans were planted with Ashmouni, Sakellaridis, and Zeidabi cottons, the last-mentioned being an improved form of the Nyasaland Upland variety. The best results were yielded by the Ashmouni variety, but Zeidabi is considered the most suitable for cultivation by the natives.

We learn that for the past three weeks tobacco has ceased to come from Greece to Egypt. The total import of Greek tobacco last month was about 15,000 parcels, whereas the average of the imports of the previous months varied between 20,000 and 30,000 parcels per month. The stock of tobacco in Alexandria is so big that it will supply the country for twelve months.

Engineering Notes.

Moroccan Railways.

H.M. Agent and Consul-General at Tangier reports that the railways in the western regions of the French Protectorate of Morocco, which were constructed merely as military lines, have now been thrown open to the public, although, naturally, priority is given to military requirements. The fare per kilometre is 0.30 fr., first-class; 0.15 fr., second class; and 0.08 fr., third class. Passengers are allowed 30 kilogs. of luggage free. For goods, the tariff per kilometre is 0.50 fr. per metric ton, or 0.75 fr. per cubic metre; goods weighing less than 200 kilogs. per cubic metre being charged on the latter scale. The tariff per kilometre for a complete wagon load of 7½ metric tons is 3 fr.

H.M. Agent adds that, as some years must elapse before the Tangier-Fez railway can be completed and become available for the transport of passengers and goods, merchants will be interested to learn that they can in the meantime have the advantage of the military railways referred to above.

Electric Vehicles in Persia.

At present no electric vehicles are in operation in Teheran, says the U.S. Vice-Consul. There is a small electric plant which supplies a 50-cycle, 220-volt, 850-ampere alternating current. The price per kilowatt hour is 2 krans (18 cents).

The roads of Teheran and vicinity are not in very good condition, although considerable progress has been made during the last two or three years. The country is generally level, and a limited number of electric vehicles could perhaps be disposed of here. The import duty is 10 per cent. ad valorem.

In normal times the most satisfactory way to ship vehicles of this kind to Persia is by way of Batum and Baku. The total transportation charge on a car from New York to Teheran, including the Russian transit duty and the Persian Customs duty is from 300 to 400 dollars. Shipments of this kind should be made against documents sent to one of the banks at Teheran (Imperial Bank of Persia, Banque d'Escompte de Perse, or Tomaniantz Frères).

Macedonian Roads and Rails.

The following are extracts from an interesting article by J. Condurier de Chassaigne which appeared recently in the *Observer*:—

The main lines of communication running northward (from the Ægean Sea coast) are the watersheds of the three rivers—the Vardar, the Struma, and the Mesta. Of these the last, situated to the extreme east of the theatre of war, is of less utility than the two first-mentioned. Its strategical importance only begins when it reaches the plain of Sari-Shabana, the tracks leading from the valley of the Mesta into Thrace and Eastern Roumelia being scarcely wider than bridle paths. But from the valleys of the Vardar and the Struma an excellent system of roads radiates, several adapted to automobile and all to wagon traffic, over which troops could easily be transported into the heart of Bulgaria.

The shortest road from Salonica into Bulgaria is by way of the Struma Valley. The river cuts through several passes, of which the Pass of Krasmin is of the highest value from the military point of view, for it affords an avenue of communication with the watershed of the Vardar. Further to the south, the Pass of Rupel gives the key of the plain of Sèrès. In the dry season the Struma is fordable in its upper and middle reaches, and at certain points of its lower basin.

The valley of the Vardar, though longer, offers for military transport certain advantages over the alternative road. It gives access to the plains of Tetovo, of Uskub and of Kumanovo, which are the principal battlefields of Western Macedonia. Besides these the plain of Outche-Polje is extremely important as the junction of all the strategic roads which start in the Tzrna Reka and the Struma, just as the plain of Monastir is the junction of the roads leading from the Adriatic Sea to the valley of the Vardar.

When we turn to the railways, it is evident that only two are at the disposal of an invading army marching from south to north; there is the line which runs from Salonica to Uskub and another going from Salonica to Monastir. But although both are single lines they do not merit the contempt which has been showered upon them, for it has been proved in military practice that twelve trains comprising 600 carriages holding ten tons each can be sent without any elaborate organization over a single line of normal gauge in the space of twenty-four hours.

Thus with a capacity of transporting 6,000 tons per day over the railways, with excellent roads for automobile, carriage, and horse traffic, the contention that an army of one million men can operate in Macedonia without running the risk of either starvtion or immobility is amply justified. It not only can be done, but has been done, for in both the first and second Balkan wars the armies engaged fell little short of that number and the ways and means of communication were far inferior then to what they are to-day. The combatants of that time did much to improve the conditions of transit, and since then the enemy at present in occupation of Macedonia has done more.

Clearing the Soil by Steam.

A novel agricultural apparatus has recently been brought out for the purpose of combating destructive vermin beetles, and undesirable vegetable growths by an application of steam to the soil, penetrating some distance below the surface. The machine carries a steam generating plant, and moves over the surface on a large drum, the outer circumference of which is armed with protruding steam outlets in the shape of blades or spines. As the apparatus is drawn over the ground the spines imbed themselves in the soil and while in this position the steam is released and penetrates the soil for some distance around the outlet, killing the worms, larvæ, beetles, and the undesirable crop of weeds which seed themselves from one season to another.

CYPRUS LOAN FUND.

(From a Correspondent.)

Cyprus, May 27.

At a meeting of the Loan Fund Commissioners, under the presidency of the High Commissioner, the profits of the last year were stated to have amounted to £10,477. Two-thirds of this is devoted to the Agricultural Department. It was decided that loans should be granted to rural credit banks, bearing interest at 5 per cent. It was proposed by some of the members that aid should be given to villages which have suffered severely from hailstorms.

COMPANIES IN EGYPT.

An important judgment was recently delivered by the Mixed Court of Appeal, says the *Egyptian Gazette*, in the case brought by Messrs. Elias Siage, Elias Malluk and Nessim Sayba, three shareholders of the Banque Egyptienne de Commerce, now in liquidation, against its administrators, from whom damages were claimed on account of unlawful and unstatutable acts committed during their management.

The Cairo Mixed Court of Commerce had previously laid down that such an action was not permissible, as according to the regulations of the bank, no action referring to the general interests of the company could be brought against the board or one of its members, except on behalf of the majority of the shareholders, and in virtue of a resolution of a general meeting. The Mixed Court of Appeal, on the contrary, held that, as in France, so in Egypt, jurisprudence has conferred the right on a single shareholder to sue the administrators of a company in case of misconduct, within the limits of his shares.

The Court then examined if this right could be entirely suppressed by express provisions in the statutes. The Court of First Instance replied negatively on this point, pointing out that the individual right of a shareholder to sue the administrators is a powerful weapon which must remain in his hands so as to overrule the arbitrariness or apathy of a majority acting often by collusion.

The Appeal Court completely supported their opinion, showing its opportuneness in Egypt, where experience has proved how much shareholders need the protection of law against unscrupulous directors.

As regards the regulation in the company's statutes on this point, the Appeal Court held that the regulation must be accepted or rejected, and declared that the company is to blame for having made such regulations, which the Court cannot respect.

Whatever may be the general rule on the matter, the Court considered plaintiffs' action as justified.

The Court found in plaintiffs' favour to the effect that the bank had been really mismanaged.

NEWS FROM ALL SOURCES.

The Roumanian Government is sending delegates to Archangel and Vladivostok in order to receive goods which have been ordered abroad.

The Danube salvage boat Adagena, belonging to the Generala Insurance Company in Roumania, has been sold to the Russian Government. The boat was formerly the Alfred Noble, which brought President Kruger to Holland from South Africa during the Boer war.

The new commercial convention between Roumania and Turkey is, says the *Times* correspondent in the Balkan Peninsula, on the point of being concluded.

According to the *Times* correspondent in the Balkans, the Turks have purchased 2,000 tons of flour in Roumania; moreover, Germany is supplying Turkey with 250,000 tons of wheat (grain?) from purchases made in Roumania.

At Lloyd's, on Wednesday, the Greek steamer Georgios, of 3,260 tons, Sachtouris master, was posted as missing. Nothing has been heard of her since she sailed from New York on February 29 for Piræus with a cargo of wheat, etc. She was built at Sunderland in 1894; was valued at £20,000, and was owned at Piræus.

COMPANY REPORTS.

Mortgage Company of Egypt.

The directors report for the year ended March 31, 1916, that, after providing for interest on the 4½ per cent. first charge debentures and on temporary loans, and increasing the general reserve for contingencies by £50,000, the accounts show a profit for the year of £52,883 11s. 3d. Adding the amount brought forward from the previous account, £7,203 18s. 8d., there remains available £60,087 9s. 11d. Out of this sum the directors propose to devote: (1) To writing down the discount and expenses of the debenture issues, £2,800; (2) to the payment of a dividend on the 5 per cent. preferred shares for the two half-years ending June 30 and December 31, 1915, £50,000, or together, £52,800; and to carry forward to the next account the balance of £7,287 9s. 11d. Notwithstanding a very small cotton crop, partly due to the reduced area sown, the economic situation in Egypt during the year 1915-16 showed a marked recovery from the severe depression of the early-war period, and this improvement was reflected in largely-increased payments by the company's clients. Owing to the continued uncertainty of the position, however, it has been thought prudent to set aside a further sum of £50,000—the same amount as last year—to increase the provision against possible loss on arrears or properties acquired by foreclosure. The two separate reserves shown in the accounts of last year, viz., the "general reserve" and "special reserve for arrears," have been amalgamated into a single "general reserve for contingencies," which, with the addition of the £50,000 just referred to, now stands at the substantial figure of £152,500. Mr. T. A. F. Critchley, Sir William E. Garstin, G.C.M.G., and Col. the Hon. Sidney Peel, directors of the company, retire by rotation, and, being eligible, offer themselves for re-election.

Suez Canal Company.

The following are further particulars of the report submitted by the directors to the recent meeting of the shareholders in Paris, to which reference was made in last week's issue of The Near East:—

If the year 1915 had been reduced to its own resources we should have been forced to make a further reduction in the dividend. However, you wisely consented, when passing the accounts for 1914, to bring forward a large amount, and it was possible for the directors to propose the maintenance of a dividend equal to that of the preceding year, and to bring forward again the sum of 11½ million francs.

In order to protect your revenue and to avoid as far as possible any further decrease, you did not hesitate to raise transit dues by 50 centimes per ton. The formalities under which our statutes are controlled caused somewhat long delay, and this measure was only able to be put into force from April of this year. If our receipts do not improve in spite of this increase, we are resolved to put into operation a second increase of the same amount. From this you will have the benefit of the wise and liberal policy that you have invariably followed.

The total receipts of 1914 amount to the sum of 98,228,098 frs. 87 c., showing, in comparison with the receipts of 1914, a diminution of 26,893,138 frs. 67 c. The decreased value of the transit receipts amounts to 28,762,959 frs. 81 c., but there has been an increase in the receipts from other sources to the extent of 1,869,821 frs. 14 c. There has also been an increase in the receipts from interest and the revenue from the supply of water. The total expenses for the year 1915, comprising, as in the years 1913 and 1914, the allocation of 3,000,000 frs. to the account for depreciation of material, amount to 32,029,968 frs 36 c. They show a decrease of 910,706 frs. 41 c., as compared with the expenses of 1914, which had already been reduced by 1,159,890 frs. 74 c. in comparison with those of 1913. The excess of receipts over expenditure, including the amount brought forward from 1914, amounts to 73,021,375 frs. 68 c. It is proposed—(1) To fix the amount of profit to be distributed at 61,567,387 frs. 33 c.; (2) to carry forward to the profit of the current year the surplus of the excess—i.e., 11,453,488 frs. 35 c. The distribution of the profits—61,567,887 frs. 33 c.—among those entitled, as mentioned in the accounts, will have the effect of bringing the dividend on each share up to 109 frs. 28 c. This dividend, augmented by the interest of 25 frs., represents a gross revenue of 134 frs. 28 c., and a net revenue of 120 frs.

During the year 1915, 3,708 ships, representing a net tonnage of 15,266,155 tons, have passed through the Canal. This, in comparison with 1914, is a decrease of 1,094 passages and 4,143,340 tons—21.35 per cent.—and in comparison with 1913, the last normal year, a decrease of 1,377 passages and 4,767,729 tons—23.80 per cent. In the traffic of 1913 the German, Austrian, and Turkish flags contributed 1,047 ships and 4,239,765 tons—21.16 per cent. Their entire disappearance thus represents almost the whole of the decrease recorded in 1915. But if the commercial traffic is taken alone and separated from the special movement created by the war, it will be found that the changes were far more noticeable than appears from a comparison of the total tonnage. Government ships and chartered vessels, whose rights are regulated by the Governments, figured in the traffic of 1913 to the extent of only 105 passages and 301,145 tons: in 1915 they furnished 743 passages, representing 3,379,597 tons. The decline of the commercial traffic in comparison with 1913 was no less than 7,846,181 tons—39.16 per cent. Threats directed against the Canal have made it necessary to take certain precautionary measures and to suspend the navigation at night in certain parts. In spite of 119,812 military passengers carried through the Canal, the year 1915 shows a net decrease of 72,000 passengers as compared with 1914. There has been a reduction of nearly one-half in the number of civilian passengers. The suppression of the pilgrimage to Mecca affected the passenger traffic, which furnished 22,000 passengers in 1913.

As in our preceding report, we will not attempt to forecast the probabilities of future traffic. We will confine ourselves to stating that if the present situation is indifferent, it is only too well explained by the profound disturbance which the economic life of the majority of nations interested in this traffic has undergone. We must look to the future for a full compensation of this critical period.

Persian Carpet Company.

By an order of the Board of Trade dated March 20, requiring the business of the above-named company to be wound up, Athelstan Dangerfield, of 56, Cannon Street, E.C., chartered accountant, was appointed controller of the company to control and supervise the carrying-out of the said order, and to conduct the winding-up of the said business. Notice is now given that the creditors of the company are required on or before July 17 to send their names and addresses and particulars of their debts or claims to Athelstan Dangerfield, and if so required by notice in writing from the said controller are to give in and prove their said debts or claims at such time and place as shall be specified, or, in default, they will be excluded from the benefit of any distribution made.

Steaua Romana.

The report of the Steaua Romana to December 31, 1915, covers 7½ months, i.e., from May 14, 1915. There is a gross credit balance of 19,960,750 frs., against 21,899,278 frs. for the preceding twelve months. After deducting 639,123 frs. general expenses, 315,262 frs. taxes, 153,555 frs. pensions and assurance funds, and 80,241 frs. special relief, there is a gross profit of 18,519,569 frs., against 19,921,352 frs. the preceding twelve months. From this is deducted 721,479 frs. interest, 6,279,417 frs. depreciation, 3,000,000 frs. special depreciation, leaving a net profit of 8,518,673 frs., out of which a 10 per cent. dividend is recommended, amounting to 7,000,000 frs.—*Petroleum World.*

New Egyptian Company.

The directors submit the balance-sheet as at December 31, 1915, with the profit and loss account for the year ending that date. The profit and loss account shows a profit of £12,514 2s. 6d. Deducting £5,525 11s. 11d. for the service of the debentures, and £4,361 14s. 9d. as reserve against loss on 1914-15 rentals, interest owing by debtors for land sold, etc., there remains a balance of £2,626 16s. 1d. Adding £4,705 14s. brought forward from last year, the balance at the credit of the account amounts to £7,332 10s. 1d., which the directors propose to carry forward. The adverse influence of the war on Egyptian affairs continues to be reflected in the result of the year's working. The restriction of the area of land for cotton cultivation, imposed by the Government in 1914, made it difficult to obtain tenants at suitable rentals. In consequence, the company was obliged to resort to direct cultivation and half-farming of a considerable portion of its lands. These systems are not so remunerative as leasing the land on account of the expense of supervision. This expense has been increased by the high cost of coal, oil, and other material. The restrictions above referred to have now been modified, and the policy of leasing to tenants has been resumed. It is, therefore, to be anticipated that better results will be obtained during the current year.

The area of land sold is smaller than last year, as was to be expected, only 172 feddans being sold, at an average price of £92 5s. 3d. per feddan. The total sales up to December 31, 1915, amount to 3,082 feddans, at an average price of £94 17s. 9d. per feddan.

The capital expenditure on the Lower Egypt Estates (6,350 feddans) during the year amounted to £11,739 7s. 3d., as against £32,266 8s. 11d. during the previous year. As practically all the uncultivated lands have now been taken in hand, this expenditure should continue to decrease in the future, as little now remains but routine work. The revenue from these estates for 1915 was £14,629 14s. 10d.; and the estimated revenue for 1916 is £20,215 7s. 8d. During the year thirty-four feddans have been sold at an average price of £114 17s. 5d. per feddan, showing a profit of £1,374 10s. 8d. A large area is now in a saleable condition, and with the prospects of a good cotton crop and fair prices, it is hoped satisfactory sales will be effected during the present year.

The capital expenditure in the Upper Egypt Estates (2,326 feddans) during the year was £1,498 5s. 7d., as against £9,268 18s. 2d. in 1914. Only such works as were necessary for maintaining the reclaimed lands were taken in hand during the year. The revenue for 1915 was £8,211 5s. 8d., and the estimated revenue for 1916 is £9,948 14s. 4d. During the year 138 feddans have been sold (70½ at an average price of £117 18s. 6d., and 67½ at an average price of £54 7s. 2d. per feddan) showing a profit of £4,629 16s. 9d. Since the close of the accounts several small sales have been effected at satisfactory prices.

During the year we sold 1,705 square metres of the Port Said plots, and re-purchased one-half of the Rodah Island property previously sold.

It will be seen from the above figures that £13,237 12s. 10d. has been expended on our various estates during the year as compared with £41,535 7s. 1d. during the previous year. This expenditure has been reduced to the lowest dimensions compatible with the process of improvement followed. The directors have agreed to reduce their remuneration during the current year, and other economies have been effected. Mr. Day, who was appointed secretary on the formation of the company, has now been appointed London manager and secretary.

Our Lower Egyptian estates of Docmera, Kahwakia, and Samatay, are now some 6,350 feddans in extent. No land has been purchased, and only some thirty feddans have been sold during the year. In spite of the many adverse circumstances experienced a steady programme has been maintained. Whereas capital expenditure has been reduced as far as possible, practically all the uncultivated lands have now been taken in hand, and little now remains but routine work. The fact that we had rice cultivation at all estates, excepting Kahwakia, greatly accelerated the reclamation of the poor lands. The amount of new capital expenditure was not large, the routine work accounting for the greater part of the expenditure. At the same time, the following new works, which were deemed necessary in order not to retard the general progress, were undertaken :—Canalization of some 600 feddans at Docmera, Kahwakia and Samatay; motor ploughing some 770 feddans at Docmera; building a new Ezbeh (village) at Docmera; and the installation of a 25 h.p. oil engine for the drainage installation at Samatay. At Nashart, practically all capital expenditure, excepting some routine expenditure, has ceased, and very shortly the other estates will enter the same stage. While it would be incorrect to suppose that capital expenditure will cease entirely on account of the fact that the main works have been practically completed, yet the progress already realized is such that one may reasonably hope for a rapid diminution each year. The fact that we are reducing our livestock, which accounts largely for such routine expenditure, from 200 to some 120 head corroborates this premise.

The progress of reclamation is clearly shown in the fact that our revenue from the estates will probably be increased by some £E5,000, or more, in 1916. The cultivable land during 1916 is estimated at about 80 per cent. of the total area of the estates, exclusive of roads, canals, etc. On the same basis this percentage for 1915 works out at 63 per cent. The revenue charges have been reduced as far as possible, but the fact that fuel, etc., is very expensive has adversely affected such savings for the time being.

The cotton crop was fair at Docmera and Samatay, but at Kahwakia the boll worm did damage to the extent of some 30 per cent. of the crop. The price was most satisfactory, and, as a result, a large amount of our arrears and practically the whole of our rent were encashed at Docmera and Samatay. At Nashart no cotton was grown in order to give the land a rest, the crop during the past few years having deteriorated considerably. The wheat crop, as a whole, was disappointing, as it was almost everywhere badly affected by "rust," especially at Docmera. The barley crop was fair, while the prices, on account of the presence of the Army in Egypt, were most satisfactory. For the same reason we were enabled to dispose of our Berseem (clover) hay crop at remunerative rates. The maize crop was the best we have ever experienced. The rice crop was excellent at Docmera, and on those parts of Nashart where there had been sufficient water. The water supply has been, as a whole, satisfactory, though considerable difficulty was experienced at Nashart, where the rice crop suffered in consequence. The irrigation engines were not much worked, thereby realizing a considerable saving in view of the high price of fuel. Our various installations at Docmera, Kahwakia and Samatay have worked regularly and satisfactorily. The wisdom of having artificial drainage systems at all estates, except Nashart, has been proved again this year, when the Government, for reasons of economy, had either not cleared, or had sufficiently cleared, the public drains —without our pumps at least half of our land would have been badly damaged through bad drainage. The cost of drainage has, however, been comparatively heavy on account of the high price of fuel. Our motor-plough worked satisfactorily at Docmera, where it ploughed some 770 feddans of land generally too hard to be touched by cattle. The experience gained in working has avoided much delay. The work done is most valuable, but the recent sharp rise in the price of petrol may prohibit its extensive use at the present.

Towards the end of the year signs of activity were not wanting. Some 33 feddans have been sold at an average price of £E111 per feddan. The good prices of cotton and the increasing political confidence augur well for future sales. A large area of land is now in a saleable condition. At Samatay a large amount of arrears has been encashed and many outstanding sales cleared up.

It is most satisfactory to note the great improvement that has been experienced at our estates. All are now well on the way to full reclamation. With a steady programme and good drainage, the results are certain. With a good cotton crop and fair prices, there is every reason to hope that sales will be numerous and remunerative, and that the remaining effects of the crisis of 1914 will be overcome.

As the reclamation of our estates is now far advanced, only high floods benefit our properties from the point of view of silting. Further, all our estates are now independent of the flood water for irrigation purposes, except Feshn, which is situated on the east side of the river, and, therefore, risk of drought in low floods has been much reduced. The flood of 1915 was a bad one. At its commencement it threatened to be very bad, but an exceptionally late rise greatly relieved anxiety, though the river was still considerably below its average maximum. It is very satisfactory to note that all our works are practically intact, in spite of the fact that low floods are frequently found to be very troublesome on river berms. It is with regret that I must report that the erosion which has been occurring during the past few years at Feshn still continues at a point beyond the influence of our spur. It is also regrettable that the Government will not allow us to make any protection of further river training works at this point for fear that they may accentuate the eroding action that is already taking place on the opposite banks. It is hoped that given a big flood the river will straighten itself out on this reach.

The following works were carried out in Upper Egypt :—At Ashmant, the permeable spur was heavily strengthened and completely repaired; the divide bank in the khor was reinforced, and some new canals made for irrigating land in the khor which was threatened with "Sharaki." At Hataba, the southern spur was completely remodelled and strengthened; the regulator was replaced by a stone wall of permanent character; the main canalization of the estate and the building of two new masonry heads and the Government canals

Digitized by Google

were carried out. At Freshn, the southern spur was heightened with woodwork by one metre. At Saadat, the permeable spur and its toe were strengthened; the regulator (crest wall) was heightened; and a strong bank was constructed at the south of the khor to prevent the flooding of the khor by any but high floods; the 120m.-long iron syphon was replaced by an embanked canal; and the canalization of the estate was completely remodelled. At Garf Sarhan some new canals were made; the enclosing banks were completed, the excavation for the artesian wells were filled in, etc.

It is most satisfactory to note that in spite of the advanced state of our lands a further considerable increase in rentals can be recorded. It is estimated that the accrued rentals for the year 1916 will show an increase of some 20 per cent. on those of 1915. This is the result of various improvements by levelling, canalization, and the special treatment of sandy lands. It should be borne in mind that the estates have nearly reached the fully productive stage, and thus it would be unwise to anticipate a large increase in the following years. This is especially the case at Ashmant and Saadat. The encashments have been most satisfactory, in spite of many difficulties, especially that of constant changes in the staff.

As was anticipated, there were but few new sales during the year. Since the beginning of 1916, several small sales have been concluded at satisfactory prices, and it is thus hoped that before the end of the year the profits from this source may be considerable. At the same time, conditions are far from normal, and, unfortunately, the onion crop has neither been good nor has it realized good prices. It would be, therefore, unwise to anticipate the sale of a large area.

In conformity with the company's articles of association, Sir Ernest Spencer and Mr. H. E. Barker retire from the board, but, being eligible, offer themselves for re-election.

COMPANY RESULTS, Etc.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 20 tons (last week, 21 tons); Hurgada production for week, 456 tons (last week, 478 tons).

ANGLO-PERSIAN OIL.—Transfer register will be closed from 16th to 29th instant.

ANGLO-ROUMANIAN MERCANTILE COMPANY.—The creditors of the above-named company are required, on or before July 31, to send their names and addresses and the particulars of their debts or claims, and the names and addresses of their solicitors, if any, to Edward Charles Weston and Henry Brownrigg Hunter, of Baltic House, Leadenhall Street, in the City of London, the liquidators of the said company.

EGYPTIAN DELTA LAND AND INVESTMENT COMPANY.—A dividend of 4d. per share will be paid on and after June 24. Dividend warrants for amount of their dividend will be posted to the registered shareholders. Holders of share warrants to bearer are requested to fill up the form to be obtained at the National Bank of Egypt, Cairo or London, and to lodge the filled up forms along with Coupon No. 4 at the offices of the Bank in Cairo or London.

MORTGAGE COMPANY OF EGYPT.—The eighth ordinary general meeting of the Company will be held at Cannon Street Hotel, London, E.C., on Friday, June 23, at 12 noon.

NEW EGYPTIAN COMPANY.—The fifteenth ordinary general meeting of the members of the New Egyptian Company will be held on Wednesday, June 21, at 12 noon, at Winchester House, Old Broad Street. The transfer books will be closed from June 10 to June 21, both days inclusive.

UNITED EGYPTIAN LANDS.—The ninth ordinary general meeting will be held at the company's offices in Alexandria on Monday, June 19, at 4 p.m.

NOTES OF THE WEEK.

The real answer of Islam to the appeal for a "holy war" launched by the German rulers of Turkey and their free-thinking satellites of the Committee of Union and Progress has been long delayed, but it has come at last. The Grand Sherif of Mecca, supported by the Arab tribes of West and Central Arabia, has proclaimed Arab independence of Turkey, has captured Mecca, Jeddah, and Taif, and is closely besieging Medina. Arab revolts against Turkish misrule are no new feature; but a movement which has for its first object the ejection of Turkish control from the Holy Places of Islam has a far wider significance than an ordinary local rebellion. There is nothing startling in the event. It has been well known for some time that the Arabs have been growing increasingly dissatisfied with Turkish rule and German domination over the Ottoman Empire. The recent visit of Enver Pasha to Medina was not undertaken from purely pious motives on the part of a devout Moslem. From the political importance that the official communication sought to attach to the tour it was evident that its object was to restore Turkish prestige in these parts. Recent developments prove how completely the Minister for War failed to achieve his purpose.

The Arab revolt is said to have begun about June 9. It has met with considerable success in a short time; but we must expect that the Turks will make a determined effort to reverse the verdict of the earlier operations. If they were free to turn their whole attention to Arabia, their present resources would give them a great advantage over the Arabs. It is for the Allies, therefore, to see that the Turks are not in a position to despatch large forces to the Hejaz, and the first precaution ought to be to cut the Hejaz Railway and to secure the permanent interruption of that avenue of communication. The Turks are still in considerable strength in Palestine, although recent events on their different fronts will have caused them to reduce the original army collected for the advance on Egypt. By the early occupation of Jeddah the Grand Sherif has shown that he is acting with an eye to strategical requirements, and possession of this port ought in existing circumstances to enable him to make good the supplies of war material in which he may be deficient. His future movements will be watched with close interest, as it is one of the preoccupations of the British Government that Mohammedans of the Empire should be assured of free access to the Holy Places.

Greece is testing the truth of the proverb that, as one makes his bed, so he must lie. The particular conditions which the conduct of King Constantine and his advisers have brought about include, in addition to the complete estrangement of the country's real friends, financial embarrassment, a Ministerial crisis, and a total "loss of face." If there are compensating advantages in the opinion of the military clique, they are not apparent to the outside world, which is now tempted to blame the Allied Powers for a policy that allows Greece, merely on the strength of her contrariness, to occupy a position out of all proportion to her importance in a world struggle.

For the luxury of keeping on a war footing an army which was never intended to take part in the war or even to protect Greek territory against invasion by her traditional enemy, Greece has had to face deficits in the two financial years, 1915 and 1916, of £17,000,000. This year she incurs an expenditure of £20,000,000, and her revenue is less than half that amount. An attempt to obtain some relief by a loan from the National Bank has brought the Greek Government into conflict with the International Financial Control Commission, which refuses to allow a fresh issue of paper money to the extent stipulated by the Bank as a condition of the new loan. If further proof were needed of the short-sightedness of the policy which has found favour at the Court, it is supplied by the financial situation of the country.

As frequently happens, a clumsy abuse of the censorship has recoiled on the head of the Greek authorities. There were some disorderly scenes in Athens on June 12 after a military fête, and the Greek Government hastened to represent them as being directed against M. Venizelos and his supporters. *The Times* was able to correct this version on the authority of an eye-witness, who pointed out that the demonstration took place with the connivance and assistance of the police, and was directed as much against the Allies as against the Venizelists . Moreover, during the military fête "members of the British Legation, including the military attaché, as well as Admiral Palmer, the new Chief of the British Naval Mission, found that members of the secret police were placed around them in the most ostentatious and impertinent manner immediately on the arrival in the Stadium of the King and members

Digitized by Google

of the Royal Family." The Greek Government has since taken upon itself to correct the account in *The Times;* but as it ignores the insult officially perpetrated in the Stadium, and denies statements which the eye-witness did not make, it cannot be said to have improved its case. The *communiqué* says:—"The statement that the demonstration was directed against the Allied Legations is mendacious and malevolent. No insult and no cry was uttered outside any Legation of the Entente." It had not been stated that such an incident took place. The building in front of which "insulting epithets" were hurled was a hotel and not a Legation; but the French Minister resides there. Again, the mob would not pass in front of the British Legation on its way to the newspaper offices selected for its attacks, but it would pass near enough, as the eye-witness stated, to be able to indicate the object of any special cries it might utter.

Perhaps the most interesting part of the Greek explanation is the naïve statement about the *revue*, which was given the same evening in an Athens theatre, and, according to the account of the eye-witness, "from beginning to end constituted a series of insults against the Entente and their forces." The Greek Government gives "the truth" as follows: "The *revue* in question —a clumsy production—was given in a small out-of-the-way theatre, the management of which seems to be not indifferent to encouragements of a pecuniary character. The performance took place before a very scanty audience, for the most part guests of the author." Evidently the encouragements of a pecuniary character were not derived from the prospect of a full house, and we are left to infer that the Greek Government wishes it to be understood that the management was in receipt of a German subsidy. It is, therefore, for a country which can sink to these depths for the object of furthering its cause that Greece has repudiated her pledged word, estranged her friends, and saddled herself with a serious financial crisis.

The British public will shortly begin to look out for and welcome Constantinople accounts of signal successes achieved by Turkish arms, for they enable us to count upon receiving a week or so later a correct version of the incident, which otherwise would have passed unrecorded by the British Government. After the announcement of a successful advance on the part of General Gorringe's force on May 22 nothing was heard of Mesopotamia until June 17, when a statement was issued regarding an incident on June 10, which had been the subject of a Turkish *communiqué* on June 14. It would be imagined that during those three or four weeks an occasion would have arisen at least to state that the situation remained unchanged, with General Gorringe's force still in touch with the enemy. But the War Office prefers to maintain an obstinate silence and allow the Turks to claim the destruction of two gunboats, when in reality they had merely sunk three barges. The very silence of the British authorities lent colour to the Turkish version. It cannot be too strongly impressed upon the Government that reticence in dealing with the East may often be as injudicious as disclosures, and that one of the best methods of obviating false reports about the progress of a campaign in this war is to refrain from long silences. It would be reassuring to have some knowledge of the situation in the Aden hinterland, before some preposterous enemy claim is given several days' start.

A feature of the air-raids now being carried out from Egypt is their gradually widening range. El Arish, a hundred miles from the nearest British aerodrome, has been attacked with no little success, although three out of the eleven machines which took part in the operation were lost, and one pilot was captured by the enemy. A Turco-German aerodrome had been located at El Arish, and was the objective of the raid. If two out of ten hangars were destroyed and four others hit with bombs, the British airmen have every reason to be satisfied with their day's work. The size of the aerodrome points to the enemy's strength in this arm, and will account for the persistence with which he has tried to attack the town of Port Said. It is significant of the confidence felt by the Egyptians that they have been left quite unperturbed by the fall of Kut and by another mishap, on a much smaller scale, indeed, but nearer home, the Katia incident. The continual bombing of Port Said, however, even though comparatively little damage has been done to life or property, has given rise to considerable comment, and the people of Egypt feel as the inhabitants of London did in similar circumstances, that they are entitled at least to greater, if not complete, immunity. As the best protection is afforded by the destruction of the enemy's aerodromes, it is to be hoped that the policy of the El Arish raid will be continually repeated. At the same time the achievements of British airmen in this region suggest a means of interrupting communications on the Hejaz Railway before Turkish troops can be sent in any large numbers to deal with the Arab revolt.

A recent message from Russia refers to the advent of summer heat in Mesopotamia, and states that for this reason no early development of large-scale operations in the direction of Baghdad is to be expected. The Russians, however, have been able to check the Turkish offensive, which caused them to fall back behind Kasr-i-Shirin, and are now, in turn, ousting the enemy from the positions he had occupied. It is noticeable that in regard to the fighting in the country south-west of Bitlis the expression "near Diarbekr" appears in the Russian reports. If the term is used more correctly than the somewhat loose application given to the words "in the direction of," it should mean that the Russians have made notable headway in this neighbourhood. The occupation of Diarbekr would materially affect the progress of the operations on the rest of the line between that town and the Black Sea.

The remarks of the Russian Foreign Minister to a Roumanian journalist will be of interest to the large number of people in this country who find difficulty in understanding Roumania's attitude in this war. After pointing out that the love of liberty and independence, which is strong in Roumania, decided her to resist the intrigues of Austria and Germany, and would, in his opinion, place her in a position to realize her national ideal, M. Sazonoff continued: "It is true that public opinion in Russia has latterly displayed some dissatisfaction at the commercial arrangements which Roumania has made with the Central Powers. These arrangements may be defended up to a certain point by your economic interests. But they have also a political character; they enable the Central Powers to continue the war. We do not ask for commercial opportunities in Roumania provided by treaties signed under pressure of threats, nor for the construction of railways serving political ends, nor for outlets for contraband trade. We simply desire your loyal co-operation, and on the day when Roumania takes up arms to realize her political ideal she will find in us, and in our friends, allies resolved to make right triumph over might." Roumania must be the sole judge of her own interests. The longer she postpones participation in the war the easier becomes her military task, but the less valuable will be her co-operation with the Allied Powers. Ultimately a point would be reached at which she would stand to incur no risks at all, but the Allies would naturally feel under no sense of obligation to her. In the meantime, however, they are prepared to admit that until the Austrians have fallen back some distance from the frontier line along the Carpathians the task of driving them from entrenched positions would probably be too great for the Roumanian Army.

Wednesday, June 28 (June 15, Old Style), is the anniversary of the Battle of Kossovo, at which the Turks (in 1389) overthrew the Serbians, and were able to establish themselves in Europe as far as the Danube. The Serbians observed this day as a national festival in proof of their confidence in the ultimate emancipation of the race. It has remained essentially Serbia's Day, and a movement has been set on foot to celebrate the day in Great Britain with the object of promoting a sympathetic understanding of Serbia.

JUSTICE IN EGYPT.

THE JUDICIAL ADVISER'S REPORT.—I.

(By Our Cairo Correspondent.)

Next to the annual note presented by the Financial Adviser, perhaps the most important administrative document published by the Egyptian Government is the report of the Judicial Adviser, and the review of the work done by the Ministry of Justice and the various jurisdictions during the past year, which Sir Malcolm McIlwraith has just published, is, as usual, full of interesting facts. The year under review has been an abnormal and eventful one, and it is instructive to note the effects which the régime of martial law and the continuation of war have had on the people.

Native Civil Jurisdiction.

In the first place, we find that there has been a phenomenal increase in the civil work of the Native Tribunals, where no less than 221,723 new cases, representing an addition of 60 per cent. on the previous year's figure, have been entered for trial. The bulk of this increase fell on the Summary Courts, the competence of which was enlarged in 1914, and which were called upon to deal with 140,893, or about 45 per cent. more cases, and on the Cantonal Courts, in which 181,093 additional cases, or 70 per cent. of the previous year's total, were brought. In the other civil courts a reduction in the number of new cases was recorded. It is satisfactory to note, however, that the work was in every instance so energetically handled that even in the Summary and Cantonal Courts the arrears at the end of the judicial year were only increased by 1,659 and 7,676 cases respectively. In the Appeal and Central Courts a considerable reduction in arrears is noticeable, and the Adviser pays a well-merited tribute to the judges, especially those of the Summary Courts, where, thanks to the special efforts made, 50 per cent. more cases were disposed of during the summer vacation. It is pointed out that a great proportion of the increase in cases in the Summary and Cantonal Courts is accounted for by personal actions for small sums, which, in the case of the first-named jurisdiction, represent about 75 per cent. of the total increase registered before it. This, Sir Malcolm says, "would seem to show that creditors have found considerable difficulty in collecting small debts." Since this opinion may seem to contradict the view expressed recently by the Financial Adviser and other financial experts as to the general situation of the country, it may be as well to add that the judicial year runs from November to October, and the financial year from April to March, whence it follows that the judicial statistics relate to a state of affairs that is about six months behind that dealt with by the Financial Adviser. Further, with regard to the Cantonal Courts, it is pointed out that half the increase is accounted for by personal claims for sums under £T100, where no fees are paid. Whilst the abnormal conditions existing in the country may have occasioned this increase, it is at the same time quite possible that the gratuitous nature of these courts may have constituted the attraction. From the beginning of the new year a small fee is being imposed on all cases coming before these tribunals, and it will now be possible "to judge how far these courts have supplied a real want, and how far the fellahin have been using them as a cheap and easy method of collecting debts or annoying their enemies."

Crime.

Crime is, unfortunately, on the increase again, arson, murder, and attempted murder, and theft constituting two-thirds of the total. The Adviser is of the opinion that, whilst the increase in theft can alone be attributed indirectly to the continuation of the war, that under the other heads can only be ascribed to general increased lawlessness. He further thinks that the general increase is due to the time and energies of the interior officials being absorbed by business outside their ordinary duties. "Almost the whole of the police and ghaffirs have been employed on such duties as guarding railway bridges and military camps, patrolling frontiers, etc. Moreover, the locust campaign has led to every police officer and man in the provinces affected being out in the fields for weeks at a time, and to every police horse used for the purpose being so exhausted as to be unavailable for patrol duty for months afterwards. There has probably never been a year in Egypt in modern times in which the administrative officials, from the mudirs downwards, have had so much extra work thrown upon them, naturally to the detriment of their ordinary duties." Sir Malcolm is, however, not despondent, and he thinks that there is "no ground for apprehending that, with the return of normal circumstances we shall not once more attain, and perhaps surpass, the favourable results in the diminution of crime shown by the figures of 1913-1914."

The number of offences reported rose slightly, by 1.3 per cent., but it appears that, but for the enormous increase in petty thefts, due probably to the greater lack of employment and consequent poverty, there would have actually been a considerable decrease in the general total. Misdemeanours have again increased, this time by about 5 per cent., whilst contraventions have fallen off slightly. The decrease in the latter is to a great extent due to the reduction in Cantonal Court contraventions. Contraventions expand or contract to a great extent in proportion as the various Government departments supervise efficiently or otherwise the execution of the bye-laws and other regulations enacted at their instance. Thus there is a marked increase under "Protection of Plants and Animals" offences, which shows that the responsible administration, the Ministry of Agriculture, has more zealously carried out its cotton and boll worm campaign. Similarly, the increase in prosecutions under "Weights and Measures" is due to the activity of the new department formed for the supervision of this matter, and the decrease in the Arms Law offences is possibly due to the fact that closer supervision of the sale and import of arms is being carried out. The Adviser points out that "hashish" and drunkenness offences are on the decrease. While the first is probably due to the increased difficulty in obtaining the drug and to the abnormal economic conditions, and the other to the more stringent regulations introduced under martial law, it is perhaps too much to hope that this improvement is more than temporary.

Turning to the work of the Courts in criminal matters, we find that of the 1,321 appeals made to the Cassation Court against sentences inflicted by the Assize Courts, only two were admitted, of which one resulted in an acquittal and one had the sentence reduced. As showing the good work done by the Assize Courts, it is interesting to note that this acquittal is the first pronounced by the Cassation Court since 1912. The Assize Courts handled about the same number of cases as in the previous year, viz., 2,533, a large number of cases resulting from the general increase of criminality, already referred to, having been sent for trial by the committing magistrates after the close of the judicial year. The Adviser notes as satisfactory the fact that the period passed by accused persons under preventive arrest has undergone substantial improvement.

Some interesting statistics are appended with regard to the sex, state, instruction, and previous convictions of persons convicted by the Assize Courts. Thus 3,539, or 94 per cent., were men, of whom 2,222 were married and 154, or 4.1 per cent., were women, of whom 101 were married. The comparative figures for England were 90.3 and 9.6. All the women were illiterate, as against 16.5 per cent. for England, and it is curious to note that the proportion of the men who were illiterate was exactly the same as the proportion of illiterates in the English statistics. As regards previous convictions, 144, or 3.8 per cent., had been previously convicted of crimes and 853, or 22.6 per cent., of misdemeanours. The figures for England were 41.9 and 26.3 per cent. respectively.

Moslem Religious Jurisdiction.

Very considerable improvement has become noticeable in the general atmosphere of the Mehkemehs Sharias or Moslem religious courts during the past year. The reason is not far to seek. The stumbling-block in the past had been the Grand Cadi, who previously presided over the Cairo and the Supreme Mehkemehs. The change in the régime has completely altered his position. Instead of holding his mandate from the Sublime Porte, and claiming, as he always did whenever any attempt was made to introduce any radical reforms in these courts, that he held his powers from Constantinople, and therefore could not be interfered with, this functionary is now a purely Egyptian official; and it has been possible not only to reorganize the interior machinery, but also to bring these courts directly under the supervision of the Ministry of Justice. "Those occult and insidious influences which exercised powerful sway over their deliberations and undermined their independence" have now been eradicated, and confidence has been restored in these courts. As proof of this we have the fact that, whereas in 1914 only 821 applications in matters of trusteeship, exchanges, etc., of *wakf* property were presented to the Cairo Mehkemeh, in 1915 their number rose to 1,325. This gives an idea of the opinion which the Moslem community held previously of their own courts, and of what British control stands for in their minds. But, although great changes have already been achieved in the tone of these courts, and in the place they hold in the Moslem community, it is not pretended that the entire administration has been exhaustively cleansed; and the Ministry of Justice continues to give these courts its closest attention, so that all that has been so unsatisfactory in the past may eventually be eradicated, lock, stock, and barrel, and "replaced by the most honest and intelligent elements that can be found among the young graduates from the Cadis' School and the Azhar." There is every hope that this will be achieved without difficulty, for both the last-named institutions are now being conducted on far more enlightened lines than in the past.

Side by side with this endeavour to purify these courts and provide them with an efficient personnel, efforts are being made to reform within a certain measure the system of law which they administer. There are, it may be remarked, four different orthodox rites in the Moslem religion. In former times each rite had its own Grand Cadi in Egypt, and in cases of dispute between parties belonging to different rites, it was that of the defendant which was always applied. At the beginning of the last century, however, the Hanafite rite was adopted as the general rite for the solution of all disputes, and, accordingly, the Mehkemeh regulations laid down that this practice should be followed. But this decision gave rise to certain inconveniences, and the more en-

NORTH BRITISH AND MERCANTILE INSURANCE CO.

Digitized by Google

lightened Moslems repeatedly drew attention to this unsatisfactory state of affairs, and demanded that the Mehkemehs should be permitted to apply the provisions of other rites in certain circumstances, which were constantly arising before the courts. Although that notable man Sheikh Mohammed Abdu took an active part in the campaign, and actually went so far as to draft provisions which might usefully, in the cases in question, be taken from rites other than the Hanafite, it was not until the end of 1914 that it was found possible to take any action. A commission was formed, under the presidency of the Minister of Justice, with, amongst others, the Sheikh of Al Azhar, representing the Malakite rite, the Grand Mufti, and the heads of the Shafeite and Hambalite rites as members, and it held its first meeting in January, 1915. There is, it may be pointed out, no idea of exercising any restriction on the application of Moslem law. "The sole intention is to promulgate, in the form of a clear and well-ordered Code, the rules which the judges at present apply to suits which come before them, substituting, however, for the provisions which have given rise to inconvenience in practice, more suitable solutions drawn from other rites." A preliminary draft of important portions of the work has been circulated amongst the Cadis and other high Moslem jurists, who have been invited to give their criticisms and suggestions. Whilst the publication of any extensive details would be premature, as well as impolitic, the Judicial Adviser makes the interesting statement that "one of the main preoccupations of the revisors has been to seek in the best accredited commentaries of the different rites solutions of a nature to improve the legal situation of women." The prevalence of child-marriage, especially in the case of girls, which has become such a serious social evil, has also engaged the earnest attention of the revisors; and "it is hoped, by rigorous regulations, that it may prove possible to put an end in practice to the deplorable abuses which occur." An improvement has also been noticeable in the administration of the Meglis Hasbys (courts of wards), where the Ministry has been able to introduce various salutary administrative reforms.

Personnel.

Sir Malcolm pays an eloquent tribute to the memory of Mr. Lionel Sandars, who died last winter, and was the first English President of the Mixed Court of Appeal. Later on in his report he refers to the services of Mr. H. W. Halton, who was one of the pioneers of the English section of the Government Law School, and who was promoted from the Presidency of the Cairo Mixed Court, which he was the first Englishman to hold, to the English Counsellorship in the higher court, left vacant by the death of Mr. Sandars.

Sir Malcolm has a few words to say with regard to the personnel of the courts and of the Ministry. Two of the vacancies created in the Mixed Courts as a result of the absence of the German and Austrian judges have been filled by members of the Ministry, and a French advocate of Cairo has been appointed to a third. An interesting point is settled by the statement that "these posts are, of course, personal to their holders, being supernumerary to those allotted to the Powers respectively concerned under their conventions with Egypt." It is to be assumed that this applies equally to the extra Italian judgeship recently created. The Mixed Courts have also lost two very valuable members in the Greek and Portuguese judges, MM. Demetriades and D'Alpoim, and the Native Court of Appeal a promising Egyptian, in the Coptic Counsellor Mina Bey Ibrahim. The Ministry itself suffered a great loss in the person of Mr. D'Aubuz, Director of the Statistical Office, who died last summer and who "had proved himself a very valuable coadjutor," and had been chiefly responsible for the statistical portion of the Adviser's reports. In my reviews of these reports I have repeatedly referred to the remarkably clear and intelligent manner in which the divers statistics were set out—as it turns out by this official, whose "untimely decease at the early age of forty-six is greatly to be deplored."

Like all other Egyptian administrations, the Ministry of Justice has had to work with a depleted staff owing to the absence of many of its officials on military duty. No fewer than twelve of its European personnel are serving with the Allies in one capacity or another, but it is only fair to say that all the other members who are of military age would be doing likewise if the Ministry had been able to spare them and accede to their request for permission to volunteer.

NEW MILITARY COURT IN CAIRO.

A Reuter's telegram states that a summary military court is being established in Cairo to deal with offences against proclamations and other offences deemed prejudicial to military interests. It is empowered to deal with offences against public decency and morality, following the principles of English law. Generally speaking, the court has similar powers to those of the petty sessional courts in England.

A representative committee (of which Mrs. Brabant is secretary) has been formed in Oxford to organize a local celebration of Kossovo Day, says the *Oxford Magazine*. It is proposed to hold a public meeting on Monday, June 26, at which short addresses on different aspects of Serbian history and civilization will be delivered by Mr. Vesnic, the Serbian Minister in Paris, M. Victor Bérard, Sir Arthur Evans, Professor Vinogradoff, and Mr. Nevill Forbes; failing the first two speakers, Dr. Seton Watson will also take part. Arrangements are being made for lectures or lessons on Serbian history throughout the schools on June 28. It is hoped also to arrange a concert of Serbian music in a College garden on Thursday, June 29, and a lecture-recital by Miss Vivian Edwards in one of the schools. Literature will be placed at the disposal of teachers, and will also be on sale in the Oxford bookshops.

TO RELIEVE DISTRESS IN SYRIA.

(From a Correspondent.)

Cairo, June 1.

The movement of Syrians abroad towards succouring their fellow-countrymen who are on the verge of destruction by starvation and persecution already gives promise of early results. According to a telegram received from the New York Committee, President Wilson has granted an audience to a deputation of representative Syrians, to whom he gave a formal promise of help. At the same time the U.S. Diplomatic Agent in Cairo addressed to his Government a long telegram, based on an exhaustive report submitted to him by representative members of the Syrian community, and supported it by strong personal recommendations. Again, the Maronite Patriarch's delegate in Egypt received a telegram from the Pope acknowledging the receipt of the appeal addressed by him and his Catholic colleagues, and stating that his Holiness is giving the matter his very serious attention, and taking the necessary steps with a view to putting a stop to the campaign of persecution and starvation to which his spiritual children in Syria are being subjected. His Holiness at the same time calls upon the relief organisers to press forward energetically with their work in connection with the raising of funds and the purchase of foodstuffs and medicinal requisites, etc., for eventual distribution among the famine-stricken population.

Furthermore, in reply to a similar telegram of appeal, addressed to his Holiness by the spiritual chiefs and notables of Alexandria, the papal secretary wired back that this matter had already been brought to the attention of his Holiness, who is doing what is needful with a view to alleviating the distress of the people, and saving the land from the avoidable woes of war.

The Central Committee in Cairo has already completed its preliminary work of organisation, and it is expected that its programme will be laid before a large gathering of Syrians on Saturday next. Then the decision will probably be taken to start the Press campaign and the collection of funds at once. The spiritual chiefs of various Christian sects, as well as of the Jews and Moslems, are represented on this committee, together with leading notables of each of these communities. Sub-committees, similarly constituted in the provinces, will be entrusted with the raising of funds within their own areas. It is suggested, though not yet confirmed, that the sums to be contributed shall not be left entirely to the charitable inclination of each contributor (Syrian, of course), but shall be fixed by the members of the respective committees, who will have to take into careful consideration his means and his personal and family obligations, if any.

It is proposed that special committees shall be formed to keep in touch with the committees outside Egypt, with a view to a better co-ordination of effort, and that other special committees shall be entrusted with the work of making appeals abroad to allied and neutral organisations, such as the Red Cross, etc.

It will no doubt interest British readers to know that the Bishop in Jerusalem is taking a deep interest in the movement, and that, in addition to having offered 300 tents—to be used eventually as temporary stores far from the principal centres of distribution—and some clothing, he is trying to obtain all possible support from home.

Havas' representative here has sent a long report to his agency in Paris, setting out fully the situation in Syria and the Lebanon, both from the economic and political standpoint, and, as this will be circulated throughout France, it is expected that French public opinion will be stirred to prompt and generous action.

According to advices from Constantinople, the Turks are brutally driving away from their homes the Greek population along the Black Sea coast, west of Trebizond, on the pretext that they are saving the Ottoman Greeks from the dangers of Russian invasion.

Speaking at a meeting of the Royal Geographical Society on Monday, the President, Mr. Douglas W. Freshfield, referred to the late Lord Kitchener, who had been a Fellow for thirty-one years. What they remembered perhaps most of all, he said, was that Lord Kitchener's career began in geographical work with his services in Cyprus, and afterwards in Palestine in connection with the Palestine Exploration Fund. While commemorating with pride his connection with that Society as a great soldier, they had to recognise that he was something more than a soldier. He restored the Sudan to civilisation and contributed largely to the establishment of order and prosperity in Egypt; it was mainly due to him that the inhabitants of the Nile from Khartoum to Cairo were able to live in peace and happiness. At Fashoda he prevented by his tact and discretion what might have been a most lamentable dispute between France and England.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, May 27.

Count Czernin's Blunder.

An incident occurred last week which aroused much attention, and is worth recording in some detail on account of its unusual character. The facts are as follows:—In a private conversation with M. Cioraneano (M. Take Jonescu's political secretary), Count Czernin announced the Austro-Hungarian Government's intention of shortly calling upon M. Take Jonescu to restore the insignia of the "Crown of Iron" conferred upon him years ago, and suggested that M. Take Jonescu should anticipate events by voluntarily returning the decoration. M. Jonescu, of course, fell in with the suggestion and returned the insignia in question. At the same time, however, he went rather further than the Austrian Minister had intended, and sent to the German Minister his decoration of the "Red Eagle," together with a letter, of which the following is the text:—

The political attitude dictated to me by my conception of a Roumanian's duties in this world-crisis has imposed upon me the obligation to forego the privilege of possessing Austrian and German decorations.

In spite of this, the restitution of insignia appeared to me a useless act of discourtesy.

The course followed by the Austrian Government—your ally—has shown that in respect of courtesy the views entertained by the Central Powers and myself are at variance.

At the present moment I no longer have any scruples in requesting you to return to your Government the insignia of the Order of the Red Eagle.

The immediate consequence of this incident was the restitution of Austrian decorations by a large number of prominent personages, including half-a-dozen former Ministers, the decorations in many cases being accompanied by letters which cannot have proved pleasant reading. Below is the text of a letter addressed to the Austro-Hungarian Minister, to which several well-known public men subscribed their names:

The pretensions of the Austro-Hungarian Government to assume the position of a judge in respect of the political attitude of Roumanian citizens who possess Austro-Hungarian decorations, and of withdrawing the same decorations from those whose attitude provokes this Government's displeasure, confers upon these decorations a character which for us is quite inadmissible.

We, therefore, beg you to return to your Government the insignia of the Orders which we hold.

Our mode of restoring them is, we admit, somewhat irregular, but it is the one which your Excellency himself found it good to select.

The Tenth of May.

It was on May 10 (Old Style) exactly half a century ago that Prince Charles of Hohenzollern-Sigmaringen made his solemn entry into Bucharest as ruler of the United Principalities. On the eleventh anniversary of this date the country celebrated its independence, proclaimed the day before by the legislative bodies. Finally, it was on May 10 in the fourth year of her independence that Roumania proclaimed herself a kingdom, and that Prince Charles and his consort assumed the Royal crown. This day of the years 1866, 1877, and 1881 thus marks three stages in the country's upward progress, and is associated with events whose influence upon the national development is incalculable. It is Roumania's "*jour de fête.*" What gift will the next one bring her?

This year's celebrations were much the same as in former years: a Te Deum at the Metropole, and the procession up the Calea Victoriei and past the tribunes at the entrance to the Chaussée. As in the case of last year's review, the foreign diplomats and military attachés receive no invitation, principally, we may assume, in order to avoid the chance of a hostile manifestation against the Central Powers taking place. There were one or two features which drew the attention of the public. Thus the King wore the new green uniform which is about to be introduced into the army, and is very becoming, and then there was the passage of the Sanitary Corps—admirably organised and equipped, thanks to the untiring labour and technical knowledge of Dr. Anghelescu, the Minister of Public Works—with its new ambulance wagons, its motor ambulances fitted with stretchers, etc. An unfamiliar spectacle was presented by the guns with muzzles directed skywards, on the look-out, it would seem, for a Taube. And finally there were the four squadrons of the Aviation Corps which was formed last autumn, the aeroplanes being conveyed on motor lorries.

On the Bessarabian Frontier.

The Military Governor of Bessarabia has ordered all owners of land in the valley of the Pruth to remove every obstacle to the free circulation along the bank of the river. From the Roumanian side one can observe people hewing trees and pulling down houses.

An Outspoken Uutterance.

Your readers may be interested in the following extract from the *Narodni Prava*, the Bulgarian journal in which M. Radoslavoff's opinions find expression. According to the *Journal des Balkans*, the passage has been reproduced by a number of other papers, including the semi-official *Echo de Bulgarie*:—

It is possible that in the near future Bulgarian diplomats may be called to pronounce upon the liquidation of the war at an international conference. The Serbian question will then occupy a prominent position, and will require a definite solution. Our diplomats will have to be firm on this point, *and not allow themselves to be softened by any humanitarian sentimentality.* The existence of Serbia, under any form whatsoever, would be a perpetual menace to the peace of the Balkans, a continual obstacle to the pacific development of Europe. This State has been a nest of intrigue and quarrels from the moment it gained its independence, *and must cease to exist.* It is not cruelty which demands its suppression, but a higher necessity, upon which depends the future of humanity, and, above all, our own.

Although Bulgaria is our enemy, and her rulers have been guilty of hideous crimes, we cannot help regretting that her Press should publish such diabolical stuff. A suspicion may be entertained that Bulgaria's rather cumbersome allies have a hand in it. Apart from the monstrous character of the suggestions made, the lines quoted indicate a complete unconsciousness of the fact that the expression of such views will not facilitate the Quadruple Entente's task of respecting the principle of nationalities.

M. PASHITCH AT ODESSA.

Odessa, May 17.

M. Pashitch arrived here yesterday from Kieff, and in the evening was entertained at a banquet given in his honour at the Town Hall, at which all the highest military and civil authorities were present, as were also the Consular representatives of the Allied nations.

In replying to the toast of his health, with which was coupled the Serbian Nation and the Serbian Army, M. Pashitch expressed warm gratitude to Odessa for the brotherly help given to the wounded Serbian soldiers and to the Serbian refugees who had been driven from their devastated homes. Serbia, he said, had always fought for right and freedom, and to the present great struggle she had brought her faithful principle, "Better to die an honourable death than to live under a shameful yoke." Relying on her faithful sister, Russia, with her great allies, Serbia still firmly believes in the triumph of the Allies; and the enthusiasm and confidence which the speaker had witnessed everywhere in Russia had strengthened this faith in him.

In the evening M. Pashitch attended a gala performance given in his honour at the Opera House, which was beautifully decorated for the occasion.

At Bucharest on Sunday there were a number of Interventionist demonstrations, including a procession of 50,000 persons who marched, singing, to the Royal Palace.

ISPAHAN NOTES.

(From Our Own Correspondent.)

Ispahan, April 20.

Since I wrote my last letter a regiment of Russian infantry has arrived here, and the day before yesterday a regiment of Russian Cossacks came in. They were all received with great enthusiasm by the population, and their presence has already brought about a state of order in the region which is unparalleled in recent times. The approach of Easter is being celebrated with great rejoicings, in many of which the Moslem population seems ready to participate—in spirit at least—and the town presents a very cheerful appearance.

The British flag was hoisted at the Consulate last Saturday with considerable pomp and ceremony. Unfortunately, the British Consul-General and the British colony, who left Ispahan in the middle of September, have not yet returned, though they are reported to have left Ahwaz, and are due here in a fortnight. The British Vice-Consul and some American travellers were present at the ceremony. Russian troops mounted a guard of honour at the entrance to the Consulate and their band supplied the music; and the Russian Consul-General and the British Vice-Consul exchanged cordial speeches.

The Russian Consulate has issued a circular stating that a telegram has been received from the Kermanshah Consulate announcing the arrest of Suleiman Khan, his brother, Suleiman Mirza, and others (seventeen persons in all), leaders of the so-called Democrats. This news was received with rejoicing by the inhabitants of Ispahan, who had been terrorized by these people ever since the outbreak of the war.

Naib Jelal, a German hireling who had played a very active part in raising the so-called Nationalist troops before the arrival of the Russians, was hanged a few days ago in the market square.

The Ahwaz-Ispahan road, which had been closed for several months by bandits, is now open, and caravans arrive and depart almost every day.

OPERATIONS IN EGYPT.

A number of despatches on the military operations in the Egyptian Command were published in a Supplement to the *London Gazette* on Wednesday. The first is from Lieutenant-General Sir J. G. Maxwell, the G.O.C. in Egypt (February 16, 1915), covering a report from Major-General Alex. Wilson, Commanding the Suez Canal Defences, on the then recent attack on the Suez Canal. The second from General Maxwell (August 19, 1915) accompanies a further report by Major-General Wilson, containing a narrative of subsequent events. The third despatch (March 1, 1916) is from General Maxwell on military affairs in the Egyptian Command since the Turks attacked the Suez Canal in February, 1915. The fourth (March 16) submits the names of officers and other ranks whom General Maxwell desires to bring to notice: (1) in connection with operations on the Western Front; and (2) in connection with Administration in Egypt. The fifth (April 9) supplements the despatch of March 1, and brings up the record of the position from January 31 to March 19, on which date he handed over his command to General Sir A. J. Murray, Commander-in-Chief, Mediterranean Expeditionary Force; and it describes the operations under Major-General W. E. Peyton for the reoccupation of Sollum.

The Suez Canal defence operations covered in the first and second despatches are now ancient history, and it may be sufficient to say that General Maxwell reported that they had been conducted by Major-General Wilson to his complete satisfaction. In the second period the actual fighting was not severe, but the work of the troops was heavy and monotonous, owing to the large amount of patrolling necessitated by the enemy's attempts at minelaying and crossing the Canal.

General Maxwell submits the following among other recommendations in connection with the various operations:—

OPERATIONS ON WESTERN FRONT.

Commanders and Staff.—Maj.-Gen. A. Wallace, C.B., Ind. Army; Col. (temp. Brig.-Gen.) J. D. T. Tyndale-Biscoe.

ADMINISTRATION IN EGYPT.

Commands and Staffs.—Maj.-Gen. H. E. Stanton, C.B., D.S.O., Brig.-Gen. in charge of Administration; Maj.-Gen. J. Spens, C.B., Res. of Off., Comdg. Aust. and N.Z. Training Depot; Surg.-Gen. R. W. Ford, C.B., D.S.O., D.M.S.; Vice-Admi. Sir R. H. Peirse, K.C.B., M.V.O., Commander-in-Chief, East Indies; Rear-Admi. H. R. Robinson, P.N.T.O.; Maj. and Bt.-Lt.-Col. (temp. Brig.-Gen.) N. Malcolm, D.S.O., Arg. and Suth'd Highrs., Senior Gen. Staff Off.; Col. H. B. H. Wright, C.M.G. (late R.E.), Chief Engineer; Col. T. B. Beach, A.M.S.; Capt. (temp. Lt.-Col.) G. F. Clayton, C.M.G., ret. pay (Res. of Off.), Gen. Staff Off. in charge of Intell. Sec.; Lt.-Col. A. W. Jennings Bramly, Intell., Egyptian Army; Maj. and Bt. Lt.-Col. E. N. Broadbent, K.O. Sco. Bord., D.A.Q.M.G.; Maj. R. E. M. Russell, D.S.O., R.E., Gen. Staff Off.; Maj. W. S. Whetherley, 7th D.G., Gen. Staff. Off., Aust. and N.Z. Training Depot; Capt. A. G. McClintock, 5th Lrs., D.A.A.G.; Maj. B. H. W. Taylor, S. Staff, R., D.A.A. and Q.M.G.; Surg.-Maj. B. Pares, D.S.O., R.H. Gds., A.D.M.S.; Maj. H. V. Bagshawe, R.A.M.C., A.D.M.S.Sanitary; Capt. and Bt. Maj. (temp. Lt.-Col.) J. N. Brown, Manch. R. (T.F.), Embarkation Staff Off., Alexandria; Capt. (Local and Temp. Maj.) C. Garvice, D.S.O., Intell., Alexandria; Capt. (Local and Temp. Maj.) H. A. Engledue, Deputy Chief Censor; Capt. and Bt. Maj. H. O. B. Wood, 8th Rajputs, Embarkation Staff Off., Suez.; Capt. P. A. Maxwell, 3rd Brahmans, Embarkation Staff Off., Port Said; Capt. A. G. C. Dawnay, C. Gds., Gen. Staff Off., Aust. and N.Z. Training Depot; Lt. C. L. Price, 4th Aust. Lt. H., Asst. Embarkation Staff Off., Alexandria; 2nd Lt. (temp. Capt.) B. H. G. Arkwright, Derbyshire Yeo., Asst. Embarkation Staff Off., Alexandria; 2nd Lt. (temp. Capt.) E. R. Harris, 2nd County of London Yeo., R.T.O.

Royal Flying Corps.—Bt. Maj. S. D. Massy, 29th Punjabis, attached R.F.C.

Queen Alexandra's Imperial Military Nursing Service.—Miss S. E. Oram, R.R.C., Temporary Matron in Chief, Egypt Command. Matron.—Miss J. E. Dods, Citadel Hospital, Cairo. Acting Matrons.—Miss M. Grierson, No. 15 Gen. Hosp. (Abbassia Schools); Miss D. M. C. Michell, Mil. Hosp. Ras-el-Tin; Miss M. E. Medforth, No. 18 Stationary Hospital, Mudros; Miss M. E. Neville, No. 17 Gen. Hosp. (Victoria College).

General List.—Maj. (Bt. Lt.-Col.) Lord E. H. Cecil, K.C.M.G., D.S.O., Res. of Off.; Lt.-Col. Sir J. G. Rogers, K.C.M.G., D.S.O., M.B., ret., A. Med. Staff; Temp. Col. Sir C. Thomson, Kt.; Temp. Col. G. S. A. Harvey Pasha, C.M.G., Provost-Marshal, Cairo; Capt. (temp. Col.) H. C. B. Hopkinson Pasha, C.M.G. (Res. of Off.), Provost-Marshal, Alexandria; Capt. and Bt. Maj. Sir G. B. Macauley, K.C.M.G., Res. of Off; Maj. C. S. Spong, D.S.O., F.R.C.S., ret. pay.; Capt. (local and temp. Lt.-Col.) A. C. Parker, Intell.; Local and Temp. Capt. M. S. Macdonnell, Intell.; Temp. 2nd Lt. C. L. Woolley, Intell.; Temp. 2nd Lt. T. E. Lawrence, Intell.; Sagh Adjt.-Maj. Essani Ahmed (Egyptian Army), Intell. at Tor.; Local and Temp. Lt. N. R. Bawden, Egyptian Government P.W.D., attached R.E.; Local and temp. Capt. Annesley De R. Gordon, Egyptian Veterinary Service; (Local Maj.) Dr. W. Hastings; (Local Maj.) Dr. E. V. Oulton; (Local Maj.) Dr. A. F. MacCallan; (Local Maj.) Dr. W. Hayward; (Local Maj.) Dr. C. Ekins; (Local Maj.) Dr. L. P. Phillips, M.D., F.R.C.S., F.R.C.P.; Dr. H. V. Keatinge, C.M.G.; Dr. J. E. Cresswell; Dr. Armand Ruffer, C.M.G.; Vice-Admi. Moreau, commanding 3rd Squadron Premier Armée Navale; Lt. de Vaisseau de L'Enaille; Count de Serionne (Suez Canal).

Officials, Egyptian Government.—Sir R. Graham, K.C.M.G., C.B.; Sir W. Brunyate, K.C.M.G.; Sir M. Macdonald, K.C.M.G.; Sir David Semple; N. T. Borton Pasha; Burnett Stewart, Esq.; E. M. Dowson, Esq.; Ward Boys, Esq.; Dr. A. Granville; C. H. Ambruster, Esq. (Sudan Government).

Ladies.—H. E. Lady McMahon; Lady Maxwell; Lady Henry Bentinck; Lady Howard de Walden; Lady Graham; Lady Douglas; Lady Rogers; Lady Godley; Mrs. Phillips; Mrs. Ford.

THE RE-OCCUPATION OF SOLLUM.

General Headquarters Staff.—Hunter, Local and temp. Col. G. G., C.M.G., Egyptian Coastguard Administration; Royle, Local and temp. Capt. L. V. A., Egyptian Coastguard Administration.

Miscellaneous.—St. Quentin, Lt. le Compte de, French Army; Meberley, Kaimakam (temp. Maj.) M., Egyptian Ministry; Grundy, R. T., Esq. (graded Maj.), Asst. Traffic Manager, Directorate of Railway Transport; Duke, R. H., Esq. (graded Maj.), Divisional Engineer, Directorate of Railway Transport; Jennings Bramley, W., Esq., Sudan Civil Service; Pringle Bey, El Miralai R., Egyptian Ministry of Finance; Hopkins, J. F. G., Esq., Egyptian Ministry of Finance; Ziaki, Yusbashi Mahmoud, Egyptian Military Works Dept.; Lebib, Yusbashi Arif, Egyptian Military Works Dept.

LETTERS TO THE EDITOR.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE FUTURE SETTLEMENT IN THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I cannot forbear from congratulating you on your leading article of April 28, which shows a statesmanlike appreciation of the problems which must be encountered by Europe in the final settlement of the Balkan question. You are eminently right in concluding that the main cause of the discomfiture of the Allies' diplomacy in the Balkans was their failure to have a policy of their own, and that for Europe the one desideratum is that there should be a permanent peace in those regions. As you point out, we must achieve this either "by confining Bulgaria for ever in the prison house of unrealised national aspirations, with Serbia and Greece as head gaolers, or by settling once for all the differences which estrange the Balkan States."

Obviously the adoption of the first alternative would entail an early renewal of bloodshed, which in all probability would not be confined to the Balkans. In ordinary circumstances no fair-minded person with any acquaintance with practical politics would tolerate such a programme for a moment. But we live in exceptional times, and the resentment which we now feel against Bulgaria (whose accession to the list of our enemies is in reality due to our own blunders) affords an opportunity for interested suggestions on the part of those who look forward to appropriating the legitimate heritage of the Bulgarian race. The extent to which our natural feelings of sympathy and indignation over the misfortunes of Serbia (which in all probability we might have prevented) have been turned to account for this purpose is scarcely realized, or perhaps not realized at all, by those who in all sincerity come forward as the champions of Serbian or Greek aggrandisement in regions inhabited by Bulgarian populations. In the present temper of our people almost any proposal hostile to Bulgaria is likely to find a hearing. The war spirit, not the schoolmaster, is abroad; few persons care to tackle the intricate racial problem, and the majority lend a ready ear to misleading statements regarding Macedonia, just as in 1878 they believed Lord Salisbury when he called that province "a Greek country." A case in point is the assertion, reiterated persistently until it has come to be believed, that Bulgaria is fighting, not for national rights, but for the hegemony of the Balkans. Hegemony, it may be observed parenthetically, is a Greek word and a Greek idea; the Greek claim to the reversion of the Byzantine empire (to which the name of the present Greek sovereign bears permanent witness), and the Serbian demand for the restoration of Tsar Dushan's empire, are alike based on imperialist pretensions; the Serbian claim to Macedonia was never seriously put forward till King Milan, at the instigation of Austria, demanded "compensation" for the union of Eastern Rumelia with Bulgaria, and attacked the sister country. The Bulgarians, on the other hand, base their claims on nationality alone; what they have always demanded is the revival of the Treaty of San Stefano, which was drawn up on ethnographic lines, or, failing that, Macedonian autonomy. The empires of their former Tsars have never figured in the controversy. To say that their claim has no better basis than "ceaseless reiteration" is to ignore all the best authorities on the subject. An interesting, though not complete, list of these will be found in an article by Mr. A. Shopoff, himself a high authority, in the *Asiatic Review* of July, 1915.

The cardinal difference between the claims of Bulgaria and those of Serbia and Greece in regard to Macedonia has always lain in the fact that the former are founded on the principle of nationalities, the latter on traditions of imperialism. The legitimate expansion of Serbia towards the Adriatic and of Greece in Crete, the Ægean Islands, and Asia Minor have never hitherto been opposed by the Bulgarians, who know that their own claims stand or fall with the recognition of the principle of nationalities. But since Sofia has fallen wholly under Austro-German influences some declarations appear to have been made in official quarters which conflict with the attitude hitherto maintained by Bulgaria, and can only redound to her detriment. The admission attributed by your correspondent, Mr. A. H. E. Taylor, to Dr. Radoslavoff seems to be confirmed by the language of a recent article in the *Echo de Bulgarie*:—"L'existence de la Serbie, n'importe sous quelle forme, serait une perpétuelle menace pour la paix des Balkans . . . Cet état, qui depuis son indépendance était un nid d'intrigues et de querelles, doit cesser d'exister." This truculent outburst, undoubtedly due to Austrian inspiration or even dictation, will inevitably be brought up against Bulgaria in the day of final reckoning, but it does not in any way represent the mature opinion of Bulgarian statesmanship, which has always desired the existence of a strong buffer State between Bulgaria and the aggressive *empires de proie* of Central Europe. That Mr. Gueshoff may have claimed Nish and the Morava valley for Bulgaria seems likely enough; up to the Berlin Treaty this region was always regarded as Bulgarian both by Turkey and the Powers.

It seems unfortunate that the ultimate settlement in the Balkans should be publicly discussed at the present moment, for the world in general is not in a judicial frame of mind. But as you, sir, observe, the policy to be adopted by the Allied Powers ought to be adopted now, for hand-to-mouth diplomacy will only bring us a crude settlement gratifying to the resentment of the moment, but laying up a heritage of fresh trouble for the future. We must not be led astray by the cynical argument that, as the Balkan races have always fought with each other in the past, they will continue to do so in the future. The sad history of the past is due to the fact that conquest took the place of equity as the basis of all arrangements. We must change all that; we must not be weary of well-doing. The new equitable settlement on the basis of nationalities must, of course, be imposed by force, and for a while be maintained by force; but in a surprisingly short space of time the young States will settle down within the limits assigned to them, provided those limits are just in regard to the nationalities and carefully adapted to local requirements. They will then find it to their interest to unite, as they once united for a time, and, warned by the sad experience of the past, they will avoid fratricidal quarrels and maintain a firm front against aggression on the part of their great neighbours.—I am, etc.,

"BEHIND THE SCENES."

June 2, 1916.

THE PLIGHT OF SYRIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The account that your correspondent (in Cairo) gave in your last issue of the state of Syria is being daily added to by the Paris and Rome press, and to-day we learn from these sources that the Maronite Bishop of Beyrout has been, with seven other Bishops, exiled to the interior, and that the Maronite Patriarch and his secretary, Bishop Sakr, are now on their trial at Aley.

More names, too, of notables from Beyrout and the Lebanon are given me as further victims of Jemal Pasha, and the Arabic journal of Paris, *Al-Moustakbal*, makes the statement that 80,000 Lebanese have already perished by starvation.

In my letter of the 16th ulto., which appeared in your issue of the 19th, I foreshadowed all this and called for remedies to this deplorable state of the country. I fear that any armed intervention is for the moment not contemplated by either France or ourselves. But when the Turks are resorting to methods of defiance by murdering our protégés within gun shot of our fleet, it seems time we did something to punish them, and to secure a ground where relief to the starving could be landed, and a refuge to the oppressed could be provided.

Early in the war I heard that the American Mission in Beyrout was helping the poor there by creating work for them in street widening and building, and perhaps it is doing so now; but it seems that flour is scarce in the town, and that the Turks will not allow any of it to go to the Lebanon, where people are consequently reduced to eating grass like cattle, and are dying from starvation and typhoid by the thousand. Surely Americans cannot be indifferent witnesses to such brutality, and when their people at home hear of it they will, I have no doubt, find means of giving assistance without delay.

It is true that our blockading of Syrian ports must entail hardship on the people, but it was never meant to starve them, as they have nothing to do with the policy of their government, and, moreover, were it not that the locusts have eaten up their crops, they would have had plenty of cereals from their own land. Mount Lebanon, however, grows little to speak of in the way of foodstuff, its main industry being the raising of silk-worms, which provides it with the means of buying food. There being, however, no insurrection in the country, it passes understanding how the Turks can benefit by murdering its unarmed people, were they to remain masters, or to be ultimately ejected from power. Surely common-sense and their future interest might suffice to induce them to be righteous for once when the fate of their whole Empire is in the balance.—I am, etc.,

ALEXANDER SEFI.

June 20, 1916.

Private letters received from Jerusalem state that in consequence of the rapid spread of spotted typhus, whooping-cough, and small pox, the Turkish Government has closed all the schools in Jerusalem. In Jaffa the plague is spreading so fast that all the schools have been closed.

TANGIER TO TEHERAN.

I was uncommonly glad to learn of Sir Percy Sykes's arrival at Kerman, and I can readily believe that the reception accorded to him and his command was a thoroughly cordial one, for he is a real friend of Persia and the Persians, and the people recognise the fact and reciprocate his liking. His selection for the mission entrusted to him was probably the very best that could be made, and he will, I feel sure, accomplish all that mortal man can do in the way of restoring order to distracted Southern Persia, which has been too long a happy hunting ground for the Austro-German propagandists and their ruffianly agents.

***

That champion of light and liberty, Talaat Bey, has been unburdening his soul to a journalist in Constantinople. The journalist, I observe, was a German, and as Talaat's confessions referred to the massacres of Armenians, they doubtless fell upon sympathetic ears. But, even so, I wonder how they will have been received in Germany, which—save to the Moslems—still poses as a Christian country, and in Austria-Hungary, where the Turk is not yet quite so "popular" as he is in Hun-land. If the Bulgarians had not suddenly discovered that they are, after all, the blood-brothers and good friends of the Turks, whom yesterday they so hated and despised, we might even be tempted to ask what *they* thought about these massacres. One seems to recollect that, not so very long ago, Sofia was moved to tears by the arrival of Armenian refugees. To-day, however, in view of the treatment meted out to the Serbians, one supposes that the butchery of helpless Armenian women and children rather appeals to the Prussians of the Balkans, who, under the tutelage of "Tsar" Ferdinand, appear to have made rapid progress in the art of Frightfulness.

***

Whatever the Central Powers and their Balkan dupe may think, or affect to think, of Talaat's frank statements, there can be no manner of doubt as to the way in which other nations will regard them. They carry their own condemnation with them. In effect, Talaat admitted that the "removal" of the Armenians was decided upon deliberately, as a "military, national, and historical necessity," and that it was carried out—in ways only too well known to all of us by now—on the direct orders of the Government. He also indicated that he resented blame for not making any distinction between the innocent and the guilty, pointing out that "the innocent of to-day might become the guilty of to-morrow." And he had the impertinence to say: "We are not savages." The world is a better judge of that than Talaat Bey, and it is not likely to endorse his verdict. Yet, to give the Devil his due, it is quite possible that the self-complacent Minister of the Interior really believes what he said. For he is intensely modern; a demagogue to his finger-tips, he believes implicitly in the power of words, words, words; and it is at least conceivable that he imagines that words, if only used in sufficient numbers, will serve to obliterate the memory of what he referred to as "these sad occurrences." It will, however, take a good many words to make the world forget the massacre of four-fifths of the Armenian population of Turkey. I am not surprised that Talaat has had "many sleepless nights" of late.

***

When last I referred to Greece in these pages, I intimated that it was becoming increasingly hard not to recognise a hard line of separation between the Greeks of ancient and modern days. That line, much as I wished to destroy it, is firmly established in my mind now, for there is something altogether wrong with the modern Greek. If he is greatly troubled now it is because supplies are running low, not because his rulers have torn his boasted dream of freedom into shreds. That a large number of Greeks remain who are still possessed of the ancient fire I do not doubt, but their lot is only agony and mortification as their beloved country plays the shuttlecock to the battledore of Wilhelm and Constantine. It does not seem humanly possible now that a single Greek of the present generation may live to see the vision of Venizelos matured to their country's good. Hesitancy and petty intrigue have done their work; the golden hour is past. Henceforward I can look upon affairs in Greece as I would look upon the affairs of any other Balkan state, relegating to an altogether different sphere the wonderful traditions of her past. When, full of enthusiasm for the past and future of the Hellenes, I last saw and, proud of the honour, conversed with King Constantine, I little imagined what Greece and the friends of Greece were to suffer by his will.

***

The events of the present month in Athens have contained all the elements of a successful comic opera. The spectacle of an unwashed herd of scallywags piloted round on their errand of destruction by the police was cheering to begin with, but the supreme moment of the farce was when the occupants of a pro-Ally newspaper office returned the fire of the mob. This contingency had evidently been unexpected, but the police appear to have acted quite promptly and, in accordance with their parts as buffoons, attempted to arrest, not the attackers, but the attacked. Again, further good comedy was provided by a paid agent of the police, who brandished a revolver — empty — somewhere in the proximity of the King, and was arrested with proper fuss and ceremony as a pro-Ally-anti-dynastic vagabond. But a silent house is a depressing place to play to, and it seems that the gallant actors of the crown are becoming a little disturbed by the silence of those whom they wished to impress so greatly. Even hisses were better than this death-like and ominous silence. They may, however, take heart of grace. The opinion of the audience will be given quite unmistakably at the fall of the curtain.

***

Some time ago I wrote on the subject of coincidence, and a coincidence in connection with one of my notes of last week is, I think, worth recording. In referring to the weather, I reproduced some lines which I had heard, not read, many years ago. I have never heard or read them since. These must have been in type on Thursday last. On the same day one of the London evening papers also quoted them! There was a very slight difference in the two versions, and the daily paper was a little ahead of me in the matter of length, but the coincidence was a remarkable one. While I am on the subject I may record another incident which occurred last autumn. I was spending the evening with friends, and in the course of conversation they referred to a fact which they thought must be unique in the history of the London Police. A few years before, my host, returning home late one evening, had found a policeman fast asleep on the door-step. The same evening, as I was going home through a darkened street, in quite a different part of London, I found a policeman prone on the steps of one of the houses. Thinking he might be injured, I stopped to investigate, only to find him fast asleep, but otherwise quite normal. In the East night *ghaffirs* are bound to yell one to another at stated intervals in order to show that they are awake, but a sleeping policeman in London is certainly a very uncommon sight.

***

Under pressure from the Huns, the Turks, I am sorry to see, are going from bad to worse in the matter of their official *communiqués*. Their productions have never been remarkable for their strict adherence to the truth, though in this respect they were for a long while preferable to the German-made article; but their method of saying the-thing-that-was-not used to be artistic and amusing. To-day it is neither. The clumsy hand of the Hun is glaringly apparent in all recent productions of this kind, and it seems to me that to refer to them as "imaginative" is to pay them a compliment they by no means deserve. It is a pity; for the war is a dreary business, and any touch of humour that lightened its dreariness was welcome. But, on the other hand, it indicates that the Turco-Germs are beginning to feel that their backs are against the wall; and that is an encouraging symptom. If the Germans who write these things for their Turkish dupes find it necessary to describe barges as gunboats, and unsuccessful skirmishes as brilliant victories, it ought to mislead nobody—not even the Turks!

***

Busreh, I am pleased to see, has been receiving encomiums from the special correspondent of a news agency, who appears to have made acquaintance with the city quite lately. He seems to like the *bellums*, which he describes as being "propelled in the same way" as the gondolas of Venice, though this is surely not quite correct; and the lighting arrangements please him much. But, alas! he declares that the amusements of the place are "hardly worth mentioning," and adds: "One cinema and a native tea-house, at which one sees indifferent dancing and hears worse singing, for the excessive charge of one rupee." If this criticism be not too captious, it would seem that my fevered longing to be off to Busreh to gaze upon the charms of these "beauties of the Aleppo world," of whom I read in the *Busreh Times*, was hardly warranted by facts. Another of Love's young dreams gone wrong.

***

A friend tells me that he read recently in a paper—the name of which he forgets—that Bulgarian troops have been finding their way to Brussels of late, and that they have been cheered by the Belgians. Of course, I declined to believe the statement until my friend proceeded to explain that the cheers were due to a misconception, the Belgians mistaking the Bulgars for British prisoners. The explanation of the mistake lies in the fact that the Bulgarians are reported to be clad in khaki, exactly like our own troops. If this be so, it is indeed rough luck on our gallant soldiers. In any case, what are the Bulgarians there for? Are they destined eventually for further sacrifice at Verdun on the altar of the Crown Prince's vanity?

NEAR EAST BOOKSHELF.

A DISENCHANTED TRAVELLER IN PERSIA.*

Mr. Benjamin Burges Moore is a young American journalist who travelled through Persia on the eve of the Great War. Starting in midwinter from Moscow, he traversed Russian Turkestan, crossed the Persian frontier south of Askabad, and reached Bushire in the spring of 1914. Unlike Pierre Loti, in whose footsteps he followed, Mr. Moore is a confirmed pessimist, and his recorded impressions lack the glamour thrown over sordid surroundings in *Vers Isfahan*. During his transit through the Tsar's dominions he chafed under the restrictions on liberty of movement which met him at every turn. Russia, he writes, "resembles a prison, inasmuch as it can neither be entered nor left without due process of law." He apparently ignored the omnipresence of German spies, whose mischievous activity called for drastic precautions; and if he returned to England at the present day he would find similar "restrictions on personal liberty" in full force. But Mr. Moore is a strong partisan of the late Treasurer-General, whose suspicion of Russia he shares. We find him retailing every story of Muscovite "outrage" told him in Persia, and that without taking the trouble to sift truth from fiction. Thus the sight of fifty Russian soldiers riding down a street in Kushan stirred him to anger, as it was "a place where they had no right other than that of brute force." Yet, with singular illogism, Mr. Moore admits that the Persians are hopelessly decadent; that their spirit has been destroyed by perennial brigandage and the oppression of corrupt officials; that "Germany's incredible and all-reaching influence had probably been at work in subterraneous channels." On such premisses he bases an assertion that "Great Britain has been compelled by political necessity to violate her best traditions in bringing Southern Persia within her sphere of influence." In point of fact, the Shah's dominions were but a pawn in Germany's game of world-empire; and if Great Britain had permitted them to remain in a state of anarchy she would have "violated her best traditions" with a vengeance. Recent events have amply vindicated Anglo-Russian policy in Persia, and indeed have proved that the condominium was not carried far enough. Our stupid regard for German susceptibilities (!) led to the establishment of a Swedish gendarmerie, most of whom were in the Kaiser's pay. Mr. Moore relates an appalling instance of their cruelty, and the photograph which illustrates it positively makes one shudder.

Our author's Russophobism is not his only disqualification. He devotes page after page to descriptions of the manifold discomforts endured by travellers in Persia. His start from Meshed was made in the wreck of a brougham, and after its total collapse he was almost shaken to death in a springless vehicle which—to judge from photographs—was half horse-omnibus and half bathing-machine. Persian roads are either quagmires or knee-deep in fœtid dust, their purlieus a continuous shambles of dead and dying cattle; while every rest-house is a sink of abominations. Mr. Moore's insistence on that which Sir M. E. Grant-Duff aptly styled the "scaffolding of life" makes wearisome reading and lessens the value of his book. But he was received with sweet and heartfelt courtesy by Persian officials, nor were their henchmen at all behindhand in welcoming the stranger within their gates. Twice did his ragged and half-starved escort refuse proffered *bakshish* because "he was their master's guest." If the children of poor, worn-out Iran no longer lead the world in artistic skill, if the realm of Cyrus be a wreck almost beyond repair, they still retain traces of a consummate civilisation, and may revive under the ægis of a strong and equitable government. From British officers of every grade Mr. Moore received an equal measure of hospitality; it is pleasant to find him pronouncing their homes to be oases in a desert far more forbidding than the Sahara.

A word must be said, in conclusion, on our author's transliteration of Eastern place-names. It reminds one of the pranks played in Colonel Malleson's continuation of Kaye's "Indian Mutiny." Such pedantry as Moscov, Bukhara, Samarqand, and Tihran; such blunders as Turkomen (pl. of Turkoman), Ferdowsi, Mowroz (for Nauroz), and Dilgusha (for Dilkhusha) prove that Hunterian spelling has many pitfalls for an author who knows no language but his vernacular.

F. H. S.

SOME RARE GREEK BOOKS.

We are indebted to Archdeacon Beresford Potter for permission to publish the following Catalogue of Greek Books in the library which the late Mr. Cobham, C.M.G., presented to the Royal Colonial Institute. The list contains several rarities, and our readers will doubtless be glad to file it for reference, as, we understand, no other list of these volumes is yet available.

'Ιστορία χρονολογικὴ τῆς νήσου Κύπρου. By Kyprianos, Archimandrite. 4to. Venice, 1788.

Χρονικὸν Κύπρου. Greek Text, with French Introduction. Ed. C. Sathas, and E. Muller. An old Edition of the above, valuable when complete. (Ought to be 2 vols.)

Φιλολογικαὶ ἐπισκέψεις. By G. Louka. Vol. I. 8vo. Athens, 1874.

'Ιστορία τῆς νήσου Κύπρου. From the French. By Constantine Bonitzianou. Bound with the above. Athens, 1877.

Εἰδήσεις ἱστορικαὶ περὶ τῆς ἐκκλησίας τῆς Κύπρου. By Georgios Philippos. 8vo. Athens, 1875. Bound up with above.

Κυπρὶς: 'Η Κύπρος τῆς σήμερον. 'Ιστορία τῆς Κύπρου ἀπο τῶν μυθολογικῶν χρόνων μέχρι σήμερον. By George S. Francoudi. Athens, 1890.

Περιγραφὴ τῆς ἱερᾶς σεβασμίας καὶ βασιλικῆς μονῆς τοῦ Κύκκου. By Ephraim, Patriarch of Jerusalem. Venice, 1817. Rare.

'Αξῆμ πατησσὰχ μοναστὴρ Κυκκόνουν χερμετλοῦ βασιτοῦλλαχ εἰκόνα τασφειροῦν. (A Turkish version of the above printed in Greek character.) By Ephraim, Patriarch of Jerusalem. 4to. Venice, 1816. Rare.

Παρὰ Νικολάῳ Γλυκεῖ τῷ ἐξ 'Ιωαννίνων. By Ephraim, Patriarch of Jerusalem.

Τουρκοκρατουμένη 'Ελλὰς 'Ιστορικὸν δοκίμιον περὶ τῶν προς 'Αποτίναξιν τοῦ ὀθωμανικοῦ 'Ζυγοῦ 'Επαστάσεων τοῦ 'Ελληνικοῦ ἔθνους (1453-1821). 'Υπὸ Κωνσταντίνου Ν. Σάθα, Αθηναισι, 1869.

Γενικὴ ἱστορία τῆς νήσου Κύπρου ἀπο τῶν ἀρχαιοτάτων χρόνων μέχρι τῆς 'Αγγλικῆς κατοχῆς. Τομος Α. Ι. Κ. Περιστιάνη. Λευκοσία, 1910.

Τὰ Κυπριακὰ: Vol. I.—Γεωγραφία 'Ιστορία καὶ γλῶσσα. By Ath. Sakellarios. Royal 8vo. Athens, 1890. Ditto. Vol. II.—Royal 8vo. Athens, 1891. (The new edition is in 3 vols.)

Τυπικὴ διάταξις καὶ λόγοι εἰς τὴν 'Εξαήμερον. By Neophytus. 4to. Venice, 1779. Rare.

Ditto, with addition of, bound in same volume, 'Ακολουθίαι τοῦ ὁσίου πατρὸς ἡμῶν Νεοφύτου τοῦ ἐγκλείστου. 4to. Nicosia, 1893.

Μεσαιωνικὴ βιβλιοθήκη. Τόμος β'. By K. N. Satha. Venice, 1073.

'Ακολουθίαι τῶν ὁσίων, 'Αναστασίου Χαρίτωνος, Αὐξεντίου καὶ Κενδέα, &c., &c., κ.τ.λ. By Chrysanthos, Archbishop of Cyprus. 8vo. Venice, 1779. Rare.

Herodotus, History: books 1-9.

Περιγραφὴ τῆς ἱερᾶς σεβασμίας καὶ βασιλικῆς μονῆς τοῦ Κύκκου. By Ephraim, Patriarch of Jerusalem. 1904.

'Ακολουθία τοῦ Αγίου ἱερομάρτυρος Θεράποντος τοῦ θαυματουργοῦ. By Michael, Archbishop of Cyprus. 8vo. Venice, 1801.

'Ακολουθία τοῦ ὁσίου πατρὸς ἡμῶν Κασσιανοῦ τοῦ Ρωμαίου. 'Ενετίησιν. 1787. Rare.

A Greek-English Dictionary, with an Appendix of Cypriote Words. By A. Kyriakides. Nicosia, Cyprus, 1892.

'Ιστορία τοῦ 'Αρχιεπισκοπικοῦ Ζητήματος Κύπρου 1900-1910. By George S. Francoudi. Alexandria, 1911.

'Ακολουθία τοῦ 'Αγίου ἱερομάρτυρος 'Ερμογένους τοῦ θαυματουργοῦ παρὰ 'Αντωνίῳ τῳ βάρτολι. Venice, 1771.

BOOK NOTES.

H.R.H. the Crown Prince of Serbia has given his photograph for reproduction in a book entitled "The Story of a Red Cross Unit in Serbia," and has also granted permission for the work to be dedicated to him. Written by Mr. and Mrs. Berry, Mr. Lyon Blease, and other members of the party whose experiences it narrates, the book is to be published very shortly by Messrs. J. and A. Churchill.

Messrs. Nelson have published a cheap reprint (1s.) of Mr. W. H. Mallock's "In an Enchanted Island; or, a Winter's Retreat in Cyprus."

The *British Australasian* has published "Crusading at Anzac, A.D 1915," by Signaller Ellis Silas, of the Australian Expeditionary Force.

Vol. 12 of "Nelson's History of the War" deals with the retreat from Baghdad and the evacuation of Gallipoli amongst other subjects.

BOOKS RECEIVED.

The Slavs of the War Zone. By the Right Hon. W. F. Bailey, C.B. Illustrated. (Chapman and Hall, 10s. 6d. net.)

With the Zionists in Gallipoli. By Lt.-Col. J. H. Patterson, D.S.O. With maps. (Hutchinson and Co., 6s. net.)

Serbia in Light and Darkness. By Fr. Nicholas Velimirovic, with a preface by the Archbishop of Canterbury. (Longmans, 3s. 6d. net.)

M. Pashitch, the Serbian Premier, left London for Paris, en route to Corfu, on Wednesday.

Lord Oranmore and Browne returned to London on Wednesday from Ireland.

H.E. the Hellenic Minister saw Sir Edward Grey at the Foreign Office on Monday afternoon.

Colonel Lazar Gueutchitch, Chief Medical Inspector of the Serbian Army, has arrived in London from Corfu.

Colonel M. J. Nicolaievitch, Military Attaché to the Serbian Legation, returned to London on Sunday from France, where he had been visiting the Western front.

Writing on May 30, our Bucharest Correspondent reports :—M. Emile Costinesco, the Minister of Finance, has returned from Constantza much improved in health. He now proceeds to Govora for his annual cure.

Captain Frank I. Mackinnon, R.A.M.C., has returned to this country from Malta, where he was in charge of the Military Hospital, Hamrun.

Our Bucharest Correspondent writes :—M. Blondel, the French Minister in Bucharest, who attained the age-limit in 1914, is now, we are sorry to hear, about to withdraw from the Diplomatic Service, M. de Saint-Aulaire being designated as his successor. M. Blondel has spent thirty-eight years of his life in the service of French diplomacy, and his career has been rich in experience. Appointed an attaché to the French Embassy in London in 1878, he was next transferred to Berlin, then back to London, and subsequently to Madrid, Tangier, Rio, Tunis, Lisbon, Berne, and Rome. In 1910 he was sent to Mexico as Minister Plenipotentiary, and was appointed to Bucharest in a similar capacity in the spring of 1907. He has gained many sympathisers during his nine years' residence in the Roumanian capital, having proved himself, on many an occasion, a good friend to the country to which he was accredited. His daughter is married to a Roumanian, M. Camarashesco.

A requiem for Earl Kitchener and his personal staff and the officers and crew of H.M.S. Hampshire was celebrated at St. Matthew's, Great Peter Street, Westminster, on Wednesday. Among those present were Sir George Arthur (personal private secretary to Lord Kitchener), Lady Arthur, Sir William Garstin, and Viscount Halifax.

There was a Solemn Requiem at the Oratory on Tuesday morning for the late Mr. Hugh O'Beirne, C.V.O., C.B.

The Municipality of Rome has decided to place a bust of Lord Kitchener at the Capitol.

A message was received in London last Friday, stating that Mr. H. L. Hurst, H.M. Vice-Consul at Sofia, had arrived at Bucharest viâ Rustchuk and Giurgevo. On the arrest of enemy consuls at Salonika Mr. Hurst, who had remained in Sofia as Chargé des Archives, was about to be imprisoned by the Bulgarian authorities, but managed to escape and find an asylum with the United States Chargé d'Affaires. On news being received from Salonika of the release of the enemy consuls, the warrant for Mr. Hurst's arrest was cancelled.

For the relief of sick and suffering Serbian soldiers, the Wounded Allies Relief Committee, of Sardinia House, Kingsway, W.C., last week shipped to Corfu quantities of hospital stores of all kinds that are urgently needed both by the Committee's own hospital staff at Corfu and by the Serbian Red Cross Society. The goods despatched include 400 pairs of sheets, thousands of roller bandages, many-tailed bandages and swabs, quantities of wool, operating stockings, hundreds of splints, pillows, pneumonia jackets, six leg sets, and numerous packages of drugs and other hospital requisites, mosquito netting, clothing, lamps, candles, and so on. A motor-car has also been despatched, as an aid to relief work on the part of the Committee's Administrator.

Speaking in the House of Lords on Tuesday Lord Derby said that Lord Kitchener was a man who inspired the greatest possible affection amongst his friends. He then went on to refer to "one particular friendship which stands out in Lord Kitchener's life—the friendship of Colonel FitzGerald, his private secretary. If ever man gave up the whole of his life to the service of another, Colonel FitzGerald was a man who gave it up to Lord Kitchener. If we may doubt or question whether the end of Lord Kitchener was what he would himself have hoped, there is one thing that is absolutely certain, and that is, that Colonel FitzGerald met the death he would have asked for—side by side with the man he had served so faithfully throughout his military career. When I look back upon my friendship with Lord Kitchener, curiously enough, the days that come back best to my memory are two days in the last week of his life. Less than a week before he died I had been dining alone with him, and after dinner he talked, not of the war, but of all those matters which interested him so much in his private life—of Broome, of his china, of his life after the war, and of his trip to Russia, which he was looking forward to with the keenness of a schoolboy going for a holiday. That is a talk I shall never forget."

Colonel Sir Colin Campbell Scott-Moncrieff, the famous engineer, of Cheyne Walk, Chelsea, Under-Secretary of Public Works in Egypt 1883-1892, a director of the Bank of Egypt, Ltd., who died on April 6, aged eighty years, left unsettled estate of the value of £27,056.

Sir Gerard Augustus Lowther, Bt., G.C.M.G., C.B., of 23, Belgrave Square, W., formerly Ambassador at Constantinople, a younger brother of the Speaker of the House of Commons, died on April 5, at Whitehall, Sandwich, Kent, leaving estate of the value of £210,837, the net personalty being £99,971. Probate of the will is granted to the Speaker and Major-General H. C. Lowther, another brother. The testator left £1,000 to St. George's Hospital and £100 to the British Relief Fund. He also left £200 to Mr. G. A. Mounsey, "who acted laboriously and faithfully as my private secretary in Constantinople in recognition of his unflagging and devoted service."

APPOINTMENTS, PROMOTIONS, ETC.

Lord Hardinge of Penshurst took up his duties as Permanent Under-Secretary of State for Foreign Affairs on Monday.

Lord Hardinge has appointed Mr. R. H. Campbell, of the Foreign Office, to be his Private Secretary.

The *London Gazette* announces :—The King has been graciously pleased to appoint Charles Murray Marling, Esq., C.B., C.M.G., to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary to his Majesty the Shah of Persia, and also to be Consul-General for the Dominions of his said Majesty. The announcement is dated March 9.

The *Gazette* announces that the King has been graciously pleased to appoint Major David Lockhart Robertson Lorimer to be his Majesty's Consul for Kerman and Persian Baluchistan, to reside at Kerman.

The *Gazette* also announces that the King has granted authority to Mr. Gordon Cooper, A.M.I.C.E., and Mr. C. E. Lefroy, A.M.I.C.E., to wear the decoration of Chevalier of the Order of the Redeemer, conferred upon them by the King of the Hellenes.

Major Lorimer was appointed H.M. Vice-Consul at Ahwaz in 1904, and was given the local rank of Consul in 1908. That appointment terminated in 1909, and in 1911 he was appointed Political Agent at Bahrein. In October, 1912, he was appointed Consul at Kerman, and held the position till November, 1914. He became a captain in the Indian Army in 1905, and was recently promoted Major.

The following appointment was notified by the War Office in Saturday's *London Gazette* :—Attached to Headquarter Units : Commander—Lieutenant-General Sir B. T. Mahon, K.C.V.O., C.B., D.S.O., vice Major-General W. E. Peyton, C.V.O., C.B., D.S.O., May 10, 1916.

The *Egyptian Gazette* of May 31 reports :—Mr. Patterson, Director-General of State Accounts, left Cairo on Monday on two months' leave of absence, which he will spend in England.

The *London Gazette* announces that the King has been pleased to grant authority to the following gentlemen to wear the decoration of the Order of the Nile, conferred upon them by the Sultan of Egypt :—

SECOND CLASS.—Bt. Col. E. E. Bernard, C.M.G., Financial Secretary, Sudan Government; Lt.-Col. (temp. Col.) W. H. Drake, C.M.G., Adjt.-General, Egyptian Army; Lt.-Col. (temp. Col.) E. S. Herbert, Officer Commanding the Cairo District, and Commandant, Military School, Egyptian Army; Maj. (temp. Lt.-Col.) L. O. FitzM. Stack, C.M.G., Civil Secretary, Sudan Govt.; Bt. Maj. (temp. Lt.-Col.) C. E. Wilson, Governor, Red Sea Province and Commandant of Troops; Maj. C. E. G. Blunt, Director of Supplies, Egyptian Army; Maj. W. S. R. May, Assistant Financial Secretary, Sudan Govt.; Mr. E. Bonham Carter, C.M.G., Legal Secretary, Sudan Govt.; Mr. Wasey Sterry, Chief Justice, Sudan Government.

THIRD CLASS.—Lt.-Col. H. G. A. Garsia, D.S.O., Financial Secretary, Egyptian Army; Maj. (temp. Lt.-Col.) G. F. Pridham, Welsh Regt.; Maj. (temp. Lt.-Col.) P. J. V. Kelly, 3rd (King's Own) Huss., Officer Commanding Cavalry and Mounted Infantry, Egyptian Army; Maj. R. M. Feilden, Governor, Bahr-el-Ghazal Province, and Commandant of Troops; Maj. F. U. Carr, A.V.C., Principal Veterinary Officer, Egyptian Army; Maj. J. P. Moir, D.S.O., R.E., Director of Posts and Telegraphs, Sudan Govt.; Maj. R. J. Rees-Mogg, R. Irish Regt., Military Secretary to the Sirdar of the Egyptian Army and Governor-General of the Sudan; Maj. M. H. Logan, W. Yorks. Regt., Commandant, Sobat-Pibor District, Egyptian Army; Maj. G. S. Symes, D.S.O., Hampshire Regt., Private Secretary to the Sirdar of the Egyptian Army and Governor-General of the Sudan; Maj. W. D. Kenny, Royal Inniskilling Fus., A.D.C. to the Sultan of Egypt; Capt. C. H. Townsend, Governor, Kassala Province, and Commandant of Troops; Capt. R. V. Savile, Governor, Kordofan Province, and Commander of Troops.

FOURTH CLASS.—Capt. A. G. Rainsford Hannay, R.E., Acting Director of Military Works, Egyptian Army; Capt. R. B. L. Bazley-White, West Kent Regt., attached to the Egyptian Army; Mr. F. C. C. Balfour, Sudan Civil Service, Nuba Mountains Province.

OBITUARY.

SIR JOHN E. BLUNT, C.B.

Sir John Elijah Blunt, formerly British Consul-General for Salonika, died at Malta on Monday, aged eighty-three. He had resided at Malta since his retirement from the Consular Service in 1902. His last Consular appointment was at Boston, whither he was sent in 1899; but the rest of his long and active career had been spent in the Near East.

Born in October, 1832, he was the son of Mr. Charles Blunt, a former British Consul at Smyrna, and on completing his education he took up his father's profession. In 1854 he was Acting-Consul at Rhodes, and in April of that year he was appointed Chief Interpreter to the Cavalry Division in the Crimea, under Lord Lucan. He was present at the battles of Alma, Balaclava, and Inkerman, and received the Crimean medal with three clasps and the Turkish medal for services in the Crimea. In 1855 he was appointed Vice-Consul at Volo, where for some time he also acted as agent for H.M. Land Transport Corps. In March, 1857, he was transferred to Uskub, and that year and the next he was Acting-Consul at Monastir. Next he was employed on service in Bulgaria and in Northern Albania, with another period as Acting-Consul at Monastir. In 1860 he accompanied the Grand Vizier on a tour of inspection in European Turkey, journeying with him from Nish to Uskub. After this (1860) he was employed on special service in the province of Philippopolis. In 1862 he was again employed on special work at Philippopolis and Adrianople, investigating the circumstances attending the murder of an American missionary; and for his services he received the thanks of the President of the United States. At the end of 1862 he was appointed Vice-Consul at Adrianople, and in 1864-65 he was Acting Consul-General at Belgrade. In the winter of 1867-68 he was again employed, this time at Eski-Zaghra, in investigating an outrage on American citizens, and again received the thanks of the President.

In 1872 he was promoted Consul at Monastir, and the same year was appointed Consul for the Salonika and Monastir districts and for the vilayets of Salonika and Prizrend and the *sanjak* of Thessaly, and in 1879 he was promoted Consul-General at Salonika, where he remained for the next twenty years, his powers or his field of work being added to from time to time. In September, 1890, during the great fire at Salonika, he rendered much assistance, and received the thanks of the Sultan and the silver medal of the Nisham-i-Imtiaz; and in 1897 he received from the Sultan the gold medal of the Imtiaz for services he was able to render in the Greco-Turkish war.

From this brief outline of his activities it may be gathered that his experience of the Near East was extensive. Not only did he serve his own country well, but he was a wise adviser to many Turkish officials, and his influence was steadily, if unostentatiously, exerted to secure better government for the people amongst whom he lived.

In 1902, after two years' service in Boston, he retired on a pension, and shortly afterwards received the honour of knighthood. He married, in 1858, Miss Fanny Sandison, the daughter of a former British Consul at Brussa.

SIR A. HOUTUM-SCHINDLER.

General Sir Houtum-Schindler, K.C.I.E., whose death occurred on Thursday of last week at Petersfield, Fenstanton, Hants, joined the Indo-European Telegraph Department for service in Persia in April, 1868, and did excellent work under Colonel Sir John Champain, R.E., and other heads of the Department. He resigned about ten years later, and accepted an appointment as telegraph adviser to the Mukhbar i-Dowleh, Persian Minister of Telegraphs. He erected several lines for the Persian Government, and travelled all over the country to report on possible telegraph projects. He thus acquired a wide knowledge of Persia.

In 1893 he became the first manager of the newly established Imperial Bank of Persia, and of the Persian Mining Rights Corporation. He was with the bank about five years. He then again joined the Persian service, and became a sort of general adviser to the Persian Government, having charge of the Passport Office in Teheran. He was an unusually good linguist, and obtained a unique knowledge of Persian, and for his services to the British Government at various stages of his career he was given in recent years a K.C.I.E. He retired in 1911 with a pension from the Persian Government, and the rank of general in the Persian service. He was not a soldier by profession or training. Lord Curzon, in the preface to his book on Persia, refers to the great assistance given him by Schindler.

We regret to learn that Mr. B. North, of the Egyptian Ministry of Education, has been killed in action. Mr. North, who was educated at Cheltenham College and Caius College, Cambridge, had been in the service of the Egyptian Ministry of Education since 1906, and was a much respected member of the staff of the Ministry. At the beginning of the war he enlisted in the Royal Fusiliers, and was advanced to the rank of corporal.

Brigadier-General Hubert John Du Cane, C.B., M.V.O., who died on June 15 at Parham Hall, Wickham Market, was appointed Military Attaché (temporarily) at Sofia in March, 1904, and Military Attaché at Belgrade also in July, 1906. He vacated the appointment in August, 1909.

Brigadier-General William James St. John Harvey, the Black Watch, at one time D.A.A.G. with the Egyptian Army, adjutant of the 1st Black Watch during the South African War, who was killed in Mesopotamia on February 1, left property of the value of £8,920.

Colonel Warren Francis Trotter, Royal Marine Artillery, died at Briery Close, Windermere, on Monday. He joined the R.M.A. in 1876, and had seen service in China, Esquimault, and Egypt. He was awarded the Egyptian Medal, 1882, and the Khedive's Bronze Star. At the time of his death he was in command of a howitzer and anti-aircraft brigade.

Captain Henry Needham Knox, R.N., who took part in the Crimean War, died in Bournemouth last Sunday, aged eighty-five years.

Under date of June 15, *The Times'* correspondent in the Balkan Peninsula reports from Bucharest:—The death of Sister Augustine, an English lady who, as sister of charity in the French convent at Salonika, carried out a great work of beneficence in Macedonia for many years, is deeply deplored throughout that country. Some years ago Sister Augustine received a decoration from the King of Bulgaria. She was greatly respected and beloved by all sections of the population at Salonika.

Deputy Surgeon-General Edward Malcolm Sinclair, who died last week at Kensington, aged eighty-four years, entered the Army Medical Service in 1854, and in the Crimean War he was at the siege and fall of Sebastopol, receiving the medal (with clasp) and the Turkish medal.

We learn from our Bucharest Correspondent that the Roumanian Flying Service has suffered a severe loss in the person of M. Campineano, a captain of the reserve, who on May 27 fell, with his machine, from a height of 200 metres, suffering injuries which caused almost instantaneous death. He was, adds our Correspondent, a refined, cultured man, much esteemed in his large circle of friends.

Egyptian papers received by this week's mail announce the death at Cairo, after a short illness, of the wife of Mr. H. Bunnell May, of the Egyptian State Railways. Mrs. May had been a very active worker on behalf of our soldiers in Egypt.

We regret to learn that Lance-Corporal J. Roberts, of the Imperial Ottoman Bank, London office, was killed in action in France on May 30.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

BOWDEN-SMITH.—On June 17, at 17, Merchiston Park, Edinburgh, the wife (*née* May Gladys Moncrieff) of Edward Cyril Bowden-Smith, Egyptian Civil Service—of a son.

DEATH.

NEW.—On June 12, at Birland, Persia, of enteric, Rowland Hill New, H.M.'s Vice-Consul, second son of Rowland Hill New, Fourth Avenue Mansions, Hove, Sussex, aged thirty-nine.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival
Moderate and Inclusive Terms

THE ISOLATION OF GREECE.

If the war seems to entail a severe test of character, not only in the case of the actual belligerents, but also on other countries which are brought in any way within the orbit of its ramifications, the reason must be found in the nature of the struggle. It is no mere quarrel between two or more nations, arising solely from envy or ambition. The fundamental principles of civilization are at stake; for, just as we understand in the term "a civilized State" a country where liberty and justice are guaranteed to all and wrongdoing is punished, so we ought to think of the civilized world as an aggregate of communities in whose relations one to another similar conditions of liberty and justice must prevail, and in which encroachment on these principles calls for immediate suppression. No State in Europe, therefore, can affect complete indifference to the course of the contest now being waged; for, according to the issue, whether liberty and justice among the nations are to be enforced or whether they are to be trodden under foot, each State stands to benefit or to suffer. There are reasons, however, why certain States should remain out of the war either temporarily or permanently, unless, indeed, it can be shown that their military co-operation is essential to the victory of the cause of right over might; and their attitude towards the conflict must be determined by a strict interpretation of the duties of neutrality or by their desire to stand in well with one or other of the contending groups. Greece, unfortunately for her, was not left entirely a free agent in regard to the war. Her alliance with Serbia placed her under the obligation of going to the help of the Serbians when they were attacked by Bulgaria. She refused to honour her treaty, and the Allies, recognizing that, even if a country could be made to fight against its will, its support would be worthless, ignored the breach of faith, and proceeded to give Serbia what assistance they could on the strength of a previous Greek invitation to land troops at Salonika for the protection of Greece. King Constantine and his advisers at once made it clear that they would not willingly accept a position which entailed a more benevolent neutrality to the Grand Alliance than to the Central Powers. The existence of a deep cleavage of opinion in the Greek nation made the Allies loth to take much notice of the Government's attempts to put spokes in their wheel, but they persisted in a line of action which had for its object the safeguarding of Greece's, as well as of the Allies', interests. With the best of intentions on both sides the situation would have proved a difficult one so long as Greece interpreted neutrality to mean that she must do for the Central Powers whatever the Allies expected her to do for them; it became impossible when the Greek Government let it be known that, either from deliberate hostility to the Allies or owing to a previous understanding with the Central Powers, it proposed to thwart the former and encourage the latter at every turn.

Opinions will differ as to whether the Allies were well advised to tolerate for so long an equivocal attitude on the part of Greece. Their leniency gave Germany her opportunity, and the conduct of the Greek Government has become more aggressively unfriendly. A climax was reached when the Bulgarians crossed the frontier and a fort was handed over to them by Greek troops. The prospect of the Bulgarian Army establishing itself in a district which the Greeks had strongly fortified at considerable cost was too much even for the Allies' tolerance. It was felt that from acquiescence in the Bulgarian invasion to active support of it might not prove an unbridgeable gulf in the hands of men who were evidently determined to play fast and loose with Hellenic interests. With a view to bringing the Athens Government to a sense of its responsibilities a blockade of Greek ports was enforced. For some days no formal demands were made by the Allies; it was significant of the relations between them and the Greek Cabinet that the first intimation of the blockade received by the latter was from its port inspectors. The Government, however, was sufficiently alarmed to declare at once its intention to demobilize the army in whole or in part. A slight relaxation of the blockade was observed, and the Greek Pharaoh at once hardened his heart, with the result that no order for demobilization was given. During the time that the Allies have been making up their minds what measures to adopt towards Greece they have held no communication with the Greek Government. On June 12 a disorderly demonstration directed against the Allies occurred in Athens, and there is strong ground for believing that the police authorities not only adopted no measures to stop the proceedings, but actually for a part of the time countenanced them. The Allies' patience became exhausted, and M. Skouloudis, who has probably been an unwilling instrument in the hands of the Court party, resolved to remain no longer in office. King Constantine will try to placate the Entente by appointing M. Zaimis Premier. It is to be hoped, however, that the Allied Powers, having gone so far, will not accept any nominal change which perpetuates existing conditions. They are less concerned with the personnel of the Greek Cabinet than with the necessity of seeing that an end is put once for all to a state of affairs which endangers the safety of the Allied troops in the Balkans. Greece can play the German game to the prejudice of the Entente in other ways than by actually moving her troops against the latter, and the first object of the French and British Governments is to ensure that she shall not play that game.

Nothing could be more striking than the way in which the friendly feeling of which Greece was always assured in Europe has been estranged. No country has espoused her part more resolutely in the past than France; yet the French to-day, if we may judge from the attitude of the Press, are unanimous in urging that strong measures should be taken against the Greek Government. Shortly before the war an Anglo-Hellenic League was formed in Great Britain to promote a more intimate knowledge of Greece and her affairs in this country. Its spokesman last week, Dr. R. M. Burrows, had to admit not only that Greece's isolation and friendlessness were a cause of anxiety to her friends, but that her actions had given rise to the suspicion that she was playing a double game. For his own part, he could not believe it; but he recognised that the alternative was to suppose that the Greeks had been so foolish as to have acquired merit with neither side. As we write, we learn that any divided counsels which might have prevented the Allies from adopting a firmer attitude towards Greece have been overcome. The latest phases of the war will have caused the early belief in the invincibility of the Central Powers to waver, and the realisation that the Allies at last mean business has predisposed even the Greek military clique to listen to reason. It is on this ground that the absence of the Liberal party from the Chamber, owing to the policy adopted by M. Venizelos in not taking part in the General Election, is to be regretted. Some of his supporters have possibly cooled in their allegiance under the impression that his tactical errors imply that he is losing grip of the situation. Only a General Election, however, could prove how far this theory is correct, and the Allies had ample justification for insisting upon this method of obtaining from the Greek nation a clear statement as to how it stands in regard to the war and the principles for which the Allies are fighting.

KOSSOVO.

Wednesday next is Kossovo Day.

To many of us here in our navy-girt islands the bald statement as penned above causes little or no impression; we are so accustomed to "days" and little flags that one more or less, we argue, is of small moment. Yet, Kossovo Day is unlike any other; it is the Serbs' great day of joy in years of prosperity and peace; it is their deep day of mourning when oppressed, betrayed and—homeless. For them it is a symbol. Wherever the heart of a Jugo-Slav beats, there Kossovo Day is commemorated, with hymns of thankfulness for mercies received, with prayers of intercession in hours of need. Such an hour will be June 28, 1916.

Whence the origin of Kossovo Day? To seek it, we must wander back through Serbian history to the days of its greatest might, to the reign of the great Tsar Dushan, who brought the Serbian State to an unprecedented height of power and fame, and united beneath his sceptre practically all Southern Slavs. His death was a national disaster and coincided with the coming out of Asia into Europe of wild hordes of Turks. His empire crumbled: Thessaly, the Banat, Herzegovina, Bulgaria, and Albania were torn away, and these were followed by the loss, in 1371, of Southern Macedonia as far north as Skoplje. The Turk had come, and he pushed energetically westwards from Thrace and northwards from Salonika against what was left of Dushan's empire. Within three years of his arrival in Skoplje, he had pushed, under Sultan Murat, through the Katchanik Pass and threatened the Serbian capital of Prishtina. Knez Lazar, King of the Serbs at the time, decided to make a last stand here, in the plain of Kossovo, which runs north and south, as it were, past the old capital. The battle was fought on June 28; both Knez Lazar and Murat were killed; so were the flower of Serbian chivalry, and, infinitely worse, the Serbian Kingdom.

Centuries of oppression followed, but ever was the memory of Kossovo guarded as a sacred emblem by the downtrodden Jugo-Slavs. Their day should come! From village to village, from hamlet to hamlet, and from farmhouse to farmhouse strolled the blind, wandering minstrels with their ballads and legends, singing of the glorious deeds of yore, of chivalrous Marko Kraljevitch, of Dushan, of Lazarus and his consort, of Kossovo, the Field of Blackbirds, drenched with the blood of Serbian heroes. Men as they listened to these songs clenched their fists, and the light of battle shone in their eyes. Thus was a people's soul kept alive—by the music of its mighty past.

At last the day came. A New Serbia threw off the yoke of the Turks and erected a throne in Belgrade. That was in 1815. The old capital, Prishtina, with the historic plain of Kossovo, and Uskub on its hill overlooking the Vardar were still held by the Turk, but time would show, and it did show. The battle of Kumanovo, in 1912, wherein the Turks were routed and subsequently whipped out of Old Serbia, was the avenging hour, and it is believed by many that the Cid of Serbian lore, the peerless Marko, mounted on his piebald Sharatz, led the great charge at Kumanovo which destroyed the power of the Ottoman in Macedonia.

But the victory of Kumanovo did not—could not—wipe out the memory of Kossovo. True, the Southern Slavs of Macedonia were now freedmen, and the Plain of the Blackbirds was no longer in the hands of the enemy. But, on the other hand, were there not millions of Slavs still suffering under a despotic foreign yoke—in the Banat, in Bosnia and Herzegovina, in Croatia? They were pining to be freed from Austro-Hungarian tyranny, and until this should have been accomplished Kossovo still had a duty to perform—namely, that of acting as the emblem of Jugo-Slav freedom and unity.

Grass was not allowed to run to seed on Kossovo Polje pending the realization, under Serbian guidance, of the Jugo-Slav ideal. No sooner had Serbia emerged triumphant from the Balkan Wars than, on June 28, 1914, Kossovo Day was celebrated with great pomp and ceremony on the plain itself. Visitors who were there speak feelingly of that great national event. Pilgrims arrived from every village in Old and New Serbia and Montenegro; they came in flocks from the Banat, from Croatia, from Herzegovina; they knelt down on the plain and kissed its hardened soil; with subdued fervour and tear-dimmed eyes they entered the time-old monastery of Grechalnitza, where, mingling with the anthem of thankfulness for freed Kossovo, were to be heard prayers for the oppressed Slavs stamped under the feet of bullying Teutons and Magyars. Echoes of these prayers swept across the Kossovo Polje to beyond the Danube, the Save, and the Drin; they cheered the Jugo-Slavs in Austria-Hungary, they angered the despots in Berlin, Vienna, and Budapest, who, less than a month later, hurled their troops against the war-worn Serbian Kingdom.

To understand what followed and to realise the heroism of the Serbs, read the history of the first part of the Great War, up to and including the famous, heart-rending retreat of the indomitable Serbian Army through the vales of Albania. It is a glorious page. Twice did Austrian armies penetrate into Serbia, and twice were they routed and driven back; the third time they came accompanied by Huns and traitors—Bulgars who took the Serbs in the flank. Faithless Greece stood by and watched, and we—our help was late. In their terrible straits it might have been expected of a weaker people that they would surrender to the enemy. But that is not the way of the Serb. Pushed back from all sides, he fought his way stubbornly, inch by inch, from the Save, the Danube, the Morava, and the Vardar to where the Kossovo Polje spreads out between Mitrovitza and the Katchanik gorge. Here, as in 1389, a last, brave, desperate stand was to be made, not on the famous battlefield itself, but slightly to the south, near Giljane. But, at the last moment, when the Serbian Army was clamouring to be allowed to make its final stand on its most sacred ground, wiser counsels prevailed, and it was decided to commence that terrible exodus towards the Adriatic which will be for ever memorable. Perhaps the retreat cost the brave army more grief than if they had been allowed to die fighting on the Plain of the Blackbirds, but it was judged to be for the best. They had heroically held the breach against the common enemy as long as it had been humanly possible; invaluable time had been gained for the great cause, and now—better that the driven army should escape and recuperate for future action than be uselessly annihilated. So it retreated from the Kossovo westwards through Ipek into the inhospitable, snow-bound valleys of Albania.

That was in the last month of last year. Since then, in the island of Corfu, the Serbian Army has recuperated and has been re-equipped. In Salonika it stands eagerly awaiting the hour when it will again strike—for hearth and home, and the Great Cause. The latter, in its eyes, is Kossovo. The significance of undying Kossovo has grown again since that memorable day in June two years ago when the breath of Jugo-Slav independence swept across the *polje* to the north and west. For us, likewise, it has acquired a new meaning: we had heard about Kossovo, read about it, perhaps even seen it; but it needed the tragedy of 1915, in the course of which brave British women and men accompanied a starving, bleeding army through the

storm and tempest, to make us realise that inseparably linked up with our cause was that of the Serbs and the Jugo-Slavs, as symbolised by that one word, so magic and sacred to their ears—Kossovo.

Wednesday next is again Kossovo Day, a new day in our history, as it is an old one in that of Serbia. Remember it. You who know Serbia and the Jugo-Slavs, who have been charmed by its people, history, folklore and landscapes, and who realise the value of the aid which the brave little Ally gave us in the dark days of last October and November, tell your friends about them and their acts, and repeat the story of Kossovo. You will be doing King Peter's subjects a good turn, and, incidentally, you will be furthering the interests of peace, which are our interests.

C. R.

THE PRESS ON THE NEAR EAST

Lord Kitchener and Alexandretta.

In an article on Lord Kitchener and the Cabinet position left vacant by his death, the *New Statesman* (June 10) insists that as far as we have evidence of the late Field-Marshal's achievements at the War Office his soldiering was better than his administration. In the latter regard this paper considers that he was handicapped by the fact that he had had no previous experience of the Whitehall machine, and also by an Oriental predilection for doing everything himself. The article continues:—

Though not a tactical battle-fighter, he was a shrewd strategist. He is said to have insistently prophesied the main German advance through Brabant and Hainault during a critical week in August, 1914, when the French General Staff still expected it to come through the Ardennes. He is believed to have been quite against undertaking both the Antwerp and the Dardanelles Expeditions; though in both cases he was overborne in the Cabinet by the enthusiasm of Mr. Churchill, seconded as it was by political arguments. It is no secret that last autumn he was against the Salonika Expedition, and at the same time in favour of withdrawing from the Dardanelles. What is less known, but can now be stated harmlessly, is that his alternative policy was an expedition on a large scale to Alexandretta. Had this been then undertaken, we can see now, in the light of Erzeroum, Bitlis, and Trebizond, that it would probably have swept the Turks out of Asia. Indeed, it is not easy among all these large questions of military policy to find one on which his judgment was wrong

Picturesque Czernovitz.

An article which appeared over the initial "H." in the *Evening Standard* (June 19) gives a very good idea of life in Czernovitz, which, for the third time, has fallen to a Russian assault. The writer stayed at this town early in the war:—

I soon discovered that this pretty little semi-Oriental hillside town was not a real health-resort. Ruthenians, Poles, Roumanians, Jews, Vlachs, and Germans all had their "clubs"—mansions used by the various nationalities as meeting-places, restaurants, and dancing rooms—where members of rival nationalities were not allowed to enter. One evening I was invited to a dance at the Polish club, and henceforth was "cut" by all the other races.

As towns go in that part of the world, Czernovitz is clean and bright and busy. There are not quite so many "American bars" as in Lemberg, nor is there much night-life. A large proportion of the inhabitants are Jews, many of them exceedingly wealthy. The land in the neighbourhood is fertile; there is an enormous grain business, and the boom in Galician oil lands turned Czernovitz into quite a little breeding house for millionaires.

Probably the greatest feature of Czernovitz is the wide-spread practice of the "boycott," carried out in a way that would have made the Irish originators green with envy. The markets are held in the open air, and the peasants who come up with goods to sell make it a point of honour only to speak in their own dialect or language. Thus, a woman who wanted to buy a fowl, some eggs, vegetables and fruit would probably have to make inquiries in four different languages. The only people who have no language prejudice are the Jews.

English is largely spoken; in 1913 more than half the students at the University could speak our language:—

Everybody knows Dickens, sometimes to an embarrassing extent. One afternoon I was drinking a cup of coffee when a man sitting opposite asked me whether I was English, and on my nodding, said, "I, too, speak English. I will tell you of Dickens." He immediately began to recite with the quaintest accent in the world the first couple of pages of the "Christmas Carol."

English as a language is popular, as far as I could judge, on account of its commercial value. Nobody will willingly speak German, and the oil boom made a knowledge of Anglo-American imperative. Talking of oil, I am afraid many of the financial promoters who came to Czernovitz did not find the people as primitive and simple as they had hoped.

The writer goes on to refer to the place as a stronghold of witchcraft, and it still retains some of the excitements with which we were familiar in the "good old days," for robber clans abound in the vicinity. The principal tribe of these is known as the Hozule—which word signifies "robber chief"—and the people "are proud of their title, taking great care to live up to it."

The writer concludes with the following reference to the capture of the city:—

Few people will bother about the fate of Czernovitz. Germany will be more or less indifferent, and Austria is by now resigned to defeats. One country, however, may be upset about it. This is Roumania. For years she has set her heart on possessing the Bukovina and Transylvania. Had she thrown in her lot with the Allies when Bulgaria came into the war, she would surely have had generous recompense.

But Roumania preferred to play the canny game of waiting to see what would happen, and the Allies are now doing for themselves what they could always have done but for Bulgarian treachery.

Whatever Roumania may do in the future, the capture of Czernovitz will help to transform the war in that part of the world. With the Bukovina cleared of the enemy we shall yet see that march into Hungary which will force a decision from Austria.

An American at Bucharest.

Mr. Percival Gibbon, writing from Bucharest to the *Daily Chronicle* (June 17) contributes a vivid article on the condition of life at Bucharest, and pays high tribute to the energy and resourcefulness of the United States Ministers. This article should be read in its original form, as the reader may judge from the quotation which we give below:—

Each nationality has its own place of accustomed resort, and none trespasses upon that of another. The Germans go striding in their large German way into the Athens Palace, where there is enough of gilding and enamel to make a fit frame for a Prussian officer. The Frenchmen are more at their ease in the faintly Bohemian atmosphere of the Moderne; two or three lean and easy English have colonised the establishment known as Capsa. Not even on that battle-line which extends from the Baltic to the Bukovina are the hostile races more definitely and abruptly sundered than here, in this neutral capital which is the political storm-centre of the Balkans.

Yet a few days ago Bucharest beheld the spectacle of most of those young men gathered together in the same ball-room—somewhat stiff and formal in their politeness, with perhaps a spice of refined venom in their punctilious civility, yet going so far upon the road to peace as to acknowledge each other's existence as human beings, and to leave each other's throats alone. It was in the nature of a small miracle; Bucharest, which has watched them for months, saw it with amaze; and the worker of that wonder, the big, bland alchemist whose compounding of good nature with shrewd American common sense makes it possible, was the Hon. Charles J. Vopicka, United States Minister to Roumania, Bulgaria, and Serbia.

There are, apparently, few occasions when Mr. Vopicka fails to assist an inquirer—he is at all times ready to help.

Possibly one of the reasons why he generally succeeds in getting what he goes after is that for the Balkans he is a new and rather astonishing diplomatic type. The good old stage-property kind of Ambassador, who moved in any matter with the massive dignity and strictly moderate speed of—shall we say—a glacier, was familiar enough in these latitudes; the local Slav or Armenian was on to his curves. But a man with nothing to learn about mere ordinary human business, who could not be short-circuited in his activities by mere diplomatic precedent and the outworn shibboleths which make intercourse between different nations as difficult and uncertain as communication with the dead—who smiled, moreover, through all the stages of an affair, and the more he smiled the less he yielded—well, the Slav and the Armenian thoughtfully withdrew from their sleeves the cards which were concealed there and retired from the game.

The following reference to America's future in the Balkans concludes an interesting article:—

The Minister looks forward to a time when American interests in the Balkans shall play an important part in the development and civilisation of those countries. Their wealth, agricultural and mineral, is incontestable; Serbia and Roumania, to mention no others, are potential treasuries of wealth, needing only brains and capital for their realisation. Those who bring them will find one thing already waiting for them on the spot, in the shape of the good will and confidence of the native populations and officials, who have formed their estimate of the American character and American energy from their experience of his Excellency, Charles J. Vopicka, of Chicago.

Dr. Kramarzh.

The *New Statesman* (June 17) publishes a long article, by "L. B. N.," on Dr. Kramarzh, the leader of the young Czechs, who was sentenced to death by an Austrian court-martial on June 3 following a charge of high treason.

The political career of Dr. Kramarzh has been an inner tragedy. One of the finest thinkers on subjects of international politics, one of the truest prophets in those matters, he has spent his life in the pursuit of a chimera. He attempted the impossible and tried to make contradictions meet. He took from Palacky the inheritance of the Austrian idea. Like Palacky he was a Pan-Slav, and like Palacky he was a fervent Austrian. After fifty years he upheld the position which Palacky had taken up in 1848, and for the same reason: he wished for a strong Austria which, whilst Russia still remained in an understanding with Berlin, could alone have safeguarded the Western Slavs from German aggression. But naturally, that Austria had to be internally free and just, and externally independent of Germany. Dr. Kramarzh, therefore, throughout his political career, worked for a *rapprochement* between Austria and the Franco-Russian allies, and always strongly opposed the German alliance. But there was one flaw in his reasoning. It considered the problem of Austria and the Slav world almost exclusively from the point of view of the Czech nation, the whole of which is included in the Hapsburg Monarchy, and blinked the fact that even a reconstruction of that State on a Slav basis cannot solve either the Polish or the Jugo-Slav national problems. These problems were bound to lead to an international crisis, in which the two articles of Palacky's creed could no longer be reconciled.

He was accustomed to refer to the policy of the Triple Alliance as "diplomatic archæology," and fifteen years before the present war broke out he wrote:—

The Sultan is no longer master in the Balkans, but he is still in Asia Minor, and he thereby holds the road to India. If Austria no longer takes an interest in Constantinople, the same is not true of Germany; Germany has replaced Austria in her rivalry with Russia, and she has done it with a force and an *élan* which ought to supply matter for thought in London and St. Petersburg. Austria lies between Germany and Turkey; her nationalities must be on their guard lest she should become a vassal of Germany and a bridge for German expansion into Asia. The Austrian Germans wish to see Austria subordinated to German policy. With the help of a subordinated Austria, the sphere of German political and economic activity would extend from Hamburg to Asia Minor. . . Naturally, those from among the Austrian nationalities which wish to see the Monarchy sovereign and independent will fight to the last against that idea which for Austria would be equivalent to the ruin of her independence.

In 1906 Dr. Kramarzh wrote that "many people speak light-heartedly about the coming struggle of the Slav and Teuton worlds; yet no one can guarantee its immediate outcome. The position of the Czechs in it would be by no means enviable."

"L. B. N." continues:—

In 1909 the shadows of the coming Balkan conflict of the World War fell upon Europe. The shadow alone of approaching events was enough to shatter Dr. Kramarzh's Austrian-Slav dream. The claims of the Jugo-Slav nation were brought to the consciousness of Europe, and Europe became divided into two camps. The Hapsburg Monarchy threw itself upon German support and became in fact Germany's vassal. It may be that the aggressive and dishonest diplomacy of Count Ahrenthal and of his associates prematurely provoked a crisis; but as a matter of fact that crisis was inevitable sooner or later from the essence of things. Jugo-Slav unity could not be realised without the disruption of Turkey and Austria-Hungary, or such an aggrandisement of the latter as could not have been admitted by any of the Great Powers now included in the Quadruple Entente. Against the Jugo-Slavs Austria-Hungary could count on support only from Germany, but by no means from Russia.

"On November 10, 1911, in the Austrian Delegation, Dr. Kramarzh delivered the funeral speech over the work and ideas of his political life:—

. . . I had an aim in life and a leading idea. The events of the Annexation Crisis have proved calamitous for the policy which I followed all my life. I wished to do everything which lay within the compass of my small powers to render my own nation happy and great in a free, powerful, and generally respected Austria. . . . I have always resented the facts that when they talked about Austria people really meant only the Germans and Magyars, as if the great majority of Slavs, upon whom rest the biggest burdens, did not exist. But now—and no beautiful words can make me change my opinion on that point—an entirely independent policy has become unthinkable, because the only path which remains open to us leads by way of Berlin. Berlin will direct our policy, not we ourselves, because Berlin has preserved its traditional relations to St. Petersburg and we have reverted to our traditional enmity to Russia. Germany's hostility against the Western Powers closes to us that road, and our relations to them are nothing more than a harmless, unmeaning flirtation with kindly ambassadors. . . . But a foreign policy focussed in Berlin leaves no room for the Austrian Slavs. We shall remain in the shadow, taking no part in the game; our foreign policy will be conducted by Germans and Magyars. Consider, gentlemen, what the knowledge signifies for the Slavs, that they will never be citizens in the full meaning of the term, that they will never have a share in determining the future of the State . . ."

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Greek Tribute to Lord Kitchener. June 20.

The LORD CHANCELLOR announced that he had received the following telegram from the President of the Greek Chamber of Deputies:—"On behalf of the Greek Chamber of Deputies I have the honour to request your lordship to express to the House of Lords their deep regret at the grievous loss of one of their most eminent members, and to assure their lordships of the very real share which they take in the sorrow of the British nation at the loss in the person of Lord Kitchener, not only of one of the most glorious of her sons, but also one of the greatest figures of our time, whose name will remain enshrined in the memory of the Greek people as a true friend of Greece."

Mesopotamia Papers. June 21.

Viscount MIDLETON asked the Under-Secretary for India when the Mesopotamia papers would be issued.

Lord ISLINGTON said the Government were fully aware when they undertook to present the papers that the work of collecting them and putting them into a suitable form would be a laborious business. For that reason they issued papers regarding the opinions of generals in the field as to the advance on Ctesiphon in anticipation of the mass of papers and correspondence in connection with the Mesopotamia campaign. The Government's desire to comply as far as possible with Lord Midleton's request to include in the correspondence certain private communications between the Secretary of State and the Viceroy had added to the task no inconsiderable amount of labour. It had been necessary to consult the late Viceroy and also the late Secretary for India. In matters of this delicacy it was necessary to confer with the War Office, Foreign Office, and the Admiralty regarding the inclusion of documents for which they were responsible, and also to consider, in respect of the character of the information to be given, whether it would be prejudicial to the public welfare. The necessary paraphrasing of the telegrams had been by no means a light task, and at present he could not say that it was by any means complete. Much of the information contained in the papers was still of a private character, and in order to avoid disclosing information that might be of service to the enemy the most meticulous revision of the papers was found necessary. No effort was being spared to expedite the publication of the documents, and he hoped it might be possible to have the papers laid in the course of the early days of next month, but this must depend to a large extent on the action of the other Departments concerned, and the expedition with which the difficulties of paraphrasing were carried out.

Lord MIDLETON thought the noble Lord somewhat overstrained the point as to the correspondence of the late Viceroy in view of the fact that he was in this country. He (the speaker) pressed for the presentation of the papers because it was necessary in the interest of the Government to say that the continued reports which, as individuals, some of them were receiving from Mesopotamia made it highly desirable that they should not merely have a debate, but hold an inquiry into this question at the earliest possible moment.

HOUSE OF COMMONS.

The Empire's Loss. June 20.

The SPEAKER: I have to inform the House that during the recess I have received certain resolutions from foreign Chambers. The first, from the President of the Chamber of Deputies of Greece, is to this effect:—"In the name of the Chamber of Deputies of Greece, I have the honour to beg your Excellency to convey to the House of Commons the lively sympathy felt by the Hellenic Parliament in the mourning of the British nation. By the death of Lord Kitchener Britain losses not only one of her most famous sons, but one of the most striking figures of our age, whose name will be held in grateful remembrance by Hellenes as that of a true friend of their country."

Memorial to Lord Kitchener. June 21.

Mr. ASQUITH moved: "That this House will, to-morrow, resolve itself into a Committee to consider an humble Address to his Majesty, praying that his Majesty will give directions that a monument be erected at the public charge to the memory of the late Field-Marshal Earl Kitchener, with an inscription expressing the admiration of this House for his illustrious military career and its gratitude for his devoted services to the State."

In the course of an eloquent tribute to the late Field-Marshal the PRIME MINISTER said: "His name is inseparably associated with that of Lord Cromer in one of the greatest achievements of our race and time—the emancipation and regeneration of Egypt. To his genius we owe the conquest of the Sudan, and to his organising initiative the process which has ever since gone on of substituting over a vast, to a large extent devastated, area civilisation for barbarism, justice for caprice and cruelty, a humane and equitable rule for a desolating and sterilising tyranny . . . Recalled to Egypt, he was displaying the same gifts in civil administration, which he had already illustrated in the military sphere, when at the outbreak of the war he obeyed, with the alacrity of a man who has become the willing servant of duty, the summons to direct and to recreate our Imperial forces in the supreme crisis of our national history. He brought to his new task the same sleepless energy, the same rare resourcefulness, the same masterful personality which never failed him in any of the fields of action in which he was, during nearly fifty years, called on behalf of his country to play his part."

Mr. Bonar Law, Sir George Reid, Mr. Wardle, and General Sir Ivor Herbert supported the resolution, and the motion was carried unanimously.

GREECE AND THE ENTENTE.

Speaking at a meeting of the Anglo-Hellenic League held at the Æolian Hall, New Bond Street, on Thursday of last week, Dr. R. M. Burrows said the Greek people were pro-Entente, and had the people's will not been thwarted Greece would to-day be fighting with the Allies. If M. Venizelos' party had not abstained from the elections last December, he would have succeeded in maintaining his majority in spite of the German terror that stared the nation in the face at that time, just after the invasion of Serbia; and if there were a general election now Venizelos' majority would probably be as sweeping as in 1912. Popular feeling was undoubtedly with M. Venizelos, and it was the supreme wish of phil-Hellenes that this feeling should be translated into action, but not for the sake of the Entente, for the Entente had now no serious need of Greek assistance. There were two occasions—at the beginning of the attack on the Dardanelles and again when Bulgaria invaded Serbia—when Greece, because of her geographical position and because of the unpreparedness of the Entente, could have given help utterly out of proportion to her military strength. But the friends of Greece and the Greek colonies all over the world were not now thinking of the Entente, but of Greece. The nightmare that haunted them was the utter isolation of Greece—her lack of any backers in the peace congress and the doubtful years that would follow it. Trying to make the best of both worlds, she had got the advantage of neither. To the Central Powers she could only plead that she was a neutral friendly to the Entente, while the Entente Powers would disclaim any such friendship.

Of late the Governments of the Entente had been asking themselves whether the Greek Government had made an agreement with Germany, and would be able to point to such signal services to the cause of the Central Powers that it would be these, and not the Entente, who would come forward as the friends of Greece. He did not believe there was any such agreement, but how was the suspicion to be dispelled? If it were not dispelled it might breed a state of things which at present could only be imagined, for distrust bred distrust; and the Greek people, with their present complete lack of control over the executive, might some day find themselves committed by that executive to direct hostilities against their natural friends and protectors. To dispel that suspicion the friends of Greece should use their influence to see that any pressure put on the Greek Government should be exercised, not punitively against the people, but protectively to restore to the people their rights. It would be necessary for phil-Hellenes to concern themselves indirectly with Greek internal politics, and to support the demand of the Greeks of the dispersion for the restoration of constitutional government. The demand of the Entente for demobilisation was no doubt prompted immediately by strategic considerations, but it happened that the same demand had been consistently urged for the last few months by M. Venizelos and the Liberal Party. The one condition precedent for the re-establishment of constitutional government in Greece was that the manhood of the nation should no longer be retained under military discipline, but should be enabled to express its will by vote and public meeting. He believed that another general election would result in the return of M. Venizelos to power. If so, he must remain in power. When the protecting powers gave Greece her free constitution, modelled on the limited monarchy of Great Britain, they assumed that that original pattern would be followed not only in the letter but in the spirit.

The Hon. W. P. Reeves, who presided, said that the overwhelming majority of the Greek people wished to take part in the European struggle and to throw in their weight on the side of the Entente. He appealed to the Entente Governments, if pressure had to be applied, that it should be applied to the Greek Government, and should not be an interference with the business, the daily life, or the prosperity of the Greek people.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.
Sole Manufacturers of the Famous . .
Dhariwal
Long Life Wool Wear
Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c.. &c.
CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The finances of Greece, through the fault of her own maladministrators, are in a helpless muddle. The Budget for 1916, introduced in the Chamber last week, shows an estimated deficit of 265,000,000 drachmæ, mainly brought about by the expensive and superfluous mobilization policy of the late Government. This was to have been partly covered by a loan, an agreement for the issue of which was signed with the National Bank. According to this agreement, the loan was to be for 115,000,000 drs., at 5 per cent., in bearer bonds of 100 drs. As compensation for this operation, the bank was granted the right to increase the circulation of bank notes by 30,000,000 drs., and its other privileges were to be extended for a further period of twenty years. Unfortunately for the Greek Government—but not for the country's foreign creditors—the International Financial Commission refused to sanction the issue of bank notes, stating that it was unjustified, inasmuch as it was not necessitated by the needs of commerce, and threatened that if they were issued, England and France would refuse Greece any financial support and forbid the quotation of the new loan on the London and Paris Stock Exchanges. This strong attitude on the part of the Commission has, I am pleased to see, had the desired effect, and it is also more than likely that it has had something to do with the fall of the Skouloudis Ministry.

***

We reproduce elsewhere the balance-sheet of the Bank of Abyssinia for 1915, together with extracts from the chairman's speech. As was to have been expected, the year was not a favourable one for the institution, which seems to have lost rather heavily, though not irretrievably, by the great drop in the value of the thaler towards the latter part of 1914. Gross profits dropped from £22,721 in 1914 to £13,615, whereas expenditure amounted to £12,866, leaving a balance of £748 from which had to be deducted £10,503 representing certain amortisations and depreciation in dollars, francs, and lire. The net result is a debit of £9,760, to which must be added last year's debit balance of £21,189, giving us a total debit of £30,949. However, the position of the bank is a unique one, and when peace has been declared and trade with Abyssinia develops, as it is bound to do, it will gradually recover lost ground. In the meantime it is doing valuable spade work helping to improve trade relations between Abyssinia, Egypt, and the Sudan. Incidentally, I read that during the past year a first issue of bank-notes was made, to the amount of $214,765, covered by a reserve of dollars (thalers, presumably) for the same amount.

***

Since the country was overrun by the Austrians, reliable news from Serbia has been meagre and not very cheering, but the interesting statement has got through that the Austrians have taken the silk industry in hand, and have established a central market at Belgrade for the sale of cocoons. It will probably be impossible to discover much about this piratical venture. At first I was inclined to hope that the project would prove a failure, but on reflection it appeared to me that to do so would be unkind to our Serbian friends. For, after all, the enemy occupation of their country can only be temporary, and anything that is done in the meantime to develope home industries, even if only partly, will be so much to the good.

***

It is reported from Amsterdam that the s.s. "Prinses Juliana," of the Nederland Company, which left on Wednesday for the Dutch East Indies, will resume the customary route through the Suez Canal. It will be remembered that some months ago the Nederland Company decided, in view of Turkish hostilities near the Canal, to send its ships round the Cape, and the return now to the old route shows that neutrals have begun to realise that in spite of Germany's much vaunted "victory" (*sic*) off Jutland we "hold the seas" more firmly than ever. The Nederland Company's decision is, therefore, a welcome sign of the times.

***

A fortnight ago I referred in these columns to a "domestic dispute" about the appointment of a director to the Board of the Egyptian Markets, Limited, and uttered a pious hope that, in the interests of the company, the dispute would be quickly settled. From the directors' report for the year ended December 31, 1915, issued last week and reproduced elsewhere, I see that the Board have adopted a most sensible attitude and one that ought to recommend itself to shareholders at the forthcoming meeting

***

The situation, in a nutshell, is as follows: On the death in 1915 of one of the directors, Mr. Allan F. Joseph (by an obvious slip of the pen I stated in my recent notes that General McKenna, V.C., was the deceased director), and in view of the imminent retirement of Major Le Breton, the directors appointed Mr. P. W. Le Breton to the Board. Unfortunately the appointment did not meet with the general approval of the shareholders, with the result that the dissentients decided to propose a second nominee, Mr. George Herbert Redwood, to the vacant post. This was the situation a fortnight ago, and now, by the directors' report referred to above, I see that in the meantime Mr. Le Breton, "believing it to be in the interests of the company," has generously resigned his appointment, thus leaving the whole question of Mr. Joseph's successor for decision at next week's meeting. On the other hand, the retiring director, Major Le Breton, has, "at the request of some of the larger shareholders," consented to offer himself for re-election—a decision that will be welcomed by all shareholders who realise that not a little of the company's past success is due to the energy and zeal of the retiring chairman. And, finally—by way of licit compromise, I take it—a resolution is to be proposed by the Board at the shareholders' meeting, to increase the maximum number of directors to six; if it is passed, the Board "hope to be in a position to submit the name of a sixth gentleman who should be acceptable to the shareholders."

***

[Since writing the above, I see that the directors of the Egyptian Markets have issued a supplementary circular to their report to the effect that Sir John P. Hewett, G.C.S.I., C.I.E., "has consented to allow his name to be put forward as a director," and that "he will accordingly be proposed at the annual meeting." I am exceedingly pleased to see that the Board are to propose a man of such sterling administrative abilities as Sir John Hewett, whose administrative career in India has been so singularly successful, and I feel convinced that his election to the vacant post will be a great asset to the company. Incidentally it may be mentioned that the directors also announce that they will propose an increase of the remuneration of the directors by a "lump sum" of £600 per annum, such sum to be divided between them as the Board may determine, and to commence as from January 1, 1915.]

***

Turning from the company's domestic affairs to the report for the year ended December 31, 1915, we find that results show a decided improvement over the previous year, in spite of the fact that in 1914 there were only five months of war. Cattle markets, slaughter-houses, general markets, and sales of chemical manure show increased takings, whilst there has been an economy in expenditure. As regards the future, it promises well, several new working arrangements having been concluded, as, for instance, a Government contract for the supply of fodder for the Army. Besides, the agency for the sale of basic phosphate for the Egyptian Phosphate Company "bids fair to develop into a considerable success when its agricultural value is properly realised." So that shareholders have little to grumble about in this, the second year of the Great War.

***

Speaking of phosphates in Egypt reminds me of a recent incident illustrating the past tremendous lack of organisation and cohesion within our Empire. The incident is as follows: When the New Zealanders came to Egypt the farmers among them were surprised to find that the country possessed enormous and important phosphate layers, of the existence of which they had been unaware. The fault naturally lies with those who should have advertised these deposits in the Dominion, but there have been so many cases of such blatant negligence that further emphasis is superfluous. Let us hope that in future we will be more thorough and practical. As for the New Zealanders, having "discovered" these layers, they lost no time in getting their people at home to buy some Egyptian phosphates, with the result that a first shipment has now reached New Zealand and is proving most acceptable to the farmers. It is a happy beginning, and I trust that at no distant date orders will be received from many parts of the Empire for Egyptian phosphates.

***

The Consulting-Agriculturist to the Egyptian Government desires to make known the fact that the Ministry of Agriculture at Cairo furnishes information connected with Egyptian agricultural produce for export and also with reference to markets in Egypt for imported produce, acting as intermediary between the producer and consumer. Samples of produce are prepared for submission to any enquirers, and information is supplied to producers to enable them to prepare their produce in a manner suitable for foreign markets. Communications in this connection should be addressed to the Bureau of Commercial Intelligence, Ministry of Agriculture, Cairo.

Fuel in Turkey.

Analysis of Coal and ron Deposits.

(SPECIAL TO "THE NEAR EAST.")

The following extracts are from a paper to be read at the Arizona meeting of the American Institute of Mining Engineers in September next. The lecturer, Mr. Leon Dominian, of New York, well known as an authority on mining questions in the Ottoman Empire, has kindly favoured us with an advance proof of his lecture.

Apart from local needs (says the paper in question), the interest attached to Turkish fuels grows chiefly out of the importance of the railway industry in Asiatic Turkey. Geographical conditions make of the tracks in this region the most essential link in a chain of world-girdling lines. By its position Asia Minor can be likened to a bridge in the through routes destined to connect European factories with Asiatic and African markets. The occurrence of fuel within an area of such significance from the standpoint of world traffic, therefore deserves investigation. Unfortunately our knowledge of the fuel resources of the Turkish Empire is still in a very immature stage. The occurrence of coal and oil has been reported from a large number of localities. In only one instance has mining been carried on in any manner compatible with the demands of modern consumption. Aside from this, work has been confined to desultory attempts that were scarcely adequate to meet even the limited local requirements. In no case can technical data regarding the extent, depth, or persistence of seams be had.

I.—COAL.

Western Asia Minor.

The north-western projection of Asia Minor, immediately south-east of the Dardanelles, forms part of a district wherein lignite deposits have been worked in a number of localities. The formations of this region can also be traced to the north on the adjoining European coast of the Marmora. The lignite beds occur mostly in Tertiary lacustrine deposits, and appear to belong to a zone of transition between the Miocene and the Pliocene.

The lignites thus formed may have industrial value. Dr. Launay cites occurrences in the vicinity of Ghemlik where seams of the fuel are found sometimes in a remarkable state of freedom from impurities. Here sandstone and conglomerate strata contain small masses of lignite mixed with pyritic sands. Occasionally, however, lignites acquire considerable value in connection with local industries. A deposit of this kind is worked at Manjilik by the owners of the near-by Balia lead mines. The product is used in an electric power station feeding the smelters and workings.

The coal-bearing strata are found at a distance of about 5 km. north of Manjilik, in the valley of the Deirmen Dere. Their total thickness attains 10 m., and their dip varies between 30 deg. and 70 deg. W. Coal outcrops can be traced over a length of 10 km. The lignite contains on an average 30 per cent ash. A small mine railway connects the coal workings with the mines in the vicinity of Balia, and extends thence southward to Osmanlar. Some lignite is also found near Lampsacus, but it has not yet been mined. In the Troad, lignite is extracted near Edremid. The fuel is transported to the seaport of Akchai, where it is stacked along the water front and sold in small quantities. Farther south, at a short distance from Soma, the terminal of a branch line from Manissa, a good quantity of this coal has been mined on a small scale. Near Panderma, at about 4 km. from Tchamakdagh, some exploration work was undertaken about twenty years ago in the Mesepsif Valley. West of this region, lignite outcrops are known at Demirtash, 20 km. north of Brusa. Mining was also carried on formerly at Chaidere, near Bilejik, and at Gueve, near Sugud. The product from the last-named locality was used in the silk factories of Bilejik and Keupli. The most westerly extension of this Tertiary lignite is found in the mountains environing Chai, near Afiunkarahissar. Seams having an occasional thickness of 2 m. have been discovered here at an altitude of 1,840 m. lying over calcareous conglomerates, and capped by clay beds. In the quaternary alluvial plain of the Mendere River, south of Smyrna, lignite with a dip of 34 to 45 deg. N. has been mined near Sokia station. The seams are interbedded with schistose strata, and can be detected along a line of 10 km. in length.

The south-western coast of Asia Minor, with its hinterland, does not appear to be devoid of coal. Seams are known near Makri in the foothills of the Eljikdagh Mountain. In the Province of Smyrna, lignite beds exist at Milas, Aidin, Kiosk, Nazili, Scalanova, and Keramos. The Nazili beds have been developed for local use. Practically every one of the other deposits is susceptible of development to supply local requirements.

Heraclea.

The presence of coal-producing measures has been recognised along the Black Sea coast between Heraclea and Ineboli, a distance of about 175 km. An economic province can be outlined in this district on the basis of the presence of a number of long and narrow parallel bands of carboniferous rocks, which comprise culm, lower carboniferous limestone, and upper carboniferous coal measures. The Heraclea coalfield is at present the best developed in the region, as well as in Turkey. It occupies a belt about 60 km. in length along the Asiatic coast of the Black Sea, between the seaports of Heraclea and Filios. The town of Heraclea itself lies at a distance of 135 nautical miles from Constantinople. The coal-beds outcrop near the coast, and are not known to extend farther than 8 km. inland. It is believed, however, that they strike south-easterly from the eastern boundary of the district to which mining operations have been confined, and that they may be re-encountered at a greater distance from the seashore beyond. The coast facing this section of the Black Sea is precipitous. Narrow valleys and ridges parallel each other at right angles to the shore line. The elevation of the land immediately fronting the water does not exceed 60 m. The altitude increases gradually southward until a maximum of 500 m. is attained at a distance of about 3 km. from the coast. Here long chains of hills with a general E.-W. trend are met.

The western boundary of the basin is determined by a long fault-line occurring at Kiosseaghzi, at a distance of about 10 km. east of Heraclea. The entire measures appear to have sunk in depth at this point. The valleys of Kiretchlik, Chaushaghzy, and Ilisu appear immediately beyond. The Cozlu depression lies about 20 km. farther east, and is the seat of the widest and most actively exploited veins of the entire district. From this last point the coal measures are detected about 2 km. farther east, to Domuz, where they assume a gradual southerly strike inland. Cutting across the Zunguldak Valley, where their width attains 5 km., they extend beyond Chatalaghzy Valley to Suksu. Mining ceases at this locality, but coal is known to occur as far east as Djide. The reserves of the Cozlu mines are estimated at 50,000,000 metric tons.

The coal mined at Heraclea belongs to the bituminous variety. It is slightly higher in ash than the corresponding average type from European basins. It may be divided into two classes—(1) that obtained from the veins of middle series, containing from 30 to 40 per cent. volatile matter; (2) that mined from the lowest stage, containing from 40 to 45 per cent. volatile matter. The first is excellent for coking purposes, while the second product is used chiefly in the manufacture of illuminating gas and for steam generation.

The following table shows the annual output for the entire region since 1911:—

1911	750,000
1912	646,281
1913	566,118

Bituminous coal of excellent quality is known in the foothills of the mountains surrounding the seaport of Kidros, on the Black Sea. This occurrence may be taken as forming the easterly end of the Black Sea coal basin. It cannot be doubted that this economic province is the seat of an important coal supply. The fuel has also been found in the vicinity of Changry, south of this bituminous field. Inferior grades are reported from Cassabaibala, in the vilayet of Angora, where the discoveries consist mainly of lignites.

Eastern Asia Minor.

A large number of coal seams of all grades are known to occur in the region extending east of the 34th meridian east of Greenwich to the Russian and Persian boundaries. Lignite was reported by Cuinet from Tavshandagh Mountain in the vicinity of Mersivan. The same observer noted coal outcrops in the immediate neighbourhood of Tokat, as well as in a district lying 60 m. south-east of that town. Outcrops have also been detected at Cardashlar at 2 hr. distance from Sivas. Lignite is known at Ghemerek and at Tonus in the same district. Farther south lignites have been observed by travellers in the vicinity of the Argana copper mines. In the northern portion of Mamuretualziz, coal is known in a band, which practically extends from its eastern to its western boundary. The localities are Chemishguedsek, where the coal is stated to be of good quality, Zafranik, Dersim, and Derstek. At Shengyah also, near Baibourt, lignite occurs, as well as in the Myriam Dagh. The Chemishguedsek seams are conveniently situated close to the banks of the Menzurchai, an affluent of the Karasu or eastern Euphrates. They lie at about 60 km. north-east of the Keban silver-lead deposits south of the last-named town. In the Erzerum province some lignite has been mined to supply local requirements. The seams are generally imbedded in the Upper Eocene. They are well developed at Kheneke, near Migri in the valley of the Arax, as well as east, in the Kashkaldagh Mountain. Beds are known at Kasachan, Hortukderessi, Serishli, near Bayazid Road, Lezghiaf, and Ercovan.

Coal has been mined at Rizeh, north of Erzerum. Proceeding southward from Erzerum the occurrence of a deposit of bituminous coal is reported from the mountains lying west of the Mush plain. South-east of the last-named locality a hard variety of coal resembling anthracite is found near Eruh, in the province of Bitlis. The coal is stated to occur in abundance in this region between the villages of Chemak and Dergal. The village of Komurhan, between Harput and Malatia, owes its name to the coal seams worked by the natives.

The same variety of coal is found farther east, near Palu. The meagre reports obtainable from this relatively inaccessible town lack definiteness, and merely suggest the possible existence of an anthracite basin in this district. The Palu coal outcrops at 25 km. from the Murad Su in the bottom of a valley. The fuel is used by blacksmiths of the region. It will probably acquire importance owing to its proximity to the copper mines at Argana.

West of the Persian boundary, the province of Van seems to have been favoured by nature with ample reserves of fuel. At Bashkale, in the Hekiari district, a number of lignite seams 0.15 m. in width are known. At about two day's horseback ride from Nordooz, the same coal occurs again. The coal-bearing strata attain here a thickness of about 14 m. At Akchai, about 24 km. from the harbour of Cheraker on Lake Van, a bituminous variety was discovered. Coal is also known at Sivan near Archek, 27 km. east of Van, where a number of seams have been brought to light. At Chahmanis, in the district of Chatak, a number of seams occur. Their width occasionally attains 1 m.

The occurrence of the fuel is also reported from Beirutdagh Mountain, where iron has been mined since times immemorial by the natives of the town of Zeitun. This region has been, perhaps, least visited of all by travellers in Asia Minor. North of Sis, toward Hajin, anthracite float has been detected in the valley of the Seihun.

Syria.

Two deposits of lignite are worked in the province of Beyrout. One is the Ainamade

Digitized by Google

mine, which lies near the village of Kermael and yields about 1,000 tons annually. The other occurs at Haitura, near Jezzim, and produces about 500 tons per year. Outcrops have also been traced in the valley of the Nahrelkalb. Both deposits are capable of yielding larger outputs. In the Lebanon, coal that is probably lignitic is reported from Faluga, near Hamana, as well as at Abdin, near Bekfaya and Mreyjatt. The first-named locality was the seat of a native exploitation which was undertaken on a small scale to supply the silk factories of the district with fuel. Other Syrian localities from which coal is reported are Meshgara, in the Beka's Mountains and Huleh, in the province of Damascus. The environs of Tyre and Safed are similarly credited. At about 80 km. south-east of Aleppo, coal outcrops have been noticed by various explorers. The accounts relative to their importance are conflicting. Two other localities regarding which very little is known, are Suedieh, on the Mediterranean coast, and the Ajilun province in Palestine.

Mesopotamia.

Coal was mined about half a century ago in the northern section of this ancient province at Harput, about 45 km. east of Gezireh. The product was used for a while on river boats plying on the navigable sections of the Tigris. The fluvial transportation industry appears to have stimulated research for the fuel, since a little mining was also undertaken for the same purpose in the Jebel Hamrin 90 km. north-east of Bagdad. Coal has also been found in the vicinity of Mosul, but the deposit has not been worked. At about 160 km. north-east of Bagdad a small amount of coal has been mined by the natives since 1890. Mining is confined to the low hills lying east of Kifri, near the Nasalah village. The coal is won from open cuts and shallow workings. Its quality was found to be poor at that level, and deeper digging has not yet been undertaken.

Turkey in Europe.

The environs of Keshan in the province of Adrianople have been prospected for coal somewhat more thoroughly than other districts of European Turkey. The coal mined here is bituminous. One of the seams worked was about 1 m. thick and had the characteristics of cannel coal, burning with a long flame and emitting little smoke. Its specific gravity was 1.37 and it yielded about 2 per cent. in ash. At Bosztepe, 9.6 km. west of Keshan, the same variety of hard cannel was discovered. In the opposite direction several seams are known along the Marmora coast between Sarkeui and Ganos, at a distance of about 48 km. south east of Keshan. The thickness of these veins varies between 0.30 and 0.45 m.

The outcrops of another deposit, which contains seams about 0.70 m. thick, are known. The coal seams are here interbedded with oil-bearing formations, with which they have a common southerly dip into the hill forming the southern slope of the Kavak River valley at about 130 m. above sea-level.

The prolongation of the Marmora-Ægean lignites can be followed in the vicinity of the seaport of Rodosto in the Sea of Marmora. Deposits of lignite are also known near the villages of Athunar, Chiflik, and Agatchly at a short distance from Constantinople.

Wholesale, of Hanson's, London, England.

Trade Notes.

Egypt.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of paints, mainly for the scavenging and watering service. Date, July 15.

The Physical Service Department, Cairo, invites tenders for the supply of weighing machines, balances and weights required for Government during 1916-17. Date, July 15.

The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of agendas required for Government Departments. Date, July 12.

The superintendent of Stores, Ministry of Education, Cairo, invites tenders for the supply of 3,600 table serviettes required for the school year 1916-17. Date, July 5.

The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of globes, bees-wax, and mats necessary for the Hedjaz. Date, July 1.

Malta.

The Commercial Intelligence Branch of the Board of Trade is in receipt of copies of transcripts of the official shorthand writer's notes on the proceedings before the Prize Court at Malta regarding (1) the sailing ship Alexandros, (2) the sailing ship Anna and cargo ex the same, (3) the cargo ex the s.s. Taiyabi, and (4) part cargoes ex the vessels Scrivia, Byzantion, Erissos, Eretria, and Agamemnon. The above-mentioned copies of the notes may be consulted by British firms at the Commercial Intelligence Branch of the Board of Trade. 73, Basinghall Street, London, E.C.

Greece.

H.M. Consul at the Piræus has forwarded a copy of the Greek Government *Gazette* (No. 79) of April 22-May 5, containing the text of an agreement, in the French language, made between the Greek Government and the American Steel Products Company of New York, concerning the supply of six revolving tables for locomotives for the Papapouli-Topsin railway, now in course of construction.

ENEMY FIRMS IN EGYPT.

A recent issue of the *Official Journal* contains the following notice:—

The following firms have been granted a licence to trade in Egypt with the British Empire and with Allies of Great Britain, in accordance with the terms stated in Section B (*vide* THE NEAR EAST, February 4):—

Dian, Nicolas, 11, Rue du Commerce, Port Said;

Vascotto, Alfred, 23, Boulevard de Ramleh, Alexandria; and

Cernic Stefano, Rue Abou Dardaa, Alexandria.

The following further notices appeared in a recent issue of the *Official Journal*:—

The firm of Stern Frères, G.m.b.H., Cairo and Alexandria, has been granted a licence to carry on business for the purpose of liquidation only, the affairs of the firm having been placed under the supervision of Mr. J. W. Eady, P.O. Box 1078, Cairo, as controller. Mr. W. B. Delany, of Standard Buildings, Sharia Soliman Pasha, Cairo, has been appointed Receiver of the property in Egypt of Messrs. Leo and Harry Stern, partners in the firm of Stern Frères, of Cairo, believed to be at present residing in enemy territory. Mr. E. C. Widdows, of Gresham House, Sharia Soliman Pasha, Cairo, has been appointed Receiver of the property in Egypt of Frederick Trinklein, partner in the firm of Stern Frères, of Cairo, believed to be at present in enemy territory.

Mr. A. J. Lowe, P.O. Box 955, Alexandria, has been appointed Receiver of the business and assets of the Cinema Moderne, Alexandria, with instructions to close the business and liquidate the assets thereof with as little delay as possible.

LIABILITIES OF ENEMY SUBJECTS.

The Civil Tribunal of Alexandria has delivered an important judgment in a case relating to the liabilities of enemy subjects in respect of losses sustained by others in consequence of the liquidation of their affairs by order of the military authorities. The case in question was brought by Mr. Parachimona against Messrs. R. and O. Lindemann, between whom a partnership had been formed for the purpose of engaging in the commercial development of a new variety of "Brown" cotton. When Lindemanns' firm was ordered to be liquidated difficulties ensued, and Mr. Parachimona claimed £E10.915 as damages in respect of breach of agreement, as affecting the cotton season of 1916.

At the hearing of the case Messrs. Lindemanns pleaded *force majeure*, which prevented them, to their regret, from carrying out the contract; but the Tribunal decided, in the negative, the question whether the acts of the authority ordering enemy subjects to liquidate their affairs, and to put an end to contracts in course of execution had to be considered as cases of *force majeure*, so that the debtors could not be sued for damages by non-enemy subjects with whom they had contracts that had thus been broken.

The further hearing was adjourned until after the summer vacation, when the amount of damages will be assessed.

NEWS FROM ALL SOURCES.

At a court of directors of the Royal Exchange Assurance, held on June 14, Sir David Yule was appointed a Director of the Corporation.

The death is announced of Mr. Raphael Eid, the representative at Alexandria of the Société Anonyme Agricole et Industrielle d'Egypte.

A further list of foreign firms with whom persons in the United Kingdom are forbidden to trade was published in the *London Gazette* of June 18. The list contains nine firms in Greece.

Regular postal and telegraphic communication with Trebizond has been opened by the Russian authorities.

The Alexandria Water Works, Egypt, has recently been equipped with an oil-burning installation which shows considerable economies over coal.

Alexandria is officially declared to be infected with bubonic plague and Mohammerah (Southern Persia) with cholera.

Lieut. Georges Oppermann, of the French Artillery, who had already been decorated with the Croix de Guerre, has been made a Chevalier of the Legion of Honour. Lieut. Oppermann is the son of M. Alfred Oppermann, a director on the International Board of the Suez Canal, who has been serving as Lieut.-Colonel of Artillery at Lyons since the outbreak of war.

The Cunard Steamship Company, Ltd., have removed from their old quarters at the corner of Rumford Street and Water Street, Liverpool, to their magnificent new head offices, which henceforward will be known as Cunard Building. The length of the building from the front façade on the pierhead to the city façade is 330 ft., the width of the former being 170 ft. and the latter 200 ft. The height from the basement is 125 ft., and from the foundations in the bed of the old George's Dock 170 ft. The structure combines, both in general outline and decorative detail, the best features of the Italian Renaissance, as represented by the Farnese Palace at Rome. It, however, secures to a greater degree and on a much vaster scale than the Farnese Palace the primitive simplicity and dignity aimed at by the architectural [illegible] whose notions and aspirations it [illegible]

SNOW AND FROST IN ROUMANIA.

(From Our Own Correspondent.)

Bucharest, May 27.

The farmer has had some cause for complaint recently, for there have been heavy downfalls of rain, especially about Bucharest, which have done considerable damage in some parts. Large tracts of country were more or less under water as I approached Bucharest a few days ago on a return journey from Moldavia. Following on the rain, snow fell in the mountains, and this caused the thermometer to fall below zero in the interior, with harmful results.

PRODUCE REPORT.

London, June 22.

Currants.

The market has been very active this past week, with a good demand for all qualities. At the same time a good amount of speculation is going on, and prices are hardening for the reasons mentioned in last week's report. The same condition prevails in the Liverpool market.

Sultanas.

The demand is moderate, with business done mostly in Afghan and North Indian fruit at steady prices.

Figs.

There has been little enquiry, but prices are well maintained, especially for good sound fruit, which apparently is mostly wanted.

Dates

The market has been fairly active, and prices are firmer with some tendency for advance.

Seeds.

Linseed has been easier: London-Calcutta spot afloat, June-July, July-August, August-September was sold at 66s. 9d. Bombay for shipment 68s. 6d. Rapeseed is rather quiet; Toria, June-July, 64s.; and brown Cawnpore, 63s. Cotton-seed is easier: London-Egyptian, June, is quoted at £13, and Sakelarides at £12 10s. per ton. Mustard-seed is in restricted supply, and is dearer. Rangoon beans are in quiet demand, and with fairly heavy arrivals prices have favoured buyers during this past week, but a steadier tendency is now noticeable.

Oils.

Linseed oil is easier, spot pipes landed are offered at £33 5s., barrels ditto at £34 5s. Rape oil is rather weak, ordinary brown naked spot nominal, while English refined barrels is quoted £48 to £50. Cotton-oil is dull, crude spot in pipes offered at £43 10s., refined pipes, pale, £47; barrels, sweet, £52 to £54.

Oilcakes.

Cotton-cakes: Egyptian are now more plentiful in supply, and, consequently, quotations are somewhat lower. Spot parcels are quoted at £10, and afloat at £9 15s. to £9 17s. 6d. English makes are also cheaper at £10; and for Bombay at £9 15s. Linseed-cakes are very quiet, with only small retail consumptive demand at more or less firm prices.

MELON SEEDS FROM THE SUDAN.

The following report on a sample of watermelon seeds (*Citrullus vulgaris*) submitted to the Imperial Institute of the Sudan Government has been published:—

The sample weighed 40 lbs., and consisted of small flat seeds, varying in colour from pale yellowish-brown to very dark brown. A small proportion of extraneous matter was present.

The seeds contained 7.4 per cent. of moisture, and yielded 23.6 per cent. of a brownish-yellow liquid oil, equivalent to a yield of 25.5 per cent. from the dry seeds.

The oil yielded by these seeds appears to be very similar to that of the "Senat" seed (*Cucumis* sp.) from the Sudan previously examined at the Imperial Institute, and to other oils derived from Cucurbitaceous seeds.

The residual meal left after the extraction of the oil was a brownish-white material with a pleasant taste, and analysis showed that the seeds have a composition somewhat similar to that recorded for sunflower seeds, but the percentage of oil is lower. The residual meal has a low food value, and contains a very high percentage of fibre.

Samples of the seeds were submitted for valuation to two firms of oil-seed crushers, who reported on them as follows:—(1) One firm stated that the value of the seeds would be determined largely by the use which could be made of the oil. In their opinion the properties of the oil are very similar to those of maize or soya oils, for which there is only a comparatively limited market, whilst the residual meal is of relatively low feeding value, and would, therefore, realise a lower price

Digitized by Google

than palm kernel meal or cake. In view of these facts and the low yield of oil, the firm were doubtful whether these seeds could be sold in the United Kingdom under present conditions at more than £7 per ton (September, 1915). (2) The second firm stated that the oil from these seeds comes within the group of oils similar to cotton-seed oil, and would be very suitable for soap-making. They were also of opinion that experiments with various methods of refining would probably result in rendering the oil suitable for edible purposes, and in that case it would, of course, command a much higher price than if it could only be used in soapmaking. The firm did not consider, however, that under present conditions the oil would be worth more than about £28 per ton (October, 1915).

The residual cake was regarded as practically valueless, the percentage of fibre being so high as to make it inadvisable to use it for feeding purposes, except possibly as a constituent in a mixture. The percentage of nitrogen is also low, and the value of the cake as a manure would probably not be more than 30s. per ton. In these circumstances the firm valued the seed at only about £5 10s. per ton delivered in England (October, 1915), and added that at the high rates for freight now ruling the export of the seeds from the Sudan did not seem likely to be remunerative.

LORD KITCHENER AND THE B.C.G.A.

Speaking last week at the monthly meeting of the Council of the British Cotton-Growing Association, Mr. J. Arthur Hutton remarked upon the great interest which Lord Kitchener had always taken in the development of the Anglo-Egyptian Sudan. He carefully studied all the details of the scheme for growing cotton in the Gezireh Plain, and it was largely due to his representations that the Government decided to assist the Sudan Government in raising the necessary capital. One of the last acts of Lord Kitchener in connection with this great project, said Mr. Hutton, was drawing up an arrangement which would ensure that the native farmer should not be left at the mercy of the capitalist, but should receive a fair reward for his labours.

Mr. Hutton added that one of the best and most enduring monuments they could raise to the memory of Lord Kitchener was to use their best efforts to make a success of the Gezira scheme, and so to bring prosperity to the inhabitants of the country in which Lord Kitchener had taken the deepest interest, and from which he took his title.

Engineering Notes.

British Engineers' Association.

The British Engineers' Association is making a strong appeal to all engineering firms to combine for the better organisation of the industry after the war, and urging them to become members of the Association, which already includes over 300 firms, with a combined capital of over £100,000,000. The appeal claims, among other objects attained by the Association during the war, that the difficulty of knowing which firms in England are under enemy control (owing to the absence of a Government black list) has been met to some extent by a carefully prepared list, available for members of the Association, of firms so tainted. It is pointed out that the war has revealed enemy-controlled trade situations which were never even guessed at in peace times, and that if the industry is to prosper after the war, more particularly in relation to exports, co-operation and co-ordination are absolutely necessary. All the members of the Association must be entirely British in their interests. One of the main objects on the immediate programme of the Association is to urge the Government to place the industry in a position to compete successfully with enemy countries after the war, and not hamper it with legislation or handicap it with conditions. It also desires to discourage the existence of enemy manufacturing and agency concerns in Great Britain, and to encourage technical education and an appreciation of scientific investigation.

The Anglo-Irish Tunnel.

The war and the recent troubles in Ireland have once more demonstrated the necessity for the construction of an Irish Channel tunnel. The late Lord Wolseley once said: "Let us try the effect of a tunnel on the Irish question, and see whether such a description of union might not be more successful in binding together the people of the two countries than was the political union of 1800." The view of the famous soldier was perhaps based on the remarkable fact that a diversity of character with a more or less controversial disposition very often exist between neighbouring people who happen to be separated by water, a strip of sea, or even a big river; whereas a similar diversity is not so evident where there are territorial boundaries and communication is effected by land. The construction of an Anglo-Irish tunnel would restore, in some measure, the primitive geographical union that existed between Great Britain and Ireland in the Pleistocene Age, when a valley ran between the two countries where now roll the waters of the Irish Sea. Between the coasts of Wigtownshire on the one side and those of Antrim and Down on the other there lay a loch about twenty-five miles long, and varying from six hundred to nine hundred feet in depth, and this loch, known to geologists as Beaufort's Dyke, still lies beneath the waters of the North Channel. It is beneath this loch that it is proposed to run the tunnel, alternative routes suggested being from Whitehead, in county Antrim, to Port Mora, in Wigtownshire, and from Great Copeland (County Down) and Donaghadee to Port Mora and Portpatrick respectively. The greatest submarine length involved in these schemes is estimated at about twenty-four miles, and the cost at anything between £10,000.000 and £20,000.000. The tunnel would shorten the Atlantic route by at least forty-eight hours.

Utilization of Tin Refuse.

Nothing is wasted nowadays that science has discovered how to utilize. Things which yesterday were thrown away are now proving a source of wealth; and there is wealth even in the abhorred market-places and street refuse. The scales of fish, for instance, are transformed into imitation pearls; gelatine, glue, and a substitute for isinglass are made from useless fish and fish offal. Broken pottery and white or coloured glass are utilized for making mosaic pavements; wool is extracted from generation after generation of garments, and used until it is worn practically into thin air. Scrap iron and waste tin are also used over and over again with very satisfactory economic results. It is, therefore, gratifying that one of the London municipal authorities, the Southwark Borough Council, in its efforts for practical economy decided on the utilization of waste products which incidentally will conduce to the promotion of a new British industry. The Council has made a working agreement with the British Tinning Company whereby the whole of the waste tin and refuse of the borough will be dealt with. It will create an entirely new industry in the district, and give employment to a large number of hands. The company has agreed to erect a building and plant at the Manor Place depot at a cost of £3,000. When finished, this is to be handed over, in working order, to the Council, who, in consideration, is to pay the company 50 per cent. of the profits arising from its use. The Council is practically taking no risk, as the company is finding customers for the metal produced, which is to be paid for at pre-war rates. The chief merit, however, of the scheme lies in the fact that by a simple process the waste metal will be turned into useful, readily saleable articles of every-day household use, by which means a British firm will be enabled to snatch part of an industry which, prior to the war, was entirely in the hands of Germany.

OIL IN NORTHERN PERSIA.

Petroleum Review translates from the Russian *Neftavnoic Dielo* an article from which the following are extracts:—

During March of this current year Mr. A. M. Khoshtaria succeeded in obtaining, on very advantageous terms, a concession from the Persian Government for the exclusive rights for exploration and exportation of petroleum and petroleum products, and also gas, asphalt, and ozokorite.

***Concessions for petroleum exploration in Northern Persia were obtained by Mr. Sapekhdar in 1895 to 1896, by which concession he was granted the exclusive rights for ninety-nine years of exploitation of all petroleum deposits in the districts Tunekabun, Kujur, and Kalalestag, and these concessions have now been transferred by Mr. Sapekhdar to Mr. A. M. Khoshtaria. The latter has taken over all responsibility as regards conforming to the conditions granted to Mr. Sapekhdar by the late Shah Nasr-Eddin, according to which he has to complete all necessary exploration not later than one year after the conclusion of the present war. Mr. Khoshtaria has to pay Mr. Sapekhdar for the transfer of the exploration and exploitation rights a sum of 50,000 roubles, and also an advance of 100,000 roubles on account of the per pood royalty, the latter being fixed at 1 kopek per pood of the production to be obtained in the above-named districts. Mr. Khoshtaria has the right to transfer these concessions to other persons or companies for a term of not over ninety-nine years, but with the right of renewing the grant on the same conditions for a further long period.

Besides the above petroleum concessions, Mr. Khoshtaria has also obtained direct concessions from the Persian Government for all other lands situated in the above provinces, and owned by the State as well as by private individuals. According to this second grant, the concessionaire obtains the monopoly for petroleum exploration and exploitation for a period of seventy years, and has the right to form subsidiary companies. He is also granted the right to erect petroleum installations, tanks, reservoirs, pumps, etc., and also refineries, and every kind of building necessary for purposes of exploration, exploitation, refining, and transport of petroleum and petroleum products, for which purpose the Persian Government grants him land and forest plots.

In return for these concessions Mr. Khoshtaria has to pay the Persian Government 16 per cent. on all profits, and to pay a State controller, specially appointed for this purpose, a yearly salary of 6,000 roubles. Mr. Khoshtaria and his companies will also have the privilege of importing, free of duty, all necessary machinery, tools, instruments, materials, etc.

Private letters received from Jerusalem, says *The Times*, state that in consequence of the rapid spread of spotted typhus, whooping-cough, and smallpox, the Turkish Government has closed all the schools in Jerusalem. In Jaffa the plague is spreading so fast that all the schools have been closed.

COMPANY REPORTS.

Egyptian Markets.

The directors report for the year ended December 31, 1915, that the number of market days lost for horned cattle, other than buffaloes, during the year was 680, as compared with 2,398 during the year 1914, an improvement of 1,718 in the number of market days held. All negotiations for the acquisition of additional markets outside the Government concessions have necessarily been suspended during the war. Gross receipts from the markets during the year were £53,736, as against £48,406 in 1914. Notwithstanding the increased period of war conditions, the gross receipts from the cattle markets show an increase of £4,588 as compared with the year 1914, which only included five months of the war period, being £33,660, against £29,072. The net receipts from the fifty slaughter-houses worked during the year were £2,290, as compared with £2,261 in the year 1914. The attendance of the public at the general markets has been satisfactory, the gross receipts from that source being £17,785, against £17,072 in 1914. The expenses in the trading account show a net decrease of £694, the principal economies being under the head of "Wages and Expenses of Market Keepers." This was occasioned by the reduction of the European staff who have joined the armies of their respective countries. Against this decrease the principal increases were in the Cairo and local offices rent, salaries and expenses. The net profit derived from the sale of nitrate of soda was £7,028, as compared with £3,371 in the year 1914, an increase of £3,657. The greatest difficulty was experienced in securing stocks in consequence of the scarcity of ships and the high freight and insurance charges from the coast of Chili. The agency for the sale of basic phosphate for the Egyptian Phosphate Company, Limited, which was referred to in the last annual report, bids fair to develop into a considerable business as soon as its agricultural value is realised by the cultivators. In December, 1915, an agency was entered into on behalf of the Ministry of Agriculture (Egypt) for the purchase and supply of fodder for the army in Egypt. It is anticipated that a considerable business will be done under this arrangement during the current year. The provision of £950 made in the revenue account for the year 1914 for Government participation in profits, under the terms of the concession, was £47 in excess of the actual amount to which Government was entitled. The dividend which was declared on the deferred shares, subject to settlement with Government, was accordingly increased by £15 13s. 4d.—i.e., one-third of £47, equal to, say, 1s. 0½d. per share, making the dividend actually paid on the deferred shares for the year 1914, say, 13s. 9 21-32d. per share instead of 12s. 9d. per share as estimated. The net revenue for the year 1915 from all sources amounted to £31,585 9s. 7d., an increase of £9,661 3s. 8d. over the year 1914. After deduction of the Government's share of the profits for 1915, estimated at £3,200, a balance of £28,385 9s. 7d. remains, which, with the balance of £4,500 1s. 7d. brought forward from 1914, makes a total of £32,885 11s. 2d. to be dealt with. After carrying the sum of £1,500 to reserve for general purposes, and after meeting the fixed charges of the annual premia for the amortisation of the share capital and debentures, £3,645 12s. 3d., and debenture interest, £2,840, a balance of £24,899 18s. 11d. remains available for distribution. The directors recommend the payment of a final dividend (No. 23) on the ordinary shares for the year ended December 31, 1915, at the rate of 6 per cent. per annum, making, with the interim dividend of 4 per cent. paid on January 31, 1916, a total of 10 per cent. for the year, absorbing in all £17,470; and in accordance with the terms of the memorandum of association of the company, and subject to the settlement of the proportion of profits due to the Government, the payment of a dividend (No. 6) on the deferred shares, at the rate of £6 2s. 5d. per share for the year 1915, which will absorb £1,836 5s. 9d., leaving a balance of £5,593 13s. 2d. to be carried forward.

The directors appointed Mr. P. W. F. le Breton to fill the vacancy on the board created by the death of Mr. Allan F. Joseph, but, believing it to be in the interests of the company, he has resigned his appointment. Mr. M. Llewellyn Evans, of Brook House, 10-11, Walbrook, E.C., has given notice that it is his intention to propose that Mr. George Herbert Redwood be appointed as a director to the vacancy above referred to. An extraordinary resolution will be proposed increasing the maximum number of directors to six. Should this resolution be duly passed, the board hope to be in a position to submit to the meeting the name of a sixth gentleman who should be acceptable to the shareholders. In conformity with the company's articles of association, Major W. I. le Breton will retire by rotation, and, though he did not desire to offer himself for re-election, yet at the request of some of the larger shareholders and of the board he has consented to do so.

Egyptian Agricultural.

The report for the year ended March 31 shows that the receipts were £3,305, while interest and expenses were £5,234, leaving a deficit for the year of £2,029, which increases the debit balance brought forward to £69,735. The temporary advances, which stood in last year's balance-sheet at £12,654, have now been placed on a more permanent basis, and are secured by a mortgage on the Dekerness estate. The loan which stood in last year's balance-sheet at £41,982 has also been rearranged, and its repayment spread over a longer period. Rather heavy legal expenses and fees have been involved, but these are not likely to recur. The profit and loss account shows a small improvement over the previous year, but is as yet distinctly disappointing. The prices obtained for the cotton crop were good, and largely in excess of those of the previous year, but the quantity and quality of the crop on this occasion proved very inferior and far below expectations, owing to the serious ravages of the insect pests.

Messageries Maritimes.

The report for 1915 states that the revenue from the working of the "Domaine Privé" (free ships, shipbuilding yard, ships used by the navy and chartered vessels) amounted to 26,151,745 frs., as compared with 20,168,697 frs. for 1914, while the working expenses were 17,360,992 frs., against 20,936,407 frs. The receipts coming from the "Domaine Contractuel" (including 16,907,116 frs. to be recovered from the State) were 71,690,086 frs., as compared with 75,903,097 frs. for the previous year, which comprised a period of eight months under the convention with the Government, and four months of the war. On the other hand, the working expenses were 70,079,086 frs., as compared with 70,290,092 frs. The excess of receipts over expenditure is 8,790,752 frs. for the "Domaine Privé" and 1,620,000 frs. for the "Domaine Contractuel." It has been decided to write off 1,226,721 frs. for depreciation of the ships of the "Domaine Privé" and to establish a reserve of 2,000,000 frs. for large repairs. The balance of 7,184,030 frs. is carried forward no decision as to its distribution being taken pending the recovery of the amounts due from the State.

COMPANY RESULTS, Etc.

EGYPTIAN AGRICULTURAL. — The annual meeting of shareholders will be held on the 26th inst., at 12.30 p.m., at 57, Old Broad Street, E.C.

EUROPEAN OILFIELDS.—Production for week ended June 11, 109,700 poods.

KHEDIVIAL MAIL STEAMSHIP AND GRAVING DOCK COMPANY.—Interim dividend at the rate of 5 per cent. per annum, less tax, for the year ended June 30, on the ordinary shares, Coupon No. 8. The dividend will be payable on July 15, at Glyn, Mills, Currie and Co., London, and at the Imperial Ottoman Bank, Alexandria.

LAKE COPAIS.—The annual meeting of shareholders will be held at Winchester House on the 27th inst., at 12.30 p.m.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for the week ended June 10, 613 tons.

SUEZ CANAL.—Receipts for the 16th, 17th, and 18th inst. amounted to 640,000 fr., as compared with 720,000 fr. for the corresponding days last year.

COMPANY MEETINGS.

NEW EGYPTIAN.

The fifteenth ordinary general meeting of the New Egyptian Co., Ltd., was held on Wednesday at Winchester House, Old Broad Street, E.C., Mr. Arthur A. Baumann, chairman of the company, presiding.

The Chairman said: Gentlemen,—To take the balance-sheet first, you will see that the amount of our assets is £681,524 odd. The most important items in that total are 8,676 feddans, at an average cost of £49 17s. per feddan, which amounted to £432,551, and the unmatured instalments for lands sold, carrying interest, less reserve, which stand for £183,830 odd. Against that total of our assets, the total of our liabilities is £618,609 odd. If you compare those two figures together—the total assets and the total liabilities—you will find that the assets exceed the liabilities by a sum of £62,914 odd, which is equal to an excess value of assets over liabilities of 2s. 10d. per share. But that excess is based upon the cost price of land as it stands in the books. According to the valuation which was made at the end of 1914 by Mr. Bonar, our technical adviser, there was an appreciation of £115,000 over the cost, so that if you add that appreciation to the £62,000 odd which I have just mentioned, you will find that there is a total appreciation of our assets over cost of £178,000, which means that if we were to sell all our lands to-morrow—which, of course, we could not do—our shares would realise something like 22s. each. I will refer to that figure again, but it is an important figure as showing that on capital value our shares are worth more than the par price. I will now turn to the profit and loss account. The profit, before charging debenture interest and reserve, amounts to £12,514 odd, as compared with £17,776 odd for the preceding year. That shows a decrease of £5,262 odd, which is accounted for by the reduced revenue from the company's lands, and the reduced profit on sales of land. The net profit for the year, after charging debenture interest and reserves, amounts to £2,626 odd, as compared with £3,829 odd in the previous year, and, with the carry-forward of £4,705 odd, the balance to the credit of the profit and loss account amounts to £7,332 odd at the end of December last, and this, with your sanction, we propose to carry forward.

The revenue from the company's lands appears at £8,443, as compared with £11,785 for the previous year, a decrease of £3,341. This decrease is not, as might be thought, entirely a diminution in the rentals, but it is due to a very large extent to a larger percentage of expenses being charged to revenue, owing to the fact that the cultivated area is larger than in the previous year. The increase in the price of coal and other materials is also responsible for the increased expenses. That means that, being unable to lease as much land as we are in the habit of doing, we have had to directly cultivate ourselves a greater proportion of land than usual, and that has led to a larger charge being made to revenue. I will give it to you exactly. The gross revenue before reserve for the year is £23,155. From that you have got to take the revenue expenditure, which includes irrigation, drainage, taxes, maintenance, depreciation, salaries, and general expenses, which amount to £14,712, leaving the balance, which I have just mentioned, of £8,443. The administration expenses, including a proportion of depreciation, bad debts, etc., amount to £10,651 odd, as compared with £10,792 odd. During the current year, since January 1, the Board have made very substantial, if not drastic, reductions in their administration expenses. The directors have agreed to draw no percentage on any available profit, and their fees have been considerably reduced. The chairman's fees for this year are £250,

as against £375; the ordinary directors draw £150 each; the managing director in Egypt, Mr. Suares, has agreed to draw £500 less than his full salary; the secretary's salary has been reduced by £100; and the London office rent has been reduced by 50 per cent., from £600 to £300 a year. These reductions, if I am not mistaken, amount to about £1,200, which I think you will admit is a considerable economy in administration. With regard to arrears of annuities, these are higher than formerly, the principal reason being that, owing to the inferior cotton season of 1914, and the low price of cotton at that time, the fellaheen have suffered severely and had to meet their engagements by means of a crop which they were only able to sell at a low figure in 1914 and a short crop in 1915. Several of the largest purchasers of our Upper Egypt estates have suffered severely owing to the abnormal rise in the price of coal, which has been between £7 and £8 per ton in Cairo, and other commodities necessary for irrigation, and as some of the estates are entirely dependent on pumping for their irrigation they have been unable to meet their obligations, and consequently in some instances we have had to extend the annuities. The present high prices for cotton augur well, and it is hoped that the outstanding arrears will be collected, especially if the cotton crop is good. With regard to the profits on the sales of land, they appear at £12,763, as compared with £14,504, or a decrease of £1,740, which, considering the abnormal times through which we have passed, does not appear to us to be unsatisfactory. The cash in hand shows an increase of nearly £3,000, in spite of the fact that we reduced our loan during 1915 by £7,000, and since the beginning of the year we have reduced our indebtedness by a further £8,100. We have purchased during the year £5,000 of debentures at 70½. If you have listened to the figures that I have given you, I think you will have seen for yourselves that the position of this company is a peculiar one, and, financially speaking, is almost a paradox, because the amount of your assets very considerably exceeds your liabilities—as I have told you, if we could sell our land tomorrow or next week or next month you ought to get 4s. or 5s. premium on your shares—but we cannot pay you any dividend. Now, the explanation of that apparent paradox is simply this: that in order to pay dividends we must sell land We cannot make enough money to pay you a dividend by leasing land, and still less by direct cultivation. By doing that we can only just make our expenses and something more. But in order to pay you dividends we must sell land. That is our business. Our business is to buy land and to prepare it for sale, which we do in Upper Egypt by irrigation and in Lower Egypt by drainage, levelling, and ploughing, and then to sell it; and as our cost price averages about £49, and our sale price averages between £92 and £95 per feddan, you can see that the business of selling land is a very profitable one. But it is necessary for carrying on our business that we should have an active land market. Now, during the time of war buyers for land will not come forward, and we can do nothing in a stagnant land market. . . . I now beg to move: "That the directors' report, together with the annexed statement of accounts, duly audited, be received, approved, and adopted." The resolution was put to the meeting and unanimously adopted.

BANK OF ABYSSINIA.

The ninth ordinary general meeting of the shareholders of the Bank of Abyssinia was held at Cairo on May 31, the President (Mr. F. T. Rowlatt) presiding. The directors presented the balance-sheet, which was as follows:—

BILAN, au 31 Decembre, 1915.

RAPPORT DES CENSEURS.

Nous avons comparé le Bilan ci-haut avec les extraits de comptes reçus du Siège Principal de la Banque à Adis-Abeba et des Agences en Abyssinie, et nous sommes d'avis que le dit Bilan est correctement établi et représente bien la situation réelle de la Bank of Abyssinia au 31 Décembre, 1915, telle qu'elle ressort des dits extraits de comptes.

RUSSELL, HARRIS, AND CO.,
Experts Comptables.

Le Caire, le 30 Mai, 1916.

The Chairman said:—Gentlemen,—Before opening the meeting, we desire to offer our respectful homage to his Royal Highness Ledgi Yassou, Regent of the Ethiopian Empire, and to express to him, as well as to his high officials, our thanks for the kindly disposition which they have shown towards the Bank during the past year.

We have the honour to submit to you the balance-sheet for the year which ended December 31, 1915, as also the profit and loss account for that year.

The political situation abroad has had a very strong effect upon the trade of Abyssinia, the conveyance of the export products to the European market having been, at certain periods in 1915, almost entirely prevented.

You must not, therefore, be surprised to find that the amount of our gross profits, which was £22,721 1s. 11d. in 1914, was reduced in 1915 to £13,615 5 9

Deducting from this figure the ordinary expenses—namely..					12,866	17 7
There remains a balance of.....					£748	8 2
We have deemed it necessary to debit the profit and loss account with the various amortisations, of the same nature as those in the previous years amounting to ...	£2,180	1	2			
The valuation of our net assets in dollars, made on December 31, 1915, at a rate rather lower than that of December 31, 1914, involves a debit of	777	10	8			
While the depreciation on December 31, 1915, of our assets in francs and lire represents a debit of	7,550	17	9		10,508	9 7
Leaving a final balance of.....					£9,760	1 5
Adding to this figure the debit balance on December 31, 1914, namely.....					21,189	17 4
We get, to the debit of the profit and loss account, a total of					£30,949	18 9

In 1915 no increase was made to our reserve for bad or doubtful debts, inasmuch as we

might consider ourselves as covered by reason of the provision previously made.

As we have stated in the report for the year 1914 the rate of the dollar at the end of that year had dropped in an abnormal manner.

This state of affairs became further aggravated in the course of the year 1915. But towards the end of that year an upward tendency began to develop, which permitted us to see again, on December 31, 1915, a rate approximating to that of December 31, 1914 (130⅛ rupees per $100, as against 130⅜). After the close of the year 1915 the value of the dollar, by reason of the rise in bar silver abroad, continued to improve in a very appreciable manner, and we were preparing to take advantage of the opportunity to liquidate our free stock in dollars, when the export of the dollar from Abyssinia was suddenly prohibited. This had the result of bringing the exchange back to a rate near to that which had preceded the rise. Our net assets in dollars on December 31, 1915, being $1,615,961.46, the dollar market (the rate being calculated in amounts of $100) would normally have the effect of increasing the valuation of our assets by more than £1,000. If we could, therefore, proceed to make a valuation of our assets based on the present market in bar silver, we should not only make up for the debit balance of the profit and loss account, but we should show a considerable balance to the credit of that account.

This shows the great importance which attaches to the question of the free disposal of our stock of dollars, and that question forms, at the present time, the subject of our most active endeavours.

The market in silver contracts having remained closed during the whole of the year 1915, we were prevented from effecting sales of this kind as cover, as we had done in the past.

With regard to the provision of £7,550 17s. 9d., which we were obliged to place to the debit of the profit and loss account in order to meet the depreciation in the value of our assets in francs and lire, we have found means to employ the greater part of these funds in a remunerative manner. This enables us to await a more favourable time for the conversion of these currencies into pounds sterling.

It is interesting to observe that in 1915 the expenses of the bank were brought down to £12,866 17s. 7d., showing an appreciable decrease as compared with the year 1914. We consider that the present figure of our expenses represents approximately the minimum compatible with the proper working of the bank.

During the course of 1915 we took very great care to maintain as liquid as possible a position for the bank. The balance-sheet which we lay before you shows that we succeeded in doing so. The dollars which we hold in our offices in Abyssinia appreciably exceed in point of fact the sum requisite for the settlement of the whole of our liabilities in that country.

We have proceeded this year to make the first issue of our bank-notes, and this innovation, which permits of a reduction in the use of heavy and cumbersome coinage, has received a favourable acceptance from the population. As is shown by the balance-sheet, these notes are covered by a reserve of dollars for the same amount.

In 1915 our sales of exchange were $3,458,322
As against ..... $5,571,835 in 1914

In 1915 our purchases of exchange were $3,335,158
As against ..... $5,451,559 in 1914

The result of these figures has been an increase of $123,164 in the amount of our net assets in dollars.

It has not been possible for us to obtain, for 1915, the complete statistics of the trade of Abyssinia with abroad, but the statistics published by the Government of the Sudan show that the imports into Abyssinia from or through the Sudan for the year 1915 have been estimated at the sum of £E52,407, as against £E37,575 in 1914; while the exports from Abyssinia to or through the Sudan were £E57,217, as against £E80,208 in 1914. The decrease in these exports may be attributed to the bad coffee crop last year, for this article represents the principal export product of Western Abyssinia. The National Bank of Egypt has continued, during the year 1915, to hold at our disposal, without interest, a sum of £40,000, and your directors in Egypt have again decided not to draw the £800 to which they are entitled in virtue of Article 25 of the statutes.

We are happy to have amongst us at the present moment Mr. Collier, the governor of the bank in Abyssinia, and we beg to express to him, as well as to his staff, our thanks for the devotion which they have displayed on every occasion.

The name of no candidate has been submitted to us for the vacant post of Ethiopian director, to comply with Article 15 of the statutes.

Baron Jacques de Menasce, having retired from the National Bank of Egypt, which he had represented on our board since the foundation of our bank, has thereby also ceased to be a member of our board. We desire to express to him our gratitude for his valuable co-operation. We have appointed in his place Mr. Léon Suarès, whose election we beg you to ratify.

The retiring directors are his Excellency Boghos Pacha Nubar and Mr. Aldo Ambron, who offer themselves for re-election. We shall be glad if you will be good enough to renew their appointment.

The following statistics show the changes and the volume of the various transactions of the Bank of Abyssinia in the course of the last three years:—

NOTES OF THE WEEK.

The text of the Allied Note to the Greek Government had not been published when THE NEAR EAST went to press last week. Its terms were more exacting than we could have ventured to hope that the Allied Powers would insist upon, but not a whit stronger than the situation demanded. "The Protecting Powers of Greece," ran this memorable document, "see themselves compelled to exact immediate application of the following measures:—

"1. Real and complete demobilization of the Greek Army, which shall revert as speedily as possible to a peace footing.

"2. Immediate replacement of the existing Ministry by a business Cabinet, without political bias, and providing all the guarantees necessary for the application of the benevolent neutrality which Greece has undertaken to observe towards the Allied Powers, and for a fresh appeal in good faith to the nation.

"3. Immediate dissolution of the Chamber of Deputies, followed by fresh elections within the time limits provided by the Constitution, and as soon as the general demobilization shall have restored the electoral body to its normal conditions.

"4. Dismissal, in agreement with the Allied Powers, of certain police functionaries whose attitude, inspired by foreign instructions, has facilitated the perpetration of crimes against peaceable citizens, together with insults directed against the Allied Legations and their members."

These terms are worthy of record, not for the humiliation of Greece, who has it now in her power to regain her prestige in Europe, but as a beacon marking the beginning of a new and happier era in Balkan history. We have to go back a long way to find a precedent for the British Government, either alone or with other Powers, addressing itself to a Balkan problem in the only language that the Balkan States understand. The innovation is doubly welcome, both on account of its bearing on the war, and because it is likely to have a permanent effect on the welfare of the Near East. This view has nothing in common with any love for sabre-rattling, a trick that will ever remain foreign to British ideas; it is based solely on an appreciation of the one thing lacking in recent years in the dealings of the Entente Powers with the Balkans. The presentation of the Allied Note to Greece synchronizes with Lord Hardinge's entry upon his duties as Permanent Under-Secretary of the Foreign Office. It may be only a coincidence, but we hope that it will not be lost sight of, in order that the nation may not have to suffer again from the blunders which allowed Bulgaria to drift leisurely into the net of the Central Powers.

The view repeatedly advanced in these pages that a firm attitude with Greece's rulers would at once bring them into line with the country's interests has been abundantly confirmed by the course of events. The Powers left to the Hellenic Government "entire responsibility for the events which might supervene if their just demands were not immediately accepted." As M. Skouloudis and his Cabinet had already resigned and M. Zaimis had not actually taken office, King Constantine was in name what he has been in fact during the whole period of the Gounaris and Skouloudis régimes—the Hellenic Government. The time that he allowed to elapse between the receipt of the Allies' Note and his authorisation to the Prime Minister-Designate to accept in his name all the demands of the Allies could be measured in minutes rather than in hours. This hasty and wise compliance on King Constantine's part disposes of the fiction that he ever contemplated extreme action against the Allies, which would have exposed the Palace at Athens to the risk of a shell from an Allied Fleet in Phaleron Bay.

The presentation of the Allied Note to Greece, which, in other circumstances, would have entailed a painful humiliation, was received with a general sense of relief by the bulk of the Greek people. As the Protectors of Hellenic liberty, as affirmed in the Treaties of 1863, the Entente Powers were able to point out that they had not only the right but the imperative duty of protesting against violations of the liberties of which they are the guardians in the eyes of the Greek people. This point of view was confirmed by the way in which the events of June 21 were taken by the nation. The Skouloudis-Gounaris Cabinet passed away unwept and unhonoured. For the moment M. Zaimis does not identify himself with the Venizelist party; but, as he is known to be a genuine patriot and not enamoured of office, he will probably be well content to hand over the reins of government to M. Venizelos if the latter is returned with a majority in the forthcoming elections. The Powers have acted wisely in insisting upon the fact that they do not ask Greece to emerge from her neutrality. The Gounaris party, if still unrepentant, can be relied upon to raise the bogey of intervention in the war—the ex-Premier seems to regard his fellow-countrymen as a race of conscientious objectors—but the Allies'

Digitized by Google

statement and the fact of demobilization should enable M. Venizelos to remind the nation that his contention that Greece, by failing to throw in her lot with the Allies, had lost her opportunity in this war has been proved only too true.

A message from Cairo to an Italian newspaper states that Medina has been occupied by the troops of the Shereef of Mecca. If this report should prove correct, it will mean that the only prospect the Turks have of quelling the Arab revolt will be at the cost of a formidable campaign. It is no longer a question of throwing in reinforcements to beleaguered garrisons. Some hundred miles of the Hejaz Railway have been destroyed, and in every respect the revolt shows signs of being well organised and skilfully conducted. The Shereef disposes at present of three armies, which are under the command of his three eldest sons. If the revolt continues to be managed on the lines which have secured these first successes, it will mark out the Shereef of Mecca as a likely candidate for the headship of the Arab world. Hitherto, while the Arabs have never taken kindly to Turkish domination, their tribal rivalries and the absence of any outstanding figure among them have militated against any successful attempt to declare their independence of Turkey.

The attitude of the Moslem world to the Mecca revolt illustrates in an unmistakable way the extent to which Turkey is held to have forfeited her position as the head of Islam. Everywhere outside Turkey the movement is being followed sympathetically. It is too soon, however, for any discussion of possible developments arising from this aspect of the incident. There can be little doubt that the Turkish Government will at once appreciate the seriousness of its position, for in many ways the declaration of Arab independence will affect its prestige far more seriously than would defeat at the hands of the Entente Powers. In course of time it will become known to the Turks themselves that the policy and administrative methods of the Committee of Union and Progress are directly responsible for the revolt. Enver Pasha's visit to the Hejaz five months ago was neither a health trip nor a triumphal procession. The danger of the situation had probably already been recognised in Constantinople, and the object of his mission seems to have been to overawe the Arabs into submission. He is said to have found the Shereef of Mecca embarrassingly outspoken. Enver retaliated by ordering some of the prominent Arabs to be executed, and to such acts and a general anti-Arab policy may be attributed the signal success of the revolt in its early stages.

News has been received that the Shia Mohammedans of Kerbellah and Nejef, in the Baghdad vilayet, have also risen against the Turkish garrisons, and that the Turks have shelled the sacred shrines at Kerbellah. It is naturally difficult to gauge the accuracy of these reports regarding a district entirely in the enemy's hands. We must, therefore, await confirmation of this intelligence before placing too much reliance upon the details. The latent antagonism between the Sunni sect of Mohammedans, to which the Turks belong, and the Shia Mohammedans, to whom Kerbellah and Nejef are sacred, might easily result in a conflict, particularly if the Turks, under the general pressure of the war, have felt obliged to levy heavy exactions on the native population. Turkey's embarrassments should prove the Allies' opportunity. In the Hejaz Great Britain can do little more than inform the Shereef of Mecca that all his wants in the matter of material will be supplied as far as possible. But in Mesopotamia, if weather conditions allow, the moment would seem to have come for a very determined resumption of the offensive.

In answer to a question in the House of Lords, the Marquess of Crewe confirmed the reports that have been reaching this country for some time past regarding the deplorable condition of Syria. The Turks appear to have acted in a characteristic manner, which shows what little difference there is between the methods of the Committee of Union and Progress and those of Abdul Hamid. As is well known, the Syrians have been endeavouring for some time past to secure an amelioration of their lot under Ottoman rule. In the face of Turkish promises agitation was dropped, and some of the chief movers returned to the country. An unfortunate chance placed the Turkish Government in possession of the names of these people, and their fates were at once sealed. At least twenty were condemned to death, and a number of others were imprisoned and exiled. In the case of Lebanon, the Turks proceeded more systematically. In the early days of the war an attempt was made to disarm the Lebanese. It was not successful, and the Turks changed their tactics. As was pointed out in these columns a few weeks ago, there seems to have been a German element in Palestine which did not take too kindly to extreme measures against a prosperous people who were doubtless good customers. By pretending that they were now prepared to guarantee Lebanon a continuance of its autonomy under friendly supervision, the Turks disarmed Lebanese suspicion until they were in a position to draw a military cordon round the country. In Lord Crewe's words, they now appear to be practically starving the population inside the cordon, depriving them of the necessaries of life. As the Christian inhabitants are suffering more than Moslems, it may be supposed that Turkish action is based on a definite policy having for its object the Turkification of all Ottoman territories.

In connection with the sufferings of the Syrians, it is satisfactory to learn from a Cairo correspondent, whose letter is published in this issue, that Syrian relief committees in Egypt are now bestirring themselves. It seems to have been a grievance in some Syrian circles that more should not have been done by the prosperous Syrian community. Whether this reproach was justified at the time or not, it evidently holds good no longer. Hopes are expressed that the funds being raised will reach a million francs. Whatever the amount, the good offices of Americans will have to be solicited to insure the satisfactory distribution of relief to the suffering Syrians. Were it not for German domination there would be some hope that American representations would have the effect of making the Turkish Government mend its ways. As things are, the quickest way of improving the lot of the Syrians and other subject peoples of Turkey will be for the Allies to "get on" with the war, particularly in the Balkans, with a view to cutting the communications between Germany and Turkey.

For the time being the Turks are in a position to hold and even attack the Russians near Trebizond and also on the Persian border north-east of Baghdad. Discrepancies between the Turkish and Russian reports, however, point to our Allies receiving reinforcements more regularly than the Turks. With further demands on the enemy's resources, coming this time from the Hejaz, the pressure he has been able to exercise on so many fronts must sooner or later be relaxed. There is, therefore, the greater need for the co-ordination of the Allies' efforts, and it should not be difficult to discover a weak spot in the Turkish armour.

An echo of the leading article entitled "Peace in the Sudan" in our issue of June 16 was heard in the House of Lords last Tuesday, when Lord Cromer, Lord Grenfell, and Lord Crewe paid well-earned tribute to Sir Reginald Wingate and his subordinates. The state of affairs in the Sudan, Lord Cromer said, was one of the greatest indirect compliments that had ever been paid to the wisdom and beneficence of English administration. Moreover, it afforded the most ample justification for the lines of our general Imperial policy. The main credit for the success achieved, he added, was unquestionably due to Sir Reginald Wingate and the officers under his command. Lord Crewe drew attention to the fact that the Darfur campaign had special difficulties to overcome. Sir Reginald Wingate showed sound judgment throughout, and especially in not refusing to take a certain amount of risk which undoubtedly existed in making the move forward at the time when it was undertaken. The plans were most carefully drawn, and the execution was rapid and prompt.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 7.

King's Birthday Review.

On the occasion of the King's birthday a review of the British garrison was held by Lieut.-General Altham. The ceremony took place as usual on Abdin Palace Square, and was watched by a large crowd of Egyptians and foreigners. The High Commissioner was at the saluting point, where also were assembled the Ministers, Sir Milne Cheetham, the Advisers, Under Secretaries of State, and senior Government officials. The day was kept as a public holiday by the administrations and principal commercial establishments.

Yesterday the Residency moved down to Alexandria, where it will occupy the same summer quarters, at Beicos, as last year. A guard of honour of British troops and of cadets from the military school was in attendance at Cairo station, where all the British and senior Egyptian officials had gathered to see the High Commissioner off, and his Excellency was accorded a similar official reception on his arrival at Alexandria.

Birthday Honours.

The Birthday Honours bestowed on officials in Egypt have, on the whole, been well received. The promotion of Sir Ronald Graham in the Diplomatic Service, and the bestowal of the C.M.G. on Mr. Ronald Storrs are considered to be well-deserved recognition of the really valuable services which both the recipients have been, and are still, rendering the British Government in this part of the world, whilst the honour conferred on M. Rocca Serra has been earned by the important work done by that able Corsican in his capacity of Counsellor to the Council of Ministers. The knighthood bestowed on Dr. Armand Ruffer and his promotion in the Order of St. Michael and St. George is warmly welcomed as an acknowledgment of the extraordinary success that has crowned the efforts of the International Quarantine Board, of which he has been the President for the past ten years, to keep Egypt, and, incidentally, Europe free from plague and other epidemics, which are always threatening to invade the West through the channel of the Levant. But, while pleasure is expressed at these honours, I find that there is a certain feeling of disappointment that the list should have been so meagre, when there are several Anglo-Egyptian officials of long service, whose work entitles them to more public recognition than they have received up to now, and some of whom have of late years done yeoman service in connection with the internal administration and economic development of the country. I do not intend to mention any names, but your Anglo-Egyptian readers, and those who are in touch with Egyptian affairs, will doubtless know the men to whom I particularly refer, and it is to be hoped that an early opportunity will be taken to remove this just grievance to which I have before now called attention.

The Bomb Outrage.

The commutation of the sentence of death passed on Helbawi and Shems ed-Din, the two men accused of complicity in the attempt on the Sultan's life last July, was not altogether unexpected. As I wrote you last week, everywhere one meets with acknowledgment of the fairness shown by the military court presided over by Major-General Watson; but at the same time it was thought by a good many that the great delay that had taken place in bringing these men to trial—they had lain in prison for nearly ten months—set up in a measure circumstances that justified the non-execution of the extreme penalty. The military authorities evidently came to the same conclusion, and so agreed, on the personal intervention of the Sultan, to commute the sentence to penal servitude for life. This decision has been extremely well received, and there is no doubt that the Sultan's action has considerably added to his Highness's growing popularity.

The Situation in Greece.

The recent events in Greece have not been without their effect on the local Hellenic communities. The Greek Press, including even one or two anti-Venizelist organs, has been most outspoken in its criticism of the action of the Government in allowing the Bulgarians to re-occupy the forts previously won by Greek blood; and indignation meetings have been held in Cairo and Alexandria, at which telegrams of protest calling upon him to resist this affront to Hellenic *amour propre* were addressed to King Constantine. There is no disguising the fact that the local community is very anxious as to the present situation and its possible consequences.

Judicial Changes.

Following on the farewell speeches made at the last sitting of the Native Court of Cassation by representatives of the Parquet and Egyptian Bar, a reception and *thé d'honneur* were given last Thursday in honour of Judge Bond by his colleagues of the Native Court of Appeal. A very handsome souvenir was presented to the retiring Vice-President, who expressed his acknowledgments in Arabic. It consisted of a miniature reproduction of a fifteenth-century Arab work of art, the original of which is in the Arab Museum, and it had a little drawer in which the farewell address signed by all the Appeal Court officials was placed.

Subscriptions are being collected for a souvenir which is to be presented to Sir Malcolm McIlwraith on the occasion of his forthcoming retirement from the post of Judicial Adviser, and also for the foundation of two Law School Scholarships in his memory. It has been definitely decided that his successor will be Sir William Brunyate, who has proceeded to England on a special mission believed to be connected with the question of the future judicial reforms to be introduced in this country. Sir Malcolm McIlwraith proceeds on leave at the end of this month, and Sir William Brunyate will not return to Egypt until late in the summer. As at present arranged, however, no one will act as Judicial Adviser p.i.

It is understood that no successor will be appointed to Judge Bond until the autumn, when it is highly probable that some radical changes will be made in the personnel of the Native Courts.

June 14.

The Death of Lord Kitchener.

The news of Lord Kitchener's death created consternation throughout the country, especially amongst the Egyptian masses. The expression of horror and grief has been as sincere as it has been universal. At the same time the circumstances of his death have fired the native imagination and have served to place him on a pedestal even higher than that on which he already stood. Few people outside Egypt can perhaps understand or realize the position which Lord Kitchener had acquired in the popular estimation. The prestige which he had enjoyed amongst the Egyptians prior to his assumption of the duties of H.B.M.'s representative at Cairo had been born mainly of fear and respect for his masterful qualities; but by the time he left the country that fear was no longer the dominant note of the relations between him and the people. They had found that behind his stern manner and iron will there was a fund of human sympathy, and that the dreaded ex-Sirdar

was their sincere friend and well-wisher, who concerned himself with their smallest wants, and was accessible to all and sundry, no matter what their condition in life might be. The telegrams and letters which have poured in from the most distant parts to the Residency, the Interior, and the leading papers all tell the same tale of affection and gratitude, while wherever one goes one hears the recital of incidents, occurring either at the Agency or in the course of one of K. of K.'s many provincial tours, which reveal the softer side of the man's character and explain the hold he had acquired over the Egyptian masses. Even the "harems" are loud in their protestation of grief. "Kichner" was the panacea for every trouble and every ill in the country, and ever since his appointment as Secretary for War the people have frequently gone to the trouble either of cabling him or of sending him petitions whenever they felt they wanted redress. Their grief at his death is intensified by the fact that they were all firmly convinced that as soon as the war was over he would return once more to the country, which, he admitted, had a foremost place in his affections; and so would continue the good work which he had initiated. Lord Kitchener had attained in the thoughts and affection of the Egyptians a place which no other European had ever been vouchsafed, and which it will be difficult for anyone to attain in the future. His name had become more than a household word amongst the Egyptian masses, and it will be handed down by them to the coming generations as that of their greatest benefactor and friend.

Memorial Services.

An illustration of the popular feeling was afforded by the circumstances attendant on the memorial service held on Tuesday afternoon in Cairo. It had at first been arranged that it should take place at All Saints' Church, but the applications for tickets were so numerous and the Egyptians were so keen on participating that it was decided to hold it at Kasr-el-Nil Barracks, as was done on the occasion of the death of King Edward VII. Even then, owing to the restricted space and the necessity for providing for the other communities, it was impossible to satisfy all the applications, and many more Egyptians would have come up from the provinces to attend had it been possible to accommodate them.

The ceremony took place in the inner quadrangle, which was lined with troops, and was packed with representatives of every element of the local and foreign population. Even the galleries and the roof of the barracks were crowded with spectators of every nationality. As soon as Sir Henry McMahon, General Murray, Prince Fuad (representing H.H. the Sultan), the Ministers, and Colonel the Hon. M. G. Talbot and Brigadier-General G. F. Clayton (representing the Sirdar and the Governor-General of the Sudan respectively) had taken up their positions, the procession of clergy started from the officers' mess. It was a most memorable sight as the procession, which included the heads of the Western and Eastern Churches, the Grand Rabbi, and Grand Mufti, and was closed by the Bishop in Jerusalem and his own and the Army chaplains, wound its way through the congregation and took up its position on the raised platform. The Right Rev. Dr. MacInnes, assisted by the Rev. E. Horan, chaplain of All Saints', and the Rev. J. H. Little, senior Army chaplain, conducted the service, which was very impressive, and which closed with the sounding of the "Last Post" and the National Anthem. During the service most of the shops closed as a sign of respect. A memorial service was also held on Friday at St. Mark's, in Alexandria, whilst the various other local religious communities have announced their intention of holding similar services in memory of the late British Agent.

The Proposed Anglican Cathedral.

Following on the recent decision taken by the Anglican community of Cairo to rebuild All Saints' Church as an Anglican cathedral a meeting of the Alexandria community was held on Friday last at the Residency at Ramleh. The High Commissioner, who was in the chair, and the Bishop in Jerusalem explained the position and the scheme in detail, and the meeting unanimously approved the resolutions passed in Cairo last month, and elected Admiral Robinson and Messrs. A. S. Preston, P. W. Carter, W. Booth, K. P. Birley, and W. R. C. Blagden as representatives of the Alexandria community on the Building Committee. In view of the fact that the question of an Anglican bishopric was first taken up seriously during Lord Kitchener's tenure of office, and that he always took a lively and practical interest in the affairs of the Church, one wonders whether it would not be possible to associate the appeal for funds, when it is made, with his name and to have the new cathedral erected as a memorial to the work he did for the Empire in Egypt. This is a suggestion that might well be taken into consideration by the promoters of the cathedral scheme and those of the British community who are talking about raising a subscription for a memorial in his honour.

Sultan Hussein's Tact.

The British community has just had afforded to it a striking illustration of the tact and kind-heartedness for which Sultan Hussein has by now become quite renowned. When Judge Sandars died recently his Highness sent one of his chamberlains to represent him at the funeral. But the Sultan, who greatly respected the ability of the President of the Mixed Court of Appeal, and who had an affectionate regard for his personal qualities, did not consider this a sufficient tribute to the memory of the man whose death he had felt so much. Accordingly on Thursday last his Highness drove out to the British cemetery, and, attended only by his Grand Master of Ceremonies, quietly deposited a wreath on the grave. But he went still further. Remembering what an ardent horticulturist Judge Sandars was, he, with his own hands, planted at the graveside a cutting of his favourite plant and gave the cemetery-keeper a handsome present to encourage him to tend it properly. Needless to say, the British community has been profoundly touched at this characteristic action of the ruler of Egypt.

The British Rifle Club.

On Saturday Major-General Watson held an inspection of the British Rifle Club at Kasr-el-Nil Barracks. The members of the club—all men whose services cannot be spared by their employers—have volunteered to act as guides, patrols, etc., to assist the military authorities in case of an emergency. They have been drilling and shooting for the past eighteen months, and as they are for the most part men who know Cairo and the natives thoroughly they should, in the unfortunate event of their services being required, prove an invaluable adjunct to the local forces. There was a very full muster of members, and General Watson, after he had watched the different companies carry out various movements on the ground, expressed his great satisfaction with the parade, and thanked the members for their public spirit and their co-operation.

LORD KITCHENER AND THE P.E.F.

Presiding at the annual meeting of the Palestine Exploration Fund last week, Dr. Leonard King said that among members of their general committee whose loss by death the society had to deplore was the late Lord Kitchener. It was well known that Lord Kitchener made his mark as a geographer when working as a young Lieutenant of Engineers in the service of the Fund, and the great survey of Western Palestine owed much to his energy and resource. A few years later, again working for the Fund, Lieutenant Kitchener made the very difficult survey of Sinai and the Wady Arabah, and since that time he had continued to take a keen interest in the society's researches. They had a right to be proud of the fact that his work as surveyor in Palestine had laid the foundation of that marvellous knowledge of the East on which he built his career.

Mr. Birch said that he was travelling with his brother in Palestine in 1875, and had met Lieutenant Kitchener then. He remembered him as being very tall, very agreeable, somewhat silent, and very much absorbed in his work. The Palestine Exploration Fund might claim to have "discovered" Kitchener. They had given him his first chance in life, his first chance of showing what he was worth; and he had shown in a sterling manner what wonderful application and what wonderful energy he could throw into everything he touched.

JUSTICE IN EGYPT.

We regret that, owing to pressure on our space, we are compelled to hold over the second instalment of our Cairo Correspondent's article dealing with the Judicial Adviser's Report.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, June 10.

The King's Birthday.

In accordance with custom, on the occasion of the King's birthday a Te Deum was sung in the Greek Church of Phaneroméni, in Nicosia, the Abbot of Kykkou officiating, in the absence of the Greek Archbishop. A telegram was despatched by the Greek members of the Legislative Council to his Majesty, conveying hearty congratulations, and a letter was sent by the Mayor, M. A. Liassides, on behalf of the Municipal Council, to the High Commissioner, Sir John Clauson, transmitting their congratulations, and expressing their hopes of a victorious issue of the war by land and sea for Great Britain and her Allies. June 3 being also the name day of King Constantine of Greece, the service included prayers for the King. Similarly a telegram was sent to Athens and a letter to the Greek Consul for transmission. In the letters and telegrams referred to mention was, as usual, made to the hopes of the Greeks that victory would bring about the realization of their political aspirations.

The Death of Lord Kitchener.

The sad news of Lord Kitchener's death was received with genuine grief in Cyprus. The Greek members of the Legislative Council sent the following telegram to the High Commissioner at Mt. Troodos on June 9:—"The Greek members of the Legislative Council pray your Excellency to convey to the English Government the expression of their sincere and deep condolence on account of the great loss which the Empire has sustained by the death of Lord Kitchener." The local Greek papers give sympathetic accounts of the life of Lord Kitchener and of his services to the Empire, and of the years he spent in Cyprus during his early military career, referring to his Government service and to the excellent map of Cyprus which was so important a part of his work in the island.

More Godchildren for King Constantine.

The Greek Consul, M. P. Pareskevopoulos, has been busy in the different districts, generally in company of the Abbot of Kykkou, in carrying out the baptismal formalities in the case of children who have received the honour of becoming godchildren (*Koumpároi*) of King Constantine. Meantime many fresh applications for the honour continue to be received from parents blessed with large families; and as these are favourably entertained the number of the King's spiritual children is being steadily increased in the island of Venus.

VICTORIA DEACONESSES' HOSPITAL.

There are not many English residents in Egypt who have not become acquainted with the beneficent work carried on for many years past at the Victoria Deaconesses' Hospital in Cairo, and few will grudge their meed of praise for the devoted services of those Sisters whose continued residence in Egypt has been rendered undesirable by the outbreak of war. The report of the committee of the hospital, which has just reached us, shows that the committee has been able to carry on its good work during the second year of war undisturbed by the trouble and turmoil which have affected the social life of almost all countries. The number of patients treated during the past year was 1,141, of whom 646 were men, 333 women, and 162 children. The patients were under treatment during a total of 28,348 days, showing that, on an average, seventy-eight beds were occupied per day. These figures indicate an increase on those of the previous year, and are quite equal to those of a normal year. The majority of the patients (700) were of Egyptian nationality, but eighty-nine English patients were treated during the year. The report states that the financial position of the hospital is satisfactory, and adds that, although the satisfactory result of the year's work reflects the general peaceful condition of the country, yet it would have been unattainable if it were not for the sound organisation of the hospital, which has stood the test of the abnormal conditions under which the work has been carried on. The hospital, too, is fortunate in its medical staff and in its Sister Superior, "who have shown never-failing devotion and inexhaustible resource in dealing with and overcoming the many difficulties as they arose." In the month of December last the deaconesses of German nationality had to leave Egypt and return to their country. The loss of the services of these devoted women (continues the report) seemed for the moment irremediable, and it looked as though the hospital must close its doors. However, the staff was equal to the occasion; an appeal was made to the heads of the Central African Mission, with the result that a certain number of Italian Sisters of that Mission who had been trained as nurses most kindly gave their services to the hospital, and with this help the work of the hospital has been carried on.

The temperature at Salonika has undergone an agreeable improvement owing to the rains in the mountain regions. This change is a source of much relief after a spell of tropical heat.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, June 17.

The Government and the Entente.

The situation has become extremely grave in the past few days. After a short and slight relaxation, the restrictions imposed upon Greek shipping have been made still more rigorous. Consequently the country is in a state of consternation, wondering what is going to come of the situation, and whether, in a few days, there will be any bread and any coal—that is to say, any light. The shipowners have met, and have addressed a memorial to the Government, pointing out the catastrophes that may be brought about by the prolongation of the present measures.

In Ministerial circles it is represented that the coercive measures of the Entente are designed chiefly to drive the Government into a corner and compel it to resign. Ministers, however, appear to have no intention of doing anything of the kind; and, affecting to be ignorant of the causes of the coercive measures, they ask through their Press why the Entente does not say what it wants. They also declare their readiness to give every possible proof of their sincerity, to begin with, by a general demobilization. In spite of these assertions and of the declaration made to-day that a new decree will very shortly be published ordering a general demobilization, Entente circles remain sceptical.

A Policy of Procrastination.

As a matter of fact, the authorities are moving in a most leisurely fashion, pretending that by preventing the movements of the boats that carry on the coasting service, the Entente Powers are making demobilization impossible; and the *Nea Himera* goes so far as to say that those Powers do not seriously wish for the demobilization, since they are hindering its realization. Obviously such pretexts as this are put forward only in the hope of gaining time, and it is hoped that the Powers, seeing that they will not gain their end by such measures, will finish up by abandoning them. The Minister of the Interior, M. Gounaris, has said as much openly in the Chamber, thus throwing down a fresh challenge to the Entente—an indiscretion which has only increased the difficulties of the situation. Thus, at the moment when yielding in a humiliating way to the demands of the Powers in demobilizing the Army—after having proclaimed repeatedly both in the Chamber and in the Press that the maintenance of the mobilization was an indispensable measure—at the moment when they seek, through their official organs, to soften the Western Powers the Government provokes them afresh and accuses them of hindering the very demobilization that they desire! This truly is a foolish policy, which can only have sad results for this unhappy country. The fact is that with the exception of M. Rallis, the present Cabinet is composed of men who are unequal to coping with the situation, who employ against the Powers the same petty shifts and tricks that they are accustomed to employ against their political adversaries in this country.

The Entente's Demands.

According to rumours that are current here, the Powers will demand, besides the general demobilization, the removal of the Chief of the Staff and the resignation of the Government, the dissolution of the Chamber, and the replacing of the principal Police prefects. I send you these rumours for what they are worth. In Ententist circles best able to forecast the result of the exchange of views now taking place between London and Paris, it is held that the Entente Powers will oblige Greece to define her attitude quite clearly, so as to dispel all their uneasiness regarding the situation of their forces in Macedonia.

A deputation of Austrian gum-diggers in North Island (New Zealand) informed Mr. Massey, the Premier, that 90 per cent. of their number are Dalmatians or Croatians, they sympathise with Russia absolutely, and are loyal to Great Britain.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, June 6.

Roumania and the Naval Battle.

The first impression created by the announcement that the Germans had inflicted a crushing defeat on the British naval forces was one of general consternation. This feeling was soon modified by the recollection that some two months ago Vienna was decorated and beflagged in celebration of the fall of Verdun! The next day appeared the British *communiqué* admitting the loss of a number of naval units, and this once more caused a sense of depression; for, though Quadruplists judged the general situation unchanged, yet they deplored the effect which the news would cause in neutral countries. I fear it is not recognized in England that premature admission of losses does not create a favourable impression among peoples who are unfamiliar with the Anglo-Saxon temperament, and who in consequence fail to realize that such admissions are prompted by a spirit of pride, of indomitable resolution, and by the consciousness of invincible power.

The *Journal des Balkans* exhorted its readers to await further news in patience, pointing out that one would expect a victorious fleet to pursue the enemy, not to turn tail and scurry back ignominiously into its ports. (It is pleasant to note this journal's unwavering confidence in the cause of the Allies.) Recent *communiqués* have shown that this was the fitting attitude to adopt, for they have made it clear that the German losses are if anything heavier than the British. "What is the situation of Germany," inquires the journal, "after the recent fruitless exploit? The same as before, but for the loss of several vessels and many illusions. The Germans, having refused to measure themselves with the main bulk of the British naval forces . . . had the shamelessness to cry victory. But this is glory of a very cheap type indeed, only a fresh sample, in fact, of 'camelotte allemande.' Read the British *communiqués*, with all their brutal frankness and their loyal recognition of losses sustained, and you will not only learn where sincerity is to be found, but also with whom lies the real victory."

The *Viitorul* gathers that the battle is a draw, that both sides have to register heavy losses in ships and men, but that the naval situation as a whole has remained unaltered.

The Explosion at the "Pyrotechnic."

In the evening of May 29 I was sitting at about eleven o'clock on a verandah facing south, when the sky before me was suddenly lit up by a red luminosity, immediately followed by darkness and the sound of a violent explosion, followed by a couple of minor ones. Presently a white cloud seemed to form some miles away, and this became gradually brighter as an ominous redness spread over the starlit sky. The telephone soon brought the news that an explosion had occurred at the "Pyrotechnic," which lies a couple of miles beyond the Palace of Cotroceni. A little over half an hour saw us on the scene of the fire, though cordons of soldiers held back an anxious crowd at all points of access, and our car circulated with the greatest difficulty. Reaching the military depôts, we found ourselves in the midst of a tremendous commotion. A huge mound of waste materials and residual substances resulting from the manufacture of munitions was on fire, and next to this was a depôt of shells, which strings of soldiers were carrying out in sacks and baskets, struggling through the dark and stumbling over miscellaneous obstacles scattered about their path. At a short distance a depôt of two or three million cartridges had caught fire, and these were incessantly exploding with a sound that reminded one of prolonged maxim fire. Adjacent to this was a depôt of powder, stored in small sacks, which were being removed in feverish haste, while firemen were breaking in the roof to souse the remains with water.

At three in the morning I left behind one of the most dismal spots I had ever seen, but all trace of fire had been extinguished.

The explosion occurred on Sunday night—that is to say, at the end of a day during which no work had been done—so that the theory of an accident does not seem plausible. Nor does the nature of the locality in which the fire started support this view. The authorities on the spot seemed to have little doubt that they were dealing with the work of foreign agents, and the public at large fully endorsed this opinion. Several arrests are said to have been made. A strict inquiry has been ordered, the results of which will not be divulged.

A few million cartridges, some residual materials, and slight damage to machines used in the manufacture of cartridges seems to represent the sum total of the losses sustained, to which, however, we must add a thousand pounds' worth of window-panes, which were shattered by the explosion.

I cannot close my account of the event without reference to the gallant attitude of King Ferdinand, who was one of the first persons to arrive on the scene, and who directed the work of salvage not only with great skill, but with exemplary coolness and disregard for personal danger. No less conspicuous by their bravery were the humble soldiers, who carried out the arduous task of removing the explosives at evident risk of their lives.

Austro-Hungarian "Ingenuity."

The following incident is reported to have taken place on the Austro-Italian front. Seeing that all their attempts to capture the Italian position of Col di Zigua were unavailing, the Austro-Hungarian command decided to send to the assault a Transylvanian battalion composed largely of Roumanians. The valley in which they found themselves being swept by the enemy fire, this battalion was also forced to fall back. Thereupon the Austro-Hungarians turned their artillery and Maxims upon them. The Transylvanians retaliated, the consequence being a furious battle, which raged for four hours, and ended, as we should expect, in the complete extermination of the Roumanians.

It is not the first time that such affairs have been reported, and they are all interesting from the sidelight they throw upon the relations existing between the Austro-Hungarians and their subject peoples. Transylvanian regiments have had the honour of being sent to accomplish tasks representing some of the most dangerous features of modern warfare, on the Italian as well as on the Russian front. Their disregard of danger and death has caused them to be used as "Sturmregimente" wherever furious assaults were called for, and this served the double end of accomplishing a dangerous mission and of avoiding the extermination of Austrian and Hungarian troops at the expense of a foreign element capable of proving dangerous in days to come. Such incidents are further evidence of the feelings of hatred and fear entertained by the Austro-Magyars towards the foreign nationalities, especially the Roumanians, and indicate what value we are justified in placing on declarations such as those recently made by Count Tisza to the representative of the *Berliner Tageblatt*, of which I give the following sample for the sake of comparison with actual facts:—

The greatest joy that we have had in the course of this war has been caused by the devotion with which the different nationalities have fought for the Hungarian fatherland. I do not speak of the Germans: they have always proved loyal sons of Hungary, and have ever inspired themselves with the political intentions of the Hungarian State. But the Roumanians, Slovaks, and Ruthenians have been equally eager to carry out to the limit their duty towards the country. Their attitude proves that the policy observed by us with regard to the foreign nationalities has been the right one.

THE NEW GREEK CABINET.

Under date of June 22, Reuter's Athens correspondent telegraphs:—It is officially announced here that the composition of the new Greek Cabinet is as follows:—

M. Zaimis, Prime Minister and Minister for Foreign Affairs.
General Callaris, Minister of War and temporarily Minister of Marine.
M. G. P. Rallis, Minister of Finance.
M. Negris, Minister of Communications.
Colonel Haralambis, Minister of the Interior.
Professor Momferratos, Minister of Justice.
M. Lidourkis, Minister of Public Instruction.
M. Calligas, Minister of National Economy.

The new Cabinet was sworn in at seven o'clock this evening.

FOR THE RELIEF OF DISTRESS IN SYRIA.

(From a Correspondent.)

Cairo, June 15.

The representations on behalf of their unhappy fellow-countrymen made by the Syrians abroad to the United States Government and to the Pope seem to have produced some good effect already. According to a new informant, who left Syria in the latter part of May, the Maronite Patriarch, on the occasion of his last visit to the Turkish military headquarters at Aley, was not only received and sent off with honours, but was also presented with twenty tons of corn for distribution among the poor. Diplomatic pressure from Washington and Rome on the one hand, and an awakening of conscience and reason, on the other, may have led the Turks to relax the criminal measures applied with especial severity against the Lebanese.

To have disarmed the population and sent out of The Mountain the male population of military age, as a precautionary measure, would have been an act for which the Turks could hardly have been condemned; but to try and exterminate a whole population through starvation is an inconceivable act of suicidal folly. What is the value of a land without a people, and where are the taxes and imposts to be collected in a deserted country? Surely the decimated Turks cannot hope to colonize the Lebanon and neighbourhood with men of their own race, when their own provinces are likely to be seriously depopulated at the end of the war. But the prolific Hun may have been casting a covetous eye on a land so greatly favoured by Nature, if equally disfavoured by Fate.

Meantime, the Syrian relief committees are working with unabated energy. At the first meeting of the Cairo Committee, not less than £6,500 was subscribed there and then, some of the wealthier members subscribing £1,500 and £2,000 each. It is expected that between the Cairo, Alexandria, and provincial committees a million francs, at the very least, will be collected. The Central Committee has been favoured by the patronage of the various spiritual chiefs—viz., the Sheikh-ul-Islam, the Coptic Patriarch, the Anglican Bishop in Jerusalem and Cairo, the head of the American Mission for Egypt, the Greek Orthodox Patriarch, the Grand Rabbi, and the delegates of the Maronite and Greek Catholic Patriarchs. The civil and military authorities of the Powers concerned have also promised their support, and licensed the eventual shipment of the relief cargo to Syria, provided a neutral Government, such as the U.S.A., undertakes to see to the distribution thereof through a commission appointed by it. The U.S. Diplomatic Agent here has, as already mentioned, sent a long cable message to his Government and has supported the appeal by personal recommendations.

One of the fundamental conditions of the Central Committee's programme is the strict avoidance of political questions, and the emphasizing of the fact that the aim and field of action of the committee and its branches is purely humanitarian.

Appeals are to be made to all countries, outside the Germanic Alliance, for saving the poor Syrians from further ruin.

BRITISH REFUGEES FROM TURKEY FUND.

The report of the British Refugees from Turkey Fund for the period covered from January 15, 1915 (when the fund was established) to May 31 last shows that the executive committee have made successful efforts to relieve our unfortunate fellow-countrymen, in spite of very adverse circumstances. Detailed reports of the work done in Constantinople are not available, owing to the lack of postal facilities. In February last, however, the Constantinople committee wired urgently for more funds, and these were remitted in due course. In Athens, where so many refugees are to be found, a large amount of relief has been afforded, but, writing on March 9 last, the local committee pointed to the fact that the question of clothing was becoming serious, as most of the refugees have hitherto been wearing the clothes they brought with them from Turkey. "These they have not been able to renew. Matters will probably soon reach a crisis. Hence I would ask you to give your earnest attention to this matter." In Athens the committee is presided over by H.E. Sir Francis Elliot, and now consists of Mr. Rendel, Third Secretary at H.M. Legation; Don Giovanni Mamos, Roman Catholic priest; and Mr. A. J. C. Wace, British Legation. In Constantinople the committee consists of Miss Eveline Whitaker, the Rev. Dr. Wigram, and the Rev. Dr. Frew, assisted by members of the American Embassy. Many refugees have found employment, but in Turkey the cases are the hardest, and in Constantinople, where the financial situation is very difficult, people, formerly well-to-do, are dependent on the fund for their daily bread. Three or four pounds a month to a family will barely keep them in lodging and food. The executive committee pay tribute to the unfailing kindness and courtesy of the American Embassy in Constantinople, "without whose generous assistance our efforts would be fruitless." Approximately 110 families have been helped, at the average rate of about £26 a year.

In Athens the committee has been able to help 38 families. In England assistance has been granted to 27 families, while in Turkey, although the figures are not by any means accurate, for reasons set forth above, the executive committee estimate that support has been provided for 45 to 50 British families. An examination of the balance-sheet given below will show that the funds are rapidly diminishing while the calls on it are increasing. The present balance will be completely exhausted by August, and the committee will be obliged to abandon those dependent upon them unless their present appeal meets with the response for which they hope.

General Balance Sheet (January 15, 1915, to May 31, 1916).

	£	s.	d.
Collections	3,610	17	8
Loans returned	323	1	8
	£3,939	19	4

Remittances to Athens	1,150	0	0
,, to Constantinople	1,050	0	0
,, to Dedeagatch	30	0	0
,, to Smyrna	50	0	0
Relief granted in London	1,108	12	7
Expenses in London	18	8	6
Cash at Bankers	532	18	3
	£3,939	19	4

LETTERS TO THE EDITOR.

BRITISH REFUGEES FROM TURKEY FUND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In appealing for the British refugees from Turkey, we will only beg you to reflect that it is for *British refugees* we are pleading; compatriots now in great penury, helplessly stranded through no fault of their own, many with valuable property confiscated by Germans and Turks within the Ottoman Empire.

Must British refugees go without while Allied refugees are being splendidly helped with British money?

The funds of the British Refugees from Turkey Fund are expended with rigorous care. We have no administration expenses except stationery and printing. Much of our money is given in the form of loans, part of which has already been repaid, but, small as the sum is which we need, we find that by August our resources will be exhausted and our work must be abandoned unless kind hearts are touched and generous hands are opened.

It is desired that a fund of £5,000 be raised for this purpose.

May we hope that you will hear our prayer and help your countrymen in their distress.—I am, etc.,

Alice Lowther,
Chairman of Executive Committee.

Lowndes House, Lowndes Place, Belgrave Square.

THE TRANSLITERATION OF PROPER NAMES.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your reviewer ("F. H. S.") of the book "From Moscow to the Persian Gulf" goes on to criticise the "author's transliteration of Eastern place-names," and accuses him of pedantry in this respect.

I hold no brief for the author, but I do take some interest in the question of transliteration, and I would ask "F. H. S.," as an act of courtesy and instruction, to be good enough to tell your readers how the names of the places he quotes *ought* to be transliterated so that "the man in the street" would be enabled to pronounce them correctly.

"M" for "N" in "Nowroz" is clearly a clerical or printers' error, but the correction (?) "F. H. S." gives us makes it into "Nauroz—"not secret," a very different thing to "now rooz"—"New Year's Day."

It would also be instructive if he would tell us from whence he obtained his rendering (Dilkhusha) of Del-gush-au, and its meaning.—I am, etc.,

B. W. S.

[Our reviewer writes:—"Your correspondent 'B. W. S.' takes exception to my criticisms of certain transliterations in Mr. B. B. Moore's 'From Moscow to the Persian Gulf.' In common with the vast majority of readers, I hold that it is sheer pedantry to meddle with the spelling of proper names which have become household words, *e.g.*, Moscow, Delhi, Cawnpore, Teheran, Samarkand, etc. Furthermore, I venture to suggest that the author of a book on Eastern travel who confesses his ignorance of Oriental languages should ask some competent person to correct his transliterations of well-known words, *e.g.*, *Nau-roz*, literally 'New Day,' for 'New Year's Day,' and *dil-khusha*, literally 'heart-rejoicing,' for 'pleasant.'"—Ed.]

TANGIER TO TEHERAN.

The news that the Shereef of Mecca had proclaimed Arab independence of Turkey and of Ottoman rule, and that he had the support of the Arab tribes of West and Central Arabia reached me too late for any comment upon it last week. It hardly came as a surprise to anyone, I suppose. The Turk has never been an altogether welcome guest in Arabia, where, as a matter of fact, he has been able to hang on only by playing one tribe off against another, and to a less extent by the real grit of the troops he sent there—and kept there, as a rule, far longer than he had any shadow of right to keep them in common fairness. The Yemen especially has been a veritable cemetery for thousands and thousands of unhappy Anatolian soldiers of all ranks, and it was a constant wonder to outsiders that the poor fellows did not mutiny rather than suffer themselves to be sent there. If the Arab rising puts an end to the scandalous state of affairs that existed in this respect before the war, it will do much good to a long-suffering body of men who put up with their lot in a way that extorted admiration from all who gave the matter a thought.

***

There is, of course, another aspect of the case: the effect which this casting-off of the Turkish yoke will have upon the Moslem world. That, naturally and rightly, is a question for Moslems alone; and I am glad that the fact appears to have been generally recognized by the West. It is, however, permissible to surmise that the revolt was very largely due to the Arabs realizing, in spite of all attempts to throw dust in their eyes, that Enver, Talaat, and the rest of the so-called "Young Turks" are not, and never have been, at heart good Moslems. Those gentry have, when it suited their purpose, posed as devoted followers of the great Prophet of Arabia; and, of course, they have likewise sought to represent their "friend" and "ally," Wilhelm II., and his Potsdam gang, in a similar light. But they forgot that the Arab is, after all, an intelligent person, and that, though he is perhaps more susceptible to oratory than most people, there comes a time when he weighs up deeds against words. That time seems to have come at last. Enver, Talaat, and the Kaiser have overreached themselves, as ultra-clever people have a way of doing.

***

As to the report that the Turks have shelled Meshed Ali and Meshed Hussein, the sacred shrines at Nejef and Kerbellah, I can only express the hope that it is not true. For, apart altogether from their sanctity, these great shrines are wonderful examples of architecture, decorated with some of the most glorious tile-work it has ever been my good fortune to see; and their destruction, or serious damage, would be a tragedy not unworthy to rank with any that has taken place in Belgium or France. But I must admit that my hopes are not very high. The Turks have never shown any reluctance to insult and annoy the Shiahs of Nejef and Kerbellah, and if they have actually perpetrated the outrage reported, they are only repeating what they did in the middle of the last century, when Turkish troops, under Daoud Pasha, of Baghdad, besieged and battered both places. Kerbellah, on that occasion, stood a longish siege, the marks of which were still visible in various parts of the town when Loftus visited it. When it fell, "the soldiers entered, and the place was given over to pillage, when the most dreadful scenes took place," as Loftus tells us, apparently on the authority of an officer who took part in the operations, "and received his promotion in consequence." As the victors celebrated their triumph by, amongst other things, shooting a party of seventy defenceless women on the spot, we may conclude that Loftus is within the mark when he writes that "most dreadful scenes took place." He adds that the mosques "suffered seriously, and the ravages of the cannon balls are distinctly traceable on their domes." When I visited the shrines I could detect no signs of this damage, but that, no doubt, was due either to the softening effect of Time or to repairs having been effected. Now if the Turks really have bombarded the shrines, I fear they will have made a "thorough" job of it.

***

According to an American journalist who has recently visited Sofia, the Huns are making use of their time of occupation by as far as possible foisting their own guttural and abominable language upon the unfortunate Bulgarian people. I have no longer any great sympathy with the Bulgarians, for they are a people in whom all gratitude is presumably dead, but they are indeed suffering heavily for their "alliance." One of the funniest things recorded by the said American journalist relates to the poetical brother of General Vazoff, formerly an ardent Russophile. Under the changed conditions of to-day, the General's house is bedecked with German and Austrian flags, while his brother, who is a well-known Bulgarian poet, is endeavouring to prove that the Bulgars are really more closely related to the Turks than they are to the Slavs. After this we may be surprised at no lunacy on the part of those who fall under German influence. Possibly the Greeks have picked up a missing link of hereditary sympathy and relationship with the Bulgars, in which case, if we follow the laws of Euclid, Turk, Bulgar, and Greek are really all members of one family.

***

I do not question the soundness of the German plans which inflict the harshness of the Teutonic tongue upon its victims and friends. In German ears "ja" is a beautiful and euphonic affirmative, and probably in this regard they do not realise the measure of their cruelty. But all the same, I sincerely hope that they are wasting their time. I do not want the wild beauty of place and sound marred by German consonants when next I visit the Balkans. It used to be quite bad enough in the old days when one met the Hun disguised as a human tourist at odd corners; it would be intolerable to hear Balkan children lisping in broken Boche.

***

Sometimes I permit myself the luxury of thoughts of peace, knowing that, the Hun strafed into docility and impotence, it must come to us at last. And in these times my imagination tempts me to the far jungles of the Sudan, where game has wandered more or less undisturbed while our hunters were engaged in a more important chase. I do not know what steps the Government has taken to prevent the "lion, leopard, and other vermin" of the game laws from encroaching in increased numbers upon the preserves, but I do not doubt that adequate precautions have been taken in this regard. If I am right in this, the sportsman may look for a wonderfully well-stocked field by the time that the war is over. During recent years before the war the Sudan had become a very popular resort for the big-game hunter, and, although protective laws were made and strictly enforced by the Government, the large number of sportsmen who annually entered the country naturally had its effect upon the stock of game. Now, however, it has been given a respite, for the shooting of Government officials alone will have interfered with its development. As a matter of fact, these officials are usually good shots, and consequently the amount of game which they account for is comparatively small.

***

It is the uncertain shot, the man who kills by luck, and who leaves a trail of wounded in his wake, that is the terror of the jungle and of the plains. And the Sudan, because it lies within such easy reach of England and offers so great a variety of game, suffers rather heavily at the hands of the novice. However, by a merciful dispensation of Providence, the really enthusiastic hunter is rarely an altogether bad shot, and the others do not care to go far from their bases in search of game, so that the evil is not so great as it might be. Perhaps also many of these gentlemen may have learned much in the way of shooting during the past two years. Anyhow, I envy the man who is able to leave England for the plains and jungles of the Sudan when peace is declared. They are always well stocked with game, but the first season which follows war should be a record.

***

It is good to learn from the *Egyptian Mail* that the police of Cairo are actively engaged in the suppression of certain features of "native life" which are, to put it bluntly, simply beastly. The *danse du ventre*, an exhibition which had absolutely nothing to recommend it, has, I read, "already been suppressed, and the police are now exercising their activities in the suppression of the *khawals*, or dancing men." These creatures must not, of course, be confused with the "dancing men" to whom the heart of the hostess warms so kindly in this country when she is wondering what on earth to do with the wallflowers. The *khawal* is an unsexed kind of creature who wears female attire and "makes up" in the most flagrant manner. As the *Egyptian Mail* says, he is in much demand at native weddings; but the weddings can get along very well without his assistance, and the sooner they do so entirely the better. For he is an utterly unwholesome, loathly being, and personally I should like to see him "suppressed" in the same way as the jurors in "Alice in Wonderland" were. You remember? They were put in a sack, and the mouth was tied up. No great harm would be done if all the *khawals* in Egypt were similarly treated, and then—dropped in the Nile.

NEAR EAST BOOKSHELF.

THE FUTURE OF POLAND.*

A useful series of handbooks dealing with Poland, past and present, is in course of publication by the Polish Information Committee. The most noteworthy treats that unfortunate country from an economic standpoint. Its author, M. Stanislaw Posner, labours with success to prove that, despite the disintegrating influence of "high diplomacy," the Poles are still a united nation, and that the three Partitions were crimes against the laws of Nature. In the days of her independence Poland stretched from the Baltic to the Carpathians, but her eastern and western boundaries were by no means so clearly defined. Thrust as a wedge between three powerful military states, and cursed with a constitution which plunged them in perennial anarchy, the Poles were foredoomed to be victims of unscrupulous aggression. According to M. Posner, the mineral resources of his country defy calculation. Its deposits of coal, iron ore, zinc, potash, petroleum, and salt offer potentialities of wealth beyond the dream of avarice; but, owing to international jealousy, they have been very inadequately exploited. In the mighty Vistula Poland has more than three thousand miles of navigable water which, for the same reason, is all but a silent highway. The Polish race is eminently fitted for industrial achievement. Energetic, progressive, and endowed with the artistic faculties, they need but a strong central government to take foremost rank among the producers of wealth. The development of Lodz, for instance, can be paralleled only in America. Before the outbreak of war it had a population of 800,000, whose textile and other products led the markets in Eastern Europe. And its progress was effected in the teeth of German competition, which, in Prussian Poland,

holds the whole province as in a vice. The authorities support German industry against the new-born activity of the Poles; the Polish business man is boycotted as much as the artizan, and German banks refuse to give them credit. In spite of all these obstacles, Polish manufacturers of agricultural machinery compete with those of Germany, and gain the first prize at international exhibitions.

In the Constantinople markets they had to struggle with German competitors, who were aided by unscrupulous diplomacy; in the Balkans they met and overcame their Austrian rivals. Although the trunk of Polish independence has been rent into three fragments, the time for reuniting them is at hand. M. Posner sums up the case for Poland in an eloquent peroration:—

A consideration of the Polish provinces united in their mineral wealth and their economic future, and by the great artery of the Vistula, forces one to believe in the possibility of their free and united existence. Surely the words which Strabo applied to France may apply here:—"This land is one and indivisible, not by chance, but by the action of some great and far-seeing Mind."

BOOK NOTES.

We have received from Messrs. Stanford a copy of their "War Map No. 18: Stanford's Half-Inch Map of the Battle Front Between the Somme and Soissons." The topographical details, being based upon the French Government survey, may be accepted as absolutely accurate, and the map, which is extremely well produced, shows the contours by a system of colour layers. The sheet is 27 ins. by 22½ ins., and may be obtained mounted to fold in case, or on a board at 5s., or unmounted for 2s. 6d.

Messrs. Smith, Elder and Co. have just published "Travels in the Middle East," by Captain C. T. Fowle. The book gives the impressions gathered by the author, who is an officer of the Indian Army, during a couple of "language-leaves." On the first journey he travelled from Busreh to Damascus; on the second, from Quetta to Askabad, by way of Nasirabad and Meshed, then across the Caspian to Baku, on to Resht, and so, by Ispahan, to Mohammerah. He writes with unaffected pleasure of the delights of caravan travel, and the volume is distinctly entertaining, if not very instructive.

Ten Austrian officers and 300 soldiers who took refuge in Roumanian territory as the result of fighting to the north of Moldavia have been disarmed.

Bucharest newspapers report that in a collision on Monday between a procession of workmen on strike, at the instigation of a Germano-Bulgarian agent, and soldiers, at Galatz, nine workmen were killed and twenty-five wounded.

At a meeting on Sunday of the Foreign Affairs Committee of the French Chamber of Deputies a resolution was adopted urging the Government to take the necessary steps to put an end to the reign of terror inaugurated in Syria by the Turks.

* "Poland as an Independent Economic Unit," "The Polish Question as an International Problem," "Landmarks of Polish History," "An Outline of the History of Polish Literature," and "The National Music of Poland." (London: George Allen and Unwin, Ltd., 4A, Museum Street, E.C. Price 6d. each.)

THE MARTYRDOM OF SERBIA.

In connection with the celebration of Kossovo Day last Wednesday, a meeting was held in the evening at the National Liberal Club. Lord Swaythling, who presided, said that a country was not to be esteemed according to the amount of square miles it occupied nor by the number of its inhabitants, but by the greatness of its soul; and, judged by this criterion, Serbia, like Belgium, would rank among the great nations of the world. At the moment she was suffering at the hands of her enemies, as those enemies knew only too well how to make a people suffer; but Serbia had risen from defeat before, and would arise from this one

Monsieur Grgich read an interesting paper on the "Spirit of Serbia." He said that many people in England still supposed that the aspirations of the Serbian people were something modern, born of the present war, but, as a fact, those aspirations were of very ancient date, and were wrought into the soul of the Serbian nation. Since the beginning of the nineteenth century Serbian and Croatian literature had been identical, except for the fact that Croat was written in Roman characters and Serbian in the Cyrillic script. Serbs and Croats were one people, and the other southern Slav communities were all branches of one race, and ought to be united in one nation.

Mr. H. J. Fynes-Clinton said that one object of the meeting was that Englishmen might join with Serbs in celebrating Kossovo Day; a second object was to express our determination that the national rights and aspirations of the Serbs should be forwarded by the strong arm of Great Britain; a third object had been to bring to English people a better knowledge of the history, the art, and the aspirations of the Serbs.

Replying to some discussion which took place,

Monsieur Grgich said that when the Serbs had to retreat last winter they tried to bring with them the boys of from thirteen to seventeen years of age, bringing them over the Albanian mountains to Corfu, Italy, and France. They had brought with them from Serbia 63,000 of these boys, but only 7,500 arrived at Corfu. All the others were left somewhere in Albania or Montenegro among the mountains.

THE SCHOOL OF ORIENTAL STUDIES.

The first meeting of the Governing Body of the School of Oriental Studies took place at the Board of Education on Thursday last week, when Mr. Arthur Henderson, President of the Board, delivered the Charter of Incorporation to the Governors.

Mr. Henderson, after referring to the services rendered by Lord Cromer, Sir Alfred Lyall, and others, in securing the establishment of the school, congratulated those present on the successful issue of their efforts. It was not inappropriate that the first meeting of the Governing Body should be held in the middle of the war. On the commercial side the school would play an important part in the reconstruction of commerce and industry by assisting this country to secure and control sources of raw material, and also to open new markets in Africa and the East. It was to be hoped that the school would become the chief centre of research, to which the learned classes among the natives in India and Egypt might turn for guidance in their studies. He had always considered it most undesirable that for these purposes they should have been obliged to have recourse to Continental schools. In these ways he hoped that the school would at once extend our commerce and influence and also strengthen the ties between the various races in the Empire. The Government as a whole—and the Secretary of State for India in particular—took a deep interest in the future of the school, and it was their desire to see it take its place at the head of all similar institutions in Europe and be the recognised centre of Oriental studies throughout the world.

Sir John Hewett, Chairman of the Governing Body, expressed the thanks of the Governing Body to the President for receiving them.

Mr. S. J. Hartog, of the University of London, a member of the Governing Body was subsequently appointed Honorary Secretary of the School. A further appeal for funds will shortly be issued. All communications should be addressed to the Honorary Secretary.

MORE ARAB WEATHER WISDOM.

In his pamphlet, "Some Arabic Weather Sayings," from which we have quoted before, Mohammed Bey Kiazim, F.R.Met.Soc., writes as follows:—

"There are some curious sayings about thunder, which most Egyptians believe to be the voice of an angel. On the other hand, the Anzarees, or the Shiites, of the sect of the Caliph Ali (cousin of the Prophet) think that thunder is the voice of Ali, who, they believe, resides among the clouds. A more reasonable belief, however, is that thunder is due to a current of air called *dukhán* (smoke or vapour) rising from the ground and passing rapidly between the interstices of the clouds.

"As to lightning, those who believe that thunder is the voice of an angel believe also that lightning is his laughter. The Shiites believe that it is the laughter of the Caliph Ali. Some Arabs hold the same theory as that applied to thunder, i.e., that *dukhán* ascended from the surface of the earth until it got amongst the clouds, where it was very rapidly moved about by the wind, and lightning resulted."

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Events in Arabia and the Sudan. June 27.

The EARL OF CROMER asked whether his Majesty's Government could give any further information as to the events which had recently taken place in the Arabian Peninsula, and whether it was proposed to publish any papers as regards the recent operations undertaken against the Sultan of Darfur. The reports which had appeared in the newspapers about events in Arabia were extremely important, also very satisfactory. They were, he thought, all the more welcome because they were rather unexpected. They were important because anything which affected the Holy Places touched the interests of the whole Moslem world; and they were satisfactory because, although he had no detailed information on the subject, he hoped the action taken by the Sherif of Mecca and those associated with him was an indication that they put implicit confidence in the declaration made by his Majesty's Government that they had no intention of interfering with the administration or independence of the people of the Hejaz. Not only were they satisfactory, but also somewhat unexpected. Although the whole of Arabia had been in a state of chronic revolt for many years past, if anybody acquainted with the affairs of the East had been asked whether there was likely to be a revolt, he would have replied in the negative. It did certainly appear that the success gained by the Turks at Kut-el-Amarah was likely to nip in the bud any idea of revolution in Arabia. That had not been the case, and it was another object-lesson to be added to hundreds that had gone before, how truly impossible it was for any European to foretell what was going to happen in the East. Since he put down the question he had seen in the newspapers notices of revolt of the Arabs against the Turks at Kerbellah. If the Government could give any information, it would be very welcome to those interested in the East. Turning to the Sudan, his lordship said that we had won successes in the field of diplomacy as well as in the field of military operations. Let them consider the position of the Sudan at the beginning of the war. It was an enormous country; the difficulties of communication were very great, the climate was extremely trying, and the population was very often turbulent. The whole of this country had been governed by a mere handful of civil and military administrators, some of them young men who had only recently left the university or the military colleges. They had been aided by an altogether insignificant force of British soldiers; but in spite of that there had not been the smallest disturbance of public tranquillity since the war began. That was a remarkable achievement, which had not been as fully recognised as it ought to be in this country. The state of affairs in the Sudan was one of the greatest indirect compliments that had ever been paid to the wisdom and beneficence of English administration. Moreover, it afforded the most ample justification for the lines of our general Imperial policy. It also showed the wisdom of the course that was taken when a few years ago we laid down the general lines on which the Sudan was to be governed. The main credit for the success achieved was unquestionably due to Sir Reginald Wingate and the officers under his command. He thought, too, a considerable amount of credit was due to the public offices in London—not for what they had done, but for what they had very wisely abstained from doing; he shuddered to think what might have happened if any attempt had been made to govern the Sudan from this country. Recently Sir Reginald Wingate and his officers established another claim to our gratitude by their successful operations against the Sultan of Darfur, who had for years been kept in order through the influence of Slatin Pasha. Slatin Pasha, being an Austrian, was obliged to quit the service when the war broke out, but that should not obscure the fact that during a great many years he gave most loyal and efficient service to the British Government. Recently the Sultan of Darfur adopted an exceedingly hostile attitude; but Sir Reginald Wingate wisely and courageously did not hesitate for a moment what to do. He undertook military operations against the Sultan, and the campaign was accomplished with success. Indeed, a more brilliant little military achievement had rarely been accomplished.

Lord GRENFELL also bore testimony to the extraordinary ability with which the Sirdar had conducted the operations in the Sudan. The difficulties of transport were very great. The sand was so deep that only camels could be used for transport, and the common idea that they required little or no water was one of the greatest possible mistakes.

Viscount BRYCE asked whether there was any truth in the statement in the newspapers that the Shereef of Mecca had torn up part of the railway line to the north of Medina. Another point on which he would like to have information was the condition of Syria, which he believed was suffering terribly from famine and disease, due to unparalleled severities on the part of the Turkish Government.

The MARQUESS OF CREWE, in replying for the Government, said that in regard to affairs in the Arabian Peninsula, he could not add much to the information which had appeared in the Press. His Majesty's Government had not received that information altogether with surprise. It had been their point of view all through that the Holy Places both in Arabia and Mesopotamia must be secured under Moslem control, and as soon as it appeared that the Turkish Government, under foreign influence and something like German control, was ceasing to represent the Moslem faith and world in the truest sense, it became obvious that a rising such as had occurred was by no means impossible. The Turkish Government had for some time past been losing its real validity as the representative of Islam, and, that being so, nobody had the right to feel surprised at what had occurred among those who regarded themselves as the true representatives of the Moslem faith. It was equally true that they could none of them refuse their sympathy with those who were endeavouring to throw off an alien yoke. And there was a further reason why they were sympathetically disposed towards the Arabian efforts to free themselves from Turkish domination. The pilgrimages had been of late greatly and of necessity interfered with. Thousands of his Majesty's subjects went annually from India and from farther East on pilgrimage to the Holy Places, and it seemed likely that what had taken place would render it far more easy to encourage the renewal of the pilgrimages, which had been interfered with to a great extent by the necessary blockade of the Turkish ports on the Arabian coast. The Government had no reason to suppose that the report of the cutting of a portion of the Hedjaz railway was untrue, but they had no further information on the subject. As to Syria, they had confirmation of the deplorable state of things. Great severity had been exercised by the Turks under Jemal Pasha against Syrian notables who became suspect to the Turkish Government. At least twenty persons of importance were condemned to death, and a number of others were imprisoned and exiled. The Turks appeared to have formed a regular cordon round the Lebanon district and to be practically starving the population inside the cordon, depriving them of the necessaries of life. Representations had been or were being made by the United States Government to the Turkish Government, pointing out what a departure from the ordinary proceedings of civilised Governments was involved in action of this kind, and it was difficult to see what other steps it was possible to take for the relief of these unhappy people. The whole future of Syria naturally caused the Government the deepest concern, and they could only hope that the success which might be obtained in different parts of the world in the military field might assist in the settlement of the question. It appeared to be the case that the Turks attacked Kerbellah, actually firing on one of the famous shrines, and it might be assumed that a considerable part of the Arab population of that part of Mesopotamia were in hostility to Turkish rule. Passing to the much more pleasant subject of Darfur and the success attained there, he said that the Sultan maintained for a considerable period rather distant but at any rate correct relations with the Government of the Sudan; but in 1915 he began to show signs of resenting our rule, and started intrigues with the tribes of the Senussi and other Moslem elements in Africa. Latterly the real necessity of inflicting a lesson on the Sultan of Darfur became more and more evident, and it was quite clear now that the best course was taken in the interests not only of ourselves, but of the French, whose colony of Wadai was on the western side of Darfur. In the meantime, the Sultan of Darfur had become more and more truculent. He addressed some very violent letters to the Governor of Kordofan and the Inspector on the border. One of them, couched in the most lurid terms, was, with a sort of grim humour, addressed to the Government of Hell in Kordofan and the Inspector of Flames at Nahud, and expressed a determination to inflict upon all infidels those combined punishments in this world and the next which the Moslem was in the fortunate position of being able to distribute. It was plain that he had been misled by German propaganda. On March 16 the advance of the British force began. It might be asked why it should not have been delayed until water would have been easier to obtain. The answer to that not unnatural question was that when movements were easier for our force they were easier for the enemy. It was likely that if delay had occurred some German emissaries whose activities there had been occasion to recognise might have found their way to Darfur. An advance from a place about halfway beyond the Kordofan border took place on April 15, and the capital was occupied on the 27th, after sharp fighting, in which heavy loss was inflicted on the enemy, and the Sultan fled. When Sir R. Wingate completed the report of the operations the Government would be able to lay papers before Parliament at the earliest opportunity. On behalf of the Government, he desired to add to what had been said already the warmest possible tribute to the services rendered by Sir R. Wingate and the Sudan officials for the sound judgment which they showed throughout, and for not refusing to take a certain amount of risk, which undoubtedly existed, in making the move forward at the time when it was undertaken. The plans were most carefully drawn, and the execution was rapid and prompt. It was just what would be expected of Sir R. Wingate, who was one of the most brilliant representatives of that type of soldier-administrator of whom the history of our government of India and the Sudan had given many examples. Sir Reginald was admirably supported by his Headquarters staff. A word of commendation should be given to the young officials, many of them of short service, who carried on the administration with such success under the Sirdar, and to the officer who carried out the military part of the expedition with the utmost care and with the success which all were glad to recognise.

HOUSE OF COMMONS.

The Situation in Greece. June 22.

Sir E. GREY informed Mr. King that, pending communication with the Allied Governments on recent developments in Greece, which were in the newspapers to-day, he could not make any statement on the subject.

Memorial to Lord Kitchener.

The House having gone into Committee, on the motion of Mr. ASQUITH the following resolution was unanimously agreed to: "That a humble Address be presented to his Majesty praying that his Majesty will give directions that a monument be erected at the public charge to the memory of the late Field-Marshal Earl Kitchener, with an inscription expressing the admiration of this House for his illustrious military career and its gratitude for his devoted services to the State."

British Prisoners in Persia. June 23.

Colonel YATE asked the Secretary of State for Foreign Affairs whether there was any probability of a speedy release of the British Consul and other British subjects of Shiraz now held prisoners by German emissaries in Persia.

Sir E. GREY: Everything possible is being done to secure the release of these captives, but I regret that I cannot at present give any more definite information on the subject.

A Zionist Battalion.

Sir E. GREY informed Mr. King that he has no information, but that he will ascertain whether a Zionist battalion has been recruited in Egypt from Jews who came from Zionist colonies, and took an honourable part in hostilities on the Eastern Front of Egypt.

Railways in Persia. June 26.

Lord R. CECIL, replying to a question put by Colonel Yate, said he believed that the Russian railway from Julfa to Tabriz, in North Persia, was completed. The survey of the Mohammerah-Khoremmabad line, the British concession in South Persia, had inevitably been delayed by the disturbed local conditions.

Dardanelles Papers.

Mr. ASQUITH informed Sir H. Dalziel that a considerable period must elapse before the promised papers on the Dardanelles operations were likely to be ready for publication.

The Memorial to Lord Kitchener.

The House agreed with the resolution passed in Committee the previous Thursday for an Address to the King praying his Majesty to give directions that a monument be erected at the public charge to the memory of the late Field-Marshal Lord Kitchener.

The Athens Police.

In a written reply to a question by Mr. RONALD M'NEILL asking whether any official information had been received of an attack on an employee of the British Legation at Athens on June 12, in which secret police and police in uniform were reported to have taken part, and of insulting behaviour of the secret police towards members of the Legation, including the Military Attaché and the chief of the British Naval Mission on the same day at the Stadium, Lord ROBERT CECIL states:—Incidents of the nature referred to by the hon. member have, I understand, taken place in Athens during the last few weeks, and serious representations were made to the Greek Government on the subject. That Government has now agreed to consult with the Allied Representatives in Athens with a view to the removal of the police officers responsible for such incidents.

Military Courts in Egypt.

Mr. GINNELL asked the Secretary for Foreign Affairs on what grounds in such cases as the attempt on the life of the Sultan Egyptians were tried by military courts instead of by the assize courts.

Lord ROBERT CECIL said that cases of the nature indicated were under martial law properly tried by military courts. Proper provision was made for the representation of the accused, and when necessary for interpreting from and into his own language, and so far as he was aware no change was intended.

The Operations in Mesopotamia.

Sir HENRY DALZIEL asked the Secretary for India whether he could give any information as to the position and prospects of the British troops in Mesopotamia.

Mr. TENNANT, who replied, said such information as could be made public without prejudice to the success of the operations had been and would be issued to the Press in the form of *communiqués*. He was afraid that it was not at present desirable in the public interest to give further particulars.

Mr. JOYNSON HICKS asked when it was decided to despatch the two divisions from France to the assistance of General Townshend as mentioned in General Nixon's telegram of April 11.

Mr. MONTAGU said Mr. Chamberlain, who was unable to be present, asked him to refer the hon. member to Sir John Nixon's letter of April 11, in which he said that the decision reached him on October 24. It was taken on the preceding day.

Mr. JOYNSON HICKS inquired whether General Townshend at any time after his telegraphic communication to the Chief of Staff on October 3, 1915, sent to the General Commanding any despatch as to the first battle of Kut-el-Amarah, and if so whether that despatch contained an appreciation confirming the said telegram.

Mr. MONTAGU referred the hon. member to the statement in General Sir J. Nixon's letter of April 12, which said that he received no representation from General Townshend subsequent to his telegram of October 3.

Mr. JOYNSON HICKS asked whether General Nixon communicated General Townshend's definite opinion expressed in his telegram of October 3, 1915, to the effect that great risk would be run in the advance upon Baghdad without two divisions, and when the Cabinet first became aware of such opinion.

Mr. MONTAGU said if his hon. friend would refer to command paper CD. 8253, recently published, he would see that before April last neither the Government of India nor the Secretary of State had any knowledge of the opinion which General Townshend had expressed to Sir John Nixon. Its existence was made known to Government by the Viceroy's telegram of April 9.

Mr. JOYNSON HICKS next asked whether the Cabinet were warned by the military authorities in Mesopotamia that strong Turkish reinforcements had been despatched from the North to reinforce the Baghdad army prior to the battle of Ctesiphon, and whether it was these forces which contributed to the compulsory retirement of General Townshend after that battle. He also asked whether the advance upon Baghdad was decided on political rather than military reasons, and whether he would publish the whole of the telegrams and despatches passing between the Secretary of State and the Government of India or the Officer Commanding in Mesopotamia containing the orders for such an advance.

Mr. MONTAGU said Mr. Chamberlain asked his hon. friend to wait for the promised papers on the Mesopotamian Expedition. Every effort was being made to present them as soon as possible, and to make them complete.

The S. Persia Expedition. June 27.

Replying to Colonel YATE, who asked whether the expedition under Brigadier-General Sir Percy Sykes in Southern Persia was being carried out under the charge of the War Office, the Foreign Office, or the Government of India, Mr. A. CHAMBERLAIN stated that Sir Percy Sykes is acting under the orders of the Government of India.

Medical Arrangements in Mesopotamia.

Colonel YATE asked whether the Secretary for India would state for what length of time Surgeon-General Sir W. Babtie, the director of medical services in India, and the officer stated to have been responsible in regard to medical provision for the expedition to Mesopotamia, was absent from his post during certain months of 1915; and who was appointed to officiate for him during his absence.

Mr. A. CHAMBERLAIN: Surgeon-General Sir W. Babtie left India for a short time early in 1915 to carry out certain work entrusted to him by the War Office. He was not replaced during his temporary absence. He vacated the appointment of Director of Medical Services in India in June, 1915, when he was succeeded by Surgeon-General MacNeece. I am not aware by what authority General Babtie is stated to have been responsible for the medical arrangements in Mesopotamia, and I would deprecate any such assertion.

Bulgarian Atrocities. June 28.

Lord R. CECIL, replying to Mr. R. M'NEILL, who asked whether any steps were being taken to compile an official record of atrocities committed by the Bulgarians in Macedonia, and to bring them to the knowledge of neutral Governments, said:—I have no official information as to such occurrences. Note is kept of reports of atrocities that reach his Majesty's Government with the view of subsequent verification and the eventual exaction of reparation, but it is of little use to communicate to neutral Governments unsubstantiated statements, the truth of which those Governments are at present better able than his Majesty's Government to ascertain.

Mr. R. M'NEILL inquired whether any official information had been obtained of the reign of terror said to prevail in the part of Nish under Bulgarian military rule, and whether the King of Bulgaria would be held personally accountable for that state of affairs?

Lord R. CECIL: I should be glad to receive any evidence possessed by my hon. friend on the subject. If atrocities such as he describes are being committed, his Majesty's Government have repeatedly said that they will hold responsible those, whoever they may be, who have authorised or permitted such crimes.

Treatment of Turkish Prisoners.

Lord R. CECIL, replying to Mr. JACOBSEN, who asked whether, in view of the fact that British officer prisoners of war captured at Kut-el-Amarah had received excellent treatment at the hands of the Turks, he would arrange that all Turkish prisoners of war in our hands should receive specially favourable treatment, and cause such action to be brought to the notice of the Turkish authorities, said:—The Turkish prisoners of war in our hands have been properly treated throughout, and the Ottoman Government are well aware of this from the reports on internment camps for Turkish prisoners of war which have been drawn up by United States officials and communicated to that Government from time to time by the United States Embassy at Constantinople.

H.M. Minister in Roumania.

Lord R. CECIL, in reply to Sir H. ELVERSTON, who asked for the name and nationality of the British Minister at Bucharest, and whether any person of German or Austrian extraction had occupied the position during the last ten years, said:—His Majesty's Minister at Bucharest is Sir George Barclay, a British-born subject. The answer to the second part of the question is in the negative. Sir Walter Townley was there from 1911-12, and Sir Conyngham Greene from 1905-11.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. June 30 July 1	1916. June. 17	Friday	1334. Shaban. 28	5676. Sivan. 29
	18	Saturday.....	29 Ramadan	30 Tamuz
2	19	Sunday	1	1
3	20	Monday	2	2
4	21	Tuesday	3	3
5	22	Wednesday	4	4
6	23	Thursday	5	5

To-day is the birthday of H.R.H. Prince Danilo Alexander of Montenegro.

Sunday is the birthday of Princess Marie of Greece, the wife of Prince George, who was born at St. Cloud in 1882, and married in Athens in 1907.

Thursday is the birthday of H.R.H. Princess Victoria.

The Roumanian Minister in London was confined to his bed during last week through illness. His Excellency, we are glad to learn, has now completely recovered.

It was announced last Saturday that Lady Maxwell was still not sufficiently well to join General Sir John Maxwell in Ireland.

General Sir John Maxwell left London for Dublin on Wednesday, after a flying visit.

Vice-Admiral Sir John de Robeck had the honour of being received by the King at Buckingham Palace on Tuesday, when his Majesty invested him with the Insignia of a Knight Commander of the Order of the Bath.

Lieutenant-General Sir Bryan Mahon had the honour of being received by the King at Buckingham Palace on Tuesday.

H.I.M. the Shah of Persia has appointed Mr. Charles Greenway, chairman of the Anglo-Persian Oil Company (Limited), Grand Officer of the Order of the Lion and the Sun.

Judge and Mrs. Fleming have left Khartoum in order to pass the summer months in England.

Dr. and Mrs. Bousfield have also left the Sudan for England.

The Hon. Mrs. Aubrey Herbert, wife of Captain the Hon. Aubrey Herbert, M.P., has given birth to a daughter at 28, Bruton Street.

The engagement is announced of Lady Irene Curzon, eldest daughter of Earl Curzon of Kedleston, and Mr. Guy Benson, eldest son of Mr. and Mrs. R. H. Benson, of Buckhurst, Sussex.

M. Pavle Karovitch, Secretary to the Serbian Legation, left London for Paris on leave last week.

On Thursday of last week, at St. Martin's, Salisbury, the marriage was solemnized of Leonard Dimock Saunders, L.R.C.S., eldest son of the late Mr. Edward Saunders, F.R.S., to Veronica Lyster, youngest daughter of Lieutenant-Colonel James C. Gore, late Receiver-General of Cyprus.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.
Σχολή Γλωσσῶν. Διδασκαλία συστηματική. Διερμηνεῖς κ.λ.π. Δίδακτρα μέτρια.
Lyceum Institute, 85, New Oxford Street, and 64, Haymarket.

On June 10 a large gathering of friends of the Rev. Mr. Gillan and Mrs. Gillan assembled at the Kasr-el-Doubara Club, Cairo, to bid farewell to them on their departure from Cairo. Amongst those present were the Bishop in Jerusalem and Miss MacInnes, Canon Gairdner, the members of the American Mission, Dr. and Mrs. Zwemer, Dr. Watson, Dr. Douglas Dunlop and Dr. and Mrs. Giffen, Sir Murdoch and Lady Macdonald, Sir Alexander Baird, Mr. and Mrs. Quibell, and Lady Oakes.

Mrs. Quibell, on behalf of the members of the Woman's Guild, presented Mrs. Gillan with a silver casket of Egyptian workmanship, and Mr. Howie, on behalf of the Kirk Session and Committee of Management of St. Andrew's Church, presented Mr. Gillan with an illuminated address and a silver inlaid ebony casket. Mr. and Mrs. Gillan returned thanks briefly, and the Bishop in Jerusalem, in the name of those who were not members of the Scotch Church, expressed his gratification at being able to thank Mr. and Mrs. Gillan for their friendship and their work.

General Bailloud, who is now in command of a division at Salonika, and was formerly at Gallipoli, has been made a Knight Commander of the Order of the Bath. General Milne, on behalf of the King, conferred the decoration upon General Bailloud last week in the presence of a selected body of French troops.

Captain and Brevet-Major Eugene Louis Gerrard (Temp. Lieut.-Col.), R.M. (Wing Commander R.N.A.S.), has been appointed a Companion of the Distinguished Service Order in recognition of his services in command of a wing of the R.N.A.S. in the Eastern Mediterranean.

Flight Lieutenant Kenneth Stevens Savory, R.N.A.S., and Flight Sub-Lieutenant Richard Sebastian Willoughby Dickinson, R.N.A.S., have been appointed Companions of the D.S.O., "in recognition of their services on the night of April 14-15, 1916, when they carried out a flight to Constantinople and dropped bombs upon points of military importance, returning safely to their base in rough and stormy weather."

The Distinguished Service Cross has been awarded to Lieutenant Frank George Fowle, R.N., in recognition of his services on January 18, 1916, when he landed in charge of a demolition party from one of H.M. ships and blew up a railway bridge near Porto Lagos.

An engagement is announced between Lieutenant Leonard T. Hamblen, adjutant of the Egyptian Labour Corps, Alexandria, and Ruth Mary, youngest daughter of Mr. W. F. A. Archibald, Master of the Supreme Court.

The Bishop of Oxford visited the Serbian Colony at Wycliffe Hall, Oxford, last Friday afternoon. In the course of an address to the youths, the Bishop said he trusted they would receive in Oxford nothing but the most cordial and sympathetic treatment, and that they would obtain the necessary facilities for the continuance of their education.

Major H. G. Thomson, commanding the 1/5th Hants (Howitzer) Battery, R.F.A., who, with most of the members of the Battery, was through the siege of Kut-el-Amarah, and is now a prisoner with his officers and men in the hands of the Turks, has written a letter to the home of the battery in the Isle of Wight conveying the first news to be received from the prisoners. He sends a list of men in his battery who are prisoners, and says: "I may not say much, but I do say this, that the island may indeed be proud of its heroic sons who have served in this campaign." A telegram despatched from Baghdad last week by Major Thomson stated that they were well treated and comfortable. The other officers of the battery taken prisoner are Lieutenant W. Tozer (town clerk of Ventnor), Lieutenant R. L. Flux, M.C., and Second Lieutenant H. C. Gallup. Major Thomson was twice mentioned in despatches and Lieutenant Flux was awarded the Military Cross.

Sir Arthur Nicolson, who is to take the title of Lord Carnock on his elevation to the peerage, has been elected to an honorary fellowship at Brasenose College, Oxford.

A military tribunal at Constantinople has sentenced Boghos Pasha Nubar to death. The charges against the Pasha were high treason and spying. One of the allegations made against him was that he had been the prime mover in collecting money for the Armenian volunteers in the Russian Army in the Caucasus. It will be remembered that early in the war Boghos Pasha Nubar left Egypt for Europe in order to interest the Allies in the fate of Armenia.

A largely-attended meeting of members of the House of Commons was held on Wednesday evening to express sympathy with Serbia on the occasion of the anniversary of the Battle of Kossovo. Among those present were Sir Edwin Cornwall, Sir Arthur Markham, Sir Hedworth Meux, Mr. Ian Malcolm, Sir Charles Hunter, Mr. Harold Smith, Mr. Handel Booth, Mr. T. P. O'Connor, Mr. Ronald M'Neil, Sir Mark Sykes, Colonel Yate, Mr. George Terrell, Sir John Lonsdale, Mr. Peto, Colonel Norton Griffiths, Mr. Walter Roch, Sir Ivor Herbert, Sir Henry Dalziel, Major Wheler, Sir F. Banbury, Sir Henry Craik, and Mr. Shirley Benn.

A special service in commemoration of the anniversary of the Serbian National Day was celebrated at the Russian Church, in Welbeck Street, on Wednesday morning. The Very Rev. Eugene Smirnoff, of the Russian Embassy, officiated, being assisted by the Rev. Vladimir Theokritoff, Deacon of the Russian Church, and Father Nicholas Velimirovitch, Father Damaskin, and Father Markovitch, Serbian priests. Among those present were M. Mathias Boshkovitch, Serbian Minister; M. George Todorovitch, Secretary; Major M. J. Nicolaievitch, Military Attaché; Mademoiselle Nicolaievitch, Madame Olga Novikoff, M. D. Janitsch, Dr. Elsie M. Inglis (Chairman of Kossovo Day Committee), M. V. Janitsch, Madame Popovitch, Colonel and Madame Markovitch, Lieutenant Markovitch, Dr. Grgich, and the Rev. H. J. Fynes-Clinton.

A concert of Serbian music and Russian songs in celebration of Kossovo Day was held at the Æolian Hall, New Bond Street, in the afternoon. The artists included Dr. Voyislav Yanitch, Mademoiselle Zouka Nicolaievitch, and Dr. Svetozar Grgich. Among the audience were Mrs. Asquith, Miss Asquith, Madame Misu, wife of the Roumanian Minister, Mademoiselle Misu, the Earl of Albemarle, Lady Thynne, and Lord Shaw.

Friday, July 7, is the date fixed for the Memorial Service (to be held at noon in St. Paul's Cathedral) for all the Serbs and British who have given their lives in Serbia for the cause of the Allies. The Archbishop of Canterbury will preach. The Lord Mayor is to attend in state, and 300 Serbian boys, who are now receiving elementary instruction at Oxford and Cambridge, will be present.

Another service of intercession for Serbia has been arranged for Sunday afternoon, July 9, in the Chapel Royal, Savoy, where Serbian music will be sung.

On Sunday afternoon next a service of intercession for Serbia will be held in the church of St. Margaret's, Westminster. Father Nicolai Velimirovitch is to deliver an address, and Russian and Serbian Church music will be sung.

Regular visitors to Egypt will learn with regret that Wild Bey, the general manager of the Nungovich Hotels Company, has resigned the post which he has occupied with so much success for some years, and intends to sever his connection with the country. Mr. Wild has spent eighteen years in Egypt, and was as popular with the residents as with the floating population, to whose wants he catered with such affability. We understand that he intends coming to London, where he is not by any means unknown in the hotel world.

APPOINTMENTS, PROMOTIONS, ETC.

Sir Malcolm McIlwraith, the Judicial Adviser to the Egyptian Government, has left Cairo for England on leave, preparatory to his retirement.

Kaimakam Bassett Bey, Senior Inspector, Upper Nile Province, has been promoted to the post of Governor of that Province in succession to Miralai Woodward Bey, who recently reverted to his unit in the British Army.

The appointment of Mr. A. P. Tottenham as Inspector-General of Irrigation, in succession to Mr. Williams, who has retired on pension, has now been officially announced by the Ministry of Public Works, says the *Egyptian Gazette* of June 14. Mr. Adamson, Inspector of the First Circle of Irrigation, has been promoted to succeed Mr. Tottenham as Inspector-General of Irrigation in Lower Egypt, and has in turn been succeeded by Mr. Carter, Director of Works of the same circle.

Our Bucharest Correspondent reports (June 6):—

M. Psychas, the Greek Minister in Bucharest, is about to return to Athens. His successor is said to be M. Rangabe, late Chargé d'Affaires at the Hague, who is expected to arrive shortly. M. Psychas' departure will cause universal regret, for he enjoyed great popularity. The reasons of his departure are not definitely known, but we have not far to seek when it is remembered that he was appointed by M. Venizelos.

M. C. Mano, Roumanian Minister in Constantinople, has recently arrived in Bucharest.

Brigadier-Generals Jean Gardescu and A. Saegiu have retired from active service.

El Kaimakam C. H. Stigand Bey, Second Inspector, Upper Nile Province, has been promoted to first Inspector and then to Senior Inspector of that Province.

Mr. F. P. Osborne, 2nd Inspector, Legal Department, Sudan Government, has been promoted to the grade of first Inspector in his Department. Mr. Osborne has also been appointed Province Judge.

El Bimbashi E. W. Viscount Hawarden, Sudan Government, has been granted the temporary rank of Kaimakam.

Dr. J. Warnock left Cairo on May 31 for England on three and a-half months' leave.

Our Cyprus Correspondent reports (June 9):—

Shefket Effendi, Turkish Judge at Famagusta, has been appointed to the vacant District Judgeship at Larnaca; and Mustafa Raïf Effendi, Village Judge of Lefka, has been appointed to Famagusta.

M. Margarot, the new Vice-Consul for the French Republic, has paid his first official visit to the High Commissioner.

DOMESTIC ANNOUNCEMENTS.

The Charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

WYLIE.—On June 7, at Tantah, Lower Egypt, the wife of Adrian W. Wylie, of a son.

MARRIAGE.

HUTCHINS—EDDY.—On June 15, at Alexandria, Egypt, at the British Consulate, and afterwards at All Saints' Church, by the Rev. Mr. Horan, Major S. Hutchins, son of the late Samuel Newburgh Hutchins and Mrs. Hutchins, of Ballylickey, Bantry, Co. Cork, to Effita Penniman, only daughter of Mrs. Eddy, of Holme Priory, Dorset, and New York City, U.S.A.

DEATH.

DORLING.—On June 23, in London, Stanley Dorling, of Alexandria, Egypt, and Park House, Southwick, Sunderland, youngest son of the late E. J. Dorling, of Sherborne, Dorset, aged 44.

OBITUARY.

BISHOP BRINDLE.

We regret to announce that Bishop Brindle, the famous Army chaplain, who had seen much service in Egypt and the Sudan, died on Tuesday, at Mount St. Mary's College, Sheffield.

Born at Liverpool in 1837, Dr. Brindle was ordained a priest of the Roman Catholic Church in 1862, at the English College at Lisbon. Fourteen years later he became an Army chaplain, and in 1882 he went out to Egypt and took part in the Egyptian Campaign. For the next four years he saw incessant service, including the battle of Suakin in 1884, and the Nile Expedition. On the last occasion he stroked one of the boats of the Royal Irish Regiment which won the prize of £100 offered by Lord Wolseley to the first boat to reach the end of the river journey. He was several times mentioned in despatches, and he won for himself amongst the soldiers a reputation for courage, and for kindliness, which was entirely deserved.

Returning to England in 1886, he spent the next ten years at Colchester and Aldershot, but in 1896 he went out to the Nile Valley again, and took an active part in the Dongola Expedition. He distinguished himself by his devotion to the sick during the bad outbreak of cholera that year; and he was present at the battles of Atbara and Omdurman, being mentioned in despatches on both occasions. After the capture of Khartoum he received the D.S.O. for his gallant conduct, on the recommendation of Lord Kitchener, being the first Roman Catholic chaplain thus distinguished. He was one of the three chaplains who officiated at the memorial service for General Gordon, and a prayer which he composed for the occasion was printed and distributed by Lord Kitchener's order.

He left the Army in 1899, and, after acting as auxiliary Bishop at Westminster, he became Bishop of Nottingham in 1901. He resigned the see in April last year owing to his age.

BARON JACQUES DE MENASCE.

The latest Egyptian papers to hand record the death, at the age of 66 years, of Baron Jacques Lévi de Menasce, one of the most prominent members of the Jewish community in Alexandria and head of the Menasce family, who have resided in Egypt for many generations. The late Baron, in his youth, entered the banking business of J. L. Menasce, Son, and Co., which was founded by his grandfather, and passed through the Liverpool, London, and Constantinople offices of the firm, being finally, in 1874, admitted into partnership. He was for over a quarter of a century chairman of the Jewish community in Alexandria, and took an active interest in all local public and philanthropic affairs. Latterly he had been more concerned in cotton and sugar cultivation than in banking, but he had a seat on a large number of the boards of Egyptian companies.

The Earl of Sandwich died on Monday at Hinchingbrooke, Huntingdon, in his seventy-seventh year. In his younger days he was occasionally attached to diplomatic missions, and in 1858 he accompanied Lord Stratford de Redcliffe, "the Great Elchi," to Constantinople on a special mission.

Captain A. Watt, Black Watch, who has died of wounds, served through the Sudan campaign with the Cameron Highlanders. He left the Army in 1902, and subsequently joined the Dundee Police Force as an ordinary constable, but when war broke out he re-enlisted, and was granted a commission very soon afterwards.

The *Sudan Times* reports that Mr. R. S. Brown, of Khartoum, died in that city. He had been in the Sudan since 1901, and was at first connected with the Sudan Development and Exploration Company, and later with the Public Works Department. Afterwards he started work on his own account as a contractor. After the war broke out, he came to England to work in the manufacture of munitions. The climate proved too severe for him, and he contracted a disease in the ear, which obliged him to return to the Sudan. There, however, his malady became worse; he had to go into hospital in April; and his disease terminated fatally on May 27. Mr. Brown was forty-two years old and unmarried.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

FRIDAY, JUNE 30, 1916.

GERMAN CONFIDENCE AND THE NEAR EAST.

In the course of three articles which have appeared recently in *The Times* an observer who has just left Germany, after having lived there since the beginning of the war, offers a striking analysis of conditions in that country. He does not allow that there has been any essential change in German public feeling, or that the confidence of the nation as a whole has yet been shaken. The twin bases of this confidence he considers to be belief in the invincibility of the German armies and the conviction that Germany has already obtained in the East such guarantees of future security as to be practically invulnerable. For the last ten or fifteen years the idea of Germany's destiny finding its inevitable development in the East had penetrated deeply into the mind of the German people. "Every well-informed and thoughtful German knew that what used to be called the Eastern Question must be solved in favour of Germany by war or otherwise. . . . . The German people feel that with the crushing of Serbia, and the opening up of the route through Bulgaria to Constantinople and beyond, the first and most essential portion of this great scheme has been realised; and they do not for a moment believe that their mastery of the highway to the East can now be seriously challenged." Accordingly, the Germans still have faith in complete victory, and the writer of the articles is of opinion that this basis of their confidence can be overthrown only by cutting across and interrupting German communications with the East. "The presence of an Allied force at Salonika has been a thorn in the German side, because of the potential menace it has constituted to the safety of the land and water routes to the East. . . . . The cutting of those routes and the re-establishment of Serbia would bring about the ruin of German hopes and the collapse of German confidence not less surely than the winning of military victories over German armies on the Western and the Russian fronts."

This view is entirely borne out by all that can be gleaned of German public opinion from the German Press, and supports the contention consistently advanced in THE NEAR EAST. It is almost impossible to read any German publication devoted to the discussion of public affairs these days without discovering the importance to the German mind of the inclusion of Bulgaria and Turkey in the German orbit. Reference is occasionally made to what purports to be a rival school of thought in Germany, which is inclined to lay stress on the importance of overseas colonies; but the two schools are in reality supplementary, not antagonistic to one another. The colonial party does not wish to see the Eastern idea developed to the exclusion of the colonies; the advocates of a Central European political "combine" stretching from the North Sea to the Persian Gulf have no objection to overseas colonies as well, provided they are not developed at the expense of their own scheme. Both parties still have implicit faith in the ultimate victory of German arms, and the grounds of their confidence are as stated. The Allied Powers are engaged in the task of inflicting a military defeat upon Germany. They cannot, therefore, afford to ignore any means which promise to shorten that task. No doubt a series of overwhelming reverses either on the Western or on the Russian front would destroy German confidence; but the difficulty of bringing this about is enhanced for the Allies by the very confidence which it is necessary to destroy. The undermining of what has been cited as the second basis of this confidence would inevitably weaken the German powers of resistance in the two main theatres of the war. Whichever, therefore, is the more vulnerable point for Germany ought to be attacked first by the Allies. In other words, if it is likely to prove easier to cut German communications with the East than to administer a crushing defeat on the Western or the Russian front, the attempt ought to be made without delay. The question is necessarily one for the military authorities of the Allied Powers to decide; but in view of what has happened in the Near East, we are tempted to believe that there has not been an adequate exchange of views between the military and the political experts. The objection of the former to the dissipation of strength is well known. No one, however, would contend that, if the situation in the Balkans had been as well known at the beginning of the war as it is now, more drastic steps would not have been taken to raise Great Britain's five million army in order that an adequate force might have been thrown betimes into the breach. As things are, the Allies have a comparatively large force at Salonika, which has constituted a potential menace to Germany's Eastern aspirations; but it has not served as yet to shake German confidence, for the reason that the force has achieved nothing. It is impossible to believe that the higher military commands of the Allied Powers intend to keep this force in permanent idleness—apart from frontier skirmishes. That it should have remained so long without attempting any forward movement may well be due in part to inadequate appreciation of the task which it ought to undertake. If its objective were Vienna or Berlin, there would be much to say against a premature move; but as its purpose would be served by the driving of a wedge between the Central Powers and Bulgaria, the question arises whether it is not already strong enough for such a limited purpose.

Justification for the discussion of these matters is to be found in the course of Near Eastern affairs during the war. From the outset Allied diplomacy has presented the appearance of trying to lag the greatest possible distance behind well-informed public opinion. Diplomatic ignorance in regard to Bulgaria had its counterpart in the military sphere in the crudeness and mismanagement of the Dardanelles venture. The failure to send help to Serbia in time must be connected with Great Britain's delay in putting forth her maximum strength. Only now after tolerating for six months or more all the inconvenience of the Greek Government's hostility have the Allies adopted a course of action which has been repeatedly advocated in these columns and in other quarters where conditions in Greece were known. The show of determination that has come so late in the day would have sufficed to save Serbia from its cruel fate. Little wonder, therefore, that there is considerable misgiving over the continued inaction of the large Allied force at Salonika. We must, however, take heart from the new policy adopted towards Greece. Its immediate and signal success should encourage the Allied Governments to revise their estimate of Near Eastern factors. In this connexion the convincing analysis of conditions in Germany by the observant writer quoted above deserves special attention; for if there is the least reason to believe in its accuracy, it affords the strongest possible argument in favour of an early advance from Salonika.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

THE QUESTION OF THE DANUBE

BY D. MITRANY.

One of the few questions connected with the present conflict which has been ignored by the Press, at any rate in the Allied countries, is the question of the Danube. Yet it is a question of no mean importance and one still awaiting solution; and it is the more worthy of our attention as the Danube is, so to say, the axis round which the whole policy which the Central Powers seem to contemplate with regard to Eastern Europe revolves. Naumann's "Mitteleuropa" may seem to us contemptibly Utopian; in Germany apparently the conception is gaining rapid ground. With the usual promptitude and energy which they display in the working out of new ideas, the Germans are already busily engaged in the preparation of schemes for a Danube-Oder and a Danube-Rhine canal. Together with other facts to hand, this clearly indicates that less than ever do the Germans intend to give up the "Drang nach Osten."

This alone should suffice to rouse some interest in the question of the Danube; but it is high time that the Danube navigation should be established on an international basis. The question has been dealt with time and again in conferences and congresses, but it has only led to compromises, either on political lines or considerations of personal interest, between the Powers interested in the navigation on the Lower Danube and the two main riverside States—Russia and Austria-Hungary. The international principle has not been furthered in this way; the smaller States watered by the Danube have certainly not been benefited by the system; and the position of the Danube with regard to the law of nations has remained very vague, though it holds the record in shipping treaties. And yet no other river is more truly international, for not only does the Danube touch the territories of nine different States, but the freedom of its navigation is a matter of serious interest to many nations outside its waterway. The present state of the question is due not to any specific difficulties, but merely to the ill-will of some of the Powers concerned. A brief historical survey of the subject will bear out this statement, while defining at the same time the problem and its correct solution.

Together with its affluents, the Danube represents a navigable waterway of about 5,250 m.; 530 towns and 660 larger villages abut upon its banks, containing a mixed population of four million people. The river was used by the Romans in their expeditions against the regions on the Lower Danube, and also served as a waterway to the barbarian invaders who advanced in the opposite direction to the conquest of Europe. The Crusades gave a great impetus to the traffic on the Danube, which declined with the decline of Constantinople and the rise of Venice and Genoa. A new period of prosperous traffic occurred in the fourteenth century, when Genoa, obtaining from the Byzantine emperors a monopoly of the Black Sea trade, established numerous staple markets along the banks of the Lower Danube. Traffic and settlements alike were abandoned when the discovery of new routes greatly reduced the importance of the Italian ports. That it took a long time for Danube navigation to recover and growth was due less to economic than to political causes.

With the coming of the Turks all security on the Danube had disappeared. Austrian ships were only allowed to descend as far as Belgrade, where the goods had to be transhipped into Turkish boats; and the ports on the Lower Danube—Vidin, Giurgiu, Rustchuk, etc.—had also become mere ports of transhipment. The treaty of Pessarowitz (1718), which granted freedom of trade on land and water, with special privileges for Austrian subjects, effected a certain improvement. But the situation acquired a totally new aspect when Russia, which had steadily expanded southwards, reached the Danube. The Treaty of Bucharest, 1812, brought her frontier down to Kilia, the northernmost arm of the Danube delta; by the Treaty of Akermann, 1826, she touched the middle arm, Sulina; while the Treaty of Adrianople, 1829, fixing the boundary at the southernmost arm, St. Georg, placed the whole delta, nominally neutral, under Russian domination.

The effects of these changes were soon to become apparent. By means of extensive works Turkey had kept open in the arm of Sulina a navigable channel 16 ft. deep. Traffic had been steadily increasing. In 1829, under the impulse of Metternich, who had recognised the economic and political importance of the Danube, an Austrian navigation company was founded, whose steamers were to call at the Danubian and even the Levantine ports. As the treaty of Adrianople in the same year had declared the Black Sea open to the commercial vessels of all countries it seemed as if nothing more was to stand in the way of the peaceful development of the navigation of the Danube. But, in order to handicap Austrian shipping and to force the Black Sea traffic to Odessa, Russia abandoned the work previously undertaken by the Turks at Sulina. In 1836, moreover, she established a quarantine at the Sulina mouth, a measure all the more injurious to shipping as the goods were not disinfected on the spot, but had to be taken to Odessa for that purpose. Moltke, who visited the region about that time on his way to Constantinople, lamented the fact that "that artery of life so important to Germany should be, in fact, in the hands of the Russians, just as the Rhine had remained, unfortunately, so long a time in the hands of the Dutch." And he adds, with unconscious irony, that "the natural obstacles which here impede navigation could easily be removed." To safeguard her interests Austria concluded a Convention with Russia in 1840, the latter undertaking to keep the mouths of the river in navigable condition and to build a lighthouse; trade was declared free, and the taxes fixed which Russia could impose upon shipping. But this arrangement remained a dead letter. The lighthouse was never built. Left to itself the depth of the channel was gradually reduced to 11 ft. in 1844, to 9 ft. in 1850, and to 7½ ft. in 1853. Navigation became so dangerous that freight from Constantinople to Galatz was nearly £1 per ton more than to Odessa, though the distance was the same.

Various factors had contributed meanwhile to draw the attention of Europe to the question of the Danube. The Black Sea and Danubian regions played a constantly growing rôle as suppliers of corn to Western Europe, especially after the repeal of the English Corn Laws; and it was in the general interest that navigation should not be impeded by arbitrary measures. Further, the political events which led to the Crimean War necessarily emphasised the political importance of the Danube, which, since Peter the Great, had always been the strategical axis of Russia's military undertakings. Accordingly, the notes exchanged in Vienna, in 1854, between the representatives of France, Austria, and Great Britain, emphatically declared that relations between Russia and the Ottoman Empire could not be established on a secure footing "if the navigation at the mouths of the Danube be not freed of all obstacles, and subjected to the principles laid down by the Congress of Vienna." What was meant by this declaration is explained in a despatch of Lord Clarendon to the British envoy. "A general treaty ought to ensure for that purpose the establishment of an independent authority, which should have the right and the power to remove all the obstacles placed by Russia in the way of the free navigation on the Sulina arm, and such obstacles as may arise in the future." The principle was adopted and extended to the whole of the Danube in the preliminary treaty signed in Vienna on February 1, 1856. But once free navigation in the delta was secured—since the retrocession of Bessarabia to Moldavia had removed Russia from the banks of the Danube—Austria changed her mind, and at the Paris Congress of 1856 she strongly opposed the application of the principles of 1815 to the whole of the Danube. Her argument was that acquired rights and engagements entered upon (meaning especially the privileges granted to the Austrian Danube Navigation Company till 1881) made it impossible for her to accept a complete internationalisation of the Danube. Though she failed in her claims theoretically, we shall see that, in fact, she has had her own way down to the present day.

Articles 15-19 of the Paris Treaty of 1856 declared the navigation of the Danube free. The works necessary to the clearing of the mouths were to be conducted under the supervision of the "European Danube Commission," consisting of one delegate of each of the contracting parties. The riverside States were to nominate a permanent com-

mission, whose functions should be: (1) To draw up regulations for navigation on the Danube; (2) to remove all disabilities preventing the application of the 1815 principles to the Danube; (3) to undertake all works necessary along the course of the river; (4) to ensure its navigability at and around the mouths. It was to take over the duties and rights of the European Danube Commission after a lapse of two years. To give an idea of the magnitude of the task I may quote a few words from an address delivered in 1873 to the Institution of Civil Engineers by Sir Charles Hartley, chief engineer of the Commission from 1856 till 1872. When the European Commission entered upon its functions "the entrance to the Sulina arm was a wild open seaboard strewn with wrecks, the hulls and masts of which, sticking out of the submerged sandbanks, gave the mariners the only guide where the deepest channel was to be found." Under the able supervision of the English engineer conditions soon improved. The depth of the channel reached 9¾ ft. in 1859; 11 ft. in 1860; 16½ ft. in 1861. The average number of shipwrecks at the mouth of the river, which had been 81 in the period 1855-60, fell to 4 between 1861 and 1905 for each 10,000 ships entering the Danube.

Meanwhile the Riverside States Commission, of which Austria was the moving spirit, had drawn up, in November, 1857, a charter for the regulation of the navigation of the Danube, from which all trace of the 1815 principles had disappeared. The coasting trade was to be reserved for the riverside States—Austrian shipping possessing almost a monopoly on the Danube at the time—and various quarantine measures, which would soon have proved a convenient instrument for injuring foreign shipping, were to be maintained. The Powers therefore refused their sanction; the Riverside States Commission disappeared, while the time limit of the European Commission was extended from year to year, and for a further five years at the sitting of the Paris Conference of March 28, 1866. At the same time the regulations drawn up by the European Commission were adopted, and the neutrality of the Black Sea extended to the works, dependencies and personnel of the Commission, which were to enjoy the protection granted by the law of nations.

Russia had never digested the restrictions imposed upon her activity by the Paris Congress, and missed no opportunity to weaken them. Taking advantage of the conflict of 1870, the Russian Chancellor, Gortshakov, issued a circular declaring that the Emperor "could no longer consider himself bound by the stipulations of the treaty of 1856, in so far as they entrenched upon his sovereign rights in the Black Sea." As things were, it was impossible to oppose to the Russian claims the will of a united Europe; on the other hand, it became imperative to secure further the liberty of the Danube navigation, now that Russia had expressed her determination to rule on the Black Sea. A conference was consequently summoned to London in March, 1871, which extended the time limit of the European Commission for a period of twelve years, and declared the neutrality of its dependencies constant. All went well until war broke out between Russia and Turkey in 1877. To suit her own purposes, Russia disregarded the various treaties and conventions: to prevent Turkish ships cutting her lines of communication she caused boats loaded with stones to be sunk in the Danube, thus stopping all traffic; the buildings of the European Commission were wantonly destroyed and its members summarily ordered away. No wonder, therefore, that at the Berlin Congress of 1878 Lord Beaconsfield protested against the proposed retrocession of Bessarabia to Russia, as Article 20 of the Paris Treaty of 1856 expressly declared that Russia agreed to that rectification of the frontier "in order that the freedom of the Danube navigation be better secured." But Russia had the support of Bismarck, who, though he objected to play the rôle of schoolmaster, was none the less the taskmaster of European diplomacy. The channel of the Kilia arm and the mouth of Stari Stambul became consequently the southern boundary of the Russian Empire, while the delta, with the Dobruja and Serpent Island, was given to Roumania. All fortifications along the Danube between the Iron Gates and the sea were to disappear, and no men-of-war, except small vessels for police duty, were to have access to that portion of the river. More important for general shipping was the extension of the jurisdiction of the European Commission up to Galatz, and the provision that it should elaborate, in co-operation with delegates of the riverside States, regulations for the navigation from the Iron Gates downwards.

In accordance with this disposition a sub-committee was entrusted with the preparation of a draft. The resulting document proposed the creation of a commission composed of the delegates of the three riverside States and an Austrian delegate, who should preside by right and possess a casting vote. The privileged position thus reserved for Austria contrasted strangely with that Power's refusal to admit any European interference in regulating the navigation above the Iron Gates. In consequence the riverside States strongly opposed the project, which had to be abandoned. A deadlock seemed to have been arrived at, when a new proposal was put forward by the French delegate, Barrère. It was suggested that the navigation on the Lower Danube should be placed under the supervision of a mixed commission, consisting of the delegates of the three riverside States, an Austrian delegate with right of presidency, and, in addition, a delegate of the European Commission nominated for six months. The latter was to be chosen in alphabetical order according to the French nomenclature of the countries they represented, which meant that during the first year, when all the fundamental regulations were to be laid down, Austria would have been able to exercise an undue preponderance—the first two countries on the list being Allemagne and Autriche. Moreover, the commission was to exercise final judicial power in its own sphere, and was to nominate commissaries entrusted with the executive. That disposition was a grave infringement of the sovereign rights of the riverside States; these States were indeed made subservient to the commission, to which they were bound "to render such assistance as it may need in the fulfilment of its functions." The result was that Roumania energetically opposed the Barrère proposal; Austria declared that only its acceptance would make her consent to the extension of the time-limit of the European Commission; while Russia, always awake to the possibility of some advantageous bargaining, threatened a similar refusal unless she was accorded certain concessions—amounting to the removing of the Kilia arm from under the jurisdiction of the European Commission. England was, above all, anxious to safeguard the existence of that commission, and at her invitation a conference met in London in February, 1883, to consider the situation.

Notwithstanding the fact that the conference was to regulate waterways over which Roumania had sovereign rights, not to speak of her paramount interests in the matter, that country was not allowed to participate. Lord Granville had pleaded for her admission on an equal footing with the other countries; but the conference adopted the contrary view of the German delegate. Under the circumstances the conference resulted in the inevitable compromise: Austria and Russia obtained what they wanted, while England had the satisfaction of seeing the time-limit of the European Commission extended for a period of twenty-one years, with tacit continuation for periods of three years. As Holtzendorff rightly observed: "The London conference has introduced a new fundamental principle with regard to the relations between States, according to which the Great Powers would be entitled to grant a State privileges in the waterways of another—less powerful—State, merely on the ground of political interests." Moreover, while the Paris conference had proclaimed that there should be one uniform navigation charter for the whole of the Danube, the subsequent arrangements arrived at by the Great Powers, culminating in the dispositions of the London conference, had achieved the remarkable progress of instituting no less than eight different régimes on the navigable portion of the Danube. The arrangement was one to which Roumania could not willingly submit, and she justly replied to the Austrian argument of "paramount interests" that "great interests and aspirations after economic and political preponderance do not constitute a legal title, and cannot outweigh positive rights." The fact that Roumania was a factor necessary to the newly formed Triple Alliance for the success of their Eastern policy made it impossible for Austria to press the matter too far. The question of the mixed commission remained once more a pious hope, Russia alone deriving a tangible benefit out of the whole bargaining.

This unsatisfactory situation on the Danube has been emphasised by an evil of a more positive character. Among the greatest natural obstacles to navigation on that river are the rapids at the Iron Gates. The Berlin Congress had given Austria a mandate to execute the necessary works in order to create a free passage, with the right to levy a tax to cover the expenses. That mandate was subsequently transferred to Hungary, who in 1895 at last began the construction along the Serbian shore of a canal, which was finished in 1899. Austrian and Hungarian authorities themselves recognise the absolute inadequacy of the construction. The current is so rapid that even the most powerful Danube steamers have difficulty in passing up stream; while, on the other hand, the canal is not deep enough to carry the traffic, which was, for instance, completely interrupted for two months in 1908 on that account. These natural difficulties are rendered more harmful by a system of onerous fiscal regulations. According to comparative figures given by the *Neue Freie Presse*, of Vienna—which publication is certainly not biassed in favour of Roumanian interests—the duties per ton of cargo at the Iron Gates were eight and a-half times as heavy as the corresponding duties in the Nord-

Digitized by Google

Ostsee canal, though the construction of the latter had necessitated an expenditure five times greater than that for the Iron Gates canal. Moreover, the towage duties were almost three times higher, though the respective distances compared as 1 to 56. The taxes were not uniform, but differed according to the class of goods, with the result that, to quote the Viennese paper again, "the burden falls primarily upon the traffic coming in transit from the Lower Danube up stream," while "the traffic from Austria and Hungary —that is, our export of manufactured goods—suffers less than would have been the case had the duties been imposed on another basis." In view of the opening of the canal, the Roumanian State Monopolies concluded in 1898 a contract with a south-German navigation company for the towage of oil-tank barges to Regensburg. The arrangement worked successfully in 1899, but broke down when the Hungarian Government enforced the new tariff of dues at the Iron Gates. The oil export has been since carried out by rail, and mainly by sea through Constantza. Finally, as a last instance of the way in which things are worked, we have the fact that, though the region in question is partly Roumanian and largely Serbian, Hungary has created national agencies on foreign territory, imposing even the Hungarian language for official use in that connection.

That Austria-Hungary should have constantly endeavoured to exploit the unsettled situation can easily be understood; that the Western Powers should have prolonged it by acquiescence in all sorts of compromises, to the detriment of the small States on the Lower Danube, is difficult to justify. True enough, their interests were concerned only with the mouths and the adjacent portions of the Danube, which they have been able to bring under a beneficent European control—a control from which Austria-Hungary was not the last to benefit. But this very fact, paradoxical though it may seem, has resulted in a serious injustice being done to Roumania; for by the restriction of her sovereign rights in the delta she was unable to enforce reciprocity upon Austria-Hungary. Either the principles of 1815 must be applied all along the Danube under European supervision, or the riverside States, large and small, must be left to deal with the problem in their own way. The duty of the Western Powers in that matter has become more clear since the plans of the Central Powers have found definite expression. Those plans have changed somewhat since the date of the Triple Alliance, when an Austrian writer, Beer, declared that "the possession of both banks of the Danube down to the Black Sea is a political end never to be lost sight of." Now the Germans and the Austrians would be apparently satisfied with that tariff union of which Naumann has become the recognised spokesman. I have mentioned at the beginning of this article some of the preparatory steps now being undertaken to that end. Though the Austrian Danube Navigation Company, which is practically a State concern, has in its hands by far the largest part of the goods and passenger traffic on the Danube, a new and considerable company for navigation on that river was formed in Hungary last year, which is, in its turn, to be subsidised by the Hungarian Government. In view of all these preparations, the Western Powers ought to untie Roumania's hands and let her defend her own interests, unless they are determined to exact at the opportune moment equal treatment, under European control, for all those interested in the navigation on the Danube. The Roumanians will not deprecate such a solution. On the contrary, they hope it will be realised that, if the problem is really to be solved and true progress achieved, such international control ought to be applied also to the Straits, as a natural extension of its application on the Danube: the Dardanelles being for all practical purposes the real mouth of the Danube, as indeed of the whole Black Sea region.

From the United States Embassy it is learned that the Turkish authorities are carefully preserving the graves of the Australian and British soldiers who fell in Gallipoli. All unburied bodies have been interred.

According to a Constantinople telegram the late Field-Marshal von der Goltz will be buried at the German Embassy at Therapia, is being impossible to send the body home to Germany. In this connection it will be remembered that at the time of Von der Goltz's death there were unconfirmed rumours that he had been murdered by a Turk.

THE PRESS ON THE NEAR EAST

The Arab Revolt.

The *Daily Telegraph* (June 23), in a leading article on the Arab revolt, points out that it is of much greater significance now than any previous revolt against the Turk.

The Mohammedans have begun to discover that Mohammed V. is so entirely in the hands of the Germans that he is deprived of all initiative, and has to carry out the commands of his Teutonic taskmasters. To be at once the "head of the faithful" and a puppet of Berlin is in the eyes of the Arabs a degrading position. In their judgment their suzerain lord has finally forfeited his right to control Mecca and Medina and the pilgrimage of pious Mussulmans to these sacred spots. Only those who are conversant with Mohammedan feeling can appreciate the sanctity which surrounds places that are identified with the life of Mohammed, or estimate at its true worth the gravity of the present revolt.

The same article concludes:—

It is impossible, however, not to notice that once more the Germans have made a fatal miscalculation of the psychology of the different races with which they have had to deal. Berlin was confident at the outset of the campaign that she would be able to stir the Islamic world into revolt against the British Empire. We know the efforts that were made on the borders of Egypt and on the north-west frontiers of India. But such success as the Germans have obtained is insignificant, and the only result of their machinations has been to confront their ally, Turkey, with a new and formidable danger.

The *Pall Mall Gazette* (June 22) says:—

The Arab has never made any pretence of loving the Turk, who represented to his mind the banalities without the attractions of civilisation and a settled life. But the present outbreak is evidently on a very different footing from the manifestations of tribal independence with which the satraps of the Hedjaz and Yemen are so familiar. It is headed by the most important indigenous dignitary of Arabia, whose personality and office alike command respect wherever the evening call to prayer turns the prostrations of the faithful towards the Kaaba. And the delivery of such a challenge by the Grand Sherif is a political symptom of no light significance. The fashion in which the Sheikh-ul-Islam rang the knell of Abdul Hamid's power will be recalled by Moslems as they learn that Mecca is in schism from Stamboul.

After paying a tribute to the work of civilisation accomplished by Moor and Saracen in the past, the article concludes:—

It may well be that a fresh dawn is coming for the faith which has given many races a higher morality than their own and has contributed illustrious names to the highest rolls of chivalry. The Western world is well capable of respecting the Moslem virtues, while the more highly developed Islamic peoples have shown themselves far from insusceptible to the tolerant spirit of the modern age. To invert the adage, we may see the grass begin to grow again where the Turkish steed can no longer pass by.

The *Birmingham Post* (June 23) concludes a leading article with the paragraph we quote below:—

Orthodox Islam had nothing in common with the party of Enver Pasha, and the Arabs have seen quite clearly that the war alliance of Turks and Germans has meant the domination of the German. The Arabs of Mecca and Medina, and the whole of the Hejaz, do not want the Kaiser as Khalif. The holy places of Islam must remain under the control and guardianship of Moslems, and if to that end it should be necessary for the Allies to intervene, intervention there must be. The Moslem subjects of Britain, France, and Russia will assuredly look to the Allies to offer any aid the Grand Sherif may need. We have certainly no wish to add to our responsibilities in this war; but the Arabs may find themselves obliged to meet a stronger Turco-German attempt to recover the lost cities than they now expect. The Hejaz railway gives the Turk the means of transporting large forces to the region of revolt, and though his preoccupations on other fronts must influence his decisions, the steps he will take in Arabia must be closely watched. Italy is interested in observing these developments almost as much as the other Allied Powers, for the happenings in Mecca cannot fail to have thrilled the Arabs of Tripoli and its hinterland as they have moved the rest of the Moslem world.

The *Daily News* (June 23), in a leading article, says:—

The Arabs have at all times been restive under Ottoman domination, and nothing but respect for Turkey as the one considerable independent Moslem Power reconciled them to the rôle of subjects of the Sultan. The discovery that Turkish independence is a fiction removes the last argument against the assumption of political independence. . . . It is not inopportune to recall the assurance of the German Wireless in respect of Enver's pilgrimage to Medina three months ago, that "The Arabian population is showing the greatest attachment to the Caliphate." There is little doubt that the illusion of Arab loyalty to Turkey seriously dominated German thought, and failure to stir up a Moslem revolt against British rule has been among the heaviest blows to the Kaiser's hopes. It may yet be his lot . . . . to see the Moslems of Arabia definitely turning to Great Britain for protection and support.

Greece and the Allies.

The *Morning Post* (June 23) blames Sir Edward Grey for having first weakened the pro-Ally party in Greece by conciliating Bulgaria. We quote from the concluding passages of this article, which deals with the Greek acceptance of the Allies' terms:—

If the situation is to be saved in the Balkans at this eleventh hour, it must be both vigilant and strong, and if Sir Edward Grey desires a more lofty motive for action than the interests of his country, let him reflect that he is helping to liberate the Greek people. They want to be on the side of the Allies and against Bulgaria and Turkey. That is at once their interest and their aspiration. They do not desire to be dominated by Germany and penetrated by Bulgaria. They want a national policy based on their independence and their aspirations. They want, in fact, the policy of the national leader, M. Venizelos. Therefore, it is the business of Sir Edward Grey to see that they have this policy—which, incidentally, is the policy favourable to the Allies. They might have had it long ago if our Foreign Office had acted on the simple rule of being the friends of our friends and the enemies of our enemies.

The *Times*, in a leading article, says:—

England, France, and Russia presented a Joint Note to Greece two days ago, and Italy signified to the Greek Government her assent to the document. Complete acceptance of all the demands it contained immediately followed. That is a lesson in war diplomacy in the Balkans, and, indeed, in war diplomacy in general, which we hope our *doctrinaires* will take to heart. . . . . The Note, we are glad to see, appears fully to accept the view that the guaranteeing Powers are responsible for the liberties of the Greek people, and that it is their right, and even their duty, to protest against the violation of these liberties. It declares that the Constitution has not been observed, and that the present Chamber does not represent the opinion of the country. We pressed these views strongly upon Ministers seven months ago. Now that they have been adopted at last, we trust that there will not be any infirmity of purpose in carrying out the policy which they dictate. The situation in the Balkans is too important to admit of shilly-shallying.

The *Daily Chronicle* (June 23), in a leading article on the Note and its result, says:—

The little clique of pro-Germans who, under the King's auspices, have so long usurped an unconstitutional control of Greek affairs is thus hurried off the stage—let us hope, not to return. The King's own position is ambiguous. If he is really the pure neutralist which he professes to be, he has now the opportunity of proving it. But until he has done so both the Greek people and the Allied Powers would do well to remember his record last summer.

The *Manchester Guardian* (June 23) says:—

We are glad that our position in Greece has at last been put on ground which is unassailable except by an open assault on the Greek Constitution. Hitherto we have been fighting our enemies in the Greek Government by putting pressure on the Greek people, a process which has been the more painful to them and to us because there was abundant reason to think that they were our friends. The new policy is to fight our enemies in the Greek Government by helping our friends to obtain their rights.

The *Westminster Gazette* says that the humiliation which the pro-German party in Athens has suffered does not touch the great majority of the people:—

Their sympathies will be wholly with the Allies in their protest against the entrance of Bulgarian forces into Greece and their occupation of strategic points with the connivance of the Greek Government. From the Greek point of view, there is a good deal to be said for the policy of benevolent neutrality as against intervention on the side of the Allies, but there is nothing at all to be said for Greek connivance with Bulgarian aggression. It is time that this situation was cleared up, in the interest of the Greeks as well as of the Allies, and the solution which is now to be found will, we are confident, be satisfactory to both of them.

The Future of Asiatic Turkey.

Mr. J. Ellis Barker discusses the above question at considerable length in an article contributed to the *Nineteenth Century* (June). In the opening paragraphs of his article Mr. Barker says that "The question of Asiatic Turkey may convulse the world in a series of devastating wars unless it be solved together with the other great questions which will come up for settlement at the Peace Congress." He thinks it not improbable that various Powers may propose to shelve the problem of Asiatic Turkey at the peace table:—

That attitude is understandable, but it should not deter those statesmen who realise the portent and the peril of the Turco-Asiatic problem, and the danger of leaving it in abeyance, from impressing upon their less well-informed colleagues the necessity of a settlement.

The question of Asiatic Turkey is undoubtedly a far more difficult question than that of Constantinople. Constantinople and the Straits are . . . not the key to the Dominion of the World, as Napoleon the First asserted, but merely the key to the Black Sea. Former generations, uncritically repeating Napoleon's celebrated dictum, have greatly overrated the strategical importance of that wonderful site. The importance and value of Asiatic Turkey, on the other hand, can scarcely be exaggerated, for it occupies undoubtedly the most important strategical position in the world. It forms the nucleus and centre of the Old World. It separates, and at the same time connects, Europe, Asia, and Africa, three continents which are inhabited by approximately nine-tenths of the human race.

If we wish clearly to understand the importance of Asiatic Turkey we must study its position not only from the strategical point of view, but also from the religio-political and from the economic points of view.

He points out that the acquisition of Asia Minor has been urged by many eminent Germans, both writers and men of action, and proceeds:—

Let us imagine the Turkish Government in Asia replaced by that of a strong and ambitious military Power. Such a Power would develop the country in every way and would double and treble its population. It would open the country in every direction by means of railways. It would construct lines capable of carrying a vast amount of traffic towards the Russian, Egyptian, and Persian frontiers, and it would continue the last of these lines, "on economic grounds," through Persia towards Baluchistan, towards India. It would create a powerful navy and construct strong naval bases on the shores of the Black Sea and near the southern openings of the Red Sea and of the Persian Gulf. Having done all this, it would be able to throw, at the shortest notice, an immense army either across the Bosphorus into Constantinople, or across the Suez Canal into Egypt, or across Persia into India. A strong European military Power, firmly settled in Asiatic Turkey, disposing of 2,000,000 Turkish-Asiatic soldiers and of a sufficiency of railways and of a fleet, could make Constantinople and Egypt almost untenable.

The writer examines at length the various schemes which might be enforced in regard to Asia Minor. The question is too fully dealt with to be quoted adequately, and the author himself quotes extensively from other writers; but we reproduce the paragraphs in which a European guardianship of the territory is given as the only feasible solution of the question:—

If the arguments given in these pages should, after a careful scrutiny, be found correct, it would appear that the problem of Asiatic Turkey can be solved only by placing the country under a European guardianship, and the question arises whether several Powers or a single one should fill this office. As several Powers possess strong interests in Asiatic Turkey, and as the country is of the greatest strategical importance, the ideal solution would seem to be a joint guardianship exercised by some body either on behalf of all Europe or on behalf of the victorious Entente Powers. It is questionable, however, whether the Powers exercising control over one of the most valuable and important territories in the world would be able to act in harmony.

Natura non facit saltum. A guardianship should not be imposed upon Turkey by violent means. It might be exercised in the form of the strictest financial control. A European financial authority might be made to control and direct the entire expenditure of Asiatic Turkey and might by purely financial means keep the country in order and shape its policy and internal development.

In his concluding paragraph the writer turns to the question as to which Power should be chosen to act as guardian:—

Russia will probably obtain considerable territory from Germany and Austria-Hungary and may receive Constantinople. Great Britain will obtain practically no material compensation, for the German Colonies can scarcely be considered as such. Great Britain has not fought for territory but for peace. The neutralisation of Asiatic Turkey appears to be the most necessary step for preventing the outbreak of another world-war. While Russia and France demand valuable territories as a reward, Great Britain is surely entitled to demand stability and peace as a compensation. No Englishman has expressed the wish that Great Britain should acquire Asiatic Turkey. The aim of the British Government and of all Europe should be to enable Turkey to govern herself. But in order to be able to govern herself Turkey must be taught the art of government, and Great Britain might be her teacher.

It seems necessary for the peace of the world that Asiatic Turkey in its entirety should be neutralised, and it seems likely that its neutrality can be maintained only if order and good government are introduced into the country under the auspices of a strong but non-military and unaggressive state, such as Great Britain, which is not likely ever to use the unrivalled position occupied by the Turkish provinces as a base for attacking the neighbouring Powers with a large army. A British guardianship would, of course, not prevent French, Russian, Italian, and Greek capital and labour participating with England in the government and economic development of the country, in accordance with the policy laid down by the European Powers in concert and executed by Great Britain as their appointed guardian. Thus Russia might develop Armenia, France Syria and Cilicia, Italy the district of Adalia, and Greece that of Smyrna.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The second article on "The Real Germany," published in Saturday's *Times* and partly reproduced elsewhere in this issue of THE NEAR EAST, offers more than usual interest to students of Near Eastern subjects. It shows how Pan-Germanism, advocating the "settling of the Eastern question in favour of Germany," was the real cause of the war, and how, as a result of hostilities up to the present, part of the question has been satisfactorily solved (in German eyes) by the Teuton control of the highway from Berlin to Constantinople, as symbolised by the Balkan Express. "They (says the writer) do not for a moment believe that their mastery of the highway to the East can now be seriously challenged." Consequently, "they are confident that, as soon as the enemy shall have recognised defeat and left Germany at the head of an immense Zollverein stretching from Antwerp to the Persian Gulf, no power on earth and no British blockade will ever be able to repeat a policy of 'starving Germany.'"

***

This certainly bears out—as do the other conclusions arrived at by the author in the course of his instructive article—my contention, namely, that the first and greatest ambition of the Teutons is the economic control of the Near East. What is more, they are going about it with all German thoroughness, and, not content with the railed highway, they are developing even now and with feverish haste the many navigable rivers and waterways which can or do unite the mouth of the Danube with the Rhine and the Elbe and which will enable "vessels of 1,000 tons to pass from Antwerp, Hamburg, Bremen, or any other port on any large German river or canal to the Black Sea by way of the Danube." Needless to say, it will be our duty to annihilate these schemes and plans, and to erect and support a buffer State in the Near East which will make of the Danube a free waterway utterly beyond German control.

***

But if, as I believe, Prussian militarism and Pan-German economic machinations will only cease to be a menace to Europe when the *Drang nach Osten* has been permanently knocked out of the Boche head, it is no less true that greater urgency attaches to the cutting off of German access to the Near East than most people realise. It is, in fact, practically a hopeless task for our Navy to try to starve the enemy when he gets the greater part of his foodstuffs and his raw material from the East. Therefore, the highway by which he gets them must be cut in twain with all possible speed. For not until then will he feel a serious shortage of supplies and finally realise that his game is up. As for post-bellum arangements, it cannot be insisted on too frequently in these columns that it must be our sacred duty to bar Germany and Austria from any and all economic as well as political participation in the development of the Near and Middle East.

***

We must wait and see how the new Greek Cabinet shapes to its difficult task of restoring confidence at home and abroad before we indulge in speculations regarding the financial future of the country. With the departure of the old and notoriously unneutral Government will disappear the majority of the causes which have led to the bad relations between the Powers of the Entente and the Hellenic Government, and it will now be possible to reconstruct the situation. The dismissed Prime Minister appears to have laboured under the mistaken impression that the power which he possessed was his to wield as he chose. It is a pity that the Entente did not act definitely months ago, for it has been obvious for a long time that action would be necessary to remedy an absolutely impossible situation. It was unfortunate that, in bringing to book the delinquent Government some hardship was inflicted upon an unoffending people, but I believe Greeks know the British and the French well enough to trust implicitly their good faith, and to look to the future with confidence.

***

There are many reasons why the Allies would prefer to see the Greeks prosperous, politically and materially; indeed, for something like eighty years they have been employed actively in assisting in the development of the country, its trade, and its standing in Europe. No true Greek would attempt to deny that his country owes its existence as a free nation to these efforts, and there is not much reason to doubt that the majority of Greeks will be prepared to subscribe to this view. It is probable that in the course of the next few weeks additional evidence will be forthcoming of the goodwill of the Allies. Indeed, we learn to-day that the British and French Ministers have already recommended their respective Governments to make an advance to the Greek Government to tide over the most pressing difficulties. Greek finance is in a condition of almost hopeless chaos; the economic situation is all wrong, and trade and industry are all but paralysed. The maritime restrictions imposed by the Allies did not improve these conditions, of course, and much has now to be done in the way of reconstruction and reorganisation. Obviously, an insolvent and down-at-heel Government in Greece would be a serious complication for the Allies when it comes to a settlement in the Balkans—and that settlement must come before a permanent peace can be established—and, as obviously, the restoration of Greek stability is a task which the Allies alone can accomplish, I think that no greater guarantee of the *bonâ fides* of the Powers of the Entente could be given than this.

***

Greek friends with Egyptian connections tell me that the restrictions imposed upon Greek trade caused grave anxiety in the tobacco world. Not that there was much likelihood of a shortage in Egypt, because the stocks in the Customs House stores at Alexandria are large enough to last for a year; but the Greeks themselves keep large holdings in Greece, and of course, with no export facilities open, they were threatened with disaster. It is said that in the first week of June imports of Greek tobacco at Alexandria amounted only to 4,000 packages, each of from thirty to forty okes. In May the imports were also considerably less than in previous months, the tobacco received from the Piræus and Volos not exceeding 10,000 packages.

If anyone in this world knows Egypt and its complexities it is Lord Milner. His views of the conditions now existing in that country, which were stated at the general meeting of the Mortgage Company of Egypt last week, will be read with confidence as to their accuracy and with appreciation as to their clear-sighted and robust faith. Egypt was hit badly financially by the sudden outbreak of the war and the exceptionally bad cotton crop season which immediately succeeded it, and several years will be needed to effect a complete recovery; but Lord Milner was able to outline a wonderful story of progress made in the direction of normality. The report he had to make of the company's affairs was not all honey, of course; he admitted elements of uncertainty regarding the future—it could scarcely be otherwise in all the circumstances—but he was able to present many gratifying contrasts.

***

The Roumanian Ministry of Agriculture is moving with the times. According to a Bucharest financial paper three plants for producing crystallized copper sulphate have been installed under the auspices of the Ministry at Jassy, Bouitea, and Campina. It is said that the sulphate is excellent in quality, and the outturn will amount to about 5,000 kilogs. (five tons) per day. In addition eight plants have been installed in the principal viticultural districts to manufacture liquid copper sulphate from burnt copper pyrites, which are obtained from the Altan-Tepe (Dobrogea) mine. I have seen nothing to indicate the output capacity of these installations, but it is said that 100 tons of the pyrites will produce about one-twelfth of the quantity of sulphate. Which is an excellent study in the utilisation of waste.

***

The cable received in London last week intimating that the operations of the Spies Petroleum Company at Grozny had been interrupted temporarily, recalls an article in the *Board of Trade Journal* of April 20. It was then stated that the production of the Grozny fields in 1915 had decreased by nearly 1,200,000 barrels—nearly 10,000,000 poods; that only "24,000 ft. were drilled, as compared with 39,500 ft. during the preceding year. It is considered that this decrease in the drilling activity will have a very harmful effect on production in the current year." There was, perhaps, no connection to be traced between these conditions and the recent interruption. The trouble was connected with the eternal labour question as a matter of fact. Fortunately, it was only temporary, for following a blank week ended June 11 there was an outturn in the week ended June 18 of 5,180 poods. For the rest, "no details have been received."

***

Since that cable was published reassuring news has been received. The latest cable report reads: — "Operations at Grozny have again become normal, production for the 22nd inst. being 28,125 poods." All is well that ends well, and I hope that the only departure from normality in the Grozny fields in future will be in the direction of increased activity, and in the improvement in the conditions to which the article I have quoted drew attention.

Fuel in Turkey.

II.—OIL—Early Use of Bitumen in Turkey and Egypt.

We continue this week extracts from the paper to be read at the Arizona meeting of the American Institute of Mining Engineers in September, by Mr. Leon Dominian, of New York, the well known authority on mining questions in the Ottoman Empire :—

The occurrence of hydrocarbons in Syria and Mesopotamia was known to the ancients, to whom the products had commercial value. The "fountains" of Is—the modern Hit—were exploited by the Babylonians who used the bitumen as a mortar to bind the sun-dried bricks with which public and private buildings were constructed. This cementing substance is probably the "slime" of the Old Testament. Ruins of edifices, as well as statues, bear evidence to-day of the enduring qualities of this binder. It is believed that the bitumen was applied in the plastic state and then gradual induration took place by the evaporation of a portion of the bituminous oils. The testimony of Herodotus on this point is instructive. The father of history describes the construction of a wall for a moat surrounding Babylon for which hot bitumen was used throughout as cement. He states that, "The bitumen used in the work was brought to Babylon from the Is, a small stream which flows into the Euphrates at the point where the city of the same name stands, eight days journey from Babylon." He also adds that lumps of bitumen are found in great abundance in this river.

Binding Property.

The binding property of bitumen was probably widely recognized by the Babylonians. Under the title of "Discoveries in Babylonia," T. G. Pinches alludes to the discovery of a Semitic head with ivory eyeballs inserted by means of bitumen in the eye-sockets made to receive them. The embalmers of Egypt consumed large quantities of bitumen in the process of mummification. The substance was imported chiefly from Mesopotamia, although it was also obtained from Syria. It is interesting to note in this connection the derivation of the word mummy from the Coptic root "mum" signifying bitumen. Pliny describes the Babylonian plains as presenting the aspect of a flaming basin. Greek writers refer to the hydrocarbons of Mesopotamia, and Strabo cites Eratosthenes when alluding to the abundance of asphalt in Babylonia, as well as to its uses as a mortar and in caulking rafts and river boats. In the old civilization of the Mesopotamia basin, bitumen was used in ornamentation. Alabaster vases inlaid with bitumen spread in fanciful geometrical designs were recovered from the ruins of Ur-Engur's temple. Pottery marked with characters in bitumen was found in near-by localities. The recognition of the value of bitumen as a commodity of commercial value is attested by the fact that part of the tribute paid to Thothmes III. at Karnak from Mesopotamian cities consisted of 2,040 minæ of "sift" bitumen sent by the chief of "Ist." To-day the substance is known by the name of "zift," not only in Mesopotamia but throughout Turkey. Later proof of the value of these hydrocarbon deposits to the ancients was well set forth in the year 311 B.C. when Antigonus sent Hieronymus of Cardia with an army for the purpose of taking the asphalt works of the Dead Sea out of the hands of the Nabatei. These dwellers of the Syrian and Arabian frontiers repelled the invaders and continued their exploitation.

The description of Hit by an English traveller, who probably visited the locality at the close of the 17th or the beginning of the 18th century, has been recorded by Rawlinson. The text runs as follows :—"Having spent three days and better, from the ruins of old Babylon we came unto a town called Ait, inhabited only by Arabians, but very ruinous. Near unto which town is a valley of pitch, very marvellous to behold, and a thing almost incredible wherein are many springs throwing out abundantly a kind of black substance like unto tar and pitch, which serveth all the countries thereabouts to make staunch their bark and boats. Every one of which springs maketh a noise like a smith's forge in puffing and blowing out the matter, which never ceaseth night or day, and the noise is heard a mile off, swallowing all the weighty things that come upon it. The Moors call it 'the mouth of Hell.'"

Oil in Syria.

Indications of oil in the Yarmuk River valley south-east of Lake Tiberias had always been reported to foreigners by natives. In 1912 oil-drilling was started near Makarim on the Hejaz Railroad by the Syrian Exploration Company. The locality lies in the heart of a desert region of contact between preglacial lavas and Upper Cretaceous rocks. It is easily attained from Haifa by rail across the plain of Esdraelon and the Jordan River valley. Drilling is somewhat hampered by the necessity of having to send to Haifa whenever parts of the machinery break. Fevers which prevail in the region, and to which the natives themselves do not appear to be immune, also constitute drawbacks. In June, 1914, drilling had attained a depth of 600 ft. with a noticeable increase in the smell of petroleum. It is expected that the plan will be encountered beyond 1,000 ft. Both the rotary and cable systems are used in drilling, although the hardness of the rocks is in favour of the use of the latter method. The geological column in this locality is represented by limestone at the surface. Sandstone occurs below and in the first 300 ft. It is followed by hard slates at about 450 ft. Other Syrian localities from which petroleum is reported are the Ajiloon, Haraun, and El Kork districts.

Mesopotamia.

The oil fields of Mesopotamia lie in the area of transition between the plateau of Iran and the Mesopotamian depression. The occurrences of hydrocarbons are encountered north of latitude 30 N. in the valleys of the Lower Euphrates, Tigris, and Karun Rivers. Thus defined they fall within the three Turkish vilayets of Mosul, Bagdad, and Busreh, and in the Persian province of Arabistan. The liquid fuel appears to exist also in the mountainous region lying north-east of Mesopotamia as far as the Black Sea coast.

The oil industry is in a higher stage of development within the Persian area than in Turkey. Nevertheless, the Turkish field is considerably larger than the Persian, which is restricted to the valley of the Karun.

The oil-bearing lands extend in a general N.-W.—S.-E. band parallel to a line of Tertiary folds rising on its eastern border. Here, as elsewhere in Asia, oil is found at the depressed extremities of mountain chains wherever the anticlinal slopes descend to the level and proximity of the sea.

This elongated basin abuts against well-defined limestone ridges which constitute the westernmost outliers of the Kurdish and Pusht-i-Koh Mountains. These successive walls of limestone begin north-east of Mosul, and are prolonged with a south-easterly trend beyond Alkosh and Sheik Adi. A range of the same connects Girdamanik, on the Great Zab, with Keui, on the Lesser Zab. The Kara-dagh, west of the Suleymanieh district, forms the watershed between the last-mentioned river and the Dyala. Proceeding farther west, the traveller attains the lowland area, which comprises the towns of Kasr-i-Shiru and Zohab.

West of the Pusht-i-Koh uplift the limestone ridges are replaced by a line of sandstone hills of lower elevation, which extend along a broad and undulating country formed by conglomerates, and characterising the environs of Mosul. The Karachak and Baravan Mountains are types of these isolated sandstone ridges, rising above a plain of conglomerates. The Jebel Hamrin, which rises to a height of 600 ft. north of Mendali, and merges in the Tigris plains beyond Kala-Serghat, also consists of sandstones and conglomerates. These different rocks disappear below Hit and Tekrit, where the great alluvial plain of the Lower Tigris and Euphrates begins. This deltaic area extends to the Persian Gulf.

The oil generally occurs in Miocene rocks, which consist of brightly coloured sandstones, marls, and limestones permeated with salt. As a rule, the petroleum and bitumen basins are found in soft whitish limestones. Veins and seams of gypsum, due to epigenetic modifications of carbonate of lime in the presence of abundant sulphur and sulphurous waters, are frequent. The usual accompaniment of sulphurous springs, often thermal, can be observed. The natives attribute curative properties to these sulphurous manifestations.

The northernmost of these Mesopotamian valley occurrences is found at Harbol, in the Caza of Sakho, sixty miles north of Mosul, within the easternmost extension of a patch of Eocene country. Thence southward to the shores of the Persian Gulf natural oil-pits are numerous.

At Hamman Ali, fifteen miles south of Mosul, a number of small basins are found at a distance of half a mile from the right bank of the Tigris. Here petroleum can be collected by skimming the pools, while threads of ceaselessly oozing bitumen can likewise be obtained.

To the south-west of Alijak, on the Great Zab, an elongated pit, about 120 m. in length, contains petroleum on the surface of its waters. The oil at this locality is reputed to be poor in quality, and the natives make no attempt to gather it. Springs are also reported immediately north of Tell Yazer, on the Chorr Derrah River east of Nimroud.

(To be continued.)

DEVELOPMENT OF AGADIR.

The following interesting account of the development of Agadir appeared recently in the *Morning Post* from its correspondent in Mogador (dated May 25) :—

It is probable that the cessation of hostilities will be almost immediately followed by the re-opening to seaborne commerce of an old and well-placed seaport on the Sus coast. Well-informed people no longer say "if" Agadir is opened, but "when." The grounds for postponement were based on obvious military necessity during the early stages of the war. It was by no means certain that an enemy squadron might not be left on the Atlantic quite strong enough to give trouble from the sea, while the possibility still existed of difficulties arising in connection with disaffected clans up country inspired by German agents, who towards the Christmas of 1914 were receiving significant messages by carrier pigeon post to "await deliverance from the ocean, *bahar el kebir*." When considering how the birds got through and whence they came one must remember that not a few German sympathisers are still enjoying the hospitality of the Spanish zone, and that long before hostilities commenced scores of pigeons had been trained and used to carry urgent commercial news from Marrakesh and Tarudant to Agadir. Indeed, I had the honour of personal acquaintance with one of their trainers, whose fingers, badly pecked by his ill-tempered little pupils, gave me the clue to an interesting discovery. This may explain the fact that all the Germans in this part of Morocco knew of their country being at war two whole days before the fact reached us by newspaper or telegram.

Morocco has enjoyed absolute immunity from the horrors of actual warfare, and the garrison at Agadir has laboured during the past summer to render the place habitable and useful for the purposes of commercial enterprise. The French *poilu*, particularly of the Midi, is a born roadmaker, and the work already accomplished by him in this direction is distinctly valuable. From confidential sources I learn that Agadir, with Casablanca, is to be given first place on the list of harbour works to be undertaken, a decision which indicates that the authorities have realised the unique advantages of the former port as a channel for tapping the resources of the Sus provinces. A considerable amount of British, French, and other capital has been invested at Agadir and its immediate neighbourhood in land, mainly with the intention of occupying it for trade and industrial purposes.

THE OIL INDUSTRY.

When all the circumstances of the last two years have been taken into account, the position of the oil-producing industry cannot well be described as adverse. True, there have been fluctuations, and fluctuations will continue, but they have not all been on the wrong side; many of the concerns in which readers of THE NEAR EAST are interested have shown no deterioration as money-earners; their production has not decreased, and although cost of working has increased from many causes investors continue to secure a reasonable return on capital. What more can be said or asked for?

One of the concerns over which a shadow appears to be forming is Ural Caspians. At the meeting last week the chairman referred to a circumstance which threatened to operate greatly to the company's disadvantage. By a recent Russian decree a maximum has been fixed of 45 copecks for crude oil, because, owing to geographical conditions, the concern has to sell at about six copecks below Baku price. The cost of pumping from Dossor to Rakusha (the port) runs up to three copecks per pood, and it does seem unfair that the Ural Caspians should be bound by the Baku price. Rouble exchange is another disturbing factor, while the excess profits taxation, both in Russia and in England, has also to be reckoned with. As a set-off to these undoubted handicaps, we have the fact that the Russian Government has now sanctioned drilling over a wider area, and the output of the Makat field has largely increased. Although this year's profits may fall below the average the outlook may be described as encouraging.
