A place in the Grand Alliance has long been reserved for Roumania; but the welcome which she now receives from the Allies is none the less whole-hearted on that account. Much water has flowed down the Danube since the late King Carol summoned a Crown Council on August 3, 1914, to discuss the situation created by the declaration of war between the Central Powers and Russia. He was a Hohenzollern, but he was true to the country of his adoption. Having been throughout his reign his own Foreign Minister, he had come to regard his personal understanding with Germany and Austria-Hungary as the only policy consistent with Roumania's interests, for it seemed dictated at once by statesmanship and by military instinct. With both the European groups Roumania had questions outstanding, and a quarrel between them offered the sole chance of her coming into her own. King Carol was too shrewd a statesman not to realise that sooner or later the Dual Monarchy must fall to pieces; but he had satisfied himself that it would outlast his generation, and he was convinced that in this war German preparation and organisation would triumph over the crude undeveloped strength of Russia. At that moment, be it remembered, Great Britain had not declared her intentions. Roumania, if she had been guided by her ruler, would have thrown in her lot unreservedly with the Central Powers and claimed Bessarabia as the reward for her services. At a later date, King Carol trusted, she could make her peace with Russia and be ready to strike for her rights in Transylvania when the break-up of Austria-Hungary seemed imminent. The decision of the Crown Council proved that he was out of touch with Roumanian public opinion. He had failed to appreciate the intensity of the feeling against Austria-Hungary, and had not grasped the fact that a nation acts more readily from impulse than in accordance with some far-sighted policy. The leaders of Roumania refused to side with the Central Powers. There was no special reason why at that moment the country should take part in the quarrel between the Central Powers and Russia, and therefore the natural alternative to King Carol's proposal was not that it should at once join the Entente, but that the Roumanian Government should proclaim its neutrality. This course was adopted, and it was not until the progress of hostilities brought out the real issues of the European struggle that Roumania felt called upon to reconsider her decision.

There is a natural tendency among those who have borne the heat and burden of the day to find fault with those whose contribution is only timed from the eleventh hour. For this reason, and because Roumania's entry into the Grand Alliance has been long expected, the feeling has gained ground that it has been unduly delayed. It would be an injustice to our new Ally to allow this view to go unchallenged. Roumania's belief in the justice of her declaration of neutrality received striking confirmation when the Russian Government, misunderstanding, in common with its Allies, the situation in the Balkans, and overwhelmed by the formidable nature of the task it had on hand, made lavish promises to the Bucharest Government in return for the maintenance of that neutrality. As the war progressed Roumania found it impossible to continue the pose of a disinterested spectator. The quarrel over Serbia had resolved itself into a conflict over fundamental principles in which Roumania was deeply interested. The more the Allies made it clear that it was their intention to seek a solution of Europe's troubles in the permanent enforcement of the principle of nationality, the more necessary did it become for Roumania to prove how vitally this very question affected her. Her readiness to join in the war was made known to the Allies at an early date, and it was not altogether unnatural that she should consider herself entitled to a bigger reward for her military co-operation than had been offered for her maintenance of neutrality. But in the meantime the Russian Government had benefited by a fresh orientation of the position in Europe. It was not prepared to concede the Roumanian demands, and, in view of the success attending Russian arms in Galicia, was not altogether convinced of the necessity for Roumanian assistance. There is no need to recapitulate the whole story of the negotiations between Roumania and the Allies. They have been prolonged, partly from misunderstandings on both sides, and partly for sound military reasons. At one time the Bucharest Government hoped that its own declaration of war would coincide with that of Italy. But Italy took the step without notifying its intention to Roumania. Robbed of this opportunity, the latter decided that her course of action should be determined solely by a very critical consideration of her own interests. As a coincidence, it will be noted that Roumania's declaration of war against Austria-Hungary ultimately synchronised with Italy's declaration against Germany. It is more than probable that the postponement of Roumania's participation in the war has been in the interest of the Allies as well as in her own. Whether her support would have sufficed to prevent the Russian retreat last year must be doubted. Certain is it that Roumania was not then in a position to carry on a long war, and the Allies would have run the risk of seeing her overwhelmed, while they were unable to help her, and thus they would have been permanently deprived of the help they can now count upon from the Roumanian Army.

Unless all the signs of the times are at fault, it is difficult to overestimate the value of Roumania's co-operation at this juncture. She enters the war with the forces she is prepared to place in the field admirably equipped and with great traditions to uphold. Her chief enemy is across the Carpathians; but the co-ordination of the Allies' efforts will require her to co-operate with the movement now launched from Macedonia, unless, indeed, Russian troops are available to be dispatched to Bulgaria from the north, while the Roumanian Army is left free to confine its attention to one front. The value of the wedge driven between the Central Powers and their vassal States south of the Danube has become an axiom in the strategy of the Allies. Neither Bulgaria nor Turkey is likely to maintain a prolonged resistance when once cut off from Austro-German support. Their elimination from the struggle will in turn deal the first decisive blow to the confidence felt or affected by Germany in ultimate victory. The significance of their two Allies to the Central Powers has consisted not so much in the accession to the total fighting strength of the combination—valuable as that has been—but in the appearance of solidarity attaching to a united and well-organised Central European Block, which has gone far to confirm the belief in the impossibility of defeat at the hands of the Allies. Roumania's entry into the struggle should quickly be the means of shattering this house of cards, for Bulgaria's capacity to resist attack on two fronts must be strictly limited, and her defection will be the beginning of the end. But with the declaration of war the great bulk of the Roumanian people will be looking beyond the immediate military prospects to the dawn of the Greater Roumania, which will come with the inclusion in the kingdom of their kinsmen in Transylvania. The national goal is at last in sight.

THE NEO-TURANIAN MOVEMENT IN TURKEY.

(From a Correspondent.)

This important movement, known in Turkey as Yeni-Turan, "New Turan," first became noticeable in Constantinople in 1913; allusions to it are now beginning to appear in various quarters. It may be defined as a movement in favour of Turkish nationality and away from Islam. Its objects are said to be as follows:—(1) To make the Turkish national soul independent of Islam (the phrase is that of Dr. Alfred Nossig, reporting in *Der Tag* an interview with the Committee of Union and Progress); (2) the development of the military spirit among the Turks; (3) the establishment of good commercial *and other* relations with the Moslems of Northern Persia (Azerbaijan), Russian Asia, and Southern Russia; and (4) the freeing of the Turkish language from Arab and Persian elements. It has, however, another object, not quite so openly avowed—the denationalization of the Arabs. The design of its authors is to make the Ottoman Turk think of himself primarily as a Turk and only secondarily as a Moslem. The movement is worked by a society subventioned by the State, known as Turk Oidjaghy, "The Society of the Turkish Hearth," and an important propaganda is being carried on; the younger generation are to be influenced by the creation of Neo-Turanian schools; the teaching of the history of the Turkish and other "Turanian" races in the higher schools is to be improved; and a large force of Turkish boy scouts (Izdjis), under the auspices of Enver Pasha, has been created. These boys receive a military training intended to fit them in due course for the army; their badges and titles are purely Turkish and Pre-Islamic, and boys with Arab names receive Turkish scout-names. There is also a literary side to the movement; many scientific and historical works are being translated into simplified Turkish; it was proposed also to translate the Koran, but this was dropped owing to the opposition of the Ulema. Numerous works in support of the movement have also been published, including a novel, "Yeni-Turan," written by the suffragist Halida Hanum in favour of the movement and of women's rights. The combination of women's rights with a "Back to Turan" movement will appear notable to those who reflect that the Turanian races have probably in their time worked more harm to women than all the rest of the world put together.

The movement is said to have had its origin in several causes. One is the language question; the composite Turkish language, written in Arab characters, is becoming more and more unintelligible to the ordinary man. With this we are not here concerned. Another cause is found in the Moslems of Russia and the Caucasus, who urged the strong "Pan-Islamic" element among the the Young Turks to acquire the sympathies of the Moslems of Central Asia, Northern Persia, and the Caucasus, as they either were, or could be, converted into "Turks"; otherwise, the Ottoman Turks, even if they could successfully exploit Pan-Islamism, would eventually be absorbed by the Arabs. A third cause was a book. The time being ripe, the actual genesis of the movement appears to have been the perusal by Nazim Bey, the Secretary-General of the Committee of Union and Progress, and said to be its strongest member, of M. Leon Cahun's historical work "Introduction à l'histoire de l'Asie; Turcs et Mongols; des origines à 1405" (1896). This work, crowned by the French Academy, is at once learned and well documented, and also brilliantly, even fascinatingly written; whether some of its judgments are sound is another matter.

It is clear that a movement which aims at making the "Turkish national soul independent of Islam" must be an important matter, not only to all the great Moslem communities, but also to France, Russia, Italy, and Britain, who all govern many Moslem subjects; and it merits, and will doubtless receive, much attention both in the East and the West. The movement is said to appeal particularly to the Young Turks on the ground, briefly put, of Vambery's old thesis, that Islam is anti-national. Islam, they say, has tended, in combination with Arab, Persian, Greek, and Byzantine influences and traditions, to convert the Turks into a race of "Moslem Levantines" without any "Kultur" of their own. This appears to be such a reversal of the facts that it is worth while considering what they are and where they lead to. What *is* the Turkish national soul, and what is its relation to Islam?

At the Christian era Turkish tribes stretched across Asia from China to the Oxus. Their religion, if any, was Shamanism; their culture, the simple rules imposed on all nomads of Central Asia by their geographical and economical environment. The distinguishing characteristic of their existence was their military aptitude and virtues; they were the universal condottieri; their honour was the honour of the mercenary, allegiance to him who led and fed them. Beyond this the Turk, of himself, has never gone. He has founded no religion of his own, evolved no civilisation. No Turk has ever even tried to unite the whole race, though the Mongol Ghenghiz dreamt of it. He has merely been the great borrower, taking the impress in turn of every society with which he has been in contact—China, Persia, Arabia, East Rome, Germany. It is not the case that his borrowings, of which Islam is the chief, have prevented his attaining to any "Kultur" of his own; the fact is that he has never shown any symptoms of forming any culture apart from his borrowings.

And of all the Turki races the Ottoman is the least representative. It is not at all the case that they constitute a definite people, governing conquered races and territory. This was once largely true of the Ottoman in Europe and Armenia. But of the kernel of the Ottoman power, Anatolia, it has not been true for centuries. Omitting the nomad Yuruks and Turkmen, there is little of the Turki about the Anatolian Turk of to-day. His Turkish nationality is a political expression; a dwindling modicum of Turkish blood mingles with a large measure of the blood of many peoples who were old when Constantinople was founded—Greeks and Phrygians, Galatians and Isaurians, Carians and Hittites. It is his European blood which has turned him to agriculture; his brief sea power in the sixteenth century was sustained by admirals of European blood; differently dressed, he looks like a European. Two things have kept him together as a people: Islam and his habit of military obedience. He is not interested in the other borrowings of his rulers, in Persian speculation, or Byzantine rules for dealing with younger brothers of the Blood; but for Islam he does, in a way, care; and for all essential purposes Islam, however much altered in the borrowing, *is* the Turkish culture, the thing that has held the State together. For if the Turk cares for Islam, it is because there is involved with it his strongest feeling, his military virtue. He adopted Islam at the word of command; he has not reasoned or felt deeply on the subject; but throughout history he has fought for those who did; he has been Islam's sword. Take away Islam, and what is left of Turkey?

Turan is left, say the Neo-Turanians, and Islam also will remain in a new form, as a national religion. But Turan has nothing creative to show, nothing of its own. Its history has been a history of destruction. The Yue-chi, destroying the Greek settlements in Bactria; the Huns, attempting to bleed both Romes to death; the Avars, attempting by the most abominable methods to destroy the young Slav race in its cradle; Hulagu, destroying the canals of Babylonia and reducing to its present sterility the most fertile region of the globe; the Ottomans, destroying that Byzantine culture on which they were actually feeding—these are Turan. Attila, the "Scourge of God"; Ghenghiz at Bokhara, proclaiming himself the Wrath of the Most High, the Rod of God's anger—these are Turan. The German, driving Belgian captives before him into battle, merely copied what was done daily by Mongols, Avars, Huns, save that these gave their victims swords. And this is where one may express distrust of some of M. Cahun's judgments. The world will hardly believe that Timur was a knight or Ghenghiz a statesman; and while M. Cahun rightly insists on the military virtues of the Turks, he does not lay equal stress on their military abominations. The omission has been remedied by a later writer, Dr. Th. Peisker, who has carried further that view of the Turks and Mongols which has been traditional since Gibbon; few more terrible indictments have been penned than his account of how these people systematically and permanently, by the most terrible methods, debased and ruined the races subject to them. It is too late in the day to idealise the mere destroyer; even Prussia, for all her Turanian blood, pretends that where she destroys she will recreate.

The Turk has no religious imagination; he has never worked any development in Islam, or even created a heresy; Islam in his hands is set and rigid. It is impossible to imagine that he could create a national religion, which seems to require that some one somewhere shall feel strong

religious emotion. Apart from this, however, it may well be that, if the Ottoman Turk were confined to his own country, Anatolia, it would not matter much how he formed his national State, provided that he did no harm to his neighbours, and that he did not continue to be an appanage of Germany. But, as a matter of fact, this is not at all the Turkey which the Neo-Turanians contemplate. They mean the whole Turkish Empire, and, perhaps, something over, for the relations advocated with the Moslem subjects of Russia aim at something much more to the point than commercial intercourse. And there is no question that they also aim at the denationalisation of the Arabs. The Turk is afraid of the Arab; he is such a very big proposition. The Turk says openly that if he does not deal faithfully with the Arab, the Arab will soon deal faithfully with *him*. Therefore, the Arab shall be Turkicised, after the best Prussian models; such as were exhibited in Prussian Schleswig Holstein when no Danish child might say its prayers in its own tongue. One fears some writers have been rather indiscreet over this matter. Thus Jelal Noury Bey in a recent work says: "The Arab lands—Irak and Yemen above all—must become Turkish colonies, in which we shall spread our own language, so that, at the right moment, we may make it the language of religion. It is a peculiarly imperious necessity of our existence for us to Turkicise the Arab lands; for the idea of particularism, of nationality, is waking among the younger generation of Arabs, and already threatens us with a great catastrophe. Against this we must be fore-armed." And Ahmed Cherif Bey has written in the *Tanin:* "The Arabs speak of their own language, and are as ignorant of Turkish as if their country was not a dependency of Turkey. It is the business of the Porte to make them forget their own language and to impose upon them in its stead that of the nation which rules them. If the Porte loses sight of this duty it will resemble a man who digs his grave with his own hands; for if the Arabs do not forget their language, their history, and their customs, they will seek to restore their ancient empire on the ruins of Ottomanism and of Turkish rule in Asia." Again, the author of a pamphlet distributed in the Caucasus, at the expense of the Ottoman Government, actually says, "The Arabs have been a misfortune to us; a Turkish conqueror's war horse is better than the prophet of any other nation."

We have here the deliberate programme of the ruin of a nationality. The Allied Powers stand firmly for the principle of nationality; no people that desires a separate life of its own shall be denied that life by another people. Their sympathies, and a good deal more than sympathy, in this matter, will go with the Arabs. And the sympathies of the great Moslem populations governed by France and Britain are not in doubt. They will be with the Arabs, chiefly because these gave birth to Islam, partly, in the case of French North Africa, through a belief in kinship in blood. The Moslems of the world outside Turkey, though they have not always loved the Turkish variation of Islam, have acquiesced in the Khalifate of the Sultans in the belief that the Sultans were strong enough to make Islam respected abroad. The time is at hand when they will be able so to acquiesce no longer.

The lot of an ally of Germany is a hard one; for the German appears to believe that a thing can both be and not be. He invokes international and every other law while he breaks it; he works for Islam with one hand and against it with the other. In the East the Kaiser has posed as the true friend of the Moslem, and has even been claimed as a convert; a Holy War (which failed) was proclaimed to raise the Moslems of all the world to fight for Germany; and great efforts, which have equally failed, have been made to seduce from their allegiance captured Mohammedan subjects of France and Britain, on the ground that it was their duty to fight for the Turk and all Islam against the infidel. This is one side of the picture. But the other side is instructive. The first glimpse given to the world of how Germany was also working *against* Islam was the capture at Moshi by General Smuts of the now famous circular addressed by the German Government to its colonial agents in Africa, and sent out in October, 1913, asking for an immediate report on the best means to be adopted to arrest the spread of Islam in the German colonies, and whether the agents thought that it would be possible for the German Government by legislation to suppress the Mohammedan religion in its colonies and to forbid anyone to follow the teaching of that religion. The knowledge of this extraordinary document should be spread wide through the Moslem world. Following on this comes this movement of Yeni-Turan. Germany has only herself to thank if her hand is suspected everywhere. But the leaders of the Committee of Union and Progress are certainly behind this movement to make the Turkish national soul independent of Islam; and it is obvious that it could not continue to flourish openly were it disagreeable to Germany, the real power behind the throne.

THE PRESS ON THE NEAR EAST

The Turkish Dupe.

In an article entitled "The Position of Turkey," the *Daily Graphic* remarks that, in view of the Turkish defeats in Armenia, and in the direction of Mosul, the news of the dispatch of Turkish troops to Galicia, to aid the Austro-Germans, seemed so incomprehensible as to be, at first, incomprehensible. It has, however, since proved true; and the *Graphic* continues:—

The German Headquarters Staff can hardly have been ignorant of the critical position of the Turkish forces in Asia. To weaken Turkey by transferring Turkish troops to another theatre of war was an act which must have been prompted by other than military motives. If the Germans felt the need of more troops in Galicia, the obvious military course was to recall the German regiments now installed in Constantinople. But the German Government knows only too well that it would be dangerous to leave Turkey without a German garrison. The Turks have suffered a succession of disasters since they threw in their lot with the Central Powers. Enver Bey may, perhaps, still be personally loyal to the German alliance; but there is abundant evidence that the Turks generally realise the blunder their Government has made, and if the German garrison were withdrawn from Constantinople there would probably be an entirely new orientation to Turkish policy.

Honour Where Due.

In welcoming Roumania's appearance in the field as an Ally, the *Morning Post* (August 29), in its leading article, "Enter Roumania," touches lightly on the part played by the King (and Queen) of Roumania and certain leading politicians:—

In this country we do not forget that the Queen of Roumania has English blood in her veins, and we recognise that King Ferdinand, though of the House of Hohenzollern, has proved himself first of all a good Roumanian, and has identified himself completely with the people over whom he rules. No doubt opinions as to the best policy for their country to adopt have not been entirely unanimous among Roumanians. Such public men as M. Carp, M. Marghiloman, and M. Maiorescu have done their utmost to keep their country at least neutral. But, now that the die has been cast, it may be assumed that such differences will disappear, and all parties will be united in support of what has become the national policy

Those who best know the difficulties of the situation in Bucharest must acknowledge the wisdom of the cautious policy pursued by M. Bratiano, the Roumanian Prime Minister, while they cannot requite too handsomely the indefatigable efforts of such patriots as M. Take Jonesco and M. Filipesco to fulfil their country's destiny in the direction in which it is now promised fulfilment.

Plain Speaking.

In a leading article, "Greece and the War," the *Manchester Guardian* (August 25) poses a question which the Greeks have probably been asking themselves quite anxiously during the past fortnight. It says: "The King of Greece, it is to be supposed, still believes in the eventual victory of the Central Powers. In that case, if Bulgaria chooses to keep the Greek territory which she has seized or may hereafter seize, who is going to eject her from it?" And the writer continues:—

King Constantine may once have thought, in the days when Germany's star was brighter than it is at present, that Germany would see him through. But when he looks about him now, even he can hardly suppose that Germany will fight a war to make Bulgaria disgorge Greek territory, and none knows better than he that nothing short of the threat of war would move Bulgaria. The fact is that Greece now depends on the Allies for the recovery not only of Salonika and the Ægean Islands, but of all the districts seized by Bulgaria, and that she is abandoning without a blow to the myriad uncertainties of war both her national territory and her aspirations farther afield, as in Southern Albania. It is said that Greece regards the presence of an Italian contingent at Salonika with misgiving, because Italian ambitions on the Adriatic coast and in Asia Minor conflict with those of Greece. The misgiving is reasonable. In this war those peoples who have aspirations are most likely to see them realised if they make sacrifices for them.

A "Queer Situation" Indeed.

The *Sheffield Daily Telegraph* of Monday's date concludes a leading article, "On Greek soil," as follows:—

The suspicion is inevitable that some highly-placed Greeks are playing into the hands of their country's hereditary enemies. It is certain that M. Zaimis, the Greek Premier, is not among these. He is showing that he is a statesman who runs straight and is loyally adhering both to the letter and the spirit of his understandings with the Allies. It is not his fault that Greece is now in a difficulty as severe and painful as any she has encountered—and she has encountered not a few—since M. Venizelos relinquished his national leadership. The further course of

Digitized by Google

events in Greece by no means depends wholly upon Greece herself. The future military purposes of the Allies must have an immense bearing upon it. What these are, even if anybody knew, would not be a matter for present discussion. In any case, they can involve no menace to Greece's independence, integrity, or neutrality. The enemy's purposes seem to involve an almost undisguised menace to all three. Taken altogether, the situation is the queerest that has yet arisen in this area, and, considering what the area is, that is saying a very great deal.

We agree with the writer; but it is certainly not saying too much.

A Dramatic Moment.

The *Spectator* (August 26) concludes an article on "The Situation in the Balkans" as follows:—

It will be intensely interesting to see what happens when the Bulgarians recognise that they are fighting against the Russians, the creators and the chief protectors of their nation. It will be one of the dramatic confrontations of history. One wonders what the feelings of Bulgarians will be who remember the history of forty years ago when Russia sacrificed more than a hundred thousand men—huge losses in those days—and spent £120,000,000 for the sake of the Bulgarian people. Russia took up arms for Christian Bulgaria then in a passion of unselfish enthusiasm which carried the Russian people away. The issue must soon be joined. For ourselves we regard it as a convenience that the Bulgars should come to meet the Allies rather than leave it to the Allies to search them out in very difficult country. If they come further, the Serbians, on the Allied left along the Moglena Hills, the French in the middle along the Belashitza Range, and the British on the Struma will be simultaneously engaged in the next few days. To immobilize practically the whole Bulgarian Army by holding it to its ground will be a great service to the Allies' united plan of campaign. If more than that should be accomplished—well, it will be all very positive gain.

Bulgaria's Despairing Move.

In a leading article *The Times* last Saturday referred as follows to "the desultory movements of Bulgarian forces on the Macedonian front":—

They are essentially the outcome of fear. The hope of injuriously affecting the Greek elections in certain areas may have been a contributory cause of Bulgarian activity, but the principal motive is evidently apprehension of the intentions of the Allies. The Bulgarians are well aware of the reinforcements which have reached Salonika, and they know that the troops of five nations are now arrayed against them. They find themselves in a position of isolation which they never expected. They are left, as one always knew they would be left, to bear the brunt of the war in the Balkans alone. Turkish units are hurried to the aid of failing Austria, but the Turks show no great eagerness to help the nation which deprived them of so much territory in Europe. The Austrians are calling out for assistance, and can give none. Germany needs every man she can put into the field on the main western and eastern fronts. . . . Bulgaria has, in short, been left in the lurch at a critical moment by her cynical patrons, and her movements just now are the outcome of feelings akin to despair. She fears she is about to be attacked. She has drawn down all the troops she can muster to the Macedonian area, and is attempting to anticipate the possible action of the Allies by a demonstration on a dangerously wide front. Her objects have been already correctly gauged, and it is plain that they leave General Sarrail unperturbed. The Allies never intended at this stage to occupy the areas into which the Bulgars are now penetrating, to the accompaniment of pretentious and misleading bulletins recalling their achievements with the pen in the first Balkan War. The true intentions of the Allies in Macedonia will be disclosed at the right moment, and meanwhile the discursive marches of the Bulgars are contemplated with more than usual serenity.

Great Britain and Her Allies.

There are some telling touches in an article, entitled "What the English Think of Their Allies," which Mr. Lewis R. Freeman contributes to the *World's Work* (August). Two of these we cannot refrain from quoting, even though they have no connection with the Near East. Both, curiously, are canine in character. Writing of British admiration of France's fine spirit, Mr. Freeman remarks:—

It was when the French poodle turned bulldog and displayed an unguessed ability to hang on as well as to snap that the heart of the British public was won entirely, and their normally repressed affection went out to their gallant Ally without reserve.

And again, after referring to the difficulties we encountered in getting seriously to work in the early stages of the war, he writes:—

Then that paradoxical brute, the British bulldog, who seems never to use his teeth so well as when his legs are tangled in his own chain, began settling down to business, and the wholehearted confidence of the French and British in each other soon became reciprocal.

As to our feelings towards Serbia, Mr. Freeman says, very truly:—

Serbia started badly handicapped in English popular esteem, for she had a rather sinister political record behind her, while the fact that she had furnished the spark to set off the bomb of the war was hardly calculated to predispose sympathy in her favour. The fine fighting qualities of the Serb, his dauntless single-handed defence against the might of Austria, won him ready admiration in England, however, and when, driven back by the overwhelming combination of both the Central Powers with Bulgaria, he still refused to ask for peace, it was no longer possible for the sport-loving Briton to deny him the recognition of a worthy Ally.

Most Englishmen, too, have a sort of sneaking idea that a more vigorous diplomacy and readier military measures in the Balkans might have saved Serbia, and this has inclined them more and more to bracket that country with Belgium as one of the small nations whose wrongs must be fully righted as a condition precedent to any sheathing of the sword of battle.

Turk v. Arab.

In a note upon the proclamation issued by the Shereef of Mecca, the *Daily Graphic* (August 26) says:—

Arabs have never loved the Turks, and Arabia has been the scene of many rebellions. Indeed, a large part of Arabia has never been fully subjected to the authority of the Sultan of Turkey. But as long as the Sultan remained effectively the head of the Moslem religion no general revolt against his authority was possible. Spiritual loyalty outweighed the evils of temporal misrule. The advent of the Young Turks altered the whole situation. Several of these so-called Turks were not Moslems at all, but Jews; others were frankly Atheists. To this group of adventurers has passed the real sovereignty of the Turkish Empire, and the Sultan is little more than a prisoner in his own palace.

The writer concludes by expressing the opinion that "unless the Turks can put into the field a stronger force than appears to be available the Arabs may very soon secure their main objects—the liberation of Arabia and the preservation of Islam."

Corpse Smuggling.

The *Lancet* of August 19 contains the second part (the first appeared in the issue of August 12) of an extremely interesting article on "The Shiah Pilgrimage and the Sanitary Defences of Mesopotamia and the Turco-Persian Frontier," by Dr. F. G. Clemow, Physician to H.M. Embassy, Constantinople. Along two-thirds of the frontier, the southern section, "the only existing sanitary defence consists of a lazaret at Khanikin and of health offices at Rayet, Suleimanieh, and Mendeli; an office formerly existing at Revanduz was done away with a few years ago." But apparently these defences are more nearly adequate than they would seem to be at the first glance, for "the danger to public health offered by the small amount of through traffic along the various minor routes" was held by a commission of investigation "not very great"; and, on the other hand, "any attempt to subject to proper sanitary control the unruly tribes in their seasonal migrations was foredoomed to failure, while the practical obstacles in the way of establishing sanitary stations in these remote and mountainous districts would have been exceedingly difficult to overcome." Assuredly the lot of any official charged with carrying out the work would be an unenviable one! The Khanikin station, however, on the most-used route, is a very useful and very necessary institution; for "an average of 34,000 travellers and 3,900 corpses pass through Khanikin every year." The "corpses" are, of course, those of good Shiahs, who wished to be buried in Kerbillah or Nejef. Here is a paragraph of somewhat uncanny interest:—

Hitherto the sanitary office and the lazaret at Khanikin have been two separate establishments, situated at some distance from each other. Pilgrims and passengers, with their pack animals, flocks, and dead bodies, were directed to the former when there was no epidemic disease in Persia, and to the latter when there was. The "office" consisted of a large caravanserai, of the usual type found in these regions—that is to say, of a series of arched recesses and enclosed chambers, built round the sides of a large square enclosure. It was here that the sanitary taxes were collected and the dead bodies inspected. It should be explained that for many years past no dead bodies were admitted to Turkish territory if death had not occurred at least three years before and the bodies been reduced to the skeleton state (*en état d'ossements*). Attempts at contraband—to be discussed more fully in a later article—have, however, always been frequent, in order to avoid the payment of the sanitary dues. When detected at Khanikin, the bodies were confiscated and kept in a special depôt prepared for the purpose until claimed by the relatives or bearers, when they were delivered up on payment of the dues. All bodies found to have been buried less than three years ("fresh" bodies) were seized and buried in a cemetery situated some 200 metres from the office. The Commission proposed to do away with this sanitary "office" altogether, and to concentrate the entire sanitary service in the reorganised lazaret. An annual

Digitized by Google

rental of P.20,000 (£166) would thus have been saved to the Turkish Government.

In Turkish Waters.

The *New Armenia* of August 1 contains an article entitled "Raiding the Turks," contributed by M. Armen S. Delalian, an Armenian who "volunteered and was accepted as pilot" of a British submarine. The following passages are of much interest, and seem to show how utterly unlike the methods of the German U-boats are those of our own submarines:—

On May 22, we started for Ereghli, on the northern shore of the Sea of Marmora. I warned our commander that the water front of Ereghli is mostly populated by Christians, and that if he should bombard this section he might kill either Greeks or Armenians. He informed me that even if the water front were inhabited by a purely Turkish population he would not fire on it unless there was a military store or troop depot there.

We saw another object on the horizon moving southward toward us. We approached her until we were within signalling distance, and then we again emerged and ordered her to halt. I boarded this sailing ship with one of the subordinate officers of the submarine, and found her to be a very small sailing vessel on her way to Mudanya in Asia. There was not much of a supply of provisions on board, and the skipper, who was her owner as well, had his entire family and the families of several of the crew on board. Her captain, an Albanian Moslem, was very much frightened. The women and children, some fifteen or twenty in number, were crying, and even some of the crew showed abject fear for their lives.

The submarine officer told me to inform them that we were not fighting them, and that if they could spare any he would like to buy some of the provisions they might have on board. This proposition sounded like a grim jest upon the ears of the Albanians. The owner of the ship said, with well studied hypocrisy, "Everything on board is yours, including the boat and our lives. You do not need to offer to buy, take all you wish." The British officer smiled and told me to inform him that we were fighting their Government, not them. After what we selected of their provisions was lowered into one of the boats we asked him how much we owed him. After long hesitation he asked two liras.

Count Bosdari, the Italian Ambassador in Athens, has officially informed the Greek Government that Italy has declared war against Germany.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.
Sole Manufacturers of the Famous . .
Dhariwal
Long Life Wool Wear
Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c., &c.
CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I understand that the Banque Franco-Serbe, the head office of which is at 14, rue Le Peletier, Paris, will shortly open an office at an address in Throgmorton Street. This important step is being taken, of course, by way of preparation for the day when Serbia will once again be in the possession of the Serbians. I am informed that very shortly before the enemy occupation began, the bank successfully removed all its cash and securities from the central office in Belgrade, and from its branches at Skoplje (Uskub) and Bitolia (Monastir). Since it was established in 1910, this bank, with its powerful French directorate, has rendered signal service to Serbian finance and commerce. It is a reasonable belief that when peace has been restored Great Britain will play a larger part in the Balkans than she has done heretofore, so that a London branch of the bank should find, without difficulty, a very useful sphere of activity.

***

Hail to our new Allies! Roumania has been long-headed enough to avoid the mistakes of her neighbours, and has dropped down on the right side of the fence. The political point of view is not one with which I am concerned; but in an article elsewhere in this issue attention is paid to some of the commercial aspects of the situation created by the advent of our new Ally. After all, her decision is a business proposition, and I think we may comfort ourselves with the reflection that after two years of careful consideration the Bucharest statesmen are not likely to have underestimated whatever chances the Huns have of coming out of this fight on top.

***

For some days past all has been fish that has come to the net of the London Press in the way of Roumanian news, but, unfortunately, it has not all been good. One leading paper, I noticed, published on Monday, without comment, a cablegram from its Paris correspondent, who in turn quoted from the Swiss paper, *Neue Zürcher Zeitung*, in which it was stated that "the National Bank of Roumania has been authorised to issue notes up to 75,000,000 frs. (£3,000,000) and 8,000,000 lei (£320,000)." This statement is absurd on the face of it. The bank is authorised generally, and legally, to issue notes up to a sum representing three times the amount it holds in gold. On June 26 the bank held gold to the value of 514,000,000 frs., and could, as a matter of fact, have had in circulation notes to the value of rather more than 1,500,000,000 frs. On that date the notes out were less than 1,000,000,000, which left a pretty good margin without need to talk of special authorisation.

***

There is much comfort to be drawn from the desperate attempts that are being made to bolster up Turkish finance. The Young Turks are credited with another frantic appeal to Berlin for more money, that is, if they have received any at all from their impecunious masters. The story goes that "the Sultan has been made to sign an iradé granting permission to the Turkish Finance Minister to issue a new lot of Treasury bills to mature five years after the end of the war. These Turkish Treasury bills will be 'covered' by German Treasury notes of the same value. Thus, a well-known chronic bankrupt gives a note of hand for a loan endorsed by a coming bankrupt, who has not yet filed his petition. Turkey and Germany, without mentioning bankrupt Austria-Hungary, keep on piling up worthless bills and bonds drawn on the 'bank of fortune in war.'"

***

There is only one possible end to this business. Turkey will find that she has joined a firm that has not the means to carry on, if, indeed, she has not already made the discovery. It may be possible to carry the partnership on for a short time longer; but with the best will in the world the Huns will not be able to give away what they have not got themselves. I do not suggest that the German people are starving; they may not even be tired of the war; but there is plenty of evidence that so far as general resources are concerned Germany has plenty to do to keep her own armies going. In those circumstances the time is not far distant when Turkey will have to look after her own funeral, as the saying goes. As I have said before, Bulgaria and Austria will have nothing to give away, and the Turks will then be "between the devil and the deep sea."

***

One of the outstanding features in English produce markets this week has been the feverish tendency on the Liverpool Cotton Exchange. There was a great deal of excitement last week, but it was then thought that the conditions were temporary, and that they would soon disappear. On Monday, however, the market opened as excitedly as it closed on the previous Saturday, and prices were soon soaring upwards. After three hours' operations American futures stood at the remarkable level of 9.84d., which represented an advance of about 40 points. On the same day Egyptian futures opened strongly, at 45 points to 50 points higher. Three hours later they were 75 points advanced—or three farthings a pound! Needless to say, conditions were irregular and unsettled, and, necessarily, unhealthy from the point of view of sound dealing.

***

Meanwhile in Manchester general business has been in a state of almost complete dislocation, at which I am not surprised, for nobody seems to know what exactly is going to happen. Until the price has been placed on a more or less fixed basis, whether it be high or low, inactivity will continue. It cannot be expected that consumers will be keen buyers in the circumstances. It would seem that the situation has been caused by the "end-of-the-season" tendency which is always in evidence to some extent at this time, and that until the new crop begins to show the excitement will continue. At the moment the bulls are in a strong position, and they may find it possible to send prices higher still; but the sooner the temperature of the market becomes normal, or approaches normality, the better it will be for all concerned.

***

For a sane view of the position nothing better has been forthcoming than that of the special correspondent of the *Westminster Gazette*, who wrote on Tuesday as follows:—"Speculation and gambling in raw cotton is at its height, and it is a long time since such violent fluctuations in prices occurred in the New York and Liverpool markets. The conditions at the moment are unparalleled, and quotations are fast approaching the level which prevailed during the American Civil War, nearly fifty years ago. . . Amongst Manchester traders there was a decided disposition to look on and wait for further developments. Trading in yarn and cloth cannot be successfully carried on when raw cotton prices are fluctuating wildly."

***

The other day I referred briefly to certain railway projects which Russia may undertake in Asia Minor after the war. It appears now that other schemes are being spoken of, at present with some reserve, it is true. Some of the Black Sea harbours are to be improved, both as regards port facilities and the approaches. Whatever may be uncertain, a revival in Russian shipping is among the certainties, especially in the Black Sea. A new steamer line is once more spoken of, the service, so it is proposed, linking up Odessa with United Kingdom ports. Hitherto the Turkish Government has been a back number in the matter of communications; but just before the war broke out she was busy with projects for the improvement of some of her harbours on the Asia Minor coast, notably Trebizond. This port is now in Russian possession, and if it remains so—as we all hope it will—there is no reason why the Russians should not revive these harbour projects as they are doing with those of the railways.

***

Among company meetings reported in this issue of the NEAR EAST will be found that of the Egyptian Delta Light Railways. The report will repay perusal by all who are interested in the development of Egypt. The chairman's statement regarding the position and working of the company was clear and encouraging, and leaves no doubt but that all is well, despite the fact that war conditions have interfered with whatever prospects there were of a dividend. With this point we have dealt previously, and it only remains to say that nothing has occurred to lead us to change the opinion we expressed then. In our City Letter a rise in the price of Delta shares in London is referred to.

***

The high price of coal is responsible for great laments at Malta. Our friends are grumbling just now because the price of gas has been increased from 6s. 8d. to 8s. 8d. per 1,000 cubic feet. I admit freely enough that even the former price is stiff as compared with the increased price at home. I fear, however, that if I were to say that people in Malta were merely finding that the burden of empire-building is more than a nominal task they would be far from satisfied. But in the correspondence that has appeared in the *Daily Malta Chronicle* one of the writers has raised a very important point. "I think," he writes, "the price of coal gas out here could be made ever so much lower if the local gas company would give up its fossilised methods of production. As far as I know, only coke and tar are extracted from the coal used, the other valuable by-products being thrown away. There would, of course, have to be machinery to extract such by-products; but in neglecting all these years to provide the necessary plant, I think the gas company sins not only against its shareholders but also against its customers."

Germany and Roumania.

What the Enemy Stand to Lose Economically.

The message received from Berlin to the effect that "according to an announcement by the 'Upper Command,' due to the existence of a state of war with Roumania, all the State property of Roumania in Germany will be sequestrated" sounds sonorous and menacing. As a matter of fact, it need not worry Roumania's friends in the least.

Discussing last week the exploitation of Roumania by Germany, we remarked that the decision of the former regarding the side she would take when she entered the war would mean a great deal to some people. It will mean a great deal to Germany, which up to this time has had free scope amounting in some directions almost to a monopoly in the country of the youngest member of the Grand Entente.

It is too early in the day to say how far the Roumanian decision will compromise the enemy's sources of supply of food grains; but in view of the transactions reported to have taken place during the two years in which the war has been proceeding, Germany will now have a considerable gap to fill. In justice to our new Ally, it ought to be explained why they have continued to supply Powers, against which she was destined to declare war, with important articles of military value. We believe it is no secret in some quarters that Roumania could not help herself. She has not been a willing seller; unfortunately, the Central Powers—in the absence of the ability of the Entente Powers to interfere—were in a position, for a time, to formulate demands, while Roumania was not in a position to resist them. Consequently, she had no alternative but to make friends with "God and Mammon," and we may be grateful that she has been able to do so and, while providing her future enemies with various articles of produce, also able to avoid compromising her position.

Industries.

The principal industry of the country is really agriculture. There were in the year 1914 something like 13,000,000 acres of land under grain cultivation, responsible for the production of, approximately, 175,000,000 bushels of maize, wheat, barley, oats, and rye, of the estimated value of £50,000,000 sterling. It is not too much to say that the Central Powers (and Turkey and Bulgaria to some extent) have depended to an important extent upon this vast source of supply. The fact is too essential to be overlooked, and while it would, perhaps, be undue optimism to say that our enemies will not be able to do without Roumanian corn, on the other hand it would be sheer folly to insist that they will not suffer grave inconvenience through this source of supply being shut off.

There is an equally important matter, however, that comes up as a result of Roumanian intervention. Agriculture is far from being Roumania's only activity. Her mines, oilfields, and timber also constitute important industries, and although in the present circumstances statistics would only be misleading, these industries are very considerable, and have attracted an enormous amount of foreign capital into the country. Needless to say, the great bulk of that capital belongs to Germany. As we pointed out last week, for many years Germany was engaged in the "peaceful penetration" of the country, exploiting every industry that could be developed, and providing the money for the working of them. We do not suggest that Roumania will ever repudiate a debt of honour, but it will be difficult to persuade the most inveterate purist that it will be possible to wage war and, at the same time, preserve your enemy's property intact.

The Oilfields.

Both Germany and Austria-Hungary stand to lose a vast sum in invested capital. In the oilfields, as we showed last week, German "enterprise" ousted nearly every other competitor from the market. The Deutsche Bank alone controls many groups, representing large investments. In the year 1914 the output of petroleum reached the huge figure of 1,895,384 metric tons. The total capital invested, in 1913, was something like £16,000,000, the principal companies being:

	Capital.
Steaua Româna	100,000,000 francs
Astra Româna	60,000,000 ,,
Concordia	25,000,000 ,,
Italo-Româna	15,000,000 ,,
Româna-Americana	12,500,000 ,,
Orion	11,000,000 ,,
Roumanian Oilfields	9,375,000 ,,
Aquila Franco-Româna	6,000,000 ,,

There are other concerns of less magnitude, among which are the comparatively small British companies.

Smaller Industries.

Third in importance among Roumanian industries are forestry and sawmills. The capital invested in these enterprises amounts approximately to £4,000,000 sterling, export values in a normal year running up to about £1,200,000. There are also prosperous sugar works and refineries, breweries, wire-drawing and nail factories, oil factories, paper mills, glass works, brick works, textile factories, cement, lime and balsalt works, pulp, etc. Not a bad list when all the possibilities of the industries are taken into account. Salt is another of the mining industries, as is coal. There are metals, too, the mining of which has not received a great deal of attention, such as copper and iron. At the same time it is worth mention that considerable German capital has been expended upon these latter potential sources of mineral wealth.

German capital has been employed, too, in works of public utility. Railways, tramways, quays, electric-lighting, waterworks, etc., have all come under the heavy hand.

Banking Interests.

In purely financial affairs the Germans and Austrians have established some powerful banking concerns—some independently, some in conjunction with each other, and others in co-operation with French and Belgian houses. The Banque Generale Roumaine was established in 1898 by the Disconte-Gesellschaft and the Maison S. Bleichroder, of Berlin. Its capital is 15,000,000 frs., and in 1912 it paid the remarkable dividend of 125 per cent. The Banque de Credit Roumain was established in 1910 by the Laender-bank and the Niederoster Reichische Bank of Vienna, with a capital of 20,000,000 frs. At the end of 1912 it had a reserve fund of 10,000,000 frs., and paid a dividend of 50 per cent. The Banque Commerciale Roumaine had French, Belgian, and German interests, having been established in 1907 by the Union Parisienne of Paris, the Crédit Général Liègeois of Liège, and the Weiner Bankverein. This concern had a capital of 12,000,000 frs. Another bank, the control of which was controlled by opposing belligerents, was the Banque Marmorosche Blank and Co., founded in 1905 by the Pester-Commercial Bank of Budapest, the Darmstadter Bank of Berlin, the Banque de Paris et des Pays of Paris. The capital of this concern was 20,000,000 frs.

From these figures an idea may be gained of the amount of capital belonging to enemy interests which war with Roumania places in jeopardy. Taken in the aggregate, the amount of German invested capital in the grip of her latest enemy must represent a vast sum, and in addition it will be recalled that a great portion of Roumania's national debt is held in Berlin. We presume Roumania will know exactly what steps she will be entitled to adopt to bring all these great interests under safe control, and since the Germans are not likely to be ignorant of what may happen—of what they themselves would do, and, indeed, have done in similar circumstances—there must be some uncomfortable investors in the Fatherland to-day.

MOROCCO NOTES.

Openings for British Traders

(From Our Own Correspondent.)

Tangier, August 19.

The Moroccan event which at present deserves most attention is the Fair, which will be held in Fez from October 1 to 15 [referred to elsewhere in this issue.—Ed.]. That statement does not imply that nothing interesting is or has lately been taking place in other directions, however. French columns have lately been very active on both sides of the Atlas, and, indeed, far away to the east of the Atlas. The line of communication through the Atlas at Taza, between Eastern and Western (Fez in particular) Morocco, is strongly and securely held. The main work of the troops is now directed towards the gradual domination of all the mountain tribes between the two Moroccos, and in the plan pursued the opening and holding of another road across the Atlas south of Taza, thus isolating a large block of difficult country, is one of the chief features. The general scheme of occupation is being carried out steadily and successfully, despite at times vigorous opposition, due in great measure, it seems, to the intrigues by which Germany still attempts to keep alive and render effective the hostility of the tribes.

Disturbed Areas.

In the north an advance is daily, though not too confidently, expected on the part of the Spanish troops, and their disreputable but useful instrument Raisuli, to complete the occupation of the Anjera country, the tribesmen of which continue till the present time, and almost within range of the guns of Gibraltar, to have the effrontery to attack any vessel which may go ashore on their coast, and to seize any boat's crew which may be imprudent enough to land. On some of these occasions members of the crews concerned have been killed or wounded, and others have been held to ransom. The Anjera country being in the Spanish zone, the duty of putting an end to this interesting but most inconvenient anachronism falls on Spain, which has not, however, up to the present been able to carry it out. These military activities, it is necessary to repeat, only affect the districts in which they take place, and do not disturb or excite the Morocco of commerce and travel. They have been in varying degree, for years past, part of the country's daily round, and it is only when they result in the throwing open for traffic or development new districts that they attract general interest.

The Fez Fair.

The Fez Fair, on the other hand, in itself a commercial exhibition of limited scope, is a significant novelty. It will mark a definite stage in the process of extending the coast development inland; it will assert strikingly the tranquillity, even in this time of stress, of districts recently very intractable, and will help to establish a current that may before many years have important consequences of trade and traffic across the Atlas between Algeria and Morocco. As in the case of last year's exhibition at Casablanca, the entries will be limited to products of France and Morocco; but the Fair should, nevertheless, be worth the attention of British visitors.

Travellers for pleasure cannot this year be expected to visit Morocco; but it is to be hoped that business men, with the knowledge of the need for developing old markets abroad and finding new ones which will be felt after the war, will find means to make use of the unusual opportunity this Fair will give of judging of Morocco's old and growing requirements. Fez itself is a wealthy city with which, chiefly through the hands of rich native merchants, many of them with partners in Manchester, a very large import trade with Great Britain is done, and the reputation of British manufacturers and business methods stands very high. The present import trade consists very largely of the old staple articles of Moroccan trade, and little attempt has yet been made to develop the market for the very numerous new requirements of the country, or to capture a share of the considerable trade (especially in broadcloth, once a regular import from Great Britain) perforce dropped by the enemy Powers. It is felt by those on the

Digitized by Google

spot who are qualified to judge that there is a great need and opening in Fez for business men from home to establish themselves there as agents for British houses, and there could be no better chance of judging of the opportunities than at this Fair.

It is now partly realised by those at home that Great Britain has, as she has long had, important commercial interests in Morocco, and that the Moroccan market is likely to become rapidly more and more valuable. Morocco is, indeed, under French protection; but the circumstance under which that position has been reached, the parallelism between British privileges in Morocco and French privileges in Egypt, apart altogether from existing guarantees, and the strong probability that after the war trade relations between the Allies will be very intimate and unhampered, seem to give every reason to expect that British trade in Morocco will be free to develop to the full extent to which it proves itself able to supply Moroccan needs.

Communications.

Fez a very short time ago was only accessible to those who were prepared to ride and to take with them camp equipment. That method has now, for Europeans, almost become obsolete. At any of the ports, Kenitra, Rabat, Casablanca, visitors to the Fair will be able to take the military railway, now available for civilians, which will land them at Fez, where the authorities are preparing accommodation. From the same ports and in less time the journey may also be done, especially in fine weather, by motor car. A few weeks ago, for the first time, a motor-car, American, indeed, but owned by a British motor-car company in Tangier, the managing director of which organised and made the journey, reached Fez from Tangier direct by road. The success—the easy success—of the attempt makes it probable that motor-car from Tangier will soon become a very favourite way of reaching Fez from Europe. There is not at present, except for a very short distance, a permanent road, but the track on the whole is very good, and until the heavy rains come, which as a rule is not till after October, there could be no pleasanter or quicker way of visiting Fez than by traversing the three zones—international, Spanish, French—which lie between Tangier and the chief of the Shereefian capitals.

ROUMANIAN HARVEST.

Writing on July 15, our Correspondent in Bucharest said :—

I hear that only 42,000 wagons of wheat (out of the 80,000 stipulated) have up to the present been sold to the British Bureau. Part of the remainder will be made up with the wheat which is in the possession of merchants, this class having been authorized to sell to the British Bureau, and with a quotum of the 1915 wheat reserved for internal consumption, which is still in the care of the growers.

Germany has been making overtures for the purchase of the coming harvest, overtures which have been repulsed on the ground that the Commission of Export will not be able to determine what proportion is exportable before the end of August.

At the time of writing the harvest of Indian corn seems to be heavily compromised as a result of the very hot weather and the lack of rain. Measures have in consequence been taken to prevent the exportation into Germany of any further maize. Up to the present 30.000 wagons have been sold to the Germans in fulfilment of the terms of the second purchase, that of the "hundred thousand wagons."

The quantities of cereals sold to the Central Powers up to July 1 were as follows :—

First Contract.	Tons.	Second Contract.	Tons.
Wheat	26,276	Wheat	50,970
Rye	1,665	Rye	1,280
Indian corn	8,770	Indian corn	30,695
Barley	9,519	Barley	12,280
Oats	4,156	Barley for brewing beer	1,812
Beans	3,308	Beans	1,255
Peas	825	Peas	2,014
		Flour	1,444
Taxes, 30,000,000 francs.		Taxes, 25,000,000 francs.	

EGYPTIAN FINANCE.

Accounts for April: Improvement Maintained.

(From Our Own Correspondent.)

Cairo, August 4.

The State accounts for April, the first month of the new financial year, were published last night. The improvement evident during the concluding months of the previous year is being maintained. The revenue amounted to £E1,329,037, as against £E1,064,598 in April, 1915, or only £E31,788 less than in the same month in 1914. The expenditure came to £E1,610,138, as against £E1,470,743 in April, 1915, or £E115,908 less than in April, 1914. There is, therefore, an excess of expenditure over revenue of £E281,101, as compared with £E406,145 in 1915 and £E365,221 in 1914.

Land tax and direct taxes came to £E275,376, customs to £E185,783, tobacco dues to £E185,033, legal fees to £E108,498, railways to £E378,519, telegraphs to £E14,488, post office to £E24,479, rent of Government land to £E23,727, domains to £E31,302, investment of funds to £E20,378, and divers receipts to £E40,075. It is interesting to note that, compared with two years ago, the chief increases in revenue during the month were direct taxes £E55,671, customs £E12,653, tobacco dues £E23,994, railways £E67,333 and domains £E21,233; whilst the more important decreases were in port dues £E31,460, investment of funds £E49,739, divers receipts £E21,726, and extraordinary receipts £E109,152.

Under expenditure the main increase has been under railways, which jumped from £E202,164 in 1915 and £E282,590 in 1914 to £E323,430. The War Office rose by £E5,172 and the Moukabala Annuity by £E13,748, but expenditure on irrigation fell off somewhat by £E6,710 and drainage by £E8,999. All things considered the prospects continue to be excellent. During the earliest months of the financial year expenditure always exceeds the revenue, and it is a matter for intense satisfaction that the deficit should be so much less this year than normally.

SUDAN TRADE.

The following table is of interest as showing the prosperity of trade in the first six months of this year, especially in exports. Compared with the first six months of the "record" year 1911, exports in the same period in this year have increased in value by 61 per cent., and the value of imports, exports, and re-exports has increased by 54 per cent.

Both in 1915 and 1916 the trade balance, viz., excess of exports and re-exports over imports has been very satisfactory :—

Year.	Exports.	Re-exports	Imports.	Total.
	£E.	£E.	£E.	£E.
1909....	436,732	31,847	941,660	1,418,239
1911....	910,771	45,009	1,234,749	2,190,529
1913....	812,013	51,787	1,056,627	1,920,427
1915....	777,973	56,154	745,250	1,579,377

TRADE NOTES.

Openings in Egypt.

The following notes are taken from a report written by a representative of a London firm who visited Alexandria, Cairo and Khartoum in May, and are published in the Board of Trade *Journal* :—

The wants of the Arabs, who form a large proportion of the population, are not extensive as regards either food or clothing. Nearly all these Arabs wear cotton overalls and trousers, the business done in Manchester goods amounting in value to several million pounds sterling annually. Very little or no meat is eaten, but a large demand exists for dried fish, such as bloaters, red herrings, kippers and mackerel. A good business is done in cheap gaudy jewellery and also in cheap cutlery, earthenware and ironware. Paints, white lead, linseed oil, general ironmongery such as nails, screws, bolts, etc., and also ropes and string, are in good demand, especially the cheaper qualities. Domestic machinery, such as coffee mills, mangles, knife cleaners, etc., would probably sell well. A large business is done in all kinds of sacks and bags.

It is stated that, with few exceptions, all the products of the Sudan would find a ready market in the United Kingdom. Many kinds of grains such as *dukhn* and Egyptian oats have not hitherto been shipped to this country. Feathers, native-made mats and baskets would, when freights permitted, find a ready sale in the United Kingdom.

Fair at Fez.

The Acting British Consul at Fez writes that a Franco-Moorish fair is to be held at Fez from October 1 to 15 next, and, although the fair is open to French and Moorish goods exclusively, it is hoped that British merchants and manufacturers will profit by the occasion to ascertain the classes of goods likely to prove successful at Fez. Mr. Dawkins has forwarded a leaflet showing (a) goods which are much in demand at Fez and are almost totally lacking, and (b) goods not in actual demand, but for which a ready sale might be found. The goods classified under (a) include the following : Enamelled ware; porcelain, crockery and glassware; ironmongery; millinery; toys and fancy goods; woollen goods; tarbouches; felt squares and building materials. The goods classified under (b) include the following :—Travelling cases; clocks; plated goods; leather goods; machinery; agricultural implements; cotton goods; silks; passementerie; coarse and fine linens; tobacco; confectionery; mineral waters; perfumery; jewellery; optical instruments; groceries; and paraffin candles. The leaflet referred to above, which contains more detailed information as to goods in actual demand and goods for which a ready sale might be found, together with two other leaflets containing the general regulations for the fair and the approximate transport rates from the coast to Fez, may be consulted by British firms at the Commercial Intelligence Branch of the Board of Trade.

[Our Morocco Correspondent deals fully with the Fair on page 430.—Ed.]

BULGAR PIRACY IN SERBIA.

According to *La Lumière Electrique*, the German-Bulgarian Union, of Dresden, has published the results of Bulgarian mineral researches carried out in the eastern part of Old Serbia. According to these researches, there are extensive coal basins between the Mava and the Peck, to the south-east of Porareva. The Dobra mine has a capacity of about 25,000 tons per year. On the Mirotch Mountain, to the south of Tetkia, there is a coal bed 30 kilos (18.7 miles) in length. At Zaietchar, a colliery which has been working for the last twenty-five years, and is connected by rail with Radujevac, on the Danube, supplies from 30,000 to 40,000 tons per year.

The Malakaon Reka bed is given a length of 3 kilos (1.8 miles), and an estimated capacity of five million tons. Sonich, located at a distance of 22 kilos (13.7 miles) from the Belgrade-Sofia railway line, can yield a large coal output. The coal basin at Alexinats is given a length of 6 kilos (3.7 miles). Coal is also found at Rtani, near Kniajevats, and in the Morava Valley, at Tzidilie.

ENEMY BUSINESSES.

Amended Liquidation Rules in Egypt.

The General Officer Commanding in Egypt has, by proclamation, completed and extended the measures already provided by a previous proclamation with a view to preservation of enemy property in Egypt pending arrangements to be made at the conclusion of peace, and to the protection of the interests of creditors and other persons interested.

The following are among the rules that relate to the liquidation of enemy businesses:—

Every liquidator shall be deemed to have been invested with full power to sell all or any of the assets of the business in liquidation, including real property, trade-marks, and other property of whatever description, and every such sale shall convey a good and complete title to the purchaser.

The liquidator shall be clothed with all the rights of the person whose business he is liquidating; he may institute and defend proceedings at law, and may grant a valid discharge of any mortgage or other charge registered by way of security in favour of such person. He shall have all such powers as are necessary to enable him to wind up the business.

The distribution of the assets realised in the course of any liquidation shall be subject to the ordinary rules, provided that as between unsecured creditors the liquidator shall satisfy the claims of creditors who are not resident or carrying on business in enemy territory in priority to the claims of persons who are so resident or carrying on business.

No bankruptcy petition shall be brought by a creditor in respect of any person whose business is being liquidated by order of the General Officer Commanding-in-Chief. A judgment obtained against any such person or against a liquidator, ordering the payment of money, shall be executed only to the extent of any dividend or dividends which may be declared by the liquidator.

The Licensing Officer shall, at such time as he may consider it desirable to do so, terminate the appointment of the liquidator, and order that all remaining assets of the liquidation be paid to or vested in the Public Custodian, who shall deal with the same in accordance with the provisions hereinbefore set out concerning the property of enemy persons. The Public Custodian may be instructed to continue a liquidation which has not been completed.

Controllers are appointed by the Licensing Officer and will follow his instructions. In general it is their duty to supervise the operations of the business placed under control, to make sure that the terms of any licence granted in respect of the business are strictly observed, and that no breach of any of the Proclamations in force is committed.

All judicial proceedings to which the Public Custodian or any liquidator appointed under Military Authority is a party shall be considered by the Court as urgent matters, and shall be disposed of with the least possible delay.

It shall be the duty of the Public Custodian, or the Liquidator as the case may be, to take the necessary steps for the immediate service of all judgments liable to opposition or appeal.

The following appointments are notified:—

Central Control.—War Trade and Licensing Officer, Col. Lord Edward Cecil, D.S.O.: Assistant War Trade and Licensing Officer, Major Hon. A. G. V. Peel.

Enemy Trading Section.—Director, Mr. H. Ward-Boys; Assistant Director, Mr. J. M. Marshall.

Import and Export Section.—Director, Mr. A. T. Loyd.

Public Custodian's Office.—Public Custodian, Mr. B. Hornsby.

The Black List.

The following Receivers of enemy firms in liquidation in Egypt have been appointed:—

Mr. C. W. Green, of the Anglo-Egyptian Bank: Business—Fernus Frères, Alexandria.

Mr. F. H. Russell, Gresham House, Cairo: Business — Austro-Orientalische Handels-Aktien-Gesellschaft.

The licences of the firms to trade have been cancelled.

NEWS FROM PERSIA.

Big Drop in Exchange.

(From a Special Correspondent.)

Ispahan, July 27.

A noticeable effect of the war in this country is the tremendous fall in the exchange. The £ sterling, which was worth about krans 50 before the war, is to-day worth less than krans 38, and is steadily going lower, while the rouble, which was worth about krans 6, is to-day worth about krans 2¼. These rates are for bills on London and Russia; but the prices of gold currency do not seem to have suffered. The English gold sovereign is worth krans 52, while the 5-rouble gold piece costs slightly over krans 25.

Piece Goods Trebled in Price.

In spite of this considerable fall in the exchange, piece-goods are trebled in price, and all imported goods have risen in price, varying from 50 to 200 per cent., but the most noticeable rise is in the prices of sugar and paper. Sugar costs about £14 per cwt., while ordinary foolscap paper of a medium quality is worth about £2 a ream. The rises are due, not so much to the enhanced prices in Europe—because this rise would be amply compensated by the fall of the exchange—but to the disturbed states of the roads which are infested by bandits; also by the tremendous increase in mule-hire. The hire from Ahwaz to Ispahan is nearly krans 400 per mule; before the war it was less than half this amount.

Quite a large number of mules are being bought here for transport purposes, and it is hoped that the presence of British troops at Shiraz will have the same beneficial effect in restoring order in the Fars province as the presence of Russian troops had in the Ispahan province.

The road from Ispahan to Ahwaz is in a fairly safe condition; so is the road from Ispahan to Shiraz; but beyond Shiraz to Bushire the mercenaries hold the road, which is absolutely impassable to caravans. By the way, the German Wassmus is still at large there, and it is hoped that the arrival of British troops at Shiraz will soon put him to right-about.

Locust Visitation.

The Ispahan province has been visited by large swarms of locusts which are several inches thick in some places. Fortunately, they arrived when the wheat and barley crops were too far advanced to be damaged; but they have destroyed the entire crop of potatoes and cotton. This, combined with the fact that, owing to the war, last year's cotton crop was not exported to Russia, and, therefore, the cultivators have not sown the usual quantity, and, again, with the prices of European piece-goods having so risen, a large number of local handlooms have sprung into existence once more, so it seems that when the war ends there will be little left for export.

On account of various restrictions placed on opium by the Opium Restriction Office, very little has been sown, and with a steadily increasing local consumption for smoking, the supply of this product, like that of cotton, will fall short of the demand.

EGYPTIAN COTTON "MORATORIUM."

A Reuter telegram from Alexandria, dated August 29, says that considerable excitement and indignation has been occasioned there by the Bourse Corporation's decision not to deal in cotton, till September 20, higher than 23 dollars. It is understood that the decision is due to the uncomfortable position of the jobbers who have been selling short, anticipating a fall, and are now unwilling to meet the big differences, as prices are still rising. The Government is actively inquiring into the matter, as the so-called moratorium is likely to stop the Fellaheen's sales and end in serious loss when the fall comes.

31, CHRISTOPHER STREET, LONDON, E.C.

PRODUCE REPORT.

London, August 31.

Currants.

There has been considerable activity in the spot market this week for all qualities, although the supplies are deficient and prices slightly higher. Transactions on new crop for September shipment are taking place at higher rates than those reported last week.

Sultanas.

The demand has been better this week, with good business in Afghanistan and Indian fruit at advanced prices. Australian sultanas are also selling well; while Greek fruit is held for higher prices.

Figs.

There is only a moderate demand, but prices continue steady.

Dates.

The demand is very good, but prices are very high, and only small business has been done during the week in spot fruit, while new crop is quoted at much higher prices.

Seeds.

Linseed has been dull and easier this week. London-Calcutta, spot, was sold at 76s.; August-September, 76s. 6d.; September-October, 77s.; while Bombay ordinary, August-September, is quoted 78s. 6d.; and small grain, ditto, 77s. Rapeseed is closing quiet, Toria, September-October, 69s.; and bold Ferozepore, ditto, 68s. 6d. Cottonseed is quiet, London-Egyptian, spot, is quoted £12; October, £12 7s. 6d.; November-January, £12 3s. 9d. per ton.

Oils.

Linseed oil is easier, spot pipes £36 10s.; barrels, ditto, £37 10s. landed. Rape is firmer, ordinary brown marked spot is nominal; whilst English refined barrels, £46 10s. to £48 10s. Cotton oil is quiet, crude spot pipes is quoted at £34 10s.; refined pipes, pale, £41; and barrels, sweet, £48 to £51 10s., as to make.

Oilcakes.

Cotton cakes.—There is still a scarcity of Egyptian cakes, but some parcels that are now on the way are offered at £9 15s., ex ship, which is also the price asked for November-January shipments; while English makes are dull and unchanged at £9 15s. to £9 17s. 6d. per ton. Linseed cakes.—Prices have a hardening tendency. London made, best, are firmly held at £13 10s. to £13 15s. East India, seed purer, are selling at £13 to £13 15s. ex ship afloat.

NEWS FROM ALL SOURCES.

The Roumanian moratorium with respect of debts due abroad has been extended for a further period of four months as from August 23.

The telegraph money order service, which was instituted on July 1 last, with certain of the British Oversea Dominions, will be extended on September 1 to other British possessions, including the Sudan.

Mr. Stanley Atter had gained a reputation as an artist in black and white before he left the London office of the Imperial Ottoman Bank for the Army. Recently he has designed an effective and cleverly drawn cover for the programmes of concerts given by the Inns of Court Officers' Training Corps at Berkhamsted.

The *Gaceta de Madrid* of August 5 published an announcement, issued by the Ministerio de Fomento, granting the concession for the construction and working of an electric tramway in Melilla to Don Ramón Prendes Rodriguez. Construction work must be commenced within three months, and completed within two years, from the date of the award of the concession.

ALEXANDRIA EXHIBITION.

How Egyptian Industry is Being Stimulated.

[*We are now able to publish a description of the Alexandria Exhibition, specially written for* THE NEAR EAST, *which amplifies the account published in our last issue.*]

(By Our Own Correspondent.)

Alexandria, August 12.

In the winter of 1914 the Jardin Rosette, Alexandria, was the scene of a ball given by the European community in honour of the visit of the British Fleet, a memorable spectacle for those who were privileged to witness it. To-day the premises are being utilized for an Exhibition of Egyptian Industries, for which they are almost equally well adapted.

The Exhibition was formally opened on Saturday, August 5, by his Highness the Sultan in the presence of the Ministers and a distinguished assembly. On the following day the High Commissioner and Lady McMahon, accompanied by Mr. Ronald Storrs, the Oriental Secretary, were received there by Adly Pasha Yeghen, Minister of Education, and Ismail Pasha Sidky, President of the Industrial Commission, who attended them during a lengthy visit.

As the first National Exhibition of its kind in Egypt, the enterprise has aroused much public interest since its conception, and for some weeks past Mr. Sidney Wells, the Director of Technical, Industrial, and Commercial Education and chief organiser of the Exhibition, together with his staff, has been busily engaged in perfecting the arrangements which, it may be said at the outset, are admirable in every respect.

Had the Exhibition been held in Cairo, in the height of the tourist season in normal times, visitors from many lands would have carried away with them a knowledge of Egyptian industries, more intelligent and comprehensive than they could otherwise have hoped to have gleaned in the course of a few weeks' visit to Egypt, even though supplemented by a study of guide books, export returns and the like; some of them, moreover, would have been spared the misgivings attendant upon the display for valuation by the hotel porter, or other sympathetic resident, of articles of Egyptian manufacture, purchased casually during the day and paid for in like spirit.

For the ordinary visitor interest centres chiefly around the Egyptian Arts and Crafts Section, and as the space at the writer's disposal is limited, it is proposed to deal with these in the first instance.

In the weaving section, the undyed woollen rugs, in brown and white, known as Assiout carpets and made in the Assiout model workshops, are remarkable for beauty and diversity of design. They are less costly than the multicoloured Persian or Turkish rugs, and should command an extensive sale. Some of the designs are original; others composite adaptations. These rugs would harmonize delightfully with a room distempered lemon yellow with brown stained floors. They are made by youthful students, both rich and poor, and prizes are given from time to time.

The Beni Suef Trade School also exhibits carpets made from Egyptian wool dyed by the weavers. A pile carpet designed by Abbas Kefafi, of the Boulac Technical School, was much admired.

Woollen articles of various kinds, in blue, white, and yellow, represented the work of the now destitute Bedouin women on the Western Frontier of Egypt. They have been collected for the Exhibition by an English lady interested in the welfare of the makers.

Mats made from Egyptian samar from Kafr el Hossr and Esneh, dyed with vegetable dyes, form an alternative floor covering for those who cannot afford the woollen rugs. One of the cleverest weavers of these mats was occupied upon a beautiful specimen with a design in green, and so rapidly did his deft fingers manipulate the material that the mat grew visibly during the ten minutes spent by his side.

Workmen were to be seen weaving carpets in the vicinity of these exhibits.

The silk dress fabrics in colours are, perhaps, not sufficiently modern in design to be easily marketable in competition with European goods.

Some very beautiful Assiout shawls were also in evidence, but as these may be seen in the shops in Paris and London, they are too well known and appreciated to necessitate special mention

The tent work, consisting of pieces of cloth in turquoise blue, brown and other colours, cut in representation of hieroglyphics from Egyptian tombs and temples, etc., and stitched upon a plain canvas background, are also well enough known to have achieved the flattering distinction of being freely copied in Birmingham and elsewhere. The specimens shown are made by the most famous exponent of this craft in the world, and a cursory examination will reveal the difference between the genuine article and the imitation.

On another stall there was a fine display of glazed ceramic ware. These exhibits form the first successful reproduction in Egypt of this ancient ware. They are manufactured in Shoubra, near Cairo. The colours are very pleasing, particularly a peacock blue shade, and the prices are moderate. Indeed, for an outlay of £10 it would be possible to acquire a representative collection.

The plain earthenware water-bottles (goulahs), vases, etc., were being moulded on the spot, by a potter at his wheel. "Shapes of all sizes, great and small," were turned out in full view of interested spectators.

Some frail glassware, in delicate shades of amethyst and aquamarine, etc., after models in the Arabic Museum, Cairo, were the work of Maalim Abdel Latif. Are these the first-fruits of the renaissance of a lost art?

Under a glass case were numerous specimens of "genuine" forged antiquities, the handiwork of the unsophisticated inhabitants of the village of Gomar. These give one furiously to think, and a study of them convinced the writer that, lacking an original, a genuine fake is preferable to—a fake. The "artist" may be imagined, tongue in cheek, plying his craft with not a little of that "joy for the working," of which Rudyard Kipling so feelingly writes.

In the furniture section there were some praiseworthy examples of inlaid (Arabesque) work, mother-of-pearl and ivory on walnut-wood from the Elhamieh School of Art, including a magnificent chair inlaid with "Baladi" mushrabia. There was also a beautifully-turned mushrabia screen from the Assiout workshops.

The Mandara* is a fine conception of the decorative possibilities of the salon of an Omda or Egyptian notable. There is no apparent straining after effect and yet the designers have succeeded in imparting a true Eastern atmosphere to the room.

To the writer's fancy, the fitting approach to such a room would be across a strip of sand. The time, noon of a summer's day; the locality, preferably Middle or Upper Egypt; the host, a dignified and courteous sheikh; the fare, coffee, cigarettes and slices of watermelon served by an ancient Sudanese; the conversation, harvest prospects. The hybrid forms no part in the decoration of this room, and fully to realize its harmony it would merely be necessary to introduce, for a fleeting moment, an example of modern furniture from Vienna or Marseilles. The inclusion of this exhibit was a happy inspiration, and owners of country houses in England, who have a penchant for things Eastern, might to advantage furnish a smoking-room from this model, a complete replica of which could be ordered for something less than £50. It is hoped that the object-lesson furnished by this exhibit will not be overlooked.

All the more important industries controlled by British and European houses employing native labour, are well represented in the Exhibition. Messrs. Compton and Sons, an important firm of clothing manufacturers, who have recently established a branch factory in Cairo, show specimens of the uniforms supplied to the Egyptian Postal Administration, coastguards, police and other public services. Messrs. Lagoudakis, printers, introduce an interesting feature in this section by displaying the actual lithographic stones—nine in number—showing the stages undergone by the poster advertizing the Exhibition, prior to production as a finished lithograph in various colours.

The Egyptian Salt and Soda Company, whose products, including soap and oil, are in universal use throughout the country, and whose oilcake finds a large market in England and the Continent, makes a brave display. The tarboushes turned out by the Kaha factory show good workmanship, and there is no valid reason why the foreign made article should ever regain the ascendency which it held prior to, and indeed for several months after, the commencement of the war. This is an industry capable of great development. Messrs. Cozzika and Company, who have a factory at Tourah for the output of "Sucrapaille," an economical patent food for horses and cattle, enjoy a prominent place. Messrs. C. J. Bolonachi and Son, who have been established in Egypt since 1884, show their various grades of brandies and rum, which have a large sale abroad.

It is evident that the Department of Technical, Commercial, and Industrial Education possesses an interesting sphere of usefulness, and it is well that an opportunity has been afforded the public of realizing what is being done by Mr. Wells and his staff in the way of stimulating the old industries and creating the new.

* His Highness the Sultan has given an order for the furnishing of a "Mandara" on the general lines of this model.

TYPEWRITER ACCESSORIES.

Warning to British Makers.

We take the following from a report by the United States Consul (Mr. John E. Kehl) at Salonika, dated May 26:—

"An unusual demand, now existing, creates a good opportunity for the sale of American typewriter ribbons and carbon paper in Salonika. The small supply of these commodities now on hand is of European origin, and, although of very poor quality, the goods are selling at the following wholesale prices to local dealers:—Ribbons, $5.25 to $5.75 per dozen, with 3 per cent off for cash; carbon paper, $1.75 to $2.50 per box containing 100 sheets.

"Under the Greek customs tariff now in force the practice has varied with reference to classifying typewriter ribbons and carbon paper. The local customs director states that ribbons are usually placed under article 287a, 'typewriter accessories,' paying a duty of 5.80 drachmas per oke ($0.40 per pound), the weight of box and spool not being counted. Carbon paper has sometimes been classified under article 306 as 'coloured paper,' paying 2.90 drachmas per oke ($0.20 per pound), not counting the weight of the container. It has more often been classified, however, under an omnibus clause providing that all commodities not specified in the Greek customs tariff shall pay a duty of 20 per cent. ad valorem, the market price in Salonika serving as a standard of value, after deducting 20 per cent. of the price. In addition to the import tariff there is a municipal tax of 1½ per cent. ad valorem.

"American banks probably would be able to obtain from Salonika banks information as to the financial standing of local firms. Under normal conditions, terms of sale in the wholesale market are from two to four months' credit, with a discount of 2 to 5 per cent. for cash. In view of present local business conditions and lack of transportation facilities, it is recommended that American firms quote prices cash f.o.b. New York at the pier of the National Navigation Co. of Greece."

ORIENTAL-RUG MARKET.

Evidence of Increased American Interest.

The following information with regard to conditions in the Oriental-rug trade was obtained by letter from five large oriental-rug dealers in the United States, says an American Consular Report:—

Three firms state that they have been unable to get rugs from Asia Minor or even to communicate with that district. One firm is of the opinion, from what little information it has received, that oriental-rugs from this section will be much higher in price after the war, owing to the scarcity of labour and of wool. Wages, it is stated, have multiplied nearly threefold, and wool is very scarce and very high. At the outbreak of the war Persian rugs declined sharply in price, and the exchange value of the silver kran dropped from 0.0875dols. to 0.07dols. There has since been a gradual improvement in prices, and the exchange value of the kran has gone up to 0.11dols.

Most of the dyes used in Asia Minor, one dealer states, came from Germany; but Persia uses its own dyes as well as its own wool. Rugs are still being woven in Persia, according to two dealers, but not in the numbers that were customary before the war, for exporting houses, owing to the risks of shipment, are not ready to make the necessary advances in money to the weavers. The markets were well stocked in 1915, but subsequent purchases by American importers and the shortage of new rugs have made present stocks much lower. The diminution, according to one firm, is noted particularly in the very popular small rugs that came from the Hamadan district. This firm adds that the most disturbed carpet centre in Persia is the Kirman district, from which no goods have been shipped for some time.

The chief obstacle at present in the Persian rug business is the difficulty of shipment, which tends to keep prices lower in Persia. It has been almost impossible to ship goods from Persia by the usual routes through the Persian Gulf or the Black Sea. Shipments through Russia are difficult, and subject to delays, if not impossible, as one firm believes. Any rugs received under present conditions will cost more delivered than they did before the war, on account of additional charges for insurance, freight, etc.

One dealer tells of his personal experience in the rug-manufacturing districts:—

"A little over a year ago, while I was in Persia and Asia Minor, the market was very much depressed. Buyers were scarce, and transportation facilities were lacking. I managed, however, to bring my goods within Russian borders and from there to Russian ports. The merchandise that I bought has been on the way for over a year. I understand that at present it is impossible to secure transportation from Persia and Asia Minor through Russian ports. I would not recommend anyone to purchase goods and send them over the route that mine are taking.

"Market conditions may differ now from what they were a year ago. Since my return two months ago I have been informed that many American importing houses have sent representatives to Persia, the Russian Caucasus, and the Asia Minor frontier to take up all available goods and store them there. As soon as they reach these interior points a considerable rise in prices may be expected.

"There is available a considerable quantity of inferior and undesirable goods, formerly shipped to Europe, but very little of the best quality, such as is purchased by the American market. No manufacturing has been done since the outbreak of the war, owing to lack of labour, material, yarns, dyes, and finance. There are on the way to New York 3,500 to 5,000 bales, which we sold at Basra and various Persian sections."

COMPANY MEETINGS.

Egyptian Delta Light Railways.

The annual general meeting of the Egyptian Delta Light Railways, Ltd., was held at Winchester House, Old Broad Street, E.C., on Tuesday, Sir William E. Garstin, G.C.M.G. (chairman of the company), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, you will remember that for the year 1914-15 we were able to distribute a reduced dividend of 2½ per cent., after payment of all charges. In my last year's speech I indicated the possibility, and indeed the probability, of our losing a further sum of £20,000 during the year now under review, owing to reduced traffic returns. I based this forecast upon the fall in our receipts in 1914-15, caused by eight months of war. Had this forecast been fulfilled, we should have been left without any balance to the good as the result of the past year's working, but I am glad to inform you that our traffic returns have, in spite of twelve months of war conditions, been so much better than I anticipated that the available profits for this period amount to £14,216, or the equivalent of nearly 1½ per cent. on our preference share capital. I must here explain that the above figure is independent of the credit arising from the transfer to suspense account of those working expenses that are in excess of 64 per cent. of our earnings. I can, consequently, describe this sum of £14,216 as representing the actual profit derived from the working of the year. A similar explanation is necessary regarding the balance we have carried forward. This is shown in our accounts as £65,228. Of this sum, £25,810 is made up by three years' adjustments of working expenditure, in excess of 64 per cent. of our annual earnings, to our authorised suspense account, thus leaving only a sum of £39,417 at our disposal. The above is clearly indicated in our accounts, but this special mention of it will, I hope, prevent misapprehension as to our available revenue resources.

Our profits for the year under review were affected by: (1) a reduction in the earnings of our light railways; (2) by the transfer to the Government of the Helouan properties; and (3) by the higher charges for fuel. The first of these deprived us of £2,282, the difference between our loss in passenger receipts and our gain in goods receipts. The loss is much less than we had expected. The second is due to the sale to the Government of the Helouan Railway and its subsidiaries, which sale formed an integral portion of the revised conditions of our new concession. The outbreak of war has not only prevented us from undertaking the construction of new lines, from which we anticipated favourable returns, but has also postponed the payment to us of the purchase price of £90,000. Thirdly, the exceptionally high price of coal, which involved an additional expenditure of £10,846 in the year's working, and led to an increase of £1,041 in our working expenses, in spite of the considerable economies that we succeeded in effecting in these last.

Whatever the future may have in store for us, we cannot escape the fact that the cost of our coal, for the time, is enormous, as compared to anything we have previously paid, and it is this fact which, far more than any other, makes it impossible for us to consider at this moment any distribution of profits, or, indeed, to hold out to you hope of such being possible in the current year. For a due appreciation of our position, I may tell you that the additional cost of fuel alone for this year, as compared with normal times, will be the equivalent of something like 6 per cent. to 7 per cent. on our preference share capital. Thus it is that, in spite of the steady and satisfactory improvement in our earnings which is taking place; in spite also of our effecting, or having effected, every possible economy; in spite also of possible assistance from the permission we have obtained to raise our rates and fares, we cannot reasonably hope that this year's earnings will be sufficient to cover our expenses and fixed charges; in fact, we quite expect to be obliged to draw upon our reserves. The position in which we are now placed is entirely due to the war and to causes quite beyond our control. It, I think, fully justifies my warning to you of a year ago, and the conservative policy that has been consistently adopted by the present board. It may, gentlemen, be found impossible to relax this policy of caution until we have made good any sums which we may be compelled to take from our reserves. This no one can foretell. I have, however, such faith in the recuperative powers of Egypt and in the important part to be played by the Egyptian Delta Railways in the development of the country, that I feel confident that a very short time after the termination of this war will suffice to reinstate us in the promising position which I had the satisfaction of describing to you two years ago, when explaining that the Government of Egypt had been pleased to modify our contract with them. I have dwelt at some length upon this question of our fuel supply, and I repeat that it is that, and I may almost say, that alone, which forces us to husband our resources and prevents us from recommending any distribution of our profits. When I tell you that the price of coal in Egypt per ton is now between £6 and £7, and may possibly still rise—whereas in the years previous to the war it averaged some 30s. a ton—you will understand how serious is the situation by which we are confronted. Happily, we are safe as regards our supply for the current year, but who can say when this war will end, and we may be faced by an equally serious situation in the following year. I feel sure you will agree with us that the course we have adopted is the only one to follow.

During the year which we are considering we have parted with the Cairo quarry lines and with the Helouan railway and its subsidiary properties. Neither of these had come up to our expectations, and our revised contract gave us the much-desired opportunity of getting rid of them. The war has, as I have explained, prevented us from utilising the proceeds of either sale, and, for the moment, we must consider that these portions of our undertaking have not been replaced by those corresponding and more remunerative additions which we had confidently contemplated. We, of course, intend to put these additions in hand at the earliest opportunity. To meet urgent military requirements we have consented to the lifting of certain outlying branches of our system on terms which protect us against loss, other than that of being temporarily deprived of these branches. We have also, through different channels, loaned or sold to the Military Authorities some of our engines and rolling stock, as well as some permanent way materials. We have further assisted them in the construction of certain strategic light railways. I am sure you will share in the feeling of satisfaction with which we have availed ourselves of the opportunity of rendering such assistance to the cause of the Allies, even though as a matter of business it has been barren of any actual profit.

The reasons already referred to by me as affecting our earnings and expenses during the exceptional period under review will have shown you that no useful comparison can be made with our working under normal conditions. I may further add that our receipts have been adversely affected by the compulsory reduction of the area under cotton cultivation, although they have been to some extent favourably affected by our carriage of

Digitized by Google

the troops and their supplies. Our expenses, apart from the question of fuel, have been reduced all round by a less frequent train service and by the partial closing of a number of stations; also by the absence of some of our staff on military duties and by the abolition of the services of others. Lastly, by the postponement of all work of any kind not absolutely and immediately necessary. Some details of these variations are given in the directors' report, but they are not of lasting interest, because they are due to the abnormal circumstances now prevailing.

The foregoing remarks will, I hope, enable you to appraise at their proper value the following comparative figures: The actual net earnings of the year (twelve months of war) are £50,692, against £54,015 for the previous year (eight months of war), and against £101,246 for the last pre-war year. The gross earnings for 1915-16 show decreases of £2,282, as against 1914-15, and £63,126 as against 1913-14. The decrease in the year under consideration results from a fall in the coaching receipts of £5,023, and an increase of £2,749 in goods' receipts. The former is due to a decrease in the number of passengers carried, but the latter figure is due to increased receipts, in spite of the fact that our goods earnings for 1915-16 were less in tonnage than those of the previous year. Our expenses have exceeded those of the previous year by £1,041, and this, as I have explained, is entirely due to the increased cost of fuel, namely, £10,846, although 2,500 tons less were consumed. The average cost per ton for the year was 57s., as against 34s. It follows that our earnings having decreased and our expenses having increased, we have passed to the debit of suspense account a much larger sum than last year in order to arrive at our fixed proportion of expenses to earnings. The available net profits for the year, after payment of our fixed charges, amount to £14,216, or about 27s. per cent. on our preference capital. Even this distribution we are, as I have shown you, unable to consider, and we are moreover very thankful to have this small addition to our cash in hand to help us through the current year. Our coal at present and for some time to come is going to cost us something like £60,000 to £70,000 extra for the year's consumption above the normal. There can be no doubt whatever, I fear, that the earnings of the year 1916-17 will not cover such an additional charge, but it is hoped that the available portion of our balance carried forward, £39,417, will suffice to do so, so that we may not have to infringe upon another reserve.

Having referred to changes in the directorate, the Chairman proceeded:—There appears to be no chance of much improvement during the current year. The cost of fuel is most unlikely to be reduced, and may even go higher than it is at present. It will take us all that we can do to meet the heavy extra cost of working thus entailed, and every penny that we can carry forward from last year's working will be required to enable us to meet these extra charges. I feel confident, however, that, if we do this, and if we continue to husband our resources carefully, we shall surmount the difficulties before us. Gentlemen, I personally have no fears for the future of our railways. The undertaking is a thoroughly sound one, and the period preceding the war, subsequent to the granting of our new concession, gave us good grounds for confidence in a satisfactory future. I feel complete confidence that when peace shall arrive, and when freights shall be lowered, we shall speedily return to the conditions existing before the war, about which I was able to speak so hopefully to you in 1913 and 1914. Egypt has such powers of recovery that it seems probable that she will rally from the effects of the war more quickly than any other country within the area affected by it. Even now signs are not wanting to show that a commencement of such recovery is almost within sight. The financial adviser's last report was decidedly reassuring in its tone. During the last four months our traffic receipts have attained to a figure nearly £10,000 higher than were those for the corresponding period of last year. The reports of the cotton crop are favourable so far, and the Nile flood is a bountiful one. We must just then carry on through these bad times, confident that prosperity will return to us in a not very distant future. Should any shareholders wish to ask questions I shall be pleased to reply to them to the best of my ability.

The report and accounts were adopted. The Hon. W. B. L. Barrington's appointment as a director was confirmed; Mr. Montagu Sharp was re-elected to the board; Messrs. Meredith and Co. were reappointed auditors, and after the usual vote to the chair had been passed the proceedings terminated.

Bibi Eibat Oil Company.

Mr. Herbert Allen, presiding at the annual general meeting of the Bibi Eibat Oil Co., Ltd., on Wednesday, said the company was mainly, but not exclusively, a holding company, their principal asset being their interest in a Russian company of similar name, of which they held the entire share capital of Rs. 2,500,000, and of which they were creditors for £82,395. Their liquid resources in London were about £44,000, and they possessed other assets besides. Their share capital was only £237,000, and the debenture debt had been reduced to £55,000. In 1912 and 1913 the Russian company made profits of Rs. 739,522 gross, and Rs. 400,000 net, but in the next two years there was a loss of Rs. 251,964, due largely to the damage done to wells during the strike in 1914. The principal cause of their troubles, however, was the intolerable treatment of the Russian company by the Imperial authorities, who continued to exact a royalty of 40 per cent. of the production, although a Government Commission had recommended that these oppressive royalties should be reduced. For what it was worth they were now petitioning the Ministry, but he would believe in a reduction when they got it. The Russian company had paid the Government in the last five years 2¼ million roubles in royalties; in the last two years alone they had paid Rs. 717,378, or about £35,000 a year, and a profit of Rs. 465,414 had thus been turned into a loss of Rs. 251,964. The promising oil fields which had been opened up in recent years in the Caucasus and the Ural-Emba districts were not Government leaseholds, but peasant lands and private freeholds held under conditions attractive to the capitalist. The company held a prospecting licence over 27 acres on the most promising part of the new oilfield at Grosny, almost midway between the immense fountain which had just been brought in by Lianosoffs and the most prolific plots of the North Caucasian Company. Lands in this locality had increased ten- to twenty-fold since they acquired their plot two years ago. The year's income amounted to £16,111, and after meeting all outgoings, including the full debenture service, there was a surplus of £4,509, which, with the balance brought in, enabled them to carry forward £19,532. This was not a paper balance, but hard cash. It was a subject for congratulation that their liquid assets were all in this country, and that when they spoke of pounds they meant sovereigns—or the modern English equivalent. The directors hoped in future to hold the general meetings in the spring of the year instead of in the autumn, and if only the Russian company could get reparation from the Government for the wrongs it had so long endured, they might start their new practice under more cheerful conditions than those prevailing last year.

COMPANY REPORT.

Maikop Pipeline Transport.

The report of the Maikop Pipeline and Transport Company, Limited, states that the profit and loss account shows:—Russian revenue account, £42,500; dividends, transfer fees, etc., £10,976. The expenditure in London and Russia amounted to £12,129; deducting debenture interest, £10,367, there remains a total available for appropriation of £30,979, which the directors propose to place to depreciation account. The items in the profit and loss account and the floating assets, less liabilities, have been taken at the rate of exchange ruling on January 13 last, i.e., 16 roubles per £1. But for the adverse rate of exchange the balance available for appropriation would have been £54,413. The amount of the company's debenture stock redeemed to date is £65,213. The quantity of oil received by the company for pumping during the year amounted to 6,900,360 poods (111,296 tons), as compared with 3,367,968 poods (54,322 tons) in the previous period. Owing to the assistance rendered by the Russian authorities it has been possible to retain sufficient men to carry out the most important operations on the field. Recent drilling activity has been concentrated in the district brought into prominence last year as the result of the fountain well on plot 457. The position at Krimskaya is more adversely affected by the war than at Maikop, and operations in this field have been limited to obtaining production from the old wells. An arrangement has recently been carried through by which the various interests connected with the supply of water on the Maikop and Krimskaya oilfields have been amalgamated and taken over by the Maikop Water Works, Limited. This company is adequately represented on the board of the Water Works Company, in which it holds the majority of the shares, and it is now managing all the Water Works' interests on the oilfields.

COMPANY NOTES.

P. & O.

An extraordinary general meeting of the stockholders of the Peninsular and Oriental Steam Navigation Company will be held at 122, Leadenhall Street, on September 7, 1916, at 12.30 p.m. for the purpose of considering and, if thought fit, passing the following resolution: "That the Conditional Agreement dated June 30, 1916, between the New Zealand Shipping Co., Limited, and the Peninsular and Oriental Steam Navigation Company be approved and confirmed. That the capital of the Peninsular and Oriental Steam Navigation Company be increased from £1,798,133 deferred stock to £2,704,853 deferred stock by the creation of £906,720 additional deferred stock, thus making, with the addition of the existing preferred stock of the company, the total capital of the company £5,744,853, such further capital (as far as required for carrying out the said agreement) to be issued in the terms as to dividend and otherwise thereby provided."

New Company for Mesopotamia.

The Persian Gulf and Mesopotamia Development Co., Limited, was registered on August 25, with a capital of £50,000, in 25,000 preference and 25,000 ordinary shares of £1 each. The company is to adopt and carry into effect an agreement, dated July 17, 1916, between H. M. Kilby (trading as Kilby and Co.) and Paul Janssens de Varebeke, of the first part, and B. Maimon, of the second part, and, in addition, to carry on in Mesopotamia, Asia Minor, or elsewhere the business of railway or tramway proprietors, ship, dock and wharf owners and carriers; to construct, maintain, and work power stations, and to carry on the business of bankers, financiers, merchants, contractors for public and other works, hotel proprietors, etc. The company is a private one. 12,000 shares are to be at the present disposal of the directors, who may allot or dispose of them as they think fit, subject to the above-mentioned agreement. No dividend is to be paid on the ordinary shares until a preferential dividend of £2 per share has been paid on the preference shares. When the preference shareholders have received the said dividend of £2 per share the company is to pass resolutions converting them into ordinary shares. The first directors are Bernard Maimon, 5, College Court, Hammersmith, W., journalist; Hugh M. Kilby, 20, Harp Lane, Great Tower Street, E.C., merchant; Paul Janssen de Varebeke, Old Mill Company, Eccles Hill, Bradford, wool spinner; Alfred L. Van den Kirckhove, 20, Copthall Avenue, E.C., merchant; and Andre P. M. Magnier, 1, Bloomfield Court, Maida Vale, W., scientist. Their remuneration is £200 each per annum. The secretary is H. W. Kilby, and the registered office Whitehall House, Charing Cross, S.W.

Dividends, etc.

The half-yearly dividend of the National Bank of Greece for the first half of 1916, amounting to 125 drachmæ per share, is now payable at the current rate of exchange on presentation at the Bank of Athens, 22, Fenchurch Street, London.

Oil Outputs.

Anglo-Egyptian.—Production last week:—Gemsah, 11 tons; Hurghada, 536 tons.

Baku Russian Petroleum.—Week ended August 19: 81,100 poods. Estimated gross production for week ended August 26, 82,800 poods. Price of crude oil, 45 copecks per pood.

Bibi Eibat.—Week ended August 20: 61,267 poods.

North Caucasian.—Week ended August 22: 677,604 poods.

Roumanian Consolidated.—Week ended August 19: 844 tons.

Russian Petroleum.—Week ended August 19: 60,000 poods. Week ended August 26: 57,200 poods. Price of crude, 45 copecks per pood.

ON 'CHANGE.

(By Our City Correspondent.)
Throgmorton Street, E.C.

Business this week has again been on restricted lines. There has been a demand for Egyptian Delta Light Railway shares, and the price has advanced ¼ to 5⅝, at which price some business was done. National Banks have continued in good demand, and are firmer again at 12⅝, but business has been impossible owing to a lack of sellers.

Of New Egyptians, about a thousand shares have changed hands in the neighbourhood of 9s. This company's lands are, generally speaking, in an advanced state of development, and it should be one of the first to benefit from sales of land, should the *fellaheen*, as appears very probable, come into the market as purchasers this year.

Some United Egyptian Lands changed hands as low as 6d.

In Egyptian Markets a fair business was done up to about 25s. 6d., and shares are still wanted.

Khedivial Mail preference shares have improved to 3¾, at which price they are still very much undervalued.

Greek securities, in spite of the disturbing political news, have remained in demand for Athens, but very little business has been transacted in the almost total absence of sellers.

Currant bonds are wanted at 90.

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to June 30, 1916 (New Style: January 14 to July 13, 1916):—

—	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
	Drachmæ.	Drachmæ.
Gross Receipts, June, 1916	2,369,243	1,859,000
Do. do. do 1915	2,799,960	1,328,000
Estimated Receipts for 6 months (Law of Control)	14,450,000	5,350,000
Actual do. do. 1916	17,017,169	13,884,000
Do. do. do. 1915	18,412,375	12,500,887
Difference between estimated and actual receipts for 6 months 1916	+ 2,567,169	+ 8,534,000
Difference between estimated and actual receipts for 6 months 1915	+ 3,962,375	+ 7,150,887

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the days mentioned:—

	1915. Francs.	1916. Francs.
August 22	190,000	210,000
August 23	150,000	70,000
August 28	360,000	250,000
August 29	320,000	240,000

NOTES OF THE WEEK.

The Roumanian attack on Austria-Hungary has been launched simultaneously along the whole of the frontier, from Orsova on the Danube to the Bukovina, where contact with the Russian army has been established. Only in the south, at Orsova, have the Austro-German forces been able to make any determined resistance, and here, we learn from enemy reports, the Roumanians were only checked for five days. Elsewhere, in spite of the favourable positions for defence occupied by the enemy in the Carpathian range, they have given ground, and the Roumanian advance has been regulated more by considerations of transport than by the opposition encountered. This unexpected development reveals the shortage of men from which the Central Powers are now suffering. The Austrian line of argument must have been that the Russian advance was a real and instant menace; a declaration of war by Roumania, on the other hand, was at worst a distant contingency. Every available man had to be collected to oppose the Russians; a Roumanian invasion must be left to chance. Common prudence prompted as big a concentration as possible at Orsova, not only for the protection of Serbia and the railway to Sofia and Constantinople, but also for the defence of the Banat and the easiest line of advance on Budapest.

Austria's dilemma has proved Roumania's opportunity. If there remained in any quarter a tendency to blame the Roumanians for a seemingly tardy participation in the war, it will have been dissipated by an appreciation of the advantages accruing from an attack on the enemy on a new front at this precise moment. A year ago the Carpathian passes might well have proved, if not impassable, at least a formidable obstacle for an army advancing from the south or east; and much of Roumania's strength must have been spent in the effort to debouch on to Hungarian territory. To-day this difficult operation has been performed almost without a struggle, the advance in force along the whole frontier leaving the enemy no alternative to a general withdrawal to a shorter front.

M. Bratiano's Fabian policy has been justified by the event. It would, however, be a mistake not to recognize the obligation under which Roumania lies to the stalwarts who have preached intervention from the very beginning of the war. They have at least kept alive the national aspirations, and prevented them from becoming atrophied under a numbing policy of unchallenged neutrality. Further, they have effectually "queered the pitch" of the German agents and their satellites among the Roumanian people, and prevented a repetition of the success attained by Baron von Schenk in Athens. Whether they have achieved more, and may even claim to have won over the Prime Minister to their way of thinking, we have no means of knowing. But it is many months since we had the satisfaction of seeing adopted a policy which had been repeatedly recommended in these columns, that, instead of maintaining an attitude of detachment or antagonism towards M. Take Jonescu and M. Filipescu and their respective followers, M. Bratiano should take them into his confidence and arrive at an agreement which would remove the necessity for an embittered interventionist campaign. The result has been that, when the psychological moment arrived, Roumania entered the war with the nation practically unanimous—a source of great strength in an arduous campaign.

The Roumanian military command has so far been very sparing in the bulletins issued, and it is significant that the world first knew of the occupation of Kronstadt, Hermanstadt, and Petrosheni from enemy admissions. It is no doubt recognised that the real fighting has hardly begun, and in view of the ebb and flow of the various battle fronts in this war Roumania may be resolved to tread warily in the matter of military claims. There is a very general expectation that the Austro-German forces will lose no time in trying to bring about a decisive check of the Roumanian advance. Such tactics would be in keeping with the character of the new Chief of the German General Staff and with the popular wish in Hungary. However divided parties in that country may have been before, they are likely to close up their ranks in a resolve to try to take vengeance on the Roumanians. The last thing the Magyar public will be minded to tolerate is an indefinite "walk-over" for Roumania through Transylvania. In these circumstances the Roumanian authorities may be acting wisely in trying to prevent their countrymen from forming at the outset an erroneous impression of the nature of the task before them. But they must also bear in mind that both in Roumania and abroad interest in the campaign is apt to bear a very close relationship to the degree of publicity extended to the army's doings.

Various explanations are given of Bulgaria's delay in declaring war on Roumania. Any one is as likely as any other, and there is no special reason why we should

▲

Digitized by Google

not attribute it to the length of time that must have been required by the Bulgarian Government to draft the formidable document in which it ultimately announced that a state of war between the two countries existed. It will, however, be noted that in the interval the Bulgarian army lost its Chief of Staff. Whatever the cause of his death, the Government may well have hesitated to launch a fresh campaign before his successor had been appointed. German-Bulgarian troops appear to have been quite ready for operations against Roumania, for the Dobrucja frontier was crossed immediately, and some unimportant successes were registered. In this theatre the Bulgarians are destined to meet not only Roumanians, but Russians as well, who have been advancing across this part of Roumania since the latter's declaration of war. In view of all these movements, it is only natural that significant events should be looked for in the Balkans in the early future. The Near East, no longer regarded as a "side-show," has become for the moment almost the chief theatre of the war; not because the final decision of the struggle is looked for in that region, but because it is at last realised that a decision must be sought here, before the final one can be reached in the West or East.

Fighting along the Dobrucja frontier has now become general. On their right flank the enemy forces have been able to penetrate some distance into Roumanian territory, and there have been patrol encounters north of Dobritch. On the Danube their immediate objective is Tutrakan, just inside the frontier, but the Roumanians have so far been able to hold their own, in spite of ten attacks on the bridgehead. The real trial of strength in this quarter is not likely to come about until the arrival of the main Russian army destined to operate against Bulgaria. Meanwhile it is of interest to note the completeness with which the policy of co-operation now established among the Allied Powers is working in the case of Roumania. Not only are Russians and Roumanians fighting side by side in the Dobrucja, but the entry of Roumania into the war became at once the signal for a fresh advance of the Russian front along the Carpathians and further north towards Halicz.

In a week that deserves to be styled eventful, even in the stirring times to which the country has become accustomed, Greece witnessed the outbreak of an informal revolution at Salonika and the arrival of an Allied Fleet off the Piræus in order to support the presentation of further drastic demands to the Greek Government. The whole situation is as obscure as it is complicated, and a visit from Alice's Queen, who would impartially order everyone in authority to have his head cut off, would save Greece much anxiety and heartsearching. Failing this beneficent but drastic remedy, we should like to see the Allied Governments take a firmer grasp of the whole problem, and draw up a plan of action for Greece to adopt, instead of merely emphasising with policemen and big ships the things that she may not do.

The revolution in Salonika is still in embryo. Military-cum-civilian Tweedledum fell out with the purely military Tweedledee. They resolved, apparently much against both their wills, to have a battle; but the French Commander-in-Chief stopped the proceedings. Tweedledee was interned, and Tweedledum remains at large as a Committee of National Defence, which has dispensed with the services of the Central Government in Athens. In so far as Baron von Schenk has hitherto been the Central Government in Athens the Salonika patriots have done very well. But Baron von Schenk has been deposed, and we are by no means satisfied on the evidence so far to hand that Greece really requires a revolution. The prestige of the Crown could hardly be lower, when such rumours as those which have been woven around King Constantine obtain general currency. But there are other people in Greece besides King Constantine who have to be blamed for the existing state of affairs, because M. Gounaris has never been without a following, and many thousands gave him their support at the last elections.

If participation in the war were a *sine quâ non* of Greece's rehabilitation, and a small clique, however highly placed, stood in the way of the realisation of the national aspirations, it might be necessary to remove that clique from power. But the Allies have not asked Greece to abandon her neutrality, and if pressed on the subject, would probably admit that they did not propose to allow her to fight by their side. In such circumstances the Greek people may banish all thoughts of war from their minds, and turn their attention solely to straightening out the constitutional muddle. Some restrictions ought to be imposed upon the capacity of the Sovereign to take the ship of State through the shallows of unconstitutionalism on to the rocks of national disgrace. It may be doubted, however, whether the country would be better off as a republic than as a monarchy. The history of Greek politics lends colour to the belief that a wise monarch can prove of inestimable value to a land in which political divisions turn mainly on personalities and not on matters of principle. King Constantine failed Greece at a very critical moment. He is not likely to be confronted with a similar dilemma again, and if he were, he would probably be found to have learned his lesson. Others proved equally false to the true interests of Greece, and there is no reason why King Constantine's punishment should be greater than theirs. It is to be hoped, therefore, that the King, M. Venizelos, and the Committee of National Defence at Salonika will be able to adjust their differences and set up Greece once more as a nation at one with itself.

On September 1 an Allied Fleet of nearly forty vessels appeared off the Piræus. Three German ships in the harbour were seized, and possession was taken of the wireless apparatus at the Greek arsenal. The following day the Allied Governments presented a formal demand to the Greek Government for the surrender of the control of the posts and telegraphs, including the wireless system, for the deportation of enemy agents employed in corruption and espionage, and for the punishment of Greek subjects guilty of complicity in such corruption and espionage. Greece intimated her readiness to accede to these demands, and the work of arresting the German agents was at once begun. Athens is thus to be rid this week of the notorious Baron von Schenk and his myrmidons, who have been responsible throughout the war for the work of creating an artificial agitation against the Entente Powers and of maintaining the German system of espionage in the Near East. The wonder is not that this drastic step has at last been taken, but that it has been so long delayed.

We have become so accustomed to the ubiquitousness of the help afforded by Russia to her Allies that the extent to which the interchange of services has been carried out by all alike is apt to be overlooked. But the British armoured motor-car, to say nothing of the British ambulance, must now be as familiar an object in the various theatres of war as the Russian soldier. It has figured in Galicia as well as in France and Egypt, and it is now reported in the Mush Valley in Armenia. Its province there seems to be to guard the roads from Kurdish incursions from the mountains, with the special object of protecting Russian supply trains. Recently two of these cars came into action against several hundred Kurds, and were able to disperse them after inflicting considerable losses upon them. In this region the Turkish offensive has been, it is to be hoped, finally checked. The Russians are again advancing, but the nature of the ground has so far prevented any decisive success being recorded.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 18.

Educational Reforms.

The Ministry of Education has just obtained the consent of the Council of Ministers to some very important reforms in the system under which the Government schools are worked. In the first place, three new sections have been created in the Polytechnic School, viz., electrical, mechanical, and Tanzim (town-vestry work). This innovation has been considered necessary for divers reasons. First, the number of students in the existing sections, Irrigation and Towns and Buildings, especially the former, has increased so enormously that the graduates turned out every year far exceed the number of posts offering in the Government and other public and private enterprises. Next, the country has undergone such development that all branches of engineering and municipal work are now being undertaken. And, finally, that there is a demand for instruction of the nature now decided upon is proved by the fact that a large proportion of the students sent privately to complete their education in England take up an electrical, mechanical, or Tanzim course. There is little doubt that the decision taken by the Ministry of Education is an eminently wise one; for henceforward, instead of further overcrowding the irrigation, engineering, and architect's profession, the Polytechnic will be able to produce material which will meet, or at any rate go a long way towards meeting, the requirements of the railways, municipalities, and other similar enterprises for competent non-European engineers. At the same time, it has been decided to make certain adjustments in the syllabus and course of the Elementary Normal School for Female Teachers. This has had to be done in order to provide the necessary staff for the Elementary Higher Schools for Girls, to the creation of which reference was recently made in this correspondence.

The Question of School Fees.

The most important reform is, however, the alteration in the school fees charged hitherto by the Government. The budget of the Ministry of Education, which ten years ago was under £E200,000, is to-day over £E400,000, of which a large portion is devoted to higher education. It was all very well to offer this class of education at low rates, which constituted an attraction at a time when it was politic to encourage Egyptians to take up liberal professions to extend the scope of their instruction; to-day, however, the situation has completely changed, and the ranks of professional men and aspirants for clerical posts have swollen to such an extent that there is no longer any *raison d'être* for the offering of this attraction, and it is absurd, indeed illogical, that those who desire to take up the higher courses should have their tuition expenses almost entirely paid by the State. At the present moment higher education alone costs £E72,000 per annum, towards which but £E11,000 is received from the students, the balance being borne by the State at the rate of £E64 per student. Similarly in the secondary schools, each student costs the State £E33 per annum, or a total of £E46,000. In the circumstances the Government has decided to raise the annual fees per student from £E15 to £E30 in the Polytechnic and Medical Schools, from £E15 to £E20 in the Secondary and Pharmacy Schools, and from £E8 to £E12 in the School of Fine Arts. As things will stand even from now onwards a substantial part of the cost of each young Egyptian's education will still be borne by the State, and seeing that the class of students which this higher form of education is to benefit comes from families who can well afford to pay the entire cost of their children's education, and who are certainly not entitled to receive charity from the State —which is, after all, what the present system amounts to—the Ministry of Education would have been fully justified if it had demanded that all who wished their sons to take the higher course of education and become doctors, lawyers, engineers, and Government servants, should pay fees that would entirely remunerate the State for that part of its educational budget which is devoted to these branches.

An English School for Cairo.

As a result of the growth of the British community of late years in Egypt, and more particularly in Cairo, the want of an English school has been gradually making itself felt. Hitherto, if their children were too young to be sent home, or if they did not want to be parted from them so soon, parents have either had to give them private tuition or been forced to send them to one of the foreign schools in the country. Both courses had their drawbacks. Some years ago, it is true, the Dean's Building School was founded at Boulac in memory of the late Dean Butcher, and there has been, of course, Victoria College at Alexandria, which was established as a memorial to Queen Victoria. But the former, besides being mainly intended to provide for the children of the State Railways staff, only gives a very elementary form of education, quite unsuited, for instance, to boys who might have to go later into an English public school; whilst Victoria College cannot certainly be said to offer the same advantages as those possessed by an exclusively English educational institution.

The Committee of the Dean's Building School some little while back came to the conclusion that the time had come when something might well be done to meet the great want referred to, and permission has been given for the German School in Cairo, which had been taken over by order of the military authorities, to be reopened as an English school. This the Committee propose to do on October 1 next. According to the circular, which has just been issued, the school will be run on English school lines, with a staff of specially selected resident British teachers; it will be for British and American children only, the Committee reserving to themselves the right of admission; it will be divided into two independent sides, for boys and girls respectively, and there will be a limited accommodation for boarders, whilst the fees will be quite moderate.

Provided it is run strictly on the principles outlined in the circular, this school ought to be a great success, and ought to prove a boon both to children and to parents. The latter will find that they will be saved the trouble and expense of putting their children to boarding schools in England at an unduly early age, whilst the former will be able to enjoy up to the very latest date the benefits of home life and home influence, in which respect they will certainly be more favourably situated than their Anglo-Indian comrades. This courageous venture on the part of the Committee is one that should commend the lively sympathy of all those who know anything of the trials which service in the East imposes on British parents in regard to the education and upbringing of their children. It is for the very reason that its firm establishment will prevent Anglo-Egypt suffering in the near future as Anglo-India has done for decades past, that it is sincerely to be hoped that the Anglo-Egyptian colony will give this school its whole-hearted support from the very outset.

Cairo, August 24.

The Festival of the Nile.

On Sunday there took place out at Old Cairo the ancient ceremony of the "Cutting of the Khalig," which, originally fixed for Wednesday, the 16th inst., had had to be postponed owing to the death of H.H. the Sultana-Mother. This ceremony has from time immemorial been annually celebrated on the day on which the Nile flood attained a certain height, recognised as the level permitting the full irrigation of the land, and so justifying the levying of the land-tax. In olden times a dam across the "Khalig"—the canal running from the Nile through the city—was cut on this occasion, and the inrushing water was hailed with rejoicing by the watching mob. To-day the Khalig no longer exists, and the ceremony of cutting the dam is not carried out, the only one of the old formalities that is adhered to being the drawing up and signing by the President of the Supreme Mahkama Sharia of the "hojja," or deed, certifying that the Nile flood has attained its completion, and that it is lawful to collect the land-tax. This formality was duly carried out on Sunday evening last in the presence of H.E. Ali Pasha Zulfikar, the Governor of Cairo, who

Digitized by Google

represented H.H. the Sultan, and of the high Government officials and prominent Egyptian notables. The ceremony was preceded in the afternoon by the usual procession of boats from Kasr-el-Nil to Old Cairo.

The Flood.

The local Press has during the past ten days contained innumerable references to the Nile flood—references that give the impression that the flood is an abnormally high one and that considerable anxiety exists as to the effect it will have on the cultivation. This impression is an entirely erroneous one. There has, it is true, been a sudden and somewhat substantial rise in the Nile levels; but this rise has fortunately come during the period when the Upper Egypt basin areas are still drawing water from the river. Had this rise come a little later, when these basins will be full, the result might have been serious, as Lower and Middle Egypt would have had to bear the full effect of the extra volume of water passing Halfa. As it is, the situation is in the highest degree satisfactory, and, provided that the curve of this rise, which is about to reach its maximum, does not drop too suddenly, there is nothing to be feared either way. Of course, it is impossible to foresee what the flood may do later on, but I have the best authority for saying that, as things stand at present, there is absolutely no cause for anxiety on the score of inundations, and that whatever measures are now being taken are merely precautionary.

An Echo of the Bomb Outrage.

When in July last year a bomb was thrown at the carriage of H.H. the Sultan as he was driving to Friday prayer, and difficulty was experienced in finding the authors of the outrage, the Egyptian Government offered a reward of £E500 to anyone who might give information leading to the arrest of the persons implicated in the attempt. Two months ago two men, Mohammed Helbawi and Mohammed Shemseddine, were brought to trial and condemned to death, the sentence afterwards being commuted to penal servitude for life. These two men were tracked down solely through the evidence of a schoolboy, Ibrahim Zaki, who had seen Helbawi, who happened to have been his master, enter the house from which the bomb had been thrown, and of a certain Ahmed Halawa, who had acted as broker for the lease of the house, and who identified Shemseddine as the man who had rented it a few days prior to the attempt. The reward has just been divided between them, Ibrahim Zaki receiving £E400 and Ahmed Halawa £E100.

The Question of Scholarships.

As a consequence of the raising of the tuition fees in the higher schools, referred to in last week's letter, the Government has found itself in a position to extend the scope of the free education which it always gives in certain cases where boys showing marked aptitude cannot afford to pay even the low fees charged hitherto in those schools. It has been decided to raise the maximum amount to be annually allotted to "Bourses" (studentships) from 3 to 5 per cent. of the total fees received, and the Council of Ministers has signified its approval of this proposal, which has naturally been very favourably received by the Egyptian public.

In this connection some recent remarks made by H.E. Adly Pasha Yeghen, Minister of Education, merit attention. His Excellency, after pointing out what the Government had done in the cause of education, said that in other countries free education was greatly, if not mainly, supported by private generosity, and he expressed the hope that the more opulent Egyptians and local commercial enterprises would in the future take a greater and more practical interest in the question than they have done in the past, and would found scholarships, etc., for the assistance of needy but promising young Egyptian students.

In a country like this, where the general spirit of charity plays such a part in the everyday life of the people, and the advantages of education have made themselves so apparent and are so generally admitted, it is indeed surprising that nothing of this description has hitherto been done. True, there have been instances where schools have been founded by individuals, and there are the Sir John Scott and Sir Malcolm McIlwraith prizes at the School of Law and School for Cadis, created in memory of the two last Judicial Advisers, but, whilst the former have been merely isolated cases, the latter are not exactly what is wanted, though they serve to stimulate work amongst the students of these schools. The cost of the foundation of a few scholarships would barely be felt by the large landowners, and, considering the great wealth possessed by many of the latter and the fact that they and their sons have been educated to all intents and purposes at the expense of the State, it is high time that they began to show some public spirit and came to the assistance of their less favourably circumstanced brethren.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, August 17.

There was a shower in Khartoum on the evening of the 16th, culminating in a heavy storm later on.

The Blue Nile continues to rise in a most satisfactory manner. Indeed, it is beginning to cause apprehension of overflowing its banks. The "sea-wall" is practically complete along the front of Khartoum, but there are depressions above Khartoum where the water may enter as it did in the first year of the Occupation. The White Nile is barely up to last year's flood, and this enables much of the Blue Nile water to be carried off. Should the White Nile rise effectively in the near future, and thereby hold up the Blue Nile waters, there might be a record flood and some danger to the town of Khartoum, but this is not seriously apprehended.

A retired officer of the Egyptian Army, who was travelling from Kassala to Atbara, was attacked by two Arabs on the road and severely handled. His wife and two children were kidnapped, and he was left on the road badly wounded, and there found shortly afterwards. The wife and two children were subsequently recovered; but it transpires that they were found not with the Arabs who kidnapped them, but some other Arabs, and it is thought possible that the original marauders themselves fell among thieves, who in their turn were compelled to give up their ill-gotten booty. The officer was taken to hospital, and is rapidly recovering.

The incident is interesting partly because it is comparatively rare for the high roads to be rendered insecure. In fact, it is probable that the incident is due to a desire for private revenge, and is not an attempt to kidnap. In either case it is satisfactory to find that the victims were very quickly recovered, and the strong arm of the law vindicated.

FOR OUR NEW ALLY.

Immediately upon the announcement of Roumania's entry into the war on the side of the Allies the Earl of Lonsdale, on behalf of the Committee of the British Sportsmen's Ambulance Fund, cabled an offer of five ambulance motor-cars to the King of Roumania. The following reply was received on Saturday:

"To Lord Lonsdale, Bettinson, National Sporting Club, London:—Accept very gratefully your generous gift, asking you at the same time to express my most hearty thanks to the Committee of the Sporting Club. Am very much touched at this proof of England's cordial sympathy towards her new Ally.—Ferdinand."

The British Sportsmen's Ambulance Fund has been organised by a body of sportsmen, headed by Lord Lonsdale as president, to send 100 motor-ambulances to the Front. Fifty have already gone, although only about £12,000 has been received in subscriptions. The money is coming in steadily, but not fast enough to keep pace with the necessities. Subscriptions may be sent to Mr. A. F. Bettinson, the hon. sec., at the National Sporting Club, Covent Garden.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, August 13.

Austrian Railroad Cars.

In the course of recent events in the Bukovina some 1,100 Austrian railroad cars were driven over the Moldavian frontier to prevent them from falling into the hands of the enemy. Some of them were laden with munitions. The Austro-Hungarian Minister has now requested the Roumanian Government to authorize their return into Hungary. The Government have, of course, not been able to accede to this request, except in so far as concerned 300 trucks which were laden with Roumanian grain and had barely left Roumanian territory.

M. de Saint-Aulaire at the Palace.

On August 7 State coaches conveyed the new French Minister and his staff to the Royal Palace, where they were received in audience by King Ferdinand. In the presence of the Prime Minister, the Minister for Foreign Affairs, and other dignitaries, M. de Saint-Aulaire presented his credentials to the Sovereign, expressing at the same time the great desire of the French Government that existing ties of friendship should not only continue, but grow stronger. The King replied in very friendly terms, and the new Minister was then received by Queen Marie, and presently reconducted home with the same ceremonial. As he drove out through the Palace gates he was warmly cheered by the large crowd which had meanwhile collected, and greeted him with cries of "Traiasca Frantza!" "Traiasca Francezü!"

Speculation Rampant.

Life has become intolerably expensive in Roumania, so that many people, while practising the strictest economy, find it practically impossible to make both ends meet, in spite of incomes which would be considered ample in normal times. This is in part the direct, and what we may describe as the natural, effect of the war; but it is in far greater measure due to speculation carried on to an extent and with a lawlessness never yet witnessed. One would like to mention the exorbitant price of different articles, but once started along this line I should not know when to stop. Suffice it to say that this speculation does not apply only to foreign-made goods, but has been extended with brazen impudence to nearly every form of home produce. Many victims of this abuse have, in self-defence, so to speak, resorted to reprisals, so that a kind of vicious circle has been established. The many who have no wares to sell find themselves unable to retaliate, and are consequently victimised all along the line. The prefect of police has now commenced—somewhat tardily, it must be admitted—to make raids upon the shops and dwellings of dealers who have drawn suspicion upon themselves; and this has led to the discovery of enormous stores. In one case a room in an hotel had been filled up to the ceiling with cloth. Proceedings are to be brought against these would-be monopolists, and it is hoped that their goods will be confiscated and sold to the public at normal prices. The loss of their total stock should prove a salutary lesson to others.

Can You Change Twenty Francs?

The above is without a doubt the question one hears asked most frequently at the present moment. Since 1913 the public have on several occasions found difficulty in obtaining small change, a condition of affairs which seems to repeat itself whenever spirits become excited and the time for mobilisation appears to draw near. Such a moment is now upon us, for the logic of events is too strong not to appeal even to the most stolid or sceptical temperaments. In the present case we must invoke an additional factor to explain the absence of silver and small notes, and this is the lust of gain. It is said that a number of small shopkeepers and tobacconists are attempting to create a kind of "corner" in small change, with the intention of speculating as soon as the time is ripe. In Bucharest great difficulty is experienced in changing a twenty-franc note. In some places of refreshment the customer is asked if he carries small change before the waiter will consent to take his order. Even at the Ministry of Finance they refuse to change anything above a five-franc note. This state of affairs causes the maximum of inconvenience to employers of labour, more particularly in rural districts, where the work of harvesting is in full swing.

Munitions for Roumania.

At the moment of Bulgaria's participation in the war there were considerable quantities of munitions at Salonika. These were destined for the use of the Roumanian army, and were awaiting transit through Bulgaria. We hear that they have now all been shipped to Archangel and Vladivostok, whence they will, it is hoped, shortly find their way into Roumania.

NOTES FROM BULGARIA.

(From Our Correspondent.)

Bucharest, August 9.

Relations with Roumania.

Although the Bulgarian Press and Bulgarian politicians continue to prate of the "excellent relations" of Bulgaria with Roumania, the actions of the Bulgarian Government would lead one to believe that it was doing all it could to bring about a quarrel. For instance, all the Roumanians employed at a sugar factory at Rustchuk have been forcibly removed to the interior of Bulgaria with their families, their demand to be allowed to return to their own country being refused on the ground that they might divulge important military secrets! It is known that Bulgaria has constructed important military works at Rustchuk, and has installed guns of large calibre there.

Another significant fact is that Roumanian sailors serving in Bulgarian tugs and lighters on the Danube are subjected to endless persecution and abuse, and if they wish to terminate their services are refused leave to do so.

Conditions in Serbia.

The Austrian military authorities in Serbia have just granted permission for the ringing of church bells once more. As most of the bells from the churches and convents of Serbia have already been requisitioned and despatched to the German gun foundries, the permission is of no great value.

According to statistics collected by a former deputy in the Serbian Parliament, there are now left only three million out of the four million inhabitants in Serbia before the war. Children under ten years of age are a rarity throughout the country, sickness and lack of food having played havoc with them. It is estimated that 45,000 Serbian children died of cold, sickness, and privation in Albania and Montenegro.

An order has been issued from Sofia for the sale by public auction of property found in Serbia of which the owners cannot be found. This is, of course, designed to give an appearance of legality to the looting that has gone on. The *Kambana* notifies the arrival at Sofia of 7,000 kilogrammes of coffee "found abandoned" in Serbia, which is to be sold in quantities of 10 to 100 kilogrammes, "so that everybody may benefit"!

ROUMANIAN FLAG DAY.

The Central Committee for National Patriotic Organisations, of which Mr. Asquith is the Hon. President, has issued the following statement:—

Arrangements are being made for the holding, some time next month, of a Roumanian Flag Day. It is intended to make this a national celebration. The people of this country will welcome an opportunity of paying a tribute of respect and admiration to their new and plucky Ally. The proceeds of the day will be handed over to the Roumanian Legation to be used as it judges best. All willing to help should apply: "Roumanian Day, Organising Offices, 1, Central Buildings, Westminster."

Reuter's Bucharest correspondent reports (September 3):—There has been a splendid outburst of charitable activity on the part of all classes of the population and members of the Allied Colonies. A Committee has been formed, on the initiative of the Queen, under the presidency of the Crown Prince Carol, to provide motor ambulances for the Army. Eight hundred thousand francs (£32,000) have already been subscribed.

The Roumanian Legation in London last Friday announced that a telegram received from Bucharest states that by Royal decree dated August 27 the whole of the Roumanian army has been mobilised, and consequently all the reservists must at once join their regiments. This applies to all classes between the ages of twenty and forty-five.

CYPRUS NOTES.

(From Our Own Correspondent.)

Cyprus, August 14.

Turkish Prisoners for Cyprus.

Some thousands of enemy prisoners captured in Egypt are expected in Cyprus, and will be taken to a camp where arrangements have been made for their accommodation.

Arrest of Turks.

A Turk named Faik Bey, well known in the island, and who has been for a considerable time residing at Nicosia, has been arrested by the police for holding communication with the enemy. At Larnaca five members of a Turkish family named Kenán have been arrested for the same reason, proof of their offence having been obtained by the detective department of the police.

New Passport Regulations.

Passports for Southern Europe are now not issued except under special circumstances, such as those of persons who are leaving for medical advice or treatment, or in order to continue studies already begun in certain countries. There is no restriction in the case of those proceeding to America, if the Commissioner of the district is satisfied as to the real destination. Those going to Egypt are subject to the regulations mentioned last week. Passports issued to Cypriots no longer contain the words "British subject," but "native of Cyprus," the form being entirely altered.

General News.

The weather in general has been less oppressive. Hardly any visitors have arrived, owing in large measure to passport difficulties. The hotels at Troodos and Platres are, however, well filled, chiefly by native families. There are about 600 convalescents at Troodos. It is improbable that any more will be sent next winter.

Agricultural Progress.

The courses of instruction in agriculture, opened for village teachers, are being carried on at Nicosia and Limassol, and will last for three weeks. At Nicosia the Director of Agriculture, Mr. W. Bevan, supported by the Chief Inspector of Schools, Canon Newham, opened the term, but as the Acting Archbishop, members of the Synod, and the Commissioner, Mr. Cade, could not attend, an official reception will be held at the end of the course. At Limassol speeches were made by the President of the District Court, Mr. Alan Stuart; the Mayor, Mr. S. Araousos, and others. At Nicosia sixty-three Greek and twenty Turkish schoolmasters are attending the course, and at Limassol fourteen masters and (a new sign of progress) ten schoolmistresses.

THE OUTLOOK FOR TURKEY.

Discussing the topic of "Roumania and the War," the *Spectator* (September 2) takes a side glance at the future of Turkey:—

When we have dealt, as we shall have dealt before long, with Bulgaria, we shall be able to turn our attention to Turkey. The "peasant Republic," as Bulgaria has been called, will be compelled by the force of circumstances either to commit suicide by a hopeless struggle against overwhelming odds . . . or else to find her senses and her soul by freeing herself from the emasculating and fatal rule of Ferdinand. . . . In either event, Turkey will find herself face to face with a situation of extreme peril. The lands from which she has been drawing supplies of all kinds will be separated from her by a barricade of steel, and she will have to live both as regards money and munitions on her own resources—a regimen which we can hardly think will be found to the liking of either Talaat Bey or Enver Pasha.

The *Daily Telegraph* (September 1), in an article "The Fate of Turkey," declares:—

Turkey is no longer governed by the Turks. Since 1908 her destiny has passed into the hands of an extremely motley and heterogeneous body composed of infidels, renegades, military free-lances, and other elements, in whose hands the Sultan of Turkey is a helpless cipher.

Surveying the disintegration of national forces in the Near East, says the writer, "we begin to realise how absolutely ruinous to the Balkan Peninsula has been the sinister ambition of Germany." But he thinks that "Turkey has only herself to thank for her downfall."

She has listened to Enver Pasha, who compassed the murder of his master, Nazim, and has never taken much trouble to conceal the purely personal interests which animate him. She has put herself into the hands of the Committee of Union and Progress, which has outraged some of her deepest convictions and played fast and loose with her traditions. She has been ungrateful to those who have benefited her in the past, and especially, perhaps, to Great Britain, who has been so constantly her friend and ally. She has thrown away chances which will never return, and has taken her stand with a beaten cause. And since the disastrous influence of Marschall von Bieberstein she has allowed herself to become a mere puppet in the hands of the Pan Germanists.

LETTERS TO THE EDITOR.

"SUPERSTITIONS IN SYRIA."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I am sorry to find your correspondent "Veritas," from Cairo, taking exception in your last issue to an innocent and diverting chat which appeared a few weeks ago in The Near East about superstitions in Syria. Let me assure him, from my knowledge of the facts, that no insult or disparagement was intended by the writer or read into her words by the British public, as we all know the class of folk missionary ladies come in touch with in all countries, not excepting this land, where superstition is as common as anywhere.

For myself, I rather take exception to the manner of dealing with Syria and the Syrians by Turkish as well as European diplomats. Here is a country, the Holy Land of Christendom for all time, most favoured by nature in every other respect, too, whose people have given the Old World its civilisation, and modern Turkey and Egypt their best men, which the Turks, after mismanaging for centuries, are now foolishly trying to starve and to oppress because the term of their fortuitous Empire is, through their own misdeeds, on the point of expiring, and which European diplomacy is treating as of small account, and as a proposition to be solved by minor officials and second-rate Chancelleries! Here is an injustice and a danger to see to for the sake of all concerned.—I am, etc.,

September 2, 1916. Alexander Sefi.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I am exceedingly sorry that my article on "Superstitions in Syria" should have conveyed such a wrong impression to one of your readers. Your correspondent "Veritas" seems to think that I intended to ridicule the Syrians, for so I understand the following sentence to mean, "to pass ill-considered and offensive reflections on a people's intelligence and degree of instruction." Anyone who knows me would never charge me with that. The subject I wrote about was "Superstitions," and I, having lived in close touch with the Syrians for sixteen years—not in one district only, but in many, both in Lebanon and the vilayets—felt myself competent to judge. Possibly "Veritas" has only come across a certain section of the people, and therefore cannot be supposed to know the true facts of the case. Be that as it may, what I wrote was simply the fact that the people, before enlightenment and education, were superstitious.

I heartily endorse what "Veritas" states as regards the adaptability and intelligence of the Syrians. Both these points were dealt with by me in previous articles in The Near East (and in other papers). Few have had such opportunities as I have had of judging of the intelligence or otherwise of the Syrian muleteer.

It would take too long to enter into a discussion with "Veritas," and I must not trespass further on your valuable space. The facts given by me in my article to which such exception has been taken only serve to show that there is still great need in Syria for more light. I may add that I am proud to count among my friends many educated—yes, and uneducated—Syrians, who are to be found in all the five continents, and to say again that nothing was further from my thoughts than to speak slightingly in any way of the people I love.

Thanking you, sir, for your courtesy in allowing me space for this letter, I am, etc.,

Acton, September 3, 1916. G. M. Farrell.

TO HELP ARMENIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The Rev. J. K. Greene, of Constantinople, who has spent fifty-one years of his life in Turkey, and has himself been an important factor during the country's most critical and revolutionary period of its modern history, has lately published his book, "Leavening the Levant." It is a volume of 400 pages, 70 pictures, and three maps, describes the land and peoples of Turkey, and states the political, racial, and moral problems involved. The book is as much up to date as the author could make it, and especially helpful to those who work for or take interest in the cause of Armenia.

The author is giving all the profits of the publication to Armenian relief, and, as advance orders have ensured the cost of the edition, the entire amount now realised will go to save life and relieve desperate suffering. The cost of the volume is $1.65, or approximately 7s. in English money, including postage. A money order for that amount forwarded to the Rev. J. K. Greene, Oberlin, Ohio, U.S.A., will at once ensure a copy.—I am, etc.,

(Mrs.) Mary Hickson,
Hon. Sec. Friends of Armenia.

THE MECCA MOVEMENT.

(From Our Own Correspondent.)

Cairo, August 25.

The Shereef of Mecca has just issued through his newly appointed agent in Cairo a proclamation to the Moslem world, in which he explains the motives that prompted his secession from Turkey, and sets forth the aim and object of his present attitude. It is a most remarkable document, as convincing in its simplicity and obvious sincerity as it is outspoken in its criticism of the Young Turks. In view of the historic interest that will attach to this proclamation and of its quaint phraseology, I append a full translation from the original Arabic:—

"In the name of God, the Merciful, the Compassionate."

This is our general proclamation to all our Moslem brothers.

"O God, judge between us and our people in truth; Thou art the Judge."

The world knoweth that the first of all Moslem princes and rulers to acknowledge the Turkish Government were the Emirs of Mecca the Blessed. This they did to bind together and make strong the brotherhood of Islam, for they saw the Sultans of the House of Osman (may the dust of their tombs be blessed, and may they dwell in Paradise), how they were upright, and how they carried out all the commandments and ordinances of the Faith and of the Prophet (prayers be upon him) perfectly. Therefore they were obedient to them at all times.

For a token of this remember how in A.H. 1322 I with my Arabs helped them against the Arabs, to save Ebhah from those who were besieging it, and to preserve the name of the Government in honour; and remember how again in the next year I helped them with my armies, which I entrusted to one of my sons; for in truth we were one with the Government until the Committee of Union and Progress rose up, and strengthened itself, and laid its hands on power. Consider how since then ruin has overtaken the State, and its possessions have been torn from it, and its place in the world has been lost, until now it has been drawn into this last and most fatal war.

All this they have done, being led away by shameful appetites, which are not for me to set forth, but which are public and a cause for sorrow to the Moslems of the whole world, who have seen this greatest and most noble Moslem Power broken in pieces and led down to ruin and utter destruction. Our lament is also for so many of its subjects, Moslems and others alike, whose lives have been sacrificed without any fault of their own. Some have been treacherously put to death, others cruelly driven from their homes, as though the calamities of war were not enough. Of these calamities the heaviest share has fallen upon the Holy Land. The poor, and even families of substance, have been made to sell their doors and windows, yea, even the wooden frames of their houses, for bread, after they had lost their furniture and all their goods. Not even so was the lust of the Union and Progress fulfilled. They laid bare all the measure of their wicked design, and broke the only bond that endured between them and the true followers of Islam. They departed from their obedience to the precepts of the Book.

With the connivance of the Grand Vizier of the Ottoman Empire, the Sheikh el-Islam, the Ulema, the Ministers and the Notables, one of their papers called the *Ijtihad* published in Constantinople unworthy things about the Prophet (The Prayer and Peace of God be upon him) and spoke evil of him (God forbid!). Then the Union and Progress rejected God's word, "A man shall have twice a woman's share," and made them equal. They went further, and removed one of the five corner-stones of the Faith, even the Fast in Ramadan, by causing the soldiers in garrison in Mecca, Medina, and Damascus to break their fast for new and foolish reasons, taking no account of the ordinance of God saying, "Those of you who are sick or on a journey. . . ." Yea, they went further. They made weak the person of the Sultan, and robbed him of his honour, forbidding him to choose for himself the chief of his personal Cabinet. Other like things did they to sap the foundation of the Khalifate.

For this it had been clearly our part and our necessary duty to separate ourselves from them and renounce them and their obedience. Yet we would not believe their wickedness, and tried to think that they were the imaginings of evil-doers to make a division between us and the Government. We bore with them until it was apparent to all men that the rulers of Turkey were Enver Pasha, Jemal Pasha, and Talaat Bey, who were doing whatsoever they pleased. They made their guilt manifest when they wrote to the Judge of the Sacred Court in Mecca traducing the verses in the Surah of the Cow, and laying upon him to reject the evidence of believers outside the Court and to consider only the deeds and contracts engrossed within the Court. They also showed their guilt when they hanged in one day twenty-one of the most honourable and enlightened of the Moslems, among them Emir Omar el Jazairi, Emir Arif el Shahabi, Shefik Bey Moayyad, Shukri Bey el Asli, Abdel Wahab, Tewfik el Bassat, Abdel Hamid el Zahrawi, Abdel Ghani el Areisi, and their learned comrades. To destroy so many, even of cattle, at one time would be hard for men void of all natural affection or mercy. And if we suppose they had some excuse for this evil deed, by what right did they carry away to strange countries the innocent and most miserable families of those ill-fated men? Children, old men, and delicate women bereft of their natural protectors were subjected in exile to all foul usage and even to tortures, as though the woes they had already suffered were not chastisement enough. Did not God say: "No punishment shall be inflicted on anyone for the sins of another?" . . . Let us suppose they found for themselves some reason for ill-treating the harmless families of their victims; why then did they rob them of their properties and possessions, which alone remained to keep them from death by famine? And if we suppose that they had also some excuse for this evil deed, how shall we find pardon for them for their shattering of the tomb of our most righteous and upright Lord and Brother, El Sayed el Shereef Abdel Kader el Jezairi el Hassani, whose bones they have polluted and whose dust they have scattered abroad?

We leave the judgment of these misdeeds, which we have touched upon so briefly, to the world in general and to Moslems in particular. What stronger proof can we desire of the faithlessness of their inmost hearts to the Religion, and of their feelings towards the Arabs, than their bombardment of that ancient House, which God has chosen for His House, saying, "Keep my House pure for all who come to it," . . . a House so venerated by all Moslems? From their fort of Jyad, when the revolt began, they shelled it. The first shot struck a yard and a-half above the Black Stone. The second fell three yards short of it, so that the flame leapt up and took hold upon the Kiswa. Which, when they saw, the thousands and thousands of Moslems first raised a lamentable cry, running to and fro, and then shouted in fierce anger and rushed to save it. They had to burst open the door and mount upon the roof before they could quench the flames. Yet a third shell fell upon the Tomb of Abraham, and other shells fell in and about the precincts, which they made a target for their guns, killing every day three or four who were at prayer within the Mosque, till they prevented the people coming near to worship. This will show how they despised His House and denied it the honour given it by believers.

We leave all this to the Moslem world for judgment.

Yes, we can leave the judgment to the Moslem world; but we may not leave our religion and our existence as a people to be a plaything of the Unionists. God (Blessed be He) has made open for us the attainment of freedom and independence, and has shown us a way of victory to cut off the hand of the oppressors, and to cast out their garrison from our midst. We have attained independence, an independence of the rest of the Ottoman Empire, which is still groaning under the tyranny of our enemy. Our independence is complete, absolute, not to be laid hands on by any foreign influence or aggression, and our aim is the preservation of Islam and the uplifting of its standard in the world. We fortify ourselves on the noble religion which is our only guide and advocate in the principles of administration and justice. We are ready to accept all things in harmony with the Faith and all that leads to the Mountain of Islam, and in particular to uplift the mind and the spirit of all classes of the people in so far as we have strength and ability.

This is what we have done according to the dictates of our religion, and on our part we trust that our brethren in all parts of the world will each do his duty also, as is incumbent upon him, that the bonds of brotherhood in Islam may be confirmed.

We beseech the Lord of Lords, for the sake of the Prophet of Him who giveth all things, to grant us prosperity and to direct us in the right way for the welfare of the faith and of the faithful.

We depend upon God the All-Powerful, whose defence is sufficient for us.

Shereef and Emir of Mecca,

25 Shaaban, 1334. Hussein.

The Cairo correspondent of the *Times* reports that the Moslem community in Egypt is deeply affected by the Shereef's proclamation. All, even those hitherto Turcophile, are aghast at the revelations of Turkish cruelties and disregard of the precepts of Islam.

THE MESOPOTAMIA INQUIRY.

The following official statement was issued at the close of Tuesday's session of the Commission appointed to inquire into the circumstances attending the Mesopotamia Expedition:—"The Commission met in the House of Lords. All the members were present. Evidence was taken from Surgeon-General Sir Alfred Keogh, K.C.B., D.G.M.S., also Captain the Hon. Aubrey Herbert, M.P., also Captain Cross, I.M.S. The next meeting will be held on Thursday."

A Greek named John Faseless was fined £100 at Cardiff last Friday for failing to register.

The War Office on Monday issued the following statement:—The General Officer Commanding-in-Chief in Egypt reports that an enemy aeroplane dropped three bombs on Rahah (about four miles east of Katia) on the morning of September 3. We suffered some casualties, but no damage is reported.

A Cairo telegram states that General Altham, Inspector-General of Communications, has received a letter from the American Diplomatic Agency testifying to the humanity with which Turkish prisoners are treated at the camp at Sidi Bishr. The camp is within a few yards of the sea, and the prisoners are permitted to bathe. A special superstructure covered with matting keeps the place cool. The officers seemed to be delighted with the place, and there were no complaints.

Under date of September 5, Reuter's Athens correspondent telegraphs:—It is reported that a British transport bound from Chios to Mytilene was fired at from a Turkish battery on the Asiatic coast without result. A monitor in Chios harbour went to her assistance and bombarded the Turkish batteries. A violent explosion ensued, and it is presumed that a shell struck a powder magazine. A British detachment effected a surprise landing at Tchesme and took prisoners thirty Turkish soldiers and one Austrian officer.

TANGIER TO TEHERAN.

I referred recently to the lawsuit brought against the proprietor of a native journal by a certain sheikh of Cairo, who considered himself entitled to a prize offered by the said journal for the best Arabic rendering of "Tipperary." The case, I gather from Egyptian papers received recently, has advanced another stage. For a moment my hopes were raised high by a lively writer in the *Egyptian Mail*, who reported: "It is stated that Sheikh Ahmed Soliman Ashur is going to sing his version of 'Tipperary' when he goes into the box, and he has also cited as witnesses all the other competitors, who will also sing their versions."

***

That, you will admit, opened up a delightful prospect. One usually associates ideas of great dignity with the mention of any "sheikh," and the picture conjured up by the writer just quoted was piquant to a degree. But, alas! it melted away all too soon. The case attracted a large audience; but, as far as I can ascertain from the Press reports, it proceeded along sufficiently humdrum lines. Instead of a sporting competition of the kind hoped for—an Egyptian Eisteddfod in miniature—the Court listened to an address by counsel—learned, no doubt, but highly technical—and Sheikh Ashur contented himself with an equally conventional appeal for justice—and the £E2 which seems to be the prize. Then there was an adjournment for a fortnight. One almost fancies that some of our own judges would have contrived to give things a more lively turn; and, judging by certain proceedings in our Law Courts, counsel seems to have missed his opportunity, too. The eminent legal gentleman whose thirty-one days' speech recently led one of our papers to head its report of the case, "Mr. —— Day by Day," would surely have seen his chance in this "Tipperary" suit to secure the heading, "Mr. —— Month by Month."

***

Unless I am much mistaken, the Kaiser promised, about a year ago, that he would honour the Sultan of Turkey with a visit. The fulfilment of that promise is surely overdue, and though I am not a betting man, I should be willing to wager that Wilhelm is unlikely to pay his visit this year, if ever he pays it. He has a liking for playing the part of patron; and, even with his extraordinary power of seeing things as he would like them to be rather than as they are, he would find it a little difficult, one supposes, to sustain that rôle in Constantinople just now. Indeed, if any kind-friend-in-need part is to be enacted to-day, it would seem that Sultan Mohammed should play it—in Vienna or Budapest. With appeals for help from Hungary, rather more than gentle hints from Berlin, and blunt requests—for 200,000 men, is it not?—from Sofia, raining in upon her, Turkey must be quite bewildered.

***

The surrender of Dar-es-Salaam has afforded me enormous satisfaction, not so much because the place is—or was—the official capital of German East Africa as because it was also the scene of a bit of treachery as bad as anything the Germans have been guilty of anywhere. This was in December of 1914, when H.M.S. Goliath and H.M.S. Fox anchored in the roads for the purpose of destroying German shipping, as a reprisal for the sinking of H.M.S. Pegasus by the Kœnigsberg. The Germans agreed that if the town were not bombarded they would not fire upon the demolition party. Then, with the white flag still flying, they suddenly opened fire on the party. We suffered several casualties, and though the town was punished by a heavy bombardment, the Germans were able to keep a few officers prisoners. You can read all about it in that splendid little book, "From Dartmouth to the Dardanelles," which was recently reviewed in THE NEAR EAST. And if you do so, you will rejoice exceedingly over the fall of the treacherous Huns' stronghold.

***

Some time ago the papers told us how, in Africa, the enemy had actually pressed the wild bees into his service. Now it seems to be the turn of something bigger—the rhinoceros, to wit. At any rate, Reuter's Agency last week reported that one day recently at dawn our camp at Dakawa, German East Africa, was "charged by a family of rhinoceroses." I have never seen a "rhino" charge, but I have had a vivid description of such a charge from a friend who had to receive it; and I feel sorry for our sentries at Dakawa. The rhinoceros is a blind, blundering kind of a beast when he "sees red," and, therefore, a fitting ally for the Hun; but he can get up a terrific speed, and his weight will carry him almost anywhere, so to say. In the "engagement" referred to, I note "the cow and a calf were killed by rifle fire, and the bull hastily retired to the bush." It looks as if the bull had adopted the truly Prussian method of allowing the other sex and the children to form a screen for his advance!

***

A Cypriot has, I see, been writing to the papers protesting against "Turks" in Cyprus being kept to-day in confidential posts in the Cyprus Government. By so doing he raises a rather ticklish question. I am not concerned to defend the "Turks" against the charges of murder, robbery, "and every kind of evil-doing" which the writer referred to brings against them. But it seems to me that the officials whom he wishes to see dismissed are unlikely to be guilty of the crimes he catalogues; and that, therefore, even assuming for a minute that *all* the criminals in Cyprus are Turks, and that *all* the virtues are possessed by the Greek Cypriots, it would still be unfair to dismiss these officials. Moreover, he might remember that, in spite of the carefully engineered agitation for "Union with Greece," Cyprus is not yet Greek. That being so, we still have some obligations towards the "Turks" of Cyprus; and until we can replace the "Turkish" officials by British (not Greek) we may naturally feel rather loth to make any change. In a word, the Cyprus "Turks" are at least as loyal to Britain as many of the Cypriot "Greeks"; and in view of recent events it is possible that we shall consider British interests even before "Hellenic" aspirations.

***

Says the *Westminster Gazette*:—"It is delightful, of course, to have Roumanian 'officials' to read, but all the agonies of Galicia are outdone by Thursday's effort, and it might be more merciful if a general arrangement could be made by which Transylvanian towns should have numbers given them. Places like Bodzafordullo Bodzavama, Torocsvarbran, and Meterezele are a little too much! Life must be leisurely in those regions." Apparently the Austro-Hungarian troops are not finding it exactly "leisurely." But that is by the way. The *W. G.* is right enough about the terrors of some of the names we are invited to tackle in these days, though the examples it selects as illustrations do not strike me as very difficult. It is names that begin with such a combination of consonants as Lrz and finish off with a lot of dz's and cs's, without any vowels at all to speak of, that floor me. You will find a choice assortment of such puzzles in the German official map of Central Europe.

CORSAIR.

"WOE TO TRAITORS."

Our Bucharest Correspondent writes (August 17):—We read in a Roumanian daily: "Although it is known that the Russian troops have had to face Bulgarian regiments at Baranovici, there are none to be found among the prisoners. 'Asevski' writes on this subject in the *Ruskoye Slovo*: 'Our wounded report that in their engagements they have had to deal with Bulgarians. The situation of the Bulgars is indeed tragic, but a fitting one for traitors. Thrown on to the Russian front against their will, they were loath to face the Russians, but the Germans urged them on from behind with the mitrailleuse. Driven to despair, they asked no better than to be made prisoners. But woe to traitors! For them there is no salvation. Our soldiers say: "How can we take prisoner this betrayer of Christ?" And we must sorrowfully admit that Bulgarians have not been found among the prisoners.'"

The Greek Metropolitan at Florina has been arrested by Bulgarians at the village of Exisou, while on his way to Kotchani.

Messages received in Athens from Constantinople report that in order to fill the gaps in the Turkish Army the age limit for mobilisation has been extended to fifty-five.

The General Officer Commanding-in-Chief in Egypt reports:—On the morning of September 4 the Royal Flying Corps carried out a further raid on the enemy's encampment at Mazar. One anti-aircraft gun was put out of action and a number of bombs were dropped with good effect on camps, supply depots, and camel lines.

According to the latest news received from Syria, the Maronite Patriarch, who ever since the war began has been under supervision, has now returned to his summer residence at Bkerki, and is living there unmolested, says the *Egyptian Gazette* of August 23. Mgr. Butros Shibly, Maronite Bishop for Beyrout, and Mgr. Gerasimos Mesana, Greek Orthodox Bishop for Beyrout, and other bishops who had been exiled to the interior, have been permitted to return to their sees. It is stated that this has been done on the intervention of the Pope.

NEAR EAST BOOKSHELF.

LINGUISTIC STUDIES IN RUSSIAN.*

That the key to a nation's soul must be sought for in its mother-tongue is a commonplace in the infant science of collective psychology. This law applies in its fullest force to the Russian people, whose language reflects every mood of which their primitive yet complex nature is capable. Until recent years they were severed from us by distance, and by radical divergences of history and environment. Moreover, between us was ensconced a bitterly hostile race which, ever since the "reforms" imposed on Russia by Peter the Great, had held her in a strangling grip. Yet, strange to say, the unlike attracts the unlike; Russians have always felt a lurking sympathy for Britons. It survived the Crimean War, which is now admitted to have been one of the greatest blunders in our history; it persisted in later years, despite the intrigues and calumnies of a school which saw in Russian expansion eastwards a direct menace to our Indian Empire. Happily for the future of civilization, the clouds which hid the real Russia from British vision are rapidly disappearing. United with her in death-struggles against a common foe, we yearn for deeper knowledge of our mighty Ally. In the flood of literature produced by this demand we may fairly single out for special commendation a book which explains the psychology of the Russian race by means of illustrations taken from their language.

The author is a Russian lady who has lived long enough amongst us to have acquired the gift of regarding her own countrymen objectively. Writing as she does in English, her work escapes the innumerable pitfalls which beset the difficult art of translation. An Italian proverb warns us that "Translators are traitors," and it must be admitted that the most perfect command of an alien tongue does not qualify a man for rendering its shades of meaning in his own vernacular. In the case of Russian, the translator's task is impossible. If we compare the best English version of Gorki's romances with originals, we find whole pages omitted, and the grim humour of others entirely absent. It is as though an Englishman were to repeat an Irish witticism without its characteristic brogue. Nor is the reason far to seek. The Russian language surpasses Greek and even Sanskrit in analytical subtlety. By dint of affixes and suffixes to a root-word it is capable of recording *nuances* which no other living tongue can convey. The suppleness of Russian prose is increased by transpositions which we associate with poetical licence. Take the following passage from Gorki's "Childhood":—

> Square, broad-chested, he would come in, trim in his golden silk shirt, velvet trousers, and pleated top-boots. Glittered his hair; shone his gay, somewhat squinting eyes under their thick eyebrows; sparkled his teeth under the black stripe of his young moustache; glowed his silk shirt, reflecting the light of the ever-burning *lampadka*.

Russian readers would at once conjure up the homely vision of a log-hut interior, faintly illumined by a lamp suspended before its *ikon*, and revealing a huge white-washed stove, with wooden benches along the walls, suggesting a night's rest for casual wanderers.

But it is in its bewildering wealth of untranslatable words that the fecund genius of the Russian people stands disclosed. What English equivalent can be found for *chutki*, implying responsiveness, sympathy, friendliness? Such antinomies as this—and their name is legion—explains the fact that Russians used to find our fellow-countrymen "heavy to lift." "With us," writes our author:—

> every new idea, plan, or invention, every change in the old routine, is welcome and appreciated. The New has always been accepted with outstretched arms in all branches of science, art, and literature, to say nothing of the individualistic development of social life. Even amongst peasants one never sees the spirit of "our parents did it this way, so it must be right!"

Consider, too, the epoch-making dissyllable *prostor*, which connotes the yearning for expansion bred by Russia's limitless plains.

> It is the seed-bed of creative impulse, it pours into Russian art the power of witching charm, and fills the Russian heart to overflowing with the power of love. His sense of size and space impels a Russian to throw out his arms, to embrace Nature, brothers, foes, and friends. At this time, indeed, embracing foes does not particularly appeal to the Russian mind, but it needed much appalling cruelty to weaken this characteristic of all-forgiveness.

A race which uses such expressions in its everyday talk must be capable of brotherhood in the highest sense, and is, perhaps, destined to raise the level of the world's civilization. But its great emotional power has volcanic elements which require repression. It is an unconscious law of civilization that everything should be said and done with a certain restraint; but the course of history proves this law to be more honoured in the breach than in the observance by Russians of the *Intelligentzia* class.

With this Slavonic capacity of yielding oneself wholly to one's ideas and emotions, it is not surprising to find an everyday definition very seldom used in England, whose people are more conservative and refuse to be swept off their feet—which, at times, must be more effective in the long run than a hearty yielding to that fascinating sensation! This definition is *uvlecheniye*, and it means "the state of being carried or swept away." Living amongst Russians, you would see people glued to work which they are not in the least bound to do, not merely for hours, but day and night for many months on end. That is why Russians wear themselves out physically much sooner than the British.

The war now raging has produced an outburst of *uvlecheniye* which will prove the salvation of the Russian people.

A few years ago Russians were thrown by reaction into a state of *marasme*. There was almost a standing still in the one-time keenness for social interests. Russian society seemed to be dozing off, tired to the verge of indifference with regard to our future place in the world. But here comes the war, and all is awake and throbbing with genuine, intense love for homeland, to be freed from the German yoke, for the people represented by the *soldatik*, that wonderful grey hero, for the *prostor* of Russia that gives a chance to the unsophisticated heroism of her folk-lore to unfold itself—*Rasvernutsa*—again for a great cause.

Mme. Jarintzov's work is, indeed, a revelation of the genius of her race. It may help to banish the stodgy insularity which clings to us as a legacy from the Victorian era, and to realize that now, as always, light comes from the East.

F. H. S.

* "The Russians and their Language." By Mme. N. Jarintzov. (Oxford: B. H. Blackwell. Price, 6s. net.)

BOOK NOTES.

Amongst the autumn announcements of the Oxford University Press is "A History of the Eastern Question from the Advent of the Ottomans to the Outbreak of the European War: A Study in European Diplomacy," by J. A. R. Marriott.

Messrs. P. S. King and Son publish in this country, on behalf of Columbia University. "The Origins of the Islamic State," a translation from the Arabic, with annotations, geographic, and historic notes of the "Kitâb-Futûh Al-Buldân of al-Imâm abu-l'Abbas ibn-Jâbir al-Balâdhuri," by P. K. Hitti, of Columbia University. The price of the volume is 16s.

We have received from Edward Stanford a copy of the Luck sheet in their series of Central European maps, reproducing part of the German official map (1:300,000), enlarged to a scale of four miles to the inch. The map is wonderfully clean and "readable," though full of detail; and the complete series is invaluable for studying operations on the Eastern front. The present sheet, which is issued at the price of 3s., covers the area between 42° and 44° east and west and 50° and 51° north and south, and shows all the principal roads, railroads, and natural features, and is produced in the high-class style we expect from Messrs. Stanford. It is perhaps a pity that the German terms of reference are not translated.

A book, entitled "Lord Kitchener in His Own Words," is shortly to be published by Messrs. Fisher Unwin, Limited. The authors, Mr. J. B. Rye and Mr. H. G. Groser, have aimed at constructing a narrative of Lord Kitchener's life told as far as possible in his own words. The book will give many of his pronouncements on Egypt and the Sudan, on Turkish misrule in Asia Minor, on the cotton industry, etc., and will also contain opinions expressed about Lord Kitchener by Lord Cromer, Lord Roberts, and other famous men. The price is 6s.

Two books announced by Messrs. Dent are "Songs of Ukraina," translations from the Russian by Florence R. Livesay, and "Armenian Legends and Poems," by Zabelle C Boyajian. The profits from the latter work will go to the Lord Mayor's Armenian Relief Fund.

Messrs. Black announce for publication "Peeps at Ancient Assyria," by the Rev. James Baikie.

Sir R. S. Baden-Powell contributes a preface to "With a B.-P. Scout in Gallipoli," the first volume of a series of "Experiences of the War by Soldiers," which Messrs. Routledge and Kegan Paul will issue.

We have received from Messrs. Luzac and Co., the well-known publishers and booksellers, of 46, Great Russell Street, a catalogue of second-hand books on Arabia, Persia, Turkey. It contains over 2,500 items, and is of much interest to all students of the Near East, the Orient, and El Islam.

Messrs. Duckworth and Co. have published (3s. 6d. net) "With the French in France and Salonika," by Richard Harding Davis, completed just before the author's death.

BOOKS RECEIVED.

The Population of the Polish Commonwealth. By Arthur E. Gurney; with a preface by Ludwik Janowski, M.A., Ph.D. (George Allen and Unwin, Limited. [For the Polish Information Committee.] 6d. net.)

Idea of Southern Slav Unity. No. V. of "The Southern Slav Library." (The Near East, Limited. 3d. net.)

The New Breed. By Andrew Firth. (Fisher Unwin, Limited. 6s.)

Life Cannot Cease and Leaves from the Pilgrims' Way By Marguerite Percy. (East and West. 3s. 6d.)

9	27	Saturday.....	11	11
10	28	Sunday	12	12
11	29	Monday	13	13
12	30	Tuesday	14	14
13	31	Wednesday	15	15
14	Sept. 1	Thursday	16	16

To-morrow is the birthday of Prince George of Serbia, who was born at Rieka in 1887.

The King of Montenegro, attended by General Matonovitch, left Paris for Italy last Friday to visit King Victor Emanuel.

The *Court Circular* of August 31 announced that Prince Andrew of Greece, who was attended by Major M. Metaxas, had left Windsor Castle.

Princess Bibescu, the cousin of Prince Antoine Bibescu, Secretary of the Roumanian Legation, arrived last week at 114, Grosvenor Road, from Paris.

M. Mathias Boshkovitch, the Serbian Minister in London, was received by the King at Windsor Castle on Monday, when he presented his Letters of Recall. His Excellency, who was afterwards received by the Queen, had luncheon with their Majesties before returning to town.

M. Yovanovitch, the newly-appointed Serbian Minister to the Court of St. James, with Madame Yovanovitch and the members of his family, will arrive in London shortly from France.

Mr. Lewis Einstein, the American Envoy-Extraordinary and Minister Plenipotentiary at Sofia, and Mrs. Einstein have left London for Paris on their way to Ouchy, Switzerland.

H.E. the Roumanian Minister called at the Foreign Office on Monday.

Sir Edwin Pears is announced in the American papers to give the introductory lecture of the season at the Lowell Institute in Boston on October 16. This is to be the first of a series of eight lectures on the history of Constantinople under Greek and Turkish rule. The programme indicates that the lectures have nothing of a political character about them, but are such as would be welcome to a university audience. The President of the Lowell Institute is Mr. Lawrence Lowell, who is also President of Harvard University. Applications have been received by Sir Edwin for lectures at other universities and colleges in the United States and in Canada. The Lowell Institute has a distinguished roll of eminent literary men who have given the introductory lecture during the last few years. As author of many historical essays on Constantinople, and especially of "The Story of the Fourth Crusade" and "The Destruction of the Greek Empire," Sir Edwin possesses a European reputation on these subjects. In reply to our inquiries, we are informed that he expects to be back in London by Christmas, and will be accompanied by his daughter.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.
Σχολὴ Γλωσσῶν. Διδασκαλία συστηματική.
Διερμηνεῖς κ.λ.π. Δίδακτρα μέτρια.
Lyceum Institute, 85, New Oxford Street, and 64, Haymarket.

Abdul Ali Khan Sadigh-es-Saltaneh, of the Persian Legation, has left Persia for London.

M. Levitch, the Secretary-General of the Serbian Ministry of Finance, will leave London shortly for France.

The *Egyptian Gazette* announces that Lady McMahon is expected back in Egypt about the middle of next month.

We learn from a correspondent that Dr. F. G. Clemow is shortly leaving for Russia with a Red Cross unit, and that he will eventually join the Serbian Army.

Major-General the Hon. H. A. Lawrence, who has just been appointed to Headquarters' Units and to be temporary Lieut.-General, is a director of the Bank of Roumania. General Lawrence was in command of troops in the recent affair at Katia.

Brevet Lieutenant-Colonel John Harington, D.S.O., Rifle Brigade, who is reported wounded, served in the Nile Expedition, 1898, and was awarded the Egyptian medal with clasp. He also served in the South African War, and in East Africa (1904).

Another officer reported wounded who has served both in Egypt and South Africa is Brigadier-General W. F. Sweny. He entered the Royal Fusiliers in 1893, and was gazetted to a Brigadier Command last year.

Dr. Percy d'Erf Wheeler, M.D., F.R.C.S., late superintendent of the English Mission Hospital at Jerusalem, has been given an appointment in the R.A.M.C. for home service with the Field Ambulance at Bourne Park Camp, Canterbury. Dr. Wheeler worked for over twenty years at Jerusalem, where his name is still a household word. This long experience in the East induced him to offer himself for service in Mesopotamia, and he would have been accepted by the War Office but for his age; the authorities being very strict on this point, his offer was declined for that front, where the climate is so exceptionally trying.

Dr. Wheeler's eldest son, Captain Wheeler, is in Mesopotamia, the second son, Second-Lieutenant Wheeler, in France, and the third son in India, this being another instance in which a whole family is under service at the same time.

Amongst the latest rewards for gallantry in the field appears the name of Captain J. B. Barron, Worcestershire Regiment, who has been awarded the Military Cross "for conspicuous gallantry when seizing and occupying enemy trenches during operations. He has done fine work, steadying his company under heavy shell fire and under trying conditions." During the great stand of the Wiltshire and Worcestershire Regiments on August 24 and 25 Captain Barron was wounded shortly before the big attack began, but, refusing to be sent down, he went through it all, and led his company when it seized the important position it had been ordered to take. This position was maintained and consolidated under a terrific shell fire. Captain Barron has received the thanks of his Brigadier for the excellent work he has done on several occasions. He is making good progress, and has not been sent home for treatment.

Mr. Herbert E. Jackson, son of Mr. W. E. Jackson, of Salonika, has been granted a commission as second lieutenant for the duration of the war, and is now attached to the Intelligence Branch in Macedonia.

Under date of August 17, our Khartoum Correspondent writes:—

The Governor-General and his Staff leave Khartoum for Erkowit on August 18. H.E. will probably remain there for six weeks, and return shortly before the feast of Kurban Bairam.

Major R. C. R. Owen, C.M.G., the Governor of Mongalla Province, arrived in Khartoum on August 15 on his way to England.

Major C. H. Stigand, the well-known authority on big game, returned from Darfur recently and returns to Malakal to take up his duties as Senior Inspector during the absence of the Governor, Major J. R. Bassett.

Mr. J. W. Sagar, of the Blue Nile Province, has proceeded with Mrs. Sagar to Halfa to take temporary duty there in the absence of the Governor, Mr. Lyall.

Captain R. S. Andas, of the Veterinary Department, has arrived in Khartoum from Kordofan and the West, and is on his way north for a change and rest.

Mr. H. V. Hawkins, of the Sudan Government Railways, has returned from Egypt, where he has been employed for some months on work in connection with the war.

News has been received of Captain O'Farell, of the Wellcome Research Laboratory. He was taken prisoner in Sinai and sent with his wounded to Beyrout, and was well treated considering the difficulties in which the whole country there is involved for food and supplies. Later, however, he was moved to Angora, where he seems to be almost alone, his only companion being a Church of England chaplain.

Mr. R. Davies, who has been inspector in Northern Kordofan, passed through Khartoum early in the week on his way back from England. It is said that he is to go to Western Kordofan shortly.

Major Logan, O.C., of the Sobat Pibor district, has returned from leave in England.

Mr. T. D. Cree, of Baghdad, who, as already announced in these columns, was taken prisoner by the Turks (for the second time) at Kut-el-Amarah, and was lately interned at Aleppo, has now been transferred to Constantinople. Mrs. Cree has also been moved to Constantinople, where she is allowed to visit her husband. It is satisfactory to learn that the British residents of Baghdad who were removed to Mosul by the Turks are being well treated.

We regret to learn that Mr. E. C. Blech has lost his son, Second-Lieutenant E. L. Blech, East Surrey Regiment, attached Machine Gun Corps, who is reported killed in action. Mr. E. C. Blech, who was at one time Dragoman-Archivist at the Embassy, Constantinople, and afterwards Consul for Palestine and Consul-General at Port Said, has served in many parts of the Near East, and is now employed at the Foreign Office. His many friends, both abroad and at home, will sincerely sympathise with him in his great loss.

A message, dated July 23, has been received from Flight-Lieutenant C. B. Gasson, R.N.A.S., who was captured by the Turks in Mesopotamia. He is in Baghdad, and, though suffering from an injured foot, is progressing favourably. He reports that he is one of several British prisoners in an "English hospital" in the city, that they are all well treated, very comfortable, get their pay regularly, and "can buy most things in the shops."

Cadet G. D. C. Koe, of the staff of the Imperial Ottoman Bank, has been appointed second-lieutenant in the Herts Yeomanry on probation. The name of Second-Lieutenant C. E. Hemmerde, Royal West Kent Regiment, formerly of the I.O.B., appeared in a recent list of wounded.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY & ALL EXAMS.

REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON,
EDUCATIONAL AGENTS.
143, Cannon Street, London, E.C.

Digitized by Google

The marriage took place on Wednesday, at the parish church, Eltham, Kent, of Herbert Chavasse Squires, M.B., Medical Department, Sudan Government, son of the late Rev. Henry Charles Squires, formerly vicar of Holy Trinity, Richmond, to Miss Hilda Margaret Norbury, youngest daughter of Sir Henry and Lady Norbury, of St. Margaret's, Eltham. The Bishop of Liverpool officiated. Miss Mildred Squires (sister of the bridegroom), Miss Marjorie Heys-Jones (niece of the bride), and Miss Mary Copland were the bridesmaids, and the Rev. C. M. Chavasse (cousin of the bridegroom) was best man.

Colonel Sir John Roper Parkington, Royal Montenegrin Consul-General, and Lady Roper Parkington have left Harrogate and have arrived at the Hotel Metropole, Brighton.

Mr. Alfred Hurst, of Edinburgh, chairman of the National Roumanian Relief Fund, who started immediately after the declaration of war by Roumania to provide motor-ambulances, hospital equipment, etc., has received telegrams from the Queen of Roumania and the Roumanian Prime Minister. Her Majesty's telegram reads as follows:—"I am very much touched by your telegram informing me that a committee is being formed in Edinburgh to present me with motor-ambulances and hospital equipment, and more especially as it shows that my father's name is remembered." M. Bratiano telegraphed:—"I am very much touched by the proposals you have been good enough to communicate to me, and I have given instructions to the Roumanian Legation, London, to give all necessary help." The president of the fund is the Earl of Rosebery, who has started it with a donation of 100 guineas.

M. Bratiano, the Roumanian Prime Minister, has sent a reply to M. Briand's congratulatory message on the occasion of Roumania's intervention in the war, in which he says Roumania, "which is attached to France by so many ties and by the feelings of gratitude for all that she has been indebted to her for in the past, is happy and proud to fight at her side for our noble and common cause."

Among Alexandria-born Britons doing their duty at the front are the three sons of Mr. J. F. Elsworth, says the *Egyptian Gazette*. The eldest, Lieutenant L. A. Elsworth, who has been for over twelve months in France, was recently mentioned in despatches. His younger brother, Lieutenant E. W. Elsworth, is with the Camel Transport on the Canal, and the third, Lance-Corporal Harry Eugene Elsworth, has just got a broken arm from a bullet in France, and is now progressing favourably in hospital in Devonport. He received his promotion from private for meritorious work at the beginning of the big push in July, and although still under 18½ years of age, has been fighting in France for over sixteen months.

The *Egyptian Gazette* of August 23 announces: Dr. Ruffer, President of the Quarantine Board, is believed to have arrived at Kamaran Island, in the Red Sea, for the purpose of inspecting the quarantine camp, which is intended to be reopened for the pilgrims of India and other Eastern countries.

We have received a contribution of £3 3s. from Mr. M. E. Lange towards the British Refugees from Turkey Fund.

Over £1,600 has been subscribed in South Wales towards the erection of a statue to the late Colonel Lord Ninian Crichton-Stuart, M.P., which is being executed by Sir W. Goscombe John.

Mr. Hugh James O'Beirne, C.B., Counsellor of Embassy at Petrograd and Minister at Sofia, who was drowned at sea with Lord Kitchener in H.M.S. Hampshire on June 5, aged forty-nine years, has left estate of the value of £28,900.

Lieutenant and Adjutant the Hon. Michael Hugh Hicks-Beach, commonly called Viscount Quenington, Royal Gloucestershire Hussars Yeomanry, of The Mill House, Coln St. Aldwyn, Gloucester, M.P. for the Tewkesbury Division of Gloucestershire, secretary to his father (Earl St. Aldwyn) when Chancellor of the Exchequer and to the present Lord St. Audries (then Sir A. Acland-Hood), Chief Ministerial Whip, who died on April 23 last, aged thirty-eight years, in Egypt from wounds received in action, left unsettled estate of the gross value of £131,509.

APPOINTMENTS, PROMOTIONS, ETC.

Writing on August 13, our Bucharest Correspondent reports:—

There have been considerable changes in the staff of the French Legation here. The Marquis de Saint-Aulaire replaces M. Camille Blondel as Minister Plenipotentiary, and Colonel Despres takes the place of Major Sichon as Military Attaché. Two other officers have been attached to the Legation, the Duc de Luynes and M. Robert de Flers. M. Charles Arsene Henry occupies the post of Secretary. He is the son of M. Arsene Henry, formerly French Minister in Bucharest.

The Marquis de Saint-Aulaire was born in 1863, and commenced his career in the consular service at Tunis in 1893. He was sent as Secretary to Santiago de Chile, subsequently finding his way in different diplomatic capacities to Lima, Rio, and Tangier. Appointed First Secretary at Vienna in 1909, he attained the rank of Plenipotentiary in 1912. Having acted for some time as Charge d'Affaires in the Austrian capital, he was transferred as Delegate to the Presidency-General at Morocco, whence he now comes to Bucharest as head of the Legation. He is spoken of by those who know him as one of France's most able diplomatists.

Our Cyprus Correspondent writes (August 12):—"The Chief Secretary to Government, Captain Orr, will shortly proceed on leave for about five months, partly on account of health."

M. Marchetti, the newly-appointed Secretary to the Greek Legation in London, has entered on his duties.

Mr. King Lewis, Director-General of the Egyptian Customs Administration, left Egypt on August 14 for England on leave. Mr. Terrel, Chief Inspector of the Customs, is acting as Director-General during his absence.

Mr. Brunton, Director of Personnel and Accounts, Minister of Justice; and Mr. Molesworth, Inspector-General of Basin Conversion Works and Acting Inspector-General of Irrigation for Upper Egypt, also left Cairo for England on leave at the same time.

Kaimakam F. J. M. Poslethwaite Bey and Kaimakam G. B. Wauhope Bey, Sudan Government, have been granted the Order of the Nile, Fourth Class.

El Bimbashi J. J. B. Tapley, D.S.O., Sudan Government, has been granted the temporary rank of Kaimakam.

El Bimbashi J. R. B. Bond, Equatorial Battalion, has been appointed Staff Officer, Khartoum District.

El Bimbashi (temporary) G. G. F. F. Greville, Khartoum District, has been transferred to 14th Sudanese.

Mr. Skellerides, Greek Vice-Consul at Mansourah, Egypt, has been appointed Greek Consul at Addis Abeba, Abyssinia. Mr. Skellerides will be replaced at Mansourah by Mr. Zivoglou, Greek Vice-Consul at Scutari.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

BARTON.—On August 12, at Gezira, Cairo, the wife of Claud Barton (Egyptian Civil Service), of a daughter.

MACKAY.—On September 1, at "Shrublands," 2, Sydenham Road, Croydon, to Dorothy Mary (*née* Simmons), the wife of Ernest Mackay, Luxor, Upper Egypt—a son.

MACLAREN.—On September 2, at the British Vice-Consulate, Resht, Persia, the wife of Charles W. de Bois Maclaren, of the Levant Consular Service—a daughter.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

FRIDAY, SEPTEMBER 8, 1916.

PREVENTION OR CURE IN GREECE.

It will help to a better understanding of the situation in Greece if we recall the terms of the Note addressed to the Hellenic Government on June 21 by the Ministers of France, Great Britain, and Russia. In that document it was stated that the three guaranteeing Powers of Greece "have numerous and legitimate grounds of suspicion against the Greek Government, the attitude of which towards them is not in accordance with its repeated engagements, or even with the principles of a loyal neutrality." Specific reference was made to the favouring of the activities of certain foreigners, to the connivance of the Greek Cabinet in the occupation of Greek territory by the Bulgarians, and to the violation of the Constitution. The attitude of the Greek Government towards the Powers who liberated Greece from a foreign yoke and assured her independence was described as hostile, and the Cabinet of M. Gounaris was further charged with collusion with their enemies. In consequence of this grave indictment Greece was required to dismiss the Gounaris Government, to remove certain police officials, and to demobilize the army. When, less than ten weeks after these demands were accepted, the Allied Powers find themselves obliged to send a strong fleet to the Piræus and to present still further demands, of an even more drastic nature, it is evident that the Greek Government had in the interval failed to live up to the spirit of its previous undertaking. How far it has come short of the Allies' requirements can only be vaguely surmised from the tenour of the new Note presented on September 2. Control of the Greek posts and telegraphs, including the wireless system, was demanded; enemy agents employed in corruption and espionage were to be deported immediately, and the necessary measures were to be taken against such Greek subjects as had rendered themselves guilty of complicity in the corruption and espionage. Although more drastic, as they involved the surrender of Greek public services, there was nothing in the new demands to call for such a display of naval strength in view of the fact that the earlier Note had met with immediate acquiescence. But behind the appearance of a strong Allied fleet within sight of the Greek capital and the demands which it supported we have no difficulty in forming some idea of what has been taking place in Greece during the last few months. One feature stands out in the relations between the Allied Powers and the Greek Government. The former have never acted prematurely; in point of fact they have in each instance delayed action until the eleventh hour or later, trusting to a cure rather than to the prevention of the evils they could not tolerate; and we may be confident that the situation in Greece, as far as the Allies are concerned, has been much worse than might be supposed from the meagre reports that have been made public.

It is, we believe, to the interests of the Allies that something more should be revealed of Greece's shortcomings. As things stand at present, Germany will be encouraged to exploit the situation as an instance of high-handedness on the part of the Allied Powers, and will point out to neutral countries still willing to listen to her the absence of any justification adduced by Great Britain or France. On the other hand, the measure of Germany's capacity for intrigue and espionage ought to have been sufficiently taken by now by the world at large to enable it to realise something of what has been happening in Greece. What it will not know is the extent to which the Greek authorities connived at the action of German agents, or, even after the change of Government, were powerless to interfere with a system that had been allowed to establish itself firmly in Greek life during the Gounaris régime. All that has happened in Salonika—the elimination of Greek control and the complete transfer of all authority into the hands of the Allied military command—has been accepted as a normal development of the original landing of a Franco-British force at that port. The same explanation in reality applies in all the circumstances to the functioning of Allied police in Athens and the seizure of the postal and telegraphic systems of the country as a whole. But the line of reasoning is not so apparent, and the Allies will do well to make it clear how the Greek Government failed to conform with its engagements and the principles of a loyal neutrality, and rendered inevitable the encroachments which have had to be made upon Greek sovereignty. Rumour has, of course, been busy with the subject, and it cannot be denied that it has been given wide scope in the face of the naval demonstration. An official explanation, therefore, becomes the more necessary as an act of justice to the Greek people, who are entitled to know the exact way in which those in authority over them have interpreted their responsibilities to their country. So far the strength of the Allies' position has rested in the fact that they have had the tacit approval of the majority of Greeks; but they would run the risk of losing this if from false sentiment they tried to shield the rulers of the people by withholding a full statement of their sins of omission and commission.

In dealing with the Balkans, the Allied Governments have so frequently taken refuge in a hand-to-mouth policy that they must not be surprised to find even now some misgivings in regard to their attitude towards Greece. Certainly the present state of affairs in that country points to the absence of any lead from the guaranteeing Powers which would help the Greek people to extricate themselves from the tangle into which King Constantine's unconstitutional procedure has brought them. The army has been demobilized, and the Powers have declared that they do not ask Greece to depart from her neutrality. But when British police are arresting German spies in Athens and Anglo-French officials are taking control of the posts and telegraphs the time has arrived to lay down more explicitly the line of action which Greece is expected to adopt. If the support of the Greek army is required by the Allies, the Greek Government should be told to carry through the elections with all possible despatch with a view to an early remobilization. If, on the other hand, the Allied Powers adopt what would seem to be the wiser course of informing Greece that in no circumstances will they now allow her to take part in the war, the situation would be materially simplified. Greek participation in the war would raise the question of compensation, and still further complicate the ultimate settlement of the Balkans. Greece was given her opportunity of striking a blow for the principle of nationality; she refused, and preferred to league herself with the Powers who set out to trample on the rights of nations, small and great alike. She should, therefore, be compelled to accept the position she has created for herself and to adhere to her neutrality. Such a course might help her to heal her domestic sores. With the fear of having to fight removed, King Constantine and his military following will be able to retrace their steps more easily into constitutional paths. It will be difficult to withhold sympathy from the Greek people; but the work of safeguarding the Constitution against attacks of a similar nature in the future will occupy their whole attention under the guidance of M. Venizelos for some time to come, without the added distraction of a strenuous campaign. All concerned will have learned a valuable lesson, and Greece will be able to settle down more quickly to a normal condition of national progress.

THE ROUMANIAN SOLDIER.

(From Our Own Correspondent.)

Bucharest, August 15.

A soldier of Roumanian nationality was recently court-martialled at Cluj, in Transylvania, on a charge of high treason. The evidence was set forth at length, and capital punishment was demanded for the alleged offence.

Counsel for the defence had gathered up his papers and risen to reply, when the deep silence which accompanied these acts was broken by the sound of a sonorous snore. All eyes were turned in the direction whence the indecorous noise appeared to proceed, when it was found to have its origin in the hunched-up figure of the accused, who, conscious of his innocence and profoundly bored by the proceedings, had dropped off into a peaceful slumber.

The defence was alive to the advantages to be drawn from the situation, with the result that our tired warrior was acquitted.

The above is a good illustration of the peasant's somewhat phlegmatic nature, with its undeniable touch of fatalism. Nothing astonishes him; never will he gape open-mouthed in wonder like the proverbial country bumpkin. His world is narrow, but his race as a whole has undergone experiences so varied, has been battered by storms so violent and oft-repeated, that startling events impart a subtle vibration to the thread which links his mind to that of his hoary ancestor, or unconsciously stirs his own particle of the collective, atavistic memory of the race, so that there enters into him a spirit of calmness—if need be, of placid resignation.

Here is another example. A group of inquisitive people gathered round a peasant who had just been taken for a flight in an aeroplane, anxious to ascertain what impression such an experience would produce upon his simple mind. But they were destined to disappointment, for the only comment elucidated was relative to the small size of the sheep as viewed from the clouds. This tale, however, is not quite characteristic; for if it illustrates what we may call the rather *blasé* temperament it does not do justice to the peasant's natural intelligence and lively powers of observation.

Are these peculiarities of temperament which, rightly or wrongly, we have ascribed to the Roumanian peasant, compatible with that dash, that reckless bravery, which is such a telling factor even in modern warfare? The answer is without a doubt in the affirmative, as history, ancient and modern, bears witness. Doubt may be entertained with regard to the efficiency of this or that element which goes to make up the complex known as "society," but never have I heard an expression of uncertainty on the score of the peasant's complete reliability as a fighting unit, and it is, of course, his class which constitutes the great mass of the army.

With his trans-Danubian neighbour, the Bulgar, he is sufficiently acquainted, and the latter enjoys his whole-hearted contempt. He would, it is true, find himself on familiar ground in the case of a Bulgarian campaign, but such would not correspond at all with his more warlike aspirations. It is otherwise with the Magyar, who is the object of a deep-rooted antipathy. A war with Austria-Hungary would for this reason alone prove popular, apart from the fact that it would be an eminently *national* war, making for the ethnical and territorial unity of all Roumanians; and with this latter aspect of the question the rural populations have familiarised themselves considerably in the course of the last few years. Even at the time of the Bulgarian campaign of 1913 the enthusiastic troops marched with additional goodwill at the thought that they were going to measure themselves with the hated Hungarian.

These, however, are but secondary arguments supporting our opinion that the Roumanian soldier will prove up to the mark. They are moral factors. But there are other requisites for the making of a good soldier, and presumably not the least important—namely, physical fitness and military training. These he has in abundance. The former the Roumanian peasant began to develop when he first saw the light of day, and endurance became an indispensable condition of life itself—endurance with its immunity to extremes of climate and temperature, and ability to sustain forced marches on a fare the quantity and quality of which would prove entirely inadequate for the demands of his Western brother-in-arms. As to discipline, this has been drilled into him abundantly during his term of military service and during the constant concentrations to which he has had to submit since the war has been in progress.

Such are a few of the reasons for which the Roumanian nation considers itself justified in counting implicitly on that section of the population which will be called upon to pay the heaviest tribute of blood in the realisation of the national ideal.

LOOTING IN SERBIA.

(From a Serbian Correspondent.)

In 1330 the Bulgarian Tsar Mihailo Sisman (Michael Shishman), in alliance with the Greek Emperor Andronikos III., attacked the Serbian King Stefan Uros (Stephen Urosh), with the object, as he said, of "placing his throne in Serbia." All the pleadings of Stefan Uros to Mihailo Sisman to avoid the war were useless. The fighting took place on the frontier of Serbia and Bulgaria, near Kustendil (Kustendji), which is to-day in Bulgaria. The victory of the Serbs over the Bulgars was so great that even the Bulgarian Tsar fell in battle. Thereafter Bulgaria lost all importance, but, thanks to the very humble petition of the Bulgarian nobility, and to the mercy of the good and pious Serbian king, it was not, at that time, annexed to Serbia, but only became dependent on Serbia.

Bulgaria never recovered her position. In her weakened condition she quietly came under the sway of the Turks, by whom she was enslaved until again created an empire by the help of Russia, in 1878.

At the time of the Bulgarian attack in 1330 Stefan Uros III. was building the majestic monastery Decani, south of Peci, which was the best monument of Serbian architecture. After the war, he completed this monastery and dedicated it to God as a sign of thankfulness for the victory over the Bulgars. After it was completed Stefan Uros III. was named "Decanski," and to this day he is almost always referred to by that name. In this monastery he was buried, and later he was canonised there. His sacred body rests there to this day, and each year, on November 11, a feast is held in his honour.

Decani was one of the greatest of Serbian relics, not only during the time of Serbian independence, but also during the régime of the Turks. It is also known because of the Serbian literature which flourished there, a great number of Serbian classics originating there.

Serbian monarchs vied with each other in making gifts to this monastery, and the monks in zeal in looking after its relics, monuments and wealth; and during the rule of the Turks the Serbs in the neighbourhood of Decani had an organisation and a special "church-leader" to look after the monastery. Even the wild Albanians of the neighbourhood respected this Serbian relic. From the far-distant Serbian countries, from the neighbourhood of the Balkan mountains, from the countries over the Save and the Danube in Austria, from Bosnia, Dalmatia, and Macedonia, the pious Serbian people came to Decani to bow to the "Sacred King."

A huge amount of wealth, in money and treasure, accumulated in the monastery, beginning with the immense presents given by Serbian kings and emperors, down to the small gifts of feudal retainers. Many manuscripts, books, and treasures of gold and of silver were to be found there. The list of the monastery's wealth found in books relating to it (G. Jurisic, "Decanski, Prvenac," Belgrade, 1858: S. Ristic, "Decanski, Spomenici," Belgrade, 1864; P. Srec-kovic, "Kralj Decanski," Belgrade, 1868, etc.) is far from being complete. All this wealth survived the troublous times of the five centuries under the Turks. Now it has become the booty of Bulgarians and Austrians.

The Sofia paper, *Narodni Prava* (July 31) reported that at the end of 1915 all the treasures contained in the monastery, whether of great or small value, had been removed to Bulgaria, and only the Ministry for National Education was in a position to speak about them. It appears, however, that the Bulgars did not take all that the monastery possessed. That is quite clear from the controversy between Vienna and Budapest papers as to who is to get the treasures found—Vienna or Budapest.

The newspaper *Novosti*, of August 6, in its article, "To Whom will the Treasures of the Serbian Monastery Belong?" contains the following statement:—

"Since it was heard from Serbia that the Austro-Hungarian armies have discovered treasures, to the value of some millions, in the very old Decani Monastery, a quarrel has taken place between the Austrian and Magyar Press regarding the rights to these treasures. As the antiquities in these treasures are very rare, a commission, appointed by the Court Museum, has started from Vienna in order to choose what they wish. But their intention will hardly be carried through, as the Magyar Press maintains that Serbia is undoubtedly more closely connected with Hungary than with Austria, and that this treasure therefore belongs to their 'Nemzeti Museum.' There is no doubt that great discussion will take place between scientific men over the question of this very famous monastery."

So Bulgars and Austrians are committing sacrilege over Serbian relics, and are destroying the legacies devoted to God and the Serbian faith. Is comment necessary on this barbarism?

THE PRESS ON THE NEAR EAST

Greece, Bulgaria and Germany.

In a leading article, "The Last Battle," the *Morning Post* recalls the saying of a modern Greek student of history, "England always wins the last battle," and points out that Bulgaria, forgetting this simple truth, "was impressed overmuch by the first battles." The writer declares:—

The position of Greece is that she was bound by treaty and honour to go to the aid of Serbia when Serbia was attacked. This obligation she refused to meet. There is a vehement suspicion that King Constantine and his Court were largely responsible for that national betrayal. The Greek nation, under the leadership of M. Venizelos, desired to stand on its treaty and oppose a strong front to the enemy. But a Palace intrigue defeated the Prime Minister, and deflected Greece from the course of honour.

Her punishment has, however, been severe already:—

Bulgaria, her worst enemy, robs her of her lands and her fortresses, kills her soldiers, beats her people, and robs her of the fruits of war. Germany used to reproach us with not being able to protect our friends from our enemies; Germany's failure is worse—she cannot protect her friends from her allies. If Greece is to sacrifice honour for Germany, surely Germany should have protected her against this insolent and injurious advance. After all, it would have been better for Greece—from the most material point of view—to protect herself.

In another leading article, "The March of Destiny," the *Morning Post* returns to this subject of Bulgarian invasion, asking:—

If these Bulgarian invaders are ejected by the arms of the Allies, what title will the Greek nation have to recover what they refused to defend? If the Bulgarians remain, is there any single Greek who imagines that Greece, unaided, will ever regain what she has lost? It must be painfully evident, even to M. Gounaris and his Party, where their policy has landed their country—in humiliation, in loss of hard-won territory, and in revolution.

A Comparison.

The Times last Saturday concluded a leading article on "The Greek Crisis" with the following comparison between the action of King Constantine of Greece and King Ferdinand of Roumania in regard to fulfilling their duty to their subjects:—

The King [Constantine] has been misled by sinister influences to forget that a constitutional Sovereign is bound by his position to stand above party and "to ally himself with the national feeling," regardless of his personal inclinations. The King of Roumania, a German and a Hohenzollern by descent, has just shown his sense of this obligation. Persistent disregard of it almost inevitably leads to more or less serious demonstrations from self-respecting subjects of resolution to vindicate their constitutional rights. We earnestly trust that, for the sake of the country which is proud of him and which he has served so well, the King of the Hellenes will speedily follow the example set him at Bucharest, and thereby free himself and his people from the increasing dangers of the present situation.

Roumania's Greatest Service.

Both the *Outlook* and the *Nation* of September 2 emphasise the importance to the Allies of the uncovering of a new flank by Roumania's action in declaring war. Says the former:—

The weight of her military resources, invaluable as it must be, is not the only contribution of our new Ally to the Entente cause. Her geographical position changes the whole theatre of war on that side to the advantage of Russia. Her western frontier served as a natural protection to the right flank of the Austrian forces guarding the passes over the Carpathians. This flank has now been uncovered, and will have to be extended for some hundreds of miles in a half-circle in order to restore the measure of protection thus forfeited. It will be a strain which the crumbling reserves of the Dual Monarchy cannot meet without withdrawing divisions from other vital centres. If military interests were alone to be considered the sacrifice of Transylvania would seem to be the lesser evil to be faced, but that blow to Hungarian pride and sentiment would be heavier than any Government dare to risk.

And the *Nation* declares:—

That she should have joined us at this moment when the enemy resources are so low is a great gain; that she should have so large and well-equipped an army is a greater; but that she should open up a new flank of such an extent is beyond question the greatest service she renders to the Allies. The Transylvanian flank is almost equal in length to the line between the Pripet Marshes and Bukovina. . . . If the Pripet-Bukovina sector collapsed when buttressed with 800,000 Austro-German troops, how can another fresh sector of like extent be held? The problem is not to deal with such and such Roumanian forces. In any case the Russian armies will act with them, and this at once kills any slight comfort the enemy may derive from the consideration that the Roumanian army is limited. The fact is, Roumania has freedom of movement, and may strike anywhere over a long front.

"The Regeneration of Persia."

Commenting upon the new Anglo-Russian Agreement relating to Persia, the *Manchester Guardian* (September 4) remarks that—

The first point in which the new Agreement is said to differ from the 1907 one is that Persia is a party to it, not simply a victim of it. That is all to the good. The chief aims of the treaty are military and financial reform. The gendarmery is to be swept away. Its place is to be taken by a force of 11,000 men in the north, trained by Russian officers, and a corresponding force in the South, trained by British officers. An army of this character might very well keep the peace of the country better than any military force Persia has had for a long time, but it is certain to be costly, and the dualism of discipline and control may prove a source of future trouble should not England and Russia succeed in maintaining permanent harmony and co-operation.

The writer does not quite approve of the constitution of the Commission which is to be put in charge of Persia's finances, and which is to consist of two Persians, one Englishman, one Russian, and one Belgian, because "in the past the Belgians in Persia have been under Russian influence," and "if that were to continue to be the case Russia would have the predominant weight in the new financial Commission." On the whole, however, he considers that—

Persia may well regard the new Agreement as a distinct improvement on the old. In 1907 Russia and England were concerned only to peg out claims in Persia and at the expense of Persia. The whole arrangement contemplated the collapse of Persia and took no measures to avert it. The new Agreement—though it is far from ideal—does do something to strengthen the fabric of Persian society, and, if the Foreign Offices of Russia and England have wisdom, might prove the beginning of a regeneration of Persia.

Dr. Dillon on Greece—

Dr. Dillon's contribution to the current *Contemporary Review* is entitled "The South-Eastern States." Those portions of it which deal with Roumania are naturally somewhat out of date, as they were written before our new Ally had declared war; but they give an excellent account of the events that led up to her declaration and of the difficulties that her statesmen had to face. As to Greece, Dr. Dillon remarks that she "has lost much by the pranks of her rulers." He continues:

Whether she can lessen those losses by tardy reparation will depend upon the hour at which it is made, and also on its thoroughness. And there is at present very little hope. For although the sands are running fast, the mischievous influences which have presided over the ordering of the nation ever since the mobilization of the army last year are still rampant and unchecked. Everything that is now taking place in the political sphere in Greece was outlined by the Kaiser's agents and approved by his brother-in-law. The Powers fixed the destination, but Germany's helmsman continues to steer the ship. When the Entente Governments intervened in June, the advice tendered by the Skouloudis-Gounaris Cabinet was to offer resistance to the Allies. One is tempted to regret that it was not complied with, because it would have provoked measures which would have put an end once for all to the irritating tactics of official Greece. But for that very reason the Berlin wire-pullers dissuaded the German Field-Marshal who governs the little realm from assuming a defiant posture, seeing that the most helpful results could be attained by verbally assenting to the demands of the Powers, and thus gaining time. And that line of action is accordingly being pursued by Constantine XII.

The Allies are determined at all costs to secure "that official Greece should henceforward behave with common decency and not misuse the flag of neutrality for intrigues and treasons which are as harmful to the nation as to its protectors."

—and Bulgaria.

Dealing with the Bulgarians, Dr. Dillon points out how, through their "Russophil" party, they hope to be able to save themselves in the event, now seen to be imminent, of the Entente Powers proving victorious in the great struggle. His description of the "Parliamentary Opposition, headed by Daneff and the Metropolitan Archbishop of Sofia, . . . rehearsing the part" allotted to them is delightful.

The line of defence is the usual one. The inarticulate population, whose love for their brethren of Russia and their little father the Tsar is constant, were cruelly deceived and hustled into the war by the Coburg seducer and his tools. They went like sheep to the slaughter. It froze the blood in their veins to think that they were bearing arms against their dear brothers and liberators. The whole nation prayed in secret that Providence might take pity on it and vouchsafe it an opportunity of proving that its heart still beats in the right place and thrills

Digitized by Google

with joy at the prospect of embracing its noble saviours. They repudiate the foreign King and anathematise his works. Under his uncontaminated son, Boris, who, like the Russian nation, is within the pale of the Orthodox Church, they are ready to express their contrition and make amends. Will not their humble prayer be heard by their noble-minded, tender-hearted brethren?

One can imagine Russia replying, firmly and grimly: "The answer is in the negative," or, since Russia is very much in earnest, with a blunt "No." But that there is some risk of too much tenderness being shown in other quarters is indicated by Dr. Dillon's next paragraph:

And the preliminary manœuvres have begun. A number of German deputies paid a friendly visit to Sofia in June, and were cordially welcomed by the Government and the authorities. Festivals and banquets were arranged in their honour. But those members of the Sobranie who will form the penitential delegation had to absent themselves from these ceremonies in order to qualify for their future mission. And that their abstention should be duly known abroad, the newspapers were instructed to publish the fact and the censors to let it pass. Accordingly, the Press of the Entente has taken cognisance of it. Whether the soft-hearted mild gentlemen of the Entente Chancelleries, whose belief in the loyalty of the Bulgars was durable, steadfast, and childlike, will be touched by these fresh symptoms, it is too early to say. What, unhappily, cannot be gainsaid is that a Bulgarian ex-diplomatist journeys freely between France and England, and has access to Entente statesmen, to the disgust of the Serbs, Roumanians, and Greeks. There is one remark which can and should be made to the penitential delegation when it sets out from Sofia. It is this: If the Bulgars are weak and pithless enough to serve as clay in the hands of German potters, they must put up with their rôle of vessels of dishonour. They are avowedly unripe for self-government.

The majority of our readers will probably share Dr. Dillon's hope that the "statesmen of the Entente will not again be duped by those arch-deceivers, and will discern what ought to have been understood long ago—that the Bulgars are to the South-East of Europe what the Prussians are to the centre. Scraps of paper will not sway their action nor moderate their inordinate desires. Military and political impotence can alone paralyse their power for mischief."

"Fools and Bulgaria."

Signs that the Bulgarians—or, rather, "Tsar" Ferdinand and his advisers—are preparing to "hedge" have led to several warnings being uttered against any weakness in dealing with them. Thus, in an article with the above title, the *Evening Standard* (September 1) says:—

We do not know what course Bulgaria will take now or later, but it is as well to be prepared for any change of front. If and when that arrives, we hope that the British Bulgarophiles will have no influence on the Foreign Office. Notoriously, they had too much influence last year. . . . There must be no question now of allowing Roumania to think that we have any lingering tenderness for her enemy and ours. The idea that Bulgaria might obtain good terms by a second treason, with Prince Boris temporarily taking the place of his perjured father, should be decisively demolished. Whatever happens, the dynasty must be blotted out, and Bulgaria's claws must be so cut that she will no longer be a menace to her neighbours. That is our plain and obvious duty to martyred Serbia and our new Balkan ally, and there can be no faltering in the task. Unfortunately our idealists, who insist on taking their imaginings to be facts, have far too much to say in these matters.

And the *Pall Mall Gazette*, of the same date, says:—

It can hardly be concealed from Bulgaria's over-clever Sovereign and his counsellors that "the game is up." . . . There is considerable expectation among qualified observers—and apparently not a little apprehension in enemy capitals—that she may now copy the example of her past discretion. . . . Buigarian secession would strike a deadly blow at the strategy of the Central Empires. But it would certainly not be allowed to save the Bulgarian rulers and people from the condign punishment that awaits their treachery in Europe.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Another act of robbery by the Young Turks has just been announced in a Reuter message from Amsterdam. At the Dutch port a telegram from Constantinople has been received in which it is stated that a "law" has been promulgated authorizing the Ottoman Government "to repurchase the railways from Smyrna to Kassaba, and from Mudania to Brusa, with their extensions and branch lines, also the harbour works and quays at Smyrna. The concessions for these enterprises are declared null and void." There will be a day of heavy reckoning for some people.

***

Our Cyprus Correspondent writes that, fortunately, since the gathering of the new harvest the prices of cereals have fallen, and that wheat was (on August 7) being sold in Nicosia at from 72 to 80 piastres a bushel. It will be recalled that in the spring the price rose to about 11s., while barley, which was selling, when our correspondent wrote, at from 28 to 34 piastres, fetched as much as 5s. 6d. a bushel. There was a great deal of distress in consequence, which, I understand, is not so great as it was, although many important articles of food are still very dear. Potatoes have also become cheaper, but are still at about double the normal price.

***

A Cairo friend tells me that the Government has decided to hold another great Industrial Exhibition next year, and that then Cairo will be given the opportunity to assist indigenous industries. My correspondent says that the exhibition at Alexandria, which has been described fully in THE NEAR EAST, has dispelled a good many of the delusions which were current about Egyptian arts and crafts, regarding which there is much ignorance in this country. So much depends upon a methodical distribution of information abroad that I am surprised that some attempt has not been made to establish a Publicity Bureau in this country. The actual producers and manufacturers stand to win so much by this method of advertisement, and it is a matter for surprise that they have not adopted it.

***

Referring to Egyptian industries I am reminded that one of the results of the war has been to show that the Egyptian people may rely safely upon their own sugar crops to make good at least part of any deficiency that may be caused by external interference with the usual sources of supply. Before the war most of the sugar consumed in Egypt came from Austria, and when this source of supply was shut off there was apprehension lest it could not be made good. It was then that Egyptians remembered that their own country produced sugar, and the question of meeting the demand has become a commercial proposition. Elsewhere in this issue is a description of one of the foremost of the factories, from which it will be seen that the industry is in a fair state of development.

***

I note a very natural disposition in financial quarters to direct increased attention to the financial and commercial openings which are presented by Roumania, or which will be presented when things are again upon a peace footing. In this connection I may call attention to the fact that we are not without direct banking representation in that country. The Bank of Roumania is a British institution, founded so long ago as 1866, the year of Roumania's original constitution, when the little country's financial position was not strong enough to warrant the foundation of a national bank. Its paid-up capital is £300,000, and its latest balance-sheet showed bills and current and other accounts to the amount of nearly £2,000,000. For the past year the dividend was at the rate of 8s. for the £6 share. The Earl of Bessborough is the chairman, and Lord Goschen is also on the board. In the past we have missed many chances in Roumania; we must change our ways, and, with the bank as guide and friend, British trade and commerce ought to take their proper place in the country.

***

In these Notes last week I referred to the apparent misapprehension regarding the conditions now existing in Roumanian finance, and to the fact that it was unnecessary for a special legal sanction to be accorded to the small "issue of notes up to 75,000,000 francs." Confirmation of my view comes from an unexpected quarter, and one which cannot be said to be biased in favour of our Bucharest friends. The financial situation of Roumania appears to have been dealt with exhaustively in the *Neue Freie Presse* (Vienna), which wrote after the last declaration of war:—"At the end of the second year of war, owing to the re-establishing of the activity of the Bucharest Bourse and the taking up of the exportation of corn abroad, the general economic aspect of the kingdom improved noticeably. During the last two years the gold reserve of the National Bank of Roumania increased from 151.1 million lei to 291.2 millions, and the note circulation from 501.1 million lei to 903.2 millions. Consequently the covering in gold of the banknotes in circulation attained at the present moment 32.2 per cent."

***

The Berne correspondent of the *Morning Post* mentioned in a recent letter that a German firm of geographical publishers in Gotha has begun the issue of a series of booklets intended to prepare the way for the "peaceful penetration of foreign countries" after the war. I run some risk of tiring my readers with the frequency of my warnings on this great issue; but I cannot refrain from a somewhat detailed reference to that part of the propaganda which concerns the country of our latest ally. The author of the Roumanian section is Dr. Otto Freiherr von Dungern, professor of Constitutional Law at Graz University, and to enable his friends to understand the possibilities of the country he "gives a history of the Roumanian people, describes the fertility of the country, its mineral wealth, and expresses his opinion concerning the possibilities of the development of the natural resources. He explains the Roumanian system of education, speaks of Roumanian literature, the Press, science and art, gives an account of the cultivation of corn, of vines, and of fruit, and tells of the progress made in forestry, horse and cattle breeding, pisciculture, home industries, etc. The book is brought up to the summer of 1913, and contains just the knowledge needed by the German going to Roumania as a stranger with the object of aiding in the work of 'peaceful penetration.'"

***

Readers of THE NEAR EAST who have been following the letters published from our Cairo Correspondent will have gathered that trade in the Land of the Nile is flourishing. This fact has been emphasised recently by comparative statistics published by the Board of Trade, which show that in the five months ended in May, 1916, the imports of the country showed a net increase of £5,331,000 over the figures of 1915, and rather more than those of the previous year. Exports also increased in value by £2,804,000 over those of 1915, and by more than a million over those of 1914. Incidentally, it will have been noted that this satisfactory advance in trade is not confined to Egypt. It is Empire-wide. What an object-lesson for those misguided States which have allowed themselves to be tied to the yoke of Germany!

***

Elsewhere in this issue is printed a significant extract from a recent copy of the *Mir*, in which the real extent of Bulgaria's need is shown. "There are no salt, petroleum or tobacco, and the peasantry hunt everywhere to find small quantities of these articles, but in vain." What the ultimate fate of the Bulgarian people will be it is difficult to say if such conditions prevail in these days when their leaders are still claiming that they are fighting on the right, that is, the winning, side. Some day these people, betrayed by their own guardians, will awake to the fact that their national life has been bartered away, and the betrayers will have a bad time. The Bulgar does not command much of my sympathy; but, after all, one cannot help feeling sorry that a people should be so victimized by those who ought to have been faithful shepherds, especially as a considerable proportion of them would have been much more contented, and happier, on the side of the Allies than on the other.

***

More than once previously I have referred to the thorough manner in which the Bulgars have exploited, and are exploiting, the mineral resources of Serbia; not directly, of course, for when the pirates of the Balkans came into possession of the mines, not being capable of working them, they calmly handed them over to their German masters. Recent advices go to show that the Huns, as in everything else, have worked their usurped resources to the fullest extent, and the better to do so have imported labour from the Hartz Mountain district. The situation is not without compensations, however, as I hope to show later on. Meanwhile, Serbia is pressing on, with the assistance of her allies, towards the time of restoration; and, as we all hope, will be in a position to exact pound for pound of that which is being taken from her.

***

Congratulations to Mr. A. Ishii, who has just been appointed to the command of the London office of the Nippon Yusen Kaisha. Mr. Ishii is one of the best-known personalities in the commercial life of modern Japan, and the interests of his company could not have been placed in better hands.

COMMENTATOR.

Egyptian Trade Activity.

Continued Noteworthy Expansion in Imports.

(From Our Own Correspondent.)

Cairo, August 23.

The condition of the trade of Egypt as revealed by the returns for the month of July, published this week by the Customs Administration, is highly satisfactory. During the month imports amounted to £E2,594,456, and exports to £E992,774, as compared with £E1,561,294 and £E1,018,359 respectively in July, 1915. There is, therefore, an increase of £E1,033,142 in imports, and an insignificant decrease of £E25,585 in exports, but for the seven months in both categories there is a considerable improvement, amounting to nearly 80 per cent. in imports and to 20 per cent. in exports; the figures for the seven months are £E17,005,934 and £E17,314,593 respectively. It is in this connection instructive to note that compared with the same period of 1914 imports show an increase of £E649,736, and exports one of £E580,272, and that the balance of trade is roughly the same. The chief items under imports during the month were (the figures in brackets are for the entire seven months):—Skins and tanned goods, £E30,340 (£E171,886); flour, £E26,199 (£E356,044); wine, beer and liqueurs, £E85,078 (£E794,596); petroleum, £E68,267 (£E470,557); coal, £E870,760 (£E3,067,894); stationery, £E75,021 (£E367,917); textiles, £E722,395 (£E5,291,562); worked iron and steel, £E90,337 (£E536,912). The import of rice fell off during the month by £E20,768, and that of chemical manures by £E64,293, whilst coal increased by £E679,046, or 52,497 tons.

Sugar and Cereals.

No eggs were exported during July, but exports of skins amounted to £E46,582 (£E167,061), cereals to £E95,686 (£E1,667,856), sugar to £E19,204 (£E545,180), wool to £E21,709 (£E196,463), cotton to £E678,590 (£E12,456,438), and cotton-seed and cake to £E56,001 (£E1,190,950). During the month wheat fell off by £E76,155 (56,837 ardebs), and beans by £E35,100 (35,172 ardebs), but maize improved by £E39,243 (38,773 ardebs), and cotton by £E104,777—the quantity was 75,282 cantars less.

It is interesting to note that the improvement in exports compared with the corresponding period of 1914 mentioned above as amounting to £E580,272, is as nearly as possible made up as follows:—Increases: Eggs, £E222,117; cereals, £E1,126,814; sugar, £E513,610; alcohol, £E128,943; gold and silver bar, £E13,432. Decreases: Petroleum, £E58,278; benzine, £E34,384; chemical products, £E33,595; cotton seed and cake, £E340,608—seed, 607,360 ardebs less and cake 8,037 tons less—cigarettes, £E68,272; and cotton, £E948,646—1,037,959 cantars less, which shows how the prices improved the situation.

British Contributions.

As regards the share falling during July to the various countries, Great Britain doubled her sales but dropped about 10 per cent. in her purchases; however, her proportion of the imports has risen from 46 per cent. to 60 per cent., and that of the exports practically remains the same, i.e., 50 per cent. Our African possessions strikingly improved their share of the imports, the amount rising from £E399 to £E37,436; this is due to the import of coal, of which £E37,335 came from South Africa. America increased her sales from £E86,507 to £E138,854, mainly petroleum and coal, whilst the absence of chemical manures has resulted in Chili dropping out of the import statistics. Spain improved her sales from £E9,460 to £E26,823 (ready-made millinery and mineral oil); Italy hers from £E162,109 to £E224,750 (half of this was cotton tissues); Russia hers from £E2,364 to £E11,451 (of this £E11,139 was writing and packing paper and cardboard); Switzerland hers from £E15,327 to £E25,502; and Sweden hers from £E12,107 to £E46,728 (matches, furniture, and ironmongery).

Foreign Traffic.

Under exports, Spain increased her share from £E 8,995 to £E29,278, Switzerland hers from £E757 to £E210,832, whilst the United States reduced theirs by 65 per cent., Russia hers from £E56,901 to £E34,271, and France hers from £E88,209 to £E70,069. With the exception of the United States and France these countries only took cotton. The former purchased raw hides for £E14,844 and cotton for £E23,718, whilst France bought maize to the tune of £E30,275 and rice for £E6,936, in addition to taking £E12,124 in sugar and £E13,418 in cotton. It is interesting to note that all the quails, eggs, cotton seed and cotton seed cake have gone to England so far, whilst half the maize, one-third of the rice, 75 per cent. of the beans and onions, and 40 per cent. of the cotton have been purchased for home consumption.

The Sudan.

Trade with the Sudan continued to be satisfactory during July, Egypt taking goods to the value of £E35,663, as compared with £E57,922 in July, 1915, and sending to that dependency merchandise to the value of £E94,672, as against £E76,135 a year ago. To date, imports from the Sudan into Egypt have doubled, whilst traffic the other way has increased by 40 per cent. the figures being £E552,955 and £E654,652 respectively.

The principal imports from the Sudan during July were livestock, £E4,831; cereals, £E13,613; gum, £E2,132; charcoal, £E1,266; and cotton, £E1,932; the main decrease was in cotton and cereals. Under exports south, the more important items were refined sugar, £E18,613; cotton tissues, £E28,564; cereals, £E7,264.

FINANCIAL PROSPERITY.

(From Our Own Correspondent.)

Cairo, August 20.

May proved another good month for the State exchequer, as is shown by the accounts of the Ministry of Finance just published. At the end of that month the revenue amounted to £E2,920,451, as against £E2,306,099, and the expenditure to £E3,818,441, as compared with £E3,407,501 a year previously. The revenue during the month increased by £E347,922, whilst expenditure was only £E271,545 more than in May, 1915. As a result, the situation of the Government finances is very much more satisfactory, for the deficit is only £E897,390, as against £E1,099,411 a year ago and £E1,404,618 on May 31, 1914.

The chief items of revenue showing increases are: Direct taxes, £E107,181 (these figures represent the amount of increase); Customs, £E162,335; tobacco dues, £E104,762; railways receipts, £E227,000; telegraphs, £E7,137; Post Office, £E10,381; rent of Government land, £E10,848; domains, £E8,974; whilst the only important decreases were: Divers receipts by £E26,944, port dues by £E7,357, and investment of funds by £E6,106.

The expenditure as already mentioned has so far increased by £E410,940. Of this increase £E271,545 was incurred during May. The chief heads concerned were irrigation, which spent £E24,739 more; railways, the expenditure of which rose from £E198,971 to £E345,365; War Office, which increased by £E21,079 to £E74,602; and Post Office by £E26,072 to £E48,312; whilst the Moukabala instalment has risen from £E45,904 to £E91,757.

DISTRESS IN BULGARIA.

We take the following from the *Mir*:—

Salt, petroleum, and tobacco are completely wanting in the capital. The peasantry hunt everywhere to find a small quantity, but in vain. For some days now the peasantry have been eating their bread without salt. The want of salt renders cheese-making impossible; this, too, at a moment when cheese is one of the staple foods in Bulgaria.

THE SUGAR INDUSTRY.

Successful Working of an Egyptian Refinery.

One of the first visits of the members of the Commission of Commerce and Industry, the result of whose work is now partially seen in the Exhibition at Alexandria, was to the sugar refinery at Hawamdia, near Cairo, and the exhibit sent by Naus Bey, the director of the "Société Générale des Sucreries et de la Raffinerie d'Egypte" in the Exhibition is proof of the importance of the industry in Egypt, says the *Egyptian Gazette*.

In addition to sugar in all its forms, from the cane to the finished article in powdered, crystallized or cube form, a quantity of heavy machinery is on view, all of which is made in Egypt by Egyptian workmen. And for the benefit of an interested public, some quite surprising information and statistics are set forth. We find, for instance, that besides the refinery above referred to sugar is manufactured in Upper Egypt at the following places: Nag Hamadi, Matai, Sheikh Fadl, Abou Kourgas, Kom Ombo (near Assuan), and Ermant.

No fewer than 17,000 workmen are employed during two-thirds of the year, and this number is increased to 29,000 during the remaining part of the year, when the peasants are busy in the fields attending to cutting and removing canes. A sum of £E400,000 a year is paid out in salaries and wages, and to the agricultural labourers and farmers £E750,000 is paid annually. The Government benefits to the amount of about £E135,000 a year for transport, monopoly taxes, and Customs dues. One is not surprised to hear, therefore, that the capital invested in the sugar industry in Egypt is over £E4,000,000.

LIVERPOOL COTTON MARKET

When the market closed yesterday Egyptian cotton was in improved demand, with quotations approximately ten points up. The following is a selection of the more important prices:—American, middling, 9.63; ditto middling fair, 10.35; Pernam, fair, 10.43; Egyptian brown, fair, 12.30; ditto fully good fair, 13.35; M.G. Broach, good, 8.80; ditto fully good, 8.95; ditto fine, 9.10; M.G. No. 1 Oomra, good, 7.40; ditto fully good, 7.55; ditto fine, 7.70; M.G. Scinde and M.G. Bengal, good, 6.80; ditto fully good, 6.95; ditto fine, 7.10; Tinnivelly, fully good fair, 9; ditto good, 9.12.

Wednesday's imports amounted to 9,000 bales, of which 3,200 were American and 5,800 were Egyptian. Sales on that day comprised American, 6,600 bales; Egyptian, 500; Peruvian, etc., 300; East Indian, 100; sundries, 500. Total, 8,000 bales (including 500 on speculation and export).

American.—The tendency was barely steady. Prices:—Sept., 9.48½; Sept.-Oct., 9.46½; Oct.-Nov., 9.45½; Nov.-Dec., 9.42; Dec.-Jan., 9.41; Jan.-Feb., 9.40½; Feb.-March, 9.40; March-April, 9.39; April-May, 9.37½; May-June, 9.37; June-July, 9.34; July-August, 9.31; August-Sept., 9.11. Egyptian futures—Tendency, easy. Sept., 13.02; Nov., 13.10; Jan., 13.20; March, 13.33. Alexandria futures—Nov., 23.00; Jan., 23-25.

ALLIED PROPERTY IN TURKEY.

The New Ottoman Law on Requisitioning.

(From Our Special Correspondent.)

Athens, August 22.

The law empowering the military authorities to requisition any buildings they may require will, no doubt, interest many readers of The Near East who have had the misfortune to see their homes occupied by the Turks.

This law is a specimen of Turkish methods, for, although in theory the elaborate regulations appear to be framed with good intentions, yet in practice the results are very different, as the regulations are never observed. Probably in very few instances, if any, have private residences been occupied with the prescribed formalities, for most houses appear to have been entered with scant ceremony and summarily taken possession of.

The enactment, however, establishes a legal basis for claims on the Ottoman Government, admitting, as the Government does, its liability not only to pay rent (though on a preposterous scale), but also to indemnify proprietors for damages and to pay for gas and water consumed.

A short time ago the Ministry of War issued a notice to the effect that three commissions had been formed with the object of dealing with questions arising out of requisitions of property, and the public were invited to apply to them in case of necessity.

It was notified at the same time that the "evacuation" of a building did not imply that it was no longer required, but it must still remain at the disposal of the authorities. If a building is no longer required the commission will then make an inspection of the property and establish its condition. Before this is done the owner must not take possession, and should he do so he may be forcibly turned out and will lose his rights to compensation.

This matter is one which no doubt preoccupies those whose residences have been seized and who will naturally wish to return to Constantinople as soon as it becomes possible to do so. There are evidently many residences which are quite uninhabitable and will require time to clean and repair, but possibly many have suffered less and can be occupied after some cleaning and repairing, and in such cases owners will naturally like to enter them at once.

Presumably, some body will be set up in Constantinople by the Allies to deal with this question, but it would be a great hardship and expense to many if they are not permitted to occupy their homes at once if they are found to be habitable.

This point having been referred to the Foreign Claims Office, at the Foreign Office, they state that "it is of great importance that the condition in which the property is found should be verified by unimpeachable testimony and that a survey of the property and a sworn statement be made as to the condition in which it is found."

It is earnestly to be hoped that measures will be taken by the British Government in order that as prompt a settlement as possible be effected of claims for requisitioning of property and of merchandise, considering that in many cases it may be extremely difficult to restart one's business or re-establish one's home without financial assistance. This matter might be taken into consideration at the present time and some scheme prepared for dealing with these claims with promptitude so as to lessen, as far as possible, the hardships and losses which many are suffering through the war.

*** The text of the law is available at the office of The Near East, where it may be consulted by subscribers.

TREATIES IN MOROCCO.

Are the Capitulations to be Abrogated.

It will be recalled that some time ago a Morocco correspondent discussed the possibility of the abrogation of the Capitulations. The following extracts from a letter from the Mogador correspondent of the *Morning Post* will not be without interest:—

These so-called Capitulations are the outcome of three centuries of continuous diplomatic and commercial effort, the first treaty having been secured from the Sultan during the reign of our Queen Elizabeth. This and the various treaties and conventions which followed it are the basis of all the liberties, rights, and privileges enjoyed by British traders in Morocco, and the owners of British ships trading with this country, culminating in the General Treaty and Convention of Commerce obtained in 1856 by Sir John Drummond Hay, his Majesty's Minister Plenipotentiary at the Court of Morocco. In the year (?) 1881 consular jurisdiction over British subjects in Morocco, subject to appeal to the highest Court in Gibraltar, was specifically established and defined by a Royal Order in Council, and subsequently confirmed by another shorter Royal Order dated in the year (?) 1914.

On the whole the system embodied by these Capitulations has worked very well for the protection of British lives and the peaceful carrying on of our overseas commerce. Moreover, thanks largely to the friendly intercourse between the two countries and to the benevolent attitude of the Moorish authorities towards English residents, usuages have grown up, as in the tenure of real estate, which became unwritten law and have been recognised as such by the native tribunals since the beginning of the nineteenth century. It is quite obvious to thoughtful observers and to parties primarily concerned that any abrogation of these old-established conditions would hamper our seaborne commerce and render commercial life well-nigh intolerable to resident merchants.

The question of jurisdiction is more serious than it would appear at first sight. While no one disputes the capacity or impartiality of the recently established Tribunaux de Paix, it is a matter of common knowledge that these Courts are under the influence, not to say the control, of an institution which is more military than judicial, and which has no reason to concern itself with the study of ancient British rights as established by treaty. Under these circumstances, to refer to a foreign tribunal questions arising out of contracts based mainly upon the common law of England would be manifestly unfair to litigants, besides leading to endless appeals and other vexatious complications.

No scheme for the readjustment of jurisdiction would be practicable which did not provide a seat on the bench for some judge thoroughly conversant with British Common and Statute Law. The Code Napoleon may be excellent for persons of Latin race, but it is far from being fitted to Anglo-Saxon temperament and British commercial usages. Morocco is one of many countries where sentiment enters very largely not only into business but into politics, and where the prestige of a foreign Power plays a far more important part than home-bred Englishmen can well realise. Anything approaching an abandonment by Great Britain of her ancient rights would be taken as a sign of weakness, and would infallibly bring about incalculable prejudice to local British trade. The conclusion English residents in Morocco draw from these facts is that, from the point of view of English rights and interests, no single item of the Capitulations could be dropped without very grave injury to the true welfare of our overseas trade.

TRADE NOTES.

Licenses to Trade.

It is officially announced that the company "Assicurazioni Generali," commonly called "La Trieste," has been granted permission to carry on business and to effect new policies in Egypt, satisfactory assurances having been received that the future business of the company will be directed and controlled exclusively from Venice, and that no direct or indirect communication will be held with Trieste.

Liquidations.

Mr. H. Swinglehurst, Alexandria, has been appointed Receiver of the business of Rudolf Stobbe, G.M.B.H., with instructions to liquidate the same.

[A list of recent changes in the list of firms with which traders in Egypt may not do business is published on page 458.]

SERBIAN EXCHANGE.

According to a Bucharest correspondent, Serbian exchange in Bulgaria continues to rise regularly despite the measures taken by the Bulgarian authorities to discredit it. The popularity of Serbian currency is particularly noteworthy among the peasantry, who appear to believe that Serbia will again enjoy great financial prosperity.

In the Serbian territory occupied by the Austrians, Serbian money has a standing value which is fixed by the enemy authorities, and is obligatory. In the districts administered by the Bulgarians the officially fixed exchange is only obligatory in transactions with the Bulgar authorities. It is free so far as private trade is concerned, and, thanks to this, a regular business in Serbian exchange is done.

In Bulgaria the people are doing all they can to secure Serbian paper-money at the present rate of exchange, for they seem to be convinced that, sooner or later, they will be able to dispose of it at a profit, when Serbia comes into her own.

MAIKOP PREMIER SYNDICATE.

In the High Court on Wednesday, Mr. Justice Sargant, in the absence of opposition, gave the approval of the scheme (already described in The Near East) of reconstruction of the Maikop Premier Oil Syndicate.

After setting out the scheme in detail Counsel explained that the royalty payable to Oil Royalties of Maikop, Ltd., would be dealt with as follows:—One-half of the royalty would be retained by the new company as a loan, to be repayable as soon as a 5 per cent. dividend was paid, and then only to be repayable by three equal annual instalments, the first instalments to be paid as and when the dividend was paid. Full royalty would be paid as from the date on which a 5 per cent. dividend was paid. The board of the new company would consist of Messrs. Parkes and Bonnard, and Messrs. Peake, Page and Tweedy, nominated by the Anglo-Maikop Corporation. It is provided that if any shareholder in the old company who had not voted in favour of the scheme should, within seven days after the scheme had been submitted to a meeting of the shareholders, express dissent therefrom by notice in writing he should be entitled to require the company either to abstain from carrying the scheme into effect or to purchase his interest at a price to be determined by agreement or arbitration. If the Court should not sanction the scheme within three months of its submission to the shareholders, or if the shareholders of the old company to the collective number of 10,000 dissented from the scheme the directors would be at liberty to abandon it. All proceedings in the existing debenture stockholders' action would be stayed.

PRODUCE REPORT.

LONDON, Sept. 7.

Currants.

There has been considerable activity in the market this week, the demand being mostly for good, sound fruit, which is selling readily at advanced prices. Regarding the new crop, the s.s. Gulf of Suez will probably be the first to bring new season fruit. Sales in new fruit are daily taking place, but a certain amount of reserve is noticeable on the buyers' as well as the sellers' side, which may be attributed to the political situation in Greece. Prices at present are on a basis of 55s. to 56s. for Provincial in quarter cases.

Sultanas.

There has been a very good demand, mostly for Afghanistan fruit, with good business done at advanced prices; later on, however, the higher prices asked by holders have checked somewhat the demand. Greek sultanas are quiet but very firm.

Dates.

The demand is fairly good, with small business passing at steady prices. Quotations for new season dates are firm, but very few transactions have taken place, and those being of small importance.

Figs.

There has been a better demand, chiefly for sound fruit, with fair business done at full rates.

Seeds.

Linseed closes inactive at about the same prices we reported last week. London-Calcutta, spot, August-September and September-October is quoted 76s. to 76s. 3d., but with little doing. Bombay ordinary, September-October, 78s.; small grain, ditto, 76s. 6d. Rape seed is firm at 69s. 6d. for Toria, September-October, and 68s. 6d. for bold Ferozepore. Cotton seed is rather quiet, London-Egyptian spot being quoted at £12 10s.; September, £13 10s.; and November-January, £12 10s. per ton. Mustard seed is in better demand, sellers quoting 28s. to 38s. cwt. Split peas, 94s. to 96s. per 504 lbs. Lentils, 24s. to 26s. per 100 lbs.

Oils.

Linseed oil is quiet, spot pipes landed being quoted at £36 10s., and barrels, ditto, £37 10s. Cotton oil is somewhat dull; crude spot pipes, refined pipes pale, and barrels sweet, after very slight alterations during the week, are closing again at prices reported last week. Rape oil is firmer; ordinary brown naked, £43; with English refined barrels, £48.

Oilcakes.

Egyptian cotton cakes are practically exhausted here, and only parcels to arrive are offered at £9 15s., and English makes at £9 15s. to £10 per ton. Linseed cakes are very firm for both English and foreign makes, London made selling well at £14 to £14 2s. 6d.; East Indian seed pures being quoted at £13 2s. 6d. to £13 5s., ex ship afloat.

Locust Beans.

Stocks in this market are practically exhausted, quotations only being given for kibbled at £11 10s., and meal at £15 per ton.

EGYPTIAN COTTON "MORATORIUM."

A Reuter message from Alexandria states that to solve the moratorium deadlock the Egyptian cotton merchants have agreed to put on the market 87,500 cantars of cotton at twenty-three dollars, while the Government advances the difference to be met up to twenty-five dollars, which will be reimbursed by an extra tax of one millieme on all Bourse transactions, deductable from the brokerage. It is hoped that thus the weaker Bourse positions will be liquidated, and also that the inevitable further rise will result in a satisfactory adjustment of the stronger positions. The Bourse reopened yesterday (September 7).

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

ENGINEERING NOTES.

Opportunities in the Balkans.

The systematic efforts that have been made in France to convince French manufacturers of the opportunities that are waiting them of doing business in Russia and in the friendly Balkan states as soon as hostilities are at an end have resulted in practical preparation for gaining those markets immediately the war is over. This, we think, ought to have roused the activity of British manufacturers, and particularly those in the engineering industry, who, with the endless suggestions, planning of campaigns, and formation of committees for the "capture of the enemy trade after the war," think best to leave the matter in the hands of officials to "wait and see" the result. It is a mistaken policy, which will cause great disappointment afterwards. No official efforts will suffice to gain even the friendliest markets without the individual initiative and energy of manufacturers and merchants. This applies particularly to the markets in the Near East, where the average buyer prefers to come into direct communication with the seller, and mistrusts the interference of any one who in one way or other takes the part of the latter.

The individual efforts of the German and American manufacturers were responsible for the decline of the British trade in the Near East, combined with the apathy of certain members of the British Consular service. The foreign manufacturers approached the buyers, studied their particular wants, and placed before them channels of information and mediums by which they could gain a knowledge of how to find them when they required their goods. Such a policy was not adopted by British manufacturers, and the success of their foreign competitors was secured.

British Substitute for Petrol.

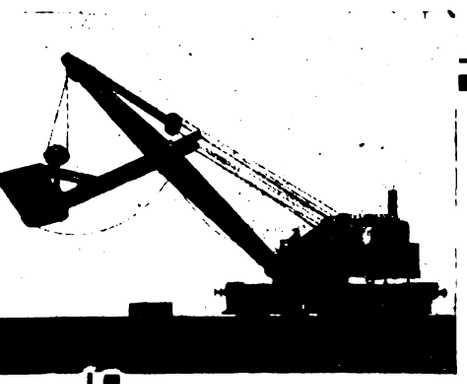
In our last engineering notes we alluded to recent announcements regarding the discovery of substitutes for petrol, and in the absence of relative particulars as to their component parts, or the results obtained from practical tests for general use, we referred to them as being, probably, still in an experimental stage. We described at the same time two or three such substitutes invented recently by Germans and Americans; the German-made mixture is said to have given very satisfactory results, and is being used by the German transport department. Our attention, however, has been drawn since to a new fuel which is an entirely British chemical preparation, and which seems to have satisfied the severest tests. The lightning motor fuel was first tried early in August. A cab driven with 50 per cent. of it and 50 per cent. of petrol was taken through the heaviest traffic, and up Savoy Hill, which is considered one of the biggest motor tests in London. It is said there was no sign of smoke or unpleasant smell, and that the next morning the cab was started, after standing all night, without any trouble whatever.

The fact that the efficiency of this new fuel has satisfied such users as owner-drivers of taxi-cabs admits no further comment. The new fuel is apparently suitable for every class of motor engine, and, probably, even for heavier commercial cars than for cabs. Regarding its production, no particulars can be given, as the composition is a "trade secret."

Serbia and Roumania.

These two countries used to be our best customers in the Near East for agricultural machinery and implements, but they gradually transferred their custom to Germany and Austria. Thus, according to recent Board of Trade Returns, Roumania, in 1912, bought from Germany agricultural machinery to the value of £215,900, from Austria £64,750, and from England only £17,000. Serbia, in 1912, bought agricultural machinery from Germany to the value of £20,300, from Austria £9,810, and nothing from England. Of agricultural implements and tools Roumania bought from Germany to the value of £165,650, from Austria £23,800, and only £300 worth from England. Serbia bought such implements and tools, from Austria only, to the value of £2,300, and nothing from England. No efforts have apparently been made to regain these two desirable markets. Yet Serbia was the first among the Balkan States to adopt the system of agricultural co-operative societies as co-operation is practised in Western European countries. Thus, in 1893, a number of agricultural syndicates were formed and agricultural credit banks were set up. In 1903, mention is made of 228 such banks. They not only received deposits and made loans to the farmers, but they themselves control the buying of cattle, seeds, fertilisers, implements, and other things. They procure the agricultural machinery which local associations hold in common, and undertake the sale of produce. A return made a few years ago by 253 societies shows that of their 12,361 members 6,218 could read and write, and 6,143 were illiterate, and the societies arranged lectures on purely agricultural subjects in various towns or villages. They also issued agricultural literature for the benefit of the agricultural communities.

Since the second Balkan War, when Serbia was doubled in size by the annexation of some very fertile land in Old Serbia and Macedonia, the co-operative societies were increased, but it is doubtful whether there are any in existence at the present time. There is an excellent opportunity, therefore, for the British engineer and manufacturer to prepare and be ready to aid in the restoration of the unhappy country; and by doing so, while benefiting himself, he helps to re-establish British commercial influence there and in the adjacent and much richer country, Roumania.



35 Ton Steam Breakdown and Shovel Crane.

RESTRICTED TRADING.

Further List of Barred Firms in Egypt.

The General Officer Commanding the British troops has in a proclamation, dated July 31, 1916, added the following names of firms to the list of those with whom trading by persons in Egypt is prohibited:—

ARGENTINA.

Ellerhorst, Fernando.
Hasberg, P.
Kobelt, G.
Meyer, Martin.
All of "La Germano Argentina."
Banco Aleman Transatlantico (Deutsche Ueberseeische Bank); Banco Germanico de la America del Sud (Deutsche Sud-Amerikanische Bank).
Schweitzer, Felipe, Santa Fé 951, Rosario.

BOLIVIA.

Elsner, Juan, and Co., Santa Cruz.
Banco Aleman Transatlantico (Deutsche Ueberseeische Bank).

BRAZIL.

Cia Lithographica Hartmann Reichenbach, Rua Gusmoes, 93, Sao Paulo and Santos; Compania Brazileira de Electricidade (Branch of Siemens Schuckert Werke), Avenida Rio Branco 79 and 81, Rua General Camara 87, Rua do Hospicio 29, Rio de Janeiro, and Rua Sao Joao, Bahia.
Schar, Ernest, Pernambuco; Schlick, Alfredo, and Co., Rua Bôa Vista 42, San Paulo; Schlick, Alfredo, and Co., Rua da Assemblea 14; and Rua Quitanda 47, Rio de Janeiro; Simoes, Angelino, and Co., Rio de Janeiro; Sinjen, M., and Co., Novo Friburgo, Rio de Janeiro; Sociedad Tubos Mannesmann, Limited, Rua do Rosario 64, Rio de Janeiro; Steiner, Pedro Maurico, Para.
Weiszflog, Max, Sao Paulo; Wachtel, Marxen, and Co., Rio Grande do Sud; Weissflog, Alfredo (of Weissflog Brothers), Rua Maranhao 21, Sao Paulo; Weissflog, Otto (of Weissflog Brothers), Avenida Paulista 112, Sao Paulo.
Achim and Co., Joinville, Sta Catharina.
Banco Aleman Transatlantico (Deutsche Ueberseeische Bank); Banco Germanico de la America del Sud (Deutsche Sud-Amerikanische Bank); Bercht Brothers, Rua Voluntarios da Patria 46, Porto Alegre; Brasilianische Bank fur Deutschland, Bahia; Porto Alegre; Rio de Janeiro, Santos, and Sao Paulo; Bromberg, Daudt, and Co., Rua Voluntarios da Patria 54 and 56, Porto Alegre; Buhle, C., Porto Alegre and Rio Grande do Sud.
Demarchi and Co., Uruguayana.
Empreza de Navegacao Mosqueiro e Soure, Para; Campos, Jose Pinto; Officina Velhote Silva; Officina Viuva Camillier; Empreza Graphica Rio Grandense, Rua Dos Andradas 447, Porto Alegre.
Hermany, Louis, and Co., Rua Goncalves Dias 54 and 57, and Avenida Rio Branco 126, Rio de Janeiro.
Ostermeyer, Frederico, Rua da Quitanda 63 and 175, Rio de Janeiro.
Pintsch (Julius) Aktiengesellschaft, Rua Sao Pedro 9, Rio de Janeiro.
Rieckmann and Co., Rua Bôa Vista 42, Sao Paulo.
Vieira, Francisco Salles, Manaos.

CHILE.

Banco Aleman Transatlantico (Deutsche Ueberseeische Bank): Banco de Chile y Alemania (Banco fur Chile und Deutschland), Antofagasta, Santiago, Valparaiso, Concepcion, Temuco, and Valdivia; Banco Germanico de la America del Sud (Deutsche Sud-Amerikanische Bank).
Canelo, Nemesio (of Gildemeister and Co.) Iquique; Cia Salitrera Constancia, Iquique.
Fonck, Carlos, and Co., Calle Brasil 126 Valparaiso; Calle Puente 571, Santiago.
Siemens Schuckert, Limited, Blanco 366 Valparaiso, and Santiago.
Trillo, Victor, Antofagasta.

COLOMBIA.

Banco Aleman Antioqueno.

DENMARK.

Beldring and Co., Vodroffsplads, 2, and Vestre Boulevard, 47, Copenhagen; Biehl, G., Tordenskoldsgade, 22, Copenhagen.
Petersen, P. Carl, Holmens Kanal, 9, Copenhagen.
Rasmussen, Alf., and Co., Martinsv., 9. Vestre Boulevard, 9, Copenhagen; Riis, C., Bonne Linoleum, A/S., Konprinsengade, 6, Copenhagen.
Winkel and Wondt, Brsen, 7, Copenhagen.
Andersen and Jensen, Istedgade 3, Copenhagen.
Henriques, R., Jr., Copenhagen.
Scandinavian British Syndicate, Islands Brygge 21, and Holmens Kanal 5, Copenhagen; Skandinavisk Produkt Import Co., Skindergade 31, Copenhagen.

ECUADOR.

Burau, Juan, Manta.
Cassinelli and Co., Guayaquil.
Kugelman, Ferd., Bahia de Caràquez

MOROCCO.

(This list supersedes all previous lists for Morocco.)

Abekhzel, Aaron, Laraiche; Abitbol, Moses, and Sons (Abitbol, Joseph M., Samuel M., Rafael M.), Laraiche; Afergan, David, Laraiche; Amar, Mesod J., Laraiche; Amarti, Mohamed Ben Drees El, Laraiche; Amir, Taher Ben, Laraiche; Anhri, Yusef El, Laraiche; Asharual, Abdelwahab, Arzila; Assayag, Simon, Laraiche; Assayag, Solomon, Laraiche; Auni, Ahmed El, Laraiche; Aztot, Abdeslam, Laraiche; Aztot, Fedol Ben Mohamed, Laraiche; Aztot Siddeh Ben Ahmed, Laraiche.

Baghar, Dris El, Alcazar; Bakkali, El Ayashi El, Arzila; Bakkali, Mohamed, Tetuan; Benarrosh, Brahim, Laraiche; Bendayan, Solomon, Laraiche; Beniflash, Elias, Laraiche; Benizri, Rafael, Laraiche; Benmergui, Vidal E., Tetuan; Benros, Isaac, Laraiche; Bensabat, Jacob, Laraiche; Benshiton, Joseph, Laraiche; Benshiton, Moses, Laraiche; Bessam Oolad, Laraiche; Botbol, Sentob Haim, Laraiche; Bukhari, Hossein Abdeslam El, Tetuan.

Cadosh, Mesod, Laraiche; Cohen, Mesod, Laraiche; Cohen, S. and J. (Cohen, Simon J., Joseph J., Scialom J., Jacob S.), Laraiche; Cohen, Simon D. (Cohen, Simon D., Jacob S.), Laraiche.

Dukali, Hadj Ben Maati el Hayani, Laraiche; Dukali, Hamed Ben Fekik, Alcazar.

Eljarrat, Jacob (Eljarrat, Amram J., Judah J., Meir J.), Alcazar; Eljarrat, Judah, Alcazar.

Gelool, Mohamed Ben Abdel Krim Ben, Alcazar.

Hababi, Mohamed El, Laraiche; Hadj, Ali Ben El, Arzila; Haquiba, Cades, Laraiche; Harrack, Abdeslam El, Alcazar; Hashmi, Hamed Ben El, Arzila; Hashmi Mohamed Ben El, Arzila; Hashmi, Si Hamed El, Tetuan; Hisu, Mohamed Ben, Arzila; Hossein, Mohamed El, Laraiche; H'sissen, Selam (Abdeselam), El, Alcazar; Huss, Reichardt, Arzila; Hussein, Ben el Hadj el Jemili, Alcazar.

Kell, J., and Co., Laraiche; Kouira, Drees, Laraiche.

Lebady, Mohamed, Tetuan; Levy, Solomon, Laraiche.

Maaroufi, Hadj Mohamed El, Laraiche; Mesbahi, Mohamed el Kasri, Alcazar; Mokhtar, Mohamed, Arzila; Mokhtar, Ulad, Arzila; Moryusef, Fortunate S. (Moryusef F. S., Judah S. Sliman J.), Laraiche; Moryusef, Joseph and Yahia, Laraiche; Moryusef Mesod Uld Brami, Laraiche; Mudden, Mohamed El, Tetuan; Muyal, Isaac and M., Laraiche; Mzamzi, Mohamed El, Laraiche.

Odadiah, Joseph Brahim, Laraiche; Oushishi, Abdelrahman El, Alcazar.

Renschausen, A., and Co., Laraiche; Rohner, Friedrich, Laraiche; Rohner, Werner, Laraiche.

Sabbag, Mokluf, and Co., Laraiche; Sabbah, Mesod, Laraiche; Sabbah, Simon, Laraiche; Sager and Woerner, Laraiche; Sherti, Mohamed, Tetuan; Sherti, Mohamed Ben El, Arzila; Simoni, Mesod, Laraiche; Soudry (Essoudry, Samuel, Soudry, Mordechal and Elias), Laraiche; Soussi, Hadj Mailoud El, Laraiche; Soussi, Hossein El, Laraiche; Steinkampf, Heinrich, Alcazar.

Tarnow, Max L., and Co., Tetuan; Tazzi, Abdel Wahab, Laraiche.
Wedele, Jehan, Tetuan.
Zailachi, Abdeslam el Amri, Laraiche; Zegari, Hamed, Laraiche; Zegari, Taib, Laraiche; Zimmermann, Alcazar; Zwartfeld, W., Laraiche.

GREECE.

COMPANY MEETING.

L'UNION FONCIERE D'EGYPTE.

The following are the minutes of the meeting of the above company, held at Alexandria on May 15 last :—

An ordinary general meeting of the shareholders of the Union Foncière d'Egypte was held in the company's office at Alexandria on May 15, 1916. The committee was composed of : Messrs. M. C. Salvago, chairman; S. Pappo, teller; R. Ismalun, secretary. The attendance sheet, duly signed by the teller, showed that there were present four shareholders representing 13,441 shares, giving a right to 706 votes according to Article 22 of the statutes. Copies of newspapers were produced containing the usual notice of the meeting. Having failed to obtain the statutory quorum, the meeting was declared void and postponed for one month, *i.e.*, to Thursday, June 15, 1916. The meeting rose at 4.15 p.m.

The following are the minutes of proceedings of the ordinary general meeting of shareholders of the Union Foncière d'Egypte, held on June 15, 1916 :—The ordinary general meeting of the shareholders of the Union Foncière d'Egypte, resulting from the second call, was held in the offices of the company at Alexandria, on Thursday, June 15, at 4 p.m. The committee was formed as follows : Messrs. Michel Salvago, chairman; Samson Pappo, teller; René Ismalun, secretary. The attendance sheet, duly signed by the teller, showed that there were present five shareholders, representing twenty-three thousand one hundred and fifty-one shares (23,151), giving a right to seven hundred and seventy-five votes, according to Article 22 of the statutes. Copies of newspapers were produced, containing the regular notice of the meeting and the balance sheet to March 31, 1916, and the profit and loss accounts were laid on the table. The Chairman declared this second meeting valid, in conformity with paragraph 5 of Article 22 of the statutes. The Chairman then read the directors' report and that of the auditor.

The following is the report of the directors for the financial year 1915-16 :—

Gentlemen,—The agricultural year which has just come to a close will be an epoch-making one in Egypt. It has been conspicuous for the insufficiency of the cotton crop, which barely exceeded four and a-half million cantars. This poor crop has been due to two primary causes :—Firstly, the reduction in the acreage set aside for the cultivation of cotton, a restriction decreed by the Government with a view to counteracting the fall in prices which it was feared would result from an accumulation of stocks; and, secondly, to the marked falling off in the average returns per feddan due to the ravages of the bollworm, ravages which have now reached alarming proportions. In so far as concerns this company, cotton was grown on an area of 1,936 feddans, as against 2,669 feddans the year before, and the total crop amounted to 2,590 cantars, as against 4,428. This represents a reduction in yield of 1/3 cantar per feddan, which, in view of the improvement in the properties (as proved by a recent revaluation), must be attributed to the damage done by the various insects, and in particular the pink bollworm. Since this latter pest made its appearance the Government has put in motion both scientific and practical researches with a view to combating this plague. Further legislation bearing on the subject is now contemplated, and it is to be hoped that these efforts will result in success. The falling off in the crop returns was, however, in some measure compensated by the rise in prices, the company's cotton having been sold at an average of P.T. 468, as against P.T. 262.210 the year before. By reason of this rise in the value of the crop, and in spite of its deficiency, the general situation of the country, agriculturally speaking, has been maintained, and even improved, in comparison with the state of affairs a year ago. Dealings in real estate have again been very slack, but the funds now at the disposal of the country, together with the favourable prices already obtainable for the new crop, point to a revival which it is to be hoped will enable the company's estates to be realised at remunerative prices.

Sales of Land.

A few small sales, amounting to an area of 49 feddans, have been accepted by the board. These sales, which have been registered, are distributed through the properties as follows :—

	Fed.	Kir.	Sahme
Kafr-el-Charki estates	0	05	26
Dar-el-Bakar ,, ...	4	20	07
Kom-el-Hassel ,, ...	29	14	18
Santa ,, ...	14	11	16
Total	49	04	09

The total area of sales still unregistered, due to balance of caution money not having been paid, amounts to about 130 feddans.

Purchases.

The estates have been increased by feddans 94-19-0, of which feddans 61-04-20 were acquired by expropriation, and feddans 33-14-04 were taken back by mutual agreement. The following table gives a summary of the movement in the property :—

	Fed.	Kir.	Sahmes.
Area on March 31, 1915	9.710	01	22
Land disposed of during the year 1915-16	49	04	09
Balance	9.660	21	13
Expropriations and re-purchases to March 31, 1916	94	19	00
Net area on March 31, 1916....	9.755	16	13

Development and Cultivation.

As explained in the last report, attention is being devoted to increasing the agricultural value of the estates until such time as the general conditions in the country permit of a revival of land sales, which are the principal object of your company. In spite of the considerable shrinkage in the resources of the company, the work of the past year has been most satisfactory, and has been very much facilitated by the abundance and good distribution of the water supply. Thanks to this, we have been able to cultivate 2,127 feddans of rice, which yielded 10,535 ardebs, or an average of 5 ardebs per feddan. This excellent result on so great an area was only possible on land where the drainage and levelling left nothing to be desired, and for which thanks are due to the thoroughly competent staff.

Balance Sheet.

It will be noted that the form of the balance-sheet has been considerably modified and, it is hoped, made clearer.

Rural Estates.—This item represents the net area belonging to the company multiplied by the cost price per feddan. The cost price thus works out at £E64.300 per feddan, which, owing to the fall in the value of real estates, must be considered as above the present value of the land.

Inventory.—In this item are included the realisable assets on the estates, such as cattle, plant, furniture and stores, etc. Debtors for rents will in future appear as a separate item.

Vendor Rights Ceded to the Land Bank.—The amount figuring under this item is £E21,863.314, as against £E23,732.385 in the last balance-sheet.

Debtors for Land Sales.—Our assets under this heading amount to £E72,593.135, of which £E21,863.314 have been ceded to the Land Bank, as above mentioned. On the other hand, the land sales annuities discounted by the Land Bank, and for the complete encashment of which we remain mutual guarantors in respect to the Land Bank, have been reduced from the original figure of £E77,960 to £E46,770.047, as against £E52,068 last year.

Mortgage Loan B Land Bank of Egypt.—Under this heading figures the prorogued balance of the third annuity of mortgage loan A. This balance is repayable in parallel with the principal loan—that is to say, over a period of thirty-seven years, dating from February 28, 1916.

Annuities in Arrears.—Whereas at the commencement of the year this account amounted to £E17,781.309, it has since been reduced by encashment to £E8,028.722.

1915-1916 Annuities.—These amounted to a total of £E18,908.022, of which £E4,620.472 has been encashed. This amount, together with the sums encashed against annuities in arrears mentioned in the previous article, forms a total encashment of £E14,373.059, which may be considered relatively satisfactory when the reduction in the yield and area of the cotton crop is taken into consideration.

Bank and Bankers.—This item includes the outstanding balances of the various credit granted by the company's bankers.

Provision for Interests in Arrears.—This account has been drawn upon to the extent of £E392.620 for irrecoverable arrears written off. At the same time, a similar amount has been passed through the profit and loss account with a view to maintaining the provision at its original figure, and a further sum of £E1,000 has also been passed through the profit and loss account, bringing this provision up to a total of £E3,000.

Provision for Rents in Arrears.—It has been thought prudent, as a safeguard against all eventualities, to increase this fund to £E5,500.

Profit and Loss Accounts.

Attention is drawn to the fact that the general and working expenses for the year amounted to £E15,014.147, and the rents and receipts to £E20,292.055. The same items for the previous profit and loss account read as follows :—Working and general expenses, £E15,673.436; and rents and receipts, £E18,297.427. We have found it possible and advantageous to employ our staff as agents for the management of neighbouring estates. This arrangement not only increases our resources by a sum of £E860, but also testifies to a confidence in our method of development. After allowing for the provisions for rents and interest in arrears, as already referred to, the profit and loss account closes with a loss of £E5,286.492, to which must be added the loss carried forward from last year, namely, £E9,783.638.

Board of Directors.

The retiring directors are Messrs. M. C. Salvago, L. Jullien, and Yver de la Brucholerie, who offer themselves for re-election.

Messrs. Yver de la Brucholerie and Jullien, of whom good news is received, continue to serve under the colours. Their colleagues here take this opportunity of conveying to them their cordial good wishes.

Auditor.

The directors propose that Mr. S. Pappo, sub-manager of the Land Bank of Egypt, be re-elected for the coming year, with the same annual remuneration of £80.

Auditor's Report.

Alexandria, May 10, 1916.

To the Shareholders,
The Union Foncière d'Egypte.

Gentlemen,—In conformity with the mandate which you have conferred on me, I have the honour to inform you that I have examined the balance-sheet and profit and loss account, and that I have found them to agree with the books of your company.

Your profits and loss account, after sundry amortizements amounting to £E3.891.786, closes with a loss of £E5.286,492, which, added to the loss shown last year, forms a total loss of £E15.070,130 to be carried forward.

(Signed) S. PAPPO, Auditor.

Resolutions.

1. The meeting, after having heard the reports of the directors and auditor, approved the balance-sheet and profit and loss account as submitted, and decided to carry forward the debit balance of the latter.

2.—Messrs. M. Salvago, Jullien, and Yver de la Brucholerie were duly re-elected as directors.

3.—The directors' fees were fixed at Lstg. 3 per sitting.

4.—Monsieur S. Pappo, Sub-Manager of the Land Bank of Egypt, was re-elected as auditor for the financial year 1916-1917, with the remuneration of Lstg. 80.

The business of the day being thus completed, the meeting rose at 4.30 p.m.

BUYERS' GUIDE.

COMPANY NOTES.

New Egyptian Land Company.

A company has been formed in Egypt with a capital of £E120,000, divided into 30,000 shares of £E4 each, which has been subscribed for by the following persons, in the proportions named: Chev. R. Riccardo Interdonato, 15,000; Dr. Bruto Pancucci, 5,000; M. Gastone Semiani, 5,000; Dr. Amédée Battino, 2,250; M. Max Kahil, 250; Henri Michaca, 2,250; M. Joseph Bertrand Bey, 250. The objects of the company, which is called the "Societa Egiziana di Beni Stabile," are said to be the purchase, construction, exploitation, and reselling of urban and rural property in Egypt, and all operations connected therewith. The offices of the company are at Alexandria, where all the subscribers are resident. Chevalier Interdonato is manager of the Egyptian branches of the Banco di Roma and M. Gastone Semiani is authorized to sign on behalf of the bank. The first board of directors consists of Chev. Interdonato, Maître Pancucci, and Maître Battino.

Oil Outputs.

Anglo-Egyptian. — Gemsah, 8 tons; Huyada, 500 tons.

Bibi Eibat.—Week ended August 27, 60,800 poods.

British Maikop.—Week ended August 26, 1,796 poods; September 3, 2,023 poods.

Cheleken.—Fortnight ended August 26. 572 tons.

Maikop Pipeline.—Week ended August 26, 21,890 poods.

North Caucasian.—Fortnight ended August 29, 671,957 poods.

Russian Petroleum.—Week ended August 2, 53,500 poods.

ON 'CHANGE.

(By Our City Correspondent.)

Throgmorton Street, E.C.

Business this week has been fairly active taking things all round. The feature has been the rise in National Bank of Egypt shares, which have advanced ⅜ to 13 on a persistent demand in a market bare of sellers.

Delta Light Railways have reacted after their recent sharp improvement and the chairman's statement at the meeting with regard to the heavy charge for coal, which is likely to continue for some considerable time.

There has been some enquiry for Behera's and some steady demand has been going on for Delta Lands and New Egyptians, both of which are somewhat higher than last week.

Mortgage Company of Egypt preference have also been enquired for, and have improved ⅜ to 7⅜.

Khedivial Mail shares have again been wanted, and some persistent buying has carried them up 1s. 9d. to 27s. 6d.

Greek stocks have remained very firm, but only a small business has been done.

The general confidence in Greek circles in London regarding the attitude of Greece to the Entente is strong, touching the level of optimism.

Roumanian oils have been very firm. Prices now are about as last week.

Very optimistic estimates are framed as to the value to Egypt of this year's cotton crop on account of the remarkable prices now ruling. It is expected to be worth several millions sterling more than last year. I have no reason to change my view that the *fellaheen* will come in again to buy land, which, of course, should materially improve the position of the various land companies.

The Roumanian 4½ per cent. loan of 1913 has been added this week to the Stock Exchange official list.

SUEZ CANAL RECEIPTS.

The traffic receipts for the Suez Canal were as stated on the days mentioned below:—

	1915. Francs.	1916. Francs.
August 30	290,000	290,000
August 31	580,000	470,000
Sept. 1	—	—
Sept. 2	—	—
Sept. 4 and 5	480,000	310,000

NOTES OF THE WEEK.

The situation in Greece is probably as obscure to all sections of the Greek population as it is abroad. M. Zaimis has resigned the Premiership, having frankly abandoned hope of being able to cope with the position to his satisfaction. He is understood to have been in favour of M. Venizelos' taking office, as the only possible solution of Greece's troubles. By resigning he may have counted upon compelling King Constantine to recognise the facts of the case and to appoint M. Venizelos Premier. He took up the post admittedly as a stop-gap, in order to repair the mistakes of the Skouloudis-Gounaris régime by a more tactful attitude towards the guaranteeing Powers, and to prepare the way for a general election. It fell to his lot to receive all the drastic demands made by the Allies upon Greece as the result of a policy for which he was not responsible. He secured the acceptance of all the terms imposed; but he was unable to effect any radical improvement in the situation. Rather than continue in a false position, he has handed in his resignation. The step is eloquent of the chaotic state of affairs in Greece. M. Zaimis' own reputation will not have been affected. He has done good service to his country in the past, and it is not his fault that the present ills would not yield to the only treatment he had it in his power to apply.

One of M. Zaimis' last acts as Premier was to offer his apologies to the French Minister for an outrage committed on the French Legation by members of the Reservists' Leagues. While the Ministers of the Entente were holding a conference at the French Legation a party of Greek Reservists forced their way into the garden, fired revolver shots and shouted, "Long live the King! Down with France and England!" These Reservists' Leagues were formed by the ex-Chief of the General Staff, and considered themselves the special depositories of King Constantine's confidence. They have constituted the aggressive section of M. Venizelos' political opponents, and have gradually become a law unto themselves in Athens and elsewhere, usurping as well the functions of gendarmes. The reply of the Allied Ministers to the incident at the French Legation was prompt and emphatic. They demanded the punishment of the perpetrators and the immediate suppression of the Reservists' Leagues throughout the country. Possibly the necessity of acceding to these demands and the knowledge that there was little chance of any promise he might give being acted upon in its entirety confirmed M. Zaimis in his intention to resign.

So far as is known, the steps taken by the Greek authorities to carry out the stipulations of the guaranteeing Powers have not yet been conspicuous for their thoroughness. In the meantime French bluejackets are guarding the French Legation. It is probable that the suppression of these Reservists' Leagues will prove the climax in the relations between King Constantine and the Allies. Rightly or wrongly, it is inferred that the King is resolved to adhere to the policy of intransigeance which he appointed M. Gounaris and M. Skouloudis to carry into action, and that he will only yield to direct pressure. His position can hardly be an enviable one. If he has satisfied himself that he has alienated the bulk of public opinion, he will be the more determined to lean upon and humour the military party which still supports him. His bugbear is still the possibility of intervention in the war. A wiser man would have been able to obtain from the Allied Powers a clear assurance that they had no wish to see Greece take part in the campaign, and he would have used the National Defence movement in Salonika as a means of restoring harmony to the nation under his personal leadership. King Constantine, however, seems to have missed his opportunity once more. He has chosen to misinterpret the Salonika movement, which was prompted by fear and hatred of the Bulgarians and not by disloyalty to the throne. In receiving a deputation of officers of the 11th Division who had refused to follow the National Defence Committee, the King delivered himself of very martial sentiments, and announced his readiness with such an army "to face any enemy." As he has commanded this army for some years and has refused in turn to give military support to his Ally Serbia and to take the field against his country's enemies, the Bulgarians and Turks, even when Greek territory has been invaded, his warlike phrases must have rung particularly false in the ears of his audience, who are equally anxious to avoid fighting.

As a result of M. Zaimis' resignation, King Constantine, in selecting his Prime Minister, continues to ring the changes on all the Greek politicians, except the one who is most clearly indicated for the post. M. Dimitrakopoulos has now been asked to form a Cabinet. He was formerly Minister of Justice in M. Venizelos' Government, but has lately adopted an attitude of hostility towards him. It may be necessary to have an interim Premier for the purposes of a general election; but the appointment of M. Dimitrakopoulos rests on no constitutional basis, as he is entirely without any recog-

Digitized by Google

nised body of supporters in the Chamber. For the moment, however, there is no need to press this aspect of the subject. Greek internal affairs have nothing to do with the Allied Governments, except in so far as they prejudice the military position in the Near East or infringe upon the comity of nations, as in the case of the outrage on the French Legation. King Constantine will, no doubt, choose his own method of returning to the path of constitutionalism, unless fresh incidents cause the Allies to present yet more drastic Notes. He is even credited with a resolve to reconsider Greece's attitude of neutrality in the light of the progress of Roumanian arms.

The omission to allay the bogey of intervention in Greece lends colour to the theory that the Allied plans experienced a sharp set-back when the Bulgarians took possession of Greek Macedonia east of the Struma. However improbable Greek connivance at such a step might have seemed, the fact that it actually occurred argues a failure on the part of the Entente diplomacy to gauge the real situation in Greece. This failure has impeded the Allies' movements ever since the first landing at Salonika. The removal of the German agents from Greece shows that Allied diplomacy has learned half its lesson; the other half will not have been acted upon until equally definite steps are taken in another direction. A glance at the map shows the advantage to the Allies of having their right flank covered by a neutral zone of Greek territory. Instead of having a single front stretching from Albania to the River Struma the forces under General Sarrail have now to face east as well as north. The task which would seem to have devolved upon the British troops is to clear the Bulgarians out of Greek territory first, before they can take part in the invasion of Bulgaria itself. It will simplify future operations if the Allies can make sure that this part of Greece, as soon as the Bulgarians have been ejected, will be taken over once more by the Greek Government under a pledge to resist with its whole armed strength any attempt on the part of the Bulgarians or Turks to possess themselves of it again. Otherwise the Allied line in any advance from Salonika must cling to the sea-coast on its right wing. The problem of swinging north-eastwards without leaving the left wing "in the air" will materially add to the difficulties of the military command.

There is a promise of big things in the Balkans, but we shall do well to curb our eagerness to see them develop rapidly. With the solitary exception of the Greeks all possible forces are now engaged. Some time, however, must elapse before decisive events can be looked for. The goal of the Allies must be to drive a wedge between the Central Powers and their Bulgarian and Turkish vassals; the only hope which the Bulgarians dare to indulge in is probably that they will be spared another winter campaign. With von Mackensen in command in Bulgaria, the Allies cannot reckon upon the enemy making any mistakes. He will doubtless be quick to seize opportunities for delivering successful blows, but in general he will play for time, regardless of the feelings of the Bulgarians. The opinion very widely shared that the latter will give in after two or three serious defeats has to be modified in the light of the fact that German officers have not only taken over the higher commands, but are well distributed throughout the Bulgarian regiments. The good behaviour of these regiments is doubly secured by the presence of Austro-German and Turkish troops among them.

The Roumanians continue to make good progress along the irregular curve of the Carpathian Range. Interest will centre later on in their movements at the northern end of the curve, where they are operating astride the upper waters of the Maros. This river must form the enemy's main line of defence in this south-eastern corner of Hungary, and the advantage to the Roumanians of being able to turn the position at the very outset will be considerable. For this purpose, however, we must wait for a more effective junction between the Russian and Roumanian lines, which can only be expected when the Russians emerge from the south-western corner of the Bukovina. Their capture of Mount Kapul, north-west of Kirlibaba, is an important step in this direction; but the nature of the country is necessarily against the rapid movements of large forces. On the other wing of the Roumanian line some ground has been gained beyond Orsova. Progress here will enable the Roumanians to free the northern bank of the Danube below this point from the attention of Austrian monitors, as well as to stop enemy transports to Bulgarian territory. The potentialities of the Roumanians' success at Orsova are great, but it is too early to tell where they will elect to place their main strength.

On their southern front the Roumanians have been less successful. By a rapid concentration of Austro-German, Bulgarian, and Turkish troops von Mackensen has struck before the Russians and Roumanians could join forces in the Dobrudja. Tutrakan fell after a heavy bombardment, and its garrison was forced to capitulate to an army which outnumbered it by three to one. Following up this success, the enemy have taken Silistria, but the garrison made good its retreat. The present situation, therefore, is that the enemy command the right bank of the Danube for some distance into Dobrudja, while almost due south of them is a Russian force which has recaptured Dobritch. If the Russians are as strong as they are represented to be, the triumphant progress of the Bulgarians ought to be short-lived. On the other hand, von Mackensen is not likely to be caught napping, and the course of events in this theatre during the next week or so ought to be of special interest. Much will depend on the capacity of the Roumanians for a bold policy. They have this in their favour, that, in common with the British and Russians, they possess ample reserves of men, and their numbers in the field will steadily increase as their supplies of munitions accumulate. That the importance of this theatre has been recognised in Roumania is shown by the transfer of General Averesco from Transylvania to command the Dobrudja army. He has been Minister of War, and is one of the most distinguished of Roumanian soldiers.

The whole Allied front based on Salonika has at last become active. For some time the Serbians on the left wing have been engaged with the Bulgarians in front of them. Their progress has been slow, if steady; but they appear to have exacted a heavy toll on the enemy, who was probably misled by his German advisers in regard to the fighting capacity of the new Serbian army. The military considerations which prompted this isolated action on one part only of the Allied front may have had some reference to the general alignment at this extreme western point; but it could hardly have been regarded as a satisfactory arrangement. Persistence in the inactivity of the French and British sections became impossible after the Roumanian reverses in the Dobrudja, and it was not a matter for surprise that on September 11 the whole Allied line assumed the offensive. British detachments crossed the Struma and occupied a number of villages that were in the hands of the Bulgarians. A French force co-operating on the left of their line was instrumental in capturing another village south-west of Demir Hissar. North of these were the Italian troops, who occupy a section from Lake Butkova westwards facing the Belashitza mountains. They are reported to have been engaged in the vicinity of Butkova Djuma, a station on the railway half-way between Lake Doiran and Demir Hissar. West of the Vardar the enemy was driven out of his trenches over a front of nearly two miles by the French, while between Lake Doiran and Ghevgeli and to the south of the latter it was apparently necessary to prolong the preliminary bombardment before an infantry attack could be

Digitized by Google

launched. This activity on the rest of the line reacted in favour of the Serbians, who also succeeded in registering important gains along their section.

The news from Persia continues to be scarce. In his speech at the opening of the Imperial Legislative Council the new Viceroy of India stated that the relations of the Government with Persia had never been more cordial. It is certain that a better spirit prevails at Teheran, which is of good augury for the future. The protecting Powers have been able to convince the Persian Government of their solicitude for Persia's real interests, and the new agreement between them has received its assent. The immediate task before all three parties is to clear the country of Turkish troops and marauding bands, as well as of any Turkish or Austro-German agents who may still be at large. Very little light has been thrown lately on the military situation in the west; but there is reason to suppose that General Baratoff has received reinforcements, and will shortly be able to push back the invaders. The work of organising the two gendarmerie, under Russian officers in the north and under British officers in the south, continues to make progress. General Sykes is understood to be at Shiraz, where a native element hostile to the British was allowed to hold sway too long. Some time must elapse before law and order are completely restored in Persia, but with the elimination of Austro-German agents the task will be simplified. One result of the new agreement between Great Britain, Russia and Persia is that we need no longer think of the country as divided into three spheres, with the anomaly of the British being virtually shut out of the part which concerns them most. It is enough for the moment to think of Russia's interests being in the north, Great Britain's in the south. Any more definite demarcation can be settled at a later and more opportune time.

No important development in the position in Armenia has been reported. In their retreat the Turks laid the whole country waste, and the Russian advance has resolved itself primarily into a question of supplies. The danger of the Turkish counter-thrust between Erzeroum and Mush would seem to have been definitely removed; but the configuration of the ground enables the Turks to put up a stubborn opposition, and the progress made by the Russian troops is slow. A Russian *communiqué* speaks of Turkish counter-attacks being successfully repulsed both west of Erzinjan and in the region of Oghnut. On the latter front the enemy's losses have recently been severe.

An article in this issue on the "Independent Chiefs of Eastern Arabia" throws interesting light on a little-known part of the world, and helps to explain how the Power in occupation of the head of the Persian Gulf must of necessity extend its jurisdiction up the two rivers in order to introduce homogeneity in the administration of a sphere exposed to tribal factions. "Whether we should have been able to preserve our policy of non-interference with Central Arabian affairs," the well-informed writer remarks, "or whether the proximity of Ibn Saoud to the sea would ultimately have drawn us, as the Turks feared, and as he wished, into direct relations with him need not now be determined. The outbreak of war brought our consideration for the Turks to an end, and as soon as he was assured of our friendship, Ibn Saoud cast away all shadow of allegiance to the Sultan." But Ibn Saoud's followers impinge on the Shammar, who in turn is in touch with the nomads to the north. Ibn Rashid must either seek his supplies in Busreh or higher up, on the Euphrates. In either case he is likely to be brought into touch with the British. His quarrel with Ibn Saoud has not yet been adjusted; it was in a conflict between their respective followers that the late Captain Shakespeare met his untimely end. The British can hardly ignore the rivalry between the two tribes, and if peace is ultimately to prevail in the Peninsula, we must show our determination to insist upon the maintenance of law and order on our borders.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 30.

H.H. the Sultan.

Last Thursday M. Defrance, the French Minister, handed to H.H. the Sultan the insignia of the Grand Cordon of the Legion d'Honneur, which was recently bestowed on him by the President of the Republic. The presentation took place with due ceremony. M. Defrance proceeded in State to Ras-el-Tin Palace, Alexandria, being accompanied thither and b ck to the French Consulate-General by H.E. Said Pasha Zulfikar, the Grand Chamberlain, and being escorted by a detachment of the Sultania bodyguard. His Highness received him, attended by the Sultania Princes and the Ministers, and very cordial speeches were exchanged by them on this occasion. This bestowal on the Sultan of such a high decoration is a delicate attention on the part of President Poincaré, and a recognition of the loyalty displayed by his Highness to the Entente cause, and of the lively sympathy which he has consistently evinced for the French nation since the time when he spent his boyhood's days at the Court of Napoleon III.

In view of the fact that his mother was never able to make the pilgrimage to Mecca, the Sultan has arranged that a certain number of ulema and students from Al Azhar shall proceed at his expense to the Holy Shrine, there to perform the devotions incumbent at least once in a lifetime on all true Moslems. These men will accompany the caravan when it shortly leaves Cairo with the Holy Carpet, which is annually sent to Mecca.

The Mecca Pilgrimage.

It has now been decided to permit the pilgrimage to Mecca. In 1914 and 1915 a fetwa was obtained from the Grand Mufti advising the Egyptian Moslems that, in view of the situation in the Hejaz, it would be permissible for them to postpone their departure for Mecca until a more propitious moment. This year the Arabian revolt has completely changed the situation, and the Sherif has opened the road from Jeddah to Mecca. In these circumstances the Holy Carpet will be sent this year right through to that city, instead of, as in the past two years, being taken merely as far as Jeddah and there handed over to the Sherif's agents. The usual escort of Egyptian troops will convoy the "Mahmal," and the Egyptian Government has arranged that about a thousand Egyptian pilgrims will be able to accompany the caravan. The number has had to be restricted owing to the difficulty in securing sea transport. As a special concession the expenses payable by each pilgrim have been fixed at the sum that was charged before the war. It is understood that the Sherif has guaranteed a safe conduct for the Mahmal and its caravan, and that he has intimated that the traditional tribute levied by the Bedouin is not to be paid. The Holy Carpet and its escort will leave Cairo on September 23, and will be embarked with the pilgrims at Suez two days later. By the way, the proclamation made by the Sherif to the Moslem world, which was issued here through his agent this week, has been very well received, and the outspoken condemnation of the Young Turks and exposition of their actions have made a most profound impression.

Local Greeks and the Crisis.

The Greek colony in Alexandria and Cairo has been very much excited these days by the news of events in the Balkans, and it is noteworthy that, as a result thereof, at least one of the Royalist organs has now come over to the Venizelist side. Monster meetings were held here and in Alexandria on Sunday last, when, amid the wildest enthusiasm, messages were sent to Athens expressing the indignation of the local community at the apathy shown by official circles in the face of the invasion of Greek territory by the hereditary enemy, Bulgaria, and supporting the demonstration in favour of intervention made by the people. These messages were addressed to the Athenian Press, to M. Venizelos, to the Greek Government, and also, as a special sign of respect, to Colonel Christodoulos, to whose bravery and patriotism the meetings paid a warm tribute and referred in these messages. The feeling in the Greek

Digitized by Google

colony is one of great depression, for it seems to be generally realised that the fact that Serbia is bearing a heavy part of the fighting, and that Greece is still standing impassively by, will very probably entail on the part of the latter in favour of the former a forced territorial sacrifice, whilst at the same time she will not attain her national ambitions elsewhere. The feeling is indeed very strong that the time has come for it to be taken out of the power of their Teutophile King to stand in the way of the will of the people and further to sacrifice the future of Greece, and incidentally betray the Entente.

The Traffic Question in Cairo.

The state of the traffic in Cairo has ever been a question that has exercised the minds of the Anglo-Egyptian authorities. It has always seemed quite hopeless to get the native drivers of vehicles to adhere to any rules of the road, and, in spite of the most energetic efforts of the police, it has in the past been impossible to improve matters to any appreciable extent. Of late, however, a transformation has manifested itself, and to everyone's astonishment the policemen on point duty have suddenly acquired a control over the traffic which is every whit as effective as in any English town. They now regulate traffic at cross roads in the busy centres of Cairo in a most businesslike manner, and, incredible as it may sound to those who know anything of the vagaries of the Egyptian Jehu, the arbuggies, almost without exception, respond to the slightest gesture or order. It is a most interesting and remarkable change, the cause for which it is not easy to discover, and both police and arbuggies are to be congratulated on this very salutary improvement in their relations.

September 4.

The Port Said Air Raid.

As I sit down to write this letter the two main topics of conversation are the Cotton Bourse crisis and the last air raid on Port Said. There is no disguising the fact that the latter has come as an unpleasant surprise, and has made a very bad impression. It was certainly thought that the defeat of the Turks at Katia and Bir-el-Abd would have meant the cessation of this style of warfare, and that, even though it had been considered inadvisable for the present to extend our line further east, the Air Service would have had the situation well in hand, and would have put it out of the power of the enemy any longer to indulge in these little joy-rides. Apparently, although we have driven back the Turks, they are still in possession of strategic points, whence they can with impunity raid the Canal. To the ordinary person it would seem that the next sensible plan of action to follow would have been systematically to bomb and destroy all these stations as soon as any attempt was made to make them an aerial *pied à terre*, by preference to attacking points in Syria, where it may be true the enemy's communications are vulnerable, but the destruction of which does not in any way relieve the Canal from the danger which it runs from air raids. Our Air Service must by this time be fully aware of the position of the enemy aerodromes, and it is to be hoped that energetic steps will forthwith be taken to prevent a recurrence of these incidents, for, as was demonstrated on this last occasion, the danger is not confined to buildings, etc., but extends also to shipping, the destruction of which might well have serious consequences.

Apart, however, from the fact that these raids are an unpleasant reminder that we are still not completely masters in our own territory, there is the local political effect which ought to be taken into account. So long as these raids continue, so long will certain elements of the population persist in believing that the Turks are unbeaten. The manner in which this last raid has followed the recent fighting in the Sinai is regarded as significant by many Egyptians, and as confirming the statement in circulation at the time that the story of our victory was a pure fabrication. With the Oriental, especially the Egyptian, seeing is believing, and, though I am far from being alarmed, yet I will go so far as to say that the air raid on Port Said on the 1st inst., which was the largest that has taken place so far, has largely counteracted whatever good effect our recent defeat of the Turks had in this country.

The Bourse Crisis.

The Cotton Bourse crisis has also had an unfortunate political effect.* Indeed, one always finds that in this country financial questions quickly assume a political aspect. Immediately the brokers fixed the price of November contracts at a maximum of 23 dollars there was an outcry that this was a glaring injustice to the Egyptian cultivators, and the agitation has not abated since. This statement is, however, quite unjustified, as I shall try to show. The average fellah contracts to sell his cotton crop to the merchant at the beginning of the season, very often even before his plants are above ground, and the terms of the sale are laid down as so many dollars above November contracts, the fellah having the right to demand that the price shall be fixed any time before the November settlement. Now, the cultivators rarely ask for the price to be fixed so early in the season, and they certainly never do so in a rising market. Their invariable habit is continually to put off taking a decision in the hope that the market will improve still more, and the majority wait until early in November, when, as usually happens, prices are at their lowest point. In these circumstances the action of the brokers temporarily limiting November contracts cannot have prejudiced the growers. But even granted that, contrary to custom, the cultivators had wanted to fix their prices just at the very time when the brokers took their action, and even granted that the market had been free, what would have happened? We should merely have found that the tendency to rise, which it is alleged was artificially stopped, would by the natural operations of the law of supply and demand have become converted into a tendency to fall, for the mere fact of so many cultivators fixing their prices would have thrown on the market an enormous amount of sale contracts, which, whilst they would have relieved the situation in so far as the brokers were concerned, would most certainly have reversed the rise in price.

Consequently the fellaheen have not suffered one whit financially, but they have undoubtedly been affected politically. It has been, and is still being, freely stated amongst the Egyptians, and not only amongst the uneducated, unenlightened class, that the whole crisis has been merely a manœuvre on the part of the English merchants and spinners to lower the price they will have to pay for Egyptian cotton and so cheat the fellaheen out of several million pounds which the latter would otherwise have received. Nothing will shake their belief in this theory any more than can any arguments convince them that in reality they have not suffered by the recent crisis in Alexandria. Thus the action of the cotton brokers has had for result not only the discrediting of the Alexandria Bourse in Europe, but also the unsettling, temporarily, let us hope, of the Egyptian cultivator. This is, indeed, most unfortunate, but it only serves to add emphasis to the fact that in this country finance cannot be dissociated from politics, in the sense that the return they will receive on their crops has far more weight with the mass of Egyptians than the most momentous dynastic or world-affecting events. It can, indeed, be asserted that, provided the situation of the people is in this respect safeguarded, almost any drastic and radical changes can be put into execution without the risk of a murmur of protest being raised; but let it be thought, rightly or wrongly, that anything is happening adversely to affect their material welfare, and all recognition of past benefits is swept away and the worst motives are attributed to the powers that be and the interested parties. The late Lord Kitchener was fully aware of this characteristic, and he framed his policy accordingly. The unfortunate impression referred to got abroad as soon as the decision of the Alexandria cotton brokers became known, but the Anglo-Egyptian authorities have been, and are still, doing their utmost to remove it, and there is little doubt that success will crown their efforts.

* An article dealing with the crisis will be found on page 478.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, August 23.

The German-Bulgarian Attack.

Greece is reaping to-day the fruit of her unwise and anti-patriotic policy, which she has preferred to a course in harmony with her national traditions and aspirations, a course that required her to combine with those who are fighting her natural and persistent enemies. Territory conquered at a great sacrifice of blood and treasure has been retaken by the Bulgarians without striking a blow. Never before has Hellenism suffered such a disgrace. Hypnotized by Baron Schenk, the inhabitants of the capital are living in indolence, amusing themselves, overcome by an apathy comparable to that which preceded the fall of the Byzantine Empire and the decadence of the Hellenic race. The public seem quite content with German assurances, given by people who are so scrupulous in carrying out their promises, and the Government relies upon the Bulgarian guarantee that the occupied territory shall be restored after the war!

Day by day the Venizelist Press strives to arouse the people from their torpor, pointing out that Germany will not settle this question, but the Peace Congress to be convened by the victors, that is to say, the Entente. At the last moment, however, Bulgaria is to invoke the fact, mentioned recently by M. Passaroff, that there are four hundred Macedonian officers in the Bulgarian Army, while two Bulgarian Ministers are Macedonians —this to show the impossibility of abandoning the disputed territory, which Bulgaria claims as her heritage.

In military circles fault is found with the Entente for compelling Greece to demobilize. It is alleged that if the troops had remained with the colours, the Bulgarians would never have dared to act as they have done. It is conveniently forgotten that while the Greeks were under arms Rupel was ceded to the Bulgarians, and that inquiry by the Diplomatic representatives of the Entente showed the Greek Government disposed to allow the Bulgarians a free hand to advance as far as they liked.

The Purpose of the Invasion

was, in the first place, to nullify the elections, so as to prevent the return to power of M. Venizelos, who seemed certain to succeed, and whose prestige was strong in the occupied departments. At that time the Liberal Party could reckon on forty-eight seats there, but it will lose them now. Efforts were also made to re-establish the connection between Athens and Berlin, the severance of which had stopped the smuggling of war material. Nor will the Allies now permit any resumption of postal or telegraphic business with Germany. Finally, it was sought to subject Greece to the will of Berlin, in opposition to the Entente Note of June 21, and this the *Patris* calls "high treason."

Electoral Machinations.

The Venizelist Press continues to denounce the officers who, obtaining leave ostensibly to take a holiday, are returning to their provinces to arouse opposition to the Venizelists. An anti-Liberal military league was nipped in the bud a few months ago, but it, nevertheless, operates semi-officially now, without Government interference. The War Minister, General Kallaris, has circularized his subalterns forbidding any participation in politics, but no penalty is incurred for disobedience, which has been frequent, with gross attacks upon M. Venizelos.

The General Staff.

Venizelist journals, and especially the *Kirix*, the official organ of the ex-Premier, have published a manifesto against the General Staff, accusing it of acting with partiality and bad faith when legitimately consulted, as well as interfering in political matters, to the extent of approaching the Entente in a diplomatic and electoral capacity. The officers concerned are charged with prolonging the general mobilisation, and granting double pay to certain colleagues who were to suppress popular dissatisfaction *manu militari*. The General Staff is even credited with a desire to use the Greek army against the Anglo-French force, so as to bring about a German triumph in the Balkans. Absolutism would then have been introduced into Greece. General Danglis, says the *Kirix*, was dismissed from his honorary position as aide-de-camp because he presided over the League of Reservists founded by the Liberals, while the enemies of the King were declared to be Venizelos and the Entente Powers.

M. Venizelos declares that the time has come to dismiss the present members of the General Staff, since, by predicting a German victory and labouring to secure it, they have lost all their military prestige. Let them, therefore, resign, for if they remain the country will be unable to play its part in connection with the Balkan crisis.

The Attitude of the Allies.

The Entente Powers are fully conscious of the anti-constitutional intrigues of the General Staff, and should they be continued further diplomatic action will be taken so as to induce M. Zaimis to secure to the Greeks the free and untrammelled expression of their national will.

Meanwhile, in all the attacks and conspiracies against the Liberal Party, the electors are told that it is a choice for them between the King and M. Venizelos. No mention is made of Gounaris, Scouloudis, etc., who seem to carry no weight for propaganda purposes. Hence, if one elector shouts "Long live the King!" and another replies, "Venizelos for ever!" the latter "free and independent" voter is immediately arrested and prosecuted for sedition. The journal *Estia* openly declares that the King ought to intervene to put an end to the dishonest tactics of the anti-Venizelists, which are, as a matter of fact, endangering the very existence of the dynasty. And, it is added, if his courtiers had a genuine respect for the King, they would discreetly counsel him accordingly.

CYPRUS NOTES.

(From Our Own Correspondent.)

Water Supply of Nicosia.

Cyprus, August 21.

There is hope that the improvement and increase of the city supply may be taken in hand at an early date. Readers may remember that action has been delayed by litigation over the claims of the Evkaf Department and the municipality respectively, respecting the control and administration of the supply. The judgment of the Supreme Court was adverse to the Evkaf, and the latter desired to appeal to the Privy Council. Permission to do this had been refused, and the Government has recently informed the municipality that the administration will be placed in the hands of a Board consisting of the two delegates of Evkaf, British and Ottoman, the Director of Public Works, the president of the Municipal Council, or his representative, and one member to be appointed by the Government. The chairman of the Board will be the Commissioner of Nicosia, who happens to be the British delegate of Evkaf. The decision is eminently satisfactory, as the duties devolving on the Board should be far more efficiently dealt with by a body thus composed than by either the Municipality or the Evkaf alone. The Municipal Council naturally claims that the funds which are now available should be applied to the repayment of its late expenses, including those incurred for prospecting for new sources of supply. It is desirable that the Board should get to work as speedily as possible.

Bread at Nicosia.

Next to water comes a question of bread, a matter which has not infrequently called for attention, and given cause for grumbling, owing to the quality of the bread. Loud complaints are at present made that the flour used for bread of which the vast majority of citizens partake, though white in appearance, is largely adulterated. The complaints find a voice in the Press, which demands that the attention of the Government, as well as of the Municipality, should be given to the grievance and that stringent measures should be taken to prevent the sale by unscrupulous dealers of flour unfit for use. The remedy, however, should presumably be in the hands of the Municipality, which can always submit samples to the Government Analyst, who has already rendered great service to the cause of public health by numerous analyses of adulterated articles of food and drink.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, August 20.

More German Work?

A formidable explosion took place on August 9 at the great powder depôt of Dudeshti, which resulted in a deplorable loss of life. The following are briefly the facts. Separated from the main powder magazines were some depôts of ether and sulphuric acid, and from the former were drawn daily quantities for distribution on the market, where there is a complete lack of this article. It is assumed that the ether was allowed to run into a vessel containing acid impurities, for on the morning in question a large crowd of officers, soldiers, and workmen was drawn to the spot by the sound of an explosion. While efforts were being made to extinguish the resulting fire there was a second explosion of frightful violence (due to extension of the flames to another depôt), killing on the spot some seventy officers and men and injuring hundreds of others. Nearly 200 have been taken to the hospitals, but the burns are proving in many cases fatal, every hour that passed during the first two days after the accident claiming its toll of victims. At the time of writing the dead number about 150. The material damage seems to be of no great importance, amounting as it does to the loss of a quantity of ether and sulphuric acid, the main powder depôts having fortunately escaped.

The King and Queen, who had hastened to the site of the accident, won the hearts of many by the personal interest they took in the injured and the families of the victims, and by subsequently visiting the wounded and attending the funeral of the dead. They have contributed 50,000 frs. for the relief of the widows and children, to which sum Prince Carol has added 20,000 frs. from his own purse. Three officers were killed outright by the explosion—Colonel Albu, the director of the establishment and an eminent chemical expert, who was the inventor of a powder of high explosive force known by the name of Alburite; Colonel Viskoiano, who had been attached to the powder works for ten years, and had made himself an enviable reputation in his speciality; Captain Savopol, who was only twenty-eight, and had invented the system of hand grenades adopted by the Roumanian Army.

A strict inquiry has been ordered, from which the public is not likely to derive much enlightenment. Many people, bearing in mind the recent explosion at the Pyrotechnic, associate this catastrophe also with the activities of foreign agents. This is the most plausible explanation to those who have any idea of the degree to which the country is overrun by German and Austrian spies. The official version ascribes the explosion to purely accidental causes. If this should prove to be correct there inevitably falls a heavy onus of responsibility on the shoulders of those who are charged with the safety of such vitally important establishments, for the circumstances would appear to be indicative of very gross negligence.

A Renegade Primate.

The nomination of Vasile Mangra as Primate of the Orthodox Church in Hungary and Transylvania is the latest blow delivered by the Magyars to the national cause of the Roumanians. Mangra had for thirty years been the soul of the national movement of his countrymen. But his heart was devoured by ambition. He seized the opportunity offered by the circumstances of an election in 1910, when Counts Tisza and Hedervary, for reasons of their own, made insincere representations of a conciliatory nature to the foreign nationalities, to throw himself into their arms, protesting that such advances could not be refused by the Roumanians without laying themselves open to the charge of political immaturity. Needless to say, the promises made for electioneering purposes deceived nobody, and were, of course, never fulfilled. Mangra's act of treachery has been rewarded. Through the direct pressure of the Government he was raised a few days ago to the Archiepiscopal seat at Sibin, which became vacant recently with the disappearance of that noble and ancient figure, Archbishop Metziano. Thus is defiled the highest dignity left to Austria-Hungary's Roumanian subjects, a dignity laid at the feet of an apostate who for selfish ends and for the sake of personal advancement forsook his co-nationals at a moment of grave crisis. The news has been received with intense indignation on both sides of the Carpathians, and is regarded as a further provocation on the part of the Hungarians. But the day of retribution is drawing near.

The Small Change Crisis.

The public continues to be inconvenienced at every turn by the absence of small change, and this state of affairs has not improved since last I wrote. Tobacconists complain that they are doing half their usual business from inability to change notes; cabdrivers take your five-franc note or piece and are unable to return change; urgent telegrams have been refused at the post office for similar reasons; and oft-recurring miniature dramas lend colour to the life of the cafés, in which the waiter has generally to assume the part of scapegoat. The crisis is without doubt the work of speculators, who judge the moment opportune for gathering in the harvest they have sown. Moneychangers now withhold as much as 6 francs on every 100-franc note they change. This reminds one of the expedient the Austrian authorities resorted to a few months ago in the Bukovina, when for the purpose of raising war funds they withdrew much of the small change from circulation. Measures are now being taken to remedy the evil. The National Bank has put one million francs in 5-franc notes at the disposal of the Ministry of Finance, and, on the other hand, the raids instituted by the Prefect of Police are proving effective. A tradesman recently arrested had in his possession 60,000 francs in silver and nickel. The offence is punishable with three to twelve months' imprisonment.

British Prisoners in Bulgaria.

Mr. Warfield, the new American Chargé d'Affaires at Sofia, is on the point of crossing into Bulgaria, where he will visit Philippopolis without delay. He has kindly consented to take with him a number of articles which had been purchased with the funds at the disposal of Mrs. Take Jonescu for our prisoners interned in this locality. They include 400 pairs of trousers, 150 caps, and additional mattresses, sugar, and parcels for the men.

ROUMANIA'S FLAG DAY.

The Roumanian Minister has sent the following letter, dated the 6th inst., to the Central Committee for National Patriotic Organisations, whose organising offices for the Roumanian Flag Day are at 1, Central Buildings, Westminster:—

"I have the honour to acknowledge the receipt of your letter of the 30th ult., and to express to you, in the name of my Government, my very best thanks for your proposal of organising a 'Roumanian Flag Day' in October. I shall not fail to notify my Government of the noble offer of your Committee, and to ask for their advice as to the disposal of the proceeds, which could be deposited provisionally with the Bank of Roumania, Limited, 27, Throgmorton Street, E.C., where a fund for the Wounded Roumanian Soldiers has been opened."

Helpers in London and the provinces are invited to apply to the Organising Office, 1, Central Buildings, Westminster, S.W.

THE ROUMANIAN RED CROSS SOCIETY.

The Roumanian Minister in London has received subscriptions for the Roumanian Red Cross Society from all parts of the United Kingdom. His Excellency has forwarded the contributions to the Earl of Bessborough, Chairman of the Bank of Roumania, Throgmorton Street. The duties of treasurer have been undertaken by the Earl of Bessborough, and generous donors who wish to contribute to the relief of the Roumanian wounded are invited to send their subscriptions to the Bank.

A Reuter's message from Buenos Ayres announces that the Greeks resident in the Argentine have sent M. Zaimis a telegram protesting against the Bulgarian invasion of Greece. They have also sent M. Venizelos a telegram declaring that they are confident that he will save the situation.

THE SITUATION IN SYRIA.

(From Our Correspondent.)

Cairo, September 5.

American Intervention.

At last the light of official truth has been thrown on the situation in Syria and the Lebanon, as a result of the negotiations between the United States Government and the Ottoman Government. The former kept in constant telegraphic communication with their Ambassador at Constantinople between the 24th June and the 7th July last, with a view to ascertaining the precise nature of the situation in that unhappy country, and of obtaining permission for the distribution of relief, going to the length of threatening that, in case the Turkish Government persisted in refusing this aid, diplomatic relations would be strained, and the feelings of the American people towards Turkey and the Turkish people would thereby be seriously affected. The result was that the U.S. Government received from their Ambassador at Constantinople the information that, while there was no doubt about the existence in Syria of serious economic distress, yet the reports published in the Press were somewhat exaggerated, and that the Ottoman Government had promised to exercise every effort compatible with accepted regulations to help in relieving the present situation.

Relief Work.

A prominent American missionary, who left Beyrout on the 26th June last, in a letter to a friend in Cairo, says that the situation there was growing steadily worse—as, indeed, it is only natural to suppose, owing to the maintenance of the blockade—but that the Protestant community, with the exception of one family, was all right. A private letter received from the Assistant Secretary of the Board of Foreign Missions of the Presbyterian Church in the U.S.A., at New York, and dated the 2nd August, contains the following pleasing announcement:

"We yesterday had a cablegram from Constantinople through our State Department, saying that Mr. Peet, the Treasurer of the American Mission Board there, could handle funds to transmit to an American Committee in Beyrout, which would supervise relief work in Syria, and that the need for relief work in Syria is now great and urgent. A letter from Sidon, written not long ago, referred rather hopefully to the harvests of this present year."

Cholera at Damascus.

From a copy of a paper published in Damascus which has reached Cairo, it would appear that the cholera epidemic prevailing in that town is not of the malignant kind, fatal cases averaging only five to six a day. It is interesting to note the freedom with which the paper criticises the apathy of the sanitary and municipal authorities in this connection. While, it says, the latter enforce rigidly the regulations prohibiting the drinking of the open waters of the Fiji River, and restricting severely the sale of vegetables and fruit, they are said to commit the criminal neglect of allowing the epidemic-stricken poor to sleep in the streets without any manner of precaution. Some of these poor people are said to have been seen lying in the streets in front of the sanitary office, with swarms of flies sucking the dirt and excremental matter covering their bodies, which contain the deadly germ that is soon after carried to the healthy. The Sanitary Department is said to disclaim responsibility on the ground that the disease of these people is hunger, and that when sent to the hospital they soon after come out, as the doors are not guarded; therefore the responsibility is with the Municipal Authorities, who in their turn use a similar argument. Truly a most Turkish state of affairs!

SUFFERINGS OF DEPORTED ARMENIANS.

The Presbyterian Board of Foreign Missions has issued a statement on the conditions of the deported Armenians in Northern Arabia and Syria, says the *Times'* New York correspondent. It includes the following report from a missionary—

At Meskene I saw women and children throw themselves into grave trenches and beg the gravediggers to bury them. The Government furnishes no bread. In Hamar there were 7,000 deported Armenians, 3,000 of them practically naked, and they gathered locusts, which they ate raw or cooked, according as they could get fire. Some caught dogs in the streets and ate them uncooked. At Rakka there were 15,000 Armenians, who live in tents in a camp on both sides of the Euphrates. The people were not allowed to enter the city. Everywhere were terrible pictures of nakedness, hunger, and death, the authorities doing nothing to help.

Some of the unfortunate people in despair threw themselves into the river. We often saw whole rows of ghastly forms rising suddenly out of graves asking for bread and water. They had dug their own graves and were waiting for death.

These Armenians number not less than 30,000 as I write. It has been proved that there has been cannibalism and that the dying have been fought over for their flesh.

LETTERS TO THE EDITOR.

THE EXTERMINATION OF THE ARMENIAN NATION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It will be a long time after the conclusion of peace before the truth about the cruel and atrocious methods used by the Turco-Germans for the extermination of the Armenian nation is heard of in the civilised world. The news that has reached us so far is but small leakings of the very facts. The Huns have not spared any effort and energy to combine their Teutonic modern methods with the traditional barbarism of the bloodthirsty Turkish tribes. It would be useless to waste paper and ink at the present moment. None can spare a moment now to hear our voice. Everybody is busy, very busy, struggling for his very existence; for the domination of right over might, and, as a matter of fact and principle, familiar to all, humanitarian feelings for the relief of or aid to a people in distress are of secondary consideration from a political point of view. The policy followed by the great European nations before the war was, as a general rule, on these lines. History is before us to show that things should take such a turning that the interests of the nations concerned should be in accordance with the very aspirations of the oppressed. The Armenian nation's aspirations are not unknown, and only a small help cannot but easily tend to its resuscitation. Given our geographical situation, our exhausted number, and limited means, we have done, we believe, more than we were expected to do. It remains to be seen what will be the policy to be followed by the great nations at the final settlement of the great conflict. It would be needless to say that the final settlement of the Armenian question would be in the interests of all concerned. We cannot but recognise with gratitude the great efforts of the Allies, before the war, for reforms in Armenia. The new *régime* would undoubtedly have given good results, but unfortunately, owing to circumstances, the elaborate agreement not only remained "lettre morte," but Turkey adopted a *régime* of radical extermination.

We cannot but believe and hope that, in consideration of our efforts, aspirations, and merits, our case will not be overlooked at the conclusion of peace.—I am, etc.,

Dervishian.

Alexandria, August 29.

ITALY AND SERBIA.

In the Geographical Section of the British Association last week, Miss Newbigin read a paper on "Italy and the Adriatic." She sought to show by quotation from Italian writings that Italy would not be inclined to displace Austria from the North-Eastern Adriatic simply to permit Slavonic rule to come in.

The President of the Association (Sir Arthur Evans), who spoke of his friendly feelings towards Italy, added that he had lived for several years on the east coast of the Adriatic. A large part of it was Serbian in sentiment, and he hoped they might eventually build up a South Slavonic State which would be largely permeated by Italian civilisation. Italy must make herself secure in the Adriatic, but let her do it by wise means. If she had the west coast of Istria, the great arsenal of Pola, and if, in addition, she had the key points, Valona and Brindisi, and certain of the islands, she would do very well in the Adriatic. If she tried to do more she would do it at her own risk and at the risk of certain war within a very limited number of years. Although we might sympathise with Italy we must sympathise also with Serbia, and if Italy did not alienate the new nationality a peaceful settlement in the Adriatic region might be looked for, but on no other terms.

NEAR EAST BOOKSHELF.

A BRITISH MEDICAL MISSION.*

The efficient succour given to Serbia by various British medical missions has made some amends for our failure to defend her during the disastrous invasion of 1915. The brilliant campaign of the previous year had left 70,000 Austrian prisoners on her hands, and they imported an infectious disease which we fondly supposed to have been stamped out by modern science. Their bodies were covered with lice, which are now known to be the only carriers of typhus, which consequently spread to the civil population. When the parlous state of our little Ally became known in this country a movement was set on foot for affording her relief, and it materialised in the despatch to Serbia of several well-equipped organisations, which struggled with marked success against the epidemic. Among them was a unit formed by the Royal Free Hospital of London, and its staff have done well to place their operations on record. Their book has a defect which is often met with where each of several authors is allowed to tell his own story without much regard for the general design. Readers will, perhaps, find some difficulty in following the unit's vicissitudes as a whole. We gather, however, that it was formed at the end of 1914 under the Red Cross and in co-operation with the invaluable V.A.D. Extreme care was taken in selecting the unit's staff from many candidates, with the result that fifty-four men and women composing it worked with the speed and accuracy of a machine. After several weeks of intense labour, the Anglo-Serbian Hospital, afterwards christened the "Berry Mission," after its able chief, left our shores for Salonika in an Admiralty transport.

It reached the Serbian frontier in February, 1915, and was despatched by the authorities to Vrntse, a health resort famed for its sulphur springs, about 150 miles south of Belgrade. There it was allotted a derelict hydro., which speedily became a hospital of the latest type. Shortly afterwards the mission annexed a neighbouring restaurant and two large villas. Accommodation for 360 patients was ultimately provided. For several months a lull took place in military operations. The Austrians were paralysed by their crushing defeats in 1914, and, lacking military patients, the mission turned its attention to the civilian element. A stream of sick and suffering poured in, imploring treatment for maladies mostly due to dirt. Thus Dr. Berry and his colleagues had ample opportunity for studying the national character. Their verdict is distinctly favourable. Serbians, being a race of peasant proprietors, display the fervid patriotism which is always seen in countries where the land is a possession of the people. Their warmth of heart and gratitude for the smallest kindness stands in marked contrast to the disposition of their Bulgarian neighbours. Dr. Berry describes them as—

> A very simple, egoistic, likeable people indeed; dirty enough, living on mud floors and disliking fresh air, consequently suffering much from tuberculosis and diphtheria; delighting in fresh colours and wild music.

In a subsequent page he likens them to the Irish, and the parallel drawn is indeed striking:—

> Ill they might be—undoubtedly were; poor many of them, badly fed some; in real pain, in gnawing anxiety for their dearest; but cold, drab, dull never. Always there was a volubility, an alertness, a power of relaxing into a picturesque attitude in the sun, and waiting, practically regardless of time; all characteristic of the nature of the people. They are like the Irish in their gaiety, their depression, their mercurial temperament; tears and smiles all a-bubble; and in their carelessness of money, a real, heart-free neglect of it when they have necessaries.

When we consider her people's resilience under blows which would have destroyed a less vital race, their dauntless courage, their capacity for organisation and discipline, we must pronounce Serbia an Ally worthy to stand shoulder to shoulder with us in destroying the Powers of Darkness.

The mission came into closer contact with the heterogeneous nationalities which fight under Austro-Hungarian banners. An unlimited supply of prisoners was placed at its disposal, and very efficient was the aid they rendered. Speaking generally, the subjects of the Dual Monarchy—removed from the evil influence of their chiefs—are good citizens and deserve a far better Government than those of Vienna and Budapest. None of them showed the slightest animosity towards ourselves. With the Magyars, indeed, we are still very popular, and most of them seemed to regard the war as a regrettable episode, which will not destroy a friendship dating back to 1849. In our authors' opinion, however, the cardinal lesson to be derived from the struggle now raging is the enormous strength of the military machine, which tears millions unconnected by common ties from their homes and sends them forth to be slaughtered in a cause with which they have no personal sympathy.

Finding time hang somewhat heavily on its hands, the mission undertook to improve the amenities of Vrntse. With the aid of the Austrian prisoners a mosquito-breeding swamp was drained, roads were reconstructed, a public incinerator was set up, and a really scientific slaughter-house approached completion, when an unexpected blow fell on the little town. Treacherous Bulgaria sided with the Central Powers, and 300,000 Austro-Germans helped her to overrun the sorely-tried country. Outnumbered by three to one and pulverised by a vastly superior artillery, the Serbian army was forced to retreat southwards, and Vrntse fell into the enemy's clutches. It is only fair to add that the mission received sympathy and active kindness from the conquerors. Protected by the Geneva Convention, the majority of its staff, with a mountain of baggage, was safely convoyed to Switzerland by way of Budapest and Vienna. The travellers were treated throughout their long journey as guests of the Austrian Government, and the only unpleasantness encountered came from German officials, who one and all displayed the inbred brutality of their race. F. H. S.

* "The Story of a Red Cross Unit in Serbia," by James Berry, B.S., F.R.C.S., and Others. London: J. and A. Churchill, 1916. Price 6s. net.

BOOK NOTES.

Her Majesty the Queen has been pleased to accept from Mrs. Will Gordon a copy of her book "A Woman in the Balkans," which contains one of the most recent intimate accounts of Roumania.

The former Serbian Minister in London, M. S. Boshkovitch, has written a preface for Mr. Gordon-Smith's descriptive work, "Through the Serbian Campaign," which Messrs. Hutchinson are just publishing.

An autobiography which should make a special appeal to NEAR EAST readers is promised shortly, that of Sir Charles Rivers-Wilson. Sir Charles died this year, so what we shall get is a posthumous autobiography. The author was Finance Minister in Egypt from 1877-79, and was on the Council of the Suez Canal Company from 1876 to 1895. As a young man in the public service he was for some time private secretary to Disraeli. He has some good stories of him, and much to say of "Bob Lowe," whose notorious "match tax," as we are reminded, this war time has, in effect, brought into being.

A hero of the Gallipoli campaign is recalled in a volume to be published by Mr. Fisher Unwin, entitled "Charles Lister: Letters and Memories," with an introduction by his father, Lord Ribblesdale. Charles Lister, who was Lord Ribblesdale's second and only surviving son, was at one time a member of the Independent Labour Party, but eventually resigned, and before joining the Army served in the Diplomatic Corps under Sir Rennell Rodd at Rome and Sir Louis Mallet in Constantinople. He died from wounds received in Gallipoli in August of last year.

Next month Mr. Arnold will publish "Light and Shade in War," by Captain Malcolm Ross, war correspondent with the New Zealand Forces, and Noel Ross, who was among the Anzacs wounded in the landing at Suvla Bay. The book contains a joint record of campaigning days and impressions in Egypt and France, as well as in Gallipoli.

Messrs. Constable announce the forthcoming publication of "Abdul Hamid," by Sir Edwin Pears, and "At Suvla Bay," a volume of notes and sketches by Mr. John Hargrave ("White Fox," of the *Scout*) while serving with the 32nd Field Ambulance of the Tenth Division.

PRISONERS OF WAR IN TURKEY.

The Secretary of the War Office forwards the following for publication:—

The British Government were informed in December, 1915, that letters written by, or addressed to, British prisoners of war in Turkey must not exceed four lines in length.

The Turkish Government have now withdrawn these restrictions. It is therefore no longer necessary that letters addressed to British prisoners of war in Turkey should be limited to four lines, but it should be realised that long letters may be subject to delay.

An uncensored message from Jerusalem, which appears in the *Neue Zürcher Zeitung*, says that an epidemic of cholera is raging throughout Palestine. Many Turkish soldiers have died from the disease.

The British crews of the steamers City of Khios and Assiout, who are prisoners of war at Magnesia, Asia Minor, have now been interned for over 21 months, and so far all efforts for their exchange have failed. Three of the original 72 have died, and three have been removed to hospital. In spite of the dangers and difficulties of the journey 32 visits have been made by the British chaplain at Smyrna since November, 1914.

In a letter written from Mosul on July 3 a British officer, taken prisoner at Kut, says: "Am quite well. It is pretty hot now, but one can buy plenty of milk and eggs, etc., on this road, and now we have arrived here one can get iced drinks. We have been allowed out to cafés here for meals, and have been able to walk about the town. I stayed for a month with a few other officers in an Arab village between here and Baghdad, not being very fit, but am quite well now."

AMBULANCES FOR ROUMANIA.

Mr. Alfred Hurst, of Edinburgh, chairman of the National Roumanian Relief Fund, who started immediately on the declaration of war to provide motor ambulances, hospital equipment, etc., has received the following telegram from the Queen of Roumania:—"I am very much touched by your telegram informing me that a committee is being formed in Edinburgh to present me with motor ambulances and hospital equipment, and more especially as it shows that my father's name is remembered."

The Roumanian Prime Minister telegraphed:—"I am very much touched by the proposals you have been good enough to communicate to me, and I have given instructions to the Roumanian Legation, London, to give all necessary help."

The President of the fund is Lord Rosebery, who has started it with a donation of 100 guineas.

LIMERICKS OF THE BOSPHORUS.

As It Seemed "Once Upon a Time."

A correspondent has been kind enough to send us some pleasing "Limericks of the Bosphorus." The few we reproduce below will serve to bring back to refugees from Turkey and many others memories of happy days which, we fear, can never be restored—for, come what may, the slimy trail of the Teuton will be perceptible in Constantinople for a long time to come.

Though anchored in well-ordered climes,
One loves to go wandering at times
By ways that are pleasant
'Neath star and the crescent—
If but in nonsensical rhymes!

'Tis the call of the East—what you will—
'Tis a voice that will never be still,
That will wake you at night
To recall with delight
That vista from Tchamlijah hill.

Or up Giant's Mount it may be
For a glimpse of the shining Black Sea,
Where the Bosphore commences
With rocky defences
And sweeps on so blithely and free.

This the scene of that quaint story olden,
When Jason his knights did embolden
To traverse these seas,
Set with Symplegades,
In quest of the Fleece that was Golden.

Here Orpheus played on his lyre
With such divine magic and fire
That man, rock, and beast
Listened, wrapt, to the feast—
No tribute could surely be higher.

Midway are the towers of Hissar,
Where the owl would keep tryst with the star,
Hooting oft as by rote,
While the bulbul's soft note
Carries strangely, though sweetly, afar.

If one has the wish to explore,
In such comfort as never before,
There's in waiting a *caique*,
And no boat is its like
That has ever pushed out from the shore.

It will take you on any sweet morn
Through the maze of the old Golden Horn,
Past Porte and past tower,
Where Stamboul sits in power,
And in beauty that one should not scorn.

One will want to land oft on each shore,
Where the past has left such a rich store
Of domes and old walls
One must feel, as he calls,
A regret that the proud days are o'er.

Where Marmora's sea is outlined,
If the voyager's heart be inclined,
He will visit some isles
Where the siren still smiles,
And other attractions may find.

Up and down this broad highway of blue
There is naught that is crude or is new;
And what tales might be told
Of the brave days of old,
And all of them thrillingly true!

Thus one who has dwelt by that shore
Must expect that his soul evermore
Will be haunted by dreams—
Tender, fancy-ruled themes—
Which the East can supply in such store.

King Nicholas of Montenegro has returned to Paris from the Italian front, where the impression he gained was of a very reassuring character.

The Queen Mother Olga of Greece, who is at present in Petrograd, replying to a telegram which King Peter sent her on the occasion of her birthday, expresses the great satisfaction she felt at the King's good wishes. The Queen Mother added at the same time that she daily kneels and prays to God for the final victory of the Allies and the restoration of Serbia, so that it might protect Grecian territory, which was so dear to her.

A *Times* telegram from Bucharest states that, on the initiative of Queen Marie, the Royal Palace is being transformed into a hospital for the wounded.

A Berlin official telegram states that the King of Bulgaria, accompanied by the Bulgarian Crown Prince, has arrived at the German Main Headquarters in the Eastern theatre of war for a conference with the Kaiser.

Princess Bibesco, cousin of Prince Antoine Bibesco, First Secretary of the Roumanian Legation in London, has left town for Bucharest. She arrived in Sweden on Wednesday.

Prince M. Sturzá, of the Roumanian Legation at Berne, and Count Vacaresco have left London for Bucharest.

H.E. the Roumanian Minister was among the callers at the Foreign Office on Tuesday, and again on Wednesday.

Acting-Lieutenant Nicolas Misu, the younger son of the Roumanian Minister in London, has left England to rejoin his regiment. Lieutenant Henri Misu, the eldest son of his Excellency, is already serving in the Roumanian Army.

M. Boresco, of the Roumanian Legation, arrived in London on Saturday from Matlock.

Madame Lahovary, wife of the Roumanian Minister in Paris, has arrived in London on a visit to her daughters.

M. Yovan M. Yovanovitch, the newly appointed Serbian Minister to the Court of St. James, is, according to present arrangements, expected to take up his diplomatic duties next week.

M. Yovanovitch, although not yet fifty, has had extensive experience in the Serbian Diplomatic Service, in which he has been entrusted with important missions. After studying law at the University of Paris, M. Yovanovitch was successively Attaché, Secretary, and Chargé d'Affaires in the Serbian Legations and Consulates at Skoplje, Athens, Constantinople, Sofia, and Cettinje. With this experience he returned to the Foreign Office at Belgrade as General Secretary, and on the death of M. Milovanovitch he became head of that Department. When M. Pashitch went to the Serbian Foreign Office in 1912, M. Yovanovitch was his right-hand man. In November of that year he went to Vienna as representative of Serbia. At the Austrian capital he remained till the declaration of war in July, 1914, and since then he has been at Nish and Corfu assisting M. Pashitch as Deputy Minister of Foreign Affairs. When in April last the Crown Prince visited Rome, Paris, and London, M. Yovanovitch was a member of the Mission which accompanied him. He has written several political and historical articles on the various aspects of the Balkan problem. For a short time he was Professor of International Law at Belgrade University. M. Yovanovitch has translated several French authors, including Balzac. The Serbian translation of "Notes sur l'Angleterre" by H. Taine is also his work.

The *World* says:—The retiring Serbian Minister, M. Boshkovitch, will leave London for Switzerland in a few days' time to recuperate. The strain of the war has greatly told on him, and he has perceptibly aged since the beginning of the year, and now he feels the absolute need of a protracted complete rest. His stay in London has not been long, but it has been very strenuous, and he has made many friends. His two chief drawbacks were, the one that while he spoke English he did so imperfectly, and the other that he was a bachelor. As a rule a married diplomatist has a better time—and perhaps does more useful work—than a single man. His successor, who comes from Vienna, where he learned everything about the genesis of the great struggle, does not suffer from the latter disability. M. Boshkovitch is not retiring from the Diplomatic Service. The Swiss mountains will give him the needed change, and he will there be able to enjoy his literary pursuits.

M. Voislav Antonievitch, First Secretary to the Serbian Legation in London, is now acting as Chargé d'Affaires.

M. Pashitch, the Serbian Prime Minister, and also the Serbian Ministers of War and Public Works and the President of the Skupshtina, arrived at Corfu last Thursday from the Salonika front.

A Sofia telegram to the *Cologne Gazette* dated the 10th inst. says:—Last night, towards midnight, the Roumanian Minister and the Legation staff in Sofia, with the Roumanian Minister and the Legation staff from Constantinople, left Sofia protected by an escort of detectives and police.

A Constantinople message says that the American Ambassador has assumed the protection of Roumanian subjects in Turkey.

The German, Austro-Hungarian, and Turkish Ministers to Roumania arrived in Petrograd on their way home last Friday.

In a conversation which appears in the *Vossische Zeitung* Mr. Elkus, the new American Ambassador at Constantinople, says: "I have been to Berlin several times. We noticed, to our great satisfaction, that neither in the streets, nor still less in the restaurants, were any influences of the war to be perceived." The Ambassador remarks that he goes to Turkey as a sincere and warm friend.

The Serbian Military Mission, headed by General Jivkovitch, the defender of Belgrade, who is popularly known as the "Iron General, has arrived at Petrograd, says Reuter's correspondent there, in a message dated the 11th inst. The members of the Mission will pay visits to the Imperial Headquarters and the Russian Front.

Captain George Lloyd, M.P., has returned to England on leave from Mesopotamia

Lewa W. S. R. May Pasha, Assistant Financial Secretary, Sudan Government, has arrived in England on leave, at the expiration of which he will retire from the service of the Sudan Government.

Lieut.-Colonel H. R. W. M. Smith, D.S.O., who is reported wounded, holds honours for service in the Nile Expedition, including the battle of Khartoum, and in the South African War (the Queen's and the King's medals with five clasps).

The marriage of Commander Viscount Broome, nephew of the late Earl Kitchener, and Miss Adela Monius, eldest daughter of Major and Mrs. Monius, of Ringwould, Dover, took place very quietly on Monday at the Parish Church, Ringwould. Major Monius and Earl Kitchener were first cousins. The bride, who was attended by her youngest sister, Miss Bridget Monius, wore a simple gown of white charmeuse, with old lace collar, and tulle veil, and carried a bouquet of white roses, lilies and myrtle, culled from the gardens of Broome Park. Lieutenant-Commander J. T. Harrison acted as best man. The service was conducted by the Rev. Gordon Cuming. Among those present were the Countess Loreburn, the Countess of Guilford, Lord and Lady George Hamilton, Major A'Beckett (brother-in-law of the bridegroom), and Captain H. Kitchener. The bride and bridegroom afterwards left for Checombe Park, Minchinhampton.

A marriage was celebrated at All Saints' Church, Ramleh, Egypt, on the 8th inst., between Captain John Francis King, only son of Mr. and Mrs. John King, of Wandsworth Common, London, to Helen Muriel, eldest daughter of Sir Armand Ruffer, C.M.G., and Lady Ruffer, of Bulkeley, Ramleh.

Readers in Egypt will hail with pleasure the conferment of the V.C. on Captain (temp. Lieutenant-Colonel) Adrian Carton de Wiart, D.S.O., Dragoon Guards, son of the late Maitre Carton de Wiart, the well-known Cairo lawyer, and cousin of the Belgian Minister of Justice. Captain Carton de Wiart has earned the much-coveted honour for "most conspicuous bravery, coolness, and determination during severe operations of a prolonged nature. It was owing in a great measure to his dauntless courage and inspiring example that a serious reverse was averted. He displayed the utmost energy and courage in forcing our attack home. After three other battalion commanders had become casualties, he controlled their commands, and ensured that the ground won was maintained at all costs. He frequently exposed himself in the organisation of positions and of supplies, passing unflinchingly through fire barrage of the most intense nature. His gallantry was inspiring to all."

Captain Carton de Wiart, V.C., was born at Brussels in 1880, and was educated at the Oratory School, Edgbaston, and Balliol College, Oxford. He served in the South African War as a trooper in the Middlesex Yeomanry (Duke of Cambridge's Hussars), and was twice wounded. He afterwards received his commission in the Dragoon Guards. Lieutenant-Colonel Carton de Wiart, who became well known as a polo player and steeplechase rider, was an adjutant in the Gloucestershire Yeomanry for three years; he served in Somaliland in the Camel Corps in June, 1914, when he was wounded and lost an eye. During his service in Flanders he was severely wounded, and lost his left hand. He had already been awarded the D.S.O., and had received from the King of the Belgians the Order of Leopold and the war medal. He has now been wounded in the head, but hopes soon to return to active service. He married in 1908 the Countess Frederica, eldest daughter of Prince Fugger-Babenhausen.

The evidence of Sir William Garstin was taken by the Mesopotamia Inquiry Commission yesterday week.

Lieutenant-Colonel Sir Maurice Hankey, K.C.B., will give evidence at the next meeting of the Dardanelles Commission, which will be held on Tuesday next.

Mr. Lucach, of the Chief Secretary's Office, Cyprus, has passed the higher standard of the Greek language in the examination recently held at Troödos.

Mr. W. R. Carruthers, manager of the Anglo-Egyptian Bank at Alexandria, has left London for Egypt on his return from leave.

Digitized by Google

A correspondent, writing to the *Daily Telegraph*, says:—While the accession of Roumania to the Entente is justly placed to the credit of the diplomatic representatives of the Allies, it is also a victory for the leader of the Conservative-Democrat party in Roumania, M. Take Jonescu. That statesman has never, since the outbreak of the war, wavered in his opinion that the destiny of Roumania was bound up with the cause of the Allies, for political, social, and all other reasons. In pursuit of this conviction, M. Jonescu worked hard to influence Roumanian opinion, and he was assisted in his campaign by another notable politician of the same party, F. Filipescu. Their task was a heavy one, as the German influence at the Roumanian Court was difficult to overcome. But the personal power of M. Jonescu was, perhaps, greater than he himself suspected. Not only is he an ex-Minister, the leader of a popular party, but he is a fluent speaker, with a charming manner and a fine presence. His English affinities (which are strong) may be traced to the fact that he married, many years ago, an English lady, under somewhat romantic circumstances. He speaks English, and is well known as a frequent visitor to this country.

Writing to one of his friends here, Mr. Oliver Bainbridge, on February 8 last, M. Jonescu said: "I am still hoping that my country will do her duty. I am, for myself, certain that she will do it, but the war will be a long one, and a very difficult one, as the Germans were too well prepared. All the same, I believe in the final victory, otherwise I would not be able to live any longer."

According to an official telegram from Berlin, Enver Pasha has arrived at the German Main Headquarters, and has by an Imperial order been placed à la suite to the Fusilier Regiment of the Guard.

According to a Sofia telegram to the *Kölnische Volkszeitung*, the trial by court-martial for high treason of M. Ghenadieff, who in 1913 was Bulgarian Minister for Foreign Affairs, opened on the 6th inst.

The Archbishop of Perth, Western Australia, as Chaplain-General of the Forces of the Australian Commonwealth, is about to visit the Australian chaplains and soldiers in England, France, and Egypt.

Colonel Sir Mark Sykes, M.P., will deliver a lecture at Caxton Hall on Saturday at five o'clock on "The Past, the War, and the Future" to wounded Oversea Dominion soldiers.

OBITUARY.

News has been received at Alexandria that Second Lieutenant J. R. M. Lawrence, East Surrey Regiment, second son of the late Rev. T. R. Lawrence and Mrs. Lawrence Dawson, of the Sailors' and Soldiers' Institute, Alexandria, has been killed in France. The fallen officer, who was 21 years of age, joined the Public Schools Battalion, Middlesex Regiment, in August, 1914, and obtained a commission in the East Surreys in May of last year. He went to France with his regiment in January last. He was educated at Haileybury and Pembroke College, Cambridge, and played both hockey and tennis for his 'Varsity.

Lieutenant-Colonel William Beresford Gibbs, Worcestershire Regiment, who is reported killed, had been employed for some years with the Egyptian Army.

The death is announced as having occurred in Rhodesia, on July 29, of Everard Arthur Drummond, third son of the late Mr. W. B. Neale, H.B.M.'s Consul at Athens.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. Cyril Cumberbatch has been appointed his Majesty's Vice-Consul at Athens.

Mr. H. A. C. Hoyland has been appointed Acting Vice-Consul at Salonika.

Bimbashi W. McConaghy, M.B., Medical Corps, and Bimbashi C. Cassidy, M.B., Medical Corps, Egyptian Army, have been granted the temporary rank of Kaimakam.

Captain (temporary) C. A. Willis, Assistant Director of Intelligence, Sudan Government, has been granted the temporary rank of Kaimakam.

Major C. H. Wolff, the Bedfordshire Regiment, has been attached to the Egyptian Army as a special service officer, granted the temporary rank of Bimbashi, and attached to the 9th Sudanese.

Captain J. R. Maurice, Army Service Corps, has been attached to the Egyptian Army, with the temporary rank of Bimbashi, and attached to the Transport.

Bimbashi J. H. Garstin has been transferred from the Department of Supplies to the Sudan Government.

The Egyptian Council of Ministers has approved of the conferment of the Order of the Nile of the 2nd Class upon Mr. H. A. Humphreys, Director of Administration in the Survey Department, who retired on a pension on April 1 last.

Colonel Thomson has been appointed chief of the British Mission at the Headquarters of the Rumanian Army.

A Reuter's telegram from Bucharest states that M. Camarasescu, Prefect of Silistria, has been appointed to act as Commissioner of the Roumanian Government with the Headquarters of the Russian Army in the Dobrudja.

The following Roumanian Army changes are announced:—

General Averesco has been appointed to the command of the 3rd Army, in succession to General Aslan.

General Crainiceano, former Minister of War, has been appointed to the command of the 2nd Army, in Transylvania, in succession to General Averesco.

General Georgesco has been attached to the Staff of the British Army.

General Alexander Averesco, who has been transferred from Transylvania to the Dobrudja, is one of the most distinguished of Roumanian soldiers. He owes his position entirely to his own merits, having risen from the ranks. He was born in 1859, and took part in the campaign of 1877 as a trooper in a cavalry regiment. He received a commission as sub-lieutenant in 1881, and attained the rank of General of Division in 1912. He commanded the troops in the suppression of the peasant insurrection in the winter of 1907-1908. In the latter year he became Minister of War. During the invasion of Bulgaria in the summer of 1913 he was Chief of the General Staff. At the outbreak of war he commanded the 1st Army Corps.

The new commander of the Roumanian forces in Transylvania—General Gr. Crainiceano—has had a brilliant military career. Ten years ago he was Inspector-General of Engineering, and in 1907, after commanding the Turnu-Severin Division, he was appointed Chief of the General Staff. His next appointment was as Minister of War in M. Bratiano's 1909 Cabinet. From 1911 onward he commanded the Bucharest Army Corps.

General George Georgesco, who has been attached to the Staff of the British Army, commanded the 5th (Constanza) Army Corps. In this capacity he was charged with the surveillance of the frontier districts. He was born in 1857, received his commission as sub-lieutenant in 1879, and attained the rank of General of Division last year.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

CONSTANTINIDES.—On September 9, at Briar Cottage, Herschell Road, Leigh-on-Sea, to Mr. and Mrs. A. C. Constantinides—a daughter (Joyce Mary).

MOIR.—On the 11th inst., at Mount Blair, Crosshill, Glasgow, the residence of her parents, the wife of Ian H. Moir, British Vice-Consul, Sultanabad, Persia—a son.

IN MEMORIAM.

ALEXANDER VAN MILLINGEN, M.A., D.D., Professor of History, Robert College, Constantinople. Died, September 15, 1915, at Rusthall, Tunbridge Wells.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.),
Alexandria.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
Glymenopoulo, Ramleh.
This Hotel is situated near the Beach.
Open all the Year. Bathing Cabins.
Terms from:
Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
Open all the Year R and—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
For Summer Season—
PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS,
LIMASSOL, CYPRUS,
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

Alexandria.
CARLTON HOTEL, Bulkeley.
Just outside Alexandria. Half-way to San Stefano.
Ramleh's Fashionable Hotel.
Patronised by the Elite.
Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. Full Pension P.T. 60 per day
C. AQUILINA, *Proprietor.*

ROUMANIA'S TASK.

Within a few days of her declaration of war Roumania has experienced an unexpected series of successes and an equally unexpected reverse. She has adopted an eminently sane attitude towards both; she has refused to be over-elated by the rapid progress of her armies in the Carpathians, and is far from being depressed by the course of events in the Dobrudja. It will be well if some of her Allies follow her example and take care that neither enthusiasm nor anxiety prevents them from forming a correct appreciation of the situation as a whole. The pace has been forced at the outset; but the race must be a long one, and is likely to prove full of incident before it is completed. Neither the Government nor the people of Roumania can have anticipated that they had only to take the field in order to find their enemies crumpling up before them over a thousand-mile front. They struck where they were least expected, or some time before they were expected—of this we have the candid assurance of the Austro-Hungarian Minister of Foreign Affairs—and the result has been that they are meeting with comparatively little opposition until the Austro-German forces in front of them are withdrawn to a shorter line. In the Dobrudja the Roumanians have in turn found the enemy in greater force and more resolutely generalled than he was supposed to be. It would appear that the Russians were intended to be responsible for the major part of the operations in this region; but their troops had not advanced far enough to be able to save Tutrakan and Silistria. There is no need to read into the temporary set-back any failure of the Allies' plans. Some risks have to be taken, and in view of the *coup* which the Roumanians have brought off in Transylvania, no one could urge that they ought to have delayed their declaration of war a single day. The loss of the two towns is a matter for keen regret, although we can conceive of nothing more calculated to steel the nation's heart for the successful conclusion of the struggle, cost what it may. Their capture would in ordinary circumstances have a heartening effect upon the Bulgarians, and we have witnessed the steps taken by Ferdinand of Coburg's allies to make the most of the achievement. But whether, with the grip of the Entente Powers tightening upon her, Bulgaria is in a position to derive full advantage from her success we may leave to the future to show. With the help of Germans, Austrians, and Turks she is making a big effort. The Roumanian territory which she has occupied, however, is south of the Danube, and brings her no nearer any practical objective than she was already at Rustchuk in her own country.

It is significant of the importance which the Bucharest authorities now attach to the Dobrudja operations that they should have appointed General Averesco to command on the Danube front. For a moment there seemed some ground for fearing that Roumania would be tempted by her successes in Transylvania and the Banat, which she is entitled to set against any losses in the Dobrudja, to adopt the attitude that the duty of readjusting the position as between her and Bulgaria devolved upon her Allies. The Russian forces which set out for a campaign in Bulgaria are no doubt equal to the task of ejecting the enemy from the Dobrudja: but the time has passed for the Allies to be content with a negative military policy in any region, least of all in the Balkans. Roumanians instinctively turn their eyes towards Transylvania, and the prospect of seizing the coveted territory in one big rush, as a result of the enemy's unpreparedness, is an alluring one. But it would inevitably prove unattainable. Already the Germans, having taken alarm, have moved down some of their own troops in the direction of Hermannstadt. The chances of an early decision in this region are small, and the Roumanians will do well to take a long-sighted view of the war and to aim at dislodging the Bulgarians and Turks before joining in the effort to break finally the Central Powers. Everything is, or should be, now ready for a supreme trial of strength in the Balkans, and it would be a matter for regret if any failure in the co-operation of the Allies at this stage caused an unnecessary prolongation of the campaign. The Allied offensive has been launched along the whole of the Salonika front. For this moment we have had many months to wait. Now that it has come we can but trust that the effort will prove irresistible. It has started auspiciously: but the long delay has brought the first days of the advance into the autumn, and if a winter campaign is to be avoided much ground will have to be covered during the next two months. The advantages which the subjugation of Bulgaria would offer are so great that it might be thought that the Allies one and all would spare no pains to achieve this end. Whether the thrust from Macedonia and the Russian advance from the Dobrudja will be sufficient to bring about an early collapse of Bulgarian resistance we do not know: but there would be no room for doubt on the subject, if Roumania could simultaneously launch an attack from another direction. However gratifying the occupation of Transylvania might be to the Roumanians, its effect on the duration of the war would not compare with the separation of Bulgaria and Turkey from the Central Powers. If, therefore, Roumania is eager for a short campaign, her interests would seem to lie in helping to the utmost of her capacity in the combined attack about to be made on Bulgaria, and it is to be hoped that General Averesco's appointment implies that she is to adopt this course.

While there is no cause for undue alarm in the situation in the Dobrudja, it would be a mistake to ignore the fact that a consistently successful thrust in this quarter must have embarrassing results for the Roumanians. The Central Powers are hard pressed. Marshal von Hindenburg has just taken over the duties of Chief of the German Staff, and can be relied upon to modify, if not entirely to reverse, the policy of his predecessor in that office, von Falkenhayn. He has been associated hitherto exclusively with the eastern theatre of war, and it is generally believed that, as far as the German Headquarters is concerned, the western front has received more attention than the eastern under the von Falkenhayn régime. Apart, therefore, from the relative gravity in German eyes of the menace in the East and of that in the West, von Hindenburg's predilections will prompt him to make a special effort in the East. In regard to Russia, he can hardly hope to do more than to hold General Brusiloff's advance. The only prospect of any real success would seem to lie in the direction of Roumania, and we must expect von Hindenburg to follow it up with all the forcefulness and determination of which he is capable. He will be ably supported by von Mackensen, who is in supreme command in the Balkans, and who has already given an earnest of his powers in the rapidity with which he has found Roumania's weak spot and dealt his first blow. To counteract the advantage which the concentration of authority in one leader gives the enemy the Allies will have to strike hard individually and strike all the time. The forces at von Mackensen's disposal must be approximately known to the Allied Military Commands. If without further reinforcements they are capable of serious mischief in the Dobrudja and ultimately north of the Danube, it will be useless to rely upon successes in Galicia or on the western front to checkmate them. The Bulgarian army with its German and Turkish supports must be dealt with on the spot and as soon as possible. In this work Roumania will have to co-operate, and not the least difficult part of her task will be so to divide her forces that she can act with effect in Bulgaria without exposing to any serious danger the line she has occupied in the Banat and Transylvania.

THE INDEPENDENT CHIEFS OF EASTERN ARABIA.

The settled lands watered by the two great rivers of Mesopotamia are bordered to the south and west by deserts which are the home of nomad tribes. The line of demarcation between the Bedouin and the fellaheen is not, however, an ethnological frontier, nor is it a sharply defined economic or political boundary. The cultivator of rice fields and palm gardens is of the same race as the wanderer in the desert; in the past, and often in a past not very remote, his forebears dwelt in the black tents; his habits of life have undergone little radical change, and his ways of thought have suffered no alteration. After the winter rains half the village will revert to a nomadic existence; with their tents and household goods borne on donkeys, they will drive their flocks out into distant grazing grounds, where they will remain until the grass has withered and the water pools are exhausted. Hospitality in turn is extended by them to their neighbours in the wilderness, who in the height of summer come in to the permanent waters and to the comparative sufficiency of pasturage near the rivers.

But the dependence of the desert upon the cultivated lands implies much more than a summer visitation from the outlying tribes. The desert does not produce so much as the necessities of existence; not even the oases of Central Arabia are self-supporting, and nowhere are there any industries for the manufacture of the elementary utensils which the Bedouin require, the clothes they wear, or the arms with which they defend themselves from their enemies. For all these essentials they must come to the inland towns and to the seaports, and they must, therefore, remain on good terms with the people who inhabit them and with the Government which can forbid them access to the markets. Thus it is that not only can remote parts of Arabia be controlled from without, but the rulers of the settled countries must inevitably find themselves thrown into economic and political relations with the independent sheikhs whose wants they only can supply.

Before the occupation of Busreh, the British Government had already come into contact with the Chiefs of Eastern Arabia, but except for a treaty with Ibn Saoud in 1866 we had confined our dealings strictly to those whose territories bordered the sea. With the Sultan of Muscat, the Sheikhs of the Trucial Coast, and the Sheikhs of Bahrein and Koweit we had long had agreements, some of which dated back as early as 1820, our main objects in every case being the preservation of commercial security in the Gulf and the suppression of traffic in slaves and in arms. Our interests were brought more sharply into line with those of the Sheikh of Koweit at the northern end of the Persian Gulf when, in 1899, certain foreign Powers seemed to be turning their attention to Koweit as a possible terminus of a Mediterranean-Baghdad line. The Sheikh saw in that suggestion a fatal end to the position of virtual independence which he had succeeded in maintaining; the British Government saw in it the ominous beginning of a Teutonised Turkish supremacy over waters which, for more than a century, we had policed and lighted, and where our trade was still of greater value than that of any other country. We cut short years of dalliance with Ottoman susceptibilities, during which the Sheikh had never felt certain whether as a last resource we would or would not support him in his efforts to checkmate the pretensions of Constantinople, threw our influence into his scale, and extended to him such protection as the nominal subject of another Power could enjoy.

A year and a-half before the outbreak of war with Turkey, another potentate, who for years past had been seeking for an opportunity for closer relations with Great Britain, forced himself into our line of political vision. Ibn Saoud, ruler of Nejd, that is to say, of the oases and deserts of Eastern Arabia, overran the province of Hasa, which had formerly been in the possession of his house, and pushed down to the shores of the Gulf, ejecting the three small garrisons which upheld the rule of the Sultan. Abdul Aziz Ibn Saoud, perhaps the most striking figure in recent Arabian history, has known every vicissitude of fortune, though he is not yet past middle age. He and his father were turned out of Riyadh, their capital, by their northern rival, the Amir of Jebel Shammar, Mohammed Ibn Rashid, who was the dominating personality of his day in Northern and Central Arabia. For several years Ibn Saoud wandered in exile, seeking refuge for a time in the Syrian desert, in the tents of the great Anazak tribe, with whom he claimed kinship, while his father found hospitality with the Sheikh of Koweit. But when, in 1897, Mohammed el Rashid died, leaving no man of his own remarkable quality to succeed him, Abdul Aziz was not slow to seize an opportunity. Aided by the Sheikh of Koweit, he rode into Riyadh with a small picked band of followers, and, by a master stroke of daring, recovered the town. The tale of his entry at the dead of night, of the swift overthrow of Ibn Rashid's vice-regent, and of the subsequent years of contest with the Shammar, which ended in the re-establishment of his supremacy over Central Arabia, has already grown into an epic on the lips of Bedouin storytellers and songmakers, and when this hero of many battles swept over the Hasa the Ottoman Government was not a little perturbed. The Turks had lavished gifts on Mohammed Ibn Rashid and his successors and studiously cultivated their friendship, hoping through them to maintain some measure of influence in Central Arabia. Ibn Saoud's success was not only a direct hit at their claims to sovereignty, but also the extension of his authority to the Gulf presented the signal danger of opening the deserts to the dreaded influence of that watcher of coasts, Great Britain.

Whether we should have been able to preserve our policy of non-interference with Central Arabian affairs, or whether the proximity of Ibn Saoud to the sea would ultimately have drawn us, as the Turks feared and as he wished, into direct relations with him need not now be determined. The outbreak of war brought our consideration for the Turks to an end, and as soon as he was assured of our friendship Ibn Saoud cast away all shadow of allegiance to the Sultan.

The occupation of Busreh must inevitably bring us into touch with Ibn Rashid and the Shammar; for though the building of the Medina Railway has made it possible to travel from Hail to Damascus in less than a week, the commercial intercourse of Ibn Rashid's oasis is all with the markets on the Euphrates. Every spring the Amir's caravans, 500 or 600 camels strong, make the fortnight's march from Hail to the Irak to replenish the stores of corn and oil, tea, coffee, and sugar which the unlimited hospitality of his palace demand, as well as to purchase the garments with which every tribesman who pays his respects to Ibn Rashid must be presented, in accordance with his rank and importance. By camel caravan the merchants of Najef furnish their partners settled in Hail with the stock-in-trade of the bazaars. Of the markets frequented by the Shammar two are already in our hands. The little towns of Zubair and Khamisiyeh, outposts in the desert, depending respectively upon the metropolitan Busreh and the provincial Souk-el-Shuyoukh, the "market of Sheikhs" on the Euphrates, are in the occupied territories. The seaport of Koweit is administered by our firm ally. Ibn Rashid, therefore, unless he be willing to keep the peace with us, will be reduced to seek his supplies higher up the

Euphrates, and even there he is beginning to find access difficult. By sea and land we hold the eastern neck of the Arabian bottle.

The Shammar have suffered since the death of Mohammed Ibn Rashid from inefficient and imprudent leading and from family jealousies, resulting in bloody upheavals in the ruling house. The present Amir is a boy of eighteen, untrained in statecraft, ungoverned in temper, and lacking in wise advisers. He clings blindly to the old policy, which has hitherto proved very profitable, of close adherence to Turkey, and shows no leanings towards the pan-Arab sentiment, with which from time to time the Sheikh of Koweit and the ruler of Nejd have coquetted—for reasons not strictly connected with an Arabian patriotic revival. Under the Amir's feeble rule the tribe is, as might be expected, divided against itself, but the Shammar are a proud and valiant people, possessors of their full share of desert virtues, and obedient to their old ideals and desert conduct. They must always be a factor in Arabian politics, and a turn of the wheel might restore to them much of their former supremacy.

One other great tribal group touches the Euphrates. The Anazah, most powerful of all purely nomad confederations, roam the Syrian desert from the borders of Mesopotamia to the eastern frontiers of Syria. They wander north almost to Aleppo, and in those northern regions cross the Euphrates and occupy the rich pasturage of the Khabur. Over this wide area more than one sheikh bears sway. The tribe is divided into four main sections, of whom the Amarat come up to the confines of the Irak. Their paramount chief, Fahad Beg Ibn Hadhdhal, is nominally the ultimate lord of all Anazah, though, in fact, his western neighbour, Ibn Shaalan, who commands the Syrian side of the desert, is a more notable personage. Unlike the Amir of Jebel Shammar and the ruler of Nejd, Fahad Beg has no fixed abiding place. He lives with his tribe, true People of the Camel, who follow where their grazing herds lead them. Yet the strong castles of Ibn Saoud and Ibn Rashid are not more impressive to the imagination than Fahad's encampment. In spring you may find him in the grassy steppes of the Syrian desert, with a couple of hundred tents round him, widely scattered in complete security from attack, and during many hours before you reach him you ride through his camel herds, for the Anazah are the greatest of all breeders. The old Sheikh, seated on fine carpets in his guest tent, with his hawk and his greyhound behind him, offers a picture of tribal dignity which the walled cities and lofty halls of the Central Arabian Princes and their troops of armed slaves cannot rival.

The Amarat scarcely come as far down south as Samawah, on the Euphrates, their market towns being Kerbela and Najef and smaller settlements higher up the rivers. A certain amount of Syrian merchandise——wearing apparel and cotton goods—reaches them also through the enterprise of Damascene traders, but for provisions they are dependent on Northern Irak, and, therefore, on those who rule it. Fahad Beg himself owns some valuable palm gardens which are watered from the Euphrates, and whoever controls the river has some grip on the sources of his private fortune.

The Ottoman Government, save for its constant regard for Ibn Rashid's friendship—a relic of Abdul Hamid's statecraft—followed no consistent policy in its dealings with semi-independent sheikhs. The Pasha had no sympathy with nomad Arabs, and the half-educated townsman of Constantinople or Salonika, who misguided the fortunes of the State through the Committee of Union and Progress, looked upon them as abhorrent relics of barbarism. A strong Governor of the Irak would chasten them, perhaps not wholly without reason; but under his weaker successor their liberty ran yet more wildly into licence. Nazim Pasha might have held them, firmly, if not wisely, but the high positions of the Turkish hierarchy were precarious eminences, and after nine months of office at Baghdad the jealousy of the Committee brought about his overthrow. Yet the task of controlling the tribes of the desert should not be one of the most difficult problems of Mesopotamian administration. The diplomatic parleyings and the alarums of war which sound among the tents, the wildernesses which change hands, and the dynasties which topple down are of no concern to the rulers of the settled lands. It is enough for them that the *de facto* master of the waters should show respect for frontier, road and rail, and for outlying cornfields. Rewards for the observance of agreements are easy to devise—they are familiar and time-honoured in all intercourse with tribal countries; but for any breach the closing of the markets of Irak and the Gulf is a swift and sure retribution.

THE SALONIKA CAMPAIGN.

Mr. H. Charles Woods read a paper before the Geographical Section of the British Association at Newcastle-on-Tyne on Friday last on the Salonika Campaign. In the earlier part of his lecture, Mr. Woods gave an interesting description of the port and town of Salonika. Possessed of a small modern harbour, in one sense the place was completely materialistic and vulgar, whilst in another it has the appearance of being a sort of relic of the past. This, said Mr. Woods, was in part due to the unique composition of its population. Out of a total of about 125,000 souls, approximately 75,000 were Jews. Besides these Hebrews there were about 15,000 Dounmehs—a sect whose exact beliefs were not properly known, and a sect from among whom the Young Turks recruited some of the ablest members of the Committee of Union and Progress. The Jews controlled the business of the city and surpassed the Greeks in their commercial ability, as also in society.

Partly owing to its enclosed position, the heat in Salonika during June, July, August and the first part of September was intense, particularly at night. Mosquitoes were so numerous that it was advisable to sleep under nets almost throughout the year. Between the 10th and 15th of September the atmosphere was cooled by the heavy rains which invariably fell then. In the town there was seldom a heavy fall of snow, but in the hills it was prevalent in winter, when the roads were often stopped by it, and by the difficulty of fording the rivers when they were swelled by the winter rains or by the melting snows.

It is impossible to consider Macedonia as a concrete whole. Politically and geographically it is divided into water-tight compartments. It is a locality possessed of certain well-defined routes which constitute natural lines of communication. The Vardar Valley, dividing East from West, and with the Morava Valley constituting the great high road from South to North, make Salonika the natural port of a large area of the Western Balkans. The importance of the valley and of the port were interdependent, and it was for this reason that Salonika and its surroundings ought either to belong to the owner of this valley, or that the valley ought to be annexed by the owner of the port.

With the assistance of maps and slides thrown upon the screen, Mr. Woods described the country which immediately surrounds Salonika in considerable detail. Whilst on the west of the Vardar it was low and marshy, on the east it was hilly, if not mountainous. The line of mountains and lakes which runs across the Chalkis Peninsula constituted a naturally strong defensive position, for the front is almost entirely protected by the lakes and by the swamps which lie between and to the east of them. The various areas which had been occupied by the Allies after their retirement last winter were served by two railways and by several roads the condition of which used to be bad. The lecturer went on to suggest the various roads and lines by which it was possible to push forward into the interior from Salonika. There were three more or less distinct routes, namely, those which run in the direction of, or via, Monastir; those by or leading from the Vardar Valley; and those which connect the Ægean plain with the interior of Bulgaria, the positions of which latter are governed by the all-important Rhodope Balkans. Unless they had been doubled by the Allies, all the railways were single; most of the roads were out of repair, and many of the bridges were in bad condition. Partly owing to the lack of adequate communications, the difficulties of conducting a campaign in Macedonia were considerable. The Vardar Valley was so narrow that a great part of it was traversed only by the railway, and not by a road. The ordinary means of transport and big guns had for the most part to be replaced by mountain artillery and pack horses which could traverse roads not passable for wheeled traffic. The drought of the summer, which always made water, except in the actual valleys, a difficulty, placed upon the supply section of the army a burden destined considerably to increase the magnitude of their task.

The whole military position at Salonika had been changed by the entry of Roumania into the war. The enemy's position in, and his communications by way of, Serbia and Bulgaria had at once been endangered. The Bulgarians had been obliged to take not merely precautionary measures on their northern frontier, but to immobilise a considerable force for its defence. In short, the enormous difficulty of making an Allied advance from Salonika must have been considerably lessened, and what had been impossible in the past might conceivably be feasible in the future

TANGIER TO TEHERAN.

A good many letters have appeared in the Press lately on the subject of our troops serving in Mesopotamia. For example, last week there was one in the *Morning Post*, signed "The Parent of an Officer," and headed "The Mesopotamia Muddle." The writer quoted extracts from a letter written by his son from Mesopotamia, and dated July 15, in which reference is made to conditions in hospitals which are indeed disgraceful—some patients without blankets, clothes, beds; some lying "on stretchers, on their own blankets massed on the filthy, dirty ground—126° in the shade"; only one orderly to look after between sixty or eighty, "some of whom are mad with heat-stroke and want holding down." And this, the writer adds, is "nowhere near any fighting, and has been going on for three months."

***

Now, I do not wish to comment on these things. The Government has told us that it is now doing all it can to put matters right as quickly as possible, and I, for one, am glad to believe the statement. Moreover, we all hope that the Mesopotamia Inquiry will have good results in the way of apportioning responsibility for past blunders; and we do not want to assume any responsibility for forming judgment in advance on incomplete data. What we can do is to try to get more adequate recognition of the work done by the Mesopotamia force amidst conditions that are quite indescribable—recognition in the way of rewards and promotions, which seem to be long overdue, surely; and to let our men out there know that we in England have not forgotten them entirely amidst the exciting events that have been taking place nearer home. A correspondent of *The Times* passes on a suggestion from an officer serving in that far-off region, to the effect that "the Mesopotamia Branch of the Y.M.C.A. might well receive some special aid." Cigarettes would apparently be appreciated, and the little luxuries that find their way to other theatres of the war would be just as welcome on the Tigris and the Euphrates as they are elsewhere. But they take a long time on the way. So the thing is *to get them off at once*, while we think of it!

***

King Constantine's speech to the hundred and fifty odd officers from Salonika who waited upon him to assure him of their unswerving loyalty to his person did not strike me as being a very judicious performance. For, if you examine it, what does it amount to? An expression of thankfulness either: (1) that these particular officers had approved of his policy of handing over Greek fortresses, Greek guns, Greek ammunition, and Greek subjects, to the "hereditary foe" without a kick; or (2), that their sense of duty to himself was stronger than their sense of duty to their country. Moreover, it seems to me, the admission that "their action had caused him the greatest joy" implies that it was also a great surprise to him to find them loyal to him under the strain imposed on their loyalty by his policy; for, human nature being what it is, when we get what we fully expect as a natural right, it seldom affords us "the greatest joy," does it? I am not surprised that King Constantine *was* surprised, of course: it seems to me the most natural thing in a very abnormal situation. But I am astonished that he should so openly have manifested his joy. I am surprised, too, that he should have allowed his delight to carry him to the length of declaring that the conduct of the "faithful" officers would entitle them to have "their names inscribed in history in iron letters," that it would "furnish a most brilliant page in military annals," and that it would "set an unprecedented example to coming generations."

***

With all due respect to Field-Marshal 'Tino, it looks to me as if his anger against those Greeks who rose in the defence of Greek soil had rather carried him away. "Iron letters" may be as cheap as Iron Crosses, but brilliant pages are hardly likely to be written in any military annals by men who tamely hand over their country's defences to their country's most bitter enemy without striking a blow for them; while, if it be argued that they did so in accordance with Royal orders, one would ask why they did not think it worth while to draw the sword against those who disobeyed the said Royal orders. That their conduct will set "an unprecedented example to coming generations" I, for one, will not dispute. But, for the sake of the coming generations, I trust that it is an example unlikely to be followed very widely. No: I am sorry, but I cannot congratulate King Constantine on his oration.

CORSAIR.

THE PRESS ON THE NEAR EAST.

Neutrals and Roumania.

The "neutral's point of view" of the intervention of Roumania is the subject of a leading article in the *Outlook*:—

It would really seem as if they imagined that Roumania had been doubtfully balancing the chances of the combatants up to a fortnight ago and had at last come to the conclusion—perhaps because of the Russian advance—that the Allies were the winning side and therefore the side to be supported. So, these critics appear to say, if Roumania with her intimate knowledge of affairs on the Eastern front is prepared to risk all on the success of the Allies, there must be something in it; let us revise our estimates and modify our tone accordingly. Now, if these good people would only try to realise that after two years' experience of this life and death combat no sanely governed Power on a sudden impulse throws off its hat and coat and leaps into the ring, that, on the contrary, a would-be combatant must undertake months of preparation in concert with the Powers to which it proposes to adhere, and that the means and the date of active co-operation are the result of a pooling of effort and a joint policy, they would understand that their forecast of the war ought to have been reconsidered months ago, at the time when, with the most ample confidence in their Ally-to-be, the British and French Governments began to supply munitions to Roumania. For then it was, well before the Russian "recovery," and not in the end of August, that the situation became clear to the sharp-sighted diplomatists and soldiers at Bucharest, who have contrived to veil their intentions so skilfully that the Central Governments were allowed no tangible ground of remonstrance until they were handed a formal declaration of war.

The Greek Army.

That the Greek Army is dominated by German influence has been dinned into English ears for so long that English people may be forgiven for believing it. A writer in the *Manchester Guardian* will have none of it, however. He says:—

The prevalent impression that German influence dominates the Greek army is false, though it has been fostered by German propagandists. Anyone who wishes to prove its hollowness had better try to speak German to Greek officers. He will seek far ere he can use it. On the other hand, those who do not speak French are few, and a considerable number know English. In the ranks, owing to the large numbers of men who have been in America, an Englishman is seldom at a loss. The writer went all through Macedonia in the campaign of 1913 conversing in English with soldiers every day.

The Baghdad Railway.

A neutral, who has recently visited Turkey and Syria, describes in *The Times* some of the activities which he observed along the line of construction of the Baghdad Railway. He writes:—

The break in the Baghdad Railway over the Taurus Mountains is forty-five miles, and at present is covered by motor service. From 15,000 to 20,000 Turkish peasants are at present employed in completely rebuilding the road. They are widening it at all points, straightening all curves, lowering and equalising grades, making it ready for the heaviest possible motor traffic, all with the appearance of the greatest haste. It ends in a beautiful Alpine valley at a place called Bozanti on the main line, from whence it starts the train for Haidar Pasha. This route can be covered in two and a-half days, or about sixty hours, without changing of cars. It is along this section of the Baghdad Railway that the greatest signs of warlike preparation appear. The tunnel at Bozanti is at least three miles long, and will require at least two years more to complete. It is true that the Taurus is actually pierced by a tunnel which has a small, narrow track running through it, but the opening is only the vault of the tunnel proper. There is a small narrow-gauge track,

Public Opinion

Edited by PERCY L. PARKER

PUBLIC OPINION'S greatly increased and increasing circulation since the war began shows that it fulfils a most useful purpose to-day by way of inspiration and information. It gives a magnificent analysis of all the great problems—social, political, financial, and religious—arising out of this War of Nations which will alter the whole of life for the present generation.

PUBLIC OPINION can be sent to any address in the United Kingdom for three months for 3s. 9d., or to anywhere in the world for 3s. 3d. Yearly subscription in the United Kingdom 10s. 10d., or Abroad 13s.

A SPECIMEN COPY will be sent to any address on receipt of a post card to THE MANAGER, PUBLIC OPINION 22-24, Temple House, Tallis St., London, E.C.

TWOPENCE WEEKLY

Digitized by Google

and this is being used to hurry ammunition through. This naturally interferes with the excavation, and, besides, it is a slow business. The engineers state that by the time the Taurus tunnel is completed all the other smaller tunnels of the approaches on the north and south will have been completed also. The long Bozanti tunnel is holding up the great work.

The Future of Serbia.

Mr. J. Ellis Barker, writing in the *Outlook*, discusses the future of Serbia. He declares that—

The Serbians are not merely "a nation of swineherds" as the Austrians assert. They are a nation of warriors, agriculturists, and artists. They possessed a highly developed civilisation which was destroyed first by the Turks and then by the Austrians. Their ancient churches and monasteries, their music, and especially their poetry and fairy-tales, show that the Serbians are not only a brave and hard-working people, but that they are a highly gifted nation as well. The future should see a great revival in the Balkan Peninsula, and in the new Serbia towns will arise which may vie in wealth and in culture with those of Western Europe. A condition for the peaceful development of Serbia is the elimination of Bulgaria as a factor for evil. The Bulgarians have terribly ill-used their strength in attacking their Allies, who had saved them, first in 1913 and then in the present war. Bulgaria must be reduced to such an extent as to make impossible another criminal attack on the peace of the Balkan Peninsula and on the peace of the world.

Bulgaria's Harvest.

As Bulgaria has sown so will she reap, says Mr. Barker in the same article:—

History is apt to repeat itself. Serbia, being attacked on all sides, was rapidly vanquished. Bulgaria's resistance may be equally rapidly broken by the Allies unless that country should prefer unconditional surrender to abject defeat. In a few weeks' time devastated Serbia may be freed from her tormentors. The moment invites therefore consideration of Serbia's position and future. Policy should be shaped by interest and sentiment, for the moral factor is quite as important in the life of nations as is the material factor. The sentiments of nations, as of individuals, cannot be disregarded with impunity. Serbia deserves the sympathy and consideration of the Allied Powers. Her terrible sufferings call for the kindest and most considerate treatment, particularly as the shortsightedness or the credulity of the Allies is probably largely responsible for Serbia's sufferings. It would appear that blind philo-Bulgarism on the part of the allied statesmen encouraged Bulgaria to stab Serbia in the back. The present war is a war of right against might, of liberty against unscrupulous tyranny. The allied statesmen have repeatedly proclaimed that they are the champions of the small nations, that the oppressed nationalities will be set free by them, that they will reconstruct the map of Europe on the basis of nationality, that they will make good the losses which Belgium and Serbia have suffered on behalf of Europe and of civilisation. Serbians expect that the new Serbia will comprise the whole of the Serbian race.

Germany and the Armenians.

How far is Germany responsible for the most recent outrages committed by the Turks upon the unfortunate Armenian people? The *Glasgow Herald* offers a trenchant indictment of Berlin:—

. . . the only people who have the power to save this wretched nation say not a word. Those people are the Germans. When the massacres began last year a whisper from Berlin could have stopped them. They were not fanatic outbursts on the part of the Moslem soldiery; they were part of a definite and deliberate scheme, organised from Constantinople, and it is impossible that they could have been carried out without the knowledge of the German Ambassador and therefore of the German Government. . . . Official Germany knows perfectly well what is going on, and the reason why official Germany will not raise a finger is that the extermination of the Armenians is in the interests of Germany's political and economic designs in the Near East. In no other way can we explain the attitude of Berlin. . . . But unless German public opinion is thoroughly awakened to this awful crime, to which the Germans are virtually accessory, there seems little hope for the Armenians. Only Germany has the power to save them. Her moral culpability is great in keeping silent and uttering no protest. It is infinitely greater if we consider the devilish *Weltpolitik* which accepts the blotting out of a nation as the providential removal of an obstacle in its path.

Turco-Bulgarian Dilemma.

Neutral diplomatists "who watch the situation with unprejudiced eyes are eagerly looking for the first indication of a breakaway among the luckless Allies of the Central Powers" is the interesting view of the London correspondent of the *Liverpool Daily Post and Mercury*. He writes:—

It is Bulgaria and Turkey who are feeling the strain most severely. They had no financial resources for the war, and Germany, if she can give her allies some officers and plenty of munitions, cannot give them men or money. She can only offer them dubious paper and exchange Turkish Treasury bonds for German War Loan, leaving it to financiers to decide which is the more valuable. Bulgaria when she entered the war was thinking only of helping herself to a slice of Macedonia, which belonged to Serbia, and she is now finding that troubles may attend a successful robber. Neutral diplomatists suspect that Bulgaria has already made tentative offers of peace, but they have no doubt as to what answers will be made to such overtures if and when they are made.

Bulgaria's Terms.

The demands by the Bulgarians will not be exorbitant, suggests the correspondent:—

Bulgaria's requirements will certainly be modest, and Ferdinand would doubtless be ready to abandon his ally if his dynasty were left on the throne and if he could retain a small slice of Macedonia just to show his people that he did not go to war for nothing. Bulgaria, however, has to atone for the sufferings she inflicted on Serbia, and if Ferdinand imagines that his treachery can escape lightly he will soon be undeceived. There is every indication that the cosmopolitan gang who have got the control on Turkey are now under no illusions. They are far too astute to ignore the reality of the situation, and the fact that not one of them is really a good Mahommedan prevents any element of religion entering into their calculations. Neutral observers are convinced that very shortly, if they have not done so already, the Turkish rulers will approach the Entente Powers, but the reply will be the same as will be made in the case of Bulgaria.

THE ANCIENT HISTORY OF THE SUDAN.

An interesting paper on "The Ancient History of the Sudan" was delivered recently at the Soldiers' Institute, Khartoum, by Mr. J. W. Crowfoot, Director of Education, who said that our knowledge of the ancient history of the Sudan had changed wonderfully in the last few years. Greek and Roman writers, who used to be our only authorities, told many fabulous stories about the country, which some of them represented as being inhabited by lordly human monsters. In place of these myths archæological researches were presenting us with a picture of development which, however new in detail, proceeded on the same general lines as in other countries. For the period corresponding with the old Empire in Egypt, about 3500 B.C., we had still to depend mainly on the records of reeds preserved in Egyptian tombs, but for the period of the Middle Empire, say, about 2000 B.C., a flood of new light had been thrown by the excavations which Dr. Reisner had been conducting during the last four seasons at Kerma. From these, it appeared that the country was then occupied in force by the Egyptians, and the graves of the Egyptian rulers and garrison which Dr. Reisner opened showed that in their own funerals these Egyptians adopted the terrible practice of burying alive with themselves a varying number of slaves and women, a practice which had survived till quite recent days in parts of Central Africa. The graves of one of the Egyptian governors contained the bodies of over 300 human victims. Side by side with this barbarous custom there were evidences of a much higher state of material civilisation than was previously suspected, the discoveries including gold-legged angaribs, ebony boxes inlaid with ivory and mica, bronze swords, beautiful scarabs, ostrich feather fans, and pottery finer in fabric than anything hitherto found in old Egyptian sites. The lecturer described next the extension of Egyptian rule to Nepata (Gebel Barkel) under the new Empire and the subsequent arrival of refugee priests from Thebes. The rise of the Ethiopian Dynasty under Piankhi was illustrated by quotations from the inscription describing Piankhi's expedition, his anger at the starvation of his enemy's horses, and his siege of Memphis. The story of the emissaries sent by Cambyses to Meroe was also told, also the miserable end of the Persian Expedition, and the lecturer concluded by giving a very brief sketch of the later history of the Sudan during Ptolemaic, Roman and Mediæval periods, up to the final overthrow of the Christian Kingdom of Soba, about 1500 A.D.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

According to information which reaches me from Bucharest—my correspondent wrote some time before war was declared by Roumania—M. Radoslavoff has abandoned the Bismarckian attitude which he adopted earlier in the war. When the Committee of Public Supply was reorganized at Sofia some months ago he opposed, successfully, the suggestion that it should be autonomous in composition, declaring that his was the responsibility of governing Bulgaria. "I would never tolerate the substitution of a private institution for Government control," he was reported to have declared. So it was that the Committee of Public Supply failed to secure the control of the importation and exportation of country produce. The result of Government control was that there was famine in the land, and public indignation has been such that Radoslavoff has had to sing another tune. In face of the grave problem that confronts the country he has capitulated completely, and the Committee is now supreme in all matters concerned with the disposal of produce. It is suggested, however, that he has held on too long to the reins. I wonder!

***

In the merry game of give and take the Huns have not scored over Roumania. It will be recalled that, on the declaration of war by the latter, the Germans immediately announced the sequestration of Roumanian capital in Germany, and something like £20,000,000 was involved in the order. Our Bucharest friends have entered upon reprisals, and will be able to sequestrate "or render worthless" German capital to the extent of double that sum. Roumanian Rentes held in Germany represent a very considerable sum, and the Roumanian Ministry of Finance has sent a Note to all Allied and neutral States calling attention to the fact that any scrip of the Roumanian Rentes discovered in Berlin cannot be negotiated. It is estimated that Rentes to the value of between 700,000,000 frs. and 800,000,000 frs. are still held in Germany, and an attempt has been made to dispose of these holdings in the United States.

***

One of the discussions at the annual meeting of the British Association last week cannot be passed over in silence—namely, that in the Geographical section on political frontiers. The arguments, which were mainly intended to call the attention of Europe's future map-builders to the difficulties attending the creation of artificial frontiers, were based on the dictum that natural boundaries (such as the Pyrenees between France and Spain, for instance, or the Danube between Western Roumania and Bulgaria) are the only possible lasting boundaries between various States. An academic debate ensued as to which—river or mountain—was the more perfect boundary, and the subject was closed by Sir Arthur Evans, president of the association, who reminded his audience of Serbia's claims to an open window on the Adriatic—a claim which he rightly hoped would be realised at the end of the war.

***

Sir Arthur Evans's reminder was most timely. In theorising, with maps in front of us, on how Europe should be partitioned off so as to form a happy family of States, we are apt to lay too much stress on natural boundaries, forgetting that there are political and economic questions of far greater significance to the life of a nation than are its "natural" boundaries. Thus, a Serbia bounded by rivers and mountains, which at the same time prevent her from reaching the open sea, is not only of necessity an anæmic State, but even a possible factor of unrest. Similarly, a Roumania absolutely dependent on the Bosphorus and the Dardanelles for her exports is a crippled organism. Or, again, a Bulgaria surrounded by natural frontiers but cut off from the sea would continue to be a hotbed of unrest in the heart of the Balkans.

***

The above is one of the most vital aspects of map-making which must not be forgotten when, at the Round Table after the war, diplomats carve out the future Europe. But there are many others, political as well as economic, which will also have to be considered—such as, for instance, the distribution of races, which has been one of the most vexed questions of all times. If we could give each of the Near Eastern States its assured outlet to the sea, and at the same time, by a system of emigration, re-distribute minorities abroad so that they could live in unison with their majorities at home, we should be in a fair way to create an almost Utopian Europe. In my opinion, therefore, it is essential that these two aspects of the "national" life of each State should take precedence over the "natural boundary" question. Combine both natural and national if you can; but, if not, let the former go overboard. It would be interesting to draw up on these lines the approximate frontiers of the new Near East, but I think the opportune moment has not arrived yet for a more explicit discussion of the subject. Let the above general indication, therefore, serve to show the general lines on which map-making in the Near East will have to be conceived if anything like peace is to reign in that troubled corner of old, war-worn Europe.

***

The article on German activities in Asia Minor, written by a neutral in *The Times* on Saturday, throws a welcome light on the present state of the Baghdad Railway in the Amanus and Taurus Mountains and in the vicinity of Aleppo. Unfortunately, not even an approximate date is given, so that it is rather difficult to determine exactly when the neutral writer was in Aleppo and saw the things he wrote about; but I do not think we will err much if we take last spring as the season of his sojourn in Asia Minor. At that time, then, the traveller intending to go to Constantinople from Aleppo could take the train to Islahieh, sixty miles away to the north, where there has been constructed "a network of tracks and railway sidings capable of holding a dozen trains." (No further information is given us as regards the state of the line towards the east.)

***

Towards the north-west, however, the following picture of the line is given us. A new road, built within six months or a year, leads over the Amanus Mountains. "It is not fully metalled. There are no guarding walls or finished culverts, and it is apparently only a temporary road, liable to be washed away and evidently only to be used until the tunnel is completed at that point." Twenty-six miles in length, it is exceptionally steep, and is mainly used by German military lorries of 40-60 h.p. It ends at the railway station at Mamoura, distant about five hours by motor from Islahieh. Mamoura itself is the scene of great German activity, but as the line westwards across the Taurus Mountains has not been completed yet, travellers (it appears from the account in *The Times*) have to continue their journey by motor road, about forty-five miles through the Cilician Gates to Bozanti railhead on the Haidar Pasha section. This road is being entirely rebuilt, and 15,000 to 20,000 Turkish peasants are at present employed in this task. It can be covered by car in about two and a-half days.

***

The big tunnel through the Taurus Mountains begins at Bozanti. It is at least three miles long, and, "according to the most recent news from the Swiss engineers in charge, it will require at least two years more to complete." It is true (says the neutral writer) that the Taurus is actually pierced by a tunnel which has a small, narrow track running through it, which is being used to hurry ammunition through, but it is only a subsidiary construction, around which the U-shaped definite tunnel will have to be bored. According to the engineers, by the time this tunnel is completed, all the other smaller tunnels and the approaches in the north and south will have been completed also.

***

Bozanti itself, like Mamoura, is a centre of tremendous German activities, military as well as otherwise. A big German camp has been constructed, and is served by more than one hundred large 40-50 h.p. lorries, each capable of carrying from 10-20 tons, whilst it is reckoned that no fewer than 300 lorries, the newest type of 60 h.p., are in use on the Taurus and Amanus roads. As for the Bozanti railhead station, it has been, and is still being, extended to such an extent with sidings, crossings, and bridges as completely to cover the narrow valley in which it lies. In conclusion, one point mentioned in the instructive article under review can be referred to here—namely, that in the forty-eight hours' journey from Bozanti to Haida Pasha no fewer than forty trains, eastward bound, passed the neutral observer's train, to which would have to be added the many which passed him at night. So that it would appear that the Turks have not only considerably increased their rolling-stock on this line (a great part of it has doubtless been drawn from other systems, including the British and French lines expropriated by the Government), but that they have also been able to keep their stocks of coal replenished in spite of all our attempts, some of them very lukewarm indeed, to prevent them. Moreover, it is curious to note that thousands of the trucks, wagons and freight cars on the Baghdad Railway have still the Belgian mark upon them. Doubtless they came to Constantinople, after the fall of Serbia, when the Pest-Sofia line had been reopened, and that they brought coal to the Turks, thus proving a double blessing.

Alexandria Cotton-Bourse.

History of the Crisis, and why the Moratorium was Established.

(From Our Own Correspondent.)

Cairo, August 31.

The decision of the cotton brokers of Alexandria not to transact any business in November futures at more than $23 until September 20 has naturally created a very great sensation throughout the country. The reason given by the brokers for this very arbitrary action is that the position has become so abnormal, and that prices have risen so rapidly and threaten to continue to rise, that they cannot find cover for their clients who have sold, and who are faced with differences which it will be quite impossible for them to meet.

As the brokers are, in default of their clients, responsible for these differences, they also are threatened with bankruptcy. They affirm, moreover, that the recent rise in Egyptian cotton is quite unjustified, and that the difference between it and American is out of all proportion. For this reason they consider that any rise beyond $23, the price last dealt in on the Alexandria Bourse, will be unreasonable, so they have fixed that price as the limit beyond which they do not consider that they should go, at any rate for the present. They say that at this price it will be possible for them to tide over the present crisis. It may be remarked in parenthesis that this decision is purely a private arrangement between the brokers, and that it has not been sanctioned by the Bourse Committee, which as a rule deals with such matters.

Position of Merchants.

It should be explained that when in ordinary years the merchant sells ahead to Europe and buys future contracts in Egypt to cover his position, his "contrepartie" may be either the holder of stocks in Alexandria, who sells against his stock, or the cultivator, who sells against his crop to secure the price, or the pure speculator. When the merchant in due course becomes a holder of stock, and sells contracts in order to liquidate his "future" position, his "contrepartie" in that case is either other merchants who have sold ahead to Europe, or pure speculators, or cultivators who are actually selling their crop and so desire to liquidate their own "future" position.

This year the merchants have sold forward on a larger scale than usual in view of the larger crop, and, of course, have bought correspondingly to cover their position. Owing, however, to the abnormal situation created by the complete depletion of the stock in Alexandria, their "contreparties" have been mainly constituted by cultivators and by pure speculators, who have sold in anticipation of prices dropping later on as a result of a larger Egyptian crop. These expectations have not, however, been realised. The Egyptian crop will be smaller than was anticipated by the speculators, and the American will be short. The result has been a sudden and sharp rise, and pure speculators, who have been for the most part sellers, have found it necessary to cover their position.

Unfortunately for them, however, no contracts are offering, for the simple reason that the ordinary holder of stock in Alexandria no longer exists, the cultivators refuse, as is their wont, to fix prices for their crops on a rising market, the owners of early arrivals of new crop likewise decline to sell, as they think better prices lie ahead, and the merchant, who would, under ordinary circumstances, become the "contrepartie" of the speculators on account of his actual purchases of stock necessitating sales to cover his previous purchases of future contracts, cannot assume that position, as he cannot find stock; whilst "bear" speculators are not operating.

Reason for the "Moratorium."

It was in these circumstances, and seeing that the persistent efforts on the part of holders of sale contracts to cover would merely have the effect of further inflating prices, that the brokers decided to protect themselves by declaring what they called a moratorium, in the hopes that that would bring about the required relief and readjustment of the situation. The latter could be relieved if some of the larger estates could be prevailed upon to sell their crops. The Domains might well contribute towards this. That is, however, purely a matter for the Government to decide.

No matter what is done, it is to be feared that there will be several failures as a result of this crisis, but that cannot be avoided under the circumstances. Whether the brokers are right or not in their contention that Egyptian is proportionately too high by comparison with American, will soon be decided, for the official statement of the American crop will be issued at Washington in the first days of September, and that ought to place Egyptian on the basis on which it should rightly stand.

One of the excuses put forward by the brokers for their position is that they are forbidden to speculate, and hence to cover a doubtful position themselves, by the new Bourse regulations, which were put into force on the 16th inst. There can, however, be no doubt as to the wisdom of the Government in insisting on this prohibition. It may be admitted that a certain amount of speculation must necessarily be carried on to make a market, and also to assist the trade to safeguard its position, but there are limits to these operations, and, in framing the regulations as it did, it must not be forgotten that the Government Commission was not only acting in the general interests of the community, but was also respecting the wishes so often expressed by the cotton trade. If any alteration is required in these regulations it is to make some provision for preventing a recurrence of such a combine on the part of the brokers. There should certainly be some machinery which can be put into motion immediately any such action as the one under discussion is taken to intervene and prevent the dislocation of the market and inflict on the offending parties the penalties which their action richly merits.

The "Bearing" Movement.

Although the depletion of the stock in Alexandria was in a measure responsible for the critical situation which has arisen, there is no possible doubt that a serious contributory factor has been the "bearing" movement which has been in operation of late. It is idle to deny its existence, as some people are doing. For some time there has been great talk of a bumper Egyptian crop, and it has been currently stated that the area under cotton would turn out to be 2,000,000 feddans, an area, it may be pointed out, that has never been attained in this country and which is 15 per cent. larger than any previous figure registered. When about a month ago the Ministry of Finance announced that the area was 1,688,000 feddans there was a howl of protest in Alexandria, and at once discredit was cast on these figures, which had, of course, upset the calculations of the "bears." But their manœuvres were without avail, and instead of the market being depressed, prices rose persistently.

Further, to aggravate matters, there came private reports of a short crop in America, and at once prices went up with a bound in sympathy with New York. Then the fat was in the fire, for the "bears," who tried to hedge and to cut their losses, found, as mentioned, that there was no cover offering, and that the more they sought to get out of their dilemma the higher the prices tended to go.

The occurrence of this crisis is in the highest degree regrettable. It may not have been avoidable owing to the abnormal conditions which have come into existence, as so many maintain; but one cannot help feeling that at the bottom of the whole matter are the bearing operations referred to. For this reason one can have little sympathy with those who are hit, and among those who must bear some of the blame are certainly the brokers, who ought to have been more careful in taking on business.

Difficult Settlement.

A settlement took place yesterday and the day before, and according to the latest reports, although it was effected at the price of $23, it was carried out without difficulty. Very great efforts are being made by all concerned to bring about a speedy return to normal, and some of the more public-spirited members of the trade are selling in order to assist in smoothing over matters. It is hoped that operations in futures will be resumed under the old conditions within a week, if not sooner, and those who are considered to know something about the situation say that it was never as bad as was made out. An impartial consideration of all the facts leads to the conviction that the Alexandria market is not strong enough, and that operations are carried out on too fine a margin, in proof of which we have the fact that if conditions tend to become abnormal there is at once panic, followed by failures.

It is to be hoped that this crisis will result in cleansing the "place" of the elements which have all along tended to affect the stability of the local market; but it is very much to be feared, in fact, it is almost a foregone conclusion, that the attitude taken up by the brokers will have discredited the Alexandria market in Europe, with the result that the covering operations required by the trade at home and here will in all probability henceforward be done altogether, or mostly, in Livepool.

GRÆCO-GERMAN FINANCE.

Gloomy Outlook of a Berlin Newspaper.

Of the Greek loans offered for subscription in Germany and quoted on the German Exchanges the following amounts were in circulation at the end of 1915, according to the *Tägliche Rundschau*. The interest of German capital is restricted mainly to the first six loans which, since 1898, have been subject to the International Finance Commission. The 4 per cent. Railway Loan of 1902 stands next with its smaller amount. The annual report of the Commission puts the coupon remittances to the German paying houses as follow :—

	Drachmæ
National Bank of Germany.....	398,000
S. Bleichröder.....	681,000
Dresden Bank.....	340,000

But these figures do not give a complete picture, for they make no mention of those coupon totals which, although in German hands, are redeemed in Paris and London for exchange purposes in peace time. That these are not small sums the following information goes to show :—From July 1, 1912, to June 30, 1913, Greek loans to the amount of 968,000 marks were taken up by German banks (pay counters). In 1913-14, 915,000 marks; in 1914-15, 1,666,000 marks. The explanation is clear. Formerly, when the connections with Paris, London, and Athens were undisturbed, considerable amounts of coupons, particularly 5 per cent. Peir-Lar Loan and 4 per cent. Rente of 1889, at their fixed exchange of 80, were sent to Paris "im arbitragewege" (by way of balancing exchange). On the other hand, we have to bear in mind that our balancing of effects during the war, owing to the altered circumstances regarding exchange, gave opportunity to knock off Greek Loan stock abroad to a total amount of some millions.

In all the circumstances it may be taken that Germany's possession of Greek Loans amounts to about 80,000,000 drachmæ.

Hitherto, the payment of the German coupons has experienced temporary delays which could be explained by interruption of communications rather than from lack of good will. But the balances (in our favour) seem in due course practically exhausted, and their filling up again will depend very much on further political developments (September 8). Even if the security pledged for our loans remain good for the whole service, it is by no means clear whether the necessary remittances for the German coupons will be forthcoming for some time to come.

EGYPTIAN COTTON REPORTS.

"Prospects Not so Prosperous" at the End of August.

We take the following summary of the reports received from Inspectors of the Ministry of Agriculture from the *Bulletin* of the Ministry of Agriculture, published at Alexandria, on September 1:—

Weather favourable, though reported as having been somewhat cool and damp at night in some provinces. Water supply sufficient. The cotton worm attack, which was reported to be over at the end of July, reappeared in August with some intensity in parts of Behera and Gharbia, and, to a smaller degree, in Sharkia. The damage, although in some cases important, was of a local nature. Where a severity of attack was noticeable, it could be traced to insufficient care being accorded to the picking of egg-masses. It should be remarked, however, that the spontaneous effort of the cultivators themselves in collecting egg-masses shows that they have at length realized the benefit of the measures so long advocated and enforced by the Government, and that this collection, in the best-managed farms, has been accepted as an agricultural necessity. This, combined with the restrictions imposed for the late watering of bersim, has rendered this pest of comparatively small account.

In Lower Egypt practically all reports agree that the trees have developed much growth and that the flowering on the upper branches has been profuse, owing to the favourable climatic conditions that prevailed until about the middle of August. The bolls on the lower branches are, however, far from abundant, and, when present, are often comparatively small in size. This is due to the sudden changes in temperature at the critical period of the production of first flowers—the heat waves of May and June, assisted perhaps by too frequent applications of water—but is not in any way attributable to insect attack. The success of the crop will depend to a great extent this year on the satisfactory formation and ripening of the upper and middle bolls, and on their escaping the ravages of the pink seed-worm, which, compared with last year, exhibits signs of diminution only in places where the destruction of balls and uncleaned sticks was rigorously carried out in the winter.

Upper Egypt.

In Upper Egypt, picking in the basins, which commenced towards the end of July, became general in August, the yield proving almost everywhere unsatisfactory, and the bolls being reported to be small. In some of the basin-lands the plants had to be pulled during or after the first picking—and in some cases even before—owing to the early flooding. The over-watering reported last month from certain localities has brought on luxuriant growth but very few bolls. The pink seed-worm attack has trebled in intensity during the month, and has spread all over the country, including the cotton cultivation in Assuan, as may be seen from the figures given hereunder, showing the result of the examination made by the Entomological Section of the Ministry of about 30,000 bolls, received from all parts of the country between July 25 and August 24. The percentage of attacked bolls, however, should by no means be considered as representing the real loss to the crop from the pink seed-worm, for at this stage the attack is generally confined to one section—i.e., one-third—of each infested boll, and even that section is in many cases not wholly lost.

Particular attention should be given to the attack by the Earias boll worm, the pest which has been known in Egypt since about 1860. This has diminished each year since the Ministry adopted measures for the destruction of useless cotton bolls and the prohibition of the cultivation of cotton perennially, until at present the pest has become so rare that it is practically non-existent in the greater part of the country.

In general, the prospects of the crop are certainly not as satisfactory as they were reported to be at the end of July.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

ENEMY INSURANCE FIRMS.

Amended Regulations in Egypt.

With a view to providing "for the better control of the operations in Egypt of insurance companies, registered and having their principal place of business in enemy territory, the General Officer Commanding in Egypt has issued the following order by proclamation in the *Journal Officiel*. The order came into force fourteen days after its publication (August 17, 1916):—

A branch or agency of a company registered or having its principal place of business in enemy territory shall not carry on the business of insurance or re-insurance of any description otherwise than under the supervision of a controller appointed for the purpose by the Licensing Officer, and in accordance with the provisions of the present proclamation.

New policies shall not be issued, and lapsed policies shall not be renewed, without the permission of the Licensing Officer.

Loans shall not be granted otherwise than for the purpose of providing for the payment of premiums and interest on loans already made on the security of policies, as and when the same fall due, and limited to the amount of such premiums or interest.

Every fire, accident, or other renewable policy shall be considered to be terminated as at the end of the period covered by the last premium paid; or, in the case of a policy upon which premium has been prepaid to cover a term of years, at the next anniversary of the date of issue following the publication of the present proclamation, subject to the return to the policyholder of the proportionate premium attributable to the unexpired period covered by the policy.

A policy shall not be transferred or modified without the written approval of the Controller.

All moneys at present in Egypt of any such company and all moneys hereafter to be received shall be paid into an account with a bank to be approved by the Licensing Officer, and shall not be withdrawn therefrom for any purpose other than the payment of the company's liabilities in Egypt, or the reasonable current expenses of the branch or agency.

The branch or agency shall not, without the written approval of the Controller, have commercial communications direct or indirect on account of the business of the company with any person out of Egypt, except only with persons resident in the British Empire or in countries in alliance with Great Britain.

Failing a person properly empowered by the company to carry on the branch or agency in Egypt, the business of the company in Egypt may be carried on by a manager appointed for this purpose by the Licensing Officer, at the expense of the company, and such manager shall have power to do all such acts as may be necessary for the proper carrying on of the business in accordance with the provisions of the present proclamation, subject to the supervision of the Controller.

Mr. C. W. Twelves has been appointed Controller under this proclamation.

TRADE NOTES.

Exports to Algeria.

In agreement with the British Government, the French Government has set up at King's House, Kingsway, London, W.C., a special office for the issue of licences for the importation into France and Algeria of goods of British production or manufacture which are included in the list of articles prohibited to be imported into those countries.

Egyptian Tariffs.

The Egyptian *Journal Officiel* of August 3 contains a notice giving the revised tariff valuations for use in assessing duties on certain hessian and jute or hemp sacks on importation into Egypt. The revised tariff valuations which are operative from July 25 until September 24, 1916, or until denunciation, are:—Hessian jute or sacks, common for cotton, 51 mill.; for onions, 53 mill. Twilled hessian jute or sacks, common, 3[illegible] mill. For European sacks the valuation will be *ad valorem*.

Exports from Morocco.

An Order of the General Commander-in-Chief has been issued authorising the exportation of chickpeas and dari (*aldorad*) from the ports of the French Zone, without limitation as to quantity.

Bureau for Salonika.

General Sarrail, the Commander-in-Chief of the Allied Forces in the East, has decided to organise at Salonika a commercial bureau for French imports, with a view to forming a tie between French industry and Macedonian trade. The objects of this bureau are (1) to procure for French industry and trade immediate and remunerative business, and (2) to promote in Macedonia a taste for French goods so as to obtain for them after the war the first place on the Macedonian market.

Liquidations of Enemy Firms.

Mr. E. D. Joyce, of the Imperial Ottoman Bank, Alexandria, has been appointed Receiver of the business of A. H. Mollik, Alexandria, with instructions to liquidate the same. Mr. F. H. Russell, Gresham House, Cairo, has received a similar appointment and instructions in regard to the business of Joseph Eggert, Cairo.

Openings.

Applications from firms in Great Britain for the names of manufacturers or producers of the following (amongst other) articles have been recorded at the Commercial Intelligence Branch of the Board of Trade during the past week, says the *Journal*, published to-day:—

Hosiery, woollen, suitable for Egypt; laces, boot and shoe, cotton; machinery and plant—Glass engraving machines, pineapple canning plant, salt crushers, and evaporators; Skins and hides—Velvet—Persian, and cowhides.

NOTICE

Société Anonyme pour la Fabrication des Cigarettes Egyptiennes marque HADJES NESSIM en liquidation.

Offers for the purchase of the following items of Stock and House Property will be received in the name of EDWARD D. JOYCE, P.O.B. 206, Alexandria (Egypt), Receiver of the above Company, up till 8 a.m. on the 15th of NOVEMBER, 1916:—

(*a*) The TRADE MARK belonging to the Company, together with all the Stock of Tin Poxes, Labels, Cigarette Paper, etc., on which the Trade Mark is printed.

(*b*) The BUILDING situated No. 12-14, Rue Abou El Dardar, Alexandria (Egypt), belonging to the Company.

Details of the above can be obtained at the Offices of the Company, 12-14, Rue Abou El Dardar, Alexandria, between the hours of 9 a.m. and noon, on any day except Sundays, from this date to the 13th of NOVEMBER, 1916.

Offers must be made in writing, under registered cover, to the above mentioned P.O. address, and must be accompanied by a deposit in Cash of 10 per cent. of the amount offered.

Offers may be made for items A and B separately.

The Receiver is not bound to accept the best or any offer made.

PRODUCE REPORT.

London, Sept. 14.

Currants.

There has been a brisk demand during the week, with the result that practically all sound fruit has been cleared from the market at a further advance of prices. Some samples of new fruit that arrived overland show excellent quality, and prices generally of new crop have considerably risen. The s.s. Gulf of Suez is reported on her way with the first new season fruit, while other ships will soon follow. The stocks of currants in London on August 31 were 2,489 tons, against 3,303 tons last year.

Sultanas.

There has been a good demand with considerable business done in Afghanistan fruit at advanced prices. Greek sultanas are apparently held for higher prices; while Australians are quoted at a slight advance. The stocks of sultanas (of all kinds) in London on August 31 were 2,874 tons against 1,730 tons last year the same date.

Figs.

The demand continues mostly for export, with business done at full rates.

Seeds.

Linseed has been quiet, London-Calcutta closing for spot and afloat at 76s.; September-October, 77s. 6d; October-November, 77s. 6d.; and Bombay ordinary, September-October, at 78s., with small ditto at 77s. Rapeseed is firm but quiet; Torio, September-October, is offered at 59s.; and bold Ferozepore at 58s. 6d. Cottonseed has been dull during the week and shows no change; London-Egyptian spot is quoted £12 6s.; September, £13 5s., and October, £13 2s. 6d. per ton. Rangoon beans are in good demand and show an advance of about £3 per ton on the week.

Oils.

Linseed oil is steady; spot pipes, £36 10s.; barrels ditto, £37 10s., landed terms. Rape oil is firmer; ordinary brown naked spot at late rates, while English refined, barrels, is offered at £46 to £48. Cotton oil is quiet with only little business doing; crude spot pipes at £34 10s.; refined pale pipes, £40; ditto barrels, £41; and sweet barrels, £48 to £51 10s. as to make.

Oilcakes

Cotton cakes in warehouse are practically exhausted, but parcels by a steamer now due have found ready buyers at £10 per ton, ex ship terms; while English are offered at £10 5s. to £10 10s. per ton, ex mill.

Linseed cakes are in strong demand, and values are dearer for all descriptions. Best London made are firm at £14 5s. to £14 10s.; while considerable transactions have taken place in East India seed pures for October-November shipment at £13 10s. per ton.

Locust Beans.

There is a good demand, but whole are quite unobtainable on spot, while kibbled are offered at £11 10s., with meal at £15 per ton.

CHAMBERS OF COMMERCE.

The following are among the principal British Chambers of Commerce in the Mediterranean and the Near East:—

Egypt: 6, Rue de l'Ancienne Bourse, Alexandria, and Savoy Chambers, Cairo.

Greece: 7, Place St. Theodore, Athens.

Morocco: At Tangier.

Roumania: 1, Strada Academiei, Bucharest.

Tunis: Rue Es-Sadika, 35, Tunis.

BRITISH COTTON PRODUCTION.

According to figures compiled by the Board of Trade the quantity of ginned cotton produced in various British Possessions in 1915, as compared with the previous year, included the following:—

	1914. lb.	1915. lb.	1916. lb.
Cyprus ..	1,048,992	700,112	—
Malta....	—a	196,490	183,850
Egypt....	494,499,800	644,937,900	—

Prominent Industries of India

RESTRICTED TRADING.

Further List of Barred Firms in Egypt.

The following is a continuation of the list of the firms with whom trading by persons in Egypt has been prohibited by proclamation:—

NETHERLANDS.

Binneveld and Schellen, Boompjes, 40b; Pickstraat, 63b, Rotterdam.

Duiker, J., Weteringschans 171, Amsterdam.

Goldschmeding, G. A., Kalverstraat, 56, Amsterdam.

Hertzfeld L. H. Van, Wijnhaven, 24b, Rotterdam; Hoeckel, P. Van, Kruisbroedershof, S'Hertogenbosch.

Kan, Alfred Abraham, J. Lzn., Van Aemstelstraat, 2g, Amsterdam; Kehlenbrink, G., Junior, Wijnstratt 117, Rotterdam; Klembt's (Paul) Scheepagentuur Maatschappy, Boompjes, 16, Rotterdam (Manager, Klunk Seger G.); Krom and Co., Keizersgracht 405, Amsterdam; Kupsch and Abas, 2e, Kostverlorenkade 23-24, Amsterdam.

Leeuw, Simeon De, and Co., Kloveniersburgwal, 72, Amsterdam; Lucardie, Willem, Maastraat 8b, Rotterdam, Coutrai, and Leeuwarden.

Molenberg and Dekker, Stationsstr., 53, Zaandam.

Olie and Vetfabriek "De Schie" N/V., Westerkade, 6, Schiedam.

Peereboom, S., and Co., Taludweg, 45, Hilversum; Prins, E. L., Nieuwehaven, 116a, Rotterdam.

Rompu, J. Van, Dejongestraat, Terneuzen; Ronnen, J. R. Van, Mathanasserlaan, 400, Rotterdam.

Verstegen, J. H., Goudschesingel, 26, Rotterdam; Visser, E. E., and Zonen Handelsvereeniging, Kromboomsloot, 57, Amsterdam.

Wallig, Gebruder, Singel, 260, Amsterdam; Wiener, H., and Co., Raadhuistraat 3, Amsterdam; Wessel, D., Boymanstraat, and V. Hogendorpsplein 5, Rotterdam.

Ingenohl, C., Witte Huis, Wijnhavn 3, Rotterdam.

Nederlandsche Asbestos Maatschappy N. V., Willemskade 19, Rotterdam; Nederlandsche Huistelefoon Maatschappy, Frederiksplein, 28, and Singel 284, Amsterdam; Zuidblaak 38, Rotterdam; Westeringkade 2-4, and Juliana van Stolberglaan, 82, The Hague; Nederlandsche Ijzerhandel Maatschappy Tot Voorzetting der Zaken, Afdeeling Enthoven, The Hague; Nederlandsche Ijzerhandel Maatschappy Tot Voorzetting der Zaken, Afdeeling Hartelust, Leeuwarden.

Schrevel's, H. Import en Exporthandel N.V., H. K. Schrevel, Rechter Rottekade 81, Rotterdam; Schumacher, D., Dufaystraat, 2, Amsterdam.

NETHERLAND EAST INDIES.

Assahan Syndicat Gesellschaft, Medan and Palembang.

Borneo Import and Export Company, Dutch Borneo and Batavia.

Cultuur Maatschappy "Soengei Langka," Batavia.

Export Maatschappy Austria, Bandoeng.

Hallesche Machinenfabriek, Sourabaya; Herrmann, C. H., Batoe Toelis 2, Batavia.

Plantagen Gesellschaft Boenisari, Batavia; Plantagen Gesellschaft Neglasari, Bandoeng; Plantagen Gesellschaft Tjiganitri, Batavia.

Schaap, F. L., Samarang.

Technisch Bureau Altmann, Bandoeng.

NORWAY.

Aanesen, Philip E., Christiansand; Andresen, Christian, Raadhusgade, 10, Christiania; Arnemann, Hans Th., Toldbodgade, 8b, Christiania; Authen, Otto, Munkedamsvn, 9, Christiania; Aktieselskabet Trondhjems Handelsbank, Trondhjem.

Behrentz, Andreas, Aalesund; Braadlan, John, and Co., N. Strandgt, 33-39 Stavanger.

Didrichsen, Moy, and Co., Kongensgt, 14, Christiania.

Engoens Sardine Co., Limited, Stavanger.

Forenede Feldspatbrud A/S., Sarpsborg.

Hudtwalcker and Co., Toldbodgade, 8b, Christiania; Hausvik, Einar, and Co., Vaerfstgt, 2a, Bergen, and Stavanger.

Johannesen, Ragnar, Lovenskioldgst, 3, Christiania; Johnsen A., Skien; Jaeger Sardine Factories, A/S, Haugesund; Jakhelln, C., Lakkegatan 16, Christiania; Jensen, Hermann, Skippegt, 144; K. Adelersgt, 34, Christiania.

Norsk Tarmindustri A/S., Baekkegt, 24, Christiania; Norwegian Sardine Company, Kopervik; Nilsen, Olaf, Trondhjem.

Olsen, Carl O., and Kleppe, Stavanger.

Pleym, Gottfried, Skippergt, 7, Christiania.

Ravn Ragnvald, Engen 18, Bergen.

Stavanger Conserves Fabrik, Lervig 45, Stavanger; Sardinfabriken "Norrig," Stavanger.

Tangeveld, L. A., A/S., Toldbodgade, 8b, Christiania; Thiis, C. Houge, Jorenholmsgt, 25, and Kongstgt 52, Stavanger; Thorbaldsen, Hjalmar, and Co., Kirkegaten, 6b, Christiania.

Waage, Thorbjorn, Holmegate, 22, Stavanger; Witzoe, Endre, Christiansand.

PERSIA.

Serushia Kerman.

Haji Amin-Ut-Tujjar Brothers, Isaphan.

PERU.

Leon, Felix, Pacasmayo.

Raygada, R. Y., Paita.

Schaefer, Carlos, Piura.

Trittau, George, Lima.

Banco Aleman Transatlantico (Deutsche Ueberseeische Bank); Muelle and Dammert, Callao.

PHILIPPINE ISLANDS.

Arend, A. Von, Manila; Asinga Co., Limited.

Basilan Plantation Company, Zamboanga.

Cooper Company, P.O. Box 189, Manila.

Determann A. (of Manila Commercial Company), Manila.

El Siglo, Manila.

Fua Matas Company, Calle Rosario, Manila.

Gmür, Otto, and Co., Manila.

La Yebana Cigar Factory, Manila; Lampe, O, (of E. A. and Otto Weber), Manila; Landahl, J. (of Secker and Company), Manila; Lohmann, J. (of E. A. and Otto Weber), Tuguegarao.

Maack, A. (of Manila Commercial Company), Manila; Manila Commercial Company, P.O. Box 442, Manila; Meller, P. (of Manila Commercial Company), Manila; Menzi, J. M., Manila.

Nagel, P. (of Juan Seiboth and Co.), Manila.

Oriente Cigar Factory (La Perla del Oriente), P.O. Box 430, Manila.

Seiboth, Juan, and Co., Limited, Manila; Siegert Siebrand, Manila; Strohecker, P., Manila.

Velhagen (of Oriente Cigar Factory), Manila.

Weber, E. A. and Otto, Cayagan, Manila, and Tuguegarao.

PORTUGAL.

Puls, Guilherme, and Co., Rua Da Nova Alfandega, 108, Oporto.

PORTUGUESE WEST AFRICA, RIO MUNI, PORTUGUESE GUINEA, AND FERNANDO PO.

Iniqo, Alfonso, Rio Muni.

Karsten, Friedrich, Bambadirca.

Lieb, Eugen, Santa Isabel, and San Carlos.

Mansnetter, Boloma; Moritz, E. M. and Co., Santa Isabel.

Perez Y Mora, Fernando Po.

Rolf, Luis, Bissao.

Schwartz, Hans, Geba; Seifert, Paul Boloma.

Titzck, Rudolf, Bissao, Chinde, Bambadirca, Geba, Baffata, Cacheo, and Farim.

Voss, Hans, Farim.

Woermann Linie Fernando Po.

UNITED STATES OF AMERICA.

ENGINEERING NOTES.

Refrigeration in Russia.

The Refrigeration Committee of Petrograd (says *Ice and Cold Storage*) publishes in its bulletin a list of new refrigerating installations either completed or in process of construction. At Minsk the executive section of the Town Council has directed one of the Minsk architects to prepare a plan and estimates for the construction of a town cold store. At Varonezh, the constructional engineer, M. P. S. Komaroff, has proposed to the Town Council to construct a cold store and to exploit the same. At Kremenchug, in view of the deficiency in natural ice, a group of citizens is arranging to erect a factory for the production of artificial ice. At Nizhni-Novgorod, the local government cold store has started work; only meat is being stored there at present. Another cold store is projected in the town, and the local architect is preparing the plans. At Simbirsk the army provisions section is co-operating with the town government for the construction of a large cold store in the yard of the town slaughter-house. At Samara, the Town Council has approved the allocation of 10,000 roubles towards the construction of a cold store.

A Gas Crucible Furnace.

Manufacturers abroad, especially in the East, where coal at the present time is obtainable in limited quantities and at largely enhanced prices, are compelled to work under very embarrassing conditions. In some places, while local gas companies are allowed to import a full supply of coal, steam users and others are "rationed," and have to use it sparingly, which, in the case, for instance, of engineering factories and foundries, means retrenchment of production. To such embarrassed firms the recently-proved utility of a modern gas furnace will be of particular interest. The utility of gas furnaces has already been proved in many ways, but what was shown at a recent demonstration, in the presence of reliable experts, was a feat which has never before been attempted commercially—namely, by means of the very latest gas crucible furnace, to melt copper with so low a fuel consumption as is represented by 2.11 cubic feet of gas per pound of metal. Precisely 61 lbs. 7 ozs. of pure metal was placed in the crucible, and this quantity was heated to pouring point in 27 minutes, with a gas consumption of 130 cubic feet, this being at the astonishingly low rate of 2.11 cubic feet of gas per pound of copper placed in the crucible.

Economy.

The economy of the proceeding is so obvious from these figures that further comment seems superfluous. There are numerous foundries in almost every town in the East where gas is available at comparatively cheap rates, and the employment of these modern gas crucible furnaces will be a boon to them at the present time, when the ordinary fuel is scarce, and exceedingly dear for the purpose.

Motor Trade Combine.

The most important item of news this week, remarks *The Light Car and Cyclecar*, in an editorial article, is the statement that a number of big munition concerns are about to pool their capital to the extent of £30,000,000 and sink their identity in a gigantic combine. That this will embrace a section of the motor trade is almost certain, and, as the object is to combat foreign trade after the war, its influence upon the motor industry is obvious. It will, of course, be suggested, continues our contemporary, that such a pooling of interests will enable the problem of the cheap car with a gigantic output to be tackled as has never before been possible, but so far as we can ascertain at present it does not seem to affect the manufacture of light cars, which is likely to be the biggest side of the motor industry after the war, to any appreciable extent. It is early yet to speculate on the ultimate result, however, and the scheme will be watched with the greatest interest. The manufacturers of this country will undoubtedly be faced with some very big problems after the war, and it may be that we shall have to Americanise our manufacturing methods.

MORE FACTS ABOUT ROUMANIA.

Official figures of Roumania's coal production first became available in 1898. In that year the production amounted to 67,000 metric tons; since then there was a gradual increase to about 300,000 metric tons for 1914.

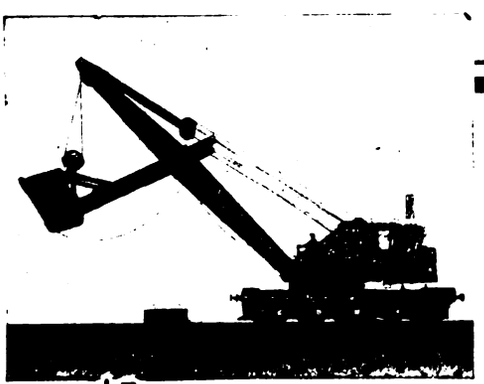
In the fiscal year 1912-13 Roumania had 2,167 miles of railway, which carried 11,428,088 passengers, 9,399,888 tons of goods, resulting in total receipts of £4,437,917, of which £2,611,237 covered expenses, leaving £1,826,680 as net receipts. During that year there were recorded 369 accidents—151 killed and 218 injured. Of killed there were 14 passengers, 54 employees, and 83 others.

In view of trade extension with the United Kingdom, it is of interest to note the following figures about Roumania's mercantile marine. The last official figures available are for 1911, in which year Roumania had :—

Sailing vessels....	497	Net tonnage ..	150,739
Steam vessels	96	Net tonnage ..	22,202
Total	593		172,941

out of a total for Europe of—

Vessels.....	79,816	Tonnage	24,895,459



35 Ton Steam Breakdown and Shovel Crane.

SHIPPING NOTES.

The Khedivial Mail Steamship and Graving Dock Company's s.s. Prince Abbas has been sold to the Hudson's Bay Company. The steamer's tonnage is 2,030 gross, 852 net. She was employed in the mail service between Suez and Port Sudan, and has now been handed over to her new owners.

Owing to a fire at Malta, the Greek steamer Prinkips Georgios was towed out of the port, but subsequently sank four miles outside the harbour. She was loading benzine in the quarantine harbour, and was a boat of 448 tons, built in 1891. She was owned at Syren by E. A. Tonstanos.

Good foundation, no doubt, exists for the report that closer relations will obtain after the War between the Hamburg-Amerika and the North German Lloyd lines, says the *Financial News*. It is stated that both companies are reorganising their directorates and finances by enlisting the support of German financiers who have made good profits out of the War, and are disposed to employ their gains in endeavouring to re-establish the German mercantile marine.

THE CITY OF LUCKNOW.

Captain Andrew Richmond, of the City of Lucknow, has been relating his experiences of the torpedoing of his vessel in the Mediterranean some time ago. The vessel had been released by the Admiralty for transport work, and proceeded to Alexandria, where she loaded a cargo for home. When reaching a position east of Malta, it being about ten o'clock on a Sunday morning, Captain Richmond noticed when going on the bridge a torpedo about 200 yards off his vessel, and coming directly for her. Captain Richmond at once ordered the helm to be thrown hard over, with the hope that the torpedo might pass under the stern. Unfortunately its proximity was such that the vessel's head had only turned a few degrees when the torpedo struck the stern and exploded with terrific violence, laying the whole after-part open and throwing many parts and articles high into the air. It was fortunate that the vessel had altered her course even ever so little, otherwise it was considered that she would have been struck in the way of the engine-room, in which case it is possible that serious loss of life would have resulted. As it was, there was nobody injured, and although the City of Lucknow disappeared in about ten minutes, everyone in the meantime had got away in the boats. It so happened that Captain Richmond was on his round of inspection just before observing the torpedo, and all hands were on the alert and ready to man the boats, which were already swung out.

Captain Richmond speaks very highly of the behaviour of his native crew, amongst whom there was not the slightest sign of panic, and absolute discipline was maintained without the slightest trouble. Since the sinking of his vessel in April last Captain Richmond has been acting as assistant to the marine superintendent, and taking relieving duty, at present being in charge of the City of Poona *pro tem*. Captain Richmond joined the City Line of steamers in 1900, and whilst chief officer of the City of Paris in July of last year obtained his first command—in very tragic circumstances. The vessel had sailed from Liverpol for Calcutta, but had only reached Point Lynas when she was chased by an enemy submarine. Fortunately she succeeded in getting clear away, but Captain Campbell, who was in command, shortly after was taken ill, and three days after died at sea.

COMPANY MEETING.

P. and O. Company.

At an extraordinary general meeting of the stockholders of the Peninsular and Oriental Steam Navigation Company, held at the offices, 122, Leadenhall Street, E.C., a resolution approving a conditional agreement with the New Zealand Shipping Company, Ltd., and increasing the capital, was passed unanimously. Lord Inchcape (Chairman of the company) presided.

The Chairman said: For a number of years past the British India and Federal and New Zealand companies have worked in alliance in the trade between the United Kingdom and Queensland, and this has led up to a proposal to bring about a complete fusion of interests between the P. and O., the British India, and New Zealand companies. The P. and O. shareholders have seen the circular which has been issued by the Board, and the agreement which has been arrived at, subject to the concurrence of the P. and O. shareholders and the consent, under the Defence of the Realm Act, of H.M. Treasury, which latter has been obtained. The New Zealand Ordinary shareholders have practically unanimously accepted the provisional offer, which was made subject to 76 per cent. of the shares being offered to the P. and O. Company and to the approval of the P. and O. Company in an extraordinary general meeting. Of 90,672 shares something like 90,215 have adopted the proposal, and the remaining few will no doubt also come in in due time. If they don't no harm is done. Some are owned by people whose address cannot be found. In one case a small holder thinks we are not paying enough. The P. and O. Board are of opinion that the fusion of interests will work to the advantage of the P. and O. and British India Companies, and they confidently recommend it for your acceptance.

The New Zealand and Federal fleets comprise 27 steamers, of an aggregate gross tonnage of 225,037 tons, and there are several new ships contracted for, some of which are approaching delivery. The assets of the New Zealand and Federal companies, apart from the ships, are valuable and liquid, and amount to a sum which, together with the ships and the business, make the proposed exchange equitable. The payment to be made for the £10 paid Ordinary shares of the New Zealand Company, which company owns the whole of the Federal Company's Ordinary shares, is £10 of P. and O. Deferred stock, worth on the market to-day about three times that amount—and perhaps a little more. While the bargain, so far as the New Zealand and Federal shareholders is concerned, is a good one for them, it is, in the opinion of your Board, not a bad one for the P. and O. and British India companies, and we have no hesitation in recommending it for your acceptance. In the year 1910 the P. and O. Company purchased the Blue Anchor Line, running to Australia, and have had no reason to regret this addition to their business. The acquisition of the New Zealand Company is simply following the precedent established at that time, and I am sanguine enough to hope that the shareholders will not have any occasion to regret the step which, with your approval, we now propose to take. I therefore beg to propose the following resolution:—"That the conditional agreement dated 30th June, 1916, between the New Zealand Shipping Company, Ltd., and the Peninsular and Oriental Steam Navigation Company, be approved and confirmed; that the capital of the Peninsular and Oriental Steam Navigation Company be increased from £1,798,133 Deferred stock to £2.704.853 Deferred stock by the creation of £906,720 additional Deferred stock, thus making, with the addition of the existing Preferred stock of the company, the total capital of the company £5,744,853, such further capital (as far as required for carrying out the said agreement) to be issued in the terms as to dividend and otherwise thereby provided."

COMPANY REPORTS.

Egyptian Hotels.

The report of the directors, to be submitted to the nineteenth annual general meeting of the company to be held at the company's offices, 11, Ironmonger Lane, E.C., on Wednesday next, states that, after charging all expenses in connection with the working of the hotels, the profits of the hotels were £29,000 15s. 1d., as compared with £6,284 17s. 5d. in the previous year, and £30,651 12. 8d. in the pre-war year. After providing for the charges payable in London and Cairo the accounts show a profit of £27,024 10s. 8d. The balance of undivided profit brought forward from last account is £2,548 12s. 2d., making a total of £29,573 2s. 10d. From this has to be deducted debenture interest, £3,553 9s. 5d.; one-fifth of the debenture expenses (reducing the balance carried forward on this account to £1,149 19s. 10d.), £574 19s. 10d.; depreciation of plant, fixtures and fittings at hotels, £5,344 0s. 3d.; leaving an available balance of £20,100 13s. 4d. The directors recommend a payment of one year's dividend of 5 per cent. on the preference shares, thus completing the payment to 1915 and absorbing £5,750, and that there be added to the reserve fund £10,000, leaving a balance to be carried forward of £4,350 13s. 4d. In May, 1915, the Ghezireh Palace Hotel was requisitioned by the military authorities and transformed into a hospital—the No. 2 Australian General Hospital—and was used as such until March 15 last. The Semiramis Hotel was requisitioned by the military authorities from November, 1915, to March last as a residence for the nursing staff. The amount of compensation to be paid by the military authorities for the temporary occupation of these properties, and for the wear and tear thereof, as well as for structural damage, etc., is being fixed by an arbitration board. A sum has been received on account, but no credit in respect of the balance has been taken into the accounts for the year under review. The special charges for food and hotel accommodation referred to in the last report as being made to members of the military force in residence have been continued, and have resulted in a very considerable increase in the takings of the year, from which a modest profit has accrued, and appears in the accounts. In accordance with the company's articles of association one of the directors retires, and, being eligible, offers himself for re-election. The director retiring is Sir Wm. B. Peat.

European Oilfields.

The report of the European Oilfields Corporation for the year ended 13th April states that the Russian profits have been converted at the exchange of Rs 14.131 to the £1, being the average monthly rate ruling during the year, while the floating assets and liabilities have been converted at the rate of Rs15.75 to the £1, being the rate ruling at the date of the balance-sheet. The accounts show a gross income of £56,551, of which £56,149 comprised the profit on trading and £401 miscellaneous receipts in London. General charges absorbed £3,794, Debenture service £15,125, and income-tax £2,747, leaving a balance of profit of £34,884. Of this £25,000 has been added to reserve for depreciation, renewals and general purposes, and £1,976 is applicable to the redemption of profit sharing notes. The remaining £7,907, added to £42,427 brought in from the previous year, leaves a total of £50,334 to be carried forward. During the year £8,581 Debenture stock has been purchased and cancelled, the amount outstanding being thus reduced to £153,468. The liabilities were reduced by

£11,000, simultaneously with an increase of £3,500 in the assets. Since the date of the accounts there has been a further improvement in the cash position. The operations of the company in Baku as well as those for the previous year are summarised in the subjoined table:—

	1915-16.	1914-15*.
	Poods.	Poods.
Gross production of crude oil	4,655,427	4,555,000
Weekly average	89,527	99,022
Crude oil used for fuel	288,001	255,152
Weekly average	5,538	5,547
Quantity available for sale	4,367,426	4,299,848
Weekly average	83,989	93,475
	Kopeks.	Kopeks.
Average price realised per pood	44·48	34·05
Depth drilled	218 sag. (1,528 ft.)	498 sag. (3,486 ft.)

* 46 weeks only, owing to strike.

The production during 1915-16 was not maintained at the level of the previous year, but the directors report that the average weekly output for the current year to date is 101,910 poods, as against 88,876 poods for the corresponding period last year. In addition to 48 wells baling at the close of the year, there were four wells being deepened, three being repaired, and two being drilled, making a total of 57. Working expenses were heavier owing to the higher cost of material and to war bonuses to workmen to compensate for the greatly increased cost of living. The Russian Government fixed a maximum price for crude oil of 45 kopeks per pood as from February 20, 1916. The employees liable to be called up for the first and second reserves have been exempted until January 1, 1917. From November 1, 1916, a new contract will come into force, under which the entire production until May 1, 1919, will be taken at 1 kopek per pood over the average monthly Bourse price, with a minimum of 42 kopeks. On the properties of the Romany-Zabrat Oilfields, a paying oil source has been struck in No. 2 well at a depth of 323 sagenes (2,261 ft.), and a production obtained ranging up to 1,800 poods (29 tons) per day. Water difficulties have arisen, however, and steps have been taken to deal with them. No. 1 well, now at a depth of 285 sagenes (1,995 ft.), is being deepened to the same source. No. 3 well has been drilled to a depth of 243 sagenes (1,761 ft.), and a new well (No. 4) has been authorised.

ON 'CHANGE.

(By Our City Correspondent.)
Throgmorton Street, E.C.

This week's business has been on a very small scale. There has been quite a holiday feeling. Egypt has been doing practically nothing, probably owing to the fact that all interest on that side is at present concentrated on the heavy fluctuations which are occurring in cotton. National Banks, on local buying, have further advanced ¼ to 13⅜, in the neighbourhood of which price about 250 shares have changed hands. Khedivial Mail shares have continued to be well supported round 29s., and Alexandria Water are wanted at 11⅝; but there has been no business owing to the absence of sellers. All the other Egyptian shares have been quite inactive, and sellers remain scarce.

In Greek securities business has also been on quite a small scale, but prices are keeping very firm. Some small lots of 1881, 1884 Monopolies and Rentes have changed hands round current prices.

OIL OUTPUTS.

Anglo-Egyptian Oilfields.—Gemsah.—Production for week, 6 tons (last week 8 tons). Hurgada.—Production for week, 621 tons (last week 500 tons).

Baku Russian Petroleum.—Estimated gross production for week ended September 9, 87,900 poods.

Maikop Orient Oil.—Cablegram dated September 3:—Plot 435a.—Well Three.—Drilled 58ft., depth 1,108ft. Well One.—Production for week, 165 poods.

Spies Petroleum.—Production, including 30,970 poods from ambars, for week ended September 10, was 178,535 poods, or about 2,880 tons; total production for year from January 14 to September 10 was 5,887,695 poods, or about 94,963 tons; total production for corresponding period last year was 9,539,140 poods, or about 153,857 tons.

Ural Caspian Oil.—Total production for week ended September 7, 151,220 poods (or 2,439 tons).

NEWS FROM ALL SOURCES.

A supplement to the *London Gazette* has been issued containing further lists of persons and firms in Egypt with enemy intereste which have been licensed by the Egyptian Government to carry on business for the purpose of liquidation only.

At the last meeting of the Council of the British Cotton Growing Association, on September 5, 1916, a letter from the Department of Agriculture of the Sudan was read, with reference to a consignment of cotton which the association recently sold for the Sudan Government. This cotton was grown in the Sennar Province on what are called "gerf" lands, which are periodically inundated by the overflow of the Blue Nile in flood times. The cotton is of very good quality, and as soon as the Government can arrange to place an Inspector of Agriculture permanently in that part of the country there should be an increased output of cotton there.

NOTES OF THE WEEK.

In spite of the German Emperor's eagerness to acclaim the Bulgarian advance in the Dobrudja as a decisive victory, it is still too early to appraise the enemy's success in this region at its real military value. The garrison of Tutrakan failed to make good its escape and was overwhelmed; at Silistria the Roumanian troops were better prepared, and the German-Bulgarian force entered a deserted town. In the week that has elapsed since then the population of Germany has had time to look round for the fruits of the decisive victory, only to learn that a decisive victory, like a "strategical retirement in accordance with prearranged plans," does not always bear the meaning put upon it by the unenlightened. Meanwhile the Roumanians have fallen back on a line which serves to protect Constanza, their chief port on the Black Sea, and the great bridge over the Danube at Cernavoda which carries the railway to Bucharest.

The Russian troops who had penetrated as far south as Dobritch have also been withdrawn northwards, but, with part of the Roumanian Army, have kept in touch with the enemy during their retirement. Consequently, in addition to the natural difficulties of the ground they have to cover, the Bulgarians have had some opposition to overcome. It is, therefore, not surprising that their later bulletins should be content with the admission that the Russo-Roumanian forces have taken up a strong position guarding the railway. On the other hand, a Roumanian official statement claims a success at Enigea, nineteen miles south of the line. This would point to the arrival of reinforcements which have enabled our Allies to assume the offensive. The enemy's chance lay in a rapid thrust which would take him to the railway line and to Constanza before the Roumanians had time to organize their defence. He may yet try to force their present position; but unless he can drive straight through it the situation on the Greek frontier will make the Bulgarians increasingly loth to tie up large forces in the Dobrudja, where not even the attainment of their sole objective would constitute the decisive victory so prematurely heralded to an expectant public in Germany.

The Balkan correspondent of *The Times* supplies an interesting explanation of the failure of Roumania to provide for the defence of her Dobrudja frontier. There is reason to believe that Bulgaria was inclined to favour the maintenance of friendly relations with the Roumanians. This feeling was reciprocated by the Roumanian Government, which refrained from declaring war on Bulgaria with the *bonâ-fide* intention of avoiding any act of hostility. Such an arrangement by no means suited Germany, and the anxiety which was displayed in the German Press over Bulgaria's delay in declaring war on Roumania will be remembered. As a matter of fact Bulgaria made no declaration of war against her neighbour. Under the direction of Marshal von Mackensen and his German officers hostilities were begun without any formalities; the Dobrudja frontier was crossed and full advantage was taken of Roumanian unpreparedness. If this explanation is correct in all its details, it would follow as a natural corollary that the Roumanian military command was satisfied that no extreme danger threatened by way of the Dobrudja in any circumstances. In that case there may well be a strong probability of the German Emperor having to revise his estimate of what is or is not a decisive victory.

Not the least satisfactory feature in the Near Eastern situation is that the Roumanians should be following up their successes in the Carpathians apparently undeterred by events in the Dobrudja. They are now in touch with stronger forces of the enemy, and progress is naturally slower. The main opposition is being met in the southern portion of the line. In the defile of Merisor fierce fighting, lasting for two days, is reported. Positions were taken and retaken several times; but the Roumanians remained masters of the field. A later enemy report, however, states that they have had to abandon Petroseny and the Szurduk Pass. It is in this direction that the main Austro-German reinforcements are being sent. At this point the Roumanian advance assumed its most dangerous aspect, as the mountain barrier between the two countries is here at its narrowest, and an invasion of the plains of the Banat would mark a critical stage of the campaign for Austria-Hungary. The Austro-German forces would be expected to concentrate on one part of the Roumanian line rather than to dissipate their strength over the whole front. Public opinion in Hungary has been deeply stirred by the intervention of Roumania, and however pressing the claims of other regions may be, political considerations will prompt the German military authorities to make a supreme effort to reassure the Magyars.

The Allied offensive on the Greek frontier is being prosecuted with great vigour, mainly on the western wing, where until recently the Serbians were bearing

Digitized by Google

the brunt of the fighting. It was obviously undesirable that these gallant troops should be called upon to pay an excessive price for the success of the whole Allied enterprise, and we welcome the appearance of the French and Russians on the extreme left of the line. Whether as a result of the earlier strain imposed on the Serbians there has been a redistribution of troops in this sector, or whether topographical considerations brought the Serbians first into touch with the enemy we do not know. But it was French and Russian troops who engaged the Bulgarians between Rosna and Florina, and the French actually took Florina by assault on September 18. These troops, continuing their turning movement, are now marching on Monastir, which the German and Bulgarian Staffs are believed to have evacuated. Meanwhile, the Serbians were confronted by the high peaks of Kaymatchkalan, north of Ostrovo and just within their own country. A systematic advance and desperate fighting finally gave them possession of this coveted position, and the Serbian Army had the satisfaction of standing once more on its own native land.

As far as can be gathered the initial thrust across the Struma is not being followed up by the British troops. The difficulty of a front of an indefinite length as the offensive develops can be avoided by holding the Struma line, at least until the western wing has swung further north than it is at present. On the other hand, if, as seems possible, the Bulgarians have been found in unexpected strength to the west and south-west of Seres, there may be a considerable amount of work to be done in this neighbourhood before the successes south of this point are extended. It must not be forgotten, however, that the Russo-Roumanian forces in the Dobrudja require the maximum support from the Salonika offensive, and to ensure this, the thrust must be directed against the territory which the Bulgarians are least anxious to lose. If the capture of Monastir can be made to coincide with a successful advance up the Vardar, it will not be long before the war-wearied people of Bulgaria become suspicious of the strategy which sends their troops to the Dobrudja, where there was no need for any fighting to take place, and leaves the approaches to Sofia insecurely defended.

If nothing more should be heard of Greece during the present war, she will have made her contribution to its history. The Greek Fourth Army Corps, consisting of three divisions of infantry, with an artillery regiment of nine batteries, was stationed in the territory overrun, by agreement with the Greek Government, by Bulgarian troops. This body of soldiers, in all about 10,000 strong, has allowed itself to be kidnapped by the Germans, and has been sent to Germany to be interned there as "guests" until the end of the war. Although the details of this amazing exploit have not yet been confirmed, it is not difficult to realise what happened. The German and Bulgarian Staffs were evidently of opinion that Greece's neutrality could not be relied upon as a permanent factor, and resolved to reduce the strength of the Greek army by the number of men whom chance and Greek connivance had placed in their power. The German version is that the General Commanding the Fourth Army Corps "found himself faced by an untenable situation. The troops entrusted to him were threatened with hunger and illness . . . and on September 12 he begged the German Chief Army Command to take under its protection from the pressure of the Entente his brave troops, who were loyal to their King and Government, and furnish them with an asylum and provisions. This request was granted. . . . It was arranged with the Commanding General that the Greek troops should be transported, fully armed and equipped, as neutrals, to places of refuge in Germany. They will enjoy the privileges of guests here, until their country is evacuated by the Entente intruders."

To enhance the verisimilitude of this delightful explanation the Germans have subsequently embroidered the narrative with stories of the desperate condition of the Greek troops and of the refusal of the British naval authorities to transport them from Kavalla. This allegation is disproved by the fact that the British took off as many soldiers as desired to leave, together with a quantity of war material. It is probably true that a highly placed Greek officer played the part of devil's advocate in the transaction. A Greek report states that the officers of the Army Corps met in conference to decide upon the course to be adopted in view of the Bulgarian summons to evacuate the town. A proposal that resistance should be offered and another to surrender to the Bulgarians were rejected; but the conference decided unanimously to surrender to the Allies. The protocol of the meeting was signed by all the officers. Subsequently, however, after a conference with some German officers, a certain Colonel Hazzopoulos "ordered the surrender of the troops to the Bulgarians, and succeeded in carrying with him the larger portion of his officers and men by means of a lying statement that the Allies had refused to allow them to leave by sea." It has yet to be explained how a colonel comes to be responsible for the fate of an Army Corps, and the discrepancy between this statement and the Gereman reference to the general commanding the Corps will be noted. The Greek Government has hastened to announce that the Kavalla commander received orders to transport his troops to Volo, and his action is denounced as treason.

Such an incident as the kidnapping of an Army Corps could never have happened outside Greece, and it would not have happened there if King Constantine and his Government had not adopted their strange attitude towards the war and towards their obligations to Serbia and the Allies. In defence of the Fourth Army Corps it must be stated that, when once they had received instructions to surrender forts to the Bulgarians, they may have felt obliged to carry out the policy to its logical conclusion and surrender themselves as well. Under a King and Commander-in-Chief who let it be clearly seen that nothing would induce him to fight for fear of "the frightful costs that war would involve" an army can hardly fail to become hopelessly demoralized. All that happened at Kavalla will seem more or less natural to everyone, we believe, except King Constantine.

Once more the Germans are likely to be found to have overreached themselves. They had established in King Constantine a genuine terror of their military strength, which was proof against the pressure of the Allies and the menace of a revolution in Greece. But they overlooked the power of ridicule. The spiriting away of one of his Army Corps, amid protests of loyalty "to the will of their War Lord and his legal Government," has made King Constantine the laughing-stock not only of the world, but of the ages. Unless we are mistaken, Germany by this one stroke will have brought about what sheaves of Allied Notes and the gathering of Allied naval squadrons failed to accomplish—the removal of the King of the Hellenes from the sphere of German influence and German intimidation. It is unthinkable that even King Constantine should pocket this affront at the hands of the very people whom he has been championing at the expense of honour as well as of reason. As the Greek Premier has made representations to Germany with a view to securing the prompt return of the Kavalla soldiers to Greece, with their arms and ammunition, the future course of the negotiations between the two countries will be watched with interest. The effrontery of the German action, however, remains, and Greece will have to decide whether she can be satisfied with the mere return of the Army Corps, even if she be fortunate enough to gain this point.

The resignation of M. Zaimis left King Constantine confronted with the difficulty of selecting another Prime Minister. After failing to induce M. Dimitrakopoulos to accept the post, he found M. Kalogeropoulos, a leading member of the Theotokist party, willing to under-

Digitized by Google

take the task of forming a Cabinet. Taking the portfolios of War and Finance for himself, the new Premier distributed the rest of his offices among politicians who, with one exception, are reckoned, as he is, as anti-Venizelists. The constitution of the Cabinet contravenes the Allies' stipulation that Greece should be given a business Government and not one steeped in political prejudice. But the personal sympathies of M. Kalogeropoulos are understood to be with the Entente, and the fact that his acceptance of office coincided with the removal of the Kavalla Army Corps to Germany may induce the Allies to allow him to prove his capacity for steering Greece into less troubled waters. For the present, however, M. Kalogeropoulos has not been recognised by the Entente Ministers in Athens. It is probable that after the experience of many months the latter may feel tempted to judge the new Government by its acts rather than by its protestations of friendliness.

The report of a Russian success in Persia is the first news that has been published for many weeks regarding the situation in this theatre of the war. As has been hinted in these columns, it was to be expected that some little time would have to elapse before the Russians were in a position to oppose the Turkish advance. We know now that the enemy forces reached a point about half-way between Hamadan and Kasvin, and we may be sure that in the meantime Turkish communiqués will not have been remiss in making the most of these successes. Now, however, the Russians have resumed the offensive. Striking south-east from the direction of Tabriz, our Allies threatened the communications of the enemy columns and compelled them to fall back. The whole expedition is now reported to be once more within twenty miles of Hamadan. The Russians have occupied Kuridjan, and we may hope to hear that the invaders are now in process of being expelled finally from Persian soil.

The experiences of a body of British troops stationed "somewhere in Egypt" afford an interesting commentary on the reports which the German Press never wearies of circulating about the bad relations between our soldiers and the Egyptian natives. There is no reason to suppose that the case is peculiar; but the information that reaches us supplies certain details which illustrate in this instance an almost embarrassing insistence on the part of the native population to testify their good will. Sums of money were subscribed to put up shelters for the troops, to provide comforts for those in hospital, and to erect a shelter for Yeomanry horses. In May last a British soldier died in hospital at the place in question. He was buried on a site about a mile from the eastern bank of the Nile in the open desert. Subsequently, the leading native notables on their own initiative instituted a lottery in order to raise the necessary funds for the purchase of part of this site for its presentation to the British community as a burial ground. The amount raised enabled a wall to be built round the proposed cemetery and an iron entrance gate to be erected, while the balance, amounting to £30, has been placed in the local branch of the National Bank for future expenses incurred in connection with the cemetery.

The Cairo correspondent of *The Times* announces that the Egyptian Government is seriously contemplating the execution of irrigation works on the White Nile, just south of Khartoum. A start may be made this autumn on the project, which consists in the construction of a dam at a cost of £E.1,000,000. The building of this dam was one of the contemplated enterprises which had to be put on one side at the outbreak of war. It has, however, become a matter of urgency owing to the series of low Niles, which points to the possibility of an abnormally high Nile, if not a cycle of high Niles, in the near future. With the extended cultivation in Egypt to-day, it is pointed out, there is a grave danger that any great increase in the volume of water coming down the river may prove more than the existing irrigation works can cope with.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 5.

The 1917 Census.

A decree has just been promulgated ordering the taking of a census next year and empowering the Department of State Statistics, under the auspices of which the work will be carried out, to mark all dwellings with whatever distinctive marks it chooses, and to call upon any Government servants to assist its representatives. The intention to take the usual decennial census was reported some time back in this correspondence, and the preliminary work is already well in hand. Some idea of the work involved may be gathered from the fact that at the last census (1907) no less than 1,926,620 dwellings had to be numbered and subsequently visited for the collection of the requisite particulars of the inmates, and that the number has probably very much increased since then. This time the difficulties of organisation, etc., will be accentuated owing to the impossibility at the present juncture of obtaining a sufficient staff of qualified and responsible supervisors. The census could, however, not be put off until after the war, as that would have upset the statistical tables, and so the Department has courageously decided to face all the extra difficulties in the interest of the country.

Precautionary Measures.

The Government has just issued a circular to the provincial authorities, advising them that cholera has appeared amongst certain of the troops in Sinai and laying down what steps they are to take to prevent the disease entering Egypt. For fear that the publication of this notice may cause alarm to people at home and elsewhere, let me say that it is a purely precautionary measure. Cholera has, it must be admitted, appeared amongst our troops in Sinai, but it was most drastically dealt with as soon as it was detected and so far no further cases have been declared. Our men caught it from the Turks, who apparently had it fairly badly. It appears that the Germans who accompanied them had given strict orders that whenever any suspicious death occurred a notice to this effect was to be put up over the place in Turkish and European characters. Quite a number of these notices were found, but they were put up as a warning to the Germans and their men and not from humane motives. The reason it has been thought advisable to issue the above-mentioned circular is that, despite the vigilant cordon which is still maintained, some of the Labour Corps may get across the Canal without examination, and so carry infection into Egypt. The risk of their doing this is, however, very remote, but the Government has very wisely thought it best to take all precautions.

Quarantine stations have been organized at Tor (Sinai Peninsula) for pilgrims returning to Egypt and the West, and at the island of Kamaran (Southern Red Sea) for those returning to India and the Far East.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, September 6.

The last fortnight has been big with events; first of all, the replacement of General Dusmani, Chief of the General Staff, and of Colonel Metaxas, the Deputy Chief, as well as that of other members. Thanks to the *savoir-faire* of M. Zaimis, their removal was quietly effected, and almost without the country knowing that it was at the Allies' demand. Incidentally, the Venizelist Press had paved the way by showing the necessity for the resignation of these officers who, as advisers of the King, had wielded a Pro-German policy, so as to furnish substantial proof to the Entente. The replacement of M. Dusmani by General Moscopoulo, of whom General Sarrail thinks highly, has helped to assure this result.

The Great Venizelist Meeting.

M. Venizelos' speech at the great meeting on August 27 was a hammer blow. With his characteristic openness and courage M. Venizelos pointed out to the people the pernicious influence of the King's entourage. Both the people and M. Venizelos' adversaries were shown in this speech that he is neither anti-royalist nor anti-dynastic, and that, on the contrary, after having saved and consolidated the dynasty at a time when it was proscribed, he still tries to save it from bad influences and perils which menace it and the nation alike. Only in such an aim, and rightly counting on the people's affection for the King, did M. Venizelos advise them to appeal direct to his Majesty, so as to put him on his guard against the influence of military advisers and his own Pro-German and absolutist tendencies.

"The Liberal Party," said M. Venizelos, in conclusion, "is neither the enemy of the Crown, the reigning house, nor of the King personally. It merely insists on the observation of the constitutional régime, which is also in the real interests of the Crown." These words are in perfect accord with the counsels of the late King George, that perspicacious diplomat, who reigned half a century over a Greece untroubled by the least internal disorder.

The King's Refusal.

It is, therefore, regrettable that the King should have refused to receive the deputation of the meeting charged to present him with the address adopted by the people, for the refusal only proves that the King is still under the sinister influence of his false counsellors.

During the King's short illness, the *Hestia* asserted that his state of health and the political situation had caused him to inform the President of the Council of the necessity of confiding the kingly functions to a regent. This statement has been denied.

Roumania's Departure from Neutrality.

The most recent events have exercised a great pressure on Greece, tending to impose inexorably on the country the policy so long mapped out by M. Venizelos. After the Bulgarian invasion of Greek territory, Roumania's intervention cast a bombshell among all the Pro-Germans of Athens. Even the most uncompromising neutralists have modified their views, and their Press demands that Greece also shall cease to be neutral, but not at once, as M. Venizelos wishes. One must still wait for the Allies' conditions, is their cry. "Greece," says the *Nea Himera*, should in her own interests not side with the Entente at once, for it would result in making it impossible for Bulgaria to defend herself against Roumania and the Entente." The paper's arguments are that in this event Bulgaria would have to detach herself from Germany, in which case Greece should co-operate with the Bulgarians.

The King's Attitude.

The King's declarations to the Entente Ministers since Roumania's intervention show that his Majesty also recognises the necessity of a re-direction of Greece's policy. These declarations gave the impression that the eve of abandoning neutrality was at hand. But the belief was premature. Apparently, the slight advances and slight successes of the Germano-Bulgars against Roumania have revived the fear of Germany which haunts military circles. Consequently, Greece's intervention will depend on happenings on the Roumanian front. It may come soon if the Roumanians secure an important victory. On the other hand, it may be postponed indefinitely if the Roumanians are defeated, or if the military situation remains uncertain and stationary. In the case of intervention on the side of the Entente, France and England will have to provide all the material required by the army after the long mobilization which has used up and deteriorated all the equipment. Although the army lacks nearly everything, its re-fitting out should be capable of being done quickly.

The Arrival of the Anglo-French Squadron.

The presence of a powerful Anglo-French squadron in the Piræus has undoubtedly assisted to swing Greek policy towards the protecting Powers. The arrival of the fleet, whose aim was the expulsion of German propaganda, inspired panic among all the Boches of Athens and their Greek associates. Thus, in order to repair a grave fault of the Entente, namely, that of allowing Germany to exercise for so long, by methods of corruption, such a vast propaganda in Greece, a whole fleet has now been necessary to expel the propagandists. For two years Baron Schenck, the arch-propagandist, has managed, by the aid of the newspapers which he won over, to effect, little by little, such a change as one would have thought impossible in Greece. In a country whose heart always beats for the Powers which created it, where, especially since the war made by the Kaiser in 1897 against Greece, the Germans were detested by everyone without exception, that was a veritable miracle for which one must render homage to the skill of the Baron, or, rather, to his money.

An Historical Monument.

Baron Schenck's name will remain historical in Athens. In one of the principal squares of the capital a disproportionately high building, still under construction, has arrived at its fifth storey. The owner, who is the editor of an evening paper, has, after being an ardent Venizelist at the beginning of the war, become a vehicle of the German propaganda. This building, the circumstances of whose erection everyone knows, will remain an historic monument of German corruption, to the shame of the country.

It is affirmed that Schenck has in all spent over ten million marks. Between July 20 and August 20 only he received through one Athens bank 2,400,000 marks as the first instalment towards the Greek elections. Thus he managed, through his spies of both sexes, to learn everything that happened in Athens. In suppressing this scandalous organization, which operated under the auspices of all the anti-Venizelist Governments, the Allies have decidedly rendered a service to Greece by freeing her from those who corrupted her patriotism and her honour, and created division and discord.

At the last moment the incorrigible pro-Germans sought to defend their protégés, and to render them a last service by having them arrested, not by the English military police, but through the intermediary of the Greek Government and by Greek mercenaries. Nevertheless, the Augean stables have been cleansed. The Boches have departed, and have ceased to infect the atmosphere of Athens by their presence.

NEW GREEK CABINET.

A new Cabinet has been formed in Greece under M. Kalogeropoulos, a leading member of the Theotokist Party, who has already held office with distinction as Minister of the Interior and as Minister of Finance. The following is the constitution of the new Ministry:

M. Kalogeropoulos	Premier, War and Finance.
Admiral Damianos.....	Navy.
M. Roufos	Interior.
M. Karapanos	Foreign Affairs.
M. Kaftangoglu.....	Communications.
M. Vokotopoulos	Justice.
M. Kanaris.....	Public Instruction.
M. Bassias	National Economy.

STATE OF PALESTINE.

We are indebted to a correspondent for the following interesting extracts from a letter received from a neutral resident in Palestine who has recently arrived from Jerusalem:—

Lack of Transport.

There have been great changes in the means of communication in Syria and Palestine during the time of the war. Early in 1915 the railroad between Jaffa and Lydda was torn up. Trains have been running twice a week only between Jerusalem and Ramleh, and very often they were needed for the military, so that civilians were unable to use them. Therefore, travelling between Jerusalem and Jaffa has had to be by carriages, and only five of these have been running owing to the absence of horses. All animals for transport—camels, mules, horses, and donkeys—were long ago taken for military service, and this has greatly added to the general distress.

Enormous numbers of olive trees, and also the eucalyptus trees near Jaffa and the oaks of Galilee, have been cut down, and the wood used as fuel on the railway, and also to make charcoal for the engines used for the irrigation of the Jaffa orange gardens. These engines were formerly worked by petroleum, but this is now unobtainable; and the orange gardens, formerly so flourishing, are suffering very much for want of proper irrigation. The distress and lack of transport were so great that in the early spring many of the fellaheen women carried baskets of oranges, containing 120 oranges in each, on their heads all the way from Jaffa to Jerusalem in order to earn a few piastres.

Scarcity of Commodities.

The peasants who used to plant "simsim" (sesame), which was formerly a profitable crop, now plant "durra" (maize), from which the cheapest kind of flour is made. Even maize flour and barley flour are so expensive that very little at a time can be bought. There has been hardly any lighting at all after sunset, as there is no petroleum, and olive oil and sesame oil are very scarce, and are needed for food. The price of all the necessaries of life is enormous. Sugar costs £1 (Turkish) per rottle (about 6 lbs.), a packet of candles 24 piastres, and petroleum, if obtained at all, is worth from £6 to £10 (Turkish) per box. Other articles are equally expensive, e.g., the commonest calico costs 12 piastres per pic, and a reel of sewing cotton is worth 30 metalics (about 1s. 3d.).

In the spring there was an outbreak of typhus, and there were not only many deaths amongst the natives, but several well-known German and Greek residents died of it.

Jerusalem to Damascus by Road.

The most astonishing change is the vastly improved number and condition of good carriage roads in the country, made, of course, for military purposes. The chief new roads are the following:—(1) From Hebron to Beersheba, and twenty miles beyond it to the south; (2) from Latron to Gaza (this road runs south-west); (3) from Jericho to Salt and Amman, eastwards; (4) the important road northwards, from Nazareth to Tiberias and a Jewish colony called "Jaouneh," crossing the Jordan at the bridge of "Jisr Benât Yakoub" to Damascus. As Nazareth was already linked with Jerusalem by a carriage road before the war, it will be seen that a carriage can now travel all the way from Jerusalem to Damascus. This journey was actually accomplished last April by a motor-car in *one day!* The car started from Jerusalem at 5 a.m., stopped for lunch at Tiberias, and reached Damascus at 7 p.m.! The same journey by train takes considerably longer, as one has to go by rail from Jerusalem to Lydda, then viâ a German colony called "Wilhelma" to Tut Karam, then the line turns westward to the Valley of Nablus, and viâ Samaria and Dothan to Jenin. This way of travelling between Jerusalem and Damascus needs two days, and there is a train service twice a week. At Damascus the train meets that of the German "Berlin to Beersheba" train service!

CYPRUS NOTES.

(From Our Own Correspondent.)

Cyprus, August 30.

Commandeering of Mules.

By order of the High Commissioner, in a *Gazette* of August 22, island mules are requisitioned for military purposes. All owners of mules are required to hold them in readiness for sale at appointed times and places, to be notified. The prices will be fixed by a committee appointed by the High Commissioner, and will consist of an official of the Colonial Service, a military officer, and one native member. Any person failing to obey the order is liable to a fine or imprisonment, or both.

The Legislative Council.

It is probable that in the approaching elections there will be sharp contests in some of the districts. The island is divided into three electoral divisions, comprising the linked districts of Nicosia-Kyrenia, Famagusta-Larnaca, and Limassol-Papho. In each division one Mohammedan and three non-Mohammedan members are elected. The High Commissioner and six non-elective members bring the total of the Assembly to eighteen. In several districts the present members will seek re-election, but will be opposed by fresh candidates. Canvassing is being actively carried out, especially at Larnaca, where two new candidates are to be proposed.

Archiepiscopal Election.

Difference of opinion still prevails. The proposal of the *Phoné tés Kypron* ("Voice of Cyprus") that the Archimandrite Chrysastomos Papadopoulos, Professor at Athens, should be elected has found many supporters; while many are in favour of the Bishop of Kition. The *Anagennesis*, of Cairo, approves of the *Phoné's* choice, but considers it unlikely that the Archimandrite would accept the appointment, and that he may be "reserved by Divine Providence for another important and distinguished position." There is still a great hope that there will eventually be unanimity or a very decided popular majority for one or the other of those named.

Troubles of Cypriot Emigrants.

Notwithstanding the warnings given by the local Press, large numbers of Greeks have left the island, chiefly for the United States, viâ Egypt, Marseilles, or the Piræus. Many of these have met with difficulties, which include the failure to obtain passages, as promised by agents in the island. Some, over 100, have been kept waiting over a fortnight at Port Said, and are unable to proceed for want of funds. Others are kept at Alexandria, and are in sorry plight. It must be said that many have only themselves to thank, or, rather, blame, for their rashness in leaving Cyprus at such a time, in spite of many cautions. The emigrants include some of the Greek Government officials, the low rate of whose salaries has led them to risk seeking a living elsewhere.

LETTERS TO THE EDITOR.

A SUGGESTION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In view of "Corsair's" philanthropic suggestion in your issue of August 4 that funds should be raised in England for the benefit of the Turkish and Laz refugees evicted from the Armenian provinces, may I press the following further schemes on your attention?—

1. Funds and Armenians should be collected for the benefit of the distressed and unoccupied Kurds, whom "Corsair" most unaccountably omits from his list of Oriental beneficiaries of our charity.

2. Employment to be found for the many Macedo-Turkish "Chetés" and Macedo-Bulgar "Comitajis," who, owing to the unfortunate fact that war is war, are likely soon to be deprived of their means of livelihood.

3. Since one of these days a number of personages of importance now resident at Constantinople are likely to lose their posts and emoluments and be reduced to penury, may I suggest that a fund entitled the "Distressed (Turkish) Gentlemen's Fund" be opened, and that the proper departments of State be requested to sanction the purchase, through the U.S.A. Ambassador at Constantinople, of buildings in which these unhappy victims of the war, who will have lost their little all, may be housed?—I am, etc.,

Gyotumdensor,
(Brother of Aristotle of Stagira).

August 20, 1916.

The anticipated meeting of the Mesopotamia Commission, of which Lord George Hamilton is chairman, has been postponed from the present week to next, and it is proposed that the Commissioners should sit again in private next Tuesday.

The Commission on Commercial Policy will, it is understood, not be sitting again for a few days. The chairman of this Commission is Lord Balfour of Burleigh.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, August 17.*

War in the Air.

Last week the political atmosphere was indeed heavily charged. You could almost smell powder! Nervous systems were strained to snapping point, and one quite had the impression that it was "touch and go." None the less a general relaxation set in and the critical moment passed. As a result of the tremendous pressure brought to bear on Sovereign and Government by the German and Austrian representatives? Who can tell? There are those who think that the question of compensation still constitutes the main obstacle to Roumanian intervention. The Russian advance, on the one hand, with the offensive from Salonika, would appear to be a guarantee for Roumania, and should, therefore, if anything, hasten a change in her attitude; on the other hand, the solution of the diplomatic bargain would seem to have suffered some further delay as a result of Russian successes.

Now, once more, there is war in the air, and I am inclined to believe that we are dealing with the genuine article this time, in spite of our all having had the opportunity of growing sceptical in the course of the last two years, during which there have been more false alarms than I can remember. It seems that the Entente Ministers have not been inactive either. They still had a card to play, and, unless I am misinformed, they have played it, and won what they stood to win. Why was this card not played before? Has the new recruit to the diplomatic ranks of the Entente in Bucharest brought with him wider powers than were possessed by his colleagues?

Signs and Symptoms.

August 1 being the anniversary of Tsar Ferdinand's accession to the throne, a *Te Deum* was celebrated at the Bulgarian chapel. The Boche Ministers were present at this solemn ceremony, as well as M. de Monteforte, the Persian Charge d'Affaires, who manifestly does not shirk the responsibility of committing his country.

Receiving on the same day the congratulations of a deputation of Bulgarian schoolmasters, M. Simeon Radeff is said to have exhorted them to hold themselves in readiness to leave shortly for Kronstadt: for the Hungarian frontier, be it noted, not the Bulgarian.

The German and Austrian Ministers have despatched a considerable portion of their belongings across the frontier, inclusive of the Count's offspring and other youthful members of these Legations, who, "having terminated their cure in Sinaia, have no reason for prolonging their stay in view of the existing epidemic of scarlet fever." This morning's paper informs us that during the last three days no less than 500 Austro-Hungarian families have left the capital and taken the way of the frontier. This still leaves us with some sixty thousand spies. Do those who have left represent the honest or the incompetent section of the Boche community, or is it that they have already accomplished their unwholesome work?

Bulgar Impertinence.

In fulfilment of orders given by the Government all the barges and lighters belonging to the Roumanian river service have been withdrawn from Bulgarian ports and towed into Roumanian waters. The lighter at Rustchuk could not be removed owing to its occupation by Bulgarian soldiery and the arrest of the Roumanian lightermen.

For some time past the Bulgarian authorities have refused permits to the functionaries of the Roumanian river service to leave Rustchuk. The Roumanian Legation in Sofia, acting upon instructions received from Bucharest, has made representations for the release of these employees. The Bulgarian Government have replied that they will in no case be allowed to leave Bulgarian territory for the present, their retention being dictated by military considerations. A similar communication has been received by the Consul-General at Rustchuk, who has himself been refused authority to cross the frontier. These restrictions are explained, though not justified, by the assumption that the individuals in question are up to a certain point cognisant of the military preparations which have been made along the frontier.

Last week there arrived at Rustchuk no less than eleven tugs each with five barges in tow containing troops and munitions of war. Others have since been seen passing down the river with pontoons for floating bridges. The arrival of Turkish troops is also reported. On the other hand, it is said that the Austro-German troops who are so very much in evidence are in reality only humble Bulgars in disguise, promenaded from point to point in the puerile affectation of terrifying the Roumanian General Staff.

Provocation—or Simply Bluff?

The German and Hungarian Press, but especially the Bulgarian, having first made advances of a flattering nature, followed by advice purporting to convey an impression of disinterested concern, both of which were ill received in Roumania, has now broken out into invective of the most undisguised variety, accompanied by frightful threats of what will happen to Roumania in case of her having the temerity to turn against her ancient benefactors, the Central Powers. Many of the Roumanian papers are inclined to regard the doings of the Bulgars as unmistakable acts of provocation. On first sight one would judge this to be overrating their audacity and feel tempted to disregard the whole matter as simple bluff. But they may not be far wrong after all, for we must remember that the Bulgars would scarcely do anything without the authority of their masters. And it is possible that Germany, deeming a prolongation of Roumanian neutrality to be impossible, may be endeavouring, by wilful acts of provocation, to precipitate the crisis prematurely, in the hope of thus embarrassing the Roumanian General Staff.

August 24.

Count Czernin's Diplomatic Bag.

In one of my last letters I spoke of the exodus of Huns, and mentioned that the Austro-Hungarian Minister had sent his children over the border. There occurred in connection with their journey an incident which is also significant in its way.

The personnel accompanying the Minister's family was armed, of course, with *laisser-passers*, but apparently had no permit for the export of food-stuffs. Now it happened that the Customs officer found among their trunks 50 kilogrammes of flour and a quantity of bacon and fat, which he was unkind enough to confiscate. Complaints were, of course, made in high quarters, but the official was found to have done his duty.

We are sorry for the Count, for the accident is a little humiliating for the representative of his Apostolic Majesty, Emperor of Austria and King of Hungary. Also for the Count's relations in Austria, who, before this annoying *contretemps* took place, were without a doubt looking forward to a change in their diet.

The Small Change Crisis.

The speculators in small change have, it seems, got themselves into quite serious trouble, for according to a resolution taken at the Ministry of Finance all one-franc and two-franc pieces will be considered without value from September 14 (N.S.) onwards, the National Bank at this date putting into circulation paper money of one and two francs to the value of twenty-five millions. Speculators will thus be obliged to get rid of all the silver coin they have accumulated, amounting in some cases to many tens of thousand francs, within a very brief period, or keep it for good. There are actually in circulation eighty-six millions in silver coin and twenty-five millions in notes of five francs. The current silver coin will subsequently be replaced by coins bearing the effigy of King Ferdinand.

* Delayed in transmission.

NOTES FROM BULGARIA.

(From Our Correspondent.)

Bucharest, August 24.

The accounts of the state of affairs in the Bulgarian army which filter through, despite the closing of the frontiers, show that there is a widespread feeling of discontent. The soldiers have not received any pay for six months. They are badly fed, and every movement of troops has to be made by road, at all times execrable, as the railways are used entirely for the transport of ammunition, though German and Austrian troops, when moved, are invariably taken by rail, while they are regularly paid and well fed.

This difference in treatment is naturally very galling to the Bulgarians, and quarrels between the soldiers of the two armies are of frequent occurrence. On more than one occasion these quarrels have led to bloodshed.

Ravages of Cholera.

Though every effort is made to conceal the truth, the few persons coming from Bulgaria agree in their accounts of the severity of the cholera epidemic, which is making great ravages, especially among the Bulgarian troops occupying Eastern Macedonia. On the appearance of any symptoms of the malady the patient is hurried away, his death being reported as due to any illness but the real one.

Scarcity of Wheat.

At a recent sitting of the Sobranje, Deputy Dimitroff addressed an interpellation to the Government regarding the inferior quality of the bread being supplied to the public in Sofia, Philipopolis, and other Bulgarian towns. M. Radoslavoff, in reply, stated that in view of the danger of the country being denuded of wheat, the Committee of Public Supply had issued an order providing for the addition of a certain quantity of bran and maize to the flour used for bread. On inquiry, however, it had been found that, in the larger towns, the bakers had exceeded their instructions, and by various mixtures had reduced the quality of bread to such an extent as to render it unfit for consumption. M. Radoslavoff observed that there was no actual scarcity of wheat, sufficient supplies remaining from the old crop, and he promised to take stern measures against the offending bakers. The fact remains, however, that good bread is unobtainable, and the prices fixed for wheat scarcely bear out the Premier's assurances as to the abundance of supplies.

Cattle in Serbia.

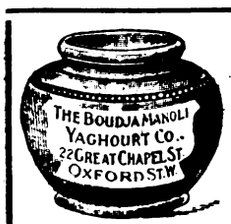
The Ministry of Finance has published the result of the census of animals taken in the portions of Serbia occupied by Bulgaria. In Old Serbia, Macedonia, and Western Thrace there were at the end of May 2,072,800 sheep, 722,300 goats, and less than 450,000 oxen and cows. The region most rich in cattle is Monastir, after which comes Nish.

BRITISH PRISONERS IN BULGARIA.

We are glad to learn that the fund raised by Madame Jonescu in aid of British prisoners in Bulgaria reached a total of £184 2s. The account of the fund, which is now wound up, was taken over free of charges by the Bank of Roumania, which also very kindly undertook the remittance of the money.

TURKEY'S PROVISIONAL STAMPS.

Mr. Fred. J. Melville writes in the *Telegraph*:—Turkey has practically exhausted the patience of collectors in neutral countries by her excessive output of provisional stamps. A Swiss correspondent tells me there was a great rush for the first dozen or so of the Turkish varieties, but now that the number of different stamps issued in connection with the war has increased to 78, very few collectors are troubling to keep pace with the stamp-issuing activities of the Turks.



THE WORLD-FAMOUS
YAGHOURT
may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.
Also LEVANT PRODUCE:
Tomato Paste, Black Olives, Locoums, Damias, &c.
Recommended by Mrs. Frank Barker.

BERLIN-BAGDAD RAILWAY.

Sir Mark Sykes and "Kultur."

At the invitation of Mr. I. W. Raymond and the Overseas Dominions War Service Contingents, 200 wounded soldiers from every colony of the Empire were entertained at Caxton Hall last Saturday afternoon. General Sir Sam Hughes presided.

Colonel Sir Mark Sykes, M.P., spoke on "The Past, the War, and the Future." He said that while not knowing the day or the hour, it was impossible for one who had gravitated for ten years between Berlin, Vienna, Constantinople, and Baghdad, as he had done, not to have felt that the war was coming sooner or later. He was not in the least criticising the people who thought it was not coming, but he thought the more people knew the ground the more certain they were that the war was coming.

The three great things between 1815 and 1915 were cosmopolitan finance, international socialism, and "kultur." "Kultur" took all the bad of past civilisation and none of the good. It had no law, no chivalry, no concessions to smaller nations. It had taken the Napoleonic military system, and its ruthless order, discipline, and mercilessness were taken from the feudal caste and the War Lord. Its purpose to develop upon all these lines was nothing more or less than absolute world-control.

Sir Mark Sykes referred to the Berlin-Baghdad Railway as playing the big part in the idea of world-domination, and said no heights of heroism and no depths of villainy were too high or too deep for the discipline of "kultur" to rise to or sink to. They had no moral at the back of them, but we refused to see the world enslaved. The kennel might be comfortable and the chain of gold, but we wanted none of it.

"Kultur" had enslavement at the back of it, and meant nothing but that. It was belly-worship, soulless, cruel, unrighteous, and enslaved. The struggle against it must be long and bitter, because so long as that Berlin-Baghdad combine held together there could be no guarantee for the future peace of the world. Germany could pay a big price. She could give Poland, Belgium, Alsace-Lorraine, Mesopotamia, etc., and yet her idea would not be broken. The Berlin-Baghdad railway would be untouched, and she would have a land communication to Africa and Asia, whilst we were left with the sea, menaced by submarines. We had got to break that spell and that belief in world-domination. The German would become civilised when he knew that world-domination was false, and could not be gained. He would never lose his illusion, he (Sir Mark Sykes) believed, until the idea of that line which he had been thirty years intriguing for was taken from him. The intrigues of peace were no less creditable than those of war. The railway was to have been built by 1917, and he believed that was the real war date. The Allies were fighting for all that "Kultur" was fighting against, and the great thing for us was the solidity in the future of the alliance between England, France, and Russia. The labour powers of the Entente must have an agreement.

"REORGANIZING" THE ARMENIANS.

The Turkish Government, writes a correspondent of the *Manchester Guardian*, after having massacred half a million Armenians in the course of last year, has recently undertaken the task of "reorganizing" the fundamental statutes which govern the Armenian people and the Armenian Church in Turkey.

According to a telegram published in the *Hamburger Nachrichten* of August 15, the Turkish *Gazette* at Constantinople has published a new "statut organique" of the Armenian Patriarchate in the Turkish Empire. The first article of the new statute provides that the old historical catholicates of Sis (in Cilicia) and Akhtamar (an island in the lake of Van) have been suppressed and their functions amalgamated with those of the Armenian Patriarchates of Constantinople and Jerusalem. The title of the spiritual head of Turkish Armenians must henceforth be granted to the latter. All intercourse between the Turkish Armenians and the Catholicos of Etchmiadzin is entirely prohibited. The seat of the Armenian Catholicos-Patriarch of Jerusalem will be situated in the Convent of the Holy Jacup Mariakub (*sic*), and his jurisdiction will extend over all Armenians throughout the Ottoman Empire. The Catholicos-Patriarch will further enjoy the right of communicating directly with the Turkish Minister of Religions (Kultusministerium) in regard to matters of a religious character.

The new statute goes on to regulate the procedure of the election of Patriarch; the constitution of the Church Council and the Mixed Council; the relationships between the Patriarch and the administrative Assembly of the Armenian people in Turkey, as well as those between the former and the provincial bishoprics. It may be interesting to recall that the Catholicos residing at Etchmiadzin (in Russian Trans-Caucasia) is the spiritual head of all Armenians, by whom are ordained all bishops for Turkish Armenia. The constitution governing Turkish Armenians and their relationships with Turkish authorities was granted by a Firman in 1863. It is a body of liberal rules and statutes by which Armenians in Turkey manage their national institutions—from the election of the Patriarch down to a marriage dispute. Perhaps the new statute published by the gang at Constantinople is meant to abrogate the Constitution of 1863 and upset all its provisions.

TANGIER TO TEHERAN.

I have been taken gently to task by a correspondent—whose letter is published on another page—for what he terms my "philanthropic suggestions" anent helping Moslem refugees in Asia Minor, at Tiflis, and elsewhere. If, as I suspect after reading his letter, the writer regards me as a rabid Turcophile, I am sorry. As a matter of fact, I am nothing of the sort. The Turks, like the Bulgarians, have made a huge mistake; they must—and will—be hammered for it; and, in my opinion, they richly deserve what they will get. But when we think of them in this way we are surely thinking of the responsible parties—the Envers and Talaats in Turkey, and Ferdinand, Radoslavoff, Tontcheff, and the rest of the gang in Sofia. These men have sacrificed everything and everybody to their own ambitions. They merit no sympathy at all, and assuredly they will receive none from me, whatever fate befall them. But for their dupes, the peasants who have been so tricked and deceived, I find it impossible to avoid feeling a certain amount of pity; and as to the women and children, who suffer perhaps more than the men, surely "Gyotumdensor" would not wish that they should be debarred from receiving help, even from their enemies! In any case, I was, after all, only passing on an appeal, originally issued by Mr. Phillips Price and M. E. Zolanievicz, who had seen for themselves what the poor folk on whose behalf they pleaded were suffering, and who, presumably, felt that it was a suitable case for the forgiveness of our enemies, even though they happened to be Turks.

***

This is not the first time that it has been suggested that I take too favourable a view of the Turk. So I may as well make it clear, once for all, that I am not concerned to defend the Turks, as a race, or to depict them as perfect. My attitude may be summed up in Rudyard Kipling's lines:—

I do not love my Empire's foes,
Nor call them angels; still,
What is the sense of 'atin' those
'Oom you are paid to kill?

True, I am not "paid to kill" any one; and, unfortunately for myself, I am unable to take any active part in the operations now afoot. But, for all that, I do *not* "love my Empire's foes," and have not the slightest wish to represent them as "angels," which they certainly are not. All I have done, I think, is to pass on stories that have reached me from friends, known and unknown, who have actually faced the Turk, and found him not quite so black as he is painted. I have carefully refrained from "touching up" these stories, and every one of them is, to the best of my belief, trustworthy. It strikes me as strange that nine out of ten men who have fought the Turk speak well of him (as a fighter and an enemy), and that the tales they tell of him are so favourable. But there the fact is, and I cannot change it.

***

Only two days ago, for instance, a lady, whose word would certainly not be doubted by any of my readers or critics, told me of an incident narrated to her by an Englishman who had been through the Gallipoli campaign. This Englishman was one night occupying an advanced post, when he saw a Turk crawl out of their lines and into a hole in No-Man's-Land. For some reason, the watcher did not fire, but informed the man who relieved him of the incident. To make a long story short, for three nights running the Turk was seen to crawl to this particular hole; then, on the fourth day, the British advanced, and in the hole found one of our own wounded, to whom the Turkish "sniper" had nightly carried food and drink. Such an incident speaks for itself. Again, I was talking recently to a friend—an Englishman, who had spent some fifteen years in Turkey, and who certainly does not greatly love the Turks—who is serving with the Australian forces, and I asked him what the Australians thought of the Turks and their fighting. "Well," he replied, "it is a strange thing, but they all swear that he is a straightforward enemy and a clean fighter."

***

For all that, I am quite prepared to believe that there is another side to the picture. For instance, it appears to be an established fact that out of nearly 10,000 British reported "missing" at the Dardanelles, an alarmingly small number—barely 400, I am told by one who ought to know—have turned up alive, as prisoners. The Bulgarians, on the other hand, have, I believe, produced over 70 per cent. of the missing. That seems to indicate that "bono Johnny" was not always quite so "bono" after all.

***

The report, sent home by the *Pall Mall Gazette's* Cairo correspondent, that a steam roller, fitted with a gorgeous armchair of slab, was amongst the spoils captured at El Fasher, opens up rather interesting possibilities. It is all very well to suggest that Ali Dinar used the dainty vehicle as a private motor, but in view of all the talk—and writing—about "*The* Steam Roller," I am inclined to suspect that he was anxious to do a bit of "rolling" in his part of Africa. Possibly he pictured to himself a triumphal progress to Khartoum and Cairo, with rows of prostrate officials—Anglo-Egyptians—spread before his own particular car of Juggernaut.

***

The letter, "written on papyrus thousands of years ago" by a young soldier from Alexandria to his mamma, and published recently (in translation) in a contemporary, is a very human document. The youngster, I observe, began by asking for money, and by stating that the four hundred drachmæ he had are "all gone"; he goes on to remark that his father did not give him a penny; and he contrasts this with the good fortune of a certain Valerius, whose mother sent him (the ancient equivalent of) cholera belts, oil, and baked meats, and two hundred drachmæ. He pleads: "Send quickly," adding that he has already had to borrow from a comrade; and he asks for a pair of "shorts." And, be it observed again, he writes to *his mother*—not his father, who seems to have been a trifle close-fisted. Yes, it was a very human epistle, and might easily have been sent home from the Front a week ago.

CORSAIR.

SEPTEMBER—THE MONTH OF THE SUDAN.

The month which is now drawing to a close is historically one of the most important in the calendar of the Sudan. It was in this month, in 1882, that was fought the battle of El Obeid, when the Egyptian troops proved unexpectedly successful, defeating the Mahdi's troops for the first time in their experience, under that chief's leadership. On the 24th of the month a relief column of about 2,000 men was despatched from Dueim under Ali Bey Satfi, and was directed on Bara. It had two engagements with the Mahdists; in the first of these it was successful, but in the second it was defeated with a loss of some 1,130 men, the survivors making good their escape to Bara.

On the 15th of this month, in the same year, had occurred the battle of Tel-el-Kebir, a place situated about sixty miles north-east of Cairo, and the scene, some fifteen hundred and fifty-four years before, of the defeat of the Egyptian King Taharka, by Esarheddon, the Assyrians thereafter overrunning the whole of Egypt. In the more recent battle of Tel-el-Kebir the late Lord (then Sir Garnet) Wolseley defeated Arabi Pasha after that ambitious Egyptian officer had organised a rebellion against the Khedive, the object of which was to put an end to foreign interference in Egyptian affairs. Two days later the British occupied Cairo, and from that time to this British garrisons have been established there. Two years later, in the same month, the unfortunate Colonel Stewart, of the 11th Hussars, was foully murdered at Hebba, after being decoyed ashore in company with Power, Herbin and some Greeks, who were all despatched on the road to Cairo by Gordon.

The year of 1896 witnessed, in the same month of September, the occupation of Dongola, the Egyptian Army finding their entrance made easy by reason of the Mahdists, who at this time were beginning to show the same falling away in *moral* as the Germans are displaying to-day, refusing to meet them in the open, and bolting southwards in a disorganised rabble. Two years later, September, 1898, the important town of Gedaref was captured, being seized by a small column from Kassala, under Colonel Parsons, after a hazardous and successful fight. Yet again, during the same month, but a few days earlier, Wad Medani had been occupied. But the most important of all events in this momentous month was the Battle of Omdurman, the scene of the late Lord Kitchener's complete victory over the Khalifa. The eyes of the visitor to the Sudan are always intuitively first directed to the long, low ridge of the Kerri hills lying to the north, which mark the scene of this great and final struggle against the Dervishes, the winning of the contest freeing the Sudan for ever from barbarian rule. Other and less important events in the once unhappy and stormy history of this now prosperous country associated with the fateful month of September are the occupation of Berber in 1897, the action at Hafir in 1896, the occupation of Roseires in 1898, and the fall of Kassala in 1885.

NEAR EAST BOOKSHELF.

ON THE GALLIPOLI PENINSULA.*

In the volume under review Mr. Creighton has given us the fruits of his diary, kept while he was with the Twenty-ninth Division, first in England and Egypt, and then at Gallipoli, where he stayed until August 9, when he was invalided from the Peninsula. At that point his narrative stops, for though he afterwards returned to Mudros, and was engaged in organising a scheme for recreation and canteens, he had no further official connection with the Division. Naturally, his diary is very largely concerned with the actual operations, and as it would be an impossibility for any individual, however situated, to be able to see more than a section of the fighting, his narrative is elaborated by several excellent accounts of the various operations by officers concerned, some of whom were subsequently killed in action. It is not, however, solely on account of the glimpses which it gives of the fighting that the book is of interest. Mr. Creighton is evidently a keen student of men and affairs, and his diary is the best possible testimony to the acuteness of his observations. Before being attached to the Twenty-ninth Division he was with the New Army, and he shows that he was greatly struck by the contrast between the regular troops and those who have only joined for the war. Whether he is right, and there is any difference, and, if so, whether it is merely of a superficial character, must remain a moot point. One interesting question suggested by a perusal of his diary is the extent to which religion enters into the life of a soldier. Probably it depends on the individual as to whether or not war results in a quickening of the spiritual sense. At the beginning of his book Mr. Creighton confesses he was far from optimistic, as he found the regulars more difficult to approach than the men of Kitchener's Army, and he wrote:—"I feel quite at sea as to how to do any direct religious work with them, and almost inclined not to attempt any, but just to try and get to know them." It should be said, however, that his later experiences were of a very different character. Throughout Mr. Creighton was filled with admiration for the Twenty-ninth Division and the other troops which took part in the difficult operations in the Peninsula. In one of his many tributes to them he says:—

> There are many other divisions, both in France, in the Dardanelles and elsewhere, which have covered themselves with imperishable glory, but it may be doubted whether any have played a more striking, picturesque, and inconceivably difficult part than the 29th and the Australian and the New Zealand contingents. From the beginning of operations till the final close they continued on the peninsula with practically no rest and no change. They were continually in the forefront of the battle. Their casualties were appalling, and their ranks were thinned by sickness and frost-bite. The regiments had continually to be made up with large drafts from England, and their officers were constantly changing. . . In the eyes of the world the whole expedition appears to have been a complete failure. But those who saw anything of the valour and endurance of the officers and men who took part in it cannot accept this verdict. They conquered where others would have failed; and whoever may be blamed by future historians for the failure to get through to Constantinople, it will not be the men who did the fighting.

SONGS OF THE DARDANELLES.†

Mr. Lawson is an Australian singer, and his note in these verses is clear, breezy, and patriotic. This is not his first book; he has sung before, and whilst he is something of a rough-and-ready singer he makes the true appeal, and to an audience that does not sit in boxes, and likes to hear songs of things it knows and reads about—of the great war and how the children of the Colonies have responded to the Motherland's call, of how they fight, and how they die, and of our great ally, Russia, and her people. He understands "Ivan," and sings a song for him. He understands the weakness and the strength of the English gentleman, and his verses on "The Lady of the Motor Car" shows that he understands the Englishwoman in times of peace and in times of war. He has a song for the Salvation Army, and of its good works around the world. But the war note is predominant, and runs through all his lines.

THE LEBANON AND THE ALLIES.‡

This pamphlet, translated from the French, is an eloquent—and thoroughly Oriental—plea for consideration of the position of the Lebanon by France and England. Although in some passages the meaning is obscure and some of the statements can hardly be accepted literally, yet the author gives a number of facts regarding the Maronites which are by no means widely known in England. As an example of the author's style a passage near the end of the pamphlet may be quoted:—

> Thus, on the summit of the White Mountain, illumined by the shining halo of Christ, one can picture, always near its celestial origin, a glorious battalion looking upward and grouped around the Patriarch at the foot of the Tree of the Cross. Touching and evangelic vision! People unique and magnanimous, who covered Lebanon with thy life-blood for the triumph of truth, of justice, of "the great consolation and the great light of humanity."

THE EASTERN ORTHODOX CHURCH.*

In this, the least expensive as well as the most recent, edition of the Divine Liturgy of St. John Chrysostom, the editor deals with his subject from its starting-point. He presupposes that the reader possesses no specialised knowledge of the worship of the Orthodox Church, but only a normal acquaintanceship with the liturgical customs of England and the West generally. A general description of the service is first given, with details concerning the vestments of the clergy and the instruments used by them. Then the service is printed in an English translation, with additional footnotes, and the parts said by the deacon *during* the recitation of the priest's prayers are clearly marked, so that an English worshipper is less likely to lose his place than usual.

The illustrations are of special interest, as they are, for the most part, entirely new and are taken from sources which usually are not accessible. There is a frontispiece of his Holiness Germanos V., Bishop of Constantinople and New Rome and Œcumenical Patriarch. Other illustrations show the Holy Table with its ornaments and the Prothesis Table with its instruments. Another picture shows a priest and server vested for the liturgy. Altogether this edition is noteworthy in several respects, and it will be valued by all those who are interested in the Churches of the East.

BOOKS RECEIVED.

The Holy Qurʾan, with English Translation and Explanatory Notes, etc. Part I. Published under the auspices of Hadrat Mirza Bashir-ud-Din Mahmud Ahmad, the "Second Successor of the Promised Messiah." By Aujusan-i-Taraggi-i-Islam, Qadian, Punjab, India.

Through the Serbian Campaign. By Gordon Gordon-Smith. With a preface by the Serbian Minister in London. (Hutchinson and Co. 12s. 6d. net.)

The Liturgy of the Eastern Orthodox Church. With an Introduction and Explanatory Notes by H. Hamilton Maughan. (The Faith Press, 2s. 6d. net.)

Given in Marriage. By B. M. Croker. (Hutchinson and Co. 6s. net.)

A BRITISH RED CROSS STAMP.

All the Allies, with the exception of Serbia and Montenegro, have issued special stamps, which sell at a premium, in aid of their war charities. By this means enormous sums have been collected in farthings and halfpennies in Russia, France, Italy, and Belgium for the wounded or for the soldiers' widows and orphans.

British stamp-collectors have designed a very beautiful war stamp, which has been engraved and printed gratuitously by Messrs. Perkins, Bacon and Co., the printers of the first postage stamp ever issued, the historic "Penny Black" English stamp of 1840. These war stamps are being sold at a penny each, or 6d. the set of six different colours, by the National Philatelic War Fund, 151, Strand, W.C. The proceeds go to the British Red Cross and St. John of Jerusalem. The design is emblematic of Britain taking up the sword of justice, and the Philatelic Secretary to H.M. the King, in accepting the gift of a special die proof of the stamp for the King's collection, writes: "His Majesty is very pleased with the design, and thinks it most appropriate."

THE TRUTH ABOUT THE DARDANELLES

By SIDNEY A. MOSELEY

(*Official Correspondent with the Mediterranean Forces*).

"Largely because it is so controversial, Mr. Moseley's book makes excellent reading."—*The Times*.

"Holds that the Evacuation was a profound mistake, because, just when we had broken the moral of a brave enemy, we caved in first."—*Daily Graphic*.

"This is an extraordinarily interesting book. Mr. Moseley has given us plenty of stories of the fighting, finely told and often extremely dramatic."—*The Globe*.

27	14	Wednesday	29	29
28	15	Thursday	30	30

Next Tuesday is the birthday of the King of Denmark, who was born at Charlottenlund on September 26, 1870.

Next Thursday is the birthday of the Queen-mother of Portugal, Queen Amelia.

Count de Salis, his Majesty's Envoy Extraordinary and Minister Plenipotentiary, was received in audience by the King at Windsor Castle on Monday, and kissed hands upon his appointment as Chief of the Special Mission to his Holiness the Pope.

M. Yovan M. Yovanovitch, the newly-appointed Serbian Minister to the Court of St. James, and Mme. Yovanvitch arrived in London on Sunday night from Paris. They were met at the station by M. Voislav Antonievitch, the acting Chargé d'Affaires, M. George Todorovitch, M. Pavle Karovitch, Colonel Milivoj J. Nicolaievitch, C.B., Military Attaché, M. Yovanovitch, Assistant Military Attaché, and some of the leading members of the Serbian Colony in London. The newly appointed Minister will present his Letter of Credence to the King in due course.

M. Yovanovitch was visited on Monday by several members of the Serbian colony.

Prince Cantacuzene of Roumania has arrived in London from Paris.

Prince and Princess Callimachi of Roumania have left London for Paris.

Captain Matila Costiesco-Ghyka, of the Roumanian Legation, left London on Saturday for Bucharest. Several members of the Legation were at the station.

Madame Lahovary, wife of the Roumanian Minister in Paris, has returned to the Legation there.

M. Alexandre V. Georgévitch, First Secretary to the Serbian Legation, has left for the Continent.

It is announced from Cairo that the Sultan Hussein will preside at the forthcoming ceremony of the departure of the Holy Carpet for Mecca.

It is stated that his Highness will return to Cairo from Alexandria for the winter months about the end of October.

The Sultan has conferred the Grand Order of the Nile on M. Defrance, French Diplomatic Agent and Consul-General in Cairo.

According to a Vienna telegram, the King and Crown Prince of Bulgaria arrived at the headquarters of the Archduke Karl on September 15. The guests visited the front of General von Kövess and watched the operations.

President Poincaré has addressed his congratulations to the Prince Regent of Serbia on the recent success of the Serbian Army.

It is reported from Berlin that the Roumanian officials in Constantinople, Sofia, and Vienna have arrived at Sassnitz, and will continue their journey with members of the Roumanian Embassy in Berlin to Sweden. Dr. Beldiman, the Roumanian Minister in Berlin, intends to go to Denmark.

The King of Italy has conferred upon Vice-Admiral Sir A. H. Limpus, Admiral-Superintendent of Malta Dockyard, the Grand Cross of the Order of the Crown of Italy.

Lady Georgina Buchanan, wife of the British Ambassador in Petrograd, has received from the Empress Marie Feodorovna the Ladies' Order of St. Catherine for her services to Russia.

Sir Horace Rumbold, the new Minister of Great Britain, was received at Berne on Monday by M. Camille Decoppet, President of the Swiss Confederation, and M. Hoffmann, Member of the Federal Council and Chief of the Political Department, to whom he presented his credentials.

In Corfu, where the diplomatic representatives accredited to Serbia are provisionally stationed, Countess Sforza, wife of the Italian Minister, gave birth to a son.

Lady McMahon is returning to Egypt by the P. and O. steamer Malwa, sailing from London on the 29th inst.

Sir William and Lady Brunyate are among the passengers by the P. and O. steamer Mongolia, which left London for Port Said last Friday.

The Right Rev. the Bishop in Jerusalem and Mrs. and Miss MacInnes are returning to Egypt by the Bibby Line steamship Leicestershire, which sails from Liverpool on the 28th inst.

The *Egyptian Gazette* announces the engagement between Lieutenant G. de Lacy Wooldridge, R.F.C., eldest son of Lieutenant-Commander L. J. Wooldridge, R.N.R., and Gwendolen Mary, daughter of the late Mr. James Meredith Austin and Mrs. Austin, of Cairo.

In our issue of the 8th inst. we announced that Captain J. B. Barron, Worcestershire Regiment, had been awarded the Military Cross. His friends will be delighted to hear that now, only a fortnight later, he has won his bar to it.

News has been received at Alexandria that Second Lieutenant C. E. Wilson, Irish Rifles, a brother of Mrs. Luard, of Alexandria, who had been reported killed in France, is only wounded, and is now progressing favourably.

Mr. O. Bentley, formerly Second Inspector of the Nuba Mountains Province, and stationed at Talodi, has been promoted Senior Inspector of the same province, under the governorship of Major R. S. Wilson. Mr. Bentley's services date from the month of September, 1905, when he first joined the Sudan Administration. The Nuba Mountains Province was separated from that of Kordofan, and given a distinct administration, in January of 1913, Talodi being made the capital. The total area is 31,560 square miles, and the population is estimated at about 35,000. The other inspectorships are at Kadugli and Dilling.

Captain J. J. Garstin, who has recently been transferred to the Sudan Government, and has just returned to that country from leave, has been appointed Second Inspector of the Upper Nile Province. This is one of the most troublesome if, at the same time, one of the most interesting, of the fourteen political districts. It has an area of something like 42,500 square miles, and a population exceeding 304,000. The other four inspectorships are located at Malakal, Kodok, Renk, and Nasser. Formerly there were stations at Zeraf and Abwong. The other officials of the Upper Nile Province are El Miralai J. R. Bassett, El Kaimakam C. H. Stigand, El Bimbashi E. D. Bally, El Bimbashi J. J. Bramble, and Mr. A. G. Pawson.

Lieut.-Colonel J. K. Watson, Military Attaché at the Residency in Egypt, makes an appeal in the local Press for donations from friends of the deceased officer towards a memorial of the late Colonel Oswald Fitzgerald, personal military secretary to Lord Kitchener. It is proposed to raise privately a fund which it is hoped will suffice to endow a scholarship for the son of an officer who has died or been disabled in the war, and whose means or estate are otherwise insufficient to permit the boy to follow his father's footsteps in the Army. Preference would be given to the son of an officer of (1) Colonel Fitzgerald's regiment, 18th King George's Own Lancers; (2) the Indian Army; (3) the British Army.

Sir Armand Ruffer, President of the Egyptian Quarantine Board, has returned to Alexandria from the Red Sea coast, after an absence of about four weeks.

Sir William Garstin has left town for Banff.

News has just been received of a gallant attempt by Corporal William Castle, of the Yeomanry, to save the life of Lord Quenington, in Egypt, for which he has been awarded the Military Medal. Early on Easter Sunday 2,500 Turks attacked Katia. In the course of the fighting, in which the troops behaved with great gallantry, Lord Quenington fell. Corporal Castle went under a heavy fire to the officer's assistance, and, placing him across his own horse, rode with him for six miles to a place of safety. Unhappily, however, Lord Quenington died the same day.

Sayed Abdelrahim el Demerdach, member of the Legislative Assembly for Cairo, has presented to the British wounded in the recent battles on the Eastern front, 1,600 boxes of cigarettes and 1,600 boxes of sweets. Sayed Abdelrahim has on more than one occasion expressed his appreciation of the work of Great Britain in Egypt and the great reforms carried out in the country since its occupation. He is a religious chief, being the head of the Demerdachi Tariha rite.

Our Cyprus Correspondent writes:—Mr. Nicolls, Director of Public Works, has recently taken charge of commissariat work at the Troödos Camp, in addition to his own duties, and has been appointed a captain, A.S.C. He has been suffering from typhoid fever, of which there have been, unfortunately, five cases in Miss Young's camp at Troödos. In consequence of this outbreak this popular and picturesque camp has had to be closed.

The admiral of the French squadron cruising in Syrian waters has paid a visit to the High Commissioner, Sir John Clauson, at Troödos.

M. Thucydides Perdikkes, chief clerk in the office of the Chief Commandant of Police, has been retired on a pension.

The late Sir Edwin Henry Egerton, K.C.B., G.C.M.G., formerly Secretary of the Embassy in Constantinople and in Paris, Envoy Extraordinary and Minister Plenipotentiary to the King of the Hellenes, and afterwards Ambassador at Madrid and at Rome, who retired in 1898, left estate to the value of £25,117.

A telegram from Sofia, received in Amsterdam, states that the Minister of the Interior, M. Popoff, has resigned in order to rejoin the army, in which he held the rank of lieutenant-colonel, and that King Ferdinand has conferred on him the Grand Cross of the Order of Civil Merits. M. Radoslavoff, the Premier, will for the present take the portfolio of the Interior.

The Anglo-Egyptian Bank has contributed one hundred guineas to the Lord Kitchener National Memorial Fund.

OBITUARY.

MR. CHARLES T. BARBER.

We regret to announce the death of Mr. Charles Turner Barber, of Shakespeare House, Mazloum Pasha, Ramleh, head of the well-known shipping firm of E. Barber and Son, Alexandria. Mr. Barber, who was the only child of Mr. and Mrs. Edwin Barber, was born in London, but was taken to Alexandria when only two years old and spent his youth and manhood in that city. His father, in 1863, started a business as provision merchant in what was then called "Leadenhall Street," now Rue de la Poste. Later on, he moved to the Marina and developed the business of ship chandler and shipping agent. On his father's death "Charlie," as he was always affectionately called, took over control, and has made the business one of the most important ones of its kind in the Near East. Mr. Barber never took a great part in public life, but was keenly interested in the welfare of the blind. Eloquent testimony to his sympathetic help in this respect was borne by the presence of several blind boys at his funeral. He leaves a son and two daughters, his wife having predeceased him by about seven years.

Lieut.-Colonel William Beresford Gibbs, Worcestershire Regiment, killed on September 3, was educated at Newton Abbot, where he got his cricket and football colours, and at Wellington and Sandhurst, both of which he represented as a full back at Rugby football, and occasionally at cricket. After serving in the South African war he went with his regiment to India and Ceylon. He was promoted captain in 1904, and in 1906 he won in Ceylon the Hampden Whip, a trophy presented by the planters of that island. During 1908 he obtained an appointment in the Egyptian Army, where he served with distinction, being at various times with the 13th Sudanese, second in command of the Camel Corps, Staff officer in an expedition against the Annaks, and finally attained to the rank of Bey, Commanding the 15th Sudanese and being awarded the Order of the Nile. He was a well-known member of the Khartoum Race and Polo Clubs. He went to the front in May, 1916, and rejoined his regiment, and on July 13 was given the command of a battalion. One of his officers writes:—"The whole battalion mourns his loss; he was a splendid commanding officer."

Lieut.-Colonel Fitzroy Edmund Penn Curzon, Royal Irish Regiment, was killed on September 9, aged 57 years. He was the third son of Colonel the Hon. Ernest Curzon, 52nd Foot, and Mrs. Curzon, and a kinsman of Earl Howe. He entered the Army in 1879, obtaining his first appointment in the Royal Irish Rifles, and became lieutenant-colonel in 1907, in which year he was placed on retired pay. He served in the Egyptian campaign, 1898, and was present at the battle of Khartoum, being mentioned in dispatches and receiving two medals with clasps. In 1898-9 he took part in the operations in Sierra Leone (medal with clasp). As a Staff Officer he also served in the South African War, and was awarded the Queen's Medal with four clasps and the King's Medal with two clasps.

Lieut.-Colonel George Henry Bell, Indian Infantry, died on September 3, at Srinagar, Kashmir, after being invalided from the front. He saw active service in the Sudan in 1888, being present at the action of Gamaizah (medal with clasp, and bronze star). He also took part in the operations on the Nile in 1889 and in Waziristan in 1901-2 (medal with clasp). In 1903-4 he served in the operations in Somaliland, being Field Intelligence Officer, and was present at the action at Jidballi (medal with two clasps).

Captain H. Leslie Henley, Australian Infantry, reported killed on August 15, was the son of Alderman Thomas Henley, M.P., New South Wales Parliament, and Mrs. Henley, of Drummoyne, Sydney. Captain Henley left Sydney University and St. Andrew's College at the outbreak of the war, and joined as a private. He was exceptionally popular with officers and men, and it is reported by a junior officer that he was killed while assisting the wounded. For the past year Mr. T. Henley, his father, has been in Egypt and France working as hon. assistant commissioner for the Australian comforts funds. Mr. Henley, with Mrs. Henley and their two daughters, arrived in London only two days before they received the unofficial news that his son and brother had been killed in action.

Second Lieutenant Charles Justus Buch, Bedfordshire Regiment, elder son of Mr. and Mrs. Charles Buch, of 77, Thurlestone Road, West Norwood, S.E., was killed at the front on September 13, in his 37th year. He was educated at Rossall School and Balliol, Oxford, and in 1907 was appointed history lecturer, Ministry of Education, Cairo. He returned home to take a commission.

Our Bucharest Correspondent announces the sudden death of Jules Bynn, the eminent French journalist and littérateur, who had spent nearly thirty years in Roumania. Formerly correspondent of the *Journal des Débats*, he took over the chief editorship of *La Roumanie* when this excellent journal of M. Take Jonescu's came into being. Jules Bynn deserves to be remembered in Roumanian literary circles for, apart from his contributions to local journalism, which were of a very high order, he studied the Roumanian legends and popular literature, rendering many choice samples into French.

The death took place at Hove, on the 17th inst., of Mr. Alexander A. Ralli, who was in his seventy-seventh year.

The death is announced at the front in France of Mr. Walter E. Keill, of Alexandria.

BRITISH REFUGEES FROM TURKEY FUND.

The following is a list of subscriptions to the above fund received between the 6th and 15th September. Further subscriptions will be gladly received by the Hon. Treasurers (Mr. A. Baker and Mr. W. G. Middleton Edwards) at 5, Giltspur Street, London, E.C.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.),
Alexandria.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
Glymenopoulo, Ramleh.
This Hotel is situated near the Beach.
Open all the Year. Bathing Cabins.
Terms from:
Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
Open all the Year Round—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
For Summer Season—
PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine.
Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS,
LIMASSOL, CYPRUS,
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

SCHOOLS for BOYS & GIRLS.
TUTORS for ARMY & ALL EXAMS.
REFINED HOMES with EDUCATION for children whose parents are abroad.
Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.
The age of the pupil, district preferred, and rough idea of fees should be given.

KING CONSTANTINE AND HIS PEOPLE.

For the divinity that should hedge a king the ruler of Greece is substituting an obstinacy which may yet become historic, for he seems bent upon securing a manifestation of that other kind of divinity which shapes the ends of all, rough-hew them how they will. How long that manifestation will be deferred we have no means of knowing. It may take the form of action by the Allied Governments, or it may find expression in the will of the Greek people. The one thing inconceivable is that in a country so democratic the King should be able to flout indefinitely both the Constitution and public opinion, while exposing himself and his subjects to fresh humiliation from without. So long as the issue was in the nature of a personal quarrel between King Constantine and the Allies, the popularity of the former enabled the Greek people to assume the attitude of dispassionate spectators. They sympathised with the Entente, but they had no desire to take part in the war, and loyalty to the Throne made them content to leave the whole matter in the hands of the protagonists. With the occupation of Greek territory by Bulgarians, however, the controversy entered upon a new phase. Here was a point on which the Greek nation held very pronounced views, and it would require more than King Constantine's popularity to convince the majority that Greece could ever do right in admitting Bulgarian troops within her borders and surrendering to them forts and war material which had been paid for with Greek money. On the top of these misgivings comes the news that a Greek Army Corps has been removed to Germany, and is there being held as a hostage for Greece's good behaviour. It is certain that we do not yet know the real truth regarding this amazing incident. For Greece, however, the mere fact is enough. It matters not whether the German version implying collusion on the part of the Greek commanders is literally true or whether the Bulgarians, finding the Greek troops in their power and realising that one day Greece might join their enemies, determined to take them prisoners and to remove them to Germany for internment. What is established is that the Greek Government by its policy of connivance with the traditional enemies of the country exposed the troops to the fate that overtook them and Greece to a humiliation without precedent in modern times.

There can be no finality in the situation of the moment. On June 21 the Allies called upon Greece to replace the existing Ministry by a business Cabinet devoid of political prejudice. In consequence of this demand M. Skouloudis made way for M. Zaimis, whose presence at the head of the Government offered the necessary guarantees for the observance by Greece of a benevolent neutrality. M. Zaimis worked to establish Greek affairs on a satisfactory footing; but, finding himself thwarted by the King's party in the political world and by the King's following in the Army, he resigned his Premiership. King Constantine has appointed in his stead M. Kalogeropoulos, a politician personally hostile to M. Venizelos, who has formed his Cabinet from other members of the Chamber of equally pronounced political leanings. The new Ministry constitutes an overt rejection of the Allies' stipulation. Whether the latter will ignore the affront in view of the puny source from which it comes or will render the position of the new Premier untenable by persisting in their refusal to recognise him is not yet known. Their course of action ought to be dictated by their military requirements rather than by political considerations. If General Sarrail is of opinion that his plan of campaign will be materially simplified by the existence of a neutral strip of territory east of the Struma, then the Allied Governments should lose no time in encouraging Greece to return to a frame of mind which would prompt her to resume possession of that part of Macedonia and to regard any attempt at invasion by Bulgarians or Turks as a *casus belli*. On the other hand, if the operations now in progress against the enemy can be prosecuted to a successful finish independently of the presence of Bulgarians at Seres and Kavalla, there is much to be said for allowing the Greeks to settle in their own way their differences with King Constantine. The National Defence movement in the north appears to be standing its ground. There is little likelihood of its being called upon for a trial of strength with the Central Government so long as the war lasts, for the Allied troops at Salonika are a guarantee for its security from attack. Meanwhile dissatisfaction with the conduct of affairs in Athens is spreading to the islands and to other parts of the mainland. Sooner or later the progress of the war and the realization that Greece is in danger of ceasing to be a factor in Near Eastern politics will compel the Greek people to take their rulers to task.

There is always another side to a question, and we have no doubt that King Constantine has persuaded himself that he and the German Emperor are right, and that the rest of the world is wrong. Unfortunately for him this view does not commend itself to the Greek nation as a whole. Moreover, his attitude rests on the false premise that he can go back on his undertakings to Serbia and the Entente Powers. Much of the trouble and annoyance to which the Allies have been subjected by Greece has resulted from the failure to bring this point home to King Constantine, and from allowing him too much play with the word neutrality, which ceased to have any application as far as Greece was concerned from the moment when Serbia was invaded and appealed to the Greeks to honour their treaty of alliance. For this reason King Constantine's side of the controversy invariably rings hollow. Thus in the course of an audience recently given to an American press correspondent, he is reported to have declared that down to the date of the Bulgarian invasion and of the entry of Roumania into the war the situation had not revealed a sufficient certainty of such advantage to be gained by Greece as would compensate her for the risks and the unquestionable cost in lives and property which must be entailed by her participation in the war. King Constantine referred also to the fate that must almost certainly overtake a million Greeks in Asia Minor and Thrace in the event of Greece finding herself engaged in hostilities with Turkey. But these and all similar considerations ought to have been taken into account before the treaty with Serbia was concluded and not to be urged now as justification for a breach of faith. Anxiety for the Greeks in Asia Minor and Thrace did not deter King Constantine from declaring war on Turkey in 1912. There were more Greeks under Turkish rule in those days than there are now, and, if report be true, the fate of many Greeks in Turkey could not be much worse than it is at present, even if the two countries were at war. Still more hollow must have sounded to King Constantine's interlocutor his rhetorical declaration that "the hour has come when we want the voice of the soul of Hellas to dictate the future of our race." This has been the burden of every appeal made to the King by the Entente Powers and by the nation as a whole; but for eighteen months he has refused the request, until he is in danger of finding that the future of the Hellenic race will not only be decided without reference to him, but will also be one in which he will have neither lot nor part.

PROBLEMS OF THE SUDAN.

III.—LABOUR.*

(By Our Khartoum Correspondent.)

An agricultural country in the situation of the Sudan is not a convenient one for the economist. Prima facie, where all the population is employed some of the time, and some of the population all the time, there should be a surplus for any demand; and these are the circumstances of the Sudan. In the practically rainless areas of the North the population is employed throughout the year in cultivating the riverain land from the Nile; the remainder is the nomad population, sparse and extremely busy looking after the herds of camels and sheep that require to be watered and herded. Further south, when the rain comes, the cultivation is practically confined between May and December. In May the land is cleaned ready for the rains in June. The crops are ripe in October or November, and cut, cleared, and threshed in December, though in a late year this may be deferred to the new year.

If the rains are good, everyone is out, anxious to make the most of a bumper crop, which may not recur. If the rains are bad, everyone must strive his hardest to win a living out of the land till another year brings new hopes. So the available labour is limited to but half the year or less.

Once the harvest is in, the rich landed proprietor watches the market for a good time to plant his harvest. The small proprietor watches even more carefully, and almost everyone is a proprietor, big or little. Where the land has been settled by the Land Commission, every family has its holding; where the land is not settled, and, for one reason or another, not likely to be, the cultivator still has a good claim to the land he has worked on as compared with any other person; and thus every household, practically speaking, has its land, which provides the necessary grain for a livelihood.

In a good year there is a big surplus; grain is cheap, and life is easy. In places remote from the railway grain becomes so cheap it is hardly worth the trouble of threshing. But grain, the dura of the country, makes beer ("marisa"), and if it cannot be sold it can be drunk; and a life of alcoholic ease extends from the harvest to the next sowing. Thus it is in bad years, when grain is dear and hard to come by, that labour is most easily obtained, and the more communications are extended and life made easier for the native and grain easily attainable the more difficult it is to maintain a constant supply of labour.

The population of the Sudan is still sparse, and there is not yet a surplus which is dependent on other sources than the land for a living, except in the one or two populous towns, such as Omdurman, and even that surplus is immensely varying.

The demand for labour, moreover, is for the most part of an agricultural kind, and the native is extremely loth to leave the cultivation of his own crop for another job, however remunerative. There is, however, one source of supply which has no status in the country and provides a very useful form of labour, and that is the Fellata. They are people from the West—anywhere from Wadai to Lagos, but for the most part from Kano and Sokoto. Some came generations ago and have acquired land and villages; some—and the larger number—are drifting through on their way to Mecca, and stay often many years before they move on; and they stay, also, as long on the return journey. The Fellata, for instance, form the majority of those who pick the cotton at Tokar. All over the country they are hewers of wood and drawers of water.

Much is often said of the cheapness of native labour, but it suffers from other attributes of cheapness. In irrigation works in Egypt the clearing or cutting of canals is largely done by contract with Egyptians from Upper Egypt. They will earn P.T.10 (2s. 6d.) a day and their food, as compared to the 10d. or less of the Sudanese, but they will shift three or four times as much earth as the Sudanese, as they have the physique and the knack and the will.

There are three important points. Although no doubt some of the negro types are fairly powerful and fine specimens, the average Sudanese is poor in physique; and though extraordinarily tough in certain ways, he has no weight or muscle compared with a European. A 34-inch chest is quite a rarity, and their weight is correspondingly small. For this reason the Sudanese are not well adapted for manual labour. Moreover, they have singularly little adaptability to the use of tools in the right way. A good axe or saw they will ruin in an incredibly short space of time, though they can make astonishingly effective work with their own tools, given time. The Arab, at any rate the Arab of the Sudan, seems to have no art or craft. What he has, he borrowed; and he despises manual labour as such, as servile; and so it is the fashion to look down on labour. (Cultivation is not labour; it is a necessity of life like herding cattle. When it ceases to be a necessity of life, it is slave's business, and to be avoided.)

It must not be forgotten that the country rests and has rested for generations on a kind of feudal squirearchy, in which the relation of master and man has been practically a matter of faith. The masters, mostly Arabs, but not invariably so, owned or purported to own the land, directed its use, and managed the disposal of the harvest. The men, in return for protection from the tyranny of any other master for their home, their clothing, family, and many small luxuries, gave a certain amount of labour and their loyalty. Whether the community were agricultural or nomad, these conditions applied, and so long as everybody's wants were supplied, there was no room for progress and no supply for an external demand for labour. These normal conditions have been altered by the import of additional luxuries and the introduction of greater opportunities for those whose lives were upon very hard and primitive lines. At the same time the system remains to the Sudanese mind the ideal one; and it takes a generation or so to alter such an ideal. In those parts where the growing of grain has become a thoroughly commercial business the natives are already fully accustomed to paying monetary wages for labour; but these are the land adjacent to the railway, and in many places the wage is paid by share in the proceeds. Moreover, there are still many who recall the good old days when slaves were obtainable for a few pounds and there was a never-ending supply.

The real crux of the labour problem is population. The starvation, disease, and slaughter of Dervish days reduced the population to about one-fifth of what it was before. Much of what remained was old and useless for the development of population. There is now an astonishing number of young men and children born since the Battle of Omdurman, but the four-fifths that was lost cannot be replaced in one generation, and it is not yet eighteen years since the Battle of Omdurman. Whilst the new population is born, new ideas are spreading, and it is as well that the new ideas should not spread faster than the situation allows.

The country can now feed itself, and can, if the rains are good, have a useful surplus for export. As time goes on there is growing up a further increase of population ready to learn the new methods of cultivation, the art of growing cotton, or providing fibre or the like. Better food, better housing and sanitation, will at the same time develop a stronger type, more fit for manual labour than their forebears. The development is a gradual one, and not to be hurried. Some who have seen the astonishing change in the Sudan, from penury and bankruptcy to something approaching solvency, coupled with considerable personal wealth, are inclined to ask too much in the parallel advancement of the character and physique of the native. But the more interesting phase of the Sudan is that just beginning, when material prosperity is not the first demand, but a steady growth of mental and moral stability, dependent not merely on wise administration of things, but a strong influence on the minds of the people. Kingsley, in "The Water Babies," remarks: "Anyone can make things if he goes on trying long enough; but can you make things make themselves?" It is the stage of making the natives of the Sudan make men of themselves that is now beginning.

SHEREEF OF MECCA'S NEW STAMP.

We are enabled to publish below a reproduction of the first specimen to reach England of a new issue of postage stamps made by the Shereef of Mecca. Apart from its interest to philatelists the issue is one of the many signs of progress which have manifested themselves in the Holy Places of Islam since the Shereef's secession from the Turkish Government, and affords to the world at large a concrete proof of the existence of an independent Arab State. The issue consists of three values, i.e., one piastre (very dark blue), half-piastre (red), and quarter-piastre (green). The reproduction above is of the piastre stamp. The inscription at the top is "Bareed Hegazi" (Hedjaz Post); that at the bottom is "Qirsh Sagh" (one piastre); that in the middle is "Mecca El Mokarrama" (Mecca, the Ennobled); and the figures at the sides indicate the year of the Hegira. All the stamps will be perforated, the perforation being 12 to the 2 centimetres on each side. The half and quarter piastre stamps are of different design, but are not yet available.

THE FUTURE OF THE BALKAN STATES.

In connection with a scheme for giving educational lectures on the war to the members and friends of the junior branch of the Primrose League, Mr. H. Lancaster, provincial agent of the League for South Wales, Monmouthshire, and Herefordshire, gave an interesting lecture, entitled "'Midst the Children of Wrath: a Tour Through the Balkans," at Caxton Hall, Westminster, on Saturday afternoon. The coloured photographic illustrations included many of the places made familiar to the general public through the war. Pictures of the sacred centres of the Mohammedan faith recently captured from the Turks by the Grand Shereef of Arabia were also shown.

Sir Ernest Flower, Vice-Chairman of the Grand Council, said financial help was urgently needed for the purchase of material. During the past fortnight the committee had sent parcels of clothing to the British prisoners in Turkey, and they had been asked by the War Office to supply two thousand pairs of mittens to the soldiers in Mesopotamia. Referring to our position in the Balkans, Sir Ernest Flower said he had read with a tinge of amusement how one valiant Greek Army Corps had become so nervous lest it should be called upon to defend the sacred soil of its country that it had invited itself to be interned in Germany for the duration of the war. But, whatever might be the attitude of Greece, he felt confident that the future of the Balkan States rested with the Allies.

ROUMANIAN RELIEF FUND.

In connection with the formation of a National Roumanian Relief Fund, of which Queen Marie of Roumania and M. Jonescu are patrons, the following telegram has been received by Mr. A. H. Hurst, of Leith, the chairman of the committee, from M. Jonescu :—

"I thank you with all my heart for the honour which you have done me. Our wounded are already returning in great numbers from the front. Your help will be welcome, the need being great.

"The Roumanian people, proud to fight for the cause of liberty and civilisation at the side of the nation which first proclaimed the doctrine of international sovereignty, will see in this noble movement (National Roumanian Relief Fund) a further proof of the unalterable friendship between the great British nation and the Latins of the East. Roumania knows that the British spirit will carry the work to success."

Lord Rosebery is president and the Lord Mayor of London and the Lord Provosts of Edinburgh and Glasgow are among the honorary vice-presidents.

WOUNDED ALLIES' RELIEF COMMITTEE.

Letters from nurses attached to the hospital unit sent out to Corfu by the Wounded Allies' Relief Committee, Sardinia House, Kingsway, W.C., to nurse sick and wounded Serbian soldiers, contain some interesting little items of information :—

"The poor Serbs still look terribly thin and wretched, and so many are miserable and depressed at not knowing what has become of their wives and children. Far more than half their number have no idea where anyone belonging to them is. The only thing these poor creatures enjoy is a cigarette. We have enough cigarettes to go on with, but the supply in our hospital only runs to giving each Serb a packet of ten per week. Quite a number of Greeks toddle up here as out-patients; they come for all sorts of ailments, also to have teeth out, and as they bring little offerings in payment it helps. For example, for one tooth being extracted a patient will bring fifteen lemons, and as a higher payment eggs are brought. We have to buy all the eggs for the hospital use, and cannot get them under 1½d. each. This means a big sum when the hospital consumes nearly seventy eggs per day. We have also to buy milk, and can get fresh cow and goat milk; this costs us 34 drachma (francs) per day, as so many are weakly men who can only take milk. The issue of meat is, I think, extremely good; it is always beef, but quite good and plenty of it, but we do not get any butter. Mr. —— came out here and inspected the hospital. He came in one of the magnificent motors that were found at the Achilleon, the palace that belonged to the late Empress of Austria, and until lately was in the possession of the Kaiser. It looks a glorious place from the outside, and the views from the windows must be beautiful. It is about four miles from the hospital and twenty-eight from the town of Corfu, and is managed as a hospital by the French.

"The motors were all made in Germany and upholstered in crimson plush."

Reports from Constantinople state that Dr. Sven Hedin has just returned from a six months' trip to Syria, Mesopotamia, Arabia, and Sinai, where he was well impressed by what he saw, "especially in Syria, where a number of recently-founded factories have an abundance of corn and other victuals which is simply astonishing." He is to publish a book on Turkey.

The front page of the first number of an interesting newssheet called "The Liberal," published at Salonika, and dated July 4, contains a "Notice" of which the following is an exact reproduction so far as spelling is concerned :—"We beg pardon from our readers for the very bad English of our paper. We have discovered our unrepereable mistake the very lost moment. We have been deceived imconsiously; our neset paper-number will prove real English."

A MESOPOTAMIAN MARSH.

The following is an extract from the letter of a cavalry officer now serving in Mesopotamia :—

"Yesterday I went to ————, a small desert town some ten miles from here as the crow flies. There is a dense marsh between here and there, and the marsh route takes about 3½ hours. I went in an Arab canoe, or *mashoof*, as they call them, a sort of Canadian canoe. They are pulled through the marshes by a man standing in the bows and one at the stern. The boats are light as a feather, and go through the various passages cut through the reeds without a sound. It is the weirdest feeling in the world going through miles and miles of marsh, with reeds 10 ft. high on either side of you almost shutting out the sky. The croak of frogs and cry of water fowl is all you hear. It is an absolute wilderness of silence, and the small waterways cut by marshmen form a regular maze everywhere you turn. You could get lost for ever, and easily, so I should say, for you cannot look over the top of the reeds to get your bearings. Marshmen know the place with their eyes shut, and, of course, it affords a great refuge for them when either fleeing from their enemies or from justice. They find it pretty handy when wanting to shoot anyone whom they don't love particularly. The marsh is about ten miles broad and twenty miles long."

DISTRESS AMONG URUMIA MERCHANTS

Miss M. Barclay, hon. secretary of the Nestorian Mission, writes as follows :—As there are no banks in Urumia, the merchants are in the habit of keeping the savings of the people, allowing them interest. Now the merchants have all been robbed and plundered; some gave bribes that their houses and shops should not be destroyed, after which everything in them was plundered. Many of those who owed money to the merchants have died in the massacres, or are so reduced to poverty they are unable to pay. Now the merchants are pressed to repay the savings deposited with them. They have no means of doing so, and are in great distress, for the starving people need their money. Winter will soon occasion widespread distress. The refugee funds are not eligible to pay debts. If the merchants were helped a large number would be relieved, and the merchants would be able to begin business again, instead of, as now, being on relief funds themselves. Help given *now* would bring blessing all round. The money could be given through Mr. Shipley, the excellent British Consul, who would see that just claims were met.

The *Southern Slav Bulletin* learns "from a reliable source" that Lord Cromer's article, "The Southern Slavs," which appeared in the *Spectator*, is to be translated into Serbian and printed as a leaflet for distribution among the Serbian soldiers on the Salonika front. This idea is said to be the suggestion of a British authority.

Two Turkish colonels and 200 officers taken prisoners in the Bukovina and Galicia have been brought to Kieff. Numbers of them were before the war bakers and shopkeepers at Odessa and Kieff, and had never had any military training.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free :—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies :—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotte, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

THE PRESS ON THE NEAR EAST.

Roumania and Austria.

M. Stephen Pichon, formerly French Foreign Minister, discusses in the *Daily Chronicle* the treaty which King Carol concluded with the Emperor Francis Joseph in 1883.

The treaty is an absolute Monument of Reaction, and, in view of that fact, one can quite easily conceive why none of the heads of Government who, after its signature, succeeded one another in Bucharest, ever dared take the responsibility of revealing it, or even of regarding it as applicable in the literal sense. To my knowledge there has not been since Metternich and the Holy Alliance a diplomatic deal inspired to such a pitch with that spirit of resistance to modern ideas, which is the root policy of the Austrian Court. By Article III. (there are eight articles in all) Roumania pledges herself to "do her utmost to annihilate, at the request of Austria-Hungary and its dynasty, Freethought, Socialism, Anarchism, and Irredentism in the event of their spreading in the kingdom and doing harm to the Rights of Sovereigns." By a paragraph of Article VII. she pledges herself "to maintain and support within the realm Catholicism and Germanism." Here we have a foreign State intruding formally and deliberately into the domestic policy of an independent Power and imposing an obligation upon the latter to repress by force the aspirations that its inhabitants were likely to manifest as their conscience and their freedom of spirit entitled them. In just this fashion was the celebrated pact of 1815 drawn up by its authors—the pact which was intended to put under the heel of four Powers the small States and Liberal nations whose ideas did not coincide with those of despotism and autocracy menaced at the time by the great currents of popular opinion. Besides inflicting this humiliation upon Roumania, the treaty of 1883 condemned her to be the mere handmaiden of Austro-Hungarian pretensions in Europe, and particularly in the Balkans.

"The Tigers of Budapest."

Under this heading the Transylvanian poet and Nationalist, Octavian Goga, publishes an article in the *Universul* (Bucharest) on the subject of the anti-Roumanian demonstration which took place lately in the Parliament of Budapest.

Goga begins by telling us that the animals in the zoological garden of Budapest all died some years ago in consequence of an epidemic. In spite of the empty pits and cages, the establishment was kept open, and those who were persuaded by an unscrupulous advertisement to pay an entrance fee, left the place indignant at the hoax that had been sprung upon them. Finally a periodical suggested that, in order to safeguard at least the illusion of a zoological garden, the dead beasts should be stuffed and exposed in suitable attitudes behind the bars. Whereupon a humorous journal published the following pleasantry:—"Once on a summer's day awe-inspiring roars were heard coming from the tiger's den. The garden was empty, the public had gone, the roars were emitted uninterruptedly. Finally the gardener, disturbed by the noise, rose from his seat and proceeded to the tiger's den, and opening the gate addressed himself as follows to its occupant: 'Enough, Mr. Schwartz, it's no use kicking up that row, for there isn't a soul left in the place. Go home yourself, for you must be hungry.' Whereupon the tiger rose on its hind paws, opened its hide down the middle, and gave exit to the grateful Schwartz." I cannot help recalling this grotesque tale to-day (proceeds M. Goga), as I read the declarations made by the political chiefs of Budapest, so full of flowery menaces addressed to Roumania. . . . Count Karoly, with whom the whole Magyar Parliament has identified itself, shrieks the following warning at us:—"If Roumania throws her army against the Carpathians she will encounter on her path not men, but tigers." In spite of the millennial hatred accumulated in our souls by unspeakable suffering, the grandiloquence of these words forces a smile of pity to our lips. Tigers of the Danube, indeed! How disparaging a comparison for the noble beasts of the Nubian desert! The old man of Schoenbrunn's pitiful army, vast nursery for Siberian tenants, sham soldiers reminiscent of Lehar's operettes, rhetorical magnates and bourgeois Jewdom from the suburbs of Pest. . . . These a band of tigers maddened by the smell of blood? For the name of heaven, Count, recollect that you are an old man; in your place and at your time of life unseemly jokes of this kind are out of place. . . . Mr. Schwartz's tiger? Precisely! He it is whom we shall meet in the Carpathian passes, multiplied into thousands of specimens, roaring at his best until—well, until the forest of Roumanian bayonets begins to advance. And then there will be no one more pleased than himself, when he discovers that he can choose, in place of the inclement Siberian weather, the milder climate of a concentration camp somewhere near the mouths of the Danube. Until then we can only answer the Budapest orator with the words:—'That will do, Mr. Schwartz; don't roar any more for the present!'"

Austrian Journal on Roumanian Heroism.

The *Neues Wiener Journal* publishes an enthusiastic telegram from a war correspondent regarding the magnificent valour displayed by the 31st Broskov (Kronstadt) Regiment, composed of Roumanians. The Vienna journal states that this regiment fought before Belgrade, in Albania, Montenegro, and on the Italian front, before finding its way to the Eastern theatre of war. "This is a proof," says the writer, "of Roumanian heroism." Yes, adds the *Journal des Balkans*, and it is a proof of something else, too, of the exhaustion of the Austro-Hungarian armies who so badly need the Roumanian elements that they send them to be killed on every battlefield.

And these are the men—the pick of a nation—who have been the object of unspeakable persecution on the part of the Hungarians, because they would not renounce their nationality, would not submit to the *Magyarisation* of their children. And now they form the backbone of the Hungarian armies! But how tragic the destiny which opposes them ever and again to troops of their own blood, Roumanians of Bessarabia to-day, Roumanians of the kingdom to-morrow.

The Balkan Time-Table.

The *Daily Telegraph* emphasises the fact that though the movement of the Allies in the Balkans appears to have been belated, it has begun "considerably in advance of the time chosen for two of the most important of recent campaigns in this blood-stained theatre of war."

That which ended in the crushing of Serbia last year was not initiated by Mackensen until a month later than this. The move against Turkey by the Balkan League in 1912 began later still. Those were short and sharp campaigns; they came to their very dissimilar conclusions within six or eight weeks of their opening. Whether events will move so rapidly again this autumn we shall see. The Allies have to secure, if possible, a decision before the beginning of the long Balkan winter. There is one certainty to be reckoned with that lessens the likelihood of an end as swift as was seen in those cases. Germany will do all she can; and when Germany has disclosed in the course of these operations the full amount of the assistance which she is able, by hook or by crook, to lend to her Balkan confederate, the Allies will be in possession of the clearest evidence they have yet had as to the condition of our chief enemy in regard to reserves of fighting force. For it is for the enemy Powers an absolutely vital interest that Bulgaria should be saved and communication with the Near East kept open. Once the Allies are across the great Balkan railway, Bulgaria is crushed and Turkey is dead, German prestige vanishes completely, and the Central Empires "see their finish." If men and guns are anyhow to be spared to avert or delay that disaster, they will have been sent to the Balkans for the campaign now opening. Austria-Hungary can do nothing: she is, in fact, herself making a fatal drain upon Germany's strength—fatal, and daily increasing. Nothing but a further dissipation of that strength can meet the new situation in Bulgaria and Macedonia; and every man detached thither goes at his country's deadly peril. That is the logic of the Allies' combined offensive on all fronts; and this new and vigorous attack is to be considered in intimate connection with the incessant hammering and grinding away of the enemy's power now proceeding upon every hand.

Macedonia in War Time.

An officer in the R.A.M.C., now in Macedonia, contributes his impressions of the country in war time to the *Hospital*:—

There are no hedges. The fields are demarked only by the line of furrow, except they be growing vines, then usually a low bank or a low bank with a slight ditch bounds them. Fig-trees grow in the vineyards amongst the grapes. The potential fertility of the country is great, but years of war and uncertainty do not conduce to careful farming. The cultivation is slovenly; the lands dirty; very little manure is used; the crops are very thin. Between the rough patches of crops is much waste land; some that shows no sign of former cultivation, other that bears marks of the plough.

Since 1912 there has been much shifting of population. The Turks largely left the land when it came under Greek government. The Turks also expelled from Thrace many Greek peasants who had their homes there. Great hardship resulted. The dispossessed Greeks lost their all, and came paupers into the land. They have been allowed to settle on the land left vacant by the Turks, but as they have neither capital, cattle, nor implements, they live squalidly in ruinous Turkish houses and eke a scant living from stony hill-sides. An oldish man, fine of face and figure, and wearing a dress that, though shabby, showed evidence of better quality than his fellows, attracted my attention in a certain village through which I was riding with an interpreter. Because he was the first fine-looking Greek I had seen, I bade the interpreter question him. He told me that he came from Thrace, where he had been a rich man with wide fields and 8,000 sheep, but the Turks had taken all and turned him out of their land. "And how am I to work to get food now when I am an old man?" he ended his tale.

King Constantine—

Mr. Crauford Price "likes King Constantine," so he writes in the *Daily Mirror*:—

There is much that is attractive about this big, handsome monarch, with his blunt, soldierly way of dealing with men and things. The moment he greets you he puts all Court ceremony aside, sets you at your ease, and permits you to talk not as commoner to king, but as man to man. He is pre-eminently courageous, whether he be facing foes on the battlefield or diplomats in his library, and he never tries to shirk responsibility for his actions. Indeed, no living royalty cuts a more imposing figure on State occasions or is more perfectly charming in the intimacy of the Court circle. And he has a gift of humour—often satirical, but never really unkind. I have met King Constantine many times and under divers circumstances: at war, en voyage, in society, and in his home. It is difficult to decide where one has met him at his best—perhaps at war, where he is free from diplomats and politicians (diplomats are his pet aversion) and can give free rein to that autocratic instinct which he has inherited from a Russian mother or imbibed from German associations.

—And the Greek People.

In the normal life of the Greeks (Mr. Price continues) there is no room for the application of absolutist principles.

For Greece is a "Republican monarchy," and the people are essentially democratic in character. From the very commencement of the war King Constantine was personally animated by a desire to keep Greece out of the conflict. In the early days it was the Kaiser who sought an ally, and the Greek ruler told me the story as I halted at Athens on my way to join the Serbian army. To repeat the whole narrative would be a breach of confidence, but he then very roughly drew the attention of the "All Highest" to the fact that Greece could be reduced to cinders by the Anglo-French fleets in twenty-four hours. The more the Kaiser badgered his brother-in-law, the more he angered him, until he finally gave up the quest. "Greece is a Balkan State," the King told me on another occasion, "and this is a European war. I am not going to be drawn into it if I can help it. I am not afraid of the Bulgars, and I am ready to go for them again. But it must be a Balkan war. I would rather fight Germany than England, but I don't want to fight either of them."

I do not credit the story that he was bound to the Kaiser, nor do I think that the influence of the Queen went far beyond making it insufferably uncomfortable at the Court for anyone of pro-Entente sympathies; but he had held an exaggerated opinion of the might of the Prussian military machine.

In both respects he was encouraged by the political and military profiteers, by whom he had unwisely surrounded himself. They elaborated plans conclusively demonstrating the inevitable triumph of the Teutonic alliance, exploited the mistakes of Entente diplomacy (particularly our ill-advised offer of Kavalla to Bulgaria) to the detriment of the Cretan statesmen, and sought by the introduction of an absolute régime to conjure the ruin of their hated rival. Hence the plague of spies, agents-provocateurs and gendarmes with which Athens was recently afflicted.

Greece's Lost Chance.

Mr. G. Ward Price, the British Press correspondent at Salonika, declares that the sequence of circumstances that has led the Greek Government and its supporters so far from the path of the interests of their country is easy to trace.

It begins with a King who was trained as a soldier in Germany and very naturally admires the German military genius, thoroughly believing, as he said to a friend of mine last year, that "the Germans could not be beaten in a hundred years." Behind him is . . . . a General Staff nearly all educated in Germany and thinking exactly as the King. And, obscure but persistent in the background, is Baron Schenk . . . . Then, early in 1915, the Allies suggested that Greece should co-operate in attacking the Dardanelles. King and General Staff reply, "If you attack the Dardanelles you will fail. We know all about the Dardanelles; we investigated them thoroughly in the first Balkan war." We answered to this, "Very well, stay outside. We will force the Dardanelles without you." Unfortunately we failed to do so, not only at the first attempt, but at all later ones. The Dardanelles are now recognized as practically impregnable. The Greek General Staff had been right. It was only natural that their confidence in themselves and their own foresight should grow exceedingly. So when a second chance for them to come in under their treaty of alliance with Serbia occurred six months later, and they saw that nowhere meanwhile had the war situation changed conspicuously in favour of the Allies, the Greek King and his generals were even stronger in their own negative opinion than before. And this time they were wrong. But since then the pendulum has been slowly swinging our way, until now the sudden bob that Roumania has given it has roused them to the realization that they have all the while been wrong, and that the hour has perhaps gone by when they could still put themselves right again.

The Kidnapped Army Corps.

"A Grecian tragi-comedy" is the description applied by the *Daily Chronicle* to the kidnapping of the 4th Army Corps.

"Take me and my army away, so that I may not be exposed to the danger of fighting in defence of my native land against the aggressor"—such, according to Berlin, was the plea of the commander of the 4th Greek Army Corps. Strong as is Teutonic influence among the higher ranks of the Greek army, we are reluctant to believe that any Greek general would behave with such pusillanimity unless indeed it be that the inexplicable vagaries of the Greek Government had confused and bewildered him and his troops. It was clever of the Germans to lure from the Kavalla region its appointed defenders, for the presence of Greek troops there might at any moment bring them into conflict with the Bulgarian invaders. But from the point of view of Greece it is a sorry incident, and one whose recollection must bring a flush of shame to the cheek of every patriotic Greek.

Challenge to Bethmann-Hollweg.

In the *Westminster Gazette*, in the second article of the series, "The German Chancellor and the Outbreak of War," Mr. J. A. Headlam throws down a challenge to Bethmann-Hollweg.

I wish to put the problem as clearly and concisely as possible. The whole question now really turned on mobilisation. The Chancellor prevented German mobilisation on Wednesday night and Thursday morning on the ground that Russia had only mobilised against Austria. He knew, however, that if Russia mobilised against Germany also his hand would be forced and he would no longer be able to keep back the soldiers. If, therefore, he wanted to preserve peace, he must do all in his power to prevent Russia mobilising further. For this purpose it was necessary to do all in his power to reassure her, to prevent apprehension, to help the Czar in his desire to keep peace. How did he use the opportunities which offered for doing this? Obviously the first thing to do was to prevent Austria hurrying on with her military action. If Austria continued the attack on Belgrade, then Russia must at once act. The first question for the Chancellor therefore is: Did he bring any pressure upon Austria to stop military operations? Again, if Austria completed her mobilisation, Russia would certainly do the same. Now we know that Austria ordered the complete mobilisation of the whole army very early on Friday morning. This was at once answered, and unavoidably answered, by complete Russian mobilisation. The second question is: Did the Chancellor use any pressure on Austria not to complete her mobilisation?

Russia's Offer.

Mr. Headlam puts very clearly Russia's offer to stop her military preparations:—

Again, during Thursday a telegram came from St. Petersburg containing an offer from Russia to stop her military preparations on certain conditions. If the Chancellor really wished to avoid war, this was clearly the most admirable opportunity. Even supposing that the conditions were not entirely acceptable, they might be made the basis for negotiations; anyhow, it would be easy to use them so as to gain a little time, and every hour was of importance, and in any circumstances an answer should be sent which would reassure the Russian Government as to the friendly intentions of Germany. How was this offer from Russia dealt with? The story is an old one. It was met with an instantaneous and categorical refusal. Herr von Jagow did not even take the trouble to forward it to Vienna. To have done so would have done no harm, even had he known that Austria would reject it, but it would at least have saved several hours. The categorical refusal from Germany inevitably brought about the immediate completion of Russian mobilisation, and everyone must have known that it would do so. Our third question to the Chancellor therefore is—Why did he treat his Russian proposal in this manner?

Articles to Note.

"Longer and Shorter Roads to Victory," in the *Matin* (September 9).

"The Roumanians," in the *New Statesman* (September 2).

"Co-operation of the Entente Powers," by Dr. E. J. Dillon, in the *Daily Telegraph* (September 16).

The British Farmers' Red Cross Fund has now paid over to the British Red Cross Society £377,636, but, owing to ever-increasing calls upon it, the committee are now appealing for nothing less than £1,000,000. The fund has already twenty-five schemes fully working, including, among many others, stores for Serbia, presentation and upkeep of various convoys of motor ambulances in different war areas, help to hospital work in Russia, Egypt, Belgium, Caucasus, East Africa, France, Britain, and other countries, and, in addition, has provided for the permanent upkeep of about sixty bedrooms in the "Star and Garter" Home at Richmond. All donations and offers of assistance should be sent to the Secretary, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Halil Bey, the Turkish Ambassador in Berlin, is busy at present, if one can believe the *Weser Zeitung*, in framing some sort of an economic bond between the German and Ottoman Empires. If the truth be told, we can afford to smile indulgently at these commercial negotiations; they are academic in spirit and thoroughly futile. Whatever their nature, they can only be of temporary duration, and will not affect the economic or financial position of the future Turkey. For the latter will not depend, when war is over, on the Deutsche Bank and its ramifications, but on London, Paris, and Petrograd. The Ottoman Exchequer finds itself already so heavily mortgaged to its creditors among the Allies that, whatever its liabilities contracted in Berlin since November, 1914, it will have to meet our legitimate demands after peace has been declared long before German bankers dare hand in their claims. To what extent we will recognise Turkey's indebtedness to Germany remains to be seen; but, unless we want the Ottoman Government to go bankrupt (thus depriving Allied creditors of their holdings) in order to help foot Germany's war bill, we must cancel most, if not all, of her Berlin liabilities. So let Halil Bey concoct financial and commercial schemes to his heart's content; the former will weaken and not strengthen the Boches, and the latter will be valueless as soon as the Allied forces have struck their great blow northwards from the Vardar and southwards from the Danube to where Nish and Pirot control the Pest-Sofia section of the Berlin-Constantinople line.

***

However, if mention is made in these columns of Halil Bey's wonderful work in Berlin West, it is with a view rather to emphasise the preposterous pretensions of the Huns in the Balkans than to belittle his Excellency's excessive optimism. I have been perusing Naumann's *Mittel Europa* (to which I shall refer again at an early date), and also some recent German literature of a similar trend, and there is no gainsaying the fact that even to-day, when their Somme front is crumbling beneath their feet, the Boches are desperately endeavouring to create that Central European State (or "combine," because it is no State in the usual acceptance of the word) reaching along the Danube to the sea, and in which the Balkan States, or more particularly Bulgaria and Turkey, are to play such an important second rôle under Germano-Austrian hegemony, with the emphasis on "German." So strong has this movement grown in the Vaterland that the Ballin shipping and the great colonial circles have deemed it necessary to cement it with a special, insidious propaganda of their own. But, in view of the low level to which his shipping has sunk, combined with the now practically total loss of his colonies, the prosaic German is inclined rather to the idea of a mighty Mittel Europa to which he would stand in the relation of a sponsor.

***

There are signs, moreover, that those in power are similarly influenced by the glamour of an Empire stretching from the Rhine to the Tigris, and hence we have Halil Bey's negotiations on the one hand, and the simultaneous visit to Germany of Turkish and Bulgarian military and financial envoys. Not that we need worry very much about these Potsdam confabulations, beyond realising that they do exist, and that they are presumably progressing favourably—that is to say, according to Pan-German wishes. They will, with the success of our arms, be destroyed—about that, if we are careful, there can be little doubt—but the spirit of the work begun will not be lost. It will live to combine against us, to thwart us, to Prussianise the Near East, even when Prussia has been humbled. That is the real danger against which I wish to warn our statesmen: they must frame peace terms in such a way as to prevent all further Boche interference in the destinies of the Balkan States, whether by means of royal connections, political bribery, commercial corruption, financial control, or military aggressiveness. This is essential. The means thereto will be at our disposal; let us utilise every one of them, remembering always that a Germany sucking strength out of the East will always be a menace in the West.

***

I understand that the British authorities in London have received an enormous number of claims in respect of losses incurred by British subjects through acts of misconduct, which cannot be regarded as acts of war committed by our enemies. These claims have come in, and continue to come in, from most parts of the Empire, so widespread has the theatre of war become Prominent in the list is a considerable group of British subjects who when the war broke out were resident in various parts of the Ottoman Dominions. As is well known, in order to escape from the Turks our friends had to leave property of great value behind them, notably in Constantinople and Smyrna. It is said that among the claimants are Egyptians, Indians, and Armenians who had become British citizens, while foreign subjects have also endeavoured to obtain the support of the British Government when the time comes for them to submit their claims. It must not be imagined, of course, that claims will be settled now, or at any future time, without scrutiny, and those who have incurred losses and propose to ask for compensation will do well to see that their claims are in order and supported by whatever evidence is available.

***

It must be understood that traders' claims will not be the only items which will be taken into consideration. The Royal Proclamation, under which claims are to be submitted, was very wide in its scope, and while the assessing authorities will properly refuse to lend themselves to fraud, no *bonâ-fide* case will be excluded from the operation of the machinery designed to secure a settlement. It will be seen that the bills to be presented to those who have wantonly violated every known principle of war and international law are not likely to be small. So far as one can see, there will be no "bad debts" in the winding up of these "enemy concerns," and it is to be trusted that British subjects who have been made victims of their shameless piracy will not refrain from sending in their bills because they happen to be small.

More than once in these columns I have emphasised the necessity for firms who propose to trade in Egypt to observe great care in the appointment of agents. Recently instances have been reported which support very fully my contention, and in the last number of the monthly *Journal* of the British Chamber of Commerce of Egypt there is an article in which a specific instance in point is quoted. A summary of the article will be found elsewhere in this issue of THE NEAR EAST, and English business houses will do well to study it carefully. It will be observed that the *Journal* states that "the flying visit of a commercial traveller may often meet the case, but unless the sales he makes are to well-known firms, or for cash, they must be attended with a good deal of risk, and it is doubtful whether a traveller, who usually lacks the knowledge of local conditions, can effect sales on as good terms as the man who resides on the spot and is in constant touch with the market."

***

The next and equally important thing is to see that the agent is honest and a person or firm of repute. References are generally available, and in most cases a bank will be prepared to report upon names submitted to it; and there is also the Chamber of Commerce. An agent should be honest enough and capable enough to be trusted with a certain amount of discretionary power. Recently it was pointed out that it was a common thing for "such firms to send their bills for collection to one of the local banks, giving the name of their agent, to whom reference is to be made in case of need. In such circumstances the bank should be clearly told whether the agent has power to stop protest, grant delays, compromise questions which may arise as to allowance, etc., and withdraw any bill without paying its countervalue. Although the necessity for such instructions may appear to a number of people to be too obvious to require special notice, the fact remains that in a large number of cases such directions are not given, with the result that time is lost and cabling expenses are incurred in ascertaining the wishes of the remitters."

***

On the other hand, it is possible to be so over-cautious as to be foolish. A case was reported to the Chamber the other day in which an English firm, starting to do business with an agent, refused to send out samples of their goods without receiving a remittance to cover expenses. Another complaint, also against an English firm, was made by a Cairo buyer, who, having bought and paid for a large shipment of goods, and finding that they were not up to sample, sent a small parcel home for comparison, and were met by a refusal, on the part of the shippers, either to recognise the complaint or to submit the question to arbitration. The critic is certainly correct in his view that this is "not the way to capture enemy trade—no German firm would think of asking for expenses on sending out samples to the country where they, presumably, wished to open up a 'connection,' and to refuse even to discuss the complaint of a client who pays on delivery, is a very poor way of setting out to replace the enemy trade."

Greece and the United States.

How Trade has been Increased by the Ill-wind of War.

Studying carefully a series of reports submitted by various Consular officers in Greece to their Government in Washington, it is possible to derive a certain amount of comfort, in that enemy commerce appears to have been eliminated. These reports, which bear a date in August, are not exhaustive in their detail, and are intended to show, primarily, the approximate position of United States interests in the country; but they contain a considerable record of general trade nevertheless, and, in view of their authorship, may be regarded as being somewhere near the mark.

Shipping statistics are the first to call for notice. In the year 1914—of which seven months belong to the war period—ninety-six German vessels entered the port of Piræus (for Athens), representing an aggregate tonnage of 200,990 tons. In 1915 only one German vessel entered the port, her tonnage being 1,730. Of Austrian vessels 226, of an aggregate tonnage of 474,618, entered in 1914, and one vessel of 4,775 tons was able to enter in the year 1915. Last year no enemy-owned vessel cleared from the port of Kalamata, no details are given of Mitylene, but of Patras the picture is pleasing. Here is a shipping table of that port for the two years :—

	1914.			1915.	
	Ships.	Tons.		Ships.	Tons.
Austrian	72	132,625	....	—	—
Bulgarian	4	11,274	....	—	—
German.....	37	70,466	....	—	—
Turkish.....	26	19,466	....	—	—

These figures speak for themselves, and are of infinitely more value than all the debates in the world could be.

No Enemy Trade.

In Entente circles Greece is, rightly or wrongly, suspect just now, and it would require bravery of quite an unusual kind to attempt to elucidate the situation out yonder; but whatever the political situation may be, it is pretty certain that German and enemy trade generally in Greece has for the time being been wiped out. We need not bother to discover whether the fact pleases the Greek people or not; for the moment the fact itself is sufficient, especially as more recent steps taken by the Entente Powers make it impossible for our enemies in the country to pursue their campaign—a campaign which, in the past, was so successful.

One of the results of the war has been that Greek shipowners have been able to amass considerable profits. Reference has been made to this fact previously in THE NEAR EAST; but the American Consul-General estimates that they have netted profits amounting to about £16,000,000. He says that some owners, tempted by the large prices offered for ships in various parts of the world, have disposed of a number of their vessels for large sums.

This has had an unfortunate sequel, for the crews have remained at home idle, partly because of idleness and partly because of the language difficulty, which prevents many of them from finding employment under foreign flags. In either case, the result has been the same; the men have remained in Greece to swell the great army of out-of-works and to increase an already severe economic problem. In passing it is worth mention that a great number of refugees have accumulated to add to the burden of the authorities. Some of these are able to maintain themselves, but the great majority are quite without means, and depend entirely upon the charity of the public, the State having to make up the deficiency.

Generally speaking, the war has had a very serious and adverse effect upon Greek commerce and trade. Raw material has been difficult to secure, agricultural interests have suffered through the mobilisation of horses and cattle for the army, while the unsettled political situation has played havoc with the country. With this aspect of the situation the Consul-General does not deal—for obvious reasons—but there are other observers who have not failed to draw a comparison between the past and the present, and they agree that not all the distress is to be attributed merely to war dislocation. There is a general lack of confidence on the part of the people in their own authorities which bodes little good for the immediate future.

The Marble Industry.

The report before us deals almost entirely with Greek trade with the United States, but here and there we are given a glimpse at the more general aspect of the question. For example, the Consul quotes the manager of a large firm of marble merchants, who describes the conditions of the industry and explains why many quarries have been closed. He says :—

"The amount of Pentelic white marble quarried in 1915 was about equal to that of 1914, yet the output from the coloured quarries has practically discontinued, with the exception of Tinos green marble, owing to conditions arising out of the European war. The American market consumed the bulk of the Tinos green produced, otherwise this property would also have had to shut down. The London market absorbed the best quality produced from the Pentelic white marble quarries, while the local market took the remainder, which, of course, was of second and third quality.

"Owing to shipments having entirely ceased to the Antwerp and Hamburg depôts, where in the past large quantities of coloured Skyros, Pentelic white, Tinos green, and Verde Antico marbles were used, the business has been seriously affected—in fact, during the past year only Pentelic and Tinos marbles have been quarried, the former during most of the year, and the latter for five months. Toward the end of the year there was a small amount of the Verde Antico marble quarried, but owing to a lack of orders all of our properties have now been shut down.

"Freight rates to London are now double what they were before the war, while to America they have increased about 30 per cent. This, together with war conditions, doubtless accounts for the decreased trade with Great Britain. It was hoped, however, that the American market would import large quantities of marble, owing to the more favourable conditions prevailing there. Up to the end of 1915 the increased freight rates to the United States had not yet gone into effect. High freight rates, therefore, do not account for the recent falling off in orders from that quarter.

"The local business has practically ceased, probably because of the high cost of other classes of building material, thereby preventing the construction of new buildings."

General Merchandise

Speaking of the Consular district of Athens alone, the Consul gives us an idea of the manner in which American trade expanded in 1915. The declared exports to the United States from the Athens district amounted in value to the sum of £382,350 sterling; not a great sum, perhaps, but certainly considerable when compared with export values in the preceding year—£273,820. Going back another year, we find that the gain over 1913 amounts, roughly, to £168,000, a very fair figure indeed when we remember the great dislocation caused by the war.

Entirely new lines of trade were opened up in furs, herbs, opium, emery, paints and colours, while expansion in trade is to be noted in respect of books, almonds and walnuts, butter, caviare, cheese, salted fish, citrons, gum mastic, marble, magnesite, skins, amylic alcohol, spirituous beverages, and liqueurs. There are several decreases to be noted—namely, in oils, the export of which fell off by about one-half; sulphur, which declined from about £27,000 to £2,000; chrome and tobacco, the decline in the latter of which was also considerable.

Emery and Magnesite.

A word of explanation is due regarding emery. Although this ore does not appear among declared exports from Greece to the United States previous to 1915, the absence is misleading, for in the preceding two years certain shipments were undoubtedly made, but were merged into the exports of Asia Minor, and included in the exports through the port of Smyrna. As is well known, emery is a monopoly of the Greek Government, and the price was advanced 30 per cent. in March this year. The output in 1915 was 15,000 metric tons (for delivery in 1916), while the demand up to March last was something like 70,000 tons.

American purchases of magnesite last year were more than doubled, owing, we are told, to the shutting down of the Styrian mines in Austria. The demand for Greek magnesite in the United States this year promises to equal that of last year. The Austrian product is much inferior to that of the Greek mines. Although it is quite good enough for firebrick making, the Grecian ore is specially valuable for the manufacture of flooring compositions.

Skins and Tobacco.

The recent history of the skin trade is interesting, and illustrates one of the effects which the entry of Italy into the war exercised. At the beginning of hostilities Germany and Austria bought up the entire available supply of skins on the Grecian market, importing their purchases through Italy. Prices were then doubled, and the field was practically exhausted. When Italy declared war against Austria in 1915 the shipments ceased, but the prices remained high and trade continued brisk, with an accelerated demand from the United States. That demand continues, for it is anticipated that shipments this year will surpass all previous records.

At the beginning of the war the Greek tobacco trade was hit badly, but it was able to make a fair recovery.

Because of the uncertain political conditions prevailing in Greece early in 1915, at least one important tobacco firm in the Athens district seriously considered closing its offices; when, however, it seemed probable that Greece would remain a neutral country, business again became active. The crop last year (the tobacco year is from September to August) was good, and on account of the blockading of Black Sea ports the prices for Greek tobacco were above the average. The 1915 crop was practically all sold in advance at a good price.

The lowest grades of tobacco found a ready market in Germany; shipped by way of the Netherlands, these grades which brought from $0.0547 to $0.0684 per pound in 1914 sold for from $0.13 to $0.164 per pound in 1915.

The sinking of two or more steamships carrying important shipments of tobacco to the United States from Greek ports obliged importers to refill orders at an advance in price of 50 per cent.

Imports through Piræus.

The countries of origin of the goods imported through the port of Piræus, with the quantities brought, were the following :—

	Tons.		Tons.
America	395,938	Italy.....	11,467
England.....	328,689	Norway	572
Egypt	11,769	Serbia	201
Austria	15,277	Russia.....	24
France.....	18,235	Belgium	26
Netherlands	10,744	All others	113,776
Turkey	6,090		
Bulgaria.....	6,497	Total	919,243

It will be noted that the United States was the largest exporter to Greece in 1915. This was due to the large quantities of wheat purchased in the United States, the Russian and Balkan markets being closed on account of the war.

The recent budget of the Piræus Port Commission, which has been approved by the Minister of Communications, contemplates the expenditure of £32,000 for the construction of new piers, £2,000 for new port works, submitted in 1914, an equal sum for deepening the central part of the harbour, and £6,000 for various improvements.

ALEXANDRIA COTTON BOURSE.

The Facts and Figures of the Settlement.

(From Our Own Correspondent.)

Cairo, September 6.

The crisis on the Alexandria Cotton Bourse has now been settled, and to-morrow it will reopen for operations under entirely normal conditions. The settlement has been brought about, thanks, on the one hand, to the public spirit shown by the trade, that is, the exporters, and on the other hand to the assistance given by the Government in the solution of the financial side of the settlement.

What has been arranged is this. The trade has undertaken to buy abroad future contracts for a quantity of 87,250 cantars, and will place these at the disposal of the brokers. The latter will take them over at $23, and, to cover the risk that the trade runs, the purchase made by the latter is to be reckoned at $9 above the price at which New York opened on September 5. The difference between this last figure and the $23, at which the brokers will take the 87,250 cantars over, is to be advanced by the Government, which will recover the amount, plus 5 per cent. interest, by means of an additional tax of one millieme per cantar, to be paid voluntarily by the brokers until such time as the advance and interest have been entirely liquidated.

The 87,250 cantars is the total commitments of those of their clients whom the brokers estimate will not be able to meet their differences. It is thought that the difference to be advanced will not be more than $3 per cantar, and that the amount will be recovered within six months.

Whilst the Government and the trade are to be congratulated on the part which they have respectively played in bringing about this settlement, the details do not induce one to regard the brokers very highly. The latter have, admittedly, paid large differences on the 87,250 cantars already, but it looks very much as if they took their action, not so much to save themselves from bankruptcy as to restrict their losses. At any rate the episode, which has been purely brought about by speculation encouraged by the brokers, can but serve further to discredit the market in Europe. It now rests with the Government to take such steps as will effectually prevent a recurrence of such a scandalous situation, and from what I gather it is the firm intention of the powers that be not to allow the market in the future to be at the mercy of the brokers, as it is proved to have been in the past.

NOTICE.

Société Anonyme pour la Fabrication des Cigarettes Egyptiennes marque HADJES NESSIM en liquidation.

Offers for the purchase of the following items of Stock and House Property will be received in the name of EDWARD D. JOYCE, P.O.B. 206, Alexandria (Egypt), Receiver of the above Company, up till 8 a.m. on the 15th of NOVEMBER, 1916 :—

(*a*) The TRADE MARK belonging to the Company, together with all the Stock of Tin Boxes, Labels, Cigarette Paper, etc., on which the Trade Mark is printed.

(*b*) The BUILDING situated No. 12-14, Rue Abou El Dardar, Alexandria (Egypt), belonging to the Company.

Details of the above can be obtained at the Offices of the Company, 12-14, Rue Abou El Dardar, Alexandria, between the hours of 9 a.m. and noon, on any day except Sundays, from this date to the 13th of NOVEMBER, 1916.

Offers must be made in writing, under registered cover, to the above mentioned P.O. address, and must be accompanied by a deposit in Cash of 10 per cent. of the amount offered.

Offers may be made for items A and B separately.

The Receiver is not bound to accept the best or any offer made.

COTTON TRADE POSITION.

Wild Fluctuation in Egyptians.

Mr. Frederick W. Tattersall, in his monthly circular reviewing the cotton trade position, says a further striking advance has occurred in raw cotton rates during the past month, fresh high records being established, and 9.90d. has been quoted, which is the highest figure for nearly fifty years. Some profit taking has occurred lately, with an increased feeling that the recent bullish movement has been overdone. The forward movement of the crop is encouraging, and at the end of last week the ginning report was much better than anticipated. It remains to be seen at what level prices will steady. Opinions relating to supplies and probable consumption during the next twelve months are very conflicting. Spinners' callings have been of fair extent, and little improvement has recently shown itself in the spot sales. It is too early for any definite estimate of the yield to be published, but the statistics so far available seem to point to an output of about 12,000,000 bales. Should this figure not be exceeded, and consumption keeps up, then we must expect depleted stocks at the end of the season High prices, however, must have some effect upon the requirements of users. Egyptian cotton has fluctuated rather wildly, and some irregularities have transpired in the Alexandria market.

The conditions in the cloth market during the past month have been most difficult, and, although the hardening tendency in prices has brought out a big inquiry, a large part of the demand has been at unworkable rates. A substantial business has been done, however, in stock lots, and where makers have been in a position, owing to either cheap raw cotton or yarn, to accept a little less than top prices. For India certain producers of light bleaching cloths and goods suitable for printing have added to their engagements, but the buying movement has not been general. Dhooties are more deeply sold than a month ago; on the other hand shirtings continue neglected and depressed. All along the line manufacturers of fancies and specialities have met with a more encouraging demand than producers of staple goods. The response on the part of China shippers to the higher prices has been very poor. Here and there quite a healthy business has been done for Egypt, certain goods being badly wanted on the other side.

THE WHEAT CROP.

Dealing with the preliminary estimate of the world's wheat crop, the *Grain, Seed, and Oil Reporter*, in its issue of September 16, states that this year's crop for the countries mentioned, as will be seen by the tabular statement printed below, is very considerably smaller than in the previous year. The following figures represent quarters of 480 lbs., with in each case 000 omitted :—

	1916.	1915.
Austria	8,000	8,000
Hungary	21,000	20,500
Greece	600	600
Italy	23,900	21,500
Roumania	10,800	11,300
Russia	105,000	113,000
Servia	500	1,500
Algeria and Tunis	4,500	5,700
Egypt	4,500	4,900

The indicated surplus in exporting countries (leaving Russia and Roumania out of the calculation) from this year's crops, according to present prospects, is much smaller than in most recent years, amounting to about 40 million quarters, against estimated import consumptive requirements of foreign wheat of 67 million quarters, this total including the wants of all European and non-European countries, excepting Germany and Austria-Hungary.

With regard to Russia and Roumania as exporters, these countries have very large surpluses of wheat, amounting in all probably to over 40 million quarters, Russia having shipped very little wheat from either the 1914, 1915, or 1916 crops, whilst Roumania has a good surplus this year.

The requirements of foreign wheat for account of Germany and Austria-Hungary would probably not exceed 12 or 13 million quarters, so that it will at once be seen what a difference it would make to consumers, so far as future supplies are concerned, were the Dardanelles Straits open, enabling Russia and Roumania to export freely.

TRADE NOTES.

Liquidation.

The firm of Joseph Eggert is liquidating its affairs, and Mr. F. H. Russell, Gresham House, Cairo, the liquidator, requires all claims to be submitted to him on or before September 30, 1916.

Failures.

The following is the list of failures in Egypt during the period June 28, 1916, to July 25, 1916 : Kelada Raphail, merchant. Mahamid (Keneh); Georges Farag el Assabgui, merchant, Cairo; Joseph Rahmin Salama, Austrian banker, Alexandria.

Openings—Pianos.

The British Chamber of Commerce (Cairo Committee) call the attention of the Manchester Chamber of Commerce to the fact that there is an opening for the sale of English pianos in Egypt, consequent upon the enforced liquidation of the business of the principal piano dealer in Cairo, who was of German nationality and dealt only in German goods. The average sales of these instruments has amounted hitherto to between 200 and 300 a year.

Licence to Trade.

Mr. Alessandro B. Pervanoglou, 6. Rue Young, Alexandria, has been granted a licence to trade in Egypt with the British Empire and with Allies of Great Britain.

SHIPPING NOTES.

Belated news has been received from Larnaca that the Greek steamer Spetzai, bound from Cyprus to the United Kingdom, has been sunk.

Our interned merchant seafarers in Turkey are in a very pitiable plight, according to official information received—mainly as regards supply of food—horse beans being largely their staple diet, says the *Journal of Commerce*. The Imperial Merchant Service Guild, which is looking after all the interned captains and officers in Germany and Turkey, also their dependents, have just received a postcard from Captain L. Allen, of the Ellerman liner Assiout, who is interned with his shipmates at the camp at Magnesie, Turkey. Captain Allen states that all the prisoners are in good health and spirits, but regrets to inform us of the death of two firemen.

The *Vossische Zeitung* hints in a recent issue at the possibility of a much closer understanding between the two great German navigation companies, the Hamburg-Amerika and the Norddeutscher Lloyd, on a basis that remains at present a secret. Both companies are now engaged in reorganising their boards of directors, many of the old directors retiring in favour of prominent German financiers and bankers. According to the above-named newspaper, it is evident that at the end of the war the two companies will require big financial credits. Representatives of the leading German mining and electrical industries will likewise be on both boards.

The King has been pleased, on the recommendation of the President of the Board of Trade, to award the Silver Medal for Gallantry in Saving Life at Sea to Mr. James Alexander Coverley, late master of the steamship Virginia, of Glasgow, in recognition of his services in attempting to rescue a wounded native seaman when his vessel was lost in the Mediterranean on July 16.

PRODUCE REPORT.

LONDON, September 21.

Currants.

There has been a considerable activity in the market during the week, with larger business done in new fruit to arrive, and for forward shipments, at further advanced prices. The s.s. Gulf of Suez, with about 2,300 tons of new season fruit, and the s.s. Pyrin, with about 800 tons, are expected to arrive here the end of this or the beginning of next week. In old fruit, only little business is done, the remaining stock not being in quite good condition.

Sultanas.

The demand continues, and Afghanistan fruit sells well at a further advance of 1s. to 2s. on the week, while some 200 to 300 tons of Australian that arrived were sold while afloat. Greek sultanas are quiet, with little doing, owing to the high prices asked.

Figs.

There is only a moderate demand, and prices are well maintained.

Dates.

Owing to the reports that shipments will be small this season on account of freight difficulties, prices have advanced, and a further advance is not improbable.

Seeds.

Linseed.—The market has been very firm during the week and is closing dearer: London-Calcutta, spot, is quoted at 77s. 6d., while afloat was sold to-day at that price; September-October, 78s.; October-November, 78s. 6d.; and Bombay ordinary, September-October, 79s. 6d., with small grain ditto, 78s. Rapeseed is firm, but quiet. Toria, September-October, is quoted at 69s. 6d., and bold Ferozepore, ditto, 58s. 9d. Cottonseed is also firm, but quiet. London-Egyptian, September-October, offered £13 15s., and October, £13 10s. per ton. Rangoon beans have further advanced, and £23 to £23 10s. per ton is now asked for spot lots, whilst quotations for arrivals are also higher. Canary seed remains quiet and practically unchanged for all descriptions.

Oils.

Linseed oil is dearer. Spot pipes, landed, £37 15s.; barrels, ditto, £38 15s. Rape oil is firm, ordinary brown, naked, spot, nominal; English refined, barrels, £48 to £50. Cotton oil is firmer. Crude, spot, pipes, quoted at £35; refined, pale, pipes, £40; barrels, £41; and sweet, barrels, £48 to £51 10s. as to make.

Oilcakes.

Cotton-cakes.—Only a small quantity of Egyptian cakes remain in warehouse, commanding full prices at £10 5s. to £10 7s. 6d., whilst business has been done during the week for September-October shipment from Alexandria at £10 2s. 6d., ex ship terms. English is unchanged at £10 5s. to £10 10s. per ton. Linseed-cakes.—Owing to the small production from the English mills values remain very firm, and manufacturers, as well as second-hand sellers, ask £14 5s. to £14 10s. Foreign descriptions, such as Italian, Spanish, Portuguese, and Greek, may be bought a little cheaper from £13 5s. to £13 15s. per ton.

RUSSIA'S BEST CUSTOMERS.

In a statement published in a Petrograd paper it is shown that Russia does her largest volume of foreign trade now with Great Britain. The statement quotes the returns of the Customs House for the first five months of 1916, showing that the exports of various goods to Great Britain over the European frontiers and seas amounted to 28,600,000 roubles value, against 16,100,000 roubles in 1915. The exports consisted almost entirely of raw material, namely, to the value of 28,000,000 roubles. Amongst the raw materials are included flax, to the value of 17,000,000 roubles; hemp, 3,500,000 roubles; skins, 1,200,000 roubles; bristles, 957,000 roubles.

Roumania follows France with 3,600,000 roubles, against 1,200,000 roubles. Roumania took foodstuffs to the value of 1,500,000 roubles, raw materials and half products 1,700,000 roubles, and manufactures 408,000 roubles.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

ENGINEERING NOTES.

War on Agricultural Pests.

The Egyptian Ministry of Agriculture, in its admirable technical and scientific service, has published an interesting note on a machine designed to kill gelechia larvæ by hot air. Mr. Du Lewis Gough, F.E.S., Director of the Entomological Section, the author of the note, writes:—

"In January, 1914, Mr. Storey and I published the results of a series of experiments made to discover a method of treating cotton seed in order to kill gelechia larvæ without injuring the seed. As a result of these experiments two machines were constructed and erected at the State Domains at Sakha. These machines were firstly a fumigating apparatus built to our design by Messrs. T. Cook and Son, Bulâq, and a machine acting by hot air, designed and constructed by Mr. Crovisier, of the State Domains. Both machines were demonstrated to ginners and other persons interested in June, 1914. Our fumigating machine fulfilled all that was expected of it, killing the larvæ without damaging the seed at a price that would not be exorbitant. It, however, did not meet the approval of the ginners, because the gas we were using—carbon bisulphide—is explosive when mixed with air, and the ginners were afraid that its employment might mean a rise in the cost of their insurances. The hot-air machine also proved a success, but was objected to on account of the huge space it required and its somewhat limited output. Both these machines were intended as models only, and were designed to demonstrate a principle. That they failed to raise much interest was because there was nothing to compel the ginners to undertake the destruction of worms in cotton seed, and in consequence they adopted a waiting attitude rather than introduce costly machinery which might soon be superseded by less expensive and more efficient methods.

Meeting Ginners' Objections.

"The results of the meeting showed that ginners would object more to any machine employing a poisonous or explosive gas than to a machine whose action was based on the application of heat. The Ministry of Agriculture consequently decided to devote special attention to the elaboration of a machine on the latter lines and to have a working model erected. The contract was given to Messrs. T. Cook and Sons, Bulâq, in January, 1915, and the machine was expected to be delivered by the end of February. Owing to the war delivery was not actually made until November, 1915. The machine is really a very simple one. In its main lines it consists of a furnace for the generation of the hot-air, a hot-air chamber through which the seed passes, and a motor. The hot-air chamber is a rectangular box of iron, isolated on the outside by asbestos to avoid loss of heat. Internally there are four endless bands made of iron chains, with trays on which the seed is carried. By a contrivance the seed, after having been carried nearly the whole journey of the upper surface of the upper part of a band, is discharged on to the upper surface of the lower part of the same band; from here, after travelling nearly the whole journey, it is again discharged on to the upper surface of the upper part of the next band, and so on, until finally it is discharged into an Archimedean screw conveyor which carries it into the sacking exit. The seed is fed in at the top of the machine by an automatic hopper, which drops in exactly the quantity of seed required to make a layer one seed deep on the endless bands. A fan situated near the feed-in causes a continuous draft of air to circulate through the machine. The air is exhausted from the hot-air generator, a brick chamber surrounding the furnace. The temperature is regulated by a damper which opens or closes by means of a screw. This damper is interposed between the hot-air generator and the hot-air chamber. A thermometer passing into the body of the hot-air chamber indicates the heat of the air at that part of the machine, and is used in regulating the temperatures. By opening the damper as soon as any indication of a fall is evident, and by closing it as soon as a rise commences, it is easily possible to keep the machine regulated to plus or minus half a degree of the desired temperature. This regulation could, of course, be made automatic if necessary. We have not fitted an automatic control on account of the extra expense, our funds not being very large.

Working the Machine.

"In working the machine the following factors have to be considered:—(1) The outside temperature: the temperature of the seed: (2) the time required to pass through the machine: (3) the temperature the machine is regulated to give: (4) the temperature of the seed at the exit. Of these four factors the last is the most important, and the other three factors must be regulated so as to keep the temperature of the seed at the exit between 48° C. and 55° C. The best temperature to regulate for being 50° C. When working the machine the time required for the seed to pass through is not interfered with; the outside temperature varies independently and cannot be regulated. The temperature required in practice is actually obtained by observation of thermometer 1 situated near the regulating damper, these readings being supplemented and corrected by observations of the temperature of the seed at the exit. Tables appended to the note show the limits between which the worms are killed and the seed does not suffer. These show that there is ample limit for regulation in such a way as to kill the worms without damaging the seed. With reference to these tables it must be remarked that they were obtained by treating small quantities of about ten kilogrammes, so that the figures given may not be quite the same as those which would be arrived at by continuous working. Further examination of the tables shows that the temperature regulated for is not as important as the final temperature of the seed. It may here be stated that the full damage to the seed can be estimated if germination tests be made directly after treatment. No further falling off of germination is observable after the lapse of three weeks. On the other hand, the mortality of the worms is not instantly complete, worms occasionally surviving treatment for a few days, especially when treated at a heat close to their temperature limit. Where only 1 or 2 per cent. of worms have been left living this is supposed to be due, not to superior power of resistance on the part of the worms which came through alive, but to the seeds containing them having fallen through the gaps between the flaps forming the endless bands, and thus not having been heated sufficiently.

Effect on Germination.

"In another table is shown the effect on the germination of treatment of nine sacks of seed. The same seed was treated twice; as the temperature at the time of the first treatment was not maintained at a sufficient height these nine sacks were treated a second time. The germination was not injured at all, the seed treated germinating quite as completely as the controls. When the machine is working the temperature inside is not everywhere the same. It is found that the temperature at the level of the lowest seed carrier is always the highest, being above that of the regulator thermometer. The second lowest carrier has the next highest temperature; after this the space above the top carrier is hottest, then follow the third carrier and the fourth carrier. The temperatures of the regulator thermometer and of the seed at exit fluctuate least. If the machine be allowed to run empty for a short time and a sack of seed be then fed in, an instant fall of the temperature in all parts of the machine is noted. This fall would, of course, not take place if the feed-in of the seed were constant and continuous. The temperature in certain parts of the machine may rise very high, up to 170° C., without danger to the seed. This is because the temperatures read are taken from the sides of the machine, and are not actually those of the carriers, and also because the seed is not exposed for sufficient time to the maximum temperatures. It is intended to fix an automatic regulator to the machine which would do away with the necessity for hand control entirely. The thermoregulator attachment ought to be fixed in such a way that the temperature of the seed passing out of the machine will give the necessary impulses."

TURKISH PRISONERS.

How they are Treated at Meadi Camp.

In a well-known Oriental art dealer's shop in Cairo may be read any day a somewhat inconspicuous legend, "Work of the Turkish Prisoners of War," and a visit to the interior of the emporium reveals many interesting specimens of handicraft, which find a ready sale among residents and visitors alike, says the *Egyptian Gazette*.

If any proof were needed at this stage of the humane treatment meted out to our prisoners of war by the authorities in Egypt, ample evidence is afforded by this new and somewhat remarkable industry. By direct authority of the military, the Turkish prisoners at Meadi are permitted to buy the materials—wools, cotton, wire, and beads—from the canteen, and from them they make up various quite saleable articles, which are offered for sale at moderate prices. Each prisoner values his own work, and the amount is attached to his production, together with his camp number, so that when the goods are sold he can claim and receive what is due to him.

At the present moment the Cairo dealer has about £E30 worth of stock of this description on hand, and this he is constantly increasing as a result of visits to the camp, where he not only settles his accounts, but advises and offers suggestions to the prisoners respecting the make and finish of the articles they produce.

Good Work.

Generally speaking, a very fair artistic level is reached by the craftsmen, who, as may be imagined, are of various nationalities. The word "Turkish," as applied to Meadi's new inhabitants, has a wide and significant meaning, since it includes Syrians, Armenians, and Greeks, who have all been compelled to take up arms under the Ottoman flag.

For the most part the articles for sale are the work of Syrian prisoners, whose hand-woven caps and handbags and olive bead rosaries are exceedingly well done. The prices are as follows:—Caps, from P.T.10 to P.T.15 each; handbags, from P.T.5 to P.T.20 each; and the rosaries, P.T.3 each. Many of the bags, or reticules, are of beadwork of good design. There are numerous serpents of beadwork, very cleverly counterfeited as regards the skin markings, and ranging in price from P.T.6 for a mere viper to P.T.50 for a much larger and equally convincing cobra.

Work in Stones.

A few beadwork belts are also on sale at P.T.8 each. These have Turkish inscriptions worked in colours. The most novel exhibits are without doubt the carved stone slabs. Thin paving slabs from the Mokattam Hills have been handled by one or two Greeks with great skill, and by means of low relief carving and coloured backgrounds, to say nothing of the accurate draughtsmanship, very excellent full-rigged ships have resulted. The marine subjects are by a Greek, who in happier days sailed the seas as a captain. As a variant from the ship type of design is the huge enlargement of an Australian florin, produced in a similar manner but with less success.

AUSTRIAN LOSSES.

Early Result of Roumanian Intervention.

Judging from the swift advance of the Roumanians in Transylvania there seems to be no doubt that their armies will soon overrun the greater part of the province, a correspondent writes in the *Morning Post*. With their advance they are not only hampering the military position of the Dual Monarchy, but are also inflicting considerable economic loss on Hungary. Not to mention the large amount of cereals left behind during the hasty evacuation of the towns and counties of the eastern portions and the whole of the Maros valley, the loss of the mines and great productive centres in the Transylvania constitutes a severe blow to the Monarchy, and indirectly to Germany also, and adds to the miserable state of affairs as regards economic conditions in the Central Empires.

Loss in Wheat.

It is stated in the Hungarian papers that practically all the wheat and other cereals along the invaded district have been lost, the Roumanians having attacked so quickly that nothing could be saved. It is estimated by the papers that in the eastern counties and the Brasso, Hermanstadt, and Orsova regions, the loss in wheat alone amounts to over 140,000 metercentners.

The Transylvanian gas fields, yielding combustible gas which pours forth from the earth, and which were discovered only a short time ago, were to have been financed by the Deutsche Bank, and it was stated that the gas springs there would be sufficient to supply the whole of the Monarchy with gas if properly exploited and administered. The Germans were about to set to work on this great scheme when Roumanian invasion put an end to operations. The value of the gas in these districts can be imagined when it is remembered that the German banks were ready to invest £2,000,000 and pay almost as much every three years to the Hungarian Government for the concession.

Mineral Wealth.

The most valuable treasures of Transylvania, however, are its mines. It is well known that the Transylvanian Alps are rich in gold, copper, and iron, as well as in coal.

The extensive forests of Transylvania naturally furnish timber in great quantities —in fact, the whole of the Austro-Hungarian timber trade is dependent on the Transylvanian forests. They produce great quantities of oak and beech, immense timber yards, all worked with electricity, are kept going day and night, and, according to the reports in Hungarian papers, all these were blown up before the forests were evacuated.

CONVICT LABOUR IN THE SUDAN.

Seventy-eight convicts who have served three-fourths of their terms of imprisonment and have proved to be of good conduct, have arrived at Cairo from the Sudan for release. It may be remembered that about a thousand Egyptian convicts were sent to the Sudan three years ago for work on the Gezireh Canalisation scheme, the Dongola Irrigation, and other works. They are still there and are performing valuable work for the Sudan Government.

Most of the Dongola irrigation schemes are now nearing completion. A canal has lately been dug out at a distance of eight kilometres east of Dongola which will soon put 80,000 feddans of land under cultivation between Dongola and Kerma. A "tarrad" has been made to flood the lands of Dongola El-Ordi and a connecting drain has been completed between this "tarrad" and Hod Ordi. Argo Canal has also been cleared and enlarged, and it is estimated that 10,000 feddans will thus be irrigated in this locality during the present season.

It is hoped that the work carried on in Dongola will soon come to an end and the prisoners will be removed to Berber Province, where certain irrigation schemes have been projected lately for the extension of the present cultivated area in that province.

AGENTS IN EGYPT.

Warning to Home Firms.

In its August number the monthly journal of the British Chamber of Commerce discusses the need of care by British firms in the appointment of agents.

"There may be some cases in which a resident intermediary is not an absolute need (says the writer), but usually it will be found more satisfactory to have a man on the spot versed in the ways of the markets, and acquainted with the languages and requirements of the country.

"The flying visit of a commercial traveller may often meet the case, but unless the sales he makes are to well-known firms or for cash, they must be attended with a good deal of risk, and it is doubtful whether a traveller who usually lacks the knowledge of local conditions can effect sales on as good terms as the man who resides on the spot and is in constant touch with the market.

An Example.

"Too much stress cannot be laid upon the necessity for care in selecting an agent. It is to be feared that a number of British firms owe their bad experience of the Egyptian market to their want of precaution in this respect rather than to any inherent defect in the country's commerce.

"A large firm of hardware merchants sent out one of its partners a few years ago to look into the state of its business, which had some time previously been placed in the hands of a local firm of commission agents. Remittances had become very irregular, many bills were in suspense, and correspondence making pointed enquiries had been treated with chilly silence. On looking into matters on the spot, the firm's representative found that injudicious sales had been made, and that in some inexplicable manner their money had got mixed up with the local agent's.

"As is not unusual in such cases, the mixing process had not been to the advantage of the home firm. The representative expressed great indignation, and had recourse to a lawyer, and finally announced his intention of withdrawing from the Egyptian market altogether, being firmly convinced that the country was an impossible one in which to do business.

No Reference.

"Just before leaving Egypt, it suddenly occurred to him to make enquiries about his ex-agents. On being informed that they had been well known for their unsatisfactory business character for many years, he admitted that he had engaged them without obtaining any local references. Had this firm been to the trouble of applying to the Chamber of Commerce or one of the banks, they would most certainly have been warned, and so saved their unpleasant experience, which, in addition to causing them financial loss, brought about their withdrawal from the Egyptian market, where under ordinary conditions they might have had quite a satisfactory and remunerative business."

GREEK CURRANT TRADE.

As we go to press we have received from Messrs. Burlumi their annual report on the currant trade (dated September 19, 1916), from which we take the following:—

We refer to our last report, dated September 14th, 1915, in which we estimated the crop of currants at 125,000 tons. The shipments during the year ended on the 22nd August reached 100,000 tons. To the Retention Stores of the Privileged Company there were delivered 30,000 tons; about 3,000 tons of fresh and dried currants were used for wine making and other industrial purposes in Greece, and the stock carried over to the new season is estimated at about 2,500 tons, making a total of 135,500 tons. Deducting 1,500 tons of old fruit brought over from the previous season of 1914-15, and 8,200 tons of retention currants sold to the exporters by the Privileged Company, we find that the crop of 1915 has yielded 125,800 tons against 145,000 in 1914 and 161,000 in 1913.

The 100,000 tons shipped to foreign countries were distributed as follows:—

	Tons	In 1914-15.
To the United Kingdom and New Zealand	70,000	against 71,300
To the United States and Canada	12,700	,, 13,600
To the Continent of Europe	17,300	,, 20,100
Total	100,000	,, 105,000

NEWS FROM ALL SOURCES.

The New Turkish autonomous tariff came into operation on September 19.

Persian and Afghanistan labourers have been recruited for the Russian cotton-growing industry.

The rainfall has been continuous in Kassala, and cultivators are looking forward for dry weather, as the ground is too wet to glean. The Gash flood is described as the greatest since the reoccupation of the Sudan.

The first cargo of American coal to be shipped to Greece from Philadelphia has been cleared. It consisted of 4,019 tons of coal, in addition to 418 tons of coke. The coal heretofore shipped to Greece has gone from Hampton Roads or Baltimore.

The Nile (says a Reuter message from Cairo) has reached a very high level, necessitating the enforcement of the decree of 1887 empowering the Government to call upon any able-bodied man to assist in the protection of threatened regions under pain of imprisonment or fine.

The Egyptian Council of Ministers has approved of the organisation of a special section in the forthcoming Imperial Exhibition in London for exhibiting samples of the Egyptian products, and the opening of a credit for £E731.250 m/m for carrying out this decision.

The Egyptian cotton crop this year is likely to amount to 6,750,000 cantars. If present prices are maintained and the crop is well financed it is hoped that it will bring in £E30,000,000, against £E16,000,000 last year and £E19,000,000 in 1914. As the flood is sure to be high this year the outlook is most favourable.

A Health Department has been established in Turkey. It has the following branches:—Public Health, Medical Jurisprudence, Pharmacy, and Statistics. Transferred under its direction are:—The Bacteriological and Chemical Institutes, the Freakhouse, the Institute for Medical Jurisprudence, and the School for Health Officers.

BRITISH TRADE WITH RUSSIA.

In view of the widespread desire to establish more intimate trading relations between the Russian and British Empires, it was decided, at a large meeting of British and Russian firms interested, convened by the Russian Consul-General in London (Baron A. de Heyking), and held in London recently, to form a Russo-British Chamber of Commerce in London. The Russian Consul-General stated that his Excellency the Russian Ambassador, Count Benckendorff, was prepared to become Honorary President of the Chamber, which would secure its official recognition.

At the request of the Russian Consul-General, Sir Algernon Firth (President of the Association of Chambers of Commerce of the United Kingdom) occupied the chair, and an Executive Council was appointed, consisting of seven Russian and seven British gentlemen, for the purpose of drawing up the constitution of the Chamber, its articles and by-laws. This has been done, and the memorandum and articles are now awaiting registration, when the Chamber will be immediately formed.

The following gentlemen have agreed to act in the capacities named in connection with the Chamber when formed:—Hon. President, Count Benckendorff; Hon. Vice-Presidents, the Earl of Derby, K.G., Sir Algernon Firth, Baron A. de Heyking, and M. de Routkowsky, Imperial Russian Commercial Attaché (ex officio); Chairman of the Temporary Executive Council, Sir Algernon Firth.

TRADING WITH THE ENEMY.

On September 15, at the Manchester Police Court, the Stipendiary (Mr. E. Brierley) continued the hearing of the evidence against Marcar Aznavorian, a naturalised British subject, a shipper, who was summoned, under the Trading with the Enemy Act, for aiding and abetting his brother Mihran in Smyrna to pay 37,414 marks to certain German and Austrian firms. It was stated at a previous hearing that the defendant's Manchester house before the war owed large sums of money to German and Austrian firms, and payments were made on these debts.

The defendant was committed for trial at the Assizes.

RESTRICTED TRADING.

Further List of Firms Barred to Egypt Traders.

The following is the concluding portion of the list of the firms with whom trading by persons in Egypt has been prohibited by proclamation dated August 10, 1916:—

SPAIN.

Blas, Herrero, Malaga.

Chell, Jose Vilchez, Isaac Peral, 22, Cadiz; Canthal, L., and Co., Muralla de Mar, Cartagena; Coca, Joaquin Garcia, Calle Principe 1, Madrid.

Deutscher Nachrichtendienst fur Spanien, Calle Santa Teresa 8, Barcelona; Diego, Cesar De, Colegiata 13, Madrid; Diego, De, and Falkenstein, Colegiata 13 Madrid.

"El Tradicionalista," Grand Canary.

Goncalves, Francisco Las Palmas and Teneriffe; Gonzales, Julio, Alameda de Mazarredo, 1, Bilbao; Götz, Anton, Hotel Moderno, Tuy.

Heise, Georg, Calle Pòpulo 24, Pral Der., Seville.

Joannides, Temistocles, Calle Generale Menacho 9, Cadiz.

Leonhardt, E., and Co., Trafalgar 23, Barcelona; Leopold, Guillermo, Caputxas 4, and Plegamans 3, Barcelona.

Manau, Mariano, Barcelona.

Oliver, Ladislau, Barcelona; Ornstein, Leon, Calle Mariana Pineda 5, Madrid.

Pfeil, Emil, Calle Obispo Lago 37, Tuy; Postigo Manuel, Trinidad Grund 21, Malaga.

Ries and Co., Ries, Isidor, Colon 72, Valencia; Rodriguez, Adolpho Hielscher, Calle Zorrilla 31, Madrid; Rosenow, Hermann, Monte Esquinza 10, Madrid; Ruiz Garcia, Fernando, Santander.

Valdes Antonio A. P., Avenida de Pries 16, Malaga; Valls, Hijos de Magin, Barcelona.

Union de Destiladores de Esencias de Espana, Sociedad Anonima, Malaga.

Wittmack (Otto) and Co., Carmen 21, Malaga.

SWEDEN.

Andersson, Leopold, Fjallgatan 6, Gothenburg; Apoteket Kronan, Korsgaten 3, Gothenburg.

Bohm, A/B. J. M. Skeppsbron 40, Stockholm.

Deijenberg, Carl, Sodra Vagen 30, Gothenburg.

Engstam, P. L., A/B., Drottningg, 81, Stockholm.

Henriksson, Axel, Brunkebergstorg 15, Stockholm; Hanson, Wilhelm, and Co., Vasagatan, 6, Stockholm.

Lagerlöf's, Sam, Maskinbyra, Centralpalatset, Stockholm.

Meyerson, Joseph, Norrlandsgatan 16, Stockholm.

Sydsvenska Kredit Aktiebolaget, Malmo.

URUGUAY.

Canto, Roberto (c/o Staudt and Co.)

Vasquez, Pablo, Salsipuedes, 231, Montévideo.

Banco Aleman Transatlantico (Deutsche Ueberseeische Bank).

Metzen Vicenti y Cia, Misione 1526. Montevideo.

Additions to List.

By a proclamation, dated August 28, 1916, the following additions to and removals from the list were ordered to be made:—

ARGENTINA.

Bauer, P. and Co., Calle Piedras 132, Buenos Aires.

BOLIVIA.

Albrecht, C., and Co., La Paz; Arnold and Co., Santa Cruz de la Sierre and Reveralta.

Blau, Stephen, La Paz.

Enss and Webber, La Paz

Nolte, E., and Co., La Paz.

BRAZIL.

Andrade Pinto, Ernesto, Bahia; Aranjo and Boavista, Rue Buenos Aires 4, Rio de Janeiro.

Campos, Alexandre and Co., Rio de Janeiro; Sao Paulo and Santos; Companhia Sud-Americana de Electricidade, A.E.G., Rua do Hospicio 59, Rio de Janeiro.

Ferreira Bastos, Antonio, Bahia; Fischer, Julio Christiano, Porto Alegre.

Guimares, F., Bahia.

Krahe and Co., Rua dos Adradas 497, Porto Alegre.

Linhares, Antonio P., Para; Luckhaus and Co., Rua General Camara 67, Rio de Janeiro; Ludwig ó Irmaos, Rua dos Andradas, Porto Alegre.

Martin, Xiste and Co., Rio de Janeiro; Sao Paulo and Santos.

Pereira, Alfredo Martins, Manaos; Prejawa and Co., Rua da Alfandega 70, Rio de Janeiro.

Reiniger, Schmitt and Co., Rua 7 de Setembro 118, Porto Alegre.

Smith, Kessler and Panke (Casa Kosmos), Rua Direita 12, Sao Paulo and Santos; Stoltz, Hermann and Co., Avenida Central 66-74 (Rio Branco 66-74), Rio de Janeiro; Praça da Republica, Santos; Rua Alvares Penteado 12, Sao Paulo and Pernambuco.

CHILE.

Armstrong, Enrique, Talcahuano.

Chassin, Trubert, Julio, Concepcion.

Escobar, Jose Ignacio, Calle Santa Domingo 1372, Santiago.

Guttmann and Maurer, Correa Casilla 85 and Calle Moneda 1065, Santiago; and Valdivia.

Inojosa, Maximo, Concepcion.

Köster and Wyneken, Calle Lincoyan 427, Concepcion; and Coronel.

Neckelmann and Co., Valparaiso; Nissen, Fischer and Co., Santiago and Concepcion.

Sociedad Imprenta y Litografia Universo, Santiago.

Vargas, Leonidas, Antofagasta.

COMPANY MEETING.

European Oilfields Corporation.

Mr. Herbert Allen, presiding at the annual general meeting of this company, held on Thursday, said it was not an uncommon practice for chairmen of company meetings to look round for troubles that could be attributed to the war, but in their case there was very little beyond the extra cost of materials, the scarcity of labour, and the lower value of the rouble that they could complain of. Against this there were the absence of strikes and the high price of oil; the latter was largely due to the war, and atoned for many drawbacks. But the main point was that the year on the whole had not been a bad one. So far as the operations in Baku were concerned, it was the most prosperous year in the history of the company, the trading profit having been Rs.890,152, against a previous best of Rs.711,647 for 1913-14. It was only when they came to take the rouble at its exchange value, for the purposes of the London accounts, that the comparison became unfavourable and the sterling value of these 890,152 roubles was reduced from £93,700 to £62,992. Their gross income in London was £56,551, and, deducting general charges, debenture service, and income-tax, they were left with a net profit of £34,884, of which £25,000 was appropriated to the reserve. With this addition the reserve would stand at the substantial sum of £135,000, and the reduction of the debenture debt, being effected out of profits, was tantamount to a further provision for depreciation. Of the remaining £9,884 they applied one-fifth, or £1,997, to the redemption of profit-sharing notes, and the balance, amounting to £7,907, added to the sum brought in from previous account, now enabled them to carry forward a total of £50,334. As to the financial position of the company, the balance-sheet spoke for itself, and everything was taken on the most conservative basis, the investments in particular being written down well below both cost and market value. In London at the present time they had ample resources for all prospective requirements, and at Baku their cash resources were now about twice what were shown in the accounts before the meeting, even taking the rouble at its exchange value on London. With a continuance of the present production and present prices the current year's results should compare very well with those of its immediate predecessor, and the company was never in a sounder position than now.

Ottoman Railway (Smyrna to Aidin).

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended June 30 states that certificates for the debenture interest for the half-year to December 31 last, amounting to £74,175, have been posted to the Four per Cent. and Five per Cent. Debenture stockholders in accordance with the resolutions passed at the special meeting held on June 10, 1915. The debit balance at June 30 amounted to £184,067. In order to safeguard the company's rights, a statement of claim against the Ottoman Government in consequence of the seizure of the company's property in Smyrna on the outbreak of war with Turkey was lodged with the Foreign Claims Office of his Majesty's Government in April last.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

NICOSIA, Aug. 28.

Locust beans of the region called Tillyria, part of the Nicosa district, have been bought by a Limassol merchant, G. Lukides, at 43 paras (40 paras equals 1 piastre), or £4 15s. 6d. a ton. This favourable price may indicate the average price that will probably be paid in other districts for beans of good quality, and may be regarded as very satisfactory for growers, and, it is hoped, for merchants, who in the past year, owing to freight and other difficulties, have had rather a trying time.

A German Creditors' Protection Association in Serbia, the scope of which includes Serbia, Montenegro, and Albania, has been established. The offices of this association are temporarily at Berlin C.2, Neue Friedrich Strasse 52 (at the offices of the Trade Chamber).

COMPANY NOTES.

Dividends, etc.

Eastern Telegraph.—The directors of the Eastern Telegraph Company announce the payment, on October 16 next, of the second quarterly interim dividend of 1½ per cent. on the ordinary stock, free of tax, in respect of profits for the year ending December 31.

Khedivial Mail Steamship and Graving Dock.—On 30th instant a dividend at the rate of 5½ per cent. per annum on the cumulative preference shares, less tax at the rate of 4s. in the £, for the six months to June 30, will be paid by Glyn, Mills, Currie and Co., and at the Imperial Ottoman Bank, Alexandria. The transfer books will be closed from 25th to 30th instant, inclusive.

Meetings.

Ottoman Railway (Smyrna to Aidin).—September 26, noon, Winchester House.

North Caucasian.—September 19.

Oil Outputs.

Black Sea Amalgamated.—Production of crude oil for week ended September 9, 19,652 poods (317 tons).

British Maikop.—Production week ended September 9, 2,312 poods (about thirty seven tons).

Maikop Combine.—Production of crude oil for week ended September 9, 5,169 poods (eighty three tons).

Maikop Pipeline and Transport.—Received for pumping week ended September 9, 29,875 poods (482 tons).

Anglo-Egyptian.—Geusah Last week tons, against 6 tons. Hurgada—645 tons, against 621 tons.

Baku Russian Petroleum (1909). Week ended September 16, 83,800 poods.

Ural Caspian.—Week ended September 14, 159,049 poods.

British Maikop.—Week ended September 16, 2,669 poods.

ON 'CHANGE.

(By Our City Correspondent.)

Throgmorton Street, E.C.

This has again been an exceedingly quiet week, with for the most part only fractional changes in prices.

National Banks, after transactions involving over five hundred shares in the neighbourhood of 13⅜, have been rather quieter, and are ⅛ lower at 13¼ on the cessation of the demand.

Some small business has been done in New Egyptians at 9s. 3d., at which price there are further sellers. Delta Lands were also dealt in in a small way at 9s. 4½d.

Khedivial Mail ordinaries, after the recent smart advance, have receded 6d. to 28s., but the preference shares have come into demand, and are firmer at 5⅞. Some Delta Light Railway Preference changed hands at 5⅛.

In Greek securities some special demand has firmed up prices of 1881 and 1824 to 58 and 57½ respectively, at about which prices several thousand pounds' worth of stock have changed hands. Otherwise there is nothing of interest to report.

NEAR EASTERN SECURITIES.

It will be recalled that some time ago reference was made in The Near East to the Bulgar piracy of Serbia's famous copper mines at Boy.

Unusual interest attaches to the announcement made recently that the French company which owns the mines is, nevertheless, paying coupon No. 10, due on September 1, on its debentures.

The shares of the concern have enjoyed considerable activity on the Paris and Geneva Bourses in anticipation, no doubt, of the speedy restitution of Serbia to its brave and indomitable people.

The coupon due on September 14 on Sofia 4½ per cent. loan of 1910 is announced for payment, subjects of the Entente Powers being excluded, of course.

AGRICULTURAL BANK of EGYPT £3½ per CENT. GUARANTEED BONDS.

The COUPONS falling due on the 1st October, 1916, on these BONDS should be PRESENTED for PAYMENT, between the hours of 10 and 2.30 (Saturdays 10 and 12), at the Dividend Pay Office, Bank of England, where lists may be obtained. Coupons must be left three clear days for examination.

THE SUEZ CANAL.

A further rise of 5d. per ton in Suez Canal dues will be imposed on October 5 next. This is the second advance which has been found necessary during the past two years, owing to reduction of revenue and a large increase in working costs, and it brings the rate for laden ships up to 6s. Many steamers have been withdrawn from service through the waterway by the British and French Governments, while others, owing to the activities of enemy submarines in the Mediterranean, have been diverted to the Cape of Good Hope route. Then, owing to the price of coal, the year's fuel bill of the Canal Company is said to be about £300,000.

The directors announce that "it is not within their power to exclude Austrian and German ships from the waterway," as the concession compels them to keep the route open without "any distinction, exception, or preference," for the use of the people of all nationalities. The question of exclusion is, however, not likely to be dropped. Shipping opinion on both sides of the Channel is hardening on the subject. It is, in fact, proposed in responsible quarters that enemy ships should be refused, for a time, permission to pass through the Suez Canal or the Dardanelles, or to arrive at or sail from any British port or possession.

Receipts.

The traffic receipts for the Suez Canal were as stated on the days mentioned below:—

	1915. Francs.	1916. Francs.
August 12	180,000	260,000
August 13	390,000	130,000
September 14, 15, 16	640,000	750,000
September 17 and 18	540,000	480,000

NOTES OF THE WEEK.

Any anxiety that may have been felt in regard to the military situation in the Dobruja has been allayed during the past week. Not only has the enemy's offensive been successfully held, but our Allies are now in a position to attack, and have driven back von Mackensen's forces some miles. Not that the Roumanians have yet reconquered all the territory they previously lost, but the Bulgarian surprise attack has failed to win through to the railway line connecting Bucharest and Constantza, and our Allies should now be equal to any forces that the enemy can bring up against them. What fighting there is still takes place within the old Roumanian frontier. The German-Bulgarian troops are said to have withdrawn to a strong position, and if the operations on the comparatively short front settle down to trench warfare, it may be some time before the enemy can be driven back into Bulgaria, unless, indeed, the whole position can be turned by a Roumanian offensive from another direction. It is hardly to be expected that General Averesco, who is in command on the Danube front, will be content with a defensive campaign in the Dobruja.

No less satisfactory is it to find that the Roumanians have been able to hold the German thrust in the Carpathians in the neighbourhood of the Vulcan Pass. Last week an enemy concentration at this point drove back the Roumanian troops, causing them to abandon two towns and the surrounding heights. The German claim that our new Allies had retired from the Pass itself was without foundation, unless they deliberately withdrew at the centre of the sector with a view to surrounding any troops that might push on into the defile. By Monday last the enemy had evacuated both the Vulcan and the Szurduk Passes in the face of what is described in a Vienna official statement as a wide encircling movement by strong Roumanian forces. The immediate success of the Roumanian counter-attacks is the more gratifying, as the enemy had hurried down what reinforcements were available—some of them German—to this spot. If they had been able to follow up their initial advantage, a short distance would have brought them into Roumanian territory.

At other points in the Carpathians the Roumanians have retained the offensive. In the Kelemen Mountains, where they are in touch with the Russian forces, their advance continues, and small captures of prisoners are recorded. The appearance of snow on the Carpathian summits is an earnest of the rigours ahead for the belligerents in these regions; but there should still be time for considerable progress towards the Hungarian plains to be made before winter actually sets in. Meanwhile Roumania, and Bucharest more especially, is experiencing the tragic effects of German air-raids—that special form of frightfulness which seems equivalent to an admission of the failure of more effective methods of warfare against the particular country on which they are practised. In their troubles in this respect we can but hope that the Roumanians will be heartened by Great Britain's experiences. Safety lies in the perfecting of their anti-aircraft defences, and in bold tactics among airmen. It is not difficult to imagine the feelings of the people of Roumania on learning that the sole achievement of a raiding air squadron was to drop bombs on a sanatorium and an orphanage, killing sixty of the inmates and injuring many others. The Allies, we hope, will keep a dossier of these murders by Zeppelins, which have proved themselves utterly incapable of accurate aim, and are merely used for the promiscuous slaughter of civilians in crowded towns. If submarine outrages have to be atoned for by the Central Powers when the terms of peace come to be settled, these Zeppelin holocausts must also be entered up against the German authorities.

The fighting along the Greek frontier continues to increase in intensity, and there can be no doubt as to the strength of the German-Bulgarian defence for the time being. If little progress can be recorded, there are the heavy losses inflicted on the enemy, which sooner or later will tell on the general situation. Interest centres chiefly in the operations on the western wing. Russian troops hold the extreme left, and are pushing northwards at a point a few miles west of Florina. The Serbians still have to defend the positions won on the Kaymaktchalan range against furious counter-attacks; but it is to be hoped that an advance of the Russians and French on their left against Monastir will compel the Bulgarians to fall back, and so render the task of the Serbians less severe. They have fought superbly, and appear to be indifferent to any losses. Their numbers, however, are limited, and an army in being will be very essential to the new Serb State at the end of the war.

On the right of the Allied line where the British with a sprinkling of French troops hold the Struma front operations are confined mainly to "the usual artillery action." No doubt some purpose was served by the advance across the river, when the general offensive was launched; but the advantage gained has not been followed up, and our men seem to have fallen

Digitized by Google

back to their original positions. After the long period which the Allied army at Salonika had to prepare for an offensive, it is somewhat of a disappointment to find that more rapid progress is not being made. It has to be remembered, however, that the enemy's main strength will be in his first line of defence. When that has been pierced, there are not likely to be the same obstacles ahead to be overcome. The days pass, and the prospects of a decisive issue before the winter sets in would not in ordinary circumstances become rosier. But the winter is not necessarily a close season for operations in the Near East; for the first Balkan War did not begin until October. It remains, therefore, to be seen whether the Allies will be able to produce any such surprises as have stood them in good stead on the western front, which may take them into Bulgaria more rapidly than the opening days of the campaign seemed to promise.

If the kidnapping of his Fourth Army Corps has shaken German influence over King Constantine, he has been at some pains to conceal the fact. Days of the utmost importance to Greece have been wilfully lost as a result of the appointment of the Kalogeropoulos Cabinet. The Entente Governments have shown no disposition to recognise the new Ministry, and the Greek administration has remained paralysed, incapable of action. Some communication has been sent to Germany on the subject of the Greek troops interned in that country; but no confidence is felt in Greece that it was couched in the terms that the circumstances required. While the Cabinet seems to hope that by backstairs negotiations it may yet receive the recognition of the Entente Powers, King Constantine is credited with casting furtive glances northwards in the expectation of seeing a strong German force marching into the Balkans to reverse the present military situation. In the meantime, the movement which began at Salonika with the object of protecting Greek soil against the Bulgarians is spreading throughout the kingdom, and the people grow daily more and more dissatisfied with a Government that does nothing.

Vague reports of unrest in Crete have quickly been followed by the announcement that the whole island has declared in favour of the National Defence movement, and that the Government officials have been deposed. This action seems to have determined M. Venizelos to take the course which he has so dramatically adopted. In the early morning of September 25 he left Athens, and, in company with Admiral Condouriotis, embarked on a steamer for Crete. The possibility of his taking such a step must have been well known. Four or five days previously he had been asked by an American correspondent whether there was any truth in the repeated reports that he was going to Salonika to put himself at the head of the National Defence movement. His reply was straightforward: "I cannot answer now. I must wait a little while yet and see what the Government proposes to do before deciding on the course best to adopt in the event of Greece's not entering the war." Not many hours elapsed before he had made up his mind on the subject, and to a situation bizarre enough is added the spectacle of probably the two most loyal sons of Greece setting out in the dead of night to put themselves at the head of a movement which only their presence and authority can hope in the circumstances to restrain from becoming an out-and-out revolution against the constituted authority in Greece.

For the present the movement is not revolutionary. In a striking message sent to *The Times* M. Venizelos makes this matter clear. The movement, he points out, is "in favour of action against the Bulgarian invader, who is overrunning Greek Macedonia, maltreating, taking prisoners, and in many cases murdering those of our countrymen who are left to his mercy, unprotected and undefended by the Greek army." The betrayal of Kavalla, M. Venizelos continues, after the loss of Fort Rupel, Seres, Drama, and of the greater part of Greek Macedonia, has brought matters to such a crisis in the very existence of the country that he can no longer resist the cry of his compatriots calling to him to help them and save them from extermination at the hands of Bulgaria. Having exhausted in vain every possible means of inducing those who govern Greece to take up arms in defence of the country, he has felt bound to go to the rescue of his oppressed brethren. "The movement now beginning is in no way directed against the King or his dynasty. It is one made by those of us who can no longer stand aside and let our countrymen and our country be ravaged by the Bulgarian enemy. It is the last effort we can make to induce the King to come forth as King of the Hellenes and to follow the path of duty in protection of his subjects. As soon as he takes this course we, all of us, shall be only too glad and ready at once to follow his standard as loyal citizens led by him against our country's foes."

King Constantine, it may be thought, is more fortunate in the loyalty of his subjects than he deserves to be. He must recognise at last, however, that he has been playing with fire, and that his choice of action is now limited to two alternatives—bowing to the national will or a final departure from Greece. Even if he should continue to acquiesce in all that the Germans and Bulgarians have done in Greek Macedonia, it is clear that a large section of the people has no intention of following his example. A message from Salonika speaks of a battalion organised by the National Defence Committee having already left "for the front," with the consent of General Sarrail, while the army at its disposal has been reinforced by two thousand Cretan volunteers. The greater part of the Navy is also reported to have placed itself at the disposal of the French Admiral. Now that M. Venizelos has taken charge of it, the movement is bound to spread still more rapidly, and the defections from the regular Greek army will become more numerous. If King Constantine has hitherto felt himself secure behind his soldiers, with always the expectation of the horizon bristling with German bayonets, he must prepare for disillusionment. The Germans are not coming, and the Army, including its Chief of Staff, who has resigned, is beginning to lose faith in a commander-in-chief who is too proud, too obstinate, or too frightened to fight.

As we go to press the expectation expressed in these columns last week that King Constantine would not be able to hold out much longer against public opinion after the kidnapping of the Kavalla Army Corps seems likely to be realised. When the news of M. Venizelos' departure from Athens became known, King Constantine emerged from his summer retreat at Tatoi and returned to the capital to consult his Ministers. No official statement has yet been issued, but it is believed that the King has now agreed in principle to military co-operation with the Allies. If this intelligence should prove to be true, it is to be hoped that there will be a very clear understanding between Greece and the Allied Governments before anything in the nature of official co-operation is sanctioned. The assistance that Greece can render in this war—all unprepared in the matter of munitions and equipment as she is—must be relatively small. It will be well that her expectations of the advantages to be derived from her intervention should not be disproportionately great. In reality she will be fighting to "save her face," or at least that of her King, whose indifference to the opinion of his contemporaries has been more flattering to his obstinacy than to his patriotism or common sense.

The report that the Turkish garrison at Taif has surrendered to the forces of the Grand Shereef of Mecca suggests that the earlier news of the progress of the Arab revolt was not accurate in every detail. Taif was then stated to have fallen; but it would seem that, although the Arabs took possession of the town, the Turkish troops in the barracks and fort held out. These have now surrendered, to the number of 1,850 officers and men. Anxious to avoid bloodshed among Moslems as much as possible, the Grand Shereef gave orders that the garrison was to be invested until it capitulated. It is probable also that the situation at Medina has under-

Digitized by Google

gone a change since June. If the city was actually occupied by Arab forces, and the railway line running northwards torn up for a considerable distance, the Turks have evidently been able to rally, to repair the line, and to send reinforcements to the city. Constantinople reports add that the Emir appointed by the Porte to succeed the Grand Shereef of Mecca has arrived at Medina, and has rallied the inhabitants to his cause. As a considerable distance separates Mecca from Medina, it is possible that the general situation may remain indeterminate for some time. It is, however, all to the good that the Grand Shereef feels himself justified in allowing pilgrimages to Mecca to be resumed.

We welcome cordially the formation of the Serbian Society of Great Britain, under the presidency of the Earl of Cromer. The attitude of the British Government in the years and the days preceding the outbreak of this war was that Great Britain's interests in Serbia were nil. Our administrators know much more about the subject now, although they were still somewhat in the dark when the intervention of Italy was mooted. It is certain, however, that the nation as a whole, while enthusiastically appreciative of the military efforts of the Serbians, is not as well informed as it might be regarding their aspirations as a race, and the bearing of those aspirations on the future peace of Europe. The Serbian Society aims *inter alia* at making clear the importance of a united Southern Slav State as a permanent safeguard of European freedom, and at working for a Southern Slav Union (*a*) as an essential feature of the Allied policy of securing the rights and liberties of small peoples; (*b*) as a guarantee against future Germanic attempts to obtain political and economic mastery in Europe and the East; and (*c*) as the surest foundation of peace in the Adriatic and the Balkans. The Society starts with a strong Executive Committee—the names of the members are published elsewhere in this issue—and may be relied upon to make good.

Our enemies are under no illusion in regard to the importance of the struggle now beginning in the Balkans. How severe a blow Roumania's declaration of war was is shown by the unbridled abuse with which that country was simultaneously assailed by the whole Press of the Central European Block. The bandying of such terms as brigands, beasts, vile animals, dust-heaps, however, may merely be an ordinary exhibition of *Kultur* for the edification of an uncultured world. Far more significant are the lectures now being read to the Bulgarians and the claims of the latter to super-virtue for rejecting alleged attractive offers from the Entente Powers. The *Zeit* of Vienna reminds the Bulgarians that the antagonism between them and the Roumanians is fundamental, as it is based on their mutual relationship as neighbouring States and rival competitors for supremacy in the Balkans. "Like so many other European questions of supremacy, this one must also be definitely settled in this war. Bulgaria cannot retain what she has conquered at the side of her Allies and realise the great objects which she wishes to obtain from the war, unless Roumania is beaten." The Bulgarian retort to these unpleasant reminders seems to be the concoction of fictitious negotiations on the part of the Entente Powers for the ratification of a separate peace. Both the intrinsic importance of the campaign in the Balkans and the necessity of keeping watch upon the Bulgarians will have contributed to the decision of the Central Powers to parry the blow from Salonika and the Dobruja with all the strength at their disposal.

In the article on "The Future of Mesopotamia," the first portion of which we publish this week, the author, Sir William Willcocks, describes the potentialities of irrigation in a country which was at one time the granary of the world. It is possible that, when the apathy and misrule of Turkey are at an end, the old prosperity may be restored. But apart from Turkish misgovernment, as Sir William points out, it is very essential that the full control of the waters of the Tigris and Euphrates shall be in the hands of one Power. It is obvious that if, after the cultivation of the delta had become well established, the upper waters of the rivers were diverted with hostile or other intentions, the people of the lower tract might suffer untold calamities. Reservoirs for the storage of water in suitable places would no doubt help to regulate the supply in time of need; but they would not be inexhaustible, and would be liable to fail. In any country where the rainfall is deficient, and agriculture depends on artificial water-supply, water becomes as gold, and is a fruitful source of discord. In the old Roman days an artificial water-channel was a *rivus*, and the users of water from such a channel may be said to have been "rivals." At any rate it is quite certain that strife was frequent. And if *intra* communities, which would otherwise have lived in amicable accord, so much bitterness was aroused, it is clear—especially in times of scarcity and drought—no two Powers with conflicting interests could be trusted to apportion the available supplies of water on a friendly basis. The prosperity of ancient Mesopotamia unquestionably depended on one authority imposing its control over the waters of both the upper and lower valleys; and when there were wars it is a reasonable inference that they were largely due to discord in this direction. The security of a future Mesopotamia can rest on no other foundation.

A brief statement from Petrograd announces that "in the direction of Hamadan" Russian troops compelled the Turks to retire westwards. Prisoners, arms, and a camel transport were captured, and the enemy's telegraph line was destroyed over a considerable distance. Throughout this Middle Eastern theatre the Russians have been able to claim a number of small successes. The news, however, is meagre, and it may be surmised that the operations on both sides are being influenced by greater events in Europe. Turks, it has to be remembered, are now fighting in Galicia as well as against the Russo-Roumanian forces in the Dobruja. In view of what has happened in Armenia, the troops employed in Europe can hardly be regarded as belonging to Turkey's surplus armies. They have had to be despatched to a point where, in the scheme of things, their assistance is regarded as being as valuable to the common cause of Turkey and the Central Powers as if they were actually defending Turkish territory. It is probably the hope of those who direct the destinies of the Ottoman Empire to-day that the troops in Europe will be able to achieve more practical results than if they merely prevented some of the wide spaces of Asia Minor from being overrun by the Russians.

In the course of an interview with an American correspondent the Sultan of Egypt made some interesting remarks on the subject of the British Protectorate. He believed, he said, that under the protection of Great Britain, the greatest of all Liberal Powers, the future of Egypt was assured. Had it not been for his faith in the British Government and his belief that there would be a gradual increase in the rights granted the Egyptians in the matter of self-rule, he would never have accepted the Sultanate. There is the strongest possible foundation for Sultan Hussein's optimism, but in this connection it may be permissible to sound a warning note that any attempt to force the pace either on the part of the Sultan or of the British authorities must inevitably lead to disappointment. The British have every reason to be satisfied with the present occupant of the Sultanate. It must not, however, be overlooked that the basis of Egyptian administration must be laid for all time, and not merely for the smooth conditions associated with the rule of an able and enlightened Sultan. Thus, in regard to the three forces in the country quoted by Sultan Hussein, the Egyptian Government, the Khedive or, as now, the Sultan, and the British Residency, the last only can be regarded as impersonal, functioning on settled lines. It will be well, therefore, if there is not too much haste displayed in taking over some of the essentials of administration before the people have had time to become imbued with the traditions of good government. Such essentials might be in safe enough hands under the present régime, but if permanently divorced from British guidance might thwart the development of Egypt's progress in less fortunate times.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 12.

The "Holy Carpet" Ceremony.

The picturesque ceremony of the "Kiswa"—the exposition of the Holy Carpet on the square below the Citadel and its subsequent transfer to the Saidna El Hussein Mosque, where it will remain until the departure of the Holy Caravan for Mecca on the 23rd inst.—took place on Saturday last amid traditional pomp and circumstance. As H.H. the Sultan is in official residence at Alexandria, H.E. Hussein Pasha Rushdy, the Prime Minister, represented him, and presided over the ceremony of receiving the carpet and other articles destined for the Holy Shrine. It is interesting to note that the Sultan is sending part of his bodyguard as an additional escort, and that the Grand Shereef has issued orders that every facility is to be offered to the caravan and the pilgrims, and that the latter are to be relieved of the payment of all dues and fees from the time they land at Jedda to the time they re-embark. All this has made a very good impression; as has also the action of the British military authorities in giving three specially selected camels to the Emirel-Hajj for the conveyance of the carpet and other offerings. Although no obstacles are being put in their way, it appears that so far very few Egyptians have applied for permission to make the pilgrimage this year. No doubt the restricted nature of the accommodation available has impelled many of the followers of the Prophet to postpone performing this religious duty until a more propitious moment, when, also, they will be in a better position to judge of the Shereef's ability to carry into effect his guarantee.

The Exhibition of Egyptian Industries.

The Exhibition of Egyptian Industries, which has been held in Alexandria during the past month, closed its doors last week. Over 25,000 people, not including officials, visited it, one of the features being the days reserved to ladies; and orders were received to the value of several thousands of pounds. It has been a great success, and those responsible for its organisation—Mr. Sidney Wells and his assistants of the Department of Technical Education—deserve hearty congratulations on their achievement, which, it is understood, they intend to repeat, only on a larger scale, in Cairo during the coming winter. The exhibits afforded a very valuable and interesting insight into the industrial activities of Egypt, and revealed the many efforts that have been made to replace enemy productions and render the country less dependent on foreign markets.

While those responsible for these efforts deserve every commendation and encouragement, this exhibition appears to strengthen the conviction amongst those interested in the matter that Egypt will never be able to produce on any satisfactory scale the manufactured commodities which her population requires. She is and ever has been an agricultural country *par excellence*, and her people can never hope to become an industrial nation. The only direction in which their industrial activity could be extended with any reasonable and justifiable hope of success is in branches closely allied to agriculture; for in all other directions there are too many factors militating against their competing successfully, even in the less pretentious grades, with the ordinary run of foreign-made articles. It is to be hoped that the responsible authorities will bear this fact in mind in any future developments of their educational policy. They would do well thus early to recognise the country's difficult and peculiar position; and to concentrate their efforts on encouraging the Egyptian worker to continue and develop, by better methods if possible, the industrial branches in which he at present excels or shows such promise, in preference to assisting him to launch out into new spheres of activity, where successful production can only be attained after years of apprenticeship with the almost certain prospect that even then the locally-made article will not be able to keep out the foreign manufacturer.

"The Victory of Romani."

Yesterday afternoon a private show was given here of a cinematograph film, entitled "The Victory of Romani." This film, which has been taken by operators under the supervision of the military authorities, depicts events at the base during and after the recent fight against the Turks at Romani, and gives an excellent idea of the life in this part of the Canal zone. Amongst the many episodes reproduced is one demonstrating the fulfilment of the prophecy as to the only manner in which the Turks could possibly enter Egypt proper, *i.e.*, as prisoners, the pictures showing the men captured at Romani and Katia crossing the Canal by a pontoon bridge at Kantara. The film is full of interest from start to finish, and should prove a great attraction at home, where the War Office will shortly authorise its exhibition.

The Agricultural Situation.

The Egyptian Government has taken a most praiseworthy step in regard to the various problems which the agricultural pests of the country have of late years created. Although it has implicit confidence in the ability to find solutions for these problems of the scientists whom it has appointed permanently to watch over the destinies of the country's products, it has decided that it would be most satisfactory to all concerned if the local efforts were assisted by the best possible outside advice. The Government has therefore secured the services of a noted expert in such matters, Mr. H. A. Ballon, Entomologist to the Barbados, who has been specially seconded for this work from his post there. Mr. Ballon, who has just arrived in Cairo, has been engaged for the period of one year, during which he will thoroughly investigate the agricultural position of the country from the entomological point of view. At the conclusion of his mission he will present his report, which will embody his recommendations as to the steps that he considers should be taken to deal with the situation. It should be mentioned that there exist precedents for this seeking of outside technical advice, *e.g.*, the question of the Cairo water supply and the cattle plague epidemic, when the services of eminent European experts were secured for the purpose of advising the local authorities.

Important Forthcoming Appointments.

Next month should witness some important changes and promotions amongst the senior Anglo-Egyptian officials. In the first place, the Advisership to the Interior will fall vacant, as Sir Ronald Graham, who has held that post for nigh on ten years, has been appointed to a high position in the Foreign Office. It is as yet not known definitely who will succeed him. It is considered unlikely that his successor will be taken from the Diplomatic Service, and it is highly probable that this plum in the Egyptian Civil Service will, as it rightly should, fall to a senior Anglo-Egyptian official. It is understood that as things stand at present the new Adviser will not be selected from within the Ministry of the Interior, but will be taken from one of the other Ministries, thus entailing as a consequence a series of other promotions.

Another important appointment which will have to be made is that of the Vice-President of the Native Court of Appeal, left vacant by the recent retirement of Judge W. M. Bond. The post was offered to Judge H. W. Halton, the newly appointed English Counsellor to the Mixed Court of Appeal, whose past services and experience eminently fitted him for this high position. To everyone's regret, however, Judge Halton has refused the offer. It is believed that Judge Sheldon Amos, who has since the outbreak of war been engaged on special work for the British Government in England, will be appointed; but it is considered not at all improbable that the post will fall to one of the Counsellors who have borne the brunt of the work of the Appeal and Assize Courts during the past two years. A definite decision will, however, not be taken until the return at the end of this month of Sir William Brunyate, the newly appointed Judicial Adviser.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, September 9.

The Nile Rise.

The Nile, after giving some indications of having reached its limit, began to drop, and then suddenly rose again; and some apprehension was aroused that the water would overflow the banks, more especially at the eastern end of the town. However, it did not actually overtop the embankment.

News from Dongola Province is less satisfactory. There the flood not only destroyed a number of irrigation banks, but at the "markaz" of Korti the river destroyed a protecting bank and flooded the whole village, and the water lapped against the walls of the police station and the school.

At Halfa, when the same predicament was contemplated, a number of soldiers in transit were detained for a few days to "sandbag" the buildings most liable to damage, and thus avert the danger.

Both in Dongola and Halfa the exceptional flood is due not so much to the Blue Nile, excellent as that flood has been, but to the Atbara, which has beaten all records.

Returning Officials.

A large number of officials have returned recently from leave. Judge and Mrs. Fleming were on the train from Halfa that was so seriously delayed by "washouts" that the train, which should have arrived on Friday, did not get to Khartoum till Tuesday morning. Messrs. Udal and Field, of the Education Department, have returned in view of the imminence of the new scholastic year, as has also Captain Patteson, of the Military School.

Major Fielden, Governor of the Bahr el-Ghazal, reached Khartoum on the 8th, and will proceed South after a few days. He will be accompanied by Major Northcote, the Inspector of the Western District of the Bahr el-Ghazal. Major Moir, D.S.O., the Director of Posts and Telegraphs, proceeded North on the 8th.

Captain Bally, who has recently returned from a month in Egypt, is transferred to the Intelligence Department. He was previously in the Bahr el-Ghazal and the Upper Nile Provinces. Before going North he had been for a time on the line of communications to Darfur.

CYPRUS NOTES.

(From Our Own Correspondent.)

Cyprus, September 5.

The heat has abated, and far more bearable weather prevails in the plains. Families have begun to return from the crowded hotels of Troödos and Platres. It is not likely that the High Commissioner and Government officers will return to Nicosia before the beginning of October, or before the elections to the Legislative Council are over. The date for the election has not yet been fixed, but should be towards the close of September or beginning of October.

Archiepiscopal Elections.

Canvassing is being actively carried on in connection with the approaching election. The candidates are the Bishops of Kition, Papao, and Kyrenia, the Abbot of Kykkou, Kleopas; the Archimandrite of Nicosia, Makarios; and a nephew of the late Archbishop, Kyrillos. The Archimandrite Chrysostomos, of Athens, has expressed his unwillingness to be nominated. It is improbable that any one of the candidates will receive a majority of votes.

A Poor-House for Nicosia.

The Municipality of Nicosia has voted the imposition of a trade rate, which has been approved by the High Commissioner. Provision is made, at last, in the by-law for the establishment of a Poor-house, which should be in working order six months after its publication, on August 25, when begging will be entirely prohibited in the streets, churches, houses, and all public places.

THE ARAB MOVEMENT.

(From a Correspondent.)

Cairo, September 12.

The first number of the Grand Shereef's organ, *Al Kiblah*, published at Mecca, has arrived this week, and the local papers have hastened to reproduce extracts from it, especially those dealing with the military situation.

The following literal translation of the first item of military intelligence received by the paper in question is given as showing the use of the up-to-date means of communication by wireless between Mecca, Headquarters, and the other parts of the Hejaz, including points in the fighting zone:—

After our last issue went to press a wireless message reached Mecca from the camp of his Highness the Emir Faisal, dated the 22nd Shawwal, in the afternoon. From this we extract the following: We have achieved a great success in to-day's battle. The Turks lost a whole battalion, whose men were annihilated.

At Taif, in view of the persistent refusal of the Turks to surrender, the Arabs have been compelled to try to reduce their positions by force of arms, and the fort of Al Hafla is said to have been destroyed by shell fire. Subsequently, cases of desertion have been multiplying. The officers and men who have been coming over to give themselves up to Emir Abdullah declare that the condition of the men left behind is extremely bad, owing to the brutality and rough treatment of their officers. The Turks, taking advantage of the Shereef's aversion to cause any harm to the civil population through military operations, have been taking refuge in the houses of the inhabitants, a fact which is responsible for the undue prolongation of the siege of Taif. This state of things, however, is not likely to be allowed to continue much longer.

A long list is given of the representative heads of tribes who have been flocking to Mecca lately to swear their allegiance to the Grand Shereef and offer their material support in the Holy War which his Highness is waging against the Turks.

An important and very welcome item of news is that the famous Emir Abdul Aziz Ibn Saoud, of Nejd, has lately offered to take an active part in the movement of the Shereef. This, coupled with the fact that the leading tribes to the north of Medina have begun hostile operations against the Turks, renders the surrender of this town imminent. It would appear that one of the factors that determined this action on the part of these tribes is the treacherous conduct of the Turkish troops, who, after having received the traditional hospitality of these Arabs, turned on them and massacred their women and children; then retired to their position nearer to the town, so as to escape the vengeance of Emir Faisal and the risk of their line of retreat being cut off.

Arab officers, one of whom has already established his military reputation as a brilliant leader and strategist, are expected to arrive in the Hejaz at almost any time now, and they will impart further vigour to the conduct of the campaign. We may hope to hear of important developments shortly in the military situation in Arabia, and probably further North beyond the limits of the Peninsula.

DOMESTIC SERVANTS IN THE SUDAN.

A Sudan correspondent writes:—"As time and opportunity permit, the Sudan Government are tackling one by one important questions relating to domestic questions which have long demanded attention. The latest of these is the servant question. Numerous representations have been made to the Government that some legislation on the subject of domestic servants is advisable for the protection of both the employer and the employed. It has been represented that there has existed hitherto some uncertainty as to the rights arising out of an ordinary contract of domestic service; and it has also been pointed out that serious difficulty often exists in ascertaining the true characters of servants on engagement; and that, therefore, a system of compulsory registration of domestic servants, as in certain other countries, would be in the interests of masters and servants of good character. An Ordinance has now been prepared with the object of laying down the law on some points as to which masters and servants appear sometimes to be in doubt, and of establishing a compulsory register of domestic servants. The draft of the new Ordinance has been published, but the enactment is being deferred pending the expression of public opinion."

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, September 5.

The Rupture.

The order for mobilization came as a big surprise to the public here. True, the German and Austro-Hungarian Ministers had been uneasy for some time, but they had been so skilfully reassured at the frequent audiences which they had had of the King that they were left in doubt up to the last minute. No one could have acted with greater skill and courage than the King has done during the past few months; and now his sacrifice on behalf of the country of his adoption has won him the deepest respect and devotion of all his subjects. Indeed, it is safe to say that no European Sovereign has a stronger hold on his people's affection to-day than has King Ferdinand of Roumania.

Panic-stricken Propagandists.

The rush of Germans to the Legation to save themselves from internment was extraordinary. It is reported that some 500 persons crowded there; and when one remembers how many Germans were employed in "propaganda," in buying grain and other provisions, and on spy work, it is not difficult to accept the number as fairly correct. Be that as it may, they crowded the Legation badly, and as it was very nearly a week before they were able to get away, their experience can hardly have been a pleasant one. The first train, on which the German and Turkish Ministers travelled, consisted of eight first-class, six second-class, and twelve third-class carriages, besides dining cars and luggage vans; and this is some indication of the size of the excursion party. The story is going the rounds that the Austrian and the German Ministers tossed up as to who should travel with M. Radeff, the Bulgarian representative. Count Czernin lost, and one can imagine his chagrin; for M. Radeff is deservedly highly unpopular, while Sefa Bey is a gentleman and a pleasant companion.

Precautions!

The delay in departure was due to the fact that the departing Ministers—who had to be seen safely on to neutral ground—objected to travelling through Russia, and asked to be sent into Bulgaria—which country had then not declared war on Roumania. Unfortunately for them, before arrangements were completed to meet their wishes, Bulgarians attacked the Roumanian outposts; so, eventually, they had to go by way of Russia after all. The train flies the Roumanian tricolour, and is in charge of M. Guranescu, a Secretary of Legation, and M. Bogdan, representing the Roumanian police. The Austrian and Bulgarian Ministers leave to-morrow.

It is interesting to note that the same system of "compensations" is to be observed as in the case of goods passing between this country and Germany or Austria. That is to say, the Ministers will remain at Petrograd until the arrival there of the Roumanian representatives and staffs from the enemy countries. Such precautions are presumably necessary!

A GERMAN BUREAU AT SOFIA.

(From Our Correspondent.)

Bucharest, August 30.

When the Austro-Germans took virtual possession of Bulgaria they established in Sofia a Bureau of Import and Export, organized on much the same lines as the one at Bucharest; and as Sofia is the capital of an "allied" country, this bureau has not hesitated to "squeeze" the Bulgarians to the utmost extent, and in every way possible. To fill the hungry mouths of Austria and Germany, Bulgaria has been practically denuded of foodstuffs, and the Bulgarians are at their wits' end to obtain the most ordinary kind of nourishment. No better illustration of the state to which the country has been reduced could be forthcoming than the fact that onions and garlic have now been declared "articles de luxe." Anyone who has travelled in Bulgaria knows that, next to bread, the succulent onion is the chief food of the Bulgarian peasant. Eyes as well as nose inform the traveller of this fact; for at every railway station he is sure to see third-class passengers—and on occasion second-class passengers, too—hugging a loaf of bread under one arm and grasping a mighty bunch of onions with the other hand, as provender for the journey. Naturally, therefore, to have their precious onions taken from them for the benefit of their "friends" has touched the Bulgarians in a tender spot, and murmurs, not loud but deep, have been heard on all sides. Even the Press has taken the matter up, and various articles have been published voicing the public discontent.

Now, however, the iron fist has descended on editorial Sofia, and orders have been given to the Press to cease criticising the workings of the Austro-German Bureau of Export and Import. It would be hard to find a more striking illustration of the fact that Bulgaria is to all intents and purposes a conquered country. Small wonder that the Opposition leaders have been putting out feelers as to the liberation of their country from its oppressors. It is even reported that there are many persons, some of them in high positions, who only a few months ago were warm friends of the Austro-Germans, but are to-day longing to see the horde of robbers and oppressors chased from the country at the points of the Entente's bayonets. But Bulgaria has made her bed, and she must lie upon it.

MAGYAR POLICY IN SERBIA.

(From a Correspondent.)

Our readers are already acquainted with the fact that on July 10 of this year General Baron Adolf Rhemen von Barensfeld arrived as Governor in Serbia to replace the superseded Governor, Count Salis Sewis.

Baron Rhemen is a German, a native of Rheine, in Westphalia. He entered the Austro-Hungarian army as an infantry officer, and has remained in its service ever since, being steadily promoted until, a few years ago, he reached General's rank. In the present war he commanded the 13th Army Corps, first in the Austrian Army under Pflanzer-Baltin, and subsequently in the German Southern Army. From this post he rose to the governorship of Serbia.

The new Governor has already discussed the policy he intends to pursue. The following statements were originally made by him to the correspondent of the *Ujvideki Hirlap*, but we quote them from the *Magyar Hirlap*, of August 22:—

"I propose to study the interests of the populations of *both* States of the Monarchy.

"Please assure Magyar public opinion that it is the will both of my King and myself to further Magyar interests to the necessary extent, and no *justifiable* complaint will be heard that injustice is being done to the detriment of the one or the other.

"His Majesty has laid upon me the duty, as his definite and fundamental wish, to take special care that *both* States of the Monarchy are equally represented in the Military Administration, after settled order and normal conditions are established in the occupied territories.

"I shall do my best to ensure that the Magyars shall take their proper part without any difficulty, and to the *same extent* as the other States of the Monarchy."

If we take into account that the former Governor of Serbia, Count Salis-Sewis, fell immediately after Count Tisza's visit to Belgrade; that Count Tisza was not satisfied with him because he favoured the Magyar officials less than the Austrian; that the Magyar Press (see *Szegedi Hirlap*, of July 20, *Szegedi Naplo*, of July 22, etc.) levelled the reproach at the superseded Governor that "Hungarian interests and the sovereign rights of the State of Hungary were not at all considered" during his administration in Serbia, it is easy for us to understand from the words of the new Governor that his policy in Serbia will be a Magyar, and no longer an Austrian one.

THE DESTINY OF PERSIA.

By J. Clive Roome.

While bayonets bristle along the world's frontiers, the pens of diplomacy record unheeded the destiny of Persia. According to a Russian newspaper, the Anglo-Russian Convention of 1907 is now a dead letter, and a new agreement, in which the claims of Persia as an independent country have been distinctly recognised, has taken its place.

It is significant that while in ordinary times a Convention relating to the policy of Russia and Britain in Persia would have aroused a storm of controversy, in these eventful days it has been passed over in almost complete silence. There is not a whisper of the old suspicions regarding Russian aims in Persia, and the shadow of Skobeleff no longer haunts the dreams of British statesmen. The new agreement is the direct outcome of the war, and as far as Persia itself is concerned it is likely to work more smoothly than the Convention of 1907. No official statement has, however, so far been made by the British Foreign Office as to its exact provisions.

As far as one can see, the agreement has changed the limits of the British and Russian spheres of influence in Persia. The neutral zone of the Convention of 1907 has disappeared; and Great Britain is to provide an efficient police force (numbering eleven thousand men) for the whole of southern Persia, and Russia will do the same for the north. There is thus no scope left in the country for either German or Turkish intrigues; which augurs well for the peace of Persia. Persia, moreover, has, in signing the agreement, publicly confessed its inability to set its financial house in order unaided. It has abandoned the illusory hope of husbanding its own resources single-handed, and has agreed to hand over the task to a mixed Commission of Russian, British, Belgian, and Persian representatives.

In doing this, Persia has not only made a candid confession of the hopelessness of its financial position: it has relegated a serious responsibility to Britain and Russia. The police force of twenty thousand odd which the two Powers propose to create in the country must eventually be maintained at the cost of Persia itself, and in view of the financial chaos prevailing in the country, both Russia and Britain will have no easy task in, first, restoring financial stability to the country, and then maintaining it unimpaired.

For this task Russia is better equipped than Britain. It has not only the strategic advantage of railways and roads to the north of Persia, which must play an important part in the revival of trade in the Russian sphere of influence, but it has also, for some years past, persistently endeavoured to improve its position commercially in two of the largest provinces, Khorasan and Azerbaijan, in Persia itself. Statistics relating to the trade of northern Persia show how successfully Russia has furthered the interests of its traders in that part of the country. They furnish a striking contrast with the condition of the British trade in the south. If the latter has not completely disappeared, that has not been due to the sustaining influence of the British Foreign Office; in a measure it has survived even the cold neglect of the Foreign Office. In the fresh conditions created by the new agreement, however, Great Britain will be compelled, by sheer force of circumstances, to improve the conditions of trade in southern Persia; for it is more on trade than on other sources of revenue that the regeneration of southern Persia will ultimately depend. While Russia could afford, if necessary, to ignore the possibilities of trade in its sphere of influence and could with advantage devote its entire attention to the development of other sources of revenue, such as agriculture and mining, the British sphere of influence is made up more or less of arid tracts, mostly very sparsely populated, but with an industrious population in places where Nature has been lavish with her gifts.

It may be argued that Russia and Britain will forbear from interference in the internal administration of the country, and will leave the problem of finance for Persia itself to solve; but if the new Commission dealing with the financial questions is to exert a beneficent influence in making Persia play the Phœnix in its ruins, both the Powers will, even against their will, have to act the mentor in earnest. Level-headed Persians themselves now realise that it is impossible for their country single-handed to escape the aftermath of bankruptcy, and they no longer cherish the illusory hope of political formulas performing miracles of rejuvenation in their country. Indeed, many of them have lost all faith in the democratic movement, which instead of proving a blessing has, apparently, made confusion worse confounded in their country. The Mejliss has proved itself only a mockery of a Parliament, and the dreams of *Jeune Persans* of a rich and prosperous Persia have suddenly changed into nightmares of utter bankruptcy, moral and material.

In the circumstances, Russia and Britain would be acting in the best interests of Persia if they stimulated the beneficent activity of the new Commission of Finance by following a vigorous policy in restoring the credit of Persia. As far as Britain is concerned, much can be done by encouraging trade between India and Persia not only by sea, but also by land. If it be not possible at this juncture to link up India with Persia by an extension of the Indian railway system through British Baluchistan and Mekran, the Nushki trade route offers a great scope for the development of trade between India and Persia. That this trade route is capable of enormous development as a highway of commerce between the two countries is evident from the statistics just to hand relating to the trade between India and Persia. In spite of the upheaval of the war, the trade showed an increase of 4 per cent. by the Nushki route. If the extension of railways into Persia be inadvisable, motor transport will answer the purpose, for the present at any rate. It will transform the whole of eastern Persia within a decade, and will stave off the evil day of bankruptcy for Persia, perhaps for ever. It will also throw open the rich province of Seistan to the world; and it is on the development of this province that the future of the country largely depends.

THE SERBIAN SOCIETY.

The following is the official list of the Council of the Serbian Society of Great Britain, which is referred to elsewhere:—Lord Aberconway, Wilfred Ashley, M.P., Major Astor, M.P., Right Hon. W. F. Bailey, C.B., Lady Frances Balfour, Right Hon. G. N. Barnes, M.P., Lord Henry Cavendish-Bentinck, M.P., Admiral Lord Beresford, F. Handel Booth, M.P., Right Hon. Sir Edward Carson, K.C., M.P., Sir Frederick Cawley, Bart., M.P., Lord Eversley, Sir Algernon Firth, Bart., Victor Fisher, Sir James Frazer, D.C.L., LL.D., Right Hon. Ellis Griffith, K.C., M.P., Sir Robert A. Hadfield, F.R.S., John Hodge, M.P., Canon Scott Holland, D.D., Professor Henry Jackson, O.M., Colonel Hon. Aubrey Herbert, M.P., P. H. Kerr, Hugh A. Law, M.P., Arthur Lynch, M.P., Sir Oliver Lodge (Principal of Birmingham University), Professor Richard Lodge, The Marchioness of Londonderry, Sir Philip Magnus, M.P., The Master of Balliol College, Oxford, The Master of University College, Oxford, Right Hon. Sir W. Mather, Viscount Milner, G.C.B., G.C.M.G., G. Hay Morgan, K.C., M.P., Lord Moulton, T. P. O'Connor, M.P., James O'Grady, M.P., Professor C. W. Oman, The Lord Bishop of Oxford, Professor Bernard Pares, Professor W. Alison Phillips, Hon. W. Pember Reeves, Earl of Ronaldshay, M.P., Professor Michael E. Sadler, C.B. (Vice-Chancellor of Leeds University), J. A. Seddon, Rev. Sir George Adam Smith, D.D. (Principal of Aberdeen University), Hon. Arthur Stanley, M.V.O., M.P., Lord Strathclyde (Lord President of the Court of Session), Right Hon. Sir Charles Wakefield (Lord Mayor of London), Sir J. Beethom Whitehead, K.C.M.G., Hon. Lady Whitehead, Right Hon. C. B. Stuart Wortley, K.C., M.P., The Lord Bishop of Winchester, Sir Francis Younghusband, K.C.I.E.

The President of the Society is the Earl of Cromer, O.M., G.C.B.; Mr. J. Annan Bryce, M.P., is Hon. Treasurer; and Dr. A. W. Seton-Watson is the Hon Sec The Executive Committee is composed as follows:—James Berry, B.S., F.R.C.S., John Buchan, Ronald M. Burrows, D.Litt., Sir Arthur Evans, LL.D., F.R.S., The Rev. H. J. Fynes-Clinton, J. A. Grant, M.P., Lady Grogan, Maj.-Gen. Sir Ivor J. C. Herbert, Bart., M.P., Elsie Maud Inglis, M.B.C.M., H. J. Mackinder, M.P., Ronald McNeill, M.P., Admiral of the Fleet the Hon. Sir Hedworth Meux, G.C.B., M.P., H. Wickham Steed, J. St. Loe Strachey, Stephen Walsh, M.P., A. F. Whyte, M.P., Mrs. Carrington Wilde, E. Hilton Young, M.P.

The offices are at Parliament Chambers (Room 73), 14, Great Smith Street, S.W.

TANGIER TO TEHERAN.

I wonder whether any publisher will ever think it worth while to give to the world a collection of King Constantine's speeches. Probably not; for, though they afford some insight into his Majesty's character, there is not, in this country at least, a sufficiently large public interested in the subject to make the venture worth while. It is almost a pity, for some of these speeches are full of a quite unconscious humour which even the most successful efforts of the Kaiser can hardly outdo. It is always amusing to see any man taking himself quite so seriously as does this Royal rival of the one and only Wilhelm; and when a very small Tin God solemnly announces to the world at large that he is so great, so wonderful, and so omniscient that his Will must prevail against that of the overwhelming majority of his people, and that it is the duty of his soldiers to lay down their lives cheerfully in the attempt to force his head through any brick wall he chooses to butt against—well, one cannot help smiling, though one may at the same time feel very angry.

***

It is a notorious fact that many of the "Young Turks"—who are Moslems only in name—openly set at defiance the obligation to refrain from drinking strong liquors. The Germans, I see, though not averse from looking upon the wine when it is red—or white, for that matter—themselves, have been rather puzzled to understand how it is that some of their numerous Turkish guests are so ready to copy their example in this respect. But a trifle like that is not allowed to worry the good German long. One of his papers is sure to come along with an explanation; and in the present instance it is the *Rhenisch Westfälische Zeitung* that has flung itself into the breach, so to say. According to this veracious journal, the drinking of champagne, far from being an offence against the law of the Prophet, is actually a virtue. For champagne, by a happy coincidence for those who like it, resembles a "sacred" beverage obtained, under miraculous conditions, from a palm tree, by a very pious Moslem.

***

The story is given with a wealth of corroborative detail which does credit to the scribe. The pious Moslem's method of preparing his tipple is set out in detail; and the German reader is invited to believe that, though he was perishing of thirst, he was able to wait some fifteen hours or so while the juice he collected (apparently under Divine guidance) fermented and became a "pure sparkling wine of most delicious flavour." The account adds that the beverage must be drunk at once, as it turns sour very quickly if left standing. Perhaps this accounts for the alacrity which the Turkish visitors to Berlin appear to have shown in disposing of any champagne that was set before them.

***

Some little time ago two distinguished English medical men, who were in Cairo in connection with Red Cross work, were received in an informal manner by Sultan Hussein at his palace. They were sitting side by side, facing his Highness, from whom they were separated by a small table covered in red cloth and provided with a fringe, which was very like the tables one is accustomed to see conjurers using on the stage. On this table stood the three small cups from which the Sultan and his visitors had been drinking coffee. Presently the Royal host, who is quick in his movements and given to gesticulating freely in moments of excitement or emotion, suddenly whipped off his *tarboosh* and clapped it down on the table, covering the three cups. The same idea struck both the visitors at once, and one of them, a famous surgeon, murmured gently: "He will produce a white rabbit in half a minute, I'm sure." His companion, who reported the incident afterwards, confessed that he had never had such difficulty to keep from laughing in his life. It sounds trivial, no doubt, but if you imagine the scene for yourself—especially if you happen to have met the actors in it—you will find it easy to appreciate its humour. If only the Sultan had had the joke explained to him, I am sure he would have enjoyed it. As it was, he was probably puzzled to know what made one of his callers so red in the face.

***

Last week, when I tried to disabuse certain correspondents who seemed to think that I was not sufficiently unfriendly to the Turks, I wrote under the disadvantage of not having their letters by me. This was particularly unfortunate in the case of the letter published (page 489). With regard to this, by the way, a correspondent suggests that the *nom de plume* selected is a strange one, and reflects little credit on the writer's sense of the fitness of things or his sense of humour. In regard to this point, my knowledge of Turkish (?) does not enable me to judge. But there are one or two points in the letter which seem to call for comment. In the first place, I am slightly puzzled to know what is meant by the reference to my "list of Oriental beneficiaries of our charity." It is true that I have from time to time appealed on behalf of our troops in Mesopotamia and elsewhere; but, with the exception of our Indian troops, they can hardly be regarded as "Oriental"! Again, I have tried to do something for the Armenians and Nestorians; but that does not make much of a "list." And, as I have pointed out before, the credit for the "philanthropic suggestion" regarding the refugees in Asia Minor does not belong to me, but to Mr. Philips Price and M. Zolanievicz.

***

Then, too, much as I should like to endorse the doubtless kindly-meant suggestions on behalf of the Kurds and the *Komitajis*, I am afraid I cannot bring myself to do so. The Kurd has his good points, no doubt, or he would not have won the liking of several well-known travellers who have studied him in his own habitat; but I have never been able to admire him greatly, and his recent achievements have not endeared him to me. If he really is "unoccupied," I suspect that a Certain Person, who, as we all know, is only too ready to find mischief for idle hands to do, will look after him very soon. At any rate, I, for one, must decline to act on the charitable hint, and shall subscribe neither in cash nor in Armenians for the relief of his distress. Finally, as to the *Komitajis*, I can only say that if I could believe that they were "likely to be deprived of their means of livelihood" so soon as the writer of the letter appears to think, I should be delighted. But even if all the present representatives of the species *should* in the near future be deprived not merely of their means of livelihood, but of their lives as well, I fear that as long as the Balkans are inhabited by such a mixed population, the *Komitaji* will continue to ply his calling. I hope, however, that neither my critics nor I will ever provide employment for him. For the only employment he takes to at all kindly is likely to prove an unhealthy one—for his victims.

***

If I had run across one of the distressed Macedo-Bulgar *Komitajis* last Friday, it is just possible that I might have provided him with temporary employment. I might have felt tempted to direct his attention to a certain person, and to whisper in his ear: "Yonder, noble hero, is one of the bitterest opponents of the glorious cause to which you have devoted yourself. Remove him, and you do good service to The Cause!" Of course, I should have hinted at a pecuniary reward as well. And the victim would have been the bold, bad printer who was responsible for the mistake that crept into my note about Ali Dinar's novel touring car. For what I wrote was "a gorgeous armchair of *state*," not of "slab"; and I am afraid the error may have puzzled some of my readers almost as much as it puzzled me.

CORSAIR.

A committee has been formed at The Hague, under the protection of the Netherlands Red Cross Society, to assist Roumanian prisoners of war.

Communications between Roumania and London are now much improved. Telegrams have been taking eighteen or even twenty days to arrive, but now take only three or four. Letters continue to take about nineteen days.

A Berlin telegram says that nobody in Germany complains of the arrival of the Greek "guests"—the troops from Kavalla—and adds:—"Whatever the strength of the Greek Army Corps may be, the hospitality accorded it cannot affect the German feeding problem."

NEAR EAST BOOKSHELF.

SERBIA'S LONG AGONY.*

Mr. and Mrs. Askew belonged to the staff of the "First British Field Hospital," which reached Serbia in April, 1915. Unlike our other medical units, which looked to Sir Ralph Paget for orders, the First Field Hospital was definitely attached to the Serbian Army, and therefore its *personnel* saw more of the actual fighting than any of their colleagues. In the spring of last year everything wore a roseate aspect for Serbia. British ships were apparently forcing the Dardanelles; the Russian invasion of Transylvania pursued its triumphant course; Roumania and Greece seemed ready to join forces with the Entente; and few people believed that Bulgaria would prove ungrateful to her Russian liberators. It remained only to reorganise the Serbian Army, weakened by its heroic successes in 1914, and to stamp out the ravages of imported disease preparatory to a combined invasion of Austria-Hungary from the south. Our authors have nought but blighted hopes to record. They remind us that month after month rolled by without bringing any display of united action on a front which offers greater potentialities than any other; that our Dardanelles adventure failed to fructify; that Russia, lacking munitions, was forced to give ground to the Hunnish hordes; and that Bulgaria treacherously threw in her lot with the enemy. Left to struggle unaided against a coalition of overwhelming force, the luckless Serbians had no choice but to retreat southwards. Mr. and Mrs. Askew shared all the horrors attending a retrograde movement which was more disastrous than that of Napoleon's *Grande Armée* in 1812. Their story thrills with poignant interest, but is sorry reading for Serbia's friends.

The second invasion began with October, 1915, and our authors' unit was ordered to Pirot, where such forces as could be mustered stood ready to meet the Bulgarian thrust. Fierce fighting ensued, and the First Field Hospital resources were strained to breaking point by the influx of wounded. Its Ford cars plied busily to and from the dressing stations, bringing a multitude of human wrecks for treatment. Each received hot coffee on arrival, and a cigarette—unless he was in a state of collapse. Intense was their craving for tobacco. One poor wretch whose lower jaw had been shot away, motioned to his nurse that he would like a smoke, and, on being given one, he thrust it up his nostril and inhaled its soothing virtue with evident pleasure!

But Serbia's northern frontier was far too extensive to be held by her depleted forces. The Bulgarians advanced on the left, while 300,000 Austro-Germans occupied Belgrade, and then pushed southwards with Nish as their objective. This menace to both its wings left the Serbian Army no choice but a speedy retreat. To fly from foes whom they had soundly beaten in 1912 was, indeed, a bitter pill for the proud warriors. Some of them were actually shot by their own officers for refusing to budge. The British Mission did all in its power to clear the hospital of patients who were in a fit state for removal; and travelled by rail to Nish in a coal-truck, crammed to suffocation, amid drenching rain. Short was their stay at that railway centre; for the enemy had a sounder view of its importance than the Allies. They spread out westwards in order to join hands with the Bulgarians, who were working round the Serbian right. Should that movement succeed the path of retreat would be blocked. One exit alone remained; it lay south-westwards, through Albania and Montenegro. On November 19th the Serbian Calvary began.

Our authors' account of the hardships they endured for seven dreadful weeks almost passes belief. Their track lay through a region of tangled mountains, destitute of every civilised convenience and swept clear of food by the Serbian Army. In Northern Albania they were dogged by savage Arnauts; for Essad Pasha's "friendlies" constituted a minority of the population. Indeed, the only bright spot in a sombre narrative was the patient heroism of their Serbian fellow-sufferers, to whom King Peter and the Crown Prince set a noble example of fortitude under adversity. That a delicately-nurtured Englishwoman should have survived such mental and physical tortures proves the inborn "grit" of her race. At length the refugees reached San Giovanni di Medua, on the Adriatic littoral, and after several hair-breadth escapes from Austrian air and submarine attack, they found a haven of refuge in Brindisi. The note of pessimism which pervades this book arises from the evident fact that it was written ere time had softened the memory of indescribable horrors. Its authors did not foresee the change which a few months' rest has wrought in the Serbian armies, and are inclined to blame the Allied generals for inaction which was no fault of theirs. It would have been sheer madness to advance northwards from Salonika while a semi-hostile army lay in the rear, and Athens was a hot-bed of German intrigues. But his country's point of view was ably stated by a Greek doctor, whom Mr. Askew encountered at Nish.

> Greece, he said, in the early part of the war was all in favour of the Allies She would have joined us had we allowed her to do so. The attitude of Great Britain was essentially honourable—she did not want to drag the small States into the war without absolute necessity. But she was blunt about it, and gave offence. . . . The consequence was that you alienated a lot of Greek sympathy, and when, necessity arising, you acted in an arbitrary manner, seizing Greek ships and territory, you alienated a lot more. The Germans saw their advantage, and were not slow to seize it. They have succeeded, despite Belgium, in making my countrymen believe that the British claim to defend small States is not justified. We have our own experience, and we have seen your failure to support Serbia. We do not appreciate being made a cat's-paw of at such a vital moment—laying ourselves open, in all probability, to the same fate as Serbia's. That is how the matter is argued at Athens, where there is now a firm belief, fostered by German agents, that the Central Powers will win the war.

The "hand-to-mouth" diplomacy, so justly stigmatised in the editorial columns of the NEAR EAST, is to a very large extent responsible for Serbia's unmerited misfortunes.

F. H. S.

*"The Stricken Land: Serbia as We Saw It." By Alice and Claude Askew. London: Eveleigh Nash Company, Ltd, 1916. Price 6s. net.)

BOOK NOTES.

Messrs. Macmillan announce the forthcoming publication of "The Wave: An Egyptian Aftermath," by Algernon Blackwood.

Messrs. Hodder and Stoughton have just published (at 2s. 6d. net) "An Englishwoman Sergeant in the Serbian Army," by Flora Sandes.

"The Archæology of the Holy Land," by P. S. P. Handcock, has just been issued by Mr. Unwin, at 10s. 6d. net.

Another new book is "The War in Eastern Europe," which is written by John Reed, and published by Mr. Nash at half-a-guinea net.

The Gresham Publishing Co. have issued (8s. 6d. net) Volume 1 of "Field-Marshal Lord Kitchener: His Life and Work for the Empire," by E. S. Grew. The volume deals with Lord Kitchener's early life, his work in Palestine for the "P.E.F.," and his first experiences in the Sudan.

Messrs. Hachette have published recently "La Retraite de Serbie," by L. L. Thomson, a French Army surgeon. The price is 3f. 50c.

Mr. A. W. Marchmont, who is well known as a writer of stories of adventure, has gone to the Near East for the scene of his latest book, "Her Sentinel," which Messrs. Cassell publish.

A Constantinople telegram to the *Frankfurter Zeitung* says that the Committee of Union and Progress will meet at the end of this month.

Several of the great Atlantic liners now engaged on transport work have continued to publish that happy feature of their voyages in the days of peace, the ship's newspaper, says the *Morning Post*. There is to hand at Liverpool the journal of a well-known vessel much-beloved of rich Americans before the war. One entry, which refers to a day in the Mediterranean, says:—"Interested in movements of French dirigible and destroyer searching for an enemy submarine which was searching for us. The dirigible maintained a great height, the better to see the submarine, and the destroyer took her bearings accordingly. One enemy submarine the less within a few hours." . . . Here is another extract from the ship's journal:—"A small Arab boy was found on board and taken up to the bridge as a stowaway. On being questioned, however, the boy, who spoke English fluently, said he was no stowaway, but the mascot of the 1st Australians (who were on board), and he was going away with 'his men' because there was nobody else who could drill them as he could. He gave an exhibition of his powers in that direction, but all to no purpose, and he was put ashore in the police boat, much to his indignation and disgust."

Princess Bibescu has arrived in Bucharest from London.

Captain Matila Costiesco-Ghyka, of the Roumanian Legation in London, arrived in Bucharest last week.

Reuter's New York correspondent reports that on Monday representatives of leading American banks and export houses gave a luncheon in honour of Sir Richard Crawford, the Commercial Adviser to the British Embassy at Washington. Sir Richard, it will be remembered, was formerly Adviser to the Turkish Ministry of Finance.

The Serbian Minister and the Greek Minister were among the visitors at the Foreign Office on Tuesday.

The Roumanian Minister visited the Foreign Office on Wednesday afternoon.

M. Ch. Miyatovitch, formerly Serbian Minister to the Court of St. James, who has now recovered from his illness, hopes to pay a visit to Ireland next month for the purpose of delivering a course of lectures on Serbia.

Our Cyprus Correspondent writes (September 5):—Captain Orr, Chief Secretary to Government, whose health has temporarily broken down, was unable to leave by the last mail steamer, as he intended, and has returned to his home at Nicosia.

Our Bucharest Correspondent writes:—Mr. W. Warfield, who has lately been appointed Chargé d'Affaires of the United States Legation at Sofia, has arrived in that city, and has been received by the Prime Minister. He has with him a quantity of clothing and comforts for distribution among the British prisoners.

Major-General the Hon. H. A. Lawrence (Temporary Lieut.-General), who this week was mentioned in despatches for the third time, is a director of the Imperial Ottoman Bank, and also of the Bank of Roumania. He is serving in Egypt. His two sons have both fallen in the war. The younger, Captain Michael C. Lawrence, of the Coldstream Guards, died so recently as the 16th of this month from wounds received in action the previous day.

The Rev. A. Lee Warner, who has been doing ministerial work at Atbara, Port Sudan, Suakin, and Khartoum since the end of 1914, left the Sudan on the 1st inst. On the previous evening a meeting of farewell was held, at which the Rev. H. C. Robins presided; and several speakers voiced the regret felt at Mr. Lee Warner's departure and good wishes for his future.

The following is the official description of the deed for which Captain J. B. Barron, 3rd Worcestershire Regiment, was (as reported in THE NEAR EAST) awarded the bar to the Military Cross which he had won only a fortnight earlier:—"For conspicuous bravery and gallantry in action during the attack on the Hindenburg Trench on August 4. Although wounded before the attack started whilst assembling his company in the trenches, he refused to leave his post, but directed the attacking companies throughout the operations, and remained in action until the position was firmly in our hands."

On Thursday of last week, at Zamalek, Gezira, Cairo, the wife of Captain (temporary Lieut.-Colonel) H. A. Engledue gave birth to a daughter.

Private Harold C. Bond, of the London Regiment, has been wounded at the front in France, and is now in a hospital in England, where he is progressing favourably.

A Sudan correspondent writes:—

Several members of the Administration are due to return to their various posts this month (September), after absence on leave. In the Sub-Department of Forests Mr. A. A. Bisset, one of the four Inspectors of Forests, will be back at Khartoum, as will Mr. G. E. Hunt, of the Gordon College Higher School, wherein he fills the post of lecturer. Mr. A. B. B. Howell, of the Finance Department, attached, will resume his duties after a short vacation occasioned by indifferent health. In the Geological Section Mr. S. C. Dunn, the Government Geologist, is due to resume his duties on the 29th inst.

Dr. E. S. Crispin, of the Medical Department (of which he has been Acting Director some time), returns to the capital immediately, after a few months' leave of absence on medical grounds. Mr. T. E. Fyers, Carriage and Wagon Works Superintendent in the Railways Department, and Mr. A. N. Wilkinson, one of the Inspectors of the Repression of Slave Trade Department, have now returned to duty. The former has had fifteen and the latter five years' service under the Sudan Administration. In the Steamers Department, both the Director—Major W. B. Drury—and one of the Assistant Directors—Captain Huntly Walsh—who have been away on leave, have again taken up their duties at Khartoum.

In the provinces there have been one or two arrivals from Europe and Egypt of officials returned from leave. Mr. E. W. Drummond Hay, of the Berber Province, where he is First Inspector, stationed at El Damer, returned on the 13th inst., while Mr. A. W. Skrine, a Second Inspector in the Dongola Province, was to have been back at his post on the 17th inst. Two of the Kassala Province officials, Captain G. B. Wauhope, the Senior Inspector, and Mr. A. D. Home, a third inspector, have resumed their duties, as has Dr. L. Bousfield, the Medical Officer of Health of Khartoum. Mr. E. R. J. Hussey, a second inspector in the Sennar Province, got back to work this month.

The *Egyptian Mail* of August 29 reports:—"A serious accident, which, however, very fortunately resulted in no personal injuries, occurred on the Ramleh Road at Sidi-Gaber just after midnight on Saturday. Mr. Ronald Storrs, the Oriental Secretary to the Residency, was returning home to Ramleh in a public carriage when a taxicab, driven by a European, and travelling in the opposite direction at a high speed, crashed into the carriage, which was badly smashed. By a miracle Mr. Storrs, though thrown on to the pavement, escaped unhurt, though naturally he received a considerable shock."

M. Radeff, formerly Bulgarian Minister in Bucharest, arrived in Berlin last week.

Moukhtar Bey, of the Turkish Ministry of Finance; Fahsin Bey, the Turkish Ambassador at Bucharest; Essad Bey, and the General Consul, Halil Bey, have reached Berlin.

"The Arabs" will be the subject of a course of lectures to be given by Professor Seligman next February at the London School of Economics and Political Science.

Mrs. Alexander Van Millingen has left London for Dunblane, N.B.

Major Sir Henry Paulet St. John Mildmay, sixth baronet, late Grenadier Guards, of Dogmersfield Park, Winchfield, Hants, who served in the Egyptian War of 1882, left unsettled estate of the gross value of £36,968.

Al Haj Khwaja Kamal-ud-Din, the leader of British Moslems in this country, has returned from India within the past few days, and will deliver his first sermon to-day at the temporary London Mosque, 39, Upper Bedford Place. He was met at Tilbury on his arrival by Lord Headley and his two elder sons, and at once proceeded to Woking Mosque.

The University College of London University has issued a list of lectures to which the public will be admitted. Among others we note one by Professor W. M. Flinders Petrie on "Ancient Egyptian Rings and Toilet Objects," to be delivered on Thursday, October 5, at 2.30 p.m., and another at four o'clock of the same afternoon on "Recent Babylonian Discoveries," by Dr. T. G. Pinches. Professor Petrie's lecture is the first of a course. There will also be a course of lectures on "Ægean Civilisation," by Mr. Norman H. Baynes. The first of these will deal with Crete, and will be delivered at 6 p.m. on Wednesday, October 11. Another course of lectures will be on the early period of Greek Art. These will be by Professor Percy Gardner, the first being given on Tuesday, October 10, at 3 p.m.

The British Red Cross Society and the Order of St. John, which have workers not only on the British fighting fronts but on all the other Allies' fronts as well, have taken prompt steps to co-operate with and assist the medical services of the Roumanian Army. More direct assistance is in contehplation, though it is not fully decided upon as yet, and a first motor ambulance, the gift of Messrs. Crawley Brothers, of the Galatz Waterworks, is being sent this week via Archangel to Lady Barclay at the British Legation, Bucharest. In the meantime £10.000 worth of warm clothing, medical and surgical stores, and comforts for the wounded have already been despatched to Roumania, and Mr. H. K. Hudson, of the British Red Cross, has also left for Russia and Roumania to supervise transport and other arrangements.

A series of popular lectures on "The Tropical Countries of the Empire," illustrated by the collections of the Imperial Institute, will be delivered by Miss Edith A. Browne, F.R.G.S., on Wednesdays in October, November and December, at the Imperial Institute, at 3 o'clock, commencing on Wednesday, October 4, 1916. Admission to the series of lectures will be free by ticket, for which application should be made to the Director of the Imperial Institute, South Kensington.

Another Dutch ambulance for Serbia, organised by the Dutch-Serbian Committee, of which Mr. E. S. Orobio de Castro, jun., is secretary, has left for Salonika. This ambulance is in charge of Dr. H. Van Dyk, of the St. Franciscus Hospital, Rotterdam. With him are Nurses J. Vermaas, G. van der Zwan, M. Kat, and A. Bakker, of whom the first two have already done noble work with the Serbians. Dr. Van Dyk is the discoverer of the new plague serum, used with good effect in Java. The party with Mr. De Castro arrived at Gravesend on Sunday in the Prins Hendrik, after being taken by the Germans to Zeebrugge. Dr. Van Hamel, surgeon at Delft, hopes to join the ambulance at Salonika as soon as the Dutch military authorities give him leave to go.

Term opens at King's College on Wednesday. At half-past nine there will be a service in the college chapel, at which the sermon will be preached by the Rev. Father Nicholas Velimirovitch, Professor of Theology in the University of Belgrade and Chaplain to the Metropolitan of Serbia.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.
Σχολή Γλωσσῶν. Διδασκαλία συστηματική. Διερμηνεῖς κ.λ.π. Δίδακτρα μέτρια.
Lyceum Institute, 85, New Oxford Street, and 64, Haymarket.

OBITUARY.

LIEUT.-COL. A. F. TOWNSHEND.

Lieutenant-Colonel Arthur Fitzhenry Townshend, who died on the 16th inst. of wounds received the previous day, was formerly H.M. Vice-Consul at Adana, Turkey in Asia (June 1903-April, 1905), and afterwards Consul for the Adrianople vilayet (1905-1906). The only son of the late Lieutenant-Colonel H. F. Townshend, of Castletownshend, Co. Cork, he was born May 19, 1874, was educated at Haileybury, and joined the Army when he was just twenty. Gazetted to the 2nd Cameronians (Scottish Rifles), he served with that regiment in India, and in the South African War he served with the 4th Scottish Rifles, and was mentioned in dispatches. He went to the front with his regiment in 1915, and in November of that year was again mentioned in dispatches, and he had been twice wounded. Last January he was appointed to command the Royal West Kent Regiment.

LIEUT. H. AUBREY BACK.

We regret to announce the death of Second Lieutenant Horace Aubrey Back, second son of the late Francis Formby Back, of Harrow Weald, and Mrs. Formby Back, of 16, Welbeck House, Wigmore Street, W., who was killed in action on Friday, the 22nd inst. Lieut. Back was educated at Marlborough College and Brazenose, Oxford, at which college he was a scholar. He studied for the Law in Cairo and Paris, and was in practice for some years in the office of Maître Carton de Wiart, the well-known avocat in Cairo. He returned to London from Egypt in 1911, and entered the firm of Messrs. Surtees, Phillpotts and Co., well-known London solicitors, in which firm he shortly afterwards became a partner. He joined the Army in November, 1915, and ultimately became attached to the Gloucester Regiment. He went to France on August 28, 1916, and had only been a week in the front line when he met his death. Lieut. Back was thirty-five years of age.

The death has occurred in action of Lieut.-Colonel Arthur Pastow Mack, Suffolk Regiment, of Manor House, Bacton, Norfolk. Mr. Mack will be remembered by Egyptian readers as one of the pioneers of the mining industry in the country, being a partner in the firm of Mack and Palmer. He was fifty-three years of age.

Lieutenant John Munro Milton, Northumberland Fusiliers, missing (believed killed), since September 26, 1915, at Hill 70, Loos, aged twenty-two, was the only son of Dr. Herbert Milton, one of the best-known and most popular physicians of Cairo, and grandson of the late Sir John Milton, Accountant-General, War Office. He was educated at St. Vincent's, Eastbourne, and Wellington College, Berks, and passed his "Little-go" at Cambridge in June, 1910. He was articled to Messrs. Harris, Russell, and Co., chartered accountants, of London and Cairo, in September, 1911, and passed the intermediate examination for the Society of Chartered Accountants in July, 1914. He played for the Harlequins, and in January, 1914, was especially mentioned as having the "makings of an international forward." He was in Switzerland when war broke out, but after some weeks' delay managed to return to Cairo. He left there in November, 1914, to offer his services, and was given a commission in the 13th Northumberland Fusiliers.

Among the latest contributions to the Lord Kitchener National Memorial Fund is a first instalment of £343 11s. 10d. received from the British Consulate-General at Alexandria, per Mr. D. A. Cameron, C.M.G.

APPOINTMENTS, PROMOTIONS, ETC.

A Reuter's telegram from Cairo announces the appointment (foreshadowed by our Cairo Correspondent in his letter of this week) of Sir Ronald Graham, Adviser to the Ministry of the Interior, as Assistant Permanent Under-Secretary at the Foreign Office. Reuter adds that Sir Ronald's departure will be universally regretted. He has carried out his duties as Adviser most successfully and is very popular among the Egyptians.

The Egyptian Ministry of Agriculture some little time ago applied to the Board of Trade for an expert in diseases of plants, and, we understand, Mr. Gordon Wallace Gibson, having been selected for the position, will leave for Egypt on October 12. Mr. Gibson, who is a Fellow of the Royal Horticultural Society, and a contributor to the R.H.S. Journal, is very highly qualified. He has the Nicholson Prize and several diplomas. He formerly acted for the Surrey County Council, and for the last six years for the Board of Agriculture, under the Destructive Insects and Pests Act.

Miralai R. M. Fielden Bey, Governor, Bahr el Ghazal Province, has returned from furlough to the Sudan.

Mr. C. P. Browne, Governor of Berber Province, has been granted leave, and is visiting England.

Captain H. Smedley, the Manchester Regiment, and Lieutenant L. E. Holland, 1st Devon Yeomanry, having reported their arrival in Egypt, have been attached to the Egyptian Army as special service officers, with the temporary rank of Bimbashi. Captain Smedley has been attached to the Transport and Lieutenant Holland to the Arab Battalion.

Bimbashi J. J. Bramble, Upper Nile District, has been transferred to Sudan Government.

BRITISH REFUGEES FROM TURKEY FUND.

The following is a list of subscriptions to the above fund received between September 16 and 25. Further subscriptions will be gladly received by the Hon. Treasurers (Mr. A. Baker and Mr. W. G. Middleton Edwards) at 5, Giltspur Street, London, E.C.

DOMESTIC ANNOUNCEMENTS

DEATH.

MACK.—Killed in action, on September 15, 1916, Arthur Paston Mack, Lieut.-Colonel, Suffolk Regiment, of Manor House, Bacton, Norfolk, aged 53.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), Alexandria.
Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
Glymenopoulo, Ramleh.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from:
Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
Open all the Year Round—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
For Summer Season—
PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS,
LIMASSOL, CYPRUS,
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

SCHOOLS for BOYS & GIRLS.
TUTORS for ARMY & ALL EXAMS.
REFINED HOMES with EDUCATION for children whose parents are abroad.
Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.
The age of the pupil, district preferred, and rough idea of fees should be given.
J. and J. PATON,
EDUCATIONAL AGENTS.

FRIDAY, SEPTEMBER 29, 1916.

THE DOORMAT OF EUROPE.

Since the days when she served as the portal through which civilisation entered Europe Greece has experienced many vicissitudes. Twenty centuries passed in Roman subjection, Byzantine servitude and Turkish slavery might have been expected to exhaust the sorrows of any nation. But once again the Greek people are thwarted in their efforts to reach a higher sphere of national life by the agency of constitutional government, and find themselves placed in the position of a European doormat. Greek history of the middle of last century bears a strange likeness to the events of to-day. In September, 1843, the issue between Hellenic liberty and German, or rather Bavarian, despotism was decided in front of the Palace at Athens. The leader of the people, supported by the troops of the capital, informed King Otho that all Greece appealed to him to fulfil the promises given when he was elected King of the Hellenes, that the people should be governed constitutionally. In order to save his crown the King agreed to abandon absolute power; but his attempt at constitutionalism was not a success. King Otho, writes Finlay, the historian of Modern Greece, "acted under the strange delusion that he was himself an honest statesman, and he believed that it was his honesty which rendered him superior to the ablest politicians in Greece. He could not understand, for his mental perceptions were very circumscribed, that what appeared to him to be fair in a king must appear to be something very like trickery in a private person. . . . It forms a remarkable trait in King Otho's dull intellect, that he knew how to conduct a game of personal intrigue with patient sagacity and to foil the restless activity of the acutest Greek. . . . The facility with which he won over deserters from the Liberal party destroyed both his own and the people's confidence in political honesty. Kanares was still a man whom neither the King nor the people believed could be gained by any bribe, either of wealth, rank, or honours, so that King Otho schemed to make Kanares himself the pilot of his own political shipwreck." The Greeks rid themselves of King Otho, and with the change of dynasty they abolished the constitution of 1844 and sought to introduce perfect government by means of an entirely new charter. It is probable that the constitution of 1864 was suited to the conditions of the day. Ample powers were conferred upon the Crown, on which the people relied to control the administrative authority of Ministers. But while no act of the Sovereign is valid, nor can be executed, unless countersigned by a competent Minister, no provision has been made for enforcing Ministerial responsibility. Experience has emphasised the shortcomings of this constitution, and the Greek people may yet be obliged to submit once more the charter of their liberties to drastic revision in order to reach the goal of their national aspirations.

Certain it is that no nation can continue indefinitely to view with indifference the record of its degradation and retain its own self-respect and prestige abroad. Under the guidance of King Constantine Greece has neither been able to take the tide of her opportunity at the flood, nor known how to make a virtue of necessity. A policy of neutrality at the outset seemed dictated by ordinary prudence and common sense; but only if the Greek Government reserved for itself complete freedom of action. Subsequent events have proved that the policy was forced upon the country not by a shrewd examination of actual circumstances, but by some understanding between King Constantine and Germany. Whatever the nature of this understanding, it has been responsible for each successive step in Greece's humiliation. The repudiation of the Alliance with Serbia was a severe blow to Greek national honour; but it had been anticipated by the action of the King in refusing to honour M. Venizelos' pact with the Allied Powers. Then came the occupation of Salonika by the Entente troops. In seeking to hinder the Allies' movements King Constantine exposed his country to a succession of rebuffs. It was necessary as a measure of precaution to consolidate the occupation, and the recalcitrant attitude of Greek military officers and Greek officials, acting under instructions from Athens, led to the adoption of various measures which in turn eliminated Greek control from that part of Macedonia and suppressed the more glaring cases of contraband traffic in Greek waters. In reality, however, no action on the part of the Entente, albeit seemingly high-handed, implied such contempt for the Greeks as the activities, under the King's auspices, of Germany's representative, Baron von Schenck, at Athens. The open bribery and corruption practised by the German emissary were no less derogatory to the recipients than they were to the author. In due course the occupation of eastern Macedonia followed, and the Bulgarians, whom the Greeks affected to despise as well as to hate, now associated themselves with the Germans in proclaiming their opinion of the Greeks. Both hastened to load Greece with the assurances she asked for, and saw no reason for explanations when one and all were broken. The kidnapping of the Fourth Army Corps is the latest stage in the history of the Greek doormat. Meanwhile, the Allies have presented Notes at Athens, calling upon Greece to admit her sins of commission and omission, and to make amends without delay. Quite early in these experiences King Constantine found that he could obtain no practical support from the Germans, whose cause he was pledged to uphold. Obstinacy prevented him from receding gracefully from an untenable position, and he sought what consolation he could find in granting audiences to foreign correspondents in order to set out the tale of his woes.

With a united people behind him King Constantine might possibly have afforded to flout the wishes of the Allied Powers. But like King Otho he has considered himself the superior in intellect and statesmanship of the ablest politician of his day, and in so doing has also set himself up against the popular will. The controversy has now reached a stage at which all those who are not Greeks will instinctively wish to withdraw from the arena, and leave the Greeks to settle the matter themselves with their Sovereign. There could be no more striking development in the situation than the departure of M. Venizelos from Athens for the purpose of placing himself at the head of the National Defence movement. That movement, as he is careful to point out, is not a revolution in the ordinary sense of the word. It is not directed against the King or his dynasty; but it challenges the right of the Government to allow Greek territory to be overrun by the Bulgarian enemy, Greek people to be maltreated and murdered, and Greek soldiers to be taken prisoners, without taking any action in the defence of Greek interests. A last chance is given to King Constantine to show himself as King of the Hellenes and to follow the path of duty by protecting his subjects. One word from him, we believe, would still bring the country together as one man, and establish both him and his dynasty firmly on the throne. There are indications that he has at last seen fit to bow to the inevitable, and he is credited with the intention of sanctioning Greece's military co-operation with the Allies. But he has persisted so long in a strange course of uncomprehending obstinacy that we must guard against undue optimism at this stage. History provides him with eloquent warnings. King Otho was also given many chances of falling into line with the national will, but he rejected them all, until the Greeks made up their minds that, however perfect the constitution offered them, they would have none which entailed the retention of Otho and his German methods on the throne.

THE FUTURE OF MESOPOTAMIA.

By Sir William Willcocks, K.C.M.G.

" O thou River who didst bring forth all things,
When the great gods dug thee out,
They set prosperity upon thy banks."

This address of some old world Sumerian seer will again see its fulfilment on the day when Turkish misgovernment comes to an end. Like the delta of the Nile, the delta of the Tigris and Euphrates will depend for its full development on the goodwill of those who hold the upper waters of the two rivers, in the regions where they can be led out of their channels and utilised for irrigation. Heavy irrigation works carried out on the upper Euphrates and its tributaries, the Bellik and Khabour, upstream of Anah, past Meyadin, the ancient Rehoboth by the River, would deprive the lower Euphrates of the whole of its low supply; while similar works carried out on the upper Tigris and its tributaries, the two Zabs, in the neighbourhood of Mosul, near the ancient Nineveh, would seriously reduce the low supply of the lower Tigris. The whole of the low supply of the Diala, or the ancient Gyndes, is utilised between Khanikin and Bakuba, and none reaches the Tigris near Baghdad. Moreover, the developed irrigation of the Tigris and the Euphrates, upstream of Kût and of Shamia opposite Diwanieh respectively, would deprive the Shat-el-Arab of any low supply water at all, and insure the ruin of the Busreh date groves, unless compensating reservoirs were in existence. The magnificent date groves between Mohammerah and the Gulf owe no small part of their prosperity to the low supplies of the Karun River, of which every particle could be drawn off by barrages at Shuster and Ahwaz.

The ancients provided for contingencies like these on the lower Euphrates by the construction of reservoirs in the deserts south of Ramadi and north of Kerbellah, and by the construction of a reservoir in the heart of the delta on the edge of the two Sipparas (Sepharvaim) for the use of Babylon exclusively. In spite of these reservoirs there must have been occasions when the heavy irrigation around Rehoboth and upstream of it caused serious injury to the Babylonian delta. When working in Baghdad I used often to think that many of the wars between Assyria, which held the upper waters of the two rivers, and Babylonia, which depended on the lower, must have been undertaken to secure complete control of the water. During the years when the Babylonian kings were powerful enough to impose their will on the whole of Mesopotamia the lower delta was always prosperous; while, under the Persian kings, who held both the upper and lower valleys, and who were able to regulate the supply judiciously, Babylonia saw its greatest prosperity.

Though in antiquity Babylonia was only prosperous when the whole country from the line of the Baghdad railway past Harran, Nisibin, and Mosul, to the Persian Gulf was under the control of a single power, or when northern Mesopotamia was given up to anarchy, it will be possible to-day to make the Euphrates self-containing from Kerbellah to the Gulf, and possibly from Hitt to the Gulf. I have proposed reservoirs, of which an account is given further on in this paper, where we shall be able to store at least eighteen milliards of cubic metres or tons of water. Of this water it will be possible to utilise for irrigation twelve milliards, or four and a half times the capacity of the Aswan reservoir. In the matter of reservoirs, the Nile does not approach the Tigris and the Euphrates.

For four hundred years the Sultans of Turkey have had complete control of the two rivers from their sources to the Gulf, and have consequently been in a position to rival the Sassanian kings of Persia, but they have not had it in them to undertake any works of peace. " Peace hath her victories no less renowned than war " is no Turkish saying. Two monuments standing to-day, one on the Euphrates and the other on the Tigris, tell us why the Turks failed where the Persians excelled. Each time I have ascended or gone down the Euphrates I have been arrested by a tall column standing on the left bank of the river not far from Rakka, the summer residence of Haroun-er-Rashid. This column was erected by Sultan Selim the Grim, to his ancestor the first Osmanli Bêg who traversed Mesopotamia. Coming westwards from Turkestan at the head of his horsemen, he had forded the Tigris; and, at this point, encountered the Euphrates. Riding straight into the river, heedless of the warnings of his guides, he had been engulfed in the waters and drowned. I have never been able to pass this monument without spending an hour or two contemplating the past history of these same Osmanli Turks, of whose strength and weakness this tower is a true symbol. As one, in ascending the Tigris, approaches Baghdad, the ruins of the palace of Nausherwân, the greatest of the Sassanian kings of Persia, towers above the level plain. At the time that the king's engineers lined out the foundations of the palace they impinged on the holding of a small proprietor, who, like Naboth, refused to part with the heritage of his fathers. The work was stopped and Nausherwân was referred to. Unlike Ahab, he ordered the alignment to be deflected near Naboth's field; and so the palace was built, and so it stands to-day. In the length and breadth of the East the greatest compliment a high official can have paid to him is to be told that his justice is comparable to that of Nausherwân. Men with traditions like this divided fairly the waters of the two rivers while they had complete control of the whole country; on the occasions that they lost control upper Mesopotamia was given up to such anarchy that irrigation works there were out of the question, and consequently lower Mesopotamia, or Babylonia, saw a prosperity which was one of the wonders of the world. The overthrow of the Persians by the Arabs in the early years of the Hegira ushered in the ruin of the country, which was completed by the Tartars under Jengis Khan and Timur, and finally sealed by the Turks.

The problems whose successful solution will restore Babylonia to its ancient prosperity are far more difficult of solution than those which faced the irrigation engineers in the Nile Valley. Of all the rivers in the world, the Nile is the most gentlemanly. It gives ample warning of its rise and fall; is never abrupt; carries enough of sediment in flood to enrich the land without choking the canals; is itself free of salt; has its annual flood in August, September, and October, securing both summer and winter crops; traverses a valley with a climate mild enough to allow of Egyptian clover in winter and Egyptian cotton in summer; and flows between sandstone and limestone hills, which provide an abundance of building materials. The height of misgovernment which Egypt knew from the time of the Arab invasion in the latter half of the seventh century to the accession of Mohammed Ali in the beginning of the nineteenth, reduced the population from twelve millions to two millions and halved its cultivated area, but it could not destroy the extraordinary richness of what is rightly called in the Bible " The garden of the Lord, the land of Egypt." The same misgovernment turned the Euphrates delta into a wilderness and a marsh, dotted about with oases of cultivation. The Tigris and Euphrates rise without warning; are always abrupt; carry five times the sediment of the Nile; have their annual flood in March, April, and May, too late for the winter and too early for the summer crops; traverse a country where the temperature rises to 120 deg. in summer and falls to 20 deg. in winter, and where both Egyptian cotton and Egyptian clover are out of the question; have a considerable quantity of salt in solution; and flow between degraded deserts of gypsum and salted marl.

In spite of the many drawbacks, the ancient Babylonians made of the Euphrates delta a country so rich that Alexander the Great conceived the project of making Babylon the capital of the world, and had started on his enterprise when death intervened. Even in the days when shorn of its glory, the son of Harouner-Rashid is reported to have exclaimed, on ascending the Mokattam Hill, which overlooks Cairo: " Cursed be Pharaoh who said in his pride, 'Am I not Pharaoh, King of Egypt?' Had he seen Babylonia he would have said it with humility."

The excessive fertility of Babylonia was due to the system of perennial irrigation, or irrigation all the year round, which the early dwellers in the Euphrates valley introduced into the world. To Egypt was due the credit of having introduced basin irrigation, a system far more impressive and majestic than its rival, but not nearly so profitable, since it only insured one crop per annum instead of two. The Nile valley was irrigated in broad fields of thirty and forty thousand acres apiece, while in Babylonia the water was led to each field of two or three acres. I have always loved to contrast these two systems by comparing one to the flight of an eagle and the other to the

KING OF SPAIN

Digitized by Google

laboriously built up cells of bees just as Horace compared the poems of Pindar to those of his own composition. We see Egypt to-day everywhere abandoning its ancient system and adopting that of Babylonia. Babylonia will be re-created by the system of irrigation introduced by itself.

The Tigris-Euphrates delta is strangely flat. Baghdad, removed 500 miles from the sea, is only 120 feet above sea level. Opposite Baghdad the Euphrates is 25 feet higher than the Tigris. Between the two rivers runs a regular valley, across which are carried the giant banks of the ancient canals. Though the slope of the country longitudinally to the rivers is very slight, the transverse slopes away from the rivers are one in a thousand, or five times as steep as those of the Nile valley. If the Nile breaches its banks in flood it can be brought back after the flood to its old channel without any serious difficulty, while a very severe breach on the Tigris or the Euphrates has been followed by the river completely leaving its channel and forming a new one miles away, after inundating the whole country. Such was Noah's flood in the early days of the world's history.

The rainfall is, on an average, about eight inches per annum. The whole of the rain falls in winter, and there have been years in succession when the total fall per annum has not exceeded four inches. In the deserts of Babylonia there are practically no locusts, though they are in millions of millions in upper Mesopotamia.

The Euphrates and Tigris have high floods of 150,000 and 250,000 cubic feet per second respectively, and low supplies of 12,000 and 9,000 cubic feet per second. The floods, as already remarked, are in the early summer.

Wheat, barley, and beans are the winter crops, and maize, rice, melons, and cotton the summer crops. In antiquity sugar cane was largely grown. Everyone who can have a garden has one. Dates, vines, and figs are the principal fruit trees, while in the lower parts of the delta the date groves shelter extensive areas of lucerne, or *alfafa*. If the winter rains are timely and above the average, large areas of land are put under barley. Horses, camels, cows, buffaloes, sheep, and livestock constitute in great part the wealth of the people.

Of the total cultivable area of ten or twelve million acres in the delta, more than five or six have never been under cultivation at one and the same time. The Arabs of the early Khalifate used to say that so continuous were the villages on the Tigris that the cocks in crowing answered each other from housetop to housetop all the way from Baghdad to Busreh. In walking down a score of miles on the abandoned Arakthu canal, which irrigated Babylon, I have found myself always treading on broken pottery.

The waters of the two rivers and the soil of the country are yellow in colour. The percentage of lime in the water and the soil is fifteen, and this accounts for the excellence of the livestock and the sturdy build of the men. The chemical analyses of soil and water testify to their richness.

In the Tigris-Euphrates delta we must never forget that we are in the country of Noah's flood; and, as in antiquity, so to-day, the foundation on which will be raised the structure of Babylonian prosperity will be the protection of the country from floods; and the more thorough the protection the more substantial will be the prosperity. The control of the Euphrates is as economical as that of the Tigris is costly.

The ancient Babylonians controlled the Euphrates by means of powerful escapes into two depressions in the Arabian deserts north-west of Babylon. The northern depression, known to-day as "Habbania," covers an area of 150 square miles, and is some 25 ft. deep in flood. At its northern extremity is a low-lying but abrupt desert mound, where are to be seen to-day the foundations of the structure surmounted by a throne, seated on which the Emperor Trajan contemplated the delta of the Euphrates before he entered upon its conquest. The southern depression, known to-day as the "Abu-Dibis," covers 475 square miles, and is 20 ft. deep to the level of the sill where the water would naturally flow back into the Euphrates valley near Kerbellah. In ancient times these depressions were used not only as escapes for controlling the floods, but also as reservoirs for feeding the rivers in low supply. They were eminently suited for both purposes, and, by the construction of insignificant banks, were rendered capable of accommodating six milliards of tons of water, of which about a quarter was utilised for feeding the rivers in the time of low supply. For a period of 60 days they were able to withdraw from the river over 40,000 cubic feet per second.

In addition to these reservoirs they had numerous and capacious canals, and the low-lying Pallacopas, or Hindia, branch of the Euphrates, which took off from above Babylon and discharged the waters of the river into the Babylonian marshes. The first public work Alexander the Great undertook in Babylon was the excavation of a new head on solid ground for the Pallacopas, known some years ago as the Hindia branch, and to-day the main stream of the Euphrates.—Its head had hitherto been in sandy soil, and as the branch had to be opened in high floods to escape the excess waters of the Euphrates, and then immediately closed after the flood to keep the main stream full of water past Babylon, the closure had been a work of extraordinary difficulty, entailing the presence of 10,000 men. Next to building a masonry barrage this was the wisest thing he could have done.

Immediately after controlling the head waters of the Pallacopas, Alexander moved down the river and constructed a massive dyke between the Babylon branch and the Nejef marshes, north of Shinafia. He did this as a preliminary work for the reclamation of this extensive area; and the dyke can be followed to-day and its alignment admired. It was while he was working at the reclamation of these marshes that he contracted the fever of which he died.

The lands of the lower Euphrates, which were exceptionally fertile and supported a dense population, were protected by banks 100 ft. wide. Their remains can be seen to-day along hundreds of miles.

Provided with escapes into depressions in the deserts, whose contours can be followed for many scores of miles by the presence of thick belts of Euphrates shells, with many capacious canals, with regulation at the head of the Pallacopas branch, and with well-constructed dykes protected by brushwood, the Euphrates was thoroughly controlled, and we do not read of any disastrous inundations on its banks. The lessons learnt during the terrible flood of Noah's time had been engraved on the minds of the Babylonians by a diamond pen.

We now turn to the Tigris. Some kilometres above the spot where the Tigris entered its delta the valley was barred by a massive earthern dam, and the river turned over the hard conglomerate, so that it could flow at a high level and irrigate the country on both banks. From the upstream side of the dam were taken the three heads of the great Nahrwan Canal, 400 ft. wide and 17 ft. deep. Nimrod is credited with having constructed the dam and turned the river. This work existed for over 3,000 years and was only swept away in the time of the last feeble Khalifs. On one side of the river is to be seen to-day an imposing fortress, and on the other the wall of Semiramis, miscalled the Median wall on some maps. These works protected both flanks of the dam. Some miles to the north of the dam is to be seen the mound the Roman soldiers raised over the body of the Emperor Julian after their disastrous defeat by the Persians.

Though the ancients harnessed the Tigris for irrigation, they never controlled the floods of this river as they had those of the Euphrates; and there were occasional inundations, when the dykes were burst, which spread such ruin and disaster that no records exist of certain years except the dismal tale that the Tigris had burst its right bank. The whole right bank of the river was protected by a broad canal with high banks, known for great part of its course as the Nahr Melcha, or the Royal Canal. The most powerful Kings of Babylonia were proud to record the fact that they had strengthened and fortified these banks; for on their holding together the prosperity of fully one-third of the country depended. The ease with which the Arabs overthrew the Persians in the seventh century of our era was due to the fact that the invasion of the country followed close upon a terrible inundation of the Tigris. The Nahr Melcha, with its high banks, can be followed for hundreds of miles. It took its supply from the Euphrates, near the town of Sippara, which stood at the bifurcation of the Nahr Melcha, which went eastwards, and the Nahr Kutha, which went southwards. Sepharvaim, or the two Sipparas, was the name given to the town of the bifurcation, just as Ashmunên, or the two Ashmuns, marks the site of the ancient bifurcation of the Nile and the Bahr Yusuf, in upper Egypt. The Tigris floods relieved themselves by overflowing the left bank of the river, just as in the earliest times the Nile overflowed its right bank, while dykes protected the left bank, notably at Memphis.

For the control of the Euphrates I have already proposed to the Turkish Government the construction of the Habbania escape into the deserts with its head just downstream of Ramadi and its tail near Kerbellah. By cutting through a low hill of gypsum and salted marl, some eight miles in length, lying between the Habbania and Abu-Dibis depressions, it will be possible to gain a head of 50 ft. over what the Babylonians possessed. By the construction of a short dam 50 ft. high across the narrow outlet of the Abu-Dibis depression, we shall form a reservoir in which it will be possible to store 18 milliards of tons of water, two-thirds of which will be at a height sufficiently great to allow of its being used for irrigation, while the remaining third will be available for maintaining the supplies in the Kurnah marshes. The Euphrates will be completely controlled; and the delta from Kerbellah to the Gulf, past Niffur, Erech and Nasiriyeh, will be independent of the low supplies of the river.

(To be Continued.)

THE PRESS ON THE NEAR EAST.

Roumanian Help: Greek Promises.

Mr. J. Ellis Barker contributes to the *Outlook* (September 23) an article, "Germany, Roumania, Greece," from which we take the following passage:—

A weakened man may be brought down by a comparatively light blow. The intervention of Roumania has had a great moral effect in Germany. However, the military consequences of Roumania's hostility are probably not the most serious. Roumania possesses some of the richest lands in the world. Her wheat production is considerably larger than that of Austria. She raises in a good year 10,000,000 tons of grain of every kind. She can easily export 3,000,000 tons and more. She would yield magnificent plunder. A German-Bulgarian attack upon Roumania has been made, not in order "to punish her for her faithlessness," not in order to gain a spectacular victory in the only quarter where it may possibly be obtained, but to secure for Germany Roumanian grain, meat, and oil. German and Bulgarian troops are fighting in the Dobrudja not for prestige, but for food.

As to Greece, Mr. Barker remarks:—

Greece has given to the Allies fair words and promises, but has given to Bulgaria and Germany fortresses, guns, ammunition, and a considerable portion of her army. England, France, and Russia, who saved Greece from her Turkish tyrants a century ago, have the greatest sympathy with the Greek people. However, statesmen cannot discriminate between nations and their Governments. The nation is the principal and the Government its agent. In politics, as in business, the principal is responsible for the actions of his agent. The Greek people may suffer, and may suffer terribly, for the mistakes, if not worse, of the Greek Government.

Words and Deeds.

The extraordinary situation in Greece has naturally led to some plain speaking on the part of the British Press. Thus, the *Morning Post* on Monday, in a leading article entitled "Declarations," said:—

By this time we have learnt the value of "declarations" bearing the endorsement of the Greek Court. They have covered every unneutral act that the avowed enemies of the Allies could contrive. It was in spite of "declarations" that M. Gounaris and M. Skouloudis pursued their sinister policy; it was in spite of "declarations" that Kavalla and a large part of its garrison were surrendered to the Bulgarians; it was in spite of "declarations" that anti-Entente demonstrations were organized in Athens; it was in spite of "declarations" that M. Zaimis, after being nominally placed in power, had his advice and authority overriden and ignored, and was obliged as an honest and self-respecting man to resign his office. His successor's appointment marks not repentance but simply persistence in illdoing. That successor's commission is not to fulfil the obligations which M. Zaimis was prevented from fulfilling, but to procrastinate and to thwart in practice what is promised in principle. The composition of his Ministry is conclusive evidence on that point. There has not been even sufficient regard for appearances to choose Ministers who were at least not notorious for anti-Entente sentiment. The affront is as open as it could well be, and it is an affront that no offer of "declarations" can possibly mitigate.

The writer of the article believes that the heart of the Greek people has been sound enough," and that their patience is rapidly becoming exhausted.

It is plain that if the Entente Ministers were willing to recognize the new Ministry the greater part of the Greek people are not. It is a Ministry not of politics or affairs, but of make-believe, with the single merit that its appointment has been enough to produce the breaking strain and end a state of affairs that was intolerable. Be it remembered that the Entente's concern for the attitude of Greece arises not at all from the need for recruiting a new Ally. It arises from the necessity of fulfilling obligations to honourable Allies—obligations incurred at the invitation of a Greek Government. We owe it to Roumania as well as to Serbia to clear up the situation at Salonika and to acquire for the large army assembled under General Sarrail a free hand to exert its power. With a Greek Government acting in collusion with our enemies that free hand is impossible. Therefore we have a duty as well as a right to demand that if Greece cannot make up her mind to definite action, she should stand aside and leave us to act. To palter with the situation any longer—to allow ourselves to be put off with "declarations," however specious—is to betray the cause to which we are committed.

He concludes his article by stating that "Greece must shake herself free from those blind or traitorous counsellors who would persuade her, for the sake of existence, to forfeit all that, for her, makes existence worth having. But the Allies have a duty of their own, which is independent of the internal dissensions of Greece, and from that duty they cannot one moment longer afford to flinch. They must have done with 'declarations.'"

The Position of M. Venizelos.

M. Venizelos' departure from Athens formed the subject of leading articles in both the *Pall Mall Gazette* and the *Evening Standard* on Tuesday. The former speaks of the "hegira" of M. Venizelos opening "a new chapter in a career already crowded with the romance of patriotic genius," and continues:—

It was entirely by the forceful personality of the former Cretan leader that Greece was raised from the depths of national abasement to the highway of progress, prestige, and expansion. After organizing the cause of Hellenic freedom in Crete, M. Venizelos came to Athens and effected a wholesome purge of its unsavoury political life. He reformed the Army, raised the whole tone and spirit of public affairs, and prepared the country for the triumphs it was to win in the first and second Balkan Wars. The moral collapse which followed, when it became apparent that the King was the mere tool of his German brother-in-law, and that the nation had not sufficient courage or capacity to thwart his treacherous measures, might have broken the heart and ended the career of a less resolute statesman. But M. Venizelos has never lost hope, and we thus see him to-day launched upon a fresh crusade of national recovery, and determined, if it be within his power, to rescue his country a second time. Greece is fortunate in finding such a saviour, and it is upon her worthiness of him that her fate will depend.

The *Evening Standard* thinks that "M. Venizelos has crossed the Rubicon, and that so far as he is concerned there is an end to the uncertainties of the last eighteen months." The article concludes:—

If M. Venizelos is forced to save his country by an organization of the forces that have declared against the King's disloyal policy, it is alike our duty and our interest to support him by every means in our power. There must be no mean or timid vacillations, no desertion of proved friends for people to whom an additional insincerity means little or nothing.

German Promises to Greece.

The *Spectator* (September 23), dealing with the same subject of Greece's painful position, declares:—

The recent turn of events in Greece seems to indicate that the final overthrow of German influences there is rapidly approaching. As usual, the Germans have overdone their contemptuous exploitation of the Greek Court and the baser type of Greek politician. The kidnapping of a Greek army corps, or, at any rate, a portion of it, was more than even King Constantine and the Hellenic Government could stand, and we read in Thursday's papers of the despatch from Athens of a very urgent Note to Germany demanding the release of the captured Greeks. . . . Presumably the Germans, having got all they can out of Greece, will reply with a direct negative. They would be quite willing now to see a state of war arise between them and their late dupes, for war would automatically blot out the huge batch of promises which they no doubt have been making to the Greeks for the last six months. But though there is a certain interest and amusement in watching these recent developments, we are bound to point out that if circumstances have rendered the attitude of the Greek Government unimportant from the German point of view, they have rendered it unimportant also from that of the Allies. We are sorry for the position in which the Greek Government has been placed by those who have proved unworthy of the trust committed to them, and personally we should like even at the eleventh hour to see something done to help the unfortunate Greek nation, as distinct from its Government. At any rate, neither the British people nor the British Government will *want* to be vindictive or to demand their full pound of flesh. But if the Greeks are to escape the consequences of the criminal follies committed by their Government, there must be an end to all further trifling and a cessation of that muddy mixture of perfidy and procrastination which has hitherto passed in Greece for high policy.

The Importance of the Balkans.

The *Observer* (September 24) considers that it becomes clearer than ever before that "Bulgaria is the real focus of the south-eastern problem." It will be necessary to overcome that country before the Roumanian national cause or the wider purposes of the Allies can be advanced. And, very pertinently, attention is directed to the need for acting promptly:—

In view of the short fighting season, if we mean business in the Balkans, time is of the very essence of the contract, and there is not a day nor an hour nor a chance to lose by further dallying at Athens. To Russia and Italy, to France and Britain the conditions are equally clear. Bulgaria will not be disposed of as easily as in 1913. Hindenburg will fight for all he is worth to keep open the connections with Bulgaria and Turkey, and to crush Roumania if possible in the manner we have explained. This is a fundamental problem of the war. The vital duty of the Entente Powers is to master the Balkans without fail in the next few months if indeed the Grand Alliance in next year's campaign is to be able to close on the Central Empires with all its force and finish the struggle.

Turks—"Young" and "Old."

Writing to *Le Matin* (September 9) on the subject of "Young Turks" and "Old Turks," General Cherif Pasha declares that the final success of the Allies can no longer be doubted even by the partisans of Germany. He is, naturally, concerned for the fate of his own country, and writes:—

Mon malheureux pays que la funeste politique du Comité Union et Progrès a entraîné à la remorque des Impériaux, alors que la stricte neutralité que je lui avais conseillée lui eût ré-

Digitized by Google

servé des avantages de tout ordre, est voué désormais au sort des vaincus. Il serait puéril aux Ottomans patriotes de se le dissimuler et, plutôt que de se lamenter et de se répandre en jérémiades stériles, il leur conviendrait de regarder la situation bien en face afin de tirer de la défaite qui s'annonce pour nous malheureusement non plus une leçon, c'est trop tard, mais les éléments de survie susceptibles de procurer la paix intérieure indispensable à notre régénération.

Turning to the question of punishment for those responsible for the war, he writes:—

Je supplie les vainqueurs de ne pas confondre la masse innocente de notre peuple qui a été et ne cesse d'être franco-anglophile, avec ses dirigeants d'occasion; les Vieux-Turcs avec nos soi-disant Jeunes-Turcs qui n'ont rien de jeune, ni rien de turc, la plupart étant des renégats et d'origine étrangère aux Tchagataï qui composent le fond de la race turque. Que leur juste colère s'appesantisse sur les Enver, les Djemal, les Nazim, les Ahmed Riza, les Djavid et *tutti quanti*, mais surtout sur le plus coupable de tous, Talaat bey, le dictateur dont tous les autres ne sont que des acolytes, il est vrai, mais subordonnés à la volonté impérieuse de cet ancien commis des postes qui les domine tous de toute la hauteur de son ignorance et de son immuable férocité.

A Fight for Coal Mines.

The *Morning Post* on Monday published a despatch from its Bucharest correspondent dealing with "The Campaign in the Carpathians." In the course of this article the writer refers to an official *communiqué* which announced that a Roumanian detachment, probably small in number, had advanced as far as the defile of Merishor, occupying Petroshani; and to a later *communiqué* announcing that "the troops are entrenching themselves between the north of the defile and the south of Petroshani." He then proceeds:—

The strategic object having been attained, it may be asked why our troops advanced as far as Merishor where a superior force of Hungarians were able to repulse them. It is evident to anyone acquainted with the surrounding circumstances that the coal mines of Petroshani, which to us are a luxury, are an absolute necessity to the Hungarians. The Hungarians saw that we should not be so foolish as to isolate in the Jiu Valley too large a number of troops, and they brought up every man they had available to save their coal mines. It is not yet known whether our troops destroyed the mines during their occupation. If not, they will have to do so next time, and if that occasion does not arrive because the Hungarians keep a superior military force at Petroshani, so much the better, since the object of the war is to defeat the army of the enemy or to immobilise as many of its men as possible.

The incident is instructive, because it serves to remind us of the extreme importance to the enemy of every coal mine he can possibly hope to retain. Similarly, the possession, or loss, of oil-fields is likely to have a far-reaching effect on the war.

The Price of Error.

In an article entitled "People Who Err," the *Daily Express* writes strongly of past blunders in our policy in the Near East, and more strongly of King Constantine's:—

During the past two years the statesman has blundered far more often than the soldier, and his blunders, particularly in the Balkans, have had costly consequences. Bulgaria was blundered into the arms of Potsdam, and the want of the strong hand is responsible for the muddles in Greece. King Constantine is still surrounded by German agents, and he is still evidently determined to serve his brother-in-law as effectively as he can. His policy is detested by the immense majority of his people. He will never be forgiven for his treacherous surrender of Macedonian towns to the Greek's hereditary enemy. . . . The King's father owed his crown to France and Great Britain. They who set up can also pull down. Constantine has had rope enough. He is determined to pay no heed to warning or advice. The continued intrigues in the Greek capital are hindering the campaign in the south-east, and are a fruitful source of weakness and distraction. It has become the duty of the Allies, both to Greece and to the general European cause, to bundle out this Teutonic-Danish King, and to set up a really national Government in Athens.

The Example of Roumania.

In an article entitled "A Military Stocktaking," a writer in the *Spectator* expresses the opinion that Roumania "has set us all an admirable example. When the war began the Roumanian people chose, and as we think most wisely chose, the bold part of advancing at once to the liberation of Transylvania and their unhappy brethren who have suffered so long and cruelly under the Austrian yoke." He goes on to say:—

The German General Staff, with that boldness of design and cleverness in political calculations which have always distinguished them, at once replied by an attempt to strike at the vital interests, or what seemed the vital interests, of Roumania by an invasion through Bulgaria of the Dobrudja, the great stretch of level swampy plain which lies between the Danube and the Black Sea. The country at this time of year offers few obstacles to an invading army, for that army has its flanks protected by the sea and the wide-stretching reaches of the great river while it appears to imperil the very safety of the Roumanian nation by striking a blow at the heart. A hostile army in the Dobrudja looks most unpleasantly near to the Roumanian capital. In truth, the German General Staff have been trying Frederick the Great's system of strategy. Frederick the Great boasted that he made the enemy Dragon turn back by treading hard on its tail. Happily, the Roumanian Dragon has a better head and a better heart than Frederick the Great's enemy. With a fortitude which is wholly admirable, the Roumanians have prosecuted their main objective, the invasion of Transylvania and Hungary, undeterred by the thought that the enemy seemed to be coming within striking distance of Bucharest. Resounding stories of successes like the storming of Silistria, and the alleged instant need for troops to defend the soil of the capital, were firmly disregarded. In a word, the Roumanians have taken their temporary setbacks with the most admirable good sense, and we may be certain that the German General Staff are now beginning to feel very unhappy at the failure of their strategic intrigue.

A Tale of Massacre.

On Wednesday *The Times* published an article "In the Hands of the Turks," written by an American lady, recently returned from Beyrout, who gives many interesting particulars of the treatment of the British in that city by the Turks. The opening passages of the article, however, concern another subject: the massacres of the Armenians. We quote the second paragraph:—

Here are a few facts about the Armenian massacres which we *know* to be correct. From one of the mission schools 157 boys between six and sixteen were taken away by a body of thirty soldiers "for deportation to a village at some days' distance." Only three of them arrived at that village. Near Kharput is a beautiful deep mountain lake, where foreigners used to spend their summer holidays. Ten thousand Armenians were taken there by Turkish soldiers Not one of them returned. In one of the villages on the Upper Euphrates a large bale was thrown on the bank one morning. It was found to contain the dead bodies of thirty-five babies. In Beirut, Armenian girls and women were sold in the streets for any price between 1s. and 5s. In three different places which we visited were camps of women and children, where mothers had to take off their clothes to protect their babies from the burning sun, and where any Moslem man could go in and select a child or woman and take them with him, dragging them along by the hair.

SERBIA AND GREECE.

Greek Press Opinions.

(From a Correspondent.)

Since the beginning of the offensive on the Salonika front, and especially since Roumania entered into the war, the Greek Press has started again to discuss with animation the question of the relations of Greece towards Serbia.

The Venizelist paper, *Rizospastis*, of July 17 (5 O.S.), writing on the occasion of the arrival of the Serbian army at Salonika, declares, in the first place, that M. Gounaris's friends feel uneasy. "It is only natural," the paper says, "that the culprit cannot bear without uneasiness the presence of his victim." But, immediately after, the writer adds that Liberal circles also are somewhat disturbed because of the presence of the Serbs. They are guilty also. "Can we," the writer asks, "expect the ordinary Serbian soldier to make distinctions between responsibilities, and to make a difference between the people and the Court? What else could he believe except that we, his allies, have shamefully deceived him, and that we are the cause of his ruin? What else could he think than that, while he has been fighting for two years, and is preparing to fight again, we are fighting solely to prevent one of our Greek noses from bleeding? Why will we not understand that the responsibility of their ruin rests partly with us Liberals, who have allowed our treaty with the Serbs to be put aside because of one person's hate? Why do we not see that we Greeks are different from the Serbs in that they have the right to call themselves honourable men, while we have renounced such a right?

"Our duty is merely to do the following: to admit our dishonour; to stretch out our hand, if they will accept it, to those whom we have deceived and ruined; and to tell them how we are ready and determined to rectify our mistake and to wash away the shame of it at any cost. This is the only thing left for us to do to-day. Otherwise, instead of showing silly anger and dissatisfaction, we should do much better to cover our faces in shame when we meet the Serbs."

The Athens *Hellas*, of July 29 (16 O.S.), in expressing its admiration for the heroism of the Serbian army, and in pointing out that this army has scored its first successes on Greek territory, says:—"This is a very handsome return on the part of the Serbians for the desertion and disloyalty of the Greeks. What a sad figure the Greeks will cut when they receive their own freed country back from the hands of the Serbs!"

The *Kyrix*, of July 30, says:—"The General Staff ensured to Germany the co-operation of Bulgaria by promising that Greece would break her alliance with Serbia, thus leaving Bulgaria at liberty to attack the Serbs. Afterwards, Fort Rupel was handed over to the Bulgars, in order to balance the forces in the Balkans, which were upset through the arrival of the Serbian Army. . . . We have deliberately trodden on the treaty with Serbia, and dishonoured the Signature of Greece."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The future of the Egyptian oilfields, to which frequent reference has been made in these columns, continues to preoccupy the attention of experts. Results up to the present have not been over-encouraging—a circumstance that need call for no exaggerated pessimism on our part, however, as it is quite possible, if not probable, that none of the great oil-bearing strata, lying at a considerable depth beyond the deepest drill-hole existing in the Egyptian region, have been tapped. Sooner or later, if the fields in question are not to be a "wash-out," serious experiments with deep borings in the most modern sense of the word will have to be undertaken on a comprehensive scale. I have reason for believing that expert advice to this effect has been tendered to the Egyptian Government, which is of opinion that the proper oil deposits have not been found yet. Geological surveys, together with present results, certainly tend to the theory that they will not be found at the deepest level hitherto exploited, so that the sooner a deeper level is sought, the better for all concerned.

***

I am glad to observe that the Egyptian Government do not intend to abandon the fuel problem without attempting again to discover a solution. The negative results of Mr. Wells's exploration and prospecting in quest of coal deposits will be recalled; Mr. Wells is now engaged busily in ascertaining how far cotton plant weed can be utilised as fuel. It would be necessary, of course, to convert the weed into some sort of compressed combustible if it is to attain any commercial value. But this is only one of the directions in which Mr. Wells's services are being utilised by the Government, for he is also experimenting with the manufacture of flax thread and other textiles, and it is no secret that the authorities are anxious that he should re-enter the service of the Government. Whether he will do so or not remains to be seen.

***

Widespread interest has been aroused by the publication of the report of Lord Faringdon's Committee, and the recommendation that a great British trade bank should be established. Readers of THE NEAR EAST will recall that I have persistently advocated the establishment of such an institution, and have pointed out time and again that, particularly in reference to Roumania, it would be of inestimable advantage to British trade and commerce if it were organized soundly and conducted on reasonable lines. I am not satisfied, from the details available, that the proposed scope is all that could be desired. I can only deal briefly with the matter to-day; but it will be found to be a pretty general view among commercial men at home and abroad that to be successful the bank must have considerable ramifications, and be represented directly by its own officers in those countries in which its influence is hoped to be exercised. Anything short of this will spell failure. Meanwhile, other developments in connection with the scheme are spoken of, and the recommendation will be dealt with in a special article next week.

At the moment I can do no more than refer to the note issued by the Ministry of Public Works at Cairo, and telegraphed in summarized form by the correspondent there of *The Times*, regarding the progress of the Nile flood. "It is expected," it is stated, "that although the levels in the Sudan have fallen lately, the levels in Egypt during the greater part of October will remain at the highest at which the banks can be called on to withstand the strain. There is little danger that the river will overflow its banks, but the banks, however, might be burst, as the surface of the river in Lower Egypt is from 6½ ft. to 20 ft. above the level of the surrounding country. There is still danger of a probable further rise, but every precaution has been taken and the banks are being closely watched. The Ministry of Public Works is of opinion that, provided there is no relaxation of vigilance, the country may feel practically certain of safety." The flood is the highest for twenty-two years.

***

Apropos my recent note regarding the claims which British subjects have been asked officially to prepare against the great adjustment, I am able to refer to some notes which the Public Trustee has just issued upon the subject. They will be found to clear up many of the points which hitherto have been obscure. The Royal Proclamation requires British subjects in the United Kingdom to make returns in respect of their claims against enemies. Such claims fall into two classes, viz.:—(1) Claims against enemy Governments, and (2) claims against enemy subjects, including, of course, firms and companies. Claims against enemy Governments are recorded with the Director of the Foreign Claims Office, unless they are claims in respect of money invested in the securities of enemy Governments, States and Municipalities, all of which should be recorded with the Public Trustee.

***

The most important of the notes deals with claims against private enemy subjects and against persons living in territory occupied by the enemy, or in respect of property situated in such territory. Regarding the latter, the Public Trustee points out that such returns do not fall within the scope of the Royal Proclamation, but "in view of the information which they give," he hopes "that all who have these claims to make, and have not already made them, will do so. It should be clearly understood by those who have already made a voluntary return furnishing all particulars required that no fresh return is necessary under the Proclamation. If, however, anyone who has already made a return desires to amend that return, or to make an addition to it in respect of unpaid interest or dividends which may have become payable since the date of his previous return, he should apply for the necessary forms for this purpose."

***

Information continues to reach me from Bucharest regarding the exploitation of Serbian industries and resources by the Bulgarians. I have already drawn attention to the shameless piracy practised in regard to the mining and silk industries, and now tobacco appears to have occupied the attention of the invaders. Large factories have been established at Monastir and Uskub in addition to others which were installed previously at Gumuljina. There is little doubt that the object of the Bulgarians is to wrest from the Serbians in these centres the little business and profit that remained to them. Since the factories were established the Allied advance has begun, however, and it will not be surprising to hear later on that the gallant Serbians themselves will derive considerable benefit from their enemies' industrial aggression.

***

The Bulgarians and Austro-Hungarians are also paying attention to the Serbian forests, and the surveyors at Choupria and Rajague have begun, under instructions, to exploit the forest of Boukvitch. It was from this forest that the Serbian Railway management obtained most of its sleepers. My information is that felling has already been undertaken on a considerable scale, and I need not point out that, in this matter at least, the Serbian Government will incur heavy losses, because depleted forests cannot be restocked quickly.

***

Apropos the article in THE NEAR EAST last week on trade in Greece, my attention has been drawn to an American Consular Report in which the manufacturers of dairy machinery are invited to turn their attention Athens-wards. For actual engineering details I must refer my readers to the Engineering Notes in this issue; but equally interesting is the shrewd advice the Consul gives to his compatriots regarding their possible dealings with the Greeks. It is interesting to note that he suggests that they can demand their own business terms "at present . . . but with the return of peace, when so many countries will be in the field, trying to capture the Greek market by their tempting offers, these terms will become too harsh." "These terms," it may be noted, are "cash against documents," and it will be as well for Greeks, who are tempted by unusual offers by Americans, to know why they have been made.

***

Nevertheless, on general grounds, I give the text of the official American advice. It may be of use. "Great care should be taken in building up a trade here," he writes. "The proper method would be to act through a commission agent. There would be many advantages in appointing such an agent, conversant with the language, local conditions, requirements, etc. He would advise the American exporter regarding the manner of doing business, the credit terms offered by competitors, the financial standing of prospective customers and complaints of buyers, and could keep the importers interested in his goods. . . . It should be noted that the Greek business man, on the whole, works with very limited capital and requires two to six months' credit to sell the goods and then pay for them. There are many houses here entirely worthy of credit, and few bankruptcies of any importance have been reported in the last few years. The Greek merchant desires that all offers should be made him on the basis of c.i.f. port of arrival. He will cheerfully pay more in order to know exactly what the goods are to cost him, rather than take chances with regard to ocean freights, insurance, etc." All, or some, of which may be of interest to our own friends.

Increased Value of Sudan Produce.

Three Years' Facts and Figures Compared and Analysed.

(From Our Own Correspondent.)

Khartoum, Sept. 10.

Reports have been published showing the comparative figures of imports and exports for the first half of the years 1914, 1915, 1916, respectively. The greater part of the commodities of the Sudan are exported in the earlier months of the year as a rule, as the grain has been harvested; it is the season for the gum, the cotton is picked and baled, whilst animals are more easily moved in the cooler weather at the beginning of the year than in the hot months. Moreover, after June the great bulk of the population is employed in the cultivation of the food crops, and is not available for other forms of activity.

Striking Increases in Exports.

Most striking are increases in the following:—Untanned skins (sheep and goats), from £14,625 in 1914 to £15,070 in 1916, show a total of £22,652 for the first half of 1916. Ivory has increased in value slightly, but the output is only 4,000 lbs. better than 1914. Durra, on the other hand, shows an enormous increase, of 100 per cent. in amount and nearly 200 per cent. in value, reaching a total of £173,326 for this half year. Sesame, too, has increased in export from a value of some £50,000 odd to £132,081, the price appearing to be fairly constant.

The actual output of gum has not greatly increased, but the value of it has, and a sum of £470,597 is shown as the value of only a slightly increased production to that of the year 1914, when the value was only £287,519. The improvement in the price of cotton is shown by the fact that the same export in 1914 produced £171,140, as compared with £252,042 in 1916. Untanned hides show a decrease, but senna has gone from £8,448 in 1914 to £9,356 in 1915 and £27,443 in 1916, which is a very satisfactory improvement. The totals for the half years show as follows:—1914, £789,611; 1915, £746,654; 1916, £1,388,739.

Imports.

Imports also show an increase, but not so large proportionally, the totals for the three years being £598,083, £494,082, and £755,369.

The chief sources of increase are in sugar and tea, which seem to be rapidly becoming the staple foods of the Sudanese, whilst the enhanced price of coal is responsible for a good deal, 36,710 tons having been imported at a cost in value of £124,321. Most of the remaining increase is due to military stores and equipment, which in view of the expedition to Darfur is only natural.

Very notable is the increase in the value of sugar, for whilst the amount in 1914 was just under 70,000,000 kilos, valued at £114,000, approximately the imports in 1916 were 6,730,116 kilos, valued at £183,205. Tea, too, to the value of £23,261 in 1916 is £10,000 more than in 1914.

The chief factors in the increased values of exports consist in the increased price of gum and the much increased figures of durra and dukhn, the staple forms of millet grown in the Sudan, and in the increase of the amount of sesame. This is distinctly encouraging, as the growth of these forms of grain is natural to the Sudanese and does not entail any great expenditure of time, money, and staff in instructing them how it should be done.

Cotton Growing.

Cotton, for example, does require that the cultivator should be instructed, and also the picker, a much lower class of intellect. But the Government, which has always displayed the keenest interest in cotton-growing, can concentrate on the subject, confident that the normal forms of produce have their market, and will form a temporary income until the growth of cotton has been thoroughly instilled into the native mind.

At Tokar there is already a well-trained population that understands the business of cotton, but there are considerable expanses of land elsewhere suitable for cotton, which can be employed before the canalisation schemes come into effect. Indeed, the encouragement of cotton in the flooded spaces of the land lying near the banks of the Blue Nile in Sennar Province will form excellent training grounds, so that when the irrigation of the Gezira is an accomplished fact a large number of the population living in the neighbourhood will be fully capable of cultivating in the approved fashion.

Satisfactory Prices.

The very satisfactory prices obtained for Sudan cotton are enough to encourage the native, and he has only to be watched to see that he does not adopt his usual fatalistic method with the seed and the cultivation. To a people accustomed to put the seed in and, after weeding twice, to remain in a state of torpor until Heaven ripens the grain, the more elaborate processes of the production of cotton seem to entail a great deal of work, and even to show a want of confidence in Providence, and nothing but a course of boll-worm or the like will prove convincing. But the Sudanese are as avaricious as their more western neighbours, and will soon realise where the profit lies. Still, their education must have its beginning, and the sooner the better.

SUDAN GUM.

End of an Unusually Good Season

The following extracts are taken from the monthly report issued by the Commercial Intelligence Branch, Central Economic Board:—

During July, 1916, 1,772,100 kilos of gum, valued at £E79,069, were exported via Port Sudan, 4,813 kilos, valued at £E95, via Halfa, and 11,803 kilos, valued at £E264, via Gedaref.

The following table shows the value and quantity of gum exported from Port Sudan during Jaunary 1 to July 31, 1915 and 1916:

Country.	Jan. 1. to June 30, 1916.	July, 1916.	Total Jan. 1 to July 30, 1916.
	£E.	£E.	£E.
Australia	927	—	927
China.....	239	—	239
Egypt.....	7,298	2,566	9,864
France	137,281	8,662	145,943
Great Britain..	262,113	51,591	313,704
Japan	16,617	—	16,617
Italy	711	943	1,654
New Zealand ..	135	—	135
U.S. America..	29,896	15,307	45,203
Total	455,217	79,069	534,286
	Kilos.	Kilos.	Kilos.
Total Quantity	10,432,551	1,772,100	12,124,651

During the same period in 1915 the exports of gum from Port Sudan were as follows:—

	Jan. 1 to June 30, 1915.	July, 1915.	Total Jan. 1 to July 31, 1915.
	£E.	£E.	£E.
Total Value	190,987	65,508	262,945
	Kilos.	Kilos.	Kilos.
Total Quantity ..	7,494,766	2,412,000	9,906,786

Kordofan Province.

The gum season is now at an end. A few more kantars may come in in August. 7,794 kantars of 120 rottles (54 kilos) were sold in El Obeid market in July, including 1,395 kantars from Nahud. The total amount of gum sold in El Obeid market this season (November, 1915, to July, 1916) is 170,789 kantars, which is only 3,695 kantars less than in the record season of 1912-13, and is 2,950 kantars in excess of the 1914-15 season.

The season has, therefore, been an unusually productive one.

The price of gum in the El Obeid market during the month has been from PT. 140 to PT. 188 per kantar of 120 rottles (54 kilos).

DATES FROM THE SUDAN.

For some time past the Imperial Institute has been inquiring into the possibility of finding a market in this country for dates from the Sudan, and with the import preference given last spring to dried fruits of the British Dominions, as against those from foreign countries, the question assumed a new importance. Samples of dates from the Halfa province of the Sudan have now been examined at the Imperial Institute. The results were most satisfactory, and as the opinion of a leading firm of importers of dried fruit to whom the dates were submitted was also favourable, a small trial consignment of dates was obtained from the Sudan and offered on the London market. This was quickly disposed of at a good price, and the Imperial Institute has accordingly suggested to the Sudan Government that a larger consignment of these dates should now be sent to London for sale.

There are many varieties of dates in the Sudan, where the date palm flourishes freely as far south as Khartoum. Those now introduced to this country by the Imperial Institute resemble Persian Gulf dates, and were disposed of at about the same price. The present price of all dates is abnormally high, but there seems to be no reason why, after the war, Sudan dates should not still be able to compete with dates from Persia.

Samples may be seen in the Public Exhibition Galleries of the Imperial Institute, South Kensington, London.

ROUMANIAN NOTES.

According to a Reuter wire, securities on the Stock Exchange show great firmness. Bonds of the last Five per Cent. National Loan are quoted at 84—10 points above the price of issue. Internal Bank shares are quoted at 53. There are many buyers, but no sellers. Agio has disappeared. The rouble stands at 2.30. The Roumanian War Budget for the fiscal year ending just prior to the outbreak of the war was £5,000,000 sterling.

Germany, in the past year, swept Roumania for grain, beans, and other vegetables to supplement the "calamity" crop. Even if the present crop came up to official predictions, it could not make up for the supplementary crops of Roumania. Even with good crops the loss of Roumania's supply would put the Teutonic food outlook in as acute a position as it was a year ago. Now this source of supplies is shut off, it is of graver import to Germany than another army appearing on the battle front.

Our (the *Financier*) special correspondent in Bucharest draws attention to an already-felt scarcity of chemical and pharmaceutical preparations, the private stocks of which have been commandeered by the military hospitals, etc. Buyers have combined, and are travelling throughout the southern part of Russia, but, as is well known, that country has not much to spare. Meanwhile, the hospitals, apart from the military ones, are already handicapped in their endeavour to cure, especially by the lack of fine drugs. It is understood that a large consignment is on its way from Vladivostock, containing goods from America and Japan. The normal import of chemicals and drugs averages 10,000,000 lei yearly.

EGYPTIAN FINANCE.

Satisfactory Reduction in Deficit in June Quarter.

(From Our Own Correspondent.)

Cairo, September 11.

This evening the State accounts for the first quarter of the financial year were published here. They show that the Government finances are in a flourishing condition. Revenue amounted to £E4,591,290, as against £E3,695,246 at the end of June, 1915, and expenditure to £E4,781,351, as compared with £E4,350,501 at the same date. There is, therefore, a deficit of only £E190,061, instead of £E655,255, as was recorded as the result of the working of the first quarter of 1915-1916.

Compared with the corresponding period of 1914, which was before the war broke out, the improvement in the position is even more striking. At the end of June, 1914, revenue amounted to £E4,056,608, and expenditure to £E5,115,320. In other words, the current year shows an increase in revenue of £E534,682 and a decrease in expenditure of £E333,969, wherefore the net position is better by £E868,651—i.e., a deficit of £E190,061 as against one of £E1,058,712 two years ago. It should be pointed out that the first half of the year is always the lighter as regards collection of direct taxation, and that expenditure is spread as evenly as possible over the whole year. The prospects of a good balance-sheet are therefore very good.

Chief Increases.

The chief heads of revenue showing increases during the quarter, as compared with 1915, are :—Direct taxes, £E106,081; Customs, £E276.636; tobacco dues, £E126,008; railways, £E345,850; domains receipts, £E20,522; investment of funds, £E18,688; and sale of land, £E11,132; whilst the only decrease of note was £E26,930 under divers receipts. It is interesting to note that, compared with the corresponding period of 1914, direct taxes have increased by £E427,503; Customs by £E116,651, tobacco dues by £E57,105, railways by £E209,628, rent of Government land by £E24,646, domains receipts by £E19,300, and investment of funds by £E20,266. The main decreases were :—£E59,322 in legal fees, £E77,816 in port dues, £E40,347 in divers receipts, and £E146,149 in extraordinary receipts. It is evident from this that the improvement affects all the heads directly connected with the agricultural element.

Expenditure during the quarter increased by comparison with the previous year by £E17,794 under domains, by £E19,067 under public health, by £E31,968 under irrigation, by £E31,662 under War Office, by £E31,480 under post office, and by £E306.683 under railways. The only decrease of importance was £E17,820 under town drainage. It is again interesting to note that compared with the same period of 1914, expenditure on irrigation decreased by £E161,772, on town drainage by £E50.606, on War Office by £E70,418, on public instruction by £E26,827, towns and buildings by £E38,092, ports and lights by £E20,575, and coastguards by £E19,221. The only important increases have been £E10,809 in the Palace credit, £E80,162 under railways, and £E111,668 in the Moukabala instalment.

Capital Works.

It would appear that it will be financially possible to start once more on the various capital works stopped by the war as soon as the requisite material can be obtained, and there is no doubt that the cost of the White Nile barrage,* to which reference is made in another part of this issue, could be entirely taken out of the current year's revenue without any difficulty and without jeopardising even temporarily the financial position of the State.

COTTON-GROWING IN GREECE.

Interesting Experiments near Lake Copais.

The British Consul at Piræus writes that a British company carried out some interesting experiments in the growing of varieties of American cotton in Greece during 1915. The principal object of these experiments, for which seed was imported direct from the United States, was to find a quality of cotton which would mature early to escape damage by autumn frosts, and would be better in quality and yield than the cotton already grown locally.

As a result of experiments on alluvial soils a yield of 1,386 lbs. of seed (*i.e.*, unginned) cotton per acre was obtained with one variety of American seed. The native variety of seed on the same soil yielded only 684 lbs. per acre. On ash beds, however—a soil consisting of partially burnt peat overlying a subsoil of lime clay—a second new American variety yielded only 532 lbs. per acre, whereas an American variety which has been grown in Greece for a number of years yielded 922 lbs. per acre. Experiments with the same varieties are being continued.

An American View.

An American consular report gives some further particulars of the experiments :—

"The Lake Copais Co., which for a long time has been engaged in exploiting the large tract of land formerly occupied by Lake Copais (Topolias), has within the past year conducted experiments in the growing in the lake bed of several varieties of cotton—American from seed imported direct from the United States, naturalized American from seed obtained from well-known growers of certain American varieties in Greece, American-Cyprus from seed imported from Cyprus, and the ordinary native variety," the writer says.

"Experience has shown that the best or most profitable variety of cotton for this region is one that will come to maturity within a comparatively short period, that can be sown fairly late in the season (say toward the end of April), and that can be picked reasonably early (say toward the latter part of October), thus avoiding damage by spring and autumn frosts. This practically debars the growing of long-staple cottons, such as Egyptian, which usually require a longer growing period than the short staple variety."

Results of Experiments.

According to the director of the Lake Copais Co., the experiments were made with ten varieties of American cotton and four naturalized or Cypriote kinds. The director thus sums up results :—

"The experiments proved interesting, but in no degree conclusive. It will be necessary to continue the observations over three or four years, and this the company proposes to do. The imported American varieties were beaten on the alluvial soil by the native American, but this may be accounted for by the sudden change of condition, and better results may be looked for next season. In the case of the cotton grown on the central ashbeds of Copias—a soil consisting of partially burned peat of a depth of 10 to 20 ins. overlying a subsoil of lime clay—the results were rendered inconclusive for the reason that it was not possible, because of the contiguity of other crops, to control the water supply. Furthermore, the month of September was characterized by heavy rains, which restricted the early maturity of the crop."

TRADE NOTES.

Openings.

Tenders are invited by the Egyptian Ministry of the Interior for clothing, bedding, furniture, hardware, slippers, brushes, and other household necessaries required for Abbassia and Khanka Hospitals for the Insane, for one year, from April 1, 1917.—November 15, 1916.

Tenders are invited by the Egyptian Coast Guard Administration for the supply of general stores, including wood, rope, saddlery and stable necessaries, marine stores, bicycles, and clothing required during the year 1917. Copies of the specification and conditions of tender may be obtained from the Director of Stores, Coast Guard Administration, Alexandria, by whom sealed tenders will be received up to noon on November 15. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer an address in Egypt at which notices may be served upon him. The specification, etc., may be consulted by British manufacturers at the Commercial Intelligence Branch of the Board of Trade.

The British Vice-Consul at Chios reports that a local commission agent desires to obtain agencies of United Kingdom manufacturers of ironmongery, locks, etc., bedsteads; and Manchester goods, madapolams, calicoes, cabots, Oxfords, prints, cloths, and similar manufactures. British manufacturers and exporters desirous of being represented in Chios may obtain the name and address of the inquirer on application to the Commercial Intelligence Branch of the Board of Trade.

To Shippers of Baling Wire.

The British Consul-General at Algiers reports that instances have recently been brought to his notice of shipments of baling wire ordered from British firms having been refused by the consignees in Algeria on the ground of the gauge not being correct. The gauge generally ordered is No. 13 (French), and the wire ordinarily shipped is No. 14 (English). The latter is little more than one-thousandth of an inch larger, and this difference might in the English trade be covered by the customary "drawing allowance," but in Algeria it is sufficient, it seems, to prevent the wire passing through baling machines.

Liquidations.

Deutsche Orient Bank A.G.; Receiver, Mr. R. E. Moore, Savoy Chambers, Cairo.

Société Anonyme Egyptienne d'Enterprises Foncières et Immobilières; Receiver, Mr. E. Moore.

Licences to Trade.

Joseph Cohen, Khan Khalil, Cairo.

NOTICE.

Société Anonyme pour la Fabrication des Cigarettes Egyptiennes marque HADJES NESSIM en liquidation.

Offers for the purchase of the following items of Stock and House Property will be received in the name of EDWARD D. JOYCE, P.O.B. 206, Alexandria (Egypt), Receiver of the above Company, up till 8 a.m. on the 15th of NOVEMBER, 1916 :—

(*a*) The TRADE MARK belonging to the Company, together with all the Stock of Tin Boxes, Labels, Cigarette Paper, etc., on which the Trade Mark is printed.

(*b*) The BUILDING situated No. 12-14, Rue Abou El Dardar, Alexandria (Egypt), belonging to the Company.

Details of the above can be obtained at the Offices of the Company, 12-14, Rue Abou El Dardar, Alexandria, between the hours of 9 a.m. and noon, on any day except Sundays, from this date to the 13th of NOVEMBER, 1916.

Offers must be made in writing, under registered cover, to the above mentioned P.O. address, and must be accompanied by a deposit in Cash of 10 per cent. of the amount offered.

Offers may be made for items A and B separately.

The Receiver is not bound to accept the best or any offer made.

PRODUCE REPORT.

LONDON, September 28.

Currants.

The market has been very active this week and prices have advanced again 2s. to 3s. per cwt. Provincial is quoted 60s. to 65s., against 30s. to 35s. the same period last year. Amalias, 66s. to 69s., against 34s. to 36s. last year; Patras, 65s. to 70s., against 36s. to 40s. last year; and smalls, 64s. to 74s., against 36s. to 46s. last year. Considerable business has been done during the week in forward shipments, encouraged to a certain extent by the fact that the quality is very good this year, and the crop, according to latest reports, is calculated as the smallest since 1900.

Sultanas.

The demand continues at steady prices, with business done mostly in Afghanistan fruit at 76s. to 100s., while Greeks are quoted at 90s. to 110s. A further increase of prices is almost certain, for the available stocks are very small and future prospects are doubtful.

Figs.

The demand is moderate, with only small sales taking place at late rates, while business in new crop is very difficult owing to the recently increased restrictions on import.

Dates.

There is a good enquiry and prices are steady, with the probability of a further advance.

Seeds.

Linseed is closing rather quiet. London-Calcutta is offered at 79s. spot and 79s. 6d. afloat; September-October, 80s.; October-November, 80s. 6d.; while Bombay small grain is quoted September-October 79s. 6d., and ordinary ditto 82s. Rapeseed is inactive, but prices are well maintained, as available supplies are small. Toria is quoted for September-October 69s. 6d., with bold Ferozepore ditto 68s. 9d. Cottonseed is quiet. London-Egyptian, prompt, offered at £13 7s. 6d., and October at £13 1s. 3d. per ton. Rangoon beans have further advanced, £25 per ton being now asked for spot, while for shipment quotations are higher. Mustard seed is selling very slowly at late rates. Split peas are offered at 94s. to 96s. per 504lbs.

Oils.

Linseed oil has been more or less quiet this week. Spot, pipes, landed, quoted £38 5s.; barrels, ditto, £39 5s. Rape oil is steady. Ordinary brown naked, spot, £43; while English refined, barrels, is quoted £48 to £50. Cotton oil is firm, but in small demand. Crude, spot, pipes, £35; refined, pipes, pale, £40; barrels, ditto, £41; and sweet, barrels, £48 to £51 10s., as to make.

Oilcakes.

Cotton Cakes: Egyptians are scarce, buyers offering £10 7s. 6d. to £10 10s. for ready parcels, while for October shipment a good amount of business was done at £10 5s. to £10 7s. 6d., ex-ship terms. English makes are sparingly offered at £10 10s. to £10 12s. 6d.

Linseed cakes had a good enquiry, which brought a slight increase both for spot and forward positions. Best London are offered firmly at £14 5s. to £14 10s.; and East Indian £13 10s. to £13 15s.

SHORTAGE OF GREEK TOBACCO.

No tobacco has come to Egypt from Greece for the last four weeks, but other Greek products are still being imported in smaller quantities, says the *Egyptian Gazette*, writing on September 9. The reason why the tobacco import has gradually dwindled to nothing is not quite clear, but it is believed that the occupation by the Bulgars of the Macedonian districts of Greece is probably the cause, for the region round about Kavalla and Seres is famous for its fertile tobacco fields. As we have already stated, the tobacco stock in Egyptian ports is big enough to supply the country for about nine or ten months.

ENGINEERING NOTES.

Some Particulars of the White Nile Barrage.

(From Our Own Correspondent.)

Cairo, September 10.

It is highly probable that the wish often expressed in these pages, viz., that the execution of the capital works, which are of such vital importance to Egypt and which were suspended on the outbreak of war, would be proceeded with at the earliest opportunity, will soon be realised. It is understood that the Egyptian Government is at the present moment studying a project presented by the Ministry of Public Works for the construction of a barrage on the White Nile, and that the approval of the Council of Ministers will soon be sought for the commencement of the work. Although, theoretically speaking, this barrage forms part of the irrigation work which will have to be undertaken on the Upper Nile to provide water for the development of the Sudan and the extension of cultivation in Egypt, in reality it is an entirely separate enterprise intended for a very special and important object. It must be borne in mind that all irrigation experts, commencing from Sir William Garstin, have given it as their opinion that the Blue Nile water might be devoted to the requirements of the Sudan, as Egypt could safely rely on that of the White Nile for all her needs. It is for this reason that all works destined to improve Egypt's water supply will be carried out in the latter river.

Fighting Inundations.

In his last report, Sir Murdoch Macdonald, the Under Secretary of State for Public Works, dwelt at some length on the great necessity for providing some protection for Egypt against inundation. It is in the White Nile that this protection must be created. Whilst the original intention in constructing a barrage slightly to the south of Khartoum —this project was brought forward some two summers ago—was to create a reservoir upstream, and thus add considerably to Egypt's summer supply, the main idea underlying its erection is to set up some form of protection in times of abnormal flood. In days gone by the irrigation authorities had little reason to fear the effects of high floods. The river might burst its banks and inundate part of the country, but the damage done was always comparatively slight, and in certain parts the overflow of water came rather as a godsend and added to the cultivated area. But the development of Egypt has to-day altered the situation. The Delta is so thickly populated and the cultivated area is so extended that inundation might inflict not only financial ruin, but also great loss of life on the population. Consequently, something must be done to set up a safeguard. The authorities have been impelled not to delay any longer with the execution of this protective work by the knowledge that we have been passing through a period of low Niles, and that, as each year goes by, we are approaching more certainly to a cycle of high Niles, including, very probably, a year of abnormally high flood. Granted the fact that the irrigation works in Egypt are not sufficiently strong to hold up any abnormal head of water, and that the river banks, as Sir Murdoch explained in his recent report, are not of a nature to resist the pressure which the volume of water carried by a high flood would put upon them, the prompt execution of this work becomes of paramount importance.

A Million Pound Job.

War or no war, the first duty of the Government is to safeguard the welfare of the country and its inhabitants, and the financial and irrigation authorities are fully justified in their decision to proceed with the execution of this work without waiting for the advent of peace, with its possible further amelioration in the financial situation. The cost of this work will be approximately £E1,000,000, truly a small insurance against the risk that lies ahead, when one comes to consider that the cotton crop alone is annually worth at the lowest estimate £E30,000,000 to Egypt, and the damage that might be done in one year by inundation would most certainly, at the lowest estimate, come to 10 per cent. of that figure. The decision of the Egyptian Government is all the more justified seeing that Egypt had such a substantial surplus last year, and very probably will have a satisfactory balance at the end of the current year, and that the creation of this barrage will, at the same time as it protects the country against the dangers of inundation, provide water for a larger area, and thus repay its initial cost in a very short time.

American Push.

As frequently pointed out in The Near East, our American friends are adopting very pushful methods along the Mediterranean—and elsewhere. They are making great use of their fine consular organization. Greek trade in dairy products was the subject of a recent consular note, and that an attempt is to be made to capture whatever market there may be in Greece for dairy machinery is obvious from the document from which the following is extracted :—"It is believed that American dairy machinery, if once well introduced to the Greek market, would make headway against machinery from other countries, and that the demand would increase from year to year. The average Greek business man has a favourable opinion of American machinery, and many of them consider it superior to all other machinery. Most of the dairy machinery in local use, however, has been imported from France, Germany, and England. French machinery is used more than any other, because most of the leading agriculturists have studied in French agricultural schools, and naturally prefer to use machinery with which they are familiar. Some dairies prefer German machinery, as it is cheaper and simpler than either the English or French, although it does not last so long."

New Legation House at Cettinje.

From the current number of the *Building News* we take a brief description of the new British Legation House at Cettinje. The provision of the house at Cettinje was decided upon in 1911, as a result of the extreme difficulty experienced in finding adequate accommodation for H.M. Minister in this remote place. The work was finished in 1914. A property adjoining the King's Palace and the residence of the Crown Prince was acquired, and the old buildings of Montenegrin construction were largely demolished. These buildings originally formed four small houses, which had been altered and adapted for use as one residence, but the poorly treated exterior, with varying roof levels, remains practically unaltered. It was decided to remodel the whole, retaining parts of comparatively sound construction. The exterior was redesigned for simple stucco treatment, and a vestibule formed by making use of an open porch, constructed of reinforced concrete, which had been added to one of the houses. An arrangement was made with the municipality to take in additional ground in the front for the purpose of forming an enclosed garden. The difficulties of arranging a contract led to the work being carried out by the purchase of materials and the employment of labour direct by H.M. Office of Works. Great difficulty was experienced in obtaining labour owing to the two Balkan wars, and men of many nationalities, including at one time Turkish prisoners of war, were employed during the carrying out of the work. The architect was Mr. R. J. Allison, A.R.I.B., H.M. Office of Works, whose design was shown at the exhibition of the Royal Academy this year.

AGRICULTURE IN EGYPT.

Notes on the Cultivation of Wheat and Maize.

The Ministry of Agriculture continue to issue the interesting bulletins dealing with the agricultural affairs of Egypt, the latest containing informing notes by Mr. G. C. Dudgeon, Consulting Agriculturist, and Mr. G. Bolland, Botanist to the Ministry. The former presents some very interesting facts relating to Egyptian wheat as a possibly marketable product in European countries. In spite of the fact that it had become a common practice to regard Egyptian wheat as worthless for export, and to refer to the lack of "strength" exhibited in Egyptian flour, actual tests, says Mr. Dudgeon, have shown that the contrary is the case. Following the information supplied and the valuations obtained by the Bureau of Commercial Intelligence, directed by the writer in the Ministry of Agriculture, trial consignments were sent to England, which showed that remunerative prices could be readily obtained.

"Strength" of Egyptian Flour.

Then again careful chemical tests made by Mr. Hughes, the Chemist of the Ministry, have shown that "strength," the definition of which is the degree of ability possessed by the flour to produce a well-risen loaf, is exhibited to a considerable degree in most Egyptian flours. In fact, Mr. Dudgeon declares, the chief obstacle to the demand for Egyptian wheats in European countries lies in the state in which they are marketed.

He goes on to state that the Hindi wheat of Egypt, which can be considered for practical purposes identical with that shipped from India under the name of "choice white Karachi," could compete favourably in the English market with the Indian kind, if the same regulations for cleanliness as those which have been enforced in India were made to apply to Egypt. To attain this position it would only be necessary to wash all wheat before shipment, and to maintain a greater uniformity in the crops sown. This last is what is at present being attempted in the experiment farm of the Ministry of Agriculture, and an account of the operations conducted during the past year is given in Mr. Bolland's report, which states that so far about twenty wheat types have been separated from the ordinary Baladi variety. Descriptions of the types ultimately selected will be given later.

Irrigation and Maize.

Mr. Bolland is also responsible for the Bulletin of the experimental work connected with millet and bersim and for the paper in Bulletin No. 9 on the field trials with Egyptian maize in 1915. Mr. Dudgeon's notes in the same Bulletin refer to the fact that the rapid establishment of maize as an important crop in the rotation employed in Lower Egypt was coincident with the development of the perennial canal irrigation system, which only became possible by means of the erection of barrages on the Nile. He explains that in accordance with the extension of the perennial irrigated areas maize has rapidly taken the place of millet, with which only a few feddans are still planted in Sharkia in Lower Egypt, practically only the now canalised areas of Upper Egypt; and that while until in past years maize had not been largely exported from Egypt, a good external demand was created during the first year of the war, and this has steadily continued. France took no less than 93,348 ardebs last year, and England 67,063 ardebs, while 11,163 ardebs went to British possessions in the Mediterranean.

The estimated production of maize in 1914 was 12,132,334 ardebs grown on 1,698,606 feddans, and that of 1915 13,650,432 ardebs grown on 1,837,516 feddans.

NEWS FROM ALL SOURCES.

Operations in connection with the opium crop have been started in the departments of Kavadar, Strumnitza, and Negotin.

At the request of the Bulgarian Government the Austro-Hungarian Foreign Ministry has forbidden the transit through the country of cocoons.

The Government have placed contracts in Nottingham for the supply before Christmas of 4,800,000 yards of mosquito netting, needed mostly for Mesopotamia.

The Nile continues very high, states a Cairo telegram. Several regions of Lower Egypt are threatened with inundation. Every precaution is being taken to avert this.

This year's cotton crop of the Turkish Province of Adana will probably not exceed 20,000 bales, owing to the diminished acreage and the exceptionally hot winds that prevailed in June.

Messrs. Henry Bath and Son report that, according to official estimates by cable, the exports of nitrate of soda in September from Chile will amount to 207,690 tons to Europe (including Egypt), against 101,700 last year; 125,250 tons to the United States, against 75,790; and 3,980 to other countries, against 2,970.

A number of important new regulations have just been promulgated by the Sudan Government in connection with the harbours and shipping of the Protectorate, all of which came into force on the first of this month. The regulations comprise pilotage control, hire of port plant at Port Sudan, dues, and harbour rules, etc.

A note from Odessa says that a large portion of the shares of the Odessa Merchants' Bank has been acquired by the representative of a group of English capitalists from Petrograd. These, having become the controllers of the bank, propose to transfer the head offices to Petrograd, in order to develop Russo-English trading operations.

A recent Turkish law makes obligatory the use of the Turkish language by companies and corporations doing business in Turkey. For foreign companies this obligation is limited to their correspondence with the Turkish Government and to any documents which they may use in their dealings with the public. They are granted until July 10 (23), 1919, to comply with the law.

The story has again been received that Germany and Austria are negotiating a record purchase of copper. It is said that the estimates of inquiry ranged from 12,000 to 24,000 tons for delivery next year. Negotiations are understood to have reached the preliminary stage, and to call for all metal available for export from America in 1917, the copper to be stored there until after hostilities are concluded in Europe. It is to be shipped then to Germany, Austria, and Turkey.

THE SUEZ CANAL.

The following, which appeared in *The Times* of September 26, amplifies the note published on this page last week:—

Yet another increase of 50 centimes (5d.) per ton in the Suez Canal dues is announced to-day. The increase is to take effect as from January 1 next, and will make the rate for loaded ships 7f. 75c. (6s. 2d. at the normal rate of exchange) and for ships in ballast 5f. 25c. (4s. 2d.). The rates were raised by 50 centimes as from January 1 last, and it was announced in July would be raised by a further 50 centimes to 7f. 25c. and 4f. 75c. as from October 5 next.

Since 1905 the dues have not reached the scale now announced to take effect as from the beginning of next year. The advances in the dues are to be attributed to the serious falling off in the receipts, which declined last year by nearly 24 per cent. in consequence of the reduced traffic, coupled with the rise in working costs.

CYPRUS CATTLE EXPORTS.

(From Our Own Correspondent.)

Nicosia, September 5.

Large numbers of sheep are being exported from the island, and fears are expressed in native circles that this may lead to a shortage of meat or to the establishment of prohibitive prices. The papers accordingly urge that the export of sheep, and perhaps also of oxen, should be restricted or entirely prohibited.

The purchase of donkeys, as well as mules, for the British Army is being continued. About 350 of the former have been bought here at prices ranging from £5 to £7, and more are being obtained in all districts.

Shortage in Egypt.

The meat question is beginning to cause some anxiety in Alexandria and other parts of Egypt owing to lack of imports, states the *Egyptian Gazette*. Before the war the price of good mutton was PT.9 per oke and the price of beef PT.7. Prices have now risen to PT.14 and PT.10 respectively, and it is probable there will be a further rise. The causes are obvious. Before the war Egypt imported sheep, goats, and cows from Tripoli, Cyrenaica, Anatolia, and the Sudan. Now, however, all imports from Turkey or Cyrenaica are stopped. The Sudan has also ceased to export sheep to Alexandria, and the only source from which Egypt can still receive sheep and goats from abroad is Cyprus, but Cyprus cannot export more than a few hundred head per month. Of course, Egypt has its own *baladi* mutton, but the quantity produced is far from being sufficient to meet the needs of the country.

GERMAN "PEACEFUL PENETRATION."

The "peaceful penetration" of Germany has been discussed very frequently in the columns of The Near East, and further light is thrown on the subject by the following extract from the *Journal of Commerce* of September 26:—

"We have of late supplied innumerable instances of the peaceful penetrating tactics of the Teuton with special regard to shipping, but we are indebted to a paper published in Lima for another instance—in another sphere of activity. This Peruvian newspaper published as recently as last June an advertisement on behalf of the German Transatlantic Bank, of which the subjoined is a full translation:—

GERMAN TRANSATLANTIC BANK.

PURCHASE AND SALE OF BILLS ON FOREIGN COUNTRIES.

This Bank sells its Bills on New York at the following exchanges:—

By cable at $4.91 for £1.
By draft at sight at $4.91 for £1.
By draft at 30 days' sight at $4.93 for £1.
By draft at 90 days' sight at $4.97 for £1.

It buys Bills on New York as follows:—

Drafts on sight at $4.94.
Drafts on 90 days' sight at $4.99 to $5.

This Bank can arrange for payments by cable or letter in England, France, Italy, etc., at the most favourable exchanges. It will also remit by bills of exchange on Germany, China, Spain, and Japan by cable or drafts at sight or at 90 days' sight at equally advantageous rates. The drafts by cable are subject to the payment of a commission and the cost of the cablegram.

If "England, France, and Italy," why not Egypt and other countries in which we are directly interested, either by possession, occupation, protection, or by alliance?

SHIPPING NOTES.

The Greek barque Elli, of Syra, has been sunk, and the crew landed at Palermo.

The Greek steamer Assimacos was sunk on September 11. The crew was landed by the Norwegian steamer Beatrice.

Two large cargo steamers, each of 6,000 tons, are being constructed by the Fernic Co. at Galatz for the Romana Steamship Co. These are the first large vessels to be built by Roumanian shipbuilders.

TRADE RESTRICTIONS.

Exports for Morocco and Tunis.

The Director of the War Trade Department announces that undertakings in the approved form will be required on and after October 9 in respect of goods packed in bags, etc., for export to certain destinations in Morocco. The regulations on the subject applicable to exports to certain neutral countries in Europe should therefore be complied with. These undertakings are not required in respect of exports destined for the French zone in Morocco and imported viâ the ports of Mogador, Saffi, Mazagan, Casablanca, or Rabat.

The Board of Trade have received through the Foreign Office a copy of a Beylical Decree, dated August 8, and published in the *Journal Officiel Tunisien* for August 30, which extends the prohibition of export and re-export in force in Tunis to cover the following articles:—Acetones, and crude or refined substances which can be used for preparing acetones; animal wax, crude or worked; coffee extracts; menthol (essence of peppermint); monazite (ore of cerium, lanthanum, and thorium); and tea.

FIRMS BARRED TO EGYPT TRADERS.

The following is the concluding portion of the list of the firms with whom trading by persons in Egypt has been prohibited by proclamation dated August 28, 1916:—

COMPANY MEETINGS.

Egyptian Hotels.

The nineteenth annual general meeting of the Egyptian Hotels, Limited, was held on Wednesday week at the registered office of the company, 11, Ironmonger Lane, E.C., Lord Claud Hamilton, M.P. (the chairman), presiding.

The notice convening the meeting and the report of the auditors having been read,

The Chairman said: Gentlemen,—The accounts for the year ended April 30, 1916, are in your hands. It is with great pleasure that I am able to draw your attention to the fact that the amount of the profit shown therein is almost as large as the profit which has been earned by your company in any year previous to the war. Last year, you will remember, I was in the position of having to report to you that the results shown that year were the lowest on record, and I think it is a matter of congratulation for us all that, despite the continuation of hostilities, the profits of the company have reverted to the normal. The management in Egypt are, I think, to be congratulated upon the results; they have during the last year laboured under serious disadvantages arising from the war, including the temporary absence of many of the staff on military duties, and for reasons consequent on the existing military situation. In these circumstances the local board felt it necessary to add to their number by the co-option of other members, and they appointed Messrs. Warren Gillman and W. B. Delany. This is probably a temporary expedient on the part of the local board, for their constitution and procedure are, as you are aware, solely matters which concern themselves.

Turning to the accounts, I have little to add to what is stated in the directors' report. Since the end of the financial year compensation has been received from the military authorities for the use of the Ghezireh and the Semiramis Hotels, which, although not sufficient fully to meet the claims made in respect thereof, has been substantial. As regards the asset in the balance-sheet which appears under the heading "Advance to and shares in the Swiss Egyptian Hotels," I have to inform you that the Semiramis Hotel, owned by that company, is now vacant, and this asset is at present unrealisable. The future value is dependent entirely upon the conditions prevailing after the war, and it is this in the main which has influenced your directors in proposing to limit the dividend to one year on the preference capital and to add £10,000 to the reserve. The plant, fixtures and fittings have been consistently and adequately depreciated. As regards the freehold and leasehold land and buildings, in normal conditions the value of these properties would be vastly in excess of the figure of £190,000 at which they stand in the balance-sheet. Under present conditions realisations in respect of sales of land are entirely suspended, and it is doubtful if there is any prospect of income from this source during the war. Proper reserve has been made for any bad debts included under the heading "Sundry debtors." The stock on hand has been certified by the managing director. An intimation has been received from Mr. Hug since the issue of the report that he does not desire to remain a member of the board of the company, which resignation has been accepted, and in due course a suitable successor will be appointed. In conclusion, the best thanks of the board and of the shareholders are due to Mr. Baehler and his staff, who have made the results of this season so satisfactory, and to the local board, who have had their share of anxiety and hard work during this difficult period. I now move: "That the directors' report and accounts for the year ended April 30, 1916, as submitted to the shareholders, be received and adopted."

Mr. E. A. Harrison seconded the resolution, which was carried unanimously.

The Chairman next moved: "That a dividend of 5 per cent. on the preference shares for the year ended April 30, 1916, be and the same is hereby declared payable on and after October 30, 1916, and that there be added to the reserve fund £10,000."

Mr. E. A. Harrison seconded the motion, which was unanimously agreed to.

The retiring director (Sir William B. Peat) and the auditors (Messrs. Turquand Youngs and Co.) were re-elected, and a resolution was passed expressing the shareholders' high appreciation of Mr. Charles Baehler's management of the hotels and of the assistance rendered by his staff.

A vote of thanks to the chairman concluded the proceedings.

Ottoman (Smyrna-Aidin) Railway.

The annual meeting of the shareholders of the Ottoman Railway from Smyrna to Aidin was held on Tuesday. The directors had reported that the Ottoman Government still remained in possession of the railway and its revenues.—The President (Lord Rathmore) said the official returns from Smyrna carried them no further than August 31, 1914. They were incorporated with the present accounts, and the figures now given would be subject to adjustment when the returns had been received. He could give no authentic information as to the present condition of the line and rolling-stock, but if any alarming damage had been done to their property some rumour, he thought, would have reached this country. A statement of claim against the Ottoman Government in respect of their property had been lodged with the Foreign Claims Office. Theirs was a specially hard case. The company was the pioneer railway enterprise in the Turkish Dominions, and after many vicissitudes had built up a first-class system of railways throughout wide districts of Asia Minor. The enterprise conferred benefits on the population by giving cheap and speedy conveyance of their goods to distant markets and facilitating the introduction of improved methods of tillage for the development of the natural resources of the country, while the revenue of the Turkish Government from those districts was immensely increased. Those benefits the Turkish people, with whom they had always worked on the most friendly terms, and their rulers, reaped from the enterprise of the company. When a prosperous future seemed assured for the company war was suddenly forced on the Turkish people, contrary to the wishes of the vast majority, by a small clique of reckless Ministers, who acted without the assent or even the knowledge of their colleagues, and at the dictation of that disastrous German influence which had brought such havoc on all who had yielded to its selfish designs. Sooner or later the company would be entitled to demand that the good old rule should apply, "Those who break must pay," and that the heavy losses they had so unjustly suffered should be made good by those who had inflicted them.

COMPANY REPORT.

Ellerman Lines.

The report of Ellerman Lines, Limited, for the year 1915 states that the dividends on the guaranteed preference shares, the 5½ per cent. preference shares, and the preferred ordinary shares to September 30, 1915, have been duly paid, and the dividend for the remaining three months has been reserved for. The profit and loss account has been charged with £428,469, being the difference between the amount recovered from insurance on steamers lost and the cost of steamers contracted for to replace them. A sum of £550,000 has been transferred to the reserve fund, making that fund £800,000. The whole of the £900,000 reserve and guarantee funds are invested in outside securities, Government loans, or bank bills. Last year £500,000 was provided for depreciation, etc., and £250,000 placed to reserve fund.

COMPANY NOTES.

Dividends, etc.

Messrs. Rothschild and Sons announce the numbers of 239 bonds amounting to £69,000 of the Ottoman Four per Cent. Loan of 1891 (secured by Egyptian tribute), which have been drawn for redemption on October 10.

The Bank of England are prepared to receive the coupons due on October 1 on bonds of the Greek Guaranteed 2½ per Cent. Gold Loan of 1898. The necessary lists can be procured on application at the Dividend Pay Office.

It is announced that Coupon No. 24 of the Agricultural Bank of Egypt 3½ per Cent. Bonds due October 1 will be paid on October 2 by the National Bank of Egypt, 6 and 7, King William Street, E.C.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for week, 25 tons (last week, 7 tons); Hurgada production for week, 622 tons (last week, 640 tons).

Bibi Eibat.—Week ended September 17, 59,933 poods.

Black Sea Amalgamated.—Week ended September 16, 20,129 poods.

British Maikop.—Week ended September 16, 43 tons.

European Oilfields Corporation.—Week ended September 17, 84,000 poods.

Maikop Combine.—Week ended September 16, 5,186 poods.

North Caucasian Oil Fields.—Week ended September 16, 88,800 poods.

Russian Petroleum.—Week ended September 16, 53,800 poods; figures for September 9 not yet received.

Spies Petroleum.—Production, including 3,115 poods from ambars, for week ended September 17, 149,615 poods.

Ural Caspian.—Week ended September 14, 2,565 tons.

ON 'CHANGE.

(By Our City Correspondent.)

Throgmorton Street, E.C.,
September 28.

The market continues very inactive. A few Aboukirs have been done at 15s. Some trifling transactions have taken place in Agriculturals on the basis of 4⅜ to 4¾.

Alexandria Water are still wanted at 11⅝ but there are no sellers.

Delta Lights are a firmer market, with some business passing at about 5¼. Delta Land have changed hands up to 9s. 6d.

Khedivial Mail Prefs. have been done at 3¾, and the Ordinaries are firm at 28s.

National Banks are quiet at 13½.

A few Union Foncières were done at 20s., just about 5s. up on the last transactions, and there are still further probable buyers at the higher price.

In Greek bonds the market has been quite nominal and prices are here and there about a point lower; but business has been at a standstill, awaiting, no doubt, for some definite form to emerge from the political chaos in Athens.

THE HUNS IN THE BALKANS.

The offices of the German-Balkan Association are in Berlin, Lutzowplatz 14. Its president is Heinrich Brühl, who, it is claimed, knows all that is to be known about the Balkans.

The proprietors of German goods in Greek ports are informed that the War Commission for German Industries, Berlin W.9, Lindstrasse 25 III., is in a position to introduce to them a well-recommended intermediary for the sale of these goods.

THE NEAR EAST.

Any Newsagent or Bookstall in the United Kingdom can supply copies of the NEAR EAST every Friday morning.

Should any difficulty be experienced in obtaining the paper, a post card addressed to the Manager, 16-17, Devonshire Square, London, E.C., will oblige.

NOTES OF THE WEEK.

The operations in the Near East continue to be full of incident to an extent to which a long period of trench warfare has rendered an expectant public unfamiliar. During the past week the enemy has claimed a "complete victory" in the Western Carpathians; he has certainly suffered a reverse at another point in the same range; the Roumanians have thrown a force across the Danube into Bulgaria, and the Dobruja battle line has changed its position considerably. It is, however, still too early to determine how the struggle in this part of the world will go in the immediate future. Political considerations, in which Hungary probably plays a prominent part, have compelled the Germans to devote special attention to the Roumanians. With General von Falkenhayn, who made way for Hindenburg as Chief of the German General Staff, appointed to the supreme command in South-Eastern Hungary, and von Mackensen in charge south of the Danube, it is evident that Germany is straining every nerve to secure a decision in this theatre. Such a course is entirely in keeping with the practice of the German Higher Command during the war. Recognizing that there is little chance of achieving any conspicuous success in the West or East, it resolves on a concentration against Roumania, with a view to encouraging the people at home, who are becoming depressed at the turn of the tide in the Allies' favour.

As at the Vulcan Pass, so at the Roter Thurm Pass, south of Hermannstadt, the enemy succeeded in driving back the Roumanians for some distance. Fighting began on September 26 in the immediate neighbourhood of the town, which would seem to have been a kind of "No Man's Land" since the Austrians evacuated it. The operations along the Carpathians, we must infer, are of a very open character. A continuous front, such as is to be met with in the West and East, does not exist, and there must be ample room for turning movements. Thus the enemy reports speak of the Roumanians being taken in the rear after some of the Austro-German forces had made a bold march through the mountains. The Roumanians admit that they were compelled to fall back, but are silent on their losses, which, according to the Berlin version, included three thousand prisoners and thirteen guns. Before the German Press, however, has been really able to do justice to this "feat of arms of the first rank," certainly before the Order conferred on the successful general by the Emperor can reach him, the news comes that the Roumanians have rallied, are counter-attacking von Falkenhayn's army at the Roter Thurm Pass, and have caused it to withdraw from some of the ground it had won. The Allies, therefore, will do well to leave the shouting from day to day to the enemy, and content themselves with the thought that the Roumanians are employing the tactics most calculated to increase the drain on Austro-German resources.

But while the Roumanian line is held at the western end of the Carpathians, it is being pushed forward vigorously in the centre and in the north. Further advances are recorded beyond Fogaras and on the extreme right wing, where touch is maintained with the Russian forces now gradually emerging from the Bukovina. Two thousand prisoners have been taken in a few days on these two sectors. It is the Roumanian thrust in this extreme south-eastern corner of Hungary that has caused so much heartburnings in the Dual Monarchy, especially among the Magyars. The excuse offered by the Hungarian Government is to the effect that at the time when the Roumanians attacked it had good reasons to believe that the Russians were about to embark on an offensive which was to exceed in violence even the other Russian attacks the Austro-Hungarian troops had already experienced. It was, therefore, out of the question to expect that Austria-Hungary would be able to keep a hundred thousand men inactive in Transylvania and allow the Russians to break through the Galicia line and "inflict irreparable defeat." The explanation affords an excellent illustration of the value of co-operation among the Allies.

For the moment, however, Roumania's chief feat consists in having thrown a large body of troops across the Danube between Rustchuk and Tutrakan. Their arrival on Bulgarian soil is acknowledged in telegrams from Sofia, but while one version announces that the Roumanians crossed in boats, another speaks of bridges, and adds that an Austrian monitor succeeded in destroying one of the bridges. As the bridges would consist of boats, the discrepancy may not be serious. The main consideration is that the crossing should have been effected, and at such a critical spot. The Rustchuk-Varna railway runs parallel to the Dobruja frontier.

Digitized by Google

At a point sixty or seventy miles west of Varna the direct line from Tirnovo meets this railway; but von Mackensen will rely on both the Rustchuk and Tirnovo arms of the system for the transport of his material and reinforcements. Riahovo, where the crossing took place, is only twenty miles away from Rustchuk, and the distance from that town to Tirnovo, the key to the railway system of north-eastern Bulgaria, is only a hundred miles. If the Roumanians already in Bulgaria are in sufficient strength for a forward move, and General Averesco is able to effect another crossing higher up the river, which would threaten the railway west of Tirnovo, the position of the enemy force invading the Dobruja must become precarious. It is, therefore, no wonder that the report should be current that the Bulgarians have already begun to evacuate Silistria and Tutrakan. Without doubt they are falling back before vigorous Russo-Roumanian offensive, which in the last few days has secured a thousand prisoners.

The chief interest in the operations on the Macedonian front has attached during the past week to the extreme left of the Allied line. Here the Bulgarians held tenaciously to the height of Kaymaktchalan, and until that position was entirely in the Allies' hands it does not seem to have been considered possible to attempt a serious thrust at any other point. As a result of hard and resolute fighting, characterized by the most violent counter-attacks on the part of the Bulgarians, the Serbians at last succeeded in clearing the plateau. They were at once able to push on, and, with the French and Russians on their left, have made a notable advance towards Monastir. On October 3 the Bulgarians not only evacuated the positions which were the immediate objects of the Allies' attacks, but they have abandoned all their first and second line positions over a wide front. The crescent-shaped front now occupied by the Allied troops is at one end of the curve within ten miles of Monastir. Most probably the enemy has fallen back on fresh positions which also lend themselves to resolute defence. The Allies have to pay for the long period of immunity from attack accorded to the Bulgarians, which enabled them to convert the natural features of the country into really formidable obstacles for an attacking army. But it is a satisfactory achievement to have familiarized the enemy at this early stage of the advance with the habit of lengthy retirements.

On the Struma section of the line the river has once more been crossed by British troops, and this time the ground captured has been retained for occupation. Both on the western and eastern wings the Bulgarians have shown the finest fighting qualities. They have consequently suffered very serious punishment at the hands of the Allies, and we may expect another rapid withdrawal on the Struma front as soon as the supply of reinforcements is unequal to making good at once the heavy toll of casualties. For the moment the Allies' plans in the Balkans appear to be developing with clockwork precision.

Greece continues to draw a subtle distinction between a Cabinet and a Government. The former she has never lacked, but she has dispensed with the latter now for a number of months. Her last Cabinet, associated with the name of M. Kalogeropoulous, has now resigned. "Not having succeeded in getting into touch with the representatives of the Entente Powers, and considering that the situation hinders progress in national questions," runs the official statement, "the Government has begged the King to accept its resignation." King Constantine has complied with this request; and in the intervals of receiving and congratulating officers who have not joined the National Defence movement, he is in consultation with various political and military personages. M. Dimitrakopoulos, who declined the invitation which M. Kalogeropoulos accepted, is once more mentioned as the King's probable nominee for the Premiership. King Constantine's attitude, however, shows no sign of a *rapprochement* with the Entente Powers. Reports from Greece represent that part of the kingdom over which he still rules as little better than a bear-garden. After the outrage in the French Legation at Athens the Allied Governments demanded the suppression of the Reservists' League. Nothing, however, has been done to check their excesses. Disorders have broken out at their instigation in a number of towns, and generally they are taking advantage of the state of affairs entailed by the existence of a Cabinet which cannot govern.

The Allied Governments are apparently satisfied to allow Greece and her ruler to vegetate in their own impotence. Whether German money is beginning to fail or the logic of events is proving too strong for the King's pro-German entourage is not clearly established. But there would seem to be a growing number of converts to intervention in the war, and it has been reported that King Constantine himself has accepted the policy in principle. No doubt ultimately he will offer with a bad grace to take the step which ought to have been taken many months ago. As far as the Entente Powers are concerned, the interest they had in Greece at an earlier stage of the war ceased as soon as her capacity for mischief had been eliminated. With the army divided against itself and with the navy either wholly or in part gone over to the Allies, the latter know that Greece is not likely to interfere with their military operations, even under German provocation of the most alarming type. King Constantine, therefore, may continue to nominate Premiers and sanction the formation of Cabinets; but until he and the Government of the day can once more speak in the name of Greece, the Entente Powers will, perhaps, be well advised to remain out of touch with the Athens Administration.

For the present the jurisdiction of the Athens Administration, in so far as any is acknowledged at all, is restricted to the southern portion of the Greek mainland. The Greeks of Macedonia, of Crete, and of the Islands have associated themselves with the National Defence movement, and have accepted the Provisional Government represented by the triumvirate of M. Venizelos, Admiral Condouriotis (Commander-in-Chief of the Navy), and General Danglis (an ex-Minister of War). The headquarters of the latter are to be at Mitylene. As the purpose of the movement is not revolutionary, but is to secure the defence of Greek territory against the Bulgarians, an indefinite period of grace is being given to King Constantine in which to associate himself with the national will. In the meantime steps will be taken to raise a Greek force capable of playing its part in the work of ejecting the enemy from the districts which he occupied with the connivance of former Cabinets. Such an anomalous position must reach its breaking point sooner or later. King Constantine's obstinacy is now said to be restricted to a personal hatred of M. Venizelos, which will not allow him to make use of or have any relations with the man who not only saved Greece, but made it possible for King Constantine to recover the throne which he was held to have forfeited. If the Greeks ever have to make a choice between these two protagonists, it is to be hoped that they will be accurately apprised of the services they have respectively rendered to the country.

Not the least noticeable feature of the *impasse* in the Hellenic world is the solidarity of Greek opinion outside Greece in favour of the policy for which M. Venizelos stands and against the line of action to which King Constantine has committed himself. A meeting of the Greek colony in England was recently held in London, and the tenor of the speeches left no doubt as to the feeling of those present. There was a praiseworthy desire to use respectful language in referring to the King, but most of the speakers condemned his attitude

Digitized by Google

in unmistakable terms. The resolution adopted, which was ordered to be telegraphed to M. Venizelos, was to the effect that "this meeting, representing all sections of Greek colonists in Great Britain, congratulates you and Admiral Condouriotis upon the action you are taking to uphold the honour of Greece, to protect her territorial possessions, and to assure the future of Hellenism. It urges you to proceed towards your goal without reference to any other authority, and assures you of every support." A committee was appointed to raise funds and enrol volunteers. The volunteer movement will be under the direction of Lieut.-Colonel K. P. Mavromichaelis, who is making an appeal to Greeks in foreign countries to come to the support of the national cause. In Paris a similar meeting allowed itself to be carried away by its indignation, and roundly resolved that Constantine XIII., King of the Hellenes, was unworthy of presiding henceforth over the destinies of Greece, and was to be shorn of the title of King, adding that "the constitutional régime having been suspended by Constantine, every Greek citizen is legally empowered to dethrone him by force."

An experiment in dethronement has just been successfully carried out in Abyssinia, which resembles Greece inasmuch as the peaceful tenor of the country's way appears to have been disturbed by German intrigues and bribery. Here, too, the ruler came wholly under German influence, and was persuaded to embark on a policy of pinpricks against such of the Allied Powers as were near him. Unlike King Constantine, he did not think of sending his brothers on missions to European Courts, nor could he count on his own shortcomings being viewed so leniently as the son of King George of Greece. In the pursuit of his efforts to play the Turco-German game, the Emperor Lidj Jeassu left his capital on a visit to Harrar, where he was in personal touch with a Turkish Consul. During his absence the Abyssinian chiefs held a Council at Adis Abeba; the Metropolitan released the people and chiefs from their solemn oath of allegiance to Lidj Jeassu, and the latter was declared to be deprived of the throne of Ethiopia. In his place a daughter of the late Emperor Menelik was elected Empress. The new ruler is favourably disposed towards the Allies, and for the time being quiet and security reign in Adis Abeba. Possibly the last word on the subject has not yet been said; but the episode serves as an excellent example of a dethronement carried out decently and in order.

One effect of the entry of Roumania into the war has been somewhat overlooked. Her dealings with the Central Powers in grain and other foodstuffs had achieved considerable notoriety, thanks to the efforts made by the Entente Powers to interfere with them. It is certain that the affected indifference of Germany to the closing of the Roumanian market to her does not represent her actual feelings on the subject. Between December last and March of this year contracts were made in Roumania for the supply of nearly 2,000,000 tons of different kinds of grain. The proportion of these orders actually supplied to the Central Powers is not known. It is possible that the full effect of the cutting off of Roumanian supplies may not be apparent at first, in view of the German harvest, but before the end of winter Germany's position, it is pointed out, should become critical, and it is then that the absence of Roumanian grain will make itself felt. On the other hand, Germany becomes deprived of her principal source of supply of mineral oils, which, next to grain, form the largest export business of Roumania, and if the Galician oilfields again pass under the control of the Russians, Germany will be unable to replenish her stocks of mineral oils, whether motor, illuminant, or lubricant. The effect of this shortage of oil in her munition factories can well be imagined, and it may not have been a mere coincidence that General von Falkenhayn's Army Order imposing the strictest economy in the use of guns and ammunition was issued at the time of Roumania's entry into the war

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 20.

The Coming Cairo Racing Season.

Just as we are approaching a fresh racing season, a rumour gains currency that certain obstacles may be raised which may seriously affect the holding of race meetings in Cairo. This rumour may quite possibly have its origin in a recent misunderstanding which resulted in the Alexandria Sporting Club, much to the general surprise and disappointment, suspending all racing for a month or so. It is sincerely to be hoped that this is but one of the usual rumours current in Egypt at this time of year, and that nothing will prevent Cairo from having its Turf season this coming winter. Those who may feel inclined to object to racing during the continuance of the war should bear in mind that, apart from the much-needed distraction and healthful amusement which the meetings last year provided every week for the troops stationed here, there is the very important and undeniable fact that the race meetings at Gezira have for years past had a most beneficial influence on horse-breeding in this country. Any stoppage of racing, even for one season, would certainly have a detrimental effect on a matter which is of national and, in present circumstances, of Imperial interest.

The New English School.

I understand that a sufficient number of British children have been entered to enable the committee to start the new English school of which I wrote you recently. The opening has been fixed for October 2, by which date it is hoped that most of the staff will be available.

The Fuel Question.

The coal crisis which Egypt has experienced since the outbreak of war, and which became acute this last winter, owing to the difficulty of obtaining ships and to the high freights ruling, has not unnaturally turned attention to the question of whether the agricultural resources of the country could provide material capable of being converted into fuel. Various experiments have been, and are still being, carried out with this object by private individuals and also under Government supervision; and at the Exhibition of Egyptian Industries recently held in Alexandria there were shown some briquettes, made out of a combination of various agricultural products, which, it was claimed, could profitably be substituted for ordinary coal. Whether in this particular instance the claim is justified or not remains to be seen, but there is reason to believe that as a result of recent experiments carried out here under official supervision the near future holds some important surprises in the matter of substitutes for coal.

Macmillan's Guide.

The remarks made by "Britisher" in The Near East of August 25 with regard to the latest edition of Macmillan's "Guide to Egypt and the Sudan" are cordially endorsed by all out here who have read them, or have had the book through their hands. Indeed, it is thought that his criticism was, if anything, far too mild; for there are several other references in the "Guide" to enemy concerns and enemy relations with Egypt, the Sudan, and East Africa, which, as it happens, "Britisher" did not mention, but the inclusion of which is none the less a matter of regret and intense surprise. It is remarked that the introductory note explains that the object of the present issue is to assist the many members of the large military force which has taken the place of the usual stream of tourists to Egypt, and that where transformation of an enemy commercial house is believed by the editors and revisers to be of a temporary nature, the name has been retained. In the first place, however, the inclusion of the references complained of could well have been dispensed with. This cannot possibly help our military guests, since they deal with factors which are non-existent at the present juncture.

Advice to British Traders.

Apropos of enemy trade, home manufacturers and merchants should note that they will receive every

Digitized by Google

assistance in this country in any endeavour they may make to take up the openings now left by the elimination of German and Austrian firms and agents. I have good reason to believe that those in charge of the conduct of Egyptian affairs are prepared to look with lively sympathy on any such enterprise, and that the old obstacles set up by the former régime will not be allowed to stand in the way of British traders obtaining their proper share of business that may be offering. Those who may be prompted to enter the Egyptian market or to extend their relations with it would do well to get into touch as soon as possible with the various authorities. They must, however, understand that they must be prepared to mend their ways and come more into line with local requirements and circumstances. If they will show more elasticity in their conditions, more enterprise and more attention to the personal side of representation, they can, I am certain, be sure not only of practical assistance from the authorities, but of readiness on the part of the local trade and of the population to take their goods, which they recognise will be far superior to the trash that was foisted off on them by the Teutons.

CYPRUS NOTES.

(From Our Own Correspondent.)

Cyprus, September 18.

The Archiepiscopal Election.

There is so far little prospect that there will be a large majority of electors in favour of any one of the candidates. There is a fairly general feeling that, although the three Greek Bishops in Cyprus are all men of distinction and zeal in the Church, it would be an advantage if an outsider of influence like the Archimandrite Chrysostomos, of Athens, could be unanimously elected, if he would consent to accept the appointment. The members of the Holy Synod, as well as all leading Greeks, are strongly in favour of proceeding seriously and without further delay to the consideration of reforms in ecclesiastical administration, which have long been needed in the island.

One of the chosen electors, a priest, met with a sad fate while travelling on foot behind his mule to Nicosia. He was badly kicked in the abdomen by the beast, and succumbed soon after from the effects.

The Turkish prisoners from Egypt, about 3,000 in number, are expected about September 23. The arrangements for their accommodation at —— are being actively pushed on. For work in connection with the camp several clerks and interpreters will be required, and these will no doubt be appointed shortly.

King Constantine's Spiritual Family.

The list of new godchildren for the Greek King is steadily increasing. Nearly fifty have already been baptized, and other batches of names have been submitted, which will bring up the number to about eighty. As regards the name Constantine, it is already one of the most common in Cyprus.

Greek Feeling in the Island.

Greek papers comment freely on the situation at Athens. While they speak very cautiously and reservedly on the subject of the King and the shifting Governments, it is plain that they regard with dismay and growing indignation the sacrifice of the honour of Hellas, the loss of territory, the blow to Hellenism, the strife of factions (the hereditary curse of the country), and the prospect of further impending degradation. The wonder is that they do not yet speak more plainly than they do, as Greek-born subjects are doing elsewhere, in all countries and islands.

To be a member of Parliament in Greece is an expensive business, says a writer in the *Daily Chronicle*. If the candidate is well-to-do he is expected to spend his money with a free hand, and "treating" is still a recognised institution at election-time. And such expenses do not end when the member takes his seat, since he is often called upon to give his services for nothing in a private capacity. A constituent, for instance, involved in litigation will rarely trouble about his barrister's fees if his member happens to be an advocate. Politicians, too, are constantly being asked to stand as godfathers to their constituents' infants, and an obscure Greek godchild may cost the Parliamentary godparent anything up to £2.

THE STATE OF SYRIA.

(From a Correspondent.)

Cairo, September 20.

The dark cloud that has been hanging over Syria seems at last to be lifting, either because the Young Turks are conscious of the impending end and therefore inclined to take a more reasonable view of things, or because of the firm attitude of the United States. A telegram just received from the editor of a well-known Arabic paper in New York by the secretary of the Syrian Relief Committee in Cairo confirms the news, previously received through a private channel, that the Ottoman Government has at last permitted the transmission of funds to Syria, to be distributed among the victims of famine and the war by a joint commission of the American Red Cross and the Ottoman Red Crescent.

Although the official replies received by the American Government from their diplomatic representatives in Turkey declare the reports published hitherto in the Press to be somewhat exaggerated, yet, judging by statements made in a letter received by a friend from the assistant secretary of the Board of Foreign Missions of the Presbyterian Church in the U.S.A., at New York, the need for relief in Syria is both urgent and great. The Central Relief Committee in Cairo has already received subscriptions to the total amount of over £12,000, and now that means of transmission are available the said committee has convened a meeting of the members with a view to consider the question of remitting the amounts collected. This, together with the much larger amounts that may be reasonably expected to have been collected in America from both Syrians and Americans, should go far towards affording material relief to the needy in Syria. It is known that, on the motion of the deputy for West Virginia, the House of Representatives agreed to, and the President of the Republic sanctioned, the fixing of a day on which subscriptions were to be received for the Syrian Relief Fund throughout the United States. It is not known here yet what these subscriptions have amounted to, but the well-known munificence of the American people and their present extraordinary prosperity justify the hope that they are very substantial. Apart from the authorised transmission of funds raised by public subscriptions, the American Diplomatic Agency here has just notified publicly its willingness to transmit both money and letters from individual Syrians here to their families in Syria, under certain conditions; and this should further contribute to the alleviation of the distress prevailing in that country.

Judging by private letters, it is the poorest classes and those who lived on trades that the war has temporarily paralysed who are suffering most acutely. Most fortunately the grain harvests are said to be quite satisfactory. The same is said to be the case with regard to fruits and vegetables, especially in the plains. In the higher mountainous districts of the Lebanon, however, the early cessation of rain about the end of April—in normal years the rains continue there till about the end of May—has affected rather adversely the crop of vegetables and fruits. It is satisfactory to know, on the other hand, that grain has been sown in the gardens and fields adjoining dwelling-houses, and more attention has been paid to this than to mulberry plantations. In this connection it is interesting to mention that the cocoons of the last crops are said to have been bought by Swiss, as well as German and Austrian, firms at magnificent and, indeed, unprecedented prices.

Another pleasing item of news that may be deduced from a private letter received recently from Lebanon is that conscription has not been enforced, as had been rumoured: because the writer of the letter mentions two young men of military age who up to the middle of July had been attending to their peaceful occupations.

SALARIES OF CYPRUS OFFICIALS.

A Cyprus correspondent writes:—In view of present high prices, it is not surprising to learn that many officials of different Government departments are again submitting petitions to the Government for an increase of salaries. A few years ago the Colonial Office recognised that circumstances demanded some increase for certain officials, but the percentages allowed were generally considered inadequate, and there appears to be ample justification for the present claim. The Colonial Office, as well as the local authorities, must be fully acquainted with the conditions of life in the island, upon which the officials are basing their memorials. It is represented that at least some addition should be made, if only to the pay of lower officials, for the duration of the war, should prices fall to more normal rates at the end. There should be no difficulty in deciding the question on its merits.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, September 20.

The French Legation Incident.

Those who pass the French Legation—which is situated exactly opposite the Royal Palace and the Ministry of War—see a distressing sight: the building is guarded by marines from the French squadron, and two sentries are on guard at the entrance from the Kephssia Avenue. The outrage which has led up to this humiliation was the result of the anarchy that has prevailed in Athens since M. Venizelos went out of office (February, 1915); for his successors have revived and encouraged all those pernicious elements of the old parties which M. Venizelos had suppressed. On the other hand, the circumstances of the case compelled the Legation to take steps for its own security, however bitter it might be to Greek self-respect. For it must be borne in mind that the Government, having been warned (by the German Minister, it is said) that such a demonstration would take place in the evening, sent a strong detachment to the garden of the Ministry of War, opposite the Legation; but in spite of their presence and of the guard at the Royal Palace, the attack took place. The offenders indulged in cries against France and England; they even fired pistols in the Legation garden; and yet they were allowed to get away scot free, passing before the soldiers sent to prevent the demonstration taking place! The incident is so scandalous as to be beyond any comment.

Resignation of M. Zaimis.

It may be considered that the resignation of M. Zaimis was a fresh check to the policy of intervention. In fact, I am in a position to state that the Zaimis Cabinet had entered upon negotiations with the Entente, and that these negotiations were progressing very favourably; but when they were almost completed M. Zaimis discovered that the King was not prepared to abandon the policy of neutrality, and consequently he insisted upon resigning. M. Zaimis has declined firmly to say anything regarding the true motives of his resignation, and has confined himself to stating that he considered that his work of forming a *cabinet d'affaires* was completed. By this he intended to express his opinion that circumstances necessitated a new orientation of Greece's policy, and that a passive attitude should no longer be followed.

Recall of M. Dimitracopoulos.

M. Zaimis persisting in his refusal to retain office, the King called upon M. Dimitracopoulos, a former Minister under M. Venizelos. As I have already informed you, this step was prepared for some time ago. According to statements he made to certain journals, M. Dimitracoupoulos was in favour of an active policy, and opposed to that of MM. Gounaris and Skouloudis. But, on the other hand, he wanted a General Election; which would have adjourned intervention by Greece indefinitely if it had not rendered it quite impossible. Evidently he aimed at creating a political party of his own; and he put forward pretensions tending to annul the effects of the Powers' Note of June 21, and to give him entire freedom of action. Consequently, at his first meeting with the British Minister he found himself faced by a categorical refusal to recognise such a Cabinet as he proposed; and he was compelled to tender his resignation. He had believed that by his declaration in favour of intervention he would wheedle the Entente into yielding all other points—a piece of folly worthy of a Greek politician of the old school, and rivalling the wisdom of M. Gounaris.

The Kologeropoulos Cabinet.

The sudden formation of the Kologeropoulos Cabinet, composed of adherents of the old Theotokist party, is regarded as a tentative step towards the reconstitution of that party, of which the leader, the late M. Theotokis, was a frank supporter of German policy. In Entente circles it is regarded as indicating a continuation of the policy pursued by the Gounaris-Skouloudis Cabinets, the real head of which—though he kept in the background—was M. Streit, who will also be in effect the President of the present Cabinet. It seems tolerably certain, therefore, that this Cabinet can hardly be recognized by the Entente Powers, since, owing to its composition, it will be unable to give those guarantees asked for in their Note of June 21 regarding the application of a truly benevolent neutrality and the free expression of the will of the Greek people. For, though the Bulgarian invasion has rendered the elections impossible for the time being, that is no reason for a return to political and anti-constitutional Cabinets, supported by the simulacrum of a Chamber.

The three protecting Powers, after having allowed public opinion to be influenced and falsified so long, wish, at last, to learn whether the Greek people approve of the present policy, arbitrarily exercised, and whether Greece is inert and indifferent at the time when her interests and her very existence are threatened. The duty of protecting this country, which they have assumed, combined with the fact that their own interests are also concerned, gives them the right to intervene. Also the three Powers appear determined not to permit any occult influence to affect the fortunes of the Greek people any longer. Yet, in spite of all the steps they have taken, the same intrigues go on under a change of form. Thus the leagues of reservists, in spite of their nominal dissolution, continue to exist, to work, and to threaten. Is it possible to put an end to this state of affairs, and, if so, how can it be done? There is the great problem to solve—and it is an anxious one, indeed.

Royal Words.

The speech delivered yesterday by the King at the ceremony of swearing in the recruits of the 1915 class was hardly of a nature to give the impression that the working of the Constitution, demanded by the Powers, will be restored. The *Patris* observes that the King, in telling the conscripts that they must render blind obedience to him, to whom alone they owe it—and consequently not to the country, as their oath declares—tends to create a monarchical régime, such as is hardly conceived of even in Prussia, regarding the functions of the army; and to make of it an instrument of the Sovereign's personal will. Moreover, the very just theory propounded by his Majesty, according to which the soldier has no right to act in accordance with his personal opinions regarding his country's policy, but must simply obey, is in flat contradiction to the policy which he himself has followed *vis-à-vis* statesmen selected by the people for the responsible government of the country and the direction of its policy.

A Possible Development.

This terribly trying situation is driving the leader of the Liberals and his party to despair; they consider that their duty will not allow them to confine themselves any longer to protests and mere words while Macedonia passes into the hands of the Bulgarians. The latter, in spite of promises given by Germany, have not hesitated to occupy even Kavalla. Yet all those who denounced M. Venizelos as a traitor when he wished to give Kavalla up to Bulgaria, only in order to secure rich compensation elsewhere, now maintain a discreet silence.

The Liberals are still waiting to see how events will shape. But if the present state of criminal apathy on the part of the Government continues, it is quite likely that M. Venizelos will go to Salonika, to place himself at the head of the insurrectionary movement, which would then spread rapidly, and would embrace the islands and Crete. Thus Greece would offer the sad spectacle of a house divided against itself; but that may be the only way of bringing about complete national unity.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, September 13.

The Fall of Tutrakan.

The news of the fall of Tutrakan, confirmed by the official *communiqué* of the 8th inst., caused no depression among the public. It is well understood to be only an episode, regrettable, of course, on account of the loss of life entailed, but unlikely to have any serious effect on the march of events. It will, indeed, rank in Roumanian history as one of the most glorious events of the great campaign undertaken by this country. For five days and nights about twenty thousand devoted Roumanian soldiers resisted with valour above all praise the repeated assaults of the Bulgaro-German forces quite five times as numerous, and vastly superior in artillery; and if they finally had to give way it was only when their number was reduced to a minimum, and after inflicting terrific losses on the attackers.

The absolute confidence of Roumania in its Army is one of the most striking points in the events of the moment, and doubtless this confidence will be amply justified in the end.

Far from having any depressing effect on the general spirit, the Tutrakan episode has had a contrary result. At all headquarters of the regiments in the capital volunteers are presenting themselves daily, demanding to be enrolled in order that they may avenge the Roumanians fallen on the field of battle. At the headquarters of the 2nd Artillery alone, for instance, where the average of volunteers was but about three per day, there presented themselves yesterday no fewer than thirty. The same regiment requiring 150 pairs of oxen, 350 pairs were offered, the proprietors stating they had brought their best.

Bulgarian Atrocities.

The frightful atrocities committed by the Bulgars and Germans at Tutrakan have caused great indignation throughout Roumania. Those who were waverers as regards the policy of taking sides against the Central Powers are among the first to demand ample reprisals upon the enemies across the Danube, and a fight to the finish is called for. "Let not a Bulgar be allowed to remain on earth" is the general cry. Prisoners were put up against walls and shot in batches by the Germans. The ambulance corps in Tutrakan, while waiting for wounded to be brought in, were set upon by the populace and put to unheard of tortures, women and children aiding gleefully in the atrocious work. The hospitals in Bucharest contain hundreds of proofs of the savagery of the Bulgars; but those who escaped are but a handful compared with those who fell victims to the frightful tortures inflicted on them by these fiends in human shape. The Roumanian authorities are causing strict investigations to be made, and soon another set of horrors will be ready to present, with protest, to the neutral Powers.

Austro-German Prisoners.

When war was declared all enemy subjects were ordered to be interned in buildings erected for the purpose in various parts of the country. At the last moment, however, the papers announced that the well-to-do Austrians and Germans of Bucharest would be lodged in houses prepared for them in the capital till "the lodgings" being constructed for the purpose in the country were ready. This has now been done, and as these undesirables are housed in hotels and other large edifices left empty by the mobilization and the general flight of Austro-Germans, it is accepted as a fact that the real object is to use them as a means of protection against air attacks, as it is thought that the presence of all these well-beloved in various parts of the town may to some extent deter bomb dropping.

There are in the concentration camps in the Jablonitza district alone 32,000 persons, subjects of the countries with which Roumania is now in a state of war. Those who have the means can arrange to live as they please; the poorer ones receive an allowance for food of 1f. 50c. per day.

MOSLEM PATRONYMICS.

(From a Correspondent.)

The Coptic Press in Egypt has recently been discussing the seemliness of parents bestowing English names upon their children at baptism. The concensus of opinion seems to be that it is an undesirable departure from precedent, that too much is apt to be expected from a child named Wolseley or Kitchener, and that there is a sufficiency of good old Coptic names to draw upon, less liable to be a source of embarrassment to the possessor. A train of thought suggested by this little polemic is the almost universal lack of continuity in Moslem patronymics.

For the benefit of readers other than Anglo-Egyptian, it should be explained that it is the custom of Moslem parents to bestow the father's surname upon the eldest son, adding thereto a second name which often has no *raison d'être* other than the whim or fancy of the parent. Thus, for the sake of example, where the father's name is Aly Hassan the son may be named Hassan Abdulla. In the result all continuity of the family name, and consequently all possibility of identifying an individual thereby, is irredeemably lost with the passing of the first generation.

This practice is all the more inexplicable in a country such as Egypt, where the pitcher has gone to the well in the same fashion for thousands of years and where continuity in tradition and custom generally is so carefully observed.* That it mitigates against the well-being of some fourteen millions of people, and will continue to do so in the era of development that is now foreshadowed, the writer cannot but believe.

Whether in an Imperial Service or a regiment, a college or a school, a profession or a business, a family or an individual, tradition, be it of good or evil, must always be taken into account. The word implies age, and age, whether in a violin, an egg, or an individual, claims the respectful consideration of all right-minded people. To multiply examples of the influence of tradition is unnecessary; they suggest themselves to the minds of us all, and the point need not be laboured. Where it is possible to trace tradition to its source, however, it will generally be found to have originated in an individual.

Now, they who win fame or distinction in any walk of life are comparatively few, and the majority must remain obscure; nevertheless it is always open to the humblest among us to found a reputation for morality and virtue, a legacy by no means to be despised by his posterity. He may feel a legitimate pride in having done so, in which case he will endeavour to inculcate and foster similar principles in his children, especially if his efforts be supported by the mother of his offspring. In time, continuity of example and of precept will tell its tale, and, allowing even for the ubiquitous black-sheep, these virtues will have become traditional in the family; for it is through continuity of qualities, characteristics, peculiarities—what you will—that they become traditional.

Egypt rejoices in the possession of a most enlightened ruler, under whose ægis much is being accomplished for the mental, moral, physical and economic welfare of its people. Does he, do his counsellors, realise the dormant possibilities of reform in this matter of patronymics? A man may have an evil influence upon his surroundings without setting in motion the machinery of the law. Repressive measures are all very well in their way, but it is better to work at the root of an evil than to wait until it blossoms and then lop off the flower.

In the opinion of the writer, this lack of continuity of the family name represents a lamentable waste of moral force in the direction of proper pride, example and incentive. The descendant of a family which has borne an honoured name for generations will be averse from besmirching its reputation. Tradition will act as a drag on the wheel.

Two hundred Greek residents of Cardiff have sent the following cablegram to M. Venizelos at Canea:—"At this moment, when you have come forward to lead the Hellenic nation out of the degraded position to which it has been brought by a policy unworthy of our traditions, and out of harmony with the views of the overwhelming majority of the Greeks in the motherland and throughout the world, the Hellenes of Cardiff unite to hail you as the saviour of our nation, and hereby declare our unbounded confidence in and determination to support your leadership, firmly convinced that in your hands our country will be redeemed from the humiliating situation in which, in the eyes of all true Greeks and of the friends of the Hellenes, it has been unconstitutionally placed to the detriment of the real interests and ideals of the Greek people."

* Occasionally nowadays the petroleum tin is a substitute for the pitcher.

NEAR EAST BOOKSHELF.

FROM AUSTRALIA TO GALLIPOLI.*

This book is a straightforward, manly account of an Australian trooper from the day of his passing the riding test at Victoria Barracks, Sydney, to the evacuation of the Gallipoli Peninsula. His readers share with him the varying fortunes of the Australian Light Horse, a famous mounted regiment who were destined to leave their beloved horses behind in Egypt with many regrets and win immortal fame for themselves as infantry. As one sergeant of Boer War renown said rather pathetically, "I went to South Africa as infantry and was given a horse, and they sent me to North Africa as cavalry and then turned me into infantry."

The book must make a personal appeal to all those who had near and dear ones in the Australian or New Zealand forces at the Dardanelles, and it will be read by all with a thrill of pride at the immortal story, so simply and naturally told, of those great souls whose attacks nothing but death could stop, and whose only fault was an impetuousness that led them to take more trenches than the number they were bidden to occupy. There is no complaining among these men, no carping criticism at the military authorities or Government for any shortcomings, no discussion of the policy of evacuation. The personal element in the narrative introduces us to men who have fought and fallen—their photographs are there—and one can almost feel one knew the great-hearted Colonel Hubert Harris, of the 5th Light Horse, or popular Lieutenant Robson, "Robbo," the quartermaster.

The first few chapters deal with the voyage to Egypt and the sojourn there, and the part played by the Australian troops in repelling the first attack on the Canal. A certain incident in Cairo is referred to. It was not a very creditable one, but very human, and caused chiefly by "high spirits and the chafing under the monotony of camp life in Egypt."

The story of the first landing and the charges up the cliffs are graphically told, and all the little daily incidents of life and death on those fatal shores are most vividly set before the reader, including an account of a visit of two hours to a hospital ship, which is described as being like a visit to heaven straight from hell. One chapter is devoted to "Bombs" and another to the aeroplanes, whilst the "Padre" comes in for fine and well-deserved tribute, as well as the Church militant. The chapter on the taking of Lonesome Pine is an epic of immortal heroism.

The loss of mails, some 250 bags, in a barge, being sunk by a shell just before reaching the beach, was a bitter blow to men so far from home as these Australians; and a pathetic description is given of the disappointed man who got no letters on mail day, and of the piles of letters which arrive too late to give cheer to the men they were destined for. Cheerfulness and pathos run all through this very human book, and there is a delightful tale of the Anzac who was roused to anger by getting a letter from a friend saying, "We're having rather a bad drought in this district; you're well out of it." He wrote back: "Come over here," and, after painting a picture of a battle or two, he concluded: "It is nearly as bad as your drought, and you're well out of it." Later the two men met at Gallipoli.

The losses were bitter, in some cases only 100 remaining out of the original 1,200, and in one case the 3rd Brigade lost thirty-two officers and 400 men in ten minutes, and the 8th and 10th Light Horse are described as "just thinned out and wilted away" under the machine-gun fire.

The departure from Gallipoli was a bitter one: disappointment at failure and deep regret at leaving so many gallant comrades behind. This is very well expressed in the poem "Anzac," which, with another called "Gallipoli," by L. H. Allen, completes a book that will be read with pride and pleasure, be the reader of this country or of the great-hearted country "down under" which has sent so many of her gallant sons to fight in the noble cause.

* "Trooper Bluegum at the Dardanelles." By Oliver Hogue. (Melrose. 3s. 6d. net.)

BOOK NOTES.

Lady Frazer has translated M. Chéradame's book, "The Pan-German Plot Unveiled," which Mr. Murray will publish shortly, and Lord Cromer contributes an Introduction.

Mr. Secker has published "Mahomet, Founder of Islam," by G. M. Draycott. The price of the book is half-a-guinea (net).

L'Imprimerie de l'Est has issued "La Politique de la Grece," a French translation of the speeches delivered by M. Venizelos last October and November in the Greek Parliament. The price is 3 fr.

BOOKS RECEIVED.

The War in Eastern Europe. Described by John Reed. Pictured by Boardman Robinson. (Eveleigh Nash Company. 10s. 6d. net.)

Half-hours at Helles. By A. P. Herbert. (Oxford: B. H. Blackwell. 1s. net.)

Intellectual Poland: A Lecture Delivered at Cambridge on May 19, 1916. By Leon Litwinski. With a Preface by Lord Bryce. (George Allen and Unwin. [For the Polish Information Committee.] 6d. net.)

An officer who was taken prisoner at Kut-el-Amarah has written to a friend at Simla:—"We are well treated, and the climate of Kastamouni is delightful. The accommodation is good and the food wholesome. Our health is perfect. Our only want is warm clothing and sketching materials."

On Monday evening, at University College, Professor Pollard lectured on "The Turning of the Tide." Referring to operations in the Near East, he said that the defence of the Dobruja was bound to be left to a large extent to Russia, and clearly the Russian preparations were not quite up to date. The consequence is that Roumania is not in a very enviable position at present. The Central Empires are attempting to cut Roumania out of the Entente; it is obviously the duty of the Allies as a whole, and Russia in particular, to prevent this. On the Salonika front our task from the military point of view is of the utmost difficulty. We have succeeded in driving the Bulgarians out of Greece, where their incursions were made with the goodwill, and probably at the invitation of, the King of Greece. The only hope of a satisfactory solution in Greece is the success of the revolutionary movement headed by Venizelos; and if it is able to impose upon their pro-German King a national Greek policy it will enormously facilitate the progress of our offensive against Bulgaria. Meanwhile, we must look very largely to an advance from the north-east on the part of the Russian forces.

Speaking at the Kingsway Hall last Saturday, Private Matthew Fahmy, an Egyptian member of the Army Veterinary Corps, appealed for a united Africa in the determination of the British nation to defeat the Germans. "Even the worst parts of Africa are more civilised than Germany," he declared. "The dream of the Kaiser is to take Africa and Egypt. If he did, he would make our countries worse than Belgium."

That resounding termination to so many Greek statesmen's names, "opoulos," is merely one of the many Greek equivalents to our "son" (says the *Daily Chronicle*). The frequency of the ending, varied by "ides," "akos," or "akes," points to an emergency. Before the Turkish domination was destroyed the non-aristocratic section of the Greeks had no surnames, and these had to be found quickly along the lines of our Robinsons and Hendersons. Other ways of creating Greek surnames were tried. Thus, "Metaxas" will have had a father or grandfather who wove silk; while "Petalas" will furnish the surname of a man whose father was a blacksmith, but had no name other than plain Socrates. Higher in the social scale, families were known by their descent, as in the case of Venezeloi, who came centuries ago from Venice.

Public Opinion

Edited by PERCY L. PARKER

PUBLIC OPINION'S greatly increased and increasing circulation since the war began shows that it fulfils a most useful purpose to-day by way of inspiration and information. It gives a magnificent analysis of all the great problems—social, political, financial, and religious—arising out of this War of Nations which will alter the whole of life for the present generation.

PUBLIC OPINION *can be sent to any address in the United Kingdom for three months for 2s. 9d., or to anywhere in the world for 3s. 3d. Yearly subscription in the United Kingdom 10s. 10d., or Abroad 13s.*

A SPECIMEN COPY *will be sent to any address on receipt of a post card to THE MANAGER, PUBLIC OPINION 32-34, Temple House, Tallis St., London, E.C.*

TWOPENCE WEEKLY

Any Books mentioned on this page, or any other Publication, can be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

THE NEAR EAST (Book Department),
16-17, Devonshire Square, London, E.C.

TANGIER TO TEHERAN.

The sorry figure cut by Greece ever since she declined to honour her obligation to Serbia must have made many people wonder what Lord Byron would have had to say on the subject, had he been alive to witness her shame. Should we have had a new Song of the Greek Poet? Some of these lines seem to fit the present case wonderfully, even as they stand:—

The isles of Greece, the isles of Greece!
Where burning Sappho loved and sung,
Where grew the arts of war and peace—
Where Delos rose and Phœbus sprung!
Eternal summer gilds them yet,
But all, except their sun, is set . . .

The mountains look on Marathon—
And Marathon looks on the sea;
And, musing there an hour alone,
I dreamed that Greece might still be free . . .

***

Again, how terribly appropriate seem these lines from another of his poems:—

Clime of the unforgotten brave!
Whose land from plain to mountain cave
Was Freedom's home or Glory's grave!
Shrine of the mighty! Can it be
That this is all remains of thee?
. . . . . .

'Twere long to tell, and sad to trace,
Each step from splendour to disgrace;
Enough—no foreign foe could quell
Thy soul, till from itself it fell;
Yes! self-abasement paved the way
To villain-bonds and despot sway.

We could almost imagine that Byron was touched by the spirit of prophecy when he penned those lines: that he foresaw the state to which unhappy Greece would be reduced by the small-minded, self-seeking men who have controlled her destinies of late. Truly, there has been little "splendour" about her modern history, but during the past eighteen months there has been "disgrace" enough and to spare. The only consolation—if consolation it be—for those who feel the disgrace is that it actually has been due very largely to "foreign foes." Byron could not foresee Baron Schenck and his myrmidons, nor could he possibly have conceived of those creatures attaining such power over the men who ought to have been the first to defend the honour of Greece. If only he could come to life again, how he would castigate them!

***

Have you read the interview with M. Derussi, the Roumanian Minister at Sofia, which Reuter's Petrograd correspondent telegraphed on September 29? It confirms the many stories we have heard before about the bribing of Bulgarian Ministers by Germany, and M. Derussi specifically mentions M. Tontcheff, the Bulgarian Minister of Finance, and General Boyadjieff. But the most delightful part of the message is that in which the Roumanian Minister is reported to have said that "Tsar" Ferdinand had burned his boats, "and would not spare the last drop of *Bulgarian* blood." That is no doubt quite true. But Ferdi will do his very best to spare his own blue blood, we may be sure.

***

The Egyptian woman of the lower class is usually an affectionate mother, in her own way, but her ideas about feeding her infants are often peculiar. She appears, as a rule, to think that the proper method of treating a baby is to keep it well filled up, so to say, and the consequence is that an appallingly large number of infant deaths take place every year, as the result of sheer overloading of the poor little victims' tummies. This is due not so much to carelessness or indifference as to sheer ignorance. The problem is: how to get the mothers to realise what a mistake they are making. And I heard lately of a case in which three Egyptian women were taught the lesson in a most effective fashion.

***

It happened in this way. The babies of these three mothers were in a particular institution in Cairo, undergoing treatment for various complaints brought about by over-feeding; and a certain English lady who was interested in the institution one day determined to try what a practical illustration of the evils thus brought about would do for the mothers of the little patients. So she had the three women brought before her, and on their arrival they found on the table a huge bowl of new milk, of which she invited them to partake. Flattered—for the lady was a very Great Lady indeed—they accepted the invitation and drank freely of the milk. When they paused in their drinking the Great Lady urged them to go on, and, for the sake of politeness, they did so. But politeness has its limitations, and very soon the trio showed a strong disinclination to drink any more. They felt, in fact, decidedly uncomfortable, and they showed it. But the Great Lady would take no denial; they *must* go on. And they went on—till the bowl was empty, while they received some sound advice on how babies should be fed, and so forth. When they began to feel pains they were invited to consider what their little ones must feel as a result of the same treatment to which they had just been subjected. There, perhaps, a discreet curtain had better descend. I hope the mothers saw the humour of the situation. They are, I imagine, unlikely to fall into the particular error of overfeeding their little ones again, and it is to be hoped that they will prove diligent apostles of the new wisdom amongst their friends and acquaintances.

***

I remember an archæologist telling me, once, of some curious finds that he made in the ruins of a Parthian fortress. Amongst other things his workmen discovered three eggs (goose's eggs, if my memory serves me aright) bricked up in a hollow in one of the walls; and elsewhere in the crude mud bricks themselves were found numbers of beads and small ornaments, which my informant thought had been thrown into the bricks in the course of making, with some idea of "bringing luck" to the building. This was brought back to my mind lately when I was told of some of the strange things that the Germans are using in their shrapnel—nails, buttons, and odd bits of metal of all kinds. Recently one of our men was carried into a field hospital with a nasty-looking wound in the shoulder. The surgeon examined it, and finding it did not go deep, proceeded to extract the bullet, when, to his own surprise and his patient's enormous interest, he fished out—a small model of an elephant! Was that put into the shell to "bring luck"? At any rate it has provided one of our fighting men with a souvenir of which he is, justly, not a little proud.

***

It is a long time since I saw a copy of the *Basrah Times*, but lately I have looked through quite a batch of them, and I am glad to see that the paper is going strong. Its size is reduced—there are only two pages now, and the Arabic has disappeared—but it is quite a live little production, on which the editor and his staff are to be congratulated. A feature that is especially deserving of praise is the information given in the form of notes about places mentioned in the various despatches and *communiqués*. This must be very welcome to many readers of the paper who, being "somewhere on the Mesopotamian front," have little chance of forming a collection of maps of the various theatres of war; and, as far as I have been able to test it, the information is trustworthy and clearly conveyed.

***

It was not my intention to give the *B.T.* an unsolicited testimonial, as I find I have done. But, on the principle of "What I have said, I have said," it may as well stand: for there have been so many grumbles about Mesopotamia that I suspect some of my readers will be glad to hear a good word for something and somebody in that part of the world. What I really set out to do, however, was to call attention to one of the advertisements in the *B.T.* This is not a "gem" like that famous announcement regarding the beauties of the Aleppo world to which I directed attention some time ago; it is a business-like notification that the "Basrah General Library," at 17, The Strand, Ashar, is "open daily for the use of H.M. Naval and Military Forces in Basrah." The institution, I note, has branches at Magil, Amarah, Nasiriyeh, Kurnah, and Ahwaz; and—here is the point—"Contributions of Books from officers and others will be gratefully received." Perhaps some of my readers have books to spare. If so, it looks as if they might do worse than send them on to the B.G.L., of which the hon. sec. is (Mrs.) Maude M. Gaunt.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. Oct.	1916. Sept.		1334. Julhijja	5677. Tishri
6	23	Friday	8	9
7	24	Saturday.....	9	10
8	25	Sunday	10	11
9	26	Monday	11	12
10	27	Tuesday	12	13
11	28	Wednesday	13	14
12	29	Thursday	14	15

Sunday is the birthday of King Nicholas of Montenegro, who was born September 25, 1841 (O.S.).

Sunday is also the birthday of H.R.H. Prince Harald of Denmark, the second brother of King Christian.

Wednesday is the birthday of Prince Peter of Montenegro, the youngest son of King Nicholas, who was born at Cettinje in 1889.

Thursday is the birthday of H.R.H. Princess Natalie of Montenegro, wife of Prince Mirko, who was born at Trieste in 1882, and married at Cettinje in 1902.

Under date of September 25 the *Times'* correspondent in the Balkan Peninsula reports from Bucharest:—Yesterday Queen Marie attended the opening of a hospital for wounded soldiers established by the Armenian colony here. Her Majesty is indefatigable in her care for the wounded soldiers, whom she visits daily at the various hospitals, bringing them gifts of bonbons and flowers.

Prince Andrew of Greece left Paris for Naples on Wednesday to embark in a Greek torpedo-boat for Athens.

Major-General Georgiescu, of the Roumanian Army, who is in England on a special military mission, had the honour of being received by the King at Buckingham Palace on Wednesday. Lieutenant Georgiescu, Roumanian Army, and Major R. G. T. Baker-Carr (specially attached) also had the honour of being received.

The Sultan of Egypt has conferred the Grand Cordon of the Nile upon General Sir Archibald Murray, the Commander-in-Chief in Egypt.

The Earl of Cromer was last Friday reported to be confined to bed with a cold, but by Sunday he had recovered sufficiently to be up all day. On Wednesday he presided at a meeting of the Dardanelles Commission.

Captain George Lloyd, M.P., left England on Tuesday for Egypt.

Lord Oranmore and Browne left his residence in Cavendish Place for Castle Macgarrett, County Mayo, last week.

Mr. W. J. Ansell, I.S.O., Chief Collector of Customs in Cyprus, has left London on his return to Larnaca.

The new Lord Blythswood, who succeeds to the title on the death of his brother, which occurred last Saturday at Blythswood House, Renfrewshire, is Major-General Sir Barrington Bulkeley Douglas Campbell-Douglas. He saw service in the Egyptian War of 1882, taking part in the battles of Kassassin and Tel-el-Kebir, and also in the South African War. He was born in 1845, and married, in 1869, a daughter of Sir Joseph Hawley.

Mr. John Wells, who has been conducting experiments in regard to fuel on behalf of the Egyptian Government, has returned to England in connection with these experiments.

Second Lieutenant Gilbert Legge, Royal Field Artillery, had the honour of being received by the King on Wednesday, when his Majesty conferred on him the decoration of the Military Cross. Lieut. Legge was formerly resident in Egypt, but had latterly been in business in New York.

An engagement is announced between Albert Guy Pawson, of the Sudan Civil Service, younger son of Mr. and Mrs. A. H. Pawson, of Howe Combe, Watlington, Oxon, and Helen Humphrey Winer, daughter of Lieutenant-Colonel and Mr. H. Lawson, of The Cedars, Chertsey, Surrey.

The engagement is announced of Irène, daughter of Mr. and Mrs. John Ross, of Alexandria, Egypt, to Captain T. B. Pritchett, Royal Field Artillery (T), only son of Mr. and Mrs. Theodore Pritchett, of King's Norton, Warwickshire.

An engagement is announced between Captain Eric M. Tabor, R.E., and of the Egyptian Irrigation Service, second son of Mr. and Mrs. Alfred Tabor, of Sunnydene, Eastbourne, and Elsie Grace Carey, only daughter of Mr. and Mrs. F. Herbert Druce, of Orchard Mains, Woking.

A marriage has been arranged, and will take place on the 9th inst., between Second-Lieutenant C. A. Wilkinson, Middlesex Regiment, formerly of the *Egyptian Gazette*, and Miss K. M. Martin, daughter of Mr. W. D. Martin, of Travancore, India.

A marriage has been arranged, and will shortly take place, between Mr. Everard Stokes, Manager in Egypt of the Royal Exchange Assurance Corporation, son of the late Henry Stokes, of 4, Mayfield-terrace, Edinburgh, and Miss Irene Lusena, eldest daughter of Maître Enrico Lusena, Délegué au Caire du Conseil de l'Ordre des Avocats d'Egypte.

The Sultan of Egypt has conferred the Order of El Kemal on Lady Graham, daughter of Viscount Midleton.

The Rev. Dr. Dearmer and Mrs. Dearmer are amongst the passengers on the P. and O. s.s. Kashmir, which leaves London to-day.

Under date of September 26 we note that the *London Gazette* contains the name of Temporary Lieutenant Frederick John Gordon Whittall, Manchester Rifles, who was awarded the Military Cross "for conspicuous gallantry in action. He led his company with great dash and for twenty-four hours, under heavy shell fire, occupied and improved a line of trenches. On two previous occasions he has displayed great courage in action." Lieutenant F. J. G. Whittall is the son of the late Frederick Whittall.

In the dispatches from General Sir Archibald Murray, in Egypt, of June and July, in the *London Gazette* of September 25, under "Mentioned in despatches and recommended for reward," occurs the name of Temporary Lieutenant Hugh Whittall, of the Royal Marines. Lieutenant Whittall is the son of Mr. W. J. H. Whittall.

News has been received at Alexandria (says the *Egyptian Gazette*) that Second-Lieutenant R. N. Dilberoglue, Coldstream Guards, youngest son of Judge Dilberoglue, former President of the Court of Assizes, Cairo, has been wounded in France. This young officer, who is not yet 21 years of age, left Eton to take up his commission in the Army, and went to France with his regiment in May of last year.

Lieutenant-Colonel K. P. Mavromichalis is appealing to the patriotism of Greeks residing in foreign countries to enrol themselves as volunteers in their country's service. A copy of his appeal will be found on another page.

Lieutenant-Colonel Mavromichalis has a distinguished record of service, having been through five campaigns, says the *Morning Post*. In the war against Turkey in 1897 he commanded the Foreign Legion, and in the last war when Greece fought Bulgaria he was a chief of artillery on the staff of the 4th Division. His purpose is to raise a large force in various countries, where among the Greek communities strong feeling prevails in favour of intervention to save not only the honour but the future of their nation. It is estimated that England and France can each yield 1,000 Greeks of military age, while in America there must be from fifty to sixty thousand, who, it is believed, would eagerly support the national cause, as they have previously done. There are also from twenty to thirty thousand Greeks in Egypt able to fight, many of them, as elsewhere, not having been born in Greece, are free from military obligation. The call is especially addressed to this class, and the best results are anticipated in view of the general sentiment.

It was announced at the Cardiff Chamber of Commerce last Friday by the President, Mr. T. E. Watson, that Mr. Leonidas Embiricos, now of Athens, but a Cardiff shipowner and a member of the chamber, had offered to place his entire fortune at the disposal of the patriots of his country. Mr. Watson remarked that Mr. Embiricos bore the noble name of the leader of the three hundred who held the Pass of Thermopylæ.

The Roumanian flag day has been fixed for October 26 for London and the neighbourhood. Those who are willing to help in making this tribute to our new and gallant Ally a great success should send in their names at once to the Organising Secretary, Roumanian Flag Day, 1, Central Buildings, Westminster, S.W.

In accordance with arrangements which have been made between the First Commissioner of Works and the Trustees, one of the swords of the late Lord Kitchener has been deposited on loan for exhibition at the Armouries, Tower of London.

This afternoon, at 4.30, at Eustace Miles' Restaurant, Chandos Street, Lord Headley will deliver the first of a series of lectures to be given under the auspices of the Central Islamic Society. His subject will be "Sister Religions." Al Haj Khwaja Kamal-ud-Din will preside.

Dr. R. W. Seton Watson is delivering a course of lectures on Serbia and Bulgaria on Thursdays at King's College, London. The first of these, given yesterday, dealt with Serbia's struggle against the Turks from 1389 to 1878. The succeeding lectures will deal with the Liberation of Bulgaria, the Concert of Europe and the Balkan League, the Balkan Wars and the Peace of Bucharest, and Austro-Hungarian Policy in the Balkans and its Influence upon the Outbreak of War.

Another lecture by Dr. Seton Watson at King's College will be given on Friday next. His subject will be "Roumania and Transylvania," and H.E. the Roumanian Minister—M. Nicolas Misu—will occupy the chair.

On Tuesday next, also at King's College, Professor T. G. Masaryk commences a course of ten lectures, entitled, "A Sociological Introduction to the Study of the Slav Nations." The fifth of these will deal with the Southern Slavs (Serbo-Croats and Slovenes) and with the Bulgars.

The Sufi Order, whose meetings take place on Sundays and Tuesdays at 86, Ladbroke Grove, London, W., has now entered on its autumn and winter session. Among the lectures, etc., that it announces is one on Mohammed, to be given by Inayat Khan on the morning of Sunday, October 15. On the evening of Sunday, December 3, Q. Abdullah, B.A., speaks on the "Essence of Islam"; while the week following the

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.
Σχολή Γλωσσῶν. Διδασκαλία συστηματική.
Διερμηνεῖς κ.λ.π. Δίδακτρα μέτρια.

"Teachings of Islam" will be the subject of Maulavi Sadar-ud-Din. Of a somewhat different order will be the lecture on "Legends and Superstitions," to be delivered by Professor Henri Léon on Sunday evening, October 22. Among the addresses to be given after Christmas we note two by Dr. Abdul Majid, on the "Influence of Islam in Modern Civilisation" and on "Education in Islam," and one on "Sufism and Islam," by Sheikh Mushir Hosain Kidwai.

APPOINTMENTS, PROMOTIONS, ETC.

Bimbashi J. U. F. C. Alexander, 10th Sudanese, has been appointed Aide-de-Camp to the Sirdar.

Mr. G. E. Seabright, Sudan Civil Service, has been granted the temporary rank of Bimbashi whilst employed with the Western Frontier Force.

Bimbashi J. P. L. Mostyn and Bimbashi C. S. Northcote, Sudan Government, have been promoted to the rank of Kaimakam.

Kaimakam N. B. de L. Forth Bey, Officer Commanding Arab Battalion, has been granted the temporary rank of Miralai.

Bimbashi J. M. C. Scott, Egyptian Camel Corps, has been struck off the strength of the Egyptian Army.

Captain E. D. M. Heriot Hill, Army Service Corps, has been attached to the Egyptian Army as a Special Service Officer, with the rank of temporary Bimbashi, and attached to the Transport for duty.

Captain A. W. D. Bentinck, Coldstream Guards, has been attached to the Egyptian Army as a Special Service Officer, with the temporary rank of Bimbashi, and is attached to the 9th Sudanese.

Bimbashi (temp.) S. F. McI. Lomer, attached Khartoum District, has been struck off the strength of the Egyptian Army.

In an Army Order issued on the 10th September the Sirdar announces with regret the death of Bimbashi W. J. Maxwell, 10th Sudanese, which took place at Abiad on August 26.

The *Norddeutsche Allgemeine Zeitung* states that Dr. von Kühlmann, German Minister at The Hague, has been appointed German Ambassador in Constantinople, in the place of Count Wolff-Metternich.

In forwarding news of the appointment the *Times* special correspondent at Amsterdam adds: Herr von Kühlmann is known at Constantinople, where he was born, and his father was Director-General of the Anatolian Railway Company. Herr von Kühlmann, who is regarded as an excellent *connaisseur* of Eastern relations, has already spent some time in Constantinople during the war as First Councillor of Embassy. He became German Minister at The Hague in March, 1915.

Among the passengers by the Bibby Line s.s. "Leicestershire," which sails from Marseilles for Port Said on the 9th inst., are the Lord Bishop of Jerusalem and Mrs. and the Misses MacInnes, Dr. Douglas Dunlop, Mr. A. King Lewis, Mr. and Mrs. Ireland, Mrs. M. H. Westropp, Mrs. Graves, Mrs. R. Snelling, and Mr. A. van Millingen.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY & ALL EXAMS.

REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON,

EDUCATIONAL AGENTS.

143, Cannon Street, London, E.C.

OBITUARY.

Captain H. W. Verelst, M.C., Coldstream Guards, who is reported killed on September 26, aged twenty-six, was the elder son of Mr. H. W. Verelst, of Aston Hall, Sheffield, and Mrs. Verelst, of Melmerby Hall, Ripon, Yorkshire. He was educated at Cheam School, Eton, and Sandhurst. He received his commission and joined the 3rd Coldstream Guards in Cairo in October, 1910, and was transferred to the 2nd Battalion on receiving his promotion in 1913. With them he went out to France on the outbreak of hostilities on August 12, 1914. He was gazetted temporary captain on December 27, 1914, and his rank was confirmed in November, 1915. He was mentioned in despatches in January, 1916, and awarded the Military Cross for gallantry in the field in June.

The *Egyptian Gazette* of September 20 reports that news has been received of the death in action, in France, of Mr. Herbert G. Skill, Chief Inspector of the Survey. At the commencement of the war he was on leave in France and then tried to obtain service in either the British or French Army. There was difficulty on account of his age. He, however, persevered and was eventually accepted for the French Foreign Legion, with whom he fought as a private for the next eighteen months in the trenches in France, taking part in the big push in Champagne last summer. At the end of this period he was offered service in the British Army, and in due course joined a battalion of his father's late regiment, the Devonshire Regiment, still as a private, and went to England to be trained in the British infantry drill. He was offered a commission just as his battalion was leaving for France, and, trained in his new duties, he said that he could not leave at that moment, and went to France, where he was killed in the recent fighting. Mr. Skill lived a very retired life. He was a man of great capacity, energy, and courage. He had worked with the Survey for about eighteen years, during which time he was responsible for a very large out-turn of work. His loss will be greatly felt by the Survey and by those who knew him.

Captain Gerard Prideaux Selby, M.B., Royal Army Medical Corps, who was killed in action on September 26, was born in April, 1891, and was the eldest son of Dr. and Mrs. Prideaux George Selby, of Teynham, Kent. He was educated at The Grange, Folkestone, and Winchester and New College, Oxford, and continued his medical studies at St. Bartholomew's Hospital. He was an excellent oar, and rowed for New College in the Torpids in 1910. He served in Bulgaria in a British Red Cross unit during the Turco-Bulgarian war, and in July, 1914, he entered the R.A.M.C. He went to the front attached to the Argyll and Sutherland Highlanders in the following December, and was wounded near Ypres in March, 1915. He returned to the front on September 4 last and was killed on September 26 while attending to wounded at the capture of Thiepval.

In a letter to the *Morning Post*, written from France, Lord Esher announces that General Girodon was killed recently by the explosion of a shell. As a colonel the deceased officer had accompanied Lord Kitchener to Gallipoli when he visited the peninsula for the purpose of judging for himself the prospects of successful evacuation.

We regret to learn that the death occurred, in Cairo, on the 17th ult., of Mrs. M. E. Austin, widow of the late Mr. Meredith Austin, whose death was announced in these columns so recently as August 11.

Second-Lieutenant Walter Rowland Heath, of the Ministry of Education, Cairo, and of the Oxfordshire and Buckinghamshire Light Infantry, who was recently killed in action, was the fourth son of the late Richard Heath, of Yoke House, near Rochester, and of Mrs. Heath, Handford, Herne Bay, says the *Egyptian Gazette*. He was educated at the Royal Naval School and at Hatfield Hall, Durham University, where he was Senior Scholar, and took Honours in Classics and Philosophy. He was a great athlete and swimmer—captain of the Durham football team and of the Fives, and President of the University Boat Club. He was an assistant master for a short time at All Saints, Bloxham, and from 1903 until he joined the Army he was at Cairo in the service of the Education Department of the Egyptian Government. He obtained his commission in July, 1915, and for a time he held a Staff appointment, with temporary captain's rank, as Inspector of Physical Training and Bayonet Drill—work for which his athletic achievements particularly fitted him. He had been only four weeks at the front when he fell in action.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

BLYTH, Captain R. C. P., 1st Gloucestershire Regiment, attd. Egyptian Army. (*Killed in Action.*)
BOLTON, Alfred, Naval Brigade.
BOND, Private H. C., 7th (Reserve) City of London Regt. (*Wounded.*)
BOND, Lieut. Gladwyn J. T., 1/3 West Riding Brigade, R.F.A., Ripon.
BOND, 2nd Lieut. Sidney, Royal Horse Guards, Interpreter, Salonica.
BOND, Corporal R. (41,357), Headquarters Staff, "D" Battery, 79th Brigade, R.F.A., 17th Division, B.E.F., France.
BORRELL, Rifleman Alfred, 7th Service Batt. Rifle Brigade.
BOWMAN, Corporal Henry J. (2424), R.A.M.C., British Mediterranean Expeditionary Force.
BROOKS, Corporal George, 41356, D. Batt., 78th Brig., R.F.A., 17th Div., B.E.F. France (in hospital with fever).
BURN, E. R., 7th Service Batt. Rifle Brigade.
BURNS, Rifleman Edward, 7th Service Batt. Rifle Brigade. (*Accidentally Killed.*)
CASTELL, Rifleman Henry, 7th Service Batt. Rifle Brigade.
CAUCHI, Act. Corporal Henry (6113), 19th Service Battalion, C. Company, Royal Fusiliers, Epsom, Surrey.
CHARNAUD, Lieut. A., R.N.V.R., Acting Interpreter.
CHARNAUD, 2nd Lieut. Fred, Intelligence and Interpreter.
CHARNAUD, Temporary Lieut. Percy, R.N.V.R.
CLEMOW, F. G., M.D., C.M.G., British Red Cross Mission.
CLIFTON, Captain Ernest H., Pioneer Batt., Cornwall Light Infantry, Salisbury.
COLES, Dr. D. A., R.A.M.C. (formerly of the English Hospital, Haifa).
COLLEY, Trooper Isaac E., Royal Horse Guards.
CORBETT, Lieut. H. C., M.D., R.A.M.C.
CRAWFORD, Private James, 7th (Reserve) City of London Regiment.
CROWE, Louis B., Red Cross Motor Ambulance B.E.F., France.
CUMBERBATCH, Lieut A. Noël, 9th East Yorkshire Regiment, Liason Officer, 29th Division, Headquarters, Salonica.
CUMBERBATCH, Captain R. C., 7th Bn., Rifle Brigade, 14th Division, B.E.F., France. (*Wounded.*)
CUMBERBATCH, Lieut. H. D., 6th Bn., The Buffs, 12th Division, B.E.F., France. (*Wounded.*)
CUMING, Sergt. A. C., No. 38,983, Intelligence Corps, 3rd Army Headquarters, B.E.F.
CURSI, Pte. F., 8th Bn., King's Liverpool Regt., B.E.F., France.
DAVIDSON, Bombardier C. T., 266th Battery, 85th Brigade, R.F.A., Colchester.
ELLIOTT, Eric C., 2nd Lieut., Essex Regiment, 11th Battalion.
ELLIOTT, Flight Sub-Lieut. Clifford W., R.N.A.S.
EPPSTEIN, Lieut. W. R., Durham Light Infantry.
FAULKNER, Lieut. M., Admiralty House, Malta.
FREWEN, Rifleman Walter K., London Rifle Brigade.
FROMANT, Private F., Grenadier Guards.
GALLIA, Rifleman M., 7th (S) Batt. Rifle Brigade
GATER, Private E. A., 3/1st E.A. (Res.) Div., Cyclist Coy., Halton Camp East, Bucks.
GATER, Private A. G., 3/1st E.A. Reserve Divisional Cyclist Corps.
GOODACRE, Miss C., Red Cross, Shoreham.
GORDON, 2nd Lieut. Stephen, Intelligence and Interpreter, B.C.E.E.F.
GOUT, Captain Charles L. Gout, 2/4th K.O.Y.L.I., Lark Hill Camp, Camp No. 10, Salisbury Plain.
GOUT, 2nd Lieut. Evelyn, 7th Service Batt. Rifle Brigade, Intelligence and Interpreter, B.C.E.E.F.
GOUT, Rifleman Richard, 7th Service Batt. Rifle Brigade.
GRAVES, Captain Philip, Intelligence Department, Mediterranean Expeditionary Force.
HADKINSON, Rifleman Vivian H., "A" Co., 7th Batt. Rifle Brigade, Queen's El Ward, Bed 40, Graylingwell War Hospital, Chichester. (*Wounded.*)
HARRIS, Trooper H. L., 1st King Edward's Horse, 48th South Midland Division, B.E.F., France
HARTY, 2nd Lieut. George, R.N.V.R. (Special service at Salonika).
HENSMAN, Sergt. R., 3rd Wilts Regt., Littlemoor Camp, Weymouth, Dorset, Interpreter.
HIGGS, Private J., 6th Dragoon Guards.
HILL, 2nd Lieut. Arthur, R.N.V.R. (attached to British Legation, Athens
HOLMES, 2nd Lieut. Gerald H., 2/5th Batt. Leicestershire Regiment.
HOLTON, Corporal Alfred, Royal Naval Division, Divisional Engineers.
HOLTON, Trooper John, B. Squadron, Essex Yeomanry.
IRELAND, 2nd Lieut. D. J., 15th County of London Regiment, Intelligence and Interpreter, B.C.E.E.T.
JACKSON, Cadet E. V., 28th Batt. Royal Fusiliers, King's Park Schools, Edinburgh, N.B.
KERR, Miss E., Q.A.I.M.N.S.R., H.M. No. 13 Stationary Hospital, B.E.F., France.
KEYSER, Captain A. G., 8th Batt. King's Own Yorkshire Light Infantry.
KEYSER, Lieut. R. N., 10th Batt. East Lancashire Regiment.
KEYSER, 2nd Lieut. Henry, 2/10th Batt. Middlesex Regiment.
KEYSER, Lieut. J. C., 2/9th Batt. (D.C.O.) Middlesex Regiment, Intelligence and Interpreter, B.C.E.E.T.
LA FONTAINE, 2nd Lieut. Fred, 7th Service Batt. Rifle Brigade, Interpreter, British Central European Expeditionary Force.
LA FONTAINE, Captain S. Hubert, Intelligence Department, British East Africa Protectorate.
LA FONTAINE, 2nd Lieut. Hugh, 2/7th City of London Regiment, Acting Interpreter, British Central European Expeditionary Force.
LA FONTAINE, Lieut. J. S., R.N.V.R., Hawke Battalion. (*Wounded*), Intelligence and Interpreter, B.C.E.E.T.
LA FONTAINE, 2nd Lieut. E. L., Intelligence and Interpreter, B.C.E.E.T.
LANDER, 2nd Lieut. Arthur.
LE BAILLY, Lieutenant R. F., R.N.V.R., Recruiting Officer for Royal Naval Air Service, Brook Green Road, Hammersmith.
LORIMER, Private D., Army Service Corps, Aldershot.
LYSTER, Lieut. Henry Newbolt, Brigade Intelligence Officer, 81st Infantry Brigade, British Mediterranean Expeditionary Force, Salonika.
LYSTER, Pte. Frederick John, 6129, 5th Co., Inns of Court O.T.C., Berkhamsted, Herts.
MACKENZIE, 1st Lieut. W., Egyptian Labour Corps.
MACKINNON, Dr. John M., Captain, R.A.M.C., 3rd King's African Rifles, Mombasa, British East Africa.
MACKINNON, Dr. Frank I., Captain, R.A.M.C., c/o D.M.S., Malta.
MACKINNON, Lieut. Patrick, 12th Field Co., Royal Engineers, 6th Division, B.E.F.
MACKINNON, Lieut. Eric, 13th Argyll and Sutherland Highlanders.
MACRAY, E. D., Dardanelles Expeditionary Force.
MCLOCHLAN, 2nd Lieut. B., 1st Canadian L.I., Intelligence and Interpreter, Egypt.
MCLOCHLAN, 2nd Lieut. G., 1st Canadian L.I., Intelligence and Interpreter, B.C.E.E.T.
METCALFE, Sister E. J., Queen Alexandra's Imperial Military Nursing Service Reserve.
MICHEU, Bombardier C. G., Royal Field Artillery.
MOORE, Miss K. M., Royal Red Cross, Serbia.
MORRISON, Lieut. J., 4th Seaforth Highlanders, B.E.F., France.
MORTON, Private Stanley, 2nd Sportsman's Battalion.
MOSS, 2nd Lieut., Public Schools Battalion.
MOUNTAIN, 2nd Lieut. Harold G., Royal Engineers.
MUMFORD, P. F., Army Service Corps, R.E., Baldock.
MUNRO, 2nd Lieut. J. G., 4th Scottish Rifles, Fort Matilda, Greenock.
NEWELL, Pte. W. A., Royal Marines, Chatham. (*Wounded at Dardanelles.*)
NOWILL, 2nd Lieut. Sidney, 2/17th City of London Regiment, Acting Interpreter, British Central European Expeditionary Force.
PARKER, Trooper G., Royal Horse Guards.
PATERSON, Captain Alexander, R.A.M.C., 1st Scottish General Hospital, Aberdeen, N.B.
PEACOCK, 2nd Lieut. Frank, 4/4th Batt. London Regiment, Royal Fusiliers.
PEARS, Major G. B., Military Cross, R.E. (*wounded*), now temporarily Chief Instructor (G.S.O.), Royal Military Academy, Woolwich.
PENGELLEY, Sapper Walter, R.E.
PODMORE, Lieut. Arthur, Military Cross, R.E.
POTTER, Very Rev. Archdeacon, Hon. Chaplain Volunteer Training Corps, Godalming Company. (Archdeacon in Cyprus and Syria.)

WHITTALL, 2nd Lieut Roland Interpreter, Mediterranean Expeditionary Force. (*Died from Wounds.*)
WHITTALL, 2nd Lieut. Vernon, Intelligence and Interpreter, British Central European Exp. Force.
WHITTALL, 2nd Lieut. Walter, 7th Service Batt. Rifle Brigade, Interpreter, British Central European Expeditionary Force. (*Wounded.*)
WHITTALL, 2nd Lieut., 6th Batt. King's Own Royal Lancaster Regiment, India Expeditionary Force. (*Seriously wounded.*)
WHITTALL, Miss E. M., Q.A.I.M.N.S., No. 10, Stationary Hospital, British Expeditionary Force.
WILSON, Dr. Marian E., Scottish Women's Hospital, Abbaye Royaumont, France.
WOODS, Harold, Interpreter, Mediterranean Expeditionary Force, Alexandria.
WRATISLAW, Captain J. C., 8th Leicestershire Regiment, 110 Brigade, 37th Division, B.E.F., France.

DOMESTIC ANNOUNCEMENTS

BIRTHS.

CAMPLIN.—On the 30th Sept., at "Winnthorpe," Lee, Kent, Muriel (*née* Woods), the wife of John Camplin, Mamoura, Egypt—a son.

CLAYTON.—On September 28, at Gezira, Cairo, the wife of Brigadier-General G. F. Clayton, C.M.G., of a son.

HARGREAVES.—On September 29, at The Moorlands, Oxton, Birkenhead, the wife of Lieutenant Alfred R. Hargreaves (C.M.S. Hospital, Old Cairo), R.A.M.C., Lancashire Fusiliers, of a son.

MARRIAGE.

BALTAZZI—PALLI.—On September 2, at Athens, Emmanuel Baltazzi, (Reserve Cavalry Officer), son of Mr. and Mrs. George Baltazzi, late Minister of Foreign Affairs, and grandson of the late Prince Nicolas Mavrocordato, to Helen Angeliki Palli, daughter of the late Count Philip Palli and Countess Philip Palli, and granddaughter of the late Sir Walter Burrell, Bart.

DEATH.

SUTER.—On September 23, at King's College Hospital, Denmark Hill, Captain Harry Charles Nelson Suter, of Cairo.

FRIDAY, OCTOBER 6, 1916.

THROUGH THE BALKANS TO GERMANY.

Even the most obdurate and sarcastic opponent of so-called side-shows in this war is beginning to pay considerable attention to the course of events in the Near East. The force of the contention, urged from the very first in these columns, that wherever the final scene in the campaign may be enacted the way to the end lies through the Balkans, is now generally appreciated. The point would have held good, even if Bulgaria and Turkey had not joined the Central Powers; it becomes still more obvious when the Allies have to deal with a block of Powers stretching from Antwerp to Baghdad. If the diplomacy of the Allies had been equal to its task, the blow would have fallen on Germany and Austria from the Balkan States themselves. As things are, the first step now to be accomplished is to divide the Central Powers from their vassals in South-Eastern Europe and to deal piecemeal with the two groups. In some quarters it is suggested that Germany is finding the burden of supporting these vassal States too great for her, and that she will be better off when she has only herself to look after and defend. The theory hinges on conditions which cannot be accurately gauged at present: whether Germany will suffer first and more from a scarcity of material or from a shortage of men. If her man-power shows signs of giving out, while her supply of equipment and munitions is maintained, then Turkey becomes for the Central Alliance the only source of fresh troops. On the other hand, if the strain of the two years of war is being felt in regard to both men and material, only elaborate calculations, for which the German General Staff alone has the necessary data, can decide at what stage it may become advisable for Germany to leave the vassal countries to themselves and to devote the whole of her strength to the defence of her own territory. If such a stage should be reached in the opinion of the German authorities, counsels of despair will have prompted their decision. The Allies need have no anxiety lest by driving a wedge through the Central European Block they may in some way lessen a strain which is telling on Germany. The moral effect of detaching Bulgaria and Turkey from their alliance will be second only to an extensive capture of German territory; an almost certain practical effect will be the shortening of the war by a considerable period. This must have been the conviction of the French General Staff when it insisted on the Allies going to Salonika. The French have consistently urged a vigorous offensive in this region, but have had to submit to delays in the provisioning of the Franco-British force. Now that the offensive has begun, we can only hope that it finds the Allies adequately equipped in every particular for all that is expected of them, and that the move has not merely been prompted by the necessity of supporting Roumania's declaration of war.

In addition to the possibility of divided counsels having delayed the Allies' preparations at Salonika, there is some foundation for the belief that far too much attention has been paid to Greek politics. The military authorities in this matter will have had to seek guidance from diplomacy, and, as there is no reason to suppose that the Allied Governments were better informed regarding conditions in Greece than they were of the real state of affairs in Bulgaria before King Ferdinand threw in his lot with Germany and Austria, the General Staffs must be exonerated, if they decided that an advance was out of the question so long as Greece's attitude remained equivocal. Nothing has happened to invalidate the contention that King Constantine and his pro-German advisers never contemplated an actual state of hostilities with the Allied Powers, provided the latter retained the mastery of the sea. Their sympathies were with the Central Powers, and they were determined to annoy and handicap the Allies as far as they were able to do so with a whole skin; but nothing short of a German occupation of Greece would have overcome their wholesome fear of the Allies' naval power. If the Entente Governments had any ground for supposing that King Constantine was capable of such active treachery as would endanger the safety of the Franco-British force in Macedonia, the right course to have pursued would have been to deprive him once and for all of the opportunity. If they have had no fears that Greek antagonism would be carried to such extremities, then there was no need to distract the attention of the Higher Command at Salonika by visits to Athens and useless audiences of King Constantine. On the same principle it is to be hoped that the recent developments in the political situation in Greece will not be allowed to interfere with the prosecution of the Balkan campaign. Such an elementary proviso becomes necessary in view of the halting counsels that have dogged every action of the Allies in the Near East. If King Constantine is to be allowed to continue to earn Germany's approval, while his advisers earn their German pay, there is no reason why they should not be told that the Entente Powers, which guaranteed Greece independence and constitutional government, will not allow civil war or individual persecution. Such a step will facilitate the task of the National Safety movement, and will allow patriotic Greeks to play their part in the liberation of their country from the Bulgarian occupation.

If the Allies are to be in a position to put forth their maximum effort against Germany and Austria-Hungary in the spring, it is essential that they should detach the Balkan henchmen of those two Powers before the end of the year. Late as the Salonika offensive was in starting, there is still time, if the preparations have been adequate, for a decisive campaign during the next few months. For this purpose Bulgaria will have to be attacked with the utmost vigour from two sides, by the Roumanians and Russians from the north and east, by the Allied army from the south-west. The thrust along the Greek frontier is being prosecuted, as far as can be gathered, strenuously and systematically. There must be checks in some places, and it will not be overlooked that the Bulgarians have had many months in which to consolidate their positions. It is, however, to the north that the Allies will look for the more telling blows on the enemy. Profiting by Roumania's unpreparedness south of the Danube, von Mackensen launched a sudden attack on the Dobruja, which carried him from seventy to ninety miles into Roumanian territory. He failed, however, to reach his objective, the Constantza railway, and has been unable to improve upon the initial advantage which the fall of Tutrakan and Silistria gave him. In the meantime, the Roumanians held on their way in the Carpathians. They have experienced two more or less serious set-backs on the left of their line of advance, but have shown remarkable powers of recovery which have so far robbed the enemy of the fruits of his victories. In spite of the pressure which the Austro-German forces in the Carpathians and the Bulgarians in the Dobruja seemed capable of exerting, the Roumanian Commander-in-Chief has boldly thrown a force across the Danube between Rustchuk and the Dobruja frontier, threatening the communications of the enemy on Roumanian soil. It is too early to form any opinion of the effects of this move, although it is already reported that Tutrakan and Silistria have been abandoned. Not the least important aspect of the situation is the clear indication that the Allied forces in the north are not hesitating to adopt a vigorous policy, which, if adequately seconded in the south, augurs well for a rapid and successful campaign in the Balkans.

THE FUTURE OF MESOPOTAMIA.

By Sir William Willcocks, K.C.M.G.

We now come to the Tigris.* So far I have estimated for and recommended the same dykes and canals which the ancients employed on the right bank of the river; but they are only makeshifts, and I have said so. The project for the control of the Tigris could not be completed by my engineers in the two and a-half years we were there, as the depression into which the excess floods were to be escaped was at that time debateable ground between the Shammâr and Dillêm Arabs, and we were never able to survey it properly. We were only able to learn that the tail of the Tarthar River is a salt pan 14 ft. below sea level and 200 ft. lower than the flood level of the Tigris 32 miles away. The size of the depression has still to be studied. Though the Arabs did not allow us to finish our surveys of the Tarthar depression, they allowed me to accompany them on two rides over country lying between the Euphrates and the Tigris. With the knowledge so gained, aided by borings in the gypsum and salted marl, an examination of the exposed bluffs on the Tigris, levels carried from the Tigris quite far enough on the level plain on its right bank, and a line of levels from the Euphrates to the Tarthar, I have been enabled to make a preliminary, though necessarily rough, estimate of the cost of the Tigris escape. The escape will leave the Tigris nearly opposite the old El-Gaim head of the Nahrwan canal, lead direct to the tail of the Tarthar, and from there proceed to the Euphrates down the wadi which opens on to the river opposite the ruined site of Trajan's throne. Here a barrage will be built across the Euphrates, and the Habbania escape will have its section trebled in order to take both the escape water of the Euphrates and the Tigris.

If the Tarthar depression, whose bottom is 200 ft. below the flood level of the Tigris at the head of the escape 32 miles away, is conveniently capacious, we should have a reservoir, in addition to that of Abu-Dibis, of very great value indeed; for it would feed the Euphrates above both the Feluja and Hindia barrages, and provide irrigation for the whole country from the latitude of Baghdad to that of Babylon. It would, moreover, allow of supplies being sent from the Euphrates down the Saklawia to the Tigris near Baghdad in low supply. I have often longed for the day when the war will be over and I shall be able to hurry to the Median Wall and wrest all its secrets from the mysterious Tarthar.

With the Euphrates and Tigris floods both really controlled, the delta of the two rivers would attain a fertility of which history has no record; and we should see men coming from the West as well as from the East, and making of the plain of Shinar a rival of the land of Egypt. The flaming swords of inundation and drought would have been taken out of the hands of the offended Seraphim, and the Garden of Eden would have again been planted.

In less poetical language we might say that the value of every acre in the joint delta of the two rivers would be immediately trebled before the irrigation works were carried out, and again increased many fold more the day the works were completed. Every town and hamlet in the valley from Baghdad and Busreh would find itself freed from the danger, expense and intolerable nuisance of flooding, and the resurrection of this ancient land would have become an accomplished fact. The Baghdad railway between Baghdad and the Persian Gulf would be taken through the middle of the cultivable land, now freed from the dread of Noah's floods; and not through hopeless deserts as at present. Imagine for a single instant the Cairo-Alexandria Railway, not passing through Tanta and Damanhour, but by the Pyramids, the Natron Lake, and the south-western shore of Lake Mareotis, because the Nile floods could not be faced!

For reclaiming the most conveniently situated sections of the millions of acres of fresh water swamp upstream of Busreh the proposed works will follow the lines of those executed by Marduk, the greatest of the Babylonian deities:—

> "Flowing wide like a sea was the river,
> When Yeh-ridu was made, when Yeh-Sagil was built,
> Yeh-Sagil, in the midst of the fresh water deep,
> Where the God of the glorious abode dwells.
> Marduk laid reeds in the face of the waters,
> He piled up earthen banks sheltered by the reeds,
> That he might cause the gods to dwell in the place of their hearts' desire.

Marduk achieved the reclamation of the swamps by dividing the lands under water into basins or compartments, surrounding them by dykes protected by reeds and rushwood, drying the enclosed areas, and then planting them with date palms and fruit trees. Such reclaimed areas are to-day veritable Gardens of Eden. It is worthy of remark that the only original reclamation work the Arabs carried out in the delta was an exact copy of this. In the days that Kufa, Wasit and Busreh were the capitals of the Moslem world, before the rise of Baghdad, the energetic Emir Hajjaj of Busreh reclaimed some 50,000 acres in the marshes between Kurnah and Busreh and converted them into one of the four earthly paradises of the Arabs. The ground was a green carpet of lucerne, out of which rose stately palm trees, sheltering the gardens from the fierce heat of summer and the severe cold of winter; while from date-palm to date-palm were festooned luxuriant vines from which hung purple grapes. It is proposed to divide the area to be reclaimed into compartments or basins of 12,000 acres apiece. With good drains and pumps we should be able to bring back the Gardens of Eden of the sons of Sumer and Akkad, by irrigating through the dykes surrounding the basins. This was the really primitive irrigation of the Euphrates valley. The inland sea, which covers an area of nearly three million acres in flood, is only 3 ft. deep, and less than 3 ft., over nearly its whole surface, and the water is absolutely fresh. The delta of the Karun River, which stretches eastwards from Busreh, and through which the overflow of the Tigris and Euphrates cuts its way by the Shat-el-Arab, excludes all sea water. The extent of the area which will be capable of being irrigated after it is dried will depend on the capacity of the reservoirs; but a beginning could be made immediately with 12,000 acres.

For the irrigation and drainage of the three million acres of land which are ready for development, two barrages have been proposed on the Euphrates and two on the Tigris, with canals, drains, escapes and subsidiary works. The Tigris and Euphrates floods are not gradual, like those on the Nile, but consist of a series of rapid rises and falls. The water during an abrupt rise is fully five times as turbid as that of the Nile when it is at its muddiest. To combat the turbidity of the rivers, regulating heads of a special design have been proposed, and provision has been made for keeping flood irrigation separate from that in summer. The escapes into the deserts have been designed not only to control the floods, but also to remove these rapid rises and falls and make the curves gradual like those on the Nile, so that the very muddy intervals might be eliminated and the regulating heads might be utilised for the purpose for which they were designed. With the aid of escapes and specially designed canal heads we hope to avoid excessive maintenance charges for silt clearances.

Alexander's historians give us an idea of the gigantic task of canal clearance in ancient Babylonia, and we know that both the Assyrian and Babylonian monarchs filled their country with captives from foreign lands, who had to spend their lives clearing silt from the waters of Babylon, by which they often sat down and wept. The success of our undertakings will depend in no small measure on the skill with which we keep our canals free of undue silt deposits.

For the Euphrates I designed two barrages, one at the head of the Hindia branch, which has been built, and the other downstream of Feluja. I am glad, indeed, that this latter work, the most important in Babylonia, has not yet been built, because, in studying the projects again and again during the last five years, I have, I think, found a far better site than the one proposed by me after the first two and a-half years' study. Upstream of Feluja, near the earthen dam which shuts off the Sakhlawia branch, is an outcrop of limestone (not gypsum) in the bed of the Euphrates. I say of limestone because it is visible at very low water like a diminutive cataract. This limestone will be of the same nature as the outcrop of limestone in the bed of the Sakhlawia branch, under the Tel Sefera ruins just opposite it; and on it should be built the Feluja barrage and the heads of the Sakhlawia branch and the left Euphrates canal It will be the only solid foundation I shall have seen in the whole of Babylonia. This is another site I shall carefully examine the day the war is at an end. Upstream of the Hindia barrage, I should throw back considerably the left bank of the Euphrates until the river was made to come straight on the barrage, at right angles. The pitching downstream of the work should also be lengthened by 150 ft. In designing this work I practised too much economy, passing even the limit imposed by the low state of the Turkish finances. With these two changes the other works proposed for the Euphrates might be carried out as designed, remembering that everything was designed for a really poor country and not for a rich, gouty country like Egypt.

On the Tigris, the Beled barrage should be moved up some four miles to allow of the proposed Tigris escape taking off from just above it. To obtain the extra height of water needed here I should redesign the work on the pattern of the Bow River dam at Bassano, in Canada. This design would suit admirably the shingle foundation on this reach of the Tigris, though I personally consider it unsuited to the Bow River at Bassano. The floor, however, should be made 10 ft.

* The first portion of this article appeared in THE NEAR EAST of September 29.—[ED.]

Digitized by Google

thick and the belt of pitching be increased by 250 ft. At the site of the Kut barrage we were singularly unfortunate in finding stiff clay soil for a foundation. The Turkish trenches, which are reported to have been quite dry through the flood, show that good stiff soil is to be found in the neighbourhood down to the depth of the trenches. The day the resurrection of Babylonia is contemplated a continuous series of borings should be instituted at all the sites near Kut where a barrage could be built in the dry. To this work as designed should be added the extra floor added to the Hindia barrage and the extra pitching proposed.

I cannot leave the question of the works needed in Mesopotamia without mentioning the fact that so far we have made no bricks of the quality of the millions of bricks found everywhere stamped with the name of Nebuchadnezzar, son of Nabopalassar. The soil of Babylonia, as a rule, contains a fair proportion of salt, which causes a white efflorescence on the surface of the bricks and is a source of decay. Nebuchadnezzar's bricks have none of this efflorescence as a rule. Since leaving the country I have thought that in his time the soil must have been well washed by his brick makers and freed of its salt before the bricks were made, for all the salts in Babylonia are soluble in water. This might certainly be tried to-day before any further bricks are manufactured. In addition to the bricks there are local sources of lime, shingle and sand, but the expeditious reconstruction of this ancient country will be achieved in very great part by the essentially modern products of cement, iron pipes, dredgers, and steel piles.

The salts in the soil are all very readily soluble in water, and as there is an abundance of lime the work of washing out the salts and reclaiming the land will be easy indeed, as can be seen wherever reclamation works are attempted. The richest part of the country will lie between Baghdad, Ctesiphon, Feluja, and Mussaib. Ardeshir Babagan was the richest province in the days of the Sassanian kings, and will be so again. When the first three million acres are under cultivation they will be worth £150,000,000 as agricultural land, in addition to all the other wealth produced by human industry and enterprise. The later addition of a second three million acres will bring the value of the agricultural land to £300,000. The foundation on which will be raised all this wealth will be the construction of the escapes and reservoirs for the excess waters of the floods of the two rivers. I have estimated these as follows:—

The Tigris escape and reservoirs	£22,000,000
The Euphrates escape and reservoirs	2,000,000
Total.....	£24,000,000

If the Tarthar depression has a surface so extensive that it could suffice by itself as an escape for the Tigris, we should lose the Tigris reservoir, and the cost of the escape by itself would fall to £12,000,000. In which case the escapes of the Tigris and Euphrates and the Euphrates reservoir would cost £14,000,000. The Tigris water for reservoir purposes is, however, well worth £10,000,000.

No serious people really contemplating the resurrection of Babylonia would hesitate for a second to carry out both these works simultaneously. Given these two escapes in proper working order, every public work in the valley, be it a railway, a canal, a road, a building, or a garden, would be insured. Egypt could be insured against an inundation by works which would cost under £8,000,000, but inundations come seldom in the Nile valley, and the Government has, most unwisely, I think, refused so far to insure itself. In the Euphrates valley, however, inundations are the rule, and not the exception, as they are in Egypt, and any attempt at reclamation without insurance against floods would result in the country drifting some day into the seventh chapter of Genesis.

In my book on "The Irrigation of Mesopotamia" (E. and F. N. Spon, 57, Haymarket) the cost of the irrigation and agricultural works has been estimated at £5 and £4 per acre respectively. We can now estimate the cost of reclaiming three million and six million acres of land:—

Cost of reclaiming 3,000,000 acres—	
Escapes and reservoirs	£24,000,000
Irrigation works at £5.....	15,000,000
Agricultural works at £4	12,000,000
Total.....	£51,000,000

or £17 per acre.

Cost of reclaiming 6,000,000 acres—	
Escapes and reservoirs	£24,000,000
Irrigation works at £5	30,000,000
Agricultural works at £4	24,000,000
Total.....	£78,000,000

or £13 per acre.

Such land when reclaimed will be worth £50 per acre.

The power which undertakes the restoration of the delta of the Euphrates and Tigris must have absolute control of the Euphrates from Hitt, and the Tigris from Samarra, to the Persian Gulf; and to these must be added the lower course of the Tarthar depression lying between the two rivers up to the northern limit of a contour 200 ft. above the level of the sea. In addition, there should be some understanding with the owners of upper Mesopotamia as to the division of the low supplies of the two rivers between the two sections. As in ancient days, the fortified right bank of the Nahrwan canal, the wall of Semiramis, and the Median Wall protected Babylonia from surprise attacks of the Assyrians and Medians, so to-day a line of trenches running from Hitt to Samara, and carried well out into the deserts on the left bank of the Tigris and the right bank of the Euphrates, will afford similar protection. But more essential even than barbed wire and machine guns will be the construction of the works for controlling the floods and storing their waters for the burning months of July, August, and September, when the rivers will be at their lowest.

GREEKS IN BRITAIN.

SUPPORT FOR M. VENIZELOS.

Last Saturday afternoon members of the Greek community in London assembled in the crypt of the Greek Church, Bayswater, to consider the political situation in Greece. Delegates from the Greek colonies in Liverpool, Manchester, Cardiff, and other towns were present, and the meeting was marked by much enthusiasm.

The Chairman, M. N. Eumorfopoulos, said that the Greeks living in England were called together to consider what their attitude should be towards the situation created in Greece during these last few months, and what measures they should take to help to extricate the Mother Country from the ruin by which she is threatened. He recommended calmness and restraint to the speakers and avoidance of any personal attacks.

M. Alexander Pallis, the delegate from Liverpool, said that if the recommendation of the Chairman was to be literally followed there would be little scope for the assembly. The first words that M. Pallis uttered were defiant and full of patriotic ardour and revolutionary spirit. It was the duty of every Greek, he said, in circumstances like the present to be straightforward. Whatever was done, there should be no address to King Constantine, who betrayed the interests of Greece and who treated with contempt all addresses sent to him, no matter how loyal and respectful they were. The history of King Constantine during the last two years consisted of systematic opposition to all the wishes expressed by the majority of his subjects in regard to the best means of serving the national interests. When his loyal and patriotic subjects asked anything that did not suit him he pretended to be ill and to be unable to speak; but when his followers, who were betraying the interests of Greece, came forward he at once got well, and found time to receive them and to address them in very warm terms. When the proposal to acquire a great part of Asia Minor was put before him by M. Venizelos, he induced the General Staff to say that that was a Colonial question, unworthy of a war. He treated the millions of unredeemed Greeks in Asia Minor, who formed an indissoluble part of the nation, as if they were Hottentots. He delivered fortresses and war material, bought by the blood of the Greek people, to their worst enemy. He ordered a general mobilisation in order to tie the hands of the people and follow a policy that was agreeable to Germany and useful to Bulgaria and Turkey, but ruinous to Greece and harmful to the Entente Powers, which he always despised and insulted. He corrupted the Army by offering to the officers double pay, so as to make of them an easy tool. He gathered round him and put the Government of the country in the hands of politicians who were discredited, and were ruling by corruption and terror. Why was all this done? There must be either ignorance and imbecility or treason. The delivery of forts and ammunition in Macedonia had been practically a war indemnity to Bulgaria of about £8,000,000. Why had the King done this? It seemed as if the King at some time or other had engaged to help the Germans: his conduct could not otherwise be accounted for. He called around him all the discredited politicians of Greece to administer affairs and they had terrorized the country. They should not address the King at all! What they had to say should be addressed to M. Venizelos direct.

Mr. Casdagli, the Manchester delegate, approved the idea of not addressing the King; it would be much better to address M. Venizelos. If they addressed the King they would simply be called knaves by the German Press.

Dr. Pagonis, the Great Archimandrite of the Greek Church in London, said he put aside his priest's robes and spoke as a Greek patriot who had followed with a sore heart events in Greece during the past months. The policy followed by the different Governments appointed by the King was not a national policy; it had been dictated by hatred of M. Venizelos and short-sighted attempts to rule by force and terror. Unfortunately the King instead of putting himself at the head of his army, leading Greece to further glory and carrying out the aspirations of her people, had followed his own ideas and personal inclinations and had delivered Macedonia to the bitterest enemy of Greece. The King had given proofs that he was not guided by love of his country, and Greece was at a loss to understand his personal policy. The fact that patriots like M. Venizelos and Admiral Coundouriotis, who were universally loved and respected by the Greeks, had to leave Athens and put themselves at the head of the national movement in Macedonia proved that there was something radically wrong in the policy of the King, and this fact alone was sufficient to make every Greek think that there was no more room for hesitation as to who was wrong and who was right. He thought that there was no more time for words.

Digitized by Google

but for deeds, and as financial means were indispensable for carrying out any action, he would recommend the immediate opening of a fund.

A resolution was submitted in the form of a telegram to M. Venizelos as follows:—"This meeting representing all sections of Greek colonists in Great Britain congratulates you and Admiral Coundouriotis upon the action you are taking to uphold the honour of Greece, to protect her territorial possessions, and to assure the future of Hellenism. It urges you to proceed towards your goal without reference to any other authority, and assures you of every support." The resolution was carried by acclamation with only two dissentients, and a committee of five was appointed to raise funds and enrol volunteers.

Colonel Mavromichalis, who has offered to lead the volunteers, has issued the following appeal:—

"Dear Compatriots,—Our country is in danger! Definite action is necessary if we are either to save the present or to safeguard the future. I have therefore decided to take the initiative and invite all Greeks able to fight to follow me. I will presently make the same appeal to other Greek communities so as to be able to put as large a force as possible at the disposal of the Provisional Government.

"I am leaving for Paris (21, rue Cambon) next Wednesday, and will wait in Paris for your arrival so that we may leave together. Those who are in a position to afford their own expenses should be provided with the necessary sum for this purpose.

K. P. Mavromichalis, Lt.-Col.

Regent Palace Hotel.

THE PRESS ON THE NEAR EAST.

The Roumanian Spirit—

Last Saturday's *Morning Post* contained an article, "Roumania and the Roumanians," written by Mme. Marie Jonescu, who begins by declaring that the Roumanians are proud to call themselves Latins, and that their claim to the title is justified by the whole history of their past. The habits and customs characteristic of the Roman Empire have, she says, been preserved in Roumania as in no other country.

The women in our villages still wail over their dead, and attach to the finger of the corpse a small coin to facilitate his passage across the Styx. Our National Dance, the Calusaré, is a reproduction of the Rape of the Sabines, while our country fêtes organised to invoke rain are identical with the Pagan festivals instituted in ancient Rome for the same purpose. Again, in many parts of Roumania, the peasants wear sandals of forged iron, which are exactly similar to those exhibited in the "Musée de Cluny" in Paris, and the Pipes of Pan, sculptured upon so many Roman and Gallo-Roman monuments, remain the favourite musical instrument of rustic Roumania. Our language, derived from the low Latin of the Imperial era, contains, according to many philologists, expressions and phrases reminiscent of that time, such as no other neo-Latin language possesses. Apart from these relics of our ancestral civilisation, the excavations undertaken in many parts of the country have furnished abundant and irrefutable proofs of our Latin origin.

—And the Roumanian Woman.

Turing to the Roumanian woman of to-day and her attitude towards the war, Mme. Jonescu says that it is she who has kept alight the fire of patriotism which animates her husband and her sons.

It is she who still wears the national costume of our people, woven and embroidered by her own deft hands. Three only she provides for her whole life's journey, the dress for her bridal, the dress for her wifehood, and the last dress of all, and packs them in her marriage chest of painted wood. They are gorgeous garments, each composed of a blouse glittering with sequins, a transparent veil such as the Roman matrons wore, and a petticoat differing in style and colour according to the district she inhabits, but invariably garnished with heavy embroidery in silver and gold.

Married at fifteen or sixteen, and frequently abducted by the man whose wife she is destined to become, the Roumanian peasant woman generally remains sincerely attached to her captor. She shares his work in the fields and joyfully bears him numerous children, for in Roumania only fruitful unions are blessed by God. In her old age her influence in the family is preponderating, besides which she enjoys the respect and confidence of the whole village. . . . In all and every season one may meet her working placidly by her husband's side, robust and graceful in the rich robe which she wears without a trace of coquetry. . . . After the day's work is over she will take out her simple loom, which still bears the name "rezboin," signifying war, and recites while she spins the simple prayer of an unassailable faith in divine protection. To-day she prays with more than usual fervour, for she is alone with her children waiting on the fortune of war. If their father returns, well, if not—it is also well, for she knows he will die for his country in 1916 as bravely as his grandfather died in 1879, of glorious memory.

Turks and "Frightfulness."

Sir Edwin Pears contributes to the current *Contemporary Review* a valuable article, "The Balkan States and Turkey." Lack of space prevents our quoting at any length from it this week, but we hope to return to it in our next number. Meanwhile, we would call the attention of some of our correspondents to the following passage, which lends strong support to views expressed in The Near East:—

In the disastrous Dardanelles Expedition, after some ugly experiences in which our Australian troops had to give a lesson to some of the Turkish officers, the Turks have been found what men in khaki call "clean fighters." I have spoken to at least a score of men who took part in that expedition and all tell the same tale. The "frightfulness" which characterises warfare by the Germans, and especially at the beginning of this contest, was not appreciated by the Turks, either in the Dardanelles or throughout the country, except in Armenia. In the latter country the stories are terrible of the slaughter of thousands of Armenians by Turks under German officers. It is a hideous statement to have to make, but it seems to be justified by the evidence, that the worst outrages in Armenia were committed under the leadership of so-called Christians. One must wait for further evidence before finally deciding on this matter, but the Turkish treatment of General Townshend and of the other officers who were captured in the Kut-el-Amara expedition points again to the fact that the Turks have shown themselves "clean fighters" there also. We have yet to hear how the rank and file in that expedition were treated.

Ugly stories come from Syria as to the treatment of the Christians, and even the European population, but none of them are worse than those of the treatment of British prisoners in Germany.

Our Bulgarian Opponents.

The following passage is taken from an article contributed to *The Times* on Monday by its Military Correspondent, and headed "Autumn War." The writer has just referred to the question of the number and quality of the reinforcements that may be sent to Mackensen. He continues:

This depends a good deal upon the attitude of the Main or Southern Bulgarian Army, which stands in a wide semi-circle round Sarrail's Army at Salonika. The Bulgars are an elementary people full of the spirit of acquisitiveness, and as they entered into the war mainly to regain Macedonia, so they are likely to cling to it and let strategy go hang. They have eight divisions in position on the Greek frontier, and the Bulgarian division is roughly double the strength of ours. They are concreted-in on every line of advance open to Sarrail, and on the side of Monastir they now have half their force. They have successive positions and plenty of barbed wire. They are well armed and know how to attack. Though considerably weaker than the strangely composed Allied Army in their front, they profit by the difficulties of the country, the absence of roads, and the poverty of the district—conditions which render the advance of the Allied Army, and its supply with food and ammunition, immensely difficult.

"The Curse of the Balkans."

In the course of an article, "The Distraction of Greece," the *Nation* (September 30) says:—

The hopeless division which has now overtaken Greek politics is not for this unlucky race a new experience. For nearly half a century after the creation of the little kingdom, its parties had for their dividing line the sympathy which each felt for one or other of the "protecting Powers." There was a Russian party, a British party, and a French party, and the three struggled and intrigued with little sense of the dignity of an independent kingdom. In some degree this has been the fate of all the Balkan States. Serbia, up to the extinction of the Obrenovitch dynasty, was torn between her Austrian and Russian factions. Bulgaria had always (and may even now still have) both her pro-Russian and her anti-Russian parties. The rivalry of the Powers has been a curse of the Balkans second only to its alternative, the ascendency of the Turks. It is natural that Greece, a poor country with an exposed coast, suffered from these factions even more severely than her fellows. The feud of pro-Germans and pro-Ententists which divides her to-day is partly a natural continuation of this habit and partly the result of a purely personal quarrel, in which all the little chieftains of groups and factions and parties who were jealous of M. Venizelos, united with a headstrong and self-willed king, to oppose him.

Later on we are told that "the cleanest solution would certainly be the proclamation of a republic."

That was what the Greek nation did when it had had too much of its mad Bavarian King Otho. On that occasion the "protecting Powers" persuaded it to adopt, as an alternative, constitutional monarchy, and its disappointment was soothed by the gift of Corfu. The experiment has been only moderately satisfactory, though no one can feel sure that a republic would have worked better. Certainly, if a republic could be attained simultaneously in Athens and Sofia, the hope of some eventual

Balkan unity might revive. Its kings have been the curse of the peninsula—but one is tempted to use that expression of each evil in turn. It has had so many curses.

Statesman and Sovereign.

In an article headed "M. Venizelos and King Constantine," the *Spectator* (September 30) discusses the possible developments that may arise from the former's "memorable act in placing himself at the head of the Greek movement to secure the intervention of Greece on the side of the Allies." The hour has passed, says the writer, when Greece's action could make an appreciable difference to us one way or the other; but for Greece itself everything is at stake.

If she follows M. Venizelos now, she may be saved; if she tries to trick and flout her true friends among the Powers, it is impossible to say what penalties she may be bringing on herself through her own action and not through any desire on the part of the Allies to punish her.

After reviewing M. Venizelos' statement regarding his past action and his plans for the future, the *Spectator* turns to King Constantine:—

It is pitiful to reflect on the opportunities King Constantine has missed. One is almost inclined to believe the story that he promised his brother-in-law, the German Emperor, that the Greeks should never take up arms against the Central Powers. The story at all events fits in with the known facts and accounts for them. But if the King made any such promise he committed there and then a flagrantly unconstitutional act. The Treaty under which Greece was created an independent kingdom stipulates that the government of the country shall be Constitutional. The Greeks themselves had asked for a system like that of Britain. Even if M. Venizelos when in office had not invited the Allies to Salonika, the interference of the Protecting Powers of Greece—Britain, France, and Russia—would have been justified by the refusal of the King to govern constitutionally.

The writer then shows how—and why—at the beginning of the present war King Constantine was at the head of a devoted nation. He proceeds:—

The story of how that position has crumbled away under his own hands is also the story of M. Venizelos's revolt. The King had only to say to his arrogant brother-in-law: "I am by law a Constitutional monarch. I have no power and no duty but to carry out the will of my people. It would be hateful to me personally to fight against your troops. If I can use any influence to prevent my country going to war with you, I will do so. But if, in spite of all, my country insists on siding with the Entente, you must remember that I am only the head of a crowned republic." Neither the German Emperor nor the Entente Powers could have reasonably objected to such a policy as that. It would have been a bare statement of the facts. But the King preferred throughout to play with the Allies. His present Cabinet is largely composed of pro-Germans, and yet rumours, intended to mislead, are spread about that this Cabinet intends to intervene before long in the war against Germany. M. Venizelos knows the value of these hints, and means to be played with no longer. . . .

There is still one more opportunity which has been specially created for the King by M. Venizelos. The King could say with all truth and sincerity to the Kaiser: "I have tried to remain neutral—I have tried even at the cost of breaking the ancient pledges of my House to the Protecting Powers. I have resorted to every sort of temporizing expedient in the hope that you would make neutrality easier for me. Now you see the result. You cannot help me. On the contrary, your allies, the Bulgarians, have overrun Greek Macedonia. My provinces are being taken from me. My people are turning against me. I can continue your policy no longer. I shall send for M. Venizelos, who has saved both the country and the dynasty before and can save them again. But this time I shall act, without a thought of looking back, as a Sovereign whose decisions are formed for him by his Ministers." After all the follies of Greek policy it seems too good that this should happen. But M. Venizelos is attempting nothing less. We shall all watch his efforts for the sake of Greece with genuine concern and sympathy, and a devout wish that he may succeed.

"A Sedan Not Realised."

Commenting upon the fighting at Hermannstadt, the Military Correspondent of the *Morning Post* (October 3), in a paragraph headed as above, writes:—

The enemy naturally make the most of their success, and Berlin and Vienna greet Falkenhayn's *début* as an independent commander with quite a flourish of official trumpets. It may readily be credited that, in the conditions under which the engagement was fought, a considerable quantity of material was captured—in relation to the size of the Roumanian force which was engaged—but it is fairly evident that Falkenhayn hoped to reproduce a miniature Sedan by isolating and capturing the whole Roumanian force, and in this attempt he failed completely. Our Allies—so Bucharest tells us—repulsed the enemy's attack from the south and re-established their line of communication. The story told by Berlin and Vienna of their disordered flight into the mountains on both sides of the pass does not seem to agree very well with the later reports of renewed fighting in the neighbourhood of Tzainani, which lies five miles south of the frontier. It is also noticeable that Vienna, which usually issues a mere slavish repetition of the German *communiqués*, is not quite in agreement with the latter on this occasion; for, evidently with the object of making light of the fighting in this quarter, it refers to the Roumanian force as "detachments," while Berlin speaks of "strong Roumanian attacks."

More German Indiscretions.

Examining "The German Chancellor's Speech" in a leading article on Saturday, *The Times* observes:—

The extreme virulence of his denunciations against Roumania and against her Hohenzollern King is hardly politic. It is the measure of Germany's alarm at the accession of that State to the Alliance, and also, no doubt, of the efforts which she will make to crush so dangerous a foe. We may safely leave King Ferdinand and M. Bratiano to repel the Chancellor's charges, but we cannot refrain from expressing wonder at Herr von Bethmann Hollweg's indiscretion in enlarging upon the degradation of "the political conditions in which Ministerial words and Royal words have no value." Has he forgotten his own express assurances to Belgium in 1911, or those of Herr von Jagow in 1913, or those of the German Minister at Brussels only a few hours before the German troops, with Herr von Bethman Hollweg's approval, began to "hack their way through"? Has he forgotten his description of neutrality as "just a word" and of treaties to which his Government had sworn as "scraps of paper"? Has he forgotten that Germany is the Ally and patron of the double-dyed Royal traitor and perjurer Ferdinand of Bulgaria? The allegation that Roumania was always influenced by the military situation is another indiscretion. . . . These blunders proceed from anger, and Germany's anger should remind the Allies how urgent is the duty of succouring their new partner by all means in their power.

The Persian Climate.

We hear so little of Persia nowadays that almost any article on that country is sure to interest a large number of readers. The October *Blackwood* contains, among quite a number of articles on Near Eastern subjects, one entitled "On the Fringe of the World War," which describes in some detail the events that led to the departure of the British and Russian communities from Ispahan in May of last year, and the hardships our countrymen encountered on the tragic journey southwards. It would not be possible to give any idea of these adventures by quoting from the article, and the events that led up to them are familiar, in outline at least, to our readers. Here, however, is a pleasing note upon the Persian climate:—

So unvarying is the Persian climate that the native divides his year into a series of forty days, and prophesies the weather pretty accurately. The Chehilhum bozurg (or forty days of greatest heat) is followed by Chehilhum kurcheck, or forty days of lesser heat, when the thermometer descends slightly. Then the cool forty days come, when there is a notable change of temperature. This goes on until the descent to the winter solstice, when the Chehilhum bozurg of greatest cold sets in.

Rain and snow, too, are timed to fall at a certain date, which is seldom far out, and even the winds seem to obey a regular behest. The gentle rushing sound which can be heard in the distance, as one treads the path in the still garden at springtime, is the voice of the zephyr which will presently sway every branch, whispering to each bud that it is time to awake. A marvellous change indeed follows as the buds respond to the wooing. Almond, peach, plum, and cherry, apricot and pear, clothe themselves in gaudy array ready for their bridal. "The wind that opens the bud" has indeed accomplished its work with splendour?

Articles to Note.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Banque Franco-Serbe will open its London branch to-morrow. I was able to forecast this important development in Balkan financial interests in London three or four weeks ago; the newcomer into our banking circles will receive a warm welcome in the City, for sympathetic no less than for political and commercial considerations. A special article dealing with Serbia will appear next week.

***

The correspondent of THE NEAR EAST in Cairo calls attention once more to the crisis caused in Egypt by the shortage of fuel. The price of coal is prohibitive, owing to the difficulty in obtaining ships and the consequent freight problem. The matter has been dealt with in this journal so frequently that there is little more to be said. Meanwhile, experiments are being made in other directions—my reference to the suggested use of certain agricultural products will be recalled—and the result of these will be awaited with interest.

***

At the industrial exhibition held recently in Alexandria—the receipt of an interesting little history of which I have to acknowledge, by the way—there were shown some briquettes made from waste, or practically waste, agricultural products, and the claim was made that this fuel could be made to take the place of coal. The claims were based upon the results of certain experiments, and I cannot imagine that the go-ahead and careful people who organised the exhibition would allow themselves to be led astray in so important a matter. Meanwhile, the authorities are taking the matter up, and I understand that not a little hope is entertained that a sound substitute will be found for the fuel the supply of which has been reduced so severely.

***

I wish I had the time and the space to devote to the British Chamber of Commerce in Egypt in proportion to its merit; unfortunately, I have not, but I am able to invite attention to the work the Chamber is doing in assisting British firms in Egypt to avail themselves of the many openings of trade resulting from the exclusion of enemy traders. The Chamber has formed special committees in Cairo and Alexandria, and in the September issue of the *Journal* is set out a great mass of information which I should advise British houses to make themselves familiar with. The most valuable details are given regarding imports into the country of textiles, hosiery, machinery, iron, and steel, hardware of all kinds, glass, and, indeed, everything else in which there is a market. It is obvious that the greatest care has been taken to make the list complete and useful, and I can say no more than that success has been fully achieved.

***

Another section deals with the vexed question of the appointment of agents, the advantage of personal visits, the character of travellers who are sent to look for trade, the facilities which these are likely to be afforded, and so on. Still another section refers to the extent to which the parcels post may be used by traders, the cash-on-delivery system, banking facilities, etc. Altogether, the September issue of the *Journal* is a *vade mecum* for British business men who aspire to an extension of trade interests. Another point is that membership of the Chamber carries the privilege and benefit of being able to draw upon its considerable stock of confidential information, which may not be obtained elsewhere.

***

A Cairo friend writes to point out, in reference to the question of trade openings in Egypt, that it would be possible for several firms, representing different trade interests, to combine in the appointment of a special commissioner. This gentleman, who would presumably have a previous knowledge of the country to assist him, would go out upon a tour of investigation, spending several months studying the conditions of trade in general and of his principals' markets in particular. When the cost of his journey is divided the contributing firms ought to be able to secure a good deal of valuable information at a very reasonable cost, and I have pleasure in passing the suggestion on. The Chamber of Commerce would, I have no doubt, be happy to co-operate in such a mission.

***

Some interest attaches to the advertisement inviting offers for the purchase of the large plot of land at Port Said facing the public gardens and the harbour, which belonged to the Deutsches Kohlen-Depôt G.M.B.H., now, of course, in liquidation. This firm before the war supplied coal to German ships passing through the Canal.

***

Relations between Bulgaria and her "protectors"—"proprietors" would be the more appropriate term—seem to be growing more strained day by day. The Sofia paper *Mir*, which but a few months ago was simply so many columns of praise and eulogy of the Austro-Hungarians and Germans, now denounces the rapacity of Bulgaria's allies and the shameful exploitation of the country by their agents. The paper makes a fervid demand that measures against such arbitrary treatment should be taken.

***

The immediate trouble appears to be concerned with transport and food questions, and the *Mir* speaks with no uncertain voice. "It is some months now since we drew attention in very serious tones to the commercial relations between ourselves and our allies, and especially as regards the question of the transport of goods," says the paper. Apparently its complaints were left to go unheeded, for the writer continues petulantly:—"We trust and hope that the question will be taken in hand, and that an acceptable solution will be found for it. Unfortunately, up till now we see with regret that everything remains as it did in the past." It seems that the cost of transporting goods has been greatly enhanced "by levying all manner of taxes, damages, and differences of exchange." Well, the Bulgars have to thank only themselves for the plight in which they find themselves. I am sorry for the unfortunate people, who, after all, are the victims of the mal-administration, the oppression, and the dishonesty of those who ought to have led them victoriously on the side of the Allies in the fight for the final uplift of the whole Balkan people.

It is interesting to learn from a cable to *The Times* from its correspondent in the Balkan Peninsula that a congress of representatives of Russian industry and commerce has drawn up a memorandum proposing a commercial rapprochement between Russia and Roumania. It is proposed to afford greater facilities for passenger and goods traffic, to simplify passport and Customs formalities, to establish a Russian Bank in Roumania, and to despatch a Russian mission for the purpose of studying Roumanian commercial requirements. This is an ambitious programme, and one which cannot be accomplished in a moment. When it has been put through, however, we should see an immediate result in an increased volume of trade, while political relations will, or ought, also to benefit.

***

Turkey and Germany appear to anticipate a long partnership of evil. Statements have appeared recently in the German Press to the effect that the negotiations for the regulation of economic relations between the two countries will soon be concluded. Turkey as we know her, however, will not be in existence when the time comes for Germany to begin the reconstruction of her foreign trade, and the Turkey that will be—the creation of the Entente—will not be keen upon a continuation of the partnership. No country in Europe has suffered from the German connection so much as Turkey has done; and it will be one of the duties of Britain and her Allies to straighten things out.

***

I am glad to hear that, through the kindly ministrations of the Imperial Merchant Service Guild, the lot of British merchant seamen who are interned at various places in Turkey has much improved recently. A correspondent of the *Journal of Commerce* stated recently that the men "have laboured under all the greater privations, owing to the fact that parcels of food and other comforts addressed to them from this country have usually never reached their destination, despite urgent representations which have been repeatedly made by the Imperial Merchant Service Guild. According to information they received only quite lately from the Foreign Office, the staple diet of these captives consists of horse beans." It is certainly a relief to know that these hateful conditions have been terminated, and that the men are now living, if not in comfort, certainly more tolerably than was formerly the case.

***

Elsewhere in this issue of THE NEAR EAST are printed extracts from the report of the Lieutenant-Governor of Malta upon the Blue Book for the year 1915-16. It is satisfactory to observe that the island has enjoyed a period of fair prosperity, that there has not been a serious falling-off in revenue, and that a material improvement has been achieved in the direction of reducing expenditure. The net result is a substantial surplus. Malta has its own war problems, of course; provisions, fuel, and other articles of daily necessity have increased in price, and labour, according to some accounts, has been affected. That there are compensations as well is fairly obvious, and the Government of the island have earned congratulations upon their successful year's work.

The Proposed British Trade Bank.

Position of Manufacturers and Producers of Raw Materials.

(By a Near Eastern Correspondent.)

The establishment of an institution such as that proposed in the report of Lord Farringdon's Committee has been advocated long and frequently in The Near East, and, so far as it goes, the proposal must be regarded as satisfactory. At least it is a step in the right direction.

As a dweller in the Near East for many years, where competition is probably of the keenest, and the experience most varied, and where one is in daily contact with different races, characters, and principles, one or two points strike me as requiring attention.

First of all there is the position of our manufacturers. It is stated that "the British banks afford liberal accommodation for the home producer." In the past, however, there has been great disappointment and complaint that the manufacturer will not adapt his plant to the production of the article required by the foreign buyer, and consequently this trade is lost to our country, which means so much loss in both imports and exports, and, most important of all, to our workmen.

Self-Satisfied.

The manufacturer in most cases is quite satisfied with the article he produces; he will not listen to proposals which entail changes, and the last thing he contemplates is the scrapping of his plant when a new invention comes forward, and which incidentally places his competitor in a more advantageous position. It is essential that the markets of the world be scoured in order that everything, no matter of what industrial nature and however much despised at present by our manufacturers, be turned to profitable account; existing factories be enlarged, new industries be created, both kept up to date, and our productions be increased and extended to their utmost.

If the functions of the proposed bank embrace the creation of syndicates for the manufacture of such articles as present manufacturers refuse to undertake, and stimulate latent and hesitating enterprise, it will do a great deal towards our regaining lost ground.

The question of foreign representation is of the utmost importance. The British foreign banks are excellent institutions, but I venture to point out that the resident British trader abroad is more practical. The latter can deal effectively and immediately with the trade as it comes forward, and use initiative, whilst the former deals with it in report. The proposed bank should, therefore, have branches in many foreign countries, in accordance with the laws of those countries; the capital should be partly British and partly foreign; the board should be partly composed of British and foreign subjects, having the advantage of the local standing, influence, knowledge, and experience; and the executive should be in the hands of the board and manager on the spot. It would thus be in the best and strongest position to deal with business as it comes along.

The Anglo-Foreign Bank, which would be under the ægis of the parent institution, would be controlled by the latter in so far as its general policy is concerned and the amount of credit given as circumstances require. The appointment of the board and manager would also be subject to the approval of the parent bank. Invitations might be extended to existing British-foreign banks, either to convert their present branches into such foreign constituted establishments or form separate establishments, such as I have indicated, in order to be on an equal footing with other banking establishments in the foreign country.

Industrial Connections.

In connection with the Anglo-Foreign Bank and under its control should be formed a commercial institution, divided into sections embracing the most important British industries, as also the products of the foreign countries, with a capable and experienced manager at the head of each section. Each manager would conduct his department in the same manner as any established firm or company, and would be under the control of the bank in respect of the extent of credit to be given to customers, as regards selling and of obligations as regards buying.

Well known established British firms of good repute in the country should be invited to co-operate, and in any case should be placed on a friendly footing so far as banking facilities are concerned.

In such an institution the British manufacturer or trader would be in close contact with his foreign buyer, which is not the case under present conditions, except in the few instances where he has established his own house abroad, and the result has too often been unsatisfactory. The consequence is distrust in dealing with the buyer domiciled abroad and limitation of business.

What is required is the establishment of confidence as between the manufacturer or trader and the foreign buyer, and I venture to assert that the formation of the Commercial Institution I have indicated would fulfil the requirements mentioned in paragraphs 9 and 10 of the committee's report, and would have the advantage of being self-supporting. Furthermore, it would assist in a practical way in the "obtaining of orders abroad," and its doors would be open to British youth, who would be initiated into the peculiarities, customs, and conditions of trade in foreign countries.

The Near East.

These remarks, of course, refer to trade in the Near East, where such institutions could be profitably and advantageously established. Each country has its own peculiarities, customs, and laws, which require to be taken into consideration; but possibly my suggestions might be adopted with modifications and meet the requirements of trade with other countries.

As the Near East is a most important part of the world in connection with the safety of our Empire, it behoves us to cultivate intimate relations with it in respect of political, financial, and commercial interests, and its geographical proximity to Germany demands careful and energetic handling and all facilities for the pushing of British trade.

TRADING WITH THE ENEMY.

"Certificates of Interest for Exported Goods."

The Secretary for Foreign Affairs desires to bring to the notice of all concerned that, with a view to preventing breaches of the Trading with the Enemy Acts and Proclamations, particularly the Trading with the Enemy (Extension of Powers) Act, 1915, all goods now exported from the countries marked (A) below to the United Kingdom, Australia, Newfoundland, New Zealand, Union of South Africa, all colonies not possessing responsible Governments and Protectorates, as well as India, must be accompanied by certificates of interest. These certificates will be issued by His Majesty's Consular Officers, who will require documentary evidence that no enemy or person with whom trade is for the time being prohibited (*e.g.*, persons on the statutory list) has any interest in the goods.

(A) Abyssinia, Argentina, Azores, Bolivia, Brazil, Canary Islands, Cape Verde Islands, Chile, Colombia, Costa Rica, Cuba, Danish West Indies, Dominican Republic, Ecuador, Greece, Guatemala, Honduras, Liberia, Madeira, Mexico, Morocco, Muscat, Netherland East and West Indies, Nicaragua, Panama, Paraguay, Persia, Peru, Philippine Islands, Portuguese East and West Africa, San Salvador, Spain, Spanish West Africa, Uruguay, and Venezuela.

In the case of exports from the countries marked (B) below, where certificates of origin have hitherto been required, certificates of origin and interest will be required for goods exported on and after October 1 on the same conditions, except that the additional evidence required for a certificate of interest will have to be produced to the Consular Officer to whom application is made for the issue of the combined certificate.

(B) Norway, Sweden, Denmark, Holland, and Switzerland.

In the case of these five countries goods for which certificates of origin are not at present required will not have to be accompanied by the new form of certificate of origin and interest.

All goods exported on and after October 10 from the five countries marked (B) above to Canada must be accompanied by a certificate of origin and interest. In other cases certificates are not compulsory, but many traders, and particularly British shipowners and masters, will no doubt require, for their own protection against possible breaches of the Trading with the Enemy Acts, to be furnished with certificates for goods consigned to any destination whatsoever. His Majesty's Consular Officers have accordingly been instructed to furnish certificates in such circumstances on application. The period of validity shown on certificates of interest and certificates of origin and interest will in no case exceed two months. It is required that shipment shall have been effected from the country of origin within the period of validity stated on the certificate, and it is not necessary that the goods shall have arrived at their ultimate destination within that period. The onus of proving that the goods were shipped within the period required will, if necessary, rest in cases of doubt with the importer of the goods.

EGYPT'S COTTON IMPORTS.

List of Revised Tariff Valuations.

The Egyptian *Journal Officiel* of September 11 contains a list of revised Tariff Valuations (No. 1) for use in assessing duties on cotton manufactures imported into Egypt, with effect from September 4 to December 3, 1916, or until denunciation, as follows:—

	Milliemes.*
White longcloths (soft or hard finish)	105
Victoria lawns, common qualities	ad valorem
Doriahs (hard finish)	"
Grey T and longcloths, domestic and cabot	112
Grey shirtings; grey twills, grey cambrics, and grey tanjibs	145
Arabian stripes and cotton scrims	ad valorem
Fine Victoria lawns	"
Fine mulls	"
White tanjibs, soft finish; white doriahs, soft finish; white cambrics, soft finish; grey mulls, white mulls; grey doriahs	191
Crapes, dice checks, herring bones, sateen stripes, bleached or grey, all common qualities	172
White shirtings; white croydons; white twills [fine light shirtings (batiste) are excluded]	165
Prints for dressing	237
Tanjibs (hard finish)	ad valorem
Fancy cloth, red, coloured, or sateen stripes (Bazin)	191
Sheetings	214
Grey dhooties	164
White dhooties	219
Plain dyed cloths, sateens, black drills Turkey red common brocades (excluding printed sateens, mercerised sateens, jaconettes, linings, and fine brocades)	
Prints, "satiné," for furniture	ad valorem
Cambrics (hard finish)	110
Swiss checks, bleached or grey	152
Drills, grand drills and cetaries	122
Cotton flannelettes and printed flannelettes	204
Oxfords, current qualities	180
Nainsook and similar cloths, white, coloured or black	ad valorem
Cambrics, y. 12 and y. 24	"
Zephyrs	"
Jaconettes, crimps, crepons, heavy lappets, heavy lenos, common punjees, and light prints, plain, coloured or printed	"
Fine brocades, plain, figured or printed	"
Plain cotton crepon, white, black or coloured	"
Embroidery cambrics	"

Note.—The tare allowance for bales is fixed at 3 per cent. Duty is leviable on the valuations shown at the rate of 8 per cent.

MALTA IN WAR TIME.

Satisfactory Revenue and Trade Conditions in 1915-16.

For one reason and the other the commercial affairs of Malta do not attract a great deal of attention in this country, although the trade figures quoted in the report for 1915-16 issued recently by the Government of the island indicate that British manufacturers could with advantage watch the trading possibilities of the island.

In the Blue-book, upon which the report is based, there is a comparative statement which shows how, since the year 1910-11, revenue has advanced steadily until it caught up with expenditure. In the year mentioned the figures were :—Revenue, £441,444; expenditure, £467,373; deficit, £25,929. In the year under review they were :—Revenue, £463,002; expenditure, £410,389, the surplus therefore being £52,613. The total amount received for duty on articles imported for his Majesty's naval and military services, and subsequently refunded to the Imperial Government in the form of drawback, was £24,945. The actual revenue for the year was, therefore, £438,057, and the actual expenditure £385,444.

After carrying to depreciation fund a sum of £70,928 to cover further depreciation on securities, the net surplus on March 31, 1916, stood at £45,378, as against £63,693 on the corresponding date of the previous year.

The revenue and expenditure for the five preceding years were as follows :—

Year.	Revenue. £	Expenditure. £
1910-11	441,444	467,373
1911-12	448,114	467,783
1912-13	442,035	427,581
1913-14	423,108	402,521
1914-15	410,725	386,283

Revenue.

The revenue collected in 1915-16 exceeded that of 1914-15 by £52,277. The only important decreases were under harbour and quarantine dues (£1,474), interest (£1,112), and land sales (£1,437), while there were appreciable increases under: Customs (£38,433), due to increased consumption of dutiable articles, attributable to an increase in population caused by the establishment of temporary military hospitals, etc; Post Office (£4,330), due to an increase in the sale of postage stamps; railway (£2,374), due to increased traffic; water service (£2,809), due to increased consumption of water in the naval and military establishments and to an increase in the rate for water supplied to shipping; electric lighting (£2,325), due to increased consumption of current by the public and in war department buildings; rents (£1,268), due mainly to payment of arrears of previous years.

Expenditure.

The expenditure amounted to £410,389, comprising personal emoluments, £162,395; other charges, £145,258; interest and burthens, £20,446; pensions, £26,163; miscellaneous services, £4,373; water and electric lighting works, £3,922; public works, £47,832.

As compared with that of 1914-15, the total expenditure for 1915-16 shows an increase of £24,106. The principal increases were :—Customs and Port Department (£10,230), due to an increase in the amount refunded in the form of drawback owing to increased importation of dutiable articles for the Imperial Service; to an increase in the amount refunded for revenue overpaid, and to the employment of more Revenue Guards owing to war conditions. Railway Department (£1,651), due principally to higher price of coal and of other materials. Prisons (£890), due to high price of provisions, fuel, etc. Charitable institutions (£4,923), due to high price of provisions, fuel, bedding, clothing and other materials. Miscellaneous services (£3,837), chiefly due to payment of Colonial allowance to officers of Maltese Corps on service with the British Expeditionary Forces during the war, maintenance expenses of interned persons of enemy nationality who were domiciled in Malta, and payment of war bonus to certain public servants, etc. Waterworks and Electric Lighting Department (£6,245), due to high price of coal and materials generally. Waterworks and Electric Lighting Extraordinary (£3,405), due to the purchase of a new generating set for the electric lighting station. Public Works annually recurrent (£5,201), due chiefly to expenditure on drainage maintenance hitherto charged to "Public Works Department."

Savings.

The chief decreases were :—Interest and burthens (£781), due to less interest paid to the savings bank on investments, owing to increase in the rate of income tax, and to less interest paid to the savings bank on moneys advanced by it to the Monte di Pieta. Post Office (£3,990), due to the suspension of the mail contract and to the fact that certain amounts due for international transit rates and expenses of International Bureau were not paid during the year. Public Works Department (£5,788), due chiefly to the transfer of expenditure on drainage maintenance to "public works annually recurrent." Public Works extraordinary (£1,573), due to postponement of certain works. The assets and liabilities of the Government at the close of 1915-16, as compared with those of 1914-15, are shown in the following table :—

Year.	Assets. £	Liabilities. £	Surplus. £
1914-15.....	770,949	707,256	63,693
1915-16.....	862,988	817,610	45,378
Increase.....	92,039	110,354	—
Decrease	—	—	18,315

The value of securities forming part of the assets on March 31st, 1916, has been calculated, as to Consols and Annuities at 65 per cent. and as to Colonials at the market price on that date.

Imports and Exports.

The total value of the imports of merchandise, including the value of goods entered by parcel-post and excluding bullion and goods imported for transhipment, was £3,213,890, as compared with £2,069,817 in 1914-15, showing an increase of £1,144,073.

The value of imports during the year was £815,451 above the average for the past three years. There is still an all-round increase in the value of imports, due, in the majority of instances, to increased importations and to the enhanced value of all goods. The only exceptions are under the headings "yarns" and "wood and timber," which show respectively a decrease of £2,655 and £6,897.

The value of exports amounted to £558,749, as against £662,412 in 1914-15, showing a decrease of £103,663 in the year under review. Food, drink and tobacco account for £164,494 of the total, raw materials for £344,496, manufactured articles for £24,706, and miscellaneous exports for the rest.

ENEMY PROPERTY IN EGYPT.

The Public Custodian of enemy property in Egypt calls attention to the provisions of the Proclamation of July 31, 1916, published as a supplement to the *Official Journal* of August 7, 1916, and states that he possesses and continues to receive information from various sources which shows that many persons have not made the various declarations concerning enemy property required by the Proclamation.

As the necessity of making these declarations may have escaped the attention of certain sections of the public, the Public Custodian desires to make it known that he would continue to receive declarations until the end of September, although the 7th was the last day allowed under the Proclamation.

THE NILE FLOOD.

Mr. A. P. Tottenham, Inspector-General of Irrigation in Egypt, has returned to Cairo after having inspected the Nile districts in Upper Egypt and examined in person the measures adopted for protection from flood. In an interview with a representative of a Cairo paper, he assured him that there was no danger this year from the flood if those who are entrusted with the watching of the banks carry out their duties properly. He did not expect the Nile to rise at Rodah more than 8cm. above the present level, for during his visit to Sohag and Assiout he had diverted to the canals and basins there a considerable amount of water which would otherwise have come down to Rodah.

TRADE NOTES.

Liquidation.

The firm of Escher, Jesumann, and Co., Alexandria. Receiver: Mr. H. B. Carver, Alexandria.

Openings.

H.M. Agent and Consul-General at Tangier reports that, according to a notice recently published in the *Boletin Oficial* of the Spanish zone in Morocco, tenders will be received up to October 4 at the Secretariat of the "Junta de Servicios Locales," Tetuan, or in the Morocco Section of the Ministry of State at Madrid, for the construction of a general provision market in Tetuan. The specification, plans, etc., may be inspected at either of the above-mentioned offices.

Failures

The following suspensions of payment are reported :—

Yanni Bichay, Morkos Bichay and the late Kyriacos, corn merchants, Mellaoui, (Assiout);

Abdel Fattah Abdel Hamid Hussein, mechanical constructor, Damanhour; and

Morgan Saleh, coal merchant, Alexandria.

Accepted Tenders.

The supply of photographic material to the Egyptian Ministry of the Interior and the Identification Service for 1916-1917, advertised in the *Official Journal*, has been adjudicated to the undermentioned tenderers :—

	Total Cost. LE. M.M
Société Anonyme des Drogueries d'Egypte ..	228 770
The Imperial Dry Plate Co., Ltd.....	138 265

GERMANISED BRITISH INDUSTRY.

At the City (London) Local Tribunal on Wednesday application for the exemption from military service of five employees was made by Messrs. S. Toye and Co., bristle and horse-hair merchants.

Mr. G. W. H. Jones said that at the outbreak of the war there were only six of these businesses in existence in England, of which the applicants' was the largest, and probably the second largest in the world. Four of the firms were German and two were about to be closed down by the Board of Trade. The whole of the bristles originally went from Russia to Germany, and up to February, 1915, the firm had licences to buy direct from Germany. Since that time they had bought direct from Russia. The trade had now so increased that the firm had to deal with a turnover which was almost double. The skilled men formerly with the German firms were Germans, and the applicants could not employ them.

Two appeals were dismissed, one was withdrawn, and two men were given exemption till January.

NOTICE.

Société Anonyme pour la Fabrication des Cigarettes Egyptiennes marque HADJES NESSIM en liquidation.

Offers for the purchase of the following items of Stock and House Property will be received in the name of EDWARD D. JOYCE, P.O.B. 206, Alexandria (Egypt), Receiver of the above Company, up till 8 a.m. on the 15th of NOVEMBER, 1916 :—

(a) The TRADE MARK belonging to the Company, together with all the Stock of Tin Boxes, Labels, Cigarette Paper, etc., on which the Trade Mark is printed.

(b) The BUILDING situated No. 12-14, Rue Abou El Dardar, Alexandria (Egypt), belonging to the Company.

Details of the above can be obtained at the Offices of the Company, 12-14, Rue Abou El Dardar, Alexandria, between the hours of 9 a.m. and noon, on any day except Sundays, from this date to the 13th of NOVEMBER, 1916.

Offers must be made in writing, under registered cover, to the above mentioned P.O. address, and must be accompanied by a deposit in Cash of 10 per cent. of the amount offered.

Offers may be made for items A and B separately.

The Receiver is not bound to accept the best or any offer made.

PRODUCE REPORT.

LONDON, Sept. 5.

Currants.

The first arrivals have met with a very good reception, sales taking place at full prices. The quality of all growths seems to be quite satisfactory, although some of the fruit, mostly provincial, brought in bags by the first steamer, was damaged by water, and its condition was not attractive. Provincial is quoted 63s. to 66s.; Amalias, 67s. to 70s.; Patras, 70s. to 75s.; Gulf, 77s. to 80s.; Vostizza, 80s. to 82s.; and smalls, 67s. to 76s. per cwt. In the above prices the duty of 2s. per cwt., for currants, is not included.

Sultanas.

Good business continues, principally in Afghanistan and Australian fruit, and prices have further advanced.

Figs.

Owing to the new import regulations, business is restricted, and buyers are mostly interested in the coming new fruit. Spanish and Portuguese quoted at 32s. to 40s.; while new Calamata are quoted 42s. to 44s.

Dates.

The demand is very moderate, Persians being quoted at 32s. to 34s. The efforts of the Imperial Institute for finding a market in England for dates from the Sudan have apparently been successful, and according to reports in the market the Institute suggested to the Sudan Government that consignments of these dates should be sent this season to London for sale. A small sample consignment of dates from the Halfa Province was much liked, and quickly disposed of recently at a good price in this market, and this fact evidently encouraged the Imperial Institute to act as referred to above.

Seeds.

Linseed is dearer, London-Calcutta spot being quoted at 81s. 6d., afloat 81s. 6d., Oct.-Nov. 82s. 6d.; while Bombay ordinary, Oct.-Nov. is quoted 84s. 6d., and small grain ditto 82s. 9d. Rapeseed is firm, but quiet; Toria Oct.-Nov. 71s., and brown Cawnpore ditto 68s. 6d. Cottonseed is firmer; London Egyptian Oct. is offered at £13, Nov. £13, and Sakelarides Oct. £12 12s. 6d. per ton. Rangoon beans are very steady, with business done on spot at £26 10s., and Dec.-Jan. at £28 c.i.f.

Oils.

Linseed oil is firmer; spot pipes landed offered at £39 10s., barrels ditto £40 10s. Rape oil is firm for ordinary brown, naked, spot at £43; English refined barrels £48 to £50. Cotton oil is firm; crude, spot pipes £35; refined, pipes, pale £40; barrels £41, and sweet barrels £48 to £51 10s., as to make.

Oilcakes.

Cottoncakes: Of Egyptian the market is almost bare of stocks, and what remains is firmly held at £10 10s. to £10 12s. 6d.; while English makes are quoted £10 12s. 6d. to £10 15s. Linseed cakes remain firm, although only small transactions are taking place at prices quoted in last week's report.

ANGLO-RUSSIAN CHAMBER OF COMMERCE.

The memorandum and articles of association of the newly-formed Russo-British Chamber of Commerce in the United Kingdom have been approved by the Board of Trade, and it is expected that a certificate of incorporation will be issued shortly by Somerset House. About 240 firms in this country have already joined, and contributions amounting in the aggregate to £1,000 have been made by British concerns towards the installation fund of the Chamber. The first general meeting of members will be held at the beginning of November. Although the Chamber is not yet in working order it is prepared to answer any inquiries concerning Russo-British trade addressed to it at International Buildings, Kingsway, London.

ENGINEERING NOTES.

Power Diminution in Hot Climates.

The following is extracted from an article dealing with "Power Diminution in Hot Climates," in the *Motor Ship and Motor Boat*:—"One of the small but important points often lost sight of by manufacturers in this country, and sometimes by buyers abroad, is the difference in the power which an internal-combustion engine will develop in Europe as compared with the output it is possible to attain in countries where the mean temperature is much higher. Generally speaking, in fairly hot climates it is not possible to maintain continuously a load of more than 80 to 85 per cent. of the European rating with any degree of safety. It is somewhat difficult to understand why there should be this comparatively large difference, and it must be pointed out that it varies at different places with corresponding temperatures, even though their altitude be the same, dependent perhaps on the humidity of the atmosphere. There seems to be no explanation other than that the air is more rarefied in hot climates, and that the same weight of mixture in correct proportion for efficient combustion cannot be received into the cylinder at each revolution. It would be thought that all manufacturers would be aware of this loss of power, and would make allowance for it, either by lowering their rated output when selling to hot climates or warning their customers that they will have to make a certain allowance. This is, however, seldom done, mainly because manufacturers are unaware in each particular part of the world how much deduction has to be made, and also perhaps because they are usually selling their engines in competition with other manufacturers who are quoting their motors at their European rating. After a time, of course, buyers learn for themselves, and make their own allowance by specifying a motor that has 15 to 20 per cent. larger rated output than would normally be required, but it would be much more satisfactory if all the internal-combustion engine-builders would make a point of ascertaining what power their motors will develop in hot countries as compared with England, and placing the facts of the case before actual and prospective buyers. That the policy would pay the writer is convinced from the bitter complaints he has heard and received from buyers in the East, particularly when they are unable to obtain that power from their engine which the makers say they guarantee."

Future of the Danube.

M. Henri Lorin, in the course of a lecture delivered before French and foreign journalists in Paris last week, on "The Question of the Danube," said that Greater Roumania would possess wealth in cereals, timber, minerals, cattle, etc., and that, consequently, improved arrangements in connection with navigation on the Danube would permit of more extensive exploitation than is the case to-day. If this is to be achieved, it will be necessary to equip the Danube with warehouses specially reserved for Roumanian merchandise for export. When peace negotiations take place it will be necessary to secure freedom of movement for craft ascending the Danube from the Black Sea—that is to say, throughout the entire length of the waterway, including extensions to the German northern rivers, which will involve the abolition of artificial obstacles, such as Customs, tolls, etc. The engineers and financiers of the Entente will find in this work, in direct agreement with local Roumanian organisations, excellent scope for their activities.

Suggested Under-sea Oil Pipe.

Those engaged in oil engineering in the Near East will be interested in a scheme for a submarine pipeline to convey oil which is proposed by Mr. S. J. Murphy, the general manager of the Tonlode Manufacturing Company, Drogheda, Ireland. The flexible pipe he has designed for the purpose is constructed of mild steel ribbon on the helical tube principle, the helices being packed with asbestos twine. The steel ribbon is coated with a protective metallic alloy, and is of such a thickness as to render the completed pipe capable of withstanding an internal pressure of 2,000lb., and an external pressure of 10,000lb. per square inch. Finally, a cotton casing is woven over the outside of the pipe and coated with preservative compound. To give longitudinal strength a stranded steel cable or hawser is put inside the pipe. Mr. Murphy considers that a pipeline between this country and America could be laid in three or four months. The course would be divided into 20 sections, and as many laying ships would be employed, so that each would have about 130 miles to lay. The ships would be provided with sufficient steel ribbon on reels, with cotton, cable, and other requirements, to complete their allotted distance, and each would carry a tube-forming and sleeve-weaving apparatus. The former consists of a cross frame carrying reels of ribbon and asbestos, and the forming and bending rollers, the whole being rotated round a steel mandril. As the frame rotates the rollers press the steel ribbon to the required shape, enclosing the asbestos and interlocking the edges of the ribbon, and, finally, the cotton casing is woven on, the preservative compound being applied at the same time.

16 Feet of Pipe per Minute.

The operations take place round the steel cable by means of which the pipe would be fed into the water. The apparatus is designed to produce at least 16ft. of pipe a minute. When beginning work each ship would attach its pipe cable to an anchored buoy. The cable would be wound on a drum having its rotation controlled frictionally, and when a pre-determined amount of cable had been produced the drum would be allowed to unwind a proportionate length of cable, on which the whole strain of laying would rest. Subsequently the sections would be joined together, the pipe by means of bronze couplings, cotton covered and preserved, and the internal cable by similar couplings of steel. Mr. Murphy calculates that a single Anglo-American pipeline, 3,000 miles long and 18in. in diameter, would deliver about 700 gallons a minute, or about 6,000,000 gallons a week, with a pump pressure of 2,000lb. per square inch. The capital outlay he puts at £10,000,000, and the annual working and maintenance costs, exclusive of clerical and directorship costs, at £50,000, power (at ¼d. per unit) accounting for £13,500, wages and salaries for £4,000, repairs and renewals to plant for £500, and a repair ship always in commission for £32,000, including repair materials. On this basis he estimates the cost per 1,000 gallons per 1,000 miles at 2s., as compared with £12 with tank steamers.

Automatic Electric Plant.

According to the Merchant Shipping Act every ship which is fitted with a radio-telegraph installation must also carry an emergency equipment. The drawback to the efficiency of wireless installations is that where they depend for their working on the main electrical supply of the ship they, obviously, are put out of action if the main generating sets fail. This difficulty can be surmounted now by the employment of a new automatic electric generating plant, of entirely British design and construction. The essential features of the system are that this auxiliary plant starts immediately the main supply fails. It is self-regulating and self-testing, and it stops immediately the main supply is resumed. The value of such a plant in the event of accident to a ship can easily be imagined, for in many cases it would enable the wireless installation to be used, and light to be obtained, for a considerable period after the main electric supply failed. On smaller vessels, where no wireless is installed, this new system affords a means of providing energy for lighting or for wireless purposes, for it is simple and reliable and does not occupy much space. The plant will particularly interest shipowners abroad, who, having adopted certain wireless installations of foreign origin, find that the system fails to act, as a rule, at the most critical moment.

GERMAN OIL INTERESTS.

War Situation in the Roumanian Fields.

The production of petroleum in Roumania has decreased materially during the war, the figures for the three years 1913-15 being 1,890,000 tons, 1,770,000 tons, and 1,670,000 tons (says *Engineering*). The export trade in the products which were allowed to be exported has, on the whole, been done at very remunerative figures, but the export has receded considerably in the matter of quantity. The aggregate export of petroleum and by-products was, for the three years, 1,036,444 tons, 684,024 tons, and 429,087 tons. The exports to Germany and Austria-Hungary were :—

	Germany. Tons.	Austria-Hungary. Tons.
1913	126,295	77,184
1914	99,165	84,253
1915	154,688	225,699

To England, France, and Italy no export whatever has taken place during last year, and the export to Russia only amounted to 578 tons.

German Interests.

Germany is much interested in the Roumanian industry, in which it has invested much capital and skill during the last twenty years. Of late years the Roumanian Government and capitalists have been endeavouring to nationalise this important industry, and of the £4,400,000 of assets shown in the balance-sheet of the Steaua Romana at the end of last year, between £2,400,000 and £2,000,000 certainly lay in Roumania, £1,720,000 representing installations, £360,000 oilfields, and the balance means of transport and stock. The £1,720,000 of assets and debtors were probably outside Roumania.

It remains to be seen how these two sections—the Roumanian and the one outside Roumania—will be able to work during the war. A substantial sum out of the profits for the first seven months of the present year is no doubt available for the board. The last business year (seven and a-half months), after writing off £260,000, yielded £200,000.

A German Concern.

As regards the German Petroleum Company, the position seems more favourable. At the end of 1915 the Roumanian portion of the shares amounted to 6,820,000 marks, besides 2,170,000 marks of other Roumanian items, and in addition to advances to Roumanian affiliated concerns. As regards the latter, the Vega Refinery Company and the Petroliter Transport Company, however, are said to be creditors of, and not debtors to, the German Petroleum Company, and the Concordia concern has, of late years, been able to reduce its liabilities.

The trade with Roumania in petroleum products has been of importance as regards lubricating oils, petroleum for lighting, and gas oil, whilst the export of petrol to Germany and Austria has been very limited. Lately, permission for export of petrol has certainly been granted, but there were several obstacles in the way. It is claimed for Germany that the stoppage of the Roumanian supplies will cause no trouble. What is called the statistical position as regards lighting oil, fuel, and petrol is secure for a long time to come. Besides, Galicia delivers promptly the quantities contracted for, and although the recently-opened oil traffic on the Danube, viâ Orsova, has again been stopped, it is stated that this does not matter much.

Proceedings have been instituted in the Prize Court at Gibraltar in respect of certain cargo *ex* the vessels Castor and Hector. The date of appearance in both cases is given as September 27.

BRITISH CONSULAR SERVICE.

The Case for Prompt and Radical Reform.

We are glad to observe that the campaign in which THE NEAR EAST has been engaged prominently in favour of the prompt and radical reform of our Consular Service is being taken up elsewhere in a definite manner. Additional interest has been attracted to this important question by certain statements made by Mr. Vassar-Smith, chairman of Lloyd's Bank, in an interview published recently in the *Daily Telegraph*. The question is intimately bound up with the success of the proposed British trade bank or with any other scheme for enabling British trade to hold its own after the war. The Civil Service correspondent of that paper now writes, in the course of an informing article: The principal complaints against the Consular Service which have been made time and again by the chambers of commerce and individual firms are that the Service is starved, and that it is recruited from men without any commercial experience.

But as Sir Algernon Firth, President of the Association of Chambers of Commerce of the United Kingdom, told the Royal Commission, the universal complaint and the chief criticism directed against the Consular Service is that it is recruited from men without any commercial training or experience.

Ignored Remedies.

The most important recommendation of the Walrond Committee of 1903, of which Mr. Bonar Law was a member, was a proposal to remedy this defect, but, true to its traditional indifference to trade, it has never been carried out by the Foreign Office. Of the eleven successful candidates at the 1913 examination for the general Consular Service, not one had any previous commercial training, and a survey of the antecedents of the successful candidates at all the examinations held as far back as 1905 reveals the same fatal drawback.

In France, Austria-Hungary, Belgium, and Holland, special training colleges have existed for the Consular Service; we rely on a mixed literary and technical competitive examination, and of quite a low standard at that. Arithmetic, for instance, goes no higher than vulgar and decimal fractions. The technical subjects can be crammed in a few weeks from any text book. This is an age above all of specialisation, and, where technical knowledge is required, no worse system of selection could well be devised than that of a Civil Service competitive examination. The one advantage possessed by open competition is that it excludes favouritism, but we may pay too high a price for it, and, in shutting the door to one evil, we may open it for others of more serious consequence.

The First Step.

The first step towards any practical reform of the Consular Service is to hand it over altogether to the Board of Trade, and let the selection of candidates be made by the Advisory Committee of the Commercial Intelligence Branch, the possession of commercial knowledge, instead of being as now the last, being made the first consideration. As Sir Algernon Firth, who is a member of this Advisory Committee, has pointed out, when it is desired to select a man for a commercial mission they do not set him to write on all these subjects, but they adopt the more simple and effective method of going into the question of his business experience. Why should not the same method of recruitment be adopted for the Consular Service? So long as the selection is vested not in one man, but in a committee, there is little fear of nepotism.

It is a constant complaint in the commercial world that, while the consuls of Germany, France, and America, for instance, do everything possible to help their nationals, very little assistance is derived from the British Consul. The competition is an unfair one. The British merchant finds himself competing, not with the German, but with the German backed by all the resources of his Government. If our British Embassies and Consulates did their duty, there would be no need for the Information Department proposed by Lord Faringdon's Committee as an important feature of the trade bank scheme.

Begin Now.

With the existing Consular staff it may not be possible to introduce any great scheme of reform in time to be effective when peace comes, but preparations might be set on foot now so that a commercial expert should be attached to each of the principal Consulates.

The Consular Service is divided into three branches—the General Consular Service, the Levant Service, and the Far East Service. The two latter services differ from the General Consular Service in being quasi-diplomatic as well as commercial, but the complaints by British traders apply to all three branches, inasmuch as they are not supported as they should be, and as their foreign rivals are, by their Consuls.

The fact that the Levant and Far Eastern services deal with diplomatic or political questions may appear to present some difficulty in detaching the Consular Service from the Foreign Office and handing it over to the Board of Trade, but such a proposal, to say the least, is far less objectionable than the present arrangement, which gives the Foreign Office control of a service, immeasurably more important on the commercial than on the diplomatic side. The point is that the Foreign Office by its tradition and training is not the proper department to which our Consular Services should belong. It is surely the natural adjunct of the Commercial Intelligence Branch of the Board of Trade, and the Foreign Office would very likely welcome the change.

PETROLEUM IN 1915.

The *Iron Age* (New York) of August 24 publishes the following statistics of the world's production of petroleum in 1915, taken from a return compiled by the United States Geological Survey:—

The total quantity of crude petroleum entering the world's markets in 1915, which amounted to 426,892,673 barrels of 42 gallons (the United States gallon = .833 of an Imperial gallon, or 6 United States gallons = 5 Imperial gallons) exceeds the record output of 1914 by 28,194,307 barrels. The bulk of the increase came from the United States and Mexico, although the output in Russia, Japan, and Argentina increased considerably. The following table shows the volume of the output of petroleum in the countries named:—

	Barrels of 42 Gallons.
United States	281,104,104*
Russia	68,548,062
Mexico	32,910,508
Dutch East Indies and British Borneo	12,386,808
Roumania	12,029,913
British India	7,400,000‡
Galicia	4,158,899
Japan and Formosa	3,118,464
Peru	2,487,251
Germany	995,764
Trinidad	750,000‡
Argentina	516,120
Egypt	221,768
Canada	215,464
Italy	39,548‡
Other countries	10,000‡
Total	426,892,673

* Market production. ‡ Estimated.

From New York comes the statement that much closer relations have been established between the Hamburg-Amerika and the North German Lloyd steamship lines, with a view to the extension of German trade after peace. Each company is reorganising its directorate with the desire of strengthening its financial backing. Each new board will, it is stated, include coal and electric interests of prominence. Herr Arthur von Gwinner, managing director of the Deutsche Bank, will, it is reported, be given a position on the board of the Hamburg-American line. The bank already is represented on the board of the North German Lloyd Company by Herr Paul Mankiewitz. It has been reported, also, that German shipowners have organised a strong association to which the support of the Government has been extended.

NEWS FROM ALL SOURCES.

An Order in Council affecting imports and exports which was published in London on Tuesday removes the prohibition of the importation of oranges. The additions to the list of prohibited imports include cotton hosiery, bone, horn, ivory, and celluloid goods, live birds other than poultry and game, and aluminium powder. Additions to the list of articles to be treated as absolute contraband include insulating materials, fatty acids, cadmium, and albumen. Yeast is declared conditional contraband.

The Board of Trade are in receipt of a copy of a Beylical Decree, dated August 23, and published in the *Journal Officiel Tunisien* for September 6, which prohibits the exportation and re-exportation from Tunis of tobacco of all kinds.

The Chief Collector of Customs and Excise at Larnaca reports that the 1916 crop of locust beans in the Island would have been much better than that of last year but for the hot winds which prevailed during May and June; these winds dried up the carobs and had a most adverse effect on the crop, both as regards quality and quantity. As a result, the 1916 crop is estimated to be about the same as that of last year.

The French Vice-Consul at Bender-Bouchir (Persia) has requested the Governor-General of Indo-China to draw the attention of growers of tea to the Persian market. Persia does not produce tea, but consumes considerable quantities of the leaf, which is supplied by numerous Asiatic countries.

It is pointed out that those merchants who would like to do business with Persia in tea would only have to send their samples to the Consulate with their prices c.i.f. Bouchir, or at least c.i.f. Bombay. Formerly Indo-China had commercial relations with Persia on a small scale, but these transactions suddenly ceased, and the present moment is described as exceptionally favourable for their resumption.

According to the Caucasian papers, the production of karakul in Russia this season exceeded 3,000,000 skins, an increase of 500,000 over the production of last year. Notwithstanding this plentiful supply, the demand is very great and the prices high—14 or 15 roubles per skin. The high prices may be due to the expected prohibition by the Russian Government of the production of karakul, which involves the wanton destruction of the sheep and their young.

Discussions in principle on the Serbian extraordinary war credits were concluded by the Skuptschina to-day, says a Corfu message dated September 27. One hundred and six members voted. Eight were opposed to the credits. All the Parliamentary parties voted for them, with the exception of the Nationalists. The Bill embodying the credits will be definitely adopted within the legal period of five days.

The Austro-Hungarian Government contemplate the construction of a new bridge across the Danube in addition to that on the lesser Danube at Hevi-Sad. The proposal is that the bridge should be built at Orsora, so that a direct road, Budapest-Bazjas-Serbia, would be established.

IMPERIAL RESEARCH.

Skinless Barley from Cyprus: Water-melon Seed from the Sudan.

If there is needed any testimony to the value of the research work carried out by the Imperial Institute it can be found in the quarterly *Bulletins* issued as a record of the progress achieved in connection with tropical agriculture and industries. A copy of the *Bulletin* for April-June has just reached us, and we observe that it contains three excellent notes on Near Eastern agricultural interests.

The first of these deals with Naked, or Skinless, Barley from Cyprus, a sample of which was received at the Institute in October last year.

The grains varied in size, were of a light-brown colour and had a dull translucent appearance, we are told. Although a small percentage of the grains showed a brown discolouration in places, the sample was clean and in good condition. The fracture was translucent. No gluten was present in the grain. The germinating power was 96 per cent. within five days.

The barley was analysed at the Imperial Institute with the result that, as compared with English and Azof barleys, it showed 106 per cent. in food units against 92 and 102, respectively.

Naked barleys cannot be employed for malting for ordinary brewing purposes, though a malting expert, who was consulted by the Institute, thought that the present sample might be used by distillers (who only require a partially malted barley) if it could be offered at from 4s. to 5s. per quarter below the price of good malting barley, which in February last was quoted at about 63s. per quarter of 448 lb.

If on trial this use of the barley proved impossible, it would still rank as a good class feeding barley. For a valuation from this point of view the barley was, therefore, submitted to importers in London, who valued the sample at 50s. per 400 lb. landed in London, and stated that its value would always be about that of feeding barley.

The sample was also submitted to a firm manufacturing barley foods, who stated that it was difficult to estimate the commercial value of the grain, but that, regarded from a "food value" point of view, it should be worth 50s. to 52s. 6d. per 480 lb. c.i.f. London (March, 1916). They submitted a sample of the barley to a large firm of millers, who stated that the grain was quite new to them, but valued it for blending with other feeding stuffs at from £12 to £14 per ton.

In view of these reports there seems no reason why this skinless barley should not be exported to this country from Cyprus at a profit, if it can be produced in commercial quantities.

Sudan Water-melon Seeds.

A sample of water-melon seeds was forwarded to the Imperial Institute from the Sudan in March, 1915. It was stated that the water melon is cultivated on a considerable scale in Kordofan Province, and it was consequently desired to ascertain whether the seeds would be likely to find a market in London. The sample consisted of small flat seeds, varying in colour from pale yellowish-brown to very dark brown.

The seeds contained 7.4 per cent. of moisture and yielded 23.6 per cent. of a brownish-yellow oil, equivalent to a yield of 25.5 per cent. from the dry seeds.

The oil yielded by these seeds appears to be very similar to that of "Senat" seed from the Sudan, previously examined at the Imperial Institute, and to other oils derived from cucurbitaceous seeds; but the amount of oil in the seeds is somewhat lower.

The residual meal left after the extraction of the oil was a brownish-white material with a pleasant taste. It contained no alkaloids or cyanogenetic gulcosides. The residual meal has a low food value, and contains a high percentage of fibre.

Samples of the seeds were submitted for valuation to two firms of oil-seed crushers, who reported on them as follows:—

(1) One firm stated that the value of the seeds would be determined largely by the use which could be made of the oil. In their opinion the properties of the oil are very similar to those of maize and soya bean oils, for which there is a comparatively limited market; whilst the residual meal is of relatively low feeding value, and would therefore realise only a low price. In view of these facts and the low yield of oil, the firm were doubtful whether these seeds could be sold in the United Kingdom under present conditions at more than £7 per ton (September, 1915).

(2) The second firm stated that the oil from these seeds comes within the group of oils similar to cotton-seed oil, and would be very suitable for soap-making. They were of opinion that experiments with various methods of refining would probably result in rendering the oil suitable for edible purposes, and in that case it would of course command a much higher price than if it could only be used in soap-making.

The firm did not consider, however, that under present conditions the oil would be worth more than about £28 per ton (October, 1915). The residual cake was regarded as practically valueless, the percentage of fibre being so high as to make it inadvisable to use it for feeding purposes, except possibly as a constituent in a mixture. The percentage of nitrogen is also low, and the value of the cake as a manure would probably not be more than 30s. per ton. In these circumstances the firm valued the seed at only about £5 10s. per ton delivered in England (October, 1915), and added that at the high rates for freight now ruling the export of the seeds from the Sudan did not seem likely to be remunerative. They asked, however, to be informed as to the prospects of obtaining the seeds in future in commercial quantities, and the Sudan authorities, therefore, have been requested to supply such particulars to the Imperial Institute.

Colocynth Pulp.

Colocynth is the name given to the peeled, dried fruits of *Citrullus Colocynthis*, the material freed from seeds constituting the drug known in the British Pharmacopœia as colocynth pulp. Colocynth is a drastic cathartic, and is usually administered in admixture with other drugs. Before the outbreak of war colocynth was largely obtained from Turkey and Austria. Fairly considerable quantities of the pulp have been exported recently from the Sudan, and early in the present year a sample of the Sudan product was received at the Imperial Institute for examination.

It consisted of pulp free from seeds, and in good condition, but slightly brown in parts and containing some yellowish dust. It was submitted to two firms of merchants in London.

One firm considered the sample to be very satisfactory except for the slight colouration referred to above, and stated that there is a good market in London for colocynth pulp in fairly large quantities. The firm pointed out that for a parcel of Sudan colocynth 3s. 3d. per lb. had been asked recently in London, but that buyers were not prepared to pay more than about half that price.

The second firm also described the sample as of good quality, but added that if the fine dust were removed it would be still better. They valued it at about 1s. 3d. per lb. c.i.f. London. They further stated that they had recently purchased several tons of colocynth pulp from the Sudan at as much as 1s. 6d. per lb., the pulp in question being of extra fine quality, free from dust and discoloured portions.

LONDON COUNTY & WESTMINSTER BANK, LTD.

ESTABLISHED IN 1836.

CAPITAL - £14,000,000, in 700,000 Shares of £20 each.
PAID-UP CAPITAL - £3,500,000. RESERVE - £4,000,000.

Chairman - THE RIGHT HON. THE VISCOUNT GOSCHEN.
Deputy Chairman - WALTER LEAF, ESQ.

HEAD OFFICE: 41, LOTHBURY, E.C.

The Bank is represented by Branches or Agents in all the Principal Cities and Towns of the United Kingdom, and has Correspondents throughout the World.

PARIS: LONDON COUNTY AND WESTMINSTER BANK (PARIS) LIMITED, 22, Place Vendôme.

Sums of £10 and upwards received on deposit, and interest allowed thereon.

COMPANY NOTES.

Oil Outputs.

British Maikop.—Week ended September 23, 2,556 poods.

Cheleken Oilfields.—Fortnight ended September 23, 487 tons.

European Oilfields.—Week ended September 24, 82,800 poods.

Dividends, etc.

The numbers are announced of bonds of the Ottoman 3½ per Cent. Loan of 1894, which have been drawn for payment on October 15 next.

Messrs. J. Henry Schröder and Co. announce that they have now received the necessary funds for the payment of the coupons and drawn bonds of the Royal Roumanian Government Four and a-Half per Cent. Gold Loan, 1913, due on October 1, 1916. Coupons and bonds can now be lodged at their counting house between the hours of 11 and 2 o'clock, and must be left for examination three clear days before application is made for payment.

The half-yearly coupon for interest due on October 10 on Ottoman 4 per Cent. Loan of the Egyptian Tribute will be paid on or after that date at the banking house of Messrs. Glyn, Mills, Currie and Co., 67, Lombard-street.

ON 'CHANGE.

(By Our City Correspondent.)

Throgmorton Street, E.C.

Business has again been on a very small scale this week. National Banks have lost ¼ at 13 on the sale of some couple of hundred shares, and at the moment they are easier to buy than to sell. A trifling business has again been done in Agriculturals between 4 9-16 and 4¾. Delta Light are again firmer at 5⅜ on some persistent demand at about this price, but sellers are scarce. Some Delta Land changed hands again at 9s. 6d. Khedivial Mail are rather quieter at 27s. 6d. A few hundred Wadi Kom Ombo have been done in the neighbourhood of 4. Markets are wanted at 1 9-32, but no business has resulted owing to the absence of sellers.

In Greek stocks the market has been weak, and prices have generally experienced a fresh set-back. The 1881 loan is offered at 55½ in a small way; the 1884 loan is nominally quoted at about 54. There has been a little business done in Monopoly round 49, and Rentes, after a fair business at 43¾, finish a dull spot at 41/43. For Larissa there is some demand at about 52.

AGRICULTURAL BANK OF EGYPT.

Situation on August 31, 1916.

THE GREEK DEBT.

The revenues assigned for the service of the Greek Debt under the law of control have been coming in well in the current year. Thus the actual receipts from monopolies for the seven months to July 31st last, though they fall short of those for the corresponding period of 1915 by 1,069,000 drachmas, they exceed the estimate by 3,299,000 drachmas. On the other hand, the Piræus Customs receipts show a more than compensating improvement, amounting to 16,422,000 drachmas, as against 14,348,000 drachmas in 1915.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to July 31, 1916 (new style January 14th to August 13th, 1916) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, July,	1916	3,140,949	2,538,000
Do. do. do	1915	2,815,126	1,848,000
Estimated Receipts for 7 months (Law of Control)		16,858,333	6,241,666
Actual do. do.	1916	20,158,119	16,422,000
Do. do. do.	1915	21,227,502	14,348,837
Difference between estimated and actual receipts for 7 months	1916	+ 3,299,786	+10,180,333
	1915	+ 4,369,168	+ 8,107,220

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

For the time being General von Falkenhayn is master of the situation in the Carpathians. A relaxation of Russia's efforts, which may only mean the necessary pause before a fresh move is undertaken, has enabled the Germans and Austrians to concentrate in force against the Roumanians, with the result that the latter have been compelled to fall back along the whole front. In so doing they appear to have been successful in avoiding heavy losses. They have been able to gauge betimes von Falkenhayn's capacity for a vigorous offensive, and have wisely withdrawn their forces before he has been able to launch any formidable attack.

Roumanian strategy has been rather difficult to follow. With a view to securing a definite decision as a result of her entry into the war, the Roumanian General Staff might have been expected to devote its main efforts, in co-operation with the Salonika force, to the overwhelming of Bulgaria and her elimination from the Central European alliance. It would have been in keeping with such a policy to make a first move in the Carpathians, and undoubtedly the sudden capture of the passes was a dramatic *coup*. This initial success, however, appears to have drawn the Roumanians into a Carpathian campaign on a grand scale, to the comparative neglect of the Danube theatre of the war. At the time this course seemed, as was pointed out in these columns, an unsatisfactory one. Progress in the Carpathians could lead to no definite objective, while it might be the means of giving the Bulgarians further respite until next spring. The course of events has revealed Roumania hovering between two strategical ideas, with von Mackensen and von Falkenhayn taking advantage in turn of her vacillation.

If, as we may hope, the thrust into Transylvania was merely the natural outcome of a desire to profit by the unexpected weakness of Austria-Hungary at this point, then the swaying of the battle line in this region may have no serious results. The original defensive positions of the Roumanians will remain intact and in such a terrain should stand them in good stead against the enemy. It is known that there is more man-power available in Roumania than the General Staff has been able to make use of for the present with the Colours. The surplus, until it can be properly armed, should be useful in strengthening the defences of the country. One consolation will not be lost to our new Allies. General von Falkenhayn's attack may prove formidable; but, when once it has been fully launched, it will represent, as in the case of von Mackensen's thrust in the Dobruja, his maximum effort. There can be few reserves for the Austro-Germans to rely upon, and they will try to achieve their end with the momentum acquired in the initial attack. If, therefore, the Roumanians can hold up the onset in the Carpathians for a little time, they can count on their strength growing as that of the enemy diminishes.

The main pressure of the Austro-German armies in the Carpathians is making itself felt in the neighbourhood of Kronstadt (Brasso). At the western end of the range the Roumanians appear to be holding their own for the time being. But they have evacuated Brasso, and now, with the exception of their northern army, which is still some miles within Hungarian territory, they have fallen back upon the frontier line. The enemy is following, but some days may elapse before von Falkenhayn reaches the Roumanian positions in sufficient strength for his purposes. It is probably not a coincidence that the point chosen for the chief attack should be the one nearest to the Roumanian oilfields. In no direction has Roumania's entry into the war dealt Germany a severer blow than in regard to the stoppage of her oil supplies. Her own harvest may make up to some extent for the loss of Roumanian cereals; but she cannot obtain any substitute for Roumanian oil. It will be worth a great effort on the part of the Central Powers to recover this source of supply of a product which is essential to the manufacture of munitions.

The need of the Central Powers, therefore, is likely to be the measure of their effort to overwhelm Roumania. This point will not be lost sight of by the Allies. It is understood that the object of the offensive begun by General Brusiloff on September 30 in Volhynia and Galicia was to relieve the pressure on Roumania. Russia's step must be supplemented by vigorous action in Macedonia and the Dobruja. But the support thus given will react slowly on the situation in the Carpathians, and the Roumanians will have to rely for some weeks on their own strength. General Averescu, who was appointed to take command of the Danube front when the position in the Dobruja looked threatening, has been sent back to the Carpathians. Roumania is undoubtedly experiencing anxious moments; but there seems to be no reason why she should not emerge from the ordeal, as Great Britain has done, stronger than when she entered it.

Digitized by Google

The reasons impelling Germany to make a supreme effort to crush Roumania are clearly set forth in a letter to *The Times* by Professor N. Basilesco. They are, he points out, at once military, political, and economic. A victorious Roumania would mean the cutting of the communications between the Austro-Germans and their Turco-Bulgarian allies. Her defeat would mean the consolidation of German mastery from the North Sea to the Persian Gulf. But the economic interests which urge Germany to a fresh effort are probably more pressing still. By the conquest of Roumania she would secure immense stores of corn, petroleum, benzine, mineral oils, salt, and timber; a good military system, and the Danube as means of transport, besides all the crops which the fertile soil of Roumania can produce. To avert the menace which threatens Roumania, and through her the Allied Powers, must needs be a prime consideration for the Allied General Staffs on every front.

In the Dobruja there have been no striking developments during the past week. The Russo-Roumanian forces have consolidated the positions previously wrested from the enemy, and have not attempted any further advance. Any hopes based on the crossing of the Danube by Roumanian troops have been belied, as the force was shortly afterwards withdrawn. When the Bulgarians reported that little or no artillery had been sent across, it was obvious that the move could only be in the nature of a feint. As such it probably achieved a double object in relaxing temporarily Bulgarian pressure in the Dobruja and in enabling the Roumanians to perfect their arrangements for an ultimate invasion in force of Bulgaria. The enemy's claim to have routed the Roumanian troops at Riahova does not ring true; but it is not to be supposed that the movement was carried out without some losses. A less satisfactory feature in the situation is the presence of Austrian monitors on the Danube, which have enabled German troops to occupy, as a result of a surprise attack, an island north-west of Sistova, capturing, according to the German account, 150 men and six guns. The occupation of Orsova was expected to place the Roumanians in a position to close the river to Austrian craft and to deal with any that happened to be in the lower waters. But so far our Allies have not been able to make themselves supreme on the Danube.

If anything were needed to spur the whole Roumanian nation to a supreme effort in this struggle it will have been supplied by Germany's methods of warfare. Her air policy, as has already been noted in these columns, has been carried out with a frightfulness as useless as it is studied. Aeroplanes and Zeppelins have dropped bombs in the crowded streets of Bucharest without any pretence of achieving a military purpose. Even hospitals and asylums have been attacked. But the coping-stone on Roumanian indignation has been placed by the discovery of numerous cases of trinitrotoluol and flagons containing glanders germs buried in the garden of the German Legation at Bucharest. As a representative of the United States Legation is said to have witnessed the discovery, the German Government will not be in a position to refute the charge by a mere denial; but it will have to be very plausible to remove the conviction that Germans by a thousand and one acts, as well as by their whole attitude towards war, have placed themselves outside the pale of civilized nations.

The Allied troops are making steady progress in Macedonia. On the left wing they are within eight miles of Monastir. The enemy occupies a strong position before the town; but as the whole Allied line is advanced the Bulgarian hold on Monastir must gradually be loosened. It is unfortunate that on the right wing the British troops should be facing east instead of north, and that so great an effort has to be put forth to free Greek soil of the invader before Bulgaria itself can be entered. In the meantime, however, a heavy toll is being taken of the Bulgarians, whose man-power is strictly limited. Prosenik, on the railway line above Seres, has been occupied. Once astride of this railway, the British may count upon making more rapid progress in breaking up the enemy's resistance. Their advance near Seres has already reacted on the situation further north, for the enemy in this region finds his communications threatened, and is falling back on Demirhissar.

If the Germanophil Greeks have not yet formed a club they should lose no time in doing so, as the members will presently be able to claim the unique record of having all occupied a ministerial office. In his quest for Premiers and Cabinets of the right complexion King Constantine has now had to raid the University and scour the ranks of the Civil Service. His new Premier is Professor Lambros, who occupies the chair of History in the University of Athens, and who took a prominent part in the revival of the Olympic Games. In both capacities he has served his country well; but whether he will enhance his reputation by accepting office under the King at the present juncture is an open question. His colleagues are described as politically colourless, with the exception of one who is a cousin of M. Gounaris and acted as Prefect of Attica under all the anti-Venizelist Cabinets of the last eighteen months.

The appointment of any Greek Ministry at this stage is necessarily a farce, and King Constantine is probably as well aware of the fact as the Allied Governments. Circumstances have shifted Greece's centre of gravity from Athens to Salonika, or, perhaps it should be said, to Mytilene, the official headquarters of the National Defence movement. Three Cabinets have held office since M. Skouloudis resigned the Premiership, but the only Government the people have known has been in the hands of the King and the Reservists' Leagues. A patriotic attempt was made by M. Zaimis to bring the country back to constitutional lines, but when he found that his efforts must needs be in vain he was too conscientious to remain in office. His successors have merely served to emphasize King Constantine's determination to flout the Allies and to betray the country's interests. Provided the former pastime could be entirely robbed of its sting, the Allies would have shown little inclination to interfere with it. The country as a whole, however, takes a very different view of its own betrayal. King Constantine is rapidly becoming as insignificant a factor in Greek current history as the puppets to whom he allots the Premiership and other ministerial ranks. A new power is being formed in the islands and at Salonika, and if it accepts the Mytilenean watchword, "Down with the King," not only the present ruler of Greece but his whole dynasty as well will be involved in the catastrophe.

To those who imagined that King Constantine would content himself by playing the German game without deliberately endangering his own skin with the Allies, the latest move of the Entente Powers has come as a rude awakening. The latter have felt constrained to summon the Greek Government, as a measure of security for the Allied forces on land and sea, to surrender to the French Admiral in command of the Allied Fleet the whole of the Greek fleet. Certain coast batteries are to be disarmed as well; the mails and the Piræus-Larissa railway are to be placed under the control of the Allies. These demands, it is stated, are dictated by "a disposition of the Fleet that menaces the Allied squadron and by a concentration of Greek troops in the interior that constitutes a danger to the Allied army of the East." A more ominous charge could hardly be brought against Greece, or rather against the King and his pro-German advisers. Few people would have felt tempted to bracket King Constantine with King Ferdinand of Bulgaria in the same moral category; but the charge places him on the horns of a dilemma. He must either accept responsibility for the dispositions of his fleet and troops and stand convicted of treachery to Greece, or he must admit that his actions have destroyed the power of constitutional

Digitized by Google

government in the country and made a few German agents the real rulers of the Greek people.

The Provisional Government of M. Venizelos, Admiral Condouriotis and General Danglis is feeling its way. M. Venizelos, after an enthusiastic welcome at Mytilene, went with his colleagues to Salonika, where they would be in touch with the originators of the National Defence movement. Here, too, they met General Sarrail, and from him would learn some of the practical considerations which must guide their action in the matter of participation in the war. The problem presents difficulties, and we trust that no heritage of trouble and complications will be laid up for the future by a failure to tackle it candidly in all its aspects now. To what extent General Sarrail has been placed *au fait* with the Allies' plans for the political future of the Near East we have no means of knowing; but it is at least open to suspicion that such plans have not yet been formulated by the Governments concerned. If they have not been decided upon, the Provisional Government may ultimately find its position an embarrassing one, and it would be well advised to leave foreign affairs alone for the moment and devote itself to the settlement of Greece's domestic troubles.

The two powers in Greece cannot exist side by side indefinitely. Questions of finance will become even more urgent for the Provisional Government than they are now for the Athens Administration. It is reasonable to suppose, therefore, that sooner or later a time limit will be set within which King Constantine will have to make up his mind whether he will govern constitutionally or will cease to govern at all. A large number of Greeks are understood to have decided the question already for him. They feel that the lost ground which the country will have to make up in order to take any place at all in the Councils of Europe entails a task beyond the scope of the man who deliberately watched the ground being lost and made no effort to retrieve the situation. They realize that the conditions that have determined King Constantine's policy in the past must remain to a large extent in the future, and will prevent him from giving whole-hearted support to the national aspirations. For these reasons they are anxious to eliminate him from an anomalous position, and are prepared with a substitute who will be free from King Constantine's disabilities, while providing an equally powerful rallying point for the Hellenic world.

There's many a slip, however 'twixt cup and lip. The Provisional Government does well, therefore, to proceed cautiously and to continue to emphasize the single-mindedness of its purpose, which is to free Greece of her hereditary enemy. An indication of the forces it has to contend against was given by the attempt of a German submarine to capture the vessel on which M. Venizelos had arranged to leave Crete for Samos. M. Venizelos was not on board, having changed his plans at the last moment. But the submarine commander had been well-informed. Again, the Greek Army is divided in its sympathies, and if the two factions are at all matched in strength, they will be unwilling to risk conclusions with one another. King Constantine's policy will be to try to starve the secessionists into submission, for Athens is the distributing centre for the islands. The steps taken by the Provisional Government to cope with the situation in Greece will be watched with great interest.

The rigour with which the censorship is exercised in Turkey is shown by the absence of any definite information regarding the plot for the assassination of the Turkish Cabinet. There is reason to suppose, however, that the conspiracy, which was discovered on August 23, had somewhat wide ramifications, involving a number of Old Turks and Hojas. It is reported that Enver Pasha's personal aide-de-camp was implicated; but there would seem to be no means of knowing what part he played in it. Presumably the conspirators were betrayed, and many suffered the extreme penalty. The dismissal of the Fetva Emini, or Judge of the Supreme Religious Court, is understood to be in some way connected with the plot; but another version has it that he has been dismissed because he would not agree to the sentence of death passed by the Committee of Union and Progress on the Grand Shereef of Mecca. In addition to its other troubles the Turkish Government will now have to cope with an increasing shortage of food as a result of Roumania's entry into the war.

Another interesting item of news which reaches us from Turkey is to the effect that the Tripolis-Homs railway line, which belonged to a French company, has been torn up, and that the material has been used for the construction of a line from Ras-el-Ain in the direction of Diarbekir. If this be the case, the branch line, which is said to have been begun in June, is a testimony to Turkish appreciation of the Russian menace in Armenia. The original intention, we believe, was to connect Diarbekir with the Baghdad Railway at a point some twenty miles west of Nisibin, itself eighty miles east of Ras-el-Ain. Nisibin is believed to be the present railhead, and it may be that the new line actually branches off at the nearest point to Mardin, bearing slightly west of north to Diarbekir. If the railway has not yet reached Nisibin, it would be still more significant that the Turks should feel compelled to divert construction in the direction of Diarbekir instead of pressing on with the main line to Mosul and Baghdad.

In a letter to the *Westminster Gazette* a Cypriote Moslem refers to "the proposed internment" of Turkish prisoners of war at Famagusta, and states that the Cypriote Moslem community would be "seriously grieved," if the proposal were carried into effect. The subject is one to engage the attention of the authorities concerned, who will, no doubt, make the necessary inquiries before taking a step which might possibly be calculated to grieve seriously any body of loyal subjects of the Crown. If the correspondent accurately represents the views of the Cypriote Moslem community his protest is worthy of consideration. At the same time that community is liable to fall in the esteem of its fellow-subjects throughout the British Empire. Presumably it is aware that the Empire is at war with the Turks and that both sides have taken prisoners, who have to be accommodated somewhere. It would have been thought that, if they held any views at all on the subject, the Cypriote Moslems would prefer to have their co-religionists, who have to be detained within the Empire, interned in their midst, in order that the consideration which the British authorities show to all prisoners might in their case be supplemented by such religious facilities and attentions as it may be in the power of and legitimate for the Cypriote Moslems to offer them. As other considerations weigh with them, it is a pity that the correspondent did not explain them more clearly.

While on the subject of Cyprus we may call attention to a brief reference made to the subject of the Tribute in the House of Commons on July 20. Mr. Annan Bryce asked the Secretary of State for the Colonies whether, when the offer of the cession of Cyprus was made to Greece it was made a condition that the burden of the Tribute was to be transferred to that country. Lord Robert Cecil's reply was: "The answer is in the negative." These words mean, we conclude, that when the British Government proposed to discard Cyprus in favour of Greece, no reference was made to the subject of the Tribute. The proposal, as is known, was summarily rejected—the one service rendered by King Constantine to the British Empire—and consequently there was no occasion to raise the Tribute question. In some circles, we believe, there has been a misconception of what was said in the House of Commons. Lord Robert Cecil did not state that the Tribute was not to have been transferred to Greece, if the proposal had been accepted. He merely pointed out that it had not been made a condition of the cession of the island; probably because the details of the proposed cession fortunately never came up for discussion.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 27.

The Departure of the "Mahmal."

The final ceremony in connection with the departure of the Holy Carpet for Mecca took place on Thursday amid unwonted pomp and circumstance. H.H. the Sultan came up specially from Alexandria in order to preside over the ceremony; General Sir Archibald Murray was present with his staff; Moslem Indian troops assisted the Egyptian Army to line the route; and Indian officers were among the guests who watched the ceremony from the steps of the Mastaba. All these features, added to the peculiar circumstances under which the Mecca Pilgrimage is taking place this year, combined to give to the occasion an importance and an interest that have not attached to it for very many years. The scene in the square, which, together with the approaches, was thronged with crowds of Egyptians, Europeans, and a great number of khaki-clad spectators, was most picturesque; and everything passed off without a hitch and in a most dignified manner. The "Mahmal" and its attendants left by special train the next morning for Suez, where it embarked on the steamer chartered by the Egyptian Government. By this time it must have reached Jeddah, whence it has to proceed overland to Mecca. It is due to arrive there in time to permit the pilgrims to perform the various religious duties which have to precede the celebration of the feast of Kourban Bairam, which starts on October 7. Many more pilgrims than were at first expected are making the pilgrimage this year. Well over 1,000 Egyptians have left for Jeddah, whilst a convoy of about 700 Algerians and Moroccans has just passed through the Canal on its way to Jeddah. The latter are accompanied by a "French Mission," consisting of prominent chiefs and officers specially selected by the French Government.

On the day after the ceremony H.H. the Sultan performed the customary Friday prayer at the famous Sultan Hassan Mosque. Great importance was evidently attached to this visit by the religious leaders, all of whom were present. At the conclusion of the service his Highness received an ovation from the *ulema*, and before his departure he addressed a few words to them, and also shook hands with the Indian officers, many of whom had been invited to attend.

The Sultan was accompanied to the Mahmal ceremony by Ismail Sirry Pasha, the Minister of Public Works and War, and not, as is usual on such occasions, by the Prime Minister, who, as it happened, was not present. The reason is that Rushdi Pasha is laid up, and has had to undergo a slight operation. He is making slow progress, and it is not thought that his illness will have any serious consequences, but it is considered imperative that he should have complete rest for some little time. Rushdi Pasha, who was Prime Minister under the old régime, and has continued in that post since the proclamation of the Protectorate, has rendered invaluable services to the British authorities—I have on more than one occasion paid a tribute in this correspondence to his loyal and intelligent co-operation—and all who know him and have had an opportunity for appreciating his sterling qualities join in wishing him a speedy return to duty.

The Nile Flood.

Since I last referred to the Nile flood the situation has undergone a considerable change, and is now giving cause for a certain amount of anxiety. The river has continued to rise, and reached, early last week at Rodah, the level of 20 metres, which is the point at which the flood is considered "dangerous," and at which the decree of September 9, 1837, empowers the Government to call out every able-bodied Egyptian for work on the banks. Parts of the low-lying districts of Cairo are under water, and the river presents an extraordinary spectacle as it rushes under the bridges, with the spans of which it is almost flush.

To allay public alarm and explain the situation Mr. P. M. Tottenham, Acting Under-Secretary of State for Public Works, has just issued a highly interesting note. It opens by declaring that the present flood is the highest recorded since 1894, and then proceeds to state that the question of whether a high flood is dangerous or not depends on the relation between the various stages of its progress, and the three stages of basin irrigation in Upper Egypt, which are: (1) the filling of the basins, which takes place from August 15 to September 25, and tends to reduce the river levels and to allow a very high flood to pass safely from the Sudan through Egypt to the sea; (2) the period from September 25 to October 10, when the basins are full and withdraw no more water from the main river, and just before which a fall in levels usually takes place and counterbalances the stoppage of withdrawal by the basins; and (3) the emptying of the basins, which starts on October 10, and is the period constituting, when the flood is long drawn out, the season of greatest danger owing to the prejudice that is found to be caused to the basin crops if the discharging of the basins is delayed, and to the additions which that discharging if not delayed inevitably contributes to the already swollen main river.

Mr. Tottenham confirms what I wrote in my letter of the 24th ult. (Near East of September 8), viz., that the record flood that was registered in the Blue Nile and Atbara reached Assuan and Cairo at the time when the basins were taking water copiously from the main river, and so did not raise the levels to any alarming extent. The fall in levels in the Sudan, which, as stated, usually precedes and accompanies the second stage, was, however, unduly delayed, and as the basins were full and could not relieve the pressure, the main river rose steadily until the level at Cairo on the 24th reached 24 pics 7 kirats. The Sudan levels are now falling, and it is expected that their effect will begin to be felt in Egypt at about the time when the emptying of the basins starts. Nevertheless, the levels in Egypt will certainly remain very high during the greater part of October, and as a result the strain on the river banks will be not only severe, but also protracted.

Everything possible is being done to assist the passing of the huge flood to the sea, to repair any damage to the banks, and to strengthen them wherever any weakness appears. There is without a doubt very great danger of the banks breaching, a danger which will increase as the levels fall. The reason for this is that in Lower Egypt the river surface is from two to six metres above the level of the surrounding country, and that the banks are by now eroded, sodden, and liable to slip, the falling away of the water making them more liable than ever to give way. This danger will last until the river has dropped again to the level of the land on either side.

The situation is undeniably critical, and the greatest care and energy will be required to keep it in hand. We have, however, Mr. Tottenham's word for it that, provided vigilance is maintained without any relaxation to the end, the country may make practically certain of safety. That is a reassuring statement, and we need not hesitate for one moment to rely upon the necessary strict vigilance being maintained. The history of the Egyptian Irrigation Service is one long series of triumphs over the vagaries of Father Nile. In time of drought and in time of flood the staff has never failed to rise to the occasion, and there is no reason to fear that this year it will not maintain its traditions, and that it will not succeed in preventing Egypt from losing by inundation the great benefits which this high flood will certainly confer on all her land as it passes down.

ATHENS LETTER.

(From Our Own Correspondent.)
Athens, September 28.

The Anti-Venizelist Campaign.

The combined opponents of M. Venizelos continue to work against him in every possible way. Knowing perfectly well that even if they should be successful at the elections, the hostility of the Entente Powers would be an obstacle to their return to power, M. Gounaris and his colleagues have recourse to every imaginable expedient in the hope of stirring up muddy waters and getting rid of their difficulty. In the first place they maintained that the Entente Powers, having by their Note of June 21 demanded that the Greek people should declare freely by whom they wish to be governed, would have no right to refuse to recognize the Government resulting from the elections, whatever it might be—evidently they expect that it will be Gounarist—the more so as the head of the Government, according to the *Nea Himera*, will not be foolish enough to betray Greek interests by governing the country in a manner hostile to the Entente. The principal organ of M. Gounaris thus admits indirectly that he was foolish all the time he was in power, since he exercised that power in such a fashion that the Entente Powers had to ask for his dismissal from office.

Certainly it may be argued that the Entente Powers, acting in the quality of Greece's protectors, would not have the right to demand the dismissal of a Government chosen by the majority of the electors. Their Governments have, however, other rights and duties towards their own countries. As soon as they perceived that the Greeks had returned to power those who had been qualified as enemies of the Entente, they could only give up the rôle of Greece's protectors and advisers, and take up an attitude of hostility towards her. What the consequences would be for Greece it is easy to imagine! It would be for her a question of life and death. What would be the fate of her mercantile marine, of her principal products—particularly the dried currants, which are almost all shipped to England—and where would she obtain the loan of which she will shortly stand in such urgent need? These are some of the consequences that would follow on such an aberration, and there would be also considerable territorial losses that she would risk having to bear. For it must not be forgotten that Greece would never have had either Crete or the other islands without the consent of the Entente Powers, especially Great Britain, who in securing them for her believed they were handing them over to a State inseparably united in friendship with themselves.

The Neo-Ententists.

Perceiving that their sophisms cannot alter established facts, M. Gounaris and his friends now declare themselves converted into ardent Ententists! They declare themselves ready to accept the Ententist policy, and even to consider abandoning neutrality—but on one condition, that the Entente shall sacrifice M. Venizelos as a kind of peace-offering. It goes without saying that this latest disguise—or attempt at a disguise—would be cast aside the moment that M. Venizelos was disposed of; for that is the one object of the schemers, and to secure it they would, without any scruple, sacrifice the country's interests, as they have done already, when they were in power. One hardly knows what to admire most about their attempt to dupe the Powers: their artlessness or their lack of honour. For, while endeavouring to make the Powers believe that they are ready to participate in the war, they are quite aware that the Greek Army—whose strength, they said, they wished to conserve, by means of their policy of neutrality, so that it might be available at the moment of need—has been so treated, morally and materially, during the nine months' useless mobilization that it will be unfit for a long time to embark on any campaign.

Exploitation of the Clergy.

In the past, even during the most corrupt times in Greece, the clergy have always been respected by political parties, which never sought to make use of them in their electoral campaigns. Now, however, the party that arrogates to itself the title of "Nationalist," after having exploited the name of the King and poisoned the patriotism of the reservists, has not hesitated to exercise its pernicious influence over the clergy. As a result, some priests have permitted themselves, in offering up prayers for the King at Mass, or in their sermons, to indulge in anti-Venizelist declarations. The Metropolitan Primate of Athens has instituted a strict inquiry into these circumstances, and one priest, who had alluded to the fire at Tatoi as being the work of Venizelists, has been suspended from the exercise of his duties for a month.

The French Press and the King.

The articles in *Le Temps* on the situation in Greece and the references to King Constantine, and the possibility of his deposition, have produced a great show of indignation on the part of those who wish to be regarded as champions of the Crown. However, as the *Messager d'Athènes* and the *Hestia* explain very frankly, if King Constantine has a very bad Press, not only in Paris, but also in London, and more especially in Petrograd, the fault lies with those who are now making such a fuss. For it is they who have always represented his Majesty—who by the Constitution should not be responsible in such matters—as prescribing and directing the policy which they have followed, thus exposing him to all these criticisms and attacks. It is they who have inspired the King to make ill-advised declarations to the foreign Press, and who, always claiming to carry out the King's policy, published articles threatening the Entente Powers, and qualifying as "traitors" those who followed an Ententist policy. According to them, the Gounarist Cabinet was "the Government of the King." M. Skouloudis did not hesitate to declare squarely in the Chamber that he "carried out the policy of the King." The Leagues of Reservists declared, as advised by their superiors, that they were at the disposal of the King. As I have already reported, on the Fête Day of the King adherents of the party raised cries of "Success to Germany," and another day some Gounarist demonstrators passing before the French Legation shouted, "Roi, roi!"—that is to say "not Venizelos," thus setting the latter in opposition to the Sovereign, as if the King were a party leader. These are the things that account for the attitude of the Entente Powers, and of their Press, towards King Constantine. And the same state of affairs still prevails. Their catchword for the elections is "The King or Venizelos." Again, the other day the famous *Embros*, commenting on the situation brought about by the attitude of the Entente Powers, suggested that the King ought to decide either to abandon the policy of neutrality, or, in accord with his people, to take the necessary steps to defend himself against any fresh attempt—meaning on the part of the Powers. Thus these champions of the Crown aim at making the King an absolutist monarch, who need neither consider the verdict of the elections nor follow the policy indicated by the popular will.

PERSONAL ORNAMENTS OF THE ANCIENT EGYPTIANS.

Speaking last week at University College, London, of ancient Egyptian necklaces and similar objects, Professor Flinders Petrie said that even in the pre-historic period the Egyptians had learned the art of making the most of their gold. To make a gold bead they made a core of plaster or lapstone, and over this beat out and burnished a plate of gold extremely thin. Survivals of that time were very rare, most of the gold now found in Egyptian tombs dating from the Græco-Roman period. In ancient as in modern times, neck ornaments were often made by stringing silver coins together. Thus a hole would be punched in a Greek drachma and a link of copper wire passed through this; a copper wire through the links compelled the necklace. Other silver necklaces were made of beads so massive that the entire necklace would sometimes weigh nearly a troy pound. It was one method of storing bullion. The lecture was accompanied by lantern-slides, which enabled the audience to follow the development of this kind of art in ancient Egypt from the beautiful work of the early dynasties down to the debased work done for Norman and other mercenaries quartered in Egypt in later Roman times.

CYPRUS NOTES.

(From Our Own Correspondent.)

Nicosia, September 26.

The Legislative Council.

October 4 has been fixed for the election (nomination) of candidates. The Council has been dissolved. Several of the leading Greeks are not seeking re-election. Among them is M. I. Ekonomides, manager of the Greek Bank of Cyprus, who has served for many years in the Council, and who is regarded as one of the strongest and most zealous representatives of Greek sentiment. Several candidates have published electoral addresses, and some have been touring and speaking in the districts. In one case at least a candidate is standing for two electoral divisions. In all districts the number of candidates will exceed the number of vacancies. Dates for the polling will be fixed by the Commissioners, who are returning officers for the three linked electoral divisions.

As regards the election of the Greek Archbishop, there is a delay, the date of the election of the sixty-six electors-general having been postponed till October 22. The Bishop of Papho, who is acting as Archbishop, is attending the Festival of the Cross at Omodhos, in the Limassol district, which is held on September 27, and is the occasion of a large annual fair and horse market.

Wheat Shortage Feared.

The order of the Egyptian Government prohibiting the export of wheat has caused anxiety in Cyprus, as the island harvest has not been sufficient to meet local needs. A shortage is feared if the supply from Egypt is cut off. The papers express the hope that the authorities will use their influence in order that the prohibition may be removed as regards the island. There are strong reasons, it is urged, for this favour, since Cyprus has continued to furnish Egypt with cattle, sheep, potatoes, and other articles of consumption.

Another batch of Greek interpreters has been recruited for Salonika in the districts of Nicosia and Larnaca.

The motor service between Nicosia and Kyrenia is suspended for the winter months from October 1. It will be replaced by a daily carriage service each way.

It is stated that, on account of the approaching participation of Greece in the war, the stream of emigration to America and France has been checked, and that a number of youths who were preparing to embark are now awaiting the call to arms in Greece, and will follow the example of other Nationalists.

A correspondent writes to the *Evening Standard*:—Is anything going to be done to improve the means of communication between here and Mesopotamia? At present it is deplorable. Three weeks ago I sent three cables, with replies paid, to relatives who were in hospital, but up to now I have had no answer to them, and I hear the same complaint from others who have cabled out there, although replies have been paid. . . . Surely during the twenty-four hours some time could be allotted for cables to and from the troops, and letters should not take more than four weeks, otherwise the management must be rotten.

BUCHAREST IN WAR TIME.

(From Our Own Correspondent.)

Bucharest, September 2.

The Bucharest of to-day is not the Bucharest of a week ago. Save for the numbers of flags that decorate them—among which are many Union Jacks and well-meant attempts at Union Jacks—the streets and buildings are, of course, much the same, and will probably remain so, unless the air attacks become much more numerous and the aim of the enemy airmen much more accurate. But the citizens, men and women alike, have taken on a serious air—the air of a people at war; and, save in the evening, when for a short time, just before dusk, everybody flocks into the Calea Victoriei, no one seems to be abroad unless he or she be on some war work. Nearly every vehicle, horse or motor, has been requisitioned, and the only civilian wheeled things you see are a few cabs drawn by animals obviously "unfit for military service." There are very many Red Cross cars and carriages, most up-to-date; and in this respect especially Roumania seems to be particularly well provided. The number of Red Cross flags flying on buildings of importance shows also how many hospitals have been and are being organised. The ladies of Bucharest have taken very seriously to nursing.

Another point that strikes you is that practically everyone you meet is unmistakably Roumanian. Gone are the numerous Austrians and Germans. Only the men were interned, but their women-folk do not care to show themselves; though, did they do so, no offensive word or gesture would be forthcoming, I am sure. It is doubtless just a feeling of chagrin that makes them voluntary prisoners. They know that Austro-German money has been poured out like water to corrupt this country; and they are shamed—by the failure of their men to achieve their purpose, not by the attempt!

Anyone belonging to the Allied nations is the observed of all observers, whether it be the British Military Attaché, the Russian Minister, or one of the ladies of the four Legations that boast such; or it may be a young Serbian officer in his smart uniform, who limps along—he has lost a limb on his country's battlefields. All heads are turned to gaze after these passers-by, and it is almost a disgrace not to know each and all of them by name.

Suddenly, perhaps, a signal is passed up the street, and everyone, rich and poor, soldier and civilian alike, stops to raise his hat and cheer as King Ferdinand—King of the Great Roumania that is to be—drives past in his car. A month ago he would have passed almost unnoticed save by the military and members of the upper class. The war has wrought a change here, too.

Next, two or three motor-cars come along at a more sober pace, carrying officers of General Zajouchovski's staff, who are in Bucharest to discuss with their Roumanian colleagues the plan of campaign in the Dobruja, and who are now being shown the sights of the capital. In marked contrast to them, but attracting even more attention, there tramp by some Russian soldiers, recognisable, as far as uniform goes, only by one in ten of their number. They are men who were captured by the Germans, sent into Bulgaria to work on road-making, and escaped thence into friendly Roumania, whence they will be forwarded on to Russia again.

One must not forget, in describing Bucharest of to-day, to mention the Boy Scouts. They are much in evidence, rushing hither and thither on their bicycles, bearing messages and performing endless commissions. It is they, too, who go round at night to see that all lights are out at nine o'clock. For the lighting order is strict indeed, and Bucharest by night is truly a very different city from Bucharest of pre-war times. Then, till one and two in the morning, motors and carriages thronged the streets; cafés and restaurants were open till one o'clock and later, and there were more people abroad in the streets at midnight than at midday. Now the streets are desolate and deserted; not a light is to be seen save here and there from a street lamp, painted black excepting one small blue square; nobody is about except the police; and those whom dire necessity compels to face the darkness must have a special permit. To those who know Bucharest well this last change seems incredible. Yet the change was wrought in twenty-four hours. Roumania's capital has accomplished the seemingly impossible.

Thousands of Christmas "billies" and boxes of comforts are now being prepared in Australia to be sent forward to the troops in France, Egypt, and Great Britain.

GERMAN AND BULGARIAN ATROCITIES.

ROUMANIA'S PROTEST.

The following is a translation of a protest which the Roumanian Government has sent to Neutral States regarding the bombardment by German aeroplanes of several towns of Roumania in violation of Articles 25, 26, and 27 of the Regulations annexed to the 40th Convention of The Hague:—

Since the day when Roumania declared war on Austria-Hungary the Bulgarian troops, after having attacked us without a declaration of war, have continued, with the assistance of the armies allied with Bulgaria, their attacks on Roumania, violating in succession all the laws of civilized warfare. Leaving aside for the moment the horrible atrocities committed against the Roumanian soldiery and civilian population of the Dobruja, as well as the employment of methods of destruction forbidden by international agreements, and speaking only of the manner in which the enemy conducts aerial warfare against us, we address the neutral States, who are bound in honour and duty under the existing circumstances to raise their voices in favour of the principles of justice and humanity which should guide civilized peoples, in time of peace as in time of war, and we bring the following to their notice.

German aviators have been throwing bombs incessantly, night and day, on the city of Bucharest without attaining any other result than making 250 innocent victims, killed and wounded, among them more than 200 women and children and several sick and infirm persons, for more than fifty-eight bombs have been thrown on hospitals and asylums. The same thing is happening almost daily in the other open towns of the country. The representatives of the foreign Powers residing in the capital of the kingdom have been in a position to note the facts, and have doubtless informed their Governments of them, and called their attention to these repeated violations of the laws of war.

The Roumanian Government considers that it has the right to hold Germany directly responsible. The aeroplanes which fly over our towns are, in fact, German. It is under the orders of German commanders that the enemy armies are fighting against us on both fronts. Now, as Germany is one of the Powers which signed the Hague Convention she cannot escape the responsibility she has incurred through this contempt for the laws of justice, as set forth by International Conferences with a view to reducing to a minimum the evils of war, the objects of those conferences being to prevent unfair methods of warfare, to limit offensive operations to the belligerent forces, and to shield the helpless civil population, as well as institutions of culture and benevolence and artistic monuments, which are the fruit of peaceful effort and civilization, from destruction, a destruction of no use whatever from the point of view of the results of the war.

We conceive that it is for the common interest, as well as for that of the neutral States, that this method of warfare should be denounced by all who have a regard for justice and respect for treaties. That is why the Roumanian Government protests with the utmost energy against the reprehensible acts to which it draws attention, and which apart from, and because of, their abomination, are calculated to give rise to dangerous reprisals and to inspire in the people sentiments of hatred and vengeance of evil omen for the welfare of humanity.

PORUMBARU,
Minister of Foreign Affairs of Roumania.

Under date of October 8, Reuter's Bucharest Correspondent reports that the following semi-official statement has been issued there: —

Germany through her wireless station at Nauen is disseminating through the world assertions made by German journalists that the Roumanian troops committed atrocities in the Dobruja on the Bulgarian population. After careful investigation, it may be stated that the Roumanian troops in the Dobruja, as well as in Transylvania, have respected the civil population in spite of the latter's attacks on them. For example, in the Dobruja the population threw petroleum into the Roumanian trenches. Concealed in houses, they fired on the troops, and they mutilated and finished off the wounded. Women of Bulgarian extraction threw boiling water upon wounded Roumanians and gouged out their eyes.

Obviously some Bulgarian villages in the fighting area were damaged, but, on the other hand, the Roumanian villages in the Dobruja have been pillaged and destroyed by the German and Bulgarian troops. In Transylvania the Hungarians in their fight carried off the population and systematically set fire to the Roumanian villages, according to the formal declarations of members of the clergy.

It is easy to understand why the Nauen station disseminated such baseless charges, while many witnesses have given evidence of atrocities and acts of incendiarism and pillage committed by the Austro-Bulgarian troops.

A mobilization order has been issued by the Russian Diplomatic Agency at Cairo providing that all Russians in Egypt who are eligible for military service shall be incorporated in the British Army in Egypt.

LETTERS TO THE EDITOR.

WHY "HORSE" BEANS?

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We are informed, disparagingly and with commiseration, that the staple food of British merchant seamen interned in Turkey consists of horse beans. I imagine that the public, on reading this news, will probably be much concerned as to how human beings can have teeth to crush, and stomachs to digest, this hard vegetable, which is never utilised here, except uncooked for horse feeding.

I venture, therefore, to reassure the seamen's friends on this subject, and to inform them that the Eastern way of cooking these beans makes them as soft as green peas, and after such preparation they become most palatable and of higher nutritive value than meat.

I may add that these beans are never, in the East, given to animals, and their market value there is generally higher than wheat. The Egyptian "Fulemdammas"—*i.e.*, baked beans—is a dish which, if popularised here, would be likely, in my opinion, to confer a greater benefit on the people than a free gift of meat. Besides, we are at war, and in comparison with the Germans the Turks are, as fighters, perfect gentlemen.—I am, etc.,

London, October 7, 1916. A. S.

THE CENTRAL ISLAMIC SOCIETY.

A very successful meeting of the Central Islamic Society was held at the Eustace Miles Restaurant last Friday. Among those present were Prince Abdul Karim of Sachchin (President); Kamal-uddin, in the chair; Lord Headley, Mr. Pickthall, Hon. Mr. Abbas Ali Baig, Mr. Yusuf Ali, Princess Ourouseff, Syed Ehsan el-Bakry (Egypt), Mr. Kaderbhoy, and Mr. Irfan Ali. Letters of regret at being unable to attend were received from the Earl of Clarendon and others

In opening the meeting, Mr. Kidwai said that the Society was founded in 1886; it had several objects, but the one in furtherance of which social functions were held and lectures delivered was to remove misconceptions with regard to Islam and Moslems. The Society was Islamic, but not exclusive, and persons of all religions could join it as associates.

Lord Headley, the lecturer, confined himself to pointing out the points of difference and of similarity between Christianity and Islam. But Khwaja Kamal-uddin very convincingly explained that Islam recognised all the Prophets, whether Krishna, Buddha, Confucius, Moses or Jesus, and thus every religion was a sister to Islam. Islam proclaimed that every nation and every country has received Prophets and revelations, and all religions contained noble principles. The claim of Islam was only this: that while other revealed books have been corrupted by the advance of time, the book of Islam was intact, and summed up all the truths of all the religions; so that it could be said that of all the sister religions Islam only had succeeded in preserving her features and character.

Mr. Yusuf Ali, who was received with cheers, pointed out that the three characteristics of Islam were:—(1) The destruction of idolatry, by which he meant all the emblems of superstition, conceit, falsehood, passion, etc.; (2) the destruction of privileges and vested interests, as that of priesthood and sex superiority; (3) the destruction of colour and race prejudices.

Dr. Abbas Ali Baig, in a forcible speech, showed how Christianity had been influenced by Pagan ideas, and how Islam was misrepresented with regard to polygamy, thus making it difficult for the people of the two sister religions to come near to one another.

In a message dated October 3 the Cairo correspondent of *The Times* reports:—The Holy Carpet has arrived at Mecca after an uneventful journey from Jeddah, where British warships rendered the fullest honours. The naval pageant greatly impressed the Arabs.

An Admiralty communiqué dated October 7 deals with naval aeroplanes operating against the Bulgarian coast between September 13 and 22, in which period the headquarters of the Bulgarian 10th Division were twice successfully bombarded, and considerable damage was done to troops, transports, and stores at and about Drama.

Statements having recently been made in the Press to the effect that the German parcel post service to Turkey had been stopped, and that the suspension also applied to Switzerland, the Imperial Merchant Service Guild, who are looking after the interests of the whole of the interned merchant captains and officers in Germany and Turkey, addressed inquiries to the Comité Internationale de la Croix-Rouge, Agence Internationale des Prisonniers de Guerre, at Geneva, asking for information as regards the forwarding of parcels to the interned merchant captains and officers in Turkey. They now learn from the Red Cross Society at Geneva that the Swiss Post Office still forwards parcels to Turkey and Asia Minor, care of the Ottoman Red Crescent Society at Constantinople, and so recently as the 3rd instant they have been assured that there is no alteration in the matter.

TANGIER TO TEHERAN.

A letter received from a Roumanian correspondent gives some picturesque details of Tutrakan, the town of which we heard so much in the German and Bulgarian *communiqués* a few weeks ago. It has (says my correspondent) often been the scene of stiff fighting. Founded by Constantine the Great at the same time as Daphne (now Oltenitza), on the other bank, it was destroyed by the Barbarians and reconstructed by the Emperor Justinian. It was twice destroyed by Michael the Brave, in 1594 and 1595, as the Turks made it one of their chief centres from which they directed incursions across the Danube. In the Russo-Turkish wars of 1773, 1809, 1829, and 1854 it was again the scene of conflict.

***

The Tutrakan of to-day is a most picturesque town of very Oriental appearance—unless the Bulgaro-German guns have battered it to bits—with streets running steeply downhill towards the Danube, and being in some instances connected with one another by steps. Many old trees grace its roads, and its mosques and fountains give it a delightful old-world air. Yet it boasts—or boasted—a "Gladstone Street" and a "Boulevard Suvaroff," the latter twenty-five metres long! At the time of the Roumanian occupation, in 1913, its inhabitants were: 3,000 Turks, the same number of Bulgarians, and between 6,000 and 7,000 Roumanians. The number of the Roumanians had increased considerably during the past two years; but the majority of them are reported to have been ruthlessly massacred by the Bulgarian and German soldiery.

***

Salonika, having done its best to emulate the great days of eight years ago, when it overthrew a sovereign and ended a *régime*, is now realising that, if its Greeks are ready to fight the Bulgar, its Jews are far too busy fleecing the Allies to think of war except as highly profitable to the *tertius gaudens*. In fact, when invited to participate in the Revolutionary ardour of their new Fatherland, they pointed out a clause in the Treaty of Athens by which they were not to be liable for Greek military service for some time to come. The Government of National Defence—who so law-abiding as a Rebel?—at once decided to be bound by the Treaty; and the Jewish youths recruited in defiance of its provisions were at once discharged. On leaving the barracks these sons of Kish cried "Zeto Basileus," which so incensed the bystanders that they fell upon the noisy ones and beat them full sore for uttering seditious cries. This drastic action produced an almost immediate change of opinions, and the Hebrews, converted almost *en masse* to the cause of the Revolution, shouted lustily, "Zeto Venizelos." This, however, failed in its object of pacifying the crowd, which again assailed the demonstrators, who felt that they were, erroneously, being treated as sons of Ishmael, not of Israel. They were beaten, kicked, and rolled in fresh mounds of dust—this time for daring to "pollute" the honoured name of the Cretan patriot by pronouncing it with lips so recently disfigured by the utterance of the "Basileus."

***

A long time ago I referred, I think, to the case of a French consul in Baghdad who, suffering badly from "Baghdad boils," used to spend much of his time sitting in the river. He had—so the story goes, and I believe it was little, if at all, exaggerated—a seat and table fixed up in the water, with a shade over them, of course; and there, when the hot weather made his boils more troublesome than usual, he pursued his studies and carried on his official duties. How he received callers I never heard. They may have waded out to him; they may have gone off to his river throne in *gouphas;* or they may have boldly donned bathing costume for official visits. All I am sure of is that if they wanted to see the much-plagued consul they were almost certain to find him "partially submerged."

***

This Frenchman had a very good excuse for his unorthodox behaviour; for a single Baghdad boil is no joke, as I can vouch from personal experience, and a lot of them must be maddening indeed. But another consul—not French—in the same city could hardly plead as much in extenuation of his eccentricity. *His* theory was that the higher you go the cooler you become, and therefore he had his chair hoisted well off the floor, his table similarly treated, and a kind of infant lift provided to haul up food, books, and so forth. At least that is the story as it was told to me a few days ago by one in whose veracity I place implicit trust; and though I never heard of this particular consular eccentric during my residence in Baghdad, that proves nothing at all. For, as I may have remarked before, Baghdad, ever since its foundation by Al Mausur, has been a city of strange happenings, and no one can expect to have heard of *all* the marvellous things that have occurred there. So let us accept the tale of the Levitated Consul without unworthy scepticism.

Some time ago the *Basrah Times* published a poem entitled "Chorus of Flies: Summoned to Plague Egypt." If not entirely pleasant, it was clever; and the poet (one "H. D.") concluded by exhorting the flies:—

From Uz to Ormuz
Flies busily buzz!
Flies busily buzz! Make a droning wind with your wings!

Very soon after there appeared "The Reply of the Flies," signed "A Fly." This effort I make bold to reproduce—with apologies to "A Fly."

Who tells us to buzz
From Uz to Ormuz
In his polished-up rhymes
Of the *Basrah Times*?
Why the —— should we buzz
From Uz to Ormuz?

We shall hold our debates
Where your rag circulates—
In the stores, in the stables,
In half-empty crates,
On officers' tables,
On unwashen plates.

From jam-pots we rise,
And if some bold warrior slumbering lies
We shall crawl up his nose,
We shall walk o'er his eyes.
And what can it jolly well matter to you
If we take a hot bath in somebody's stew
Or commit suicide (a beautiful death!)
By getting too near to a bellamchi's breath.

Why the —— should we buzz
From Uz to Ormuz?
It would give us great pain to be misunderstood—
We have plenty to do in this neighbourhood.

***

Anyone who is interested in the relations existing between Turkey and Germany must have read with peculiar interest some extracts from two articles in the *Frankfurter Zeitung* that were published in *The Times* recently. The writer of the articles referred to is amazingly frank. He thinks that "the sense of independence which comes with a sense of increased strength" has encouraged in Turkey a disposition towards "Oriental exclusiveness" which may lead up to "the Stambulization of Byzantium." This is truly a horrible idea for a German to contemplate, after the desperate efforts that have been made for the Germanization of the devoted city. And the writer is pained to observe that the German element in Constantinople is not spared by the movement which he detects; it is, in fact, "sometimes harder hit by these sentiments than it was before—and harder even than Germany's enemies are at present." Truly, he must find it an ungrateful world when even the Turkish Ally gives such plain proof of not entirely welcoming Teutonic *Kultur*.

***

As he warms to his subject, the writer becomes even more frank. He would like, apparently, to see Germany following the "normal" way, and "conquering" Turkey; but he realises that there are certain difficulties in the way; so he finally advises that the Fatherland shall borrow a hint from —the British Empire!

> "Former illusions about the collapse of the world Empire built by the British upon the Dominions have proved erroneous. Canada and Australia might make themselves "free," but they do not want to. Perhaps one can learn from this peculiar process. We will not and cannot conquer Turkey in order to control her as a subject land, but we must have with Turkey the same political life as Old England has with Australia, whose regiments fight for England's cause, and whose yards built ships for the English rule of the seas. We will not touch Stambul, but Pera and Galata must be the habitation of the Turco-German alliance, and the great bridge between them and Stambul must be the stairway into our house."

He appears to forget that Germany has, in spite of her efforts, hardly sent as many colonists to Turkey as Great Britain has to Australia, and that in Australia the "sense of independence" has not encouraged a disposition to "exclusiveness," such as he regrets in the case of Turkey. But his remarkable article makes enjoyable reading, and I sincerely hope it will be widely read by the Turks.

CORSAIR.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

NEAR EAST BOOKSHELF.

THE GALLIPOLI WITHDRAWAL.*

"The Truth About the Dardanelles" is, and must necessarily be, a somewhat disappointing book. The author is a courageous man to claim for his work the elusive title of Truth. Mr. Moseley writes, and writes well, of what he genuinely believes to be the truth, as far as he was able to judge it from his own experience as a spectator, or from the experience of those with whom he has been in contact. The absolute truth, however, cannot yet be known, even if it is ever fully revealed, to the public. Moreover, the truth, as the author regards it, may be, and doubtless is, regarded in exactly the opposite light by many people who may be as well qualified to state their opinions as is Mr. Moseley.

The volume is divided into three parts, the first dealing with "Peninsula Incidents," most of which have been by now made familiar to the general public either by articles in the Press or by friends and relations who took an actual part in that great enterprise. Part 2 deals with the "Aftermath," telling of the wounded and their experiences in Egypt and England, and the author has a good word to say for the R.A.M.C. Part 3 concerns the evacuation, and is the most interesting, because of the criticism it passes on that operation and the strong line Mr. Moseley takes up as well as the forceful manner in which he expresses himself. The seven short chapters which form this section of the book are very interesting reading.

In Chapter 1 of this part, which the author calls "Some Criticisms Criticised," he breaks a lance with Mr. Ashmead Bartlett, who comes in for some strong condemnation for his attitude on the Dardanelles operations as a whole. Mr. Moseley is a thoroughgoing believer that the evacuation was a great mistake. He maintains that the Government were "bluffed" out of the Peninsula, and that the Turks were on the point of collapse, and that another vigorous attack would have seen us through "the few miles which separated us from victory." He is an advocate of the policy of "rush," and there is little doubt but that the element of surprise gave the best chance at Suvla and Anzac. But with the failure of the surprise all the virtue was gone out of it, and the operations resolved themselves into trench warfare, which the Turks, being near their base and with more elbow room, were able to carry on with a tenacity almost equal to that of our own troops.

The book is frankly controversial, and the author hits out with energy at croakers and pessimists, and has some interesting things to say about the leakage of valuable information. His views certainly are interesting, but whether anything is to be gained now by a somewhat bitter discussion of the operations is another question; and while strongly supported opinions are put forward, they are still but opinions, and the book, as a whole, does not add greatly to the sum total of known facts concerning this phase of the war.

Mr. Moseley refers to the prevalence of stomach trouble on the Peninsula, and residents of the Levant will remember that all newcomers to that part of the world are liable to this ailment in a more or less severe form during the first year of their residence there, even under the most favourable circumstances.

Several amusing stories are told, and there is one of an officer who, by clapping his hands and calling out "Ta'ala henna," was able to fetch a Turk or two out of their trenches. He was lucky to have Arab troops opposite him; for a Turk would no more have understood these words than he would their English equivalent of "come here."

The book is very free from typographical errors, though "Erenquei" is not a usual form of Erenkeui, and the author, who has visited Constantinople, has so far forgotten his geography that, in describing the panic that reigned there in the early days of the attack on the Straits, he says: "Those were the days when the islands in the neighbourhood of the Sweet Waters of Asia were patronised by the quaking Turks. . . ." It must have been a serious convulsion of nature, too, that shifted the Prince's Islands from the Gulf of Ismid to the narrowest part of the Bosphorus!

* "The Truth about the Dardanelles." By Sydney A. Moseley. (Cassell. 5s.)

Any Books mentioned on this page, or any other Publication, can be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

THE NEAR EAST (Book Department),
16-17, Devonshire Square, London, E.C.

BOOK NOTES.

A first glance at Mr. Algernon Blackwood's latest book, "The War: An Egyptian Aftermath," a copy of which we have received from Messrs. Macmillan and Co., shows that it is delightfully written. Mr. Blackwood, indeed, always writes with distinction, and we look forward to a rare treat in our reading of "The War."

Messrs. Hodder and Stoughton have just published "With the Springboks in Egypt," by "Captain," and "The Black Hole of the Desert: Being the Diary of a Yeoman-Signaller, one of the Survivors of H.M.S. 'Tara.'" Both books are published at 1s. net.

Messrs. Hutchinson have published "The Lure of the Desert," by Kathlyn Rhodes, a novel, of which the hero is an Englishman with Arab blood in his veins.

Messrs. Mills and Boon have published this week "Experiences of a Woman Doctor in Serbia," by Dr. Caroline Matthews. The price of the book is 5s. net.

The latest publication of the Anglo-Hellenic League is the "Speech of M. E. Venizelos to the People: Delivered in Athens on Sunday, August 27, 1916." The booklet contains the Greek text and an English translation, and we congratulate the League upon its appearance. Copies can be obtained at the offices of the League (43, Aldwych) at the price of 3d. each, or 2s. a dozen.

SALONIKA.

A very interesting paper by Mr. H. C. Woods treating of Salonika chiefly from the geographical standpoint was read by Mr. Henry Trotter at the meeting of the Central Asian Society last Wednesday. Salonika was described as occupying a fine site at the head of a bay opening out of a gulf. The latter has deep water throughout, but parts of the bay are blocked by mud brought down by the rivers. The depth of water is always changing, and the present harbour is a modern structure. The town has 125,000 inhabitants, of whom 75,000 are Jews—descendants of those expelled from Spain by Ferdinand and Isabella. They control the business of the city and surpass the Greeks in commercial ability. Besides the Jews there are about 15,000 *Dounmehs*. The Greeks number 25,000, and there are, besides, 5,000 Turks, 4,000 Bulgars, and a small colony of people from Western Europe. But all these only exist by sufferance of the Jews, who dominate everything.

Of the military situation Mr. Woods said that the fighting must be entirely unlike anything else in Europe, and would be far more arduous. With the exception of the plain lying west of Salonika, which is already in our hands, almost the whole area in which fighting may take place is made up of rocky hills and mountains. Motor vehicles, transport wagons, and big guns are practically useless; special transport and mountain guns must be provided.

SERBIA'S LOSSES.

In a letter addressed to an Englishwoman, pleading the claims of Serbia upon the Allies, Madame Christitch, wife of a former Serbian Minister, writes:—

"Knowing that these words will find an echo in your heart, I plead for those who are expressing their suffering by fighting against an enemy, superior in numbers, with a dash and bravery unequalled in all history. Do we not read every day in the newspapers articles full of admiration for the Serbian troops? . . . But, while admiring them, do people think enough of the fact that these troops are the last that remain of that fine Serbian Army?

"My heart bleeds at the thought that if things continue in this way our race, that valiant, courageous race, will have no more strength to continue itself. It will be doomed either to disappear or else to undergo a mixing which would deprive it of the qualities which are our pride and the admiration of the whole world. It seems that people do not any longer remember that the Serbs have been under arms since October 1, 1912—that is to say, they are now entering upon the fifth year of superhuman struggle.

"A country which has under three millions of inhabitants finds itself at grips with three Empires and one Kingdom, after having waged three successive wars. In addition, there are the different epidemics that make themselves the accomplice of the enemy and mow down thousands of these brave ones. That also is not enough to break the spirit of this heroic people. They must then endure the retreat through Albania, die on the way of fatigue, of hunger; be attacked by Albanian bands. Those who are left after this hell land at Corfu, but they are not men, they are phantoms. There, again, die in masses those who were upheld during the retreat by their energy and their will to live.

"But a miracle! Those phantoms who are left, after a few months of rest and care, behold them fighting, like the bravest of the brave, against the traitor enemy, the invader of their sacred country. Is it human, is it brotherly, on the part of the Allies to let the Serbs be killed to the last man in their eagerness to reconquer their Motherland? . . .

"I ask you to be the interpreter between us Serbian women and your compatriots, in order to prevent them from making another mistake where we are concerned. The mistake committed in the year 1915, to the profit of those traitors and perjurers the Bulgars, can still be repaired, but this other mistake would be irreparable."

13	30	Friday	15	16
	Oct.			
14	1	Saturday.....	16	17
15	2	Sunday	17	18
16	3	Monday	18	19
17	4	Tuesday	19	20
18	5	Wednesday	20	21
19	6	Thursday	21	22

Monday is the birthday of H.R.H. Prince Carol of Roumania, the Prince Royal, who was born at Castle Pelesh, Sinaia, in 1893.

Lord and Lady Oranmore and Browne arrived at their residence in Cavendish Place on Wednesday morning from Castle Macgarrett, County Mayo.

Madame Misu, the wife of the Roumanian Minister, and Mlle. Margaret Misu, her daughter, who have been spending the summer at Eastbourne, have returned to the Legation.

M. Mathias Boshkovitch, formerly Serbian Minister to the Court of St. James, has arrived in Paris from London.

Lieutenant-Colonel W. F. T. O'Connor, C.I.E., H.M. Consul at Shiraz, returned to England lately, and is now in London. It will be remembered that he was treacherously made prisoner some time ago, when the Swedish gendarmerie at Shiraz suddenly surrounded the Consulate and seized all the British residents. He was only recently released.

M. Alexis Catargi, son of the late Roumanian Minister to the Court of St. James, and Secretary to the Roumanian Legation in Paris, and Madame Catargi, who have been spending the summer at Weybridge, are leaving London for the Continent.

On Saturday Major Guy Pears, R.E., had the honour of being received at Buckingham Palace by the King, when his Majesty conferred upon him the Military Cross.

Prince Cantacuzene has arranged to leave shortly for Bucharest to rejoin his regiment.

M. Levitch, Secretary-General of the Serbian Finance Department, left London on Tuesday for Paris on a special mission. He will afterwards proceed to Corfu.

On October 4, at Holy Trinity Church, Orton Longueville, Peterborough, the marriage was solemnized of Second-Lieutenant Derek Cox, R.F.C., only son of Colonel Sir Percy Zacariah Cox, K.C.S.I., K.C.I.E., with Ethel, second daughter of Mr. W. H. Ellington, of Orton Waterville, Peterborough.

On Monday afternoon a wedding was solemnised at St. Nicholas Church, Hintlesham, between Lieutenant Clennell Anstruther Wilkinson, of the Middlesex Regiment, formerly of the *Egyptian Gazette*, and Miss Kathleen Mona Martin. The bridegroom, who is now at home on sick leave, having been wounded in the recent fighting on the Somme, is the eldest son of the Rev. A. Anstruther Wilkinson, rector of Hintlesham; whilst the bride is the eldest daughter of Mr. Walter D. Martin, of Travancore, South India. The wedding was a very quiet one, no invitations being issued, and only a few friends being present. The bride, who was given away by Mr. W. Knight (in the absence of her father), wore a travelling coat and skirt of brown cloth, with hat to match, and carried a bouquet of bronze chrysanthemums and maidenhair fern. The offices of best man were fulfilled by the Rev. Charles Hodges. The officiating clergyman was the Rev. A. Anstruther Wilkinson, and the service was choral, the hymns being: "O, Perfect Love" and "The King of Love my Shepherd is," the Rev. A. H. Stevens, Mus. Bac., vicar of Chattisham, presiding at the organ. The bride and bridegroom were the recipients of a large number of beautiful wedding presents, among these being a handsome travelling clock, presented to the bridegroom by the inhabitants of Hintlesham.

On October 2, at 9, Atlantic Road, Newquay, Cornwall, the wife of the Rev. H. C. Robins, of Khartoum, gave birth to a daughter, who did not survive her birth.

Our Cyprus Correspondent writes that Captain Orr, Chief Secretary, who is accompanied by Mrs. Orr, has left for England on leave on account of his health.

Captain A. Stanley Wilson, M.P., who, it will be remembered, was taken prisoner by an Austrian submarine while travelling in a Greek vessel in the Mediterranean, and who is a prisoner of war in Austria, in a letter to a friend in Yorkshire, writes: "I am well, though eight months' captivity is enough. In spite of the monotony I keep fairly cheerful and am very hopeful that the war will not last very much longer. I had hoped that I might get home in exchange, but my hopes are shattered."

Among the officers who attended one of the recent investitures by H.M. the King at Buckingham Palace, was Lieut.-Colonel Henry MacGeorge, of the Indian Army. Colonel MacGeorge was in command of a battalion of Mahrattas on the outbreak of war, and when the Mesopotamian campaign was decided upon his regiment was one of the first to be ordered to the Persian Gulf. He took part in every fight right up to the final investment of Kut, and was invalided down from that town only a few days before General Townshend was finally shut in. At Busreh Colonel MacGeorge recovered sufficiently to be able to take up a Staff appointment there. But his recovery was only temporary, as it turned out, and he finally was ordered to Bombay, where he was granted six months' leave in England, none too long a time after nineteen months on end in Mesopotamia. Colonel MacGeorge, who saw his first service with the 7th Dragoon Guards in the first Sudan campaign, and who is a brother of Mrs. Sydney Merton, of Cairo, has been mentioned in each of the Mesopotamian dispatches issued so far, and for his services he was awarded the Companionship of the Bath, with which he was invested at the recent investiture by the King, with whom he subsequently lunched and had a long private interview.

Mr. Platon Drakoulis, who said some very plain things to King Constantine in an audience the other day, is well known at Oxford, where for some years he edited a Greek paper, *Ereyna*. He is a Socialist by conviction, and a pioneer among his countrymen in the labour movement. says the *Manchester Guardian*. He belongs to an old and distinguished family of Ithaca, several of whose members occupied positions under the British Government during our fifty years' occupation of the Ionian Islands.

A correspondent writes: "Flag days are to be held in Manchester and Salford on Friday and Saturday, October 13 and 14, on behalf of the Armenian Red Cross and Refugee Fund. This fund came into being soon after the commencement of the war and is greatly in need of support. Thanks to facilities provided by the Russian Government it is in close touch with the relief authorities in the Caucasus. Many thousands of homeless Armenian refugees there are looking to this fund to help them through the rigours of the coming winter. The address of the fund is 35a, Elsham Road, Kensington, London, W."

Of the second and third convoys of motor ambulances (50 in each) which the British Farmers' Red Cross Fund has agreed to send to the front, twenty ambulances have this week been despatched to Salonika for the use of our Army there. All these bear inscriptions that they have been given by this fund. Up to October 6 the fund had collected £391,516 4s. 6d. Subscriptions are urgently needed, and all offers of help should be sent to the Secretary, Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.

The Id-uz-Zoha prayer was held on October 8 at 86, Ladbroke Road, W., in the Khan-Kap, the headquarters of the Sufi Order, under the auspices of the Islamic Society, of which Dr. Majid is the president. The prayer was well attended, and representatives of various parts of the Moslem world were present.

We regret that by a printer's error the address of the Sufi Order was given in our last week's issue as 86, Ladbroke Grove, instead of 86, Ladbroke Road.

Viscountess Templetown (130, Ashley Gardens, London) appeals for money to buy wool for her knitters, who are making socks for the troops at Salonika, where the cold is already making itself felt severely.

An announcement was made in error in our last issue to the effect that Dr. Seton-Watson had delivered the previous day the first of his series of lectures at King's College on Serbia and Bulgaria. It had been arranged that he should deliver the lecture, but illness prevented it.

From October 16th the office of the Jugoslav Committee will be transferred to 54, Chepstow Villas, Bayswater, W., where also Dr. Hinkovic will stay, replacing the absent President, and Dr. Jedlowski, the Secretary. All letters for the committee or the above mentioned members may be sent to this address.

The Hon. Marjorie Hicks-Beach, commonly called Viscountess Quenington, of The Mill House, Coln St. Aldwyn, Glos., who died in Cairo on March 4 last, wife of Lieutenant Viscount Quenington (who died in April last, leaving estate of the value of £131,509), left unsettled estate valued at £988.

Sir Victor Alexander Haden Horsley, C.B., F.R.S., F.R.C.S., captain of the 3rd London General Hospital, R.A.M.C., since 1897 a member of the General Medical Council, of 25, Cavendish Square, W., who died on July 16 from heat-stroke while serving as a consultant with the Forces in Mesopotamia, aged 59, has left property of the value of £35,595, the net personalty being £30,214. Probate of the will, dated April 17, 1895, is granted to Lady Horsley.

Mr. Benjamin Lewis Mosely, LL.B., of Brick Court, Temple, E.C., barrister, late Judge in the Native Tribunals at Cairo, who died on July 13 last at Monte Carlo, left estate in the United Kingdom of the gross value of £43,054, of which £42,274 is net personalty. Among his bequests were: An annuity of £60 to William Whittington, formerly in his service, and on his death to his wife, should she survive him, and £500 to his clerk, John Samuel Good. The residue of his estate Mr. Mosely left to his wife, but in the event of her predecease to the Khedive of Egypt for charitable purposes in Egypt and elsewhere, as he may determine.

Miss Sarah Broom Macnaughtan, of Norfolk Street, Hyde Park, the well-known novelist, who died on July 24 last, left unsettled estate of the gross value of £12,112.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.

Lieutenant Frank Fox, Royal Field Artillery, who has been wounded a second time, is a member of the *Morning Post* staff, and represented that paper in the Balkans during the two Balkan wars. He is the author of "The Balkans" and other works on the Near East.

Mrs. Theodore Ralli and Miss Ralli have given up the lease of 12, Belgrave Place, and will be at the Berkeley Hotel until they sail in November to spend the winter in New York.

APPOINTMENTS, PROMOTIONS, ETC.

Last Saturday, at Buckingham Palace, H.E. Monsieur Yovan Yovanovitch had an audience of the King, and presented his letter of credence as Envoy Extraordinary and Minister Plenipotentiary for the Kingdom of Serbia. Lord Hardinge of Penshurst, Permanent Under-Secretary of State for Foreign Affairs, was present.

It is officially announced that Sir Ronald Graham will be succeeded as Adviser to the Egyptian Ministry of the Interior by Mr. J. Haines, Under-Secretary of State for Agriculture.

Mr. John Langley, of the State Domains Administration, will succeed Mr. Haines at the Ministry of Agriculture.

The *Daily Malta Chronicle* of September 29 contains the announcement that Vice-Admiral Limpus, K.C.M.G., C.B., has left Malta for England, and that Rear-Admiral George Alexander Ballard, C.B., has taken over the duties of Senior Naval Officer in Charge at Malta.

OBITUARY.

We regret to announce the death of Admiral Sir William Robert Kennedy, which took place on Monday at Falconer's Hill, Daventry. The second son of John Kennedy, Chargé d'Affaires at Naples, he was born on March 4, 1838. His grandfather was the son of the eleventh Earl of Cassilis and brother of Archibald, first Marquess of Ailsa. After some early schooling at Cheam and Brighton, William Kennedy entered the Navy in December, 1851. As a midshipman of the line of battleship Rodney, he was in the Black Sea during the Crimean War, being present at the bombardment of Sebastopol, and serving in the trenches before that fortress; he was also present in the Sphinx at the bombardment of Kinburu, and received the Crimean and Turkish medals with clasp for Sebastopol. Next he served on the East Indies and China Station, on Sir Michael Seymour's flagship. Thereafter his service was in the West rather than the East; but in 1865 he was first lieutenant of H.M.S. Victoria, flagship of the Commander-in-Chief in the Mediterranean; and in 1892 he was appointed Commander-in-Chief on the East Indies Station. He became Admiral in June, 1901, and retired in December of the same year. He distinguished himself on several occasions, and was also one of the most popular officers in the Navy. He was a keen sportsman, and a writer of no little charm, his best known book being "Hurrah, for the Life of a Sailor." Sir William Kennedy married in 1868 Edith Louisa, daughter of the late Captain E. Stopford, R.N.

Lieut.-Colonel Charles Edward Fishbourne, Northumberland Fusiliers, of Ashfield Hall, Ballickmoyler, Queen's County, who has died of wounds, was the only surviving son of Joseph Fishbourne, and was born in February, 1869. He was educated at Oakham School, and entered the Northumberland Fusiliers in April, 1892. He had promotion in 1895, and was captain in February, 1900; in the following November he was given his brevet of major, and this rank was made substantive in September, 1909. In August, 1914, he received the rank of temporary lieut.-colonel for the command of a Service battalion of his regiment. He was adjutant of the Northumberland Fusiliers from October, 1899, to September, 1903. Colonel Fishbourne had fought with distinction in the present war. Before this he had seen distinguished service. He took part in the Nile Expedition of 1898, including the battle of Omdurman, and had the Egyptian medal with clasp and the Nile Medal. He also served throughout the South African War of 1899-1902. Colonel Fishbourne married in 1908 Elizabeth Leslie, second daughter of the late Robert Russell.

The death occurred on Saturday, at Buriton House, Buriton, Petersfield, of Sibella Charlotte, the wife of Henry Bonham-Carter, of 5, Hyde Park Square, London, and elder daughter of the late George Warde Norman, of Bromley Common, Kent, in her eightieth year, after a short illness. Mrs. Bonham-Carter was the mother of Mr. E. Bonham-Carter, C.M.G., Legal Secretary, Sudan Government, with whom sincere sympathy will be felt by a very large circle of friends.

We have to announce the death at Torquay, on the 8th inst., of Lieutenant-Colonel F. West, late 48th Foot, aged 92. Lieutenant-Colonel West was a Crimean veteran, and was a Chevalier of the Legion of Honour and also had the Order of the Mejidieh and the English and Turkish medals for the Crimea. He was the youngest son of the late Admiral Sir John West, G.C.B., and lost his only son, Lieutenant A. V. West, Royal Berkshire Regiment, in the Boer War.

It is now announced that Lieutenant Richard Nicholas Dilberoglue, Coldstream Guards, was killed on September 15. Aged 20 years and 10 months, he was the youngest son of Judge Dilberoglue, former President of the Court of Assizes, Cairo, and Mme. Dilberoglue, of the Lodge, Eastbourne. He was educated at Eton, and rowed in the Eton eight of 1914. He was captain of his house, and a first-rate all-round athlete. On the outbreak of the war he left Eton and went to Sandhurst, where he soon became a sergeant. He obtained his commission in the Coldstream Guards in February, 1915, and on May 1, 1915, he joined his regiment at the front. He was acting captain, and led his company into action on September 15. A brother officer wrote lately to Lieutenant Dilberoglue's mother:—"I was with him, as you know, for a year out there, and I know no one of whom I got so fond, and whom I admired more. He was splendid in everything he did, and whatever it was it was always done well. You have the satisfaction of knowing that in the regiment he was looked upon as the best soldier of the young officers." Both his brothers are serving in France.

Lieutenant Allan George Condi, who was killed in action on October 1, was the only son of Mrs. Condi, of Mulcaster Crescent, Stanwix, Carlisle, and the late Frederick Condi, of Corfu, Greece. He was 20 years old.

BRITISH REFUGEES FROM TURKEY FUND.

The following is a list of subscriptions to the above fund received between September 26 and 30. Further subscriptions will be gladly received by the Hon. Treasurers (Mr. A. Baker and Mr. W. G. Middleton Edwards) at 5, Giltspur Street, London, E.C.

DOMESTIC ANNOUNCEMENTS

DEATH.

LAWRENCE.—Killed in action, on August 16, 1916, Joseph Reginald Mark, Second Lieutenant, East Surrey Regiment, dearly loved youngest son of the late Rev. Thomas Ranger Lawrence and of Mrs. Lawrence Dawson, Sailors' and Soldiers' Institute, Alexandria, Egypt, aged 21.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.),
Alexandria.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
Glymenopoulo, Ramleh.
This Hotel is situated near the Beach.
Open all the Year. Bathing Cabins.
Terms from:
Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.

Open all the Year Round—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
For Summer Season—
PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS,
LIMASSOL, CYPRUS,
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

SCHOOLS for BOYS & GIRLS.
TUTORS for ARMY & ALL EXAMS.
REFINED HOMES with EDUCATION for children whose parents are abroad.
Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.
The age of the pupil, district preferred, and rough idea of fees should be given.

KING CONSTANTINE IN THE BALANCE.

The National Defence movement in Greece is still careful to proclaim that its action is aimed solely at freeing the country of the hereditary enemy. But when cries of "Down with the King!" are raised at Mitylene after a speech by M. Venizelos, it is not difficult to see the point to which the movement must inevitably tend, if King Constantine maintains his present attitude of passive resistance. Sooner or later the restraint now imposed on their followers by M. Venizelos and his colleagues in the Provisional Government must find an outlet in the force of the reaction which will accompany a definite trial of strength between Greek patriotism and German vassalage. Hitherto we have clung to the hope that, as soon as there could be no mistake regarding the trend of the national will, King Constantine would range himself once more on the side of the Constitution, and absolve himself from any personal pledges given at a time when he could not foresee the course of future events. But the national will has stood revealed for a long time now, and, although the King has appeared repeatedly to be on the verge of a surrender, he has found reasons for changing his mind. The difficulties of Roumania in the face of von Falkenhayn's concentrated attack in the Carpathians will have supplied the latest excuse for fresh vacillation. In the expectation that a few days or weeks will see the Roumanians well on the way to sharing the fate of the Serbians, King Constantine may hug to himself a belief in his own infallibility, and continue to trifle alike with the Allies and with Greek interests by appointing dummy Cabinets until steps are taken to put an end to the farce. How near that stage is approaching may be inferred from the new demand made by the Allies upon Greece, that she should surrender her fleet, as a precaution against the adoption by her of measures calculated to endanger the safety of the Allied armies of the East.

The National Defence movement has become too big to be ignored even by the strongest of autocrats. It has already absorbed the foremost men of the country, with the exception of a number of army officers, and the Athens Administration is now left without a navy. The personal popularity of King Constantine was calculated to carry him a long way even in a conflict with M. Venizelos, who has never been without enemies in the political world. But the logic of facts has been too strong for the King's negative policy. Earlier in the war M. Venizelos recommended that Greece should hand over Kavalla to Bulgaria and compensate herself, at the suggestion of the Allies, with a large extent of territory in Asia Minor. King Constantine vetoed this suggestion on the ground that Greece would never relax her hold of territory which she had gained at the point of the sword and at the cost of Greek lives. But to-day the Greek people have been called upon to witness not only the surrender, without compensation, of the whole Kavalla region, but also the sacrifice of millions of pounds' worth of war material. To this must be added the humiliation entailed by the kidnapping of some thousands of Greek soldiers and their internment in Germany. King Constantine may count on having his soldiers returned to him by the German Government, and he may place implicit confidence in the German Emperor's promise to restore the territory which his allies have felt constrained to occupy. But he can never hope to persuade the Greek people that the Bulgarians will of their own volition evacuate the coveted district of Kavalla. The value of German promises to the Greek mind is shown by the fact that the undertaking given that Greek territory should not be violated has been broken, and what object, it is argued, will Germany have after a victorious war in antagonizing merely for the *beaux yeux* of Greece the Bulgarians, whose place in the Central European Alliance is essential for the realization of German schemes? On the other hand, the Greeks may ask themselves, if the Entente Powers are victorious, what object will they hope to serve by penalizing Bulgaria for the benefit of a country whose Government has been consistently hostile during the greater part of the war? To-day the Bulgarians are the enemies of the Entente, and Anglo-French troops may require to expel them from the Kavalla district; but it would be folly to overlook, as King Constantine has evidently overlooked, the fact that the Allies aim at a permanent settlement in the Balkans. The Greeks know well that there is a school of political thought which holds that the occupation of Kavalla by Bulgaria is practically essential to such a settlement, and that it would welcome any excuse for leaving it in her hands. What is to prevent the natural exasperation of the Entente Powers against Greece from taking advantage of a situation which will make them sole arbiters of the fate of the town and district, in order to place them once and for all in Bulgarian possession?

These considerations, we are confident, are prompting the National Defence movement no less than the instinctive dislike of seeing Bulgarians in occupation of Greek soil. Greece, as M. Venizelos has continually urged, is at a critical stage in her history. Her hold on Kavalla challenged the principle of nationality, and, so long as Bulgaria remained strong, must always have prevented a permanent settlement of the Balkan question. She was given the opportunity of emerging from a false position with great advantage to herself, in the form of territorial expansion. King Constantine caused the offer to be rejected. The entry of Bulgaria into the war against the Allied Powers went far towards cancelling the claim of the Bulgarians to Kavalla in favour of the Greeks, and would probably have been held to have done so entirely, if Greece had retained the sympathy of the Entente. This she has deliberately sacrificed, and it would be foolish, the supporters of the National Defence movement reflect, to count on the Allies going out of their way to benefit Greece. Hence the anxiety of the Provisional Government to have a hand in the ejection of the Bulgarians from Eastern Macedonia, so that, as the enemy falls back, there may be a recognized Greek authority on the spot to resume the administration of the territory. A clear appreciation of the position can only range every true Greek against King Constantine, who has wilfully betrayed Greek interests. In Macedonia, the Islands, and in Crete he has already been weighed in the balance and found wanting. Unless he can make very sudden and complete atonement for the wrong he has done the country, it is difficult to see how either he or the Crown Prince, who has inherited the Hohenzollern instincts of his German mother, can be tolerated on the throne. In such circumstances the Allied Powers have a duty to perform to the Greek people, to let it know how it stands. One thing is certain, the co-operation of the Greek army, now divided into hostile camps, would not be worth the expenditure of money and munitions required to convert it into a fighting machine. At the same time the Allies have no right to accept the services of even a handful of Greek volunteers, or to give the least encouragement to the Provisional Government, if there is any chance of the Balkan question finding its ultimate solution in the retention of Kavalla by the Bulgarians.

THE NILE.

(From a Correspondent.)

Although the achievements of modern engineering science have secured Egypt from the menace of famine consequent upon a low Nile, the moods of the great river are still incomparably the most important thing in all the land. While far away among the distant mountains of Central Africa her floods are gathering, Egypt waits breathlessly for news. A huge flood will mean the certainty of agricultural plenty; a low Nile, an increased burden of care and anxiety to the dwellers in the valleys. This year, when Egypt is still an armed camp, and when the anxieties of war—albeit greatly lessened during recent months—are still with us, the magnitude of the flood is even more than ordinarily gratifying. There are thousands of extra mouths to be fed in the country now, and every grain of corn, every ounce of sugar, every edible morsel grown on Egyptian soil is helping to sustain the British Army along the road to victory; while the cotton of Egypt is a direct munition of war. A good Nile, therefore, meaning as it does a maximum yield of produce, is at the present time an event of world-wide importance. And the Nile has risen to the occasion. It would be hard to estimate the exact figure of her contribution to the war-chest, but it must be very great indeed. The strip of green which for centuries has bordered the Nile in Egypt has broadened considerably within the last decade, and the generous flood of this year means nothing less than that every inch of cultivable land will receive all the water necessary to the production of record crops.

It is small wonder that the ancients looked upon the Nile, from which apparently all favours flowed, as an object worthy of their devotion and worship. Year by year they saw their cultivable land crack and harden under the merciless rays of the semi-tropical sun, year by year came the same relief as the Nile waters tumbled northwards from the unknown region far beyond the ken of their civilization. Their former idols might prove deaf to their incantations, but the Nile flowed on, a beneficent and unfailing friend to their country. Even at the present time there are dwellers upon the banks of the Nile who continue to listen for the voices of the river spirit at nightfall. The writer was once fortunate enough to meet an aged Fellah to whom this Nile Spirit was one of the realest things in life. Night by night he made his unchanging way to a bend in the river above Assuan, where he would squat for hours in true Oriental indifference to time until the Spirit deigned to speak. Then, according to the letter of the message which he had received, he would return home sad or happy, exultant or with a load of depression in his heart. He was regarded as a seer in his district, and there was certainly something uncanny in the manner in which he foretold disaster to human life on the waters of the Nile.

This is not an isolated case; the worship of the Nile Spirit is latent in the hearts of thousands in Egypt to-day, although they seldom speak of it unless they are very sure of their audience. There were many who deeply resented the caging of the Nile waters at Assuan, fearful that calamity might follow at the instigation of outraged spirits robbed of their freedom. But prosperity has gone far to destroy this feeling, and the erection of further barrages will probably be accomplished without even the latent opposition of the people. The fact that this year the Nile should have given of her best will have a greater effect upon Egyptian public opinion than most people imagine. The great river has marked the Allies down for especial favour, and all is well in Egypt.

LOCUSTS IN THE SUDAN.

(By Our Khartoum Correspondent.)

The plagues of Egypt had few claims to virtue, but they had at least the virtue of variety. The more modern examples are repeated with an iteration that makes opposition seem almost hopeless. So especially it is with locusts. Every year the locusts reappear, vast swarms flying across the sky, looking like a thunder-cloud in the distance, to sink gradually lower, till fatigue compels them to settle. Then they eat everything in front of them, until they are strong enough to fly again. If, as must often happen, the descent is made upon the bare desert, the whole swarm is killed by starvation, and it is doubtful if such swarms ever lay eggs. But nature has provided against that contingency by the enormous number of young which can hatch out from one female. One of the most miraculous sights that can be seen is the sudden birth of myriads of "hoppers," which all start to come out of the ground at approximately the same moment; and where at one time was bare earth there may be a few minutes later a crawling mass of baby hoppers. It is the hopper that does the serious damage, for he cannot fly, and he eats everything he meets, laying waste the land before him till he grows bigger and bigger, and gradually flies a few feet at a time, then a few yards, until suddenly the whole swarm will be scattered and the bulk of it flying, flying, flying till it drops, leaving only the weaklings to be caught and fried in butter and eaten, and thus make up in some small way for the damage they have done.

As the hopper is most destructive, so is he the easier to deal with in the early stages. He eats his way forward. So it is only necessary to put down some lightly poisoned "dura" stalks, chopped up small, in his way, and whole swarms are blotted out in this fashion. This is the approved method, as recommended by the Sudan Government, which sends quantities of poison to all provinces ready for emergency. Often the natives find adequate the simpler fashion of digging a ditch and driving the hoppers into it, and then stamping or beating the hoppers in.

The great thing is to get early news and co-operation. This by slow degrees has been brought home to the natives, and the appearance of hoppers leads to immediate action, whilst the passage of flying locusts is telegraphed on, so that preparations may be made for their descent. For the tired locust can be destroyed almost like a hopper. Above all, steps are taken to ascertain where they breed, and literally millions have been destroyed in the egg form. The female drives her tail into a hole in the ground and deposits the eggs at the bottom, so that the breeding ground is noticeable by the vast number of small holes in the ground. The soil is hoed up, and the eggs destroyed. These breeding grounds may be anywhere, and it is stated that the eggs will remain unhatched for a very long period, until the conditions of atmosphere happen to be suitable, so that the young hoppers may come out to find plenty to eat, at any rate, at first.

With the flying locusts the method of inoculation is occasionally used—that is, a certain number of locusts are caught and infected with a coccus, and liberated. The others become infected, and ultimately die. But this method is a temporary one only, as the locusts after a year or so breed a kind immune to this treatment. This year, with its exceptional rains, is also the opportunity of the locusts. They cannot live in the south, where the rains are too frequent for them, wet their wings, and prevent them flying. But in the north they have been widely reported, chiefly in Berber and the Red Sea Provinces. Partly, no doubt, this is due to a realization by the natives that locusts must be

reported; partly, probably, the exceptional rains have allowed exceptional numbers to hatch out. The damage reported so far is insignificant, and where the swarms have been caught in the hopper stage they have been utterly destroyed. Flying locusts have been reported, too. But there have been violent storms in most parts, and it is improbable that many of them survive. Possibly they may have survived long enough to deposit eggs and thus cause more trouble in the future.

Even supposing the eggs throughout the Sudan were destroyed, the country would not be immune, for it is stated that locusts can fly as much as 2,000 miles. Still the work of destruction is continuing in all parts of Africa, and it may be that in years to come the locust will exist only in rare and bottled specimens.

BULGARIA AND THE SAINTS.

(From a Correspondent.)

The extent of Bulgarian barbarity can be judged to some extent by their treatment of churches and saints. We have heard of their conduct regarding Sofia Cathedral. This church, erected years ago in memory of Bulgaria's liberation by Russia, was named "St. Alexander Nevski," after the patron saint of Tsar Alexander II., the Tsar-Liberator. It was built with Russian contributions, designed by Russian architects, decorated by Russian artists; and yet, last March, on the Government's proposal, the Bulgarian Sobranje passed a resolution changing its name on the representation of the Prime Minister, M. Radoslavoff, that "We do not want bloodthirsty Russian saints." (See the Budapest paper, *Az Est*, April 20.)

The Bulgarians are now giving us a further example of sacrilege. One of the greatest Serbian kings of the Middle Ages, Milutin (1282-1321), was canonised after his death, owing to the services he had rendered to the Serbian Church, particularly in the building of beautiful monasteries, which have been highly praised by Sir Arthur Evans, Charles Diehl, Gabriel Millet, Kondakoff, and others. It so happened that the relics of this Serbian saint were removed from Serbia in the days of the Turkish invasion, and carried to Sofia, about the middle of the fifteenth century. There they were worshipped by the people, and the church wherein they were laid was known as "The Holy King," and so it has continued through the centuries. Now the Bulgarian authorities have changed the name of this church also, and have thrown the mortal remains of the saint into "some obscure corner." The Bulgarian Press makes the following comments on this act, which are a worthy counterpart of the words uttered by the Bulgarian Prime Minister:—

"The Holy King of Serbia," says the Sofia paper, *Kambana* (August 22), "is walking in the streets of Sofia. After a long tolerance caused by a misleading ignorance, the bones of this unworthy saint have now been thrown into some obscure corner; but they did not pass through the purgatory through which such unclean things should pass. Even the name of the Church has been renewed, and that of 'The Holy King,' forced upon it through ignorance, has been taken away." But the Church of The Holy King is so well known in Sofia that a square in Bulgaria's capital was named after it; therefore, the inscriptions on the electric trams still bear this name. On this account, the *Kambana* protests as follows: "But it is not easy to destroy an evil action. The name of The Holy King is still officially borne through Sofia's streets—on electric trams! We know the anti-Bulgarian feelings of the director of the trams, but we admire our endless patience."

A Paris telegram announces that the Montenegrin Government will shortly take up its quarters at Neuilly-sur-Seine, where King Nicholas already resides.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The War in the Near East. October 11.

Mr. Asquith, in the course of the speech in which he proposed a fresh Vote of Credit for £300,000,000, reviewed the situation generally. In the course of his remarks he made the following references to operations in the Near East:—In Mesopotamia, the hot weather of the past months hampered active operations, but substantial progress has been made in the improvement of our rail and river communications. The health of the troops is also greatly improved. General Maude assumed the command of the forces in Mesopotamia on August 28, and his most recent reports indicate that real headway has been made in overcoming the difficulties which have hitherto hampered our operations in that territory. In Egypt the chief event of importance has been the Turkish attack on our forces at the Katia oasis on August 3, which resulted in the complete defeat of the Turks, with a loss of 3,164 prisoners and four guns. In spite of the great heat our troops pursued the defeated enemy, forcing him to evacuate the Katia district and to fall back for a distance of twenty miles to the east. This success has gone far to remove the danger of an attack on the Canal, and has impaired Turkish prestige in Syria and Arabia. The weather has not allowed of any extended operations since, but steady progress has been made with the railway from the Suez Canal to Katia. On the Western front of Egypt the Senussi has been reduced to impotence. This, combined with the successful operations undertaken by the Sirdar in Darfur, has put an effectual check on the Turco-German intrigue in Western Egypt and the Sudan. At Salonika the Allied forces, having received considerable reinforcements of Italian and Russian troops, assumed the offensive early in September with the object of combining their action with that of the Russians and Roumanians in Transylvania and the Dobruja. This offensive has met with a considerable measure of success. On the right flank the British troops have established themselves on the left bank of the Struma, where they have occupied several Bulgarian positions, and have repulsed repeated counter-attacks, and inflicted heavy losses on the enemy. On the left flank the French, Russians, and Serbians have defeated the Bulgarians, and taken Florina, driving the enemy from frontier heights, and are now within eight miles of the important town of Monastir. Our operations in that sphere have not only entailed heavy losses on the enemy, but prevented him from transferring troops from Macedonia to the Dobruja, and have rendered valuable aid to our Russian and Roumanian Allies.

There is, as I have said before, complete intimacy and mutual confidence between the General Staffs of the four Powers, with the resulting co-ordination of purpose and of purport. I spoke of the four Powers, but our gratitude is equally due and is equally warm to the smaller States which have recognized that both interest and duty call upon them to play their parts in a struggle upon which their whole future hangs: Belgium, Serbia, and now Roumania, whose King and people, in defiance of a thousand calls on a pusillanimous and self-regarding neutrality, joined our cause and are spilling their best blood on behalf of the threatened independence of small nationalities. I wish I could add Greece. Greece—with her imperishable record of stubborn and victorious resistance to the inrush of barbarism and tyranny; Greece—of whose fortunes and liberties we have been for the best part of a century the staunch protectors. I will only say that even now, wisely guided and governed, Greece may yet take a worthy part on the side to which she is committed by all that is great and glorious in the traditions of her past.

Sir Edward Carson, in the course of a long speech, said:—I am bound to say that, for my own part, following as well as I can the operations in the Balkans, there seems to be some ground for anxiety upon our part. I am, of course, glad and thankful, as the Prime Minister himself said, that the Roumanians have come in; but those who are watching events must have considerable anxiety as to whether the Germans have not as their policy the crushing of the Roumanians. That, in my opinion, would be a great disaster. To have the consolidated Balkan States under the heels of the Germans and in their possession at a time when peace proposals may be put forward would seem to me to add great difficulties to the acceptance for a moment of any of the proposals that may be made. I think it is right that this country should turn its attention to the fact which is now patent, and has been patent for a long time, that the aggression of the German Government is not directed merely toward Europe, but is also directed toward the Balkans with a view to ultimate aggression in the East, where we are so deeply concerned. That is a matter which ought never to be left out of consideration for a moment in considering the various operations which we are driven to undertake.

Bombs were successfully dropped on Sofia by two French aeroplanes, which landed at Bucharest last week. One of the machines went up from Sorovitch, on the Monastir front, and the other from Salonika.

According to the *Cologne Gazette*, an official report of the death sentence passed upon Essad Pasha has been issued in Constantinople. It says that it was proved from a letter that Essad Pasha had conspired against Turkey and had rendered service to her enemies. The sentence was confirmed by the Sultan.

THE PRESS ON THE NEAR EAST.

The Allies and Roumania.

The *Pall Mall Gazette* (October 9) expresses the opinion that "the loss of Brasso and the retreat of the Roumanian Army from Transylvania can cause little surprise, in view of the trend of recent events. Possibly the invasion of Transylvania went too far in pursuit of its political object, and certainly the unexpected action of Mackensen in the Dobruja must have had its repercussion." The writer continues:—

There seems to be no ground for alarm at present, but Germany is undoubtedly bent on striking with all her weight at Roumania, and no one can foretell the future if the Allies should falter in doing their share to relieve the situation. It would be a smashing blow to our prestige if Roumania were to suffer the fate of Serbia, and, as champions of small nations, the Allies would have to bow to the enemy, who have at least kept the territories of her satellites inviolate. It is largely Russia's job, but the Macedonian contingents could powerfully influence the situation if they could put more life into the offensive from Salonika.

German "Invention."

The *Scotsman* (October 9), in a leading article on the progress of the war ridicules the "inventions and suppression of the truth that figure as history in the German dispatches"; and points out that though "neutral and belligerent nations alike are expected to import their information in war time, as they imported their goods in time of peace, from Germany," that expectation is not likely to be realized nowadays. The article continues:—

There was a run for a time on fraudulent victories in the Dobruja and in Macedonia. These have meantime stopped. The Roumanians, aided by the Russians, have picked up 8,000 prisoners on the scene of their decisive defeat. The great Bulgarian offensive in the direction of Greece and the Ægean has fared still more unhappily. The enemy's right flank has been driven in upon Monastir over a front of some forty miles; on their left flank, the British have got across the Struma, and have established themselves on a twelve-mile front within reach of the railway which is the chief connecting link between the Southern Bulgarian Army and Eastern Macedonia. As nothing hopeful is to be had from the Balkans, on which the other day the German critics were asking their own people and neutral nations to concentrate their eyes, they have gone for comfort to Transylvania. By concentrating superior forces on the more Western Carpathian passes, Falkenhayn has compelled the Roumanians to fall back at several points—including, it is said, Brasso—on their own frontier. But the object of the movement was not the withdrawal, but the interception and destruction of the invaders, and this purpose has signally failed. Our Allies have skilfully evaded the clutch, and through the concentration of their hold in the region where they can co-operate with Russia they have probably improved the strategic strength of their position.

King Constantine and the Allies.

The *Manchester Guardian* (October 9), in an article entitled "A Cabinet of Professors," adds yet another to the warnings that have been raining on King Constantine from all sides of late:—

King Constantine has tried a Cabinet of officials and a Cabinet of party politicians. He has now sought salvation in a Cabinet of professors. He could be congratulated on his fertility of resource if that quality were the mark of statesmanship in a ruler of Greece at this time. Unfortunately, what his country requires of him is a very much simpler quality—the capacity for patriotic decision. If King Constantine continues to drift it may be sure that he will be doing his brother-in-law a useful turn; it is certain that he will be presiding over the disintegration and ruin of Greece. He would, perhaps, from his own personal point of view, do well to remember that a dynasty must be very ancient and deeply rooted to bear the weight of responsibility for such a national catastrophe.

As to the Allies' attitude, the writer says:—

If they feel that they cannot safely move in the Balkans so long as King Constantine's attitude threatens their base at Salonika and their lines of communication, and if they are convinced that King Constantine's intention is to hamper their moving, then they must either abandon their campaign or remove the obstacle in their way. Those are the alternatives, and much too much time has already been wasted in hesitating to choose between them.

"Untrustworthy."

The *Morning Post* (October 6) concludes a leading article, "The Betrayal of Greece," with the following plain speaking:—

The time is past to treat with King Constantine. It is obvious that he cannot be trusted, and that he is altogether in the hands of the German Party. It may be a painful duty, but the interests of the Allies cannot be sacrificed any further in the indulgence of a Government committed to the interest of the enemy. In war it is necessary to come to disagreeable decisions and to act upon them with resolution. The neglect of this quality of firmness has already cost the Allies dear not only in the Balkans but in every theatre of war. The time has come for our Government to understand that the friends of Germany can only be indulged at the sacrifice of our own brave soldiers, and that this sacrifice in such an interest can no longer be permitted.

Greek Naval Feeling.

In a note upon "The Greek Navy," the *Naval and Military Record* remarks:—

It will be no slight matter for satisfaction on the part of many British naval officers that the Greek fleet should have shown so unmistakably its sympathy with the Entente Powers. It would never have had any existence if it had not been for the part which the British Mediterranean squadron took in the battle of Navarino. In recent years it has owed much to British naval officers and men.

It certainly is pleasing to find the Greek naval officers more alive to the best interests of their country than are certain others more highly placed. The writer is doubtless correct when he states that "the fighting value of the Greek Navy is inconsiderable," in the present case at least; yet it is also true that—

If the whole Greek Navy had thrown in its lot with M. Venizelos his cause would not have gained appreciably in strength; but the fact that so many officers of the Greek fleet, from Admiral Contouriotis downwards, have associated themselves with the Venizelist movement has been of no little political value. Their adhesion has not only exposed German misrepresentation as to the attitude of the Greek people towards the Entente Powers, but has reminded King Constantine that his policy has already deposed his country, though we trust only temporarily, from its position as one of the smaller maritime Powers of the world. It is curious to recall that only a little over two years ago, amid enthusiastic cheers, the Minister of Marine announced that the Greek Government had determined to take active steps to re-establish the Greek fleet. The programme was drawn up after consultation with the British mission. It included three battleships, three armoured cruisers, and a large number of smaller craft. The only vessel of the new Greek Navy which was to be is the battleship Salamis, now flying, presumably, the German ensign.

In the Dobruja.

The following passages are extracted from a description of the Dobruja contributed to *Common Sense* (October 7) by a correspondent:—

It is an undulating stretch of country, generally devoid of trees, and remarkable for the extraordinary abundance of its bird life. Across the isthmus between Kustendji and Tchernavoda runs Trajan's Wall—a ditch some 12 ft. deep and 20 ft. wide. At the base of the mound formed by the thrown-up earth there was at once time a great wall, composed of rough-hewn stones weighing from one to six tons. The wall is now fallen, and its huge stones lie in disorder on the ground.

This wall afforded, when I was in the Dobruja, most excellent partridge shooting. The bottom of the ditch was full of brambles—the only cover for miles. The plain abounded with partridges, and as the day advances the hawks and harriers drive these from their feeding ground in the stubbles to the wall for shelter. By following the wall, therefore, in the afternoon, you were generally sure of sport. Eagles, vultures, and eagle owls abound, and the lakes are alive with wild fowl and snipe. You may also see grand flights of swans, and hear the beating of their strong pinions. Flocks of great bustards, on the plain, might easily be mistaken for sheep. Of sheep there were great flocks, tended by Bulgars or Transylvanians and protected by ferocious dogs. Those Transylvanian shepherds must be some of the most enduring of mortals. They spend years on the plains and seldom sleep in a house. Summer and winter they are clothed in sheepskins, and on a cold day a shepherd looks like a gigantic old ram on his hind legs.

France and Roumania.

The following passages are extracted from an article, "Les Roumains et nous," contributed to *Correspondance d'Orient* (September 10) by M. J. Ernest Charles:—

Le maintien du corps expéditionnaire à Salonique était indispensable pour le progrès politique et moral des Alliés dans les Balkans. Or, nul n'ignore ce que fit M. Briand aux heures ingrates, pour le maintien du corps expéditionnaire à Salonique. Ce succès, voulu et préparé par M. Briand, apporte au premier ministre français un surcroit d'autorité et de prestige. Tant mieux! et il est permis de penser, au surplus, que cela ne nous sera pas inutile au moment de la conclusion de la paix.

Mais quand on a considéré les circonstances et les contingences, quand on a mesuré l'action des événements et l'action des hommes, il importe de ne pas méconnaître l'influence des grandes forces qui parfois entrainent à leur insules gouvernements et les peuples. La Roumanie, entrant dans la guerre, est excellemment réaliste. Mais elle est idéaliste aussi. Constatons la puissance de cet idéalisme. La Roumanie va où le mènent non seulement son intérêt national, mais encore ses ardentes et profondes sympathies.

Des affinités existaient depuis longtemps entre la Roumania et les Alliés, et particulièrement entre la Roumanie et la France. La récente décision roumaine souligne ces affinités, et les résultats que cette décision produira développeront dans les temps prochains ces affinités merveilleusement.

Austria-Hungary and Peace.

"A Foreign Correspondent" contributes to the *Outlook* (October 7) an article entitled "Can Austria-Hungary be Spared?" from which we extract some passages bearing on the Near East. "Materially and geographically," says the writer, "the Danubian Monarchy is in an envious position. . . . It is difficult to discover anything lacking for its strength and prosperity." Yet prosperity was absent: there was no soul in the land.

Austria-Hungary, ruled by a bigot dynasty allied to an unconciliatory Church and intolerable aristocracy, was a living anachronism of Europe, and like Turkey was assailed from every side by growing forces of her nationalities endowed with centripetal motion, ever waxing greater. In order to maintain its rule her dynasty divided the power with the Germans and the Magyars, leaving to their tender mercy and greedy exploitation all other nationalities in the Monarchy. But even such a combination was too weak to resist the pressure from outside and to subdue the centripetal motions from the different nationalities. . . . The Czechs pray for our victory and contribute to it greatly. The Czech regiments surrendered to the Russians and the Serbs, and were ruthlessly butchered by brutal German officers.

The Italians, the Roumanians, and the South Slavs did and do the same and suffer equally. The latter are looking for deliverance to Italy, Roumania, or Serbia, and actively, after having surrendered, take part in fighting on the side of the Allies. No wonder that Austria-Hungary is exhausted, and sacrifices as a last resource to the unsatiable Moloch of dominion children of fourteen and old men of sixty-five years of age.

The writer is of opinion that "peace in Central Europe can be secured in two different ways: by German conquest—and it would be a peace of graveyards—or by setting free the trodden-down nationalities in Austria and uniting them with their kinsmen in Italy, Serbia, and Roumania. Such a peace would be the peace of progress and liberty. The Allies have pledged their word to obtain such a peace, and have given solemn assurances that the rights of the smaller nations shall be recognised. But such a peace cannot be achieved without the complete dismemberment of Austria-Hungary."

The Balkan States—

Last week we referred briefly to Sir Edwin Pears's article on "The Balkan States and Turkey," which appears in the current *Contemporary Review*, and expressed the hope that we might be able to return to it. It is indeed a temptation to quote from it at great length, but we must confine ourselves to the concluding passages, in which Sir Edwin gives in effect what he regards as an ideal and yet practical solution of the old Balkan Problem. "The Balkan States, excluding Turkey, are," he considers, "worth cultivating." The Roumanians, Bulgarians, Serbians, and Greeks "are full of the energy of newly-born peoples." They are to-day divided, hostile to each other, with apparently conflicting interests; but they are in presence of a struggle that may—Sir Edwin thinks it "should"—end by their becoming united for the purpose of saving their existence.

A century has not passed since each and all were under the Turkish yoke. Partly by foreign sympathy and aid, but still more by their own aspirations and exertions, they have formed themselves into separate States. The one thing which they have in common is a form of Christianity. The Orthodox Church is a living force to which they are all deeply attached. That it makes for civilisation is beyond doubt, that it is clearing itself from forms of superstition is equally manifest to those who know the country well. The influence of Robert College and the American and other Christian missions in the Near East have revived in the people higher conceptions of their duty as men and as citizens. A quiet social revolution or reformation is going on steadily throughout all the Balkan States. Hitherto their Christianity has been bound up with nationality, and has been justly regarded as constituting their bond of union against the oppressor. It is now their great arm in promoting morality and in the cultivation of higher ideals of life. Among the many hopeful signs is their increased liberality towards foreign forms of faith. It is tempting to tell of religious services where Presbyterian ministers have preached in Orthodox Armenian churches; of the enthusiasm created by a visit of the learned and noble young Anglican Bishop, Collins, who in the robe of an Armenian Bishop preached to the edification and delight of an enormous congregation; of a Presbyterian minister from Scotland, who pretty regularly on his visits from England conducted his own service in Orthodox churches in Greece; of the small British congregation at Candilli, on the Posphorus, who in an Armenian church on successive Sundays held their English service. Christianity is still in these States a great power. Bitter as is the hostility between Bulgarians and Serbians, members of the same race, professing the same religion, speaking virtually the same language, the two nations would have long since come together but for the opposition of foreign politicians, and especially of Austrians. Englishmen may well hope to see a greatly enlarged Serbia united to Bulgaria. It is as inevitable that the two nations should come together as it was that England and Scotland should unite. It is too much to hope that the racial and lingual differences between these two Slavic States and Greece will be overcome within the same period. Roumania, also, with a different language, may well enter into a union with Serbia and Bulgaria. All these States, sooner or later, will recognise the need for combination against external foes. Probably the first step will be common action to form a Customs and Postal Union. From that to a Federation for Defence is not far. Englishmen should endeavour, both in the interest of civilisation and of our country, to aid in reconciling the differences between them and in promoting their union.

—And Turkey.

As to Turkey and the Turks, Sir Edwin assumes that "their dominion in Europe has come to an end, that the Armenian provinces will pass under Russian rule"; then, leaving the Arabs out of the calculation, there will remain between eight and nine million Moslem Turks in Asia Minor and Syria. "There can," he declares, "be no lasting peace in the Near East unless they are fairly dealt with." They should be treated justly and mercifully.

They have never shown themselves capable of dealing justly with subject races. But Europe must not duplicate the injustice by placing them in subjection. It is the fashion, especially among people who know little about the country, to denounce the Young Turk party. That party committed a host of blunders, and allowed themselves to be driven into union with the Central Powers, but among their leaders were thoughtful and patriotic men, who desired to see fair play to the subject races, as their predecessors had never desired. The party still remains in power, and I see no signs of its being replaced. The millions of Moslems should be allowed to choose their own form of government, and, while they must give guarantees for the protection of the life and property of their non-Moslem subjects, they should be left as far as possible to develop in their own way upon European or Asiatic lines, as they judge best.

In many ways this would certainly be an ideal solution. But who would protect the Moslem Turkish State against aggression from without, and—even more fatal, perhaps—from exploitation by European "capitalists"?

Italy and the Southern Slavs.

On Wednesday of last week *The Times* published a letter from Lord Cromer, President of the newly formed Serbian Society of Great Britain. As already stated in THE NEAR EAST, the main object of this society is to promote the union of the Southern Slavs and the establishment of a Southern Slav State as "the surest foundation of peace in the Adriatic and the Balkans"; and the purpose of Lord Cromer's letter was to rebut the suggestion that such an object might involve a policy hostile to Italian interests. Commenting upon this, the *New Statesman* (October 7) says:—

The suggestion is a natural one, since many, if not most, Italians are profoundly nervous and suspicious regarding Southern Slav aspirations. The same may be said, of course, of the Southern Slavs regarding Italian aspirations. The conflict of interests is real, and there is nothing to be gained by ignoring it. But, though real, it is by no means incapable of adjustment. Lord Cromer, on behalf of his society, emphatically repudiated claims alleged to have been put forward by Serbian propagandists to the possession of Istria and Trieste. We hope he will go further and state what Serbian claims his society does endorse; for when they are stated we believe it will be found that between them and the claims put forward by the saner elements of Italian public opinion, there is no point of really serious conflict. Italy wants strategic control of the Adriatic. The Southern Slavs want the freest possible commercial access to the Adriatic. These requirements are only incompatible when they are stated by the extremists on either side. If Lord Cromer, as we gather, is prepared to concern himself with the discovery of a compromise reasonably satisfactory to both parties, we most sincerely wish him success. We do not think there is any direction in which at the present time his influence and his special abilities could be more usefully employed.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

According to the *Patris*, the Greek "Prime Minister has been informed that the Treasury has only 360,000 frs. in hand for the month of September, while about 20,000,000 frs. are required for the salaries of public servants and officers, and for other urgent needs of the State." I have little confidence in such unbacked statements as this appears to be. That the Greek Government is in great need of financial assistance there is no reason to doubt: that its position is causing weakened credit abroad is obvious; but that Greek finances have been reduced to the level described by the *Patris* is very unlikely indeed.

***

Herr Basserman is an optimist in regard to the future relations between Germany and Russia. For the *Badische Neueste Nachrichten*, apparently, there is no reason why the policies of the two countries should not harmonise in the future. The paper does not agree with the many German politicians who maintain that the "great issue separating Germany and Russia—the Dardanelles question—is one of life and death. With skilful treatment it might become a question of diplomatic understanding which would keep for Turkey her property and sovereign rights in Constantinople and assure for Russia free passage through the Straits. Russia suggested in 1908 summoning a European conference for revising the Berlin Treaty concerning the Straits. The Central Powers then opposed to this desire an obstinate resistance, which doubtless promoted England's encircling policy. It might be thought that Germany and her allies, in the stronger position in which they find themselves to-day towards Russia, could resume without danger the policy abandoned in 1908." A good many questions will have to be subjected to "skilful treatment" long before Germany will be in a position to "resume the policy abandoned in 1908."

***

Smyrna fruit will again be conspicuous by its absence on the market this year, but gradually we are beginning to draw our supplies from other sources. Thus, as regards sultanas, Australia, which before the war did not grow the fruit, is now cultivating them, and with satisfactory results. If the undertaking should prove profitable there is no doubt that Australian sultanas will become a yearly feature in the dried fruit market. It will depend to a great extent whether the prices of the Australian article, placed on the home market, can compete with the Smyrna product. The higher freights from Australia, as compared with the Mediterranean, are certainly not in favour of the Australian sultana; but, then, cannot that be remedied, if necessary, by a preferential tariff? Similarly, cannot figs and oranges, grown in our possessions or in those of friendly countries, eventually be made to replace those drawn chiefly from Smyrna and Jaffa? Of course, there will be many objections to the introduction in this country of a preferential tariff on foodstuffs, but I think that most of them will have to be waived if Imperial trade is to gain ground after the war. The matter is one that must be seriously envisaged sooner or later, and I only indicate the dried fruit trade here as one minor aspect of the great trade problems which will arise after the war. Doubtless growers in Australia have gone to some considerable expense in beginning the cultivation of sultanas, and their interests will have to be considered before those of the Turks of the Smyrna vilayet, whatever the sympathies of the latter may be.

***

I am glad to see that negotiations have been going on in connection with the future of the Turkish bondholders. It is not so very long ago that in these columns I drew attention to the parlous state of Ottoman finances, and to the supreme ease and casual carelessness with which the Young Turks had mortgaged their country up to the hilt in Berlin. I still maintain that the debts contracted by Constantinople in Berlin since the autumn of 1914 will have to be totally disregarded by the Entente Powers when the war is over. That is the first principle to be asserted by our delegates. The second is that the interests of our bondholders, regardless of the nature of their securities, should be safeguarded. This will mean a total reorganisation of the Debt Administration, the disappearance therein of Teuton influence and intrigue, and the introduction of new elements, prominent among them being the Russian and Roumanian. The acquisition of Ottoman territory, thereby reducing the revenues accredited to the Debt Administration, will have to be compensated for, either by the payment to the bondholders of a capital sum to be profitably invested (preferably in Allied countries, please), or of an annuity equivalent to the normal annual revenue derived from the territory in question.

***

As a matter of fact, the whole question of Ottoman finances, and, perhaps, more particularly of the country's outstanding debt, is so intricate and involved that there are only very few experts alive to-day who can see clearly through the range of loans, securities, and schemes. Even before the Balkan wars the tangle was extremely complex; the outcome of those wars only hastened to make it more intricate. Moreover, the outbreak of the Great War prevented any settlement of the vexed question. It is true an Economic Conference met in Paris in the spring of 1914, but it was adjourned until the autumn, when, of course, it was killed by the outbreak of war. So that nothing was done to simplify the situation, and now it is, literally, in an awful mess.

***

Which brings me to suggest that, apart from all other considerations, it might be advantageous if a complete re-arrangement of the Ottoman Debt were to be undertaken. Surely the majority of the outstanding loans—those recognised by the Entente Powers—can be consolidated, and new securities exacted. This would, at one blow, do away with securities that are anomalous, not to say archaic—Egyptian and Cyprus tributes, for instance—and reduce the present muddle to a simpler form of reckoning. Secondly, and in view of the greater indebtedness of the Ottoman Empire and the inability of its rulers to look after their finances, it is advisable that greater power be given to the Debt Administrators to collect and administer the country's revenues. But before this is done it is necessary to purge the Board of its obnoxious elements and to strengthen it considerably. I gather that the negotiations now taking place are intended to attain this end, but I hope also that serious attempts will be made to simplify a financial situation which is in a state of chaos. It only needs a determined effort on the part of those conducting the negotiations to succeed in introducing drastic reforms more in accord with modern business methods than has hitherto been the case And, finally, steps must be taken to prevent in future the indiscriminate borrowing powers of the Ottoman Government, more particularly when the proposed loans are intended to serve the political aims of our enemies.

***

As was to be expected, since Roumania decided to come into this war on the side of the Entente, a great deal of attention has been devoted to the commercial and industrial possibilities of the country. Financial writers have been at great pains to show how vast an ascendancy the Germans and Austrians enjoyed before the war, and how many are the possibilities that lie ahead for British enterprise. That, of course, is all to the good; too much emphasis cannot be laid on this aspect of the coming in of our latest Ally. At the same time, I think it ought to be pointed out that the suggestion that there is no direct British representation in Roumania is entirely wrong. The Bank of Roumania—the London branch is at 27, Throgmorton Street—provides all the representation that is necessary, as everybody who has trading interests in the country knows. I hear, by the way, that there are considerable schemes afoot regarding the future of British interests in the country, of which I hope to be able to say more later on.

***

I understand that considerable feeling has been evinced in Egypt because of the apparently dilatory manner in which certain enemy businesses are being liquidated. If British trade and commerce are to benefit from the turning-out of the Teutons, the authorities in Egypt must display more energy. My information is that one large enemy firm in particular could be sold for something approximating £100,000, and only the fact that it "is still being wound up" stands in the way. As the liquidation has been in progress for a very long time, it is difficult to understand the delay. Surely something can be done to expedite the clearing-up of formalities. Opportunities are slipping by, and we cannot afford to let them do so. It might be advisable to invite the attention of the Financial Adviser, let us say, to the firm of Stein's, to begin with.

The Future of Serbia.

Opportunities for British Engineering and Financial Houses.

Rail and Waterway Schemes.

So much has been written regarding the outlook of the gallant and martyred Serbian people that it would seem that little remains to be said; but as the British and Allied Forces advance in the Balkans, and the liberation of the occupied country appears now to be within measurable distance of time, actually, too much attention cannot be drawn in this country to the possibilities that lie ahead. In 1912 the foreign trade of Serbia represented, approximately, one-hundredth of the British turnover—£8,000,000, to be more exact—and it is not surprising, perhaps, that British merchants and industrialists gave little attention to almost the smallest of the Balkan States. Two outstanding facts have to be remembered, however. First, the Serbs were hemmed in, land-bound, and without sea communications; and, second, the political conditions of the Near East were all against stability, and were sufficient to discourage enterprise from without.

In the following year the conditions of the Serbs were more promising. National territory had been nearly doubled, and when the time of redemption comes even the enlarged area will still be greater; the land-lock will be removed, and there will, consequently, be greater scope for expansion. With an estimated population of 15,000,000, with a territory of about 100,000 square miles, and with an extensive sea coast, Serbia will enter upon a new era, and, given the sympathy and support of those who are now her allies, the era should be one of commercial and political importance. That will be Great Britain's opportunity.

Factors of Development.

The true development of Serbia depends upon a great number of factors. There will be the rebuilding and re-equipment of the old railways, for example, and the construction of others. Destroyed bridges must be replaced, and wrecked bridges repaired. It is estimated that in new Serbia immediately after the war, construction of something like a thousand miles of railway line must be taken in hand to bring the communications into line with the industrial and commercial developments which are known to be inevitable. One of the main arteries will continue to be the existing Fiume-Zagreb-Belgrade and the Belgrade-Nish-Salonika systems; but these are susceptible of improvement and change.

But there are additions to be made to Serbia's railways, some of which are already projected, and others actually were under construction when the war broke out. These are: — Belgrade - Malakrsna - Pozkarevac-Negotin-Radnevac, on the Lower Danube, a scheme involving about 140 miles; Kragnevac-Kralevo-Rashka-Mitrovica (Kossovo Field), about 100 miles; Krushevac-Tulari-Kurshumbia-Prishtina, about 100 miles; Ferizovic-Prizren, along the River Drin to Scutari and the Adriatic, 180 miles; Prizren-Dibra-Sruga-Ohrid-Monastir, 140 miles; Spalato-Konjica-Sarajevo-Donga-Tuzla-Belgrade, 250 miles; Spalato-Gospic-Karlovac, 150 miles; Veles-Monastir, 70 miles; and Kumanovo-Kriva-Palanka, 40 miles. These are new lines, regarding the importance of which there is no doubt; but their construction, which is regarded as inevitable sooner or later, does not exhaust the programme of what ought to be undertaken.

The existing lines running through Bosnia and Serbia are on the narrow gauge, and for various reasons must be changed to standard. In this category are the Bosnia-Brod-Sarajevo Mostar-Ragusa, 200 miles, Sarajevo Vishegrad-Uzhice, 80 miles. In addition, there will be feeder lines on the narrow-gauge measurement which will be designed to connect the great mountainous districts with the fertile plains and large centres of population and industry. Here is a reason, then, why British engineers and manufacturers should take steps to be ready to come into this harvest. It will be to their lasting discredit if they fail to do so.

Danube-Salonika.

Discussion of coastal developments must be left to the future. It may be relied upon, however, that these will be considerable. But for the present there is another great proposal which, it is hoped, will come within the scope of practical discussion—the suggestion to construct a navigable waterway through Serbia which will connect the Danube with Salonika. "As every student of Balkan geography knows" (said a recent writer), "nature has provided in this otherwise mountainous country the easiest passage from the basin of the Mediterranean Sea with Central Europe. The tributaries of the rivers Morava and Vardar, running in the opposite directions, have their head sources on a lower plateau forming the watershed between the Black Sea and the Ægean Sea, only 1,500 feet above sea-level, quite indistinctly marked, affording the easiest passage for any road from Belgrade to Salonika, naturally turning Serbia to the Ægean."

It is too much to say, perhaps, that this great scheme is realizable immediately, but its importance to Serbia has long since been recognised, and it is significant that last year, when the Germans and Austrians overran the country, they immediately took the possibilities of the scheme into consideration. They speedily recognized—it is probable, indeed, that Berlin had marked out the possibilities at a much earlier date—that by obtaining a cheaper route to Salonika the development of the mineral resources of Serbia would be enormously stimulated.

"Not only Serbia, but future Magyar States (says the writer previously quoted), as well as Transylvania and Bohemia, would avail themselves of that route, as all their rivers flowing into the Danube would be naturally connected with the waterway Smederevo-Nish-Salonika.

"The agricultural and mineral products of Bohemia, Hungary, and Central Balkan countries might find an easy access to the sea, and an outlet to the Western European markets without being obliged to pass through Germany or by the Lower Danube and the Straits. From Buda Pesth to the nearest seaport, Fiume, there is a distance of about 440 miles, the same as from Belgrade. The distance by waterway to Salonika would be, from Buda Pesth 600 miles, and from Belgrade 460 miles. The places in Hungary situated on the rivers Theiss and Morish are nearer to Salonika and further from Fiume than Buda Pesth."

This waterway would have an enormous advantage over the existing communication, which proceeds tortuously from Belgrade *viâ* the Danube, the Black and Ægean Seas to Piræus, a distance of approximately 1,200 nautical miles; the Serbian scheme would involve a distance of little more than half. This would mean that imports and exports to and from the countries of the basin of the Middle Danube would be freed from considerable charges. The heavy dues of the Straits, at Sulina and at the Iron Gate, would be avoided, to say nothing of other advantages which would accrue.

It is an alluring prospect, and we think British financial and engineering houses will do wisely to fasten their attention upon Serbia—not the broken, gasping Serbia as we know her, barely living under the oppression of the Teuton heel; but a fair land which is capable of coming to a new birth and of entering upon a new life.

A BANKING DEVELOPMENT.

As we stated last week, the Banque Franco-Serbe has opened a branch in London, the offices being located at 27, Throgmorton Street. There could be no greater mark of the confidence felt in an early restoration of their territory to our Allies. Correspondence is invited from those having actual interests in Serbia or contemplating the transaction of business with that country when conditions become more normal.

The Banque Franco-Serbe was established in Paris in 1910, and has a paid-up capital of 12,000,000 francs. Its principal office in Serbia is at Belgrade, with branches in Skoplye (Uskub) and Bitolj (Monastir). In the three years prior to the outbreak of war the bank had made considerable progress, and had paid dividends of 5 per cent. for 1911 and 6 per cent. for the two years 1912 and 1913.

In the absence of any direct British representation in Serbia those having connections in the country will be well served by the facilities offered by the Banque Franco-Serbe.

NEWS FROM ALL SOURCES.

By a proclamation published in the *Journal Officiel* the export from Egypt of cotton seed to other than Allied destinations has been prohibited.

The condition of the cotton crop in Lower Egypt is officially reported to be 90 per cent., and that of Upper Egypt 96 per cent. The yield is likely to be appreciably below the average.

In the British revenue returns for the last week of the half-year ended September 30. receipts from Suez Canal shares and sundry loans came to £1,862,924. The expenditure included £250 for the Anglo-Persian Oil Company sinking fund.

According to a message from Athens the Allies have confiscated the goods which were on board the seized Austro-German vessels, and which were subsequently stored in the Customs house at the Piræus. Great activity has been noticed among the Allied ships which are lying off Salamis.

As the result of an agreement between Italy, France, and England, the Italian Government has prohibited the export of silk products (except drawn silk) to neutral countries bordering on enemy States, or situated in the North of Europe. This measure will tend to check the supply of silk to the enemy through neutral States.

EGYPTIAN TRADE AND FINANCE.

Marked Improvement in Trade in August.

(From Our Own Correspondent.)

Cairo, September 24.

August was another good trade month for Egypt. The Customs statistics just published show that imports came to £E2,659,799 and exports to £E1,119,343, the former being £E845,126 better and the latter £E160,466 less than in August, 1915. The total imports and exports for the eight months amount to £E19,665,733 and £E18,433,846 respectively, as against £E11,449,386 and £E15,598,325 during the same period of the previous year, a very marked improvement on both sides of the account, due on the one hand to the expansion given to the sale abroad of Egyptian products, and on the other, but unfortunately so, to the rise in freights and in cost price of imported goods.

It may be remarked that the balance of trade, which was £E4,148,939 in favour of the country at the end of August, 1915, has swung over against it to the extent of £E1,231,887. This position is, however, no worse than it was before the war. At the end of the corresponding eight months of 1913 imports amounted to £E17,390,417 and exports to £E16,072,760. Thus, whilst there is an improvement of respectively £E2,275,316 and £E2,361,086 on the two sides of the account, the balance of trade is to all intents and purposes stationary, the increase in export of agricultural produce compensating for the rise in price of imported articles. Export of cereals has, however, now been stopped, and during this and the next month cotton exports will have been considerably reduced owing to the exhaustion of the stock. There is, therefore, every reason to expect that the adverse trade balance will increase up to the end of the year, though this increase may to a certain extent be set off by the higher prices commanded by the cotton crop now coming on the market.

Principal Imports.

The principal imports during August were:—Skins and leather goods, £E40,850; cereals, £E104,224; raw sugar for refining purposes, £E28,484; jams and preserves, £E33,187; petroleum, £E175,152; beer, wines, and liqueurs, £E61,604; stationery, £E86,317; coal, £E574,119—27,168 tons less than the previous year; cotton tissues, £E499,649; sacks, £E99,616; ready-made linen and millinery, £E52,160; worked iron and steel, £E89,500. The chief exports were untanned skins, £E37,346; cereals, £E133,207; sugar, £E23,802; alcohol, £E27,951; wool, £E27,816; cotton, £E699,642; cotton seed and cake, £E78,883. It is noteworthy that, by comparison with 1913, cereal imports fell of 60 per cent., by which proportion cotton tissues increased; sugar exports trebled; and that whilst cotton exports fell off by 20 per cent. in value, they decreased by nigh on 50 per cent. in quantity. Cigarettes were £E5,012 better in August this year than last, though £E6,272 less than in August, 1913; the total for the current eight months is £E78,382, or 31 per cent. less than at the end of the latter month.

Great Britain still maintains her position amongst the nations trading with Egypt. She provided 50 per cent. of the imports and took 63 per cent. of the exports, whilst the Colonies sent just over 10 per cent. of the imports. The principal items provided by the Empire were all the indigo, potatoes, sacks, pepper, flour, and tea, 90 per cent. of the coal, of which South Africa is continuing to supply part, 88 per cent. of the coffee, 80 per cent. of the cotton tissues and cotton threads, and 60 per cent. of the ironwork and machinery. Under exports the Empire takes half the sugar, 40 per cent. of the maize, all the cotton seed and cake, senna, gold and silver bar, and 80 per cent. of the cotton.

Foreign Trade Analysed.

The United States increased their exports to Egypt by £E158,035 to £E277,226, providing all the benzine, 75 per cent. of the petroleum, and 10 per cent. of the coal. They took only one quarter of their usual quantity of cotton. France increased her sales somewhat, as also did Italy and Japan, the latter providing 25 per cent. of the ready made linen and millinery; but the chief increases were registered by the neutral European countries—Spain, who quadrupled her share, and Holland, Sweden and Switzerland, all of which rose very considerably. It is noteworthy that the three Scandinavian countries and Spain, which did not figure in the statistics in 1913, sent over one-third of the stationery last month, and that Holland provided nearly 50 per cent. of the beer. Amongst the countries buying from Egypt, the only ones outside Great Britain and Russia which showed any increase in their purchases were again the neutral countries, especially Greece and Switzerland. Holland and Sweden, it may be remarked, still show a very great preference for Egyptian tobacco.

Trade with the Sudan fell off slightly during August. Imports into Egypt came to £E36,646, and exports to the Sudan to £E81,347, the totals for the eight months, however, showing a marked improvement on the preceding year. The chief imports into Egypt were live stock, maize, sesame, gum, charcoal, and cotton; the main decrease was in the latter item, which fell to £E1,248. The principal exports from Egypt were cereals, boots, sugar and cotton tissues. Sugar fell off by 33 per cent., whilst coffee dwindled from £E9,046 to £E429; cotton tissues rose, however, by 45 per cent.

JULY FINANCES.

Revenue Continues Above Pre-War Level.

Cairo, September 26.

Last night the Ministry of Finance published its accounts for the month of July. During that month the receipts amounted to £E1,184,151, and the expenditure to £E1,144,191, as compared with £E1,228,100 and £E993,723 respectively during July last year. The total revenue for the four months of the financial year comes to £E5,775,441, and the expenditure to £E5,925,542—an increase of £E852,095 and £E581,318 over the total at the same date in 1915. As a consequence, the balance is again a more satisfactory one, being a deficit of only £E150,101, as against one of £E420,878 at the end of July, 1915, and one of £E1,021,334 in the previous year.

Perhaps the extraordinary manner in which the country continues to improve its position, in spite of war conditions, will be more clear from the following table, which gives the totals of the principal heads of revenue at the end of July this year, in 1915, and in 1914, when normal conditions were still holding:—

	1914. £E.	1915. £E.	1916. £E.
Direct taxes	1,315,528	1,651,744	1,682,162
Customs	678,212	469,575	798,951
Tobacco dues	645,233	568,588	675,176
Port dues	150,650	554,731	45,628
Legal fees	477,143	399,951	399,386
Railways	1,199,260	1,014,359	1,419,357
Telegraphs	38,281	42,032	47,461
Post Office	110,585	90,193	100,535
Rent of Government land	83,737	103,993	107,186
Domains	71,222	135,591	82,130
Investment of funds	103,691	103,934	123,753
Sale of land	69,456	35,111	47,018
Sundry heads	415,743	253,544	246,698
Total	5,358,741	4,923,346	5,775,441

£E852,095 Up.

From this we see that whilst the revenue for the current financial year is, as already mentioned, £E852,095 better than that of the previous year, it is still £E416,700 above the figure registered before the war broke out. The improvement over the pre-war period is evident in practically every branch, where the economic condition of the people would affect the totals.

Thus direct taxes are £E366,634; Customs, £E120,739; tobacco dues, £E29,943; railways, £E220,097; rent of land, £E23,449; domains, £E10,908; telegraphs, £E9,180; and investment of funds, £E20,062 to the good. The only heads where important decreases are evident are port dues, £E105,022, which is, after all, entirely due to the difficulty in getting shipping to come to Egyptian ports, owing to the demand in other parts; legal fees, £E77,757, of which £E65,387 is accounted for by the Mixed Courts; Post Office, £E10,050; and sale of land, £E22,438.

Increased Expenditure.

Expenditure during July increased by £E150,468, as compared with July, 1915, and was £E120,564 below that of the same month in 1914. This year's increases were mainly accounted for by railways, which took £E134,960 more, other increases being: irrigation, £E19,741; Mixed Courts, £E16,249; Native Courts, £E8,523; and public health, £E9,691. War Office decreased by £E51,635. Irrigation and public works generally account for the decrease in expenditure as compared with 1914, but railways are requiring a larger credit, owing partly to improved traffic conditions and also to the enforced economy during the early days of the war.

TRADE NOTES.

Openings.

Tenders are invited for the supply to the Lunacy Division, Abbassia, Egypt, of clothing, bedding, furniture, hardware, slippers, brushes, and other household necessaries required for Abbassia and Khanka Hospitals for the Insane, for one year, from April 1, 1917. (November 15.)

Also for the supply to the Director of Personnel and Equipment Department (Supplies Office), Cairo of photographic material for Cairo City Police. (November 1.)

Liquidations.

Mr. H. Bridson, 6, Rue de l'Ancienne Bourse, Alexandria, has been appointed Receiver of the business of A. Seidmann, Alexandria, with instructions to liquidate.

Mr. A. S. Ingram, Port Said, has been similarly appointed and instructed in regard to the business of Klink and Lauer, Port Said.

Licences Granted.

The following persons and firms have been granted licences to trade in Egypt, with the British Empire and with Allies of Great Britain:—Luzianovich, C., 8, Rue Abou Dardaa, Alexandria; Fazzi, Augusto, 7, Boulevard de Ramleh, Alexandria; Steinauer and Co., Max, 3, Sharia Antikkhana el Masria, Cairo; Société Carmel Oriental, 9, Rue de l'Ancienne Bourse, Alexandria.

The firm of Behrend and Co., Ltd., have been granted a licence to trade without special restrictions, in place of the restricted licence granted to them.

Enemy Property.

All money, claims, and other property of whatsoever nature in Egypt belonging to Leonhard Tauber, of Nuremberg, in the Empire of Germany, have been vested in the Public Custodian of enemy property in Egypt, and the appointment of the Receiver of the property has been cancelled.

NOTICE.

Société Anonyme pour la Fabrication des Cigarettes Egyptiennes marque HADJES NESSIM en liquidation.

Offers for the purchase of the following items of Stock and House Property will be received in the name of EDWARD D. JOYCE, P.O.B. 206, Alexandria (Egypt), Receiver of the above Company, up till 8 a.m. on the 15th of NOVEMBER, 1916:—

(a) The TRADE MARK belonging to the Company, together with all the Stock of Tin Boxes, Labels, Cigarette Paper, etc., on which the Trade Mark is printed.

(b) The BUILDING situated No. 12-14, Rue Abou El Dardar, Alexandria (Egypt), belonging to the Company.

Details of the above can be obtained at the Offices of the Company, 12-14, Rue Abou El Dardar, Alexandria, between the hours of 9 a.m. and noon, on any day except Sundays, from this date to the 13th of NOVEMBER, 1916.

Offers must be made in writing, under registered cover, to the above mentioned P.O. address, and must be accompanied by a deposit in Cash of 10 per cent. of the amount offered.

Offers may be made for items A and B separately.

The Receiver is not bound to accept the best or any offer made.

PRODUCE REPORT.

London, October 12.

Currants.

The market has been very active during the week, and prices of all qualities are much dearer, especially of Provincial, which is in greater demand. The 2,000 tons that were brought by the s.s. Pyrin and s.s. Alkmini were soon cleared, and one or two other cargoes now afloat are eagerly expected by would-be buyers. Provincial is quoted 65s. to 68s., against 33s. to 37s. last year; Amalias 70s. to 72s., against 36s. to 40s. last year; Patras 72s. to 78s., against 40s. to 42s.; Gulph 78s. to 80s., against 42s. to 45s.; Vostizza 80s. to 84s., against 42s. to 52s.; Islands 80s. to 86s., against 38s. to 42s.; and Smalls 76s. to 84s., against 37s. to 46s. In the Liverpool market the first arrival of new fruit met with a good reception, and sales were made at full prices. The stocks of currants in London on September 30 were 3,319 tons, against 2,754 tons the same period last year.

Sultanas.

There is only a moderate demand, with small business done in Afghanistan and Australian fruit, at more or less unchanged prices. New Greek sultanas have not arrived yet, but owing to restrictions, and to the fact that great quantities were sold to the Allied armies in Macedonia in fresh condition (not dried), only small quantities may be expected here, and prices will, of course, be high. The stocks of sultanas, of all kinds, in London on September 30 were 2,578 tons, against 1,246 tons the same period last year.

Seeds.

Linseed is quieter; London-Calcutta spot has been sold to-day at 80s., afloat 79s. 9d., Oct.-Nov. 81s. 9d., Nov.-Dec. 82s. 6d.; Bombay ordinary Oct.-Nov. 84s. 6d., and small grain 83s. Rapeseed is firmer; Toria, Oct.-Nov. is quoted 72s.; and brown Cawnpore ditto at 69s. Cottonseed is steady; London-Egyptian loading is quoted at £14, and Oct. also £14 per ton. Mustard exhibits an easier tendency; the new crop—which is reported to be large—is now coming on the market. Rangoon beans show a further advance of 1s. to 1s. 6d. per cwt. on the week.

Oils.

Linseed oil is firm. Spot pipes are quoted £39 10s., and barrels at £40 10s. landed. Rape oil is steady; ordinary brown naked, spot £43; English refined barrels £48 to £50. Cotton oil is firm; crude spot pipes £35 15s. asked, with refined pale pipes £41 10s., and sweet barrels £48 to £51 10s., as to make.

Oilcakes.

Cotton cakes: Egyptians are not available on spot, but good business has been done during the week in Sept.-Oct. shipments at £10 7s. 6d. to £10 10s. ex-ship terms. English-made cakes continue to be offered sparingly at £11 2s. 6d. per ton. Linseed cakes are in better demand, with improving prices on account of the limited supplies of both English and foreign. Best London-made are quoted at £14 12s. 6d. to £14 15s. ex mill.

Locust Beans.

Nothing is offered on spot, with the exception of a limited quantity of kibbled, for which £12 2s. 6d. per ton is demanded.

A TREASURE IN THE TRENCHES.

"A week ago," writes a corporal in the A.S.C.M.T., "I dropped my Swan Fountain Pen near the trenches in the dark, and as it meant pretty certain sniping if I lit a match, I reluctantly had to abandon it. This morning I was passing that way again and found my lost property fifty yards from where I had missed it. Apparently a bursting shell had blown it down the road. I have had the pen in constant use ever since the early days of the war. That it stood the rough usage without ever failing me, and was as smooth in writing at the end as when first I had it, bears evidence of 'Swan' excellence and utility for soldiers at the Front."

Thousands of "Swan" pens are being used by our men at the Front and in the Fleet, and, in truth, what more useful present could be sent to either soldier or sailor? Our readers would do well to ask the Manufacturers, Mabie, Todd, and Co., Limited, 79 and 80, High Holborn, London, W.C., for their free booklet giving full particulars.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.

Army Boot and Equipment Manufacturers.

CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.

THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.

Tanners and Curriers, Leather Goods Manufacturers.

Saddlery and Harness of every description. Travelling Requisites, Bags, Trunks, &c.

CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.

Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.

Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.

Sole Manufacturers of the Famous . .

Dhariwal
Long Life Wool Wear

Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c., &c.

ENGINEERING NOTES.

Facts about the Newest Motor Ship.

The twentieth motor ship to be launched from Burmeister and Wain's yards at Copenhagen started her maiden voyage to South Africa and Australia on August 24. This vessel, the Peru, is a sister ship of the Columbia and the Chile, wrote the *Engineer* in the course of a recent article. These vessels have a length between perpendiculars of 425 ft., a beam of 55 ft., a depth of 30 ft. 6 ins., and a draught of 26 ft. 5 ins., Their deadweight capacity is 9,500 tons. Their propelling machinery consists of two six-cylinder Diesel engines, driving twin screws. These engines are designed to develop a total of 3,100 horsepower at 125 revolutions, and to give the ships a speed of 11.15 knots. The great difference which may characterize the performances of two sister ships, engines, or machines has often been remarked upon, and is well illustrated in the case of the Peru and the Chile. On her trial trip the Chile's engines, running at 136 revolutions, developed 3,318 indicated horse power, and gave the ship a speed of 11.39 knots. The Peru on her trial trip developed 3,685 indicated horse power 139.3 revolutions, and showed a speed of 12.74 knots. The consumption of fuel oil on the Chile was 147.6 grammes per indicated horse power hour, and on the Peru 144.8 grammes. It is to be noted that the trial trip of the Chile was run during very cold weather, and that, as her bronze propellers were not ready in time for the trip, cast-iron screws were used in their place. Even so, the difference of a knot and a-quarter in the speed of the two vessels is remarkable.

Electric Vehicles.

In previous notes we alluded to the petrol famine which is threatening seriously to disorganise road transport throughout this country. From what is gathered from foreign publications a similar, if not more acute, famine is experienced in other countries, especially in the East, where private motor-cars are sparingly used, and road transport is paralysed by the great scarcity of petrol. The question, therefore, of employing electric vehicles instead of petrol cars is engaging at the present time the attention of municipal authorities, as well as of the public. Yet there was a time that such a question was considered, from an economic point of view, as unpractical. Even now *dilettanti* experts adhere to that opinion. Without entering into technical details we think a reference to the results obtained recently by practical experiments will be of interest to those who contemplate the employment of electric vehicles. Mr. H. Webber, a competent electrical engineer, in a very interesting paper gives facts and figures which prove that cars can be run cheaper by electricity than by petrol. He points out that the present retail price of petrol of the grade suitable for commercial vehicles (when it can be obtained) is 3s. 2d. per gallon, and when purchased in bulk, 2s. 10d. Pre-war prices varied between 1s. 1d. and 1s. 3d. Whereas under the present abnormal conditions the price of electrical energy has advanced only by a small percentage, the cost of petrol is nearly double, and Mr. Webber shows that even in normal times, with electricity at about 1d. per kelvin, trolley-buses can be operated more cheaply than petrol-driven vehicles.

A Comparison.

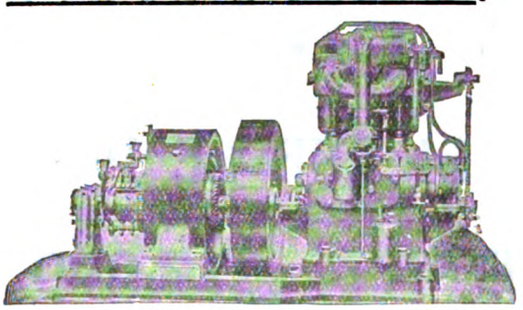
Mr. Webber, in his experience as a municipal electrical engineer and tramway manager, compares the running costs of a service employing ten 'buses, each running 80 miles daily, giving a total annual mileage of 292,000. The cost of petrol-'buses for fuel alone is, at present rates, 3¾d. per car per mile, and of electric trolley-'buses 2d., inclusive of maintenance and other charges, showing a saving in favour of the trolley-bus of 1¾d. per mile, or £2,129 3s. 4d. for the whole service. With such results, and considering that the trolley-'bus is comparatively, a new development, whereas the petrol-bus has benefited by all the experience and improvements gained in the motor-car industry during many years, so that there is no room for further great improvement, the prospects of the two antagonistic systems are very obvious.

The Port of Candia.

From statements in the Greek press, it would seem that the long projected improvements of the port of Candia, Crete, are about to be undertaken. It is stated that the contract for the construction of this enterprise has been awarded to a French firm. Under the plans submitted the outer port of Candia is to be used for anchorage of vessels of comparatively a deep draught, while the inner harbour will be planned to accommodate smaller steamships and sailing vessels. The work will consist of a breakwater of stone some 2,400 feet in length; the dredging of the inner harbour, originally built by the Venetians, to a depth of 13½ feet, and the dredging of a new harbour to a depth of 23 feet. Various necessary jetties, moles, and piers will also be constructed. This work is expected to entail an expenditure of some 3,500,000 drachmas (£135,000).

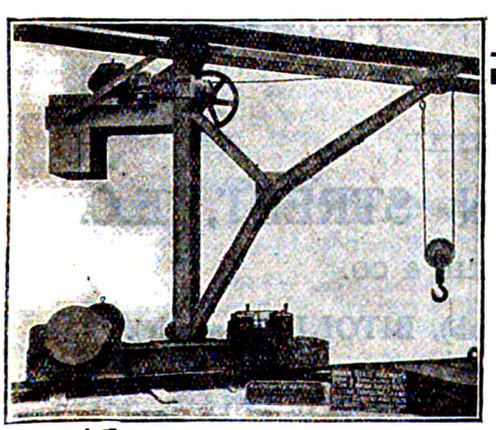
W. H. ALLEN, SON & CO., LTD.,
BEDFORD, OIL AND GAS ENGINES. ENGLAND.

Vertical Enclosed Forced Lubrication.
Designed for Paraffin, Petrol, Alcohol, Town, or Producer Gas, &c.



Suitable for driving:—
Dynamos, Pumps, Fans, and other forms of Machinery.

Foreign Branches and Agents:
INDIA. GREAVES COTTON & CO., Bombay and Calcutta.
TURKEY. EDWARDS & SONS, Dilsiz Zade Han, Stamboul, Constantinople.
EGYPT. W. H. ALLEN, SON & CO., Ltd., Cairo.



5 Ton Electric Bicycle Crane.

CRANES
For RAILWAYS, DOCKS, HARBOURS and WORKS.
— ALSO —
HYDRAULIC BUFFER STOPS AND OTHER RAILWAY PLANT
SUCH AS
Turntables, Traversers, Tanks, Pumps, Water-Cranes, Capstans, Winches.
SEAPLANE LAUNCHING APPARATUS.
Also Sole Makers of the "Stoney" Control Sluices, with Stokes' Patent Improvements.
Over 1,000 already installed.

GERMAN RAPACITY.

When will the Bulgars be Tired of It?

When will the Bulgars grow tired of German rapacity? According to a letter from the Buda Pesth correspondent of the *Morning Post*, the whole of the copper found in Bulgaria has been exported to Germany, having been requisitioned earlier in the war. Everybody has to deliver up any copper in his possession, and even the church bells have gone to Krupps from all the Bulgarian church towers. Twenty-five per cent. of the tobacco produce also goes to Germany, but this only on paper, for as a matter of fact one-half at least is exported to that country, where the tobacco famine is as great as in Austria-Hungary.

The influence of the Germans over Bulgaria springs from the fact that they are the munitions producers and argue that unless they can feed their working men and get the raw materials they need the production of munitions suffers. What the Bulgarians are suffering from most is the scarcity of soap and leather. It is almost impossible to obtain an ordinary cake of soap, and the soling of a pair of boots costs 25s. Petroleum is a rarity, and candles are a luxury not everybody can afford.

As regards the temper of the people under the circumstances, it is not difficult to picture. The men at the front are dissatisfied because they were promised that they would be allowed to go home to attend to their lands, while, later, leave was denied to them. Their womenfolk write to tell them that their produce is being snatched from them for almost nothing by the Germans and the Committee, whilst the people at home are in need of everything. One Hungarian food-buyer, who spent some months in Bulgaria buying geese and ducks, said that he took with him two bags full of small cakes of soap, and for every one he got one or two geese from the peasants, which he sold at Buda Pesth and Vienna for £3 to £4 each. The second time he wanted to repeat the experience the soap was confiscated at the frontier, for it is now a prohibited article of export.

THE COTTON POSITION.

Prices and Possibilities of a Famine.

The position and prices in the cotton market have been exercising a great deal of attention recently, owing to the remarkable advances. The *Financial Times* pointed out recently that at the early part of the present century, raw cotton on the basis of middling American, got down to a shade below 3d. per lb. in Liverpool. The last business day (October 6) of the past week opened with middling American spot cotton standing at 9.95d. per lb.; say five points above the previous "record," at the beginning of September, and 1.45d. per lb. above the record of the short crop of the 1909-1910 season (when Egyptian cotton was even poorer in crop yield than the American). And, after a week of strength, there was a recession of only two points in "middling," namely, to 9.93d. In brief, the present level of values is very appreciably higher than was attained in and since the financial crisis period of 1873, and one has to go back to the American war-time to find higher prices than to-day's for the American staple.

Egyptian Cotton.

In the same way the longer Egyptian staple, on the basis of fully good fair brown, has now got to 15.06d. per lb. spot, as against 13.60d. per lb. at the beginning of September (when middling American was 9.90d.). It is true that, although on Friday alone F.G.F. spot rose 35 points per lb. (repeating Thursday's rise) the value of the Egyptian staple has not yet attained the high level of the 1909-10 season, when F.G.F. brown spot went to 16 3-16d. per lb.—a figure quite unreached since the American war period. But, of late times, owing to the correspondingly greater demand for medium-to-coarse counts of yarns and fabrics, the run upon the finer grade Egyptian staples has not—till the last few weeks—been so pronounced as it was in 1909-10, or as it is normally. But the at first "sympathetic"—and now "bolting"—rise in Egyptian cotton of late may be seen at a glance when it is noted that as recently as the end of August F.G.F. brown Egyptian was at little over 11½d. per lb. spot, as against 14.35d. on Wednesday and 15.05d. on Friday, while in the same period—barely six weeks—middling American has risen from 8.85d. to 9.95d. per lb. Since the beginning of 1915 "middling" has risen about 2.60d. per lb., and about 4.10d. per lb. since June 30, 1915.

SHIPPING NOTES.

H.M. Consul-General at Barcelona (Mr. C. S. Smith) reports an announcement in the local Press of the first sailing from that port of a new weekly service of Greek steamships, by the Palios Line, between Barcelona and Piræus, calling at Marseilles, Naples, Messina, and Patras.

After a considerable interval, caused by war conditions, the Royal Mail Steam Packet Company have found it possible to resume their fortnightly service between New York, West Indies, and Colon. Two passenger steamers will be employed on this service, commencing with the Tagus from New York, December 2, followed by the Danube on December 16. The ports of call will be Santiago (Cuba), Kingston (Jamaica), Colon (for Panama Canal and Pacific ports). The round voyages will occupy twenty-three days.

FERTILISERS IN RUSSIA.

Opportunity for British Producers.

In the course of a useful article dealing with the extent of the production in Russia of medium and heavy chemicals, the *Financier and Bullionist* discusses the native manufacture of fertilisers.

Referring to the output of sulphate of ammonia, the writer says:—"The Russian farmer does not fully appreciate that product, but it will yet play its part in his general scheme of agriculture. Fertilisers just mentioned must prove of particular interest to both the Russian and the foreign industrial chemist. To the former because, as the population grows and begins to press on the available cultivable land, intensive cultivation with the aid of artificial fertilisers will become urgent, and to the latter because Russia must remain to all appearances mainly an agricultural country and an exporter of grain in conformity with the world's economy of exchange for many years to come; and as the demand for foreign manufactures grows and the call on the agricultural resources of the country correspondingly increases, the need for fertilisers will progressively impose itself, to anglicise a French expression.

"That Russia should supply all her own fertilisers is unthinkable. It is quite true that her fertiliser-producing industry is constantly growing, but her importations grow as well, and it may be safely assumed that with the progress of agricultural knowledge amongst her grain-growers the demand for fertilisers will keep so well ahead of the home production that foreign supplies will continue, as in the past, to be a growing feature on Russian import lists.

"One item she ought to be able to supply herself—that is, superphosphate. Phosphorites are abundant in many parts of Russia, and the home supply of sulphuric acid is increasing; therefore there is no reason why the recent production of this particular fertiliser should not be improved on. But the act of evacuation of so many chemical works in the West will make the demand a feverish one as soon as the ports are opened. In connection with this particular item, it should be stated that, although phosphorites abound in Russia, large quantities are too poor for commercial use, excepting where it becomes too expensive to transport the richer foreign superphosphates from the ports or from those parts of Russia, such as Podolia, where the phosphorites are of exceptional richness, and can be turned to excellent account in agricultural regions within reasonable reach. Russian basic slag is not of much importance. There are only one or two iron works that yield the requisite composition of slag."

COMPANY NOTES.

Oil Outputs.

Anglo-Egyptian.—Gemsah, 2,327 tons; Hurgada, 731 tons.

Baku Russian Petroleum Company (1909).—Week ended October 7, 85,200 poods.

European Oilfields.—Week ended October 1, 81,200 poods. Week ended October 8, 82,900 poods.

Maikop Pipeline and Transport.—Week ended September 30, 61,051 poods.

North Caucasian.—Week ended October 3, 560,728 poods.

Spies Petroleum.—The production, including 12,795 poods from ambars, for the week ended October 1 was 154,140 poods, or about 2,486 tons. Week ended October 8, 145,090 poods.

Ural Caspian.—Week ended September 28, 150,711 poods. Week ended October 5, 153,580 poods.

ON 'CHANGE.

(From Our City Correspondent.).

Throgmorton Street.

Business continues very restricted. There is practically nothing doing in Bank shares, Nationals being weaker on offer at 12⅞ without any willing buyers above 12½, and Agriculturals dull at about 4⅞. In Aboukirs, a fairly large parcel of shares changed hands at 14s. 6d., while about 100 Béhéras were transferred at £6. In Delta Lights there have again been a few transactions at about 5 5-16. Markets have been done in the neighbourhood of 25s. 6d. for about 1,000 shares, and in Salts something like the same number have changed hands at between 18s. and 18s. 6d. Khedivial Mails are rather quieter round 27s., as also Khedivial Prefs. round 3½. A few Land Banks are wanted at 4 15-16, but there are no sellers. Mortgage of Egypt Prefs. are quieter at 7½. Some trifling business has been done in New Egyptians at 8s. 6d., and 1,000 United Egyptian Lands were transferred at 10½d.

In Greek stock, apart from a deal of about 4,000 Monopoly at 49⅜, there has been practically no business, and prices are all nominally marked down.

SUEZ CANAL DUES.

With reference to the notice in the *Board of Trade Journal* of July 13 relative to increased tonnage dues on vessels passing through the Suez Canal, the Commercial Intelligence Branch of the Board of Trade is notified by the London Enquiry Office of the Suez Canal Company that from January 1 next the transit dues will be increased from 7.25f. to 7.75f. per metric ton for ships with cargo, and from 4.75f. to 5.25f. for ships in ballast.

This increase has been rendered necessary by the continued decrease in transit receipts, which up to September 21 this year amounted to 56,500,000f. only, as against 66,330,000f. and 86,690,000f. in the corresponding periods of 1915 and 1914 respectively.

Receipts.

The traffic receipts for the Suez Canal were as stated on the following dates :—

	1915. Francs.	1916. Francs.
October 4	200,000	60,000
October 6, 7, and 8	680,000	610,000

EGYPTIAN DELTA LIGHT RAILWAYS.

Receipts for ten days ended September 20, 1916.

	1915. £E.	1916. £E.
Sept. 10-20	4,495	5,281
April 1-Sept. 20	67,902	82,400

NEW COMPANIES IN RUSSIA.

Activity in financial and industrial circles in Russia continues, as will be seen from the fact that in one week recently eight new companies, with an aggregate capital of nearly £3,000,000 sterling, were formed. The companies with their capitals are :—

	Roubles.
"Leterit," Ltd., boilers and engines	2,000,000
Northern Timber, Industrial, and Trading Co.	3,000,000
"Kurort Koporye," Ltd., sanatorium, etc.	2,000,000
Lopandinskoe Co., match factory	5,000,000
"Petchat" Publishing Co.	5,000,000
Grigorevka-Grishino Mining Co., coal and anthracite	4,000,000
Maloff Bros. Petroleum Co., Ltd., kerosene, benzine	6,000,000
White Sea Fish Co.	2,000,000

NEW RUSSIAN LOANS.

Subscriptions to the new Russian Railway Four per Cent. Internal Loan for 350,000,000 roubles at 73¾ are now being received. Redemption is to take place at par by annual drawings extending over eighty-one years. It is understood that the railway issue is to be followed by a still larger internal loan next month, to be styled the new Military Internal Loan. It will be for 3,000,000,000 roubles in Five and a Half per Cent bonds.

ENEMY COTTON FIRMS IN EGYPT.

The Manchester Cotton Association has made the following reply, through the secretary, to the letter sent by Lord Edward Cecil, Financial Adviser to the Ministry of Finance, Cairo, to the president of the Association of Chambers of Commerce, which appeared in *The Times* of October 7, refuting the opinion expressed by the Manchester Cotton Association that the British firms already in Egypt were capable of dealing with the small cotton business previously transacted with England by the enemy firms that had been liquidated :—

"I am instructed by my directors to write and thank your lordship for the detailed information contained in your letter dated Cairo, August 31, 1916, and to inform you that the communication was referred by them to a committee of Egyptian Merchants and Spinners for consideration and report.

"That Committee expressed the following views :—(1) That they agreed with the directors' statement previously made. (2) That any new firms should preferably be British. (3) That it is of the greatest importance that banks should give generous support to British firms, and (4) That it is of the greatest importance there should be a full and regular supply of tonnage, as an irregular supply would have a most serious effect upon spinners and manufacturers of this country using Egyptian cotton, and therefore respectfully request your lordship to kindly use your influence whereby the supply of tonnage may be regular and ample."

NOTES OF THE WEEK.

Roumania for the moment supplies the key to the whole future course of the war, for the cogent reason that her defeat by Austro-German forces would nullify to a very large extent what has been accomplished by two years of Great Britain's naval blockade. It is impossible to over-estimate the value which the Central Powers must be placing on the possession of the stores of grain and oil that are known to be in the country. As the Roumanians themselves will be dependent on these supplies, they could not be destroyed in their entirety. Once they fell into the hands of the Germans they would be ear-marked for German use, and Roumania would be left to fend for herself. Apart from economic considerations, the overrunning of Roumania would seriously affect the strategy of the eastern theatre of the war. With the whole course of the Danube open to the enemy, Southern Russia would be exposed to attack to an extent not possible hitherto, in view of the limited capacities of Bulgaria and Turkey.

It would seem, therefore, that the Allies' first consideration at this juncture must be to bring direct relief to Roumania, even at the cost of heavy sacrifices. Russia alone is near enough to her to be able to help immediately in this way, but Russia's strength is largely dependent on the support in the form of munitions that she receives from Great Britain and France. Public sympathy with Roumania has been aroused in both of these latter countries, and the same tolerance as was shown when Serbia was overrun could not be expected if it could be proved that mismanagement or supineness was responsible for this supreme misfortune overtaking Roumania as well. The Allied General Staffs must be aware that the consequences of the two reverses would be entirely different, and there is no reason to suppose that they are indifferent to the danger threatening the whole Allied cause. Fortunately, the difficulties of the enemy in an advance across the Carpathians are not inconsiderable. His advantage is said to lie in the superiority of his artillery, and the rate at which heavy guns can be pushed forward in hilly country is restricted. The course of the struggle along the Roumanian frontier, therefore, must be watched eagerly and not altogether without anxiety, for some days to come, until it is seen whether the resources of Roumania and her Allies are equal to checkmating the very determined effort which the Central Powers are making to achieve a success in this theatre.

Amid the multiplicity of comments on the situation it is impossible to draw any conclusions as to the likely course of events during the next few weeks. From the tenour of the remarks made by King Ferdinand to a special correspondent of *The Times* it is evident that on October 9 a serious view of the position was taken in the highest quarters in Roumania. Otherwise such a pathetic appeal would not have been addressed to the Allies. "The Roumanians pray," his Majesty is reported to have said, "that in spite of their existing exigencies and of their own huge problems, the Allies will not allow the affairs of Roumania, who has staked her all on this conflict, to pass into the back of their minds and suffer that she meet the fate either of Belgium or of Serbia." A few days later the British Secretary of State for War appeared to take the same view of Roumania's position when he declared that the Allied countries were fully alive to the danger, and that they would make every effort to protect the Roumanian army. On October 14, however, General Georgesco, the representative of the General Staff at present in England, adopted a far more confident attitude towards his country's predicament. He admitted the huge concentration against Roumania, but considered that it was quite certain that the Austro-German troops would not succeed in forcing the passes. On another point he was equally emphatic, and his assurance is a source of gratification. "Any suggestion," he declared, "that we are not being supported by our Allies is absurd."

In spite of General Georgesco's optimism, the Roumanians have already lost two passes, the Törzburg, south-west of Kronstadt (Brasso), and the Gyimes, in the centre of that part of the Carpathians which runs roughly north and south, dividing eastern Transylvania from Moldavia. The latest reports, however, are to the effect that the military news is reassuring. In the Predeal region, the pass through which runs one of the railways connecting Budapest and Bucharest, the Roumanian troops are said to be resuming the offensive and to be pursuing the enemy on the Transylvania slope. Very stubborn fighting is in progress. At every other point along the whole Carpathian front the enemy is attacking violently, but so far without success. Bucharest, it is satisfactory to learn, remains calm, and it is significant that the enemy's official statements are couched in moderate tones.

Although the Allies continue to maintain steady pressure on every front, they have not succeeded in making any considerable headway at any one point which might

Digitized by Google

react in favour of Roumania in the Carpathians. Particularly is this the case in Macedonia, where an advance at this stage would be of great value to the Allied cause. After the successful thrust across the Struma the British troops have reached the railway; but they found Seres strongly held by the Bulgarians, and there has since been an absence of important news. The capture of the village of Bursuk, near Lake Butkovo, pushes forward the British line on the left wing and points to an encircling movement against Barakli Djuma, the pivot of the Bulgarian line in this region. In the same way, on the extreme west, the closing in of the Allied troops on Monastir is proceeding but slowly. It was reported that the Bulgarians were evacuating the town. Some movement of this nature may be taking place, but it is evidently precautionary, for the enemy continues to occupy strong positions and to offer a stubborn defence.

Greece continues to make up for any lack of incident noticeable in any other portion of the world immediately affected by the war. Last week we were able to record the sudden demand of Admiral du Fournet for the surrender of the Greek fleet, on the ground that its dispositions constituted a menace to the Allied squadron, while the movements of Greek troops in the interior appeared to threaten the Allied army of the East. The reference was to a surreptitious concentration of men and material in Thessaly, along the Piræus-Larissa-Salonika railway —a proceeding hardly compatible with protestations of friendly neutrality. The significance of the Allies' action lay in the fact that it amounted to an admission for the first time that the Entente Powers credited King Constantine and his advisers with warlike intentions against them. There could be but one explanation of the preparations at Larissa—that King Constantine contemplated an open breach with the Allies, and was making ready to withdraw to a district where he would be out of the reach of the Allied Fleet and in a position to threaten the army in Macedonia.

As far as is known, King Constantine has made no attempt to offer any other explanation of the military movements in the interior. It may be of interest, therefore, to examine his position in the light of these latest developments. The King has clung to a policy of neutrality for Greece during the war, and, it must be admitted, has carried part of the nation with him. Fully one-half of the people, however, has declared against this policy in favour of military co-operation with the Allied Powers. By no stretch of the imagination could the neutrality half of the nation be regarded as advocates of a policy which would ally them to Bulgarians and Turks against British, French, and Russians. But King Constantine, by throwing down the gauntlet to the Allies, in the face of the secession of a large, if not the larger, section of the people, would deliberately league Greece with her hereditary foes against her traditional friends. And for what purpose? The Central Powers may make promises to Bulgaria; but it is inconceivable that, with the pledges which they must have given already to the Bulgarians and the Turks, any sane Greek can suppose at this stage that in the most favourable circumstances these same Powers will have anything to give to Greece. King Constantine, therefore, would seem to have been prepared to commit Greece to a policy which could have brought her no reward, no advantage, but which would most likely entail her complete ruin. Such action might be expected of an Enver capable of selling his country for German bribes: it seems incredible on the part of the scion of a European reigning house.

The prompt action of Admiral du Fournet has probably saved Greece from a worse fate. Within the stipulated time—a matter of a few hours only—the vessels of the Greek fleet indicated were handed over, certain coast batteries were disarmed, and the Allies assumed control of the Piræus-Larissa Railway. It was symptomatic of King Constantine's attitude that he should still try to flout the Allies by arranging for a demonstration in which the disbanded crews of the men-of-war would figure. He appears to have received an ovation, but the inevitable disturbances arose subsequently among the populace. To prevent further breaches of the peace and to forestall the intentions of the Reservists' Leagues, which in spite of the Allies' embargo maintain their activities, Admiral du Fournet landed a force of a thousand bluejackets to assist the police in keeping order in Athens. This unmistakable manifestation of the Allies' intentions not to tolerate an equivocal situation any longer would seem to have succeeded, where Notes failed, in impressing the King and his advisers. Agitated consultations are stated to have taken place. The report may be believed, for the capital in the virtual occupation of the Allies is a factor which something more than King Constantine's popularity will be required to explain away.

In the meantime, the Greece of the Provisional Government is consolidating its position. A Cabinet has been appointed in which no member of the Triumvirate—M. Venizelos, Admiral Condouriotis, and General Danglis—is serving. It would seem that the accumulation of public business brought about by the separation of the islands and Macedonia from the Athens Government required immediate attention. By appointing a service Cabinet of men of note, but not including any of their number, the Triumvirate have made a last bid for conciliation with Athens. If the King summons this Cabinet to exercise office in the capital, the members of the so-called Provisional Government, it is stated, will resign. His own subjects, no less than the Allies, seem to leave no stone unturned to enable King Constantine to make good his retreat from an untenable position.

The publication of General Sir Percy Lake's dispatches dealing with the operations for the relief of Kut serves to whet the public appetite for a more detailed report from the Commission appointed to inquire into the whole Mesopotamian campaign. In spite of the unusually full narrative, there are clearly many points on which further light is required. Something more is now known of the failure to take Dujailah Redoubt on March 8. General Kemball's column arrived at the point selected for its deployment more than an hour late. "This delay was highly prejudicial to the success of the operation. . . . Prompt and energetic action would probably have forestalled the enemy's reinforcements. But time was lost by waiting for the guns to register and to carry out reconnaissances." Three hours later General Kemball's troops attacked, but the Turks were back in their trenches, and the attempt to relieve Kut had failed. The Commission's report will, perhaps, explain how it came about that those three precious hours after General Kemball's late arrival were lost. Another passage which does not afford welcome reading is a brief reference to the British aircraft. General Lake is commending the services of the airmen who dropped eight tons of provisions in Kut in a fortnight, and he adds:—"The journeys were subject to attacks by enemy aircraft of superior speed and fighting capacity." Yet another state of affairs that ought not to nave been.

Reference has been made from time to time in these columns to the School of Oriental Studies. The provisional date of opening has been fixed for January, 1917, but much headway has yet to be made in the matter of funds, if the school is to play the rôle intended for it An income of £14,000 is aimed at, and towards this amount only £7,500, including grants, has been secured. The Committee desired to raise an endowment fund of £150,000, but its appeal was suspended at the outbreak of the war. The time has now come to renew the appeal, for the war, it is held, has made the creation and the early opening of the school not less but more urgent, and it is a matter of Imperial importance that it should be in full working order as soon as hostilities have ceased. Provision will be made in the school for all the more important languages of the Near, Middle, and Far East and of Africa, and for this reason the appeal for funds may be particularly commended to readers of THE NEAR EAST.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 4.

The Adviserships to the Interior.

It is now officially announced that Sir Ronald Graham has resigned the Advisership to the Interior, and that he is to be succeeded by Mr. James Haines, Under-Secretary of State for Agriculture, to which post Mr. John Langley, Director-General of the State Domains, is to be promoted. This confirms my forecast of a week or so ago, that the new Adviser to the Interior would be taken from outside that Ministry.

Sir Ronald Graham's resignation was by no means unexpected, as it was known that he was due for the next vacant Under-Secretaryship at the Foreign Office, and that it was only a question of months as to when that vacancy would occur. The news has been received with sincere regret by everyone, especially the Egyptian element of the population, who have hastened to give expression to their feelings both by coming to Cairo personally to take leave of him, and also by arranging the various ceremonies with which it has become customary to speed any prominent official whose departure is deplored. H.H. the Sultan, who has bestowed the Order of "Al Kemal" on Lady Graham, gave a State banquet in Sir Ronald's honour at Ras-el-Tin Palace, to which H.E. the High Commissioner, General Murray, the Sultania Princes, the Ministers, and the high Government officials and notables were invited. Yehia Pasha, President of the Native Court of Appeal, held a *thé d'honneur* at his house; while prominent Egyptians are organising farewell fêtes in Cairo and in the provinces, where it is understood Sir Ronald Graham will make a tour before he finally leaves the country at the end of the month. To judge from the articles that have appeared in the local Press, their regret at his departure is sincere and widespread. Nevertheless, as one of the papers has put it, that regret is tempered by the thought that he is obtaining well-merited promotion, and that his successor is such an able man.

The New Adviser.

Mr. James Haines has had twenty years' experience of Egypt. He was for several years Controller of the Department of Direct Taxes, a position once held by the late Sir Eldon Gorst. He displayed conspicuous ability in that difficult post, and when the Department of Agriculture was transformed into a Ministry in the autumn of 1913 he was chosen to be its first Under-Secretary of State. Since that date he has confirmed the good opinion held of him by the British authorities; he steered the new administration with great skill through the troubled waters on which it had been launched, and has contributed in no mean manner to the solution of many of the problems that continually arise in a country like Egypt, and that require delicate handling. It was an open secret that he was marked out for the post of Adviser to the Interior whenever it might fall vacant, and he should fill it with credit to himself and benefit to the country. His appointment appears to be very popular in Egyptian circles.

The promotion of Mr. John Langley to the Under-Secretaryship of State for Agriculture has come as a great surprise to everyone, as, without detracting from his merits, it was thought that the post would go to one of the higher officials in that Ministry who had done yeoman service in organising the agricultural administration when it was first formed in 1909, and who has since done much to secure the success that has attended its work, especially since the outbreak of war. However, Mr. Langley, who, before going to the Domains, had been Inspector-General of Irrigation, and who possessed seniority, was chosen, and it only remains for us to wish him success in his new sphere of work.

The Egyptian Courts.

I understand that Mr. H. W. Halton, British Counsellor in the Mixed Court of Appeal, will after all be appointed Vice-President of the Native Court of Appeal in the place of Judge Bond, who recently retired. Mr. Halton was offered the post some little while back, but, as I reported at the time, he declined it. However, it is understood that he has been persuaded to reconsider his decision, and that an announcement to this effect will be made as soon as Sir William Brunyate, the new Judicial Adviser, returns to Cairo. Mr. Halton's return to the Native Courts, which he left some years ago in order to take up an appointment as judge in the Mixed Courts of First Instance, is most welcome, and his nomination to the Vice-Presidency of the Court of Appeal is an excellent step; for he is most popular with the Egyptian element, and in addition to his legal qualifications he has displayed great administrative ability in his direction of the affairs of the various Courts over which he has from time to time had to preside.

It is, indeed, quite time that the personnel of the Native Courts was strengthened. With the departure of Judge Bond the English vacancies in the higher Court were increased to three, while in the Courts of First Instance two still exist. The position has been aggravated by the fact that Mr. Sheldon Amos has been absent—on munitions work—for two years from the Court of Appeal, and that two of the junior judges, Messrs. Baynes and Sanderson, are at the front. The strain on the judges who have been left to do the work has been very great, and it is really marvellous that they have been able so successfully to cope with it. Some of these vacancies ought most certainly to be filled speedily. But whilst the Mixed Courts can spare no one, and the Bar is reduced to its minimum, the administrative staff of the Ministry of Justice, which should be the natural recruiting ground for the junior judgeships, has now been reduced by promotions and the demands of the Army to two English inspectors only, so that under present conditions no relief can be obtained from that quarter. The Government is certainly faced with a very difficult problem, and it would not be at all surprising if it found itself forced to apply for the return from the front of those members of its legal staff to whom it accorded permission to take up commissions.

British 5 per Cent. Exchequer Bonds.

The authorities at home have at last awakened to the fact that there is an untapped source of capital in Egypt which might well be drawn upon for the purpose of supplying the British Empire with funds for the carrying on of the war. When the previous British loans were issued, I called attention to the fact that no provision had been made for obtaining subscriptions from the British colony in Egypt and from Egyptians. They could, it was true, subscribe through the local banks, but the minimum was £100, and no facilities such as were being offered to the small investors at home were available out here, whilst the deduction of income-tax made the loan unattractive, especially for non-British subjects, as compared with the French one. It is now announced that the National Bank of Egypt is prepared to receive applications, from £5 upwards, for British

Incorporated A.D. 1720.

Digitized by Google

5 per cent Exchequer Bonds, and that the bonds can be held in London, so as to save transfer and insurance expenses. This is an excellent departure, and as the interest is payable free of income-tax to all residents outside the United Kingdom, they should prove a great attraction to the small investor, and should enable Britishers out here to emulate the patriotic attitude of their fellow-countrymen at home: while Egyptians will also be able to give practical expression to their loyalty. It is, nevertheless, a pity that the offering of facilities to the small investor in Egypt should have been delayed so long, for it has coincided with the advertisement for applications for the new French War Loan. The latter, which bears the same interest as the British Exchequer Bonds, and is also free of income-tax, is issued at 88.75 frs. per 100 frs., as compared with the par issue of the British bonds. This represents 5.6 per cent., and in reality the return comes to just under 6 per cent. owing to the present favourable rate of exchange with France. In these circumstances the non-British small investor will almost certainly turn to the French investment, whereas if the British bonds had been available six months ago he would certainly have put his money in them.

The Greek Situation.

In view of the developments which the Greek situation has undergone, the Hellenes of Egypt held another meeting of the community on Sunday last in Cairo and Alexandria. Without a single dissentient voice, the community declared itself in favour of M. Venizelos, and despatched to the courageous Cretan a telegram advising him and Admiral Condouriotis of this decision. At the same time a committee was formed to recruit volunteers and to collect funds for assisting the new Pan-Hellenic movement. Already substantial sums have been remitted to Salonika. It is stated that M. Sachtouris, the Consul-General at Alexandria, who in the past has adopted a somewhat ultra-Royalist attitude, has expressed the desire to resign, as he no longer approves of the policy followed by his chiefs at Athens.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, September 28.

H.E. the Governor-General and his Staff are expected to return to Khartoum in the first week of October. Lady Wingate will accompany him. Other visitors to Erkowit who will be returning simultaneously are Major and Mrs. Spinks, Captain Pattisson, Captain and Mrs. Gowland, and Mrs. Burnett.

Major Vandeleur, Second-in-Command of the Camel Corps, has arrived in Khartoum, from el Obeid, and Captain Maclaine, of the same corps, accompanied him. They are proceeding for a change of air.

The Feast of Kurban Bairam will be celebrated, as usual, as a public holiday extending over several days, from October 7. There will be the usual levee and reception, and a number of notables will receive robes of honour.

One of the results of the war is the difficulty of obtaining the cloth of the kind used for robes of honour. It is a good class of red cloth, and it appears that the whole of the available supply in Egypt was taken by the Sultan for ceremonial purposes; and the merchants find that they cannot replace it.

The weather in Khartoum has been somewhat hotter, but it rarely attains the temperatures of last year, and on the whole the season may be said to be very fair. The months of September and October are never pleasant, owing to the damp and the large numbers of flying pests.

There were a good many reports of locusts in the course of the last week, but they do not seem to have done much damage. The chief trouble is said to be the need of additional seed at Tokar, with which to re-sow the areas washed out.

Commenting on the Mesopotamia despatches, the *Times of India* urges the immediate and generous recognition of all who did well, in order to raise the *moral* of the force and as an act of justice to the fighting men.

CYPRUS NOTES.

(From Our Own Correspondent.)

Cyprus, October 3.

According to present plans, the High Commissioner should leave Troodos and visit Limassol, *en route* for Nicosia, on October 20. Here there are always matters of local importance to be presented or discussed. Ever since the occupation Limassol has been the most progressive of the district capitals, this being principally due to the fact that it is the chief centre for the export of wine and carobs. General progress, too, in municipal matters has been more conspicuous than in other towns.

The Legislative Council.

October 11 has been fixed for polling throughout the island. The number of new candidates is considerable. Among the late members who are retiring from politics is M. Pascal Constantinides, who may be called the *doyen* of island representatives. An advocate of ability and great experience, gained under both Turkish and British administration, he has long been regarded as one of the most far-seeing and capable men of the island, his opinion carrying great weight in the counsels of the Greek community. He is supporting the candidature of his son, Neoptolemos Pascali, who for some time studied and was called to the bar in England.

Archiepiscopal Election.

The course of the election is not running smoothly, as it was hoped would be the case. The Holy Synod has commenced proceedings against a paper called the Κυπριακὸς Φύλαξ ("Cypriot Guardian") for libel, and, unless pacific counsels prevail, this will be followed, it seems, by actions against the Holy Synod on the part of citizens of Larnaca and Limassol, who have felt aggrieved by decisions pronounced by that body in the matter of objections made against the election of certain representatives. Regret is expressed in most quarters that there should be a danger of such regrettable incidents as would be involved in the appearance in the civil law courts of clerics of the highest rank, and others, as accusers and accused, or as witnesses, in connection with questions which ought to be settled within the precincts of the Church.

The Wheat Supply.

With reference to the order of the Egyptian Government prohibiting the export of wheat, mentioned last week, it has been arranged that shipments to Cyprus of quantities not exceeding 500 tons monthly may for the present be allowed.

SIR RONALD GRAHAM'S DEPARTURE.

(From An Alexandria Correspondent.)

Your Cairo Correspondent will doubtless have dealt fully with the subject of the approaching departure from Egypt of the Adviser to the Ministry of the Interior. As the event is of considerable importance, it may not be out of place to record the impression of an Alexandrian.

Sir Ronald Graham has spent more time in Alexandria lately than he would have done in normal circumstances, but it was only recently, upon the second anniversary of the outbreak of war, that the British community, as a whole, had the opportunity of seeing him on the platform. In the course of the proceedings he made a most interesting speech, and though his abilities in this direction were doubtless known to his personal friends they were in the nature of a revelation to a large section of his audience. Save on the comparatively rare occasions upon which Mr. Cameron, H.B.M.'s Consul-General in Alexandria, lends himself to the task, the community too seldom hears a good speech in the mother tongue, and in this instance the effort—if effort it were—was warmly appreciated.

Where first-hand knowledge is lacking, there is a tendency, more pronounced perhaps in Egypt than elsewhere, to echo the opinion of the last acquaintance with whom one has discussed a personality or event. If this somewhat dubious test of public opinion be applied in the case of Sir Ronald Graham, he will not suffer in the result; fortunately for him, his reputation rests upon a securer basis.

In a leading article in its issue of September 26, the *Egyptian Mail* states that Sir Ronald "leaves behind him no enemies and many friends of all nationalities." The reflection that he has no enemies is apt to be the anodyne of the nonentity in his moments of abstraction—and even then he may deceive himself. But when applied to a man in the prime of life, who has occupied one of the most important positions in the Administration of a country such as Egypt, it is at best a doubtful compliment. The present writer prefers to believe that Sir Ronald's enemies are few, that such as they are, their possession does him credit, and heartily concurs with the opinion expressed in the latter portion of the paragraph quoted. As to his abilities, it should suffice to say that he worked successfully under a man whom one might reasonably suppose to have been exacting where the public security of the country was concerned, and to whose memory he paid a touching and finely conceived tribute in the course of the speech to which reference has already been made. Sir Ronald and Lady Graham, then, are among those to whom Egypt is loth to say farewell.

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, September 24.

Bulgarian Atrocities.

Every day the Danube yields up a ghastly toll of bodies, horribly mutilated by the Bulgarians. The *Dimineatza* demands an official commission of inquiry into these atrocities, suggesting that it shall be composed of military men, magistrates, journalists, and delegates from the neutral countries. "It is necessary," says this journal, "that we should have exact information of every Bulgarian crime possible."

The Germans who surrender on the Dobrujan front—and they are not a few—when coming in contact with the Roumanian troops invariably call out, "Wir sind nicht Bulgaren," anxious to let it be known at once that they took no part in the fearful torturing of the unfortunate wounded and non-combatants at Tutrakan. But, as a Roumanian paper remarks, after what has happened in Belgium, Serbia, and elsewhere, it is difficult to see what difference there is.

In spite of the very justifiable hatred and thirst for revenge engendered in the Roumanians by these Bulgarian atrocities, the people of this country preserve their self-respect. The following incident which I witnessed myself serves to emphasize this fact. A party of Bulgarian prisoners was passing through one of the streets of this city, in charge of Roumanian militia. The public gazed at them in strict silence as they tramped by, but a couple of street lads near me began to whistle. "Silence!" exclaimed a man, who, judging by his leather apron, was probably a bootmaker in a small way of business. "Remember you are Roumanians." And a murmur of approval ran through the crowd of onlookers. As a matter of fact, I could readily have forgiven the observers if they had hooted the prisoners; for I had just come from a hospital where I had seen an officer with a knife-slash across the upper part of each thigh. These had been inflicted upon him by a young Bulgarian girl, while he was lying wounded.

Queen Marie's Hospital.

On Tuesday the hospital in the Royal Palace organized by Queen Marie was inaugurated. At present 300 beds have been arranged for, but many more can be provided if required. The Red Cross flag now flies over the Palace, in place of the Royal Standard, which has been relegated to one wing of the building.

News for the Troops.

The Ministry of Public Instruction has decided to publish a Bulletin, similar to those issued to the Allied armies, for distribution among the Roumanian troops. The question of allowing all Bucharest journals to be sent to the front is also being considered by the Ministry of War.

In Transylvania.

The troops advancing in Transylvania have found in that region considerable quantities of provisions of all kinds. Apart from the supplies found at Brasso and other centres, it is surprising to learn of the existence of large numbers of cattle, sheep, and pigs. Thus the feeding of the Roumanian troops is proceeding under the most favourable conditions. Everything is paid for most promptly, and the Transylvanian Roumanians flock to sell what they have to their cousins from "The Country," as they term this land. On their part, it is reported, the soldiers are enchanted by the country through which they march, and especially by the handsome kine. On one occasion a magnificent young bull was offered for sale, and the officers of an infantry regiment from Wallachia clubbed together and bought it for the regiment. Now, its horns decorated with ribbons of the Roumanian tricolour, the bull proudly heads the regiment on march. The bull's head, it may be added, forms the arms of Wallachia.

The *Egyptian Gazette* of the 2nd inst. announces:—The U.S. cruiser Des Moines is expected to leave Alexandria for Jaffa before the end of this week. It is believed that an American medical mission will sail on board for Palestine in order to assist in fighting cholera, which is reported to be spreading there in certain districts where people take drinking water from contaminated wells.

NEWS FROM SYRIA.

(From a Correspondent.)
Cairo, October 6.

The Question of Relief.

The question of the distribution of relief among the victims of starvation in Syria is, unfortunately, not yet definitely settled. It seems that the Ottoman Government insists on the distribution of relief being carried out by a joint committee of the Ottoman Red Crescent and the American Red Cross. Unless, however, this is left solely and entirely in the hands of the American Red Cross, the Syrian Relief Committees that have been formed in Egypt and the Sudan will not part with the subscriptions hitherto collected. Pending the result of its negotiations on this subject with the American Red Cross, the Cairo Central Committee is urging those who have put their contributions on the subscription lists to hasten payment, so that the total amount should be ready for immediate use as soon as this vexed question is satisfactorily settled. Meantime, it is hoped that the British authorities here will hurry the formalities in connection with private remittances destined for close relatives, of which the American Diplomatic Agency here has kindly offered to assume the charge, because it is reported that the forms which were filled up a few weeks ago by the intending senders are still under examination in the Licensing Officers' Department. It is comforting to learn, in the meantime, from people who have lately managed to escape from Syria to Ruad Island, and thence to Egypt—and the numbers of these fugitives is said to have largely increased lately—that the Maronite Patriarch has mortgaged a part of the patriarchal estates against a loan of about £20,000 made by two rich Moslem merchants of Beyrout, and has distributed the proceeds among the poor in urgent need of help.

A Romantic Story.

Apropos of this venerable prelate, an interesting account of his alleged escape from trial by Jemal's court-martial is given. There is a touch of mediæval romance about the story, and I will therefore briefly summarise it:—An Austrian nobleman, in the course of a tour in the Holy Land and the Lebanon, met a Lebanese lad who took his fancy by his comeliness and bright wit. Having the spirit of adventure, the youngster readily accepted the nobleman's offer to enter his service and go with him to Austria. Thanks to personal ability and high patronage, the Lebanese had such a brilliant career of rapid promotions that he now holds one of the most important commands in the Austrian army as a general. A few years ago he is said to have visited the Lebanon, and especially his native village, and to have made generous donations to deserving members of his family. A relative of this Austrianised general, an Exarch of the Maronite Church, who is now in the United States, on hearing of the impending trial by court-martial of the Maronite Patriarch and his suite, had the happy idea of appealing to his distinguished relative for immediate intervention. In his long and impassioned appeal, the Exarch explained that such a humiliating and undeserved blow, aimed at the aged prelate, as the temporal and spiritual head of the Maronites, would react on the whole body of the Lebanese and spell moral and material ruin to the land and people. Although the reply sent by the general's secretary was couched in stiff military language—evidently meant as a screen—yet the desired result was not long in being attained; for the Ottoman Government, which had actually decided to have the Patriarch and his suite tried at the court-martial at Aley, recalled this decision, evidently on representations from the Imperial Court at Vienna.

British Prisoners Removed.

From the same source it is learned that the Ottoman Government has removed the British, French, and Russian prisoners in Syria to Kutahia, in Anatolia, and that the ex-Director General of the French Railways, now in Paris, is using his influence with the ex-Ottoman Commissaire of Railways in Syria, who is now in Constantinople, and is an important member of the committee, with a view to his prevailing upon the Ottoman Government to have these and all Allied prisoners transferred to Constantinople.

It is reported that the well-known French College of the Lazarists at Aintoura, Mount Lebanon, near Beyrout, the pioneer of European institutions of higher education in Syria, has been transformed into barracks and now occupied by Turkish soldiers, and that the members of this congregation—no doubt those of Ottoman nationality—have sought refuge in some of the Maronite convents, where they are said to be suffering great privations.

AT SHIRAZ A YEAR AGO.

(From a Correspondent.)

Whatever the case may have been with regard to other parts of Persia, it is a fact that in Shiraz there was no anti-British feeling at all in the early stages of the war. Indeed, the members of the small British community there were made to feel in many ways that the sentiments of the upper-class Persians towards them were as friendly as ever, if not rather more friendly; and when the work of the German propagandists began to bear fruit at last, and the "pro-German" party began to make itself offensive in a number of small ways, the better-class Persians, as a rule, were undoubtedly vexed, and honestly resented the underhand work.

Then came the arrival of the notorious Herr Wassmuss, who proved a veritable stormy petrel. He did not stay very long in Shiraz, but he contrived to stir up a certain amount of mischief, and his activities in the south, whither he betook himself, doubtless exercised a malignant effect upon the development of events at Shiraz. It is doubtful, however, if things would ever have reached the stage they actually did reach if an unkind fate had not helped the German intrigues most substantially. The British occupation of Bushire was in itself an excellent step no doubt, but the hauling down of the Persian flag and the hoisting of the Union Jack provided our enemies with just the lever they wanted to rouse feeling against us. The Persians are proud and extremely sensitive, and the incident touched them to the quick. Wassmuss and his agents saw their opportunity, and seized it at once. The result soon became apparent in the form of street processions, the formation of corps of *mujaheddin* (volunteers), and the delivery of many fiery speeches in mosques and other places. Then news reached Shiraz that an attempt had been made upon the life of the British Consul at Ispahan, resulting in his being wounded and one of his Indian *sowars* being killed; and a few days afterwards the British Vice-Consul at Shiraz was actually murdered in the streets while accompanied by an escort of gendarmes. These escorts had been supplied to the Consul and the Vice-Consul, and also to the bank and the telegraph office, which were thus directly under the protection of the Persian Government.

From this point things went from bad to worse. Wassmuss and his agents lost no opportunity of making mischief; and the first fruits of the renewed agitation were the wounding of a Persian clerk of the Shiraz Consulate and the killing of one of the Consular guards. Then came, with dramatic suddenness, the great *coup*.

It was well planned and skilfully carried out, and if the Consul had any suspicions of what was in store it is safe to say that no other member of the British community had. We were prepared for many things, but hardly for what actually happened.

On November 9 the only Swedish officer of Gendarmerie then in Shiraz left the city, under the pretext of having business in the north in connection with making preparations for escorting a new Governor-General of Fars, who was said to be on his way down from Teheran. As a matter of fact there can be no reasonable doubt that the captain, considering discretion the better part of valour, left simply in order to avoid responsibility for what was to follow. The next morning, soon after nine o'clock, parties of gendarmes suddenly appeared all round the Consulate, occupied the adjoining buildings, placed machine guns and a field gun in positions commanding the Consulate, and summoned the Consul, Major O'Connor, to surrender. Simultaneously the telephone wires were cut and telegraphic communications were also cut off.

The demand for surrender was made in writing, and the document, which was signed by "the National Committee for the Protection of Persian Independence," was a truly remarkable production. It announced that the "provisional arrest of the Consul and the British colony" had been decided upon by "the Persian patriots"; that the Consul was given a half-hour to decide what to do; and that if he and the British surrendered they would be sent to Borasjun, there to be kept prisoners until they could be exchanged for certain Persians and Germans held by the British. The English ladies, it was added, might choose between remaining at Shiraz, where they would be "perfectly safe," or accompanying their men folk to Borasjun, whence they would be escorted to Bushire. Failing surrender, the Consulate and the British houses would be bombarded; and "the Committee" expressly declined any responsibility for the consequences that might follow—"especially for the women." One wonders whether this last rather artistic touch was due to Persian or German suggestion! Probably German.

In the circumstances resistance would have been worse than futile: it would have been criminal folly. The surrender was made, and within a few hours the prisoners of the "National Committee" were marched out of Shiraz. Owing to the short notice given, most members of the little party had no baggage worth speaking of, and consequently all suffered a good deal of inconvenience on the road. It is worthy of note that the departure from Shiraz was witnessed by very few of the citizens, and the only demonstration of any hostile feeling came from the Gendarmerie. It was satisfactory to learn subsequently that the "Committee" and their friends were bitterly disappointed by their failure to find the large supply of rifles, machine guns, and so forth—to say nothing of vast sums of gold—which they had expected to secure in the Consulate. The German agents who set afloat the tales about these hordes may have honestly believed them, judging British methods to be similar to German, or they may have acted simply with the aim of prodding their dupes into action. In either case the Persians, at least, must have been sadly surprised by the meagreness of their booty. Nevertheless, our enemies had, for the time, scored rather heavily, and Herr Wassmuss must have felt entitled to congratulate himself on the success of his labours for the Fatherland. The end of the story has, however, still to be written.

MANCHESTER SYRIAN RELIEF FUND.

At a meeting held on Tuesday in Manchester under the chairmanship of Mr. E. Tootal Broadhurst, a local Syrian Relief Fund was inaugurated, and a committee was appointed. Lord Bryce, in a letter to the Lord Mayor of Manchester expressing his wishes for the success of the fund, wrote:—"The information which has reached me from Syria, of whose correctness there can, unfortunately, be no question, describes the condition of the Christian, and to some extent of the Jewish, population there as most deplorable. The Lebanon, which has been the one peaceful and prosperous part of the Turkish dominions, because it enjoyed an autonomous government, has now been laid waste, and the unfortunate villagers and peasantry are starving. All the help that English charity can send will be needed to relieve their sufferings."

The meeting appointed the following officials:—President, the Lord Mayor; vice-presidents, Lord Bryce and the Mayor of Salford; chairman of committee, Mr. E. Tootal Broadhurst; hon. treasurer, Mr. E. E. Rigby; hon. secretary, Mr. K. Jebara; and a committee composed as follows:—Mr. Alfred Brookes, Major Cardwell, the Dean of Manchester, Sir Edward Donner, Sir Arthur Haworth, Mr. G. C. Haworth, Mr. J. H. Macmillan, Sir Henry A. Miers, Mr. C. T. Needham, M.P., the Rev. J. E. Roberts, Dr. C. W. Saleeby, Sir F. H. Smith, Sir William Stephens, Mr. Harold Sumner, Mr. William Sutcliffe, and Colonel Sykes. The executive committee consists of Mr. Alfred Brookes, J.P., Mr. S. Cohen, Mr. E. Kahla, Mr. Y. Majdalany, and Mr. F. Hourani.

Donations amounting to about £2,000 were promised in the meeting. The committee have issued an appeal to the public in which they emphasise the urgency of the need, and ask for a prompt and generous response.

Cheques may be made payable to the hon. treasurer, Mr. E. E. Rigby, and sent to the Lancashire and Yorkshire Bank, Limited, Mosley Street, Manchester, or its branches.

It is announced that the offices of the Military Forwarding Officer, Devonport, have been removed to Avonmouth Docks, Bristol (G.W. Railway), and the public is informed that all parcels, gifts, etc., intended for troops serving with the forces in Egypt, Salonika, Mesopotamia, India, and East Africa, which have hitherto been dealt with at Devonport, should from henceforward be sent:—C/o. the Military Forwarding Officer, Avonmouth Docks (near Bristol).

SCHOOL OF ORIENTAL STUDIES.

AN APPEAL.

The following appeal on behalf of the Endowment Fund of the School of Oriental Studies at the London Institution has been issued by Lord Curzon (chairman of the Appeal Committee), Lord Cromer, the Lord Mayor, Sir J. P. Hewett (chairman, Governing Body), Sir Montagu C. Turner (chairman, Executive of Appeal Committee), and Mr. Lionel Martin (chairman of Council, London Chamber of Commerce):—

The buildings of the School of Oriental Studies, in regard to which announcements have already been made in the Press, are now ready for occupation. The school has received a Royal charter, and the provisional date of opening has been fixed for January, 1917. His Majesty the King has graciously consented to be patron of the school.

The objects of this new institution have been frequently explained and are now fairly familiar to the public. They are three in number—(1) To provide a place where the Englishmen who will presently be engaged in governing or garrisoning the Oriental and African parts of the Empire may learn the languages and study the literature, the religions, and the customs of the peoples with whom they will be so soon brought into contact, and their influence over whom will largely depend upon their familiarity with indigenous character, ideas, and institutions; (2) to offer a training to those who are about to proceed to the same countries to take part in commercial enterprise or avocations; (3) to furnish in the capital of the Empire a meeting-ground and focus for the scholars of the East of all nationalities, where, on their visits to this country, they may be assured of a sympathetic welcome, and, if required, of opportunities for study among those who are engaged in kindred pursuits.

In all these respects the war has made the creation and the early opening of this school not less but more urgent; and it is a matter of Imperial importance that it should be in full working order as soon as hostilities have ceased. Evidence has been accumulating in recent years, and even since the war began, that the training of our Civil servants and officers in the languages, the beliefs, and the modes of thought of Oriental peoples falls short of the ideal which we ought to have in view. In the new relations that will develop when the war is over there must be a higher standard of efficiency in these respects, if our rule is to continue to commend itself to the heart and brain of those with whom we are brought into administrative or diplomatic relations.

Similarly on the business side it is clear that a long and fiercely-waged commercial war will follow immediately upon the cessation of hostilities. Information has been received that important steps are already being taken in Germany to give a higher education to Germans about to proceed to the East. It is probably in China, where the population is estimated at over 400 millions, that the commercial war will be most acute, and that the opportunities will be greatest, if only our business representatives are properly equipped to take advantage of them. Some of those who sign this letter have seen with their own eyes the immense strides that have been made in recent years by our present enemies in their attempt to acquire the mercantile hegemony of the Eastern world, and we hold that a great effort will be required, and that now is the time for it if this advance is to be checked by us, and if Great Britain is to recover her once unchallenged position in the Orient.

In the third category, may we not hope, after the war, for a much closer co-operation, a clearer understanding, a livelier interest, the more universal recognition of a common aim between the peoples of the East and the West who are fellow-subjects of the same Sovereign, and whose common allegiance will have been tested and purified by the fiery ordeal of common service and sacrifice against a common enemy? Just as the soldiers of these various climes have stood shoulder to shoulder on the battlefield or in the trenches, will not the students and scholars, the civilians and men of peace, crave for the closer association of fellowship in a common spiritual and intellectual aim?

Provision will be made in the school for all the more important languages of the Near, Middle, and Far East and of Africa; but above all we desire to urge the claims to a further recognition of Indian studies, especially in view of the splendid part that India has played in the struggle for our Imperial existence.

The Berlin School of Oriental Languages had, before the war, an income of £10,000; the income required for the school in London, of which the scope is necessarily more extended, is £14,000. Of this sum the school has at present in view an income of about £7,000, including grants from the Imperial Government and the Government of India. The committee desire to raise an endowment fund of £150,000 for this purpose, towards which they have now as a result of a preliminary appeal (which was suspended in August, 1914) about £10,000. One subscriber of £100 has raised his subscription to £1,000 as a mark of appreciation of the services rendered by India in this crisis. We appeal for similar help and, where possible, for similar generosity.

In addition to the signatories of this appeal the Prime Minister, the Marquis of Crewe, the Marquess of Lansdowne, Viscount Grey of Fallodon, Mr. Austen Chamberlain, Mr. Bonar Law, Mr. Henderson, and many others have joined the appeal committee.

Donations and subscriptions may be paid to the head office or to any branch of the London County and Westminster Bank, or to the secretary of the executive of the appeal committee at the School of Oriental Studies, Finsbury Circus, E.C.

ROUMANIA AND TRANSYLVANIA

There was a crowded meeting in the great hall of King's College last Friday, when Dr. Seton-Watson delivered an address on Roumania and Transylvania. His Excellency the Roumanian Minister, M. Nicolas Misu, was in the chair.

Dr. Seton-Watson traced the history of Transylvania from the time when, in the eleventh century, the Magyars extended their sway over the country, began to make settlements therein, and were followed shortly by the Saxons. Thus a dominant class was formed in a community where the mass of the people consisted of Roumanian peasants, who never obtained recognition. When the Reformation brought religious equality for other sects, the Greek Church, to which the peasantry belonged, was excluded from this benefit. In 1848, when the spirit of nationality was abroad in Europe, the Transylvanian peasantry became affected by it; but the Magyars, refusing to recognise any nationality but their own, passed a law uniting Transylvania with Hungary. A racial war resulted, to be followed by ten years of repression, constitutional government being restored in 1859 after the disastrous war with Italy. The Transylvanian Diet then assembled and passed a law giving equal rights to Magyars and Roumanians; but this alarmed the bigots of Buda-Pesth. The Diet was dissolved, its laws were annulled, and Transylvanian autonomy ceased. A law passed in 1868 guaranteed equal rights to all nationalities in Hungary, but, as the result of the deliberate policy of the entire Magyar ruling class, this remained a dead letter. There were no State schools, primary or secondary, where the language of instruction was Roumanian; and Roumanian voters were prevented from getting representation in the Hungarian Parliament by wholesale jerrymandering of constituencies and every conceivable device of chicanery and intimidation. In one case, when a Roumanian candidate was winning "hands down," the returning officer stuck up a dummy, a non-existent person, of the same name. Voting was by word of mouth; the votes of the peasants were credited to the imaginary person, and so the Government candidate got in.

Of the present situation Dr. Seton-Watson said that Germany was straining every nerve against Roumania, partly because she wanted to convince neutral Powers that she was able to help small Powers who sided with her, while the Entente was not, partly because she was anxious to get possession of a country full of corn and oil, whose products would ease the situation for the Central Powers, but, above all, in order to maintain her connection with Turkey and to keep open the road to the East. A psychological reason why German troops fought with special enthusiasm in Transylvania was because of the Saxon colony they found there. We must picture to ourselves the feeling that would be aroused among our soldiers if in Macedonia they found English villages dating from the reign of Henry III. and speaking the dialect of Yorkshire or Somerset. The German effort must be crushed at all costs. The honour and the credit of the Entente were at stake.

Sir Arthur Evans, President of the British Association, also spoke, and a telegram was sent from the meeting to the University of Bucharest expressing good wishes for the success of the Roumanian army and for the liberation of Transylvania.

ROUMANIAN FLAG DAY.

The Organising Secretary of the Roumanian Flag Day, 1, Central Buildings, Westminster, has received the following letter from Lieutenant-General Georgesco, A.D.C. to the King of Roumania, and representative of the Supreme Command of the Roumanian Army at the British Headquarters: "I have visited the offices of the Roumanian Flag Day and I am much pleased and impressed with the organisation and preparations that are being made to hold a day in order to celebrate the entrance of Roumania into the war. I am sure from what I have seen at the offices that the Roumanian Flag Day will be a great success. We Roumanians are fighting for the same great principles as yourselves, and the motto of all the Allies must be. 'One enemy, one front, one command.' The Roumanian people will appreciate this British effort for our wounded, not only on account of the money that may be raised (though that is important), but because it will be welcomed as an expression of the British goodwill towards Roumania, and because it will tend to strengthen that solidarity of the Allies, which is so essential to our ultimate triumph. I hope and believe that the Roumanian Flag Day as now being organised will be a complete and conspicuous success."

A Reuter's message from Amsterdam, dated October 18, says:—The *Kölnische Volkszeitung* reports from North Palestine that the Turkish Government two months ago handed over to the Germans the famous monastery on Mount Carmel, which, as it was under French protection, was seized by the Turks. The monastery is now occupied by German Carmelite monks.

THE WORLD-FAMOUS
YAGHOURT
may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.
Also **LEVANT PRODUCE:**
Tomato Paste, Black Olives, Locoums, Bamias, &c.

TANGIER TO TEHERAN.

Eighty-nine years ago—October 20, 1827—was fought the Battle of Navarino, in which the Turkish and Egyptian fleets were utterly smashed by the combined British, French, and Russian squadron commanded by Admiral Sir Edward Codrington. That was really the turning point in the fierce and desperate struggle for Greek independence. At the time, Sultan Mahmud, with the very efficient help of Mohammed Ali Pasha, had got the "rebellion" fairly well in hand, and Turkey looked like weathering the storm. But Navarino put an entirely fresh complexion on affairs, and Greece soon afterwards was free. King Constantine and his pro-German friends may have forgotten these unimportant things, but I hope and believe that a good many *real* Hellenes have better memories, and that to-day they will remember with gratitude what the three senior partners in the new Grand Alliance did for their forebears nearly ninety years ago.

***

The members of the Smyrna Municipality appear to have made up their minds not to let any petty questions of finance cause them undue worry. At any rate, the municipality recently issued £T30,000 worth of one and two-piastre notes. These form a forced currency, but they are not accepted at the post-office or in payment of taxes, nor—need it be added?—are they current outside Smyrna. Further, they are not redeemable if torn *or dirty*. I am not an expert in High Finance, but it almost looks to me as if these novel notes will be jealously guarded against damage by their lucky (!) possessors, and as if the Smyrna Municipality had done quite a good stroke of business. I am, however, unable to say what local opinion on the subject may be.

***

The Young Turks seem to have been rather panicky of late, probably because, being by no means fools, they realise that the day of reckoning is very, very near. At any rate, it appears to be a fact that they have been making a great many arrests during the past two months. In a letter received a few days ago from a correspondent who is well placed for gathering trustworthy news one of these arrests is rather quaintly reported. "The Mufti of Damascus," says the writer, "has been arrested for lack of enthusiasm for the war, which, apparently in an unguarded moment, he denied to be 'holy.'" Can the absent-minded Mufti, I wonder, have been reading Dr. Snouck Hurgronje's masterly little book "The Holy War 'Made in Germany'"?

***

No: on second thoughts it is safe to conclude that the Mufti will have had no opportunity of reading the book referred to. Whatever other works may be allowed to enter Turkey at the present time, the Leiden Professor of Arabic's scholarly essay is sure to be banned, and to remain so as long as the Germans retain any shred of influence in the country. For not only does he show how preposterous was the attempt to involve the whole Moslem world in a *Jehad* for the benefit of the Germans and a handful of free-thinking "Young Turks"; he also exposes, by means of quotations from their pre-war speeches and writings, the sheer dishonesty of some of the leading professors (German, of course!) and others who are now posing as ardent champions of Islam. Thus, he reminds us how Professor Marquart, of the University of Berlin, in 1913 derided "the alleged function of Islam as a bearer of culture," and how he spoke "with biting irony of the 'blessings of the *jehâd*, predatory murder on the path of Allah turned into a religious duty,' *i.e.*, that duty which Germany now has again impressed on Turkey." And a little later we read how "in a German colonial congress this resolution was adopted:—'*As the expansion of Islâm is a serious danger to the development of our colonies, the colonial congress suggests for earnest consideration*,'" etc.

***

The passages quoted would suffice to make the Germans anxious to keep this neutral professor's book out of Turkey. But they do not stand alone; far from it. Dr. Snouck Hurgronje tells us that "Professor Martin Hartmann, who teaches the science of Islam at the Seminary for Oriental Languages in Berlin . . . never tires of pointing out that the Moslems are kept from participating in culture mainly by the institutions of Islam"; and that "He calls the Caliphate of the Ottoman Sultans a usurpation which could only have been committed through contempt for the holy tradition." At the time of the Turco-Italian war the same Professor Hartmann also wrote that the idea of "a holy war, *i.e.*, of war against all unbelievers, except those who are especially designated to the community by the leaders of Islâm as friends of Islâm" was "madness," and declared that "all civilised nations" would unanimously stand together "against any attempt to excite religious fanaticism," and that Islam was "a religion of hate and of war," which "must not be suffered to be the ruling principle in a nation of the civilised world." It would be easy to add to this list of deadly quotations; but enough has been written to show why the little book is not likely to have fallen into the hands of the Mufti of Damascus—or anybody else in German-bossed Turkey.

***

A Spartan friend, who knows King Constantine's latest (at the moment of writing) Prime Minister very well, assures me in a letter that "he is far more *Anglophilos* than *Germanophilos*. He may," adds my friend, "admire German philology, but he thinks a great deal of English ethics, character, and liberalism. In the University, as a student, he was always the popular Spiro Lambros, and afterwards, as a professor and as Rector of the University, he still retained his popularity. . . . Son of the late well-known antiquarian, he was appointed Professor of General History at Athens University in 1887. He has written several important works in German, French, English, and Greek, mostly on philological and historical subjects, and he is the author of a few dramas and of some poetry. He is of independent means, very popular in society, a charming companion, and—had never mixed in politics until called upon by King Constantine."

***

When Dar-es-Salaam surrendered I expressed my great satisfaction—due to the avenging of an act of treachery of the most disgraceful kind on the part of the Huns. A recent report issued by the Belgian colonial authorities in connection with the capture of Tabora seems to indicate that the German Governor of Dar-es-Salaam was quite a specialist in the way of doing dirty work. On August 4, 1914, he was entertaining a number of Belgian guests at dinner, when, towards the end of the meal, a telegram was handed to him. He read it, rose from his seat, and said: "Gentlemen, there will be no coffee. I have grave news for you. Belgium has declared war on Germany. You are my prisoners." I am glad his official residence was afterwards so knocked about by our men-of-war. His ideas of "rising to the occasion" are, let us hope, peculiarly his own.

***

It is not only at Salonika that the military have, unintentionally, no doubt, rendered service to archæology. Trench digging on the scale that it has to be carried out on to-day is indeed sure, sooner or later, to produce "finds" of interest in ground so rich in historical interest as South-Eastern Europe. I learn from a Bucharest correspondent that early in August Bulgarian soldiers who were engaged in digging a trench in the neighbourhood of Rustchuk came upon a tomb at a depth of about two metres below the surface. It contained, besides human remains, two heavy silver bracelets and some large earrings, with pendants in gold, of an Oriental pattern. The grave was probably that of the wife of some former Turkish pasha, but apparently its date has not yet been decided. The bracelets and earrings have been sent to the National Museum at Sofia. One hopes that they may escape the fate of other "relics" and "souvenirs" that have found their way to Bulgaria by more questionable means!

General Managers

Lecturing at King's College last week, Dr. Seton-Watson said that the Serbs and Croats came into Europe side by side and settled along the shores of the Adriatic and throughout the country behind it. Christianity was brought to them from the East by Cyril and Methodius at a time when the Eastern and Western Churches were united. When the schism reappeared the Serbs went with the Greek and the Croats with the Latin Church. Gradually two States evolved, but at the end of the eleventh century Croatia fell under the Hungarian Crown, and though it always retained a kind of home rule, it had never since been an independent State. The Serbian State grew steadily stronger during the twelfth and thirteenth centuries under a series of able rulers, and became a centre of mining industry, populous and flourishing, with the beginnings of a fine architecture and painting. At this period Stephan Dushan, the greatest of the Serbian Kings, ruled over a country stretching from the Adriatic to the Ægean, and, after a long series of victorious campaigns against the Byzantine emperors, he was threatening Constantinople when he died in 1355, and his empire fell to pieces.

NEAR EAST BOOKSHELF.

BERLIN TO BOMBAY—AND BEYOND.*

The literature of the great war, extensive and weighty though it has already become, includes no more valuable contribution to the study of its causes and objects than Mr. P. Evans Lewin's new book, "The German Road to the East." It is the first story which has yet been published in England of the great German movement known as the "Drang nach Osten"—the Big Push towards the East, of which the Baghdad Railway was the outward sign and symbol, the great orientation which comprehended the subjugation of the Balkan States, the seduction, utilisation, and subsequent abandonment of all the forces of Islam, and the consolidation of a land route through Roumania, Bulgaria, and Turkey, Mesopotamia, Persia, and Baluchistan, to the heart of India. Mr. Lewin's survey is wide, judicious, and undogmatic. He marshals his facts with meticulous care, and strains no point in order to draw a conclusion. And the facts which he assembles show beyond the shadow of dispute that the world-tragedy which apparently began with the crime of Serajevo had been in steady, careful, and well-organised preparation for at least a generation. The Pan-Germans based their dream on the Napoleonic ideal. Mr. Lewin writes:—

> Napoleon aimed not only to deliver a staggering blow against British prestige in India, but also desired to secure the domination of the Levantine route to the East. These are the two dominant aims of Germany in building the Bagdad Railway and in overwhelming the Balkan States that have opposed her advance. The thrust from Belgrade means nothing less than the aim of Germany to dominate the East.

Napoleon, following the course of the Emperors Trajan and Julian, laid his proposed course through Aleppo, Baghdad, and Busreh. The pinchbeck Napoleon of Potsdam laid down precisely the same route, and, blind to the lessons of the past, or obsessed by the problems of the moment, our diplomacy, in what Mr. Lewin calls its "unfortunate sentimentalism," amiably acquiesced in these plans, and, even at so recent a period as the middle of June, 1914, six weeks before the war, initialled an agreement permitting the Germans to carry the railway as far as Busreh. Mr. Lewin believes that all these plans for an empire in the East were laid down by the Berlin Congress of 1878, and the facts give strong support to his belief. Ferdinand of Saxe-Coburg was assigned to his allotted task in Bulgaria, a Prussian princess became Queen of Greece, Albania came under Prussian control, Austria was alternately bribed and threatened, Turkey became a hotbed of Prussian intrigue, the German consular system came under the domination of the Kaiser's master-spy. Germany, however, had reckoned without one masterful personality. In the sinister grouping of events prior to the outbreak of war the one figure which stands out in tragic prominence is that of the Archduke Franz Ferdinand. He was one of the few men in Europe who realised that Austria, whose aged and half-demented Emperor had become a puppet in the hands of his Ministers, lay between the upper and the nether millstones, and that the house of Hapsburg was doomed to extinction between the grinding forces of Pan-Germanism on the one hand and of Magyar ambition on the other. The Archduke's sympathies were with the Slavs, and he foresaw that the consolidation of a Southern Slav State within the Austrian Empire was the one means of saving Austria from the German menace. His prescience sealed his doom. Such a Slav consolidation as he proposed would have meant the shipwreck of all those colossal plans of Eastern expansion which Germany had for so many years, and at such great sacrifices, been preparing. The Archduke stood in the Kaiser's way; and he was removed. He was the champion of the Slav peoples, and, as Mr. Lewin reminds us—

> The Slav peoples of Austria-Hungary were to be swept down the Danube and pushed into national reserves like Kafirs or American Indians. The frontiers were to be settled by Germans. Austria-Hungary was to be deluged with a flood of Germans, whose duty it would be to displace the useless Slav elements.

Nothing, not even the Archduke, still less the treaties to which Germany had signed her name, the Kaiser had given his pledged word, was to stand in Germany's road to the East. And so the great war came, and it is Mr. Lewin's view, as well as that of many who had studied closely the problem of the Near East, that it is in the Balkans that the final struggle will be waged. Mr. Lewin has done well in putting the issue so clearly before us. His book should be read by all who desire a complete understanding of the great issues for which the Allies are fighting.

* "The German Road to the East." By P. Evans Lewin. (Heinemann, 7s. 6d. net.)

TWITTING THE TURK.*

When we learned, by a note at the commencement of Mr. Herbert's book, that most of the verses it contains had already appeared in *Punch*, we set ourselves to read it with the comfortable assurance of a pleasant half-hour before us. We were not disappointed. "Half-Hours at Helles" is packed with good things from cover to cover. In his opening dedication Mr. Herbert makes his own position plain:—

> Think not, if in these lays
> The singer seeks for smiles,
> That he forgets the unsmiling days
> Beyond the Ægean Isles.
> Think not he now pretends
> That Helles hours were sweet,
> Think not he wrongs the buried friends
> We left at Achi's feet.

So runs the first verse, and in the succeeding lines of this dedication the author allows his public to see how deeply the iron of war has entered his soul. For the rest, his verses deal only with the humorous side of things, and they make capital reading. According to Mr. Herbert, one of the chief difficulties which beset the British lay in the fact that the Turk—who, by the way, is described as an "honest man"—consistently refused to remain riled, despite all the efforts of his Majesty's warriors to annoy him. For instance, in the early stages of hostilities he was much insulted by being catapulted with tins of bully, until, as the bard pathetically informs us—

> . . . He spoiled the whole concern
> By gobbling up the beef.

This is the second book we have read from the pen of Mr. Herbert. We hope it will not be the last.

* "Half Hours at Helles." By A. P. Herbert. (Oxford: B. H. Blackwell 5 net.)

BOOKS RECEIVED.

The Wave: An Egyptian Aftermath. By Algernon Blackwood. (Macmillan. 5s. net.)

Year Book for 1916. (The Carnegie Endowment for International Peace, Washington, U.S.A.)

BOOK NOTES.

By a printer's error, the title of Mr. Algernon Blackwood's new book was given last week as "The War." It should be "The Wave."

The October number of the *Quarterly Statement* of the Palestine Exploration Fund contains the first part of an account of "Lord Kitchener's Work in Palestine" by Miss Estelle Blyth, who handles her interesting subject most gracefully. There are also further instalments of the valuable "Occasional Papers on the Modern Inhabitants of Palestine," by Dr. E. W. G. Masterman and Professor R. A. S. Macalister, and of "The Immovable East," by Mr. P. J. Baldensperger. The former contains some very typical tales illustrative of Oriental character; and we hope these papers will be eventually republished in book form. Mr. Joseph Offord continues his "Archæological Notes on Jewish Antiquities," and also contributes a paper on "The Warning Writing on the Wall at Belshazzar's Banquet."

Messrs. Putnams have published this week "The Gate of Asia: A Journey from the Persian Gulf to the Black Sea," by William Warfield. The price is 12s. 6d. net.

ARABIC JOURNALISM.

According to the Arabic Paris journal *Al-Moustakbel*, of the 6th inst., the number of Arabic journals in the world is about one hundred, with fifteen reviews, seventy of the journals being edited by Syrian Christians, ten by Mohammedan Syrians, and twenty by other Arabians; while of the reviews, fourteen are edited by Christian Syrians and only one by Mohammedan Syrians. The two editors of the new Mecca journal *Al-Kibla* are Mohammedan Syrians.

It is to be noted that sixty of these publications appear in various parts of the New World, whither the tide of Syrian emigration has set strongly during the past twenty years; whereas in the whole of Egypt, the most prosperous Arabic-speaking country, the daily papers do not exceed eleven, six of which are in the hands of Syrian Christians, while two are owned by Copts and three by Mohammedans.

The great fault and drawback of all these publications in Arabic has been, so far, their poverty, and their necessarily economical administration has prevented them from having original sources of information, either by telegraph or post, so that commercially they are of very little value. But no doubt in time this defect will be remedied, and they will be enabled to embrace larger fields of subjects with greater profit to all concerned. *Al-Moustakbel* is the youngest of Arabic journals, but except that it is a "war journal," now treating exclusively of current news and political events as an outcome of the present war, it is certainly one of the best written and best printed Arabic papers of the day.

The King has sent £100 and Queen Mary £50 to Mr. A. Herscovici Hurst, chairman of the National Roumanian Relief Fund, London.

Prince Nicholas of Greece has arrived in London from the Continent.

Captain Paparigopoulos, of the Greek Navy, Aide-de-Camp to Prince Nicholas of Greece, has informed Reuter's Agency that there is no truth in the report that the Prince has come to this country on a political mission. He left Athens in July last for Russia on a round of family visits. He has been staying with his mother, the Queen Dowager of Greece, in Petrograd, and on his return home by the only practicable route is visiting his relations in England.

The Grand Duchess George of Russia, sister of King Constantine, who has been in England for a long time, has arrived in London, together with Prince George of Greece, who has come from Paris. Prince George honoured the Greek Minister and Madame Gennadius by calling at the Legation on Tuesday afternoon and remaining for some time. He also had an interview with Viscount Grey at the Foreign Office.

On Wednesday Prince George visited the King and Queen at Buckingham Palace.

Sir John Ramsden arrived in Egypt recently.

M. Alexis Catargi and Madame Catargi left London for the Roumanian Legation, Paris, last week.

Lieutenant-General Georgesco, the representative of the Roumanian Military Headquarters Staff, who has been visiting London, is at present in Paris.

The Serbian Minister visited Oxford on Sunday to see the Serbian students at Wycliffe Hall, where he was received by Sir Arthur Evans and Mr. Sidney Ball, Chairman of the Oxford Serbian Committee. After lunching with Sir Arthur Evans at Boar's Hill, the Serbian Minister took the opportunity of calling upon the Vice-Chancellor (the Dean of Christ Church) and the other heads of Colleges (Balliol, New, Magdalen, Merton, St. John's, and Jesus) which have admitted Serbian students, and expressed his profound gratification at the arrangements made for the education of Serbian students at the University and in Oxford. His Excellency has now returned to London.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.
Σχολή Γλωσσῶν. Διδασκαλία συστηματική.
Διερμηνεῖς κ.λ.π. Δίδακτρα μέτρια.
Lyceum Institute, 85, New Oxford Street, and 64, Haymarket.

M. C. Miyatovich has gone to Ireland to deliver a series of lectures, and will be the guest of Lady Fairbairn at Shanganagh Grove, Ballybrack.

Mlle. Helen Losanitch, the sister-in-law of the Serbian Minister of Agriculture, and a prominent member of the Serbian American Committee for the relief of the sufferers in Serbia, has left London for Washington.

A son was born to Sir Mark and Lady Sykes at 9, Buckingham Gate, on Sunday.

It is announced that a marriage will shortly take place between Brigadier-General Montagu Grant Wilkinson, C.B., M.V.O., late K.O. Scottish Borderers, and Lina Florence, eldest daughter of the late Captain Lennard E. Dick, R.N., and Mrs. Lennard Dick.

Simultaneously, the engagement is announced between Capt. Charles Gordon Dowding, Punjabis, eldest son of the Rev. W. B. Dowding, Senior Chaplain to the Forces, and Mrs. Dowding, and Violet Helen Grant, only child of Brigadier-General M. Grant Wilkinson, C.B., M.V.O., 3, Priory Mansions, Drayton Gardens, S.W.

General Wilkinson, it will be remembered, served in the Nile Expedition of '84-'85, and with the Sudan Expedition of 1888.

Mr. H. A. Cumberbatch, C.M.G., has removed from Campden Hill Court to 30, Bramham Gardens, S.W.

Captain R. C. Cumberbatch, Rifle Brigade, who was wounded in September, being shot in the arm, will, we are glad to learn, soon be fit for light duty. His brother, Lieutenant Hugh D. Cumberbatch, of the Buffs, has been wounded again, but fortunately not very seriously. He is now in Princess Henry of Battenberg's Hospital, London.

The Misses Rees, who have arrived from Athens, have taken up their residence at 55, Campden Hill Court, Kensington.

Our Cairo Correspondent writes: Mr. James Haines, the newly-appointed Adviser to the Interior, is the son of Mr. William Haines, and was born at Oxford on Jan. 2, 1868. He was educated at Oxford, obtained his B.A. in 1839, and came to Egypt in 1897, in which year he was appointed to an English mastership at the Khedivieh School in Cairo. In 1900 he was transferred to the Ministry of Finance as Inspector. On Jan. 1, 1906, he was appointed Sub-Controller of the Direct Taxes Department, and was promoted Controller of that department in December of the same year. When the Ministry of Agriculture was created in November, 1913, he was appointed Under Secretary of State, and he held that position when he was appointed to the Advisership to the Interior. Mr. Haines has received the 2nd and 3rd Class of the Order of the Medjidieh and the 2nd Class of the Order of the Nile.

In his despatch relating to the operations in Mesopotamia, which was published last Friday, General Sir Percy Lake expresses his indebtedness to Captain the Hon. Aubrey Herbert, M.P., Irish Guards, and Captain T. E. Lawrence, General Staff Intelligence, Egypt. These officers, he says, greatly assisted him in the exchange of sick and wounded prisoners from Kut for an equivalent number of Turkish prisoners.

General Lake also speaks of the "magnificent service in command of the Mejidieh" rendered by Lieutenant-Commander C. H. Cowley, R.N.V.R., throughout the campaign in Mesopotamia. Lieutenant-Commander Cowley, it will be remembered, met his death while taking part in the extremely gallant attempt made by the s.s. Julnar (Lieutenant H. O. B. Firman, R.N.), to run the gauntlet of the Turkish defences and convey stores to the beleaguered garrison at Kut. General Lake writes:—"I trust that the services in this connection of Lieutenant H. O. B. Firman, R.N., and Lieutenant-Commander C. H. Cowley, R.N.V.R., his assistant, both of whom were unfortunately killed, may be recognised by the posthumous grant of some suitable honour." Such an honour would certainly be much appreciated by all the members of the British communities of Baghdad and Busreh, by whom Lieutenant-Commander Cowley was highly esteemed.

King Peter of Serbia has forwarded through the Serbian Minister a subscription to the French 5 per Cent. Loan. At the same time, he expressed a wish that his action should be interpreted as indicating his gratitude for the generosity of the French and his absolute confidence in the successful issue of the war.

Colonel L. O. F. Stack, C.M.G., Civil Secretary, Sudan Government, who had been spending his leave at Alexandria, returned to the Sudan on the 2nd inst.

Second Lieutenant E. C. Masterson, Lancashire Fusiliers, who is in hospital suffering from a bad fracture of the right arm and slight injury to the right ankle, is an Old Mancunian, who came to the school from Roumania. He went through the Gallipoli campaign unscathed, and was then drafted to Egypt, after which he was sent to another front.

The inaugural meeting of the Serbian Society of Great Britain will be held at the Mansion House next Friday afternoon at 3 o'clock. Earl Cromer, Sir Edward Carson, and other speakers will address the meeting.

On Tuesday, October 24, in connection with the tenth anniversay of the Anglican and Eastern (Churches) Association, there will be a solemn celebration of the Holy Eucharist at St. Augustine, Queen's Gate, at 11 a.m. The Rev. Fr. Nicolai Velimirovitch, D.D., of Belgrade, will be the preacher, and the Processional Litany will be sung to the traditional melodies of the Serbian Liturgy.

On the same date, at 7.30 p.m., there will be a public meeting in the Great Hall of the Church House, Westminster. The Bishop for North and Central Europe will preside, and will deliver an address on "Russia's Growing Desire for Unity," and the Rev. A. C. Headlam, D.D., will speak on "The Churches of Palestine and Their Future."

The erection of a town memorial to Lord Kitchener, the first and only freeman of the borough, was discussed at a public meeting at Chatham on Monday, and it was decided that homes for disabled soldiers and sailors should be erected.

In connection with the Montenegrin Red Cross and Relief Fund a Central Office has now been opened at 11, Victoria Street, Westminster. The Fund has been registered in the City of London, under Section I., War Charities Act, 1916. Donations continue to be received by Lady Roper Parkington at 58, Green Street, Park Lane, W.

Mr. Oliver Bainbridge has been requested by the Birmingham Lecture Society to deliver the inaugural lecture of the session at the Town Hall on Sunday evening, October 22. "Roumania and the War" is the lecture which has been selected for the occasion.

APPOINTMENTS, PROMOTIONS, ETC.

Official decrees have been published in Cairo nominating Sir William Brunyate Judicial Adviser, Mr. Haines Adviser to the Egyptian Ministry of the Interior, Mr. Langley Under-Secretary of Agriculture, and Mr. Anthony Director-General of State Domains.

The Egyptian Council of Ministers has appointed Lewa Blunt Pasha, member of the Commission of Supplies, President of the Commission.

The President of the Egyptian Council of Ministers has confirmed the nomination of Mr. A. S. Merton, of the Ministry of Agriculture, to the post of Secretary to the Commission of Supplies, the appointment dating from September 1, 1914, when he took up these duties.

Kaimakam F.R.L. Edwards Bey, Deputy Assistant Adjutant General and Aide-de-

Digitized by Google

Camp to the Sirdar, has been appointed Assistant Adjutant General, Egyptian Army. He is succeeded by Bimbashi A.H. Pattison, the Officer Commanding the Military School at Khartoum, who in turn has been succeeded by Bimbashi F. H. Blackwood, of the 13th Sudanese.

Our Cyprus Correspondent writes:—Mr. Thorne, President of the District Court of Larnaca, has accepted an appointment in Egypt. His departure will be much regretted.

M. Gustave Boissier has been appointed Chargé d'Affaires of the Swiss Legation in Roumania, and has left for Bucharest.

Kaimakam Spinks Bey, Second in Command of Artillery, Egyptian Army, has been promoted Officer Commanding Artillery and Director of Ordnance in succession to Lewa C.E. Palmer Pasha, and has been granted the temporary rank of Miralai.

Kaimakam S. E. H. Giles Bey, Staff Officer Transport; and Kaimakam Darwall Bey, Officer Commanding 14th Sudanese, have been granted three months' leave each, on medical grounds, expiring on November 22.

Temporary Miralai M.H. Logan Bey, Officer Commanding Sobat District, has been appointed Acting General Staff Officer and Adjutant General in succession to Lewa W.H. Drake Pasha, C.M.G., who has reverted to the British Army.

Kaimakam F. J. M. Postlethwaite Bey, Inspector of Kassala Province, Sudan Government, has been struck off the strength of the Egyptian Army on reversion to the British Army.

OBITUARY.

M. NIKOLA FILIPESCU.

On October 13 Reuter's Bucharest correspondent telegraphed:—M. Filipescu, Senator, ex-Minister of War, and leader of the Unionist Federation, who has played in Roumania an important political part favourable to the Entente, died at 11.30 this morning, after a long and painful illness.

M. Nikola Filipescu, who was a descendant of one of the old *boyar* families, had long occupied a prominent position in the Roumanian political world, and his name will always be honoured by Englishmen as that of one of the most ardent and consistent advocates of Roumanian action upon the side of the Allies in the present war.

As a young man he studied law in Paris, and on returning to his own country soon entered the political field and was elected Deputy. In 1900 he was Minister of Agriculture and Domains, and in 1911 he became Minister of War in the Carp Cabinet, and held that office some eighteen months. During that period he did excellent work in connection with the reorganization of the army and in obtaining from Parliament the funds necessary for its accomplishment. That work finished, he retired from the Ministry of War, and took up again the portfolio of Agriculture, which he retained until 1913.

On the outbreak of the war, the Conservative party became split up, and M. Marghiloman, who had been its leader, became extremely unpopular with the majority of the party, by reason of his markedly pro-German sympathies. As a result, M. Jean Lahovary was chosen as head of the party, and on his death last year M. Filipescu was chosen as his successor. As recorded in THE NEAR EAST at the time, the party eventually joined forces with the Conservative-Democrats, whose leader is M. Take Jonescu, and last June the fusion of the two parties was announced by M. Filipescu to be an accomplished fact.

Early in the present year M. Filipescu visited Petrograd, where he was received in special audience by the Tsar, and on his return to Roumania he renewed his activities on behalf of the cause he had so closely at heart. Convinced that the Allies were fighting for a righteous cause, and sure of their ultimate victory, he also ardently desired the creation of that Greater Roumania for which his countrymen have so long waited and for which they are to-day fighting so gallantly. He has not been spared to see the fulfilment of his hopes, but his work has borne good fruit already; and though Roumania is passing through a somewhat gloomy period just now, it may confidently feel that brighter days are not far distant. When they come, M. Filipescu's work, carried on amidst considerable difficulties, and at times in the teeth of bitter opposition, will not be forgotten by his countrymen.

The death is announced as having taken place while on active service with the Scottish Women's Hospital Unit in Serbia, of Miss Olive Smith, of Glasgow. Miss Smith, who was the youngest daughter of Mr. Robert Smith, of Haltwhistle, Northumberland, was formerly head teacher of the Physical Training Department of Glasgow Provincial Centre for Teachers. Before going to Serbia she had served on the staff of a military hospital at Malta.

Second-Lieutenant Joseph Reginald Mark Lawrence, East Surrey Regiment, who fell on August 16, aged 21, was the youngest son of the late Rev. Thomas Ranger Lawrence, and of Mrs. Lawrence Dawson, Lady Superintendent of the Sailors and Soldiers' Institute, Alexandria, Egypt. Born at Alexandria, he was educated at Haileybury and Pembroke College, Cambridge, leaving there in November, 1914, to join the Public Schools Brigade. He obtained his commission in the East Surrey Regiment in May, 1915, and went to the front last March.

Referring to the death of Second Lieutenant Charles Justin Buch, which, as already reported in this column, took place on September 13, a correspondent writes:—"After a residence of eight years in Paris, he came home in the summer of 1915 to join the Army, and in August of that year was gazetted Second Lieutenant in the Bedfordshire Regiment. He went to the front in May, 1916, and in an attack on a German trench on September 13 was shot in the head, death having been instantaneous. His Colonel, when announcing the sad event, wrote: 'He was a splendid officer, and is a very great loss to the battalion. Of course I had not known him very long, but he was one of those people who succeed in obtaining the affection and respect of all with whom he came in contact.' The Egyptian Minister of Education also sent a sympathetic letter, in which he wrote: 'I desire to express to you our high appreciation of the character and worth of your son, and of the services he has rendered to the cause of education in Egypt since he became an assistant master in the secondary schools under this Department in 1907.'"

It is announced that Lieutenant Ronald William M'Kinstry, Royal Field Artillery, was killed in action on September 23. He was the youngest son of the late Colonel A. W. M'Kinstry, Leicestershire Regiment, and Mrs. M'Kinstry, Balerno, Midlothian, and was in his twenty-fourth year. He held the rank of captain in the Egyptian Coastguard Service, and was home on sick leave when war broke out. He applied at once to the War Office and obtained a commission in the Royal Field Artillery. He went to France in 1915, was invalided home, and after some months in hospital returned to the front. He took part in the recent great advance, and met his end by shell-fire while endeavouring to rescue the battery horses.

The death is announced in Alexandria of Dietrich Bey, former chief engineer of the Alexandria Municipality, who died at the age of seventy years.

DOMESTIC ANNOUNCEMENTS

BIRTH.

THOMAS.—On October 15, at "Glack," Boscombe, Hants, to the wife of L. Irving Thomas—a daughter.

MARRIAGE.

LAKE—NICHOLS.—On October 12, at Westbury Church, Westbury-on-Trym, by the Rev. J. C. Godwin, William Henry Lake, of Khartoum, son of the late George Henry Lake, of London, to Ethel Mary, eldest daughter of the late Hugh Nichols, of Bristol.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.),
Alexandria.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
Glymenopoulo, Ramleh.
This Hotel is situated near the Beach.
Open all the Year. Bathing Cabins.
Terms from:
Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

PROGRESS IN PERSIA.

A year ago the situation in Persia was frankly disquieting. German and Austrian agents were at large throughout the country, bribing officials and stirring up the tribesmen against Russia and Great Britain. A series of outrages on British subjects had been committed, culminating in the action of the Swedish-trained gendarmerie in surrounding the Consulate at Shiraz and taking prisoners his Majesty's Consul and the other members of the British community. The details of that incident, which have not been told in their entirety before, are given on another page. They make interesting reading, and will serve to clear up certain misunderstandings which arose at the time from a failure to appreciate the actual conditions obtaining in Persia. The Shiraz prisoners have been released for some time now, ostensibly in virtue of an exchange for Persian insurgents who had fallen into British hands; but in part as a result of the growing conviction among the Persian tribesmen that they had placed themselves in a false position through being misled by German intrigues. This change in their attitude has been brought about by more vigorous action on the part of the protecting Powers, heralded, it will be remembered, by a Russian proclamation announcing the intention of Russia and Great Britain to put an end to their enemies' activities and reminding Persia that friendly relations could be maintained with her, only if the Teheran authorities made a real effort to prevent Russian and British subjects from being exposed to such outrages as had taken place. Then followed the Russian military operations which extended to Ispahan in one direction and to Kermanshah and Khanikin in the other. In the face of a Turkish offensive the Russian troops who had reached the Persian frontier beyond Kermanshah were compelled to fall back, and the Turks were able to overrun a considerable tract of country in Western Persia, including Hamadan. This temporary set-back, however, has had little or no effect on the general situation in Persia. Turco-German intrigues received a sudden stimulus from the occupation of Bushire by British troops, when an unfortunate mistake in connection with the Persian flag provided an opportunity for misrepresenting the action of the Allies. They have now finally, we may hope, been given their quietus, and fluctuations in the fighting in Western Persia ought not to be able to revive them.

Apart from the landing at Bushire of troops, who were subsequently withdrawn, the British Government has undertaken no military operations in Persia. General Sir Percy Sykes has been appointed, in agreement with the Teheran Government, to organize a new gendarmerie, and is supported by an adequate force to secure order in the districts where its members are being recruited and trained. But no steps have been taken to visit on the tribesmen in Southern Persia the penalties they have incurred by the outrages committed on British subjects. For a long time neither the Home nor the India Government was in a position to undertake this task. It is, therefore, a question now whether the rehabilitation of British prestige in these parts requires something in the nature of a punitive expedition against the tribes who have been guilty of hostile acts in the past and have still to be regarded as unfriendly. Only full knowledge of local conditions can decide the point. But apart from military considerations, which, it would be thought, must be against fresh commitments of an indefinite nature in this part of the world, it is at least open to argument whether Great Britain would not be making a political mistake by driving any large section of the population at this stage into permanent hostility. Swift retribution after the commission of the outrages was, no doubt, desirable. It could not be inflicted, and in the interval the culprits have had occasion to take stock of the situation. They are naturally lawless, and require little encouragement to indulge their passion for brigandage. The arrival of German agents with money, rifles, and promises impressed them momentarily with exaggerated ideas of Germany's might, and they readily made common cause against her enemies. After the lapse of a few months they were compelled to revise their estimate of the Germans. The supply of everything except the promises was probably exhausted, and they saw the people whom they had regarded as so powerful cut off from the outside world and virtually prisoners in Persia. A number of these Turco-German agents had already been captured; the remainder hardly dared to venture beyond the jurisdiction of the tribe or chief in whose hands they had placed themselves. The Persians are under no illusion, as far as their country is concerned, regarding the relative strength of the Turco-German combination and the protecting Powers, and if wisely handled should fall into line with the new order without much difficulty.

In spite of Great Britain's preoccupations elsewhere the Persian problem cannot be ignored at the present time. The new arrangement arrived at between the Russian and British Governments, in agreement with the Persian Government, calls for a far more definite policy in Southern Persia than has been adopted hitherto. Sir Percy Sykes's mission is a necessary preliminary, but the formation of an efficient gendarmerie will not fulfil all Great Britain's responsibilities in this sphere. British interests in the past, it is to be feared, in the same way as the Mesopotamian campaign, have suffered from a system of divided control, with the consequent evils of overlapping, hiatuses, and the absence of any consistent driving force. There was much in the old Russian régime, as administered by Russia's representatives on the spot, which was as completely out of harmony with British principles as with the professed intentions of the Tsar's Government. But Great Britain's close association with Russia made her equally responsible in the eyes of the Persians, and she had no alternative régime in the south to point to as an example of her own intentions in regard to Persia. The new order to be established after the war, and possibly to be gradually introduced during its progress, will provide, we may hope, a concrete policy for the better government of the country. To what extent Persian co-operation can be secured at once or must be a goal for the attainment of which a period of training is required is a subject that does not need to be dealt with here. The first desideratum would seem to be a definite scheme for promoting the welfare of Southern Persia. Such a scheme should then be entrusted to one authority to carry out, and this authority, it would be expected in present circumstances, would be the Foreign Office. Indian interests will clearly be involved and must be safeguarded. We do not, however, subscribe to the theory that the interests of any one portion of the Empire or department of State must needs be prejudiced by being transferred to the jurisdiction of another portion or department. If they should be so prejudiced, the sooner the ways of the administration or department concerned are mended or ended the better. But Imperial interests may well suffer when they are made the shuttlecock between two administrations. They have undoubtedly suffered in Persia from this cause in the past, and advantage ought to be taken of the present readjustment of things in the country to remove the anomaly.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

THE RUSSIAN ADVANCE IN THE CAUCASUS AND THE TURKISH COUNTER-STROKE.

(From a Correspondent.)

Since the sudden and dramatic fall of Erzeroum there have been no events in the Russian campaign in the Caucasus of sufficient importance to sustain the interest of a public absorbed in watching the momentous struggles on the European fields of war—the tremendous attack on Verdun, the discomfiture of the Austrian dash on Northern Italy, and the brilliant drive of the Russian Southern Armies. In comparison with these the operations in the remote plateaus of Armenia have been of secondary importance, and we have to cast our minds a long way back to realize the interest with which we heard in January last of the blow that had fallen on the Turks. At the time the Allies badly required a victory. The Central Powers, after bringing their great effort against Russia to a victorious, but not to a decisive issue, had turned their arms south, had overrun Serbia, and completed the humiliation of Montenegro. The long agony of Gallipoli, with its brilliant examples of almost incredible heroism, had ended in admitted failure, and the news of the evacuation of the Peninsula without loss had been hailed almost as a victory. In Mesopotamia our troops, after a success which seemed to herald a decisive victory, had been obliged to fall back. On the Western front there was no hope of an early advance; on the Eastern a Russian offensive, after some preliminary success, had been brought to a standstill. The Russian advance in Armenia thus brought the first feeling of genuine success that we had for long enjoyed, and to us in this country it was doubly welcome from a vague expectation that it would in some way relieve the pressure on the beleaguered garrison at Kut. We had also the pleasure of welcoming an old friend in the emergence after a long silence of the Grand Duke, whose name had been familiar to us throughout all the fluctuations of fortune which our Ally had experienced in the first period of the war.

Of the preparations which the Grand Duke was making on the far side of the mountain barrier that formed the Russian frontier no whisper had been allowed to reach us. Information was published from time to time of movements away to the south in Persia, which brought the Russians nearer to the region on which our eyes were fixed in Mesopotamia; but of an advance in Armenia there was no sign, and no expectation, as the region was one in which, by general agreement, military operations were well-nigh impossible at that season of the year. It is probable, indeed, that the Grand Duke accelerated his advance, owing to the setting free of the Turkish forces that had been immobilised while we held the Dardanelles. The evacuation of the Peninsula was completed on January 9, and ten days later came the news that the Russians had crossed the Turkish border on a front of 70 miles. So well and so secretly had the Grand Duke's plans been laid that in less than a month the fortress of Erzeroum, which in the last war, half a century before, had defied the efforts of the Russians, was in their hands. It is from this point that the campaign has been difficult to follow, and that progress has seemed by comparison to be slow. The *communiqués* are vague; the places they mention are unfamiliar and often untraceable; the popular commentators on the war have made little or no attempt to furnish enlightenment. Moreover, the contradictions between the reports of our ally and of our enemy make it peculiarly difficult to ascertain the truth. But the Russian advance may yet have an important effect on the war in the West, and it is worth while attempting to understand the geographical conditions that affect it as it rolls slowly westward, if only to follow more intelligently the *communiqués* of our Allies.

As the accompanying sketch map shows, the main line of the Russian advance from Erzeroum lay nearly due west along the valley of one of the branches of the Euphrates, which is generally referred to in the *communiqués* as the Euphrates, but which will here be dis-

Digitized by Google

tinguished as the Phrat—the name by which it is known in the maps. In this direction the strongest forces of the Turks might be expected, and in this direction lay the principal interests of Russia in the campaign. But it was necessary also to safeguard Erzeroum and its long line of communications from attack from the south, from the direction of Lake Van and of the head waters of another branch of the Euphrates, which in the *communiqués* is generally—but not always—distinguished as the Eastern Euphrates, and which will here be called the Murad. The danger of attack from this direction was not serious in February, but it would inevitably become more threatening as the season advanced, and prompt arrangements to forestall it would have the additional advantage of alarming the enemy for the safety of his communications with Baghdad, and thus perhaps of relieving the pressure both on the English forces in the Tigris Valley and on the Russian main advance in the north. The operations then may be considered in the first instance under two main heads:—

(1) Those in and to the north of the valley of the Phrat.

(2) Those in the country of Lake Van and the upper reaches of the Murad.

(1) The valley of the Phrat is separated from that of the Murad by a range of almost impassable mountains that extend from the 41st to the 39th parallel of east longitude—from the south of Erzeroum to a point further west than Erzinjan. Except perhaps in the immediate neighbourhood of Erzeroum, these effectually guard a force moving west from that place from any serious attack from the south. Once Erzeroum was passed, the left flank of the advance would thus be sufficiently protected, especially in winter. On the north, however, it was otherwise. On this side lay the old Roman province of Pontus, formed of ridge after ridge of mountains running generally from south to north, from the valley of the Phrat (and further west of the Kelkid) down to the Black Sea. The wild and varied beauty of these ranges, passing through all gradations of climate and vegetation from ice-bound peaks above to a moist sub-tropical belt near the sea, has aroused the enthusiasm of travellers; but the country is thinly peopled except in the towns on the coast, and the mountain ridges interrupt communication from east to west in the interior. From the seaports, marked on the sketch, roads of a kind lead south to the Armenian plateau, but from Samsoun eastward there is no reasonably good road to the interior until Trebizond is reached. It would be a strong thing to say of any road in Asiatic Turkey that it is good and maintained in good repair; but Trebizond is the port of Erzeroum, and the highway connecting the two places was carefully and skilfully constructed, and is still looked after with an attention that the Turks are not in the habit of bestowing on their communications. For this attention there are good reasons; for the road is not only a main artery of commerce by which Turkish trade can reach the north of Persia without passing through Russian Custom houses and over Russian railways; it is also a strategic route by which supplies and reinforcements can reach the garrisons of Erzeroum and Erzinjan more quickly than by road from the railheads in the west, provided always that the command of the sea is not interfered with. After the fall of Erzeroum the Russians in pursuit of the Turks cleared the country to the west, where the roads to Trebizond and Erzinjan follow the same route for some thirty miles. This done, they turned their attention to Trebizond itself, and, taking advantage of their command of the sea, landed a force on the coast to the east of the town, which fell to a combined military and naval attack in the middle of April. The two ends of the highway were now in Russian hands, but the road itself is circuitous, bending well to the west of Trebizond, and its intervening stretches, with the towns of Baiburt and Gumushkhaneh, were still in the possession of the Turks, and could be reinforced from Erzinjan by roads that were at the time outside the Russian sphere of operations. By this time the Turks had been able to push up additional troops to Armenia, and appear to have been in great force there. At a later date it was estimated that they had as many as fifteen divisions about Erzinjan and in the country extending from it to the Trebizond road. There was much fighting, with fluctuating results; and the Russian advance was checked both along the road to Trebizond and at Mamakhatun, half-way to Erzinjan. This was in May. Two months later, however, they made a rapid and successful advance along their whole front. In July they routed the Turks at Baiburt, and pressing on rapidly, were able to announce the capture of Gumushkhaneh on the 21st of that month. The left wing of the advance was equally successful, and on the 26th gained possession of Erzinjan. With justifiable exultation the Russians announced this capture as "completing the conquest of Armenia." Erzinjan was, in fact, a place of great military importance to the Turks. It, and not Erzeroum, was the headquarters of the Turkish troops in the north-eastern part of their Empire, being chosen probably for the purpose as lying further from the frontier than the fortress. A glance at the map will show that with Erzinjan and the Trebizond Chaussée firmly in their hands the Russians are secure from any serious menace to their right flank for a long distance to the west. The left flank of an advance is also sheltered from serious attack for a considerable distance by the almost impassable hills that overlook from the south the valley of the Phrat. When the time comes the advance on Sivas, rather less than 150 miles due west, where the climate in winter is much less rigorous than on the high plateaus to which the operations have hitherto been confined, can be undertaken under much less hazardous and arduous conditions than our ally encountered in the opening of the campaign. For the present there are no definite signs of an early advance, but the attacks of which we read on various points along the Black Sea coast are undoubtedly meant to prepare the way for it. Nor do the Turks appear to have made any formidable attempt to drive the Russians from the positions occupied. We still hear of severe fighting west of Gumushkhaneh, but the accounts which we receive indicate that these are due rather to Russian than to Turkish initiative. The Turkish strategy appears here to have been defensive, however aggressive their tactics may have been locally. Their real counterstroke was not delivered on the Erzinjan front, but was directed with great ability at the Russian communications near Erzeroum and further east and south. It belongs, however, to the second sphere of operations to which we may now turn.

(To be continued.)

A recent number of *Le Figaro* contains an article from the pen of Victor Eftimui, a Roumanian poet, now on a visit to Paris. M. Eftimui's article is highly interesting and instructive, the more so because of the frankness with which he writes of his people. We take the following passages from it:—

The undeniable resistance of the Latin peoples, he says, is manifested very strongly among the Roumans. Far removed from the common cradle, isolated among the Slavs who surround them, oppressed by Magyars, Turks, and Phanariotes, and abandoned by Rome because of their religion, they have shown through the centuries an admirable and astonishing Latin tenacity. The Rouman, in spite of all he has suffered, loves brightness, laughter, and song. He is quickly inflamed with enthusiasm. He sings or weeps with all his heart. He is a poet and wit, with marvellous spontaneity. He is good-natured, hospitable, and without rancour, easily forgetting an injury. He has all the good qualities and all the faults of the Latins; has them, indeed, in a higher degree than any other Latin race. One thing in which his Latinity assists him is in finding admirably logical reasons for not having done as he should. He is uncommonly good at explaining why he has not accomplished the work that he ought to have done. He has a charming explanation. He loves the sun, and the sun does not favour work; therefore the Rouman, child of the sun, does not love work any more than his brother, the Neapolitan *lazzarone*. Popular irony puts a by-word in the mouth of him who is forced to seek employment: "I go in search of a master, may Providence ordain that I shall not find one."

But the peasant works, and also his wife. At thirty her beauty fades. She is already old. Her features are withered by the sun, and have borrowed from the earth its colour and ruggedness. Frequent maternity and the hard work of the fields spoil her supple figure. She is a very good mother. The child is sacred. She has four, five, six—ten; "God has sent them," she says, "and He will take charge of their existence." In her poverty she is proud. Some years ago, on the Sinaia road, a great lady's motor-car killed the child of a poor woman. The great lady sought and found the unfortunate mother, and offered her some thousands of francs as consolation. Very dignified in her sorrow, with eyes dry and head erect, the peasant woman replied: "Madam, keep your money. I do not sell the soul of my child."

THE PRESS ON THE NEAR EAST.

Roumania and her Allies.

In a leading article, headed "The King of Roumania's Message," *The Times* refers to the hope expressed by King Ferdinand that Roumania should not meet the fate either of Belgium or of Serbia. "The King," it goes on to say—and every Englishman will say the same—"and his brave soldiers may rest assured that in spite of engrossing preoccupations in the west and on other fronts there is no subject more constantly in the thoughts of the British nation at this juncture than the position of Roumania."

From the moment that Roumania drew the sword the movements of her gallant Armies have been followed with the closest attention and admiration in this country. We rejoiced with her when her troops swept into Transylvania, the land upon which her hopes are centred; we sympathised with her when they encountered temporary reverses, and throughout the vicissitudes of the opening weeks of her campaign the British people has reposed unabated confidence in the prowess and the heroism of the Roumanian Army. We believed, and continue to believe, that the sons of the heroes who won immortal glory upon the blood-stained slopes of the Grivitza Redoubt at Plevna would face reverses with fortitude, and would speedily restore the balance. We regarded the fluctuations of the first stages of the Roumanian operations with calmness, because we knew by painful experience that the Roumanian Army was only undergoing that period of fiery trial which has been the common lot of every belligerent on beginning hostilities. Each nation has had the same experience, and has profited by it. . . . The message of the Allies to Roumania is that her cause is now the cause of us all, that succour is at hand, and that while the nations watch her stubborn resistance with sympathy and understanding the General Staffs of the Allies are rapidly taking steps which will relieve her apprehension. . . . Meanwhile we welcome the clear and stirring exposition of Roumania's motives and policy furnished by King Ferdinand. His message shows to the world that, as his people now fully realise, he is a Roumanian first, and his words breathe the purest spirit of Roumanian patriotism. To King and nation alike we would say in reply that their unfaltering allegiance to the Allied cause is regarded in every Allied country with the deepest gratitude, and we would repeat that Roumanian necessities are receiving earnest and strenuous attention, and that the arms and the resources of the Allies will be so directed as to give Roumania the utmost possible support in her hour of need.

Transylvania or Bulgaria?

The *New Statesman* (October 14), in a note upon Roumania's withdrawal from Transylvania, remarks that her "present plight—which seems to be serious without being anywhere or in any sense desperate—is apparently the outcome of her having ignored the wisdom of the military pundits and allowed political to outweigh military considerations":—

The enthusiasm purchasable by a rapid advance into Transylvania has been dearly bought at the expense of an even more rapid subsequent retreat. . . . M. Take Jonescu, the most prominent of the interventionist leaders in Roumania, has recently expressed to a Russian paper his conviction of the supreme importance of the Balkans and the urgent necessity of concentrating all available forces against Bulgaria, "not isolated small bodies of troops, but a whole army, strong in numbers and artillery, that would cut the connection between Vienna and Constantinople." In this view, M. Jonescu certainly has Western opinion on his side, but unfortunately Roumania did not act upon it. How far that was the fault of her own statesmen, or, on the other hand, was due to Russian representations that an attack pressed northwards would quickly complete the downfall of Austria, is one of those problems which are not likely to be solved until after the war.

Falkenhayn's Strength.

There is some uncertainty regarding the strength of the forces that General von Falkenhayn has at his disposal, and the subject has occupied the attention of several writers. Upon the whole it seems probable that these forces are not so large as the Germans would like to have it believed. The *Morning Post's* military correspondent writes (October 13):—

It is naturally part of the German scheme to exaggerate the results achieved by magnifying rearguard actions into battles; but if Falkenhayn had been as strong as he would like to have it supposed it seems unlikely that he would have spent so much time in preliminary manœuvres before developing an attack on the Vulcan and Rothethurm passes, which, if successful, would have brought about the withdrawal of the Roumanian Second and Northern armies from their advanced positions in order to concentrate for home defence. Falkenhayn's strength is, no doubt, increasing, but the number of his reinforcements will be governed by the activities of the Allies in other theatres of war.

And the *Nation* (October 14) takes a hopeful view of the situation:—

It is impossible to say whether von Falkenhayn is using only a small force and making it perform the operations of a large army by manœuvring it along the lateral railway north of the frontier, or if he actually has the considerable body of troops required for an invasion of Roumania. So far, everything is consistent with the former assumption; but this gambling warfare will avail little when it is met by a really competent general like Averescu. The invasion may not mature. The Germans seem to be acting very cautiously, and the situation elsewhere is not encouraging.

General Lake's Despatch.

Last Friday *The Times* devoted a leading article to a discussion of "The Kut Despatch." The writer remarks that the publication of Sir Percy Lake's despatch "will serve to remind the public that we still have a very large army in Mesopotamia," an army which, it is to be feared, "has undergone severe trials"; and he refers to "the cloud which—rightly or wrongly—has dimmed the reputation of so many generals on the Tigris." As the Mesopotamian Commission is still sitting, it is not, says *The Times*, easy to discuss with complete frankness Sir Percy Lake's despatch.

It must be conceded that it tells more than most of the despatches which have been issued during the war, and yet it leaves a great deal unsaid. No doubt the Commission will throw light upon its omissions.

The story of the failure to eject the Turks from the Umm el-Hannah defile during the operations between January 19 and 23 is described as a pitiable one.

The troops were gallant enough, but their task was impossible. They had to advance across boggy ground entirely destitute of cover, and they were mown down without ever reaching the enemy's trenches. Supports failed to reach the devoted Scottish and Indian infantry which made the first assault, and the Expedition was eventually very definitely repulsed. It was discovered meanwhile that the enemy had constructed four other strong positions on the left bank between Hannah and Kut.

As to the great attack on the Es Sinn position, we read:—

The essence of the scheme was to be surprise. Had it succeeded, there can be no reasonable doubt that Kut would have been relieved the same day, and the whole of the Turkish positions on the left bank would have been turned. General Aylmer was in command, and the two attacking columns were commanded by Generals Kemball and Keary. Sir Percy Lake says that General Aylmer instructed his subordinates that the capture of the great Dujailah Redoubt, the centre of the Es Sinn position, "should be pushed through with the utmost vigour." His words must have fallen on some deaf ears. The main attack was to be made by General Kemball from the south, with General Keary attacking in support from the east. General Keary was in position at daybreak, General Kemball was an hour late. Even then the defences might have been pierced and Kut saved, for, in spite of the lateness of General Kemball's column, the Turkish positions were hardly manned at all. . . . Incredible though it may seem—and the story of Es Sinn is one of the most incredible episodes of the war—three precious hours were wasted. Our troops were compelled to lie for nearly three hours before an almost empty redoubt, and watch the Turks swarming back into it. Sir Percy Lake says time was lost "by waiting for the guns to register and to carry out reconnaissances." We record his statement, and await the further report of the Commission, because it is now very widely known that these points do not tell the whole story. Someone was to blame, and the public have a right to expect that the blame for a series of blunders which gravely compromised our prestige in the Middle East shall be properly apportioned.

The article concludes:—"When every allowance is made for the extraordinary difficulties which confronted the expedition, the story of the first three months of the present year on the Tigris sheds no lustre upon British generalship."

Hungary's Fears—and Hopes.

Last Friday the *Morning Post* published two most interesting letters from its Budapest correspondent. Writing on October 3, he says:—

It seems evident that the depression the invasion of Transylvania caused in Hungary threatened the Army Command with a grave crisis among the Hungarian troops elsewhere, and that they thought that by averting this crisis and by aiming a desperate blow at Roumania they would achieve a double purpose—that of regaining the confidence of the Hungarian portion of the army and of striking terror into the hearts of the Roumanians. The mere fact that their two most able Generals, Falkenhayn

Digitized by Google

and Mackensen, have been sent to the Roumanian front points to a punitive expedition against Roumania, to say nothing of the perhaps even more significant fact that purely German and Hungarian units, the best fighting men of the Central Powers, have been concentrated in Transylvania. The Honveds have been specially selected for the purpose, they being the most distinguished regiments, who have been through the thick of fighting on the many fronts within the frontiers of the Monarchy.

The aim of this "punitive expedition" is no doubt the invasion of Roumania from the north and then from the west. The initial successes of the German-Hungarian forces have made a great impression in Hungary, and the sighs of relief are to be heard in the comments on the operations in Transylvania. The battles which are now raging around Nagy Szeben are expected to decide the issue on this sector also, and great hopes are entertained in this regard, although every newspaper report speaks of the stubbornness of the Roumanian attacks and the stout fighting qualities of the Roumanian soldier.

The following day he adds:—

A report in the evening papers to-day speaks of Austro-Hungarian and Bavarian troops having crossed the Roumanian frontier near the Vulkan Pass and entering Roumanian territory for five miles along the mountain ridges. This report has caused greater joy than anything the war ever produced in the way of successes. . . . The heart of the whole nation has been set on "punishing" Roumania, and nothing seems to be too great a price in order to achieve this aim. The hero of Hungary to-day is Falkenhayn, who is to free the country from the invaders and restore Transylvania to Hungary.

The Allies in the Balkans.

The *Independent* (New York), reviewing the events of the week in its issue of October 2, says:—

The Entente Allies are painfully conscious of the advantage the Central Powers won in overrunning Serbia and occupying northern Greece. Every week of time is precious to the Allied Powers, for winter will soon check active operations in the Balkan mountains, as it will on all other battle lines in mountainous or northerly regions, and it may well be winter before the huge composite armies gathered at Salonika have advanced far enough into Bulgaria to threaten the railroads which connect Austria-Hungary with the Ottoman Empire. At present the line of battle, which one might term the "war frontier," follows the Struma river, turns westwardly through Grecian Macedonia as far as Doiran, then follows the Grecian frontier rather closely as far as Albania. The two nations, Greece and Albania, which furnish the principal battlegrounds for the contending national groups, are nominally neutral, but their neutrality is purely formal and official. Individual units of the Greek Army, and to an even greater extent the undisciplined tribesmen of Albania, take whatever side in the fighting their sympathies or their views of national interest incline them to favour.

Articles to Note.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

British Prisoners in Turkey and Bulgaria. Oct. 12.

Mr. HOPE, replying to Mr. MALCOLM, said: British prisoners taken by the Turks in Mesopotamia are detained at the following places:—Afion Kara Hissar, Brusa, Castamouni, Mosul, Yuzgat, Baghdad, Constantinople, Angora, Ras-el-Ain, Adana, Bozanti, Enzeli, Eski Shehir, and Konia. We have also reason to believe that there are British prisoners at Amanus, Aleppo, and Islahia, but complete information as to the whereabouts of all British prisoners captured in Mesopotamia has not yet been received. The United States Embassy were requested on September 18 to ask the United States Embassy at Constantinople by telegraph to press the Turkish Government to supply the full list of the British prisoners of war in Turkey at the earliest possible date. This has not yet been received.

Mr. FORSTER informed Mr. MALCOLM that 537 British officers and 11,641 of other ranks are now estimated to be prisoners in the hands of the Turks. Four hundred and thirty-nine Turkish officers and 9,751 of other ranks have been captured by British forces. Negotiations are in progress for the exchange of those who are incapacitated for further service.

Mr. HOPE, replying to another question put by Mr. MALCOLM, said: A considerable amount of clothing has been supplied to the British prisoners in Bulgaria from various sources, and more is being sent in parcels, which are found to arrive with regularity. An agreement has been arrived at with the Bulgarian Government for the exchange of incapacitated prisoners of war.

Payments to King Constantine.

Mr. GILBERT asked the Under-Secretary for Foreign Affairs whether Great Britain, in conjunction with France and Russia, paid any annual allowance to the King of Greece; if so, what was the amount; and whether, in view of his recent actions, any steps had been taken to discontinue such payments by our Allies and us.

Lord R. CECIL: The answer to the first part of the question is in the negative. The remainder, therefore, does not arise.

The Salonika Expedition.

Mr. DILLON said that for many months past the most sinister rumours had been in circulation as to the Salonika expedition. It had been constantly stated that the British War Office, and certainly the General Staff, had looked all along with an evil eye on the expedition, and had done everything in their power to discourage it. In *The Times* of that day there appeared a most moving and important letter from a Roumanian professor, who made a strong appeal to the people of this country to realise in time how vital was the question of the fate of Roumania. It would be very useful if the Secretary of State for War could say something to convey to the people of Roumania the conviction that this country would strain every nerve to come to their assistance by a strong offensive in Macedonia. It would be an unparalleled disaster were Germany allowed to overrun Roumania. Rumours had been in circulation for a long time that a struggle had been going on behind the scenes between the General Staff in England and certain other influences as to whether the Salonika expedition should be starved and ultimately abandoned. For his part, he believed that the war would be decided in the Balkans, and that if we allowed Roumania to be overrun, success might be denied to us.

Mr. LLOYD GEORGE: I am afraid I could not possibly answer the hon. member without entering upon subjects which are extremely perilous in their nature. But the Government are fully alive to the necessity of giving every support in their power to the gallant armies of Roumania in the very vicious attack which has been made upon her. We have not the least doubt that Germany is concentrating her strength in the hope of crushing her. She is doing it not merely from the point of view of her own interests, but in a spirit of resentment and vengeance because these brave people have dared to challenge her power so near to her own home. The Allied countries are fully alive to that, and my hon. friend may depend upon it that every effort will be made by this country and by others to protect the Roumanian Army against an effort of that kind.

The Allies and Greece. Oct. 17.

Mr. R. M'NEILL asked the Under Secretary for Foreign Affairs, in view of the fact that events have vindicated Sir E. Carson's foresight, as expressed in his letter to the Prime Minister of October 12, 1915, with respect to affairs in the Balkans, whether the Government are yet prepared to follow his advice that vigorous efforts should be made to compel Greece to fulfil her treaty obligations.

Lord R. CECIL replied that he did not wish to enter into any discussion as to the political foresight of his right hon. friend. Everyone must judge of that for himself. In time of war the most important advice was that of the naval and military advisers of the Government. It was impossible for him to discuss the present or future action of the Allied Governments in respect of Greece. The Government could not give effect to advice of this kind except in consultation and concert with their Allies.

Lord R. CECIL, replying to another question by Mr. R. M'Neill, said that by Article 3 of the Treaty of 1863 Greece, under the guarantee of the three Courts of England, France, and Russia, formed a Monarchial independent and constitutional State. The instrument did not contain any definition of constitutional government. His hon. friend might rely on the guaranteeing Powers discharging their treaty obligations.

The Mesopotamian Wounded.

In a written reply to questions put by Major ASTOR relating to alleged deficiencies in the arrangements at the Nilgiri Hills stations for the reception of sick and wounded troops from Mesopotamia,

Mr. C. ROBERTS states that in August last the Secretary of State for India telegraphed to the Government of India for a report. As regards Coonoor, the Viceroy replied that there had been small defects of a temporary character, but that these had been promptly remedied, and that the G.O.C. of the Division, in the course of frequent visits, found the invalids contented and happy. As regards Wellington, the Viceroy was satisfied by an exhaustive inspection carried out by the G.O.C. in company with the Governor of Madras that there were nothing more than inconveniences of a temporary character, which were quickly dealt with. The Viceroy added that there was no dearth of comforts or stores, and that private relief was merely supplementing official resources.

Dentists for Mesopotamia. Oct. 18.

Mr. LLOYD GEORGE, replying to Sir J. Jardine, said: The Force in Mesopotamia has been supplied with all the dentist and dental mechanics for which it has asked, and the Army Council were quite recently informed by cable that no more were required. The distribution of the dentist and dental mechanics sent out is, of course, a matter for the discretion of the local military authorities.

The Kut Prisoners.

Mr. FORSTER, answering Sir E. Cornwall, said: The total number of British and Indian troops taken prisoners at Kut who have been accounted for is about 2,850 of all ranks. This figure includes natives and also those who have been reported as exchanged or dead. Those traced are distributed over some sixteen places. Information is scanty, but those in camps are believed to be fairly well treated.

M. Venizelos' Government. Oct. 19.

Answering Mr. LYNCH, Lord R. CECIL had nothing to say as to the intention of the Government to recognise the provisional Government established by M. Venizelos. The question was one of agreement between the Allied Powers, and not one in which H.M. Government could take individual action

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The story of a certain British firm which has bravely started a factory here with the purpose of manufacturing in this country a key-article which before the war was entirely in the hands of Germans is deserving of particular attention, chiefly because it serves as an illustration of what British private enterprise can do even in war time. The enterprise of the company is most commendable. But there is a fly in the ointment. Supposing, for instance —and the supposition is by no means fantastic—that after the war, when Germany has acquired again some sort of status among industrial nations, our country is made the dumping ground for the key-article in question. What will be the result? The firm, unable to compete against prices allowing no margin of profit, will go under, and the German industry will regain its monopoly. It is essential that the British Government should take the necessary measures *now* to prevent this, and thus not only assure the company's future, but also liberate us from the bondage of an enemy-controlled key-industry. Needless to say, the German industry will be backed by the "bottomless purse of State aid," and it is against this that we will have to fight, by prohibiting the dumping in this country of the enemy article, and by enabling our home industry to compete against the German one on foreign markets.

***

Which brings us to the question of State grants-in-aid. Wherever such are necessary, they should be given; in nine cases out of ten the capital invested would bear substantial interest, and thus prove a profitable investment, besides enabling us to smash a German monopoly. I know that hitherto State grants-in-aid have been foreign—or almost completely so—to our industrial and commercial system, but all this will have to be changed. Prior to the war, for instance, we lost hundreds of glorious opportunities in the Near East because our Government held strictly aloof from aiding—whether morally or materially—British private enterprise. The thought, alone, of any such aid was tabooed by all officials. Then, one day, we woke up to find the enemy firmly ensconced in all points of industrial advantage, and our people so handicapped that, in most cases, they were obliged to withdraw from the fight.

***

After protective tariffs protecting the home industry at home, and grants-in-aid (where necessary) to protect it abroad, the most important reform to be introduced is that of our banking system. Banks must in future do more to help our industrial and commercial interests. They must rely less on the bill-broking business. I see that, in this connection, the Unionist War Committee is taking up the cudgels, and I wish it every success. Bankers are averse to acknowledging that they have not helped British industry and commerce to the best of their abilities, but it is notorious that they did not help it one-thousandth part as much as the Dresdner, Diskonto and Deutsche banks helped their compatriots. This is true both as regards home industries and the export trade. The Near East particularly was a long sufferer in this respect, and I sincerely hope that the end of the war will also see the end of our apathy in the Balkans as regards the financial help required by our exporting firms, who will be doing their utmost to keep the flag waving on the eastern confines of Central Europe.

***

In conclusion, however, it must be pointed out that in the question of British banks furthering British foreign trade, no serious reform or progress along modern commercial lines can be undertaken until the branches of the German banks in England have been finally liquidated. These, firmly established here as the unscrupulous agents of German trade and the secret enemies of British, did an immense amount of harm, besides acquiring considerable power and prominence in the foreign exchange business. It was hoped, when Germany played us foul in 1914, that these institutions would be liquidated and the enemy thus shorn of his power to do us harm. Basing their actions most naturally on this assumption, many of our leading banking institutions turned their attention to foreign business with a view to freeing us from the German parasite. Thus, as *The Times* points out, "the foreign exchange business of our banks has been trebled, and the insidious influence of the German banks in undermining our foreign trade has been removed—for the time being." But, and this must be emphasised, "the research and the enterprise which our banks have devoted to the subject will be wasted and their further efforts will be discouraged unless the Government adduces clear evidence that it is determined to rout out the influence which in the past the German banks have exercised." So far the Government have not done so, but I hope that, in order to convince them of the necessity to liquidate as rapidily as possible the branches of the German banks trading in this country, no stone will be left unturned by all interested in the freedom of our banks to promote British trade abroad, more particularly in the Near and Middle East.

***

The native Press in Egypt is once more agitating for the removal of the ban on the cultivation of tobacco in the country. As a justification of the fresh plea being made the journals point to the difficulty now experienced in obtaining supplies from Greece. As my readers are aware, the best tobacco is obtainable from districts in Macedonia which passed into the hands of the Greeks as a result of the Balkan wars, but have now been graciously ceded to the Bulgars. Permission to grow the fragrant weed in Egypt would manifestly have no effect on the present difficulties in the local tobacco trade, but the statement that the actual stock of tobacco in Egypt is only sufficient to meet requirements for the next six months makes it necessary to consider whether the continued prohibition of tobacco cultivation is justified under the circumstances. Apart from the loss of revenue from Customs dues involved in the departure, the main consideration which the Egyptian Government has, I believe, had in mind in enforcing prohibition was the question of commercial treaties, to wit, with Greece. But nowadays, as one paper points out, even international treaties, let alone commercial treaties, are being interpreted in the interests of the parties likely to suffer, and a way out could surely be found in the present case.

***

The shippers of Egyptian onions to this country need hardly fear competition from the British onion grower, but, nevertheless, it will interest them to know that the cultivation of the succulent bulb is being tried this year in Lincolnshire on a bigger scale than hitherto. If successful as a business venture, there is no doubt that increased areas will gradually be put under cultivation. The present venture covers an acreage of about 350 acres, and the crop will vary, at a rough estimate, from five to ten tons an acre, and be worth anything between £30,000—£40,000. The cost per acre is reckoned at £40, leaving a prospective profit of £20,000.

***

A writer in the *Egyptian Mail* calls attention to the fact that at the recent exhibition of Egyptian industries held at Alexandria there were an extraordinary number of open infringements of foreign patents. "Primus" stoves and "Crown" corks are two instances which he mentions, but he believes there were several others. The fact is that there are no real patent laws in Egypt, and thus foreign manufacturers are at the mercy of almost any enterprising merchant who cares to imitate their products. If the present endeavours to interest British manufacturers in the trade possibilities of Egypt after the war are to bear fruit, it seems certain that some effective patent law should be enacted, which would afford them ample protection against such infringements.

***

Elsewhere is printed a short summary of a report on the trade of Malta for the year 1915, and I draw particular attention to it because in sending a copy of it to the United States Trade Bureau at Washington, the American Consul on the island emphasises the great opportunities that exist there for American enterprise. I have remarked upon the tireless character of American energy before; and though we are very good friends there can be no reason why we should allow them to come in to take away British trade from British subjects. The Consul appears to realise the difficulties imposed through lack of shipping communications; but we must see to it that before Americans can improve their transoceanic carrying facilities we must solidify our own position.

***

Our American rivals are not the only danger, however. The Japanese have already "got busy," and the result of their enterprise is evidenced by the increased amount of Japanese goods seen in the shops, especially in the cheaper lines formerly supplied by Germany. It is the same elsewhere. Throughout India, for example, the Japanese trader is very successful; and although the cheap goods with which he floods the markets are very cheap and very nasty, he is making strong headway. Better a Japanese or an American than a Hun, of course; but in spheres in which Britain's influence is predominant there is no reason why British trade should not be supreme as well. British manufacturers must begin to work seriously if they do not want to be left at the post in the race for trade.

MALTA'S TRADE IN 1915.

How the War Brought Prosperity.

In a recent issue we dealt at some length with the revenue returns of Malta for the year ending 1915-16. Here is a report showing what were the trade conditions on the island in 1915.

It was a prosperous year, we are told, the prosperity being due to the largely increased sum expended by the Government on war account. The dockyard ran continuously at its maximum capacity, and the large number of steamers which stopped at Valetta for coal and other purposes added greatly to the earnings of those employed in the supply of marine stores. Merchants, too, had the advantage and profit which accrue from a large floating population.

Limited Stocks.

Stocks of all kinds were much depleted at the beginning of 1915 owing to the usual channels of trade having been almost entirely closed, and this was especially true with regard to goods formerly purchased from Germany and Austro-Hungary. However, in the early spring England and France were able to furnish a sufficient quantity of such goods as they had formerly sold this market and, in addition, to supply to a limited extent substitutes for goods previously bought from Germany and Austria-Hungary.

There was a shortage at various times of kerosene, gasoline, and lubricating oils, as well as some of the important articles of food, such as sugar, lard, bacon, butter, condensed milk, and coffee. There has never been a sufficient stock on hand of the following goods: Women's cotton, silk, and lisle hosiery, women's ready-made shoes of good quality, underwear of all grades, writing papers, printing paper, leather and shoe findings, glassware of all kinds, enamelware, chemicals used in the manufacture of aerated waters, notions, etc.

Japanese Invasion.

The Maltese manufacturers of lace, silver filigree work, and cigarettes have enjoyed an exceedingly good year owing to the large number of transients on the island. At times they have had difficulty in filling orders, largely due to inability to secure a sufficient supply of the necessary raw material. This was especially true with regard to lace manufacture, as large quantities of material are always in the hands of the lace makers, who are usually women with household duties to perform and who can only work on the lace at odd times. One firm has more than 900 women employed in the manufacture of lace. They are scattered all over the islands of Malta and Gozo and frequently are not able to deliver their work for long periods.

In the last annual report mention was made of the campaign that was being carried on by Japan to secure Malta business, and the result obtained is evidenced by the increased amount of Japanese goods seen in the shops, especially in the cheaper lines formerly furnished by Germany.

Foreign Trade.

Exclusive of bullion and coin, the total imports for the fiscal year ended March 31 amounted to £2,014,552, while for the preceding year they amounted to £2,452,270, a decrease of £437,718.

Total exports, again excluding bullion, amounted to £897,084, a decrease of £128,431 on the previous year, due to a dropping off in the exportation of coal.

Export Trade.

Potatoes, onions, and cumin seed were the principal articles of export. During the greater portion of the year the exports of onions and potatoes were prohibited, but this restriction caused little hardship on the farmer, for excellent prices were obtainable on the island through the large addition to the normal population.

During the year the principal articles of export were :—

	£
Cheese	6,380
Coffee	60
Fish	3,110
Onions	30,310
Oranges	860
Potatoes	104,441
Lard	60
Spirits	3,026
Cigarettes	20,258
Cigars	2,590
Tea	5,057
Wine	2,837
Cumin Seed	17,450
Cotton goods	6,969
Fruits and vegetables (n.e.s.)	1,276
Flour and semolina	2,107
Coal	344,800
Cotton	1,150
Rags and by-products	1,796
Sponges	431
Metal manufactures	8,680

Agriculture.

In 1915, the total area under cultivation was 41,617 acres. Cereals were raised on 13,816 acres, the slight decrease of 78 acres on the figure for the present year being explained by expansion under onions and cumin seed.

Potatoes were grown on 3,673 acres, as against 4,488 acres in 1914. Owing to the conditions ushered in by the war farmers were undecided whether to plant potatoes to the usual extent or not. At the end of the year, however, a demand for about 2,000 tons from the Regency of Tunis came just in time to turn the scale in favour of normal planting.

The importation of potatoes shows a decrease of 15,608 cwts. of 112 lbs., the quantity imported being 102,654 cwts., of which 62,438 cwts. were used as seed. Onions were planted on 1,703 acres, as against 1,119 acres in the preceding year. The increased area was partly due to record prices obtained last year. Out of 6,180 tons produced last year, 3,931 tons were exported, leaving scarcely sufficient for local supply. Cumin seed was grown on 2,359 acres, as against 1,546 acres the previous year, an increase of 813 acres, in which Gozo also shared. The increase was chiefly due to the exceptional price obtained for the produce the summer of 1915. The produce of this year is estimated at 12,691 cwts of 112 lbs.

The total quantity of oranges, lemons, and mandarins gathered last year is estimated at 75,000 dozen, as against 167,000 dozen in 1913-14.

The "fluted-scale insect" which had lately spread to the central parts of the island where orange groves are located, continues to be kept in check by the *Novius Cardinalis*, and no ill-effects are apprehended from the pest.

AMERICANS IN GREECE.

Reporting under date of August 21, the United States Consul-General at Athens stated :—

For some time past the Athens Consulate-General has maintained a card index of the names of local agents of American firms, under a cross-entry system. It has not been possible, however, to make this list complete as it should be, despite a notice concerning it that appeared in *Commerce Reports* some months ago, wherein American commercial houses were requested to notify this office of the names of their representatives. In an endeavour to perfect this list there is now added to the Consulate-General's replies to inquiries from the United States a paragraph somewhat as follows :—"This office keeps a card index of agents of American firms in this territory and endeavours to co-operate with them in building up American trade. Perhaps in the event that you make an agency arrangement for this district you may see proper to notify this office so that inquiries may be referred to your representatives; might it not be in your interest to have your representative call on the writer with a view to discussing the possibilities of the market?" American firms having a representative in the Athens district are again requested to consider the advisability of notifying this office.

Another example of the manner in which the American trade authorities are endeavouring to strengthen their position in the Mediterranean.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, August 18.

The capture of the town of Petrosheni was of interest to the Roumanians principally on account of the coal of excellent quality which the mines in the vicinity produce. The Government engineer, Puscarin, who was entrusted by the Ministry of Industry to take over the mines, has now returned to Bucharest. He states that the present production of the mines amounts to 50,000 tons annually, and that 3,000 workmen were employed by the Hungarians on them, but on account of the war only 500 labourers remained. These were put to work in shifts by the engineer and his assistants, so that work on the mines can proceed regularly.

Coal Supply.

The possession of these mines is important to Roumania as a regular supply of coal is secured for the country. Hitherto Roumania has been dependent on water-borne coal from Cardiff or Germany, and last winter coal had to be brought from Russia at very heavy cost.

About 400 lighters, flying the German, Austro-Hungarian, Greek, and Roumanian flags, and transporting cereals belonging to the Austro-German Consortium, have been seized in different parts of the Danube.

A quantity of 2,000 wagon-loads (20,000 tons) of coal coming from Germany has also been seized. These will be disposed of by the Import and Export Commission. The consortium in question is naturally in liquidation. It is probable that all grain belonging to the consortium, which has been in trucks or lighters since the day of mobilisation, will be paid for by the Bureau of Liquidation at export prices. Grain in the stations or ports of the Danube not yet loaded for export may be withdrawn by the consignors, but will all be bought for the use of the army.

State Railway Profits.

The profits of the Roumanian State Railways for the month of July were 13,210,080 frs., against 12,538,745 frs. in the same month last year.

The Import Commission met yesterday under the presidency of Mr. Al. Radovich, Minister of Commerce, to examine the question of distribution of the merchandise confiscated and brought from the various localities occupied by the Roumanian armies. The Commission has advised the Government to intervene with the Russian Government with a view to facilitating the importation of goods from and viâ Russia.

SHIPPING NOTES.

The *Sudan Government Gazette* of August 31 publishes the text of Regulations, dated August 2, made under the Harbours and Shipping Ordinance, 1916.

These Regulations, which came into force on September 1, deal, *inter alia*, with pilotage and port dues at Port Sudan; hire of port plant; harbour regulations; licensing of harbour craft; and the authorised passenger tariff.

British firms interested may consult the full text of the above-mentioned Regulations at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The Roumanian steamer Bistritza has been sunk. She was a steamer of 3,688 tons, built at Sunderland last year, and owned at Braila.

The Levant liner Ernest Simon has arrived at Marseilles with 102 refugees from Turkey, sent to France for assisting in manual labour. On the arrival of the steamer the police arrested three stokers for smuggling hashish, 12 kilograms of which were found on board.

ECONOMIC POSITION OF THE SUDAN.

The Half-Yearly Accounts.

(From Our Own Correspondent.)

Cairo, October 5.

The half-yearly accounts of the Sudan Government show that the Sudan, like Egypt, is holding its own manfully against the abnormal war conditions, which reasonably might have been expected to affect the country's prosperity. For the half-year ending June 30 the revenue amounted to £E1,001,411, and the expenditure to £E748,302, as against £E736,608 and £E663,024 respectively a year ago. Thus in the six months there has been an improvement of £E264,803 (or over 35 per cent.) in revenue, and an increase of £E85,278 (or 13 per cent.) in expenditure, leaving the position £E179,525 better off than it was a year ago (a surplus of £E253,109, as compared with one of £E73,584 on June 30, 1915).

The chief heads under which increases are registered are:—Provincial receipts by £E70,870, in which are included land tax, which increased by £E11,496; tribute by £E7,473; gum royalty by £E17,042; and animal tax by £E40,871. The two first-named items actually doubled, the last-named quadrupled, whilst gum royalty improved by 50 per cent., Customs by £E27,830 (or 33½ per cent.), import duty by £E13,102, export by £E3,951, and dues collected by Egypt by £E12,298; railways by £E153.008, public transport by £E82,140 (or 38 per cent.), and transport for the Egyptian Army by £E43,402, or to almost treble the figure for the previous year. Post Office and Telegraph receipts increased slightly.

Under expenditure the main items were:—Provincial, which increased by £E5.032 to £E,192,185, central services by £E15,32? to £E42,529, steamers by £E4,656 to £E42,293, and railways by £E56,766 to £E217,687.

It is interesting to note that even compared with June 30, 1914—*i.e.*, a period which was not affected by war conditions—the figures for the past half-year are eminently satisfactory. The revenue is £E154,578 better, and the expenditure is just about the same, the difference being £E624 in favour of the current year. The only items which show any marked diminution compared with June 30, 1914, are:—Import dues and steamer receipts, which are respectively £E10,152 and £E23,133 less; railway receipts are up by £E96,354, of which £E54,582 are for public transport; animal tax has increased by £F34,562, land tax by £E14,465 to nearly treble its former figure, post and telegraph fees by £E5,018 (or 15 per cent.), royalties by 10 per cent., trader's tax and tribute have doubled, export dues have improved by 90 per cent., and dues collected by Egypt on account of the Sudan by £E12,863 (or 25 per cent.), thus somewhat upsetting the drop in import dues. On the expenditure side, which, as stated, is about the same, central services have required £E18,821 more and railways £E8,123 more, whilst steamers have taken £E15,004 less, public works £E10,498 less, education £E3,035 less, and nothing appears as recovered from the Egyptian Government on account of repression of slave trade, which accounted for a deduction of £E7,890 in the first six months of 1914.

This state of affairs is decidedly satisfactory, especially when one notes that in the budgetary estimates for the current year revenue and expenditure were set at £E1,642,000, and that the collections during the first half-year are over 60 per cent. thereof—in 1914 the proportion was only 50 per cent.—and the expenditure is well under half. Of course, it is not possible to know what bills due in the early part of the year have remained outstanding, and so are debitable to the concluding half-year; but it is reasonable to assume that they do not approach the difference in the balance-sheet, which to-day is £E155.202 in favour of 1916, as compared with 1914.

The result so far attained fully bears out the anticipations expressed in the review of the accounts for 1915 published in The Near East of July 28, when it was stated that the increase in the estimates was amply justified by the excellent reports on the agricultural situation and the general improvement in the internal trade. Some of the increase in certain of the receipts, such as railways, animal tax, and royalties, may be due to the raising of the tariffs, but there is little doubt that the improved complexion that has come over all the heads of revenue is due to the amelioration in the economic situation as indicated by the expansion of the country's trade, and we may, I think, look forward to the current year turning out to be one of the best the Sudan has known since its reconquest.

GOOD SUDAN CROPS.

(From Our Own Correspondent.)

Khartoum, September 28.

Reports from the provinces still indicate exceptional crops, although there has been some damage in places due to excessive rain. Sesame is expected to be well above the average. Of cotton it is too early to speak, whilst of durra there will be a glut in many places.

A small consignment of cattle has arrived from Beni Shangul viâ Kurmuk, and fair prices have been realized. The cattle trade is barely re-opened yet, but the quantities of excellent grazing should ensure fat beasts, and it is simply a question of demand. The market in Egypt seems to rely chiefly on the needs of the European residents, as the local supply suffices for the native wants.

EGYPTIAN COTTON CROP.

The monthly bulletin of the Ministry of Agriculture, Cairo, dated October 1, gives the condition of the cotton crop in Lower Egypt as 10 per cent. and in Upper Egypt as 4 per cent. below the average. The bulletin adds that the weather was hot during the first half of the month, and promised well for the maturity of more cotton than was anticipated in the last report, but it was rather damp during the second half and generally too cool at night, so that the expected improvement was not the general result.

The pink bollworm attack has considerably increased in intensity, notably in Upper Egypt. Picking is now general, and in some places cotton plants are being removed immediately after. The first picking has been completed in several provinces, but the yield is very uneven, being disappointing in the majority and normal only in a few. In Dakahlia, owing to the general early opening of bolls, the result of the first picking was particularly good, leaving but very little cotton for the second picking. In general the poorer lands have done better than average, whereas the better lands have fallen off to some extent. In the basins, owing to high floods, the crop had to be prematurely picked, and the yield was therefore much below average. In several provinces the ginning outturn is reported to be somewhat low, but this has not yet been taken into account in the crop estimation, as the results may be improved later.

On the whole, the yield of the crop this year is likely to be appreciably below average, the main causes being the abnormally excessive and continued heat in June, followed generally by too copious watering, which prevented the formation of lower branch bolls; the quick maturity of middle bolls before attaining the maximum size; and the damaged condition of the upper or late bolls by pink seed worm. The too rapid maturity of middle bolls, upon which the crop depended this year, was doubtless due to lack of water towards the end of July and the beginning of August.

EGYPT'S TOBACCO IMPORTS.

The Greek steamer Dagni brought to Alexandria lately 4,640 bales of tobacco from Greece for six firms in Egypt, of which the Matossian Company alone received 1,991 bales.

Greece has been for over a year the only country from which Egypt imported Oriental tobacco. During the last year it supplied to that country 5.198,298 kilos to the value of £E571,597. Before the war, when Turkey and Russia supplied tobacco to Egypt, the Greek exports of the same article were much less than the above figures. In 1914 Greece shipped to Egypt 3,378,116 kilos, and in 1913 3.282.043 kilos, against 1,720,225 and 2,628,274 kilos exported by Turkey in the same years.

TRADE NOTES.

Liquidations.

Mr. A. J. Lowe, Alexandria, has been appointed receiver of the business of Mr. Antoine Leban, Alexandria, with instructions to liquidate the same.

The licence granted to Mr. Antoine Leban has been cancelled, and the liquidation of his business will be carried on by the receiver whose appointment is mentioned above.

Mr. E. C. Widdows, Gresham House, Cairo, has been appointed receiver of the business of the firm of Bohm, Friedrich and Heymann, with instructions to liquidate the same. The licence granted to the firm of Bohm, Friedrich and Heymann has been cancelled, and the liquidation of the business will be carried on by the receiver.

Openings.

The Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), invites tenders for the supply of uniforms, cloth, white and khaki drill, saddlery, accoutrements, furniture, enamel ware, leather, boots, paints, oils, tarbushes, cotton shirts and drawers, blankets (woollen), and miscellaneous stores. (December 10.)

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs, dressings, sundries, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (November 25.)

The same Department invites tenders for the supply of equipment, clothing, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (November 30.)

Export Prohibitions.

A consolidated and amended Proclamation, dated June 22, 1916, has been issued by the Government of Cyprus, which prohibits the exportation of various articles to certain countries. It is provided in the Proclamation that nothing contained therein shall affect the prohibition of the exportation of goods contained in any Law or Regulation of the Colony. The exportation of the following goods is entirely prohibited by various laws of the Colony, viz.:—All timber, charcoal, and firewood, being the produce of Cyprus; bark, tar, pitch and resin; manure; antiquities; game; skins or eggs of game or wild birds. The Proclamation has since been amended by Proclamations dated July 12 and 25, August 2 and 18, and September 6, 1916. A supplement to the *Board of Trade Journal* of October 12 publishes lists specifying the articles the exportation of which is prohibited from the Colony, according to the latest information received by the Board of Trade.

The same supplement to the *Board of Trade Journal* publishes a revised and consolidated list of articles, dated April 5, 1916, the exportation of which from Egypt is prohibited or restricted. This list has since been slightly modified and the corrections have been included in the list given. In the list of prohibited exports no mention is made of the administrative measures (such as the requiring of British Consular certificates of destination) which have been taken by the Customs authorities to prevent goods from reaching the enemy through neutral countries. These measures are in force for *all* goods exported to neutral countries adjacent to enemy countries. The list is liable to modification at any moment, owing to the requirements of the military authorities.

PRODUCE REPORT.

London, October 19.

Currants.

There has been a strong demand during this past week, and all kinds are practically cleared; in fact, for the first time yesterday there was no spot business done owing, simply, to the absence of stocks. A steamer with 1,200 tons arrived yesterday, and another is due. Pyrgos, in bags, was sold at 69s. to 70s.; Amalias, quarter cases, 74s. to 76s.; Gulf, 77s. to 78s.; Vostizza, 80s. to 82s. Smalls are dearer; some, in bags, were sold at 78s., and others, in cases, at 80s.

Sultanas.

The demand has been very good, with business done mostly in Afghan and Cretan fruit, the former selling at 91s. to 93s., and the latter at 92s. to 95s. Northern Indian fruit is quoted 90s. to 92s., and Australian 101s. to 103s. Greeks, new crop, will arrive after November 1, whilst old fruit is selling at the rate of 100s. to 105s.

Seeds.

Linseed is firm, and more or less against buyers. London-Calcutta spot was sold to-day at 80s., afloat also 80s., while Oct.-Nov. was offered at 81s. 3d. and Nov.-Dec. 83s., with few buyers. Bombay, small grain, Oct.-Nov., 81s. 6d., and Nov.-Dec. 83s. Rapeseed is very firm at recent full rates: Brown Cawnpore, Oct.-Jan., to London, is offered at 68s. 6d.; bold Ferozepore, prompt, 71s. 6d. Cotton-seed is quiet and rather easier: Sakelarides, loading, £14 7s. 6d.; Egyptian to Hull, new, afloat, £14 15s.; and Oct., £14 10s. Bombay to Hull, spot, £12 15s. Rangoon beans are steady. Spot is quoted £27, afloat £26 15s., Oct.-Nov. £27 5s., Nov.-Dec. £28, and Dec.-Jan. £30, c.i.f.

Oils.

Linseed oil is in fair request at stiffer rates: Spot, pipes, £40 5s.; barrels, £40 17s. 6d.; Oct., £40 15s.; Nov.-Dec., £41 10s. Rape oil is firmly held: English refined, in barrels, spot, £49 to £52. Cotton oil is firm, but in limited request: Crude pipes, spot, £39 10s.; refined pale, pipes, £42; barrels, £43; and sweet, barrels, £49 to £52.

Oilcakes.

Linseed cakes: The demand is very good, with quotations in favour of sellers. Best London made is offered sparingly at £15. East Indian seed, pures, are quoted at £14 5s. to £14 10s. Cotton cakes, Egyptian, on spot, are not offered, but Oct.-Nov. shipments are quoted about £10 10s. per ton, ex ship, and English, from Bombay seed, at £10 12s. 6d. to £11.

Locust Beans.

The scarcity continues, and only small quantities of kibbled are obtainable at £12 per ton. Cyprus locust beans are selling at the Liverpool market £11 10s. to £11 15s., ex store, net.

Tobacco.

Considerable business has been done during the last two weeks at extremely high prices. Turkish is quoted 1s. 6d. to 15s. per lb.; Latakia, 1s. 6d. to 5s.; Greek, 1s. to 5s. (The duty on these kinds varies from 5s. 6d. to 6s. 2d. per lb., according to moisture contained in every 100 lbs.)

POTATO DISEASE IN CYPRUS.

(From Our Own Correspondent.)

Nicosia, October 4.

Dismay has been caused in parts of the island where potatoes are largely grown owing to the appearance of two parasites which eat the leaves and the roots respectively of the new crops. There has been a large extension of the cultivation of this tuber in the present year. This evil will, no doubt, be promptly investigated by the Agricultural Department.

The price of potatoes has risen in the cheapest markets to 3 and 3½ piastres (4d. and 4½d.) the oke for foreign (generally called French) kinds, and to 2½ and 3 piastres for native. It is represented that the export of the vegetable should be at once prohibited. It is also urged that all exportation of sheep and pigs should cease, as otherwise there will inevitably be a shortage of meat and of fats, which are so necessary for cooking, especially as the importation of "butter" and lard has been greatly restricted.

Prominent Industries of India

ENGINEERING NOTES.

Petrol Substitutes.

The decision of an English magistrate a few days ago that all petrol substitutes come under the definition of "motor spirit," and, therefore, cannot be used without license, is being widely discussed by users. The official view is that the decision was correct, while the Owner-drivers' Branch of the London and Provincial Vehicle Workers' Union expressed indignation at the decision. Only a few weeks ago, as we mentioned in these columns at the time, the union discovered a substitute, which proved satisfactory after severe tests, and which a number of taxi-cab drivers put into immediate use. "We have taken a month to get the machinery, and we are proposing to put the substitute on the market in big quantities," said the officials of the union, "and if any of our members are prosecuted for using it we are prepared to fight it out." In the meantime, the petrol famine and the apparent mishandling of the liquid fuel problem is rapidly disorganising road transport throughout the country, and it appears that the electric-driven vehicles have the best opportunity at present. There is a demand for them for all purposes, but, unfortunately, it is very difficult, if not impossible, to obtain such vehicles of British manufacture at the present moment, and the Board of Trade has been approached with a view to allow their importation.

The Petrol Problem.

Apropos our remarks on electric cars in these notes last week, it may be mentioned that in Algiers, Tunis, some parts of Egypt, Greece, and elsewhere certain motor-car service communications with inland districts have been stopped for want of petrol, and the old camel, horse, and mule service is revived; while in Athens the people are crying as vigorously for war as for water. The Mayor of the latter town, in order to relieve the sufferings of certain thickly populated neighbourhoods, which, owing to the distance from the existing mains, and the insufficiency of water in the only reservoir of the town, could not obtain even the necessary water for drinking, had arranged a regular water auto-car service by which the suffering inhabitants receive a daily supply of water. During the scarcity of petrol this water-car service has been stopped, and a water "revolution" may now be just as probable as any other. But that is not all. The Mayor, after praiseworthy efforts, and personal sacrifices, succeeded in obtaining a considerable quantity of water from a new source near Athens, which will relieve the situation until the great scheme for the water supply of Athens is realised. Now that supply of water has to be stopped, for there is no petrol to work the pumping engines, and the employment of an electric pumping plant is contemplated, British manufacturers who happen to have in stock such plants would do well to communicate with Mr. Benachi, Mayor of Athens, who, by the way, is said to be a great friend of M. Venizelos and pro-Entente.

A Zeppelin Alarm.

It is well known that in all light-restricted areas when Zeppelins are sighted the town's gas is lowered to half or quarter pressure. Based on this standing order, a device has been invented which can be connected to an ordinary gas burner at any convenient place in the house, and when the gas is lowered it rings an electric bell, giving thus a timely warning of the coming of Zeppelins. The device consists of a metal cylinder containing a rubber bladder, which is so arranged that while the gas is turned on the bladder is inflated and in that condition keeps apart the contacts of an electric bell with which the device is connected. When at the coming of Zeppelins the town's gas is lowered to half or quarter pressure, the rubber bladder is deflated, and, dropping gradually, allows two metal prongs above it to fall on a disc containing mercury, when a perfect contact is made and the electric bell starts ringing.

An Air Hoist.

We have had occasion in previous notes to allude to the great difficulties experienced in the working of mines and quarries, and in the construction of public works, throughout the East, through the want of efficient and labour-saving hoisting apparatus. Primitive lifting devices and very old-fashioned hoists are still in use in some very important mines and quarries, whose shares are not unknown on the European Stock Exchanges. An air hoist which was recently shown at work will undoubtedly interest proprietors and contractors in the East. It is designed to solve the question of how to raise and lower timber and rock economically and quickly, and is specially useful because of the ease with which it can be set up or taken down, or transported from point to point, and the great tonnage it will handle in a limited time, thus economising labour. It is equipped with an inverted cone similar to that found on rock drill shells, which permits mounting the hoist on a 4½ in. double-screw column in exactly the same manner as a rock drill. By means of the column arm to which it is clamped the hoist can be set up as high or as low down on the column as desired, and swung in any direction, either close to the column or some feet away from it. It is built to meet underground conditions, and is a compact and sturdy machine, light enough to make it easy to handle and operate, yet strong and powerful enough to do a great deal of work. The hoist is operated by a reversible pneumatic motor through a chain of gears cut from solid steel and hardened. This gearing is so designed that a brake is unnecessary; it instantly and positively locks, whether in raising or lowering the load, the moment the motor stops, and it is impossible for the load to slip, even though the air is cut off for a whole day.

No Waste from Liquorice Root.

There are several places in the Near East where liquorice is produced, and until recently a considerable trade was done with America and countries in the Continent. Some years ago there were large liquorice mills in some parts of Greece, Asia Minor, principally in Smyrna, and in some of the Ægean islands, where the juicy substance was obtained from the root of the liquorice; but more recently it has been found difficult to compete with the American mills, and most of the native-owned mills were closed, and the roots are now exported. With the great scarcity of wood at the present time it will be of interest to liquorice growers to hear that, according to a recent report in the American Press, waste liquorice root is being utilised for the manufacture of "boards" for box-making. After extraction of the liquorice the crushed root was formerly considered a waste product and destroyed; but under a new process it can now be made into chemical wood pulp and pressed into a board that is said to have satisfactory resisting qualities and strength.

There has been a marked development lately in the foreign markets for Japanese superphosphate fertilizers. An Osaka firm is reported to have secured an order for 2,000 tons, half for Russia and half for India, and further orders are said to be in sight from the former country, besides one for several thousand tons from Port Said. An investigation is in progress to see whether there are sufficient stocks to meet the demand.

NEWS FROM ALL SOURCES.

The despatch by parcel post of cigarettes to Switzerland has been suspended until further notice in Egypt.

Herr Alfred Lohmann, director of the Ozeanreederei, has received a gold medal from the City of Bremen in commemoration of the return of the Deutschland, and for his achievements in "establishing new trade relations with the Orient and with countries beyond the seas."

It is interesting to note, in connection with the recent official announcement urging more British firms to enter the cotton trade, that Messrs. J. Rolo and Co., the well-known merchants of Alexandria, have recently established a cotton branch. Messrs. J. Rolo and Co. have appointed as their representative at Manchester Mr. O. F. Waterfield, a former Anglo-Egyptian.

Captain Richard Whieldon Barnett, Captain attached to the General Staff, chairman of the Oilfields Finance Corporation, deputy chairman of Roumanian Consolidated Oilfields, and a director of several other oil companies, chairman of the St. Pancras Conservative Association, was the only candidate nominated on Monday for the West St. Pancras Parliamentary vacancy, and was duly declared elected.

After many years of suggestion, the Greek Government on Saturday announced that the Vice-Consulate at Newcastle had been raised to the fuller dignity of Consulate, says the *Newcastle Daily Journal* (October 16). Mr. Scholfield, the previous Vice-Consul, had asked for this, seeing the great importance of Newcastle and the Tyne in connection with Greek shipping. Mr. Leonard Macarthy, the new Consul, and who succeeded Mr. Scholfield, just received the announcement that he had been raised to the rank of Consul an hour or so before he had the privilege of welcoming Prince Nicholas of Greece at the quayside, where he landed from a Norwegian mail boat *en route* from Russia.

Roumania's appearance as a belligerent Power probably will not seriously affect economic conditions in Switzerland, says an American Consular report. Since the outbreak of hostilities in Europe, not only Russian, but Roumanian grain and cereal shipments to Switzerland have reached insignificant proportions. Switzerland long ago was compelled to cover the shortage by increased purchases in the American market. It will doubtless continue to do so, and the same is true of its purchases of petroleum, benzine, and unrefined machine oils, which have been entering the country from Roumanian sources in unprecedented quantities. If Roumania's entrance into the war is felt at all by the Swiss people, it will be felt in this particular field.

An Egyptian subject named Mahommed F. Leheta, residing at Birmingham, was fined £2 at Llandudno for entering the prohibited area of Carnarvonshire without the permission of the Chief Constable. It appeared that Mr. Leheta went to spend a short holiday at the Craigydon Boarding House, and gave the usual notice to the Birmingham police, but overlooked the fact that as an Egyptian subject, and, therefore, though Egypt is under British protection, an alien, he ought to have obtained the permission of the Chief Constable of the county to which he intended to travel. The case had been adjourned from the previous sitting of the Court in order that the defendant might attend, but a letter was now received from him stating that he was shortly to leave for Egypt, and for that reason he asked to be excused the journey to Llandudno.

ALEXANDRIA PRIZE COURT.

The Deutsches Kohlen Depot.

This was a claim by the Crown for the confiscation as a good and lawful prize of a large number of tugs, motor launches and steel lighters, together with freight due, the property of the Deutsches Kohlen Company, an enemy firm in course of liquidation by the order of the military authorities.

Mr. A. S. Preston appeared as H.M. Procurator for the Crown; Mr. G. A. W. Booth for the Licensing Officer; Mr. C. H. Perrott for the liquidators of the Deutsches Kohlen Company.

The hearing took place before his Honour Judge Grain on August 28, September 8, 9, and 30.

The arguments largely turned upon the interpretation of the Hague Conventions No. VI. art. 1 and XI. art. 3, and involved a discussion on the position in international law of a small craft employed in local trade. Further questions that arose for the purposes of the case, were whether the property of the Deutsches Kohlen Company should be regarded as that of an alien enemy, the property sought to be confiscated being in the possession of the Egyptian branch of the company and having been used during the period of the war by the military authorities, notwithstanding an agreement between the British Coaling Company and the Deutsches Kohlen Company for the exclusive use of the craft of the latter.

The Court took time to consider its judgment, which was as follows,—

The Deutsches Kohlen Depot of Port Said is a German company registered at Hamburg, and their business was supplying coal to ships passing through Port Said; they also had a contract with the British Coaling Company to supply them with lighters and tugs for the purpose of enabling that company also to supply coal to ships.

After the outbreak of war the company appears to have been allowed to continue trading unmolested for some time, and in the evidence it is stated that as late as October, 1914, they were still having neutral steamers consigned to them for coaling, or "bunkering," as it is called in the trade.

Somewhere about the end of 1914 the naval and military authorities began to requisition some of the lighters and tugs, and continued doing so up to the present time. The German company has also been supplying the British Coaling Company with lighters and tugs up to the present time under a contract entered into on April 4, 1913.

Shortly after the outbreak of war a neutral subject was appointed as manager at Port Said in place of the former German subject.

Although in the evidence it is stated that the property of the German depot was requisitioned by the naval and military authorities, it appears to be more a case of hire than requisition, as no trace of any formal requisition can be discovered; and on November 7, 1914, a letter from the manager of the depot addressed to Major Elgood, War Department, was sent tendering prices for the hire of plant, and a further letter about prices was written on November 14, 1914, to the depot by the military authorities.

On October 30, 1915, a licence was granted to the depot by the Licensing Officer to carry on business to the extent of carrying out the contract with the British Coaling Company, and "for the liquidation of outstanding business, and, in particular, of claims against steamship companies for which the licences acted as agents in Egypt before the war." But since the outbreak of war no money appears to have been paid either by the military and naval authorities or the British Coaling Company for the hire of plant and craft. Consequently, there is a considerable sum of money now due to the Deutsches Kohlen Depot from all three parties.

On April, 29, 1916, Mr. Lloyd Jones was appointed liquidator of the depot. On August 8, 1916, a writ was issued against the "ships and floating craft" of the Deutsches Kohlen Depot.

The Procurator now asks that the Court shall condemn as prize and make an order for confiscation of these ships and floating craft, viz., four steam tugs, seven motor boats, and seventy-four wooden and steel lighters belonging to the Deutsches Kohlen Depot, or, in the alternative, if the Court came to the conclusion that the ships are within the Sixth Hague Convention to make an order for detention till the end of the war.

He further asks that the amount of money due by the naval and military authorities and the British Coaling Company shall be paid to the Prize Court.

With regard to the lighters, the Procurator argues that they are not ships, and that, therefore, neither the Hague Convention No. VI. nor No. XI. applies, and quotes the preamble to Convention No. VI, viz.: "Anxious to ensure the security of international commerce, etc.," and suggests that it governs the various articles which follow, that lighters are not merchant ships engaged in "international commerce" within the meaning of the Convention. He suggests that the ships must be such as to make voyages and travel from port to port, and urges that it would be ridiculous to give the lighters "days of grace" and a pass, because they could not move out of the port. He claims that these lighters are enemy goods in port, and, therefore, can be confiscated under The Roumanian case, Trehern's Prize Cases Vol. I. pp. 75, 536, and the Achaia (No. 2) case, Trehern Vol I. p. 635.

As regards the money due from October, 1914, to the present time, the Procurator claims that the captor and Crown stand in the same position as the person whose property has been captured, and such sums as were due to the original owners now become due to the Crown.

He states that this amount due for hire is in the same category as freight dues, that it is money due to the ship and the owners of the ship. Mr. Booth, who appears for the Government War Trade Department, and Mr. Perrott, who appears for the liquidators of the Deutsches Kohlen Depot appointed by the General Officer Commanding in Egypt, oppose the contentions of the Procurator and argue that these lighters are ships engaged in commerce, that they come within the Hague Convention XI., art. 3, and are "small boats engaged in local trade," and are exempt from capture, and that they undoubtedly come under the Hague Convention No. VI., and ought to be given days of grace and a pass. That, if that was not done, an order for detention only can be made. On the question of the confiscation to the Crown of the money due for hire, they urge that it stands in quite a different position to freight, as freight merely becomes payable to the Crown when the Crown completes the contract, it is money becoming due after the ship is in possession of the Crown. This hire money became due and payable long before the lighters came into the possession of the Crown, and it was a mere chance that it had not been paid before. And they further suggest that this Court has no jurisdiction with regard to this sum of money, as the whole transaction was complete, and the money payable before the lighters were taken as prize. They ask that the money shall be handed to the liquidator and an order made for the lighters to be released to the liquidator, or, in the alternative, an order for detention only.

The first question to be decided is under what classification are these lighters to be placed. Are they ships? If so, are they merchant ships within the Sixth Hague Convention?

The definition of a ship in the Merchant Shipping Act, 1894, sec. 742, is: '"Ship" includes every description of vessel used in navigation not propelled by oars.'

I do not know whether these particular lighters go out to sea or not, but they are similar to the lighters which are used for the purpose of loading and unloading ships in open ports where, in some cases, they have to go a considerable distance out to sea. And these particular lighters are constantly being navigated about the port of Port Said.

In the case Mayor of Southport *v.* Morris (1893), I.Q.B., 358, Lord Coleridge, C.J., decided that a small passenger steamer plying on an artificial lake "having regard to the size of the sheet of water on which it was used, it was not a vessel used in navigation." But an artificial inland lake is quite a different matter to a large port like Port Said.

In *ex parte*, Ferguson (1871), L.R. 6, Q.B., 280, a cobble 24 feet long, 7 feet beam, mast and bowsprit could be unshipped and oars used. Vessel fitted for oars, used for herring fishing, going twenty miles out to sea, when sea not too heavy, was decided to be a ship, and Lord Blackburn, in the course of his judgment, said, "whenever a vessel does go to sea, whether it be decked or not decked, or whether it goes to sea for the purpose of fishing or anything else, it would be a ship."

What, then, is the meaning of the word "ship"? It is this, that any vessel that substantially goes to sea is a ship.

These lighters certainly do not go to sea by their own propulsion, but lighters of identical style and build are towed out to sea loaded with merchandise by tugs for the purpose of supplying ships engaged in international commerce.

In the case Gapp *v.* Bond (1887) 19, Q.B.D., 200, a dumb barge propelled by oars, plying on the River Thames carrying goods, wares, and merchandise was decided to be a vessel within Bill of Sales Act, 1878, Lord Justice Fry stated: "A ship it clearly is not, but it appears to me to be a vessel." Lord Justice Fry, in stating it was not a "ship," probably had the Shipping Act definition in his mind, viz.: "Not propelled with oars."

In Abbott's Law of Merchant Ships and Seamen, 14 edit., the meaning of the word ship is discussed as follows:—

"The word 'ship' is not used either in the Act or decisions dealing with merchant shipping in any technical sense, but covers every description of vessel which is used in navigation, or for the purposes of maritime commerce, so long as that vessel is not propelled by oars alone. The true criterion appears to be that the vessel being propelled otherwise than by oars is used for the transport of things or persons from place to place, and it appears to be immaterial whether such a vessel goes to sea or not. She may be a ship, although she is used entirely in inland waters."

In H.M. Court for Zanzibar (in Prize), 1915, Murison J. says: "There is a further point which was not raised in argument before me, but to which I ought, I think, to refer. There may be some doubt whether a lighter is a ship within the meaning of the word as used in prize and Admiralty law. The word 'ship' is defined in the Naval Prize Act, 1864, as including a vessel or boat. A lighter is, at any rate, a 'vessel.' I hold, in any event, that this lighter is an enemy vessel subject to detention," and he held that the Sixth Hague Convention applied.

In the Territorial Water Jurisdiction Act, 1878 (41 and 42), Vic. C. 73, S. 7, there is also a definition of ship, viz.: "Ship" includes every description of ship, boat, or other floating craft, and "floating craft" is the phrase used by the Procurator in his writ for the confiscation of these crafts.

In the case of The Mac, L.R. 7, Prob. Div., p. 126 (1882), the Court of Appeal went somewhat fully into what was included under the word "ship."

The Mac was a barge technically called as "hopper barge," and was used for dredging purposes, and could not go to sea, and was propelled by towing.

Lord Coleridge, C.J., said: "I think it immaterial to consider whatever the hopper barge was used for in navigation within the meaning of the Merchant Shipping Act, 1854; because that enactment directs that the word 'ship' shall include every description of vessel used in navigation 'not propelled by oars,' it does not exclude other meaning of the word."

"She falls within the definition cited in Todd's Johnson's dictionary."

"Cotton L.J., states 'a ship is a general term for artificial structures floating on water. I think the proper meaning is sometimes hollowed out.'"

Although these cases and definitions refer to divers Acts of Parliament and none refer directly to cases in this Prize Court, except the case from Zanzibar, nevertheless they give a general idea of the meaning of the word "ship" accepted by various tribunals, and I am of opinion that I cannot hold otherwise than that a lighter comes under the generally accepted definition of a ship. The next question to consider is, are they "merchant" ships. They are undoubtedly engaged in

Digitized by Google

maritime commerce, the particular ones now before the Court are mostly used for coal, but lighters are also used for the loading and unloading of merchandise, and I dare say some of these were also used for that purpose. Moreover, in coaling the various merchant ships passing through Port Said, they were directly engaged in making maritime commerce possible. I therefore find that these are merchant ships within the meaning of the Hague Convention.

It has been urged by counsel, on behalf of the Deutsches Kohlen Depot, that not only do these lighters come under the Sixth Hague Convention, but also under the Eleventh Hague Convention, viz. : Chapter II., Art. 3, "Vessels employed exclusively in coast fisheries or small boats employed in local trade . . . are exempt from capture."

In Hall's International Law (6th ed.), p. 468, discussing this article, with regard to fishing boats, it is stated : "It is indisputable that coasting fishery is the sole means of livelihood of a very large number of families as inoffensive as cultivators of the soil or mechanics and that seizure of boats, while inflicting extreme hardship on their owners, is as a measure of general application wholly ineffective against the hostile State."

Although this statement is made concerning the exemption of fishing boats, nevertheless I consider that it equally applies to the "small boats employed in local trade" which are classed with the fishing boats in the article of the Hague Convention No. XI.," and that the "boats engaged in local trade" which were contemplated when the Convention was signed were such boats as passed to and from small villages, fishing ports, and small local towns on the coast, belonging to poor men engaged in earning their living by carrying food, etc., for those places. And the seizure of this class of ship would, "while inflicting extreme hardship on their owners, be as a measure of general application wholly ineffective against the hostile State."

In this case we have a very different state of facts. Instead of the poor owners gaining a precarious livelihood and assisting other poor people to gain the means of existence, we have a rich and powerful company engaged in giving the greatest assistance to what was the extensive maritime commerce of Germany.

I am, therefore, of opinion that these lighters and tugs do not come within the category of "small boats employed in local trade" which were intended to be included in Article 3, Chapter II., of the Eleventh Hague Convention.

It has occurred to me that possibly these lighters would not come under the "days of grace" article of the Sixth Hague Convention, because they were absolutely unmolested from the outbreak of war, and continued to ply their trade, as far as possible, till very nearly the end of 1914. We have it in evidence that in October, 1914, they were still engaged in coaling neutral vessels. Therefore, there was no necessity to give them "days of grace" or "passes," as the Deutsches Kohlen Depot certainly had more than two months (which were a very good equivalent for three days' grace) in which they could have sold them, the proceeds being acquired by the Deutsches Kohlen Depot, which was still carrying on its business. Certainly, no passes were offered, nor would they have been much good if they had been, because it is not likely that four German steam tugs and seven motor-boats towing seventy-four German lighters would have arrived safely at a German or neutral port.

But this point (which may have no sound basis) was not argued or suggested in the course of the arguments before me, and the Procurator in the event of the Court finding that these lighters are merchant ships asks for an order for detention which was the order asked for in "The St. Tudno," which was a tender that had also been carrying on business after war had broken out. I therefore make an Order in the terms of the "Chile" case (1914 P. 217) for the detention of these four steam tugs, seven motor boats, and 74 lighters.

There remains one more point raised by the Procurator to be decided, namely, am I to make an order for the detention of the proceeds of the hiring of these craft before they came into the hands of the Prize Court, or is it a sum of money due to the Liquidators of the Deutsches Kohlen Depot over which this Court has no control? The Procurator argues that this money is equivalent to freight, at least that it is governed by the same rules, and stated that "it did not matter what you called it, whether freight or not; it was money due to the ship."

But how in this case can one parcel out the amount of money due to each lighter. Some of the lighters which had helped to earn the money are not even in the possession of the Prize Court as they have been sunk or broken up, and some of these now before the Court may not have been amongst those hired.

On behalf of the War Trade Department and the Liquidators it is argued that freight becomes due to the Crown and captors merely because they complete the contract after the ship has come into their possession; while this contract of hiring was complete long before the Prize Court had obtained possession.

In "The Fortuna" (No. 1) E.P.C. vol. I., p. 304 Sir William Scott (Lord Stowell) found that captor was only entitled to freight because he had completed the contract. In such case (carrying the cargo to the port of destination) I apprehend the rule to be that the captor is entitled to freight on the same principle on which he would be held not to be entitled when he does not proceed and perform the original voyage. The specific contract is performed in the one case, and not performed in the other.

And in the "Der Mohr" (No. 2) E.P.C. vol. I., p. 395, the captor was held liable to pay freight due to the vessel after capture. The vessel had been decreed to be restored to her owners, and after capture she was lost by the negligence of the captors. They were held liable because it was the captors' duty to complete the contract and obtain the freight for the vessel, but through negligence the contract was not completed.

But in this case there is no contract to complete. The whole transaction was completed before the Prize Court had anything to do with these lighters.

I agree with the views taken by the War Trade Department and the Liquidators on this point, and I am of opinion that I cannot make an Order concerning the money due for the hire of these craft before they came into possession of the Prize Court.

SHORTAGE OF SMALL COINS IN BULGARIA.

The economic position and the state of Government credit in Bulgaria may be gauged from the fact that coins are being hoarded by the people, whereby the value of Treasury notes is being depreciated. Newspapers in Bulgaria are paying great attention to this in their columns. According to the *Narod*, of Sofia, "small coins for change are gradually disappearing, this being especially marked in villages, where wild and scandalous speculation in small coins is the rule. Although there is plenty of small change, it is rarely that any is seen. Unscrupulous and grasping individuals are collecting them in order to bleed the people. A certain class of merchants, in whose business small coins are an absolute necessity, are offering a good premium for changing notes. Egg dealers, for instance, are offering premiums of 4, 5, and 6 lews for changing notes of 20 lews, upon which they are quite satisfied to receive coinage to the amount of 16, 15, or even 14 lews. This works out at a premium of 20, 25, and 30 per cent. Intending purchasers of small articles are met with the reply that the shopkeeper has 'no small things and no goods.'"

In order to facilitate the circulation of small coins, the National Bank has recently printed and put into circulation new Treasury notes of 2 lews (silver value). These notes are rather larger than those of 1 lew, the dimensions being 11 cm. by 7 cm.

The *Times'* correspondent in the Balkan Peninsula telegraphs from Bucharest that the maize harvest has begun throughout Roumania and that the crop is of average quality.

GERMAN EXPLOITATION OF TURKEY.

At the Empire, Old Market Street, Bristol, on Sunday evening, a lecture was delivered by the Rev. Canon J. T. Parfitt, M.A., Canon of Jerusalem, on the subject of his experiences during twenty years' residence in Baghdad and Syria. The lecturer explained the condition of the country as he found it upon his first arrival, incidents of his journey, and of the perfunctory quarantine proceedings of the Turkish officials after the judicious use of "palm oil." Long experience of the Turk and his ways was to know something also of the Germans, their pushful tactics, and their utterly ruthless methods; and numerous facts illustrating these points were given in detail. He had early accepted an appointment as honorary chaplain to the German Consulate, and in this capacity officiated at German weddings, baptisms, etc., and was invited frequently to dinners and other public and private gatherings, where he heard much of the aims, expectations, and intentions of the rapidly-growing Prussian communities. In early days little attention was paid to these things, but later the stern reality of these efforts forced themselves into notice, and to-day the Teutonic invasion of the Turkish Empire was practically complete. There were few Germans in Turkey twenty years ago, but since then their commercial, engineering, and other enterprises had startlingly developed. The lecturer spoke of the immense importance of Aleppo and of the Baghdad Railway scheme, intended to link Berlin in a direct line with the Persian Gulf, and by the aid of maps the strategic importance of the German plans were pointed out. In the light of the present-day facts, German intentions could be well understood, involving their possession of Constantinople as a naval and military centre, with the Dardanelles and Bosphorus made permanently impregnable; and these plans also involved the commercial ruin of Russia, the control of the Suez Canal, and our expulsion from Egypt. If the German plans had succeeded our bread would probably have cost us eighteenpence a loaf, instead of the present comparatively moderate cost. The lecturer spoke with warm approval of British achievements in Persia, and of our enterprise, generally resulting in the magnificent development of commercial and other undertakings, instancing the Admiralty oil wells, the Euphrates barrage and irrigation, and the growth of the wheat, wool, liquorice, and date industries, giving employment to large numbers of the native population. Mesopotamia, he added, is remarkably fertile, and in due course will probably become one of the finest wheat-growing countries of the world.

NOTICE.

Société Anonyme pour la Fabrication des Cigarettes Egyptiennes marque HADJES NESSIM en liquidation.

Offers for the purchase of the following items of Stock and House Property will be received in the name of EDWARD D. JOYCE, P.O.B. 206, Alexandria (Egypt), Receiver of the above Company, up till 8 a.m. on the 15th of NOVEMBER, 1916 :—

(*a*) The TRADE MARK belonging to the Company, together with all the Stock of Tin Boxes, Labels, Cigarette Paper, etc., on which the Trade Mark is printed.

(*b*) The BUILDING situated No. 12-14, Rue Abou El Dardar, Alexandria (Egypt), belonging to the Company.

Details of the above can be obtained at the Offices of the Company, 12-14, Rue Abou El Dardar, Alexandria, between the hours of 9 a.m. and noon, on any day except Sundays, from this date to the 13th of NOVEMBER, 1916.

Offers must be made in writing, under registered cover, to the above mentioned P.O. address, and must be accompanied by a deposit in Cash of 10 per cent. of the amount offered.

Offers may be made for items A and B separately.

The Receiver is not bound to accept the best or any offer made.

ON 'CHANGE.

(By Our City Correspondent.)

Throgmorton Street, E.C.

This week, again, there is very little to report. Prices, where changed, are mostly lower, but Salt and Sodas provide an exception to this rule. They have been a good market on fairly large buying orders from Egypt; only about 1,500 shares have changed hands, however, as holders are rather inclined to wait for higher prices. The present price—19s., at which they are closing firm to-night (Wednesday)—is a rise of 9d. since a week ago. Some small transactions in Agriculturals have taken place in the neighbourhood of 4 9-16, at which price the few shares on offer have been absorbed. A few Delta Lights have been done at 5¼, and Delta Lands are rather quieter at 9s. 3d. Khedivial Mails have dropped about 1s. 6d. to 25s. 6d. on some small sales in a market devoid of support. National Banks, after changing hands down to 12⅜, close a firmer market at 12 7-16, but this figure is still ¼ lower than last week.

In Greek securities the market is absolutely nominal. Prices are quoted lower at 50 to 53 for 1881, 1884, and 1890, 46 to 49 for Monopoly, 40 to 42 for Rente, 63 to 65 for 1902, 60 to 65 for 1910, and 72 to 76 for 1914; but there are no real sellers, and any change for the better in Greece, leading to buying orders from Athens, would soon put prices up again, and this without bringing anything but insignificant quantities of stock to market. In Currant Bonds stock is offered at 90.

COMPANY NOTES.

Anglo-Roumanian Petroleum.

The report to December 31, 1915, states that the gross profit for the year amounted to £2,761, and, after deducting London expenses and debenture interest, there remains £76. The board have decided to write off £7,457 on account of depreciation, and consequently the accounts for the year show a loss of £7,381. After allowing for the amount brought forward from 1914, there remains £1,017, which it is proposed to carry forward. The production of crude oil for the year was 13,200 tons, against 13,585 tons for 1914. The unsatisfactory condition of the market for crude oil referred to in last year's report continued for the period under review, the average price obtained being about 50 per cent. less than in 1913 and 40 per cent. less than in 1914. The continuance of the European war has caused development operations to be almost impossible, and the limited local consumption of crude oil made it very difficult to dispose of even sufficient to cover expenses; the demand, however, has recently improved, and the price has considerably advanced.

Oil Outputs.

Anglo-Egyptian.—Gemsah, week, 21 tons; previous week, 2,327 tons. Hurgada, 692 tons, against 731 tons.

Baku Russian.—Week ended October 14, 84,100 poods. Price of crude oil, 45 copecks per pood.

Russian Petroleum.—Week ended 14th inst., 56,200 poods. Price of crude, 45 copecks per pood.

Ural Caspian.—Week ended 12th inst., 147,819 poods (2,384 tons).

Dividends, etc.

Egyptian Unified Bonds.—The Bank of England are prepared to receive the coupons due 1st prox. The necessary lists can be procured on application at the Dividend Pay Office.

Alexandria Central Buildings.—Dividend at the rate of 5½ per cent., or 5s. 6d. per share, payable at the offices of the Anglo-Egyptian Bank, Alexandria.

BRITISH COLONIAL PETROLEUM.

The anomaly of a company entitled British Colonial Petroleum Corporation owning properties solely in Roumania is explained by the fact that it originally operated in Nigeria. The original venture was a failure, says the *Financial News*, and the practically derelict concern came into new hands, which, in taking it over, saved the expense of forming a new company to run a small Roumanian prospect. The capital was reorganised, and now consists of £100,000 in 1s. shares, of which 404,500 are issued. When Treasury sanction is given, further shares will be issued as purchase consideration, raising the issued capital to 722,380 shares, or £36,119. It will be seen, therefore, that the concern is quite a small affair. The production from May 15, 1914, to April 30, 1916, was 22,958 tons, valued at £43,665, obtained from two wells, in spite of various interruptions. The report for the period mentioned gives expenditure in Roumania at £35,453, leaving a working profit of £8,211. London expenses absorbed £1,077; directors' fees (unpaid) are entered at £867; £1,915 is allocated to depreciation, and the balance of £4,352 is carried forward. The balance-sheet shows a severe shortage of cash, and further capital must be raised if the properties (15,000 square metres at Tsintea and 18,600 square metres at Bordeni) are to be exploited. The properties are held under lease, and the royalties payable in oil are rather high.

NOTES OF THE WEEK.

Rapid and far from satisfactory developments have taken place during the past week in the Roumanian campaign. At a moment when attention was mainly directed towards the Carpathians von Mackensen launched a new offensive in the Dobruja, before which the Russo-Roumanian force had to fall back and concentrate its efforts on saving the bridge-head at Cernavoda. Constanza, the chief Roumanian port on the Black Sea, was abandoned and half the railway between the Danube and the coast fell at once into the enemy's hands. The Allied line was bent back, resting on Rasova on the Danube and bearing north-east across the Dobruja. Bulgarian cavalry pressed on north of the railway, evidently with the purpose of turning the Russo-Roumanian position, and the fall of Caramurat was reported. There still seemed some hope that our Allies would be able to defend the famous King Carol I. Bridge, and a natural desire to protect that valuable structure would prompt them to sacrifice territory in the east and north of the Dobruja. But the fall of Rasova brought enemy guns near enough to the bridge-head to make it untenable, and the capture of Cernavoda, which is now announced, was not altogether unexpected.

It would be useless to seek to disguise the fact that the Allied cause has received a serious set-back in the Dobruja. By itself the fall of Constanza, however regrettable, would not necessarily have impaired Roumania's powers of resistance. But now that the enemy has captured the whole of the railway from the port to the bridge-head, the blow is a severe one. In the first place the rapidity of von Mackensen's sweep opens up an uncomfortable vista, in view of the assurances that the positions guarding the railway line were exceptionally strong. Again, the swampy nature of the whole region between Cernavoda and Feteshti, while rendering an invasion of Muntenia at this point unlikely, carries with it the corresponding disadvantage of rendering the task of withdrawing the Russo-Roumanian troops the more difficult. The reported capture of several locomotives and two hundred wagons at Mejidia points to a hitch in the Roumanian evacuation, and will cause fuller news of the fate of the Allied force holding Cernavoda to be awaited with some anxiety.

The Russo-Roumanian force has withdrawn to the northern portion of the Dobruja. Here it can receive further Russian reinforcements, and eventually, we may hope, be in a position to check von Mackensen's advance. For the moment the latter retains the power of the offensive, and for this reason the situation must be regarded as critical. The Roumanians must reconcile themselves to the destruction of the railway bridge, which the enemy can be relied upon to carry out, if the Allied force has not already done so. The Austro-German command can hardly anticipate a set of conditions under which the bridge would now be of more use to them than to the Roumanians. With the arrival of General Berthelot the Roumanian General Staff will have received a welcome accession of strength, and if our new Allies can hold their own for a week or ten days, all may yet be well.

In the Carpathians the most noticeable event is the capture of Predeal, the Roumanian frontier town south of Brasso. Here the enemy is astride the railway which leads down the Prahova Valley, past Sinaia, to the centre of the oilfields and to Bucharest. He is still in the mountains, and the long foothills lend themselves to defence as much as the actual frontier, if the Roumanians have time to consolidate their positions. But the ground slopes steadily in favour of the invading force. Predeal, ninety miles from Bucharest, is 3,400 ft. above sea-level; Sinaia, twelve miles away, the Roumanian Simla, is less than 2,800 ft.; Campina, eighteen miles nearer the capital, where the railway enters the oil-bearing district at one of its most productive parts, stands at an altitude of 1,300 ft. The enemy, if he is to be held at all, must be stopped before he has proceeded far down the Prahova Valley. No other pass in the Carpathians offers such a favourable avenue of advance to the Austro-German forces. At every other point the configuration of the country makes progress towards Bucharest, even when the plain is reached, a difficult matter. The assistance to be rendered to the Roumanians, therefore, is needed very urgently.

The weather has chosen to favour the enemy at a particularly inopportune moment for the Allies. Just when the forces in Macedonia ought to be making a supreme effort, in order to relieve the pressure in the Dobruja, the advance has been almost entirely stopped by heavy rains. On the left wing little progress would seem to have been made towards Monastir since the capture of Brod by the Serbians. The Bulgarians have been reinforced by some German troops, and the combined force has attempted some unsuccessful counter-attacks on the Allied line. Thus the process of attrition continues, but the general military situation calls

Digitized by Google

for more effective measures. Fortunately, the ease with which the enemy's attacks are broken by the Allies' artillery fire points to the latter's strength in an arm which will stand them in good stead when the advance can be resumed. On the right wing the Struma is reported to be in flood, and although the British line seemed to be advanced well beyond the river, difficulties attending the despatch of supplies and reinforcements may prevent a fresh move in this quarter until the weather conditions improve. In connection with these Macedonian operations the steady progress of an Italian force in Albania must not be overlooked. A detachment has now occupied Liaskoviki, fifty miles south by west of Lake Prespa, on which the extreme left of the Allied front at present rests, and its cavalry is in touch with the cavalry of the Salonika force. For the purposes of a general advance into Serbia and Bulgaria, it will be necessary to have the Allied left adequately protected. To achieve this the Austrians must be driven out of Albania.

The substitution of deeds for words is having the desired effect in Athens. As pointed out in these columns months ago, the Greek Government required to be told what it had to do—not merely to be left to its own devices, and in intervals of being sent to Coventry receiving suggestions in regard to what it was not to do. Admiral du Fournet's bluejackets have brought about a marked improvement in the situation. There have been skirmishes in the streets, for the Reservists' Leagues—whose abolition the Allies demanded in June, but took no steps to enforce—are still at large; and now and then the Greek Government tries to ride the high horse, as when it suggests that interference with the anti-Ententist press would be unconstitutional. But the Allied Ministers are now in touch with Professor Lambros's Government, and are received by King Constantine. This sudden rise in the political barometer was celebrated by a *communiqué* published on the authority of the French Minister. It was to the effect that "the situation had been greatly cleared as the result of his Majesty's expression of his feelings towards the Entente, and of the French Minister's assurances regarding the disposition of the Allies with a view to the re-establishment of relations of confidence with the Greek Government on the basis of benevolent neutrality." Although it would be rash to attempt to translate this diplomatic utterance into ordinary language, we will risk the suggestion that it is meant to hint at the possibility of King Constantine becoming a reformed character on condition that he is not expected to fight.

Such a solution of the Greek *impasse* was recommended before the situation was complicated by Greece's domestic differences. At the present time it is at best only a half-solution. There ought to be no question of the Greek Army officially taking part in the war at this stage, for the good reason that it is of no military value, and could not hope to become an efficient war machine, unless the Entente Powers were prepared to supply it with funds and munitions. Such funds and munitions, it may be pointed out, could be disposed of to better effect elsewhere. King Constantine's qualms about having to fight ought to have been dispelled long ago. If at the same time the direct measures now employed by Admiral du Fournet to impress upon the Greek Government that the Allies are in earnest had also been adopted, the Allied Army of the East would have been spared many anxieties.

As things are, King Constantine's conversion—always provided the circumlocutory *communiqué* means what it is careful not to say—comes late in the day. It finds two Governments functioning in Greece, one at Athens, the other at Salonika. The King's difficulties, therefore, are not confined to his relations with the Allies, but are with his own people as well. At no time have we felt inclined to take the Greek situation too seriously; it acquired its worst character as a result of the unfortunate way in which it was handled by the Allied Governments. It undoubtedly called for more vigorous action on the part of the Allies at a much earlier stage; but until the charge was brought against King Constantine of mobilizing troops for the purpose of attacking the Salonika army in the rear, his offences seemed mainly the outcome of Potsdam-headedness and petty-mindedness. Now, as soon as a sufficiently periphrastic statement can be drafted we may be told that the Allies are satisfied that the force which was being collected in Thessaly was not intended to strike the Salonika army in the back, or that if it were, the King was not a party to the plot. So far so good. But the Allied Governments, in rejoicing over King Constantine's repentance, must not overlook the existence of the Provisional Government and of the large section of the Greek people which has dissociated itself from the King and his ways. The Entente Powers are mainly responsible for Greece's domestic difficulties, and they must continue to intervene in Greek affairs until a satisfactory settlement has been reached. An olive branch has already been held out from the north. If King Constantine will grasp it, and if he is not obsessed by an undignified hatred of M. Venizelos, all may yet be well with Greece. The Allies, however, should regard it as part of their duties to see that, if reconciliation is to be the order of the day, all sections of the Greek people are brought under the same umbrella.

Purely imaginary accounts of discontent or disturbances in various parts of the British Empire have been part of Germany's stock-in-trade for heartening her own people during the progress of the war or for impressing neutrals. The Turks have proved apt disciples of German methods, and the Constantinople Press has contained many picturesque statements of events which never happened. Among these may be mentioned articles on riots in Cyprus, dealing *inter alia* with the supposed discontent of the Moslem inhabitants with British rule. Little attention has been paid to these lucubrations in the English Press, but it may be opportune to state that there has not been the slightest disturbance of any kind in Cyprus since its annexation to the British Empire in November, 1914. The people of the island are peaceful and prosperous, and whether of Greek or Turkish origin have been found to yield a ready and cheerful obedience to the British Government.

From a report which appears elsewhere in this issue it will be seen that the Serbian Society has held a successful inaugural meeting at the Mansion House under the chairmanship of the Lord Mayor. Lord Cromer, the president, made it clear that the society was not animated in any degree by hostility to Italy or the Italians. It is well that the statement should have been unequivocally made, for the point is one that was bound to be raised sooner or later. The Serbian Society very rightly believes in the importance of a united Southern Slav State as a permanent safeguard of European freedom. Another association exists to win support for a united Southern Slav State, and its tenets would seem to be frequently urged without much consideration for Italian susceptibilities. Some people, therefore, might wonder whether the Southern Slav idea was incompatible with a good understanding with Italy. Those who have studied the question impartially hold that there is no reason why a friendly agreement should not be reached between the Southern Slavs and the Italians. The Serbian Society is of this opinion, too, and, although, as Lord Cromer pointed out, it does not aspire to the rôle, or think that Great Britain should aspire to the rôle, of being arbitrators between Slavs and Italians, it does believe in the wisdom of making the British public *au fait* with the facts. A welcome note was struck at the meeting by Sir Edward Carson, who reminded his audience that "when the Allied Powers, after the victory they were determined to win, set themselves to the re-writing of the map of Europe the interference of Germany, Austria, Turkey, and Bulgaria would be eliminated." The point is often overlooked, sometimes, we are tempted to believe, deliberately. So many people imagine that peace terms will be a matter of bargaining, oblivious of the fact that if the enemy is entitled to do any bargaining, the Allies will not have then won the victory they have set themselves to gain.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 12.

The Kourban Bairam Feast.

The Feast of Kourban Bairam, which came to an end yesterday, has passed off quite quietly throughout the country. No reception was held at Alexandria, where the Sultan is still officially in residence, as his Highness spent the holiday on his estates at Gabares. The Ministers and the Sultania Princes proceeded thither on the first day of the feast, in order to present their loyal wishes to the Sovereign, but for the rest of those who are habitually received on this occasion by him a register was kept open at Abdin and Ras-el-Tin Palaces.

The English School in Cairo.

The English School, the proposed foundation of which I announced some little while back, was duly opened on the 2nd inst. Over one hundred pupils have been entered, and this unexpected response has given much pleasure to the promoters, who see in it a good augury for the eventual success of their excellent project.

The Ghaffir Tax.

About a year ago I reported that a Proclamation had been issued by the military authorities ordering all and sundry to pay the ghaffir-cess whenever they were asked to do so, and intimating that any refusal to comply with any such demand would be considered as a military offence, and would render them liable to punishment by a military court, in addition to the usual civil penalties. The reason for this action was, as explained at the time, that the tax, which was intended to meet the cost of upkeep of the ghaffir (night watchmen) force, had never been accepted by the Powers, owing to the opposition set up by Germany and Austria, and that, as foreigners in the towns to a great extent refused to pay the cess, the maintenance of the force had become a serious and wholly unjustified charge on the Government.

No one raised any objection to this expedient for getting out of the difficulty and forcing the persons who specifically benefited from the protection afforded by that force to pay their due share of its upkeep. Unfortunately the Proclamation did not lay down whether the tax had to be borne by, and was therefore recoverable—by means of forced sale of property, if necessary—from the landlord or the tenant. Many disputes have arisen, and it has nearly always happened that the tenant has been forced to pay the tax, often under protest, for the simple reason that his property, *i.e.*, his furniture, etc., was more easily saleable than that of his landlord. The position is so obviously unsatisfactory that it is to be hoped that before long some definite and authoritative pronouncement will be made on the point as to who is liable for the tax. The Proclamation also provided no special machinery for its enforcement under martial law or for the obtaining of redress in the case of wrongful seizure or arbitrary action on the part of the civil authorities who have been entrusted with the collection of the tax. In this connection I would draw attention to the fact that the methods at present employed for distraining the property of defaulting tenants would appear to leave much to be desired, and that it is highly desirable that the native police should not be allowed to have sole control of these operations, especially where foreign residents are concerned.

The New Coinage.

The new coinage has nearly all arrived in the country, and we may soon expect to see it in circulation. Probably its issue will be delayed until the end of this month, as the Mohammedan New Year, the date of which the new coins bear, falls on the 28th inst. Strange to relate, the Indian rupee, which was made currency last March, to meet a shortage, has almost entirely disappeared from circulation. This is not due to the fact that the Government has been withdrawing the rupees preparatory to returning them to India; for I understand that the amount in the hands of the Ministry of Finance is very small. Nor is this disappearance explained by the theory propounded recently by certain "authorities" out here, that owing to the rise in the silver market the rupee, which contained proportionately more of that metal than the Egyptian coins, was being melted down by the silversmiths. I am assured that while the value of the silver in the rupee as compared to its face value is, as a matter of fact, higher than in the Egyptian coins, the rise in the market could in nowise make it worth while to buy rupees and melt them down. The true explanation of this disappearance of the rupee from circulation would, in the opinion of those who are in a position to know, appear to be that the *fellaheen* have taken a liking for the foreign coin, which is certainly attractive in design, and that they are hoarding all they can get hold of instead of taking, as usual for this purpose, the Egyptian silver coins in default of gold.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, October 5.

H.E. the Governor-General and Sirdar arrived from Erkowit on the 3rd inst., accompanied by Lady Wingate and his Staff. He is not expected to return to Erkowit again this year.

Colonel Stack, C.M.G., and Mrs. Stack are expected to arrive at Khartoum from Cairo this mail. Major Moir, the Director of Posts and Telegraphs, is also arriving with Mrs. Moir. Dr. Crispin, the Director of the Sudan Medical Department, is on the same train, as is also Captain Dumbell, of the Slavery Repression Department. Mr. Dun, the Advocate-General, is also arriving from England. Others coming by the same train are Mr. Hussey, Inspector of Sennar, and Mr. Hume, who was previously in the Legation at Addis Abeba, and has latterly been working as Inspector at Gallabat.

The Feast of Kourban Bairam is at hand. There is a succession of public holidays from Friday to the following Wednesday. A levée will be held on the 9th, at the Palace.

The Nile still continues to keep extremely high, although the fall has actually begun. Still the river is now three and a-half feet higher at Khartoum than it was on the same date last year, whilst at Roseires it is as much as nine feet above last year's level.

A swarm of locusts came through Khartoum on the 4th, and caused some damage to gardens.

Prince Waldemar of Prussia left for Constantinople last week on a special mission from the Kaiser. He will present a sword of honour to the Sultan.

A Sofia telegram announces that an ordinary session of the Bulgarian Sobranje has been convoked for October 28.

Some 300 Bulgarian prisoners taken by the Serbs have arrived in Salonika. They appeared to be in good condition, and gave the impression that they were pleased that they had seen an end of the fighting.

SUDAN OFFICIAL MOVEMENTS.

(From a Correspondent.)

Under ordinary conditions a large number of Sudan officials would now be absent on leave; but the few who are away from their posts are granted leave almost entirely owing to medical advice. Sir Reginald Wingate, however, with extraordinary devotion to duty, has not quitted the Sudan since the outbreak of war. His friends would like to see him take a little holiday; for though he shows no sign of weariness or breakdown in health, it is not difficult to imagine even such a sound and vigorous constitution as his feeling the strain of more than two years of constant mental anxiety and burden of responsibility. Sir Reginald Wingate, now in his fifty-sixth year, deserves well of his country, to whose service he has given of his best. There are none among his subordinates who do not deeply respect him, while those who have been brought into more personal contact with him have learned to love him for his brilliant qualities, his personal sympathy, and his profound sense of justice and consideration. Thus the condition of his health is not alone of moment to him, but to all who serve under him.

Mr. S. A. Wood, the Assistant-Director of Forests, as well as his colleague, Mr. S. Skirmunt, the Deputy Assistant-Director, are for leave.

Captain C. McKey, Director of Customs, who has seen over fourteen years' service under the Sudan Government, has recently returned to Port Sudan from absence on leave. Mr. M. F. Simpson, Assistant-Director in the Education Department, is expected to return to duty, after a brief absence from Khartoum, towards the beginning of next month (November). Mr. H. H. King, the brilliant young entomologist under the Wellcome Tropical Research Laboratories, who has rendered such signal services to science by his investigations, especially in connection with tropical diseases, has returned to his post at the Gordon College. He has been absent upon medical grounds.

A considerable number of officials connected with the Legal Department (Kanuni) have been away during the last few months, but the majority of them have either already returned, or will shortly return, to their posts. Among those who are back in Khartoum are Mr. W. Sterry, the Chief Justice; Mr. H. St. George Peacock, a Judge of the High Court; and Captain F. Burgess, the Police Magistrate at Khartoum. Mr. R. K. Winter, a Provincial District Judge, has likewise recently returned, while Mr. G. W. Williamson, a Judge of the High Court at Khartoum, is expected back during the second or third week of November. Mr. B. H. Bell, the District Judge at El Obeid, is due to return to the Sudan a day or so before Christmas. He has been away under medical advice.

Miss C. A. Palmer, Miss M. Wise, and Miss E. Ellison, all of the "Dawa," or Medical Department, have been, and still are, working in connection with the Sudan Nursing Fund, and are stationed at Khartoum.

Dr. H. C. Squires, Senior Medical Inspector of the Sudan, who has been absent for a short period from the country, is due to return to Khartoum early in November. Dr. Squires has been eight years in the service of the Government.

Three members of the Public Works Department—the Director, Major M. Ralston Kennedy; Mr. F. H. Cobb, one of the five District Engineers; and Mr. G. B. Bridgman, the Architect—who have been absent upon medical grounds, are expected back at their various offices during November. Others, including Captain H. Claxton and Captain R. W. Knollys, District Engineers, and Captain Allen Smith, Electrical Engineer, are absent upon temporary duty.

Mr. A. J. C. Huddleston, who has been acting as Governor of the Berber Province during the absence on leave of Mr. C. P. Browne, will return to his post as Senior Inspector of that Province upon the arrival from England of Mr. Browne in the early days of next month. The First Inspector, Mr. E. W. Drummond Hay, who has also been paying a short visit to England, was due back at his post in the middle of this month. Mr. Drummond Hay has over fifteen years' experience of service under the Sudan Administration. Mr. F. P. Osborne, the District Judge of Berber Province, has got back to his work.

Mr. R. A. Bence-Pembroke, a Second Inspector of the Khartoum Province, is doing temporary duty at Nahud, while Captain H. A. MacMichael, the Senior Inspector of the same province, has been temporarily sent to El Fasher, the capital of our newest acquisition—the former Sultanate of Darfur. Mr. J. A. Gillan, an official (Second Inspector), in the employ of the Kordofan Provincial Government, is also at El Fasher, together with Captain F. Atterbury, from the Repression of Slavery Department.

The two Senior Inspectors of the Provinces of the Upper Nile and the White Nile—Captain C. H. Stigand and Mr. V. R. Woodland—are acting as temporary Governors of their respective provinces. During the absence on leave of Colonel R. C. R. Owen, Governor of the Province of Mongalla, his place has been filled by Captain H. C. Smith, the Senior Inspector of the province. Captain Smith has been but little over four years in the service of the Sudan Administration. Colonel Owen has served for more than thirteen years, having joined the Government in June of 1903.

Of the forty odd official members of the Railway Department there have been, or still are, some thirteen absent upon medical grounds, while four are away on temporary duty. Among the first-mentioned have been Mr. A. C. Parker, Superintendent of Accounts; Mr. F. G. A. Pinckney, one of the District Engineers; Mr. H. Walmsley, who fills a similar position; and the Hon. H. G. G. Pelham, the Assistant Traffic Manager.

CYPRUS NOTES.

(From Our Own Correspondent.)

Cyprus, October 9.

Receptions at Government House.

The first of the receptions of Sir John and Lady Clauson, after their return to Nicosia, will take place on Wednesday, November 1, after which they are announced for the first Wednesday of every month, from 4 to 7 p.m., during the winter months.

The Legislative Council.

(1) Non-Mohammedan Elections. In each of the electoral divisions of Nicosia-Kyrenia and Larnaca-Famagusta there are seven candidates for the three seats. In the Limassol-Papho division there are four nominations. (2) Mohammedan Elections. For the Nicosia-Kyrenia division Irfan Bey is unopposed. In the Larnaca-Famagusta division there are three nominations for the one seat, and in the Limassol-Papho division two contest the seat.

The Hellenic Consul.

The Consul for Greece, M. P. Pareskevopoulos, will shortly leave the island to take up an appointment in the Foreign Office at Athens. This Consul has shown considerable activity, having taken a greater part in local Greek affairs than most of his predecessors. There appears to be no need that the post, when vacated, should be filled, as there is but a very small handful of Hellenic subjects in Cyprus. The bulk of the Greek-speaking Cypriots had been Ottoman subjects up to the date of the annexation by Great Britain in 1914. A very few indeed acquired Hellenic nationality, as the Ottoman law which regulates naturalisation is very stringent.

THE SERBIAN SOCIETY: INAUGURAL MEETING.

The Earl of Cromer and Sir Edward Carson were the principal speakers at a meeting held at the Mansion House last Friday to inaugurate the Serbian Society of Great Britain. Other speakers were Mr. Wickham Steed and the Lord Mayor, who presided, while among those present were Dr. R. M. Burrows, Dr. Seton-Watson, and Mr. T. P. O'Connor.

In the course of some remarks opening the proceedings, the Lord Mayor said that the aims of the Serbian Society were educational and constructively political. It desired to bring home to the people of the British Commonwealth a sense of the importance of Serbia as a "key" country to the political structure of Europe, not only the Serbia of the past, but still more the united Jugoslavia of the future.

Lord Cromer said that the Serbian Society might be regarded as a portion of the machinery now being forged over the greater part of Europe, in order to resist the onslaught of Germany, Austria, King Ferdinand of Bulgaria, and the poor, bewildered Turks, with whom he had been associated during the greater part of his life, and who, in spite of the defects of their Government, were a manly and virile race. Sixty years ago the British nation had poured out its blood and treasure in order to put the Turks upon their legs again; but this had been in vain, for the Turks were resolutely determined to commit political suicide. The Serbian Society consisted of people who thought that the best means of securing in permanence the objects for which the Entente was fighting, would be to establish a solid block composed of non-Teutonic people, who would act as an insuperable barrier to Teutonic aggression in the future. The Southern Slavs were adapted to form this barrier. It had been whispered that the Society was latently hostile towards Italy; but he believed its attitude was in the best interests of that country. There was no reason why Italy should not have her natural wish gratified for a naval supremacy in the Adriatic, while at the same time all reasonable aspirations of the Southern Slavs were met.

Mr. Wickham Steed said the Society was not a Southern Slav Society: it was a British one. It held no brief for any extremist view, and was not identified with any programme yet put forward.

Sir Edward Carson said that he was a member of the Cabinet when the Bulgarians began to invade Serbia, and he remembered very well the statement afterwards made by Sir Edward Grey in the House of Commons, that we were prepared to give to our friends in the Balkans all the support in our power in the manner that would be most welcome to them, in concert with our Allies, without reserve and without qualification. But when the Bulgarians entered Serbia we were not prepared to help drive back the invader, and nothing could be more pathetic than the story of the Serbian nation waiting for the British Army that never came. Speaking on behalf of the British Government, he could assure Serbia that her independence was regarded as one of the essential objects of the Allied Powers. Our first duty was to assure her of the restoration of her independence; but even with that Serbia's part in the war would have been in vain if we did not make use of the victory which we were determined to attain to settle the Southern Slav question. He hoped that when we came to redraw the map of Europe we should mould the Southern Slavs into a great unity, whether by federated states or by what other form of government he did not know, but they must be formulated into a complete union. In this settlement Montenegro, the smallest, and one of the first of our Allies, must not be lost sight of.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, October 4.

The Revolutionary Movement.

The details of M. Venizelos' departure from Athens, together with all the leaders of the Liberal Party, are no doubt known to your readers already, and need not, therefore, be recounted here. He has gone to place himself at the head of the movement which alone can save this country, and it is to be hoped he will succeed. His success will depend largely on the development of events in the Balkans, where a favourable turn, dispelling the fears of the German phantom, will give courage to those inclined to hang back. As it is, volunteers and officers are leaving for Salonika every day. But for the strict measures taken by the Government these recruits would have been far more numerous, especially in the Navy. Almost all the commanders of the armoured cruisers have been deprived of their commands, and to make more sure of things, essential parts of the ships' machinery have been removed.

The reservists' leagues, which continue their activities with impunity, have prevented volunteers from departing for Salonika, with the result that the latter have had to apply to the French Legation to protect them when setting out; and this has led to conflicts between the reservists and the French sailors. These reservists, inspired by the Germanophil clique that organised their leagues, seek daily to create "incidents," with the evident object of provoking conflicts with the French, conflicts that would lead up to a disembarkation of forces and an occupation, hoping thus to inflame the Greeks against the Entente, and to prevent the abandonment of neutrality. They also continue to exhort the King to remain firm, stating that they will not take part in the war even if he himself should call upon them to do so. Their activities have been encouraged by M. Rouphos, Minister of the Interior in the Cabinet that has just resigned. M. Rouphos one day ordered the Prefect of Police to give up the keys of the reservists' premises—which had been handed over to him when the Powers ordered the closing of these premises—to the proprietors. Thus the leagues, which had been dispersed, have commenced to act and to meet again regularly. In these circumstances it is not surprising that Admiral Dartige du Fournet has sent an ultimatum to the Greek Government, on the expiration of which he will proceed to a disembarkation in order to deliver the country from its military oppressors.

Fall of the Cabinet.

Thus we see another Cabinet fall, after being in power for barely three weeks. The presence in this Cabinet of M. Rouphos—who had, over his own signature, written articles most insulting to the Entente—and of two other rabid anti-Ententists rendered its recognition by the Entente quite impossible; and the situation was aggravated by the scandalous action of M. Rouphos referred to above. Yet the Cabinet expected recognition by the Entente Ministers, and when the latter failed to accord it, it opened negotiations through the Greek Ministers in Paris and London. The suggestion it put forward was that Greece should declare war upon Bulgaria, after a period to be agreed upon, which should be utilized for the reconstitution of the Greek Army at the expense of the Entente Powers; but should the balance of power in the Balkans undergo such a change in the meantime that Greece's intervention could not re-establish it, or be of any use, Greece should be freed from the obligation to go to war. No reply being vouchsafed to these proposals, the Cabinet next instructed M. Romanos, the Minister in Paris, to sound M. Briand. The latter replied quite frankly that the Entente would only accept Greek co-operation if King Constantine should personally propose to abandon neutrality unconditionally, and immediately proceed to mobilize, and declare war on Bulgaria. The Entente Powers would then be able to satisfy Greek ambitions up to a point, but only on condition that the new policy should be applied by a Cabinet in which they could repose confidence.

The French suggestion, then, debarred the Cabinet from remaining in office. Nevertheless, almost all its members declared in favour of abandoning neutrality; but the King opposed this step, declaring that Greece must have time to prepare her military forces. Such a proposal might have been accepted if the Entente had confidence in Greece, as formerly; but after recent events the Entente could hardly be so simple as to make an advance for the reorganization of the Greek Army, with the prospect of finding itself three or four months later confronted with fresh excuses. The most likely means the intriguers would employ would be to continue to inform the people, as they have been doing up to now, that the abandonment of neutrality was demanded by the Entente. Then, when the general mobilization was declared, the reservists would not respond, declaring openly—as those of Patras have done already—that they would not even obey the King, since the mobilization was forced on the country from abroad.

A Germanophil Proposal.

There are, however, worse things than this which the Entente might fear on the part of Greece, without being taxable with too great suspicion; for it is quite well aware that more than once there has been some idea of attacking its forces at Salonika. In fact, I am in a position to state that quite recently, while M. Kalogeropoulos was in power, M. Gounaris, evidently with the approval of the other members of the clique, suggested that the King should withdraw to Larissa, and that he should assemble in Thessaly an army of from 90,000 to 100,000 men, with which he should attack the Allies in the rear.

One day—it was Wednesday, September 27—that is to say, while the Kalogeropoulos Cabinet was in office, a rumour spread that mobilization had been decided upon; and naturally everybody concluded that it had been determined to abandon the policy of neutrality. But the next day the rumour was denied, and nobody could understand what had actually taken place. Two days later, however, a journal that is usually very well informed announced that the Government had, in fact, decided to mobilize seventeen classes of the Reserve—not, however, to co-operate with the Allies, but in order to deal with the national movement, and to suppress it by armed force. Now, since it is certain that in such an event they would have found themselves confronted by the Allied Fleet, it seems clear that they had determined to follow the plan of M. Gounaris, as indicated above. But as soon as the Entente Ministers got wind of the proposal to mobilize, they notified the Government, indirectly, that such a step would be contrary to the terms of their Note of June 21. Thus the plan was hit on the head. But the incident serves to show the disposition of the Germanophil clique, and whether M. Briand was wrong in counselling Greece to give proof positive of its sincerity.

Vain Hopes.

In point of fact, if the Greek Government had seriously contemplated abandoning its "neutrality," it would have done so long ago. But it is still playing the same old comedy that was begun by M. Gounaris in February of last year. Again, as soon as the Germanophils saw that M. Zaimis was bent upon a policy of action, they stirred up the Reservist Leagues, which, armed with the State's rifles, terrorised the country, to prevent mobilization; and forced M. Zaimis to resign. Now the Kalogeropoulist party, which represents the real Germanophil party (the Theotokists) in Greece, has just declared for a policy of action, as have all the most important generals and political men, with the exception of M. Gounaris and, perhaps, M. Skouloudis; and yet it is pretended that the people do not wish for war. Meanwhile, the members of the military leagues are allowed to prevent manifestations of the popular feeling by indulging in all kinds of excesses in order to intimidate the people.

All indications tend to show that the new Cabinet that is to be formed will continue to play the same old comedy, for the sole purpose of temporising. The only real hope for this country is that the Powers that have protected it up to the present will intervene more energetically, and encourage the national movement at the head of which M. Venizelos has placed himself. Only the success of that movement can save Greece from the Germano-Bulgarian peril.

NEWS FROM SYRIA.

(From Our Correspondent.)

Cairo, October 14.

A young man belonging to a good family in Damascus, who had the courage to seek safety in flight by way of the Syrian Desert, and was helped by the Bedouin tribes in his adventurous journey, has just arrived here. He gives the following account of conditions in Syria when he left it, about three months ago.

The prices of the following articles, then ruling, serve to illustrate the economic distress from which the country is suffering:—A tin of petroleum cost £5, an oke of sugar 2 mejidehs, an oke of grape molasses 20 piastres, an oke of rice the same, an oke of boiled butter 40 piastres, an oke of bread ¼, or sometimes ½, a mejideh, an unprecedented price in the economic annals of Damascus. Electric lamp-bulbs were fetching £1 each, a fact that proves that the much-vaunted Berlin-Constantinople Express did not mark the beginning of an era of economic prosperity for Turkey, as it has thus far been able to cope only with the transport of military requirements. The excessive prices of other articles of import, such as cloth, leather, etc., bear out this fact. Previous reports as to the excellence of the crops are confirmed, but as the Government has prohibited the storing of any quantities under severe penalties, and has taken stringent measures to lay hands on the produce of the land, it is very much feared that famine will continue to prevail.

Gold coins are extremely rare, and whenever seen they are quickly seized by the police and exchanged for paper money, which was steadily depreciating, until, in early June, the enormous fall of 50 per cent. of the gold value was reached. This tends to confirm the reports received from various sources that the Turkish pound in paper money was being exchanged at El Arish for about one-fourth of its value in silver coins.

In order further to drain the pecuniary resources of the country, the Turks are continuing to accept the military exemption tax, but this is now valid for one year only, so that people will soon be paying the tax for the third time if their means admit. The battalion of Dervishes and Kadirieh at Damascus is entrusted with the task of tracking fugitives and searching persons to see whether they are in possession of the proper Government receipts, or certificates of exemption on medical grounds. Those who are found to be not in possession of such documents are bound with ropes and dragged off to the military authorities for investigation and eventual trial. Often well-dressed gentlemen were to be seen led away thus through the streets in company with vagabonds in rags, so that these Dervishes have come to be regarded as the terror of the citizens.

Youths of seventeen, and elderly men up to fifty-five, are now liable to service, and even men of sixty, looking strong and healthy, are compelled to present themselves before the military authorities, who enrol them, if on examination they are found fit for military duty. This may explain the Turkish Government's capacity to send such strong reinforcements to the Bulgarian and Austro-German fronts.

As previously reported, supplies of medicines and drugs are practically exhausted. As, however much the transport of munitions and armament may absorb railway tonnage, sufficient room could always be provided for the carriage of goods that occupy such little space, the only plausible explanation of this shortage is that druggists do not dare to pass any orders for fear of the goods being requisitioned by the military authorities. The consequence is that epidemic diseases, such as typhoid, have been working havoc among the population, whose powers of resistance have been diminished by underfeeding. The informant cited the case of one family, related to him, that alone lost ten of its members from typhoid. The well-known Sheikh Ali el Kuzbari, who delivered the famous oration on the occasion of the Kaiser's visit to Damascus, and who received a special invitation to Berlin after the war, is one of the victims. Cholera had broken out just before my informant left Damascus.

MOROCCO NOTES.

RAISULI'S POLICY.

(From Our Own Correspondent.)

Tangier, October 14.

In the Spanish zone the chief interest lies around the interesting, unscrupulous personality of Raisuli, whose peculiar ability in playing a double or treble game, assisted by circumstances, has once more gained for him a position of some importance.

In the course of the operations undertaken during the summer by the Spanish forces to open up communications between the Laraiche and Tetuan districts, and, if fortune favoured, to subdue the tribe which occupies the country immediately opposite Gibraltar, a large part of the fighting fell to the lot of Spain's ally, Raisuli. When the little campaign came to a seemingly premature end Raisuli remained in possession of the chief part of the modest success obtained—the control of the most important part of the Tangier-Tetuan road, opened once more to traffic. This fact, in addition to his other present advantages, Raisuli evidently intends to turn to the best possible advantage, and he is now in various ways emphasising the value of his services to Spain and his ability, if he wish to exert it, to adopt independent action.

Strengthened by assistance received from Spain; with a certain number of men enlisted for the service of that country, but obedient to his orders; the only man who seems able at present to induce the tribes to take combined action in any direction; the recipient, it is believed, of large subsidies from the German agents who swarm in the Spanish zone—subsidies which, whatever their object, he will certainly use as suits him best—he no doubt believes that he has before him a fascinating choice of courses. He appears to be weighing the advantages obtainable from Spain against those which an attempt to make himself the independent ruler of the tribes which refuse to accept Spain's domination might procure. His lineage and the importance attached to it by the tribes greatly increase the strength of his position. Meanwhile he asserts the right of controlling an important means of communication between Spain's northern and western areas of occupation, and takes every opportunity of flaunting his strength and independence.

In most countries such a condition of affairs might be expected to lead to rapid developments. In the Spanish zone nothing—not even possibilities of disturbance—ever develops rapidly or fully. From time to time events occur which give rise to hopes or fears. The hopes die out, and the fears never become sufficiently acute to lead to energetic attempts at improvement. Fortunately Tangier is not affected by the course of affairs in the Spanish zone, except—and it is an important exception—in its trade and communications with the interior.

"WAKING UP" IN MESOPOTAMIA.

The following extracts are from a letter written by an officer serving in Mesopotamia to a relative. They will be read with pleasure as showing that our forces in that region are by no means disheartened by all the trials through which they have had to pass during the terrible hot season:

"Thank goodness, the cold weather seems near us at last. Our nights are getting cold and the early mornings are beautiful. Our army is waking up again like a huge black bear wakes up from its winter sleep. In our case it is a case of waking out of a deadly dull lethargy caused by the heat. It is an extraordinary climate, this. You literally almost die in summer and gradually recover again in winter. The dying process is not pleasant. On all sides you see men white-faced, thin, worn out and regular wrecks, beginning to put on colour, weight, and cheerfulness. It is something like a flower bursting into bloom. Keenness for work and fighting comes with health, too." The writer concludes with the hope that the Mesopotamia Force may take its "share in the all-round 'bump' which we appear to be giving the Germans."

News has been received that the party sent out to the Dobruja by the Scottish Women's Hospitals has been doing splendid work. The members are nursing the Serbians who joined the Russian Army, when the Russians released them from Austrian captivity.

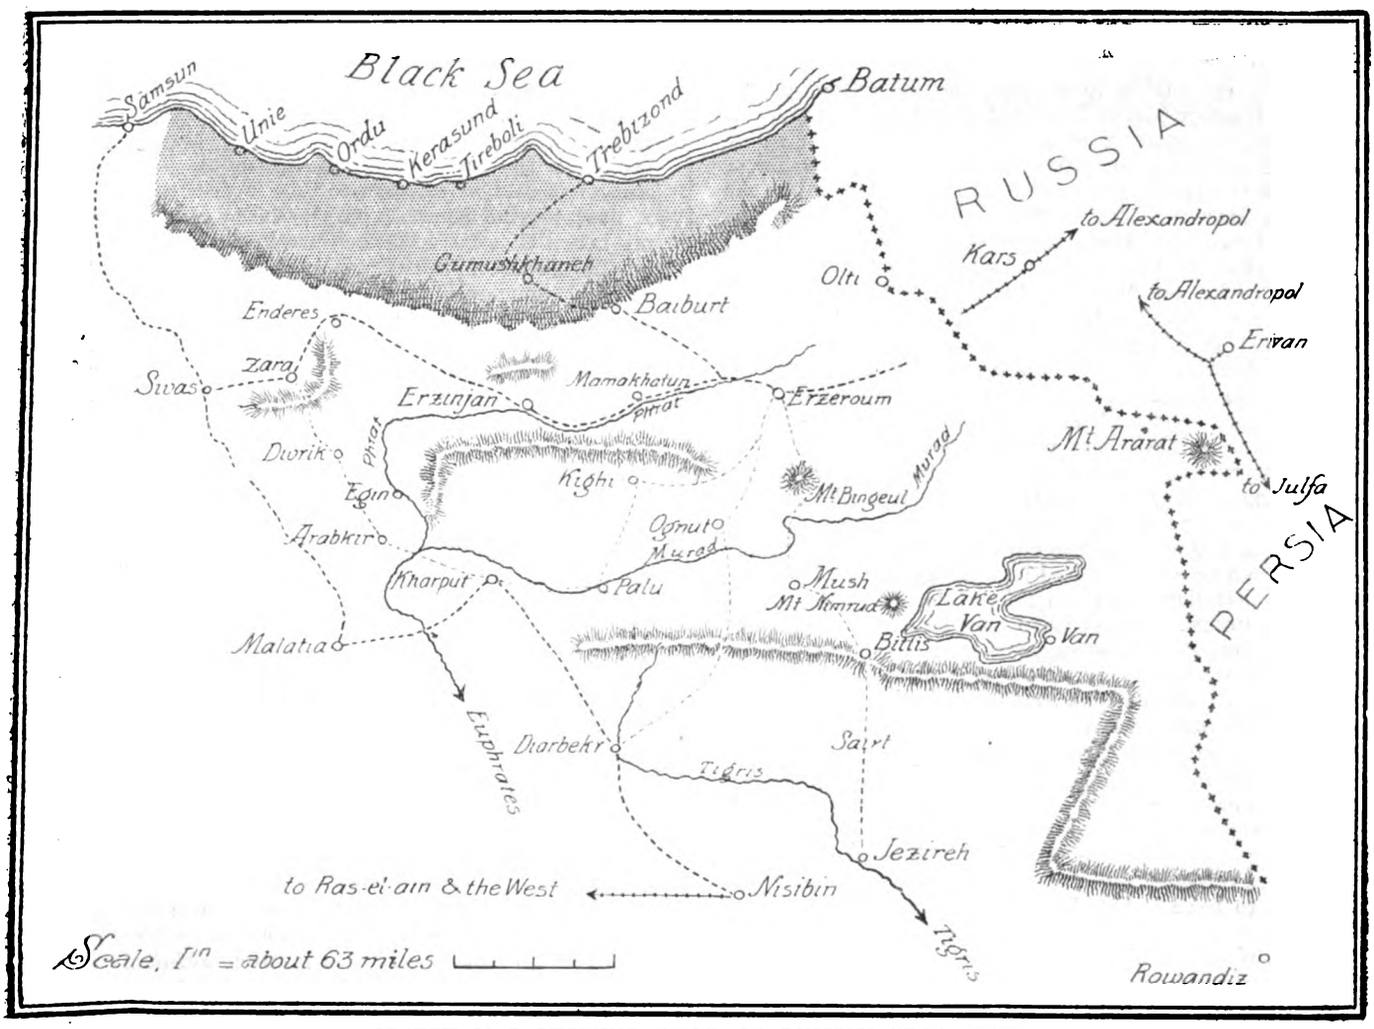
THE RUSSIAN ADVANCE IN THE CAUCASUS AND THE TURKISH COUNTER-STROKE.

(From a Correspondent.)

I.—Operations in the Country of Lake Van and the Basin of the Murad.

The three Empires of Russia, Turkey, and Persia meet where the mountains of Greater and Lesser Ararat rise from a lofty tableland, known on its Persian side as the Iranian plateau, the altitude of which varies from 4,000 ft. to 6,000 ft. above sea-level. Lake Urmi on the Persian side of the frontier is over 4,000 ft. above the sea, Lake Van in Turkey is over 5,000 ft., while in the neighbourhood of Erzeroum the plateau attains a mean height of about 6,000 ft. To the south of the Russian frontier towards Van and to the south-west towards Bitlis and Mush the country is, for those regions, comparatively easy. It is broken and hilly, and great mountains, rising to heights of 10,000 ft. or more, are thrown up from its surface; but amongst the hills lie fertile plains, communicating with each other and extending away to the south to the Armenian continuation of the Taurus range, on the far side of which lie the plains of Mesopotamia. Wheeled transport is in common use in these parts, and the recent news that British armoured cars have been able to operate there with success shows that, even in the absence of made roads, the country is not difficult to traverse in summer. For the protection of his communications it was necessary for the Grand Duke to dominate the plateau country, and to secure the points at which access to it from the plains of Mesopotamia was possible, before the ordinary season for campaigning should begin.

On the extreme east the Van plateau can be approached from Persia, as the frontier hills south of Ararat form no serious obstacle to a force moving from the direction of the Persian Highlands, to which the Turks had access by way of Rowandiz and the passes near that place. (The neutrality of Persia, it need scarcely be said, did not seriously trouble the plans of either of the belligerents.) From Rowandiz westwards the country south of Lake Van is a mass of high and difficult mountains crossed only by rough tracks. This region is well known to the traveller, and has of recent years been regarded with some interest as the headquarters of the Chaldæan Christians; but it is wild and rugged and unsuitable for the advance of large armies. The first practicable pass is that at Bitlis, south-west of the lake, where a narrow and beautiful gorge, through which the Bitlis River flows, leads down from the plateau to the plains. For many years the Turks have been fitfully engaged in the construction of a roadway along the hillsides by the river, and it is probable that the various completed lengths had been linked up into a good through route before the war broke out. At its lower end the pass can be approached either from Jezireh and Sairt to the south (approximately the route taken by Xenophon and the Ten Thousand), or from Diarbekr to the south-west. The town of Bitlis lies at the upper or northern end of the pass, and it was necessary to guard against the risk of Turkish troops debouching from the pass on to the tableland above. Fifty miles north-west of Bitlis, and approached from it by an easy road along the foot of the northern slopes of the hills, lies the town of Mush, at the farther end of a large plain, once covered with prosperous Armenian villages. Mush can be reached from Diarbekr by difficult but not impracticable routes, and fifty miles farther west the Murad, which flows through the plain north of Mush, is crossed by the main route from Diarbekr to Erzeroum viâ Oghnut—a route not likely to be taken by armed forces in winter on account of the height of the passes which it traverses, but apparently quite practicable in summer. To the west of this point the valley of the Murad becomes excessively difficult as far as the neighbourhood of Palu, half-way to the important town of Kharput. No direct advance of the Turks by the valley of the Murad was, therefore, to be feared; but from Palu and from Kharput routes lead to Kighi, some thirty-five miles west of Oghnut, and



SKETCH MAP SHOWING FIELD OF RUSSIAN OPERATIONS

(The shaded portion indicates area in which th ranges run mos Nort and South.

Digitized by Google

thence to Erzeroum. How far these routes may have been improved in recent years we do not know; but the whole course of this campaign in Armenia shows that now as in the past the military mind does not admit the word "impossible" in its calculations. When the armies of the Grand Duke advance in winter into a country hitherto considered unsuitable for military operations at that season; when armoured cars successfully harry the Kurds in their roadless haunts, we must be slow to question the ability of the Turks to place and support large armies in places hitherto described as difficult of negotiation even by the solitary and lightly equipped traveller. We know, too, that it has been in contemplation to improve the communications of Erzeroum with the south, and it is very possible that the movement of troops towards that place from Diarbekr or Kharput is not so difficult as the descriptions of the country would at first suggest.

The position that had to be provided for was, therefore, this. After passing Erzeroum the Russians would be protected on the south by the high range that here borders the valley of the Phrat. But near Erzeroum and east of it their communications would be exposed to attack by way of the Van plateau or of the valley of the Murad—attacks that might come:—

(*a*) Viâ Rowandiz and the Persian frontier.

(*b*) Viâ Bitlis and Mush.

(*c*) Viâ Oghnut and Kighi.

The *communiqués* are silent as to any special precautions taken in the direction of Rowandiz at the time of the dash on Erzeroum. At that season it was probably sufficient to maintain a watch on the passes, and there were no collisions with Turkish troops of sufficient importance to be reported. The main Russian operations in Persia were then far to the south, in the country round Ispahan, Hamadan, and Kermanshah, whence the Turk was being gradually driven towards his own frontier. This tract is outside the area on the sketch, but as the operations were connected with those in the north, and are of interest to us from their bearing on our own position in the Tigris valley, a short digression may conveniently be made to note the main dates and incidents. Russia has already in the war shown a chivalrous readiness to accept risks for the assistance of her Allies when in difficulties, and it is only reasonable to assume that in acting on the Persian frontier east of Baghdad one of her motives was to relieve the pressure on our expedition in the valley of the Tigris, and to impede the retreat of the Turks should that expedition be successful. In December she occupied Hamadan, in February Kermanshah, and in March Ispahan. Her troops then pushed on from Kermanshah to the frontier, which they reached, at Kasr-i-Shirin, on May 10, too late unfortunately to affect the situation at Kut, which had fallen in the end of April. It is improbable that this move was more than a demonstration; though had we been able to advance on Baghdad we should doubtless have been joined there by the Russian light troops, a party of whom, making their way through the much more difficult country to the south, rode into General Gorringe's camp about May 20. This dashing exploit—for the distance, either from Kermanshah or from Kasr-i-Shirin to Kut, is 150 miles as the crow flies—is a fine example of what can be accomplished by a hardy body of cavalry, skilfully handled, ready to take risks, and able to live on the country. It may have been of no military value in itself, but its success suggests that had our organisation in Mesopotamia allowed of an equally enterprising use of the excellent light cavalry of India, the Turkish commander might have been seriously alarmed for the safety of his communications.

With the fall of Kut the balance of power in south-western Persia turned against the Russians, and there was no longer any reason for the maintenance of their exposed position on the frontier. They withdrew, or were forced back, and in the end of June the Turks claimed to have inflicted on them a severe defeat near Kermanshah, and to have compelled the abandonment of that place. This news was substantially accurate; and a further Turkish advance followed on Hamadan, the Russians being apparently driven to the north of that place. In August Russian military critics considered that the Turkish offensive in these regions was at last exhausted and on the point of collapsing. The truth may, perhaps, be that the Russians had now no important military object to gain in the south, and that some withdrawal of their troops was desirable to cope with a Turkish advance further north. The Turkish advance has been checked, but the latest accounts give no indication of its collapse, and fighting still goes on to the north of Hamadan.

This digression has taken us far from points (*a*), (*b*), and (*c*) mentioned above; and it is now proposed to deal with these in turn.

(*To be continued.*)

ISLES OF PEACE.

In the cold, terse phrases which are characteristic of our official reports of battle, the Secretary of the War Office announced the capture of 175 Senussi and much material of war this week. The operations which resulted in these captures were undertaken from the Oases of Dakhla and Baharia in the Libyan desert. Thus it comes about that after many tranquil years of peace the tide of war has risen at the bidding of a modern Attila to flow over those fair lands. In the olden days these jewels of the Libyan desert were the object of frequent attacks by roving Arabs, but more recently they had fallen upon easy times, and, although the veiled authority of the Senussi was always with them, their people and their days were secure and prosperous. Far from the valley of the Nile, until recent years the only communication with these oases was by way of the old caravan route across the desert, a tedious journey, and one seldom attempted by the majority of their inhabitants. It was sufficient to them that the harvests were good and plentiful; for news of the outside world they cared little; they were content to live and die in the limited fields of green which flamed like emeralds in the vast of the desert's gold.

A few years ago, however, an enterprising Westerner conceived the idea of connecting the Libyan Oases with the valley of the Nile by railway, and a company was formed for this purpose and for the development of the Great Oasis of Kharga. The railway, which presented considerable engineering difficulties, was eventually constructed, and it altered the whole character of the oases at one stroke. Even after this railway was built, however, the Senussi continued to levy taxes upon the people in the teeth of the Government. An amusing story was told in relation to this fact a few years ago. A business-like Sheikh from the valley of the Nile, having heard that his credulous brethren of the oases were in the habit of contributing to the treasury of the Senussi, journeyed to Kharga by train, and proceeded to collect taxes in the name of the great Senussi himself. That he got away with his spoil was the merest matter of luck, for as his train steamed out of the station on his return journey, the legitimate tax-collector of the Senussi rode into the town from the opposite direction!

The Oasis of Kharga itself is a place of considerable historical interest, for it was to this distant place that Nestorius was banished in the early days of Christianity, and the town still possesses some remarkably well-preserved remains of what is reputed to be one of the earliest Christian cemeteries in existence. From the valley of the Nile the railway follows a rising track for many miles, after which it traverses a desolate plateau for some distance before descending through the wild and rocky gorges which lead to the oasis. How well the oasis is hidden may be gathered from the fact that when the railway was in course of construction a surveyor, missing a few of the survey pegs ahead, passed the entrance to the gorge by a few yards, and was lost for hours in the barren desert beyond. The entrance to this gorge, wild and magnificent as it nears the oasis, was barely ten yards in width at the point where its first cleft opened from the Libyan desert to lead to the fertile valley below. The village of Kharga is for the most part constructed beneath the ground, although latterly other houses have been built in the ordinary way above the surface. The sub-terrestrial character of the former

Digitized by Google

dwellings was made necessary by reason of the raiding Arabs, to which allusion has already been made, and despite the advent of the railway with its civilising influences, the place was, until quite recently, one of the most primitive and attractive spots in all Egypt.

Change, however, has come suddenly, and the group of oases of which this is the chief has now seen warfare in its most up-to-date guise. It is strange indeed to think that the inhabitants of this remote spot have seen more of war and destruction than many of us who dwell in Europe. Notwithstanding the terse sentences in which we are informed of this latest little battle, we are given an insight into its conditions; and we know that the latest appliances of war have been pressed into the service of our fighting men side by side with the famous Camel Corps. Armoured cars, we are told, operated with the Camel Corps to sweep the oases clean. Armoured cars—devils to pant with stinking breath side by side with the ancient ones of Egypt. It is not a new picture in this war, but its strangeness is enhanced by the surroundings in which this latest combat was staged. One can imagine our Camel Corps fighting sternly to a finish with hordes of well-mounted Senussi; one can accept the rifle and even artillery as legitimate to warfare in the desert Isles of Peace; but the motor-car is too much. And yet, perhaps, some day our children's children will read of this encounter, and, comparing it with incidents of their own day, will cry that romance is dead. Mr. Kipling has shown us how to-day regards the romance of yesterday; it may be that steel-proof cars spitting death across the desert may one day seem the acme of romantic warfare.

NEAR EAST BOOKSHELF.

THE SORROWS OF SERBIA.*

The special correspondent of the *New York Tribune*, whose adventures and misadventures in the Balkans last year are here recounted, was seldom near enough to the fighting line in Serbia to describe from his own observation the engagements that resulted in the rout of King Peter's army. He arrived at Nish from Salonika early in October, and was there when Mackensen forced the passage of the Danube and occupied Belgrade. He stayed at Nish till October 12, if not longer, by which time the Bulgarians had crossed the frontier. As soon, indeed, as the German plan of operations became clear, he determined to make an effort to reach the battlefield on the Danube front; but after watching from a hill near Palanka the enemy beginning to pour into the Morava valley, he hurried back to Nish, being anxious, we gather, about the safety of his baggage. The only important intelligence he obtained on this occasion was given to him, during the return journey, by a Serbian officer. It is much the same with his descriptions of the fighting which followed. As often as not he was looking for his baggage, and he was always a considerable distance from the localities where a rearguard action was being fought. What he has to tell, therefore, about the retreat of the Serbians to the Albanian frontier is based on what other people saw. He was at Pristina when, early in November, in a forlorn hope, they attacked the Bulgarian lines in the Katchanik Pass; but he was not allowed to accompany the troops. During the retreat through the Albanian mountains he travelled for the most part with the Headquarters Staff; and though his experiences of the hardship and perils of the way were disagreeable enough, they probably afford only a faint indication of the awful sufferings and losses undergone by the bulk of the army.

The fact is that, like the majority of special correspondents during the first two years of the war, Mr. Gordon-Smith could relate little, so far as the actual operations are concerned, beyond what he heard, or what he inferred from the information given him. Nevertheless, his narrative may prove to be at once the most trustworthy as well as the most circumstantial history we shall have, for some time to come, of the disaster that befell the army and nation of Serbia. Its accuracy is guaranteed by M. Boshkovitch, who has written a preface to the book. This well-known diplomatist, described in the text as the present Serbian Minister in London, and on the title-page as having formerly held that position, fully endorses the author's vehement denunciation of the attitude of the Allied Powers toward Serbia up to the time of the German invasion. When on his way to the Balkans from Switzerland, Mr. Gordon-Smith saw the Greek Minister to the Italian Court, who assured him as a positive fact that Bulgaria was pledged up to the hilt to Germany, and was preparing night and day to join her in arms. Yet the Greek Government, he said, were told by the Allied Powers that Bulgaria, the most loyal and upright nation in the world, would most certainly support their cause. "We know," said M. Coromilos, "that the contrary is the case; but MM. Sazanoff, Delcassé, and Sir Edward Grey turn a deaf ear to all we say." This was in August, 1915. Ten days later M. Venizelos, when the author called on him in Athens, confirmed every word of his colleague's statement. What is more, the Greek Premier, as he was then, spoke of the Allied Powers as dragging on negotiations with the worst enemy of Greece and Serbia when, he declared, a child might see that they were being fooled by the wily Radoslavoff and his German-born sovereign. Mr. Gordon-Smith evidently thinks that our Foreign Office ought some weeks earlier to have perceived that it was being hoodwinked. It was in July, 1915, according to his reckoning, that Serbia, convinced of the imminence of a renewed onslaught by Austria, now actively backed up by Germany, appealed to the Allies for military aid. All they could do, we are told, was to say they would get Bulgaria to assist her neighbour; and from this moment, the author maintains, must be dated the worst military and diplomatic blunder perpetrated by us and our partners. Curiously enough, however, what he styles "the crowning error" was still to come. Directly after the Bulgarians began mobilising, the Chief of the Serbian Staff telegraphed to London, Paris, and Petrograd begging for permission to invade Bulgaria straight away, and the Allies put a veto on an adventure which, in the author's judgment, might have been carried through with ease and success. Having thus, he writes, tied the unfortunate Serbia hand and foot, the Allies looked on helplessly while the Central European Powers and their Bulgarian accomplice proceeded to cut her throat.

All this, however, does not bring us any nearer to a final solution of questions that were so hotly debated a year ago in Parliament, on the platform, and in the Press. Nor has the author attempted to review, in the light of such evidence as he collected in the Balkans, the statements made by Mr. Asquith, Viscount Grey, and other Ministers, when the action or inaction of the Allied Powers was first challenged. His book contains nothing in the shape of documents or other authentic testimony that would add weight to adverse criticism of their policy or dispose of arguments in favour of it. Nor will it be thought, perhaps, that this is altogether an opportune moment for reopening the whole controversy; least of all for reiterating charges which can neither be proved nor disproved till all the material facts are disclosed, as they certainly will not be as long as the war lasts

A LEVANT COMPLAINT.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—In his sympathetic review of my book "The Truth About the Dardanelles" your reviewer refers to that dreadful stomach complaint, which was so prevalent at Gallipoli, as one familiar to those who have lived around the Levant. I confess I was very interested and surprised at his assertion that visitors invariably suffer in this way during the first year. As this point is so important—how many conflicting medical terms and explanations there were I have shown in my book—perhaps he will tell us a little more about it.—I am, etc.,

SYDNEY A. MOSELEY.

Sunday is the birthday of the Queen of Roumania, who is a daughter of the late Duke of Edinburgh, and was born in 1875.

Sir Henry McMahon, British High Commissioner in Egypt, left Alexandria for Cairo on the 11th inst., accompanied by the officials of the Residency. An official farewell was held at the Bab el Gedid station, and on his arrival at Cairo Sir Henry was met by General Sir Archibald Murray, Lord Edward Cecil, and many members of the diplomatic body and Ministry.

Lady Maxwell, who is still in very delicate health, has returned to 7, Grosvenor Place from the Royal Hospital, Dublin.

Sir Ronald and the Hon. Lady Graham arrived at 28, Bruton Street, on Monday, from Cairo.

Prince Bibesco, of the Roumanian Legation, left London last week for Marlow.

Princess Zoe Sturdza has left for Bucharest, where she purposes helping in hospital work.

Our Bucharest Correspondent informs us that Lady Barclay and Mrs. Rook Carnegie are working in the Roumanian Military Hospital there.

Prince Nicholas of Greece left London on Wednesday for the Continent.

H.E. the Serbian Minister and Madame Yovanovitch have now taken up their residence at the Legation.

A marriage has been arranged, and will shortly take place, between Lieutenant E. A. C. Lloyd, Yeomanry, the eldest son of Ernest O. Lloyd and Mrs. Lloyd, of 68, Warwick Square, and Charlotte Edith Annette, second daughter of Vice-Admiral Ernest T. Troubridge, C.B., C.M.G., and the late Mrs. Troubridge.

Lewa J. F. Carroll Pasha, Principal Medical Officer, Egyptian Army, who was slightly indisposed, has completely recovered, and has returned to Khartoum.

In a Supplement to the *London Gazette*, issued on the 19th inst., it is announced that the King has given orders for the following promotion:—To be K.C.B., Major-General Charles Vere Ferrer Townshend, C.B., D.S.O.

Lieutenant-Colonel Sir Percy Z. Cox, K.C.M.G., K.C.I.E., who is mentioned in General Sir Percy Lake's despatch as one of the political officers whom he desires to bring to special notice for services rendered in the course of the operations in Mesopotamia from January 19 to April 30, has an extraordinary and intimate acquaintance with the Persian Gulf region and its somewhat involved politics. He has served as Consul at Muskat and as Consul-General at Bushire; and since the beginning of the operations in Irak he has rendered invaluable services with the forces.

Lieutenant-Colonel S. G. Knox, C.I.E., another "political" officer mentioned by General Lake, has also served at Muskat and Bushire. He was at Muskat from 1911 to 1914, and was sent to Bushire in 1914, as Acting Consul-General.

Mr. H. R. Dobbs, C.I.E., a third "political" mentioned in the same despatch, entered the Indian Civil Service in 1892. He was appointed Consul-General at Baghdad in 1914, but was prevented from taking up the duties of his post by the outbreak of war with Turkey.

Mr. R. W. Bullard, also mentioned by General Lake, was Acting-Consul at Busreh when war broke out with Turkey. He did good service there in very difficult circumstances, winning golden opinions from all the British community. He had previously served at Beyrout, Bitlis, and Erzeroum.

A correspondent writes:—The British colony in Baghdad—or formerly in Baghdad—has done its share in this war. In addition to Lieutenant-Commander C. H. Cowley, R.N.V.R., whose fine service and brave death have already been chronicled in THE NEAR EAST, General Lake included in his list of "special notices," Sub-Lieutenant R. Cowley, R.N.V.R. Then in the list forwarded by General Townshend of those who performed distinguished services during the defence of Kut-el-Amarah one notices with much pleasure the names of three "civilians with the force": Mr. T. D. Cree, of Messrs. Blockey, Cree, and Co., Mr. A. W. M. Tod, of Messrs. Lynch Bros., and Mr. T. Dexter. Unless I am very much mistaken, the last-named formerly served in the old R.I.M. Comet as an engineer. All three of these gentlemen had a knowledge of the country and of the Arabs that must have been very useful to General Townshend, and it is pleasant to see their names on such a list.

A service in memory of Captain George Ronald Lane, Adjutant, Coldstream Guards, only son of Major-General Sir Ronald Lane, formerly G.O.C. in Egypt, and Lady Lane, was held on Saturday at Kelsale parish church, Suffolk. Captain Lane was born on February 27, 1894, and spent much of his boyhood in Egypt. He was killed on September 15.

The inaugural meeting of the Serbian Society of Great Britain was held last Friday afternoon at the Mansion House, the Right Hon. the Lord Mayor presiding. Amongst those present were:—The Earl of Cromer, O.M., G.C.B., Sir Edward Carson, K.C., M.P., Mr. J. Annan Bryce, M.P., Mr. R. W. Seton-Watson, D.Litt., Mr. John Buchan, Mr. R. M. Burrows, D.Litt., Sir Arthur Evans, LL.D., F.R.S., the Rev. H. J. Fynes-Clinton, Mr. J. A. Grant, M.P., Lady Grogan, Major-General Sir Ivor J. C. Herbert, Bart., M.P., Mr. H. J. Mackinder, M.P., Mr. Ronald McNeill, M.P., Admiral of the Fleet the Hon. Sir Hedworth Meux, G.C.B., M.P., Mr. H. Wickham Steed, Mr. J. St. Leo Strachey, Mr. Stephen Walsh, M.P., Mrs. Carrington Wilde, Mr. E. Hilton Young, M.P., Lord Henry Bentinck, the Roumanian Minister, the Serbian Minister, Sir Philip Magnus, the Master of University College, Oxford, Dr. C. W. Prothero, Sir Frederick Cawley, Lord and Lady Haversham, Sir James and Lady Frazer, Sir Donald Mackenzie Wallace, Commander Carlyon Bellairs, Colonel Sir J. Roper Parkington, the Right Hon. W. H. Dickinson, Sir John Rolleston, Rev. Hugh Chapman, Sir W. E. Treacher, Sir Henry Dalziel, Mr. Hugh Law, Lord Cecil Manners, Captain Douglas B. Hall, Dr. R. O. Moon, Mr. Arthur Lynch, M.P., Mr. Arthur Serena, and Mr. T. P. O'Connor, M.P. A report of the meeting will be found elsewhere.

Mr. and Mrs. John Ross and Miss Ross are leaving London to-morrow on their return to Alexandria.

The Serbian Minister has written to Mr. Sidney Ball, chairman of the Serbian Committee in Oxford, expressing his gratitude to all those who are taking so much care of the Serbian refugee boys there. These boys, says his Excellency, through the distress of their country, have now the exceptional opportunity of studying in the first University City in the world. He also writes that he was deeply impressed by all he saw on the occasion of his recent visit.

Lieutenant-Colonel E. V. O. Hewett, South Wales Borderers, whose name appears in the list of wounded, had seen service in the Sudan. He rejoined for the war.

The Anglican and Eastern Association, an organisation that seeks to promote a re-union of the Anglican and Eastern Churches, celebrated its tenth anniversary last Wednesday. In connection with this a processional Litany, with prayer for unity, was chanted in the Church of St. Augustine, Queen's Gate. At this service the Roumanian Minister was officially present.

Among the sums received for "Our Day" at the headquarters of the British Red Cross Society is £8,400 from the British community in the Sudan, the Egyptian and Sudanese officers and soldiers of the Egyptian Army, officials of the military and civil departments, sheikhs and notables, and in fact all creeds and communities in the Sudan.

In connection with the Roumanian Flag Day (yesterday), the following message from Mr. Asquith was received at the organising offices:—

"I cannot doubt that the response to the appeal on behalf of the National Roumanian Relief Fund will bear striking witness to the sympathy and admiration which we feel for our latest Ally, who is fighting valiantly both for the general cause of freedom and civilisation, and for the fulfilment of her own just and historic claim to national unity."

Lieut.-Col. Percy Wilfred Machell, C.M.G., D.S.O., Border Regt., of Crackenthorpe Hall, Appleby, Westmorland, and the Naval and Military Club, Piccadilly, who saw considerable service in Egypt, and who was killed in France while leading his men to the attack on July 1, left property of the value of £23,018.

APPOINTMENTS, PROMOTIONS, ETC.

The *Egyptian Gazette* (October 10) says:—We understand that Mr. Langley, Director-General of the State Domains Administration, has declined the post of Under Secretary of State for Agriculture, vacated by Mr. Haines, who has been appointed Adviser to the Ministry of Interior. In order to induce him to accept the post, the Government suggested to him the transfer to the Ministry of Agriculture of the administration of the 160,000 cultivable feddans which are now being administered by the State Domains Department so as to make his responsibilities greater, but it is doubtful whether he will accept the post even with this condition. In case he declines this post finally, it is thought that the offer will be made to Mr. McKillop, Chief Inspector of the Ministry of Agriculture, who in turn would be replaced by Mr. Hopkins, Inspector at the Ministry of Finance.

The governing body of the School of Oriental Studies, London Institution, have appointed Mr. Edward Denison Ross, C.I.E., Ph.D., to be director of the school. Dr. Ross, who is forty-five years of age, studied Oriental languages in Paris and Strassburg, and has travelled extensively in the East. For several years he was principal of the College for Moslem Education in Calcutta, and he has held important positions under the Government of India.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.

Our Cyprus Correspondent writes (October 9):—

During the absence of Mr. Thorne, President of the District Court, Larnaca, his place will be filled by Mr. A. L. S. Stuart, Judge at Limassol.

During the absence on leave of Mr. Bros, President of the District Court of Kyrenia, the duties of judge in that district will be carried out by Mr. J. R. Holmes, who presides over the Nicosia District Court.

Colonel Tartarinoff, the Russian Military Attaché at Bucharest, has been appointed Russian Delegate with the Roumanian Staff; and Staff-Colonel Politzine has been appointed Military Attaché in his stead. Commander Zarine is appointed Naval Attaché.

Miralai J. R. Bassett Bey, Governor Upper Nile Province, and Miralai N. B. de Forth Bey, Officer Commanding Arab Battalion, have been struck off the strength of the Egyptian Army on reversion to their British units. They have been granted the Order of the Nile (Third Class), on the occasion of their retirement.

Mr. F. C. C. Balfour, Inspector Nuba Mountains Province, has been transferred to Kassala Province.

Mr. T. A. Leach, Inspector Khartoum Province, has been promoted Senior Inspector and transferred to Kassala Province.

Mr. Norman Wilkinson, Inspector, Repression of Slave Department, Sudan Government, has been retired on pension and replaced by Mr. Aylmer Wylly, Commandant of the Red Sea Province Police. Mr. Wylly will continue to perform the duties of Commandant of Police at the same time.

Bimbashi (temporary Kaimakam) H. S. Hearn, Department of Ordnance, Egyptian Army, has been confirmed in his temporary rank from July 16, 1916, and has been granted the temporary rank of Miralai.

Bimbashi E. D. F. Gee, Artillery, has been promoted to the rank of Kaimakam. He has been appointed second in command, Artillery.

Bimbashi H. T. R. S. Wright, 14th Sudanese, has been transferred to the 13th Sudanese.

OBITUARY.

Sir Henry Benbow, K.C.B., D.S.O., died last Friday at Osborne House, Eastbourne, aged seventy-eight. He entered the Navy in 1861, as an Assistant Engineer, and rose to Chief Engineer in 1879. He served with the Naval Brigade in the Gordon Relief Expedition, 1884-5, and received the medal and bronze star. When the Safia's boiler was disabled by a shot from Wad Habeshi Fort he effected repairs under a heavy fire. For this service he was thanked personally by Lord Wolseley, who presented him with a silver cigarette case as a mark of appreciation of his courage and resource; and was mentioned in despatches.

A correspondent writes:—"The many friends in this country of the Rev. Marcellus Bowen, D.D., and Mrs. Bowen, of the American Bible House, Stamboul, Constantinople, will grieve to hear of the death of Dr. Bowen at Vevey, Switzerland. He was seized with paralysis on October 2, and never regained consciousness, passing away on October 4, after forty-eight hours' illness. Dr. Bowen was beloved of all who knew him for the sweetness and geniality of his disposition, for the charm and graciousness of his manner, for his unselfish devotion to duty, and for his warm-hearted loyalty to his friends. The hearts of all will assuredly go out with loving sympathy to Mrs. Bowen and her daughter, Mrs. Ferguson, in their overwhelming sorrow."

A telegram from Teheran states that M. Mornard, the former Treasurer-General of Persia, has died of appendicitis.

M. Jacques Joseph Mornard, whose death at Teheran is reported, became Treasurer-General for Persia in June, 1912. Along with other Belgian subjects, he had previously been employed in the Persian Customs Department, of which he rose to be Administrator-General. On Mr. Morgan Shuster's retirement from the agitated field of Persian politics, the British and Russian Ministers, Sir George Barclay and M. Sazanoff, strongly recommended M. Mornard for the vacant post; and the Regent ultimately sanctioned the appointment, though six months elapsed before it was officially announced. With the American financial expert M. Mornard's relations had been strained almost to breaking point; but as the Belgian Administrator-General of Customs had a long experience of local conditions, whilst Mr. Morgan was new to the country, it is probable that, as often as they differed, the older hand was in the right.

On becoming Treasurer-General M. Mornard strengthened the European element in the supervising staff of his new department, and was not content till there was a Belgian controller of finance at all the chief centres of the administration. One result was that the inland revenue during his first year of office showed an increase of over 40 per cent. His position, however, was a difficult one, for it was no simple matter to satisfy the needs of the Persian Government and at the same time to administer the finances in accordance with principles regarded as vital by Great Britain and Russia. In July, 1914, M. Mornard resigned the Treasurership, although under the terms of his contract he might have held it three years longer. That he could have put Persian finance on a firmer footing during the troubles which, since his retirement, have distracted the country is not at all likely.

Captain J. A. Mereweather, who was killed in action on September 30, was a member of the firm of John Peel and Co., Minia, Egypt. In January, 1915, he worked for a short time with the Canal Transport Corps, after which he came home and obtained a commission in the Rifle Brigade. He was the son of Judge Mereweather of Sydney, Australia, and was trained for the Bar.

The death is reported as having taken place at Gambela, on September 25, of Mr. G. W. Dawson, of the Customs Department. He joined the Sudan Government in 1912.

A Reuter's message from Bombay announces the death there on Monday of Sir Jacob Sassoon, chief partner in the well-known firm of D. Sassoon and Co.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

KNABENSHUE.—On October 6, at the American Diplomatic Agency, Cairo, the wife of Paul Knabenshue, American Chargé d'Affaires, of a son.

MARRIAGES.

AGIUS—NOEL.—On October 21, at St. Dominic's Priory, Haverstock Hill, N.W., Captain Arthur J. Agius, son of Mr. and Mrs. E. T. Agius, 3, Belsize Grove, Hampstead, N.W., to Evelyn Violet Marie (Dolly), younger daughter of the late Ludovic Henri Noël and Madame Noël, "Pavelly," 45, Compayne Gardens, Hampstead, N.W.

EDMONDS—JOHNSON.—On October 19, at the British Consulate, Alexandria, subsequently at All Saints', Ramleh, William Stanley Edmonds, of The Levant Consular Service, son of Mr. and Mrs. Charles Edmonds, of Lymington, Hants, to Alice Lindo Johnson, daughter of Mr. and Mrs. Edward Johnson, The Mount, Beer, Devon.

DEATHS.

ALDERSON.—Accidentally killed during bombing practice, on October 19, 2nd Lieutenant the Rev. Alexander George J. Alderson M.A., Machine Gun Corps, youngest and dearly-loved son of the late Dr. Alderson and Mrs. Alderson, Aboukir House, Bournemouth, aged 36. Formerly master at Sherborne School.

HOOD.—Killed in action, on October 12, Second-Lieut. T. Hood, Suffolk Regt., formerly of Gharbieh Land Company, Egypt.

We regret that two printers' errors crept into the paragraph which was published in these columns last week referring to Second-Lieutenant C. J. Buch. Lieutenant Buch's name was Justus, not Justin; and it was in Cairo, not in Paris, that he spent eight years before coming home to England to join the Army.

On and after Monday, October 30, the address of the Wounded Allies Relief Committee, Sardinia House, Kingsway, W.C., will be changed to 8, Grosvenor Gardens, S.W., kindly lent to the Committee by Lord Ilchester.

"Domestic Life in Egypt—the Home of the Bey," will be the subject of a lecture to be given by Syed Ehsan El-Bakry on Monday evening, December 11, before the Société Internationale de Philologie, Sciences et Beaux-Arts, at 39, Upper Bedford Place, London, W.C. In January next he will speak before the same society on "Glimpses of Arabic Poetry."

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.),
Alexandria.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
Glymenopoulo, Ramleh.
This Hotel is situated near the Beach.
Open all the Year. Bathing Cabins.
Terms from:
Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.

Open all the Year R and—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
For Summer Season—
PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine.
Moderate Terms.
Excursions to Mount Troödos.

For Tickets and further Particulars, apply to
NAJEM HOURY & SONS,
LIMASSOL, CYPRUS,
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.
Head Offices and Central Stores: LIMASSOL.

CRITICAL DAYS IN ROUMANIA.

The military situation in Roumania is critical. The force under von Mackensen, following up an offensive launched only a few days previously, has been able almost at one sweep to occupy the railway from Cernavoda to Constantza. Our Allies, realising in time the seriousness of this new menace, at once evacuated Constantza, and in so doing, we may hope, were able to withdraw all or most of the stores of grain and oil which at ordinary times are to be found there. The loss of Constantza is without doubt a blow to Roumania; still more so is the loss of the bridgehead guarding the Cernavoda viaduct and bridge, the great work, eleven miles in length, which carries the railway across the two principal channels of the river and the low-lying ground on either side. Apart from the monetary loss entailed in the destruction of this magnificent enterprise—the bridge over the main channel is 750 metres long, and with the other bridges and viaducts cost £1,400,000 to build—the interruption of access to the Black Sea by this route must prove a considerable handicap to Roumania for some time to come. Moreover, we must not ignore the fact that von Mackensen's thrust is liable to gain in importance the more it coincides with von Falkenhayn's advance over the Carpathians. The number of passes into which the Austro-German forces have penetrated has grown during the last few days. They have not yet emerged on to the foothills below; but the tendency of the Roumanian army seems to be to give ground. Its valour and fighting capacity have already been established, and it can be relied upon to achieve all that is humanly possible. Its lack of success in the Carpathians points to its being outmanœuvred rather than beaten in actual encounter. We must, therefore, wait for the strengthening of the Roumanian General Staff that has now taken place to be reflected in our Allies' strategy.

In the meantime we shall do well not to lose sight of the services which Roumania has rendered to the Allied cause. It is true that strenuous efforts have now to be made to rescue her from a precarious position, but during her eight weeks' campaign she has attracted to herself not only large numbers of the enemy, but also two of Germany's most prominent leaders, von Falkenhayn and von Mackensen. Her entry into the war has caused these troops to be withdrawn from other fronts, or has depleted to a corresponding extent the enemy's reserves. It may be difficult for the moment to trace the effect of this movement of troops in other theatres; but even if they were all taken from the eastern front, where the approach of winter may allow the German positions to be held with reduced strength, these men cannot well be drafted back again, and that front or another remains weakened for the next advance on the part of the Allies. Moreover, the end of the Roumanian campaign is not yet. The greater the preliminary success of the enemy's thrust the more he will stand committed to an enterprise which must still further drain his resources. Up to a certain point the Roumanians do well to fall back before von Falkenhayn and von Mackensen, provided they exact some toll upon them for their advance and have strong positions ready for defence in the rear. By this strategy the tendency of the attack must be to lose its vigour as its lines of communication lengthen. But Roumania, on the other hand, is not Russia with unlimited territory that can be evacuated without exposing any vital part to the enemy's occupation. Less than two hundred miles separate one section of von Falkenhayn's troops from von Mackensen, or about twice the distance the latter has penetrated into the Dobruja. But between the two enemy forces flows the Danube, and is to be found the whole strength of Roumania, which has been only slightly impaired by having to yield ground to superior numbers. The battleground in this part of Europe is essentially open, in the sense that it is not dominated by unbroken lines of strongly fortified trenches confronting one another. Fluctuations in the battle-line can be brought about in a short space of time. For this reason the tables may yet be turned on von Mackensen's troops without the lengthy preparations which are required for a successful offensive on the eastern or western fronts.

The Roumanians add to the obligations under which the Allies remain to them by meeting their reverses in a spirit of quiet and dignified confidence. It is typical of the splendid *camaraderie* of the Allied countries that they should feel more anxious for one another than they would for themselves in similar circumstances. There is no need, however, to exaggerate the feeling and thereby hearten the enemy with the belief that he has now found out where he is most dreaded. By her entry into the war Roumania showed that she had satisfied herself that the Allied cause must triumph in the end. Temporary reverses on the field of battle, even when she is the victim, will not avail to shake her assurance; for she knows that, whatever may happen to the Roumanian army, the final verdict of the war will be recorded by the Allies on German soil. In these circumstances the peoples of the Allied countries will be content for the time being with the official declaration that all necessary measures have been taken to enable the Russo-Roumanian army to maintain its freedom of action and continue its resistance. The British public has shown its readiness to shoulder its responsibility to its new Ally by setting apart a day for the needs of the National Roumanian Relief Fund. London's Roumanian Flag Day was observed yesterday. The fund was started in Edinburgh, when Roumania intervened in the war, for the purpose of presenting motor-ambulances and hospital equipment to Queen Marie, a daughter of the Duke of Edinburgh. It has grown into a general Relief Fund, subscribed by the people of the United Kingdom. The association with the movement of Queen Marie serves to call attention to the special ties which bind the Roumanians to Great Britain, apart from their association in a common alliance. From the time of her first arrival in her adopted country Princess Marie of Edinburgh won Roumanian hearts by the freshness of her essentially English character. She has proved herself no less English in playing her part as Roumania's Queen in the war. All the help that the British can give through her to the Roumanians should strengthen yet more the hold which King Ferdinand and his Consort have on the affections of their people.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

FROM SHIRAZ TO LIBERTY.

(From a Correspondent.)

The arrest of the British Consul and the entire British community at Shiraz having been described in a previous article, it may interest some readers to follow their subsequent adventures. It was on November 10, 1915, that they left Shiraz, and they arrived at Borasjun on November 17, after an uncomfortable and at times somewhat exciting journey. The prisoners, as already mentioned, suffered much inconvenience from having had to pack in such haste and having been able to take so few things with them. Part of their baggage was pilfered by the gendarmes on the road; and these delightful guardians of law and order—and of the "independence of Persia"—did not make the journey any more pleasant for their captives by their conduct at the khans, where the officers appropriated the best rooms to their own use, and left the English, ladies included, to shift as best they could. Nor was it an easy matter for the party to secure provisions.

The most unpleasant incident of the journey occurred at Kazerun, where the travellers arrived three days after leaving Shiraz. This place had a not entirely enviable reputation, and on this occasion it acted up to it. Large numbers of people had assembled on the road outside the town to witness the arrival of the party; and it soon became apparent that the mob was "out for fun" at the expense of the prisoners. As the cavalcade proceeded there was a good deal of yelling and shouting, in which the women certainly did their full share; and gradually gaining courage from the sound of their own voices, the roughs closed in on the procession, and indulged in a good deal of horseplay. The *kajavehs* in which the ladies of the party were travelling came in for particular attention, but though one of the ladies was old and in very indifferent health, while the two daughters of the manager of the Bank of Persia were mere girls, the younger being under ten, the demonstrators did not have the satisfaction of arousing any alarm on their part. The men of the party had every reason to be proud of the calmness shown by the ladies, for the intention to be unpleasant was perfectly obvious; and though, on the representation of Major O'Connor to the gendarmerie, some show was made of keeping the mob in order, it was a very farcical attempt. That the demonstration was organized—on the instigation of the pro-Germans, of course—cannot be doubted. It terminated only when the party reached the quarters allotted to it in the town. Kazerun is like to remain an unpleasant memory for all the members of the party, and in days to come the better-class Persians will probably blush for what took place there on this occasion.

It was at Kazerun, too, that all the horses of the party were commandeered by order of the Committee. This entailed a considerable delay while mules and donkeys were obtained to replace the stolen animals. But the substitutes were forthcoming at last, and on them the party completed the journey to Borasjun. Here another incident of an unpleasant character occurred. The Moharrem Festival was in progress, and the usual processions of excited people were parading the streets, when suddenly, for no particular reason apparently, one of the parties endeavoured to force a way into the prisoners' quarters. Fortunately, the gendarmes, for once in a way realizing their responsibility for the safety of the party, interposed, and the rush was checked.

At Borasjun Herr Wassmuss had been awaiting the party's arrival, and he now announced that the Indian *sowars* were to remain there, while the English, men and women, were to proceed elsewhere. This was, of course, not in accordance with the terms of surrender accorded by the "Committee," but argument was useless, and the prisoners were taken off to a village (Semal) some fourteen miles south of Borasjun. Here the party was split up. The ladies were sent on to Bushire, under escort of Wassmuss and some gendarmes, while the men were marched off to Ahram under an escort of Tangistani tribesmen. Most of the ladies, it may be mentioned, survived their trying experiences; but Mrs. Smith, wife of Mr. Smith, of the Indo-European Telegraph, died shortly after reaching England at the beginning of this year.

At Ahram the men were confined in a building of two rooms, with a courtyard attached, and were closely guarded at all times. In December their number was added to by the arrival of Dr. Azzopardy, and shortly afterwards by that of Mr. Christmas, of the Indo-European Telegraph, and his wife, who had been arrested on the Ispahan road. Mrs. Christmas was forwarded to Bushire, but her husband was detained at Ahram.

At first the prisoners were allowed to take a certain amount of exercise outside their compound, but early in May this privilege was withdrawn, and thereafter they suffered considerably from close confinement. With the advent of hot weather their troubles increased, and several of the party became seriously ill. At the end of April Mr. Pettigrew, of the Indo-European Telegraph staff, died, and six or seven weeks later Dr. Azzopardy was sent down to Bushire, his captors recognizing that his health was so bad that to hold him prisoner longer might prove fatal.

Upon the whole the prisoners were not badly treated. The close confinement and the lack of decent food were their greatest trials. They were supplied with rice and fowls by their guards, and were allowed to purchase milk, eggs, and so forth; while two Persian servants who had accompanied them from Shiraz were allowed to cook for them and generally wait upon them

During this time Major O'Connor had been allowed to communicate with the British authorities at Bushire, and negotiations had been in progress for the exchange of the prisoners, as suggested in the "Committee's" ultimatum. Major O'Connor had also lost no opportunity of endeavouring to inculcate some sense into the two chieftains who were in charge of the prisoners; and though Herr Wassmuss, who was most of the time at Ahram, did his best to nullify the effects of the Consul's diplomacy, he failed. The whole story of that time cannot be told as yet, but it is satisfactory to state that Wassmuss was outmanœuvred.

On August 7 the party was conducted to a point not far from Bushire, escorted by a strong guard, for exchange, as had been by now arranged. But now a hitch arose. One of the Persian prisoners was not forthcoming, owing to some misunderstandings; and for a short time it looked as if all the prisoners would have to return to durance vile. Eventually, however, it was arranged that Major O'Connor should remain as a hostage, in the hands of the Tangistanis, and the other members of the party—five in number—were duly exchanged. Happily, the missing prisoner arrived soon afterwards, and on August 20 Major O'Connor was set at liberty and reached Bushire.

Thus ended a very minor incident of the war, but one which is unlikely to be forgotten by any of those who took part in it. In its own small way it serves as an example of the methods pursued by our enemies, methods of treachery, bribery, and utter contempt for honour and decency. But, it is satisfactory to add, there was nothing about it of which any Englishman need feel ashamed.

TANGIER TO TEHERAN.

I was looking through a collection of Serbian proverbs the other day when I came across one that struck me as peculiarly apt at the present time: "Victory is won not by shining arms, but by brave hearts." This might well be noted by the author of the "mailed fist" and "shining armour" phrases. So might another in the same collection: "What is taken by force is cursed." And, finally, I would commend to the "supermen" the Serbian equivalent of "The mills of God grind slowly, but they grind exceeding small," which is: "God does not settle His accounts with men every Saturday, but the day comes on which He does settle them." That is a fine saying, and one to keep up the heart of the Serbians; but it is not likely to be very popular with the Bullies in the Balkans, I suppose.

***

A letter received from an officer who has been serving on the Tigris for some time gives a lot of interesting particulars about the life of our troops out there, especially about their all too rare periods of relaxation. I should like to quote from it at length, but, for various reasons, must resist the temptation. However, one or two extracts can do no harm. Writing of a period when he was stationed at a point on the Shatt-el-Arab, above Busreh, he says:—"Time was very hard to kill. We paraded every morning at 5 a.m. and worked them [the men] two hours. They bathed every day in the creeks, and three times a week I lectured the N.C.O.'s during the heat of the day on the war, especially the events in Mesopotamia. I think they took a real interest in this. During lectures on outposts and kindred subjects they generally go to sleep—those in the background, at any rate. . . . Otherwise there were no amusements, except bridge and reading. Busreh is too distant to visit except on business. . . ." The heat at this point was, says the writer, almost unbearable, especially when the breeze failed; but his men "were constantly on guard, and sometimes fatigue, for as long as eight hours a day." This, he adds, "seems hard" on them. Knowing the climate, I can only agree with him.

***

Though a keen disciple of Isaac Walton, the writer found the fishing in the Shatt-el-Arab "very uninteresting, as bait of *atta* and meat was as likely to bring up a *goonch*, or tortoise, or possibly a young shark, which, owing to their weight and size, were landed rarely, and usually took away bait, hook, trace, and all." He deems himself lucky in not having hooked a shark. Then he adds that one afternoon he "shot a partridge, one of a covey of four. The remainder forsook the locality and never returned. When my men found that I had a gun and cartridges they became a perfect nuisance, and on one occasion I saw Lance-Naik —— enfilade three doves, after careful stalking and adoption of an inconspicuous fire position (with rest). He then came up to me and reported casualties in the manner beloved of the Indian Guard Havildar. This is the usual *modus operandi*. They never shoot birds flying, nor waste a shot." Later, just below Amarah, he reports that he and a companion went ashore in the evening "and —— shot a black partridge in the pitch dark. I didn't know how he saw it even." From Amarah onwards "the banks were thick with partridges and sand grouse. I have never seen so many; and tortoises basked on the edge of the water. It was too hot to go shooting ashore, so we took shots at them with rifles. I hit a blue bird and one partridge, and we knocked over innumerable tortoises. The latter, when the bullet hits the bank beneath them, are cast 10 ft. and more into the air. It is almost incredible."

***

To return to the fishing. The officer is pleased to be able to confirm his opinion that the Indian *mahseer* is existent in the Tigris, a fact which had been denied apparently by no less an authority than the *Fishing Gazette*. One day he purchased one of these game fish, weighing 11 lbs., from an Arab below Amarah; and on another occasion one of his men caught one of 13 lbs. "on a line, with *atta*, just behind Sanayat." This place, as far as I can make out, is the Sanna-i-yat of unpleasant memories; and apparently the writer got some fishing—which he describes as "very doubtful"—even in the intervals of occasional scraps with the enemy.

***

What he writes about the Arabs' methods of fishing will probably be new to some of my readers. So I will conclude these extracts by quoting it:—"The Arabs are very good at harpooning fish with a trident, and practise it from their youth up. I saw one boy get seven in fifteen minutes, two of which were some ten yards off. Of course, fish swim near the surface in muddy water, and their wash is often faintly visible. The best way of catching fish in muddy water is by a circular net, weighted by lead at the edges. This is thrown so as to land flat on the water; the edges sink faster than the centre, and any fish enclosed in the centre is trapped when the net is drawn up by a rope attached to the centre of the net. The Arabs are adept at this method." Here, again, I can endorse the writer's description and opinions from my personal observation. The weighted net is—or was—also used extensively on the Bahr Yusuf Canal in Egypt, where the fisherman sometimes stands on a raft consisting merely of a bundle of reeds—a feat which seems to me to add much to the skill of the performance.

***

The Greek Navy, like the Greek Army, has suffered a good deal as a result of the pro-German intrigues at Athens; but its friends hope that it will soon efface the memory of these bad days and free itself entirely from the evil influences under which it has fallen to some extent. For the Greeks are good sailors. More than any other people of the Levant, perhaps, they have the Sea Spirit in them; and in their struggle for independence from Turkish rule that spirit showed up well. The achievements of Constantine Canaris, from the island of Psara, and of Miaoulis, from rocky Hydra, are not unknown—especially the daring feat of the former (which was described at the time in the poems of Victor Hugo), when the young sailor, Canaris, entered the harbour of Chios by night and, with a small fire ship, destroyed the Turkish admiral's flagship and other ships of war.

***

These thoughts were suggested to me by hearing recently from a Greek friend of an interesting tradition concerning the origin of the present blue and white striped Greek flag. I had never heard it before, but my friend tells me that it was once narrated publicly by the late Greek Ambassador at Constantinople, M. Condouriotis, at a national fête. And this is the story. "Once, during the great struggle for independence, Admiral Miaoulis found himself in a very tight place, and wishing to distinguish his ship from the enemy's, he, on the spur of the moment, evolved a new flag. Hastily, he cut from his white shirt and his voluminous blue breeches some strips, joined them together, and hoisted them as his ensign." And that, according to my friend, is the true origin of the flag now flown by the Navy and the Mercantile Marine of Greece. Here, it seems to me, is a subject not unsuited to the genius of the cinema playwright. In these days of "disrobing" plays it ought certainly to "catch on."

CORSAIR.

PERSIAN PAINTINGS OF THE MIDDLE AGES.

Last Friday, before the Oriental Circle of the Lyceum Club in Piccadilly, Professor T. W. Arnold read a paper on Persian painting in the period contemporary with that from Giotto to Raphael. The lecture was illustrated by lantern slides photographed from the illuminations of old Persian manuscripts, and these in their turn had in some cases been copied, in all probability, from wall paintings. They illustrated scenes from Persian legends or the Mohammedan mythology. The lecturer explained that it was questioned whether the injunction of the Koran forbidding the Faithful to make any graven image extended to pictures as well as statues; in any case such ordinances were not very faithfully observed at the courts of the Turki princes who were the patrons of most of the painters whose works were shown. In those days, in Professor Arnold's opinion, Persian painting compared favourably with that of Italy, but the quantity was relatively very small. In the earlier pictures a pronounced Chinese influence could be seen, but this decreased as time went on. About the close of the period selected the reigning monarch sent a painter to study in Rome, and European methods were introduced, but the result was unfortunate.

THE PRESS ON THE NEAR EAST.

German Hopes in Roumania.

The military correspondent of the *Westminster Gazette*, in an article entitled "Roumania's Service to the Allies," expresses the opinion that before embarking on their vigorous campaign against Roumania the Germans had made up their minds that their defensive on the other fronts could hold, "at all events for the time they judged necessary." He continues:—

For there is a time-limit here. If we look closely at the German operations against Roumania, we shall not be long in deducing from the general haste that has marked them that the immediate object is not, as usually inferred, to subjugate the country. That with Roumania's contiguity to Russia would be a heavy undertaking, and even with the best of luck, the *best* of generals, and an attacking force greater than the Roumanians, reinforced by Russia, could put into the field, would take months. No, the immediate purpose is to hustle the Roumanians into a peace. It would be a peace, of course, in which Germany would have all the advantages. But hints which have lately, under official inspiration, appeared in the German Press indicate the calculation that entry of German troops into Roumania would suffice to create an anti-war party strong enough to pull down the present Ministry.

Subtle as the thing appears at first sight to be, the flaws are glaring. The primary consideration is time. This effort against Roumania must be carried out rapidly. Otherwise the risks, not in the least diminished, but on the contrary always growing elsewhere, may be heavily and speedily aggravated. In brief, it is a dangerous throw, though unavoidable. And now, as it is after the event, we may note the reason for the Roumanian retirement. The Germans hoped to defeat the Roumanians in Transylvania in detail, and to effect considerable captures of men, guns, and munitions on the Transylvanian side of the mountains. They might then have been able to force the passes with comparatively little difficulty. But the stroke failed. Notwithstanding all that has been written in German papers about the battle of Hermamstadt being a second Sedan, Falkenhayn missed his quarry. In eluding him, the Roumanians not merely gained a military advantage; they gained what here matters most of all—time. In brief, they have been acting not independently but in concert with the rest of the Allied forces. . . . The effects of the Roumanian intervention remain, and Germany has jeopardised her defensive up to now without positive results.

Two Sovereigns.

In an article entitled "The (Anti-) Patriot King," the *Spectator* (October 21) refers to certain rumours regarding the reasons why the Powers have tolerated King Constantine's tricks and quibbles so long:—

People have been asking here and in Paris, and indeed in the world generally, why the Allies have been so tender to King Constantine, and why he and his obsequious courtiers and puppet politicians have been allowed to play such fantastic tricks before high Heaven—why, in a word, he has been permitted to hamstring the Government, the Army, and the Navy of the unfortunate country which circumstances, and a Consort who seems to have inherited the family failing in regard to "scraps of paper" and the faith of treaties, have delivered into his hands.—*Quicquid delirant reges, plectuntur Achivi.*—Why did not the Allies stop all this nonsense months ago and establish a republic, or some other form of popular government, with that true patriot and wise statesman, M. Venizelos, at its head?

The *Spectator* disclaims any intention of attempting to answer this question, but it points out that "believers in the divine right of Kings, if they still exist, could hardly have been so mad as to try to fight the last fight of monarchy on so bad a case as that afforded by Greece."

To begin with, the present Greek dynasty was established too short a time ago. Again, it was patently called into existence by the will of the Hellenic people. Finally, the international instruments on which the Greek throne is founded specifically guarantee Constitutional Monarchy in Greece. If any people can legally get rid of an unconstitutional King, it is the Greeks. It is not on such Kings as those of Greece or Bulgaria that the defenders of monarchy, if they are wise, will base their case. The thing is so evident as hardly to need argument. Then comes a telling comparison between King Constantine and King Ferdinand of Roumania:—

Who can doubt, in spite of the immediate accidents of the war—merely local and temporary as we are certain they are—whether Ferdinand of Roumania or King Constantine of Greece has the firmer seat upon his throne? The King of Roumania has played the true part of a Constitutional Monarch. He has acted the part of the patriot and the democratic King. The fact that he is a member of the Hohenzollern family, and that Roumania was before the war a member of the Triple Alliance, though with a limited liability, might have seemed to afford excuses for an attempt to play the game played by the Greek monarch, or at any rate for the maintenance of neutrality and the sterilization of his kingdom. King Ferdinand made no attempt to seize them. Instead he at once recognized that his duty lay in thinking not of his personal or dynastic position, but of the will of the people over whose destiny he presides. When that will was clearly shown he not only made no attempt to hold Roumania back, but loyally accepted the part of interpreter of his people's wishes. Who can doubt that it is he who has given strength to the monarchical principle in Europe, and not his Greek brother?

The Drag on the Wheel.

A point in regard to King Constantine and his hold upon his people that should not be forgotten at the present time is brought out in an article in the *New Statesman* (October 21), entitled "The Greek Entanglements." The writer says, truly:—

It is a relevant circumstance, and one that cannot be left out of future account in deciding how far Greece shares her Sovereign's responsibility, that King Constantine's violent action nowhere evoked more than verbal protests, and that he remained, in spite of it, what he had for some time been—one of the two most popular individuals in his kingdom.

Later, dealing with the revolutionary movement led by M. Venizelos, the writer of the article, who has been discussing the various difficulties of the Allies in their dealings with Greece, says:—

The birth of this movement opened a new vista of hopeful possibilities for the Allies; but at the same time its growth has rendered the general election formula impracticable. For the formula of the revolutionaries, who are our friends, is to gather men to the colours and organise them into a new army to fight against the Bulgars and Turks; and unless we are to thwart our friends' plan we cannot go on with the demand for a general election, of which complete demobilisation is the condition precedent. Under all these circumstances we seem to have entirely reverted to the policy of meeting difficulties piecemeal as they arise.

He concludes his article by expressing the opinion that the best hope of a solution of the difficulties of the situation lies in the expansion of the Venizelist movement.

This proceeds rapidly in its own areas, and receives some accessions daily from Old Greece. But for obvious reasons the Allies cannot push it. It must move with its own momentum. On its spreading fast enough depends not only the immediate future of the Allies' relations with the Greek people, but also in great measure the ultimate international future of Greece in a Europe which the victorious Allies will reshape.

Italy and Serbia.

The *Manchester Guardian* published on Saturday an interesting article, "Serbia and Italy," from a correspondent who analyses Italian feeling on the vexed subject of Italian and Serbian interests in the Adriatic. The rival aspirations of the two nations, he declares, "are likely to furnish one of the earlier difficulties that will arise at the conclusion of peace," and "the aspirations and difficulties are accentuated by the press." Examining the attitude of the Italian journals, he concludes that "the truest record of Italian public opinion is to be found in the *Corriere della Sera*, which has not taken up an anti-Serbian policy either on strictly Italo-Serbian relations or on the question of the Adriatic, or on that of Dalmatia." He continues:—

The views and spirit of the *Corriere* on the Dalmatian question are those of the great majority of the Italian people. The nationalist agitation has failed to carry the public, which is content to leave the whole question to the Government. An address to the Ministry embodying the opinion of the Moderates—that is to say, of the most intelligent elements of the public—has been drawn up. In the Ministry itself a very strong body is alive to the necessity of keeping Italian and Slav feelings in harmony. It is this moderate element in the Ministry and in public opinion which deserves support among the Allies. The best end is certainly not served by the action of French writers such as Denys, Vellay, and Chevrin, who back the extreme Slav party and dispute the right of Italy not only to Dalmatia (which they may reasonably do) but also to Trieste and Istria, and thus give the Italian extremists a handle against both the Slavs and the French.

He adds that "it is not sufficiently recognised how considerable in Italy is the party which is willing to recognize the Serbian claim to Dalmatia," and he deplores the lack of opportunity to discuss the whole matter freely. The Moderate party in Italy, he declares, "has, unluckily, no Serbo-Croatian counterpart":—

In Italy it is manifest in a hundred directions—in the admirable book of Signor Prezzolini on Dalmatia, recognizing the Serbo-Croatian claims; in the *Unità*, a very able independent journal directed by the historian Salvemini and the Marchese di Viti di Marco, and in certain articles in the *Secolo* and the *Azione Socialista*. But no Serbo-Croatian writer or newspaper has, I believe, shown the slightest inclination to recognize the Italian claim on Trieste and Istria. Here lies the chief difficulty in the work of sincerely moderate politicians in Italy. If the Italian extremists are to be prevented from capturing the public, it would be very useful to see some indication of a corresponding

Digitized by Google

movement on the Serbian side. Otherwise the nationalists on both sides, with their popular Imperialistic catchwords, might well render the situation impossible.

Moslem Courts in Egypt.

The article entitled "The Mohammedan Law Courts of Egypt," which Sir Malcolm McIlwraith contributes to the October *Nineteenth Century*, gives an encouraging account of progress. The reform of these courts and the abolition of abuses has not been an entirely simple task, but it has gone forward steadily in the teeth of all opposition; and though, as Sir Malcolm writes, "it is not suggested that the millennium has arrived," the marked improvement effected gives ground for high hopes of radical improvement in the future. "Gradually the unsatisfactory elements which still remain in this branch of judicial administration will doubtless be weeded out and replaced by the most honest and intelligent elements which can be found among the young graduates from the Cadis' School and the Azhar." We quote the concluding paragraph of the article:—

Thus the outlook for suitors in Egyptian courts is more hopeful than it has ever been before in modern times. I say suitors generally, because it must not be forgotten that to the mass of the people it is not the Mixed Tribunals nor the Native Courts, but the Mehkemehs—the Egyptian Court of Chancery—which really count. A man may easily go through life without ever having to bring a law-suit on a matter of business or without coming within reach of the criminal law. But he can scarcely avoid contact, all his life, with the courts which deal with marriage, divorce, wills, successions, guardianship, family settlements, and such-like matters. To rich and poor alike, therefore, purity and the absence of corruption in such courts is a matter of paramount importance. And yet, unhappily, precisely because their sphere of influence is so far-reaching and their character and constitution such as to render British control so difficult by reason of the religious susceptibilities involved, they have hitherto been the happy hunting-ground of the powerful and the unscrupulous, and have constituted by far the least satisfactory branch of the Anglo-Egyptian Administration. It may be confidently anticipated that a new and brighter era has now dawned for them and all connected with them, and that Egypt, under the beneficent sway of its present enlightened Sovereign and with the aid of his very able Ministers, may ere long be able to claim that her religious courts are as honest and efficient as those which are more directly controlled by European influence.

Guiding Principles.

The *Nation*, referring to anti-Venizelist demonstrations in Greece, and especially to the maltreatment of two Venizelists by the soldiers and the crowd, sounds a note of warning against the use of coercion.

This incident, so far from suggesting to us the advisability of fresh coercion, conveys its warning as to the reaction which these measures must have on the prospects of M. Venizelos now and hereafter. If it seems to a section of the Greek people that in a domestic feud the Powers are interfering by drastic and humiliating measures to support one party against the other, there will inevitably be a rally against the party which will be accused of calling in the foreigner.

The warning is no doubt a sound one, in so far as the pro-Germans are sure to make the most of any opportunity given them. But most people will be of opinion that the only way to meet the tactics of the Germanophils in Greece is by affording active support to the friends of the Allies. As to the Greeks and their Sovereign, the *Nation* says:—

Greece has played a mean part, and the King is, to our thinking, a brutal and evil influence in Greece. None the less, he has his backing, and we imagine that (outside the islands, which are safe) a great part of the Greek people, and especially most of the Reservists, are only anxious to avoid the risks of war. They are not so much pro-German as neutralist. Their motive is prudence or fear. It is their right to be guided by that. M. Venizelos has our esteem and our warm good wishes, but it is best for him to win his battle by Greek opinion, or, at the worst, by Greek arms.

Articles to Note.

"German Penetration in Rumania," by D. Mitrany; "The Mediæval Serbian Empire," by William Miller; and "Egypt and Palestine," by Albert M. Hyamson, in the *Quarterly Review* (October).

"Greece and the Germans," in *Land and Water* (October 19).

"The Danube and its Crossings" (illustrated), in the *Sphere* (October 21).

"Between the Rivers," in the *Globe* (October 23).

The London County Council is recommended by the Education Committee to allow Serbian refugees to be admitted without payment of fees to the Council's secondary schools.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Allies and Roumania. Oct. 19.

Mr. Bonar Law, replying for the Prime Minister to Major Hunt, said: The situation in Roumania has been for some time past the subject of careful consideration by ourselves and our Allies in concert, and everything which is possible is being done.

Sir E. Carson: When may we expect some information and statement by the Government as regards Roumania, having regard to the general anxiety that prevails?

Mr. Bonar Law: I do not think that it would be desirable or advantageous in any way to make a statement as to what is being done militarily in regard to the matter. As soon as it is possible to make any statement the Government will be glad to do so.

The Balkans Operations.

Mr. Bonar Law informed Mr. Lynch that it was quite untrue that considerations of a secondary order had been allowed to intervene in regard to the situation in Greece and the military operations in the Balkans, to the detriment of the Allies' chances of success.

Mesopotamian Pension Hardships.

Mr. Hogge asked the Secretary to the Local Government Board whether widows and dependents of soldiers who had died in Mesopotamia were excluded from participating in the benefits of the Statutory Committee.

Mr. Hayes Fisher: The Statutory Committee have obtained a legal opinion to the effect that payments by them "can only be made in favour of members of the forces paid out of the public funds of the United Kingdom and their dependents." Hence the answer to the question appears to be that the widows and dependents of soldiers who have fallen in Mesopotamia can participate in the funds administered by the Statutory Committee if the soldiers were paid out of the public funds of the United Kingdom, but not otherwise.

Sir E. Carson, in view of the urgency of the matter, asked if the right hon. gentleman would bring it before the Secretary for India and have immediate provision made.

Mr. Hayes Fisher said he was very sympathetic towards those cases, and he would address a letter to the Secretary for India and the head of the Government, asking whether there was any intention of providing for the victims of the Mesopotamian campaign in the same manner as the victims of other campaigns.

Bulgaria's British Prisoners. Oct. 20.

Mr. Forster informs Sir E. Cornwall, in a written reply, that, according to the latest information, nearly 450 British have been captured by the Bulgarians. They are all to be concentrated at Philippopolis. Arrangements have been made, in principle, with the Bulgarian Government for the mutual repatriation of those who are incapacitated for further service, but the military situation is such that it is extremely difficult to put it into execution. According to information in our possession very few of our men in Bulgaria are eligible for such repatriation.

Heat Stroke in the Persian Gulf.

In a written reply to another query put by the same member, Mr. Forster quotes from a telegram sent by the Viceroy of India on August 5 as follows: One hundred and thirty cases of heat-stroke occurred amongst British sick and wounded being transferred to India on the recent voyage of steamship Dongola from Busreh to Bombay. There were seventeen deaths attributable to heat-stroke among invalids and crew and five deaths among invalids considered to have been influenced by heat. The voyage was carried out under the most trying climatic conditions, and a following wind was experienced, which necessitated the Dongola being turned round every four hours for the first day and half of voyage in order that air might get into the wards of the ship. These cases, he adds, appear to have occurred on board the Dongola, and not on "an overcrowded light-draught steamer waiting for two days in the hot weather on the bar at the mouth of the Shatt-el-Arab because of the failure to co-ordinate her departure from Busreh with the arrival of the Dongola," as suggested by the question.

The Situation in Roumania. Oct. 25.

Sir H. Dalziel asked whether the Government had any information other than that which had appeared in the German wireless as to the fall of Constantza, and whether the Secretary for War could give the House any information as to the military situation in Roumania.

Mr. Lloyd George: The Roumanian official *communiqué* announces that it has been found necessary to evacuate Constantza. We have no information more recent than that which has appeared in the last *communiqué*. As has already been stated, we and our Allies are working in concert, and everything that can possibly be done for Roumania is being done. It is obviously undesirable to give more exact information.

Correspondents at Salonika.

Mr. Forster, asked by Mr. Ellis Davies why the representative of one newspaper had been allowed special facilities to send special despatches from the Serbian headquarters through Salonika, and whether he could see his way to extend the same privilege to the representatives of other newspapers, or provide that the information obtained should be supplied to all papers alike, said this question was now under discussion between the Newspaper Proprietors' Association and the War Office, and it was hoped that some solution satisfactory to both might shortly be found.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The correspondent of THE NEAR EAST in Morocco, in his letter which is published to-day, raises some interesting points regarding the future trading relations between British and French merchants in the French zone. At the present moment, he says, British firms who have handled cereals for years are gravely handicapped by the special conditions imposed through the war. Grain, he says, is almost entirely in the hands of the Government, and while no fault can be found with this particular restriction, considerable stocks are being ruined through lack of transport, "while British steamers . . . are unable to find on the Moroccan coast a cargo for Great Britain." This is, we fear, a question entirely for the French Government, which may be trusted not to place unnecessary obstacles in the way of grain shipments. The same remarks apply to wool and skins.

***

An interesting suggestion made by our correspondent is that, after peace has been reached, France and Britain will combine to pool the openings for trade which their countries supply, an arrangement which would settle commercial questions in Egypt and Morocco. There is, of course, no valid reason why the trade representatives of two countries, which are now sharing the greatest of sacrifices with fine loyalty and devotion to each other, should quarrel over the fruits which the final victory of their respective countries will bring them, and the further development of affairs in Morocco will be awaited with more than usual interest.

***

The cancellation of the Ralli jute contract by the War Contracts Department has not come as a surprise to the trade, which had made, together with the Government of India, strong representations to the Department. But the new situation which has been created can hardly be said to improve matters. At least, that seems to be the general impression, which looks upon the cancellation as a "compromise," of little favour to the trade. It was expected that, if the Ralli contract were called off, the whole scheme of Government buying would have been "called off" likewise. This has not been done, and the provision of the new scheme, whereby the houses in India will be called upon not only to buy the jute for the Government at cost price, but also to make good any depreciation in course of transport to this country, is not regarded favourably as being bound to result in a loss to the merchants, who are working with, practically speaking, no margin of profit. However, the whole scheme is dependent on its acceptance by a representative majority of the Calcutta traders and shippers, and no decision has as yet been made known. It would be premature, therefore, to prognosticate as to the immediate future of the trade.

***

I am pleased to see that public interest in the German commercial taint in this country is daily growing. Last week I had occasion to speak rather pointedly on the subject, more particularly as regards the effect of that hybrid taint in our foreign trade. Since then the Unionist Committee appointed to investigate the matter has been doing useful work, and the Press has backed it up with commendable energy. Chambers of Commerce have also more or less openly joined the campaign, whilst welcome also is the resolution adopted by the U.K. Commercial Travellers' Association, expressing its opinion that the Consular Service should be an organisation for promoting commerce, and that "the paramount qualification for the office of Consul should be knowledge and practical experience in commerce."

***

All these subjects amplify and supplement each other. The German peril must be combated where it is to be found, and that is both here and abroad. In the former case it is essential that we British should extirpate the "taint"—liquidate German concerns, protect our home interests, and help those who are striving to emancipate us from the enemy's economic grasp. Abroad, our consuls must not only do, but, what is more important, be allowed to do their share; moreover, banks and financiers, helped by the State when necessary or advisable, must actively push our interests. Happily, there are signs that we are beginning to realise all this, and the appearance on the scene of the Unionist Committee will be a great help in the right direction. It needs, however, all the backing it can get, in order to enable it to influence the powers that be, always loth to protect our trade interests. I hope, therefore, that all who are interested in the development of our Near and Middle Eastern trade will openly give their support to the good cause. Only in this way can definite and positive results be obtained.

***

Whilst on this subject, I must make reference to the amalgamation by the Board of Trade of the Commercial Intelligence Branch and the Exhibitions Branch, under the Comptroller-Generalship of Sir William Clark. Both departments, in their own way, have done zealous work in the more recent past. Whether their amalgamation is a progressive or retrograde step it is difficult to say, but I fear that little advantage is to be gained therefrom by the trading community at large. Of course, practically everything will depend on the energy and abilities of the Comptroller-General. More cannot be said at present. Nevertheless, I regret the change.

***

It is not my intention here to dilate on the political significance of the statements made last week at the Mansion House, when, under the auspices of the Lord Mayor and of the Earl of Cromer, president of the society, the Serbian Society of Great Britain was formed. But there is an economic aspect of the matter which I wish to emphasise, believing that in doing so I will awaken the interest of those who otherwise regard the whole matter as too distant and remote to be seriously considered.

***

From this point of view it is essential that we should take careful note of one of the aims of the society—namely, to further the creation of a great Southern Slav State, comprising the Jugo Slavs within and without the borders of what is still called Austria-Hungary. The political reasons are self-evident. Some unfriendly people have insinuated that Italy's interests in the Adriatic will be attacked by the creation of this new State, but there is not an atom of truth in it. However, this has nothing to do with the economic aspect of the question, which consists in the formation in the Near East of a new market where our exporters can find buyers and our importers sellers. Hitherto the Southern Slavs, including Serbian, were cut off from the outer world, and were entirely dependent on the goodwill of Austria for their commercial relations with foreign countries. They were thus thrown into the arms of Austrian and German dealers, who exploited them ruthlessly, at the same time writing the word "Verboten" on every gate through which a non-German tradesman attempted to go. This must be stopped, in our own interests and in the interests of the open door. And the only way in which to do it is by the creation of a solid, serious Jugo Slavonia having a good commercial port opening on the Mediterranean or Adriatic, and connected by rail with its hinterland.

***

The suggested port, mind you, is essential, not because it is intended as a menace to Italian interests (what tosh!), but because we shall never be able to aid satisfactorily in the economic development of a Southern Slav State which has no free, open port or seaboard of its own within reach of our mercantile marine. This is, I believe, a point which has not been sufficiently emphasised—excepting now and again in these columns. Nevertheless, I consider its realisation a *sine quâ non* of a successful Slavonia; wherefore, let the trading community interested in the Near East give its unstinted adhesion to the Serbian Society of Great Britain, at the same time drawing the attention of its leaders to the above economic aspect of the question. For a Southern Slav State with a *good* commercial port of its own will offer splendid trading opportunities, whilst, on the other hand, we shall be in a position financially to assist in the free development of its marvellous resources, to the greater annoyance of the Boches, hitherto the tyrant oppressors of Central and Eastern Europe and the brutal exploiters of the Southern Slav peoples.

***

The thirty-fifth annual meeting of the Canadian Pacific Railway Company, held in Montreal on October 4 under the presidency of the chairman, Lord Shaughnessy, was entirely satisfactory. Though the gross income of the company from the business of the railway lines was below the maximum, the net revenue was in excess of that of any previous year. Moreover, the statements and statistics give evidence of improved operating effectiveness and of greater financial strength and stability. The cash in hand on June 30 last, including the temporary investment in war loans, readily convertible, was nearly forty-seven million dollars, or about thirty millions more than at the end of the previous fiscal year. These are figures the significance of which will not be underrated by my readers.

The Gold Currency of Egypt.

Case for Reform in the Tariff Rates: Wanted—A Standard Pound.

By Professor Todd.

The letter addressed by the High Commissioner of Egypt to the Sultan, which appeared in the *Official Journal* of October 20 (published elsewhere in this issue), concludes with the following paragraph: "His Majesty's Government desires to be consulted beforehand as to the weight, standard and general design of the coinage, as well as the rate at which foreign coinage would be admitted for circulation in Egypt." It is to be hoped that this paragraph foreshadows the intention of the Egyptian Government to carry out a long-delayed and much needed reform in the tariff rates of the various foreign gold coins which, theoretically or practically, constitute the gold currency of Egypt.

Englishmen and Australians, whom the fortunes of war have carried to Egypt during the last two years, must often have wondered why the value of a sovereign should have been fixed at the very awkward figure of 97½ piastres, instead of at the much more convenient round sum of 100, and, if their knowledge of the currency puzzle in Egypt extended so far, why the Egyptian, French, and Turkish gold coins, which are all nominally legal tender in the country at various rates, were never seen there in actual circulation even before the war. The explanation goes back to the beginning of the present Egyptian currency, which dates from a reform inaugurated by Mohammed Aly, the founder of the present Dynasty, in 1834.

Back to 1769.

The decree of 1834 made no mention of any specific unit of the new coinage, but it seems to have been based on the Turkish piastre, which was introduced in 1769 by Aly Bey and adopted by Napoleon in 1798. There is also no reference to the Egyptian gold pound, or 100-piastre piece, but the coinage of these was actually commenced about 1836. Meantime the privilege of legal tender had been granted to certain foreign gold coins, which apparently were already in circulation in the country in considerable quantities. The principal of these were the English sovereign at the rate of 97½ piastres and the French napoleon at 77.15 piastres. The Turkish pound had not then been introduced, but it was subsequently tariffed at 87.75 piastres.

Irregular Gold Coinage.

All these tariff rates were more or less under the real value of the coins as decided by their actual gold content in relation to that of the Egyptian nominal unit. Considerable quantities of the new coinage were issued by the Cairo mint, as well as from Brussels and Paris, but the gold coins were very irregular both in weight and standard, and entirely insufficient in quantity, so that the currency soon became saturated with foreign gold coins.

Even before the British occupation of Egypt in 1882 a Monetary Reform Commission had been set on foot, but the events of 1882 led to its suspension, and it was not till 1884 that it was formally re-appointed. After many meetings it issued a report, which was followed by the Khedivial Decree of November 14, 1885. The Commission pointed out that the piastre was too small for the standard unit, and the gold pound of 100 piastres was proposed in its place. The old standard of fineness (⅞ths fine gold, as against the English 11-12ths or the French 9-10ths) was maintained.

Mohammed Aly's Gold Pound.

As to weight, great difficulty was experienced in ascertaining the exact weight of Mohammed Aly's gold pound. Its weight in dirhems was known, but the exact conversion of dirhems into English or French measures was not ascertainable. Finally, the Commission had to take the average weight of a large number of Egyptian pounds actually in existence, the result being 8.544 grammes. It was then resolved, after long discussion, to adopt 8.5 grammes as the future weight.

This reduction of the gold weight of the Egyptian pound increased the difference between the tariff value and the intrinsic value of all the foreign gold coins, making them still more "strong" than before. The original idea of having any such difference at all was presumably to cover the cost of re-coining these foreign coins into Egyptian coins when necessary; but there is no apparent reason why, as was actually the case, the English sovereign should have been least undervalued of the three, the French next, and the Turkish pound most. To remedy this anomaly, it was proposed to raise the tariffs of the napoleon and the Turkish pound to 77¼ and 88 piastres respectively, which would at least have equalised the under-valuation of all three, and made it possible for them to circulate side by side, but this suggestion was never carried out.

Position of Gold Coinage.

Since 1885 very few of the new Egyptian gold pounds have been issued, and those previously in circulation have been steadily called in. The position of the gold coinage thus became as follows:—It consisted nominally of the standard Egyptian pound of 100 piastres and three foreign gold coins, all more or less undervalued or strong in comparison with that standard. Under the well-known economic law known as 'Gresham's Law' the effect should have been that the weakest of the four—viz., the Egyptian pound—would drive the others out; but as a matter of fact there were never enough of the former in circulation, and the result was a modified operation of Gresham's Law—the least strong of the three foreign gold coins, the English sovereign, drove out the other two. Thus the English sovereign is now practically the only gold coin in circulation in the country. The only disadvantage of this state of affairs from the economic point of view is that the tariff rate of 97½ is most inconvenient in business when metallic money is used This, however, is greatly mitigated by the fact that most transactions are carried out on paper in terms of the nominal standard, or Egyptian pound of 100 piastres, so that it is only when paying actual cash that the unit of 97½ is used at all.

A Standard Gold Pound.

It is very desirable that now that a complete recoinage is in view the opportunity should be taken to get rid of this difficulty by assimilating the Egyptian gold pound with the sovereign—i.e., making it of the same weight and standard, and retaining its present nominal value of 100 piastres. This would, of course, involve raising the value of the sovereign also to 100 piastres. It was impossible to do this until the occasion arose for issuing a new silver coinage also, because to make the change otherwise would practically have been equivalent to a premium of 2½ piastres to the holders of English sovereigns at the expense of the holders of Egyptian silver. Now, however, that the Government are contemplating a new silver coinage it will be possible to call in the old at 97½ and re-issue the new at 100. If the Government does not feel inclined to bear the loss which would be involved in this process (assuming that the new silver coins are of the same weight and standard as the old), that loss could be avoided by a slight reduction in the pure silver content of the new coins.

The Silver Factor.

As it happens, the present high price of silver will involve some loss to the Government in any case, but, as silver is only token money at the best, its intrinsic value matters relatively little, and the loss would certainly not be comparable to the convenience of having a gold coin on a decimal basis, which would at the same time make it possible to gratify the long-cherished desire of the Egyptians for a gold currency of their own. It would then be possible, if it were thought desirable, to dispense altogether with the tariff rate of the French napoleon, which has all along been a dead letter, and French gold would find its level in Egypt at its true value in proportion to the English and Egyptian gold. The nominal legal tender of the Turkish pound in Egypt will disappear as a matter of course, but that will make no difference to anyone, as there never was a sufficient quantity of it available for circulation in Turkey, let alone in Egypt.

AMERICA IN PERSIA.

American consuls continue to take exceptional interest in the commercial and industrial possibilities of Persia. Thus, Mr. Jafferson Caffery, the Chargé d'Affaires, American Legation, Teheran, in a recent report to his Washington headquarters, discusses affairs from fisheries to minerals.

"Factories, as that word is understood in the United States, do not exist in Persia," he writes. "Manufactures are the output of private workshops or the production of particular sections. In this manner are produced silk, woollen, and cotton tissues, and artistic manufactures. The customs of the trade are regulated by associations of workmen.

"The best camels in Persia are the powerful one-humped kind, which are bred in the Province of Khorassan. This animal can carry a burden of 600 pounds at the rate of twenty miles a day. The ordinary Persian camel, however, will carry 400 pounds at the rate of fifteen miles a day.

"Large quantities of skins and hides are exported in ordinary times to Baghdad and to Russia. The principal tanneries and leather factories are at Hamadan. The principal centres for exportation are Hamadan, Shiraz, Isfahan, and Khorassan.

"The chief districts where wool is produced in Persia are Khorassan, Fars, Luristan, Azerbaijan, Kermanshah, and Kurdestan. The best quality comes from Khorassan. The trade is in the hands of Armenians, and exports are increasing.

"The zones producing minerals are (1) the Province of Azerbaijan, (2) the slopes of the Elburz range, (3) Khorassan, (4) Kerman, (5) the districts around Isfahan and Nain, and (6) the region of the Persian Gulf.

"In Azerbaijan iron, lead, and copper ores exist in abundance. Lead is found in Khalkal region. Coal is dug near Tabriz. The slopes of the Elburz are rich in deposits of coal and iron. Turquoise mines are found in Khorassan, and also copper, coal, and salt. Kerman produces copper, lead, manganese, marble, borax, turquoises, iron, mercury, nickel, and cobalt. In the southern region along the Persian Gulf the chief minerals found are naphtha, rock salt, and iron ochre.

"The intrinsic value of these minerals is great, but their worth as articles of commerce depends entirely upon their situation, as means of transportation are extremely difficult, the cost of machinery is very high, and the questions of ownership and concessions from the Government are difficult to arrange."

SUDAN DATES.

Work of the Central Economic Board.

In the matter of developing the Sudan date industry the Intelligence Branch of the Central Economic Board appears to be doing a great work.

The Sudan is greatly indebted to Mr. H. P. Hewins, director of this branch, and his assistants, for the good work done by them. New markets have been found, and better terms and prices secured for the Sudan products through their efforts.

Though no profit worth mentioning accrued to the country from the recent trial consignment of dates, the prospects of a successful effort on a larger scale, and the hope that native farmers will take more interest in improving the quality of their dates, will enable the Sudan to compete in this line with Persia.

An Official Report.

We publish hereunder a statement taken from the monthly report of the Intelligence Branch, Central Economic Board, for August, referring to the subject, which runs as follows :—

The three samples of dates which are the subject of this report were forwarded to the Imperial Institute by the Governor of Halfa Province, and were referred to by the Director of the Commercial Intelligence Branch, Central Economic Board. It was desired to ascertain whether these dates would be saleable in the United Kingdom, and if so to obtain information regarding methods of packing and marketing.

The dates were packed in wood boxes, about 10 ins. square and 4 ins. deep, each box containing approximately 8½ lbs. of fruit. The dates had been packed irregularly in the boxes and pressed, and although on the whole they could be separated fairly easily from one another as entire fruits, many of them were slightly broken owing to the irregular packing. The dates were of the "Gondeila," "Garban," and "Bertamoda" varieties.

(1) 21 boxes of "Gondeila" dates; weight, about 178 lbs. net.

These dates were slightly larger than the other two varieties on the whole, averaging about 46 to the pound. They were of light reddish brown colour and had the best appearance of the three samples. The fleshy portion of the fruit was rather thin, and separated easily from the stone, which was somewhat large. The flavour was good and not too sweet.

(2) Four boxes of "Garban" dates; weight, about 34 lbs. net.

These dates were dark reddish brown, and averaged about 48 to the pound. The fleshy portion of the fruit was firmer than in the "Gondeila" or "Bertamoda" varieties, and slightly less sweet. The stones were rather large.

(3) Eight boxes of "Bertamoda" dates; weight, about 68 lbs. net.

These dates were similar in colour to the "Garban" variety. The fleshy portion of the fruit was somewhat softer than in either the "Gondeila" or the "Garban" dates, and the fruits when separated were more broken and sticky. The dates averaged about 50 to the pound. The flavour was sweeter than that of the other varieties, but not so pleasant. The stones of these were also rather large.

Commercial Valuation.

Samples of the three varieties of dates were submitted both to retail dealers and to brokers, and the following opinions were obtained :—

(1) The retail dealers stated that the samples did not represent dessert dates of the best class, such as Tunis or Tafilat, but that they were of good quality for ordinary dates. They would be classed with Persian dates, and it was thought that the "Bertamoda" variety would compare with Sayer dates and the "Gondeila" variety with Khedrowie dates.

(2) The brokers reported that the dates resembled the Sayer variety now shipped from the Persian Gulf and would be saleable in the United Kingdom. They estimated the value of the samples at about 21s. per cwt. landed in London (July, 1916), and added that the three varieties would be considered as of equal value in the United Kingdom, as the ordinary buyer does not distinguish between the different varieties.

In connection with their valuation of the samples the brokers mentioned that the yearly importation of Persian dates into the United Kingdom is from 500,000 to 700,000 boxes containing 70 lbs. each, and that their normal price is from 10s. to 12s. per cwt. ex-wharf London, the present high value being due to the short supply combined with very high charges for freight.

Thirty of the boxes of the Sudan dates were handed to this firm of brokers for sale, the remaining three boxes (one of each variety) being retained at the Imperial Institute for purposes of reference. The consignment, which had a net weight of 2¼ cwts., was sold in London at 24s. per cwt. (July 29, 1916), i.e., at 3s. per cwt. more than the original valuation.

EGYPTIAN COTTON.

We extract the following from Mr. Frederick W. Tattersall's Cotton Trade Circular Report for September :—

During the past month the raw cotton markets have been excited, and a further upward movement in prices has transpired, past high records being broken. On September 13 middling American on the spot in Liverpool was at 9.47d. Comparatively small fluctuations occurred during the next few days, but the tendency of rates was against buyers, 9.62d. being the figure on September 22, and the month closed with the quotation at 9.50d.

Large buying has been reported by trade interests in the United States, and spinners on this side have been disposed to keep very fully covered, and "bears" are decidedly scarce. Now and again some profit-taking by speculators has transpired, but it is quite evident the article has many friends at the moment.

Judging from private advices, some people believe the official reports are too pessimistic, but the fact remains we are face to face with a shortage of supplies this season, and it would not be surprising if still higher prices prevailed in the near future. So far as can be gathered from information received, the crop will be very little more than 12,000,000 bales, and consumption estimates continue large.

An extraordinary condition of affairs has prevailed in Egyptian cotton prices, and violent fluctuations have transpired from day to day. Fully good fair brown a month ago was at 12.90d., while the figure to-day (October 12) is 15.55d. It is said that serious deterioration in the plant has taken place during the last few weeks, and some forecasts of the yield are very low. On the 13th ult. Fully Good Broach was at 8.85d., and the figure to-day (October 12) is 9.32d.

A strong tone has prevailed in the yarn market throughout the month. Spinners have put up their quotations very firmly to cover the increased cost in the raw material, and in certain directions an increasing business has been done. In American qualities the finer counts have gained strength, owing to the marked rise in Egyptian descriptions. Medium American numbers have also done well. A little more irregularity is showing itself in coarse counts, partly owing to the delivery instructions not coming in so freely as desired.

Spinners as a whole have experienced a healthy demand, and users are finding sellers more difficult to deal with than for a long time back. The production of the mills tends to be further reduced, owing to more men being taken into the Army, and there are no signs of stocks accumulating in first hands. The export yarn section has been rather disappointing. . . . Prices in Egyptian yarns have considerably advanced, and buying has been irregular. Some spinners, owing to the uncertain outlook, have withdrawn quotations. Engagements are extensive, and for small lots to be sent in at once special rates have had to be paid.

TRADE NOTES.

Openings.

The Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), invites tenders for the supply of uniforms, cloth, white and khaki drill, saddlery, accoutrements, furniture, enamel ware, leather, boots, paints, oils, tarbrushes, cotton shirts and drawers, blankets (woollen), and miscellaneous stores. (December 10.)

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs, dressings, sundries, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (November 25.)

The same Department invites tenders for the supply of equipment, clothing, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (November 30.)

The Ministry of the Interior (Egypt) invites tenders to the Lunacy Division, Abbassia, for the supply of clothing, bedding, furniture, hardware, slippers, brushes, and other household necessaries required for Abbassia and Khanka Hospitals for the Insane for one year, from April 1, 1917.—(November 15. 1916.)

Liquidation.

Mr. F. H. Russell, Gresham House, Cairo, has been appointed receiver of the business of Bunder Stross, with instructions to liquidate it.

CAMPAIGN AGAINST GRAPE PESTS.

Petroleum is being used successfully in Switzerland as an insecticide by grape cultivators. Owing to difficulty in importing carbon disulphide—the usual medium—experiments were made last year for the extermination of the grape louse in infested stocks by more thoroughly sprinkling the ground with petroleum the first of the season and once or twice later. Subsequent investigation showed that to a depth of 8 ins. no living grape louse could be found, and the surface spreading of the same seems also to have been prevented. It is, however, presumed that during a season of greater moisture this method would not have proved so successful.

The more thorough sprinkling with petroleum did not kill any of the vines, although it did in some instances seem to check their growth. For fear that the grapes of the vines so treated might have an unpleasant petroleum taste they were gathered early, but the composition of the wine when tested at the Experiment Station at Wadenswil was proved to be normal, and the presence of petroleum could also not be detected by the taste.

MANCHESTER AND EGYPT.

At a recent meeting of the Council of the Manchester Importers and Exporters the chairman, Mr. E. H. Langdon, said the Egyptian Section had arranged a freight agreement with the Egyptian Conference liners for the year 1917 at the rate of 75s., less a rebate of 5s. per ton, making a net rate of 70s. per ton of 40 cubic feet, for the conveyance of fine goods and yarn from Manchester to Alexandria.

ROUMANIAN TEXTILE INDUSTRY.

According to the *Curierul Financiar*, of Bucharest, the textile industry would have every chance of making progress in Roumania if the raw materials that are produced there, such as wool, flax, and hemp, were cultivated more intensively, and then were systematically employed in the textile industry.

At the end of 1915 this industry included twenty-three enterprises enjoying the benefits of the law for the encouragement of industry, and representing a fixed capital of £252,740. The raw material utilised in 1912-13 amounted to £218,800, of which only £24,879 represented domestic products, the remainder, mostly cotton, having been imported. The value of products of the textile industry in the same year was £088,132. The total number of employees was 1,708.

PRODUCE REPORT.

LONDON, October 26.

Figs.

There is only a moderate demand, with small business passing at recent rates. New crop Greek figs are quoted equal to about 57s. to 60s., duty paid.

Seeds.

Linseed is closing quieter, but recent advance is steadily upheld; Calcutta to London, spot, quoted 85s.; afloat, 85s. 6d.; October-November, 86s.; November-December, 88s.; Bombay, small, October-November, was sold at 86s.; November-December, 88s. Bombay to Hull, October-November, 88s. 9d. Rapeseed is firm, but sellers scarce. Brown Cawnpore, to London, afloat, 71s.; and bold Ferozepore, prompt, 75s. 6d. Toria, to Hull, October-November, 75s. Cottonseed is firm and dearer in sympathy with Alexandria. Egyptian, to London, afloat and prompt, £14 10s.; Sakelarides, loading, £14 3s. 9d.; Egyptian, to Hull, spot, old, £13 5s.; and afloat, new, £14 12s. 6d. is asked; October was sold at £14 17s. 6d. f.a.q. and £14 12s. 6d. for Sakelarides. Rangoon beans are fully steady with a moderate business passing. Spot sold at from £26 17s. 6d. to £27; and November-December at £28 c.i.f.; December-January is quoted £28 10s. c.i.f.

Oils.

Linseed oil has been quiet. Spot, pipes, were sold at £42 10s.; and barrels, spot and October, £43 5s.; November-December, £43 12s. 6d.; and January-April, £44. Rape oil is firm; refined English, in barrels, spot, £50 to £52. Cotton oil is steady. Crude, pipes, spot, £41; refined, pipes, pale, nominal; barrels, sweet, £50 to £52, as to make. Olive oil, spot, is firm at £62 to £64 per tun for Spanish, ex store, in barrels, and shipments steady, but quiet. Levant olive oil, no offering.

Oilcakes.

Cotton Cakes.—Egyptian are not offered on spot, but considerable business was done on October-November shipments at £10 15s., ex ship, although shippers are demanding fully 5s. per ton from time on these quotations. English continue to offer in very limited quantity at £11 5s. per ton. Linseed Cakes.—Only small business passing, but values are firmly held up, and in some cases rather more money is asked. Best London made move off at £14 15s. to £15 per ton, while American prime Westerns are offered at £14 5s. to £14 10s., as to quality.

LIVERPOOL MARKET.

The oversea markets on October 24 closed strong at 27 to 35 points further advance. Here the initial dealings were done at quotations varying between 17 to 20 points, but the best quotations were afterwards not maintained on somewhat freer offering.

Egyptian futures opened strong at an average rise of 40 points, but later on reacted, and at noon the market was unsettled at 11 points advance on balance. Hardening a little in the afternoon, the market closed steady at 14 to 18 points advance on the day.

Wednesday's total import, 14,750 bales, of which 12,900 American, 1,850 sundries. Yesterday's sales comprise:—American, 8,600 bales; Egyptian, 300; Peruvian, etc., 800; East Indian, 100; sundries, 200.

Wednesday's deliveries: American any port, basis of middling f., G.O.C. Tendency, irregular and unsettled. Oct., 11.08½; Oct.-Nov., 11.08½; Nov.-Dec., 11.07½; Dec.-Jan., 11.07½; Jan.-Feb., 11.09; Feb.-March, 11.12½; March-April, 11.16; April-May, 11.19½; May-June, 11.23; June-July, 11.22; July-Augusa, 11.21½. Egyptian futures—Tendency, steady. Nov., 16.94; Jan., 17.04; March, 17.10; May, 17.06. Alexandria futures—Nov., 32.68; Jan., 32.05.

Trade and Commerce in Morocco.

Handicap of British Merchants.

(From Our Own Correspondent.)

Tangier, October 14.

The attention of the British communities in Morocco is becoming more and more directed to the question of their position—especially in the French zone—after the war. One reason for this fact is, no doubt, that from the height of success which the Allies' cause has now reached the end of the war seems well in sight, though at a distance which cannot be closely calculated; a second reason is to be found in the irksomeness of local war conditions, which, though borne here as everywhere with uncomplaining patience, intensify the anxiety to know what will be the permanent conditions under which British trade in the French zone of Morocco will, after the war, be carried on.

At the present moment the chief trade of the country—the export of cereals—is, in the French zone, in the hands of the French military authorities, who alone are authorised to export wheat, barley, or maize, and are therefore able to fix their own prices. British firms, in whose hands the greater part of the export of these grains has for many years been, and who have built up their organisations largely with an eye to this particular trade, have found their businesses perforce revolutionised, a great part of their organisation and staff rendered, for the time, useless, and the possibilities of taking advantage of two unusually good agricultural years, which would, under ordinary conditions, have been extremely profitable, enormously reduced.

Stores of Grain.

Grain is now in very great quantities piled in the warehouses, quays and even streets of the various ports, awaiting shipment, which French shipping is unable adequately to ensure, and it is feared that, like last year, when piles of grain stored in the open were spoilt by the rain, much of these valuable grains will be lost, while British steamers, which with difficulty cope with the demands for outward shipment to Morocco, are unable to find on the Moroccan coast a cargo for Great Britain.

Others of the staple products of the country, such as wool and skins, are only allowed to be exported by the military authorities, so that British merchants who still include the chief import and export houses of Morocco find one-half of their business—their export trade—semi-paralysed, and their import business considerably handicapped.

A French Exhibition.

Meanwhile, every effort is being made to push French trade. An important trade exhibition, from which all but French and Moroccan goods were excluded, but to which British contributions in money were asked for and received, was held last year at Casablanca. Another and more important exhibition, to which also only French and Moroccan goods are admitted, will be opened in a few days at Fez, and arrangements are being made to sell there large quantities of merchandise for the transport of which over the Moroccan railways special facilities in the way of priority will be given.

Altogether it is not surprising that the British communities in the French zone look forward with eagerness to the end of war conditions and are anxious as to the nature of the final settlement, which will in all probability before very long define their position.

Capitulations.

At present, it is perhaps needless to say, the Capitulations, under which, amongst other rights, British consular jurisdiction is maintained, are retained. New laws and regulations issued in the French zone are not applicable to British subjects unless approved by the British Government. The principle of commercial equality is recognised by treaties and buttressed by certain provisions of the Act of Algeciras. It is a state of things which, if not ideal, is, with goodwill on the part of those concerned, quite tolerable, and does not impede the administrative authorities in their efforts for the good government and welfare of the country. There is, however, little doubt that attempts will be made to bring about a change.

The obvious and most probable principle on which to base any alteration is that of mutual concession—by Great Britain in Morocco, by France in Egypt—outlined in 1904. An arrangement starting from such a basis, which would place French subjects and trade in Egypt on exactly the same footing with respect to the Protecting Power as British subjects and trade in Morocco, and secure to subjects of the two nations the same rights, and the same treatment, would seem to offer no possible chance of disagreement even were Great Britain and France less closely united by sympathy and interest than is the case.

Will the Allies Pool Trade?

It may be said with confidence that with such a position, fully and permanently secured, and, as no doubt would be the case, all outstanding questions in Morocco as in Egypt cleared up before the settlement came into force, the vast majority of British subjects in Morocco would face the future hopefully, and British merchants would take up vigorously after the war the work of developing the opportunities which Morocco will offer.

If, as indeed seems possible, the Allies agree to "pool" the openings for trade which their territories supply, and the anomaly of Great Britain holding open her trade doors even to those who when opportunity serves close their own against her is brought to an end, the settlement of commercial questions in Egypt and Morocco would, of course, be made much easier.

TRADE IN 1915.

Morocco's Large Purchases of Egyptian Sugar.

We extract the following from a report dealing with the foreign seaborne trade of Morocco in 1915, and published in the *Board of Trade Journal*:—

In 1915 the total value of the trade of Morocco by sea amounted to 245,851,292 frs., as compared with 180,410,424 frs. in 1914 and 236,729,055 frs. in 1913. It is interesting to note that, notwithstanding the war, the total seaborne trade of Morocco in 1915 was greater than in 1913, an increase of nearly 42 per cent. in the value of exports more than counterbalancing a decrease of about 3 per cent. in imports.

As might have been expected from the disappearance of enemy shipping, the trade of Germany and Austria has practically disappeared. Germany's total seaborne trade with Morocco of 26,887,896 frs. in 1913 declined to 204,655 frs. in 1915, whilst that of Austria-Hungary decreased from 5,703,230 frs. in the former year to 120,088 frs. in the latter. Such enemy trade as there was in 1915 consisted of goods of enemy origin imported into the Spanish zone viâ neutral countries.

Advance, Egypt.

The following table shows the share of certain countries engaged in trade with Morocco by sea in 1915, as compared with the figures for 1913, the last pre-war year:—

—	1913.		1915.	
	Imports from	Exports to	Imports from	Exports to
	Francs.	Francs.	Francs.	Francs.
France	97,662,412	13,530,244	92,057,711	33,295,638
United Kingdom	44,411,988	6,585,498	51,111,444	13,461,307
Egypt	34,154	746,445	8,025,768	137,785
Netherlands	4,843,795	154,220	6,378,359	11

Imports.

The value of imports into Morocco by sea in 1915 was 193,132,048 frs., as compared with 154,196,118 frs. in 1914, and 199,584,515 frs. in 1913. A satisfactory feature of the returns for 1915 is that imports from the United Kingdom showed an increase of 15 per cent. as compared with 1913. Imports from France, on the other hand, showed a slight falling-off. The very large increase in imports from Egypt was entirely due to the importation of large quantities of sugar from that country, to the value of 7,895,993 frs.

An examination of the returns shows that imports from the United Kingdom advanced in all the principal items except hardware, cloth, and readymade clothing, in each of which there was a decline; this was to be expected in view of the large demand made upon the United Kingdom factories in connection with the war.

An interesting item in the statistics of imports is motor-cars, for which, with the laying out of roads, there is an ever-increasing demand. The majority of the cars at present being introduced are of American make.

Referring to the principal articles imported from Germany prior to the war, it may be pointed out that as a supplier of sugar Germany was replaced by France, Egypt, the Netherlands, and Spain in 1915; of flour by France and Spain; of tea by the United Kingdom; and of cloth partly by Spain.

Exports.

The value of exports from Morocco by sea in 1915 was 52,719,244 frs. as compared with 26,214,306 frs. in 1914, and 37,144,540 frs. in 1913.

SHIPPING NOTES.

The British Consul-General at Alexandria reports that quarantine has been imposed on arrivals from Busreh, Mesopotamia.

The *London Gazette* notifies that proceedings have been instituted in the Prize Court in Malta in respect of certain goods ex the vessels Agostolion, Angeliki, Anna, Maleas, and Zakinthos. The date of appearance in each case, except in regard to the Maleas (October 17), was given as October 19.

A recent issue of the French *Journal Officiel* contained a Presidential Decree, dated October 12, which prohibits the importation into France and Algeria, under any Customs régime, of wine lees and crude tartar produced in, or exported from, foreign countries. The prohibition is not, however, to apply to such goods imported on account of the State, nor to consignments which are proved to have been despatched direct to France or Algeria prior to the date of publication of the Decree.

ENGINEERING NOTES.

(From a Greek Correspondent.)

Prospects in the Ægean Islands.

Recent events in the Eastern Mediterranean have brought again into unexpected political prominence the islands of Crete, Mytilene, Chios, and Samos. It has been usual to think of these islands as places solely of historical interest; little appears to be known of their natural economic resources and commercial value. Yet these large islands, with many others, which stud the Ægean Sea form a desirable market in the Near East, the value of which, the Germans, in their efforts to conquer, commercially, Asia Minor, have not failed to appreciate. In spite of the continuous troubles and insurrections which occurred in these islands during the last century under Turkish rule, their industrious inhabitants have been able to develop the industrial and commercial resources to an extent that would do credit to any other Mediterranean island in the West under European rule. Here are some facts concerning the industrial progress of the islands which British engineers, manufacturers, and other firms will do well to note.

Crete.

Crete is a most fertile and salubrious island. Her unique position in the Mediterranean offers great advantages from a commercial point of view. She stands in the high road along which the commerce between East and West is carried on, and in a position which places her within from a few hours to two or three days' sail of any market on the Mediterranean coast, and particularly that of Egypt, which her agricultural products can reach in fresh condition. The island is famous for its olive oil, oranges, lemons, almonds, chestnuts, pomegranates, raisins, sultanas, wines, locust beans, vallonea, soap, cheese, etc. In recent years, the agricultural population has shown a remarkable desire to increase the use of modern machinery and implements, and Germano-Austrian, as well as French and American, travellers availed themselves of the opportunity to introduce their goods on the spot, while the British have not even visited the islands.

With the same activity foreign firms have canvassed the island for orders for industrial machinery; also contracts for railways, tramways, electric lighting, etc. It must be remembered that the island of Crete has a population equal to that of Montenegro (before the war), the last census showing 336,151 inhabitants, the majority of whom are engaged in agricultural and industrial pursuits. The kinds of machinery most needed are light ploughs, harrows, sowing machines, harvesting and threshing machines of light construction, small power flour mills, olive-oil presses, oil motors, tractors, etc.

Mytilene.

Mytilene is one of the most important islands in the Ægean Sea, and has two of the best harbours in the Mediterranean. Her imports are £600.000, and exports £720.000. There are 150 olive oil mills in the island, most of them worked by steam power, and the latest type of hydraulic presses and oil refineries, 40 tanneries, 30 soap factories, four oilcake mills, three flour mills, one engineering workshop, one cotton spinning, and 10 wool weaving factories, 115 brick and tile factories, and various other smaller workshops. There are openings for the establishment of more factories, and manufacturers of machinery for the above purposes, in England, should make a note of it: the importance of supplying the existing factories with accessories and renewals should be obvious to engineers and merchants.

Chios.

Chios, which lies outside the Gulf of Smyrna, is justly called "the garden island." Its harbour, of recent construction, has an area of 300,000 square yards, and a depth of 23 to 27 feet. Considerable improvements are needed, and are already planned to be carried out after the war. I have observed in a recent publication that the municipal authorities of the capital of the island have invited tenders for the electric lighting of the town. There are two flour mills in Chios producing 25,000 sacks of flour, about 18 tons of macaroni and other pastes, 70 tons of bread, and about 12 tons of ship-biscuits. There are also 18 tanneries, which represent the principal industry of the island, employing 500 to 600 men, and producing annually 1.500 to 1,700 tons of leather, of which about 1,200 tons are exported to Asiatic Turkey, Roumania, Bulgaria, etc. A steam-power mill grinds the bark, vallonea, and other materials for the tanneries. In the north of the island there are some rich antimony mines with the necessary furnaces and workshops. In commerce and industry the Chiotes are very enterprising, and the names of Ralli, Rodoconachi, Skilizzi, Petrocochino, Argenti, and other well-known names in the commercial world are mentioned with pride by every Chiote in and out of the island. British engineers and manufacturers, therefore, must not overlook Chios, for apart from her position on the coast of Smyrna, there is every possibility that important public works will be carried out at no very distant date.

A Story with a Moral.

A correspondent sends to *The Engineer* an example of German slimness which has come to his own knowledge. A German traveller working for a British firm secured orders beyond the output of the factory, with the result that the firm could only deliver part of the requirements of their customers. Having a list of the customers and a knowledge of the demand, he went for a holiday to his own country, and, on the evidence at his disposal, obtained the necessary funds to erect and equip works for the production of the same articles on a larger and more economical scale than the British firm. The arrangement was made with a German bank, the new works being under its control until the outlay was recovered, and he then retired from the British firm as soon as he was in a position to enter into competition with them, which he did with remarkable success. Had the British firm been in a position to raise funds in order to increase its works and output more speedily, and had it suspected the duplicity of its traveller, it might have developed an important and thriving industry; but as the next move of the German was to secure control of the supplies of raw material for the production of the articles in question, the industry in this country speedily declined. Moral.—Don't supply Huns with positions of trust.

Another Petrol Substitute.

A patent has recently been taken out by Mr. H. K. Tompkins, Champion Hill, London, S.E., for a new petrol substitute, the constituents of which are cheap and entirely obtainable in this country. The fuel consists essentially of a solution of ethane and its higher gaseous homologues or isologues in paraffin oil or other liquid hydro-carbon under pressure. Coal gas produced by the low temperature distillation of coal is washed with paraffin oil or other liquid under pressure and at a low temperature, and the solution of hydro-carbon gases so obtained is delivered under pressure into drums. For use, the solution of gases is drawn off from the bottom of the drum, and is delivered into the carburetter through a small orifice, without wire-drawing, so as to obtain the full atomising effect of the dissolved gases. The paraffin oil is partly or entirely volatilised in the carburetter, according to the proportion of dissolved gases.

NEWS FROM ALL SOURCES.

An Italian official Decree suspends the exportation of all vegetables, herbs, and fruit, with the exception of citrons and oranges.

It has been decided by the Government of India not to establish a direct mail service between Aden and Busreh or between Aden and Karachi, as had been suggested, with a view to speedier communication with the troops in Mesopotamia. The proposal is impracticable owing to dearth of shipping.

H.M. Consul-General at Algiers writes under date September 28 that, according to reports from administrators of country districts, the grain crops in Algeria this year are considered to be only moderate in quantity, late frosts in the spring and great heat in the early part of the summer having prevented the harvest from being as abundant as had been anticipated.

A Beylical Decree of September 1, 1916, published in the *Journal Officiel Tunisien*, provides that certificates of origin shall not be required by the Tunisian Customs authorities in respect of merchandise of neutral origin shipped to Tunis from a British port. The Decree amends that of October 25, 1915, which provided that, as from November 15, 1915, merchandise of neutral origin might only be imported into Tunis if accompanied by a certificate issued by the Customs authorities of the country of origin, and *visé* by a French Consul, attesting that the goods had been produced or manufactured in that country.

The Egyptian *Journal Officiel* of August 28, 1916, contained a notice issued by the Ministry of Agriculture notifying importers of grapes, and all other persons concerned, that they "must take immediate steps to ensure that the use of vine leaves as packing material for grapes consigned to them from abroad is discontinued. The importation of vine leaves into Egypt is prohibited by Law No. 1 of 1916, and all parcels coming from abroad and containing vine leaves used as packing material must, in terms of Article 4 of the same law, be sent away again within fifteen days, and if not sent away may be destroyed and their owners shall have no claim to compensation." Notice was given that on and after September 1, 1916, the provisions of this law would be rigidly enforced.

EGYPTIAN COINAGE.

The letter addressed by the High Commissioner of Egypt to H.H. the Sultan, referred to in Professor Todd's article on page 622, was as follows:—

"It has pleased your Highness to inform me that the Egyptian Government has examined the question of the eventual stamping of the Egyptian coinage, and has asked me to ascertain the opinion of the British Government on the matter.

"In reply, his Majesty's Government has charged the Principal Secretary of State for Foreign Affairs to acquaint your Highness that the British Government is of opinion that it would be most natural to replace the monogram of the Sultan of Turkey by the monogram of your Highness. It feels at the same time that the employment of the English language, side by side with the Arabic language, on the face of the coins, to indicate the value, would facilitate circulation, and would serve to recall the bonds existing to-day between Egypt and Great Britain. His Majesty's Government desires to be consulted beforehand as to the weight, standard, and general design of the coinage, as well as the rate at which foreign coinage would be admitted for circulation in Egypt."

CYPRUS NOTES.

(From Our Own Correspondent.)

Nicosia, October 9.

Restrictions have now been imposed with a view to checking diminution of the island stock. Also no shipment of sheep will be allowed unless at the same time an equal number of goats is exported by the owner, or such a proportion of goats as the authorities may from time to time determine.

Forest Work.

The felling of trees and the work of the Government steam saws are actively carried on in the Papho forests, furnishing labour to large numbers of villagers. Owing to the cutting off of supplies of timber from foreign ports, due to the war, the island demands have, of course, been largely increased. One of the papers advocates a large extension of felling in all forests in the island.

This, of course, would be most impolitic, as the fear is lest the present drain on the forests should exceed the limits which prudence would lay down. Needless to say, the greatest vigilance is needed on the part of the Forest Department respecting the extent to which the sparsely wooded State forests can bear denudation, in consequence of the havoc wrought in Turkish and preceding periods.

CYPRUS TRADE IN 1915.

Increased Exports and Imports.

The High Commissioner's Report on the trade of Cyprus for 1915 contains the usual interesting statistics, from which we quote the following:—

Value of imports of merchandise during 1915 was £588,019, as against £496,744 during the previous year—an increase of £91,275. The principal articles showing increases are:—Wheat, £46,891; flour, £37,367; sugar, £16,901; olive oil, £10,309; coffee, £8.237; rice, £8,121; cotton yarn and thread, £6,612; cotton piece goods, £2,044; leather, sole and dressed, £4,905; matches, £2,695; cigarette-paper, £1,716; sesame, £1,563; carriages, £1,155; petroleum, £1,144; indigo, £1,082.

The principal articles showing decreases are:—Timber, £19,847; machinery, £12,258; tiles, £6,797; iron and steel manufactures, £6,178; empty sacks, £3,955; coal, £3,669; glassware, £3,408; soap, £2,262; woollen manufactures, £2,253; silk manufactures, £1,418; hides and skins, £2,331; straw manufactures, £1,945; hardware and cutlery, £1,694; earthenware and china, £1,487; furniture, £1,329; beer and ale in wood, £1,135.

The total value of exports of merchandise during 1915 amounted to £650,490—an increase on the exports during the previous year of £153,714. Of the exports, the principal items were:—Carobs, £203,162; barley, £68,371; animals, £51.622; wine, £38,158; silk cocoons, £37,299; raisins, £34,468; potatoes, £28.513; pomegranates, £20.250; wool, £14.523; lemons and oranges, £13,235; asbestos, £9,509; sponges, £7,937.

The value of specie imported during 1915 amounted to £23,899, as compared with £72,472 in 1914, and the value exported to £10,907, as against £53,463 during the previous year. This low movement in specie is due to the war, and to the consequent restrictions regarding the exportation of specie.

The total tonnage entered, steam and sail, in the foreign trade during the year was 492 vessels of 155.152 tons, and the clearances were 481 vessels of 153,159 tons. In the coasting trade the total number entered was 2.183 vessels of 267.944 tons, and cleared 2,221 vessels of 273,878 tons. There was a decrease of 71 steamers entered from foreign ports, amounting to 126,329 tons, and of 46 steamers, of 92,147 tons, in the coasting trade, due to the war.

We hope to deal with other features of the Report next week.

BELGIAN CONGO.

Possibilities Wrapped Up in Cape-to-Cairo Railway.

Generally speaking, the Belgian Congo has not been regarded as of any considerable interest to the Near East and to those who have trading interests in that sphere of somewhat elastic borders; but our American friends, as alive to the future as ever, regard the great African tract as possessing great potentialities.

They look far ahead, of course. "When the Cape-to-Cairo Railway is linked up with the Congo River and Grands-Lacs Railway route the two sections of Belgian Congo will be brought into closer relations, but at present, owing to its situation, practically in the heart of Central Africa, Katanga is dependent for an outlet upon the railways running south through Rhodesia to Beira, Portuguese East Africa, and to Cape Town," the American Vice-Consul at Boura wrote in the course of a voluminous report to his Government recently.

The Copper Industry.

Are there not possibilities for Egypt also when the railway has been constructed completely? It ought not to be necessary to point out that Katanga derives its industrial importance from the great copper deposits now being exploited by the Union Minière du Haut Katanga, a Belgian company, about 40 per cent. of the shares of which are owned by the Tanganyika Concessions, Limited, a British enterprise engaged in the industrial development of Central Africa. There are several other small mining companies, but of little importance as compared with the Union Minière.

The prophecy set forth in previous reports that the Katanga copper mines would soon become one of the world's important sources of copper supply seems about to be realised, and even the war has not interfered in any serious degree with the mining operations and production. When the war broke out the headquarters of the Union Minière at Brussels were removed to the London office of the Tanganyika Concessions for the purpose of continuing operations and furthering the sales of copper.

Americans Forward.

The report of the Union Minière, which has charge of the copper mines and smelters, states that active mining works had been carried on during 1913 and 1914 on the Star of the Congo, Kambove, and Luushia mines, and on the Musoshi iron deposits for iron-stone flux. The total ore and flux mined during 1914 amounted to 360,000 metric tons, as compared with 170,000 metric tons in 1913.

Engineers claim that the ultimate success of the mines depends on the development of an economical scheme for low-grade ore treatment. The Union Minière, under the direction of Messrs. Wheeler and Horner, American experts, is now experimenting with the electrolytic leaching treatment of these ores, and the results are said to be promising. The product of this method is known as "electrolytic copper," which commands the highest market prices.

American and other mining interests and copper consumers are now giving considerable attention to the Katanga mines, and it seems quite possible that the estimated production of copper therefrom, which is placed at 40,000 tons for 1917 and thereafter, may be realised, in which case Katanga would be near the head of the list of the world's greatest copper suppliers.

The Land.

Even more interesting, perhaps, is the question of agriculture and cattle-raising. The Agricultural Department has made efforts to encourage farming, but it is claimed that the soil is not sufficiently rich for profitable results. At the end of 1914 about 2.270 acres were under cultivation by the Department and by immigrants that had been induced to take up this work. These farmers, who now number thirty-seven, receive free land from the Government, and are given assistance in procuring seeds, clearing the land, and even in ploughing with steam tractors. There is an experimental station near Elizabethville where extensive investigations have been carried out in crop raising and irrigation, but until the demand for farm products is greater the results will have little value.

There is a more promising future for cattle raising, and the Biano Plateau, which is free from the tsetse fly and has abundant pasturage, offers a good field for this industry. At the end of 1914 the Government breeding station at Katentania on the plateau had 1,737 head of cattle, 734 of which had been imported from Northern Rhodesia. It is planned to start sheep raising in the near future.

ANOTHER GERMAN LIE.

The *Weser Zeitung*, of Bremen, publishes an article on "England and Abyssinia," in which it states:—"England, ever since she has established her powerful influence in Egypt, has kept a wakeful and eager eye on Abyssinia, and of late, not content with having deviated the waters of the Nile in order to fertilise the Abyssinian soil, and so causing a certain amount of injury to the Egyptian cotton-grower, she has tried to place this country entirely under her political influence and control. England's devices with regard to Abyssinia are very clearly shown by the *coup d'état* which she has just made to place on the throne of Abyssinia the lord of the richest region of the land—that, namely, which stretches to the borders of the Tana Sea and to the banks of the Nile. This region is one which Italy has long coveted, as it is near her colony, Erythrea. Italy will, therefore, be but half-pleased with the influence which England possesses here."

ON 'CHANGE.

(By Our City Correspondent.)

Throgmorton Street, E.C.

The market in Egyptian shares continues very quiet, with very small changes in prices. Aboukirs are slightly firmer, having been done at 15s. for 250 shares. About 100 Agricultural Banks have changed hands at 4½. Some small business is passing in Delta Light round 5⅛ to 5¼. The increase of 1 per cent. (making 5 per cent.) on Markets was a pleasing surprise, but there has been nothing doing this week in the shares, which are still wanted at about 25s. 6d. Salt and Sodas have further improved 6d. to 19s. 6d. on Egyptian buying, but fewer than 1,000 shares have changed hands, sellers being scarce. Land Banks are wanted at 5.

In National Banks some small business has been done at about 12⅜, at which price there are further buyers, with a small seller at 12½. An exceptional transaction took place in New Egyptians at about 8s., and some Uniteds have been done at 9d.

In Greek securities business is at a standstill, and there is absolutely nothing further to report.

Roumanian Oil.

Yesterday Oil Shares were steadier. Roumanian Consolidated, after a fair number of dealings, from 12s. 4½d. to 13s. 7½d., finishing 3d. better on balance at 13s. 3d.

COMPANY NOTES.

Meeting.

Anglo-Egyptian Bank, November 21.

Oil Outputs.

Anglo-Egyptian Oilfields, Limited.—Gemsah production for the week was 17 tons, against 21 last week; and the Hurgada production 508 tons, against 692.

British Maikop.—Week ended October 21, 36 tons.

Dividends, etc.

The board of the Egyptian Markets, Limited, has declared a dividend on the ordinary shares of 5 per cent., less tax at 4s. 6d. in the pound, in respect of the year ending December 31, payable November 14.

The directors of the Anglo-Egyptian Bank, Limited, recommend a dividend of 10s. per share, less income-tax, for the half-year to August 31, making, with the interim dividend of 5s. per share, 15 per cent. for the year and a bonus of 2s. 6d. per share, free of income-tax. After providing in full for depreciation of securities and appropriating £5,500 bonus to staff, £10,000 to reserve fund, and £5,151 to premises account, they carry forward £52,000.

Royal Mail Steam Packet Co.—An interim dividend for the half-year ended June 30 at the rate of four per cent. on ordinary stock, less tax.

NOTICE.

Société Anonyme pour la Fabrication des Cigarettes Egyptiennes marque HADJES NESSIM en liquidation.

Offers for the purchase of the following items of Stock and House Property will be received in the name of EDWARD D. JOYCE, P.O.B. 206, Alexandria (Egypt), Receiver of the above Company, up till 8 a.m. on the 15th of NOVEMBER, 1916:—

(*a*) The TRADE MARK belonging to the Company, together with all the Stock of Tin Boxes, Labels, Cigarette Paper, etc., on which the Trade Mark is printed.

(*b*) The BUILDING situated No. 12-14, Rue Abou El Dardar, Alexandria (Egypt), belonging to the Company.

Details of the above can be obtained at the Offices of the Company, 12-14, Rue Abou El Dardar, Alexandria, between the hours of 9 a.m. and noon, on any day except Sundays, from this date to the 13th of NOVEMBER, 1916.

Offers must be made in writing, under registered cover, to the above mentioned P.O. address, and must be accompanied by a deposit in Cash of 10 per cent. of the amount offered.

Offers may be made for items A and B separately.

The Receiver is not bound to accept the best or any offer made.
